The proposal for making Liverpool University College into a degree-granting body distinct from Victoria University has reached the practical or money-giving stage. A third of a million is wanted for it, and towards this sum we notice that Sir John Brunner, Bart, has given 25,000*l.*, Mr. William Gossage 5,000*l.*, Mr. E. K. Muspratt 1,000*l*, and Messrs. Evans, Sons & Co. 1,000*l.* The Liverpool Chemists' Association is giving 100*l.* The Leeds City Council are agreed that the dissolution of the Victoria University would be detrimental to the interests of university education in the north of England, and have instructed the Finance Committee, if thought desirable, to represent the views of the Corporation to the King in Council.

Birmingham Notes.

In a window of a suburban chemist's shop there is displayed a large poster showing Sandow in various athletic attitudes. This calls forcible attention to the Sandow embrocation.

Medical men, it is interesting to note, are now advertising for married dispensers. Can this mean a beginning of the elimination of the lady dispenser, or are all of this class taking to double harness?

The City Council last week sanctioned, on the Health Committee's recommendation, the appointment of Mr. G. F. Liverseege as public analyst for Birmingham, at a salary of 350*l.*, which is an advance on his previous salary of 80*l* per annum. After much discussion, Dr. Alfred Hill was appointed M.O.H, at a salary of 1,000*l.* a year.

"A Manifest Piece of Patchwork"

Swift's words quoted by a Correspondent in the Potteries district.

Bank Holiday was generally observed by the chemists throughout the Potteries, and even in Newcastle, where a very large annual fair is held on Easter Monday, the rule was not broken.

In the last-named town the chemists, who do a large trade in veterinary medicines, advertise very largely by posters in the repositories and other conspicuous assemblies of cattle and horses, notably Messrs. Turner, Wain, &c.

In the Market Square at the fair was seen an object-lesson in the art of making "cough troch." which certainly amused the crowd, sold the article rapidly, and interested one pharmacist at least. With a saucepan, coke fire in a tripod cauldron, some sugar, and peppermint oil, a dapper little chap produced a 3 lb. batch of medicated rock, poured it out on a marble slab, and while in that condition "pulled" it over a large silver-plated hook such as the plaster-maker adopts, and transformed in five minutes a clear pale-yellowish mass into an opaque pearl-white which, with much "patter," he proceeded to cut up into penn'orths, and distributed with great rapidity amongst the crowd.

The promiscuous recommendation of the use of chemicals for domestic purposes is always attended with danger. On the advice of a friend employed at the gasworks, a Longton publican, Miss Sarah Ann Griffiths, manageress of the White Lion Hotel, Church Street, on Good Friday, was cleaning a copper urn with certain acids; some time afterwards the lady complained of the fumes having got on her stomach, causing pain. Acute inflammation arose, and death ensued on Sunday.

It is not often that the tram-ticket is impressed by the name and wares pertaining to pharmacy, but most of them in one district are used as advertisement media by a photographic chemist and druggist—viz, Mr. Turrell, of Hanley.

Mr. Cornwell has established a small branch chemist's shop in Hope Street, Hanley, and Mr. Young has invaded Wolstanton, a large and much-built suburb of Burslem—the mother of the Potteries.

The large residence formerly owned by the late Mr. Thomas Leicester, chemist, of cough-lozenge fame, situated in Waterloo Road, Burslem, has been converted into a club-house, and the grounds into a bowling-green.

The trade generally in the district is not good, and the pharmacist has much to complain of, but the fillip given to the trade by the Imperial order for half-a-million Coronation mugs has brightened the hopes of our much-worked and little-remunerated brethren of Pottersborough.

The ladies of this district are mostly engaged in the "pots," and having much time at their disposal week-ends, indulge in finery and perfumery. One well-known pharmacist —Mr. Edmund Jones—sells an enormous amount amongst

Digitized by Google

them, and from an all-round conversation the industry in soaps and other toilet-requisites is "prodeegious."

An excellent advertisement of the mechanical sort can be seen in a chemist's shop-window in the Square, Tunstall. It consists of a figure, the head part of which is screened by a fan. The fan moves and shows a headless man, and by his side is a black box containing the capital appendage. The second movement shows the fan replaced, to be again removed, showing head in position and the box empty. All this is followed by clapping in the gallery and nods of approval in the stalls where the audience is seen to be assembled.

A Midland Exhibition.

The art and industrial exhibition to be held at Wolverhampton this year is to be opened on May Day by the Duke and Duchess of Connaught. The main buildings, which have been designed by the architects who planned the Glasgow structures, are being erected in the West End Park, and will occupy 127,215 square feet. They comprise an Industrial Hall, a Machinery Hall, and a Canadian Pavilion, and in their design precedent has practically been ignored, and an endeavour made to reflect artistically their contents and use. There will also be other buildings, such as restaurants, a concert-hall, &c, covering an additional area of 20,980 square feet. About thirty-two acres of ground have been enclosed for the purposes of the Exhibition, and the total capital expenditure will be over 100,000*l*. All the usual devices for the entertainment of visitors (including a Ping-Pong Tournament) will be provided.

Contracts.

The Gravesend Town Council has appointed Mr. A. A. Gillett chemist to the Corporation.

Mr. J. Hepworth, chemist and druggist, Loughborough, has been appointed chemist to the workhouse.

The Pontypridd Board of Guardians has accepted the tender of Mr. Oliver W. Davies, chemist, for the supply of drugs.

The Bedford Board of Guardians has appointed Messrs. Taylor & Brawn, of Bedford, to supply drugs to the workhouse.

The Coventry Board of Guardians has appointed Mr. H. Welton, of Bishop Street, Coventry, to be chemist to the workhouse.

Mr. W. T. Horniblow, chemist and druggist, Sidbury, and Mr. Milne, of Tything, have been appointed chemists to the Worcester Workhouse.

Mr. T. J. Calcutt, chemist, Peterborough, has received the contract of the local Board of Guardians for the supply of drugs to the workhouse.

The Dover Board of Guardians has appointed Mr. A. L. Thompson, chemist and druggist, Dover, to supply chemicals to the workhouse.

The tender of the United Alkali Company (Limited) for the supply of manganate of soda has been accepted by the Dartford Rural District Council.

Mr. C. W. Southern, chemist and druggist, Belper, has been selected by the Belper Board of Guardians to supply chemists' requisites to the workhouse.

The Ludlow Board of Guardians has contracted with Mr. Burnett, chemist and druggist, of Ludlow, to supply cod-liver oil and quinine to the workhouse.

Messrs. John Ismay & Sons, wholesale druggists, Groat Market, Newcastle-on-Tyne, will supply the drugs to Newcastle Workhouse during the next half-year.

The Hollingbourne Board of Guardians has accepted the tender of Messrs. Stonham & Sons, chemists and druggists, Maidstone, for the supply of drugs to the workhouse.

The Bolton Board of Guardians has accepted the tender of Messrs. Thos. Moscrop & Co. (Limited), druggists, 1 and 3 Folds Road, Bolton, for the supply of sulphur to the workhouse.

Mr. J. Paul Inch, 1 High Street, Barnstaple, has secured the contract for the supply of Irish moss to H.M.S. Prison, Dartmoor, and for the supply of cod-liver oil to Barnstaple Union.

Messrs. John Richardson & Co., Leicester (Limited), will supply drugs to the Wolverhampton Workhouse Infirmary for the next half-year at 45*l*. 9*s*. 10*d*., and to the Union Dispensary for the same period at 51*l*. 14*s*.

The East Preston (Sussex) Board of Guardians has accepted the tender of Mr Geo Light, chemist and druggist, of Arundel, for the supply to the workhouse of Howard's quinine at 1*s*. 7*d* per oz, and cod-liver oil at 4*s*. 9*d*. per gal.

The Romney Marsh Board of Guardians has accepted the tender of Mr. C. E. Gerring, chemist and druggist, New Romney, for the supply of Condy's Fluid and carbolic acid to the workhouse. Mr. Gerring will also supply disinfectants to New Romney Town Council.

The Kettering Urban Council has accepted the tender of Messrs. W. Hitchman & Son, chemists, of Kettering, for pink carbolic powder, 15 per cent., in casks, 4*l*. 16*s*. per ton; sanitary fluid, 1*s*. per gal.; sulphur candles, 7*s*. per doz.; Pickle's gummed strips, 3*s*. 10*d*. per doz. packets; formalin-tablets, 9*s*. per lb.

At the meeting of the Medway Board of Guardians on March 26, Mr. T. C. Lamb, chemist and druggist, Chatham, one of the guardians, referring to certain remarks that were made at a previous meeting respecting the drug-contracts, said they were unfair to himself. Ever since he had sat on the Board he had gone through the drug-tenders and had endeavoured always to act above-board and fair, but now he found a guardian complaining of the way in which tenders for drugs had been dealt with. Mr. Godsiff inquired whether the tender accepted (that of Messrs. Ostler & Co.) was satisfactory to the doctor, whereupon Mr. Lamb said the suggestion seemed to be that he was interested in the contract. Mr. Godsiff replied that he never said so, and after further altercation Mr. Lamb said the doctor was quite satisfied with the drugs, which were similar to those supplied to St. Bartholomew's Hospital. Mr. Godsiff remarked that he did not say that Mr. Lamb was "in co." with Messrs. Ostler's firm, but he objected to Mr. Lamb going through the drug-tenders alone, and considered that the doctor should decide which tender should be accepted. Several members were of opinion that Mr. Godsiff should withdraw his strictures, but the matter dropped.

Imperialists Enjoy Themselves.

The Bohemian concert at the Albion Hotel on March 23, in connection with the Imperial College of Chemistry, Imperial Buildings, Ludgate Circus, London (Mr. Frederick Davis's), was a very successful affair, a *recherché* programme of a most artistic character being provided. Mr. John Lloyd was an ideal Chairman, and he was supported by Major Graham in the vice-chair. Many ladies were present, and the company numbered about 120. The most noteworthy items on the programme were the rendering of "Wolsey's Speech to Cromwell," by Mr. John Todd; "Fra Giacomo," by Mr. Arthur Foxon; the beautiful violin solos of Mr. Oswald Laston; and the contributions of Mr. Frederick Davis. In the interval Mr. John Todd proposed a vote of thanks to the Chairman and the Vice-Chairman, both of whom subsequently replied. In the course of another speech, Mr. Todd spoke in warmly eulogistic terms of Mr. Frederick Davis's qualities as a tutor and a man. His remarks were endorsed by Mr. Edgar S. Eaton and by the Chairman, and were enthusiastically received. Mr. Edgar S. Eaton and Mr. Roberts-Williams were the accompanists, and the Imperial College Anthem, contributed by the Imperial Quartette as the last item upon the programme, created much laughter. Much of the success of the evening was due to Miss K. Horniblow and Mr. Edgar S. Eaton, who acted as organisers and secretaries throughout.

Poisonings.

Fourteen fatalities from poisoning are recorded since our last report. In eleven cases scheduled poisons were employed, these being carbolic acid (4), hydrocyanic acid (3), laudanum (2), chlorodyne, and oxalic acid. The unscheduled poisons include nitric acid, said to have been taken by a Leeds machinist in mistake for whisky; salts of lemon, taken in a 2-oz. dose by a woman at Abergavenny; and "a

Digitized by Google

root resembling a yellow radish" which a boy at Putney ate, and which a doctor at the inquest said was "black or garden nightshade." The oxalic acid was taken by a Merthyr carter, who obtained it from Mr. H. M. Lloyd, chemist, Victoria Street, Merthyr, for the purpose of cleaning harness. Carbolic acid still retains favour as a suicidal medium, and at an inquest held at Liverpool on March 29 on the body of a carbolic suicide the Coroner (Mr. T. E. Sampson) said the sale of the poison had been quite in accordance with the law as recently revised, but he still thought the sale of carbolic acid should be put on a more restrictive basis. At an inquest held at Gravesend on the body of Mr. M. O. Carruthers, of Messrs. Carruthers & Co., chemists, Gravesend, the medical evidence showed that death was due to prussic-acid poisoning. Mr. W. Geddes, deceased's partner, said Mr. Carruthers had been suffering from influenza and diarrhœa, and had been very despondent of late.—On March 28 an inquest was held at Norwich on the body of Mr. Arthur William Forster, late secretary and manager to Messrs. Fisher & Co. (Limited), wholesale druggists, Calvert Street, Norwich, who was found dead. From the evidence of Mr. Robert Fisher, managing director of Fisher & Co. (Limited) and father-in-law of deceased, it appeared Forster had been depressed and strange in his manner for some time before his death. Witness had reason to complain of some irregularities in money matters, and deceased had been discharged from the service of the company. Dr. C. J. Muriel said death was due to prussic-acid poisoning.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Sleeping draught Fatality.

An inquest was held at Lisburn (co. Antrim) on March 29 on the body of the Rev. Alfred Relton, Vicar of Brinsop, Herefordshire, who was found dead in bed at the Pakenham Arms Hotel, Lisburn, on the previous day. Chlorodyne and laudanum bottles were found in the room, and evidence was given that deceased occasionally took sleeping-draughts. Death from an overdose of sleeping-draught was the verdict.

Boating Fatality.

On Good Friday the sons of Mr. J. T. Holmes, one of the founders of the Pharmaceutical Society of Ireland, went out for a sail from Hoylake to Liverpool, along with Mr. John Lewis, of Birkenhead, dentist. Their boat was a 16-foot centreboard one, and when about a mile off New Brighton a sudden squall capsized the boat, and all three were drowned. Mr. Thomas Holmes, the elder of the two brothers, was a powerful swimmer, and it is supposed that he was drowned while trying to save his younger brother, Albert Edward Holmes, a clerk in the Local Government Board at Dublin. The latter had been on a visit to his brother Thomas at Birkenhead. Nothing could be done to avert the calamity or to save the men, and up to the present the bodies of the Holmes brothers have not been recovered. Much sympathy is felt in Dublin for their father, who has had many sorrows to contend with during his career.

Medicine-contracts.

At the meeting of the Strabane Board of Guardians, Mr. Jas. Hill, Strabane, was declared contractor for medicines; and the Medical Requisite Company, Cork, for medical appliances.—Mr. J. J. Cole, chemist, Cavan, was declared contractor for medicines to the Cavan Union.

Mr. P. N. White, Sligo, informs us that he neither tendered nor obtained the contract for medical appliances to the Strokestown Union, as stated in the *C. & D.* last week (page 488). It was the Medical Supply Company, Sligo, that got the contract, and our correspondent sends us a lengthy statement as to this company as well as the circumstances of the case.

The following have been declared contractors for medicines, &c., to the undernamed Boards of Guardians: Macroom (co. Cork) Union and Dispensaries—Messrs. Harrington & Co., Cork, at 13 per cent. below the L.G.B. list. Dunmonway (co. Cork)—Messrs. Harrington & Co., Cork, at 12½ per cent. off, for medicines; and Messrs. Clarke & Co., Dublin, 10 per cent. off, for appliances. Gort (co. Galway)—Messrs. Fannin & Co., Dublin, at 22½ per cent. off, for appliances; Messrs. P. A. Leslie & Co., Dublin, at 12½ per cent. off, for medicines. Dungarvan (co. Waterford)—Messrs. Thacker & Hoffe, Dublin, at 10 per cent. off, for medicines; and the Medical Requisite Company, at 7½ per cent. off, for appliances. Birr (King's County)—Messrs. Golden & Co., Birr, at 5 per cent. off, for medicines; and the Medical Supply Association, at 17½ per cent. off, for appliances. Athlone (co. Westmeath)—The Apothecaries' Hall, Dublin, for medicines; and the Medical Supply Company, Sligo, for appliances. Shillelagh (co. Wicklow)—Messrs. Thacker & Hoffe, Dublin, at 10 per cent. off, for medicines; and Messrs. Smith & Sheppard, Dublin, at 7½ per cent. off, for appliances. Castlerea (co. Longford)—Messrs. Boyes & Co., Dublin, at 15½ per cent. off, for medicines; and Mr. Adamson, Ballina, at 20 per cent. off, for appliances. Omagh (co. Tyrone)—Messrs. P. A. Leslie & Co., Dublin, at 27½ per cent. off, for medicines; and the Medical Supply Association, Dublin, at 15 per cent. off, for appliances. Carlow—Mr. D. J. McGrath, Carlow, at 22½ per cent. off, for medicines (Messrs. Hoyte & Co., Dublin, tendered at 2½ per cent off, and Messrs. Leslie & Co., at 2 per cent. off); and the Medical Supply Association, at 20 per cent. off, for appliances. Wexford—Messrs. Fannin & Co., Dublin, for medicines. Gorey (co. Wexford)—Messrs. Thacker & Hoffe, Dublin, at 10½ per cent. off, for medicines (Messrs. Leslie's and Messrs. John Clarke & Co.'s tenders were 5 per cent. off); and Messrs. Fannin & Co., Dublin, at 12½ per cent. off, for appliances.

English and Irish Medicines.

At the last meeting of the Dungarvan (co. Waterford) Board of Guardians, the following letter was read from Messrs. W. A. Leslie & Co., Dublin, regarding the medicine-contract:—

Gentlemen,—Our attention has been called to a resolution passed by your Board to try and obtain medicines from London. Of course, you are at perfect liberty to do this; but, at the same time, we think it is scarcely a patriotic action, and certainly it is the first time to our knowledge that such a thing has been done by any Board of Guardians. Certainly in the old days of the *ex-officio* Guardians these gentlemen, although they did not proclaim to the world what fine patriots they were, yet they never endeavoured to obtain supplies from England, and this, in a practical fashion, showed their patriotism. We note that you are astonished at the rise of 12½ per cent. in the price of goods. This is simply accounted for by the fact that the price of the crude materials is increased, and when we tender we reckon on the price ruling on the day we put in our tender . . . Certainly there is no such thing as a "ring" among the wholesale druggists in Ireland. Thanking you, gentlemen, for your past kindness to us—a house established in the year 1683 and a house that employs, and has always employed, a large number of hands (every one an Irishman), and which manufactures all the chemicals and drugs dealt in—and regretting that you should now endeavour to secure your supplies from England, we are, your obedient servants,

W. A. Leslie & Co.

The Guardians discussed the letter, and came to the conclusion that it was "uncalled-for, if not insulting."

Personal.

Mr. George W. A. Howard, Belfast, who is one of Mr. S. Gibson's staff, was last week presented with an illuminated address and gold watch by the parishioners of St. Mary's Church, Crumlin Road, on his leaving to take up the post of organist at St. Columba's Church, Knock. Mr. Howard has frequently assisted in the musical evenings of the Chemists' and Druggists' Society.

Chemist and Analyst.

At the last meeting of the Wexford Guardians a letter was read from Messrs. John Clarke & Co., Dublin, with reference to one from Professor Tichborne, in which they say:—

We only questioned the figures, and wanted to verify them by an independent analysis ourselves. We never meant to convey

Digitized by Google

for an instant that Professor Tichborne had made a mistake. We only expressed our surprise at such a stupid mistake having occurred on our part, and we suppose we are like other people, we do not like to admit a mistake until we are certain there is no loophole to get out of. We have not finished our own analysis, but when we do, if our own figures agree with Professor Tichborne's, we will admit our error at once.

The Chairman said that when the whole quantity was replaced they had no fault to find.

Increase of Analyst's Salary.

At the last meeting of the Coleraine Guardians, Mr. R. J. Blake, the analyst, applied to have his salary increased from 10*l.* to 16*l.* a year. The Board compromised by giving Mr. Blake 15*l.* a year.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

The Chemist's Legacy.

Mr. Robert Irvine, of Granton, whose death we announced last week (page 501), has bequeathed a sum (which when available will amount to from 25,000*l.* to 30,000*l.*) to Edinburgh University for the purpose of founding a professorship of bacteriology. Particulars are given in our abstract of the will (page 530).

Mr Robert Irvine.

Business Changes.

Mr. James D. Walker, chemist and druggist, has acquired the business in High Street, Peebles, carried on for many years by Mr. George Morison.

Mr. William Russell, chemist and druggist, has purchased the business carried on until recently at 5 Alvanley Terrace, Edinburgh, by Mr. J. D. Walker.

Mr Jas. Chapman, chemist and druggist, Kirkliston, has removed to Troon, and Mr. David Lister takes over the business at the former place.

Mr. Alex. Govan Reid, chemist and druggist, late of Torquay, has taken over the business at 84 Newington Road, Edinburgh, lately carried on by Mr. Blair Hill.

Messrs. Gibson & Co., chemists, Edinburgh, announce that in May they will open another branch at 13 Leith Street. This will be the fourth branch of the firm in the city.

Mr. Wm. S. Glass, pharmaceutical chemist, Edinburgh, has taken one of the shops in the new range of buildings at present being erected on the west side of North Bridge Street, Edinburgh, in which he intends to open a branch of his business. Mr. Blair Hill, chemist and druggist, who has relinquished his pharmacy at 84 Newington Road, is to manage the business. It is expected that the premises will be ready for occupation in May.

Edinburgh Chemists' Golf Club.

The fixtures for the season include competitions for the Captain's and club prizes, and the Gibson Handicap medal at North Berwick on the Spring holiday; for the Gibson Handicap medal, at the Braids on May 14, June 18, September 3, and on the Autumn holiday at Largo, where club prizes will also be competed for.

The Great De Wet Drive.

Mr. J. D. Horsburgh, the Volunteer compounder, who has frequently contributed to the *C. & D.* since he went to the front, participated in the second De Wet drive, and his experience of it is given in the *Scotsman* of April 1.

Glasgow Notes.

The American soda-water fountain has not yet made much headway amongst Scotch chemists, but several Glasgow shops now have them, and this season there are to be some new "installations."

The popularity and success of the Edinburgh Pharmacy Athletic Club have suggested the feasibility of a similar organisation in the capital of the West. In the meantime the project is in the incubatory stage.

A suburban chemist who put a fancy basket containing eggs stained in various attractive colours, and the legend "Easter-egg dyes, 1*d.* per box" in his window, was agreeably surprised to find that there was quite a run on what proved to be a seasonable commodity. He has resolved to develop this "side-line" next year.

The apprentice may not live, but he still lingers. An employer who was rummaging in his back-shop on a recent quiet Sunday evening, came upon a collection of improvised chemical apparatus and a note-book, from which it appeared that his industrious apprentice had been experimenting with Clyde water, in order to extract iodine from it. A patent may be applied for shortly, and then, good-bye to *caliche* and the Stassfurt deposits.

Chemists are warned against a male cocainomaniac who is at present going around. His *modus operandi* is to present a prescription for ʒij. 2-per-cent. sol. cocainæ hydrochlor., and when the bottle is handed to him, draw the cork, and swallow the entire contents. Thereafter, he coolly informs the chemist that he has no money, and does not care if he is given into custody for fraud. The chemist, rather than have any bother, usually gives the fellow a piece of his mind and then lets him go.

French News.

(From our Paris Correspondent.)

Fire and Explosion.—News has been received in Paris that the wholesale drug-warehouse belonging to M. Van Overstraeten, rue de Malines, Louvain, Belgium, was destroyed by fire last week (March 25).

Analysing a Glacier.—While the Pasteur Institute of Paris has from time to time astonished the world by the discoveries made in its laboratories, the chemists there find that it also falls to their task to destroy every now and then some popular fallacy. For instance, glaciers have usually been supposed to be free from those germs which tend to add zest to our daily life, but M. Binst, one of the head chemists at the Institute, has recently submitted to bacteriological analysis some ice obtained from the summit of Mont Blanc, and reports that on being melted the water contains germs that belong to the most diversified families of bacteria. M. Binst's theory is that the microbes are driven on the mountains by wind-storms.

The Chemical Analysis of Sardine Oil.—The chemists of the Paris Municipal Laboratory having issued a report to the effect that certain firms who put up sardines in tins and advertised that they use pure olive oil for the purpose were using oil that was found on analysis not to be of the quality described, the police have prosecuted one of them, M. Emile Giffo, a well-known Brittany sardine-packer. The defendant was, however, able to prove his good faith, and gave as his defence that the sardines themselves when tinned give off a certain quantity of oil and gelatin which mixes with the olive oil used, and somewhat changes its nature. As the sardines were in excellent condition and of good flavour, the summons was dismissed.

Morphine Propaganda.—There was a little scene of an unusual character in the Boulevard Richard-Lenoir, Paris, last Sunday morning. A young man who was passing down that thoroughfare suddenly stopped and took from his pocket a case containing a bottle of morphine and a syringe. After giving himself several injections of the drug in the neck, he stepped up to a man who was sitting on a bench and commenced giving him an injection also. On being

Digitized by Google

remonstrated with at this curious proceeding, the morphine young man said, "Pardon me, sir, for having made you suffer a little, but I am of opinion that the use of morphine is not sufficiently widespread, and have undertaken the duty of convincing the public of the advantages of this liquid." He then made off, and a little further away stepped up to a policeman, saying, "My poor fellow, you are not well; I can see you are despondent. I can cure you with this syringe if you like." Gently, but firmly, the representative of the law led the young man to the police-station, and it transpired that his name is Emile Lemarchand. He is only 21 years of age, and he was entered on the charge-sheet as a lunatic wandering at large.

The Late Prince Münster.—The passing away of the distinguished diplomatist, Prince Münster, better known under his former title of Count Münster, has caused widespread sympathy both in Paris and London, his career during the last twenty-eight years of his life having been spent in those two cities as German Ambassador. The Prince was a familiar figure in the shops of both places frequently calling to make his own purchases; and I am sure that pharmacists in the neighbourhoods of Bond Street and of the Rue de la Paix will have an agreeable recollection of his commanding presence and kindly manner. I occasionally came into contact with the late Ambassador in the way of business, and found him to be just that kind of customer to whom one has pleasure in rendering service. He spoke English excellently, and one of his favourite phrases when using that language was "My dear boy"—an appellation bestowed on all and sundry.

Saccharin in France.

In the French Senate last week the subject of saccharin came up for discussion towards the end of the debate on the Budget. Before the Bill reached the higher Assembly the Chamber of Deputies had voted several articles introduced on the initiative of the Government regulating the use of saccharin, and prohibiting its use for all other purposes except for pharmacy, therapeutics, and the preparation of products not intended for food. The Finance Committee, regarding the question as serious, asked the Senate to separate from the Budget the items voted by the Chamber. M. Viger opposed this, and spoke at some length with a view to proving that the prolonged use of saccharin is detrimental to health. He held that its use as a substitute for sugar cannot be tolerated, also that there is the greatest urgency to take an immediate decision, for if the vote were delayed, manufacturers and others using saccharin for sweetening-purposes would simply lay in heavy stocks, thus rendering all precautions illusionary. M. Poirrier, a prominent manufacturing chemist, replied on behalf of the Finance Committee in a statesmanlike speech. He supported the request to separate from the Budget the articles voted by the Lower House on the ground that the measure taken by the Chamber of Deputies would affect not only saccharin, but also certain industries in which the use of this substance is indispensable. M. Poirrier went further than this, and affirmed that saccharin is not detrimental to health. He contended that it does not compete with sugar. The Minister of Finances in turn declared that the use of saccharin in articles of food or drink is harmful according to the reports of various Committees of Public Hygiene, while, on the other hand, it is a prejudice to the interests of the Treasury, as saccharin is used instead of sugar, which bears an Excise tax. On the question being put to the ballot, the Senate confirmed, by 235 votes to 41, the proposal of the Chamber of Deputies limiting the use of saccharin. The Senate also specified the prohibition to the same extent of the use of all other artificial substances possessing a sweetening-power superior to that of the sugar-cane or beetroot, without having its nutritive qualities. The fact that the use of saccharin is to be to a great extent confined in France to pharmacy and therapeutics seems to sufficiently prove that the object in view is rather to foster the sugar-industry, which is a source of revenue, than to protect the public health. Legislation here has already treated saccharin with no gentle hand, and its importation into France is prohibited, but there is no doubt that it continues to be brought over the frontier by contraband in large quantities, and is largely in use for sweetening pastry, jams, and syrups. The Government hope to get at the root of the matter by making its use for such purposes an infringement of the law.

The Article of Law (No. 53) above mentioned was completed by the following:—

Article 54.—The manufacture of the said artificial sweetening substances can only take place in such places or works as are submitted to the permanent supervision of the Excise authorities. This supervision will be at the cost of the manufacturers. The cost will be fixed annually by the Minister of Finances, according to the number and salaries of the officers attached to each manufactory. (Voted.)

Article 55.—An account will be kept of the quantities manufactured, and sales can only be made to pharmacists for therapeutical and pharmaceutical purposes. For the use of saccharin for non alimentary purposes special regulations will decide the conditions of delivery and control of its use. (Voted.)

Article 56.—Pharmacists will be responsible for the quantities they receive; they cannot sell or employ the substances above-mentioned without a doctor's prescription. They must enter in their prescription-book the quantities received, those used for the preparation of medicines, with the designation of such medicine, the date of the doctor's prescription, with his name and address, the name and address of the client to whom the substances in the original form or the medicines dispensed with the said substances have been delivered. Every three months they must totalise the quantities received and those sold, either in the original form, or in medicines on a doctor's prescription. Infraction of this regulation will be treated as an offence against the Pharmacy Law.

The Speaker of the Senate read the Articles one by one, and here M. César Duval interrupted. He asked for the suppression of the third paragraph of Article 56, which, he contended, would make all the pharmacists in France agents of the Excise authorities, and he protested in their name against it. He had no objection to obliging them to inscribe saccharin amongst dangerous medicaments, but to force them to keep a quarterly account for the benefit of the Treasury of what they had bought and sold was out of the question. No pharmacist would consent to such a thing, but would prefer not to sell the product under the circumstances. M. Duval asked the Senate to suppress the paragraph in question. After remarks by other members, the Minister of Finances said: "I confine myself, gentlemen, to observing that when a principle is proposed the application must be carried out in its logical consequences. Perhaps it may be necessary—to allow full liberty to the exercise of pharmacy—to make one or two modifications in the wording of the Article in question; but from the moment you decide that saccharin can only be used for therapeutical purposes it is necessary to be certain that this is carried out. What we propose to require of pharmacists for saccharin is already imposed on them for other substances, such as phosphorus." He went on to say that the liberty formerly allowed to pharmacists in the sale of phosphorus led to great abuse, such as the fraudulent manufacture of matches, which is an important source of revenue to the French Government and a cherished State monopoly. He added that from the moment you accord what is, in his opinion, nothing more or less than a special favour to pharmacists, in authorising them to use a product prohibited by the law, you ought to submit them to a certain control. In so doing, he considered, there is nothing excessive. The Minister then went on to say that the first paragraph of Article 56, as presented, was an anomaly, the law requiring already that pharmacists should only dispense medicines on a doctor's prescription. Some discussion followed, and, finally, M. Maxime Lecomte presented an amendment as follows:—

Pharmacists will be responsible for the quantities they receive. They cannot sell or use the substances above mentioned except in view of a pharmaceutical use.

Paragraph 2.—They must enter on their prescription-book, &c., the designation of such medicine, the date, if necessary, of the doctor's prescription, &c. . . .

Paragraph 3.—Suppress at the end the words "on a doctor's prescription."

Paragraph 4 was maintained.

The amendment having been put to the Senate, it was decided to return it to the Finance Committee for consideration. Article 57 was then read by the President. It refers to the fines to be imposed for infringing the regulations

Digitized by Google

regarding saccharin. The fines will vary from 500f. (20*l.*), as a minimum, to 10,000f. (400*l.*) maximum, but this proposal was returned to the Committee, as were also Articles 58, 59, and 60, which treated of matters of detail. In reply to a question by M. Poirrier, the Minister of Finances said that holders of stocks of saccharin at present would be required to declare them, and would be given facilities for disposing of such stocks after due guarantees had been obtained for preventing fraud.

South African News.

Cape Chemists and the Martindale Memorial.

(Cablegram from Our Special Correspondent.)

CAPE TOWN, April 2, 1 40 P.M.—The Pharmaceutical Society of Cape Colony at a meeting just held considered the desirability of participating in the memorial to the late William Martindale. The meeting unanimously resolved to support the movement, and the Secretary was instructed to write to Bloomsbury Square, saying that the Society will contribute towards a memorial scholarship.

IT is proposed to establish a soap-factory at Congella, Durban.

A PATENT for "an approved apparatus for the distillation of water" has been applied for by James Hogan, East London, Cape Colony.

MESSRS. E. W. CARLING & Co., colonial merchants, St. Dunstan's Buildings, St. Dunstan's Hill, London, E.C., have been appointed London agents of the Johannesburg Town Council.

OF NO AVAIL.—The Cape Government has declined to confirm the findings of the Colonial Medical Council that Dr. Scholtz be struck off the list of medical practitioners in the Cape Colony (see *C. & D.*, February 1, page 187), and notice to that effect was made through the Press on March 4. Dr. Scholtz died on March 7.

BUSINESS CHANGES.—Messrs. McVittie & Scruby is the style of the new firm who have opened business in the Market Square, Harrismith, O.R.C. Mr. McVittie was formerly manager to the late Mr. Glaister, while Mr. Scruby was in business in Johannesburg.—Mr. H. L. Stonham has bought the branch business of Mr. F. W. C. Thomas, at Landsdowne Road, Claremont, Cape Colony.

A BUSINESS FOR SALE.—Advices from Natal state that the executor of the estate of the late Mr. J. W. Gowthorpe, chemist, is desirous of disposing by private treaty of the deceased's drug and mineral-water business in Newcastle as a going concern. The premises, on a portion of Scott Street, in the centre of the town, will also be sold, or let to the purchaser. A lucrative business, it is stated, is now being done.

GERMAN EXPORTS.—The following figures relate to the exports of cyanide of potassium, glycerin, and perfumery from Germany:—

	Cape Colony and Natal			Transvaal		
	1899	1900	1901	1899	1900	1901
Pot. cyanide (tons) ..	88	80	61	1,012	193	—
Glycerin (tons) ...	—	—	182	—	—	—
Perfumery (tons) ...	16	26	41	—	—	—

LICENSED.—The following have received licences to practise as chemists and druggists in the Cape Colony: William James Stronge (Irish certificate), Archibald Masterton, George Smith Houghton, George Francis Tutt (British certificates). Alexander Thomas Fraser, M.B. (late of Buxton, England), has been authorised to practise as a medical practitioner at the Cape.

PERSONALITIES.—Mr. Alfred H. Mathew (of Messrs. Heynes, Mathew & Co., Cape Town) is expected in England presently, and will visit the United States before returning to Cape Town.—Mr. W. Dawn Copley (of Smart & Copley, chemists, Bulawayo) is due to arrive in London about the middle of May.—Mr. Frank Turner (of Turner & Co., chemists, Pietermaritzburg and Johannesburg) is now back in the Golden City.—Mr. W. A. Stegg, chemist and druggist, who has hitherto managed the business of Messrs. Hazell & Son, chemists, is now a partner in that concern.

COMBATING THE PLAGUE.—A Blue-book of 243 pages reaches us from the Cape, containing the report and proceedings, with annexures, of the Cape Peninsula Plague Advisory Board, which was appointed to advise the Cape Government on matters connected with the suppression of the outbreak of bubonic plague last year. The report demonstrates how thoroughly suppressive measures were carried out, and how successful the prompt and vigorous action of the authorities proved. Specially interesting to chemists are the precautions to householders recommended by Professor Simpson, and the detailed bacteriological examinations of Dr. Edington. Amongst other precautions, Dr. Simpson advised the destruction of all mice and rats. Rodents caught in traps or found dead should have Jeyes' fluid thrown over them and the traps placed in a pail of Jeyes' fluid. Kitchen refuse should be burnt, or carbolic acid poured over it daily in the dust-bin. Yard and surface drains should be watered daily with a solution of carbolic acid, and the disinfectant used freely in the cleansing of cupboards, bedding, carpets, &c. Fresh air and sunlight in plenty should be let into all living-rooms; personal cleanliness is insisted upon, and in washing the hands the use of carbolic soap, or the addition of a tablet of chinosol or other disinfectant to the water, is recommended.

East Indian News.

PERSONAL.—Mr. E. Seller, representing Messrs. Burgoyne, Burbidges & Co. (London), was in Ceylon when the mail left (March 13).

INDIAN QUININE FOR SOUTH AFRICA.—India is now supplying quinine to South Africa, an order for 5,000 oz. of sulphate having been placed with the Government quinologist, Sibpur.

CHANGE OF TITLE.—The business of Messrs. Amritlal Nathoo Thakor & Co., wholesale and retail druggists, at 60 Kalbadevi Road, Bombay, will in future be carried on under the style of Thakordas Nathoo & Co. at the same address.

OPIUM IN BURMA.—It is stated that the Burmese Government will abandon the yearly auction of the opium-farms; and it is assumed that there may be an attempt made by the authorities to run the retail opium-shops departmentally.

HEMP-DRUGS.—Messrs. Arbuthnot & Co. have secured the Mysore contract for the wholesale supply of ganja, charas, bhang, and other intoxicating drugs prepared from the hemp-plant for the next five years. Messrs. Parry & Co. were believed to have offered the most favourable terms, and to be sure of the contract, but events have not been according to expectations.

MORE VETERINARY SCIENCE WANTED.—According to the *Madras Times*, considerable dissatisfaction appears to exist as to the neglect of the Madras Government in the encouragement of veterinary science. The Government of India, the *Times* asserts, has not the strength of mind to insist that the Civil Veterinary Department shall be anything more than a name. Hence the science and practice of veterinary surgery in Madras is said to be in a parlous state.

MR. F. H. GLEW, chemist and druggist, Clapham Road, S.W., contributes a paper to *Photography* on some experimental photographs he has taken with radium. Radium of good luminous quality costs 5*l* per gramme.

Digitized by Google

American Notes.

A Side-line.—Some of the New York drug-stores arebeing converted into branch circulating libraries by fi ting them with revolving bookcases to hold 120 volumes. These volumes are to be changed each week, and members may take any book on loan by dropping 5c. in a s'ot.

Unsatisfied.—The Baltimore correspondent of the *Pharmaceutical Era* state s that litigation in connection with the liquidation of the Charles A. Vogeler Company's a sets is not yet over. Creditors had filed exceptions to the allowances for attorneys and trustees contained in the auditor's report, and Judge Stockbridge scaled down the total by over £16,000 on fees and commissions. The creditors, however, do not consider the reduction sweeping enough, and have taken an appeal from the finding of the Court

Californian Olive Oil.—The Southern California Olive-growers' Association expects to control the olive-oil industry next year. It is intended to have branch associations in the several olive-growing centres. The object of the association is to establish prices which will be fixed to all packages of oil and pickled olives produced by its members. The present crop of the Southern California groves is one of the largest ever gathered. From 1 100 acres owned by the Capital Olive-growers' Association near Fernando there will be produced more oil than ever produced before in California in one year.

Harrying the Grocer.—At the instance of the State Board of Pharmacy, several grocers in San Francisco have been arrested for violating the provisions of the State law prohibiting the sale of poisons unless made by registered pharmacists. The special charge brought against the parties in question was the sale of wood alcohol, which when sold by a registered pharmacist should have the name of the vendor on the label and the sale should be recorded in the registry-book. It is one of the peculiarities of the law in San Francisco that sales of wood alcohol must be registered, and so active a poison as carbolic acid dispensed without any record being made.

Capture of Smuggled Opium.—The United States Customs at Portland, Ore., have effected one of the largest seizures of smuggled opium ever made at that port, consisting of 1,250 tins, which, without duty, cost the smugglers about £4,500. The lot will bring about £10,000 when auctioned by the Government. The opium came from British Columbia, but was shipped to Portland from Seattle over the Northern Pacific Railroad. The smugglers' plan to land the opium in Portland was to send it with a consignment of household furniture, bedsteads, tables, chairs, and kitchen utensils, and with them three boxes which might naturally be supposed to contain dishes or books, but which contained the 1,200 tins of opium.

A Landmark Disappearing.—The drug-store of the Theodore Metcalf Company, at 39 Tremont Street, Boston, which has been famous in the history of Boston for three-quarters of a century, is to be demolished and replaced by a building more suited to modern requirements. When Dr. Oliver Wendell Holmes (the genial "Autocrat") began his career as a physician, he hung out his sign almost directly over that of Mr. Metcalf, the pharmacist. Quoting Dr. Holmes's own words, "When I began to practise I was as anxious to get a fever as Mr. Metcalf was to get a favour; what business we could not attend to between us was looked after by the sexton across the street." The presence of a graveyard directly opposite was considered a serious drawback to the young doctor and the young pharmacist in their early efforts, but it did not prevent either from securing the rewards to which each was entitled. Dr. Holmes's writings are, perhaps, better known to the world than his skill as a physician, but Mr. Metcalf soon built up *the* dispensing-business of Boston, and it has gone on increasing as the years have rolled. The new building will be on exactly the same site as its predecessor, and it is expected that it will be ready for occupation in about twelve months. Until the new building is completed the business will be temporarily located at 36 Court Street, adjoining Tremont Street.

Colonial and Foreign News.

Colombia Increases Import-duties.—A despatch from Colon states that the Colombian Government has increased the import-duties 30 per cent.

New Mineral Water.—Apotheker Josef Simkovich, of Klausenburg, Hungary, has received permission from the Government to introduce into commerce a medicinal water—Rózsa-Heilquelle—obtained in the neighbourhood.

Projected Swiss Tariff.—A new Swiss tariff, is to be brought before the Conseil National and the Conseil d'Etat in May. The new schedule of duties contains 1,123 articles, as against 723 for the conventional tariff and 476 for the general tariff now in force. A marked increase is noted in 500 of these 1,123 articles, especially in the case of agricultural products.

No Room for Chemists.—A *Times* correspondent describes Liberia, the negro Republic on the West Coast of Africa, as "the fairest land in the whole continent of Africa." "A commercial botanist," he adds, "would discover drugs of value, for there are few diseases which the native doctors cannot cope with by the aid of the products of the Liberian forest."

Chemicals for Spain.—The *Gaceta de Madrid* of March 6 contains a Royal Order authorising the Grenada powder-factory to purchase by private negotiation 87 tons of gun-cotton, 115 tons of sulphuric ether, and 10 tons of raw cotton from certain German firms, and the following without indication of market—namely 85 tons of alcohol, 4 tons of acetic ether, 40 tons of nitric acid, and 40 tons of sulphuric acid.

Oil Tenders Wanted.—Tenders are invited by the Intendant of the Norwegian Navy, to be received by April 12, for the following oils: 20 000 kilos. sweet oil (not more than 8 per cent. acid), 30 000 kilos. marine oil, 2,000 kilos. castor oil, and 3 000 kilos. lamp-oil, of good qualities. Conditions of tender may be examined on personal application at the Commercial Department of the Board of Trade.

Brazilian Dental and Medical Diplomas.—A federal statute in Brazil provides that all physicians, surgeons, and dentists of foreign extraction who desire to practise their profession in any part of the country must first pass a prescribed examination at the medical colleges at Bahia and Rio de Janeiro. These examinations, which include languages and other branches not usually found in a medical curriculum, are said to be so severe that few foreigners have any chance of passing them successfully. It is now reported that this law is to be more rigidly enforced hereafter, especially in the case of dentists. Such British or American dentists as have been practising in the country may now be required to go to Rio de Janeiro and pass examinations; and although Brazil supplies a very profitable field for medical practitioners, the examinations are said to be so severe as to necessitate two or three years' extra preparation.

Lagos Notes.—A Ladies' League has been formed in the colony of Lagos, the main object of which is the administration of quinine to children and the combating of infant mortality.—A meeting of the Legislative Council was held at Government House, Lagos, on February 17, when the Bill entitled "An Ordinance to Regulate the Dispensing and Sale of Drugs and Poisons" was read a second time. The Council then went into Committee, and the Bill was considered clause by clause, and amended in several particulars. The Bill having passed through Committee with amendments, progress was reported, and Council resumed. His Excellency Sir William MacGregor, Governor and Commander-in-Chief, informed members that it was not desirable to proceed further with the Bill at that meeting on account of several alterations, but it should be held over till next meeting, when members would have had clean printed copies as amended. It is understood that the Ordinance has been so modified that practising druggists of good standing will only be required to produce a certificate of efficiency from a duly qualified medical practitioner in order to obtain a licence, and the prime stumbling-block to the passing of the measure (see *C. & D.*, February 22, page 307) has thus been removed.

Winter Session.

Dispensing and Prescribing.

As briefly mentioned in our last issue, the Bradford Chemists' Association on March 25 discussed dispensing and prescribing questions. The President (Mr. Hanson) led off the discussion by stating that rightly the dispensing of prescriptions belongs to the chemist, and the work requires a broad and liberal education, possession of precise technical knowledge, and the employment of a high degree of operative skill. Many physicians who formerly expected their prescriptions to be made up by the chemist, now write a prescription only when they have a poor patient and desire the chemist to share in the charity. One cause which has contributed greatly to this, he said, is the number of persons employed in pharmacies who have infringed upon the province of the doctor and thus brought discredit upon the whole profession. Medical men argue that the pharmacist is incompetent to do dispensing, or often hands it over to his assistant or apprentice. The increase in the number of low-grade medical colleges and a consequent over-production of graduates of corresponding quality is also a factor in the case. Manufacturers also make a speciality of supplying physicians with ready-made prescriptions, and do all they can by pamphlets and pocket-books to supply the physician with ready-to-hand information. This aspect of the question was enlarged upon, all its iniquities being exposed, and Mr. Hanson proceeded to make a scathing exposure of the conditions of dispensing in doctors' surgeries. He added that hundreds of instances had been recorded in which the compounding of the prescription as written by the physician would have been almost certainly followed by a fatality. Would the physicians have avoided those mistakes if they had dispensed the medicines instead of writing the prescriptions? The only effective precaution against such mistakes is the interposition of the learning and judgment of a competent dispenser between the physician who prescribes and the patient who takes the medicine. He felt sure that every chemist had had cases of wrongly dispensed medicines, overdoses in prescriptions, and incompatibilities too numerous to mention brought to his notice, and he thought that in the near future the Pharmaceutical Society should make it their business to inquire more seriously into this trespassing on the preserves of the chemist; it is the duty of every chemist, he concluded, to try to promote good feeling between doctors and chemists, and to show the medical profession that it would be to their interests to let the dispensing of medicines be done in its proper place by a properly qualified chemist.

Mr. Marshall remarked that if some chemists had to live on dispensing they would not be able to live at all.

Alderman Dunn said that it would not do to blame chemists for prescribing while the doctors do their own dispensing.

Mr. Silson said the chemist had established the right to prescribe, and there was no doubt that he would keep that right. The difficulty was that very few of the chemists in Bradford could live if they depended upon dispensing.

Alderman Dunn suggested that the local medical societies should be approached on the subject.

Mr. Penty said he had reason to believe that any suggestion of the chemists on the subject would have great weight with the medical societies.

Mr. Bailes and Mr. Marshall spoke of the quantity of dead stock which the chemist often had to carry in consequence of purchasing bottles of drugs to deal with prescriptions.

The President replied that they might find it of very considerable mutual benefit in an exchange of lists. There were sixty or seventy of them in Bradford, and they ought to be able to arrange so that they would have very little dead stock, and accommodate each other materially.

It was decided that the suggested exchange of lists should take place, but no action was taken with regard to the proposed consultation with the medical societies.

A vote of thanks having been accorded to the President, Mr. Waddington raised certain questions in regard to the management of the *Pharmaceutical Journal*, and as to the proposed federation for Yorkshire, and it was determined to discuss these at a meeting to be held on April 8.

The Public Dispensers' Association.

At the meeting held on Wednesday, March 26, at St. Bride's Institute, Ludgate Circus—the President (Mr W. Duff) in the chair—there was a fair attendance although, considering the important business on hand, it was not what might have been expected, owing doubtless to the rather inclement weather. The Chairman stated that the business of the evening was the proposed alteration in the prospectus of the Association. The first point in the prospectus was the title; this, the President said, it was proposed to retain unaltered. Mr. Goodall, however, proposed that this should not be done, as the reference to poor-law was distasteful to most of the members. He moved that the title be altered to "The Public Dispensers' Association." Mr. Spencer seconded the proposition

Mr. Dunstan moved, as an amendment, that the old name be retained, for, said he, the Poor-law members would entirely lose their identity if the name was omitted, and, further, it was the old Poor-law Dispensers' Association that formed the nucleus around which the present one had grown. Mr. Lindsay supported this view. The President then put the matter to the vote, and there was a large majority for the proposed alteration, all except two of the poor-law members present voting for the change.

Another change was to insert the words "all dispensers in public institutions shall be eligible for membership." The Council wished to draw attention to the fact that by public institutions, hospitals, infirmaries, asylums, all Government institutions, provident and other dispensaries were intended. It was also agreed to add to the clause which states "to provide basis for consultation and united action in all cases of difficulty arising out of the nature and in the discharge of their duties," the words "and to provide legal assistance if necessary." The Council also desired to omit a poor-law secretary from the list of executive officers, it being felt that there would be less confusion if only a general secretary were retained. As each section of the Association is represented upon the Council it was thought that special business would be well looked after by them.

Mr. Dunstan moved that the Poor-law Secretary be retained, but on being put to the vote it was found that the majority were in favour of the omission.

The last part of the prospectus states that provincial dispensers are cordially invited to become members, and to take an active part in the affairs of the Association by forwarding papers for discussion and communications of general interest.

The next business on the agenda was a discussion of the "Interim report of the Dispensing Committee of the Pharmaceutical Society." Mr. Noad Clark said that he would like at the outset to draw attention to the fact that, being an interim report, much criticism could not be indulged in, but he felt very disappointed that the Council of the Pharmaceutical Society appeared so satisfied with the state of affairs. This proved to be the general opinion of the meeting up to closing-time, and all present were unanimous that the members of the Association should work together for their mutual interest, and that much could be achieved by so doing.

The discussion was adjourned until next meeting.

Chemists' Managers' and Assistants' Society.

At a meeting of this Society held at the Horseshoe Hotel, Tottenham Court Road, on March 26, with the President (Mr. C. E. Pickering) in the chair, a paper was read by Mr. George Cullwick (Treasurer) on "Chemists' Prices—old and new," in which he referred to the great differences in prices charged by the chemist of twenty years ago, and his successor of to-day. He particularly complained of the diversity in prices charged by chemists at the present time. No two chemists, he said, charged the same price for the same article. Patent medicines, for instance, were to be had at 1*s* 1½*d*., 1*s*. 1*d*., 1*s*., 11½*d*. and 10½*d*., according to the idiosyncrasy of the seller. Such ordinary everyday things as methylated liniments and lime-water were sold at various

Digitized by Google

prices according to locality. He urged chemists to pay much greater attention to their window-dressing, and they would find an appreciable increase of trade. The President also discussed these matters at same length, and insisted strongly that chemists ought at least to charge good prices for their skill in dispensing, just as a doctor charges for his professional attainments. Mr. Jones considered some of the comparisons made by Mr. Cullwick to be odious. He thought the impression which appears to prevail, that the "stores" are in the habit of dispensing anyhow, is an entirely mistaken one. He disagreed also with the opinion expressed that the old-fashioned chemist will keep the dispensing from the drug companies. The President said from his own experience he was convinced that nothing sold in "stores" was up to the standard of such a place as the Apothecaries' Hall. The general opinion was, however, that Mr. Cullwick's paper was a very instructive one.

Cardiff Pharmaceutical Association.

A meeting of this Association was held on March 26, under the presidency of Mr. Robert Drane. The first subject on the agenda was that of a

Curriculum and Divided Minor.

The President said he was opposed to an enforced curriculum at the present moment. The whole scheme was premature. When an enforced curriculum was realised it would be more difficult for students to enter the ranks of the drug-trade than to qualify for the career of a general practitioner in medicine. By adopting such a system now he considered they would render it almost impossible to obtain apprentices. The public were not demanding greater qualification in chemists than they at present possessed. He admitted that as craftsmen they were losing ground and were rapidly being reduced to the position of petty shopkeepers, and that the only way out of the difficulty was by some method of enforced curriculum; but at present they were not ripe for that. Mr. A. Hagon thought if they were going to divide the Minor examination the need of an enforced curriculum was not so pressing. The discussion was continued by Messrs. Gerhold, R. Griffiths, and A. J. Bellamy. The last-named read a letter he had received from Mr. G. F. Merson, Hon. Secretary of the Federation of Local Pharmaceutical Associations, in which he said: "It is generally conceded that the present Minor examination is too much of a cram, and that any means whereby the heavy mortality could be obviated would be of benefit to the trade as well as to the individual student." Mr. Bellamy said for his own part he thought that if apprentices were properly treated and got the training they should do, there would not be so many failures in the Minor examination.

The President did not think that the percentage of failures was very much larger than in the medical profession. Eventually a recommendation that the Minor examination be divided was agreed to.

Mr. A. Hagon then proceeded to discuss the President's verses entitled

"Bunkum & Co."

with reference to patent medicines. It seemed to him (Mr. Hagon) a grievous thing that a box of pills or tablets which were of no more intrinsic value than a few pence should be sold at 2*s.* 6*d.* He objected very much to the sale of these remedies without a clear statement as to their contents, and without any opportunity being given to the public to arrive at an estimate of their cost. He thought that some such plan as obtained on the Continent should be adopted in this country, and, further, that for handling these goods they as chemists should receive a minimum profit of at least 20 per cent. He agreed with the President that ridicule was one of the best weapons they could employ to remedy the present state of things, but he would go to the Legislature and ask them to adopt the continental plan and order the exact recipe to be printed on every package of stamped medicine. He would go even further and demand that the preparation and sale of all medicines for human consumption should be limited to qualified chemists.

Mr. R. Mumford thought they should confine themselves to what was practical. To memorialise Parliament against any business which brought in a revenue close upon 300,000*l.* a year would be futile. Until someone started cutting the prices of patent medicines, he never heard a word against them, but now when they had to hand over a 2*s.* 6*d.* article at a profit of 3*d.* they began to tell their customers that they had a much better article for 1*s.* (Laughter.) For his own part he thought it was very convenient to have a few things put up ready for sale, especially when they were very busy, for it saved them the trouble of having to make a mixture themselves. In his opinion any attempt to check the sale of patent medicines would be about as successful as that of Mrs. Partington in trying to keep back the waves of the ocean with a mop.

The President thought Mr. Mumford had hit the point in saying that when they were making a good profit by the sale of lies they were content to deal in falsehood. That, however, had never been his usage for at least a quarter of a century. He had never once given any countenance to the sale of patent medicines, and though the usage of the trade had compelled him to be a distributor of these things, it had always been under protest. This dealing in patent medicines and the publication of lying advertisements were the damnation of their trade.

Mr. R. Griffiths was appointed Secretary to the Buying and Selling Bureau.

A vote of thanks was accorded to Mr. W. J. Sanders, the late Hon. Secretary, for the gift of a number of volumes of The Chemist and Druggist and other books; and it was decided to hold a smoking-concert on the second Tuesday in April.

Torquay Chemists' Association.

The first annual meeting of this Association was held on March 20 at the Pavilion Hotel, Torquay, Mr. R. Sloman presiding over a good attendance. The Hon. Secretary (Mr. J. Young) presented his

Annual Report,

in which he said the Association had not only created a bond of friendship amongst the chemists of Torquay, but it had undoubtedly benefited them in a financial sense. The scheme of co-operative buying adopted by many of the members had proved a great success. The Hon. Treasurer (Mr. Bourne) reported that the Association was in a sound financial position.

The following officers were elected for the ensuing year: Mr. Knight (President), Mr. Ness (Vice-President), Mr. Young (Hon. Secretary), Mr. Horner (Hon. Treasurer), Messrs. Cutmore, Lee, March, Newlyn, Rawling, and Sarson (Paignton) as Executive Committee.

Enforcing the Stamp Act.

A discussion then took place in regard to the recent raid made by the Inland Revenue authorities on the Torquay chemists for offences under the Stamp Act. The chemist who opened the discussion said he had only a short time ago purchased an old-established business in Torquay, and amongst the literature in stock at the time was a circular enumerating a list of articles prepared by the firm. The wording of the circular wrapped around one of the preparations made the whole of the articles sold liable to stamp-duty, and the authorities demanded penalties amounting to 90*l.*, but accepted 10*l.* Another chemist stated that he received orders by post for numerous articles, amongst them being one for "carbolic dressing," where the words "carbolic dressing" were simply written upon an ordinary poison-slip. In course of time came the usual official missive inquiring as to what reasons could be advanced for the non-payment of penalties incurred amounting to 130*l.* It was pointed out that no amount of word-twisting or reasoning could make the "carbolic dressing" liable to duty, and the result was that the penalties were reduced to 20*l.*

In another case 90*l.* was demanded as penalties for nine articles sent by post. Amongst the goods sold was a box of "Blank's Glycerin Lozenges," which was held to be liable, although the same label had been passed as not liable some years ago. After some correspondence the sum demanded was reduced to 10*l.* The speaker considered this was a case which should be defended by the Pharmaceutical Society, as

Digitized by Google

they took the guineas from chemists, but, to use an inelegant though expressive term, they were not worth "two penn'orth of gin" in helping the trade.

Mr. KNIGHT quoted a case which happened some years ago, where a bottle of essence of ginger, the label of which bore the words "Beneficial after sea-bathing," was held to be liable to duty. He paid one guinea under protest, as he considered, like many others, that it would be unwise to fight the Government.

Mr. SLOMAN gave his experience with respect to a skin-lotion label, where the words "Skin irritation" were held to make the lotion liable to duty, and 10*l.* was demanded. After protesting that it was exempt under "toilet-articles" class, the authorities withdrew their claim on condition that it was stamped in future.

Mr. YOUNG considered that if the C.D.A. could defend Medicine-stamp Act cases, it was clearly the duty of the Pharmaceutical Society—as the representative body of the trade—to undertake this work. At least half the chemists in Torquay had withdrawn their support from the Society on account of its apathy.

Mr. KNIGHT suggested that the Pharmaceutical Society should attempt to obtain a clearer interpretation of the Act, as no one seemed able to understand it in its present form. After a long discussion it was unanimously resolved that a letter be sent to the Pharmaceutical Society calling attention to the series of frivolous and vexatious prosecutions instituted by the Board of Inland Revenue against certain members of the Society, and expressing the opinion that the Pharmaceutical Society should take steps to actively defend certain cases in the interests of the trade. Upon the suggestion of Mr. YOUNG it was resolved that a letter be sent to Mr. Leyland Barratt, M.P. for Torquay, inviting him to ask a question in Parliament as to whether half the fees recovered by Inland Revenue authorities go to the informer.

Edinburgh Chemists' Trade Association.

A MEETING of this Association was held at 36 York Place, Edinburgh, on March 27, Mr. David McLaren (in the absence of the President) in the chair. In view of the fact that the British Pharmaceutical Conference is to be held at Dundee this year, it was agreed not to have the annual excursion.

INLAND REVENUE STAMPS.

Mr. BOA brought forward the question of whether the Inland Revenue should be approached with the view of securing that stamps issued by them for the use of chemists and druggists be perforated and gummed. A member of the trade had drawn his attention to the fact that in the case of a chemist putting up a number of dutiable proprietaries the way in which the stamps were sent out necessitated a considerable amount of careful trimming. If they were sent out like postage-stamps it would be a great convenience to those who used them. He had made representations to the Revenue authorities in Edinburgh on the subject, and had been told that if several of them made a representation at headquarters they might get what they wanted, otherwise nothing would be done.

The members present said they did not use any, or very few, of those stamps; and as the gentleman who mentioned the matter was not a member of the Association, it was agreed to take no action.

Mr. BOA then opened a discussion on the

SALE OF POISONS.

He said there were possibilities of chemists inadvertently doing things in connection with the sale of poisons which might have a prejudicial influence on their future interests. In having put upon them the responsibility of the sale of poisons chemists were at the same time charged with a certain amount of duty to the public. The right to sell poisons, however, gave them no right to restrict the sale of poisons. If anyone came to them for twopennyworth of laudanum or chloroform, he should say the first principle they had to act upon was the right to assume that the purchaser was perfectly sane, and that unless there was some obvious reason for objecting, the retailer should supply what was asked for.

The CHAIRMAN: Do you start at a pennyworth?

Mr. BOA said he did not regard the quantity at all. If a man asked for a halfpennyworth of poison he considered a chemist was in duty bound to supply it unless there was some good reason to the contrary. The objects of the passing of the regulations were, it seemed to him, to be that poisons should be sent out under conditions which, in the hands of people in their senses, would prevent the stuff from being used with any disadvantage to anyone. That, to his mind, did not justify a chemist in refusing to sell poison unless for some very obvious reason. If a man was insane or drunk he should not be supplied, but otherwise the chemist was not justified in refusing to sell the poison. The chemist was in the same position as the hotel-keeper, who was bound to sell refreshments if he was asked for them. If they made unnecessary objections in selling poisons, they might quite rightly have people calling for greater facilities in the getting of poisons. There were many poisons used for remedial purposes, or in the arts, and to put any obstacle in the way of people getting such poisons would be extremely injudicious on the part of the trade. The object of the poisons regulations was not to restrict: the object was the safety of the public. They did not carry through legislation for people who were insane: the laws were made for the people who were supposed to be in their senses. The public was advancing in education, and as people were more highly educated they were more capable of dealing with dangerous subjects with greater safety, and the procedure which might have been quite right twenty years ago was probably out of date at the present moment. When any member of the public wanted a poison in Part I. of the schedule—say, perchloride of mercury—for some legitimate art purpose, if he was not known to the chemist he could not sell the poison to him without a witness, but it would be a right thing for the chemist to make it as easy for that man to get what he wanted as possible. He sometimes got handed in to his place of business a poison-bottle labelled "Laudanum." He considered it was an extremely injudicious thing to put laudanum into a poison-bottle and label it with the glaring red label used for articles intended for external use. By doing so they did away with the main object of using a poison-bottle—that was, to draw a distinction between what was for internal use and absolutely for external use. He did not think it right to put laudanum into a poison-bottle, especially if it was labelled "Dose—10 to 20 minims" He believed fear of the coroner very largely conduced to many chemists being disinclined to sell poisons except to regular customers. If anything went wrong the coroner sometimes took the opportunity to cast aspersions on the chemist; but if a chemist supplied poison according to the regulations, no man had any right to say anything against him, and if anyone did say something against him under such circumstances it was the duty of the Pharmaceutical Society to see that its members were protected.

Mr. FORBET agreed with Mr. Boa. Chemists, he thought, were not legally entitled to refuse poison to anyone whom they knew. They were the legal vendors of poisons, and if anyone whom they knew came in for a poison he thought they were legally bound to sell it, unless, of course, the purchaser was not sure of the name of the article wanted. He would not hesitate to send a child for a written note, and on anyone asking for oxalic acid or salt of sorrel he inquired what it was for. Perchloride of mercury for photographic purposes he sold right away, registering the purchase.

In answer to a question as to how he would treat a sale of 2 oz. of laudanum, with directions for 20 drops to be taken internally and four tablespoonfuls to be mixed with a poultice, Mr. BOA said he would put the laudanum into two bottles.

Mr. MCPHERSON also agreed with what Mr. Boa had said. He thought they ought to construe the Act and regulations liberally without departing from their spirit. The regulations were certainly puzzling at times, and would require overhauling by people having some practical knowledge of the question. In a sale of laudanum for internal use it might be put into a plain bottle and labelled "Poison." Tincture of opium for a lotion would be put into a poison-bottle and labelled "For external use only." It was not compulsory to put carbolic acid into a ribbed bottle, but it was compulsory to so put carbolic lotion above 3 per cent. With regard to the coroner, they had no coroners in Scot-

Digitized by Google

land, and he did not see that the Pharmaceutical Society had any duty in England, except that Mr. Bremridge might send a letter to the offending coroner.

Some further conversation took place on the various dispensing practices, and on the selling of poisons for agricultural purposes.

Mr. Rutherford Hill said it seemed to him that the public were entitled to expect the qualified seller of poisons in the district to keep the poisons that were desired, but he did not think he was bound to sell them. The liberty and discretion was left to him to refuse where he thought proper, but he ought to stock them. It had been said that the poisons regulations should be observed. He thought that wanted drawing attention to, as he was afraid there was a great deal of disregard of these provisions, which was being quoted against them. Articles, he believed, were being sold which came under the provisions of Section 17, Part I., of the schedule. These ought not to be sold to strangers, and ought to be registered if sold. He was afraid that regulation was being disregarded. The other point was that when they did work out the regulations framed under the Act of Parliament they got themselves into endless difficulties. His opinion was that there should be no such regulations by Act of Parliament. The restriction of the sale of poisons should be left to educated persons to carry out with commonsense and judgment. All attempts at increasing mechanical restriction should be sternly resisted.

Prescriptions of Poor Patients.

The next item of business was a proposal by Mr. C. F. Henry to circularise medical men as to specially marking prescriptions of poor patients, but he suggested as the evening was advanced it should be left over till next meeting. He said that twenty years ago it was a common practice for medical men to mark prescriptions, but the practice had apparently lapsed completely. He thought the Association should direct attention to the fact that chemists did make medicine cheaper to those not so well able to pay for it as others. It was agreed to postpone this discussion, and the meeting terminated with a vote of thanks to the Chairman.

Edinburgh Chemists', Assistants', and Apprentices' Association.

A meeting was held at 38 York Place, Edinburgh, on Wednesday, March 26, at 9.15 p.m., Mr. J. G. Sclater (President) in the chair.

Besides the paper by Mr. Lyon (*C. & D.*, March 29), Dr. Gordon Sharp read one on

Dosage.

Dr. Gordon Sharp first gave the dictionary definition of dose and dosage, and spoke of the object of administering doses of a drug or chemical agent. How a dose exactly acts is not known, but it may reasonably be assumed to act by modifying the normal action of the cell. Some drugs at least form chemical compounds with the tissues in much the same manner as albumin and the metals. He then went on to speak of the methods of administration, dividing the subject into two parts—(1) by the direct method, when drugs are applied to the skin, as mercurial ointment, when the tissues directly absorb the mercury hypodermically, or injected directly into the blood-stream; (2) the indirect method, when drugs are administered by the mouth, or by the bowel in the form of enema or suppository These methods were then considered in detail, the following being the remarks on hypodermic medication:—

The hypodermic needle was first introduced by Alexander Wood, an Edinburgh surgeon. It is limited in its application, and is chiefly used in the exhibition of the active, soluble, and potent glucosides and alkaloids. It is rapid, certain, and more dangerous than the other methods, hence the dose is smaller, and greater care has to be exercised in using it. The tissues soon become saturated by a drug given in this way. If we take morphine as an example, we find the tissues are rapidly saturated with the drug, and elimination is slow, and the risks of fatal poisoning are greater than when given by the mouth. A dose of morphine given by the mouth is soon eliminated by the kidneys, whereas a dose given under the skin is only slowly eliminated, and the morphine instead is passed round the circulation and so produces a continuous action till every tissue may become soaked and paralysed. In fact, given in this way morphine appears to act like pepsin in another connection—that is, it can be used by the tissues over and over again. It is known that if one makes a solution of pepsin containing the normal proportion of hydrochloric acid, and then make it digest its maximum of albumen, fresh albumen can afterwards be added almost indefinitely provided the solution is diluted and hydrochloric acid added in normal proportion.

After considering the relative potency of drugs, Dr. Gordon Sharp passed on to certain important factors influencing dosage—age, sex, race, climate, and individual peculiarity.

The dose for one year is generally reckoned as one-twelfth or one-thirteenth of the adult dose. Take the twelfth. This gives the age in years as numerator and denominator, but to the denominator twelve is added. If we take the dose for two years as an example, we get an equation $\frac{2}{2+12}$, and if we work this out we find the dose for two years is one-seventh of the adult dose. Like all rules, it has exceptions, for the undeveloped nervous system of the child cannot be relatively compared by any fixed denominator. However, we may lay it down as a law, with exceptions, of course, that drugs whose constitution is simple are well borne by children.

The female dose is rather less than the male dose. Women are often highly susceptible to the simplest bitters, but they stand purgatives and iron better than men. There is a racial peculiarity even in drug-taking. The Scot has not been nurtured in the lap of luxury, and heroics and superlatives extend to his drugging. Climate has an important effect on the action of drugs. In tropical countries quinine is prescribed in much larger doses than could be tolerated in cold or temperate regions, and ipecacuanha can be given in larger doses without causing nausea. Genuine individual peculiarity to small doses of certain drugs is so varied, so inexplicable, and so humorous that it almost borders on the romantic, and a fascinating chapter might be written on the subject.

The speaker then referred to larger doses than those ordinarily prescribed, and suggested that the Pharmacopœia Committee insert a paragraph in the preface asking prescribers to make distinctive marks when they intentionally order larger doses than those given in the Pharmacopœia. Liquid extract of ergot, the dose of which is 10 to 30 minims, is occasionally prescribed in 2-dr. or even 4-dr. doses. The solutions of arsenic are likewise often administered in doses far in excess of the 2 to 8 minims, as much as 30 or 60 being prescribed in St. Vitus's dance in children. The 5 to 15 minims of tincture of digitalis may, in alcoholism, mount up to 60 minims. Ipecacuanha-root in powder is prescribed in tropical countries in 30-gr. or 60-gr. doses every hour for five or six doses in dysentery, and now and again one has to give such doses in this country to patients who have lived in the tropics. Dr. Gordon Sharp next spoke of dose calculations and the relative advantages of apothecaries' weights and the metric system. He said:

The metric system, being a decimal method, is easy of multiplication and division as compared with our clumsy system, but mistakes in dispensing are not unknown in Germany, which is the adopted home, if not the birthplace, of the metric system. The very clumsiness of the apothecaries' system may be a safeguard, because in making calculations one has always to be on the watch. Whether it is this or the superior intelligence of British pharmacists, it is pleasing to record that dispensing mistakes are few. After everything has been said against us as to our slowness and dulness in taking up and comprehending new methods, our most determined opponents will admit we are a practical people. If it had been evident to us that the adoption of the metric system was to be of material advantage in the actual practice of medicine and pharmacy we should ere now have been deep in the mysteries of the cubic centimetre. The American people are nothing if not up to date, and they do not enforce the metric system in the dispensing of prescriptions. The metric system is authorised by Act of Congress as it is amongst us by Act of Parliament. . . . There is something to be said for the old system, and seeing chemists not only know a system that has been practised so long in dispensing, but also know the system employed on the Continent, no one has any right to look upon British pharmacy as being old-fashioned in this respect.

Finally, reference was made to the doses given in the Pharmacopœias. The system adopted in the 1898 edition marked progress in the science and art of Pharmacopœia-making.

Digitized by Google

improvements could be made, and have been suggested but, on the whole, a bold attempt has been made at uniformity in dosage. This better system is no doubt due to the larger measure of representation which pharmacy has had in the compilation of the work. Pharmacy should be largely and directly represented on the Pharmacopœia Committee, for the book concerns the pharmacist even more than it does the medical man. There are many medical practitioners who have not yet seen the inside of the 1898 Pharmacopœia, but Dr. Gordon Sharp questioned if there could be found one pharmacist of whom the same can be said.

Mr. Dott said the paper of Dr. Sharp was an exceedingly interesting one. There was one point in which he did not quite follow what he said. That was in regard to the analogy between morphine and pepsin. He would expect morphine to be oxidised in the tissues, and could not see how it would be available for continuous use. With regard to Mr. Lyon's paper he agreed with most of what he said. He was not sure that much of what was done by the large manufacturers could be called pharmaceutical advancement. It was very doubtful if the tablet form was the best for the administration of many medicines. Many of the preparations sent into the market were rather to be classed as pseudo-scientific quackery. This was true even when they had what purported to be medical certificates.

Mr. Hill said the point that struck him most in Dr. Sharp's paper was that in which he advocated the teaching of what might be called the theory or science of dosage. He thought there was a great deal in that. Pharmacists were always kept back from doing much in that direction from a feeling that they might be trenching on the sphere of the prescriber. This feeling was due to the restriction imposed on their pharmaceutical examinations by the Pharmacy Act of 1852, which excluded therapeutics or anything implying the theory and practice of medicine. But they were required, as pharmacists, to know a good deal about dosage. They were examined on it. There had been great advances in the science of dosage since the passing of the Act of 1852. At that time it was to a large extent empirical; but now it was for the most part founded on a thoroughly scientific knowledge of the action of drugs. He thought it would be an immense advantage to pharmacists to have a knowledge of the scientific basis of dosage, and therefore the suggestion of Dr. Sharp was well worth consideration. Mr. Lyon had given them a large amount of very good and proper advice. Advice was sometimes nauseous, but he hoped no feeling of that kind would prevent their getting the benefit that could be got from such a paper. For the most part his suggestions really embodied what had been the distinctive work of the Association for twenty-four years. That work had been in great measure successful, and had been recognised in reports to the General Medical Council, and embodied in the latest edition of the Pharmacopœia.

Mr. MacPherson and Mr. Hutcheon also spoke, and Dr. Sharp and Mr. Lyon replied.

Society of Chemical Industry.

Nottingham Section.

The annual meeting of the above Section was held at the Victoria Station Hotel, Nottingham, on March 26, the Chairman (Mr. L Archbutt) presiding. The retiring officers were re-elected, and after other business, which included a vote of thanks to the Committee of University College for use of rooms in the College, Mr. G. J. Ward read a paper on

the role of alumina in blast-furnace slags

The paper very appropriately followed that of Mr. Rix (reported on page 374 of the *C. & D.*, March 8), as slags and insoluble grits have much in common as regards their composition and physical properties. The author based his remarks on a series of analyses of nineteen specimens of slags which he exhibited, and which contained an abnormally high percentage of alumina. Two specimens contained over 40 per cent., the highest as much as 44·87 per cent. The author discussed the views of various investigators as to the occasionally acid or neutral character of alumina in these substances, but he concluded that in these particular slags it is found as a base replacing an equivalent quantity of lime.

the annual dinner

was subsequently held, Mr. L. Archbutt being in the chair. Amongst the members present were Dr. F. Stanley Kipping, F.R.S., Messrs. J. B. Alliott, F. S. Barford, R. M. Caven, B.Sc., S. R. Trotman, M.A., G. J. Ward, and J. T. Wood (Hon. Secretary). After the loyal toast had been honoured, Mr. F. J. R. Carulla proposed "Success to the Nottingham Section," and said that the members of their Society, engaged as they were in the heavy-chemical industries, were called upon more than those of the sister chemical Societies to devise methods for the utilisation of waste products, which were still thrown away in huge quantities. To take the subject that they had heard about that evening, Mr. William Whitwell, in his presidential address to the Iron and Steel Institute in 1901, stated that the total make of slag in the Cleveland district was 2,670,000 tons yearly, of which only a comparatively small portion was utilised. Although they might not attain the success anticipated by the inventor quoted in Percy's "Iron and Steel" [Dr. Smith, page 517], whose figures would make a company-promoter's mouth water, yet much may still be done, and one can only hope that members of this Section will share in its accomplishment. The Chairman, in replying, said the Section, although mostly composed of analytical and manufacturing chemists, represented many other branches of chemical activity, including pharmacy.

Newcastle Chemists' Association.

A special meeting of this Association was held at Newcastle-on-Tyne on Wednesday evening, March 26, to consider Mr. James Paterson's proposals respecting

State Aid to Pharmacy Students,

as brought forward by the Federation. Mr. Robert Wright (President) occupied the chair. Mr. T. Maltby Clague, in introducing the subject, considered that electrical engineering and other technically-aided industries handicapped the chemist, and that parents noted this in deciding what to put their boys to. They could qualify much more cheaply than the chemist, who had to depend entirely on his own resources for his education. He contended that as ratepayers they had a right to part of the money at the disposal of the Technical Education Committees of the local Councils. Government, he continued, compels qualification in the interests of the public, therefore they ought to give some assistance towards that qualification. He suggested this help might take the form of scholarships tenable at local schools, assistance in railway travelling, &c. He also suggested that, with a view to paving the way for approaching the Technical Education Committees, the North of England School of Pharmacy should be taken under the patronage of the local Association as at Liverpool, and that a visiting committee of, say, three be appointed to report upon the equipment of the school and the curriculum in force there.

Messrs. Gilderdale, Ellis (South Shields), F. R. Dudderidge, G. F. Merson, J. Low (Chester-le-Street), Barry Noble, Dakers, jun., and others also spoke, and the following resolutions were submitted and passed unanimously:—

1. That this Association decides to approach the Technical Education Committees of the Northumberland County Council, the Durham C.C., and the Newcastle City Council, and urge upon them the desirability of giving grants in aid of students in pharmacy, by paying their fees, providing scholarships or prizes tenable at the school which the student may select.

2. That this Association appoint a small committee (say 3) to inspect the North of England School of Pharmacy with a view to reporting on its equipment, curriculum, &c., and as to the advisability of its being definitely placed under the patronage of the Association with a visiting committee.

Thereafter committees in accordance were appointed—that to approach the various technical education authorities being Messrs. Wright (President), Atkins (Secretary), Clague, and Merson.

Business Changes.

Mr. D. T. Evans, of Margate, is opening a pharmacy at the New Public Buildings, Birchington-on-Sea.

Mr. H. Davies has taken over the business of the late Mr. J. L. Lewis, chemist and druggist, at Aberayron.

Messrs. Horrell & Goff, chemists, Dartford, have taken over the pharmacy of Mr. Jas. Cann, at 8 Lowfield Street, Dartford. The business will be continued under the style of Messrs. J. Cann & Co.

A dissolution of partnership is announced between Peter Leuthardt and Stanley Goulden Thompson, aniline-dye and chemical manufacturers, Droylsden, trading as "Leuthardt & Co." The business will be continued alone by Mr. Thompson.

The business of the late Mr. Thomas Christopher Fawcitt, pharmaceutical chemist, the Whitworth Pharmacy, 413 Oxford Road, Manchester, has been taken over by Mr. John Layland, of the Mount, Wrightington, near Wigan, and formerly an assistant with Mr. Cave, chemist, Southport.

Trade Notes.

An Auction of Plant suitable for manufacturing chemists is to take place at 175 Grange Road, Bermondsey, S.E., on April 16. Particulars will be found in our coloured supplement.

Modern Developers. — The Actien-Gesellschaft für Anilin-Fabrikation, whose agents are Messrs. Chas. Zimmermann & Co. 9 and 10 St. Mary-at-Hill, E.C., have issued a new edition of the booklet on modern photographic developers and "Agfa" specialities. Photographic chemists can obtain free supplies of the booklet for distribution on application.

A New Catalogue of proprietary medicines and druggists' sundries has been issued by Messrs. William Edwards & Son, 157 Queen Victoria Street, E.C. It is arranged in two parts. The first devoted to proprietary goods, is printed on white paper, whilst the second part, on tinted paper, deals with druggists' sundries. A new and useful feature has been introduced into the proprietary-medicines section in the printing of the names of protected articles in heavy type.

A Coronation Soap which will be hard to beat has been brought out this week by Messrs. Edward Cook & Co. (Limited), East London Soapworks, Bow, E. It is made with a white basis of tested purity, and is richly perfumed with a royal bouquet as delicate as it is natural. Each cake (there are three in a box) is done up in Coronation red paper with gold lettering, and the box is in Coronation red also, with medallion portraits of King Edward VII. and Queen Alexandra as a centrepiece on the lid. The soap "is made entirely, from start to finish, by English hands."

Under "Local Industries and Businesses" the *Rhyl News* prints as much as would fill a page of the *C. & D.* about Mr. P. J. Ashfield, chemist, High Street, Rhyl, and his business. Mr. Ashfield took over in 1897 one of the oldest businesses in the town, and since then he has made very great improvements in the business-premises, as well as in the class of trade carried on. Mr. Ashfield was trained with Mr. Claridge Druce, M.A., Ph.C., Oxford, and also acted as assistant to Mr. T. Porter Blunt, M.A., Ph.C., Shrewsbury, as well as to other chemists in Birmingham, Coventry, and London.

Births.

Read.—At 15 Hogarth Road, South Kensington, S.W., on April 1, the wife of Lawrence J. Read, London representative of Messrs. John Timpson & Co. (Limited), of a daughter.

Thompson.—At 3 Anglesea Road, Kingston-on-Thames, on March 26, the wife of Henry P. Thompson, of a daughter.

Marriage.

Dickenson—Hemsley.—On March 31, at Bourne Abbey Church, by the Rev. H. M. Mansfield, assisted by the Rev. R. K. Paine, Edmund Ernest Dickenson, chemist and druggist, of Nottingham, to Mabel, eldest daughter of Mr. Wm. Hemsley, of Cawthorpe Hall, near Bourne, Lincs.

Deaths.

Bell.—At 65 Park Grove, Hull, on March 24, Mr. Henry Bell, chemist and druggist, formerly of Gosforth, Newcastle-on-Tyne. Aged 46.

Blau.—At Hornsey, N., on March 31, Helen Jane E. N., the wife of Mr. Heinrich Blau, Secretary of the Medical, Surgical, and Hygienic Exhibitors' Association.

Burrows.—At Waulip, Syston, Leicester, on March 18, Mr. Hampden Charles Burrows, chemist and druggist. Aged 83.

Carruthers.—At Gravesend, on March 24, Mr. Matthew Crowden Carruthers, chemist and druggist. Aged 26. Mr. Carruthers was a native of Buckie, N.B., and served his apprenticeship with Mr. John Webster, chemist and druggist, of that town. He commenced business in Gravesend about a year ago, and was only married last summer.

Forster.—At Norwich, on March 23, Mr. Arthur William Forster, chemist and druggist. Aged 41.

Leppard.—On March 21, at Kingston-on-Thames, Mr. Jas. Leppard, formerly in business as a chemist at High Street, Chelmsford. Aged 59.

Waugh.—At Falkirk, on March 24, Elizabeth Gillespie Hunter, widow of the late Mr. James Waugh, chemist and aërated-water manufacturer, Glasgow. Aged 77.

Wilson.—On March 28, Mr. George Fergusson Wilson, F.R.S., F.C.S., F.L.S., of Heatherbank, Weybridge, and Oakwood, Wisley. Aged 80. At this ripe old age has died a chemist who was little known to the present generation, although it was he more than any other man who was the means of making glycerin the popular article which it has become during the past forty years. He was the inventor of the process by which Price's glycerin is made, and for many years he was managing-director of Price's Patent Candle Company (Limited). Mr. Wilson was born at Wandsworth Common on March 25 1822. His father was Mr. William Wilson, of Kilbucho and Culter. He was educated at private schools at Wandsworth and Streatham. Afterwards he became devoted to chemistry, entered Price's, and spent much time in the study of fats, although when he started on the subject Chevreul's work was still recent, and glycerin was made by decomposing fats with litharge (as in making lead plaster), and treating the watery portion for the removal of lead and other impurities, and evaporating. Mr. Wilson's studies on fats culminated in 1854 with a patent taken out by himself and Mr. George Payne for the production of glycerin and fatty acids by treating fats in a specially constructed still with superheated steam. This was really a mechanical invention. In the same year Mr. Wilson communicated a paper to the Royal Society on the value of steam in the decomposition of neutral fatty bodies, and in the following year he described to the British Association at Glasgow his new method for obtaining and purifying glycerin. We may recall the fact that Mr. Michael Carteighe, while a student at London University College, was asked by Professor Thomas Graham to examine and report upon the first sample of pure glycerin which had come on the market. From this time Price's glycerin took the lead as a medicinal article. Mr. Wilson was elected a Fellow of the Chemical Society in 1855 and in the same year his researches brought him the blue ribbon of the science. He was a founder of the Institute of Chemistry. He retired from the management of Price's Patent Candle Company a dozen years ago, and devoted his leisure to gardening, in which he was an adept, lily-growing being his special hobby. He had served as a member of the Council of the Royal Horticultural Society, and had done much to promote the Society's interests.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1l., obtainable through any money-order office.

(*From the "Trade-marks Journal," March* 26, 1902.)

"Sideroleum"; for chemicals. By the Siderosthen Paint Syndicate (Limited), Monier Road Works, Wick Lane, Bow, E. 244,268.

"Dalo"; for photographic films. By G. Houghton & Son, 88 and 89 High Holborn, W.C. 244,458.

"Puritan"; for chemicals. By Christopher Thomas & Brothers (Limited), Broad Plain Soap-works, Bristol. 243,012.

Device and the word "Witch" (the essential particulars); for a chemical chimney-cleaner. By Gourmet & Co., Mount Pleasant, W.C. 243, 597.

"Mattheine"; for chemicals. By Matthey-Meier et Cie., 25 Steinenvorstadt, Basle, Switzerland. 244,360.

"Synoline"; for an embrocation. By Henry Shaw, 299 Harold Road, Clive Vale, Hastings. 243,673.

"Phorxal"; for chemical and pharmaceutical preparations. By Julius Hofmeier, IV–I Hengasse 4, Vienna, Austria. 243,681.

"Zymocide" (no claim for "Zymo"); for goods in Class 3. By Reed & Carnrick, 42 Germania Avenue, Jersey City, U.S.A. 244,131.

"Peptiron"; for chemicals. By C. I. Hood & Co. (Limited), 31, Snow Hill, E.C. 244,158.

"Lifewood"; for medicines. By William Payne, 2 High Street, Hitchin, Herts. 244,341.

"Tegmin"; for chemicals. By Benno Rothziegel, 5 Rudolfsplatz, Vienna, I, Austria. 244,393.

"Atoxyl"; for pharmaceutical preparations. By the Vereinigte Werke Aktiengesellschaft, Salzufer 16, Charlottenburg, Berlin, Germany. 244,633.

"Coaguline"; for gelatine. By Kay Brothers (Limited), St. Petersgate Mills, Stockport. 244,179.

"Thyma"; for photographic developing-troughs. By Max Reichert, 11 Burgoyne Road, South Norwood, S.E. 243,160.

"Varoma"; for surgical instruments and apparatus. By the Varoma Medical Company, Chatham, State of New Jersey, U.S.A. 244,073.

"Humbine"; for a dental-impression composition. By Daniel McLean Humby, 74 Oakfield Road, Stroud Green, N. 244,180.

"Pelloids"; for ink tablets or pellets. By Cochran & Co., Greenland Street, Liverpool. 244,094.

"Aurox" and "Dalux"; for photographic paper. By J. J. Griffin & Sons (Limited), 20–26 Sardinia Street, Lincoln's Inn Fields, W.C. 244,498 and 244,500.

Device of hedgehog; for food-stuffs. By the Lagos Stores (Limited), 6 Stanley Street, Liverpool. 241,912.

"Vitaz"; for a poultry, &c., spice. By R. Hyde & Co., (Limited), 4a Harold Street, Camberwell, S.E. 243,576.

"Cimbrosa," "Naconda," "Nalesta," "Ordelta," "Orledo," "Stralino," and "Valastro"; for food-stuffs. By the Mazawattee Tea Company (Limited), Tower Hill, E.C. 244,423.

"Elektrimehl"; for a toilet powder. By Agnes Medhurst, Cottesmore Hall, Oakham. 243,459.

Device for a tooth-powder. By the Renson Manufacturing Company, 11 Woodbridge Street, E.C. 242,949.

Device of pine-apple; for perfumery and toilet-articles. By Joseph Crosfield & Sons (Limited), Bank Quay, Warrington. 244,393.

"Anchor"; for metal-polishes. By Edward James & Sons, Sutton Road, Plymouth. 243,794.

Device of huntsman and hounds and the words "Tally Ho!" (the essential particulars); for polishes, &c. By John Lane, 77 Tradescant Road, South Lambeth, S.W. 243,148.

"Rican"; for boot-polishes and furniture-polishes. By F. W. Warmington & Co., 34 and 36 Bethnal Green Road, E. 244,098.

Practical Notes and Formulæ.

Shampooing-paste.

White Castile soap	14 oz.
Carbonate of potash...	3½ oz.
Glycerin	7 oz.
Water	28 oz.
Oil of lavender	30 drops
Oil of bergamot	30 drops

Heat the soap, carbonate of potash, and water on a water-bath till a homogeneous mass results, then add the glycerin and perfume.

Suppository-base.

M. Ed. Crouzel suggests the following basis for suppositories in lieu of cacao butter:—

Hard paraffin	1
Lanolin, anhydrous	3

The advantages claimed for the lanolin-paraffin base are greater ease in incorporating liquids owing to the fact that anhydrous lanoline absorbs its own weight of water and the easier absorbability of medicaments combined with lanolin.—*Répertoire de Pharmacie.*

Bromidia Substitute.

The following is a formula proposed by M. De Ruyter, a member of the Antwerp Society of Pharmacy:—

Potass. bromid.	℥v. gr. viij.
Chloral hydratis	℥v. gr. viij.
Ext. cannab. ind.	gr. iij.
Ext. hyoscyami	gr. iij.
Aq. destill.	℥j. ♏xxv.
Ext. glycyrrh. liq.	℥v. ♏xxxv.
Alcohol. (94 per-cent.)	℥j. ♏xxv.
Ol. aurantii	♏iij.
Glycerini, q s. ad	℥i iss.

Dissolve the bromide, the chloral and the extracts in the hot water, add the liquorice, alcohol, and glycerin, allow to stand for several days, and filter. The dose is one teaspoonful.

—*Journal de Pharmacie.*

Soap Dentifrice.

Pumice powder	℥iss.
Cuttle-fish powder	℥iss.
Powdered myrrh	℥iij.
Powdered orris-root	℥iiiss.
Precipitated chalk	℥vj.
Powdered soap	℥viij.
Glycerin	℥xij.
Rose-water	q.s.
Oil of cloves	℥'ss.
Otto of rose	℥j.

Heat the soap and glycerin together on a water-bath to obtain a uniform mass, add a little rose-water, the powders, and the perfumes, and beat in a mortar till a uniform mass results.

—*Pharm. Zeit.*

Boiling Milk.

Some doubts having been expressed as to the advisability of boiling milk from a nutritive point of view, Dr. W. B. Ransom, Nottingham, has given attention to the matter in a paper before the Nottingham Medico-Chirurgical Society, in which his conclusions are thus summarised:—

There is no solid evidence to show that milk raised to its boiling-point (110° C. = 233° F.), or to the temperature of boiling water for ten minutes or a quarter of an hour, suffers any diminution of its nutrient qualities. Neither is it probable that, if consumed within twenty-four hours of the heating, it will cause infantile scurvy. The same is true of pasteurised milk heated to 80° or 85° C. None of these methods render the milk absolutely sterile, but they do kill most pathogenic microbes (for example, those of tuberculosis, cholera, diphtheria, and typhoid), and if the milk be kept cool and drunk within twelve hours of the heating, few or no spores will have developed into bacilli. Pasteurisation is probably less reliable than heating to 212° F. for ten minutes, and is also more difficult to carry out, as it is easy with simple domestic apparatus such as Aymard's, or other double saucepan, or Soxhlet's, or Hawksley's bottle-holding tins to keep the milk in a bath of boiling water for ten minutes.

Scientific Progress.

Genuine Lemon-juice.—Sendtner publishes the results of the examination of a number of samples of pure lemon juice, and gives the following as the limits he considers should be expected: sp. gr. at 15° C., 1·034 to 1·039; total solids between 8 and 10 per cent., of which at least 6, but usually more, up to 9 per cent, should consist of citric acid, and ash should not exceed 0·5 per cent.—(*Chem. Central.*)

Aloin Test.—M. Leger, before the March meeting of the Paris Society of Pharmacy, read a paper on aloes, in which he proposes to utilise the action of sodium binoxide on aloin in testing for aloes in pharmaceutical preparations. The substances which might lead to confusion, such as the soluble principles of rhubarb, cascara sagrada, and buckthorn, are precipitated either by alum or by subacetate of lead. M. Leger says that although aloes can be preserved for several years without alteration in pilular form, the aloin tends to disappear from the aloetic tinctures of the Codex. (*Journal de Ph. et de Chimie.*)

New Remedies.—*Ibite* is a compound of tannic acid and bismuth oxyiodide, which is claimed to be a powerful steriliser. It is a greenish powder, odourless and tasteless, and insoluble in most solvents. In contact with organic fluids it easily parts with a portion of its iodine, to which it probably owes its therapeutic value. *Hermophenyl* is a mercury-sodium-phenol disulphonate, containing about 40 per cent. of mercury. It is a white amorphous powder, easily soluble in cold water. It is claimed to possess a very powerful antiseptic action, and is best applied in the form of a gauze. *Iodocol* is a mixture of iodine and guaiacol, suggested as a useful form of administration of guaiacol in cases of lung-tuberculosis. *Lactanin* is bismuth bilactotannate, a yellow tasteless and odourless powder, insoluble in water, and recommended for chronic enteritis and diarrhœa.—(Merck's *Berichte.*)

Recent Wills.

Geldart.—Letters of administration to the personal estate of the late Mr. John Geldart, chemist and druggist, 163 Oakfield Road, Liverpool, who died intestate at the Royal Infirmary on November 8, 1901, have been granted to his widow, Mrs. Sarah Ann Geldart. The gross value of the estate was sworn at 471*l.* 3*s.* The sureties are Mr. W. D. B. Geldart, chemist's assistant, and Mr. C. H. Hutchence, 164 Queen's Road, Liverpool.

Irvine.—The will of the late Mr. Robert Irvine, F.C.S., Royston, Granton, chemist to Messrs. A. B. Fleming & Co., ink-manufacturers, Granton, was recorded in Edinburgh on April 2. He has appointed as his trustees Professor G. Sims Woodhead, M.D., Cambridge; Dr. David Patrick, Edinburgh; Mr. David Jardine (manager of J. & G. Cox, Limited), Edinburgh; Mr. Robert McVittie, biscuit-manufacturer, Edinburgh; Mr. Wm. Maxwell, journalist, London; and Mr. George M. Wood, S.S.C., Edinburgh. The preamble of the fifth purpose of the will is that in respect of his having become possessed of certain shares in the Christmas Island Phosphate Company (Limited), which he considers to be of great prospective value, he directs his trustees to do certain things. They are instructed, after setting aside 12,000*l.* for his relatives, to hold the remainder of his estate, including the shares referred to, till they shall accumulate to the sum of 25,000*l.*, or, in their discretion, to the sum of 30,000*l.*, which they shall then pay, exclusive of legacy duty and expenses, to the Association for the Better Endowment of the University of Edinburgh, for the purpose of founding a Professorship of Bacteriology in the University, and the equipment of a class-room and laboratory for the teaching of the same, and for conducting original investigation in connection with the said subject. He suggested that nominal fees only be charged for attending the lectures and laboratories. The residue of his estate he directs his trustees to pay to the Royal Infirmary of Edinburgh, the Royal Association for Incurables, Edinburgh, and the Dunlop Cancer Fund, in the proportion of one-third to each.

Paffard.—The will of Mr. Frank Paffard, Grantham, formerly a chemist and druggist of 37 Alma Street, Blackburn, who died on November 19, has been proved at the Lancaster District Registry by his daughter, Miss Emily Paffard, spinster, and Mr. Thomas Sharples, 62 Regent Street, Blackburn. The gross estate is valued at 5,714*l.* 15*s.* 9*d.*, and the net personalty 3,811*l.* 10*s.* 3*d.*

Russell.—Probate of the will of Mr. Charles James Lawrence Russell, pharmaceutical chemist, Upton Dene, 56 Coombe Road, Croydon, who died on December 29, has been granted to the Rev. Charles Walter Russell, of St. Stephen's Vicarage, Battersea, one of the executors. The gross estate is valued at 700*l.* 17*s.* 9*d.*, and net personalty 648*l.* 15*s.* 9*d.*

Things that Happen—Sometimes.

The Retort Ambiguous.

Th' invasion of th' adventurous Fair
To regions where man reigned supreme
Hath weighted him with double care
And shattered many a life-long dream.
With man the Master's spoken word
Suffices, for he dare not gird.

But Daphne when the Minor's won
Bethinks herself no tinsel worth,
And thus when at life's work begun
She fears no Minor lord on earth;
To Major e'en, when he perpends,
She pertly her opinion lends.

The wisdom culled from countless years
Behind the lone dispensing-screen
Is naught; for Daphne laughs at fears,
And moves her own sweet way serene;
And most men know the dull despair
Of argument with Daphne fair.

But this man bolder, or less wise,
Bethought our Daphne to instruct,
And, heedless of her haughty eyes,
He meant to tender usufruct
Of what he'd dug from many mines
And garnered, when at Bloomsb'ry's shrines.

"Think you," said he, "that without me
You will be able to dispense?"
'Tis Reynolds tells the tale, and he
Says Daphne made no vain pretence,
But, with a gleam in eyes so blue,
Replied, "I can dispense with you."

Observations and Reflections.

By Xrayser.

The Use of the Royal Arms by tradesmen as an advertisement, or on their labels as an ornament, has been discussed several times lately, and will be more so as the Coronation approaches; and though it is a fact that certain officials have disclaimed any desire to harass traders who have used the picture with no intention to convey a false impression, their amiability cannot modify the precise terms of a statute. The Act says that if we are not among the blissful set specially appointed to purvey something to his or her Majesty, we are liable to a penalty of 5*l.* if we use the device [in a way calculated to deceive], and except for the pleasure of doing what we are told not to do, there can be but very little advantage in employing it. I happen to remember the reason why the section interdicting the use of the Royal Arms was introduced into the Patents Act, and it is perhaps worth noting. Before the Act was passed there were a number of offices in and about Chancery Lane boldly designated "Patent Office" and ornamented with an imposing copy of the Royal Arms. It was alleged that a great many inventors were consequently attracted into these offices in the belief that they were in the real Government office, and that they were not undeceived with due diligence. It was to protect people from this kind of error that the legal offence was created.

The Vaseline Trade-mark Case will probably go to the House of Lords for final settlement, and I understand that comments on it at its present stage which might influence or intimidate the Supreme Court must be avoided. But for the benefit of future litigants, and without intimating any opinion on the merits of this particular contest, it cannot be contempt of Court to try to fathom the mysterious methods by which the Court of Appeal feels its way to a decision. The pivot on which the three Judges hung their arguments, it will be seen, was not at all whether the Chesebrough Company had or had not a just claim to the word. This consideration scarcely came within their survey. "The word vaseline was admittedly invented by R. A. Chesebrough," said Lord Justice Stirling quite incidentally, and as if that circumstance were an immaterial one. No; the question which the Court of Appeal decided by a two to one vote was whether the mark which was registered in 1877 was then properly registered as an old mark; that is, whether it had been used as a trade-mark in this country prior to 1875. And to get at that result they had to decide whether the onus of proof lay with the inventors of the word or with the challengers. The majority of the Court held that it was for the latter to prove the negative, and as they had not done so the property was left with the creators of it.

Inventors of either words or things are not too generously treated in our courts. It might have been supposed that it was not an offence to invent something new or useful; but it is settled law that if a person does this he is punished by a certain outlawry so far as the Trade-mark Act can punish him. The linoleum case, quoted by Lord Justice Stirling, established that if a person invents and patents a process for manufacturing something, and sells that something by a certain name during the continuance of the patent, he loses his exclusive right to the name as well as to the process when the patent expires. This doctrine was imported from America. It first grew up when the sewing-machine patents began to fall out. Mr. Singer, for instance, patented a particular form of sewing-machine, and when the patent expired someone else began to make the same machine, as of course he had a right to do; but he also claimed the right to sell it as Singer's. This claim was upheld by the Courts on the ground that otherwise the patent-monopoly would be in fact retained. So in the linoleum case, Mr. Justice Fry said this stuff is known only as linoleum. By what other name could another manufacturer sell it? He would have to invent a new name. Why should he not?

The Influenza-label which formed the *casus belli* in the medicine-stamp prosecution at Brentford last week was of particular interest because it raised the question whether distinctive titles for medicines which include the name of a complaint (cough-mixture, for example) can be used without rendering the stuff liable by right or by grace. The Board of Inland Revenue has always assumed an air of generosity in connection with those titles, and in the case reported their representative argued that the use of the words "cough mixture" was, in fact, a holding-out of the medicine as beneficial for a cough. So general is this view that, as shown last week, Mr. Atkinson endorsed it without a doubt. If the Board accepts the Brentford decision, or if it should be confirmed on appeal, Messieurs the Commissioners will have to depend on some other virtues for their canonisation, now that this one of generosity breaks down. So far as the English language can be trusted, the term "cough-mixture" may just as well mean a mixture that will produce a cough as one that will cure one; and the Brentford Magistrates seem to have exercised a proper discretion when they declined to read into a designation an unexpressed meaning.

Vaccination by Chemists, which a correspondent of a medical journal declares to be frequent, is a new idea to me. But it looks like a rather hopeful side-line in localities where there is nothing to be got from the doctors. The art of vaccinating is certainly not difficult to acquire. A ten-minutes' curriculum would, I should think, perfect anybody in it. But what particularly occurs to me in connection with the suggestion is to commend it to the anti-vaccinationists. If they can induce chemists to take it up, coroners' inquests on children who have died after vaccination, medical evidence as to its danger, and verdicts condemning it, would soon be as plentiful as blackberries. There would not be a swollen arm which was not due to the carelessness or ignorance of the unqualified vaccinator, and thus by this Machiavellian policy public distrust and professional doubt would be sown simultaneously.

Petitions to Parliament do not usually secure the prominent attention which for special reasons was paid to the one which Sir Herbert Maxwell presented on behalf of the horticulturist tradesmen who want to sell poisons. Constitutional manuals tell us that the right to petition Parliament is one of the most precious privileges which the subject enjoys. Anyone who has seen members pitching them into bags by the score will doubt whether the privilege is anything more than a sentimental one. Sir Herbert Maxwell's confessed indifference to the prayer of the petition so trustingly confided to him was evidence of the general feeling of M.P.'s in reference to these documents Some 30,000 petitions are presented to the two Houses every year, and not half a dozen attract any real attention There is, it is true, a Committee which reports on them periodically, but the only thing proved if there are 100 petitions in support of a Bill and 101 against it, is that there is a difference of opinion in regard to the proposal. Letters to members of Parliament direct from their constituents are infinitely more effective.

Editorial Comments.

Jamaica Honey.

At a time when every effort is being made to improve the position of the West Indies by reviving the ancient sugar-industry, it is appropriate to call attention to a scheme which is on foot to place the production of Jamaica honey on a more successful and remunerative footing. Mr. Dickson of the Jamaica Bee-keepers' Association has recently arrived at Bristol, and has brought with him samples of honey to place before buyers in the United Kingdom, the idea being to deal as directly as possible with consumers, and so save intermediate profits, which at present fall to the broker, merchant, and wholesaler. Hitherto the market-price has been governed by the law of supply and demand at public auction, and so far as the public are concerned Jamaica

Digitized by Google

honey is practically an unknown article, as it is not suited for table-purposes. It is all consumed in manufacturing processes, and it is difficult to understand, therefore, what Mr. Dickson is to do in order to get better values for Jamaica honey. It has been one of the cheapest articles sold in Mincing Lane during the past twelve months. At each successive auction since April, 1901 (when the new crop arrived), large quantities have been offered, and, although there has been a good demand throughout, prices have been the lowest on record, owing to over-production. Last year the shipments of honey to the United Kingdom were estimated roughly at 13,000 cwt., and we understand this quantity will be greatly exceeded during the coming season, as already some 5,000 packages of 25 gals. each are booked, so that the prospect of better prices for the farmer is not bright. Apiculture is one of the oldest industries in Jamaica, but owing to various reasons no great measure of success has attended the efforts of those interested in the business. The greatest drawback appears to have been uncertainty in the quality of the honey and the method of packing, but the Jamaica Bee-keepers' Association now claims to have effectually overcome these difficulties. The Association was formed for the mutual protection of buyer and seller, and the object is the guaranteeing of every package of honey shipped by it to be absolutely pure and of standard quality. A board of examiners has been appointed, composed of practical apiarists, and every package of honey sent by members of the Association for shipment is to be graded by these experts on its merits, and if found to come up to the required standard it is to be branded with the Association's stamp. The Association includes practically all the bee-keepers of Jamaica, numbering over 400, and these represent something like 5,000 colonies of bees. The beekeepers have hitherto been working at a disadvantage, having been compelled in many cases to mortgage their honey before production, and thus to accept prices below what they might obtain if they were better off. The Imperial Department of Agriculture in the West Indies has recently taken an active part in bringing bee-keeping under the notice of the people of the Lesser Antilles. They have engaged an expert, Mr. W. K. Morrison, formerly connected with the United States Department of Agriculture, who has visited Barbados, Dominica, Montserrat, Antigua, Grenada, St. Vincent, and St. Lucia. During his visits he has advised and assisted the bee-keepers to obtain honey of high quality. His opinion is that the outlook for bee-keeping in the West Indies is very encouraging, as there is an abundance of honey-bearing flowers all the year round. Mr. Morrison's work appears to have aroused much interest, and every effort is now to be made to encourage the industry by establishing model apiaries, granting assistance in obtaining hives, bees, &c., at cost-price, and obtaining practical information. Of course, the result will largely depend on the care and attention which bee-keepers are prepared to give the subject. It need hardly be said that Jamaica honey is as highly esteemed as any of the imported honeys on this market, and it is undoubtedly true that the prices obtained for it have been largely governed by the need of the bee-keepers to realise as quickly as possible. If Mr. Dickson wishes to secure the intermediate profits which accrue in the present method of placing the honey as quickly as possible in the hands of consumers—*i.e.*, wholesalers and manufacturers—he must be prepared to sacrifice the superlative advantage of prompt cash, for he can only get that by the Mincing Lane methods of business or by giving buyers such inducements in quality and price as will compensate them for the existing familiar methods of doing business. It appears to us that West Indian bee-keepers would do better if they would not disturb their existing connection at all, but keep up the supplies as hitherto, and also place on the market through wholesalers and retailers exclusively the best selected honey as table-honey in the comb or in glass jars. There may be more money in that, and if experience were to prove it, the new departure could be pushed without jeopardising the existing trade.

Doctors and Dentists.

The new editions of the Medical and Dental Registers, which are published this week (Spottiswoode, 6*s.* and 4*s.*), are good indices of the progress of the medical and dental professions in this country. The total number of practitioners on the Medical Register is now 36,912, or 557 more than on the last one. The number added by registration in 1901 was 1,318, or 27 less than the previous year, but still much above the average of the last five years (1,291). The removals have been fewer than the average, but the quinquennial revision under Section 14 of the Medical Act, which is performed more rigorously than the annual one, may be expected either in 1903 or 1904, and it will lop off many names now standing. The true index of the numerical progress of the profession is probably found in the number of registrations, which, although but slightly under the number in 1900, is far below the record year (1893), when 1,579 names were added. This is partly owing to the five-year curriculum weeding out undesirables, but chiefly to the fact that the medical profession is not so attractive as it was; people are realising that it is not the "very fine thing" it was supposed to be, and it is about the most expensive in preliminaries of any profession. The proportion of registrations in England, Scotland, and Ireland is much the same as in the previous year. In Scotland the number was identical (499), in England 4 fewer (672), but in Ireland 23 fewer (147). It is interesting to note that the Registers of pharmaceutical chemists and chemists and druggists for the United Kingdom contain 14,834 names, or nearly one-third the number on the Medical Register. The additions to the Pharmacy Registers in 1901, as the result of passing the Qualifying examinations, were 557, against 1,318 added to the Medical Register from the same cause. Of course, a larger proportion of medical registrants are colonial men, and many home students go abroad—more in proportion, we should think, than is the case with registered chemists and druggists.

The Dentists' Register for 1902 contains 4,641 names, against 4,509 in 1901. The latter year is not a good one for comparison, however, as the 1898 Register contained 4,937 names. The feature of interest to pharmacists in the Dentists' Register is the proportion that licentiates bear to the whole, or, in other words, the gradual extinction of the persons who on their own declaration were in *bonâ-fide* practice of dentistry on July 22, 1878 (the date of the passing of the Dentists Act). In 1897 there were 3,287 (or 67·63 per cent.) such persons on the Register; the new Register shows 2,587 names, or a proportion of 55·76. From this it can be estimated that by 1930 the persons registered as in practice in 1878 should have disappeared, but our successors in 1950 may find a few ante-Act names then on the Register, as some were under 13 when registered. The extinction of the non-licentiate class of dentists is regrettable from some points of view, as it is questionable whether the number of licentiates will suffice for the demand. What will probably happen is that more people will be compelled to resort to hospitals for dental treatment,

Digitized by Google

as it is certain that the working classes cannot afford to pay the fees charged by licentiates in dentistry. We do not lose sight of the fact that it is not necessary to be registered in order to practise on the teeth, but it is common knowledge that the younger generation of chemists do not now take up dental work to anything like the extent the ante-Act chemists did, and it is this class which has provided a large part of the modern and cheap dentistry.

Women in Pharmacy.

The *Pharmaceutische Zeitung* publishes some interesting facts on the employment of women in continental pharmacy, stating that although women have had to fight hard for admission to the universities, and in some cases still have to do so, the pharmaceutical career is nearly everywhere thrown open to them through the initiative of men. Naturally this is not from any chivalrous wish to accede women a right, but from the scarcity of male assistants. Hermann Schleuz, a decided opposer of the emancipation of women, found during his pharmaceutical researches so many references to their employment in the early centuries that he thought it worth while to collect these data, and to publish them under the title of "Women in the Realm of Æsculapius." Schleuz arrived at the conclusion that women are not as suited for the calling as is generally supposed, and that their work is inferior to that of men. Practice, however, contradicts this theoretical conclusion, women-pharmacists now being employed almost everywhere. At the present time there are over four hundred women-pharmacists in Russia. Mrs. B. Leniowska, who a short time ago was the first to obtain permission to open a pharmacy there, has in her pharmacy at Moscow a staff which is, with one exception, entirely composed of women, one man alone being employed for the convenience of customers who prefer to be served by a man. The happy land for women-pharmacists appears, however, to be Holland, where the total number of assistants comprises 840 women and 435 men. In most of the Dutch pharmacies women and men assistants are found employed together. There are five women and three men at the pharmacy of the large Amsterdam hospital. Women have more favourable hours of employment than their male colleagues, as they have no night-duty. In Germany, pharmacy has been thrown open to women since 1899. The scarcity of assistants, and the impossibility of paying qualified ones in small country pharmacies, caused a commission, which had been appointed by the German Pharmaceutical Society, to inquire into the matter. In reply to a circular, 2 066 answers were received, of which 1,392 were in favour of women. The Commission thereupon proposed, among other remedies for solving the assistant-difficulty, that women should be accepted as pupils in small pharmacies, and trained as assistants without admittance to the State examination, and that the female members of a family should be employed on the responsibility of the owner, in quite small pharmacies not able to afford paid assistants. These proposals were rejected by the Society, and, in spite of women being now officially admitted to German pharmacy, very few have availed themselves of the privilege. In Hungary, where women have since 1893 been allowed to enter the pharmaceutical career, there are also few who have taken advantage of the permission. The conditions of entrance are the same for both sexes, except that the women have to apply for sanction to the Minister of Education. This is, however, purely a matter of form, as the permission is always given. The scarcity of assistants in Hungary is so great that every opportunity is taken to boom the calling in the daily Press in order to prevail upon more women to join it. It is described as one of the most remunerative of callings, which is by no means the actual case, as the male assistants, even after a long term of service, do not obtain a higher salary than 300k. per month, which, considering the training necessary and the responsibility attached to the position, cannot be considered high. There are at present three women employed in pharmacies in Hungary. There are few women-pharmacists in Switzerland, although they would be gladly welcomed. The Roumanian pharmacists are not so much in favour of the invasion of women, and engage but few. Those employed are mostly at the hospital at Buda Pesth. Austrian pharmacists strongly opposed the entrance of women into their ranks, and maintained that if they were admitted the profession would lose in repute and social position. In spite of opposition, however, women obtained the necessary permission in 1900, and some are now actually employed by unprejudiced pharmacists. What most strikes us in reading the article is the universal scarcity of qualified pharmaceutical assistants. This country is bad enough. Since the Boer war broke out thousands of young men have been drafted from productive to destructive means of employment, and, as a consequence, younger lads have been taken on at comparatively high wages for work previously done by those out of their teens. The result is that errand-boys and apprentices are difficult to get in every branch of trade. This condition may right itself in time but the scarcity of chemists' assistants is another matter, and it almost seems from its universality that there is something in pharmacy repellent to present-day youths.

THE MARTINDALE MEMORIAL.

It will be noticed from a cablegram on page 521 that the Cape Pharmaceutical Society has resolved to contribute to the Martindale Memorial. This is the first colonial response, and others will doubtless follow. We think the committee are keeping the matter rather quiet. Things of this kind are apt to become failures if they are not kept well under the notice of those who may subscribe. Nothing official has been heard of the memorial since the meeting a month ago. The committee are aware that the hospitality of the columns of the trade-journals is extended to them.

NEW CATARACT-CURE.

The eradication of cataract by means of the knife is now so common and successful an operation that other cures for it are rather at a discount. Nevertheless, Dr. Bahal, of Bordeaux, has come forward with the suggestion that a 2½-per-cent. solution of potassium iodide (or the sodium salt), used as a bath twice daily, clears up arterio-sclerous cataracts. The Paris edition of the *New York Herald*—a copy of which comes to us from a faithful admirer of the *C. & D.* at Nice—devotes a column to the treatment, first telling all about the scissors, forceps and knives that take part in the surgical treatment. Besides bathing the eye in the iodide-solution twice daily, "one or two drops" of it are instilled into the eye morning and evening. The treatment is worth trying in early cases, for if it does no good it will do no harm.

ARSENIC IN REDUCED IRON.

Dr. E. S. Reynolds, of Manchester, in his evidence before the Royal Commission on arsenical poisoning, drew attention to the large quantity of arsenic sometimes present in reduced iron—B.P. ferrum redactum in some cases having been found to contain as much as 1 per cent. of arsenic. Many practitioners have found special advantage from administering iron in this form in cases of anæmia, and it is possible that this beneficial result arises from the fact that with every grain of reduced iron a dose equivalent to a minim of liquor arsenicalis is administered. The possibility

Digitized by Google

at any rate, deserves to be noted; but we may recall the fact that Mr. E. S. Peck found only three out of sixteen commercial samples to be absolutely free from arsenic (see *C. & D*, August 3, 1901, page 242).

A WORD TO PROPRIETARY-PACKERS.

Manufacturers and wholesale houses connected with the drug-trade are, as a rule, careful not to pack goods to be distributed to the public with printed matter intended for the retailer only. But there are exceptions. A subscriber sends us this week the sheet of a wholesale price-list which was used as packing of a proprietary article. It contained such items as the following:—

	s.	d.	Per doz net. s.	d.
Crown Perfumery Co.'s invigorating lavender salts	1	6	12	0
Diamond frost...	0	1	0	6
Dinneford's Army bath-pads ...	2	0	10	6
Eyebrow pencils	0	3	1	6
Gibbs's superfatted cold-cream soap	0	6	3	9

Such items could be multiplied by the score. This sort of thing is very poor business on the part of the packers. It is false economy, and, besides giving the public information which belongs to the retailer, it cannot fail to alienate the retailer's affection, if any, for the proprietaries.

"DELIGHTFULLY SOOTHING."

The Commissioners of Inland Revenue are to take the opinion of the High Court on the Brentford Magistrate's decision in the Stamp Act case reported last week. Mr. Denniss applied to the Magistrates on Thursday, March 27, asking them to state a case. The Magistrates felt reluctant, chiefly because they did not wish Mr. Sanguinetti to be put to further expense in the matter, and they asked Mr. Denniss to give an undertaking to that effect before they state a case. This, we understand, he is prepared to do, and the matter will therefore come under revision by the High Court Judges. The Chemists' Defence Association (Limited) defended at Brentford last week, and there, we understand, the Association's liability ends, a court of first instance being all that it professes to cover. But in so important a matter as this, wherein the revision is of benefit to the whole trade, some effort should be made to have the case for the defence stated by an able lawyer. We wait some declaration by the Chemists' Defence Association on the matter.

SECOND THOUGHTS ARE BEST.

So it is said, and it is true as regards the appeal by Mr. Dobbs, the solicitor for the defendants in the recent case at Newcastle-under-Lyme regarding the sale of "XL-All" insecticide. It will be remembered that the Magistrates agreed to state a case, but at the Newcastle-under-Lyme Police Court last week it was stated that it had been decided to abandon the appeal. The Bench consented to the withdrawal of the appeal, and ordered the recognisances of Messrs. M. & E. Jenkinson, who sold the insecticide, to be vacated. It was certainly a bold step to appeal in a case of non-labelling which followed the death of a man through the omission, and, as we pointed out a fortnight ago, the appeal was opposed to the principle advocated by Mr. Dobbs's Society. Now that the case is settled the fact may be brought to light that the defendants were not summoned under Section 15 as illegal sellers of the poison, and we presume that the Pharmaceutical Council, for some reason known to themselves, refrained from prosecuting under that section.

SMALLPOX DISINFECTION.

The recent report of experts to the London County Council regarding the activity of antiseptics and disinfectants has given one or two people the opportunity of exercising the gentle art of punctuation. A correspondent of the *Daily News*, for example, writes in a spirit of astonishment, asking why the wonderful efficacy of formalin has not been brought to public notice before. This correspondent succeeds in reiterating the good qualities of formalin. His innocence is sufficiently transparent, but he is rivalled by Mr. James Haysman, of the International College, Hampstead, who in the *Pall Mall Gazette* points out that burning sulphur is little good (the *Daily News* man has the same idea): chlorine is the thing. "Well do I remember," says Mr. Haysman, "my old friend Dr. Cooper's exultation when he so promptly checked the spread of scarlet fever in one of the most densely populated districts of Bristol by, as he described it, 'the greatest stink he had ever made, emanating from chloride of lime and dilute sulphuric acid.'" The moral of the whole thing is, we are to understand, there would have been no smallpox epidemic if everybody had been as wise as these authorities.

A NARROW MARGIN.

The general medical practitioner in England is, when he gets into the swing of family-practice, one of the hardest-worked men on earth, and not well paid either. A middle-class practice returning 500*l.* a year keeps a man going all day and allows him few holidays. Lower down he has to work as long for less, and when there is club-practice he is in eminent risk of making nothing at all if he has to throw in bottles along with medicine. So the *Hospital* tells us in the following plaintive sentences:—

> Nothing could more markedly show the depths to which contract-practice has dragged a noble profession than the interest roused by the "bottles" question when club-practice is discussed. It seems that certain club-doctors, although perfectly ready to give "attendance and medicine" according to their contracts, draw the line at bottles. Rallying to the battle-cry, "No bottles," they defy the clubs, and hold that each club patient must provide himself with that necessary receptacle for his physic. The whole squabble is inexpressibly ignominious, and the pity of it is that the difficulty seems to be a real one; for to such a miserable remuneration has contract-practice been cut down that the question of "bottles or no bottles" involves a serious proportion of such profits as the medical man derives from it. . . . If the payments are cut so fine that the question of bottles becomes one of serious importance, it is difficult to have much confidence in the "attendance and medicine" which are provided.

Club-practice has its evils, chiefly of a lowering-the-profession order, but we cannot repress a dash of sympathy with the men who have to do it.

THE ABUSE OF PRESCRIPTIONS.

The recent case of Forsythe *v.* Law has given the *Hospital* the text for some remarks on the abuse of prescriptions. It is the old story of repeats without the prescriber's sanction on each occasion, and our contemporary remarks that

> anyone armed with a prescription can obtain practically as much of the drug ordered as he wishes, and it therefore is a serious question whether some restriction should not be put upon the dispensing of strong narcotics and other substances which ought only to be taken under the immediate direction and superintendence of a physician. Perhaps when the Pharmacy Acts are revised it would be possible to insert a clause compelling chemists to stamp upon the prescription the date when dispensed, so that others could see at a glance the amount recently supplied, or a clause forbidding the making-up of mixtures containing poisons without special instructions.

We question the first statement, and see no reason for legislation to prevent repeats, which can be done by the prescriber stating on his prescription that the medicine is not to be repeated. Few, if any, chemists would ignore such directions.

DUTY-FREE ALCOHOL.

On several occasions during the past few years we have referred to the question of the use of duty-free pure alcohol in chemical-manufactures in this country, and it may be remembered that at the meeting of the British Association in Glasgow last year the Chemical Section had a discussion

Digitized by Google

on the subject. The Council of the Society of Chemical Industry now intimates that, the question of concessions in regard to the use of spirit having become pressing, it desires to obtain information from members interested in industries in which partially or wholly duty-free spirit would be of advantage. Communications should be sent to the Secretary of the Society, Palace Chambers, 9 Bridge Street, Westminster, London, S.W. This is a matter in which manufacturers of pharmaceutical products are directly interested, and we print this notification in order that they may take the necessary steps to have their case considered in any proposals that are made to the revenue authorities.

MALARIA-CURES.

In a recently issued Foreign Office Report, Mr. Neville Rolfe, British Consul at Naples, writes about mosquitos and malaria, stating that the insects are not transported by wind, but move from place to place on or about men or animals, and on baggage. Cases of fever, owing to this cause, occurred at the station of Termini, near Rome, the cases having probably originated from the mosquitos conveyed by the Terracina train, which crosses the most deadly part of the Pontine marshes. Mr. Rolfe has something to say about cures—*e.g.*, that there is a special aniline dye which, when diluted even to the extent of 0·00031 per thousand, is said to kill the larvæ. He also mentions that *Pyrethrum roseum* cultivation is being tried near Ceprano, a town about half-way between Naples and Rome, and that powdered valerian-root mixed with insect-powder renders it more efficacious. Experiments were made last summer by Professor Grassi to combat the malady by the use of drugs. Having selected one of the most malarious places in Italy—Ostia, at the mouth of the Tiber—he and his staff administered six pills a day to adults, and a proportionate dose to children, the pills being composed of a compound called "esanofele," a harmless drug composed of quinine, arsenic, iron, and bitter herbs. Dr. Grassi speaks highly of the results, and the tabulated statistics of the Ostia treatment appear very favourable. This is a nice little advertisement for "esanofele," which, we gather, is "a very expensive drug." One wonders, nevertheless, why the Foreign Office goes to the expense of putting such things in Blue-books.

Gazette.

Partnerships Dissolved.

Cohen, G. A., and **Morgan, H. B. T.**, under the style of Cohen & Morgan, Harringay, Middlesex, surgeons.

Leuthardt, P., and **Thompson, S. G.**, under the style of Leuthardt & Co., Droylesden, Lancs, aniline-dye and chemical manufacturers.

Major, H. P., and **Dickson, W.**, under the style of Messrs. Major & Dickson, Hungerford, Berkshire, general practitioners.

The Bankruptcy Acts, 1883 and 1890.

ADJUDICATION.

Kennedy, Angus Ross, Coventry, Warwickshire, late Bilston, Staffordshire, physician and surgeon.

A Singapore Subscriber, writing on January 10, 1902, says, in renewing his subscription:—"It is the best investment I know of on this side of London, and the amount of information and tips it contains from week to week, it strikes me as really wonderful how you can do it at the money, and give away a Diary as well—a volume in itself.

Legal Reports.

Stamp Act, 1812.

"Delightfully Soothing": Appeal.

At the Brentford Town Hall on Thursday, March 27, Mr. Denniss asked if the Bench would state a case for the High Court in the case against Mr. F. Sanguinetti (reported in last week's *C. & D.*).

The Chairman said he thought it might be waste of money and time.

Mr. Denniss said it was a matter of great importance.

The Chairman said the Bench had been of opinion that the mere putting of the words "delightfully soothing to singers and public speakers" on the box was not a recommendation of the pastilles.

Mr. Denniss said his appeal would be, of course, on a point of law.

The Chairman said it seemed very trivial to fall on a respectable chemist as they had. Would the parties undertake the costs of the case, so that Mr. Sanguinetti would not be put to further expense? The majority of the Magistrates thought it was a frivolous appeal. They could, of course, go for a mandamus.

Mr. Denniss said the question of costs would be for the High Court.

The Bench allowed Mr. Denniss to have his case stated on the condition mentioned, and asked him to give it his early attention.

Sale of Food and Drugs Acts.

Milk of Sulphur.

At Dunkinfield, on March 27, Allen Saxon, drug-dealer, of Oxford Road, Dunkinfield, was fined 5*s.* 6*d.*, and costs, for selling milk of sulphur which was stated to be adulterated with 45 per cent. of mineral matter. The defendant said when he purchased the drug from Mr. S. Sharp, chemist and druggist, Stamford Street, Ashton-under-Lyne, in 1898, he was told that it was perfectly pure. There was no B.P. standard in 1898 for the drug, he added. Inspector Lee stated that milk of sulphur would not depreciate to such an extent in 1,000 years.

Soap-liniment.

At Bow Street Police Court on April 1, judgment was given in the adjourned case in which Arthur Spinks, trading as a chemist, Theobald's Road, W.C., was charged with selling soap-liniment containing 40 per cent. of methylated spirit (see *C. & D.*, February 22, page 293, and March 8, page 380).

Mr. Marsham, in giving his decision, said the case was not without difficulties, but on the facts before him he found that soap-liniment was a drug, and the formula was in the Pharmacopœia. It was admitted that soap-liniment made with methylated spirit is an article of commerce, the evidence given by two doctors and six chemists not being contradicted, showing that when the article was made with methylated spirit it was equal as to strength and efficiency to that made with rectified spirit. Chemists' price-lists specified two kinds, and the methylated liniment was largely sold as a domestic remedy, and was, therefore, an article of commerce. He had no doubt, however, that the proper course for a chemist to adopt would be to ask the customer whether he wished to purchase the article compounded with rectified or methylated spirit, the difference in the cost being about one-half. After considering all the circumstances he had decided to dismiss the summons.

Mr. Walford (who supported the summons) asked for costs, but Mr. Marsham said he did not think he could give costs to either party; Mr. Beck interposing that he had no intention of applying for costs.

Mr. H. C. Jones (the Town Clerk for Holborn) then asked if the Magistrate would state a case, but Mr. Marsham replied that he had dismissed the summons on the facts. Mr. Beck said as he understood the judgment it meant (1) that there was no special request for a specific article, (2) that there is a commercial standard for the article used as a domestic remedy, and (3) that the sale was not to the prejudice of the purchaser.

Digitized by Google

Mr. Marsham: No; I did not say the sale was not to the prejudice of the purchaser. I said the proper course would be for the chemist to ask the customer which kind he would prefer. There is no question of law. I found on the facts.

Mr. Jones said he and his friend (Mr. Back) were very anxious to have the question of a commercial standard settled, and asked the Magistrate if he would consider any application made on the point within the next seven days. Mr. Marsham said he would be pleased to do so.

Sweet Spirit of Nitre.

On Wednesday, April 2, at Wolverhampton Police Court, before the Stipendiary Magistrate (Mr. N. C. A. Neville), Edward Spicer, grocer, 285 Willenhall Road, was fined 20*s.*, and costs, for selling sweet spirit of nitre which was 23 per cent. deficient in ethyl nitrite. Inspector Allwood said he did not press for a heavy penalty, but he submitted that the matter was important because the drug was sold at many small shops. The bottle from which the sample analysed was taken was marked "Raybould, Whitehouse & Co., manufacturing chemists, Dudley." Mr. Neville pointed out that the defendant had rendered himself liable to a penalty of 20*l.* for selling the drug in a weak state. He thought it might be advisable to prevent people carrying on a business they knew nothing about. They not only, as in this case, defrauded the public, but might be the means of doing serious injury as well.

New Companies & Company News.

Super-Aëration (Mineral Waters) Ireland (Limited).—Capital 50,000*l.*, in 1*l.* shares (15,000 preference). Objects as indicated by the title. The number of directors is not to be less than three nor more than seven. The first are P. C Bernard, Sir P. N. Grace, and J. Kiloh. Qualification, 100*l.* Remuneration, 100*l.* each per annum.

General Forage and Grains Drying Company (Limited).—Capital 60,000*l.*, in 1*l* shares (50,000 preference). Objects: To adopt an agreement made by this company with H. Lowe, to carry on the business of manufacturers of and dealers in foods for horses, cattle, dogs, poultry, &c., and to deal in brewers' and distillers' spent grains, corn-seeds, bran meal, and all substances and other ingredients suitable there for a wholesale, retail, and manufacturing chemists. No initial public issue.

British Indian Oil-mills (Limited).—Capital 30,000*l.*, in 1*l.* shares. Objects: To acquire the business of oil and manure manufacturers and merchants carried on by the British Indian Oil-mills at Garden Reach, near Calcutta, and the similar business carried on by the United British Castor oil Company (Limited) at Ossory Road, S.E., and to carry on and develop the same and any auxiliary business. No initial public issue. The first directors are J. H. G. Hill, J. R. D. Hill, Sir W. Thorburn, M.P., G. H. Brown, and A. S. N. Davis. Qualification, 200*l.* Remuneration not less than 250*l.* per annum divisible.

British Iron Milk Syndicate (Limited).—Capital 3,000*l.*, in 1*l.* shares. To adopt an agreement with W. White to acquire any inventions and rights relating to the manufacture of medicinal preparations, chemical products and foods, to develop and turn to account the same, and to carry on the business of chemists, druggists, dealers in medicines, &c. The first subscribers are: A. O. Williams, M.P., Castle Deudraeth, Merionethshire; W. W. Bruce, 29 Comeragh Road, West Kensington, gentleman; E T. L. Williams, 1 Clement's Inn, Strand, solicitor; W. W. White, 165 Cromwell Road, S.W., merchant; J. Silcox, 7 Cremorne Road, S.W., publisher; Mabel Layzell, 180 Park Road Crouch End, N., typist; and Amy J. Parvin, 60 St. Julian's Farm Road, West Norwood, S.E., typist. No initial public issue. The first directors are A. O. Williams, M.P., and W. W. Bruce.

C. Müller (Limited).—Capital 5,000*l.*, in 1*l* shares. Objects: To acquire the business of manufacturers of and dealers in surgical instruments and dealers in vulcanite, ebonite, indiarubber, and metal goods carried on at 64 and 65 Holborn Viaduct E.C., as "C. Müller," to adopt an agreement between A. M. Edelstein and S. Strauss, and to carry on the same and the business of manufacturers of and dealers in medical appliances, optical, electrical, and scientific instruments, &c. The first subscribers are: S. Strauss, 10 Lyndhurst Gardens, N.W., diamond merchant; A. M. Edelstein, 23 Greencroft Gardens, N.W., merchant; Mrs. L. Strauss, 10 Lyndhurst Gardens, N.W.; J. Curtis, 56 Lamb's Conduit Street, W.C., clerk; F. C. Beard, 55 Avondale Road, S.E., clerk; Mrs. B. Edelstein, 23 Greencroft Gardens, N.W.; Miss E. Edelstein, 23 Greencroft Gardens, N.W. No initial public issue. The number of directors is not to be less than two nor more than five. The first are S. Strauss and A. M. Edelstein. Qualification, 200 shares. Remuneration, as fixed by the company. Registered office, 64 and 65 Holborn Viaduct, E.C.

Westhorpe (Limited).—Capital, 85,000*l.*, in 1*l.* shares (25,000 preference). Objects: To adopt an agreement between G. S. Pinchin, B. F. French, H. R. S Krall, and E. W. Harrison for the acquisition of certain businesses carried on by the three first-named persons, and generally to carry on the business of manufacturers, importers, and exporters of and dealers in oakum lint, surgical dressings, and specialities for paper-making, also of hemp, jute, linen, cotton, wool, silk, textile materials, paper-pulp, indiarubber, papier mâché, drugs, dyewares, paints, chemicals, apparatus, &c. The first subscribers are: G. S. Pinchin, 59 West India Dock Road, E., merchant; H. R. S. Krall, 23–25 Billiter Street, E.C., merchant; B. F. French, 52 Broadway, New York, merchant; E. Harrison, 3 Cambridge Road, Ilford, clerk; G. S. Herschell, 11 Uxbridge Road, Ealing, solicitor; A. Stone, 3 Lansdowne Place, Blackheath, B.A., gentleman; E. H. Laroombe, 32 Woodford Road, Watford, gentleman; and J. C. Coulder, 7 Bodney Road, Lower Clapton, clerk. No initial public issue. The first directors are G. S. Pinchin, H. R. S. Krall, and B. F. French. Qualification 1,000*l.* Remuneration 600*l.* per annum, divisible. G. S. Pinchin, chairman.

Meggeson & Co. (Limited).—Warrants for the half-yearly interest on debentures and preference shares, and interim dividend on the ordinary shares, were posted on April 1.

Oowana Soap Company (Limited).—We understand that the resolution in regard to the winding-up of this company, referred to in our issue of March 22, is purely voluntary, and was a necessary step in the process for increasing the capital of the company, which is being reconstructed under the title "Oowana (Limited)." The business will be continued under the same management and at the same address, 205 Victoria Street, London, S.W.

Cheap and Good (Limited).—From a circular issued by the Top Not Company, Glasgow, it appears that the company are extending their business under the title of "Cheap and Good (Limited)," to introduce a new system of trading. The gentleman who has consented to become the chairman is the proprietor of forty shops in another line, with thirty years' experience of multiple-shop trading. The circular says several well-known firms are putting money in the business, and the company will have a nominal capital of 25,000*l.*, in 1*l.* shares. It is proposed, after the business has been well started, to reconstruct into a big concern, "when the original shareholders will receive large profits." The *Financial Times* ironically remarks, "The offer of an interest 'on rock-bottom terms' does not look particularly enticing, and most people, we should think, will be quite content to wait until the concern has been 'well started.'"

Southall Brothers & Barclay (Limited).—At a meeting of the preference shareholders held at the Grand Hotel, Birmingham, on March 23, Mr. Thomas Barclay (the Chairman) proposed that the capital of the company be increased to 260 000*l.* by the creation of 60,000 preference shares of 1*l.* each, carrying dividend at the same rate and with the same priorities both as to dividend and capital, and with the same rights and privileges as the existing preference shares of the company. The shareholders generally, as was evidenced by the proxies sent in, showed that they appreciated the action of the directors in providing the new capital by the issue of preference shares instead of by debentures. Additional buildings, plant, and fixtures had to be provided in order to keep pace with the increase of the business. Since December 31, 1897, when the business was taken over, there had been an increase in leasehold land, buildings, and premises of 10 577*l.*; in plant, machinery, tools, and fixtures of 16 645*l.*; in stock-in-trade, 8,004*l.*; in amounts due from customers, 9,836*l.* These were subject to 3,444*l.* increase on the trade creditors, but the total increase in assets was 41 620*l.* To keep the business going it had been necessary for the directors to advance 16,869*l.* 16*s.* 4*d.*, and the bankers 10,683*l.* 15*s.* 7*d.* That was without taking into account the profit earned last year and the reserve. It was the intention of the directors to apply the amount raised from the preference shares to clear off these liabilities, to enable them to erect additional premises on the site of the Waterloo Tavern in Dalton Street, and also for completing

Digitized by Google

the purchase of new warehouses in Dalton Street, adjoining their own premises. The directors considered that 40,000 additional preference shares would, with the 9,000*l.* subscribed for ordinary shares, be sufficient for present requirements. The proposition was seconded by Mr. J. Adkins (a shareholder), and unanimously agreed to.

Medical Gleanings.

Seasickness.

Codeine gr. ¼ in an effervescing mixture is useful in vomiting from any cause. The following mixture has given good results in seasickness:—

Menthol.	gr. iss.
Cocainæ	gr. ij.
Syr. simp.	℥j.
Spt. vini rect.	℥ij.

M.

One teaspoonful to be taken every half-hour.

Among the remedies for seasickness suggested by correspondents of the *British Medical Journal* are hypodermic injections of strychnine and atropine. Dr. Percy McDougall from an experience of fifty cases believes the method will always give relief, if not cure. An injection of gr. $\frac{1}{60}$ strychnine sulphate and gr. $\frac{1}{120}$ atropine sulphate should be given at the first onset of discomfort or even just before embarking. In some cases the strychnine may be increased to gr. $\frac{1}{30}$ with benefit, and the injection may be repeated every twelve hours or less. The same drugs in the same doses may be taken by the mouth, but are less efficient. Another medical man mentions a case where 2 minim doses of ipecacuanha wine every hour worked wonders.

Dionine.

Dr. Darier, in *La Clinique Ophtalmologique*, speaks very highly of dionine in iritis. His observations are confirmed by Mr. H. B. Grimsdale (St. George's Hospital). The best strength is 5 per cent., of which solution one drop is placed in the lower *cul de sac* of the eye, repeated at intervals of five minutes until the œdema appears and the pain is relieved. Mr. Grimsdale speaks of dionine as of great service in relieving pain in most deep-seated affections of the eye, and as a remedy more potent and more rapid than the application of leeches, without unfavourable action.—*Medical Times.*

Thiosinamine,

a white crystalline substance soluble in alcohol, was first brought into notice by Hebra. It is used for softening scar-tissue, and Juliusberg has applied it in a series of cases of lupus. Juliusberg's formula is—

Thiosinamini...	gr. xlij.
Glycerini	℥iss.
Aq. destil. ad...	℥j.

This is used subcutaneously in doses of 16 minims, increased to 35 or 50. Other methods of using thiosinamine are plasters (10, 20, or 30 per cent.) and soap, but these forms are not at times so well tolerated.—*British Medical Journal.*

The Action of Iodides.

Drs. Ralph Stockman and F. J. Charteris, in investigating the action of iodides on the heart and circulation, mention that their observations show that potassium or sodium iodides, given to men by the mouth in therapeutical doses, do not modify the physical conditions of the circulation, and that therefore they neither directly weaken the heart nor dilate the arterioles. The therapeutical effects must be due to some other mode of action, and this is probably true also of some of the rarely occurring poisonous effects. It is sometimes observed, for instance, that iodides quicken and weaken the pulse, and this has been specially frequent in goitre; sometimes also their administration is followed by emaciation. There is good reason for believing that in neither case is this a direct effect, but is due to increased formation or alteration of the iodine-containing thyroid secretion, which has a powerful action on the circulation and on metabolism.—*Lancet.*

Correspondence

To Correspondents.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Monthly Accounts.

Sir,—I was considerably relieved to find through your issue of March 29 that your special contributor "Xrayser" had admitted the justice of my little note of complaint, and had endorsed it by a suggestion of his own, with which I heartily agree. I had hesitated more than a little before I sought your assistance to give expression to what, after all, is only a minor grievance. It is, however, the petty worries of business-life which add to the burden of those who are already pretty well hedged round by all kinds of embarrassments and pitfalls, particularly frequent in the practice of retail pharmacy; and as the pharmacist himself must in the main rely upon purely personal service to enable him to meet his engagements, any omission which in effect impinges upon his time results in a possible loss of income. I am much indebted to Mr. Umney for his explanation, and whilst I would not advise him to take all the drug-houses under his sheltering wing, I am sure he will be relieved to know that his excellent firm has no part in my indictment, for the statement from Southwark Street invariably arrives regularly and in good time. But after reflecting upon Mr. Umney's letter, I am just wondering whether this regularity is due to the systematic arrangement of the ledgers—a possible initial advantage—or the possession of a temper so exacting and erratic as to cause unmerited priority from the ledger-keeper. Unfortunately, payments to drug-houses *per se* constitute about a tithe of the present retailer's disbursements, and it may be that the enormous increase of manufacturing firms, who can have no actual knowledge of the difficulties which a retail druggist working single-handed experiences in managing the financial part of his business, accounts to some extent for the irregularity and laxity of which I originally complained. Taking last month as an example, I find that I had to deal with monthly accounts upon three separate occasions; had they been all rendered by the 8th inst., one clearing-off would have sufficed. The last payments were made on the 17th or 18th, and since that date two or three more have arrived, and must naturally remain unpaid till I am dealing with the first batch next month. Mr. Umney, an experienced and respected authority, says: "I hold that in all cases statements should be in the hands of the pharmacist . . . at least seven days prior to the date named for payment—say, about the 8th of the month." With such a pronouncement I am perfectly in accord; my only point of difference is—and in this respect I do not suppose Mr. Umney would dissent—that whether an account is due for payment on the 15th, 20th, or by the end of the month, the last statement should be in the hands of the retailer not later than the 8th inst.

An Ordinary Retailer. (189/7.)

The Medicine-stamp Act.

Sir,—The genial criticisms of "Xrayser" of the *ex cathedrâ* type are usually so entertaining that I am almost unwilling to traverse his statements in regard to certain imaginary inaccuracies on my part. "Xrayser" is unfortunate in his examples. In any "united effort" surely the predominant partner—the Pharmaceutical Society—must, as the only legal and legitimate head of pharmacy, be officially represented. The affair of 1886 was one of the expiring efforts of the old Chemists' Defence Association; the concession following I alluded to. Still more important concessions have been obtained since, yet not the resultant of anything which meets my view of "united effort." Admittedly a most excellent text-book, I did not quote "Alpe" as a safe guide, because Somerset House refuses to recognise it as

Digitized by Google

authoritative. It is curiously coincident that Mr. Denniss, appearing for the Inland Revenue in the Brentford case (*C. & D*, March 29), should emphatically say, "'Alpe' is no authority." At a later stage Mr. Denniss further stated, "The use of such words as 'cough-mixture,' &c., was a concession merely," thus corroborating my statement. In regard to verbal recommendation, "Alpe" alludes to this, and in The Chemists' and Druggists' Diary, as a footnote to Class 2 and Class 3, is printed in italics, "this and the preceding claim may be made verbally." What can there be either misleading or inaccurate in my remark that verbal recommendation had never been clearly defined, and should be? It probably goes as far as this: You may sell, *e.g.*, essence of ginger, and recommend it for certain ailments verbally, but you must not claim verbally any special, exclusive, or secret method of manufacture. I maintain this is hazy. "Xrayser" next doubts the trade's acquaintance with the Stamp Act being so elementary as I assume, waiving my own correspondence and the numberless queries in the journals during the last three or four months. Mr. Glyn-Jones, speaking as the official head of the new Chemists' Defence Association, said that out of 200 cases submitted to them 198 were distinctly liable; moreover, the authorities have been so overwhelmed with labels, it is becoming a question whether this concession may not be withdrawn, because in 90 per cent. a small knowledge of the Stamp Act would have obviated any necessity for opinion. If this does not satisfy "Xrayser," the only alternative remaining is a sweeping reflection on the general probity of the craft, which I prefer not to suggest. "Xrayser" in saying such words as "recommended by eminent physicians" in the opinion of Somerset House do not constitute liability, is in direct conflict with "Alpe." My justification is this. I inquired by letter from Somerset House, "Do the words 'recommended, advised, ordered, &c, by eminent physicians, the faculty, &c,' so commonly appearing on ordinary stock-labels, incur liability?" The reply was definite that such words do not. This correspondence is open to inspection. Finally, I did not raise the question of dispensing proprietaries as anything novel (though, oddly enough, it appeared new to several). My suggestion was that it created a difficulty between the physician and dispenser which the Board might obviate without loss of revenue. This, I think, disposes of all "Xrayser's" imaginary inaccuracies, though I willingly admit hasty preparation, for I understood my invitation from the Western Chemists' Association was merely to provide a basis for discussion on the Stamp Act. Whether the best interests of the craft may not lie in diplomatic methods rather than legal antagonism is a matter of purely personal opinion. I favour diplomacy. Yours faithfully,

285 Brockley Road, S.E., March 29. Leo Atkinson.

Dewsbury and the Federation.

Sir,—I accept Mr. Broadhead's disclaimer with pleasure, and would assure him that I have no personal feeling whatever in the matter. I am simply the honorary servant for the time being of the Federation Executive, and in such impersonal capacity I penned my protest to his remarks which accompanied his resolution. Mr. Broadhead, by fixing on an incidental sentence, conveniently "rules out of court" the remainder (!) of my letter. By so doing he evades the issue—viz, that the arguments he put forward in favour of a West Riding Federation form the very best reason why the Dewsbury and District Chemists' Association should continue to give countenance to and assistance in furthering the interests of the forty Associations which comprise the National Federation.

Yours faithfully,
Geo. F. Merson,
Hon. Secretary,
Federation of Local Ph. Associations.

Newcastle-on-Tyne, April 1.

An Irish Grievance.

Sir,—Permit me through the medium of your columns to draw attention to a state of affairs in Ireland, which in the interests of the profession ought to be remedied. I refer to the Pharmaceutical Council's acceptance of a certificate for the Registered Druggist's examination from a limited liability company. A young man who served his apprenticeship in a limited company (both partners in which are registered druggists only) applied to the Society for examination as registered druggist. The Society accepted the certificate, and when questioned afterwards they said that the certificate was signed by one of the partners in the firm himself being a registered druggist. The young man passed his examination, and was registered as a registered druggist, and is about to open on his own account. In this case the Society cannot plead ignorance of the facts, for they were communicated with some months before the examination and the facts of the case laid before them. It happens that there are two other establishments in the neighbourhood, the proprietor of only one of which is an L.P.S.I. I leave it to your readers to conjecture what will follow. The qualified man, who, like multitudes of others, has spent some of the best years of his life in passing exams. in order to be properly qualified, is now hemmed in on both sides by two unqualified men, his business seriously interfered with, and a large share of his profits gone. The above is only one case out of many, and may be looked upon as typical. Some may say, "Oh, what harm can the registered druggist do the L.P.S.I.?" I answer, Every harm. At present to be a druggist is sufficient in the eyes of many, especially country people, who are not supposed to know the distinction, and naturally our registered druggist friend will carry on all departments of the business and compound medical prescriptions. Let no one answer, "He cannot, as he is not qualified." How many registered druggists in Ireland at the present time are busy compounding prescriptions whilst an apathetic Pharmaceutical Society looks idly on and takes no notice? It would be interesting to have a list of registered druggists prosecuted during the past year for compounding: I am afraid it would be almost a minus quantity. This is a question that cannot be lightly put aside. It is in the interests of the army of dispensing chemists and qualified assistants, who have spent years of honest toil and large amounts of money to qualify only to find a man who comes in so to speak by the back door enter into competition with them. Is this right? Is the Society alive at all? Is it safeguarding the interests of those who are properly qualified, and is it doing its best to prevent unlawful competition? These questions not only concern dispensing chemists, but the public at large. Faithfully yours,

M.P.S.I. (181/40)

Cannabis Indica.

Sir,—I am obliged to Dr. McWalter and Mr. Maben for their friendly criticisms of my note on extract of cannabis indica. Both of these gentlemen, however, overlook the fact that I expressly disclaimed any intention to touch at all upon the chemical composition of the drug, and inferentially upon what constituent or constituents the medicinal value depends. I had by me published reports of the work done by the investigators named, but with the object I had in view I did not deem it necessary to load my paper with a *résumé* of these. The points I endeavoured to bring out, and which my experiments amply proved, were—

1. The B.P. extract of commerce is, physically, a very variable article. It contains to a greater or less extent an extract which, insoluble in 90-per-cent. alcohol, is soluble in water, and has all the characters of an aqueous extract of cannabis indica made after the drug has been exhausted with rectified spirit.
2. It varies from a syrupy consistence to that of a stiff paste, due to the relatively large variation in the percentage of water present.
3. An improvement upon the official process would be to exhaust the drug with absolute alcohol and prepare the tincture by dissolving the extract in spiritus ætheris.

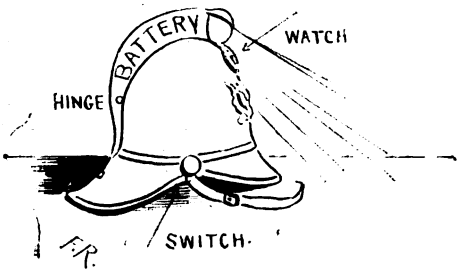
Whether the therapeutic activity lies in the resin or in a volatile and evanescent body accompanying the resin, is foreign to the question; and until the Pharmacopœia gives some specific assay-process for the crude drug, I take it that uniformity in the physical characters of the extract is a step in advance of the varying article at present on the market, and with the object of furthering this my experiments were recorded. Yours faithfully,

24 Newgate Street, Geo. F. Merson.
Newcastle-on-Tyne.

Ince on Emulsions.

Sir,—It may appear so much of an impertinence to criticise Mr. Ince that I hesitate to append my name, but

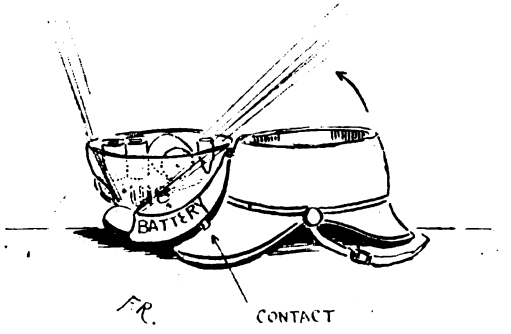
Digitized by Google



surely in the twentieth century one should not write *ex cathedra* on emulsion-making without once dropping a hint that the oil should not be rancid, and that the mortar and bottle should be clean. Methinks I hear some indignant Briton protest, "Oh, it's only in Ireland that one need mention so self-evident a condition; we all know they should be clean." But I do not speak of ordinary gross palpable dirt: we must seek after a condition of cleanliness which approaches to sterilisation. Thus, when the mortar has, after cleaning, been several times washed out with boiling water, and dried on the stove, and the bottles submitted to the same process, most of the micro-organisms that make for fermentation will be absent, and the emulsion a success. The degree of acidity of the oil is another important factor—thus it is why olive oil is so variable in its results, and almond oil so much better generally. The bland cream oil, free from smell or taste, makes a delightful emulsion, and all the Inces on earth cannot make a good emulsion from the intensely acid, acrid, and rancid oil which is a couple of years old.

Yours truly,

Dublin, March 22. L. A. H. I. (184/60.)



For Robert.

Sir,—Might I suggest a "first-aid helmet" for the London city police? The sketches will probably explain

themselves. The contents of the helmet are as follows:—

2 bandages,
1 simple tourniquet,
1 small roll lint on spool,
1 pair scissors,
Some safety-pins,
Small tin ribbon-plaster,
1 dose sal volatile, diluted ready for use.

The small dry-cell battery can be switched on at will, and lights up the interior of inverted apex automatically by contact.

Yours faithfully,

The Inventor.

Leeds, April 1. (Fred Reynolds)

The Apprenticeship Question.

Sir,—I have read with great interest a discussion, which for some considerable time has been occupying your valuable columns *re* the difficulty chemists find in obtaining apprentices to the profession in the home country, and in all the arguments brought to bear upon the subject it seems to me that the writers have quite overlooked (or wilfully neglected to state) the primary and more essential causes of the above state of affairs. In the present age "men are wide awake," and before sending their sons to any profession or trade, naturally inquire into the various privileges, &c., connected with the particular branch in which they propose to educate them. Now, when we consider the privileges which our embryo chemist is to possess, any sensible man will admit without hesitation that they are *nil* in comparison with the other semi-professions. The hours are unnecessarily long, responsibility great, pay small, examinations difficult; in fact, everything calculated to promote dull spirits, ill-health, and demoralisation; and no time allowed for careful study, thought, athletics, or other bodily exercise which, according to all medical science, is absolutely necessary to maintain that most desirable *mens sana in corpore sano*. So long as this state of affairs exists, and no steps are taken to have any one, or all, of these grievances removed, just so long will the chemist not only find himself unable to procure apprentices, but also to command the respect which his important calling entitles him to. In conclusion, I would like to inform the "young blood" at home that a much better state of affairs exists in this colony: the hours are short, pay good, the climate excellent, and employers aim at making their assistants comfortable by placing no unnecessary burden upon them, and giving every advantage possible: by these means life and work become a pleasure, and not a life-long yoke of persistent solitude and slavery.

Yours faithfully,

Ladysmith, Natal, February 26. Sam Hooey.

English Assistants Abroad.

Sir,—Judging from the tenor of the letter of "Quite Enough" (*C. & D.*, March 29, page 509) Parisian berths for English chemists' assistants are about as unsatisfactory as they are elsewhere. After a long and varied experience in different parts of the world, I have come to the conclusion that the young qualified chemist, if he is worth his salt, is as well off as an assistant in England as anywhere. Provided he takes a real interest in his employer's business, and if he does not object to long hours and hard work, he can earn from 2*l.* 10*s.* to 4*l.* weekly as salary, without selling his service to the drug-companies. I have never heard of any situations abroad where the extra remuneration is sufficient to cover the extra expenses *plus* the disadvantages of residence abroad. If qualified assistants were really alive to their own interests, they would hesitate before leaving England and engaging themselves for terms of years in other countries, because the prospects in the homeland are distinctly encouraging when we bear in mind the increased stringency of the qualifying examination, the dearth of apprentices, the gradual abolition of the indoor system, and the generally expressed desire among pharmacists for shorter hours of labour. I would like to draw attention to the ridiculous salaries offered to assistants in South Africa at present. It seems to me positively insulting to advertise a situation in Johannesburg, wages (not salary) 20*l.* per month, while the Transvaal Administration are at the present moment inviting applications from postmen for service in that country, and to whom they offer salaries varying from 200*l.* to 400*l.* per annum in addition to a prospective pension. Those thinking of leaving England for other climes should not engage themselves for a smaller salary than double they are capable of earning in England, otherwise, from a pecuniary point of view, they will most certainly reap disappointment. This is a rule which was suggested to me about a year ago by an agent in this country who engages numbers of assistants every year for situations abroad.

Senior. (19/91.)

London, W., April 1.

Dispensing Notes.

Aluminium-chloride Pills.

Sir,—Some time ago we had a prescription for aluminium-chloride pills, and I remember how unmanageable they were until Canada balsam was tried as an excipient. This made a good pill, which kept firm and dry for some time. They are now, however, very wet, although round, and I have them in a stoppered bottle. If aluminium chloride is to be used, it will be well to know something about the pharmacy of it. I do not much like the pilular form.

Yours faithfully,

R. O. (23/92).

A Camphor-mixture.

SIR —The compounding of the following mixture may be of interest to many of your readers :—

Spt. camphor.	℥ij.
Potass. iodid....	℈j.
Vin. colchici	℥iss.
Sodii salicyl.	℥ij.
Aq. ad	℥iij.

The method I employed with perfect success was as follows: Dissolve the pot. iod. and sod. salicy. in ℥iss. aq. Put ℥ss. mucilag. acaciæ, diluted with ℥ij. aq , in a mortar. Add the spt. camph. ℥ij. and the remaining ℥vj. aq. alternately, triturating briskly the while. Add this to the dissolved salts, and a most presentable mixture is obtained.

Yours,

Edinburgh. S. D. D. (179/53.)

173/57. *Cepia.*—The mixture is a very muddy one. We presume that is the point you wished cleared up.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

189/33. *Walton.*—Your best plan in regard to the label is to have it registered at Stationers' Hall, which can be done for 5*s*.

185/53. *A. E. C.*—Your label makes the article liable to duty because it is said to be "for liver, indigestion, costiveness, and piles."

184/47. *Aspirin and other Correspondents.*—Your powders, being composed of an entire drug, are exempt from stamp-duty, and you may call them what you like or recommend them as you please.

185/33. *Silva.*—The sentence, "It quickly cures pimples," on your skin-lotion is on the border-line of liability; but, so long as it is confined to the emollient skin-lotion (a toilet-preparation), the Commissioners of Inland Revenue have hitherto not interfered. It cannot be used on a blood-purifier.

181/34. *Devon.*—Off wine-licences are granted to individuals. See our DIARY for particulars.

182/2. *Cinthos.*—Does the rosemary and cantharidine hair-wash contain a poison? If it does, and the fact can be proved, it cannot be sold by grocers.

188/12. *F. H. S.*—An unqualified person does not make his actions legal by employing a qualified man to manage his "chemist's shop." See our DIARY on the point.

187/60. *Medical.*—Of your six labels, three are liable—viz., "blood-purifier," because "it is much recommended for scorbutic affections, abscesses, . . . pimples, and skin-eruptions"; the "herbal cream," because it is "prepared only by" (the initials before the title may also involve liability); and the "corn-solvent" because it is for "rapidly and painlessly removing corns," &c.

183/42. *An Old Subscriber.*—If you are prepared to admit responsibility for the printing of the election bills your name may appear upon them as the printer. The course which you have followed is perfectly legal.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

183/13. *J. H. W.*—Doubtless $\frac{7}{100}$ grammo is meant. This is sometimes written 0·07 ctgr. To convert into grains for ten powders multiply by 155.

185/52. *Cymro.*—We read the prescription for oils as follows: Orynum (oil of origanum), spike (oil of spike), mouns (ammonia), peter (oil of petre), brisk (oil of brick), turpantine (oil of turpentine), enters (oil of Exeter), swallow (oil of swallow). For oil of brick the modern equivalent is linseed oil coloured with alkanet; oil of petre is represented by a mixture of turpentine (20), Barbadoes tar (1); whilst for oil of Exeter and oil of swallow green oil is given.

185/57. *Radium.*—The following books on organic chemistry and physical theories will suit you: Perkin and Kipping's "Organic Chemistry" (Chambers), 6*s*. 6*d*.; and Tilden's "Introduction to the Study of Chemical Philosophy" (Longmans), 5*s*.

185/32. *Velox.*—Mountant.—See DIARY, page 267, or last volume of *C. & D.*, page 900.

185/54. *T. L. N.*—Liquid Metal-polish:—

Precipitated chalk	℥ij.
Terra rosa	℥ij.
Liquid ammonia	℥ij.
Methylated spirit	℥iij.
Water to	℥xx.

Mix.

Shake before use.

188/28. *Cornwall.*—You will find the following formula for Castration-ointment suitable for your purpose:—

Verdigris	1 oz.
Glycerin	1 oz.

Rub together in a mortar until perfectly smooth, then add to—

Margarine	½ lb.

Mix thoroughly.

188/16. *X. Y. Z.*—There is no University in Europe which grants the Ph.D. without residence at the University for a period of at least two years. See our Educational Number, September 7, 1901, for particulars.

188/37. *A. Puleo Caputo* (Palermo).—(1) The address of the Society of Chemical Industry is Palace Chambers, Bridge Street, London, S.W. (2) Benzosol is benzoyl guaiacol, and is, we presume, what you refer to.

164/70. *Mizpah.*—(1) The proportion of chalk in the plate-powder was, as far as we remember, about a third. (2) Levigated kieselguhr may be had from any wholesale house. (3) The liquid preservative used for meat, and applied by means of cloths, is calcium bisulphite.

173/24. *J. A. H.*—Essence of Vanilla.—See *C. & D.*, April 6, 1901, page 571.

158/63. *Woolbob.*—(1) We do not know enough about wool-carding and washing to be able to recommend a hand-book on the subject. (2) Ordinary unwashed sheep's wool contains 28 to 42 per cent. of a mixture of potash soaps and fatty matters. (3) Wool-fat Purification.—The following is an outline of the process of separating the fat from the wash-waters of woollen factories: Sulphuric acid is added to neutralise the alkali present, and waste steam blown through to facilitate the separation of the fatty acids, &c. (magma) from the watery fluid. After draining and filter-pressing (first cold, then hot) about 50 per cent. of the crude magma remains as a dirty press-cake. The crude magma contains about 35 per cent. of fat, and is bleached by means of potassium bichromate and sulphuric acid, and purified by boiling with water. Other processes involve the use of calcium chloride as a precipitant of the cholesteroid bodies, and solvents such as petroleum spirit, acetone, and carbon bisulphide. A centrifugal process similar to that employed in separating cream from milk is also used for separating the suspended grease from the wash-water. If you study the lanolin patent (4992 of 1882) and the report of the lanolin lawsuit (*C. & D.*, November and December, 1893), you will gather much information about the subject.

179/55. *G. P.*—To Turn White Flowers Red the stalks are put in water containing a red aniline dye, such as fuchsine, in solution.

Digitized by Google

178/27. *R. W.*—**Mist. Bismuthi Co.**—An alternative formula to the one given in "Pharmaceutical Formulas" is the B.P.C. recipe, which contains :—

Morph. mur.	gr. viij.
Tr. card. co.	℥iij.
Chloroform.	℥j. ♏x.
Ext. nuc. vom. liq.	℥ij. ♏xv.
Ac. hydrocyan. dil.	℥v. ♏xx.
Liq. bismuth. conc.	℥xv.
Aq. dest. ad	℥xx.

Liquor bismuthi conc., B.P.C., is made in a similar way to liquor bismuthi (page 528 "Pharmaceutical Formulas"), but the quantities are as follows :—

Bismuth. subnitr.	1 oz.
Ac. nitrici	5 oz.
Ac. citrici	5 oz.
Sodii bicarb....	8½ oz.
Liq. ammon....	6 oz.
Liq. ammon. citr.	12 oz.
Aq. q.s. ad.	50 oz.

177/59. *D. F.*—**Liquor D'Hoffman** in the hair-wash prescription is spt. ætheris co. The script has evidently been copied by a layman. The items "E. water" and "Pot. nitrat." are intended for β naphthol and pilocarpine nitrate.

177/73. *G. F. G. G.*—(1) **Good Capsicums** were found by Alpers to yield about 19 per cent. of oleo-resin (15 oz. from 5 lbs. of capsicums) by the ether extraction-process. (2) **Silvering-paste** :—

Silver nitrate	gr. xxxvj.
Potassium cyanide	℥j.
Water...	℥j.

Dissolve the nitrate in half the water and the cyanide in the other half; mix, and add to—

Precipitated chalk	℥v.
Cream of tartar	gr. v.

Make a paste.

To use the paste, clean the surface thoroughly and apply the paste, allowing it to remain on overnight, when it is brushed off, and the process repeated if necessary.

173/53. *Metol.*—(1) **Dry Metol-quinol Developer** :—

A.

Metol	100 gr.
Quinol...	50 gr.
Powdered sodium sulphite... ...	2 oz.

B.

Sodium carbonate	1 oz.
Potassium bromide...	60 gr.

The powders A and B, which are best packed in glass tubes, are each to be dissolved in 1 pint of water to form a developer.

(2) **Dry Quinol Developer** :—

A.

Quinol...	80 gr.
Potassium metasulphite	½ oz.
Potassium bromide	10 gr.

B.

Lithium carbonate	80 gr.

Dissolve the two powders in a pint of water.

(3) **Dry Pyro-soda Developer** :—

A.

Pyrogallol	80 gr.
Sodium sulphite	2 oz.

B.

Sodium carbonate	2 oz.
Potassium bromide	20 gr.

Each powder is dissolved in 1 pint of water.

Anhydrous sodium sulphite and calcined sodium carbonate give the best result in dry developers.

☛174/47. *Sivel.*—**Dark-room.**—There is no book published on the construction of dark-rooms, but the following details will be sufficient to guide you in building one. Do not build a smaller dark-room than 6 feet 6 inches high by 5 feet by 4 feet 6 inches, and let there be a sliding panel of white and red glass for working with. The size of the red glass should not be too large. For evening work a dark-lantern is required, to illuminate which either gas or electricity should be supplied. A bench should be fixed beneath the source of light for working on, and on one side a lead-lined or glazed-earthenware sink fitted with overflow-plug. The water-supply should have a swing-arm tap. The end of the bench near the sink should be sloped, covered with lead, and supplied with a levelled grille for resting the dishes on whilst developing. A convenient size for the sink is 30 by 19 by 4 inches, and the top of the bench is conveniently placed at 3 feet from the ground. Underneath the bench shelves for dishes should be placed, and a special position assigned to the fixing-bath. On the wall shelves will be required for bottles and measures. It is usual to paint the interior of the room a flatted slate. The ventilation should not be neglected, but it is a simple matter when the room is out of doors. Care must be taken that the door and windows are light-tight.

184/44. *J. T.*—The most recent information on removing superfluous hair is giving in the *C. & D.*, December 28, 1901.

184/58. *Mizpah.*—Your inquiry has had to be held over owing to pressure on space.

184/67. *G. J. G.*—**Books on Diseases of the Horse**—Gresswell's "Manual of Equine Medicine," 10*s.* 6*d.* (Baillière); Robertson's "Practice of Equine Medicine," 25*s.* (Baillière); Mayhew's "Illustrated Horse-doctor," 10*s.* 6*d.* (W. H. Allen).

106/33. *P. R. C.*—Slater's "Every Man his Own Cattle-doctor," edited by Mayhew, is published at 21*s.* by Warne.

181/60. *W. S.*—You do not give any information in your inquiry as to what cement you used, or what kind of belts you wish to unite. Machinery-belting cannot be efficiently united by cement.

17/3. *W. J. S.*—(1) We note the photographic tip, and shall use it soon. (2) The steps to take for obtaining a patent are given in The Chemists' and Druggists' Diary. Is the method of preventing steamy windows new? If it has been used before, you cannot get a valid patent.

183/18. *E. & H.*—**Hard Soap.**—For every 282 parts of oleic acid 40 of caustic soda is required by theory; in practice, a slight excess is ordinarily employed. The strength of the ley used varies with the percentage of water required in the finished soap; thus, if to 282 parts of oleic acid 140 of ley be added containing 45 of caustic soda, the resulting soap will contain 304 parts of anhydrous soap and 5 of caustic soda. Neglecting loss by exudation and evaporation, the finished soap will contain 113 parts of water, or 27·3 per cent. The reaction is—

$$\underset{282}{C_{18}H_{34}O_2} + \underset{40}{NaHO} = \underset{18}{H_2O} + \underset{304}{C_{18}H_{33}NaO_2}.$$

The oleic acid is heated in a steam-jacketed pan furnished with an efficient agitator, and the ley run in; the whole is then agitated to complete the reaction, and transferred to a "cooling-frame" in which it solidifies.

184/45. *C.*—(1) Please supply further information about the "remedy for fits." (2) Dried yeast is reckoned as being three times as strong as fresh yeast, the latter containing from 40 to 80 per cent. of water.

203/12. *Ulver* asks for a reliable method for proving the presence of free sulphuric acid or hydrochloric acid, or both, in organic extracts, which may possibly contain soluble sulphates and chlorides, and acids of fermentation, such as acetic, lactic, &c. The extract is a liquid extract (containing a large amount of tannic acid), as used by tanners for making leather, and there is a suspicion that sulphuric acid or hydrochloric acid has been added to it—a not uncommon practice, it appears. [Our correspondent's problem is one of considerable difficulty. An approximate answer is the most that could be furnished, and to supply even this several quantitative determinations would be required. We would suggest, first, the gravimetric determination of chlorine and of the SO_4 radical in a weighed quantity of the original extract; then the careful incineration of another weighed

Digitized by Google

quantity of the extract (with due observance of all the precautions that must be taken in effecting the incineration of such materials), and the determination of the chlorine and of the SO_4 radical in the ash. If the proportion of chlorine was found to be less in the second determination than in the first, this would indicate that hydrochloric acid had been driven out (presumably by free sulphuric acid) during the process of incineration. If no chlorine was found in the ash, and the proportion of SO_4 radical was also less than in the original extract, this would indicate more clearly that the latter had contained free sulphuric acid. Comparison of the results obtained in these determinations, with the results of similar experiments carried out with an extract of the same kind, but known to have been prepared from materials to which free hydrochloric or sulphuric acid had not been added, would be a valuable check.]

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

114/3 Makers of "Rolo" or "Rollo" fly-coil?

190/46. Makers of "Royal Crown" stramonium cigarettes?

187/35. Where can "Merrit's Liverettes" be obtained?

191/73. Where are Howard's headache-powders obtainable?

183/38. What are "soap-oil," "grape-seed oil," and "melon spirit"?

183/58. What is "American soap," used for removing tattoo-marks, or where can it be obtained?

Australasian News.

Chiefly from "The Chemist and Druggist of Australasia," February 1, 1902. 6d. per copy, post free.

Poison Laws.—Mr. A. B. Cowling, at the half-yearly meeting of the Pharmaceutical Society of South Australia on January 23, read a paper on "The Poison Laws in South Australia," dividing his subject into (1) What we possess, (2) What others enjoy, (3) What we want. Mr. Cowling's wants were modest in the extreme.

Pharmacy Competition.—The gold medal awarded by the Pharmaceutical Society of South Australia for a competition in practical pharmacy and a paper on the poison laws was this year gained by Mr. Hoddle. The competitors had to make sulphurous acid, spt. ammon. arom., ferri carb. sacch., hydrarg. oxid. rub, and syr. ferri iodidi. The products were analysed to see how far they corresponded with the Pharmacopœia requirements.

Pharmaceutical Examinations.—A special feature is made of examinations in the February issue of the *C.D.A.* Portraits and biographies are given of most of the examiners of the Commonwealth. Many of the examiners own Great Britain as their birthplace. A paper by Dr. Peter T. Austen gives some instruction as to the why and wherefore of examination-questions. The idea of examination-papers should be to test not only the knowledge possessed by the student, but also the working of his mind upon the particular subject, which will show more clearly the nature and condition of a mind than the daily recitation, because the case is more capable of systematic study, and can be made to cover larger fields of mental activity. Dr. Austen does not suggest that such examinations should replace the regular recitation, but he believes they should be held frequently, and should serve a far wider purpose than that of merely noting the quantity of knowledge absorbed by the mind. Such an examination is not a mere matter of testing and registering, it is a creative exercise of the mind.

What a Young Victorian Thinks.—Another view of pharmacy in England is given by a young Victorian who, writing home, says:—

I got The Chemist and Druggist supplement, answered several advertisements, and got four answers at the marvellous salaries of from 30*l.* to 35*l.* a year indoors. . . . English "biz" is mainly governed by the marvellous penny. It is all "penn'orths," and one will rush about for an hour or so, and on looking into the till will find only a couple of shillings. On account of the chemists' curse, "the inspectors," you are in a state of terror when any decent-looking person comes in for a penn'orth of sweet nitre. . . . Scrips are almost unknown, except in the best shops, as Squire's, &c. In this shop where I am now it is a great event to get a scrip. There is no scrip book, and the dispensing scales would defy description. . . . I called on the Pharmaceutical Society to find out about the Minor. To my astonishment I will have to do the Preliminary again. I had an interview with Mr. Bremridge, the Registrar, who, like most officials, is very fond of arguing in the abstract, and quoting from by-laws. It was placed to the blame of the Colonial Secretary (Chamberlain) that I am compelled to go through the Preliminary again. By the way, they charge 10*l.* 10*s.* for the first shot at the Minor, and they do not reckon one is ready for it till he puts in six to nine months' graft from 9 to 5 daily. In fact, one requires to be a millionaire to pass the English examination, and when he has done so he gets 30*l.* per annum indoors.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, April 7.

Society of Chemical Industry (London Section), Chemical Society's Rooms, Burlington House, Piccadilly, at 8 P.M. Mr. E. Sanger Shepherd on "Some Recent Improvements in the Photography of Colour."

Tuesday, April 8.

Bradford Chemists' Association. Annual dinner.

Wednesday, April 9

Glasgow Chemists' and Druggists' Assistants' and Apprentices' Association, 94 W. Regent Street, at 9.15 P.M. Annual business-meeting. Election of office-bearers and discussion of proposals of interest to assistants.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W.C., at 11 A.M. Monthly Council-meeting.

Manchester Pharmaceutical Association, Victoria Hotel. Annual general meeting.

Newcastle-on-Tyne Chemists' Association, Hôtel Métropole, West Clayton Street, at 8.30 P.M. Mr. F. R. Dudderidge on "Tests for Arsenic," and Mr. W. Graham on "Optics."

Young Chemists' Association. Business-meeting of the Association, in the Working-men's Club, Gallowgate, Newcastle-on-Tyne, at 8.15 P.M.

Thursday, April 10.

North Stafford Chemists' Association, Alexandra Hotel, Stafford. Annual meeting and dinner, at 4.30 P.M. Tickets, 5*s.* each, may be had from Mr. Edmund Jones, chemist, Hanley.

Reading Chemists' Association. Conversazione.

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. "Notes on some Pharmacopœial Preparations," by Mr. E. A. Andrews.

Grimsby Chemists' and Druggists' Association, Oberon Hotel, at 7 P.M. Annual meeting and dinner.

Friday, April 11.

Photographic and Optical Exhibition, Portman Rooms, Baker Street, W., opens.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Professor Dewar on "Problems of the Atmosphere."

Royal Victoria Hall, Waterloo Road, S.E.—The following are the arrangements for Science-lectures, on Tuesdays, at 8.30, during the month of April at the above Hall:—April 1, Mr. Richard Kerr, F.G.S., on "Curiosities of Nature." April 8, Mr. Bennett Brough, "The Iron Mines of the World." April 15, Mr. W. H. Shrubsole, F.G.S., "Microscopic Marvels of the Thames." April 22, Mr. Corbett on "Ceylon." April 29, to be announced later.

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: April 3.

BUSINESS has not yet been fully resumed on the markets, but the tone is rather better than was expected immediately after the holidays. Quinine is a "waiting" market, with a scarcity of sellers in anticipation of an advance in the bark unit at Amsterdam to-day. Considerably higher prices are again asked for cod-liver oil, which preclude business. Cream of tartar has a firmer tendency owing to higher prices asked from France. Japanese crude camphor is again offering at lower prices for shipment, but the "monopoly" quotations are unchanged. Belgian castor oil is a trifle easier. Shellac closed dearer previous to the holidays, but since then little has been done. The following table shows the principal fluctuations of the week:—

Higher	Firmer	Easier	Lower
Cinchona	Cream of tartar	Benzols	Camphor, crude (Jap.)
Oil, cod-liver	Golden seal	Canary-seed	Oil, cumin
Pepper (black)		Oil, castor (Belg.)	Oil, orris (concrete)
Shellac		Pepper (white)	

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from March 26 to April 2, inclusive:—Acid, carbolic, 113; acid, citric (@ Bordeaux), 12; acid, tartaric (@ Rotterdam) 39, (@ Bordeaux) 41; argol (@ Bordeaux), 121; arsenic (Span.), 75; buchu, 55; canary-seed, 53; cardamoms, 109; caraway-seeds, 153; camomiles, 42; cascara sagrada, 116; castor oil (Fr.) 84 cks., (Ital.) 120, (@ Rotterdam) 150, (Belg.) 206, (@ Calcutta) 1,125 cs.; cochineal, 32; cod-liver oil (@ Norway) 457, (@ Rotterdam) 100, (@ Hamburg) 45; chamomiles, 42; chillies (Jap.), 350; cinchona (B.I.), 52; citronella oil (@ Galle), 15 drums; coca-leaves (Ceylon), 5; cream of tartar, 181; croton-seed, 20; cubebs, 6; cumin-seed, 292; essential oils (from Messina) 96 pkgs., (@ Lisbon) 21 cs.; galangal, 67; gentian, 27; ginger (Jam.) 1,116, (Jap.) 1,470, (African) 1,151; gum thus, 250; honey (Jam.), 17 cks.; jaborandi, 4; lime-juice (Jam.) 10 puns., (@ Messina) 25 pps., (@ Dominica) 46 brls.; lime oil (@ Dominica), 19; menthol (Japan), 15; musk-seed (W. I), 1; nux vomica (@ Madras), 257; peppermint oil (@ N. York) 16, (@ Japan) 20, (@ Bordeaux) 75; pot. pruss., 14; quicksilver (Span.), 13; quinine (@ Batavia), 100 cs.; saccharin, 4; saffron, 1 cs.; saltpetre (@ Calcutta), 1,310; sarsaparilla (@ N York) 35, (@ Colon) 7, (@ Panama) 15; soda bicarbonate (@ N. York) 328; soy, 56; sulphur (@ Catania) 1,200 pkgs. 100 tons, (@ Italy) 400 bgs. 485 cks; tartar (Span.) 202, (French) 258; wax, ceresin, 80, (@ Dusseldorf) 35; wax, bees' (Mor.) 82, (Jam.) 5, (Italian) 7; wine-lees (@ Bordeaux), 328.

The World's Quicksilver Production.

The following table covers practically the quicksilver output of the world with the exception of Mexico. The figures are in metric tons:—

	1900	1901	Per Cent.
Austria	550	512	− 6·9
Italy	220	278	+26·4
Russia	340	368	+ 8·2
Spain	1,111	846	−23·9
United States ...	967	992	+ 2·6
Total	3,188	2,996	− 6·0
Total flasks ...	91,873	86,340	− 6·0

The production of Italy includes all the working mines. That of Austria is from the Idria mines. The Spanish output includes 786 tons from Almaden, and 80 tons from the smaller mines. The Mexican production in 1900 was 335 tons, and if the same figures are allowed for 1901 it would bring the world's total production for the year up to 3,331 metric tons, against 3,523 tons in 1900.

West Indian Kola.

The Director of the Jamaica Botanic Gardens, in his annual report for 1901, states that kola is still being planted to some extent, and that 539 seedlings were distributed during the year. Dr. Preuss, Director of the Botanic Gardens in the Cameroons, when lately on a visit to Jamaica, said that the kola grown in that island was the best of the edible species of West African, and that it was the finest he had seen.

Heavy Chemicals.

Business in the heavy-chemical market has naturally been much interfered with since last writing by the holidays, so that there is really little fresh to be reported. The tone of the market continues to be of the same quiet nature, with home-trade demand fairly good and steady, whilst the export business is still only poor.

Sulphate of Ammonia is rather quieter, but firm tone shows no indication of decline. Present values are, roughly, 5*s.* per ton higher than those last given.

Alkali Produce.—Bleaching-powder rather quiet, but if anything moving a shade better than it was. Softwood casks, free on rails, 6*l.* 7*s.* 6*d.* per ton; f.o.b. Tyne or Liverpool, 6*l.* 10*s.* per ton. Caustic soda quiet: 76 to 77 per cent., 10*l.* 7*s.* 6*d.*, to 10*l.* 15*s.*; 70 per cent., 9*l.* 15*s.* to 10*l.* per ton; and 60 per cent., 8*l.* 15*s.* to 9*l.* per ton. Ammonia alkali, 58 per cent., well maintained, both as regards demand and value; 4*l.* 10*s.* to 4*l.* 15*s.* per ton, in bags, free on rails. Chlorates of potash and soda still keep very low, and there is not much doing: potash, 2½*d.* to 3*d.* per lb., and soda, 3⅛*d.* to 3¼*d.* per lb. Bicarbonate of soda moving steadily, at 6*l.* 7*s.* 6*d.* to 6*l.* 12*s.* 6*d.* per ton in large casks, and 6*l.* 15*s.* to 7*l.* per ton in 1-cwt. kegs, f.o.b. Liverpool. Soda crystals in steady request at unchanged rates of 67*s.* 6*d.* per ton, f.o.b. Liverpool, and 62*s.* 6*d.* per ton, f.o.b. Tyne. Saltcake dull, at 23*s.* per ton, free on rails, in bulk. Yellow prussiate of potash still quiet, at 5¼*d.* to 5⅜*d.* per lb. for best Lancashire makes. Sulphate of soda (Glauber's salts) in steady request, at 30*s.* to 32*s.* 6*d.* per ton, in bags, free on rails. Hyposulphite of soda in heavier demand, but without improvement in value: 6–8-cwt. casks, 5*l.* 10*s.* to 5*l.* 17*s.* 6*d.* per ton, and 1-cwt. kegs, 6*l.* to 7*l.* 5*s.* per ton, according to quality and quantity. Silicates of soda unchanged; 140° Tw., 4*l.* 2*s.* 6*d.* to 4*l.* 12*s.* 6*d.* per ton; 100° Tw., 3*l.* 12*s.* 6*d.* to 4*l.* 2*s.* 6*d.* per ton; 75° Tw., 3*l.* 5*s.* to 3*l.* 15*s.* per ton, f.o.b. Liverpool or Tyne, in usual casks.

Liverpool Drug-market.

Liverpool, April 2.

Castor Oil.—The s.s. *Craftsman* has arrived with a further supply of good seconds Calcutta, and 2 1/16*d* per lb. continues to be quoted from the quay and 3*d.* is asked in store. First-pressure French is unchanged at 2 1/16*d.* to 3*d.* per lb. Second-pressure French is still held nominally for 2⅛*d.*, but this figure might be shaded.

Quillaia-bark.—The firmness recently noticed in this article is fully maintained, and further sales are reported at 12*l.* 15*s.* to 13*l.* per ton.

Beeswax.—The market has been slack, probably due to the holidays. Values still range from 7*l.* 7*s.* 6*d.* to 7*l.* 15*s.* per cwt. for Chilian, according to quality.

African Ginger is slightly easier, at 30*s.* 6*d.* to 31*s.* per cwt. in quantity from the quay.

Fenugreek-seed.—Further business is reported in Mogador at 7*l.* per ton.

Canary-seed.—Sales are reported of fine bright Turkish, at 35*s.* per qr.

Turpentine has eased off slightly for the week, and 31*s.* 6*d.* per cwt. is the value now.

Scammony-root.—A sale of 5 tons is reported at 26*s.* per cwt.

German Drug-market.

Hamburg, April 1.

Business is very quiet at present owing to the holidays.

Aloes (Cape) is steady at 76m. per 100 kilos.

Camphor (Refined) is unchanged, makers asking 435m. per 100 kilos., while second-hand will take a few marks less.

Condurango remains firm—in first-hands at 150m., and 130m. to 135m. per 100 kilos. from second-hands.

Ergot is scarce; Spain and Russia are offering very little at present, and prices here are unchanged.

Coca-leaves are dearer at 260m. to 270m. per 100 kilos. An advance in cocaine is anticipated.

Lycopodium keeps very firm, 460m. per 100 kilos.

Digitized by Google

GOLDEN SEAL is firmer, and 520m. per 100 kilos. is now asked.
QUININE is unchanged at 41m per kilo.
JAPANESE WAX is very firm at 69½m. per 100 kilos. spot.
STAR ANISE is quiet and easier at 125m per 100 kilos.
OILS (ESSENTIAL).—Star anise is unchanged at 10½m. per kilo., Japan peppermint is firmer at 8½m. per kilo., and HGH is quoted at 8½m. per lb.
OILS (FIXED).—Cod-liver is very firm and dearer at 90m. for old and 95m. per barrel for new oil. Linseed is dull and lower. Castor quiet, and very little doing.

Cablegrams.

THE following cable was received too late for insertion in our last issue: New York, March 27. Tame markets here. Opium is easy at $2.90 per lb.; quinine strong at 28c.; menthol higher at $4; ergot firm at 40c.; golden seal hardening: 50c. is now asked; codeine declined 20c. per oz.

* * * *

NEW YORK, April 3:—Quiet markets are reported. Opium is neglected, at $2.90 per lb. Golden seal (hydrastis) is higher, at 52c. Genuine jaborandi-leaves are scarce, at 18c per lb. Round buchu-leaves are steady, at 18c. Menthol is higher, at $4 per lb. Star-aniseed oil is easy, at $1.10 per lb.; and cocoa-butter is also easy, at 29c. per lb.

* * * *

BERGEN, March 26, 6 P.M.:—The fishing continues bad, and new oil is very firm, being now held at 95*s.* per barrel, f.o.b. The catch at the above date amounted to 20,288 000 cod, against 16,990.000. This is expected to yield 11,568 barrels, against 16,730 barrels at the same time last year.

* * * *

BERGEN, April 2, 6.45 P.M.:—The market here is rising, and 100*s.* per barrel, f.o.b. Bergen, is now quoted for best non-congealing medicinal oil. The fishing continues unsatisfactory, the total catch of cod to date being 22 846,000 against 20,612.000 at the same time last year. This is estimated to yield 12,797 barrels against 20,760 barrels last year.

* * * *

HAMBURG, April 3:—Business here is quiet, and there are no price-alterations to report.

* * * *

SMYRNA, April 2, 4.15 P.M.:—The sales of opium for the week ending to-day (Wednesday) amount to 70 cases, including current talequale at 7*s.* 4*d.* per lb., and richer qualities 7*s.* 6*d.* to 7*s.* 8*d* per lb., f.o.b. Smyrna.

* * * *

AMSTERDAM, April 3:—At the auctions of cinchona held here to-day 6,780 packages were offered (containing the equivalent of about 30 tons of quinine), of which 5,443 packages were sold at an average unit of 8 60c. per ½ kilo, against 7.95c. paid at the auction on February 26. The following were the approximate quantities of quinine purchased by the principal buyers: English and American factories, who purchased the equivalent of 7.982 kilos.; the Brunswick factory, 2 259 kilos.; the Mannheim and Amsterdam factories, 6.048 kilos.; the Frankfort-on-Main and Stuttgart factories, 4 824 kilos.; and various buyers, 3,161 kilos. The prices paid for the manufacturing bark ranged from 8c. to 8¼c. per ½ kilo; and druggists' bark from 8½c. to 59¾c. per ½ kilo.

ACID, CITRIC, is quoted 1*s.* 0¼*d.* to 1*s.* 0½*d.* per lb.

ALOES.—The following figures relating to the exports from Cape Colony are taken from official records furnished by our Cape correspondent:—

	1901	1900	1891	1890
Quantity (lbs.) ...	338,503	475,362	469,999	642,661
Value (£) ...	1,955	3,047	2,666	3,641

Last year Germany imported 146,480 lbs.

BUCHU.—Fifty-five bales have arrived this week, which, according to the importer, are the last of the new crop.

The following figures relate to the exports from Cape Colony:—

	1901	1900	1891	1890
Quantity (lbs.) ...	220,303	229,197	114,518	55,560
Value (£) ...	5,685	4,357	1,117	341

CAMPHOR.—Crude Japanese is again lower, with sellers of April-June shipment at 142*s* 6*d.* per cwt., c.i.f., but there seems no disposition to operate at this price for distant shipment. "Monopoly" quotations are unchanged at 165*s.*, c.i.f., from Formosa, and 185*s.*, c.i.f., for pressed. English refiners are firm at present quotations.

CANARY-SEED is rather easier, the price of fair Turkish on the spot being now 36*s.* 6*d.* per quarter.

CASCARILLA.—For thin stringy quality 45*s.* per cwt. has been paid, showing no change.

CINCHONA.—The shipments from Java to Europe during March amounted to—

	1902	1901	1900	1899
March (Amst. lbs.)	691,000	875,000	650,000	977,000
Jan. to Mar. „	2,155,000	2,623,000	1,906,000	2,025,800

COCAINE is unchanged, and although it has been "talked up" lately by makers and their agents, it is asserted on good authority that in face of the still heavy stocks of crude cocaine in Hamburg an advance is not justifiable. Moreover, the present price of hydrochloride is very high, and while it is so the output of the crude alkaloid is being maintained.

COCOA-BUTTER.—The result of the auction held at Amsterdam on April 1 is as follows:—Seventy tons Van Houten's sold at 63½c to 70c. (average price 66.90c., against 64½c. at the previous auction); 13 tons de Jong sold at 62¾c. to 64c.; 3½ tons Helm sold at 62½c. to 62¾c.

CREAM OF TARTAR.—Higher prices are asked by French manufacturers which has caused a firmer feeling here, but quotations are as yet practically unaltered, best white French crystals being quoted 70*s*, 95-per-cent. powder 72*s.*, and 98-per-cent. powder 74*s.* per cwt.

DRAGON'S-BLOOD.—A few cases of thin bright finger in reeds have been sold at 9*l.* 10*s.* per cwt.

ERGOT.—For Spanish 1*s.* 6*d.* to 1*s.* 8*d.* per lb. spot has been paid this week, the latter figure for good sound quality, and there are further offers at 1*s.* 7*d.* Russian is also obtainable at 1*s.* 7*d.* spot.

GAMBIER.—Cubes are quiet with small sales of good at 36*s.* per cwt.

GAMBOGE.—Good blocky pipe has been sold at 16*l.* 10*s.* per cwt., and 17*l.* is now wanted, at which only a few cases are offered. Cables sent to Singapore elicit that there is nothing to be had.

GOLDEN SEAL comes a shade dearer from the United States, but there is little demand here, 2*s.* 2½*d.* per lb. net being the spot price.

OIL, ANISE, STAR.—Market is inactive, with small sales at 4*s.* 4*d.* per lb. spot, and further sellers thereat.

OIL, CASTOR.—Quiet, at 3*d.* per lb. on the spot for Calcutta seconds. Medicinal French is unchanged at 31*s.* 6*d.*; and Belgian of first pressing is quoted easier at 26*s*, and 25*s* for seconds. Hull make for July-October or July-December delivery is quoted 25*l.* per ton for firsts, and 24*l.* for seconds, in barrels, ex wharf London.

OIL, COD-LIVER.—Writing on March 29 our Bergen correspondent states that the Easter holidays have considerably interrupted the fishing in the Lofotens, with the result that there has been little increase in the quantity caught. The exports from Bergen to date amount to 2,631 barrels, against 2,416 barrels at the corresponding period of last year. (For latest quotation, see our cablegram.) In London, prices have also advanced in sympathy with Norway, and agents are now quoting from 105*s.* to 110*s.* per barrel, c.i.f., according to brand, though we understand business has been done at 102*s.* Good Newfoundland oil is quoted 3*s.* 6*d.* per gal., c.i.f.

OIL, CUMIN, has been reduced to 11*s.* per lb.

OIL, ORRIS (CONCRETE).—The list-price has been reduced to 15*s.* per oz.

OIL, PEPPERMINT.—American HGH is inactive with sellers at 8*s.* 10½*d* per lb. Japanese dementholised has been in more inquiry, but prices show no change. English is listed at 25*s.* per lb. net.

OPIUM.—Our Constantinople correspondent writes on March 29 that there is a general disposition all round on the

Digitized by Google

part of buyers to operate at present prices. We doubt very much if prices will recede any further until the crop, which is progressing very favourably, is safely gathered in. The week's sales amount to 12 cases "Druggists'" at 7*s.* 3*d.* per lb. Market continues very quiet.

Quinine.—Previous to the holidays the second-hand market closed slightly easier, with small sales at 1*s.* 2*d.* per oz. for June delivery, but subsequently prices became steadier, with sellers on Wednesday of June at 1*s.* 2¼*d.*, and August, 1*s.* 2½*d.*. Practically no business has been done, however, owing to the holidays and the desire to wait the result of the Amsterdam bark sale to-day, where an advance in the unit is anticipated. The London stock of quinine was reduced by 40,000 oz. during March.

Saffron is firm, but inactive, at from 23*s.* to 25*s.* per lb., according to quality.

Santonin.—There is some inquiry, but practically nothing is obtainable under makers' price, which is 16*s.* 9*d.* per lb.

Shellac.—Previous to the holidays there was a recovery of 1*s.* 6*d.* in the delivery market, and a moderate business was done, the closing quotations being, May, 114*s.* 6*d.*; June, 115*s.* 6*d.*; July, 116*s.* 6*d.*; and August, 117*s.* 6*d.* per cwt., with spot sales of TN at 112*s.* to 115*s.* for fair to fine. The above prices have not been maintained this week, however, and values are easier, June selling at 114*s.*, and August, 115*s* 6*d.* per cwt.

Soy is quiet at 1*s.* 6*d.* per gal., duty paid.

Spermaceti.—For American in 20-box lots 11½*d.* per lb, c.i.f, is quoted.

Spices.—Black *Pepper* is dearer owing to a good continental and American demand for shipment from Singapore, and small shipments to London. Singapore is now quoted 5 13/16*d.* per lb. on the spot, and business has been done at 5¾*d.* to 6*d.* per lb. for shipment according to position. White Pepper continues quiet at late quotations; Singapore 9½*d.*, Siam 9⅝*d.*, and Penang 9½*d* per lb. on the spot. Very little business has taken place in Zanzibar *Cloves*, and prices are practically unchanged at 3¾*d.* per lb. for spot, and 3⅞*d.* for June-August delivery.

Sugar of Milk.—Finest American powder is quoted 40*s.* per cwt. in barrels, with a reduction for ton quantities.

Thymol is offered at from 7*s.* 3*d.* to 7*s.* 6*d.* per lb.

Tonka Beans.—Good crystallised Pará are still scarce, 2*s.* 6*d.* per lb. being wanted.

Wax, Carnauba.—Recent sales in Liverpool include 74 bags good fair to fine yellow at 71*s.* 6*d* to 77*s.* 6*d.* per cwt., and 24 bags Ceara and Maranham grey at 51*s.* 6*d* to 54*s.*

JAMES'S POWDER.

In the book entitled "Some Unpublished Letters of Horace Walpole," edited by Sir Spencer Walpole, recently issued by Messrs. Longmans, Green & Co., there is frequent mention of James's powder, which was the fashionable remedy of the day. Horace Walpole urged its use for his friend Madame du Deffand with such persistency that one might almost suppose he had some interest in pushing its sale. On hearing of the lady's illness he writes:

Would it be impossible to give "James's powder?" if it were but 5 gr. or 6 gr. . . . I would give the universe to have her try it. I earnestly beg you to recommend it.

Again he writes:

Yet I should hope, if she had taken "James's powder," though I did not express it so much as I wished to do, because I am at a distance and cannot be a perfect judge.

"How I abhor all professions!" he declares, on learning that the doctor has refused to prescribe the powder; and then, as if in despair, he exclaims, "Oh, if it were not too late to give her 'James's powder'!" J. A. Paris, in his "Pharmacologia," says that the celebrated fever-powder of Dr. James was evidently not his original composition, but an Italian nostrum invented by a person of the name of Lisle, a recipe for the preparation of which is to be found at length in "Colborne's Complete English Dispensatory for the year 1756." In the last edition of the "Pharmacologia" (1843) there is the following footnote:

Some years since I received a very interesting letter from Dr. Halliday, of Moscow, in which he thus comments upon the above passage: "You attribute the invention of James's powder to one Lisle, which was not the fact; as the original author was the father of a very old friend of mine, Mr. McIntosh, perhaps you may think it worth while to correct the mistake in a future edition. The above inventor was a German apothecary and chemist of the name of Schwanberg, with whom Dr. James was associated, and who, on obtaining the patent, vended a medicine which did not accord with the specification. Mr. McIntosh, who was in the habit of preparing medicine for the supply of Moscow, assured me that the formula given in the London Pharmacopœia for the pulvis antimonialis was something like the original recipe, but differed from it in certain particulars, which he was bound by an oath not to disclose."

—*British Medical Journal.*

London Drug Statistics.

The following statistics are compiled from information supplied by public warehousers. They relate to the receipts and deliveries of some of the leading drugs from and into the London public warehouses for the month of March, 1902, and to the stocks on March 31.

Chemical Society.

Anniversary Meeting.

THE members met at Burlington House on Wednesday, March 26, when the chair was taken by the President, Professor Emerson Reynolds. The attendance was rather meagre, although a few well-known provincial Fellows, attracted to town no doubt by the Raoult Lecture, which was given the same evening, were present. The first business was the ballot for the election of officers, Mr. Hugh Ramage and Dr. T. A. Henry being appointed scrutators. The names of the gentlemen selected to fill the vacant positions have already been given in the *C. & D.*, and it is sufficient to add that they were all elected, this annual reconstitution of the governing body being a mere formality, wherein the Fellows quietly agree to the Council's proposals. The President then read his report on

Prof. Reynolds.

The Year's Work.

He congratulated the Society on a continually increasing number of Fellows, the membership of the Society being at present 2,335, against 2,226 last year. The number of papers printed in the *Transactions* shows a slight increase on last year's figure, and there has been no falling-off in the quality of the contributions. One of the most valuable branches of the Society's work is the circulation of books from its now extensive library, and in this way eighty parcels of books were sent out to country Fellows during the year. The Research Fund, from which grants of money are made to Fellows in a position to carry on research-work, was drawn upon to the extent of 250*l*. The Society lost during the year two prominent Fellows—Sir Henry Gilbert, F.R.S., and Dr. Maxwell Simpson.

After disposing of his report, the President, following a long-established custom, proceeded to make a few remarks on a current chemical topic, and selected for this purpose the subject of

The Genesis of the Elements

Theories of the transmutation of the elements and their formation from some more elementary *protyle* have always exercised a peculiar fascination for English chemists—a fascination which is apparently amusing and inexplicable to certain continental *savants*, who regard this subject as disposed of by the atomic-weight determinations of Stas and others, since these can no longer be taken as integral multiples of any small number. The President's contribution to the subject takes us perhaps no nearer to the heart of the matter, but generalises it in an interesting way. He finds that by arranging the elements according to their atomic weights on a curve, which may be taken as representing the motion of a stretched string vibrating in segments, the ordinary elements fall on the moving parts of the curve whilst the elements like argon, neon, and krypton occupy the points where no motion occurs—*i.e.*, the nodes, of the string. The elements like iron, cobalt, and nickel, which do not fit easily into any periodic-table representation of the elements, in this scheme occupy a harmonic curve—*i.e.*, a curve representing the same string moving in larger segments. This arrangement of the elements, the President pathetically observed, when first brought forward by him in 1886, was somewhat irreverently described as "Reynolds's staylace."

Dr. Gladstone in proposing that the President should allow his address to appear in the *Transactions*, whilst fully appreciating the ingenuity of the "staylace," regretted that it seemed impossible to get a nearer insight into what was the real cause of these relations of the elements. Dr. Tilden then presented

The Treasurer's Report,

which showed that the Society had the handsome balance of 2,000*l*. on the year's work. He, however, as is the manner of efficient Treasurers, advocated economy, since the forthcoming decennial Index will absorb a good deal of money, and in a few years the continual growth of the Society will necessitate some structural alterations in the House. After the proposal and acknowledgment of a vote of thanks to the auditors of the Society's accounts, Dr. Dixon proposed, in an amusing speech, a vote of thanks to the Secretaries, Foreign Secretary, and Council. The Foreign Secretary (Professor Meldola, who has retired and been succeeded by Professor Ramsay) he described as a radio-active body whose function appears to be to shed rays of light on the occasion of the jubilees of eminent foreign chemists; and as to whether his successor will prove a body of even higher atomic weight, and consequently greater radio-activity, the future will show. Professor Meldola having suitably replied, the meeting adjourned.

Dinner to Professor van 't Hoff.

In the evening a dinner was given at Limmer's Hotel by the officers and Council to Professor van 't Hoff, of Berlin, who had come over to England to deliver the Raoult Memorial Lecture. The President of the Society was in the chair, and among those who supported him were Lord Kelvin, Sir William Huggins, Principal Rücker, Professor Odling, Professor Dewar, Professor Witt, Dr. Thorpe, Dr. Gladstone, and Dr. Perkin.

After the toast of "The King" had been proposed by the President, that of "Professor van 't Hoff" was given by Lord Kelvin, who referred to him as the founder of modern physical chemistry. Lord Kelvin said that as a physicist, if so he might call himself, he had for fifty years taught his students that chemistry and physics are one—nay, more, that chemistry is a branch of natural philosophy. There were two reasons why he had not himself taught chemistry; one was that there was no time, and the other that he did not know enough. Sixty years ago chemical atoms were thought of as objects infinitely small; now they were told that they are things of real magnitude, and a hydrogen atom, so far from being indivisible, has at least 500 parts, and, in fact, is a cluster having as many parts as a galaxy of stars. He referred to Professor van 't Hoff's brilliant application of the principle of thermo-dynamics to explain the observed phenomena of solution, as developed by Raoult and Van 't Hoff himself, and to the latter's extension of investigations to the case of solvents other than water.

Professor van 't Hoff.

In reply, Professor van 't Hoff agreed with Lord Kelvin on the whole that chemistry is a branch of physics, but with the restriction that it forms the largest branch of all. He was glad to be among the members of the London Chemical Society, not only because it is the oldest chemical society in the world, but also because it was the first to honour him with honorary membership, for which he had never before had the opportunity of thanking it personally. He concluded by proposing the toast of "The Society" to which the President replied.

Raoult Memorial Lecture.

François M. Raoult was elected in 1898 one of the forty honorary members of the Chemical Society. Ten years before a similar honour was done to the comparatively young Dutch chemist, Dr. J. H. van 't Hoff, who was following in Raoult's footsteps. On April 1 of last year the labours of the French chemist—carried on in comparative obscurity—were terminated by his death, and the Chemical Society, ever ready to do honour to foreign workers, arranged for a

Digitized by Google

memorial lecture by Van 't Hoff. In anticipation of a large attendance the Royal Institution Lecture-theatre was obtained, and there on Wednesday evening of last week was an audience of between 300 and 400 to receive Professor van 't Hoff, who at 9 o'clock stepped into the theatre accom-

François M. Raoult.

panied by Professor Emerson Reynolds, Lord Kelvin, and Sir Wm. Huggins, with the leading members of the Society, its officers, and past Presidents. Professor van 't Hoff wore several decorations, and stood at the historic lecture-table while the President introduced him to the meeting. Professor Emerson Reynolds referred to the lecturer as the professor-general of chemistry at the University of Berlin, and recalled the time when he taught chemists to look upon the beautiful atom carbon in space, whereby arose new possibilities in the chemistry of carbon compounds. Like the carbon atom, Professor van 't Hoff, he continued, possessed four links of national interest—the first, with his own country, Holland; the second, with Germany; the third, with this country; and the last of the four valencies brought us into combination with France. (Applause.)

Professor van 't Hoff, after the applause had subsided, began to lecture in perfect English syntax, with here and there a modification of the vowels which indicated that the language is not his native tongue. Raoult, he said, was a man of retiring habits who had hardly ever left France, and living in the out-of-the-way town Grenoble had come little into contact with fellow-workers in the same domain of science. Yet he was one of the most prominent men of science. He was born at Tours on May 10, 1830, and was of modest origin; indeed, poverty haunted him all his student-days up to the time (1853) when with a thesis embodying observations on the transport of electrolytes by magnetic currents he graduated in Paris. In 1856 he was appointed an assistant professor at Rheims, where he remained until 1862, when he obtained a similar position elsewhere, and in the following year with a thesis on "Electromotive Force" obtained his doctorate in physics. This really commenced his scientific career. Raoult's life-work, the lecturer said, can be divided into three parts—physical, chemical, and (the most important) physico-chemical. In the first branch he mentioned Raoult's investigations into the energy relations of electric cells, when he clearly anticipated the results deduced later by Helmholz, Willard-Gibbs, and others from thermodynamical considerations that the available energy of a cell is not wholly secured in the electric current produced by it. These researches by Raoult were at the time entirely overlooked, because they were, on the theories of that day, quite unexplicable. It was not until 1878, fifteen years after the observations were published, that their worth was recognised. The purely chemical contributions to scientific knowledge made by Raoult were neither extensive nor remarkable, being limited to the recognition of the gas (marsh-gas) given off by a mineral spring near Grenoble, and to the interesting physiological discovery that copper and zinc exist in the human liver, especially of old men—a remark which made the audience laugh heartily. Raoult had removed to Grenoble in 1867, and was appointed successor to Gervais in the chemistry chair there. Besides the subjects mentioned he did some work on the absorption of ammonia by ammonium nitrate (in which, however, Divers was before him), the utility of retort-carbon in boiling sulphuric acid (to prevent bumping), the inverting action of light on sugar, and he showed that inhalation of carbon dioxide diminishes exhalation of that gas. In all this Raoult was feeling his way, for it was as a physico-chemist that he achieved fame. His cryoscopic researches originated in an attempt to determine the alcoholic strengths of various beverages, his first contribution on this subject being the determination of the freezing-points of such materials as cider and marsala The results so obtained led him to determine the freezing-points of solutions of different strengths of such substances as glycerin, mannitol, and various alcohols when he observed that the lowering of the freezing-point of water occasioned by those substances is proportional to their molecular weights. From this result it was a short step to the suggestion that the observation of the freezing-point of a solution affords data for the determination of the molecular weight of the dissolved substance. His paper dealing with twenty-nine substances was published on June 5, 1882.

A great part of Raoult's later work was devoted to cryoscopic measurements of organic and inorganic substances in solution, and to the determination of the constants of liquids suitable for this purpose. He was at first sceptical with regard to the anomalous results observed by other workers when investigating the behaviour of salts in aqueous solution, but finally convinced himself by his own measurements of the validity of these observations and accepted the doctrine of electrolytic dissociation as accounting for them.

His second great contribution to science was the discovery that the boiling-point of a liquid is increased by the solution of a substance in it to an amount proportional to the molecular weight of the solute—a result completely parallel with his observations on the freezing-points of solutions. This behaviour also he took advantage of for the determination of molecular weights, and himself discovered that certain solvents—such as acetic and formic acids—give higher molecular weights for well-known substances than those bodies can possibly have. The explanation of this anomaly was also given by him as due to "association" of the simple molecules into double and triple molecular groups, as had already been observed by others in determining the vapour-density of acetic acid.

The lecturer referred in appreciative terms to the painstaking, accurate, and unobtrusive character of Raoult's work, and pointed out that chemists as a body owe much to him for the introduction of two such weapons for the determination of molecular weights. His work had also served as a centre and stimulus for the researches of the now numerous band of physical chemists whose labours have so vastly benefited chemistry and physics during the last twenty years. It was, for example, his work from which Arrhenius and the lecturer, as well as Ostwald, started in formulating the modern theory of solution.

In the last part of the lecture Professor van 't Hoff referred to Raoult as a man, speaking of the various honours which had been conferred upon him, and of his retiring disposition yet happy home life. The lecture was a simple and earnest tribute to a great man.

SPEECHES OF THANKS.

Professor Odling, who was called upon to move a vote of thanks, said it was an appreciative and unaffected and simple account of the work of Raoult—an account so lucid and complete that no matter from whom it came it would have been of peculiar interest, but coming from a man so distinguished as Professor van 't Hoff it had given all the greater pleasure. Then he referred to Professor van 't Hoff's own work, saying it did not, very properly, win its way without some contest, and in some continental schools it was treated with some undue harshness of reception for which a friend of his own—the late Professor Kolbe—was responsible. Kolbe, he continued, "was a man of great chemical insight who laboured under the disadvantage of being unable to assimilate ideas evolved from a different stand-

Digitized by Google

point from his own. (Laughter.) I have a certain degree of sympathy with him, for, however revolutionary one may be in one's youth, one does not take kindly to revolution in old age (Renewed laughter.) But, however this may be, Professor van 't Hoff can regard with complacency the reception with which his far-reaching conception was originally received. As with his theory of the chemical atom in space so is it with the doctrine of osmotic pressure and his philosophy of solution. In no country have the doctrine of osmotic pressure and the theory of solution, with the supplemental observations of Arrhenius, met with greater favour than in this country; not as a final truth, if a truth at all, but as running on all-fours with it."

Professor Dewar, in seconding the vote, said it was a gratification to the Society that their distinguished honorary Fellow, the world-wide Professor van 't Hoff, had shown how the field of chemistry, which is wide beyond any other, had been opened up by the patient scientific work of Raoult. Sometimes we hear that England is not kind in recognising foreign talent, but that could not be said of the Chemical Society, which is ever ready to do honour to foreign chemists.

Sir William Huggins, P.R.S., supported the vote in a brief speech, referring to the scientific stimulus which Professor van 't Hoff's presence amongst them gave to English scientific men. He regarded Profesor van 't Hoff as a philosopher as well as a chemist, and although he had specially devoted himself to the loves and hates of atoms and molecules, his work had bearing upon the whole universe of science.

The President then put the motion to the meeting, and it was carried with acclamation.

Professor van 't Hoff, on rising to reply, was received with renewed acclamation. He said: "I have more reason to thank you: to listen is more difficult than to speak. I feel that this occasion has given me something. This lecture has brought me to the works of a man whose works I know, and whom I esteem over all others on account of what he has done in regard to the theory of solution and osmotic pressure." At this point Professor van 't Hoff walked across the room and bowed to Professor Odling, who rose and bowed to him in response, the company meanwhile cheering; and the cheers turned into laughter when Professor van 't Hoff added, "I hope I will see them in print."

The meeting then closed.

Our Town Traveller.

I had a talk the other day with one of the partners of

MESSRS. JOHN PHILLIPS & SONS,

the well-known sponge-merchants of York Road, City Road, E.C., regarding the withdrawal of all their country travellers. Mr. Phillips was perfectly frank about the matter, and told me that, after a trial of seven or eight years, his brothers and he had come to the conclusion that it would be better policy, both for the firm and also for their customers, to abolish the country-traveller system altogether, and to deal with their country friends direct.

"Travellers in the sponge-trade," said Mr. Phillips, "have to carry a large and varied stock of samples, and even the largest of these stocks is not varied enough to suit every customer. The expenses are heavy, averaging, I should think, from 13*l.* to 15*l.* per week. We have thought it better to give our customers the benefit of this saving in weekly expenditure, and we think they will be in no way inconvenienced by the withdrawal."

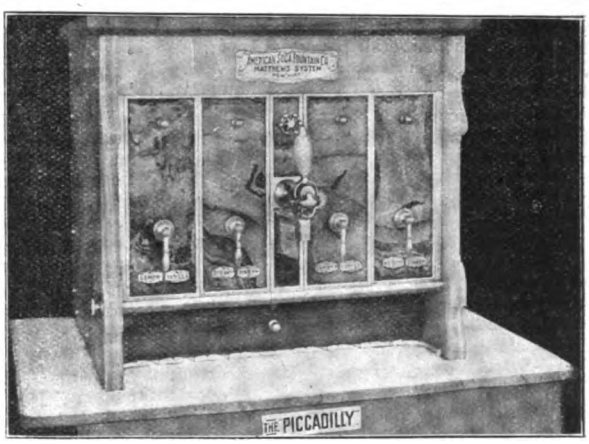
"But how do you propose to let your customers select their goods?" I inquired. "You cannot expect them all to come up to London when they want sponges"

"Oh, certainly not," replied Mr. Phillips; "we have made very complete arrangements to meet all these difficulties. We are prepared to send original cases carriage-paid to any of our customers on approval Our business is strictly wholesale, and we reckon that course will be more satisfactory to our clients, and less expensive to ourselves, than the system we have discarded."

"And about how much do you think your latest method will save the buyer?"

"Well, a customer from Sheffield called here this morning. Amongst other purchases, he bought a case containing ninety sponges at 2*s.* 6*d.* each. The traveller selling those same sponges would have had to charge 2*s.* 9*d.* each for them to cover his expenses."

"That is, therefore, a net saving of 1*l.* 2*s.* 6*d.* on the case to the customer?" said I, proud of my arithmetic.



"Quite so," assented my genial victim, "and not only that—the buyer is better satisfied because he has the stock in the whole of this building to choose from."

"The whole of this building," as I have beforetimes explained, is a term of considerable magnitude. It embraces many cubic feet of space, and includes thousands of cases and millions of sponges. If it has any fault, it is an *embarras de richesse* for the fortuitous sponge-sampler, and it certainly ought to compensate the provincial buyer for a withdrawal which is promulgated for his benefit. That the action of the firm is already appreciated by the retailer is evidenced by correspondence which Mr. Phillips showed me from several well-known country chemists.

With the approach of summer the fancy of some chemists turns to thoughts of thirst-quenchers, and many there be nowadays who dream of soda-fountains and their concomitant profits. Last year there was a boom in fountains, and in order to ascertain if this is to be sustained, I recently interviewed Mr. N. W. Stiles, of

MESSRS. STILES (LIMITED),

at the new office, 74 Gray's Inn Road, Holborn. Mr. Stiles, with the knowledge that he has sold forty machines since January 1, was sanguine that the boom will be maintained; as a matter of fact, he looks upon the soda-fountain in Great Britain as now a permanent institution. This year Messrs. Stiles (Limited) have produced several new styles of fountains exclusively for the English market; the "Piccadilly," illustrated herewith, is one of them. It is an all-onyx

affair with metal fittings, and is supplied without superstructure. The length at base is 2 feet 7 inches, the width 2 feet 1 inch, and the height 2 feet 5 inches. It has eight oscillating glass syrup-jars and one double-stream soda-water draught arm, and the price is 98*l.* The "Strand" is a more elaborate and expensive fountain, also built specially for the English trade; and there are many other fine fountains in the showrooms to select from and to suit all tastes and conditions of banking account. That Messrs. Stiles have confidence in the future of the business is evidenced by the fact that this year they have laid down plant for the preparation of all the syrups requisite for the fountain. No essences are used, the flavours being obtained directly from the fresh fruits; and a special "fruit-drink" expert of twenty years' experience has been imported from the United States to superintend the manufacture. Concentrated syrups (1 to 5) will be supplied, and all the adjuncts for the soda-counter, such as crystal dishes (with elaborate nickel lids) for holding crushed strawberries and so forth, ice-cream spoons, glass jars for holding straws, &c. For the convenience of those who wish to dispense ice-cream soda and other cream drinks Messrs. Stiles have likewise introduced the "Monitor" brand Swiss milk in airtight tins, which they guarantee a pure milk.

Digitized by Google

Personalities.

Mr. Frank Ross, of Messrs. Thomson & Taylor, Bombay, is now in London.

Mr. Joseph Fletcher, chemist, Scunthorpe, has been appointed on the Commission of the Peace for the Parts of Lindsey.

Mr. Edward Machon, chemist, Derby, has been unanimously elected for the fifth time people's warden of Christ Church, Derby.

Mr. C. J. Taylor, pharmaceutical chemist, Shorncliffe Road, Cheriton, near Folkestone, has been appointed an overseer of the parish.

Mr. Thomas J. Keenan, Associate Editor of the *American Druggist*, arrived in London on Tuesday on a short and mainly personal visit to Europe.

Mr. H. Monkhouse, chemist and druggist, Irongate, Derby, has been re-elected a member of the Executive Committee of the Derby Chamber of Trade.

Mr. George Nelmes, chemist and druggist, 39 Fox Street, Liverpool, has been elected people's warden of St. Timothy's Church, Rokeby Street, Liverpool.

Mr. A. H. Waddington, chemist and druggist, Bradford, has been elected to act as Hon. Secretary of the Trades Procession Committee established by the Bradford Corporation to organise that particular feature of the local Coronation celebrations. Mr. Waddington served in a like capacity on the occasion of the Diamond Jubilee celebration.

A good portrait of Mr. Edward Evans, jun., appears in this week's *Tatler*, which says "One of the most important men in Liverpool to-day is Mr. Edward Evans, jun. He is a partner in the well-known firm of Evans, Sons & Co., a Justice of the Peace for Cheshire, and an enthusiastic worker for the Liberal party in Liverpool. Mr. Evans is popular with all classes, as a recent presentation of silver plate to himself and to his wife sufficiently indicated."

Mr. E. Wightman Bell, F.C.S., chemist and druggist, Spalding, is the centre of interest in a deadlock between the local and central authorities over the appointment of an analyst, under the Fertilisers and Feeding-stuffs Act, for the Holland Division of Lincolnshire. Mr. Bell was appointed district analyst under the Act several years ago, but the Board of Agriculture declined to confirm the appointment, and asked for a fresh nomination. The Council replied by sending up Mr. Bell's name again. The nomination was officially ignored, with the result that the Act is a dead letter in the division. The Department is now, however, stirring up local authorities to make more use of the advantages of the Act, and the question came before the General Purposes Committee at Spalding on Tuesday, when the opinion was expressed that it was detrimental to the district not to have an agricultural analyst, but unabated confidence was expressed in Mr. Bell as in every way a capable man. It was agreed to recommend the County Council to write to the Board of Agriculture asking for the confirmation of the appointment of Mr. Bell. We hope the Council persists in the matter, and as such appointments are eminently suitable for pharmacists the Pharmaceutical Council might do worse than give the Board of Agriculture advice.

Mr. E. Wightman Bell.

Mr. T. J. Barratt, of Messrs. A. & F. Pears (Limited), is the owner of Bellmoor, Hampstead Heath, which stands near the Flagstaff marking the highest point in the county of London; he has had affixed a tablet to one side of his house, bearing the following inscription: "Bellmoor, Hampstead Heath. The surface of the soil is here 455 feet 7 inches above the sea-level, or 16 feet 7 inches higher than the top of St. Paul's Cross." On another tablet is an outline diagram of St. Paul's, drawn to scale to show the difference in levels.

Mr. H. Brereton Baker, M.A., member of the Council of the Chemical Society, late scholar of Balliol College, Oxford, has been elected by the governors of Dulwich College to be headmaster of Alleyn's School, Dulwich. Mr. Baker, who has had several years' experience as senior science master in Dulwich College, is known for the papers he has contributed to chemical literature on the remarkable influence of traces of moisture in facilitating chemical action. Alleyn's school possesses excellent physical and chemical laboratories.

The death of Mr. Edward Baker, of Chichester, which we announced in last week's issue, removes not only a veteran in the peaceful art of pharmacy, but a participant in the struggles of the Crimean War and the Indian Mutiny. Mr. Baker was a native of Chatham, and when quite a lad enlisted in the 16th Lancers, but was bought out. However, he had a predilection for a military career, and in 1841 he enlisted in the 34th Foot (now the "Border Regiment"), which had its depôt then at Dover. He was, therefore, a pretty well-seasoned soldier when the Crimean War broke out, and in the operations against Sebastopol he was hospital-sergeant of his regiment. Mr. Baker, who could tell many tales of Crimean deeds, recently wrote to a newspaper of the strange coincidence that the 34th Foot, having at the battle of Arozo des Molinos, in the Peninsula, captured from the 34th Regiment of French Infantry the whole of their band instruments, &c., found themselves in the Crimea quartered next to the very same corps. The English 34th had the drums of the French 34th still in their possession, and the English colonel, to avoid trouble, had them whitewashed and sent down to Balaclava! After the fall of Sebastopol, Hospital-Sergeant Baker took a fatigue-party into the town to obtain hospital-necessaries, and while there met a French Zouave with a Russian Eagle which he had looted from Government House. The Zouave parted with his trophy for a consideration, and the Eagle was afterwards presented by Sergeant Baker to the Mess of his regiment, and is still highly prized, like the French drums. In 1857 his regiment took an active part in the Indian Mutiny, Sergeant Baker being with a party of the first British troops to enter Cawnpore after the massacre; and he was also present at the relief of Lucknow. He possessed the Crimean and Turkish medals, as memorials of the great struggle against Russia; the Indian Mutiny medal; and also medals for long service and distinguished conduct in the field—the last-mentioned having been granted during the Crimean campaign for bringing in wounded under fire after the attack on the Redan. On the return of the regiment from the Crimea in 1856, and while it was stationed at Edinburgh Castle, a handsome service of plate was presented to Hospital-Sergeant Baker by some of the officers, "in grateful remembrance of the kind and unremitted attention that he evinced towards them when wounded during the siege of Sebastopol." And in 1861, when he quitted the Service, Lieut.-Colonel Sir Richard Kelly, K.C.B., and the officers gave him a purse of sixty-four sovereigns, as a mark of their regard and esteem. After leaving the army, Mr. Baker established himself as a chemist and druggist in Eastgate Square, Chichester, where his son Mr. Samuel Baker subsequently became associated with him, and has had the management of the business for some years past. Mr. Baker took an active part in public affairs, being a member of the Town Council and of the Board of Guardians. The funeral took place on March 26, at the city cemetery.

Mr. Edward Baker.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

Subscription Rates.

Ten shillings a year in advance, post free to any part of the world, including a copy of The Chemists' and Druggists' Diary next published. Single copy, 4d.; Summer or Winter Number, 1s.; Diary, 3s. 6d. Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

COLONIAL TRADE.

Next week's issue of The Chemist and Druggist will be specially circulated to all buyers of druggists' goods, and allied manufactures, in every colony of the British Empire, India, China, and Japan. It is an excellent opportunity for advertisers to address a magnificent business circle. In this connection we may note that this week we have received a letter from the Secretary of the Pharmaceutical Society of the Transvaal, informing us that, as most of the members are now back to business, the Society is reconstituted, and The Chemist and Druggist has again been adopted as the official organ. To firms at home this is significant of three things:—(1) Pharmaceutical business with the Transvaal is fully re-established; (2) The chemists and druggists in the colonies look to The Chemist and Druggist for their trade information; (3) Every one of the buyers of druggists' goods in the Transvaal will get the Colonial Number of the *C. & D.*, April 19, besides thousands elsewhere, and the largest circle of home buyers. The Publisher cannot guarantee insertion of any advertisements received after Tuesday, April 15. Coloured Supplement advertisements will be received up to Thursday, as usual.

Summary.

The latest store-prices are quoted on p. 553.

Lead Pills have been before Parliament in the form of a question (p. 578).

Mr. Joseph Ince has a word more to say about the making of emulsions (p. 561).

Further Subscriptions to the William Martindale Memorial are noted on p. 564.

The history of monkey-lymph is being gradually evolved in Parliament (p. 578).

When snow falls in Manchester there is 3 tons of soot in it to the square mile (p. 576).

The Royal Agricultural Society's meeting yields us some interesting items (p. 552).

Mr. James Reid, in a lengthy letter, refers to the Poisons Committee's work (p. 582).

The progress of German trade as compared with British is the subject of an article on p. 568

The Irish Police are again to undertake prosecution of offences against the Pharmacy Acts (p. 564).

The Bradford Chemists' Association have formulated several questions to ask Council cand dates (p. 577).

The latest ideas on photography of colours are embodied in a paper by Mr. E. S. Shepherd, reported on p. 576.

This Month's Major examination questions are given on p. 562, with an account of the practical work by a candidate.

Letters on the Medicine-stamp Act and several replies to queries on that subject will be found on p. 581 and p. 582.

Mr. Tocher's Scheme has been approved by the Pharmaceutical Council. Mr. Glyn-Jones was the only opponent (p. 559).

An action by Marshall's (Limited) against Lewis & Burrows (Limited) and others regarding a lanoline-preparation is in the High Court (p. 572).

Abuses in the sponge-fishing in the Levant are partly remedied by the abolition by Egypt of the "akafander." Turkey sponges may be dearer (p. 570).

A Circular is to be sent out for the purpose of getting corrections in the Irish registers of pharmaceutical chemists and registered druggists (p. 564).

The Possessive Case is considered by the Inland Revenue Commissioners to involve medicine-stamp duty. We show on p. 567 cases in which that should not apply.

Cambridge Chemists have broken the early-closing arrangement (p. 576); Blackpool chemists have extended theirs (p. 578). Teesside chemists are also closing early (p. 552).

The Minor Examination will not be divided until there is a compulsory curriculum, so the Pharmaceutical Council decided on Wednesday by nine to eight (p. 561 and p. 567).

The Pharmaceutical Society of Ireland has had a satisfactory response to the Council circular regarding compounding in hospitals and the use of poison-bottles (p. 563).

The Inland Revenue Authorities have lost two more actions against chemists who declined to pay penalties for alleged illegal non-stamping of medicines. The proceedings are reported on p. 571.

Messrs. A. S. Campkin (Cambridge), C. E. Pickering (London), and J. W. T. Morrison (Tring), are the new candidates for the Pharmaceutical Council in addition to the seven retiring members (p. 561 and p. 566).

The Privy Council has called the attention of the Pharmaceutical Council to the fact that Dr. Thos. Stevenson recommends Minor candidates to prove that they have had instruction in, at least, chemistry and pharmacy (p. 560 and p. 567).

The features of interest in the markets this week are a further advance in cod liver oil, an advance in "official" quinine, Japanese crude camphor, shellac, Japanese wax, and almond oil. Hydrastis is firmer, and menthol, castor oil, and lemon oil are lower (p. 584).

In the case Evans *v.* Jones, heard in Liverpool this week, Messrs. Evans, Sons & Co., asked for a statement of account by Mr. W. A. Jones respecting profits on a throat-pastille paid to him on behalf of a hospital. The defendant counterclaimed, and asked the Court to declare that plaintiffs have no longer the right to manufacture the pastilles, but judgment was given against him (p. 572).

B—O

Digitized by Google

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Only two samples of drugs were taken for analysis by the public analyst at Hereford last month, and both were found to be genuine

At Burnley on Wednesday, April 9, a medical herbalist named William Mason was fined 10*s.*, including costs, for selling spirit of nitrous ether which contained only a twentieth of the ethyl nitrite requisite.

On April 2 John Steadman was sent by the Stoke Magistrates to the Quarter Sessions to be tried for stealing a quantity of lead piping, the property of Mr. Arthur Sant, chemist and druggist, Longton.

At a meeting of the Cambridge Board of Guardians on Wednesday, April 9, Mr. A. Sidney Campkin, J.P., was thanked for the courteous and efficient manner in which he had discharged the duties of Chairman during the past year.

At an extraordinary meeting of the London Sanitary Inspectors' Association held in Carpenters' Hall, London Wall, E.C., on April 5, the principle of a scheme of federation with the National Union of Sanitary Inspectors (North-Western Counties), the South Wales Association, and the Scottish Association was adopted.

There was a big window-smash at the shop of Mr. John Billington, chemist, Metropole Buildings, Blackpool, the other evening, a horse crashing into it and doing a lot of damage. Mr. Billington finds it necessary to advertise that the business is being carried on as usual, and offers the goods in the window at a 25-per-cent. reduction.

Kenneth McDonald, "chemist," was fined 40*s.*, and bound over to keep the peace for six months, at Marlborough Street Police Court on April 5, for using insulting language in Hyde Park. McDonald wanted the Magistrate "to state a case for a higher Court," and was directed to apply in writing stating upon what questions of law he wanted a decision.

The Governors of the Yorkshire College, Leeds, after discussing the proposed dissolution of the Victoria University at a meeting on April 9, passed a resolution authorising the Council of the College to take such steps as may be desirable to obtain the appointment by the Crown of a Royal Commission or other suitable body to inquire into the whole subject.

Besides the advertising on tram-tickets by Mr. Tirrell, of Hanley, referred to in last week's Potteries Notes, a correspondent informs us that this popular method of making business is indulged in by Mr. Edmund Jones, Hanley, Mr. Charles, Burslem, and Mr. C. J. Wain, Newcastle-under-Lyne. It was Mr. Edge who opened at Wolstanton, not Mr. Young, and it is some time since he went there.

Early-closing.

The movement for early-closing, which has been organised by the Teesside Chemists' Association, has resulted in the agreement that the following chemists in Stockton will (after April 10) close their establishments every Thursday at 1 o'clock for the remainder of the day: Messrs. Bainbridge & Finlayson, High Street; W. Hardcastle, Finkle Street; F. A. Graham, Norton Road and Mill Lane; J. Gregory, Yarm Lane; Mandale & Co., High Street; Milburn's (Limited), High Street; J. N. Robinson, Mill Lane; W. Salmon, High Street; T. W. Sudlow, High Street.

Public Vaccinators' Fees.

At a meeting of the parishioners of St. Botolph, Bishopsgate, held last week, the Bishop of Kensington presiding, objection was raised to the public vaccinators having vaccinated in some of the warehouses in the City as many as 300, 400, and even 500 employés consecutively, to the detriment of the suburban vaccinators. The Guardian of the Poor for the Parish (Mr. R. Evans) said the City Guardians had reduced the fees from 7*s.* 6*d.* a head to 2*s.* 6*d.* a head. The vaccination officers had protested, but they had had to content themselves. Many of the people could have afforded to pay their own doctor. The City ratepayers ought not to be held liable.

At the meeting of the City of London Board of Guardians on Tuesday, the General Purposes Committee reported that in the opinion of the Local Government Board the re-vaccination by the public vaccinators of persons at the places at which they were employed (they being non-residents in the City) did not come within the terms of the public vaccinator's contract. But the Board had expressed their willingness to sanction a special fee, equal to that paid for re-vaccination "at places other than at the home of the person" in respect of such cases. The Committee were of opinion that the application suggested by the Local Government Board should be made, having regard to the fact that the re-vaccination of persons at their several places of employment had undoubtedly prevented the spread of smallpox in the City. The report was adopted after the last words from "should be made" were deleted.

Mineral-makers Merry.

Quite a record gathering was the sixteenth annual banquet of the London Mineral-water Bottle Exchange and Trade-protection Society (Limited), which was held in the Grand Saloon of the Hotel Cecil on Thursday, April 3. Mr. Mark Beaufoy (the new President) was in the chair, and Mr. W. Adpar Jones his *vis-à-vis*; and amongst the principal firms represented were Stevenson & Howell, the Saccharin Corporation, the Anglo-Continental Chemical Company, W. Barnard & Sons, Barnett & Foster, Barrett & Elers (W. W. Robinson), J. Bourne & Sons, Breffitt & Co., British Syphon Company, W. J. Bush & Co., Carbonic-acid Gas Company, Dawson & Sons, Durafort & Fils, Foxon, Robinson & Co., E. Geraut & Co. (Mr. Hewitt), C. H Glover & Co. (Limited), Hancock & Corfield, A. Hassall, Hayward-Tyler & Co., J. Kilner & Sons, London Essence Company, Moore, Nettlefield & Co., Clayton & Jowett, and the Manchester Chemical Company. The programme was a particularly agreeable one, the Society having brought from Yorkshire a dozen vocalists who sang in solo and concert. Mr. William Tooke, the Secretary of the National Alliance, who was one of the tenors of the troupe, was mainly responsible for their introduction; and he was warmly congratulated on the general success. The speeches, too, were most apt, from the loyal and patriotic toasts to the concluding compliment to Mr. Davenport, who organised the entertainment. The President eulogised the King, Queen, and Royal Family. Mr. E S. Crick paid tribute to the pluck and prowess of Great Britain's defenders, and Mr. G. G. Baker-Cresswell (manager to Mr. Beaufoy) responded. In submitting the toast of the evening —"Success to the Society"—the President said the Council had worked hard for success, and deserved all they had achieved. Mr. Walter Davenport replied. Mr. R. H. Durant proposed "The Chairman and President," and Mr. W. Adpar Jones proposed "The National Union and Kindred Societies." Mr. J. M. Dowden responded. "The Guests and Visitors," proposed by Mr. Jas. Johnson, was responded to by Mr. W. Warren, and the Mayor of St. Pancras (Mr. Edward Barnes, J.P.).

Royal Agricultural Society.

Prince Christian presided over a meeting of notabilities on April 9, comprising the Council of the Royal Agricultural Society The Society's consulting chemist reported the raising of the standard of pure linseed-cake. A conference between representatives of the Society and the Highland and Agricultural Society of Scotland is to be arranged as to the testing of farm seeds. The report of the Society's consulting botanist, Mr. W. Carruthers, F.R.S., gave details of cases of clover sickness caused by attack of the parasitic fungus, *Sclerotinia trifoliorum*, which still continued to do serious damage to fields of red clover. The zoologist (Mr. Cecil Warburton) stated that the beetle-mite *Oribata orbicularis*, reported for the first time last year as apparently injurious on limes and other trees, had recently been discovered on the twigs of apple-trees, where it seemed to be doing harm. Professor McFadyean's report to the Veterinary Committee stated that during the last four weeks for which returns had been issued there had been 55 outbreaks of anthrax, 95 cases of glanders, and 4 cases of rabies

Digitized by Google

Swine fever is declining, but an outbreak of foot-and-mouth disease was discovered last month near Canterbury.

Midland Notes.

The glass-bottle industry of Stourbridge and Brierley Hill is said to be in a very bad way, its existence being threatened owing to cutting-prices and labour-conflicts.

At least one chemist has taken advantage of the coming Wolverhampton Exhibition so far as to have miniature pictures of it pasted upon his business envelopes.

The electrolytic production of caustic potash, caustic soda, chlorate of potash and bleaching-powder by the Castner-Kellner process is now in successful operation in the Birmingham district. Phosphorus is now produced by electrolysis, but the details of procedure and the methods adopted are jealously guarded as a trade secret. The process is probably similar to that of the Diel process lately patented in Germany.

Mr. W. F. Haydon, pharmaceutical chemist, was absent from his place on the occasion of the twenty-second annual meeting of the Birmingham Exchange held last week. Mr. Haydon is the Secretary, having relinquished pharmacy many years ago, and has now gone abroad for the benefit of his health. He formerly held the secretaryship of the Chemists' Trade Association, and one can safely say that in the early days of its formation even Mr. Glyn-Jones would have revelled in the warlike tactics brought to bear against undue aggression from without the ranks of pharmacy.

Store-prices.

The following are amongst the alterations in the April issue of the *Army and Navy Stores Price list*:—

Revised.—Chloride of ethyl, 2*s.* 6*d.* and 3*s.* 6*d.* per tube; carbolacene, 3*s.* per gal.; Coleby's balsam, 1*s.* per bottle; colocynth (whole), 3*s.* per lb.; Kirby's glycecoles, 9½*d.* per box; poppyheads (selected), 8*d.* per dozen; Botot's dentifrice, 2*s.* 3*d.* and 7*s.* 3*d.* per bottle; tooth-powder, 2*s.* 6*d.* per pot; tooth-paste, 11*d.* and 2*s.* 6*d.* per jar.

Reduced.—Lithia carbonate, 8*d.* per oz.; lithia citrate, 6*d.* per oz; naphthaline (powder), 5*d.* per 1-lb. tin; P. D. & Co.'s pepsin tablets, 1*s.* 3*d.* and 5*s.* 6*d.* per bottle.

Added.—Casumen Prideaux, 6*d.*, 1*s.*, and 2*s.* per box; I.R. bath-sponges, 2*s.* 3*d.* and 3*s.* 3*d.* each; Jeyes' antiseptic toilet-paper, 7½*d.* per packet; Navanoids, 4*s.* 2*d.* per bottle; Wetherall's Sciaticure, 2*s.* 6*d.* per bottle.

Contracts.

Mr. R. T. Clarke, chemist and druggist, has been appointed as chemist to the Gravesend workhouse for the next half-year.

The Liverpool Lint Company has been appointed by the Burton-on-Trent Board of Guardians to supply surgical goods to the workhouse for the ensuing half-year.

The Richmond and Heston and Isleworth District Councils have accepted the tender of Messrs. S. Maw, Son & Sons, Aldersgate Street, E.C., for the supply of druggists' sundries to the Mogden and Dockwell Isolation Hospitals for the ensuing year.

The Technical Instruction Committee of the Runcorn Urban District Council has accepted the tenders of Messrs. P. Harris & Co. (Limited), wholesale chemists, Birmingham, for the supply of apparatus to the Technical Institute for the ensuing year; of Mr. J. W. Towers, Widnes, for acids; and of Mr. J. H Weston, chemist and druggist, Runcorn, for general chemicals.

The Shoreditch Borough Council, at their meeting on April 8, appointed the Sanitas Company (Limited), Bethnal Green, to supply carbolic-powder (15 per cent. acid) at 2*l.* 9*s.* per ton, and disinfecting-fluid, in barrels, at 2*s.* 5*d.* per gal.; and also accepted the tender of Messrs. R. Young & Co., 38 Elliott Street, Glasgow, for the supply of carbolic soft-soap (best quality) at 17*s.* per cwt.

The Llandovery Board of Guardians has been worried about the question of the supply of expensive medicines. Three medical gentlemen have written to advise them as to what are "expensive medicines," according to the British Pharmacopœia, giving estimates for the same for the year as an appendix. The Guardians have decided that the doctors shall furnish vouchers for all medicines of this "expensive" nature which shall have been actually supplied, and be paid for accordingly.

The Chairman of the Portsmouth Board of Guardians (Mr. E. H Davis), by whose casting-vote the drug-contract, representing an expenditure of about 600*l.* a year, was given to Messrs. Walker, Troke & Co., though Messrs T. Hodgkinson, Prestons & King had submitted a lower tender (see *C. & D.*, March 29, page 486), has been subjected to so much criticism in this connection that he has published an explanation. He says he proposed that the acceptance of the drug-contract should be referred to a committee of experts to select firms from whom tenders for drugs should be accepted, either through local chemists or direct from the firms themselves. The committee included Messrs. Brewis and Blackadar (both chemists) and Dr. Knott (the Medical Superintendent). The reason for his making such a proposition was that he considered the question of purchasing drugs such a serious matter for the poor that no consideration whatever except the one of quality should be taken into account, and his contention was that only experts were able to decide a question of such overwhelming seriousness. His suggestion, however, was not adopted, and the Board voted upon the two tenders submitted, when, the voting being equal, he gave his casting-vote for the firm who for over twenty years had proved the quality of their drugs, and had given perfect satisfaction.

Stealing from Chemists.

The shop and house occupied by Mr. M. Adcock, chemist, at Dowing Street, Smethwick, were broken into during the holidays, and a quantity of jewellery and money stolen.

At Birmingham Quarter Sessions on April 3, two brothers, named Taylor, were each sentenced to two months' hard labour for breaking into the shop of Boots (Limited) in Broad Street, Birmingham.

At the Cinque Ports Sessions at Margate on April 7, two girls, named Henrietta Bax and Edith McDonough, were charged with stealing two bottles of perfume, value 2*s.*, the property of Mr. Wm. E. Kirkman, chemist and druggist, High Street, St. Peters, Thanet. In the course of his evidence, Mr. Kirkman told the Bench that since July last he had had perfumes and sprays to the value of between 3*l.* and 4*l.* stolen from his pharmacy, and he prosecuted the defendants in order to stop what had become a pest. As he did not press the case, the girls were discharged with a caution.

The Week's Poisonings.

Half of the twelve fatalities reported as having taken place during the past week were caused by articles not in the schedule. Hydrochloric acid killed three, liquid ammonia, phosphorus (in the shape of match-heads), and an embrocation are alleged as the cause of three others. The scheduled poisons were laudanum (two), morphia, chloroform, carbolic acid, and arsenic (in the form of Cooper's sheep-dip). The hydrochloric acid was taken by a Coventry bicycle-repairer, by a Hackney gasfitter, and by a woman at Cranleigh. In the ammonia case the evidence seemed to show that cloudy ammonia had been mistaken for cascara by a woman at Sutton-in-Ashfield.—At an inquest held by Mr. Braxton Hicks at Wandsworth, on April 8, on the body of a lady named Dyer, Dr. Edwin Smith said deceased had no doubt poured the whole contents of a bottle of Elliman's embrocation into a tumbler and drank it. An empty Elliman's embrocation-bottle and a tumbler were found near the body, and the jury returned a verdict of suicide while insane.—A man named Martin Morris Frank died at Willesden from an overdose of chloroform. The evidence showed that deceased was in the habit of inhaling chloroform to induce sleep. He bought small quantities from various chemists and mixed them together in a big bottle. Five bottles were found in the bedroom. The Coroner (Dr. Gordon Hogg) said the case was not at all unusual, as the drug was a very fascinating one.—A servant girl at Brentford tried to poison herself by taking a quantity of eye-lotion containing nitrate of silver. She recovered, and was bound over at the Police Court on April 7. — A market-gardener at Twyning swallowed a quantity of carbolic acid in mistake for cider, but recovered.

Irish News.

Business Change.

Merrin's Medical Hall, Lower Camden Street, Dublin, has changed hands. The new proprietor is Mr. Dunlop, L.P.S.I., late of Dr. Starkey's Medical Hall, Rathmines.

Personal.

A statutory notice to creditors has been issued in the goods of the late Mr. W D. Porter, M.C.P.S.I., who died intestate, and administration has been granted to Rebecca Jane Porter, who will wind up the estate during the present month.

More First Aid.

On April 8 Mr. James Maher, Central Hotel, Dublin, was knocked down by a pony and trap at O'Connell Bridge, Dublin. He was brought into the establishment of Messrs. Hamilton, Long & Co., Sackville Street, and attended to by Dr. Michan, manager of the firm.

Dispenser's Death.

The death has occurred at Falmouth of Mr. J. A. Johns, L.A.H., late director and governor of the Apothecaries' Hall of Ireland, and up to recently compounder of medicine to the Grand Canal Street Dispensary, Dublin. Mr. Johns only recently returned from South Africa, whither he went some months ago for the benefit of his health.

Medicine-contracts.

The following contracts have been declared:—

Baltinglass Guardians.—Messrs. P. A. Leslie & Co., Dublin, for medicines, at 12½ per cent. off; and Messrs. Smith & Sheppard, Dublin, for appliances, at 7½ per cent. off.

Boyle Guardians.—Mr. Boyers, of Sligo, for medicines; and Messrs. Smith & Sheppard, Dublin, for appliances.

Carlow Asylum.—Messrs. John Clarke & Co., Belfast, for both medicines and appliances, at 22½ per cent. off. Mr. C. S. Tynan, Carlow, tendered at 2½ per cent. off.

Fermoy Guardians.—The Medical Requisite Company, Cork, for medicines and appliances.

Mohill Guardians.—Mr. Burns, Mohill, for medicines, at 20 per cent. off; and the Sligo Medical Supply Company for appliances at 30 per cent. off.

Queen's County Infirmary.—For medicines, Messrs. Boileau & Boyd, Dublin, at 26 per cent. off L.G.B. standard price; and surgical appliances, Messrs. Fannin & Co., Dublin, at 20 per cent. off.

Rathdrum Union.—Messrs. Boileau & Boyd, Dublin, tendered at 5 per cent. off, and the Apothecaries' Hall (the old contractors) at 17½ per cent. off. The lowest tender was accepted. At the same meeting the Medical Supply Association was declared contractor for appliances at 20 per cent. off.

At the meeting of the Guardians of the Rathdrun Union on April 3, the following letter from Messrs. Hayes, Conyngham & Robinson (Limited) was read:—

Having heard from more than one quarter that the awarding to our company of the contract for the supply of medicines to your Union when Sir Thomas Robinson, a member of the firm, was on your Board is regarded as not being right or honourable, we should be very sorry, for any advantage we might gain by the contract, to put either the Guardians or Sir Thomas Robinson in a doubtful position as touching honour or correct conduct. So, with the permission of the Board, under the circumstances we will with pleasure withdraw, and hope the Guardians may see their way to give the contract to the firm next lowest on the list.

The Clerk said that Messrs. Boileau & Boyd (Limited), chemists and druggists, had also written him on the same subject, saying that they did not think that the Local Government Board would sanction the contract being given to Messrs. Hayes, Conyngham & Robinson (Limited), and asking that the completion of the bond might be delayed. Mr. Kennedy said limited companies were not debarred from tendering for workhouse contracts, even though members of such firms were also Guardians. The contract was therefore adhered to.

Swinford Guardians.—Messrs. Clarke & Co., Dublin, for medicines, at 22½ per cent. off; and Messrs. Adamson & Co., Ballinda, for surgical appliances, at 28½ per cent. off.

Scotch News.

A Boots' Rumour.

A rumour has been prevalent in Edinburgh for the past ten days that Boots Cash Chemists (Limited) had resolved to invade Edinburgh, and the premises were located in North Bridge, a few doors from Messrs. Duncan, Flockhart & Co.'s pharmacy. On inquiry it has been ascertained that whether the rumour has any foundation or not the location is entirely wrong.

Licences.

At the Edinburgh Licensing Court on Tuesday, Mr. David Brown was granted a grocer's licence, for the sale of wines only, on behalf of Messrs. J. & F. Macfarlan & Co., wholesale chemists, 111 Abbey Hill. This was the only new licence granted by the Court. The licence held by the Scottish Drug Depôt (Limited) for the premises at 140 High Street was granted in the name of the new manager, Mr. G. Graham Davidson.

In Three Purchases.

A man named George Baillie committed suicide on April 3, in his house in Edinburgh by drinking laudanum. Baillie appears to have purchased the drug in three small bottles, the contents of which he mixed together and took in one dose. He then went to bed, where he was found in an unconscious condition, and he died before the arrival of a doctor.

Preceptors' Honours.

At the professional Preliminary examination held by the College of Preceptors in March only four candidates obtained a place in the honours division. One of the successful candidates was Miss Margaret A. Beaton, who is apprenticed with Messrs. H. Mitchell & Son, chemists, Inverness. In order to obtain a pass in the six subjects necessary to qualify for registration as an apprentice or student of the Pharmaceutical Society a candidate must obtain 400 marks. Miss Beaton took seven subjects, and obtained 765 marks, gaining distinction in four subjects.

Glasgow Notes.

According to a report from the Hebrides, the kelp-industry is on the point of extinction. It was at one time a principal source of alkali for soap-making, as well as of iodine.

A Glasgow chemist who once courted the Muses now cultivates philosophy, and has discovered the secret of the universe. He alleges that he got the clue when he was stirring an emulsion.

The new façades of several chemists' shops now being refitted in various parts of the city are in striking contrast to the staid, old style. For weal or woe, glass and glitter are becoming the distinctive decorative notes.

The chemists in the neighbourhood of Ibrox Park, the scene of the terrible accident at the International Football-match last Saturday, were kept busy supplying dressings and giving first aid to many of the sufferers from minor injuries.

A propos last week's note on the contemplated Glasgow Pharmacy Athletic Club, it is noteworthy that a good many local chemists, including the President of the Glasgow and West of Scotland Pharmaceutical Association, are ardent "gowfers," of whom the caddies are not ashamed.

A Glasgow assistant, who has just returned as a time-expired man from medical compounders' service in South Africa is indignant at the treatment to which the military authorities subjected him and his fellow-dispensers. He was one of many who refused to "sign on" for another year.

Quite a number of ladies turned up to Mr. Lothian's lecture on "The Eternal City," the newspaper advertisement of which ended with "Ladies particularly invited." The committee have now a ghastly suspicion that the "dear creatures" came expecting to see Hall Caine's notorious novel illustrated by limelight. If the ladies were disappointed in this respect, they had ample compensation in the fine lecture to which they were treated.

At a recent meeting of the Philosophical Society, Dr. R. Fullerton, late acting-superintendent of the Glasgow

Digitized by Google

Smallpox Hospital, read a paper, prepared by Professor R. S. Thomson and himself, on the statistical aspects of the cases of smallpox admitted to the hospital between April, 1900, and June, 1901. The following is a summary of the results in 1,810 cases:—

	Mild	Severe	Death-rate
	Per cent.	Per cent.	Per cent.
Vaccinated	82·8	17·2	9·13
Unvaccinated	43·4	56·6	51·64
Doubtfully vaccinated ...	33·3	66·7	55·55

One critic's comment upon these figures is that they seem to show that it is more dangerous to be doubtfully vaccinated than not at all, and that whereas before the advent of vaccination the mortality from smallpox was 18 per cent., it has now risen to 51·64 per cent.

French News.

(From our Paris Correspondent.)

Obituary.—The death is announced from influenza at the age of 27 of M. Francis Rigaud, son of the late M. F. Rigaud, of the well-known firm of Rigaud & Clermont, manufacturers of pharmaceutical preparations, rue Vivienne, Paris.

Foucault's Pendulum.—A movement is on foot among the astronomical authorities in Paris to arrange for the repetition of Foucault's famous experiment at the Panthéon which was interrupted in 1851. In the demonstration, to show the rotational movement of the earth, all modern improvements in instrument-construction will be taken advantage of.

After Many Years.—On May 10, 1878, a pharmacist named Danval, of 12 rue de Maubeuge, Paris, was sentenced to hard labour for life at the Assizes of the Seine Department for poisoning his wife. Since then he has been incarcerated at the Agricultural Convict Settlement of Bourail, which has been recently visited by a representative of *Le Journal*. This gentleman had a long interview with the ex-pharmacist, with the result that a campaign has been started in that Paris newspaper in favour of Danval, who inspired the journalist with the belief that he is an innocent man.

Nineteen Years of Catalepsy.—For nearly nineteen years a Mlle. Bouyenval has been in a state of catalepsy without taking nourishment, and to all appearances dead except for the almost imperceptible beatings of the heart. Renewed interest is now being shown in the case. The patient lies in her mother's cottage in Thenelles, near St.-Quentin, and is over 37 years of age. She has been visited by a number of medical celebrities, and all sorts of theories have been put forward by way of accounting for her condition. The local physicians are or opinion that the trouble was caused by some violent emotion, and this view was also given by an expert in his report to the St.-Quentin court, which years ago inquired into the matter. Now, however, the idea is started that Marguerite was probably magnetised, and not having afterwards been properly aroused may thus have remained in a state of hypnotic catalepsy.

Australasian News.

Chiefly from "The Chemist and Druggist of Australasia," March 1, 1902. 6d. per copy, post free.

Mr. H. T. Tompsitt has resigned his seat as member of the Council of the Pharmaceutical Society of Australasia, and left by the R.M.S. *China* for a stay of several years in England.

Egg-preserving.—Mr. W. A. Ellis, Stratford, N.Z., has closed his business, and is to devote himself entirely to pushing a process he has patented for sterilising eggs. Mr. Ellis is to come to England with his process in a few weeks.

Queensland Register.—The Register for 1902 contains 216 names. Of these twenty-five are entered as either pharmaceutical chemists or chemists and druggists of Great Britain; the names of two of the gentlemen do not, however, occur on the British Register.

Registering Nurses.—New Zealand is the first in the field with a Nurses' Registration Act. The Act passed last Session, and is creating somewhat of a stir in nursing quarters. Provision is made for registration of existing nurses and examination of future candidates. The examination-fees are expected to defray the cost of the working of the Act.

A Staff Dinner.—The members of the staff of Messrs Felton, Grimwade & Co., Melbourne, were entertained to dinner on February 21. The Hon. F. S. Grimwade was in the chair, supported by Messrs. E. Norton Grimwade and H. W Grimwade. Mr. Cowley, in proposing "The health of the Firm," mentioned that Mr. Grimwade and his family were proposing to go to Europe, and wished him good health and a safe return.

Pharmacist's Wife Registered.—As mentioned in the *C. & D.*, March 15, page 420, the Pharmacy Board of New South Wales decided to ask a lady applicant for registration to come before them for examination. Mrs. Susan Harris, wife of Mr. C. Harris, Gulgong, accordingly attended, and was interrogated on oath as to her experience in pharmacy. The answers were so satisfactory that Mrs. Harris was registered by the unanimous vote of the Board.

Poisons Laws.—The paper read by Mr. Cowling on "Poisons Laws" at a meeting of the Pharmaceutical Society of South Australia (*C. & D.*, April 5, page 543) has resulted in the appointment of a committee of three members of the Society to collect data for a draft Poisons Bill. Mr. Cowling has, since he read his paper, obtained some measure of support from the Secretary of the British Medical Association (South Australian branch) and the City Coroner.

Federal Customs.—The discussion on the Federal Customs duty on drugs and chemicals came on in the Federal Parliament on February 25, and resulted in a reduction of the proposed duty of 25 per cent. to 15 per cent. The item patent and proprietary medicines was split into two, the former being taken to include drugs, like trional, which are prepared under patents. The distinction was not, however, at all clear in the minds of the majority of the members. The Pharmaceutical Society of Australasia prepared a list of patent medicines for the mover of the reduction of the duties, and this action is greatly responsible for the favourable turn things took. One result was that the reduction on patent medicines was voted for separately and obtained. The Government then accepted this vote for the whole section. A new item was added to the medicines section—medical preparations containing opium, 30*s.* per lb. on opium contained therein not dutiable at higher rate under the heading of medicines. Insecticides, sheepwashes, and disinfectants n.e.i. are admitted free (in place of the proposed 15 per cent. *ad val.* duty). During the debate a good deal was said about proprietary medicines, Sir Edward Braddon mentioning that chlorodyne is one of the most valuable medicines, another speaker adding, "And Fellows's syrup." Those specially interested in this subject should get a copy of *C.D.A.*, which contains a full report.

South African News.

Natal Pharmacy.—Messrs. Samuel Boyd and Gabriel Myers have been admitted to practise as chemists and druggists in Natal.

A New Drug-store has been opened at the corner of Orange and Long Streets, Cape Town, under the firm-name of "W. J. Strange."

Methylated Spirit in Natal.—New regulations for the manufacture, importation, and sale of methylated spirit in Natal have been gazetted.

Mr. G. T. Branch, formerly of the Metropolitan College of Pharmacy, London, and recently Sergeant-compounder R.P.R. at Scandinavia Drift, sailed for England by the *Kinfauns Castle* on March 26.

Examination-chemistry.—In future the Colonial Pharmacy Board will conduct the chemistry part of the pharmaceutical examination in the Government Analytical

Digitized by Google

Laboratory, situated in the Department for Agriculture buildings, Cape Town.

A Big Lot of Cyanide.—A German named Gustav Schlochamer was arrested at Durban on March 14, on a warrant from Johannesburg, charged with the theft of cyanide valued at 14,000*l*. The Magistrate fixed bail at 20,000*l*. Schlochamer was removed in custody.

Imports.—The value of the drugs and chemicals imported into the Transvaal Colony during 1901 is officially given as 81,000*l*.—Drugs and chemicals of the value of 293,000*l* were imported into the Cape Colony during 1901. For the same period in the previous year the value was 231,000*l*.

Spirit-drawback in Natal.—By a new Regulation dated February 25, 1902, drawback of duty is authorised on rectified spirit, colonial compounds, and liqueurs deposited in a bonded warehouse by rectifiers or compounders in the Colony. The drawback is to be paid on spirits leaving the Colony.

Natal Trade-marks.—Jeyes' Sanitary Compounds Company (Limited), of 64 Cannon Street, E.C., have applied to the authorities in Natal for the registration of the trade-mark "Creolin," surmounted by the words "Jeyes' Fluid" and a rising sun, in respect of chemical substances prepared for use in medicine and pharmacy.

Americans can do most things, and very rarely does one hear of our Transatlantic friends having to refuse business owing to the call being beyond them. Such, however is the case in a well-known chemical product used largely in the Cape Colony. It is not a question of money, but sheer inability to fill contract-conditions as to quantity.

Shop-rents show no signs of coming down in Cape Town. A firm of chemists there recently applied to the owners of a building now being put up in Adderley Street, the main thoroughfare of that city, for a shop therein suitable for a pharmacy and were asked 200*l*. per month. The owners did not appear over anxious to do business even at that figure.

The Scholtz Case.—Our Cape Town correspondent was informed officially just before the departure of the last mail that the Colonial Medical Council had nothing to say in connection with the Scholtz case. Notwithstanding that the Governor in Council refuses to endorse the findings of the Council, the attorney for the late Dr. Scholtz wishes to consider the matter *sub judice* for the time being.

Proposed New Steamship Service.—A new service of steamships will soon be established to run between Liverpool and South African ports. The line will have a frequent service, and, in addition to Liverpool as a home port, will also have sailings from Glasgow. No reduction in freights is expected, as in a very short time the trade between Great Britain and South Africa will supply ample work for all the British lines now engaged in it, as well as for the proposed new line.

Cape Trade-marks.—Messrs. Alfred Fennings, of Cowes, Isle of Wight, medicine-proprietors, have applied to the authorities in Cape Town for registration of a trade-mark (a sleeping child in a bassinette) of which they are the proprietors in respect of medicines in Class 3.—Messrs. Lea & Perrins, of Worcester, England, intend applying to the Registrar of Deeds for the Cape Colony, on April 17, to register the words "Lea & Perrins" as a trade-mark, in respect of glass bottles.

Cape Licences and Foreign Firms.—It is interesting to learn that January and February were record months at the Cape, so far as the taking out of licences by representatives of British and foreign firms is concerned. This fact shows a feverish activity to secure the coming business. The major portion of the licences taken out was for agents of British firms, who have evidently made up their minds not to be behind when South Africa is generally thrown open again to trade. The 25*l*. tax imposed is now a recurrent source of income to the Cape Government, who appear to look particularly keen after it.

Cape Town Harbour.—A short time since we reported that the facilities for discharging and landing cargo at Cape Town had greatly improved, but it would appear that the improvements made in this direction have completely disorganised the delivery between the docks and the importers' stores. No fewer than half-a-dozen serious complaints have been lodged with the *C. & D.* representative, who has assured himself that they are correct. No. 1. A chemist has only received fourteen packages out of twenty as per bill of lading, and the Harbour Board can give no account of the missing ones. No. 2 A shipment from America consisting of four cases; two were delivered to a wholesale-house, who could not persuade the Board to take them away again, while the remainder went to two other addresses: the consignee did not receive a single package until he found them in various parts of the city and carted them to his own store at his own expense. No. 3 is exactly similar to No. 2, except that the shipment consisted of six cases, out of which the Board delivered two to the consignees and the remainder were distributed about the city. No. 4 consisted of two cases on a general bill of lading through a commission-house. The documents and instructions lodged were quite in order, but the Board has not the faintest idea where the goods are. They have been lost for nearly a month. No. 5 is a case lost after leaving the ship's slings, while complaint No. 6 would hardly look well in print. In every instance the packages have gone astray between the docks and the destination of the goods in and around Cape Town. On inquiry at the wholesale drug-houses it was ascertained that they are not treated quite so bad, still they are incensed at the gross mismanagement.

Business Changes.

Messrs. Lewis & Burrows (Limited) have purchased the business lately carried on by Mr. T. Turner at 292 High Road, Chiswick, W.

Mr. A. E. Colman, chemist and druggist, from Messrs. Lamplough (Limited), has taken over the business of Mr. Henry Burn, at 7 Gresham Street, E.C.

Mr. G. Williams, pharmaceutical chemist, has purchased the business lately carried on by Mr. J. S. Harvey, chemist and druggist, at 11 Market Jew Street, Penzance.

Mr. W. E. Williams, chemist and druggist, has taken over the drug-business at 15 Dunraven Place, Bridgend, Glam., formerly carried on as Jipson's Drug-stores.

Messrs Sanguinetti & Stevenson, chemists, Ealing, have acquired the business at High Street, Southall, formerly belonging to Mr. W. Wooster, chemist and druggist.

Mr. Charles Skeat, chemist and druggist, formerly with Mr. Newton Wright, of Ilford, has acquired the business at 609 High Road, Tottenham, lately carried on as the Williams' Pure Drug Company.

Messrs. C. Oppel & Co., proprietors of Friedrichshall mineral-water, have opened offices at 10 and 12 Milton Street, London, E.C., under the management of Mr. G. Greiner, as their headquarters in the United Kingdom.

Mr. Robert Parkinson, Ph.D, has retired from the business of Harrison, Parkinson & Co., chemists, Bradford, which is continued by Messrs. John Jackson and Albert Wilson, with Messrs. H. R. Jackson and W. K. Jackson, as new partners.

The Partnership hitherto existing between Mr. T. G. Forshaw and Mr. C. M. Snow, trading as chemists and opticians, at 138 Westgate, Bradford, has been dissolved. Mr Forshaw will continue the Westgate Pharmacy, assisted by a qualified chemist, while Dr. Charles Forshaw has entire charge of the optical department. Mr. C. M. Snow, chemist and druggist, has started in business in Filey.

Early Laboratories.—Professor W. Ramsay, in reviewing a German book on science-teaching in England, says the author (Dr. Karl T. Fischer) has been wrongly informed that chemical laboratories in Great Britain have only of recent years been open to students. Professor Thomas Thomson's chemical laboratory at Glasgow and Professor Hope's laboratory of "natural philosophy" at Edinburgh were available at the beginning of the nineteenth century; and in England, Professor Turner's laboratory was advertised at least as early as 1834. The laboratory of the Pharmaceutical Society.

Pharmaceutical Society of Great Britain.

COUNCIL-MEETING.

WEDNESDAY'S meeting occupied three hours, when many important matters came before the Council. Mr. R. A. Robinson took his seat on the right of the President, between Mr. Carteighe and Mr. Wootton, and was suitably welcomed. Reference was made to the deaths of Mr. W B. Randall, Southampton (a former councillor); Dr. Hamberg, Stockholm (an honorary member); and Mr. G. H. Hawtayne (a corresponding member); and suitable letters of sympathy are to be sent to the relatives. A mild sensation was caused by the covering letter from the Privy Council which accompanied Dr. Stevenson's report. The letter called the Society's attention to the remarks about the necessity for a compulsory curriculum in at least chemistry and pharmacy, and the reply of the Society is to remind the Privy Council that for years the Society has been asking it to sanction the very thing. Messrs. Campkin, Morrison, and Pickering are, in addition to the retiring members, candidates for the May vacancies. The Benevolent Fund granted 124*l.* to nine applicants. The Library report caused an instructive discussion, and ended in the approval by the Council of the Scotch University education scheme and the relaxation of the rule as to Preliminary certificates, so that candidates who have not sufficient "Leaving" certificates can get the rest from one of the approved examining bodies. Dr. Symes brought forward a motion to request a committee to look into the question of dividing the Minor, but an amendment by Mr. Hills was passed by a majority of one. The shilling-fee by-law has been altered, and is with other amended by-laws to be submitted to a general meeting, as also is an alteration in the poison regulations, which has been made with the object of including liquid disinfectants in the bottle section. The Council prize-list was approved of, and several other items also came before the meeting.

The monthly meeting of the Council was held on April 9 at 16 Bloomsbury Square, W.C. There were present the President (Mr. G. T. W. Newsholme), the Vice-President (Mr. C. B. Allen), Treasurer (Mr. S. R. Atkins), and Messrs. Carteighe, Cooper, Cross, Gifford, Glyn-Jones, Harrington, Hills, Park, Robinson, Savory, Storrar, Symes, Wootton, and Young. Letters accounting for absence were received from Messrs. Corder, Harrison, Southall, and Taylor.

Welcoming Mr. Robinson.

The President, on behalf of himself and his colleagues, welcomed Mr. R. A. Robinson to a seat on the Council. Mr. Robinson was not, he said, a stranger, but had been known to them both as a very loyal member of the Society for many years and a hard-working councillor of the London County Council. The large amount of public work Mr. Robinson had done made him a very desirable addition to the Council.

Mr. Robinson briefly replied, and said he should be glad to give all the time he possibly could to the work.

Deaths.

The President then referred to the death of Mr. W. B. Randall, of Southampton, who died on March 14, aged 80 years. He joined the Society in 1845, and served on the Council from 1865 to 1889—a period that covered the historic efforts of pharmacists to secure legislative recognition, and which marked the establishment of the principle that sound poison law must be based upon the competent skill and knowledge of the seller. Mr. Randall had acted as a local officer of the Society for many years, and in his efforts to promote education had elevated their calling and the status of the Society. The Editor of The Chemist and Druggist had kindly sent him (the President) some further particulars of Mr Randall, in the form of an autobiography, in which Mr. Randall spoke of the pleasure it gave him to attend the Council-meetings in London, and associate with such men as Squire and Morson, and enjoy the hospitality of Mr. Thomas Hyde Hills at his house in Queen Anne Street. The President proposed a resolution of sympathy with the family.

The Vice-President said he had not the pleasure of knowing Mr Randall personally, but had had an opportunity of going over the business premises at Southampton, and what he saw showed abundantly that they had been in the occupation of a thorough pharmacist.

The Treasurer said he not only knew Mr. Randall, but he was his life-long friend. He (the speaker) had been in the habit, whenever he wanted special advice, of going to Southampton and conferring with Mr Randall, and more honest and sound advice he never had. When attending Mr. Randall's funeral he was impressed with the large number of representative citizens who attended. It was a great thing to them as pharmacists to have been represented by such a man with such splendid talents.

The resolution was carried unanimously.

Reference was also made to the death on February 13 of Dr. Nils Peter Hamberg, Inspector of the Pharmaceutical Institution, Stockholm, aged 86, who was elected an honorary member of the Society in 1856. Dr. Hamberg contributed a paper some years ago on the influence of arsenical wall-paper on the air of rooms.

A corresponding member—George Hammond Hawtayne—has also died, at Ramsgate. Mr. Hawtayne was formerly Administrator-General of British Guiana, and took great interest in the Society museum.

Letters of sympathy are to be sent to the relatives of Dr. Hamberg and Mr. Hawtayne.

Mr. Robinson was placed on the Library, Museum, and House Committee.

Examinations.

The report of the Government visitor (Dr. Thos. Stevenson) on the examinations held by the London Board of Examiners during 1901 was then presented:—

Minor.—The report stated that there was a falling-off in candidates, the number being 1,036, against 1,357 in 1900; the percentage of passes was 27·6. Dr. Stevenson added that owing to the proportion of failures having been so great he had paid great attention to each branch of the examination. The result of this investigation showed

that no less than 509 candidates, or 67·9 per cent., failed in the practical parts of the examination—*i.e.*, in dispensing, pharmacy (the preparation of pharmacopœial articles), the recognition by tests of ordinary salts and the detection of their ordinary adulterants (practical chemistry), and in the standardisation of potent pharmaceutical wares. Incompetence in these matters—which form, or ought to form, part of the daily routine of the chemist's business—is, rightly, not passed over by the examiners. The safety of the public imperatively calls for competence in practical pharmacy and practical chemistry; and candidates ought not to be passed who display gross ignorance in these subjects, however versed they may be in theoretical matters. Until pharmacists themselves agree to require compulsory courses of instruction in at least chemistry and pharmacy, there will continue to be a large percentage of failures at this examination.

Major.—For this examination 80 candidates presented themselves, against 103 in 1900; the percentage of passes was 35. The quality of the candidates presenting themselves for this examination was, the report stated, often very unequal, and the result of an analysis of the figures showed

that pharmaceutical education leaves much to be desired, and that the excellent teaching now available at several centres is too little made use of. It is to be hoped that in the near future attendance at recognised teaching centres will be made compulsory.

The covering letter from the Privy Council which accompanied the report contained the following:—

I am directed by their Lordships to request that you will be so good as to draw the special attention of the Society to Dr. Stevenson's remarks in the report with respect to a compulsory course of instruction in at least chemistry and pharmacy being required.

Digitized by Google

The PRESIDENT said the matter was of great importance. Dr. Stevenson had often called attention to the necessity of a curriculum, but now the Privy Council had emphasised it. The Council had been for years urging on the Privy Council the desirability of a compulsory course of study, and provision had been made for enforcing some curriculum in the draft Bill. He moved that the Secretary refer the Privy Council to the efforts the Council had made in this direction. The Bill which the Council drafted in 1881 after the House of Lords judgment contained the first curriculum clause.

Mr. HILLS hoped the letter would be very full and give chapter and verse of the many efforts the Society had made to obtain a curriculum. It was satisfactory to find that the Privy Council was now urging upon them the necessity of imposing some course of study on their candidates.

Mr. CROSS: Would it not be well to notify the Government that the draft Bill which is now in their pigeon-holes contains a clause to give the power of enforcing a curriculum?

The Secretary is to reply to the Privy Council.

ELECTIONS.

Members and student-associates of the Society were elected, four persons were restored to the Society, and four to the register.

The SECRETARY then announced that there were ten candidates for the seven seats on the Council which would be vacant in May, and that all have signified their willingness to serve if elected. The names are:—

A. S. Campkin, Cambridge	J. W. T. Morrison, Tring
M. Carteighe, London	C. E. Pickering, London
W. S. Glyn-Jones, London	C. J. Park, Plymouth
J. F. Harrington, London	A. Southall, Birmingham
J. Harrison, Sunderland	J. R. Young, Warrington

MONEY MATTERS.

The report of the Finance Committee was then read. It showed the following balances:—

General Fund	£3,172 17 1
Benevolent Fund...	322 4 0
Donation account	217 15 0
Orphan Fund	325 10 0

Submitted for payment from the General Fund account, 1,388*l.* 5*s.* 5*d.*; Benevolent Fund, 4*l.* 1*s.* 6*d.* The committee also recommended that 300*l.* Consols be purchased for the Orphan Fund.

The amount submitted for payment was made up of 582*l.* for *Journal*, 350*l.* current expenses, 181*l.* rent, 182*l.* salaries, 58*l.* law expenses, and 112*l.* sundries.

The PRESIDENT, in moving the adoption of the report, said the Benevolent Fund had received ten guineas from the Pharmacy Club. It had been thought desirable to invest the Orphan Fund balance in Consols so that the money could be realised at any time; 30*l.* would be required next June for the Watford orphan.

The report was adopted.

BENEVOLENT FUND.

The report of the Benevolent Fund Committee was taken *in camera*, after which,

The VICE-PRESIDENT, in moving the adoption of the report, said an application had been received for assistance from a chemist who had died between the time of making application and the matter coming before the committee. Under the circumstances the committee resolved to treat the application as coming from the widow, and she had been relieved. The grants made were two of 20*l.*, four of 13*l.*, one of 12*l.*, and two of 10*l.*—a total of 124*l.*

THE LIBRARY REPORT.

The report of the Library, Museum, and House Committee was next submitted. The first part dealt with the details of the libraries, museums, schools, and spring-cleaning. It was recommended that permission be given for the cup of the Inter-Pharmacy Football League—won by the School—to be kept in the library during the ensuing twelve months. The following three items from the Council were considered:—

1. A letter from Mr. Hagon, of Cardiff, asking for a reduction of the annual subscription to the Society in the case of members of the local Association.—The committee desires it to be pointed out that the Council has no power to make such concessions, and that it would not be practicable to do so in any case.

2. A resolution from the Executive of the N.B. Branch, suggesting that candidates possessing Leaving certificates be allowed to complete their examination by passing the remainder of their six subjects under any one of the examining bodies recognised by the regulations.—The committee recommends that this suggestion be adopted by the Council.

3. A draft (forwarded by the Executive of the N.B. Branch) scheme for the promotion of University training for Scottish students, and for instituting a degree in pharmacy.—The Committee recommends the official approval of the principle of the scheme, subject to the condition that the degree shall not be granted to any person who does not present a certificate stating that he is entitled to registration as a chemist and druggist.

The PRESIDENT, in moving the adoption of the report, said he was glad to find that the School had been successful in football, and thought they would all be pleased to have the cup placed in the library. The recommendation in regard to Leaving certificates was perfectly right and a safe thing to adopt, otherwise the youth who had left school and had not taken the whole of the subjects would be under a disadvantage. It would be convenient to the candidates to let them take the other subjects from one of the recognised examining bodies, and no disadvantage to the Society. In regard to the University training scheme, he agreed with the recommendation that official approval be given of the principle of the scheme, provided that the degree is not granted to any person who does not present a certificate stating that he is entitled to registration as a chemist and druggist. The committee had considered the subject for a long time, but as there had not been complete agreement between Scottish pharmacists and the Executive on some points the committee had hesitated to recommend the Council to give their official approval to the scheme. The President then gave an outline of the principal suggestions in Mr. Tocher's university scheme, and said that the principles laid down were worthy of the Society. Pharmacy, moreover, owed a considerable amount of gratitude to Mr. Tocher for bringing forward this scheme and elaborating the details. There were some who did not agree with advanced education in pharmacy, but he (the President) believed that the more education they had the better it would be. The Council had been aiming for a long time to get a better system of education, and had endeavoured to avail themselves of the Universities and schools wherever possible in carrying out their educational plan. This utilisation of the universities was the very essence of Mr. Tocher's scheme, and therefore the Council approved of it. University training was bound to improve the status not only of the individual, but of the craft itself.

Mr. STORRAR said it was almost unnecessary for him to say anything in favour of the scheme, but there had been criticisms outside the Council which he should like to answer. The aim of the scheme seems to have been misunderstood. The object was to give pharmacy students a chance of a University training and the hall-mark of a University to their studies. If they could do this, it would be the greatest advance made in the training of pharmacists since the time of their charter. Pharmacy was a craft as well as a calling that required business training, but the only chance the chemists had of retaining legitimate pharmacy was through their own personality and efficient training. This, he was sure, was the only way to meet illegitimate competition, and he thought they were more likely to turn out successful men as a result of this training. They had been told they would never have thought about a degree in pharmacy, if it had not been for the Carnegie Trust being instituted, but he would remind them that it was the money provided by the Carnegie Trust that made the curriculum possible. As regards a degree in pharmacy, it was not necessary for him to say a single word to that Council in defence of a degree: the principle had already often been admitted. By this scheme they were placing a degree within reach of every student who passed the qualifying examination of the Society. The Society will not ask any more from students, and the University curriculum will be purely optional for the student. It had been objected to, again, that the scheme was a purely provincial one, but he contended they were quite entitled to do the best they could for their students, and to get their fees paid for them if they could. He would remind the critics, on the other hand, that the University courses would be open to all students, so that everybody

Digitized by Google

could thus indirectly get the benefit of the Trust. It was only possible to carry out the scheme if they could establish the lectureships, which would take, as far as he could see, from 30,000*l.* to 40,000*l.*

Mr. Glyn-Jones had tried to come to the conclusion that it would be quite safe for them to approve of the scheme, but had been unable to do so. The Society is, through a branch, going cap in hand to the Universities, and asking them to set up a degree in pharmacy. They were told that it would place a hall-mark on their students; but, as far as he could see, no case had been made out for the Universities as trainers of pharmacists. As it is, to-day any pharmacist can get a science degree. Their duty was to look at this question quite apart from the Carnegie Trust. If a demand had existed for a degree, he could have understood it; but here they had the question tacked on to another scheme of free pharmaceutical education. He was not quite sure that it was the duty of the Society to seek to get free education for its students. As far as he could see, anyone, whether he needs it or not, can claim the benefits of the Carnegie Trust. Surely their members might have got the benefits of the Trust without bringing up the question of a degree in pharmacy. The promoters admitted that there will be no rush for the degree, which he took to mean that there was really no need for it. If they approved of this scheme it was tantamount to admitting that the Major was not to be a sufficient hall-mark of pharmacy. Not only had the need for the degree not been established, but he saw in its establishment a source of danger to pharmacists, for here a man might have satisfied the more stringent examination of an outside body, and yet not have passed the Minor. The condition about the Minor was not one they could put before any university; either the universities must throw over that condition or else take over the Minor. He asked that the subject be referred back to the committee so that they keep their hands free to deal with anything that may turn up. Mr. Glyn-Jones proposed an amendment in these terms, but it was not seconded.

Mr. Carteighe said, stripped of all its surroundings, the scheme was the result of an opportunity which had presented itself of getting through the University, which in Scotland is rightly regarded as the highway to all professions. They need not fear for their examinations. He was even prepared to give up all their examinations if he thought they could be efficiently conducted elsewhere, and let the Society be only a registering body like the General Medical Council. Mr. Glyn-Jones reminded them that if the Carnegie Trust had not been available they would not have heard of the scheme; but if it had not been for the Carnegie Trust the Universities would not have had the money to start the necessary faculty. The Trust is open to all classes in Scotland, and the Scotch very wisely encouraged everybody to go through a systematic training wherever possible. Would to God they did the same here! The Universities could not do anything in the matter unless there was a faculty. Every man under the scheme would have an opportunity not only of being examined but of getting thorough training. If the scheme acted as a stimulus to those in the South to get the same sort of thing, so much the better. He did not fear that the Society would lose by any scheme such as had been proposed.

Mr. Hills said he was unable to be at the committee-meeting owing to his presence at Whitehall, so that he was glad to have the opportunity to say that he approved of the scheme. In regard to the condition of recognising the Minor, he had some doubt as to whether the University would accept it. That remained to be seen. As regards the question of Scotch *v.* English, he hoped the scheme would serve as an object lesson to philanthropists south of the Tweed to devote some of their money to those who had the misfortune to live south of the Tweed. There was no reason why all should not make use of the scheme, as everyone would be able to go in for the University course and take the degree of bachelor of science in pharmacy He hailed with delight any means of getting a curriculum recognised on University lines. The fact of their students coming in contact with students preparing for other professions in the University was a training in itself. Their thanks were due to Mr. Tocher for putting the scheme into shape, and he wished it every possible success.

Mr. Carteighe: I should have said how grateful we are to Mr. Tocher for bringing the scheme forward. Mr. Tocher has shown wonderful ability and great tenacity and knowledge of education which is rare amongst our members. He is a very brilliant man, and I hope he will not overwork himself and so render himself less useful in the future.

Mr. Storrar said there seemed to be doubts expressed as to whether the University would accept the condition of the Minor, but in a letter Mr. Tocher assured him that all the individual members of the University he had spoken to agreed with the condition.

The Treasurer said he would have liked to have had Mr. Glyn-Jones's support, but it seemed like reversing the order to require a man to pass the Minor after going through a higher examination. Were they to regard the Major as equivalent to the B.Sc.Ph.? or was the degree to be something beyond the Major. He was a great admirer of the Scotch educational system, by which men from the lowest walks of life could attain by merit the highest positions. A friend of his, the son of a humble farmer in the Isle of Skye, had by the system of bursaries attained a very high position in the Civil Service. Here he would like to say that however they regarded Cecil Rhodes, they could not but admire the splendid form in which he had bequeathed his wealth for education. It was much better than spending absurd sums on mansions and works of art, to contribute to the real uplifting of the nation.

Mr. Glyn-Jones explained that his objection was to imposing conditions precedent to the Minor.

The Vice-President said he was heartily in sympathy with the aspirations of Scotch pharmacists. He shared with his colleagues in the warm appreciation of the ability Mr. Tocher had shown in drawing up the scheme.

Mr. Wootton said that some months ago when he asked a question about the scheme he did it because he was afraid it was being shelved, or that there was some jealousy in regard to it. He was glad to find that the scheme had been so heartily endorsed. Scotch pharmacists would have been neglecting their duty if they had not taken advantage of the Carnegie Trust. As he read the scheme of the Trust, it aimed at giving the advantage of a university education to as large a number as possible, and did not aim at simply getting people to pass examinations. The trustees had, he feared, put obstacles in the way of obtaining the benefits of the Trust, but any money obtained would be of considerable value to education not only in Scotland but to the world. It appeared to him to be ungracious to make the condition of passing the Minor too prominent. The degree could not possibly be a qualification according to the Act of Parliament, and, besides, it was expressly stated in the scheme that it was not intended to be a qualification. Therefore he saw no reason for emphasising the condition.

Mr. Carteighe said it was necessary to put it so in the report so that those who had not read the scheme would understand the resolution.

The President: The idea runs through the scheme.

Mr. Wootton: Yes; that is why I say it is a little unnecessary to emphasise it

Mr. Storrar: Perhaps we could modify the resolution to make it simply refer to the conditions of the scheme.

Mr Gifford thanked the Secretary for the full report of the committee. He was also pleased at the reception the University scheme had met with, and hoped it would cement good fellowship between England and Scotland.

The President, in putting the report in the form of two resolutions, said he wished to emphasise that he saw no disadvantage in trying to get a degree in pharmacy. It would elevate pharmacy.

When the resolution referring to the Preliminary examination was put,

Mr. Hills explained the steps which led to the relaxing of the conditions first laid down. They started by requiring six subjects to be passed in one examination under one body. But difficulties arose which led them to make it a condition that the subjects be taken at not more than two examinations of the same body. They had now learnt by experience that still a little more latitude must be given to make the conditions the same as are required of medical students at the Scotch Universities.

A Poison Question.

Mr. Young asked the President whether his attention had been directed to articles published in various papers which

Digitized by Google

professed to give particulars as to the proceedings of the Poisons Committee, and whether those reports give a proper account of such proceedings.

The President: My attention has not been specially called to the reports. Of course, I have seen some of them, but I am not in a position to answer the question. Perhaps Mr. Hills can tell us.

Mr. Young: I understood the proceedings are supposed to be private

Mr. Hills: I always understood that the evidence is private, therefore whatever is published is a matter of speculation, and any deductions from such speculations would consequently have little weight.

Preparing for a Fight.

Dr. Symes here asked that a notice of motion standing in his name on the agenda be taken before the consideration of the new by-laws, because the resolution might require some alteration in the by-laws.

Permission was given.

Retiring Divisional Secretary.

Mr. Frederick Andrews, Divisional Secretary for South Paddington, asked to be relieved from his secretaryship. Mr. Andrews was formerly an auditor, and was a member of the Council from 1880 to 1884.

He was thanked for his services.

Dividing the Minor.

Dr. Symes then moved the following resolution:—

That this Council approves of dividing the Minor or Qualifying examination, and requests the Library, Museum, and House Committee to consider and report on the best means of carrying the same into effect under the existing Acts of Parliament.

The Council had on several occasions shown their approval of dividing the Minor, and had, he was aware, introduced a clause in the draft Bill giving power to do that. The clause had, however, been introduced into a Bill which contained controversial matters, and he was of opinion, with Mr. Hills, that measures for consolidating the Society should be separated from matters of controversy. The Council had been told that the Privy Council had laid it down that they could not impose conditions precedent to examination, but this was only when the suggestion of a curriculum was made, not dividing the examination. The Act says very little about examinations, except that examinations are to be held, and that they can be varied from time to time by by-law. The question of dividing the examination was thus a matter of by-law only. They had, moreover, for thirty-two years divided the examination, as the Preliminary had always been regarded as part of the Minor. He thought there was no question but that they had the power to alter the examination by by-law. A large number of persons had pointed out to him (the speaker) the desirability of the change, and it would be better for the candidates. The habit of study acquired at school would be continued if their young men had an examination to look forward to in a short time. At present the examination did not come on till a young man was twenty-one years of age, and he consequently got out of the habit of study, as the examination was such a way off. If the theoretical part of the examination could be taken during apprenticeship, it would be something to work for, and would be a test of the pupil's progress, and show how far the master was doing his duty. He (Dr. Symes) would like to give the examiners an opportunity not only of finding out how much a candidate knew, but of ascertaining how far he was capable of applying his knowledge. He was certain they would get better results if the examination were divided as he proposed.

Mr. Young seconded the resolution. It was safe to say that, after the total abolition of company-pharmacy, the question of dividing the Minor was the most popular item in pharmaceutical reform. He was not prepared to abandon what opportunities they at present had of getting the examination divided, and did not see that they should wait till they could get a curriculum. It was no new idea: in 1871 a division existed in the examination, when a candidate could be re-examined in such subjects as he had failed in. This was, moreover, the custom in all other bodies, and if some such practice existed in pharmacy, the anomalies which they often saw at present of a candidate alternately passing and failing in particular subjects would be done away with.

Mr. Hills said he had often been asked the question, "Are you in favour of dividing the Minor?" His answer had always been, Yes, but under certain conditions, and at the same time as the establishment of a compulsory curriculum. He moved, as an amendment to Dr. Symes's motion—

That this Council approves of dividing the Minor or Qualifying examination, but is not prepared to consider the question apart from the institution of a compulsory curriculum.

There were reasons why the question should not be considered at the present time. One was that the committee now sitting were considering some part of their Act, and the report may lead to a general reconsideration of the laws affecting their calling. The Council ought to use every effort to get the powers that be to see that they thought a proper training for candidates of even higher importance than any specific examination. The older he got, the more he saw that proper evidence of training was the best evidence of fitness.

Mr. Park, in seconding the amendment, said he could not say from his experience that young men who gave time to their studies saw any necessity in dividing the examination. Parents should take the precaution when apprenticing their children to see that time for study was allowed.

Mr. Carteighe said he hoped Dr. Symes would not press his motion. Dr. Symes was very emphatic about their powers, but they had been told very plainly by the legal advisers of the Privy Council that they had no power to impose such by-laws. The legal advisers of the Privy Council were the Law Officers of the Crown, and unless the Council could persuade the Privy Council that a division of the examination was within the Act it was useless. The Privy Council naturally could not go back on what they had been advised on a former occasion.

Mr. Cooper said he agreed with dividing the Minor, but only if a curriculum was imposed.

Mr. Glyn-Jones supported Dr. Symes, and said that, in the face of the clause in the draft Bill, the Council could not say they did not approve of the division of the Minor. The only effective argument to Dr. Symes would be that they have no means of dividing the Minor. It was as illogical to say they would not have division till they got a curriculum as to say they would not protect their title till they had a curriculum. The two things do not necessarily go together. The whole question was, Have the Council power under the present Acts to divide the Minor? This was met by a declaration of the Privy Council that there was no power to impose conditions precedent——

Mr. Carteighe: Or to divide—these words are always left out.

Mr. Glyn-Jones: I have never been able to make quite clear whether that covered both the curriculum and the division of the Minor.

Mr. Carteighe: It does.

Mr Glyn-Jones proceeded to say that they need not impose any conditions, only give a candidate the option of taking the examination all together or in parts. If, as he heard for the first time, a division of the examination existed in 1871, it was clear that it could be done without any alteration in the by-laws. He hoped the committee would see whether they could not do this, and if not, why not——

Mr. Carteighe: In fact, find a way round. (Laughter.)

Mr. Glyn-Jones: Well, put it so if you like.

The Treasurer supported Dr. Symes in principle, but it was a good thing at the wrong time. He supported the amendment proposed by Mr. Hills, as he looked upon training as of more importance than examination, and in the draft Bill the curriculum is made a cardinal point.

Mr. Gifford said the present was an inopportune time to press Dr. Symes's principle. Mr. Young said it was a popular proposal, but that did not have the slightest effect on him.

Mr Young: I don't think anything would. (Laughter.)

Mr. Gifford, continuing, said they should not deal with the question unless they insisted on the foundation of the personal qualification.

Mr. Harrington, in supporting Dr. Symes, could not see why they should not support the division without a curriculum.

Digitized by Google

Mr. ROBINSON said the question was without doubt an important one, but it seemed to be largely one of expediency. The division of the Minor was wanted from an educational point of view, but he was not prepared to say they would not do something good unless they got something else. He pointed out also that the Privy Council's letter only urged the desirability of a curriculum in one or two, and not all, of the subjects. There is no examination with a greater element of chance in it than the Minor. In medicine, where the examination is taken in parts, the percentage of failures is much less.

Mr. WOOTTON suggested that the opinion of the Boards of Examiners as experts should be asked. Both Boards should be asked to expressly consider the question and send their reports to the Council. He would be glad if the Council would postpone consideration of the subject, as there was a great deal to be said on both sides. He was more inclined to take the subject separately, and not mix it up with a curriculum.

The Secretary sent for the minute-book, as the examiners had previously given their opinion on dividing the Minor. In the meantime,

Mr. YOUNG asked if the practice of 1871 was stopped through interference by the Department.

Mr. CARTEIGHE explained that the practice was to allow candidates who only obtained 25 per cent. of marks in one subject to be re-examined in that alone. But it was found that they could only make up the marks with difficulty, and that they did better if they took the whole of the subjects together.

The PRESIDENT said he saw no reason to alter his often-expressed opinion that the examination should be divided only when a curriculum was imposed. The medical examination was, it was true, taken piecemeal, but then the students had to follow a curriculum. He appealed to Dr. Symes not to press his motion to proceed with it would be almost fatal at the present time.

The VICE-PRESIDENT said that if, like Mr. Robinson, he had only come on the Council that day he would have supported Dr. Symes, but having been on the Council for eighteen years he was steeped in the necessity of a curriculum. He had never heard any opinions from candidates that they wanted the examination divided.

Mr. ROBINSON: They are very strong on division.

The VICE-PRESIDENT said the two principles have been embodied in the draft Bill, and to press the resolution would be one of the most disastrous steps the Council could take.

The SECRETARY here read the minutes of January, 1900, from which it appeared that the Board of Examiners for Scotland expressed the view that division was desirable, but that when the question was put to the London Board the reply was they were not prepared to discuss division apart from a curriculum.

Dr. SYMES, in reply, said the way candidates' opinions varied was well expressed in a letter which appeared in THE CHEMIST AND DRUGGIST a few weeks ago, in which a candidate did not think, when he got through the Minor after three tries, that there was any necessity to divide it; in fact, he had no interest in the matter. His resolution said nothing about a curriculum, but the discussion left the impression on him that its advocates were afraid of it being left to struggle in the cold if the support of the division of the Minor was taken away. This seemed to show that the curriculum was not so necessary as it was made out to be. There was nothing new in Dr. Stevenson's recommendations of a curriculum——

The PRESIDENT: But there is this time the Privy Council letter.

Dr. SYMES, continuing, said anyhow it seemed absurd to say that because they could not get two good things they would have neither. There was no other examination in which there was so much uncertainty——

Mr. CARTEIGHE: Except the Civil Service.

Dr. SYMES said he had been told over and over again that passing the examination was a matter of luck. He only asked that the subject be sent for consideration to a committee. It was scarcely fair to quote what the Privy Council said about two things, conditions precedent——

Mr. CARTEIGHE (emphatically): "Periods of time between portions of examination." I do not want to quarrel with you, but you must give your quotations correctly.

Dr. SYMES: Well, anyhow, whatever remark was made it does not apply here.

Mr. CARTEIGHE: What I say is that the Privy Council have expressed an opinion that it is not legal.

Mr. ROBINSON: And we have got to get them to change their mind.

Voting was then taken with the following result:—

[9] *Mr. Hills's Amendment.*	[8] *Dr. Symes's Motion.*
President	Glyn-Jones
Vice-President	Harrington
Treasurer	Robinson
Carteighe	Savory
Cooper	Storrar
Cross	Symes
Gifford	Wootton
Hills	Young
Park	

Mr. Hill's amendment was then put as a substantive motion, and passed by a majority of one.

THE BY-LAWS.

The PRESIDENT then brought forward the amended by-laws which the committee have been dealing with since they were sent back to the Privy Council. The only alteration made from the by-laws sanctioned at a general meeting of the Society in August, 1900, is Clause 23, Section X., as follows:—

Old.	*Proposed.*
Persons who have given notice of intention to attend an examination, and have failed duly to attend at the time appointed for the same, shall not be entitled to attend on a future occasion unless and until they have given renewed notice of intention to attend an examination, and shall in each case have paid a fee of one guinea—or if the persons shall have proved to the satisfaction of the Council or the Board of Examiners (by production of medical certificates or otherwise) that the said failure to attend was occasioned by unavoidable and proper causes—one shilling.	Persons who have given notice of intention to attend an examination, and have failed duly to attend at the time appointed for the same, shall not be entitled to attend on a future occasion unless and until they have given renewed notice of intention to attend an examination, and shall in each case have paid a fee of one guinea—or if the persons shall have proved to the satisfaction of the Council or either of the Boards of Examiners (by production of medical certificates or otherwise) that the said failure to attend was occasioned by unavoidable and proper causes—one shilling.

The alteration was agreed to.

MISCELLANEOUS.

A member at Grimsby who had had his membership certificate destroyed by fire was given a fresh certificate.

Mr. Thos. Tickle was appointed a delegate to the Congress of the Institute of Public Health.

The Torquay Chemists' Association drew the Council's attention to the recent raids by the Inland Revenue authorities on chemists at Torquay.

The Public Dispensers' Association asked for a copy of the register.

The Forfarshire Chemists' Association conveyed their approval of the University education scheme and relaxation of the conditions for the Preliminary.

The Colonial Office, through Mr. Secretary Chamberlain, asked the Council's opinion on the regulations passed by Lord Milner for the registration of physicians, surgeons, dentists, and chemists and druggists in the Transvaal.

These were referred each to an appropriate committee.

COUNCIL PRIZES.

As a result of examination the following awards were made and confirmed by the Council:—

Botany.—Silver medal, R. R. Bennett; certificates of honour, H. W. T. Young and C. T. Johnson.

Theoretical Chemistry.—Silver medal, H. W. T. Young; certificates of honour, E. T. Neathercote and J. S. Hills.

Practical Chemistry.—Silver medal, H. S. Phillips; certificates of honour, E. T. Neathercote [R. R. Bennett and H. W. T. Young].

Pharmacy.—Silver medal, R. R. Bennett; certificates of honour, J. S. Hills and W. T. Young.

Poison Regulations.

The President announced that he had unofficially consulted with the Privy Council officers, and had ascertained that a slight alteration in Clause 3 of the Poison Regulations was desired. The alteration, which is indicated below in *italics*, will be placed before the annual general meeting: –

That in the dispensing and selling of poisons all liniments, embrocations, lotions, and *any liquid disinfectant* containing poison be sent out in bottles rendered distinguishable by touch from ordinary medicine-bottles, and that there also be affixed to each such bottle (in addition to the name of the article, and to any particular instructions for its use a label giving notice that the contents of the bottle are not to be taken internally.

This concluded the public business.

The April Major in London.

The following is a summary of the questions given:—

Botany.

Three questions out of five had to be attempted.

(1) Structure and development of stem periderm.

(2) Difference between a parasite and a saprophyte, with life-history of latter.

(3) How to ascertain the amount of carbon dioxide evolved from a plant.

(4) Distinction between mosses and liverworts with structure of moss sporogonium.

(5) Structure of lichen thallus, and reproduction.

Materia Medica.

Two questions out of three.

(1) Preparation, testing, and pharmacy of cocaine and its hydrochloride.

(2) Sources and distinction of copaiba, prepared storax, benzoin, and wool-fat.

(3) Characters of quillaia, elm, slippery elm, cascara sagrada, and Virginian prune.

Chemistry.

The paper was in two parts, and two questions had to be taken from the first part.

Part I.

(1) Determination of atomic weight of magnesium or iodine.

(2) Equations to show action of sulphuric acid on potassium dichromate, iodide, permanganate, and ferrocyanide.

(3) Preparation and properties of nitrogen trioxide, phosphorus tetroxide, acetylene, and sodium thiosulphate.

(4) Manufacture of metallic nickel and properties thereof.

(5) Detection and separation of calcium, barium, and strontium.

(6) Estimation of CO_2 in air or ammonia in drinking-water.

Part II.

(7) Properties and reactions of sulphonic acids, secondary alcohols, amines, iso-paraffins, and phenols.

(8) Preparation of succinic acid, acetone, aniline, and benzaldehyde.

(9) Probable constitutional formula of $C_4H_{10}O$.

(10) Reckoning a formula of a monobasic organic acid 0·2467 gramme of which yielded 0·44 gramme CO_2 and 0·18 gramme H_2O: the silver salt contained 59·7 per cent. of Ag.

Physics.

(1) Electrical resistance of copper wire. (2) Latent heat. (3) Description of calorimeter. (4) Situation of image placed 1 foot in front of convex lens whose focal length is 9 inches. (5) Dissociation. (6) Rates of diffusion of two gases.

A Candidate's Experience.

The forty-two candidates in London for the April Major were divided into two sets for purposes of examination—half of the number had to attend on April 1, 3, and 5, and the remainder on the 2nd, 4th, and 5th. This fact was the occasion of some technical jesting, comparisons being drawn with the "symmetrical" and "asymmetrical" positions in the tri-hydroxy-benzene compounds. The papers set in the examination I need not comment upon; but I have thought that a short description of the practical work might interest readers of the *C. & D.* The first day's work is devoted to practical chemistry, which lasts from 11 A.M. to 5 P.M., under the supervision of both the professorial examiners in the subject. The Society provides ham sandwiches, claret, and soda water for the candidates at about half-past 1. I have never, I think, even in the City, seen twenty men eat their lunch in so short a time. One youthful student was observed to put away six sandwiches, but most men cannot spare time for more than two, while scarcely anyone avails himself of the permission to smoke: this from an idea, probably, that tobacco-ash does not improve a gravimetric precipitate. All apparatus in any way requisite or useful is provided, and, as the examiners do not "sniff round" the men as they work, the unhappiness of the Major candidate's lot becomes to a great extent alleviated. On the day that I was in, quite three men had the bad luck—or bad management—to upset the funnel containing the all-important gravimetric precipitate, due probably to nervous hurry. Of the two examiners, Professor Millar Thomson is an old friend of pharmaceutical examinees, while his colleague, Professor Smithells, of Leeds, has already earned a good name among the oracles of Galen Place. Both are very obliging, and do not apparently conceive it a part of their duty to snub a man who asks for a reagent which, with less nervousness, he might perhaps have found for himself.

The "salts" set were only double, not, as we had expected, treble mixtures; they included, if we are to believe candidates' communications to each other afterwards, barium nitrate and strontium sulphate, barium carbonate and lead chromate, copper iodide and lead borate, "ferri ammon. cit." and nickel chloride, and many other combinations. In the quantitative work, though all have the same paper, there would appear, from the results obtained, to be a number of mixtures of quite different proportions. This, of course, is a sure way of preventing collusion, and renders detective work on the examiners' part unnecessary.

For the second day candidates are warned to bring razors with them—not for the purpose suggested by some cynically despondent persons, but for practical materia medica (histology) under Mr. Harold Wilson, and for practical botany under Professor Potter, who, I believe, is not the gentleman from Texas. In histology arnica rhizome was given to investigate, while the natural orders set in the botany included *Ranunculaceæ* (anemone), *Liliaceæ*, *Amaryllidaceæ*, *Compositæ*, *Boraginaceæ*, &c. Chestnuts and almonds were given for dissection; various leaves to examine microscopically, and branches bearing prickles, &c., for morphological description.

An article on a pharmaceutical examination would hardly be complete without the statement of a grievance. Many candidates were heard to complain of having to attend all Saturday afternoon; with a little management this could easily have been differently arranged, as all the candidates had two off-days in the examination-week. (194/74.)

Major Examination in Edinburgh.

Subjoined are extracts of the papers:—

Botany.

1. Structure and division of a vegetable cell.
2. Structure and development of flower and fruit of a crucifer.
3. Assimilation or phytosynthesis.

Materia Medica.

(*Two of the following had to be attempted.*)

1. Gum acacia—all about it.
2. How salicin and santonin are obtained.
3. Physical and chemical characteristics, source, &c., of thymol.

Chemistry.

(*Six questions had to be attempted, two being from Part II.*)

Part I.

1. Preparation of any three of the following: arsenic acid, bleaching-powder, lithium carbonate, sodium bitartrate, sodium hypophosphite.
2. How to obtain mercurous chloride, ammoniated mercury, red mercuric sulphide, and mercuric cyanide from mercury.
3. Impurities in refined sugar
4. Strontium compounds in Nature, and what strontium compounds are used for.
5. How to prepare potassium chromate from chromic sulphate.

Part II.

6. Preparation of milk-sugar and of maltose.
7. Action of potassium hydroxide upon benzaldehyde, benzene sulphonic acid, iodoform, ethyl acetate, and acetamide.
8. Synthesis of napthalene and action of oxidising agents.
9. Qualitative analysis of a mixture consisting of barium sulphate, silica, and alumina.

Physics.

(*Six questions to be attempted.*)

1. Composition of vapour of sulphuric acid.
2. Fractional distillation of two hydrocarbons.
3. Definitions of boiling-point, critical point, and vapour-density.
4. Use of the polariscope.
5. Description of meter for electrical energy supplied.
6. Utilisation of electrical current in chemical industry.
7. Osmotic pressure and measurement thereof.
8. Referred to vapour-pressure of pure water.

Pharmaceutical Society of Ireland.

COUNCIL-MEETING.

THE Council met on Wednesday, April 2, in the Society's House, 67 Lower Mount Street, Dublin, at 3 o'clock The President (Mr. George D Beggs) took the chair, and the other members present were the Vice-President (Mr. Bernard), and Messrs Batt, Baxter (Coleraine), Simpson, Connor, Kelly, Tate and Moffitt (Belfast), and J. Smith.

Compounding in Hospitals and Poison-bottles.

The PRESIDENT said a number of replies had been received in response to the circular letter which the Council had sent out on the above subjects.

The REGISTRAR read the replies—viz., one from Mr. J. P. Condon, Clerk of the South Dublin Union, stating that the Guardians at their meeting on March 26, had marked the memorandum "read"; from Mr. John Robinson, Registrar of Mercers' Hospital, stating that the Governors had referred the circular to their Medical Board for their information, and that as far as the Governors were aware none of the practices alleged in the letter applied to that hospital; from Cork Street Hospital stating that the letter would be laid before the committee, and that in that hospital they had no extern department, and that they had an intern and a visiting apothecary fully qualified; from Dr. Law, Hon. Secretary of the Dublin Throat and Ear Hospital, stating that no medicines were dispensed from that hospital, as the patients took their prescriptions to whom they pleased; from the Superioress of St. Michael's Hospital, Kingstown, stating that she would bring the letter under the notice of the Medical Board of the Hospital; and from the Registrar of the Royal Victoria Eye and Ear Hospital, and the Secretary of the Royal City of Dublin Hospital, stating that the letter would be brought before the respective Council and Board of those institutions.

The VICE-PRESIDENT: I think the action of the South Union Guardians in marking our letter "read" is very discourteous. We are doing a public duty, and they have also a public duty to discharge, and they should have received our letter in the spirit that one public body should show to another. Marking the letter "read" was not doing their duty to the public, and I say without fear, and am prepared to prove that they are the biggest offenders in their dispensaries in the matter of dispensing poisonous liniments and other things in beverage-bottles, not alone to adults, but to children.

Mr. KELLY: I know that in Mercers' Hospital the Governors visit the place.

The PRESIDENT: I think the Vice-President is quite justified in his remarks.

Mr SIMPSON: It was very discourteous in a public Board to merely mark our letter "read."

The PRESIDENT: As if it did not concern them at all.

The REGISTRAR read a letter from the Assistant-Secretary of the Local Government Board, dated March 25, which contained the following:—

I am directed by the Local Government Board for Ireland to acknowledge, with thanks, the receipt of your communication of March 20 enclosing a memorandum drawn up by the Council of the Pharmaceutical Society of Ireland, relative to the dispensing of medicines by unauthorised persons in hospitals and public dispensaries; and in reply I am to inform you that the Board do not sanction any such practice in any of the institutions under their control. Article 16 of the Board's General Rules for the government of dispensary-districts prescribes the qualifications which the Board require for any person appointed by a Board of Guardians as compounder of medicine in a dispensary-district If, as stated by your Council, there are cases of evasion of the above-mentioned regulation, the Board would be obliged by your supplying specific information as to the places and the individuals referred to. I am at the same time to inform you that the Board are fully in sympathy with your suggestion as to the necessity of dispensing poisonous liniments and lotions in proper poison-bottles, and that they have provided in their prescribed list of medicines such bottles for the use of medical officers of dispensary districts, who can requisition them as required.

Article 16 of the Local Government Board's General Rules for the government of dispensary-districts is as follows: "The qualification of every compounder of medicine to be appointed by the Guardians for the service of any dispensary-district shall be as follows: (1) He shall have obtained the licence of the Apothecaries' Hall, Dublin, or from the Society of Apothecaries, London, or a certificate of competency to compound medical prescriptions from the Pharmaceutical Society of Great Britain or of Ireland. (2) He shall have reached the age of 21 years."

The PRESIDENT: The letter of the Local Government Board is very satisfactory.

The REGISTRAR read the following extract from the *Medical Press* of April 2:—

Dispensing in Hospitals.

Attention has been recently drawn by the Council of the Pharmaceutical Society of Ireland to what they consider the lax manner in which the compounding and dispensing of medicines is carried on in hospitals. They "regret to know" that medicines are compounded by students, nurses, and other unqualified persons, and that regrettable accidents have been the result. They point out that it is important to have medicines compounded and dispensed by "duly qualified pharmaceutical chemists and by licentiates of the Apothecaries' Hall." They further draw attention to the extreme danger of the practice of supplying poisonous liniments, &c., in common bottles. The Council of the Society have performed a very proper duty in calling attention to these errors, which have been allowed to persist in some hospitals from one generation to another. It is not proper, or wise, that any hospital should be without a qualified dispenser, and, if possible, a resident dispenser, unless there is a qualified medical man whose duty it is to compound and dispense And it is certainly most wrong that a dangerous liniment should be given to a patient in an old beer-bottle. Of course, the root of the evil is want of funds. Small hospitals cannot afford to pay for a qualified dispenser, and few hospitals, large or small, care to undertake the duty of providing out-patients with bottles for their medicines and liniments. It should, however, be a rule that poisons will not be supplied unless the recipient is provided with a proper poison-bottle of a recognised shape. Surely, however, a duly qualified medical practitioner is legally capable of dispensing and compounding medicines? Why then, should he, unless he is an L.A.H., be excluded from the Council's list of persons, who, one would gather, are apparently alone entitled to compound?"

The VICE-PRESIDENT moved that all the letters be referred to the Law Committee. What the Council wanted was to have the work done by properly qualified men. There was no wish to attack the qualifications of general medical practitioners as compounders, but it was advisable that they should be required to show in some way that they had practical experience in compounding before they undertook to do it.

The PRESIDENT said that notices of the memorandum had appeared in the *Irish Times* and the *Independent* newspapers, and also a comment had been published by the *Evening Telegraph*.

The REGISTRAR read a paragraph which appeared in the Dublin *Evening Telegraph* of March 26, as to which the PRESIDENT remarked, "This shows that we have had the matter as thoroughly ventilated as possible."

The Vice-President's motion, with power to the Law Committee to answer the letters, was then unanimously passed.

Education in Belfast.

A letter from the Principal of the Municipal Technical Institute, Belfast, applied for the recognition by the Council of the materia medica and botany classes held there.

The PRESIDENT: Mr. Tate and Mr. Moffitt can throw light on this application. We held it over from the last meeting for their comments. Are the subjects properly taught?

Mr. TATE: I think they are, and they will be taught on better principles than heretofore, for we hope to make the institution one of the finest in Ireland. The teaching of every subject will be conducted on the best principles, and in accordance with the rules laid down by the Society.

The application was granted.

Examination Matters.

A letter was read from Dr. James Henry on the subject of the conduct of the Preliminary examination.

The Registrar stated that the Preliminary examination held on the preceding day commenced at 11 A.M. and finished at 7 30 P.M.

The PRESIDENT said the strain caused on the candidates by such long hours was too great The Council would be acting wisely in extending the examination over two days. It would fall in with Sir George Duffey's ideas, and it would

Digitized by Google

be an advantage to the students, and tend to their being better qualified.

The Vice-President said that he and the President had a conference with the examiner on the previous day as to the regulations that should be adopted with a view to rendering the Preliminary examination more convenient and efficient. They thought that it should extend over two days, the first of which should be devoted to papers and the second to *viva voce* examination. Both Dr. Henry and Mr. O'Sullivan said they entirely approved of such an arrangement. They thought that the examination in Euclid should be altogether *viva voce*; and they also thought it desirable that there should be a small committee to confer with them at the conclusion of the examination. With regard to the Licence examination the first day should be for papers, the second for *viva voce* examination, and the third for examination in practical chemistry and practical pharmacy. He (the Vice-President) moved that a committee be appointed to confer with the examiners.

This was seconded and agreed to.

Pharmacy Prosecutions by the Police.

Messrs. Casey & Clay, solicitors to the Society, forwarded the following letter which they had received from the Clerk of the Privy Council of Ireland:—

11th March, 1902.

Gentlemen,—Referring to your letter of the 11th of January last, and enclosures on the subject of the detection and prosecution by the police of offences under the Pharmacy Acts, I am directed by the Lords Justices to inform you that, the matter having been laid before the Law Officers of the Crown, their Excellencies are advised that the police may prosecute for offences under these Acts. Instructions have accordingly been issued to them to do so in future in all proper cases.

I am, &c., J. B. Dougherty.

The President: I think that letter is very satisfactory. We have been striving for a long time to gain this point. It will be a material help to us, and a saving of the funds of the Society.

A letter was read from Mr. Samuel Gibson, chemist and druggist, complaining of

Inaccuracies in the Registers,

and making suggestions for their correction.

The President: We are very much obliged to Mr. Gibson for his letter. The matter is one that can be easily dealt with. We can send a circular to our licentiates in each town asking them to state how many pharmaceutical chemists and registered druggists are there. But it is hard to be accurate when the registrars of deaths do not send us notice of the deaths of persons for six and twelve months. They very seldom do it. Notifications of deaths, which should come to us directly through them, we receive indirectly through other quarters.

The Registrar said that in some instances the constabulary gave notices of deaths.

The Vice-President: Our proper course is to write to the Registrar-General, pointing out that the registrars throughout the country are not acting in accordance with the provisions of the Act of Parliament, and requesting him to call on them to be more vigilant in sending notifications of deaths to us. I know, however, that some of them are not to blame, for many of the registered chemists and druggists call themselves merchants. Last October two years a resolution was passed by the Council that a register should be formed of all the persons in business, but it has never been carried out. We do not know who is in business in any town in Ireland or in how many establishments drugs are sold or compounding carried on. I feel thankful to Mr. Gibson for his having brought this matter forward again.

It was decided to send out a circular asking for information.

Donations were then acknowledged.

The Hour of Meeting.

A discussion then took place as to whether a better attendance of members at Council-meetings could not be secured, and the convenience of country members better met, than at present by a change in the hour of meeting of the Council. It was finally decided to adhere to the present hour of meeting—viz., 3 P.M.

The Council then adjourned.

WILLIAM MARTINDALE MEMORIAL.

Subjoined is a list of subscriptions additional to those given in the *C. & D.* of March 8, this completing the preliminary list. Subscriptions of any amount not exceeding 2*l* 2*s.* are invited by the Committee, and should be addressed to the Hon. Secretary, Mr. G. S. Taylor, at 17 Bloomsbury Square, London, W.C. Postal orders and cheques should be made payable to the Treasurer, Michael Carteighe, 180 New Bond Street, W., and crossed London and Westminster Bank, Westminster Branch:—

Things that Happen—Sometimes.

Our Customers:

Girl with Jemimas.—"A packet of 'observant' wool and a tube of 'lint,' please, for Dr. Bolus!"

An Entertaining Chapter might be written on chemists' hobbies. One Glasgow chemist, not now in business, used to "raise" show-dogs in his back shop, and exhibit them all over Scotland. Another consoles himself with the banjo when the public pass him by for the nearest store. A third plays powerfully on the jewsharp. A fourth paints pastels "indifferent well"; and yet another has rigged up a ping-pong arrangement for the benefit of the friends who call upon him.

Observations and Reflections.

By Xrayser.

The Power of the Retailer

is undoubtedly manifested in this tobacco war. With two vastly wealthy combinations bidding against each other for his favour, his lot seems at the moment to be a happy one. But the whole history reveals a dangerously unhealthy condition of modern business method. Capital—*voilà l'ennemi*—is aiming to secure all the profits of this and other industries for itself. Capital is merciless; it has shown itself to be so again and again. One side in this contest has already allied itself with one powerful organisation of retailers; the other side may at any moment plot another organisation. The ordinary retailers are mere pawns to these millionaire companies. Gradually capital is invading all the fields of industry. In skilled labour trade-unions have to a great extent baffled capital, but ordinary tradesmen like tobacconists will never have the same chance. Businesses which require special training can do as well against the monster as skilled artisans; but even qualification and brains are no use against millions until they are welded into a firm mass.

The Government Defeated

twice in two weeks on ground of its own choosing by the audacious C.D.A. is enough to make the victors tremble. "One more such victory and we are lost," said the King of Epirus when he had defeated the Roman legions at Asculum. Mr. Atkinson advises "diplomatic methods rather than legal antagonism" in dealing with the Juggernaut of the Strand, and there is assuredly much wisdom in that view: up to a point. It very rarely pays the worm to turn against its oppressor.

The Commissioners of Inland Revenue

have admittedly administered the Medicine-stamp Acts on the whole with fairness and consideration, but I think they have lately shown a tendency to rush us a little over them. Probably they have themselves been hustled by Sir Michael, but that does not justify straining the Act. Most of us, I think, will back the C.D.A. in this contest, at least with our cordial good wishes But it may be an expensive fight, for it is hardly likely that the Board will consent to take its law from mere magistrates. The Brentford Bench's condition, that if the Commissioners want a case stated for the High Court they must undertake to pay the costs, win or lose, is as just as it is chivalric; but, that being so, I am not surprised to be told that it is not law. Still, it may be remarked that a contest with the King under the Act is not so risky as it once was. By the transfer of the medicine-duty from "Stamps" to "Excise" some ten years ago it resulted that no appeal can be carried beyond a Divisional King's Bench Court.

Mr. Leo Atkinson

is, I am afraid, justified in remarking on the *ex-cathedrâ* tone of these notes. I would gladly append to every comment the formula, "this is merely my own opinion," if space allowed. Will Mr. Atkinson and other friends kindly always take those words as read? Without reverting to the points of difference between us in detail, Mr. Atkinson's letter suggests one important remark. He says of Alpe that while it is a most excellent text-book it is not a safe guide, because Somerset House refuses to recognise it as authoritative, and also because Mr. Denniss says it is no authority. What counsel says is rather less evidence than what the soldier said. Of course Mr. Alpe's Handybook was not authoritative in the sense of being final. But neither is anything that Somerset House may declare now. Mr. Denniss, I suppose, spoke at Brentford with what might be called authority; but the Magistrates there were even more authoritative than he, and the King's Bench alone is ultimately authoritative. But Mr. Alpe's treatise is far and away the best exposition of the Acts in print, and the *C. & D.* never did a better service to the trade than in arranging with him to write it.

The New Medical Register

suggests one of those useless but inevitable statistical paragraphs. How much does each inhabitant of the United Kingdom spend per annum on medicine and medical treatment? There are 36 912 practitioners on the Register. Credit these with average practices of 500*l.* a year (as suggested on page 535). That gives 18,456,000*l.* paid to the doctors. There are 14 834 names on the Pharmaceutical Registers. Credit each with selling annually 100*l.* worth of physic. That only adds another 1½ million, and even adding the patents and drugs sold by hucksters, the total will not far exceed 20 000,000*l.*; one-seventh of what we pay in Imperial taxation, one thirty-fifth of the amount assessed for income-tax, and, simplest way of putting it, half a sovereign per head per annum. For that contemptible figure the whole Æsculapian army is at the beck and call of every man, woman, and baby (baby especially) night and day; the earth is ransacked for its treasures, pills are sugar-coated, vacuum pans constructed to extract the virtues of plants, and wearisome examinations are passed. Then if a single individual in this vulgarly (from our point of view, indecently) robust nation gets a half per-cent. too little ethyl nitrite in his pennyworth of spirit of nitre, the sword of justice is unsheathed and society insists on vengeance.

The Chapter on Advertising,

published by the Vinolia Company last week as an advertisement, should be read by anyone thinking of launching out. It at least emphasises the fact, which is sometimes overlooked, that the mystery of advertising has not yet been fathomed. We see scores of successes, apparently the result of almost reckless advertising, and we are apt to conclude that advertising is a certainty. We do not hear about the failures. There is no such thing as chance or luck, say some moralists. This may be true, but if chance rules anything, if luck prevails anywhere, it is, I think, in the region of advertising. I have seen excellently prepared advertisements on which real talent has been expended, judiciously and lavishly placed, utterly fail in results; and I have seen poor, stupid things, bald and flat, pay abundantly. Indeed, I have been almost tempted to deduce the rule that advertising should not be too clever if you want to extract the shillings of the multitude who are not clever. But even that rule would be a risky one to trust twice. The Vinolia Company have succeeded with an opposite method. They have advertised very cleverly, and have spent hundreds of thousands with brilliant results; but after all their experience they take a page of The Chemist and Druggist to tell us that they know very little about the inner mysteries of an art in which they have proved themselves experts.

Valuable deposits of borate of lime are said to have been found in Bolivia, along the Mauri River.

"Pharmacopedia" as a title suggests "the rearing of children on drugs." So Mr. Sidney Plowman remarks in the *Australasian Journal of Pharmacy*.

Editorial Comments.

Pharmaceutical Councils.

SOMETIMES the reports of the meetings of the Pharmaceutical Councils in Dublin and London fall into the same numbers of this journal, and whenever that happens we are struck by the contrast presented by the proceedings. It is generally in favour of the Dublin body, which is energetic in promoting the welfare of the licentiates of the Society, as is admirably exemplified in the matter of compounders to Guardians and the dispensing of poisons in plain bottles, dealt with in this issue. But the London Council is this week not a whit behind the Dublin one. The proceedings lasted three hours, or double the recent average time taken to wipe the slate clean. It will be seen that the contest for the seven vacancies on the London Council in May will not be exciting. The seven retiring members seek re-election, and,

Digitized by Google

besides, Mr. A. S. Campkin, of Cambridge, Mr. C. E. Pickering (President of the Chemists' Assistants' and Managers' Union) and Mr. Morrison, of Tring, again come forward. The members of the Society will be thankful to these gentlemen for making a contest, but the support hitherto accorded to Mr. Pickering and Mr. Morrison scarcely warrants hope of success on this occasion. Mr. Campkin's chance depends upon whom he might replace. He has good experience as an administrator in public and corporate affairs, and the immediate success on the Council of Mr. R. A. Robinson, who has similar experience, suggests that another administrator would be a gain to the Council. The retiring members are Messrs. Carteighe, Glyn-Jones, Harrington, Harrison, Park, Southall, and Young. Of these Mr. Park is the one who may be unseated, as his record for the past three years (January to December) is not encouraging. It is as follows:—

1899.—Attended seven out of the eleven monthly Council-meetings, and spoke once—briefly, on the Pharmacy Bill.

1900.—Attended eight out of the eleven meetings. Spoke twice once thanking Mr. Hills for his work in connection with naval hospital dispensers, and another time he said, "Not necessarily," when someone asked if Army dispensers have to be qualified.

1901.—Attended seven meetings, and never spoke.

Of the subjects discussed at the Council-meeting the division of the Minor examination and Dr. Stevenson's suggestion in regard to a curriculum may be considered together. This journal is, we believe, responsible for promulgating the doctrine of division of the Minor examination. Steadily the doctrine has won recognition, and there is not a member of the Council to-day who does not approve of it or recognise that the present examination is too heavy for one sitting. The curriculumists have seized the doctrine as a likely conveyance for their scheme, and so it happened on Wednesday that by a vote of 9 to 8 it was decided that the Minor examination might be divided when a curriculum is established. This is an illogical victory, since it is alleged that a curriculum will better enable candidates to pass. Failures are as much due to the fact that candidates are expected to perfect themselves in six subjects at one time as to deficient preparation. However, the Privy Council has given the curriculumists unlooked-for support by emphasising Dr. Thomas Stevenson's suggestion that Minor candidates should go through a curriculum of some kind. Their Lordships suggest pharmacy and chemistry, overlooking the fact that a certificate of three years' experience in dispensing medical prescriptions is required from each candidate.

It is obvious from their Lordships' recommendation that a collegiate curriculum similar to that required of medical students is not in their minds—simply "instruction in at least chemistry and pharmacy." That is as far as the matter need go, for already the requirements for registration as chemist and druggist are ahead of the examination for assistants, specified in the Act, and it is questionable if any compulsory curriculum should be imposed without restoring an assistants' examination. However, all this is in the future, and although the Council has decided on a curriculum, which requires fresh parliamentary powers, the majority is the narrowest on record. The only other topic in the proceedings which we can refer to now is the recommendation which will require liquid disinfectants containing poison to be sent out in bottles rendered distinguishable by touch from ordinary medicine-bottles. The Society and the Privy Council have to approve of this before it becomes operative. Liquid disinfectants are largely sent out in canisters and barrels indistinguishable from containers of harmless liquids. Will the regulation apply in these cases?

The Possessive Case.

At a recent meeting Mr. Glyn-Jones stated that he has taken steps to test the rights of chemists and druggists to put on their labels the ailments for which British Pharmacopœia preparations are useful. It is to be hoped that the Inland Revenue authorities will take up the challenge, for the matter interests more than Mr. Glyn-Jones, and it would lead to a thorough forensic threshing of a little-understood exemption-clause in the 1812 Stamp Act. We quote the essential part of this clause, which declares that there may be sold unstamped—

all mixtures, compositions, or preparations whatsoever mixed or compounded with or prepared from medicinal drugs . . . which shall be uttered or vended by any surgeon, apothecary, chemist, or druggist . . . the different denominations, properties, qualities, virtues, and efficacies of which mixtures, compositions, and preparations as aforesaid are known, admitted, and approved of in the preservation, cure, or relief of any disorder, malady, ailment, or complaint incident to or in anywise affecting the human body, and wherein the person mixing, compounding, preparing, uttering, or vending the same hath not nor claims to have any occult secret or art for the mixing, compounding, or preparing the same, nor hath nor claims to have any exclusive right or title to the mixing, compounding, or preparing, or to the vending of the same, and which mixtures . . . have . . . not been, now are, or shall hereafter be by any public notice, advertisement, or by any written or printed papers or handbills, or by any labels or words written or printed, and affixed to or delivered with any such packet, box, bottle, pot, phial, or other inclosure aforesaid, held out or recommended to the public by the owners' proprietors, makers, compounders, original or first vendors thereof as nostrums or proprietary medicines, or as specifics, or as beneficial for the prevention, cure, or relief of any distemper, malady, ailment, or complaint.

If this clause is carefully read it will be seen that there are conditions under which a chemist and druggist, not being the owner, proprietor, maker, compounder, or first vendor of an article may hold out or recommend it. But the point arising from the clause to which we now call attention is that it exempts from stamp-duty non-secret medicinal compounds which are designated by a name in the possessive case—supposing they come within the general charge of duty, which is improbable in many instances. This is exemplified by Easton's syrup, a preparation which is not and never has been a secret or proprietary article. One of our subscribers has sent to Somerset House a label as follows:—

EASTON SYRUP.

Dose—From a half to one teaspoonful in water three times a day.

Prepared by

(Name, designation, and address of the chemist.)

Our subscriber is a registered chemist and druggist, so that he is entitled to any exemption there may be in the clause quoted. The Secretary to the Commissioners of Inland Revenue did not mark the label "liable" or "not liable," but said:—

As regards the label submitted in the case of "Easton Syrup," I am to explain that if the syrup is one prepared according to the British Pharmacopœia, and that fact is stated on the label, there would be no liability to duty. The words "Easton Syrup" must not, however, be used, it being understood that the formula syr. ferri phos. c. quininâ et strychninâ of the British Pharmacopœia of 1898, is not a synonym of Easton's Syrup, the latter being made from a different formula.

We quote this passage from the letter with two verbal corrections in the Latin. The hesitation of the authorities to mark the label may or may not be based upon a new reading of the exempting clause, but it is perfectly well

Digitized by Google

known that hitherto they have considered the use of the possessive case to be just ground for the enforcement of duty, except where the formula for the preparation is one recognised by the British Pharmacopœia or some equal authority. "Dr. Gregory's Powder" is an example of the kind. The letter indicates that if the name is not in the British Pharmacopœia it may not be applied without liability to duty. We question this, and would point out that the exempting clause requires that duty shall not be charged upon "mixtures, compositions or preparations . . . vended by any chemist or druggist . . . who hath not any occult secret or art for . . . or exclusive right to . . . preparing the same." There is no occult secret in preparing the Pharmacopœia representation for Easton's syrup—*i.e.*, syr. ferri phos. c. quin. et strych, which is well known to be Easton's syrup, although not exactly the formula of Dr. Easton, as quoted in Aitkin's "Practice of Physic"; and in the same category we would place other B.P. preparations, the popular names of which are not official synonyms, *e.g.*:—

Donovan's Solution (Liq. arsenii et hydrarg. iodidi).
Huxham's Tincture of Bark (Tr. cinchonæ co.).
Scott's Ointment (Ung. hydrarg. co.).

A claim, as specified in the clause, must appear on a chemist and druggist's label as a preliminary to the enforcement of duty, and the name, in the possessive case, of the originator of a non-secret preparation is not such a claim, but as definite an indication as can be given that the denominations, virtues, &c., of the preparation are "known, admitted, and approved." There are a number of popular unofficial non-secret preparations which ought to be free from stamp-duty when sold under the popular names (those of the originators) by the persons specified in the exemption clause. The following are preparations of the kind selected from "Pharmaceutical Formulas":—

Carruthers's Electuary for Piles.
Mackenzie's Eye-lotion.
Dobell's Aperient.
Unna's Zinc Paste.
Barrack Sergeant's Drops.
Coghill's Inhalation.
Beehag's Catarrh-snuff.
Stokes's Chest-liniment.
Stokes's Rheumatic-liniment.
Whitworth's Drops.
Henry's Solution.
Ashburton-Thompson's Syrup of Phosphorus.
Startin's Lotion.
Fothergill's Anti-asthmatic-mixture.
Begbie's Tonic mixture.
Christison's Cough-mixture.
Christison's Aperient-pills.
Stokes's Expectorant-mixture.
Sir Andrew Clark's Liver-mixture.
Sir Andrew Clark's Pills.
Lady Hesketh's Pills.
Sir Benjamin Brodie's Gout-pills.
Dr. Hamilton, Jun.'s Pills.
Livingstone's Rousers.
Dr. Bell's Digestive-powder.
Rubini's Spirit of Camphor.
Date's Ointment.
Wilson's Zinc Salve.

According to the Inland Revenue authorities all these titles in the possessive case involve liability, but we maintain that they come within the exemption clause *when the articles are sold by chemists and druggists, apothecaries, and surgeons.* We italicise a line or two because no other vendors than those mentioned can claim the exemption. We may state, further, that this is not the point raised by Mr. Glyn-Jones, but we have no objection to his adding this supposed illegality to his bid for martyrdom. We trust, however, that the authorities will give the exemption clause the consideration which it deserves, and gracefully acknowledge that they have no right to compel chemists and druggists to stamp such articles as Scott's ointment, Easton's syrup, and Christison's pills.

Briton v. German.

An interesting article appeared in the *Times* last week on British *versus* German trade, in which the writer endeavoured to dispel the idea that the progress of Germany during recent years has brought about a retrogression of trade in this country. It is not optimistic but is soothing. Taking exports as the best test of productive capacity, German shipments have advanced from 171,000,000*l.* in 1895 to 220,000,000*l* in 1900, while those of the United Kingdom have moved up from 285,000,000*l.* to 354,000,000*l.* On the basis of population, the comparison is very favourable to British trade, the exports per head in the United Kingdom having advanced in the period from 6*l.* 2*s* 9*d.* to 7*l.* 2*s* 4*d.*, and those of Germany from 2*l.* 17*s* 6*d.* to 3*l.* 18*s* 8*d.*, the difference being in favour of Germany, though slight, and "there is comfort in the reflection that, at the rate of respective progress during the last five years, it would take Germany upwards of a century to overtake us in export trade *per capita*." In many directions we are making far less progress than Germany. This is notably the case in exports of cotton and woollen manufactures, machinery, iron and steel. At what cost this trade has been gained or what profit it bears, is a problem for investigation. The *Times* contributor considers that not a little of the German success is due to the energy of the Emperor William, whom he describes as a "business Emperor," who, in his perambulations over Europe, and especially Turkey, has admirably played the *rôle* of commercial traveller. Moreover, he has chosen the right men for important posts, who have fostered German trade in every direction, and their efforts have been well seconded by the intelligence and industry of the population, assisted by an excellent system of technical and general education. It is not, therefore, surprising to find that Germany's exports have increased by 80 per cent. during the past twenty-five years, and that the total value of her foreign trade (imports and exports) has advanced from 300 millions sterling to 500 millions at the end of 1900. The causes which have led up to the success of Germany in chemical industry are thus dealt with:—

> Years of research and theoretical training had made the German chemist *facile princeps*. Even in Great Britain, in France, and in the States most leaders of the chemical trades and most assistants are Germans by birth or training; of Germany the chemical trades are a speciality. And the technical colleges had likewise bred a highly efficient army of electrical, metallurgical, and mining engineers who would soon find ample scope for their talents. In addition the German mind has always been scholarly by inclination and open by habit. The self-sufficiency and the indifference to foreign doings, so characteristic of the British trader, never have been features of the German. On the contrary, he has always been open to foreign influences, and eager to adopt foreign ways. His knowledge of languages enabled him to follow and to absorb foreign thought with ease; and the custom of giving young men a few *Wanderjahre* abroad led to familiarity with and respect for foreign methods, and to the introduction of all foreign usages which it seemed advantageous to graft upon the German stem. Then there were in every foreign trading centre German settlements ready to act as scouts for German trade, ready also to open, to maintain, and to strengthen commercial intercourse with the Fatherland, ready to criticise, to instruct, and to inform. German ships were sent to the corners of the earth, and German banks weaned themselves from the London money market and opened up their direct relations everywhere.

There is some exaggeration in this. The leaders of chemical industry in this country are not Germans, although a few are. British traders are not universally indifferent to foreign doings—the fact that Britain leads in practically every market in the world is proof to the contrary, but it is true to say that some old-established British houses do not bother themselves much in regard to new foreign customers, and that is a disposition shared by every old-established house in Europe. It is the young firms that are enterprising and willing to adapt themselves in order to get a footing, and as most German firms are young as regards foreign trade they appear to be more enterprising than British firms. One element in German export-trade, which the *Times* contributor does not touch, should not be for-

Digitized by Google

gotten—viz., that much of it is done at a loss. It is questionable whether the trade in chemical products during the past twelve months has been profitable. Values, with few exceptions, have never been so low, in consequence of over-production in Germany and keen competition in foreign and home markets. Witness the cutting in salicylates, sulphonal, lithia salts, chloral hydrate, acetic acid, acetanilide, and potash salts. It is difficult to see from which quarter relief is to come, as new factories have sprung up everywhere in Germany, and there is evidently not room for all. The *Times* writer soars above such prosaic facts as the industrial crisis which has befallen Germany during the past eighteen months, and this has specially influenced profits in the chemical-trade. There are signs, however, that the worst stage of the depression is past, and there is no doubt Germany will take to heart the severe lesson taught by over-speculation and irresponsible finance, which was largely the cause of the collapse. In summing up the commercial position the *Times* correspondent compares the two countries with two rival shopkeepers in the same district. He says:—

Great Britain is the "Universal Provider," with the largest turnover and steadily expanding business. Germany began later, and on a humbler scale, and has relatively had more rapid expansion, notably in one or two special lines, which it cultivates with remarkable assiduity. But the "district" in which the two operate, the world's trade, is growing, and there is room for a new concern now and then. Meanwhile the Universal Provider remains paramount on the whole, although one or two of his departments feel the influence of the rival, and although he has failed to add some new articles for which a demand has arisen.

In other words, there is no reason why we should not hold our own, if we do not prolong our noonday siesta while the world clangs at our door to come to attend its wants. We have built up such a snug business, and our customers have been so well satisfied, that both parties were inclined to think that better could not be done. The next-door shopkeeper is going one better, however, and whether it pays him or not he caters for the same customers, and if we are to keep them we must look sharp.

Experiments on Animals.

In our issue of December 14, 1901 (page 950), we reported a lecture by Professor Sherrington to the members of the Liverpool Chemists' Association, in the course of which experiments by Dr. Grünbaum were performed to demonstrate the action of snake antitoxin on living rabbits. The alert Secretary of the National Anti-Vivisection Society, Mr. Stephen Coleridge, forwarded a copy of The Chemist and Druggist, calling the attention of the Home Secretary to the matter, and stated that the experiments did not seem to have been "performed with a view to the advancement by *new discovery* of physiological knowledge, or of knowledge which will be useful for saving or prolonging life or alleviating suffering" as required by the Act. He pointed out also that, according to the last Parliamentary report, Dr. Grünbaum had no certificate permitting him to perform experiments on living animals in illustration of lectures, nor had he a certificate enabling him to test former discoveries. He inquired whether Dr. Grünbaum held such certificates at the date of the lecture, and under what section of the Act a licensed vivisector is enabled legally to inoculate a rabbit with poison that kills it in half an hour, and to do this without anæsthetics in illustration of a lecture. The reply from Whitehall (dated February 21) was as follows:—

With reference to your letter of the 17th December last forwarding a copy of The Chemist and Druggist for the 14th December last, which purported to describe certain experiments on living animals performed by Dr. A. S. F. Grünbaum, I am directed by the Secretary of State to inform you that he has caused careful inquiry to be made in the matter.

The experiments were performed under a Certificate A, the authorities who granted the certificate being no doubt of opinion that such experiments tended "to the advancement, by new discovery, of physiological knowledge, or of knowledge which would be useful for saving or prolonging life or alleviating suffering.

Dr. Grünbaum states that the report of the proceedings is somewhat misleading in that the experiments were not performed until after Professor Sherrington had finished his address, and that they were not in illustration of a lecture. He has, however, conveyed an assurance to the Secretary of State that such experiments in similar circumstances will not be repeated.

This interests us only in so far as our report is concerned. When speaking of proteids Professor Sherrington called upon Dr. Grünbaum to demonstrate the action of snake antitoxin upon some rabbits, and when three experiments were performed the Professor explained what they proved. Whether this demonstration was part of the lecture or not is a mere quibble, but we only refer to it in order to refute the suggestion that our report was incorrect. While Dr. Grünbaum's injections were working Dr. Macdonald demonstrated the action of chloroform on the nerve and muscle tissue of the frog; then Professor Sherrington concluded his lecture with remarks on the therapeutics of certain drugs and several speeches followed, all after the rabbits had been dealt with. We object to scientific gentlemen trying to climb down from an untenable position at the expense of reporters; hence these remarks.

"AUTHORITATIVE."

One of the Stratford Magistrates last week said that Alpe's "Handy Book" cannot be authoritative because the author is dead. This reminds us of an incident that Mr. Alpe himself used to relate. He was prosecuting on behalf of his department, and the defendant quoted the "Handy-book" against Mr. Alpe's argument, whereupon Mr. Alpe informed the Bench that the book could not be taken as authoritative as the author was alive. The Inland Revenue Department itself can scarcely be considered authoritative, seeing that it has been beaten three times on medicine-stamp questions in as many weeks.

WISDOM FOR PRESCRIBERS.

Sir James Sawyer, M.D., of Birmingham, is one of those rather rare medical practitioners who rise superior to the trammels of their calling, and when they write about professional subjects, succeed in doing it in such a way that the non-professional man or woman can read with profit. This longish sentence embodies the thought that comes first after a pleasant two-hours' reading of Sir James's "Contributions to Practical Medicine." It is only a half-crown book, containing nineteen lectures and papers on such common maladies as insomnia, gastralgia, pleurisy, constipation, eczema, and piles; but what he says is so obviously the result of personal observation, and not a compilation, that one gets fascinated in reading the book. We cordially commend it to our readers. Doubtless there are some amongst them who are prescribers, and they especially will enjoy the book and profit by it. It is the third edition, and is published by Messrs. Cornish Brothers, Birmingham.

OXFORD v. EDINBURGH.

In his will Mr. Cecil Rhodes mentions that South African medical students, with few exceptions, go to Edinburgh University Medical School, and suggests that if it had been a residential university he would have given it something. Therein Mr. Rhodes betrayed his ignorance of the peculiar advantages of the Scotch universities over the more ancient seats of learning in England. The residential system followed in Cambridge and Oxford has made these universities until comparatively recent times accessible only to the well-to-do. Those of Scotland have for centuries been

Digitized by Google

attended by the sons of working men as well as the inheritors of wealth and position. Had the Scotch universities been residential in the sense that Oxford University, is Scotland would educationally have been poor indeed, and some of Mr. Rhodes's right-hand men in administration might never have been heard of. The non-residential system enables the poorest of students to live as their means permit without influencing their collegiate career in the slightest. Mr. Rhodes gives each of his Oxford students 300*l.* a year. That is a fair estimate of the cost of the expenses in an Oxford College, but it is sufficient for a three years' curriculum and good private living in Edinburgh. The younger universities of England, in adopting the Scotch rather than the older English system, have realised that their function is not to rival Cambridge and Oxford, but to bring the best education within the grasp even of the proletariat.

THE KING'S SANATORIA.

Mr. J. Arthur Gibson, chemist and druggist, Edinburgh, communicates to the current issue of the *Westminster Review* an article on the sanatoria for consumption, which King Edward VII is promoting by means of the 200,000*l* placed at his disposal by Sir Ernest Cassel. Mr. Gibson's views in regard to the treatment of consumption are well known to readers of The Chemist and Druggist, and in his recent book on the subject he has given sound reasons for avoiding expensive establishments When the King's intention was made known, it was suggested that a sanatorium for one hundred patients should be erected. Mr. Gibson can make more with the money. He would divide it into two equal parts; 100 000*l.* to be used for the building of sanatoria, 100.000*l.* to be invested, and the interest used for the payment of the sanatoria doctors. Of the first portion. 80,000*l.* should be used for establishing eight small sanatoria in different parts of the three kingdoms. Each of these would have accommodation for forty patients, and would cost 10,000*l.*—an ample sum to establish, furnish, and equip such a sanatorium, and provide a stock of cows, pigs, horses, carriage, van, and all else necessary. Mr. Gibson deals with all the details, short of the architectural scheme, and shows that 30*s.* a week should keep a patient well.

EXAMINATION FAILURES.

As a comparison with the failures in the pharmaceutical examinations in London, dealt with in Dr. Thomas Stevenson's report communicated to the Council on Wednesday, the statistics for Victoria are interesting. The Council of the Pharmaceutical Society there in the report for 1901 gives the following particulars respecting the examination of students for the certificate of the College of Pharmacy:—

		March	June	Sept.	Dec.
Chemistry	Examined ...	15	11	15	30
	Passed ...	7	2	5	14
Botany and Materia Medica	Examined ...	15	11	15	30
	Passed ...	7	2	5	14

The exceptional interest of these figures lies in the fact that the candidates, though examined by different examiners in the two branches, succeeded in passing in exactly the same proportions in each. That is, we should think, an unprecedented phenomenon. It may be surmised that the same lot of students were examined in chemistry as in materia medica and botany. But the report says "the total of the students who presented themselves . . . was 142, and . . . 56 passed" From another part of the report we learn that 133 students attended the school, including 35 medical students and 38 dental. Of the rest 31 entered for chemistry and 32 for materia medica and botany, so that the total of pharmacy students in 1901 could not have exceeded 63 (which compares badly with 142), but some of the 63, may be duplicates. The college, we may add, is highly spoken of by the Royal Commission on Technical Education and as their opinion was partly based on "details quoted as to the students who have attended lectures," it would be advantageous to clear up the haze of figures. We turn to the *Chemist and Druggist of Australasia* for light on the subject, but all that is said there is this sentence:—

> The report does not state how many individual students these figures represent. Evidently each student entered for both branches, and it is probable that some of the eight who failed to pass in March reappeared at the end of one of the other three quarters of the year.

The College of Pharmacy in Melbourne is the only State-aided one in the British Empire, and it is just possible that the Government may be more impressed by the figure "142" than by the exact number of individual pharmacy-students in the college.

Sponge-fishing in the Levant.

Mr. G. Bie Ravndal, the American Consul at Beirut, has written an interesting report on the condition of the sponge-industry in the Levant, for the benefit of American sponge-merchants. The report deals chiefly with Greek and Turkish sponges, the output of which during the last fifteen years has greatly diminished, owing to the introduction by Greeks, in the seventies, of diving apparatus which proved ruinous to fishermen and fisheries alike. In collecting the sponges, four methods are employed—viz, harpooning, primitive diving, dredging, and diving with special outfit. The most popular method in the Levant is diving with no other apparatus than a slab of stone as a sinker, and a cord to communicate with the surface. On reaching the bottom, the diver hastily snatches up as many good sponges as possible, and, after remaining under water from one to two minutes, tugs violently at the cord, and is drawn to the surface. The sponges are collected in a net which the diver carries round his neck. At greater depths, particularly along the coasts of Asia Minor, dredging is employed, usually in winter, when storms have torn up the seaweed which covers the bottom. With the harpooning method, one of the chief difficulties is to see the bottom clearly through a troubled sea. To obviate this, a wood or zinc-plate cone, like a water-bucket, open at the top and with a glass bottom, is used. On looking through this water-glass, which is partly submerged, the bottom of the sea may be clearly studied even at thirty fathoms, and the proper sponges picked out by the harpoonist. To these simple operations was added, some twenty-five years ago, the "skafander," or diving-apparatus, which enables the diver in his submarine dress to spend an hour under water at a depth of ten to fifteen fathoms, Experience has shown that this method is a severe tax upon the sponge-banks, as everything in sight—sponges large and small—is gathered. The fishermen who use the skafander are frequently stricken with palsy of the lower extremities and other complaints.

The abuses which so disastrously affect the Levantine sponge-industry have prompted a Russian philanthropist, Professor Charles Flégel, to inaugurate a campaign for the abolition of diving-apparatus in sponge fishing. Through his efforts the authorities of Samos, Crete, and Cyprus have recently prohibited the use of the skafander; also the Governments of Italy and France, the latter acting on behalf of Tunis. Egypt has also banished the skafander, and Greece and Turkey will also be invited to follow their example. So far as is known no steps of importance have been taken to protect the sponge beds in Turkish waters. A close season has been proposed, but has not been established by law. The Government collects from each boat using the harpoon or the primitive diving system 319 gold piastres (about 3*l.*) a year. A skafander boat pays about 30*l.* per season, and its operations are limited to eight months in the year beginning April 1. From the drag-net boat a licence-fee of about 5*l.* is exacted. Along the Sinai littoral the demand of merchants, especially for white sponges, exceeds the supply, and prices naturally have an upward tendency It is only occasionally that shipments go direct to the United States, the bulk being bought for London and Piræus, but the Consul hopes that with the advent of regular direct steamship facilities a larger business will be done.

Legal Reports.

Stamp Act, 1812.

PORTO-COCA GARGLE.

AT Marlborough Street Police Court on March 26, Messrs. J. M. Davis & Sons, English and foreign chemists, Coventry Street, W., were summoned at the instance of the Commissioners of Inland Revenue for infringement of Section 2 of the Act by selling unstamped a preparation for the relief or cure of an ailment. Mr. Denman was the presiding Magistrate.

For the prosecution it was stated that the article sold was a throat-gargle labelled as follows:—

Prosecuting counsel contended that this label brought the article within the Act, as people would understand it to be used for sore throats.

Mr. J. M. Davis, who appeared in his own behalf, submitted that the gargle did not come within the Act. There was no claim of proprietary rights, or for the cure of any ailment. The gargle was simply a tonic for strengthening the voice, used by actors, clergymen, barristers, and others. The Inland Revenue authorities, whom he had no wish to defraud, had before now after correspondence been persuaded that they were wrong in trying to take action against him, and had withdrawn their claim.

Mr Denman said that he had looked over the Act. It was contended that Porto-coca gargle came within the description held out as beneficial to the prevention or relief of a distemper, malady, disorder, or complaint affecting the human body. If the label said that the thing cured people, it would be liable to stamp-duty. But with regard to what was on the label anybody could sell anything to gargle with, even if it was pure water, and he did not think it was held out to be more than an excellent stimulant for the voice. He was of opinion that it did not come within the section, and accordingly dismissed the summons.

THE C.D.A. WINS AGAIN.

AT the Stratford Petty Sessional Court on Saturday, April 15, before Mr. T. G. Robinson (in the chair) and other Justices, William Goyne Stevens, chemist and druggist, of 677 Romford Road, Manor Park, Essex, was summoned by the Commissioners of Inland Revenue for selling a box containing a preparation used as a medicine and medicament for the cure of disorders of the human body, which was not stamped as required by the Act.

Mr. B. Hawkins prosecuted; Mr. C. H. Kirby (of Messrs. Neve, Beck & Kirby) defended on behalf of the Chemists' Defence Association.

Mr. Hawkins said these proceedings were instituted under Section 2 of the Act, against Mr. Stevens for selling without a stamp certain medicine which the Commissioners considered liable to stamp-duty. The dispute was whether these came within the scope of the Act: there was no dispute as to facts On December 23 an Inland Revenue officer saw in the window of the shop a card placed on several boxes apparently containing lozenges. This card stated: "A most effective bronchial, throat, and voice lozenge, 4½*d*." There were no other lozenges near these boxes, which were labelled "Bronchial troches." The officer went in and asked the person serving for a box of bronchial, throat, and voice lozenges. He was served with one of these boxes marked "Bronchial troches," and he paid 4½*d*. The box which he produced also bore the words "For directions see back," and they gave the defendant's name and address. On the back was the following inscription: "These troches contain nothing deleterious, and may be used freely whenever required. Suitable both for children and adults. Dose: allow a troche to dissolve in the mouth and repeat as often as necessary." The schedule to the Act specified a number of medicines by name, and among those were a number of lozenges Then at the end of the schedule there was a general charge of duty for all other medicines, and that part of the section, he maintained, applied to the present case. The question which the Justices had to decide was whether the troches were held out to the public by the notice "for the prevention, cure, and relief of any distemper, malady, disorder, ailment, or complaint affecting the human body." No specific complaint was mentioned on the box, but he held that it was not necessary that any complaint should be actually mentioned. In the schedule "Pectoral lozenges" were mentioned, and, lower down, "Church's pectoral pills" and "Hayward's stomach-pills," specifying the part of the body relieved. It is a very common practice to apply the name of the part of the body to the remedy, and that conveyed to the purchaser the use for which the remedy was intended. Thus liver and stomach-pills were very well known, and so was blood-mixture, and he submitted that any ordinary member of the public seeing this advertisement stating "A most effective bronchial, throat, and voice lozenge" would come to the conclusion that the chemist was recommending this for the prevention, cure, or relief of complaints affecting the throat.

Mr. Thomas Jameson, who made the purchase on December 23, was then called to prove it. He saw Mr. Stevens, and in the terms of the card asked him for "bronchial, throat, and voice lozenges" Mr. Stevens produced the box, for which he charged 4½*d* It bore no stamps. Asked if he knew their composition, witness stated he thought they contained aniseed with other ingredients.

Mr. Stevens: They do not contain aniseed.

The Magistrate (to witness): Are you an expert?

Mr. Hawkins, interposing, said witness was an I.R. official with many years' chemical experience in the Government laboratories.

Cross-examined by Mr. Kirby, witness said he had never bought similar lozenges at a confectioner's, and he had not analysed them.

For the defence, Mr. Kirby said his friend had stated exactly the points. First of all, were these lozenges? There was no dispute about that. Secondly, were they medicine; and thirdly, were they held out for the "prevention, cure, and relief of any distemper, malady, disorder, ailment, or complaint effecting the human body"? It was quite clear that the whole case rested upon the card put up in the window, for in a letter to the defendant the Inland Revenue said he had made himself liable to a stamp-duty by reason of recommendation by the card in the window. Their Worships knew what the term medicine in the ordinary sense meant. It signified something healing and useful in diseases and wounds; it must contain something of a healing nature, but there was nothing in this which constituted a medicine or medicament at all. It was perfectly true that people might apply it for purposes for which it was not intended, but that was their look-out. Champagne was often advised for people with influenza, but that did not bring it within this Act. A great many lozenges were sold by confectioners, but it would not be reasonable to say they were in any way medicines. Cough-lozenges, acid drops, and jujubes, were all in effect lozenges, but they were not

Digitized by Google

medicines. As to the question whether this was held out or recommended he would call attention to the particular wording of the section, which said this must be by public notice or advertisement affixed to or delivered with the article. The card relied upon in this case could not have been affixed to or delivered with these lozenges. It could be seen from the condition of the card that it had not been affixed to anything. For what were these recommended—for the prevention, cure, or relief of what? There was nothing specified or indicated on the box. It was a straining of the language of the section against his client, and it was necessary to read in something which was not there to bring this within the statute at all. He could best show what this was by comparing it with things commonly sold. Cough-lozenges were not in the Act. Mr. Kirby proceeded to quote from Alpe's "Handy-book"—a text-book written, he said, by an official who previously had charge of this department at Somerset House.

The Chairman said they could not accept that book as the law on the subject.

Mr. Kirby said a man who was going to make a public speech or contemplated addressing the Justices at that court might use these lozenges before doing so, so that there was a legitimate reason for the words on the card without straining them to bring them in the Act. He added that he was prepared to call witnesses to show that these lozenges were sold by confectioners.

The Chairman: I do not think that will be necessary.

Mr. Kiroy then pointed out that the articles quoted from the schedule all bore the names of the proprietors of the medicines in the possessive case, and that made them liable to the stamp-duty.

The Chairman: If these had been called "Stevens's Bronchial Troches" they would have been liable to duty?

Mr. Kirby: Quite so; we should have made ourselves liable. In conclusion, I submit that this is not a medicine within the meaning of the Act; that the recommendation, if any, was not affixed to or delivered with the article to which it applied, and there was no holding out or a recommendation for the prevention, cure, or relief of any distemper or disorder. Mr. Kirby then proceeded to quote from Alpe's "Handy-book," when the Chairman intimated that the book could not be accepted as the author had long joined the majority, but Mr. Kirby replied that the book was the only one on the subject, and surely the Magistrates could not ignore any law book written by a specialist on the subject dealt with. He then pointed out that the title "bronchial troches" was no more a recommendation of the article for the cure of bronchitis, than "muscle-liniment" would be a cure for rheumatism, and he submitted that such titles as "cough-mixture" are not liable to duty, as Alpe clearly showed.

Mr. Hawkins said he had a case in answer to the point that this public notice or advertisement was not affixed to or delivered with the article. The point arose in the case of Smith *v.* Mason in the High Courts, when Mr. Justice Cave held the words "delivered or affixed" did not apply to "public notice or advertisement," out to the label.

Mr. Kirby: It would be a straining of language to call this card a public notice or advertisement.

Mr Hawkins said they took the meaning which the card would convey to any ordinary person going to the shop. As far as cough-lozenges were not liable, there was a very good reason for that. Really they were liable, but the Commissioners took the view that unless they allowed chemists to put some distinctive name such as "cough-mixture" or "muscle-liniment" on their medicines, there would be a danger to the public through the possibility of swallowing the wrong thing by mistake. If the chemist went outside the simple statement, they had to draw a line and demand the payment of duty.

The Bench retired to consider the case, and on their return the Chairman said they had very carefully considered the arguments *pro* and *con.*, and had come to the unanimous decision that this was not liable to the duty, and they therefore dismissed the case.

Mr. Hawkins: I am not in a position to say what the Commissioners will desire to do, but if they decide to apply to you to state a case——

The Chairman: We will consider it. It appears to us that the notice on the box was very carefully compiled, and the Inland Revenue base their position on the card.

Mr. Hawkins: On the box and the card.

High Court Cases.

Hop Bitters.

In the case of Wheatley & Bates (Limited) *v.* Ellen Cronkshaw, heard on Tuesday, April 8, by Mr. Justice Byrne, Mr. Levett, K.C., said that it was a motion for an injunction to restrain the defendant from selling or offering for sale hop-bitters not manufactured by the plaintiffs. He understood that Mr. Buckmaster, for the defendant, was prepared to agree to an order. The case was important because of what had taken place. The defendant had had menu-cards with the plaintiffs' names on them, and purported to sell other hop-bitters as theirs. The parties were both *sui juris*, and the terms were that the motion should be treated as the trial of the action, that there should be a perpetual injunction in the terms of the notice of motion, 5*l.* damages, and defendant should pay the costs of the action. Mr. Buckmaster said that was so, and his Lordship, by consent, made an order in the terms mentioned.

A Lanoline Lawsuit.

In the Chancery Division of the High Court on April 8, before Mr. Justice Byrne, Mr. T. Terrell, K.C., said that he had a motion in the action Marshall (Limited) *v* Wright & Co. and Lewis & Burrows (Limited), which was for an injunction in regard to a lanoline preparation. It had been agreed that the case should go into the witness-list, and the costs of the motion would be costs in the action. Mr. Justice Byrne thereupon directed that the action should be set down for trial, with pleadings.

Antiseptic Throat-pastilles.

Vice-Chancellor Hall, sitting in the Chancery Court of Lancashire at Liverpool on Tuesday, April 8, commenced the hearing of an action relating to the manufacture of throat-pastilles and the application of the royalty paid by the manufacturers upon the sales. The plaintiffs (for whom Mr. Maberley and Mr. John Rutherford appeared) were Messrs. Evans, Sons & Co., wholesale druggists, of Liverpool; and the defendant (who was represented by Mr. Roch and Mr. Stuart Deacon) was Mr. Wm. Alfred Jones, formerly employed by the plaintiffs as manager of their export department. The plaintiffs sought to have an agreement relating to the manufacture of the pastilles set aside, to recover damages, to obtain an account of all moneys received by the defendant under the agreement and prior thereto in respect of the pastilles, and in particular such portion thereof as was paid and entrusted to the defendant for and on behalf of the Liverpool Hospital for Diseases of the Throat, Nose, and Ear, and to recover payment of an amount which the plaintiffs alleged had not been properly applied. The defence was a denial of the allegations, and the defendant counterclaimed for a declaration that plaintiffs were no longer entitled to manufacture and sell the pastilles, for the delivery up to him of the formula and various documents, an injunction against the plaintiffs for advertising, manufacturing, or selling the pastilles, and the payment of 220*l.* 10*s.* due to the defendant from the plaintiffs.

Mr. Maberley, in his opening statement, mentioned that the defendant had for thirty-five years been in the employ of the plaintiffs. In 1893 the defendant consulted Dr. Bark regarding an affection of the throat from which his wife was suffering. Dr. Bark was at that time identified with a private hospital, started about 1884, for the treatment of diseases of the throat, ear, and nose. Dr. Bark gave the defendant some lozenges for his wife, and at Mr. Jones's request wrote out for him a formula of a pastille quite as efficacious but less costly to produce. This the defendant consulted the plaintiffs about, and suggested to them that if they would undertake the manufacture, apart from the large business profit which must accrue, a substantial profit could be handed over for the benefit of the hospital in question, and of which the defendant stated that he was the Treasurer and Secretary. An arrangement was arrived at, and subsequently it was agreed that the sum to be paid over as a

Digitized by Google

royalty for the benefit of the hospital was 6*d.* per lb. weight. The defendant alleged that he was entitled to the benefit of this royalty, while the plaintiffs' case was that he was to have no part of it Various payments on account of royalty were made to the defendant, the total which he was stated to have received being put down as 2,393*l.* 18*s.* A written agreement was subsequently entered into between the parties respecting the pastilles, the sale of which had very greatly increased. In April, 1900, the defendant produced a letter from Dr. Bark in which that gentleman said he had no claim or interest in the prescription Mr. Jones got from him some years ago for the throat-pastilles. The defendant, who described himself as the sole proprietor of the formula, followed this up by offering in writing an authorisation to the plaintiffs to manufacture pastilles for sale in all parts of the world in consideration of their paying to him a royalty of 6*d.* per lb. weight. The plaintiffs confirmed the arrangement by letter on May 9, adding that they understood that the royalty as advertised by them was "largely applied" by the defendant for the benefit of the hospital. The plaintiffs, counsel alleged, subsequently ascertained that though the sales were going up by leaps and bounds the defendant was not devoting any part of the royalty, which now reached 800*l.* a year, to the hospital, and the sum of 379*l.* being all that he had paid over to that institution.

The case was continued on Wednesday, when Mr. Maberley read several letters which were written by the defendant, as from the firm of Evans, Sons & Co., urging agents and travellers to push the sale of the pastilles on the ground that the throat hospital was to benefit to a considerable extent.

The Vice-Chancellor said it seemed to him that the letters read were all one way. They appeared to show that the defendant was working entirely in the interest of the hospital, and not in his own. If he was not, then he was not speaking the truth when he wrote those letters. Was that Mr. Rotch's case?

Mr Rotch, in reply, said that he would show that what the defendant meant was that a considerable proportion of the royalty was to be applied to the hospital.

His Honour said he could understand a man lying for his own interests, but what he could not understand was, why a man should lie for the benefit of a third party, unless it was for the honour and glory of being Hon. Secretary and Treasurer to the hospital.

Mr. Maberley said all those letters were written on the stationery of the firm and in their business-hours.

His Honour: There is nothing to show that he was privately interested in the royalty.

Mr. Rotch hoped his Honour would read all the letters.

His Honour begged Mr. Rotch to be merciful, and not to ask him to wade through a pile of useless letters.

Mr. Maberley, in conclusion, said that the defendant was discharged from the position of Hon. Treasurer to the hospital in the beginning of 1901, and yet after that he had received from Messrs. Evans royalties on its behalf, which they would not have paid had they known that he was not connected with the hospital. On October 10 Jones wrote a letter to one of the plaintiffs' travellers in which he stated that in deference to the wishes of the hospital management the declaration which had hitherto appeared in the advertisement to the effect that a portion of the profits on the pastilles was devoted to the hospital had been withdrawn. On the 26th of the same month the defendant was discharged from his employment. The action (said counsel) was brought to vindicate the position of the plaintiffs, and to show that the advertisements which stated that the profits were to go to the hospital had been issued in good faith, and to ensure that the royalties in question should, as agreed, reach the hospital. What the Court was asked to do was to make a declaration that defendant was liable to render an account of the moneys received by him and not applied for the benefit of the hospital, and also that he was not entitled to retain any part of those moneys for his own benefit. The defendant had received a total of 1,070*l.* down to May 9, 1900, and of that sum he paid only 312*l.* 8*s.* 2*d.* to the hospital, according to his own statement. That could not be taken as, in any way, "a large proportion of the profits."

John James Evans, senior partner in the plaintiffs' firm, was then examined by Mr. Maberley. The defendant, who had been in their employment for thirty-five years down to October last as manager of the export department, was largely under witness's supervision. In 1893 the defendant brought to him a formula for throat-pastilles which he said had been given to him by Dr. Bark, and which had proved of great benefit to his wife. He urged the firm to take it up, but witness and his brothers thought little of it, as they had almost daily things of the kind offered to them. However, they undertook the manufacture of the pastilles (they contracted with a firm of wholesale confectioners), and it was agreed that the plaintiffs' firm should pay 6*d.* per lb. out of the profits to the hospital. That was because Mr Jones wanted to show his gratitude to Dr. Bark and the hospital for what they had done for Mrs. Jones. The defendant undertook to do everything he could to introduce the pastilles to the public, and they were issued under the name of the firm. There was no reference to Mr. Jones's salary, which was 400*l* a year, together with some commission on advertisements, which amounted to 100*l.* or a little over that sum. Mr. Jones said nothing at all about his retaining any portion of the 6*d.* per lb. royalty for his own benefit, and neither witness nor any member of his firm was a party to any such arrangement. It was not until 1896 that any payment on account of the royalty was made. Up to that time the sale was inconsiderable. Dr. Bark's name was on the labels, but at that gentleman's request, and on the ground that it was prejudicial to his professional status, the name was withdrawn, and the pastilles were labelled, "Prepared only by the sole proprietors—Evans, Sons & Co." Witness never saw Dr. Bark in reference to the matter until after Mr. Jones had been discharged. Mr. Jones said that everything in connection with the hospital's finance was left to him, and witness had every confidence in Jones at the time. In April, 1900, witness had a conversation with Mr Jones, the result of which was that he (Jones) received a letter from Dr. Bark stating that he had no interest in the pastilles. As a result of that an agreement was drawn up between Mr. Jones and the firm, arranging for the payment of the royalty to the hospital. At that time he remarked that the hospital must be getting very rich, owing to the large amount it was receiving. He asked Mr. Jones distinctly if he received any of the royalty for himself, and Jones replied, "Oh, the time may come when I shall get some part of it for the benefit of my children." That led witness to infer that up to that moment he had not got a single penny for himself.

His Honour: Never mind what you inferred; we want to know what took place.

Mr. Evans: I believe I said that if he got any of it, he ought to let me know. I made a note in the private ledger, with a view that his salary should, in that event, be revised. It was only after Jones had left the firm that witness saw Dr. Bark, and learned from him that the whole of the royalty had not been applied to the hospital.

In cross-examination by Mr. Rotch, witness said the gross profit on the pastilles was 1*s.* per lb., from which trade expenses had to be deducted. They went into the thing as a matter of business, and never posed as benefactors to the hospital.

Mr. Edward Evans, jun., another partner in the firm, said he should have considered it dishonest that their firm should take any of the royalty under the circumstances; and while he was receiving a large salary, Jones never told him that he had severed his connection with the hospital, or that he was not applying the whole of the royalty to the hospital. It was a revelation to him when he discovered that the hospital was not a public hospital, but a private one.

Mr. Rotch: If you get this money, will you hand it over to Dr. Bark?

Witness: That depends upon who the right person is.

At the resumption of the hearing on Thursday, Dr. John Bark was examined for the plaintiffs. He said he gave a prescription for pastilles to Mr. Jones in 1893 but he never heard of any such thing as royalty until Mr. John Evans sent for him in November last. He wrote several years previously to Messrs. Evans objecting to the use of his name in connection with pastilles. Mr. Jones told him that Messrs. Evans intended giving a donation to the hospital, but nothing was said about a royalty. He objected to the formula being treated as secret, when, in fact, the idea was borrowed from another source which was open. Mr. Jones had worked hard to develop the hospital. In reply to Mr.

Digitized by Google

Rotch, witness said if plaintiffs won he would not take the money in question. He never agreed with Jones that the formula should be kept secret.

The case for plaintiffs having closed, Mr. Wm. Alfred Jones, the defendant, was examined. He said the formula was suggested by him in order that a cheap pastille might be brought out. He swore that the verbal agreement in 1894 was that he was to have a royalty, but that he intended giving a proportion of it to the hospital. He admitted that cheques were drawn in the early period by the plaintiffs for 60*l.*, payable to the hospital through him. It was his intention still to devote a portion of the money to the hospital.

Without calling upon plaintiffs' counsel to cross-examine the witness,

The Vice-Chancellor said he should believe the case made out for the plaintiffs, and he accordingly gave judgment for them on the claim and counterclaim. He, however, had some sympathy with defendant under the circumstances.

Sale of Food and Drugs Acts.

Pepper.

At Southwark Police Court on April 9, John Appleton, of 53 Long Lane, Borough, was fined 40*s.*, and 12*s.* 6*d.* costs, for selling pepper which was adulterated with 60 per cent. of ground rice and other impurities. The defendant said he was not aware that the stuff was other than pure pepper; he paid 9½*d.* per lb. for it wholesale.

At Stoke-on-Trent on April 4, Thomas Bardsley (trading as Bardsley & Co.) druggist and drysalter, 115 Liverpool Road, Manchester, was fined 20*l.* and costs for selling pepper to a butcher at Stoke, which on analysis was found to contain 20 per cent. of rice-flour.

Salicylic Acid in Ginger-wine.

At the Leyland (Lancashire) Petty Sessions on April 7, the Leyland and Farington Co-operative Society (Limited) were fined 5*l.* and costs for selling ginger-wine which contained 9 gr. of salicylic acid per pint. The usual contradictory opinions as to the effect of salicylic acid on the health were advanced, and notice of appeal against the conviction was given by the defendants.

Bankruptcies and Failures.

Re Frederick James Lea, 43 Tontine Street, Folkestone, Kent, Chemist and Druggist.

At the Canterbury County Court, on April 7, debtor applied for his discharge.

The Official Receiver (Mr. Worsfold Mowll) said the receiving-order was made in May, 1896 [see *C. & D.*, June 20, 1896 (page 862), for public examination, and July 18, 1896 (page 77), for statement of affairs]. The liabilities to rank for dividend were estimated at 266*l.*, while the proofs admitted and probable claims amounted to 392*l.* The assets were put at 93*l.*, whereas they only realised 105*l.* The stock-in-trade was allowed to get to the lowest ebb, and the household furniture, estimated at 200*l.*, was sold by auction for 49*l.* The book-debts were over estimated and many of them were set off by larger contra-accounts. The bankrupt commenced business as a chemist and dentist a 43 Tontine Street in 1882, purchasing the business from his father for 400*l.* He paid 50*l.* down, and traded successfully for some time, and paying all the purchase-money with the exception of 70*l.*, from which his father released him. The bankrupt attributed his eventual failure to trade competition and illness of his family. He (the Official Receiver) charged bankrupt with not having assets equal to 10*s.* in the pound and trading with knowledge. Debtor stated that he was now a manager for Mr. Benson Harries, chemist and druggist, Newport, Mon. He had been there for twelve months and was receiving 25*s.* a-week, with commission and some meals. Debtor's children were boarded out. His father, who was a retired chemist, lived in Folkestone. In reply to Judge Sir W. L. Selfe, debtor said he had no prospects of putting any money by. Discharge was suspended for two years.

Re Edward Howdall Hasselby, 55 and 57 Pevensey Road, St. Leonards-on-Sea, lately residing and trading at 1 Eversfield Place and 33 King's Road, East Street, St. Leonards-on Sea, Chemist and Druggist.

The summary of the debtor's statement of affairs herein shows gross liabilities 5,105*l.* 14*s.* 6*d.*, of which 1,139*l.* 14*s.* 11*d.* is expected to rank, net assets 299*l.* 18*s.* 5*d.* The Official Receiver's observations state that bankrupt commenced business as a chemist in 1870 at Norman Road with a capital of about 500*l*; that two years later he entered into partnership with a Mr. Robinson, and they bought the business and furniture at 1 Eversfield Place; the capital of the partnership was 3,000*l.*, each partner bringing in 1,500*l.*, and the whole amount was paid for the business (2,000*l.*) and the furniture (1,000*l.*). The partnership was dissolved in 1882, when he (bankrupt) paid Mr. Robinson 2,200*l.* for his share of the business. In 1885 he bought the freehold for 5,000*l.*, the whole of which was obtained on mortgage, and in 1896 he took over a cycle business carried on by T. Marchant, paying Marchant's creditors a composition of 8*s.* in the pound. He eventually sold his chemist's business to Mr. Atkinson for 1,000*l.*, and only received 400*l.* of the purchase-money, which was used to pay creditors, that he raised 325*l.* by bill of sale of the furniture, the whole of which was received by Mr. Atkinson, and then he carried on the cycle business only, but has lost money by it; the stock was sold a few weeks ago under a distress for rent; and his freehold property was foreclosed and sold. The cause of the insolvency is said to be "Losses through assisting Marchant in cycle business, through liabilities incurred on my behalf, and misappropriation of monies, and also losses on trust accounts and on guarantees paid for Mr. Atkinson." Debtor states that he knew of his insolvency about a year ago, and he has been continually sued since then. The liabilities will probably be slightly increased. The assets are probably over-estimated.

Re James Thomas, trading as Thomas' Drug-stores, at 118 Kingsland Road, N.E.—Debtor applied on April 8 to Mr. Registrar Linklater, at the London Bankruptcy Court, for an order of discharge. Particulars of the failure were detailed in our issues of October 19, 1901 (page 655), and October 26, 1901 (page 686). The offences alleged by the Official Receiver were (1) insufficiency of assets to pay 10*s.* in the pound to the creditors; (2) imperfect bookkeeping; and (3) trading with knowledge of insolvency. On these grounds the discharge was suspended for a further term of two years.

Gazette.

Partnerships Dissolved.

Bythway, J. B., and **Bythway, M.**, under the style of J. T. & H. Bythway, Manchester, drysalters and merchants.

Cooper, W. A., and **Dugon, F.**, under the style of Cooper and Dugon, Ederton Road, Rotherhithe, S.E., and Rotherhithe New Road, S.E., general medical practitioners and apothecaries.

Leach, John (the elder), Crawley, Sussex, chemist.

New Companies & Company News.

New Baltic Toilet and General Requisite Company (Limited).—Capital 2,000*l.*, in 1*l.* shares (four founders'). Objects: To carry on the business of hairdressers, perfumers, manufacturers of toilet-requisites, chiropodists, manicurists, &c.

Holmes Swinburn (Limited).—Capital 2,000*l.*, in 1*l.* shares Objects: To acquire the businesses carried on by R. Stainton and W. K. Gresswell (trading as the "Holmes' Pure Air Cooler Company") and W. Swinburn, at Railway Place, Grimsby, and to carry on the business of refrigerator and cold-store proprietors, ice, chemical insulating-material, charcoal, firewood, washing-machine and wringing-machine manufacturers and dealers, metal-founders, metal and wood workers, chemists, druggists, &c.

Rochester, Chatham, Gillingham and District Mineral-water Manufacturing Company (Limited).—Capital 3,000*l.*, in 1*l.* shares. Objects: To carry on the business of mineral-water, cider, cordial, and beverage manufacturers and merchants, with a view thereto to acquire certain land and premises at Wellington Street, Chatham, and to adopt an agreement with J. T. Snell and W. J. T Bell. The first directors are J. T. Snell, J. Godwin, J. Newby, F. Pott G. H. Hone, W. H. Checkfield, J. Evans, H. Batchelor, and W. J. T. Bell. Remuneration, 100*l.* per annum, divisible. Registered office, Wellington Street, Chatham

Natural Food Company (Limited).—Capital 1,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on as "The

Digitized by Google

Natural Food Company," at 21A Patriot Square, Cambridge Heath, Essex, to adopt agreements with T. R. Allison, L.R.C.S., and P. Tyrer, and to carry on the business of importers and manufacturers of and dealers in natural, manufactured, condensed or prepared foods, whether combined with medicinal or other preparations or otherwise, &c. No initial public issue. The first directors are T. R. Allison, L.R.C.S., P. Tyrer, and H. S. Schultess Young. Qualification 1*l.* Remuneration (except P. Tyrer, managing director) one guinea for each board-meeting attended.

F. KENDALL & SON (LIMITED).—Capital 50,000*l.*, in 10*l.* shares. Objects: To carry on the business of manufacturing, consulting and analytical chemists, consulting brewers, chemists to the brewing and mineral-water trades, sugar-boilers, manufacturers of preservatives, antiseptics, disinfectants, colouring matter, varnish, chemical extracts, essences and combinations, finings, invert and other sugars, and other articles and products, dealers in raw and manufactured materials and growing crops, farmers, &c., and to take over the business of a manufacturing, analytical, and consulting chemist, brewers' chemist, manufacturer of invert sugar, &c., carried on by G. F. Kendall as "F. Kendall & Sons," at his Birmingham Road Works, Stratford on Avon. The first subscribers are: G. F. Kendall, Stratford-on-Avon, chemical-manufacturer; F. H. Kendall, 26 North John Street, Liverpool, solicitor; Miss E. F. Kendall, The Hollies, Stratford-on-Avon; Miss L. J. Kendall, The Hollies, Stratford-on-Avon; W. Wilson, 56 Shottery Road, Stratford-on-Avon, bookkeeper; R. E. Evans, Glencoe, Stratford on Avon, technical chemist; and P. D. Kendall, Dalehurst, Rock Ferry, articled clerk. No initial public issue. G. F. Kendall is permanent governing director.

GUY'S TONIC LIMITED).—Capital 35,000*l.*, in 1*l.* shares (20,000 6-per-cent. cumulative preference). Objects: To take over the business of patent-medicine vendors carried on at 12 Buckingham Palace Road, London, as "Guy's Tonic Company," to adopt an agreement with C. S. Stemp, and to carry on the business of chemists, druggists, &c. The first subscribers are: A. E. Leonard, Woodroyd, Sidcup, solicitor; K. Claye, 20 Christchurch Road, Hampstead, N.W., solicitor; A. Blunden, 14 Sheen Grove, Barnsbury, N., solicitor; G. Pearl, Medrose, Sidcup Hill, Foot's Cray, Kent, clerk; C. G. Candy, 4 Clifden Road, Clapton, N.E., clerk; J. W. Bridle, 15 Binden Road, W., clerk; and C. G. Condby, Buckhurst, Redhill, Surrey, articled clerk. No initial public issue. The first directors are C. S. Stemp, J. White (chairman), and W. H. Hunt. C. S. Stemp may retain office for life, and J. White and W. H. Hunt may retain office so long as they hold 1,000 preference shares each. Ordinary qualification 500*l.* Remuneration (except managing director) 100*l.* each per annum. The directors are also to receive, in any year when the sales exceed 50,000*l.*, 1 per cent. on the amount of the excess, and in the event of the sale of the company's assets 7½ per cent. on the surplus available for distribution after returning the amounts paid up on the shares. [We understand that the whole of the capital has been privately subscribed.—EDITOR.]

SHAWS (HUDDERSFIELD) (LIMITED).—Capital 5,000*l.*, in 1*l.* shares. Objects: To take over the business of wholesale druggists and general merchants carried on by George Shaw at Half-moon Street and Bank Works, Outcote Bank, Huddersfield, as "George Shaw & Sons," to adopt an agreement with G. Shaw, W. Shaw, and V. Shaw, and to carry on the business of chemical-manufacturers, druggists, chemists, drysalters, oil and colourmen, manufacturers of and dealers in photographic, surgical, and scientific apparatus and materials, &c. The first subscribers are: G. Shaw, Springwood House, Huddersfield, wholesale druggist; W. Shaw, Bank Terrace, Huddersfield, wholesale druggist; V. Shaw, Upper George Street, Huddersfield, chemist and druggist; C. W. Hincksman, Spring Grove Street, Huddersfield, traveller; J. S. Poulter, Rawthorpe Lane, Dalton, Huddersfield, farmer; C. Mosley, Moor End Road, Lockwood, printer; and J. Lloyd, Outcote Bank, Huddersfield, warehouseman. Minimum cash subscription, 10 shares. The number of directors is not to be less than two nor more than five; the first are George Shaw, Walter Shaw, and Vincent Shaw, M.P.S. Qualification, 100 shares. Remuneration as fixed by the company. Registered office, Half-moon Street, Huddersfield.

PARKE'S DRUG-STORES (LIMITED) announce the payment of the half-yearly dividend on the preference shares at the rate of 6 per cent. per annum, less income-tax.

KODAK (LIMITED).—According to the directors' statement to the shareholders, the total net profits of the Associated Kodak Companies for the year 1901 amounted to 393 769*l.*, which, with the undivided profits brought forward from the previous year, leaves 724,033*l.* available for distribution. Dividends of 6 per cent. on the preference shares and 10 per cent. on the ordinary shares of Kodak (Limited) have been paid, and, in addition, a bonus of 5 per cent. has been distributed to the ordinary shareholders, making altogether 15 per cent. for the year.

AËRATORS (LIMITED).—The third ordinary general meeting of this company was held at Winchester House, E.C., on April 7, Mr. H V. Rudston Read (chairman of the company) presiding. In moving the adoption of the report and accounts the Chairman said no printed copy of the profit-and-loss account had been circulated this year, although one had been passed by the auditor, and was, of course, open to the inspection of shareholders, because the directors considered it inadvisable to make public too many details of the company's business. The results of the year's working had been very satisfactory. As to the distribution of the net profits, 11.883*l.* 17*s.* 10*d.*, it was proposed to pay 10 per cent. dividend, which would absorb 5,639*l.* 12*s.* 1*d.*; to give additional remuneration to the directors, in accordance with the articles of association, amounting to 574*l.* 16*s.* 3*d.*; to allocate 270*l.* 7*s.* 9*d.* as bonus to staff and employés; and carry forward 5 399*l.* 1*s.* 9*d.* to next account. Dealing with business prospects, he said that after a considerable amount of experimenting they put on the market the standard ball-stoppered bottle for small sparklet bulbs. This bottle, they had found, could only seriously compete with the aërated-water trade under special circumstances. The directors have now evolved a new pattern, which is more practical and simpler than any of its predecessors. It was estimated that each of the 15 000 000 syphons at present in use in the United Kingdom was refilled twenty-five times a year, making 350 000 000 syphons consumed annually. The consumer paid from 3*d.* to 6*d.* per syphon, the latter remaining the property of and being returnable to the manufacturer. The ordinary syphon-trade, as at present conducted through the chemist and druggist, was looked upon as unprofitable and troublesome; the delivery and collection of syphon-bottles caused great inconvenience. It was the same chemist and druggist who would distribute to the public the new syphons of the company, and he had viewed the sale and delivery of the new syphons and sparklet bulbs far more favourably, as the return of empties was at once done away with. The profit realisable by the chemist on the initial sale of the new syphon would amply repay him for the first introduction of the goods, and the subsequent sale of the sparklet bulbs entailed no trouble whatever. It was expected that the new syphons would be available for the public by the beginning of May, and orders already amounting to over 40,000 syphons and some 3,800,000 large sparklet bulbs had been received. The bulk of these orders was for this country, which seemed to prove that they had at last got an article suitable for the home market. The Chairman then referred to the "Maxator" apparatus, which had been put on the market to suit the demands of large households and country-houses, &c. The new factory at Edmonton is nearly completed. The report and accounts were unanimously adopted.

Trade-Marks Applied For.

(*From the "Trade-marks Journal," April* 2, 1902.)

"VAMPIRE"; for fly-papers. By Kay Brothers (Limited), St. Petersgate Mills, Stockport. 244,742.

Device and word "Murine"; for eye-drops. By J. B. and G. W. McFatrich, 1023 Masonic Temple, Chicago, Illinois, U.S.A. 240,539.

Winter Session.

Society of Chemical Industry.

London Section.

A meeting of the Section was held at Burlington House, Piccadilly, W., on April 7, Mr. Otto Hehner in the chair. A little preliminary business having been disposed of, the Chairman called on Mr. E. Sanger Shepherd to give his paper on some recent

Improvements in the Photography of Colours.

The lecturer first referred to the difficulties which early photographers found in rendering correct colour-values—a deep-blue dress came out white and a yellow dress black in the photograph. This incorrect rendering of tones was one of the greatest objections to photography, and led to the production of plates and light-filters, which together rendered the colours of an object translatable into correct monochrome. The important part taken by aniline dyes, certain of which combined possess the property of causing light-action throughout the spectrum, was referred to. Some of the dyes are added to the sensitive emulsion in the process of making dry-plates, and others are used for light-filters. These latter are made from optically worked glass: the glass is coated with an even film of structureless gelatin, and then dipped in the aniline-dye solution. When the light-filter is dry it is spectroscopically tested. Two plates of such prepared glass are cemented face to face with Canada balsam. It was incidentally mentioned that aniline dyes have the reputation for fugitiveness, but the lecturer has found that when sealed between glass plates they are practically permanent. Six thousand dyes have been tested, and a good number have proved suitable for making light-filters. A large number of lantern-experiments in colour were then shown, commencing with the familiar one of combining red, green, and blue to form white, and proceeding to the placing of three separate colour-slides on top of each other to form a picture in natural colours—the one shown being a Mellin's Food advertisement. In practice complementary colours are used, and not the three primary colours. The construction of reflecting cameras for making the three negatives at the same time was then explained. By means of mirrors the three negatives are taken through the three light-filters, each on a specially colour-sensitised plate, simultaneously, and the exposure need not be longer, in a favourable light, than ten seconds. The application of the principle to three-colour-process work was next touched on, some fine examples of this class of work being handed round. Three separate blocks are made, but it is most important, when the blocks are printed, that the three gratings cross each other at a certain angle (38°), or patterns offensive to the eye will be obtained, which spoil the appearance of the finished work.

There was not much discussion, but Mr. Shepherd answered several questions on matters of detail. For instance, it appears that the green print (in lantern-work), being the one which generally has the most detail, is printed direct on to the slide, and is formed on the silver deposited by the developer by treatment with potassium ferricyanide and iron sulphate. The blue and red prints, on the other hand, are printed on celluloid in bichromated gelatin containing silver bromide in suspension. The prints yielded in this way are afterwards stained, and in this part of the process the operator requires to exercise a considerable amount of judgment in adjusting the colours so as to get a true result. It was mentioned also that the most critical test of a colour-process is to photograph an object, such as a silver cup, against a grey background.

Manchester Section.

The annual general meeting was held at the Victoria Hotel, on Friday evening, April 4, Dr. Grossmann in the chair. There was a large attendance consequent on discussion in relation to the Manchester Corporation (General Powers) Bill, which deals with sewage questions that specially interest chemical-manufacturers. After this was thoroughly discussed, Mr. J. M. Irving read a paper on

An Analysis of Snow

which fell in Manchester in February last. He took 100 square inches to a depth of one inch at Crumpsall, and found that over a square mile three tons of soot fell during the nine days the snow remained. This would represent 300 tons over an area of 100 square miles round the Manchester Town Hall. The composition of the soot was as follows: Carbon, 48·6; grease or oil, 6·9; ash, 44·5 per cent. The proportion of ash was very much higher than in the ordinary soot, which he attributed to the more complete burning of the coal. The grease was about the same as in ordinary soot. It smelt like burning wood. The question of dealing with soot would have to be seriously dealt with ere long, added the author. A remedy would be in increasing the use of coke, gas, and electricity, especially on the part of householders, and the substitution of gas-engines for steam-boilers. Gas should be sold at 1*s* per 1,000 cubic feet.

Dr. Kreuht, who had taken a sample of snow in the centre of the city at the same time, gave the result of his analysis, which showed that the amount of soot and *débris* was greater than in the suburbs. There was arsenic in abundance.

Mr. Ivan Levinstein was elected Chairman of the Section for the ensuing year, and Dr. Bailey Vice-Chairman, with the following new members of the committee: J. Allen, R. Clayton, J. Hübner, Dr. H. Levinstein, and Professor W. J. Pope.

Cambridge Pharmaceutical Association.

A meeting was held at the Bull Hotel, Cambridge, on Friday evening, April 4, to consider

The Question of Early-Closing

on Thursdays during the May term, Mr. E. Saville Peck presiding. The Hon. Secretary (Mr. Bernard S. Campkin) read correspondence on the subject, from which it appeared that some felt it inconvenient to close during the term, and after Messrs. Cook (Chesterton), Parsons, Macavity (Messrs. Sturton Brothers), A. Sidney Campkin, White, and the Chairman had spoken, it was resolved—

That in consequence of several firms having expressed their desire to remain open unless all close, and as this appears improbable, the Pharmaceutical Association feel that they cannot at present make any further recommendation during the May term but leave it to the option of the chemists themselves after April 10.

Northampton Chemists' Association.

The annual meeting of this Association was held at the Black Boy Hotel, Northampton, on April 4. Mr. W. McKinnell (the President), occupied the chair. The Secretary (Mr. F. Cowdery) read his annual report of the year's work, and presented the balance-sheet, which showed a balance of 1*l* 4*s*. 11*d*. in hand. The report and balance-sheet having been adopted, votes of thanks were passed to the retiring President. Mr. Mayger was then elected President, and Mr. Armitt and Mr. E. O. Ashford Vice-Presidents. Mr. F. Cowdery was re-elected Hon. Secretary and Treasurer. Mr. Flinton Harris introduced a discussion on early-closing, urging the benefits of universal closing early on Thursday afternoon, like almost all other business-places in the town, and he appealed to the chemists to agree to close at a uniform hour, so that both employer and employed might have a little time for recreation and rest from business. The discussion was adjourned to another meeting on April 18.

Wolverhampton Chemists' Association.

At a meeting held at the Star and Garter Hotel, Victoria Street, on Monday evening, April 7, there was a strong muster of local pharmacists, and Mr. F. H. Alcock gave an account of some experiments on

Tincture of Opium.

Mr. Phillips occupied the chair. The lecturer dealt in succession with (1) the principle on which the tincture is prepared, (2) the process of assay, and (3) obtaining the

Digitized by Google

morphine i . a crystalline form. Referring to Mr. D. B. Dott's discov ry of sulphuric acid in opium, about twenty years ago, Mr Alcock said it is possible to tell whether the tincture has been made properly or not by determining the amount of sulphate in it. On the other hand, he mentioned that the sediment which forms in shop-rounds of tr. opii contains sulphate, no doubt of mineral origin. He suggested preparation of the tincture in the cold with the addition of a small quantity of sulphuric acid or phosphoric acid to the menstruum. Speaking of the marc, which has frequently been shown to be rich in morphine and other alkaloids, he said he had examined samples from wholesalers, and found so little morphine in them that he was bound to conclude that the wholesalers knew how to get out the alkaloids in making the tincture. This, however, did not universally apply, and he gave an instance to the company—25 lbs. of hard and dry opium, rich in alkaloid, had been used to make liquid extract; the marc was rejected, but much morphine was afterwards obtained from it. The hard and dry condition was the cause of the trouble in this case.

The brief discussion which followed was on complimentary lines, and the PRESIDENT, Messrs. GIBSON and WEAVER, and others joined in it.

Glasgow Assistants' Association.

THE closing meeting of the present session was held in the rooms, 94 West Regent Street, on Friday evening, April 4, Mr. J. P. GILMOUR presided, and introduced Mr. J. LOTHIAN, who delivered a vividly descriptive lecture on "The Eternal City," which comprised an account of the historic landmarks of ancient, mediæval, and modern Rome. The lecture was illustrated by a series of specially selected lantern-slides. On the motion of the CHAIRMAN, an enthusiastic vote of thanks was awarded to the lecturer.

Bradford Chemists' Association.

AT the meeting on Tuesday evening, April 8, at the Royal Hotel, Bradford, Mr. Arthur Hanson presiding, there was a good attendance.

COUNCIL CANDIDATES

came up for discussion, but first a motion by Mr. A. H. WADDINGTON, in regard to the conduct and style of the *Pharmaceutical Journal*, was agreed to. Mr. Waddington spoke at considerable length on the matter, blaming the Journal Committee for cutting down the paper, which, he said, should be as valuable as THE CHEMIST AND DRUGGIST. The PRESIDENT, Mr. NEWBOULT, Mr. NOBLE, Mr. ROGERSON, Alderman DUNN, Mr. MARSHALL, and Mr. WILCOCK also spoke. It appeared that one of the chief grievances is that THE CHEMIST AND DRUGGIST publishes news of the trade, reports of meetings, and other matters in many cases a week ahead, and is altogether more interesting than the Journal for which the members of the Society pay 1*l.* 1*s.* The motion agreed to was to ask Council candidates to prevent curtailment and increase the efficiency of the *Pharmaceutical Journal*, as well as to report the Council-meetings more fully.

Alderman DUNN suggested that the following questions be put to candidates:—

Experience having demonstrated that the mere restriction to qualified persons of distinctive titles, along with power to sell and dispense such poisons as are enumerated in the schedule to the Pharmacy Act, has failed to secure adequate protection to the public, by reason of the unrestricted sale of potent drugs and medicines (other than scheduled poisons) by unqualified persons in the form of companies and otherwise, will you introduce to the Council or support some scheme by which the sale and dispensing of drugs and medicines, especially those of a potent character, shall be restricted to registered chemists?

The keen competition of so-called drug-stores, controlled by unqualified persons, having seriously tended to render the calling of chemists and druggists unremunerative, do you think it proper at the present time to place further difficulties and cost upon young persons contemplating qualifying for registration by the institution of a compulsory curriculum or otherwise, and will you vote for the postponement of any proposal for the institution of such a curriculum until more adequate protection be secured for those qualifying by examination?

After Messrs. WADDINGTON, NOBLE, WILCOCK, ROGERSON and the PRESIDENT had spoken, the first resolution was put and carried unanimously.

Mr. WADDINGTON objected to the second, but it also was carried.

The question of the expediency or otherwise of a

WEST RIDING FEDERATION

was then considered.

The PRESIDENT was astonished at what Mr. Broadhead had said, and Alderman DUNN rather pitied the Batley Demosthenes, but Mr. WADDINGTON said he had a letter from Mr. Broadhead, who said the reports of his remarks were garbled and misleading. [We condensed but did not "garble."—EDITOR] In the course of a discussion as to the advantages of federation, in which Alderman DUNN opposed the idea as having no apparent need and Mr. WADDINGTON strongly supported it, Mr. MARSHALL pointed out that such an organisation would be useful for such purposes as the election, and to deal with questions like those which they had been discussing. The PRESIDENT, who spoke in support of the principle of federation, proposed "That this Association, having further considered the proposed formation of a Federation of West Riding chemists, expresses its approval of the scheme suggested by the ex-President of the Dewsbury Association." The resolution was seconded by Mr. WILCOCK, and carried without dissent.

London Chemists' Association.

A MEETING of the General Purposes Committee of this Association was held on Wednesday, April 9 at Anderton's Hotel, Fleet Street, E.C., Mr. A. Cooper (President of the Association) in the chair. It was decided, after a brief discussion, that trade press-representatives should be admitted to future meetings of the committee.

The HON. SECRETARY reported that the sub-committee had drawn up a circular letter to London chemists, setting forth the objects of the Association. The circular was approved.

Mr. TRUMAN reported that the committee for South London had met, and steps were being taken to arrange for a general meeting of South London chemists at an early date.

The VICE-PRESIDENT (Mr. Glyn-Jones) introduced a discussion on the use of trade-names on poison labels, in which Messrs. TRUMAN, PENTENEY, CAMPBELL, HARRINGTON, POND, BUNKER, BURTON, and others took part, but no decision was arrived at.

Mr. John Humphrey was elected a member of the Association.

Blackpool and Fylde Chemists' Association.

A MEETING was held on Tuesday, April 8, at the Palatine Hotel, Blackpool, there being present Messrs. Turver, Johnson, Ashton, Keeley, Buckley, Richardson, Moyson, Greenwood, Bailey, and J. Sankey, Hon. Sec. Mr. TURVER presided, and opened a discussion on the advisability of continuing the holiday-afternoon closing for two weeks longer. It was unanimously decided to continue the closing. The Chairman also commended the Benevolent-fund to the members. Mr. SANKEY said the majority of local chemists subscribed, but the present idea was to invite all registered chemists in the parliamentary division to subscribe. On the proposition of Mr. RICHARDSON, seconded by Mr. BUCKLEY, it was unanimously resolved that circulars be either obtained from headquarters or drafted by the association-secretary and the divisional secretary, and sent to each registered chemist in Blackpool parliamentary division. Mr. Buckley was to have read a paper on the "Buying of Patents," but it was not ready, and was postponed until the next meeting after a general discussion on the unsatisfactory business in unprotected patents.

Exeter Chemists' Association.

THE annual meeting of this Association was held on April 8, under the presidency of Mr. E. Lemmon. The Hon. Secretary (Mr. H. Wippell Gadd) presented the annual report, which was unanimously adopted. Mr. G. Stocker was elected President for the ensuing year, and Messrs. H. Wippell Gadd and J. H. Lake were re-elected Hon. Secre-

Digitized by Google

tary and Treasurer respectively. The retiring President (Mr. E. Lemmon) and the officers having been thanked for their past services, the financial statement was presented by Mr. J. Hinton Lake, and the committee was re-elected, with the addition of Mr. Harris.

The meeting then discussed the subject of

PHARMACEUTICAL EDUCATION,

especially in reference to Mr. Paterson's scheme. Mr. Gadd explained that pharmaceutical education should be supported by Imperial or local public money, by the Pharmaceutical Society, and by local associations. He had ascertained from the Town Clerk of Exeter that the College classes were supported by what was known as whisky-money. Some years ago the Pharmaceutical Society gave a grant of 20*l.* for furnishing a materia-medica cabinet at the local College, whilst in various ways the Association had supported pharmaceutical education, and the three ways suggested by Mr. Paterson had been carried out in Exeter.

Mr. J. HINTON LAKE moved a resolution to the effect that the Association approved generally of Mr. Paterson's scheme. Mr. D. REID seconded the resolution, which was carried unanimously.

The meeting next discussed the question of

PHARMACEUTICAL APPRENTICESHIP,

Mr. MILTON expressing the opinion that the Pharmaceutical Society should do more to protect the interests of chemists and druggists.

Mr. LEMMON agreed. The Pharmaceutical Society, he said, could protect their interests by a stricter enforcement of the Pharmacy law. The Pharmaceutical Council should see that everyone who performed the acts of a qualified chemist was a qualified chemist. If the Pharmacy Act was strictly enforced in all big stores and cutting pharmacies it would stop a great deal of mischief.

Mr. J. HINTON LAKE said a good deal depended on the members of local associations giving information to the Pharmaceutical Society or to the local Society of any cases of infringement of the Pharmacy Act.

Mr. TICKLE, dealing with the dearth of apprentices, said he was in favour of a very broad and liberal education for everybody.

Mr. REID was of opinion that the raising of the standard of the Preliminary was a step in the right direction.

Mr. VINDEN mentioned long hours as an obstacle to entering the trade.

Mr. STOCKER said one of the chief difficulties was that when an apprentice was being engaged too much was held out before him.

The discussion was continued by Mr. J. H. LAKE and Mr. H. W. GADD, and was adjourned in order that Mr. Clayden might have an opportunity of expressing his views.

Cardiff Chemists' Assistants' Association.

A MEETING of the members of the above Association was held at St. John's Café on Monday evening. Mr. A. BARRINGTON SPARROW presided, and announced that through the kindly influence of Mr. Robert Drane the whole of the chemists in the centre of the town had consented to close their shops at 2 o'clock on Wednesday afternoons. Mr. Drane was thanked. It was decided to form an Association cricket club, and Mr. J. Ferrier was appointed captain, Mr. D. Morgan vice-captain, Mr. H. L. Francis secretary, and Messrs. A. Barrington Sparrow, T. H. Davies, and Bullock, members of the committee. The PRESIDENT stated that Dr. Williams, medical officer of health to the Glamorgan County Council, had consented to read a paper on food and drugs.

CANNOT INVESTIGATE.—The Massachusetts State Board of Health has decided that it cannot make an investigation into the properties of alum, as ordered by the General Court. The order was that it study and report on the healthfulness of baking-powders, and whether the introduction into food of an ordinarily harmless article in small quantities would eventually undermine the system of a person in feeble health or dietetically disordered. The Board states its inability to carry out the order of the General Court, owing to the very great difficulties which such an examination presents.

Westminster Wisdom.

(By our Parliamentary Representative.)

PARLIAMENT REASSEMBLES.

The House of Commons met again on Monday, April 7, but until the middle of the week the attendance of members was very small. Nearly all the victims of influenza have now recovered. With the exception of the Chairman of Ways and Means, who still lingers in a sunnier climate, all the official members who were indisposed have returned to their posts. During the recess the House has been thoroughly cleaned, and any microbes which may still be lurking about the green benches must have more robust constitutions than members, for the measures that have been taken to extirpate them have been relentless.

LEAD PILLS.

Mr. Coghill has called the attention of the Home Secretary to an inquest held by the Coroner for North-West Staffordshire on March 18, on a married woman residing at Porthill, when the Coroner, in summing up, stated that it appeared that the deceased was a milliner, and had never been employed in the lead-trade, and consequently could not have got lead-poisoning in the course of her trade; that it could not be difficult to find out where this lead was obtained; and that if this had been done, and the person who supplied it knew for what purpose, he would find himself charged with manslaughter at least. In view of the fact that the jury returned a verdict to the effect that the death was due to lead-poisoning, brought about by the deceased taking lead pills for a certain purpose, the hon. member asked Mr. Ritchie whether he would cause inquiries to be instituted as to the source of supply. In answer, Mr. Ritchie stated he understood that active inquiries had been made, but that no clue had been obtained to trace the person who supplied the pills. Thereupon Mr. Coghill inquired whether the right hon. gentleman had been able to ascertain whether the practice of using the pills was common. To this Mr. Ritchie replied that the course of the inquiry had not been directed to that abstract question, but to find out where the particular pills were bought.

SURGICAL INSTRUMENTS FOR INDIA.

One of the small items of information which Mr. Galloway Weir picked up in India during the recess was that in some of the military hospitals there surgical instruments with wooden handles are used. Soon after he returned he gave notice of a question on the subject to Lord George Hamilton. The noble lord has made inquiries and learned that all instruments sent to India in recent years have metal handles. He, however, proposes to go more fully into the matter, and if there is any reason to suppose that a large proportion of the surgical instruments now in use in India are not of the most approved pattern, the Government will be anxious to replace them with as little delay as possible.

WHAT AN EPIDEMIC COSTS.

It will surprise most people to learn that the smallpox epidemic involved an expenditure of about 280,000*l.* on the part of the managers of the Metropolitan Asylum District during the half-year to the end of March. This amount includes a sum of 225,000*l.* in respect of special expenditure in connection with smallpox accommodation and transport, but it does not cover the amounts expended by Boards of Guardians and other local authorities.

MONKEY LYMPH.

Before the Easter adjournment we heard a good deal about the lymph obtained by Dr. Copeman from the inoculation of smallpox on monkeys. It has now been stated that the lymph was passed through calves and properly glycerinated before it was used for the vaccination of human beings. Mr. Long understands that the medical men using the lymph thus derived were made aware of the circumstances connected with it, but he cannot say whether the parents of the children vaccinated knew them. He is informed, however, that the amount manufactured was but small, and that whatever remained in stock was destroyed nearly two years ago.

Digitized by Google

The Supply of Government Lymph.

A question of some importance to chemists and druggists was put on Tuesday by Mr. Bartley. It was whether the President of the Local Government Board could state what progress has been made in the supply of Government lymph; whether the Local Government Board has been able to overtake the demand for it; and whether any arrangements have yet been made to supply private practitioners as well as the public vaccinators with Government lymph for primary and secondary vaccination at about cost-price. Mr. Long replied: "I am glad to say that since the early part of last month I have been able to meet all the demands made by public vaccinators for lymph, not only for primary vaccinations, but also for revaccinations. As regards the last part of the question I have carefully considered the matter, but I regret that I have not seen my way at present to comply with the suggestion of my honourable friend."

Personalities.

Mr John Crampton, chemist and druggist, Sawston, has been elected to the Sawston School Board.

Mr. J. Sumner, chemist and druggist, has been re-elected a member of the Urban District Council of Wilmslow.

Mr Philip Cornell, chemist and druggist, Tavern Street, Ipswich, has been appointed an overseer of the parish.

Mr Thomas Brewis, chemist and druggist, has been elected a member of the Portsmouth Board of Guardians.

Mr. W. J Barnes, chemist and druggist, Dover, has been appointed an overseer for the parish for the ensuing year.

Mr. Alfred Gall, chemist, Woodbridge, Suffolk, has been appointed churchwarden of St. Mary's in that town.

Mr. C. Gerring, chemist and druggist, New Romney, has been appointed overseer of the parish for the ensuing year.

Mr. H. Blackadar, chemist and druggist, has been re-elected a member of the Portsea Island Board of Guardians.

Mr. Joseph Willey, chemist and druggist, Hoyland, has been elected a member of the Hoyland Urban District Council.

Mr. Julian Horrell, chemist and druggist, Broadstairs, has been re-elected a member of the Broadstairs Urban District Council.

The name of Mr. W. S. Glyn-Jones, of the Middle Temple, occurs in the list of those who have passed the examination in Roman Law of the Council of Legal Education.

Mr. David Hooper, F.C.S., of Calcutta, has been appointed to act for six months for Dr. J. W. Leather, assistant agricultural chemist to the Government of India, at Dehra Dun, N.W.P.

Mr. Thomas Barclay (chairman of Messrs. Southall Brothers & Barclay, Limited, Birmingham) left England on March 29 on a visit to the company's fishing-station in the Lofotens.

Mr. A. R. Briggs, chemist and druggist, has been returned at the top of the poll as a member of the Horbury Urban District Council. Mr. Briggs was Vice-Chairman of the Council last year.

Mr. H. W. Carter, chairman of H. W. Carter & Co. (Limited), manufacturing chemists and mineral-water makers, of Bristol, has been appointed J.P. for the city and county of Bristol.

On April 7 Mr. Woolmer White, J.P., chemist, was entertained at a complimentary dinner given by the committee of the Southsea Central Conservative Club. Mr. White is an ex-President of the Club.

Mr. William Wilkinson, chemist and druggist, Colne, is taking keen interest in the Colne Ambulance Corps, of which he is President, and, at the recent annual meeting, reported excellent progress and work done by the corps.

Mr. G. U. Spratt, chemist and druggist, manager for Boots' Cash Chemists (Eastern) (Limited), at their London Road branch, Nottingham, has been reappointed vicar's warden for St. Philips, Nottingham, for the fifth time.

Mr. J. Shaw, chemist and druggist, Oldham, along with Sir John James Harwood and Mr. William Longbottom, Sheffield, benefits to the extent of 100*l* under the will of the late Mr. John Henry Warhurst, Newton Heath, of which they are executors.

Mr. Charles Thomas Ward, chemist and dentist, has been re-elected people's warden of St. Michel's parish church, Southwick, Sussex, for the twelfth time. Mr. Ward is the eldest son of the late Mr. Francis Ward, pharmaceutical chemist, of 11 Lower Grosvenor Place, Belgravia.

Marriages.

Epton—Casswell.—On April 3, at Dunsby Church, James Epton, chemist and druggist, Spalding, to Ethel, eldest daughter of Mr. Fred Casswell, of Dunsby.

Keall—Evans.—At York Place Chapel, Swansea, on April 3, by the Rev. Casnodyn Rhys, Allan Adolphus Keall, chemist and druggist, to Emily, daughter of Mr. Henry Evans, Swansea.

Deaths.

Donnelly.—At 59 Onslow Gardens, S.W., on April 5, Major-General Sir John Fretcheville Dykes Donnelly, K.C.B., R.E., late Secretary Science and Art Department, South Kensington. Aged 67.

Glover.—At 7 Chester Road, Tottenham, after a long and painful illness, Mr. William Glover, for many years with Messrs. S. Maw, Son & Sons, Aldersgate Street, E.C. Aged 56.

Hawley.—At Aigburth, Lancs, on March 25, Mr. John Hawley, chemist and druggist. Aged 68.

Iliffe.—At his residence in Curzon Street, Derby, on April 3, Dr. Frank Iliffe, one of the oldest and most popular medical practitioners in the town, died suddenly of syncope. Dr. Iliffe, who was 63 years of age, was the son of a chemist at Nuneaton, where his brothers Mr. George Iliffe and Mr. Thomas Perkins Iliffe, pharmaceutical chemists, are still in business.

King.—At Amersham, Bucks, on March 25, Mr. Thomas Howes King, chemist and druggist. Aged 70.

Lloyd.—On April 1, at Rossett, Denbighshire, Mr. Thos. Lloyd. Aged 74. Mr. Lloyd had carried on business at Rossett as a druggist and general storekeeper for many years. He served his apprenticeship with Messrs. Lloyd & Grindley, chemists, Chester.

Stevenson.—At 10 Broomfield Terrace, Whitby, Yorks, on April 8, Mr. John Stevenson, J.P., chemist and druggist. Aged 84. Mr. Stevenson leaves behind him a splendid record of public work. For forty-eight years he had been churchwarden of St. Mary's Parish Church, Whitby, a position which he resigned only a week before his death. He was one of the eldest local secretaries of the Pharmaceutical Society, was elected to the North Riding County Council on its formation, was on the Commission of the Peace for the North Riding, and had filled almost every public office of importance in Whitby. During an ecclesiastical interregnum Mr. Stevenson had acted as lay-rector, in which capacity he collected tithes for the Archbishop of York. He was also a founder, and the last surviving original director, of the Whitby Waterworks Company (Limited). In his younger days Mr. Stevenson combined the practices of pharmacy and veterinary surgery. Of recent years he had relinquished retail business, but remained to the last the owner of a prosperous mineral-water manufactory, which he established some time ago. Mr. Stevenson was a prominent Freemason. A few years ago he had a paralytic seizure, from which, in spite of his great age, he made a wonderful recovery, but latterly had suffered from weakness of the heart. He had been for many years a widower.

Digitized by Google

Trade Notes.

Messrs. Farrow & Jackson (Limited) have been appointed suppliers of cellar-fittings to the Prince of Wales.

"Coronatia" Soap is, we understand, the registered name which Messrs. Edward Cook & Co. (Limited) give to their new soap mentioned last week.

Messrs. Joseph and John Vickers & Co. (Limited), Victoria Distillery, Fulham, London, S.W., have, in addition to their warrant from the King, received a warrant appointing them distillers to the Prince of Wales.

"Butterfly" Cachous.—A new line of cachous just put on the market by Messrs. Potter & Clarke, of Artillery Lane, E C, has each box (which retails at 1*d.*) shaped and decorated like a butterfly. The boxes are in various colours, and should prove a catchy counter-novelty for the coming season.

Cod-liver Oil Emulsion.—It may be well for those who think of using the "non-liable" label given on page 499 of our issue of March 29, to note that "the finest A1 cod-liver oil" means the oil manufactured by Messrs. Southall Brothers & Barclay (Limited). If any other cod-liver oil is used, the "A1" should not be included in the title, for it is registered as a trade-mark.

Vaccination.—A number of medical men have advised the Vinolia Company (Limited) that they found if Vinolia powder was applied at the time of vaccination and the spots kept from the air, the vesicles dried up without the sores suppurating. The company have also had a number of letters from persons vaccinated, whose sores were accompanied by pain and great irritation, reporting that they found free applications of Vinolia cream afforded them ease and comfort.

Messrs. Philip Josephs & Son, shopfitters and showcase-makers, owing to the continued expansion of their business, are removing the whole of their workshops to more commodious premises at Lenyon Works, Danbury Street, Islington. Their offices will continue at 93 Old Street. Workshops covering more than a quarter of an acre of floor-space, and fitted with the most modern appliances employed in the trade, are now in working order, and the firm are in a position to cope with the steady increase of their business as chemists' shopfitters.

A New Catalogue.—A fresh departure has been made by Messrs. G. B. Kent & Sons (Limited), of 75 Farringdon Road, E.C., in the issue of a price-list of thirty-two pages containing a variety of sundries. The brushes of the firm are world-known, and it is likely that the sundries, which comprise such articles as knife-cleaning machines, knife-powders, felt filter-bags, sieves, chamois leathers and gloves, mortars and pestles, polishes for metal and leather, liquid glue, and many other articles of domestic utility, will soon be as universally sought after.

"Tabloid" Apomorphine Compound is the name which Messrs. Burroughs Wellcome & Co., Snow Hill Buildings, E C., have given to a preparation consisting of apomorphine hydrochloride $\frac{1}{50}$ gr., ammonium chloride 3 gr., and extract of liquorice $1\frac{1}{2}$ gr. It is a useful combination for the treatment of chronic bronchitis and any other affection of the respiratory organs in which the stimulating properties of apomorphine are indicated, the ammonium chloride being in this instance as beneficial as the iodide without its depressing properties. The tabloids are put up in bottles of 25 and 100.

"Wellcome" Aconitine.—Through The Chemists' and Druggists' Diary the trade was first informed that Messrs. Burroughs Wellcome & Co. had commenced the manufacture of certain alkaloids and other fine chemicals As an indication of the high standard which the firm have attained in this line, we may state, from independent examination of "Wellcome" aconitine (obtained through ordinary trade channels), that it equals in chemical purity and physiological activity that reported upon by Professors Dunstan and Cash to the Royal Society. A similar high standard of excellence is attained, we believe, in their other products.

Two New Remedies.—Mr. B. Kühn, of 36 St. Mary-at-Hill, London, E C, is placing on the British market, on behalf of Messrs. Knoll & Co., Ludwigshafen, two new remedies. One is called *Triferrin* It is a tasteless, pale-brown powder containing 22 per cent. of iron as para-nucleirate It thus combines the advantages of the nuclein treatment (which has been found of great service in cases where anæmia is due to toxins), and appears to us to be an ideal remedy in many respects, especially for the greatly debilitated suffering from anæmia or convalescent from severe illnesses. The dose is 5 gr. The second preparation is called *Purgatin*. It gives the pharmacist rather a shock to think that the synthetic chemist has been able to produce an article possessing the therapeutic properties of such drugs as aloes, cascara sagrada, rhubarb, and senna. That is what purgatin is. It is an oxyanthraquinone derivative, and in appearance resembles powdered rhubarb, but differs from the natural drugs in being of invariable composition and activity. Clinical experiments made with it in Berlin and elsewhere in doses of 5 to 15 gr. have proved it to be an efficient laxative, but it may be given in doses up to 30 gr. in more obstinate cases.

Reviews.

An Introduction to Dermatology. By Norman Walker, M.D. Second edition. Royal 8vo. Pp. xvi + 300. 9*s.* 6*d.* net. Bristol: J. Wright & Co.

A work of this size on skin-diseases has been a desideratum. The author is a diligent student of Dr. Unna and Dr. Allan Jamieson, and is "up" in the most modern methods of treatment, as well as the causation of the many maladies to which the skin is liable. He writes concisely, and illustrates the text well, many of the illustrations being photographs of the living subjects. The book is rich in prescriptions.

The Chemistry of Pigments. By Ernest J. Parry, B.Sc., F.I C., and John H. Coste F.I.C. Demy 8vo. Pp. 285. 10*s.* 6*d.* London: Scott, Greenwood & Co.

An exceedingly interesting volume. It does not profess to be a manufacturer's recipe-book—nevertheless, the authors succeed in giving a great deal of usable information regarding inorganic and organic pigments. To analysts it is particularly useful, because the chemistry is reliable, and the analytical processes have been used by the authors in the valuation of commercial pigments. The book is divided into four chapters. The first is on light and colour phenomena (theoretical mainly), the second on the application of pigments (a most interesting and largely historical chapter), and the third and fourth deal with the preparation, composition, use, and analysis of inorganic and organic pigments.

The Medical Annual, 1902. 7*s.* 6*d.* net. Bristol: John Wright & Co.

This is the twentieth volume of this most useful annual, and in many respects it is ahead of the nineteen which have preceded it. It does not profess to be an epitome of every contribution to medical literature made during the past year, for, owing to the fact that more than a score of specialists are contributors, the volume comprises their selection of what is best of the literature; thus the reader has the benefit of not requiring to toil through quantities of comparatively ephemeral material. The most striking features of the 1902 *Annual* are the coloured illustrations, an excellent epitome of the arsenical-beer poisoning literature, a good chapter on vision-testing, and concise abstracts of the legal decisions in 1901 which have a medical bearing. The book is excellent value for the three half-crowns which it costs.

In Germany last year 615 persons qualified as apothekers (pharmacists). The average for the previous decennium was 627 per annum. In 1901 there also qualified 41 analytical chemists, 1,344 medical practitioners, 147 dentists, and 269 veterinary surgeons.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Stamp Act Cases.

SIR,—In an Editorial note in last week's issue, dealing with the case in which Somerset House unsuccessfully prosecuted one of our members for selling "Pure Gum Pastilles—Influenza," unstamped, you rightly state that the Association is under no obligation to contest the threatened appeal. The importance of the appeal to the trade is beyond dispute. You state in the note referred to that you wait some declaration from our Association on the matter. The whole question is under consideration, and I hope to be able to write to you at an early date stating what action, if any, our Association proposes to take.

I am, yours faithfully,
W. S. GLYN-JONES.

184 and 185 Temple Chambers, Temple Avenue, E.C., April 9.

SIR,—In the Stamp Act case decided in our favour at the Marlborough Street Police Court [see this issue, page 571] Mr J. M. Davis pointed out to the Magistrate that for years the Inland Revenue authorities had attempted to extend the scope of the Act beyond the intention of the framers, who intended it only for preparations which the makers claim the exclusive right of making, and who, either by label or advertisement, profess to possess the secret of its preparation. If the contention of the Inland Revenue was correct—viz., that the word "tonic" implied a cure—other words, such as "aperient," "laxative," and "diuretic," would naturally, if used on a label, render the article liable to stamp-duty. If that were the case it would be impossible for a chemist to label any compound preparation sufficiently to indicate its use unless stamped.

We would advise chemists, when they have good reasons to consider a label not liable to stamp-duty, not to pay the mitigated fine imposed on them conditionally to non-prosecution, but to contest the case as we have in this and other cases successfully, and thus defeat the attempt of the Inland Revenue to extend unduly the powers of the Stamp Act. This is by no means the first time we have succeeded in convincing a magistrate that the Inland Revenue officers are not infallible. Also in other cases, after a long correspondence, the Inland Revenue officials have thought it wise to withdraw their threats and retreated under cover of a polite letter suggesting that we should make some slight alteration in our label.

Yours faithfully,
Coventry Street, W., April 8. J. M. DAVIS & SONS.

Emulsion-making.

SIR,—A correspondent has found fault with me for not having cautioned a young dispenser against untidy habits and damaged drugs. I have done my best to guide the first steps of a beginner, while giving him always credit for the possession of ordinary common sense. I have come into daily personal contact with very many dispensing students, and have never yet seen one who would endeavour to get a cream-coloured emulsion out of a dirty mortar, or who would hope for success by the use of rancid oil. I would ask the opinion of our great London dispensing-houses if they consider that the purification of the mortar carried almost to the point of sterilisation by repeated washings and drying is a necessity in the general course of business, and whether during the London season it would be possible to adopt such an arrangement? I agree with the statement that "all the Inces on earth cannot make a good emulsion from the intensely acid, acrid, and rancid oil which is a couple of years old." They would scarcely be so idiotic as to try.

JOSEPH INCE.

13 Alfred Road, Acton, April 7.

Sea-sickness and Asthma.

SIR,—In last week's *C. & D.* I find a remedy for or preventive of that unpleasant trouble sea-sickness. Some time ago a visitor in my house who had been out to China stated that the application of a belladonna plaster over the region of the stomach was a preventive of the trouble. It had to be put on a day or two before proceeding to sea. A lady got into a train in the neighbourhood of Glasgow about twenty months ago. She was very distressed with her breathing. A fellow-passenger told her that by wearing a necklace made of amber she might have perfect freedom in her respiratory organs. She took the advice given, and during all these months has not had a turn of her complaint. Those of our craft who know that ol. succini is used in chest complaints, and has been for generations back, will see some connection in the matter.

Arbroath, April 8. D. HAITLY BURN.

Tr. Benzoin. Co.

SIR,—When making this tincture in my early pharmaceutical days, I used sometimes to find the storax, notwithstanding vigorous occasional shakings, partially undissolved. This may have happened to some of the persons who have been summoned because of the tincture not satisfying the analysts. I overcame the difficulty, and often made the tincture in twenty-four hours thus: When I received the storax I used to liquefy it with a gentle heat, and stir into it one-fourth its weight of rectified spirit, and added this proportionally to the other ingredients. Then, with much less shaking, I had the tincture completely ready for filtration in from twenty-four to forty-eight hours. This suggestion I make feeling sure that it will save time and trouble.

Yours truly,
Feltham, April 6. G. E. BURT.

Dosage of Drugs.

SIR,—In prescribing remedies the physician has to recognise many particulars in the peculiar constitution of his patient—(1) idiosyncrasy, (2) temperament, (3) age and sex, (4) habits of life and avocation. The address given by Dr. Gordon Sharp is full of valuable suggestions on this most important subject, attention to which would be of vast assistance both to the prescriber and the dispenser, for as every bullet has its billet so a single dose may prove weal or woe to the subservient patient. The physician should be a man possessed of very active perceptive qualities, added to extensive experience, or he will much resemble many ardent young men who have distinguished themselves by bad preeminence in the disastrous wars in which our nation is engaged. Opium and mercury may be considered as typical agents in the treatment of disease. Dr. Pereira has given instances in which almost fabulous doses of opium have been taken, whilst calomel has proved fatal in ordinary doses. A medical man in Manchester astonished me one morning by saying, "I have killed two children with a grain of calomel each." He became so alarmed that he turned homœopath, saying, "It would be safer to let people die than to kill them outright." It is only fair to acknowledge he succeeded remarkably well. His dictum was, "It is a good thing to know when not to give physic." Another man, who had been an army surgeon in India, tried the Eastern practice upon English subjects, giving large doses of opium, quinine, and mercury. When he began to repeat at home the doses he gave abroad he lost many patients. The late Dr. Radford, of Manchester, found fault with some cough-lozenges. "What do you put ipecacuanha in your lozenges for?" "Only $\frac{1}{8}$ gr. in each," was the reply. "If it was $\frac{1}{50}$ gr. I should have known it. When I was an apprentice I had to pound ipecac., and it brought on an attack of dyspnœa, and I have been sensitive to its action ever since." Still more sensitive was Mr. William Wilkinson to arnica; merely handling the flowers caused erysipelas a second time after a year's interval. An old lady asked for some mild aperient pills, "But do not put any rhubarb in them." I disregarded the injunction. Next day she complained of the effects—causing her tongue to swell, with a sensation of choking. Such instances of idiosyncrasy must come under the notice of the ordinary pharmacist now and then, and "when found should be made a note of" for the mutual benefit of all parties concerned.

Deal, April 5. R. GOODWIN MUMBRAY.

The Poisons Bill.

Sir,—You have several times commented on the apathy of chemists in regard to the work of the Poisons Commission, but I believe that apathy is more apparent than real. So far, chemists have been practically helpless. There is really no way in which they can influence the deliberations of a commission of inquiry, unless they are to adopt the tactics of the enemy, and resort to the newspaper Press. It is doubtful whether chemists, even if they were willing to adopt these tactics, would meet with so much sympathy as the enemy has met with, for nothing has injured pharmacy so much in this country as the ignorance and prejudice constantly exhibited, almost without exception, by writers in the newspapers. We are hampered, too, on this question by the carbolic-acid regulations. In accepting these regulations the Pharmaceutical Council practically accepted the principle for which Mr. Cross and his friends are fighting; and although I am quite persuaded that this principle applied to such poisons as weed-killers and poisonous sheep-dips will prove disastrous to the public interests, to argue on this head, in view of the carbolic-acid regulations, is like trying to lever a heavy body without a fulcrum. I think, too, that the Pharmaceutical Council should have made an effort to find out those chemists who really had important evidence to give on this subject, and put them forward at the Commission It can be seen at a glance that chemists in business in large towns must be less able to give evidence regarding agricultural poisons than chemists in business in agricultural districts, and in view of this chemists in large towns, unless in exceptional cases, ought to have been passed over. Even in agricultural districts local secretaries ought to have been asked to find out men who were in a position to give really useful evidence. There are any number of chemists who could have done so, but even when they are found there is the further difficulty of getting them to tell what they know. The enemy has brought forward no real solid evidence to support his position. His evidence is entirely composed of the theoretical, built up on an imaginary public grievance. Chemists in all parts of the country could, if they liked, bring forward real evidence regarding the manner in which seedsmen and others handle these deadly articles, and cases could be instanced by the score, any one of which would entirely turn the tables on these men. Most of the weed-killers and sheep-dips are already being sold by seedsmen and ironmongers, and there are every season many serious accidents as a result of this, which could easily be avoided were these articles confined to the hands of those who know what they are about. As there generally exist, however, agreements between seedsmen and chemists, it is difficult to get anybody to give evidence from either side. In most cases chemists who have entered into these agreements have no power at all to protect the people. If the chemist is a wholesaler he knows that the position of the seedsman or ironmonger is illegal. The weak appearance made by the Pharmaceutical Council before this Commission may, therefore, be as much due to the natural inclination of chemists to keep silence as it is due to the even more natural inclination of the Pharmaceutical Council to bring forward men who are well known in pharmacy, rather than search for men who have valuable evidence to give. Another point which must not be overlooked is that chemists are probably sick of the more or less illegal, and altogether profitless and irksome, system of agreements with unqualified men. I sympathise with this. The system is a bad one—it could hardly be worse. Although in regard to the public interest I think it would be a backward step, rather than continue this system I would urge the legalising of the position of the seedsman and ironmonger, were it not that other interests are at stake. We can hardly say that such a course would be cutting away the foundations of the Pharmacy Act, because they are cut away already, and we have practically no Act; but it would be cutting away the rockbed on which all future pharmaceutical legislation must be built up, and that is very important. Pharmacy in this country has for years been, mostly through maladministration of the Pharmacy Act, drifting into a condition in which fresh legislation cannot be avoided, and we have now reached a point at which even outsiders see that the matter is urgent. It is for us to see that the ground is not cut away before we are allowed to begin building. I would, therefore, urge on all chemists throughout the country to relax nothing of their vigilance The Poisons Bill must come up before long in the House of Commons. It will be discussed at some length. I think chemists ought to adopt the methods they have adopted with success before—*i.e.*, educate members of Parliament. You, Sir, might publish, for circulation in the House of Commons, a broadside giving information on the matter, which chemists who cannot see members personally might forward; but I believe a personal interview is very important. I have no doubt if this system is adopted Mr. Cross and his friends will be defeated, just as many others who have tackled pharmacy in the House of Commons have been defeated before them.

Dumfries, April 7. James Reid.

Pharmacists and Druggists.

Sir,—Your correspondent "M.P.S.I.," in last week's issue, makes a most astounding assertion—*i.e.*, that many registered druggists in Ireland are busy compounding prescriptions. This is a very daring charge—a most serious matter if true. Perhaps "M.P.S.I." will give your readers the proof of his assertion, if any. Perhaps, however, as is the case often, the root of the matter may be a little jealousy at a rival's success. Possibly there is a falling-off in his receipts owing to his druggist brother's more up-to-date ideas. Competition, we know, is the very soul of business, and chemists are not exempt from this rule. The age of monopoly in the drug-trade is gone; that of competition, stern and keen, has succeeded. Let our friend not whine, but work.

Truly yours,

Nemo. (196/1.)

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

186/49. *A. E. I.*—If you write to the Comptroller of Trade-marks, 25 Southampton Buildings, London, W.C., telling him the nature of the trade-mark which you think is registered, he will reply. Enclose a stamped and addressed envelope. A thorough search can be made by one of the trade-marks agents who advertise in the *C. & D.*, and to whom you should write for terms.

194/7. *East Anglia.*—If you sell "Bile Beans" of your own or any other manufacture in penny boxes without stamping them, the Inland Revenue authorities will have good grounds for taking proceedings against you, as the title is that of a proprietary medicine which pays stamp duty.

191/17. *M. P. P.*—Neither of your labels is liable to stamp-duty. "Chapped hands" and "rough skin, lips," &c., are not considered to be ailments by the Board of Inland Revenue.

192/35. *Manchester.*—Compensation for disturbance must be based upon the loss which you are likely to suffer by ejectment, and that you may fairly estimate at the profits which will be sacrificed, as well as the value of the stock. You should, however, consult a local solicitor on the matter, and get him to act.

191/67. *Tenax.*—It is impossible for us to say whether the proprietors of Clarke's "Blood-mixture" will take action or not against you for using such a title as "Jones's Blood-mixture," but they have taken proceedings against many who have used such titles in the past, and have succeeded because infringements of their trade-mark rights were proved.

190/10. *Licence.*—If you refer to The Chemists' and Druggists' Diary, page 284, you will observe that holders of off wine-licences must not keep their shops open for the sale of wine after certain hours; but this does not apply to any other article except on Sunday or other Holy day, when nothing may be sold in such shop except between 1 and 3 P.M. and 6 and 11 P.M. in London, and 12 30 and 2.30 P.M. and 6 and 10 P.M. in the country. Correspondents will save

Digitized by Google

themselves time and trouble by referring to our DIARY in regard to matters of this kind before writing to us.

186/29. *Booco* asks: "(*a*) In a firm of two partners are they entitled to deduct twice 160*l.* from profits paying income-tax, or is the amount allowed for deduction only 160*l.*, however many partners there are in the business? (*b*) In the case of the latter being correct, assuming that a business with two partners is paying tax on 140*l.* (being difference between 300*l.* gross and 160*l.* abatement), are not the partners entitled privately to a rebate on 70*l.* each, provided their total private income does not exceed 160*l.* per annum?" [The profits of a partnership are assessed in one sum. No account is taken of the number of partners, and it follows (*a*) that only one deduction can be made, and (*b*) that the partners are not entitled to any rebate, as in that case there would be no good in assessing the partnership as a whole.]

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

193/74. *W. A. W.*—Was there a little oil of sassafras in the liniment, do you think?

186/51. *F. R.*—**Distilling Water.**—It is quite practicable for you to distil your own water. Messrs. Bennett, Sons & Shears (Limited) advertise the proper apparatus in THE CHEMISTS' AND DRUGGISTS' DIARY. Write to them, stating your wants.

180/52. *Popular.*—**Developer Formula.**—You do not help us at all in your inquiry by telling us the result of your experience. Want of clearness may be due to the use of impure water, or to a deposit of salts owing to supersaturation. Probably the latter is the cause, and may be remedied by using potassium carbonate in place of the soda salt.

185/40. *Plastic.*—**Plastic Dressing as poultice-substitute.** This is prepared by making a finely powdered white kieselguhr into a stiff paste with a mixture of glycerin and water equal parts. The glycerin should hold in solution about 1 per cent. of thymol, and antiseptic conditions should be observed when making the preparation.

185/61. *R. H. P.*—**Tattoo-colours.**—The pigments used are mineral colours such as Prussian blue, Armenian bole, Venetian red, the umbers, sap-green, Hooker's green, and ultramarine, made into a pasty consistence with water, and thinned with mucilage before use. The colours used are, in fact, selected from the ordinary water-colours of the artist, but some of the metallic colours are not suitable.

188/66. *Lubricator*—Heavy petroleum oil can be had of various specific gravities to suit the several classes of machinery. You should read an instructive article on the subject which appeared in the *C. & D.*, May 28, 1898, page 878.

187/57 (*Silica*), 123/37 (*J. G. J.*), 196/47 (*Silica.*)—**Egg-preserving.**—Please refer to pages 401 (March 8) and 477 (March 22).

188/60. *Marking-ink.*—The stains of aniline marking-ink of the Melanyl class are fairly well removed by hydrochloric acid and methylated spirit. You will have to judge whether the "delicate piece of lace" will stand this treatment.

190/11. *Subscriber.*—(1) The formula for mist. bismuthi co. given in the *C. & D.* April 5, page 542, with the addition of soluble pepsin ʒiij., will suit you. (2) "The Art of Dispensing" (*C. & D.* office, 5*s.* 6*d.*) contains a good chapter on incompatibles, which tells practically all there is to know about the subject.

190/7. *Cremolia.*—We do not know the toilet-preparation to which you refer. Perhaps you will amplify your description as to colour and odour, and say whether it is a greasy application.

195/56. *Jacobus.*—Try a daily injection of thymol (1 to 2 gr. in 3 or 4 oz. of warm water) for the seat-worms. This treatment sometimes answers splendidly. Small doses of thymol can also be taken by the mouth.

195/62. *Tonic.*—The aqua chloroformi used in your quinine-and-iron tonic should be from the B.P. 1885 formula, or you can add spiritus chloroformi ʒij. to each 6-oz. bottle.

196/38. *C. H. C F.*—We have not noticed the precipitation of crystals in vanillin essence. Can you send us a sample?

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

196/13. Address of makers of materials for ferrotypes.

192/26. Where can "Roy's specific cure for insanity" be obtained?

192/71. Name of an office that issues policies against syphons bursting.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, April 14.

Photographic and Optical Trades Exhibition, Portman Rooms, Baker Street, W. Open throughout the week, from 12 A.M. to 10 P.M. daily. Admission 1*s.*

Dewsbury Chemists' Association, Church House, at 8.30 P.M. Monthly meeting.

Tuesday, April 15

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W.C., at 8 P.M. Dr. Augustine Henry on "Chinese Drugs."

Wednesday, April 16

North-East Lancashire Chemists' Association, White Bull Hotel, Blackburn, at 9.15 P.M. Discussion on the apprentice question.

Western Chemists' Association, Westbourne Restaurant, Paddington, W., at 9 P.M. Smoking concert.

Sheffield Pharmaceutical and Chemical Society, at 8 P.M. Mr. J. Austen (President) will give "Some Historical Notes on Old Sheffield Druggists."

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. "Photography as Applied to Architectural Measurement and Surveying," by Mr. Bridges Lee.

Thursday, April 17.

Nottingham Chemists' Association. Annual dinner in the Victoria Hotel, at 7.30 P.M. Tickets (4*s.* each) can be obtained from the Hon. Secretaries, Mr. A. Eberlin and Mr. W. Gill.

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. Exhibition evening.

Chemical Society, Burlington House, W., at 8 P.M. The following papers will be communicated:—"Oxonium Salts of Fluoram and its Derivatives," by J. T. Hewitt and J. H Tervet. "The Influence of Certain Acidic Oxides on the Specific Rotations of Lactic Acid and Potassium Lactate," by G. G. Henderson and D. Prentice. "The Amounts of Nitrogen as Ammonia, and as Nitric Acid, and as Chlorine in the Rain-water collected at Rothamsted," by N. H. J. Miller. "The Amounts of Nitrogen as Nitrates and Chlorine in the Drainage through Uncropped and Unmanured Land," by N. H. J. Miller.

Chemists' Managers' and Assistants' Society. Visit to the Crown Perfumery Company's works. Members meet at Bank Station (C.L.R.) 3.30 P.M.

Friday, April 18.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Sir John H. A. MacDonald on "The Autocar."

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: April 10.

BUSINESS on the markets shows a slight improvement on that of last week, and with the resumption of the drug-auctions, which promise to be large, there will be more activity. The interesting features this week include an advance in British and German quinine and a further rise in cod-liver oil, but with buyers still holding off. Crude Japanese camphor is better, with more business doing. Shellac has been in more active demand at fluctuating prices. Menthol is a shade easier, so is castor oil, while oil of lemon is offered very cheaply. Golden seal (hydrastis) is firmer. Japanese wax is higher. Sweet-almond oil has been advanced, and caraway oil will probably be dearer. Saffron is inclined to higher prices, and buchu-leaves have been in good export demand. Cream of tartar is firmly held at the advance, tartaric acid is unaltered, and citric acid remains easy. Codeia may probably be reduced. The following are the principal charges of the week:—

Higher	Firmer	Easier	Lower
Coriander-seed	Camphor, crude (Jap.)	Jalap	Insect-flowers
Oil, almond	Golden seal	Menthol	Oil, lemon
Oil, cod-liver		Oil, castor	
Oil, Geranium (Bourbon)			
Quinine			
Shellac			
Wax, Japanese			

A Quarter's Trade.

The Board of Trade returns issued this week show that the imports last month amounted to 40,897,861*l.*, a decrease as compared with March last year of 5,528,095*l.* For the first three months of this year, as compared with the same period last year, the imports show an increase of 572,818*l.* The exports last month were 22,217,238*l.*, a decrease compared with March, 1901, of 2,804,055*l.* For the three months ending March 31, as compared with the first three months of last year, the exports show a decrease of 3,013,591*l.* It must be borne in mind, however, that the Easter holidays took place in March this year, while in 1901 they fell in April, which fact accounts to a great extent for the decrease. Also the exports of new ships declined by 2,167,000*l.* last month, so that, taken altogether, figures are fairly satisfactory. Imports of chemicals decreased by 114,186*l.* for the quarter, and the exports also decreased by 199,009*l.* Medicines and medicinal preparations to the value of 328,212*l.* were exported during the quarter, against 322,398*l.* and 300,025*l.* for the corresponding quarters of 1901 and 1900. Soda-compounds were also better by 102,000 cwt.; bleaching-powder dropped by 10,000 cwt., and sulphate of copper by 6,000 cwt. The figures regarding quinine and quinine-salts for the quarter are as follows:—

Imports			Exports	
Oz.	£		Oz.	£
60,906	3,017	British ...	130,130	8,739
		Foreign ...	55,727	2,502

Cablegrams.

HAMBURG, April 10:—Cevadilla-seed is easier, at 93m. Cod-liver oil is firmer, and camphor is unchanged.

* * * *

NEW YORK, April 10, 2 24 P.M.:—Business is fair. Quinine is higher, at 30c. per oz. Peppermint oil is easier, at $1.75. Buchu lower, at 16c. Jalap easy, at 11c. Cartagena ipecacuanha lower, at $1.25. Cod-liver oil higher, at $26 per barrel. Sarsaparilla easy at 6c. Gamboge scarce, at 73c. Thymol easier, at $2.45 per lb.

* * * *

BERGEN, April 9, 7.5 P.M.:—The market continues to advance, to-day's quotation for best non-freezing Lofoten oil being 103*s.* per barrel, f.o.b. Bergen. The fishing in the Lofoten district is now coming to an end, and the catch this week is again small. Up to date the total catch of cod amounts to 27,464,000, against 23,801,000 at the same time last year. This is estimated to yield 14,561 barrels of refined oil, against 23,290 in 1901.

Heavy Chemicals.

A fairly steady business continues to be done in the heavy-chemical market, and, generally speaking, there is really no material change in the condition of the market, nor is there much of special importance to be referred to. A distinctly pleasing feature is certainly the fact that the home-trade demand keeps up so well.

ALKALI PRODUCE.—Bleaching-powder and caustic soda are in rather better demand. Ammonia alkali continues to move briskly. Other main products without change from recent reports.

SULPHATE OF AMMONIA has taken a somewhat quieter tone, but it keeps very steady in value. Beckton, 12*l.*; Beckton terms, 11*l.* 15*s.*; London, 12*l.*; Leith, 11*l.* 18*s.* 9*d.* to 12*l.*; and Hull, 11*l.* 17*s.* 6*d.* Exports from Leith last week amounted to 507 tons.

BENZOLS keep very dull, and are lower: 90 per cent., 8½*d.*, and 50 per cent., 7½*d.* per gal.

SOUTH DURHAM SALT.—In steady request and well maintained, at 11*s.* to 11*s.* 3*d.* per ton, f.o.b. Tees.

LEAD PRODUCTS.—In continued good demand, with prices a shade higher. White sugar of lead, 24*l.* 5*s.* per ton, less 2½ per cent. Glasgow. Brown sugar of lead, 17*l.* 10*s.* per ton, less 2½ per cent. Glasgow. Nitrate of lead, 22*l.* 10*s.* per ton, less 2½ per cent. Glasgow.

SULPHOCYANIDES are without any improvement, either in value or demand. Potassium, 7¼*d.* to 7½*d.* per lb.; barium, 95 per cent., 4*d.* per lb.; and ammonium, 6*d.* per lb.

Liverpool Drug-market.

Liverpool, April 9.

CASTOR OIL.—Quietness characterises the market for good seconds Calcutta, for which 2 1/16*d.* per lb. is asked on the quay and 3*d.* in store. First-pressure French is now obtainable at 2⅞*d.* to 2 5/16*d.* per lb. There is no change in the position of second-pressure French, which can be bought at 2¼*d.*, or even a shade less.

QUILLAIA-BARK.—Considerable business has been done in this article both for export as well as for home-consumption, and 13*l.* per ton is now the lowest price.

BEESWAX.—Five bags of Chilian mixed yellow to grey changed hands at 7*l.* 10*s.* per cwt., showing a very steady market. Higher prices are looked for.

AFRICAN GINGER.—Considerable quantities have been sold to arrive at about 31*s.* per cwt, and the spot-price has advanced to 35*s.* per cwt. It is getting scarcer.

TURPENTINE is dearer, at 32*s.* to 32*s.* 6*d.* per cwt.

CANARY-SEED.—Three hundred and fifty bags of good bright Turkish are reported sold at 35*s.* to 35*s.* 3*d.* per qr.

SULPHATE OF COPPER is firmly held, at 19*l.* 5*s.* per ton.

German Drug-market.

Hamburg, April 8.

Business is very quiet at present, and our drug-market shows little animation.

AGAR-AGAR is firmer at 310m. spot, and 295m. to 300m. per 100 kilos. for forward delivery.

ALOES.—Cape is firm, at 76m. per 100 kilos.

CAMPHOR is quiet and unchanged; the refiners ask 435m. per 100 kilos., while second-hand holders take less.

CONDURANGO is held in first hands at 150m., and second-hands ask 125m. per 100 kilos.

ERGOT remains firm and scarce, at 335m. to 340m. per 100 kilos.

LYCOPODIUM continues firm, at 460m. per 100 kilos.

IPECACUANHA.—Rio is quoted 21¼m. to 22m., and Cartagena, 9¼m. per kilo.

JAPANESE WAX is firmer, at 70m. per 100 kilos.

QUININE is again firmer, the factories having advanced their price from 41m. to 43m. per kilo.

SENEGA is quoted 510m. per 100 kilos.

COD-LIVER OIL is very firm, non-congealing oil of old crop being quoted 95m., and new, 105m. per barrel.

LINSEED OIL has fluctuated considerably, but closes dull.

PEPPERMINT OIL.—Japanese is firmer, at 8¾m. per kilo.

Digitized by Google

American Drug-market.

New York, April 1.

The market has a tame appearance, and business is of somewhat limited character.

Aniseed Oil is generally quoted at $1.12½, but $1.10 per lb will buy in quantity.

Beeswax is very firm, though not quotably higher. Supplies at all points are light.

Buchu-leaves.—Short are in good jobbing request, and values are fairly steady at 18c. to 20c. for prime green.

Cocaine.—Quotations are nominally unchanged at $4.25, but active competition is still in evidence, and $4 will buy.

Codeine is unsettled owing to competition, and values have declined to $3.40 per oz.

Cod-liver Oil has sold at $24, but dealers generally ask $25 for the better brands.

Ergot has sold in quantity at 37½c., but 40c. seems now an inside figure for Russian.

Golden-seal (Hydrastis) has advanced to 52c. The market is more active, and considerable quantities changed hands at 50c. per lb.

Lemongrass Oil.—Demand is light, and quotations are lower at $1.85.

Opium is nominal at $2.92½. Probably $2.90 would buy, but the drug is neglected.

Quinine is firm on the basis of 28c., with second-hands offering at 27c. to 27½c.

Snake-root (Canada) is in light supply, and higher at 25c. to 30c. per lb.

Acid, Carbolic.—Ordinary ice crystals, 39° to 40° C., are quoted 6*d*. per lb., and 34° to 35° C., 6*d*. to 6½*d*. Liquid 95 per cent., 7½*d*. to 10*d*. per gal. Crude 60 per cent., 1*s*. 11*d*.; 75 per cent., 2*s*. 3*d*. to 2*s*. 3½*d*.

Acid, Tartaric, is firm, at 11¼*d*. to 11½*d*. per lb. for English, and 10½*d*. to 10¾*d*. for foreign.

Aloes.—Fine Curaçao aloes continue very scarce, 35*s*. being wanted. About 40 boxes black capey have arrived.

Areca.—Market is practically cleared, further sales having been made at 20*s*. per cwt.

Arrowroot.—At auction on Wednesday only 10 barrels St. Vincents sold at 2*d*. per lb. for good, the remainder being bought in at 2*d*. to 2¾*d*. per lb. for good and at 3¼*d*. for fine.

Balsam Copaiba.—In Liverpool 8 barrels Maranham have been sold at 2*s*. per lb. for ordinary cloudy, to 1*s*. 11*d*. for inferior dark.

Belladonna-root.—Good quality is very scarce at from 40*s*. to 43*s*., c.i.f., according to quality.

Benzoin.—Sumatra is in fair demand, the finer grades being scarce. The arrivals are 80 cases Sumatra, 16 of Siam, and 50 of Palembang.

Buchu.—The market is now practically cleared of first-hand supplies, there having recently been a continued demand for the American market, which has helped to sustain prices. Of the 55 bales received last week, 40 were *in transit* for the United States, and remainder will probably be offered next week.

Camphor.—Japanese crude has advanced 2*s*. 6*d*., business having been done at 145*s*. per cwt., c.i.f, for March-April shipment.

Cannabis Indica.—For siftings 2*s*. 2*d*. per lb is now asked, and 2*s*. 3*d*. for tops.

Cardamoms.—The exports from Ceylon from January 1 to March 17 have been 142,323 lbs., against 94,496 lbs. at the same date of last year, or an increase for the two-and-a-half months of over 60 per cent.

Cocoa-butter.—In auction 100 tons Cadbury's brand sold at 1*s*. 0⅛*d*. to 1*s*. 0⅜*d*. per lb., the average being 1*s*. $0\frac{5}{16}d$., against 1*s*. 0¼*d*. at the previous auction.

Codeia.—It has been rumoured that a reduction in codeia is probable, but although makers have no intention of reducing prices, they are, of course, prepared to meet the competition of Swiss makers in this market.

Cream of Tartar is firmly held, at 70*s*. 6*d*. per cwt. on the spot for best white French crystals, 72*s*. 6*d*. for powder, and 73*s*. 6*d*. for 98-per-cent. powder.

Cubebs.—The exports from Java during January amounted to 367 piculs to Singapore, against 47, 16, 221, and 44 piculs for the corresponding periods of 1901, 1900, 1899, and 1898 respectively.

Gentian is in fair demand, at from 17*s*. 6*d*. to 18*s*. per cwt. for bale-lots. C.i.f. is quoted 15*s*. to 16*s*.

Golden Seal is firmer at 2*s*. 2½*d*. per lb. net on the spot.

Gurgun Balsam.—Business has been done at 5*d*. per lb., spot.

Henbane-leaves are becoming scarce. Good picked are quoted 60*s*. to 90*s*. per cwt., c.i.f., according to quality, fine being unobtainable. Common may be had at from 35*s*. to 40*s*.

Insect-flowers.—A report from Trieste, dated March 31, states that, although stocks are small compared with previous years, some holders are inclined to accept easier prices for open flowers in view of the approaching new season. The stocks in Trieste at the end of March amounted to 124,800 kilos., against 117,500 kilos. at the end of February. The receipts in March amounted to 44,500 kilos., and the deliveries to 37,200 kilos. The following f.o.b. prices are quoted:—"Open" flowers, 68*s*. to 74*s*.; "half-open," 88*s*. to 110*s*; "closed," 116*s*. to 127*s*.; and "wild," 131*s*. to 148*s*. per cwt.

Ipecacuanha.—Since the last drug-sales about 100 packages of Cartagena root have arrived, also 19 packages Rio, 35 "cultivated" Rio, and 9 bales "cultivated" Singapore. On April 1 the stock in the warehouses amounted to 525 packages Rio and 463 packages Cartagena, the deliveries for March being 123 of both descriptions, or about double the quantity of the previous two months. Cartagena is quoted 4*s*., and Rio 9*s*. 10*d*. to 10*s*. per lb.

Jaborandi.—The 70 bales recently arrived in Liverpool per *Bourbon* have been sold at full prices, 42 bales realising 1*s*. 6*d*., and 25 bales 1*s*. 5*d*. per lb.

Jalap is easier at 5¼*d*. per lb. net for small lots.

Juniper-berries are firmly held at 11*s*. 6*d*. per cwt. spot.

Lime-juice.—Firmly held. For raw West Indian 1*s*. 3*d*. per gal. is quoted.

Menthol.—Quiet, and about 6*d*. per lb. easier this week, with sellers of Kobayashi crystals at 13*s*. to 13*s*. 3*d*. per lb., spot.

Musk.—Assam grain has been sold at 47*s*. 6*d*. per oz.

Myrrh.—Darkish Aden sorts have been sold at 55*s*, and for siftings slightly under 60*s*. has been paid.

Oil, Almond, has been advanced 1*d*. per lb., English pressers now quoting sweet (B P.) at 1*s*. 5*d*., and pallid at 1*s*. 7*d*. per lb. The cause of the advance is due to the fact that frost has affected the almond crop.

Oil, Bergamot, is quiet, at 7*s*. 3*d*. per lb. c.i.f.

Oil, Caraway, may probably be dearer, as it is reported that the crop of seed will be short this year.

Oil, Cassia.—For 80 to 85 per cent. c. a. 2*s*. 9*d*. per lb. is quoted.

Oil, Cod-liver.—This market continues to advance, agents for the refiners now asking from 107*s*. 6*d*. to 115*s*. per barrel, c.i.f., according to brand. These prices have, of course, considerably restricted business, and there is a general holding-off, buyers hoping there will be a reaction ere long. The high prices for new oil have created a good demand for old Norwegian, which has been sold at 83*s*., and 85*s*. is now wanted. For new oil, 105*s*., c.i.f., has been paid for a quantity. Our Bergen correspondent writes on April 5 that the East Lofoten fishing is now apparently closed, and that the catch in the West Lofoten district is still unsatisfactory. The quality of the fish, and especially of the liver, is becoming poorer. From Finmarken there are as yet no reports as to the commencement of the fishing. Supplies are now very small, and the market is very strong. For best new medicinal Lofoten oil 103*s*. per barrel, f.o.b. Bergen, is nearest value. The exports from Bergen to date amount to 2,837 barrels, against 2,752 barrels at the same time last year.

Oil, Geranium.—Bourbon is now very scarce and dear, prices being nominal owing to absence of stock.

Digitized by Google

Oil, Lemon, is lower, with offers of finest Messina oil at 2*s.* 5*d.* per lb., c.i.f

Oil, Peppermint.—All descriptions are quiet. American HGH is quoted 8*s.* 10½*d.* to 9*s.* per lb, spot. "First premium," 7*s.* 9*d.*, "pure" 7*s.* 3*d.*, and H. & P. 8*s.* Japanese has been sold at 3*s.* 10*d.*, spot, for dementholised.

Oil, Sassafras, is quoted 1*s.* 7*d.* to 1*s* 8½*d.* per lb., spot, according to quality.

Opium.—Quiet, with small sales of Persian at 9*s.* to 9*s.* 3*d.* per lb., spot, but for forward delivery it is reported there are no sellers. No business is reported in Turkey descriptions.

Smyrna, March 29.—The market is unchanged, sales for the week amounting to 50 cases current talequale, at the equivalent of 7*s.* 9*d.* to 7*s.* 10*d.* per lb., c.i.f. The outlook for the new crop continues favourable, as a return of good weather is announced from the principal producing sources. The arrivals at Smyrna up to date amount to 3,180 cases, against 3,992 cases at the corresponding period of last year.

Constantinople, April 4.—The position remains unchanged. Smyrna is slightly lower, and United States buyers continue purchases on a fairly considerable scale. The weather is as favourable as ever, and a continuance of same during next month will probably bring price of opium down to the lowest point it will touch during the next four or five months. The week's sales amount to 6 cases "soft," at 9*s.* to 9*s.* 6*d.* per lb.

Smyrna, April 4.—The market has declined 1*d.* per lb. this week, and about 60 cases usual current talequale and Karahissar talequale have been sold to American buyers, together with 15 cases Yerli and Boghaditz for the Continent. Crop news continues good, and a further decline is expected, as there is a pressure to sell.

Phenacetin.—It is reported that the Bayer Company are endeavouring to enforce new conditions with regard to the sale of phenacetin by requiring labels to be affixed to the 1-lb. paper parcels bearing the words that it is sold with the permission of the holders of the patent—viz, the Bayer Company. The idea is likely to meet with considerable opposition from wholesalers and others.

Quinine.—On Monday the German makers of quinine advanced prices ½*d.*, now 1*s.* 3*d* per oz. for 1,000-oz. lots in bulk. Howards also advanced their quotation 1*d*, and Whiffins ½*d.* per oz. In second-hands the market has been quiet, with small sales of May delivery at 1*s.* 2½*d.*; August, 1*s.* 2½*d.* to 1*s.* 2¾*d.*; September and October, 1*s.* 2¾*d.* per oz. Quinine salts have also been advanced, and the following are now the prices, in 100-oz. tins, for the more important:—Bisulphate, 1*s.* 3½*d* ; citrate, 1*s.* 9½*d.*; hydrobromide, 1*s.* 8½*d.*; hydrochloride, 1*s.* 8½*d.*; phosphate, 1*s.* 10½*d.*; salicylate, 1*s.* 8½*d.*; tannate (British), 11*d.*, (German) 7½*d.*; and valerianate, 1*s.* 11½*d.* per oz.

The exports of quinine from Java during January amounted to 200 cases, which were shipped to New York. The shipments for January, 1901, and 1900, were 184 and 352 cases respectively.

The exports of quinine, quinine preparations, &c., from Germany during January amounted to 9,600 kilos., against 10,400 kilos. and 29,900 kilos. in January, 1901 and 1900 respectively.

At the auction of quinine in Java on April 9, the whole quantity offered—viz., 2,700 kilos. (Ed. II.)—sold at an average of 23½f. per kilo. (about equal to 9⅜c. Amsterdam unit), against 21½f. per kilo. at the previous auction. The next sale will take place on May 21.

Saffron.—Very firm, and still inclined to higher prices in Spain. Best Valencia is quoted 23*s.* 6*d.* to 24*s.* 6*d.* per lb,, net.

The exports from Spain during January amounted to:—

		1902	1901	1900
Kilos.	...	10,818	7,867	6,661
Pesetas	...	1,082,000	787,000	666,000

Sarsaparilla.—In second-hands good fibrous Jamaica is quoted 1*s.* 6*d.* per lb., mixed at 1*s.* 5*d*, good Lima-Jamaica at 1*s.* 3*d.*, and Guatemala 7¾*d.* per lb. The arrivals include 31 bales Lima-Jamaica, 10 red native Jamaica, 5 grey Jamaica, 36 Mexican, and 7 Honduras.

The value of the exports from Honduras during the two years ending June 30, 1900 and 1901, was 4,035*l.* (1899-1900) and 3,625*l* (1900-01). The above figures do not represent the importance they should possess in a country so suitable to the production of sarsaparilla, remarks the British Consul at Honduras, and no great increase is to be expected until the Republic is more populated and general facilities improved.

Seeds.—Russian *Anise* continues slow at 20*s.* per cwt. Dutch *Caraways* are offering at 20*s.* 6*d.* to 21*s.* per cwt. for fair quality. *Canary* is very slow of sale at 36*s* 6*d.* per quarter for Turkish, and the finer qualities are quite neglected. Morocco *Coriander* is dearer at 10*s.* per cwt. *Cumin* is firm at 26*s.* 6*d* per cwt. for Morocco, and 34*s.* for Malta. *Fenugreek* quiet at 7*s.* to 7*s.* 6*d.* per cwt. *Linseed* is steady at 58*s.* to 60*s.* per quarter for fine clean.

Senega is quiet, one holder quoting 2*s.* 2½*d.* net, on the spot, while in another direction 2*s.* 4*d* is asked.

Shellac.—The market last week closed strong, and the improvement was maintained on Monday, prices showing an advance of 5*s.* per cwt. from the lowest point touched, but subsequently there was a slightly weaker tone. On the spot there has been a good demand, ordinary to good second orange TN selling at 114*s* to 117*s.* and Garnet at 100*s.* to 105*s.*, according to condition. The delivery-market has also been fairly active, the business including May delivery, 118*s.* 6*d.* to 119*s.*; June, 119*s.* 6*d.* to 121*s.*; July, 121*s.* to 122*s.*; August, 122*s.* to 123*s.* per cwt. At auction on Tuesday there was little interest shown, and of the 216 cases Second orange offered, only 16 cases sold, including pale lemony at 128*s*, and very broken red at 114*s*. Of Button 215 cases were shown, of which 80 cases sold "without reserve" at from 87*s.* to 115*s.* for more or less resinous. Of AC Garnet 132 cases offered, and 12 sold "without reserve" at 103*s.* to 106*s.*, for broken and blocky.

Spices.—The auctions were resumed on Wednesday after the Easter holidays, but there was not much demand for anything except Jamaica *Ginger*, which met with good competition and sold at steady prices for the lower qualities, and at rather dearer rates for the better descriptions. Common dark lean sold at 33*s.* 6*d.* to 36*s* 6*d.*, dull lean and small at 37*s.* to 40*s.*, dull to middling washed at 41*s.* to 46*s.*, and fair to good washed at 49*s.* to 60*s.* per cwt. Washed rough Cochin was bought in at 40*s.* per cwt. B cut sold "without reserve" at 55*s.* 6*d*, but native cut was held for high limits. Japan was bought in at 36*s.* to 37*s*, and African at 37*s.* per cwt. Zanzibar *Cloves* were bought in at 4*d.* per lb, the quotation for fair is 3⅞*d.* The market is dearer, business having been done at 4*d.* for June-August delivery. Good Amboyna were bought in at 5¾*d.* per lb. Common Zanzibar *Chillies* were bought in at 33*s.* per cwt., fair small Japan at 40*s.*, and long at 35*s.* per cwt. Fine Egyptian *Capsicums* were taken out at 50*s.*, and ordinary East India on stalk at 27*s.* per cwt. *Pimento* firmly held, but none sold, 3*d.* to 3¼*d.* per lb. was wanted for ordinary to good fair. *Mace* and *Nutmegs* slow, but unchanged. *Cassia-lignea* was bought in at 55*s.* per cwt. for new selected, *China-cinnamon* at 30*s.*, and dusty *Cinnamon-chips* at 3*d.* per lb. Black *Pepper* steady, grey Alleppy was bought in at 5¾*d.*, and good at 6*d.* per lb., Tellicherry at 6½*d.* Singapore is selling at 5 13/16*d.* per lb. on the spot, with sellers of June-August shipment at 5 15/16*d.* Good to fine Singapore white was bought in at 11*d.*, ordinary at 9¾*d.*, and Penang at 9⅞*d.* per lb.

Turmeric is slow of sale. In auction 238 bags offered, of which 19 sold at 10*s.* per cwt. for Cochin split bulbs, and 15*s.* for fair finger.

Wax, Carnauba.—In Liverpool there has been a steady demand for yellow, business including 69 bags fine Ceara at 75*s.* per cwt.; and good Maranham at 70*s* to 72*s.* Rather lower prices have been accepted for grey Ceara and Maranham, 54 bags selling at 51*s.* to 52*s.* Pernambuco is plentiful at 50*s.* per cwt.

Wax, Japanese.—Good pale squares have changed hands at 35*s.* 6*d.* per cwt., spot, being dearer. For April-June shipment 35*s.*, c.i.f., is quoted.

The January exports from Japan amounted to 260,135 kin, against 199,007 kin (kin = 1·3 lbs.).

Wax, Paraffin, is easy at from 3*d.* to 3¾*d.* per lb. for refined; and 1⅞*d.* to 2*d.* for crude.

Export of Sicilian Lemons.

The American Consul at Catania says it is estimated that about 700,000 boxes of the winter crop of lemons remain for export. Prices are very low, varying from 3·50 lire (2*s.* 6*d.*) to 5·50 lire (4*s.* 3*d.*) a box. A shipment of 300 boxes to the United States was made from Catania in March, the first within a year. The freight was 1*s.* 3*d.* a box.

TRANSATLANTIC BUSINESS.

THE Publisher desires to inform manufacturers and wholesalers that the issue of THE CHEMIST AND DRUGGIST for May 31 will be specially circulated to transatlantic buyers. Canada, the United States, and the West Indies will be thus covered, and, as export business in chemicals, medicines, and similar products with these countries is on the increase, the circulation of May 31 will be a good chance for improving the business of those who advertise in it.

Summary.

THE list of Cricket League fixtures for 1902 is given on p. 589.

XRAYSER suggests ping-pong for the Liverpool chemists (p. 613)

AN ORIENTAL ADVERTISING AGENT is suggested for home-use (p. 607).

OUR veterinary expert contributes a helpful article on indigestion in cattle (p. 599).

A PORTRAIT of Dr. Bertram Prentice, of the Royal Technical Institute, Salford, is shown on p. 629.

AT the monthly cinchona-auction supplies were larger than usual, and the bulk sold at steady rates (p. 639).

THE SOCIETY OF PHARMACY OF ANTWERP have published a Formulary, from which selections are given on p. 634.

THE TALK OF THE WEEK in business circles concerns the new Budget proposals. We deal with the matter on p. 614.

MR. P. W. SQUIRE has proved that citrine ointment made by his process keeps well and does not contain free acid (p. 595).

THE SECOND of the series of articles on the Anglo-Indian drug-trade appears on p. 620. Bombay pharmacies are dealt with.

MR. E. A. ANDREWS, of St. Mary's Hospital, suggests a new process for the preparation of liquid extract of belladonna (p. 608).

NOT MANY CHEMISTS' ASSISTANTS can spend the season at Monte Carlo, but they can read another assistant's experience on p. 619.

THE CHEMISTRY of the celandine poppy has been investigated by Schlotterbeck and Watkins. Their results will be found on p. 612.

PARTICULARS of a congress of pharmacy, which has been held in St. Petersburg, are given on p. 594, and some notes on Russian pharmacy on p. 616.

THE PORTRAITS of thirty-four Australasian pharmacy examiners are given on pp. 624–5, and short biographies of twenty of the examiners on p. 623.

THE novelties which are to be seen at the Photographic Exhibition are noted on p. 630. There are several new daylight-loading devices for films.

THE MEDICAL OFFICER OF HEALTH for Halifax has been experimenting on the quantities of arsenic contained in malt under various conditions (p. 588).

THE ANALYSIS of the contents of the stomach is becoming of great importance in certain diseases. How to conduct the analysis is described on p. 626.

AN abstract of an excellent paper by Mr. John Austen on "Old Sheffield Druggists" is printed on p. 632. Four portraits of old-time druggists are given.

A REMEDY against the substitution which is said to be practised by United States pharmacists in the sale of proprietary medicines is suggested on p. 615.

THE results of the April examinations in Edinburgh are on p. 597, whilst the names of the successful candidates at the Irish examinations will be found on p. 590.

DR. AUGUSTINE HENRY gave a lecture on Chinese drugs to the Pharmaceutical Society, and Mr. Holmes gave the meeting additional information on the same subject (p. 595).

WHY buy medicines or waste money on doctors when you have cures for all diseases in your own gardens? asks a writer to the lay Press. The gist of his remarks appears on p. 601.

LEGAL MATTERS concerning pharmacy have not been much to the fore in the Courts during the week, but a victory for the Revenue authorities in a stamp case is reported on p. 603.

THIS NUMBER contains many items about the mortar: its evolution is told by Fred Reynolds, its reminiscences by William Smart (p. 627), whilst on p. 612 the newest form of that utensil is shown.

OUR TOWN TRAVELLER has visited the York Glass Company, Messrs. Wyleys (Limited), Luce's Eau-de-Cologne Company, the Marvel Company, and Messrs. F. Schutze & Co. What he saw is described on pp. 606–7.

BUSINESS in drugs and chemicals is dull, but changes in value are few, the principal being a reduction in codeine. Menthol is firmer in Japan, cod-liver oil is unchanged, and quinine is inactive. The drug-sales, at which heavy supplies were offered, are reported on p. 639.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Mr. Robert Parry, chemist, has been elected on the Bettws-y-Coed District Council.

Mr. D. Stephens, chemist, has been re-elected a member of the Llandilo District Council.

Messrs. Hamor, Lockwood & Co. (Limited), chemical-manufacturers, Manchester, have entered upon a voluntary winding-up of the concern.

Six dogs belonging to farmers and others in the Brynna district have been found dead within the past fortnight, the death in each case unmistakably pointing to poisoning.

At Greenwich Police Court last week a lad of 14, named Robinson, was remanded in custody on a charge of embezzling 7*s.* 10*d.*, belonging to his employer, Mr. John Butler Davis, chemist, Montpelier Road, Blackheath.

Fred Robinson, for falsely obtaining commission on bogus advertisements which he alleged were from Mr. F. W. Bates, chemist and druggist, and other tradesmen, has been sent to gaol for two months by the Manchester Magistrates.

On April 14, a few friends met in the Black Horse Hotel, Redditch, and presented Mr. Dundas Simpson, chemist and druggist, with a silver-mounted walking-stick, with inscription (Mrs. Simpson being presented with an umbrella), on their leaving Redditch for the North.

Micah Morris, farmer, of Calbourne, Newbarn, was fined 2*s.* 6*d.* and 15*s.* costs by the Isle of Wight County Magistrates on April 12 for placing poisonous grain on the land. The evidence was to the effect that defendant had sown a quantity of barley recently soaked in poison, and that a pheasant and some pigeons had been picked up dead in the field. The defendant pleaded he did it to destroy the rooks, which committed great havoc with his crops.

Arsenic in Malt.

Mr. Thomas Fairley, the Leeds city analyst, in a report recently presented to the Sanitary Committee of that town, stated that out of seventy samples of beer analysed by him nine were found to contain arsenic in minute quantities. In the course of his investigations he had found that wherever beer was exposed in a room where there was dust or soot traces of arsenic were to be found. Owing to the action of beer on glass it was difficult also to get bottles which would hold the liquid any length of time without it being contaminated by the presence of arsenic.

At a sitting of the Royal Commission on Arsenical Poisoning at the Westminster Palace Hotel on April 11, Lord Kelvin presiding, Dr. Neech, medical officer for Halifax, said that, in his opinion, not more than $\frac{1}{100}$ gr. of arsenic per gal. should be allowed in beer. In giving details of experiments which he had carried out, he said that, using ordinary gas-coke, with the malt in very wet condition, unbrushed malt was found to contain $\frac{1}{355}$ gr. of arsenic per lb, and brushed malt $\frac{1}{285}$ gr. In an experiment with dry malt there was $\frac{1}{200}$ gr. of arsenic in unbrushed, and $\frac{1}{230}$ gr. in brushed malt. Two experiments were conducted with arsenical coke as fuel. With wet malt there was $\frac{1}{9}$ gr. of arsenic per lb. in unbrushed malt, and $\frac{1}{8}$ gr. in that which was brushed. With dry malt the figures were $\frac{1}{18}$ and $\frac{1}{24}$. No steps were taken to see that the barley was free from arsenic.

Contracts.

The Cambridge Public Health Committee has appointed Mr. E. W. Moss, chemist and druggist, to supply drugs, &c., to the local Infectious Diseases Hospital for one year.

Mr. T. Kenny, chemist and druggist, 236 Beverley Road, Hull, has been selected to supply the Sculcoates (Hull) Workhouse with drugs and aërated waters for the next six months.

The Mile End Board of Guardians has accepted the tender (401*l.* 17*s.* 8*d.*) of Messrs. Hodgkinson, Prestons & King, 81 Bishopsgate Street Without, E C., for the supply of drugs.

The Romford Urban District Council has accepted the tender of Mr. W. J. Bray, chemist and druggist, Romford, for the supply of disinfectants to the town for the ensuing year.

The Holywell Board of Guardians has accepted the tender of Mr. J. Prince, chemist and druggist, Connah's Quay, for the supply of drugs to the workhouse surgery for 12*l.* 15*s.*

Mr. Frederic J. Keene, chemist, Market Place, Oldbury, has been selected to supply the Oldbury District Council with carbolic-powder, chloride of lime, sulphuric acid, and roll sulphur for the ensuing year.

The East Ham Urban District Council has accepted the tender of Mr. Knights Dack, chemist, 93 Plashet Grove, East Ham, for the supply of drugs, medicines, chemists' sundries, and disinfectants for the year.

The Local Government Board continues to draw the attention of Boards of Guardians to the advisability of expensive drugs and medicines being provided by contracts with chemists, instead of through the medical officers. The Loughborough Board on April 10 considered the question, but it was decided, before taking any steps in the matter, to ask the Local Government Board what were considered expensive drugs and medicines.

At a meeting of the Yarmouth Board of Guardians on April 15, the Visiting Committee reported that at their meeting a letter was read from the Superintendent of the Apothecaries' Hall objecting to the use made of their price-list. It appears that the list had been used as a basis of tender for drugs by local chemists, who quoted a discount from the Apothecaries' Hall prices. The committee reported that instructions had been given for the medical officer of the Workhouse to be consulted, with a view to some other arrangements being made if thought desirable.

At a meeting of the Swindon Town Council on April 9, in discussing the question of the contracts for disinfectants, Ald. Jones asked why the orders should not be given to the local tradesmen. Mr. Shawyer said there was a fixed price at which Izal powder should be sold, and that being so he did not see the advantage of going outside the town for it. They should keep as much trade as possible in Swindon, but if there was such a large advantage in going outside then they certainly, in the interests of the public, ought to do so. Ald. Jones expressed himself satisfied with the answer.

At a meeting of the Stroud Board of Guardians on April 11, in a discussion regarding the drug-supply, it was suggested that some of the Stroud chemists should be asked to give an estimate for supplying the Workhouse drugs. A member stated that a chemist who supplied drugs to the Workhouse some years ago said he was willing to take the contract again. Another Guardian urged that after what the Local Government Board Inspector had said the Board should supply the drugs, as they were almost alone in allowing the doctor to provide them; while another expressed the opinion that it would be better for the patients if the drugs were dispensed at the Workhouse. No definite action was, however, taken.

Alleged Theft of Teeth.

At the North London Police-court on April 16, Morris Rosen (16), described as a metal-dealer, was charged with stealing from the surgery at 186 Mare Street, Hackney, a set and a half of artificial teeth, valued at 10*l.*, the property of Mr. William Sharman, chemist and dentist; and, further, with attempting to steal metal from the same surgery. Mr. Arthur Taylor, assistant to Mr. Sharman, gave evidence to the effect that prisoner called on April 5 offering to buy old metal or loose teeth. No business was done between the parties, but after prisoner (who left his card) had departed, a set and a half of false teeth were missed. Prisoner was suspected, and he returned a few days afterwards on the same errand. The assistant again saw him, and left the surgery for a few minutes to inform Mr. Sharman. When he returned he found the door closed and prisoner leaning over a cabinet containing some metal and loose teeth. He accused prisoner of stealing the teeth on his previous visit,

Digitized by Google

and according to the evidence of both Mr. Sharman and his assistant, prisoner said he was extremely sorry, and offered to pay 1*l.*, 2*l.*, or 3*l.* for what he had taken. The stolen teeth have not been recovered, and prisoner denies that he took the teeth, explaining that the money he offered was to pay for what he obtained on his second visit. After a lengthy hearing Mr. D'Eyncourt committed the prisoner for trial.

Dispensing to the Poor.

At a meeting of the Vaccination and Dispensary Committee of the Cardiff Board of Guardians on April 10, the question of supplying medicines containing poisons came up for discussion on a letter from the dispenser. Mr. Ames referred to the fact that the committee had already passed a resolution recommending that children under 10 years of age should not be supplied with medicines, &c., from the dispensary. They had been told that some bottles sent out contained enough poison to kill several people, and also that children had been caught drinking from bottles of physic when on the way home. He thought the resolution ought to have been accepted by the Board. Mr. Sutherland said a rule ought to be passed that no child under 14 years of age should be supplied with relief of any kind, medical or otherwise. The dispenser said the St. Pancras Guardians had passed a resolution to that effect. The Clerk was instructed to obtain information as to what was done in other Unions. Mr. Ames proposed that a stocktaker should be appointed for the dispensary. The quantities of expensive drugs used were increasing to a great extent. He thought a man should be appointed to work out from the prescriptions once a month the quantity of drugs used, and once every three months take stock of the drugs left at the dispensary. They would then be able to see where the increase arose. He thought the Guardians could get the work done for 20*l.* a year. The Clerk pointed out that there were over 3,000 prescriptions every month. Mr. Ames said that he could get a man to do it for 30*l.* a year, and if it cost more he would pay the difference. The proposal was entered on the minutes.

City upon City.

In making excavations for a cellar beneath the premises of Mr. J. T. Birkbeck, chemist and druggist, Bailgate, Lincoln, the workmen on April 10 struck some massive stones, which have turned out to be the roof of an ancient subway. The Lincoln of to-day, it is estimated from previous discoveries, is 7 feet above the first city, Lindum Colonia. When commencing their excavations in the street in front of Mr. Birkbeck's premises, the workmen came upon the old city wall, standing at this part 4 feet high, and consisting mainly of stones weighing approximately 15 cwt. each.

Midland Notes.

At Brownhills (Staffs) on April 9, Mr. Ashley Brown, chemist, Chasetown, was fined 1*l.* 12*s.* 6*d.* for driving a motor-cycle at more than twelve miles an hour at Burntwood on Good Friday.

Sir Ernest Spencer, M.P., offers as a Coronation gift to provide (at a cost of about 60*l.*) all the necessary instruments for the opening of a dental department at the West Bromwich District Hospital.

Some of our brethren find it profitable to cater for the high-class barber. Such things as bay-rum, perfumed spirit, cold shampoo, almond and olive oils, pomades, brilliantines, and glistening pomatums are often in request, and powders of various hues for dusting the hair are now fashionable.

At Coventry last week a meeting was held under the presidency of Colonel Wyley (Wyley's, Limited), at which it was resolved, in connection with the Coronation festivities, to advertise for a Lady Godiva and a white horse to repeat the ride of the fair lady who set the city free from toll in Saxon days.

Worcester pharmacists learn that the F. & D. Inspector for the County Council complains that the Act is a dead letter in the county, in spite of the fact that the Council has gone to great expense in establishing a laboratory and appointing an analyst to try to secure purity. A circular is to be issued on the subject.

Messrs. Hedges have issued broadcast throughout Edgbaston small neatly-got-up pamphlets intimating the fact that they have invaded that fashionable city quarter, and that they are ready to supply good articles and high-class dispensing by fully-qualified assistants at low charges. They beg to emphasise that they are "chemists and druggists" and not a limited company.

Sir James Sawyer, the well-known physician, is never tired of dilating upon the virtues of honey. Addressing the members of the Warwickshire Beekeepers' Association recently, he declared that honey was a nutritious food, capable of administering to every activity of the body and mind, of muscular action, and of resistance to cold and disease. If we consumed ordinary sugar it had to be changed into glucose before we could assimilate it, but the bee had already done that for us with regard to the sugar-solution which it took from the flower. Besides being nutritive, honey was valuable as a demulcent and laxative.

The Pharmaceutical Society is worrying itself about that bogey—a compulsory curriculum (writes a Midland correspondent), but can its members be aware of the practical working of such a method? The lectures, or two-thirds of them, are attended, but little heed is given to the teaching until it comes near the end. Then come the final spurt and failure. That such is the case can easily be ascertained by comparing the percentages of passes and failures at any university old or new. In a recent conjoint chemistry examination at Birmingham University only 40 per cent. passed, and the total for the kingdom was a pass-list of about 70 out of 170, and that with a five-years' curriculum.

Masonic.

A mallet, made of wood from the Spanish Armada, has been presented to Berwick Freemasons' Lodge by Bro. W. P. Carr, chemist and druggist, through the kindness of Bro. Deacon Shaw, chemist, Glasgow. Records exist proving that the old Kilwinning Lodge, was built from the Armada, and when the new Kilwinning Lodge was built portions of the wood were preserved for memento purposes, such as the mallet which has now been presented to St. David's, Berwick. The mallet bears a silver plate on which is an inscription bearing testimony to the historic interest of the gift.

Wholesale Druggists' Cricket Championship.

The following is the list of League fixtures for 1902:—

May 17	Hawley *v.* Wellcome	...	Hackney Marshes
„ 24	Burgoyne's *v.* Davy Hill's	...	Honor Oak
June 7	Wellcome *v.* Davy Hill's	...	Bowes Park
„ 21	Burgoyne's *v.* Wellcome	...	Honor Oak
„ 28	Hawley *v.* Burgoyne's	...	Hackney Marshes
July 5	Wellcome *v.* Hawley	...	Bowes Park
„ 12	Wellcome *v.* Burgoyne's	...	Bowes Park
„ 26	Davy Hill's *v.* Burgoyne's	...	Brockley
Aug. 2	Hawley *v.* Davy Hill's	...	Hackney Marshes
„ 9	Davy Hill's *v.* Wellcome	...	Brockley
„ 16	Burgoyne's *v.* Hawley	...	Honor Oak
Sept. 6	Davy Hill's *v.* Hawley	...	Brockley

The competing clubs are: "Burgoyne's" C.C. (Burgoyne, Burbidges & Co.), "Davy Hill's" C.C. (Davy, Hill & Co.). "Hawley" C.C. (Evans, Lescher & Webb), "Wellcome" C.C. (champions) (Burroughs Wellcome & Co.).

Analysts' Affairs.

Mr. A. H. Allen, F.I.C., has been re-appointed public analyst for the City of Sheffield.

Mr. Francis Sutton, pharmaceutical chemist, Norwich, was on April 12 reappointed agricultural chemist for the Norfolk County Council. He was also appointed county analyst under the Food and Drugs Acts.

At the annual meeting of the Herefordshire County Council on Saturday, it was stated that Dr. Voelcker, the county analyst, had agreed to accept a fee of fifty guineas per annum to cover fifty samples, and to analyse any further samples at half-a-guinea each. These terms were accepted by the Council.

At a meeting of the Dudley Town Council on April 8 Councillor Brooks said that in view of recent magisterial decisions he questioned the propriety of reappointing

Digitized by Google

Mr. Vaughan Hughes as public analyst. Councillor Messiter observed that Mr. Vaughan Hughes was morally right if legally wrong; and the Mayor (Councillor John Hughes) said that, although prosecutions instituted on Mr. Hughes's advice had failed in court, they had had the desired effect, and the objectionable articles had been withdrawn from sale. Mr. Hughes was accordingly reappointed.

Fire.

A fire occurred in some offices over the shop of Mr. Hortensius Aspinall, chemist and druggist, in Bridge Street, Newport-upon-Usk, on April 15. Damage to a considerable amount was done, the chief sufferers being Mr. Aspinall and Mrs. Aspinall, who has a millinery establishment next door.

The Week's Poisonings.

Only eight fatalities from poisoning have been recorded during the week, but the past few days have been characterised by a large number of "narrow escapes." The fatalities were caused by liniment of aconite (taken by a man at Blackheath in mistake for his medicine), chlorodyne, carbolic acid, vermin-killer, and a solution of caustic soda with about 15 per cent. cresylic acid (which a Chepstow publican drank, thinking it was port wine).—At Chorley a labourer's wife killed herself with phosphorus paste, while a Hackney Jewess drank a fatal quantity of liquid ammonia.—An engine-greaser at Liverpool, employed by the Spanish Cold Storage Company, inhaled ammonia-fumes, and died from the effects.—At an inquest held on the body of a married woman who died in Derby Infirmary, it was stated that she had injured herself by taking powders obtained from a local chemist for the purpose of procuring a miscarriage. After a long inquiry a verdict of blood-poisoning from abortion was returned.—An old woman named Grace Herbert obtained some poison from a cupboard during her nurse's absence and drank it, with fatal results. The jury expressed the opinion that sufficient care had not been taken as to the safe custody of the poisons.—The non-fatal cases include that of a boatman at Wolverhampton, who drank ammonia in error; an Oldham woman, who tried to poison herself with henbane, which she obtained from a chemist and druggist, and made into a strong decoction; a Winchester man, who took a quantity of phosphorus paste; a woman at West Ham, who drank a solution of oxalic acid; and a Bradford woman, who took a poisonous liniment.—At Faversham Quarter Sessions on April 8, a woman named Annie Clark was charged with attempting to commit suicide by taking laudanum, which had been obtained from the shop of Mr. Evan Jenkins, chemist and druggist, Market Place, by her ten-year-old daughter. The prosecuting counsel said it seemed extraordinary that a child should be able to purchase a fatal dose of laudanum without any questions being asked. Mr. Jenkins explained that he had complied with the Pharmacy Act, the second schedule of which only stipulated that the bottle should be labelled "Poison." The Recorder said it was an extraordinary thing, but, of course, the chemist was not responsible for it. — At an inquest held at Tottenham on April 16 on the body of a child aged 1 year, the son of an Italian, it was stated by the mother that she sent to a chemist for some castor oil. She gave the deceased half a teaspoonful of the mixture which was brought. The bottle was labelled, but no one in the house could read what was on the label. The child became red in the face as soon as it had taken the dose, and vomited. The child was taken to the chemist, and afterwards to the Tottenham Hospital, where it died on the following day. Mr. Bernard Jago, assistant to Mr. Walker, chemist, of 428 West Green Road, Tottenham, said he was a dentist but not a qualified chemist. The bottle brought to him had a "castor-oil" label on it, but he thought the messenger asked for creosote. He asked the man to say what he wanted a second time, and then supplied him with creosote, re-labelling the bottle accordingly. The messenger was present in court, and at the wish of the jury he said "castor oil." After hearing his imperfect pronunciation of the words the jury were satisfied that it was an easy mistake for Jago to have made. Dr. Andrew Galloway said that death was due to shock. He did not think the child actually swallowed any of the creosote. The Coroner (Mr. A. Hodgkinson) said although there had been a certain amount of carelessness the chemist could not be made responsible.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Pharmaceutical Society of Ireland.

The following are the names of the successful candidates at the recent examinations:—

Pharmaceutical Licence Examinations.—A. N. Yoxall, H. I. Gorman, B. Connolly, H. N. Forsythe, H. C. Thackeray, H. J. Owgan, H. Todd, H. I. Grubb, P. L. Doyle. Fourteen candidates were rejected.

Registered Druggist Examination.—A. M. Gamble, T. Hanna, W. H Howe, D. O. Perry, R. Verner, passed. Four candidates were rejected.

Pharmaceutical Assistant Examination. — G. H. Batt, H. T. Grindley, J. Hunter, passed. One candidate was rejected.

Preliminary Examination.—J. O'Neill, E Collins, Kathleen M. Roberts, W. Kelly (T. J. O'Connor = I. Keogh), J. J. Allen, W. S. Lawrie, H. G. Parker, G. H. E. Banford, A. Mitchell, F. Macguire, G. B. Hoey, M. Stack (T. Kennedy = H. Kevin). Fourteen candidates were rejected.

Must Dissent Quietly.

The opera of "The Dandy Fifth" caused some excitement in Cork last week owing to a pro-Boer element, and this week in Dublin (on the opening night of the opera, April 14) there were also scenes of disorder created by some occupants of the gallery. The police arrested eleven of the disturbers, and amongst them was Mr. James Bradley, chemist's assistant, 5 St. Benedict's Terrace, N.C.R., Dublin. The defendant, when brought up in the police-court on Tuesday, said that he was not ten minutes in the Theatre Royal when he was arrested, and he did not see why he had not a right to express disapproval or approval of what he saw on the stage. Mr. Hall (the Magistrate) said that people had a right to express dissent in a reasonable manner, but it would appear that Bradley went to the theatre with the intention of creating a disturbance, and he would have to pay a fine of 40*s.* or go to gaol for a month.

Analysts Wanted.

The Glenamaddy Guardians, the Durfanaghy Guardians, and the Kilrush Guardians require analysts. The salaries are not stated. The Gort Guardians are looking out for an analyst also (at 8*l.* per year), owing to the resignation of Sir Chas. Cameron as drug-analyst; while Durmannay Guardians must also get an analyst, as Sir Charles has resigned the analysis of drugs for that Union too.

No Increase in Salary.

At the Antrim Guardians' meeting last week Mr. Blake (analyst) asked for an increase of salary from 10*l.* to 16*l.* per year, as he is now doing the work at a loss to himself. A motion to grant the extra 6*l.* was, however, defeated by eighteen votes to seven.

Extras in Medicine.

At the Lurgan Board of Guardians' meeting last week Mr. Faloon said he observed an account from a local chemist for a large number of extras during the past month. He understood that the doctor was not to get such things without the authority of the Guardians. The account was 10*l.* 9*s.* 9*d.* The Chairman said that sometimes medicines were required immediately. Mr. Faloon said that some of the articles were ordered in dozens, and did not appear to be for temporary use only. No action was taken by the Board.

Accident.

A fatal accident occurred in the establishment of Messrs. Haslett, Belfast, a man named Parker Smith being cut to pieces by revolving machinery. He had been in the employment of the firm several years before. At the time of the accident no one was about, and it is not known how the accident occurred.

Digitized by Google

A Good Deed.

The public subscription in aid of the widow and orphans of the late Dr. Smyth, of Bartonport, co. Donegal, has realised 7 629*l*., of which 3,600*l*. was subscribed in Dublin. It will be remembered that Dr. Smyth died of fever which he contracted when conveying fever-stricken patients in a boat from the island of Aranmore to the mainland. The money has been lodged in bank in the names of five trustees, who include the Duke of Abercorn and Mr. Thomas Myles, President of the Royal College of Surgeons in Ireland.

Chemist Postmaster.

Mr. Wm. Shaw, chemist and druggist, 185 Grosvenor Street, Belfast, has been appointed postmaster for that district. Mr. Shaw received the appointment out of about forty applications.

Breaking and Entering.

Eight and six months' respectively were the sentences of the Recorder at Belfast on the burglars Anderson and Nabnez, who entered the drug-establishment of Wm. Dobbin & Co., and stole several articles therefrom.

Business Changes.

A drug-business is about to be opened at Newcastle, co. Down, by a leading northern druggist.

Mr. J. S. Weir, druggist, Strandtown, Belfast, has removed his business to new premises at 124 New Lodge Road.

Personal.

Mr. John Haslett, of Messrs. J. & J. Haslett, has been very seriously ill for some time. His illness took a critical turn a few days ago. His brother, Sir James Haslett, M.P., who was in London, had to be telegraphed for.

Mr. Wm. Jameson, Vice-President of the Chemists' and Druggists' Society, has now nearly recovered from his illness. Mr. Jameson will in future assist in his counting-house, and his genial presence will be much missed on the road. Mr. Jameson was held in great respect by his brothers on the road, and was always looked up to by the younger men.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

The Kinninmont Prize.

Intending competitors are reminded that their names should be sent to the Hon. Secretary, Mr. W. L. Currie, 223, Byres Road, Dowanhill, Glasgow, before the end of this month. The examination takes place in June. Particulars on application.

Fire.

On April 10 fire was discovered to have broken out in the dispensary of Dr. Kydd, Church Street, Port Glasgow. The brigade turned out, and the flames were speedily extinguished, but not before the contents of the shop were destroyed. The fire was caused by some burning soot falling down a chimney.

Business Changes.

Mr. Thomas Armstrong, chemist and druggist, late of Dundee, has acquired the business at Maybole formerly belonging to Mr. R. Tocher, pharmaceutical chemist.

Mr. Robert Tocher, Ph.C., F.S.M.C., who recently bought the business at 491 Victoria Road, Glasgow, formerly carried on by the late Mr. James Dickie, visits Ayr weekly for the purpose of sight-testing.

Mr. William Munro, chemist and druggist, son of the late Mr. Munro, registrar, Scone, has taken a shop next door to the Post-office in that village, and will shortly open as a dispensing chemist. He served his apprenticeship with Messrs. Dandie, Newby & Dandie, Perth, and has been for some years in Edinburgh and the South.

Home from the War.

Mr. J. D. Horsburgh, chemist and druggist, Edinburgh, has returned from the front, where he has been on active service in a field hospital for two years and four months. A portrait of Mr. Horsburgh appeared in a recent issue of the *Edinburgh Evening Dispatch*.

Glasgow Notes.

The annual business meeting of the Assistants' Association had to be adjourned *sine die* on account of the meagre attendance. Like master, like man.

Judging from the frequency with which one sees chemists' windows given up to exclusive displays of proprietary soaps, &c., the practice of letting windows for that purpose must be on the increase.

Glasgow is not remarkable for the number of Major men within its borders. The latest addition to the small band amongst the passes at the recent examination in Edinburgh is an Englishman.

The Governors of the Western Infirmary are about to erect a large outdoor dispensary block on ground adjoining the infirmary. The present premises are too small for the growing demands of the work.

At the instance of a representative local pharmacist, the Glasgow district is being "prospected," with a view to the formation of an organisation on the lines of and probably affiliated to the Edinburgh and District Trades Federation.

Mr. Quarrier, the founder of the Bridge of Weir Sanatoria for Consumptives, who is appealing for 100,000*l*. for the extension of the institution, states that according to a well-founded estimate there are 70,000 consumptives in Scotland, of whom 7,000 die annually. Mr. Quarrier is also anxious to establish a "colony of mercy" for epileptics.

A meeting of the Scottish Section of the Society of Chemical Industry was held on April 7 in the Technical College, John Street, Glasgow, when papers were read by Dr. Harry Ingle on "The Origin and Nature of the Free Acid formed during Hubl's Reaction with Unsaturated Compounds"; by Dr. Gray on "The Phenols from Scotch Shale Oil"; and by Dr. William Frew on "The Estimation of the Solid Extract in Worts and other Saccharine Liquids."

Upon the importunate representation of the Licentiates' Association, headed by Dr. Burges, the Glasgow Faculty of Physicians and Surgeons have undertaken to procure a legal definition of their licentiates' position with reference to the recent edict of the General Medical Council against the employment by medical men of unqualified persons as sellers of scheduled poisons. In stating the case for the licentiates, Dr. Burges predicted that, should the recommendations of the Poisons Committee be adopted, nearly everything in a doctor's shop would be scheduled.

The Ibrox football disaster has shown how inadequate local hospital accommodation is for such an emergency. It is now suggested that a new general hospital should be erected in Govan, and Mr. Wayland, one of the surgeons to the Victoria Infirmary, points out that the best way to relieve the chronic congestion in the number of inmates is to treat all cases of tubercular disease in separate sanatoria. An approver of this proposal says that people should support it, "and not mope away their time by discussing so much with Nurse Miss So-and-So about the fearful operation, &c., that was done by Professor McTavish on Miss Thingumbob the other day."

At a meeting of the Andersonian Naturalists' Society Professor Scott Elliot exhibited a series of specimens of wool dyed by British plants. The specimens have been presented to the Technical College by Dr. Plowright, King's Lynn, who has made a special study of the subject. Only a few simple mordants were used, such as alum, copperas, &c. Nevertheless, the range of colour is considerable, about 150 shades having been produced. Many of these are both artistic and pretty. Yellows, greens, and various hues of brown and red predominate, but there is one good blue, the indigo blue of the woad, which is still employed in some parts of England. Professor Scott Elliot remarked that the cheapness of aniline dyes practically precludes the use of vegetable dyestuffs.

French News.

(From our Paris Correspondent.)

Obituary.—The death is announced at the age of 61, of M. M. Cornu, a well-known French scientist and author of a number of remarkable works on solar spectrum, terrestrial magnetism, and the velocity of light. He was a brother of M. Cornu, the prominent botanist, who died some months ago.

Explosion at a Perfumery-works.—A few mornings ago there was a serious explosion at the works of Messrs. Piver, the well-known perfumers, at Aubervilliers, near Paris. It occurred through a leakage in a tank containing carbon bisulphide, the vapour of which filled one of the rooms during the night. An explosion took place in the morning, by which the roof was partly carried away, and one workman rather severely injured.

The Anti-tuberculosis Propaganda.—Last Sunday morning M. Millerand, French Minister of Commerce, opened a new dispensary recently organised by the Paris Society for the Prevention and Cure of Consumption. The dispensary is situated in the Place de la Nativité, and is excellently arranged, the pharmacy being a special feature. The Minister spoke of the necessity of struggling, as a patriotic duty, against tuberculosis, and highly complimented the staff of the dispensary on their present efforts.

The International Congress of Pharmacy.—A meeting of the members of this Congress was called recently to offer a souvenir to M. Charles Crinon, the General Secretary, in accordance with a resolution previously taken by the committee. The reunion was held at the offices of the Syndical Chamber of the Pharmacists of the Seine, and was numerously attended. The President of the Congress (M. Petit) took the chair, and, speaking in the name of his *confrères* who were present at the successful meetings in 1900, he referred to the arduous work so successfully undertaken by M. Crinon during the period of organisation, and, above all, in connection with the publication of the reports of the meetings. M Petit was glad to have the opportunity of expressing the feelings of appreciation and affectionate esteem which all pharmacists have for one who, like M. Crinon, has for so long valiantly defended the interests of the profession. Other gentlemen (including MM. Marty, Riéthe, and Guichard) spoke in the same terms as M. Petit, and the formal presentation of the souvenir then took place in the name of all the members of the Congress. It consists of a handsome bronze bas-relief. M. Crinon replied in suitable terms, and afterwards received the individual congratulations of the members present.

Danval, the Convict Pharmacist.—Since I wrote last week concerning the campaign started by *Le Journal* regarding the pharmacist Danval, who was sentenced to penal servitude for life twenty-four years ago for poisoning his wife with arsenic, the matter has taken a new development, a public meeting in favour of Danval having been held under the auspices of some of the leading Paris pharmacists. The reunion was held in the hall of the Société d'Horticulture, and was organised by the General Syndicate of Pharmacists and the Association of Pharmacy Students. The chair was taken by Professor Cornil, a Senator of the French Parliament and member of the Institute. He was supported on the platform by MM. Trarieux (Senator and President of the League of the Rights of Man), Chatin (son of the former Director of the Paris School of Pharmacy, and member of the Institute), Galippe (member of the Paris Academy of Medicine), Dr. Béhal (Professor of Toxicology at the Paris School of Pharmacy), and other well-known pharmacists and scientists. Professor Cornil opened the proceedings by explaining that there is sufficient ground for believing that there has been a grave miscarriage of justice in the case of Danval, and it was their duty to have every doubt on the subject removed. M. Jacques Dhur, of *Le Journal*, who has interviewed Danval at the French convict settlement at New Caledonia, then explained at length the circumstances under which he came to take the matter up. Dr. Béhal followed by giving an interesting lecture on the subject of poisoning by arsenic. He mentioned the recent new discoveries that have completely modified the scientific opinions of the experts who gave evidence at Danval's trial. These experts agreed in 1878 as to the presence of arsenic in infinitesimal proportions in the viscera of Mme. Danval. They were also of one opinion in affirming that arsenic does not normally exist in the human body. This assertion, Dr. Béhal said, is at the present time admitted to be inexact. M. Armand Gautier has recently proved that arsenic is found in milk, and in a normal state in the hair, the skin, and other parts of the human body; in fact, that arsenic is necessary to the system. M. Steins has also found it in potatoes, cabbages, turnips, and rye. It was decided that delegates should be appointed with a view to interceding with the President of the Republic on behalf of Danval, and a telegram was sent to Danval informing him that active measures are being taken to obtain his release.

The History of the Case.—The doubt as to the guilt of Danval is not new. The trial of 1878 was a sensational one, and public opinion ran high. Danval was in business as a pharmacist in the rue de Maubeuge, Paris, and was on bad terms with his wife. She died under circumstances that seemed suspicious, and the husband was arrested. The *post mortem* examination of Mme. Danval's viscera having shown the presence of a small quantity of arsenic, the question arose as to whether Mme. Danval had not been poisoned. Two of the gentlemen present at the meeting last week, who were called in as experts at the trial, MM. Cornil and Galippe, stated positively in their evidence that death was not due to poisoning by arsenic. M. Bouis, who was at that time the professor of toxicology at the Paris School of Pharmacy, gave evidence to the same effect in a particularly energetic way. In fact, it was afterwards his custom, when speaking of poisoning by arsenic in his lectures, to cite the Danval case as typical of a judicial error. Dr. Bergeron, an expert physician on the other side, insisted that Mme. Danval had been poisoned, and it was on his evidence that Danval was found guilty, but with extenuating circumstances, which led to his being transported to New Caledonia. He has never ceased to protest that he is innocent.

South African News.

Still Growing.—We are informed that Messrs. Burroughs Wellcome & Co. are opening an office in Cape Town.

Messrs. Lennon (Limited), Cape Town, have sent in their cheque for 50*l.* to the Coronation Celebration Fund of that city.

What were the Seeds? — Durban advices dated March 20 state that an Indian was lately charged before the local Magistrate with poisoning a family by placing seeds in the soup. Four people were taken sick, and a doctor declared this to be the result of vegetable-poisoning.

Dispensers in Rhodesia.—The Medical Director at Salisbury recently advertised in a Bulawayo paper for a qualified chemist to act as secretary and dispenser at Umtali Hospital, Southern Rhodesia. The salary offered was 200*l.* per annum, with board and quarters, the applicant to be unmarried and have a knowledge of bookkeeping.

Contravening the Law.—Christine Balloch, who stated that she was a certificated nurse, was fined 5*l.* or fourteen days' imprisonment in default, at Cape Town, on March 22, for contravening Section 26, sub-Section 2, of the Martial Law Regulations by obtaining, by fraudulent representation, a permit to visit the wards of the Boer prisoners of war at Simon's Town.

We have just had a visit (writes our Durban correspondent) from Mr. J. W. McBeath, who was in business in West Hartlepool for many years, and later came out and started a business in Kimberley. He went through the siege of that town, only to find himself broken in health. He has now been appointed assayer to the De Beers Co.'s branch at Salisbury in Rhodesia, to which place he is on his way.

Plague and Pestilence.—A case of smallpox was discovered at Woodstock, near Cape Town, prior to the departure

Digitized by Google

of the last mail. South Africa is keeping up its reputation as the land of plague and pestilence. Rats are dying daily at both the Cape Town docks and in the Harbour Board warehouses at Port Elizabeth of plague. Of this fact there is, unfortunately, no doubt, while mysterious cases of disease continue to make their appearance in the near interior, Graaf-Reinet being the last town to report a suspicious case.

Trade-marks.—The Molassine Company (Limited), of 36 Mark Lane, London, are registering a trade-mark consisting of a pictorial device of a boar's head over a bull's head, &c., covering food and condiment for animals in Class 42.—Application has been made to the Cape Town authorities for the registration of the Lydia E. Pinkham Medicine Company, of the City of Lynn, Massachusetts, U.S.A., as the proprietors of a certain pictorial trade-mark in respect of proprietary medicines manufactured and sold by them, including a purifier for the blood and remedies for female complaints, in liquid and lozenge form, and in the form of pills in Class III.

Building Resumed.—According to the *Bloemfontein Post* the handsome building which is now being erected on the corner of Maitland and West Burgher Streets, Bloemfontein, for Messrs. Lennon (Limited) is nearing completion. The work was commenced in 1900, but operations had to be suspended during the earlier part of the war. On the ground floor will be the pharmacy, with doctors' consulting-rooms and laboratory adjoining. The first floor will open on to a broad balcony, where there will be several offices. The premises will cost 4,000*l.* to build.

America *vid* Australia.—American exporters to South Africa located in the middle or western States, in the absence of an early sailing from New York, have now and again resorted to the Pacific route. Transhipment takes place at Sydney to one of the Australian liners trading *vid* the Cape, and in many instances this roundabout method has resulted in an earlier delivery of the goods at Cape Town than would have proved possible by waiting on a vessel at New York, subject to enormous delay in discharging in Table Bay. Australian liners homeward bound have some preference on arrival from Australia, as they bring food supplies, and will not stop at all unless they can get prompt attention.

The Sale of Opium.—At Pretoria recently, before the presiding Magistrate, a local chemist was charged with "contravening the Act prohibiting the sale of poisons except under permit." The poison—a quantity of opium—was sold to an Indian woman who had had a difference with her husband, and was anxious to end life's worries. The husband discovered the wife's intentions and the opium, and reported the matter to the police. A prosecution was the result. The accused admitted the sale, but set up the plea that, opium being an indispensable article of consumption among the Indians, no permit was required in their case. It was not his custom, he said, to sell poisons indiscriminately. The Magistrate took a lenient view of the case, and inflicted the minimum penalty.

In Memory of Martindale.—Before proceeding with the business of the Council of the Pharmaceutical Society of Cape Colony on March 20, the President (Mr. George Darroll) moved a vote of condolence to the widow of the late Mr. William Martindale. The President was sure he voiced the feelings of the whole of the craft of pharmacy in the Cape Colony when he said that they had all lost a very strong man, one whom they could not possibly replace. Mr. Martindale visited South Africa some three years ago, and while in Cape Town the Society had the honour of entertaining him to a dinner. His geniality and good comradeship on that occasion will not soon be forgotten by Cape pharmacists. Tennyson had hit the position in which they, as pharmacists, now found themselves in when he remarked that "words were yet but empty chaff well meant for grain," and that when eulogies had been passed by such pharmacists as Carteighe, Newsholme, and others, it would suffice if they put it on record that they, as Cape pharmacists, wished to endorse every word uttered by the co-workers of the late Mr. Martindale, and also every word of the trade Press. After referring to the chemist at Penzance who had a few minutes' chat with the deceased, and had remarked thereafter that he (the chemist) looked upon Mr. Martindale as a lifelong friend, the speaker went on to say that there were a number of chemists in this country that looked upon him in the same way. The English trade Press spoke of Mr. Martindale as the prince of pharmacists, but if he was not the king then the speaker was very much afraid that pharmacy had no king. In seconding the vote of condolence the ex-President of the Society, Mr. J. A. Mathew (President of the Colonial Pharmacy Board), spoke very feelingly and with admiration of the work and life of Mr. Martindale. The resolution was carried in silence, the members of the Council standing with bowed head.—Natal chemists unite (writes our Durban correspondent) in paying tribute to the memory of the late Mr. William Martindale, who paid a short visit here during his recent trip to South Africa.

American Notes.

Honouring the Dean.—A portrait of Dr. A. P. Prescott, dean of the School of Pharmacy and Director of the Chemical Laboratory of the University of Michigan, will be presented to that institution during the week of commencement in June, by the alumni of the School of Pharmacy.

Co-operation or Company-promoting?—The "Hundred Drug-store Combination" is the name of a new company just formed to do business in Philadelphia. It has a capital stock of $500,000. Mr. John McFadden, druggist, 1,440 South Twentieth Street, Philadelphia, is one of the promoters of the new company. The object of the company will be to take as many stores as practicable into the combination, to get favourable terms and prices, and to do a manufacturing business at a central laboratory yet to be equipped.

Poverty and Pharmacy.—A "Poverty Dance" was given recently by the Buffalo Pharmacists' Social Club. The invitations, printed on cheap brown wrapping-paper, said:—

Hard times have struck the sails of our ship, and we have had to pull them in, the direct cause of this, our last entertainment. The Poverty Dance does not expect you to appear in your gay evening dress—this warning is given to the fortunate few that may have them left. You are expected to put on your oldest clothes such as you may have stored away some ten years ago. The more ragged the better.

The ingenuity displayed by the average American even in his amusement is astonishing. We suspect that the spirit of the dance was the antithesis of the club's actual condition.

Recent Wills.

Clower.—The will of Mr. John Clower, pharmaceutical chemist 22 Bridge Street, Northampton, has been proved by his widow, Mrs. Grace Howard Clower, sole executrix. The gross value of the estate amounted to 715*l.* 10*s.* 6*d.*, including net personalty 469*l.* 17*s.* 4*d.*

Hopkins.—The will (with two codicils) of Mr. Thomas Hopkins, pharmaceutical chemist, who died at 44 Hamilton Terrace, St. John's Wood, on November 10, has been proved by his executors, the Rev. Thomas Daniel Hopkins, 139 King Henry's Road, South Hampstead, clerk, son, and Mr. William Furber, 2 Warwick Court, Gray's Inn, auctioneer and estate agent. The gross value of the estate is 41,187*l.* 2*s.* 10*d.*, and the net value 23,281*l.* 4*s.* 5*d.*

Randall.—The will (with one codicil) of the late Mr. W. B. Randall, pharmaceutical chemist, Southampton, has been proved by his executors—Mr. Frank William Randall, Widcombe Lodge, Ryde, Isle of Wight, mineral-water manufacturer, and Mr. Percy Mayor Randall, Glenhurst, Southampton, sons of the deceased—his widow Mrs. Mary Randall, who is named as an executor, having renounced probate. The gross value of the estate is 11,896*l.* 5*s.*, and the net personalty 6,815*l.* 11*s.* His personal effects, furniture, &c., are left to his widow, to whom 200*l.* is to be paid immediately after his decease. The testator also bequeaths 50*l.* to Mr. Alfred Mumford, pharmaceutical chemist, as a token of friendship and esteem; also 20*l.* to Mr. James Wassell, who has been in his service since boyhood. The residue of the estate is left in trust for his four sons—Mr. Frank William Randall, Mr. Percy Mayor Randall, Mr. Ernest Bidgood Randall, and Mr. Alexander Brodribb Randall. To his son Frank he bequeaths certain pictures.

Colonial and Foreign News.

A Herb-tea Fortune.—The family of the deceased Dr. Lieber owed their prosperity to the sale of a once much sold "tea," said to have been *Herb. galeopsid. grandiflor.*

Business Change.—The Medical Hall at Agra, formerly belonging to Messrs A. John & Co., has been acquired by the Agra Medical Hall & Co-operative Association (Limited), of which Mr. F. H Trehearne is manager.

Roumanian Pharmacy. — Twenty-five new pharmacies are to be opened in Roumania, of which three are to be in Bucharest. Up to now the average of pharmacies to population has been one pharmacy for 25,000 inhabitants.

Australia and the Decimal System.—The Committee on Decimal Coinage, appointed by the Federal House of Representatives, has recommended the adoption of the decimal system of coinage with the retention of the sovereign as the standard value.

Chemicals for W. Africa.—The *Gold Coast Globe* says there is an opening in West Africa for goods manufactured by wholesale chemists and surgical instrument makers. The medicine chests of the expeditions sent out by the mining companies are always well stocked with drugs.

More Casein.—The Budapest firm of Ruda & Co. is erecting a casein-factory at Maria-Theresiopel. The Government has promised a subsidy of 720*l.*, on the condition that the factory shall use all the cheese produced by the union of agriculturists of the county—viz., about 600,000 kilos. yearly.

Turkish Borax.—The International Borax Trust has acquired the Panderma mine on the south coast of the Sea of Marmora. The exportation of the Turkish borax has not been profitable of late years owing to competition with the South American product, and in 1901 only 4,000 tons were exported.

Waking Up.—With a view to the further development of its foreign trade the New South Wales Government has appointed four commercial agents. Special attention is to be given to the Far East, South Africa, and Canada. The Victorian Government has also appointed a commercial agent in South Africa.

Medical Research in the Straits Settlements.—The Institute for Medical Research at Kuala Lumpur (see *C. & D.*, January 4, page 5) is now ready for workers in general pathology, bacteriology, and chemistry. The work of organisation is almost finished, but the European assistants have not yet been engaged. Dr. Hamilton Wright, the director, hopes that independent workers will take advantage of the Institute when it becomes better known.

The Ash of a Man's Skull is still in great demand as a popular remedy in Japan. The whole head is placed in a pot and carbonised, then powdered. It is then considered a first-rate blood-cleanser. An article in a daily paper, saying that gravediggers were doing a great trade in stolen heads, brought on an investigation, and only two cases were proved. The inspection of a large number of pharmacies also was ineffective, the pharmacists stating that they used the heads of monkeys.

Saké-brewing in Japan.—Consul-General Bellows, of Yokohama, has furnished an interesting report on saké-brewing in Japan. It describes the process of manufacture, and gives some chemical analyses prepared by Mr. R. W. Atherton, professor of analytical and applied chemistry in the Tokyo University. Saké, the national drink of Japan, is as wine to France and beer to Germany. It is manufactured almost entirely from rice, and differs from beer chiefly in having a larger percentage of alcohol and smaller proportions of dextrose and dextrin.

Proposed American Store.—The American Consul at Bombay laments the fact that his country does not receive its fair share of the import or export trade of India. To remedy matters he proposes an American Department Store at Bombay to be composed of ten or twelve departments each controlled by a sub-manager. The sales, both wholesale and retail, would be on a cash basis or its equivalent, and sufficient goods would be carried in stock to permit immediate delivery. An American merchant in Bombay is writing up the plan and is to place it before American exporters.

Pharmaceutical Society of Japan.—The recent communications to the Society, which has its headquarters at Tokyo, include a paper on the constituents of sukuri seed, by Mr. Y. Kunitomo, who has examined the seed and proved that it contains a large quantity of tartaric acid beside some malic and citric acids. Mr. F. Ando has commenced the examination of the methods of testing compound "saké," partly for hygienic purposes and also in its bearings on taxation. Patent medicines are having the attention of Mr. S. Ogawa, who reports the results of examination of a few of them.

Tenders for Sulphate of Copper.—The *Gaceta de Madrid* of April 1 contains a notice calling for tenders which will be opened thirty days after that date, at 11 A.M., in the office of the Inspector-General, Chief of the Telegraph Section of Posts and Telegraphs, Caretas 10, Madrid, for the supply of 30 tons sulphate of copper, for the service of the telegraph stations of the State, at the upset price of 923 pesetas, or about 27*l.* per ton. Tenders must be presented five days prior to the date for opening, and a provisional deposit of 5 per cent. of the amount of the contract calculated at the upset price is required to qualify any tender.

Quinine in Malaria.—An article in a recent issue of the *Messagero* of Rome criticises a law passed in November of last year enforcing the use of a preparation of quinine (Quinine confectionnèe par l'Etat) manufactured by the Government. The purchase of this quinine is to be a charge upon the community amongst the proprietors of lands where the peasants, workmen and employés are engaged in the malarial districts, these districts being enumerated. It enacts that should a workman die from disease occasioned during his employment, and it can be shown that he had not been supplied with the Government remedy through the fault of his employer, the latter can be made to pay a strong indemnity to the family of the deceased. The result of this law according to the *Messagero* will prevent the development of the best work in those infected areas which only by cultivation and drainage can be made beneficial to the public. It obliges doctors to use this remedy exclusively although many have grave doubts of its absolute efficacy, and it prevents both doctors and employers from using other treatment which may be more beneficial.

A Russian Anniversary.—The Congress of Pharmacy, which had been arranged to take place in commemoration of the two-hundredth anniversary of the opening of the first public Russian pharmacy, was held at St Petersburg last month. A reception was held on March 18 at the residence of Professor A. von Poehl, the President, and the Congress was opened by the Hon. President (Professor Mendelejew) next day. In the course of his address, Professor Mendelejew stated that the development of scientific pharmacy in Russia was closely connected with Peter the Great. Since his reign it had made great progress, and had changed from a botanical to a chemical pharmacy. He pointed to the necessity of pharmacists establishing scientific pharmaceutical associations, and of them attaching themselves to learned societies, and he hoped that pharmacists might be shortly allowed to take the doctor's degree, which at present they are not allowed to. The Congress was divided into (1) pharmaceutical and biological chemistry, (2) pharmacognosy and pharmaceutical botany. One question discussed was whether pharmacists should strive for uniformity in dispensing, and a speaker said it was not possible to prepare identical preparations in all pharmacies, due in some cases to the defects in the Russian Pharmacopœia.

At a meeting of the Andersonian Naturalists' Society, Mr. Woodrow mentioned that he once read in a book on Indian botany of a tree in India, the wood of which burnt as readily when green as when dry. He had afterwards identified this tree in the Western Ghauts, and verified the statement of the book. There was also a belief, vouched for in an English work on botany, that the wood of the ash and that of the hawthorn were as combustible green as dry, but he had disproved this experimentally.

Pharmaceutical Society of Great Britain.

EVENING MEETING.

THE last of the evening meetings of the session took place on April 15, Mr. G. T. W. Newsholme (President) in the chair. The attendance was rather better than usual, some fifty being present, including Dr. Barker-Smith and Messrs. A. Cooper, W. Hills, W. S. Glyn-Jones, E. M. Holmes, E. T. Brewis, W. L. Howie, T. Stephenson, H. Helbing, R. Bremridge, and F. A Upsher-Smith.

After a few preliminary remarks, the PRESIDENT called on Mr. P. W. Squire to read his paper on

CITRINE OINTMENT.

Mr. SQUIRE explained that the paper was the outcome of the discovery of two old samples of citrine-ointment made according to the formula he suggested in 1897 and afterwards abstracted in the seventeenth edition of the "Companion."*

The samples were placed on the table, and it was seen that the pale lemon colour had darkened somewhat, but had not turned dark as samples had made at a similar time by the process which was afterwards adopted in the B.P. The objections urged against the Squire process were that the ointment "must be from the nature of the case exceedingly acid," and that "however well stirred, it is apt to be spongy." Mr. Squire finds, however, that the product is no more acid, and has no greater tendency to become spongy, than the ointment made by the B.P. process. The percentage of spongy batches made in Mr. Squire's laboratory is, in fact, greater in the case of the official formula. When Lucas's process (which afterwards became official) was first suggested in the *Pharmaceutical Journal*, it was pointed out by Mr. Squire that as the mercurial solution boils at 250° F., or 100° lower than the temperature of the heated fats, expulsion of the contents of the vessel was likely to occur on mixing. The temperature was lowered 60° in the B.P., but is still sufficiently above the boiling-point of the mercurial solution to cause trouble, though not to such a dangerous degree as before. A good deal would depend also on the interpretation of the expression "very gradually" by the operator. Mr. Squire made experiments with a view to determining the acidity of citrine ointment. Using normal soda, and either phenolphthalein, methyl orange, or litmus, it was found that the indicator did not act until the whole of the acid, either free or combined with the mercury, was neutralised by the soda. The titration showed, moreover, that almost the whole of the nitric acid was determined by this method, and that it is no easy matter to determine the quantity of free nitric acid in the presence of mercuric nitrate. Calculating the mercury in the B.P. ointment to mercuric nitrate, it works out as 3·78 per cent. of total nitric acid, and on shaking one of the old samples made by the Squire process with a mixture of petroleum ether and water, and titrating the aqueous portion the result came out as 3·78. The acid was clearly not free, as soda gave at once a yellow precipitate. If the ointment is simply shaken with warm water, only 0·69 per cent. of nitric acid is shown; but here again the acid was not free. Mr. Squire gave the details of the process, and concluded by saying that in his opinion the official method was no advantage over his process, but rather the reverse, as its keeping qualities were not so good, and it was not so easy to manipulate.

There was no discussion on the paper.

The PRESIDENT then called on Dr. Augustine Henry to read his paper on

CHINESE DRUGS,

and said that although Dr. Henry had not previously read a paper before the Society he was well known as an energetic corresponding member and contributor to the museum. He mentioned also that the Royal Horticultural Society had just awarded to Dr. Henry a medal for his researches on Chinese botany, and, added the President, "Dr. Henry is probably the greatest living authority on Chinese drugs."

Dr. HENRY began by referring to the wonderful Chinese herbal attributed to "Shen Nung," or the Divine Healer, as the most ancient herbal in the world. In this herbal 347 drugs are specified, 239 belonging to the vegetable kingdom, 65 animal, and 43 mineral. It was mentioned that myrrh, asafetida, olibanum, opium, and camphor were comparatively modern introductions into China, but that the herbal enumerates such well-known drugs as liquorice, rhubarb, gentian, mallow, aconite, madder, cinnamon, ginger, croton, gelsemium, podophyllin, cimicifuga, hyoscyamus, and artemisia. The five ancient poisons were croton, veratrum, aconite, cantharides, and lang tu (unidentified).

In China the sale of certain poisons is absolutely forbidden, but the Chinese druggist gets over the difficulty by renaming the poison. Both buyer and seller are decapitated in case of accident with poison. The doctrine of signatures is in vogue in China, but there is unquestionably a good deal of accurate observations made as the result of experiments. Simple ailments are fairly accurately understood, but the Chinese are wildly theoretical when it comes to acute diseases.

The best-known Chinese drugs were then considered seriatim.

Camphor, as before mentioned, was not used in China as a drug anciently, although the wood of the tree was employed for making boxes. Sumatra camphor from the *Dryobalanops* tree was first introduced into China, and Dr. Henry mentioned that it was through the early Dutch settlers that the Formosa and Japanese camphor-industry was introduced. Camphor is obtained from *Cinnamomum Camphora* and *Blumea balsamifera*, and is a monopoly of the Japanese Government.

Opium was introduced into China from abroad. In 1765 200 chests of the drug were imported. It is not known when opium-smoking began in China, but an edict was promulgated 100 years ago forbidding the practice. Dr. Henry briefly discussed the aspects of the opium question. Opium-smoking is recognised by the Chinese as a great evil, the Japanese have succeeded in stopping the practice in Formosa since they came into possession of that district, and the Roman Catholic Church forbids its votaries in China from dealing in or using opium in any form. The export of opium from India to China is dwindling, and Dr. Henry thinks that the Government would do well to replace the cultivation of opium by other crops, only growing sufficient to supply medical needs.

Tu chung, a bark used as a remedy for excessive perspiration, is yielded by the genus *Eucommia* (discovered by Dr. Henry), in the small Eastern order *Trochodendraceæ*. Tu chung is interesting on account of its elastic fracture and as a possible source of guttapercha.

Bandolino wood, so called because the shavings soaked in water yield a bland mucilage used for smoothing the hair, is yielded by *Machilus Thunbergii*. S et Z.

The receptacles of *Ficus pumila*, L., from Formosa, are used for making a jelly. The receptacles are steeped in water, and the product sweetened makes a pleasant summer food.

Ginseng occurs in two principal varieties—one is found in Mandchuria, Japan, and Corea, and the other in the United States and Canada, and, although there are differences between the two kinds, they are both called *Aralia quinquefolia*, Pl. et Dene., in the Kew Index. A cultivated form of ginseng, to which the Chinese attribute quite different properties, is called "San-ch'i." It is used for surgical hurts, and Burkhill has identified it as *Aralia quinquefolia* var. *Notoginseng*.

Huang-lien, cultivated in Hupeh, is *Coptis chinensis*, and probably identical with *Coptis Teeta*, Wall. Large quantities of huang-lien are imported into Bombay from China. The rhizomes of *Picrorhiza Kurroa*, Royle, are also found in the native drug-shops.

Rhubarb, notwithstanding its antiquity, has not had its botanical origin clearly defined. The only dried specimens of *Rheum*, producing rhubarb for the market in China itself, which have reached Europe have been identified as *Rheum officinale*. The great seat of the rhubarb-trade is at Hankow.

* Dissolve without the aid of heat the mercury in the nitric acid. Heat the lard and oil on a water-bath until the lard is dissolved, and when at a temperature of 180°–190° F. add the mercuric solution (cold) to the melted fats and stir continuously. When brisk effervescence has commenced, continue the heat for ten minutes, then remove from the water-bath, and stir till cold.

Digitized by Google

A portion of the rhubarb met with in this great market comes down the Yangtze from Szechwan and Tibet *vid* Tchang; another part apparently comes overland, or down the Han River from Kansu and Shensi. The great interior market of rhubarb is Si-ning, in Kansu, and an immense quantity of the drug is collected in the mountains around that city. Pratt says a good deal is collected at Za-chun-li, where it is simply sun-dried and pierced with holes. It is sent from there to Si-ning, where it receives further treatment, being dried again after being thoroughly scraped. Dr. Henry then traced the attempts that have been made to fix the botanical origin of rhubarb. Bretschneider holds that Prezewalsky in 1872 discovered the plant yielding it in Kansu to be *Rheum palmatum* var. *tanguticum*; another species from Szechwan and S.E. Tibet was described by Baillon as *Rheum officinale* Maximowicz says that *Rheum palmatum* occurs in W. Kansu, but that in E. Kansu a different species, probably *R. officinale*, Baillon, or *R. Pichonii*, Pierre, is found. Mr Holmes, from the peculiar markings of the best Chinese rhubarb, finds it is not yielded by either *R. palmatum* or *R. officinale*, which seems to show that there is an unknown species. Dr. Henry suggests that efforts should be made to obtain specimens of the plant growing in E. Kansu and Shensi, as these localities are the most likely ones in which the third species will be found. From these districts the drug would go to the great central market of Si-ning and be distributed as rhubarb to the world. No rhubarb is now exported from Canton or Tientsin, all comes down the Yangtze from Hankow.

Mu-erh, a fungus used as an article of food, is *Hirneola polytricha*. It resembles the fungus known as *Hirneola auricula-judæ* (Jew's ear), and is said by Mr. Massee to be only an eastern form of it.

Lysimachia Fœnumgræcum, Hance, is very common in Kwangsi and Yunnan, and is much used as a scent for hair-oil.

Dioscorea rhipogonoides, Oliver, occurs in Formosa, S. China, and Tonkin. The tuberous root, called the dye-yam, is used in enormous quantities for preserving fishing-nets and for dyeing. The properties of this article are well worth scientific investigation.

A sample of *Extract of tea* made in the office of the Prefect at Szemao and used only by the Dowager-Empress, to whom it is sent as tribute, was shown. It is in the form of a yellowish-brown powder, and contains 6 per cent. of caffein and 12 per cent. of tannin.

There are several kinds of *Soap trees* in common use in China—*Gymnocladus chinensis*; various species of *Gleditschia; Sapindus Mukorossi*, Gaert.; and *Pancovia Delavayi*, Franchet. The residue of the seeds of *Camellia Sasanqua*, Thunb., from which "tea oil" is pressed, is used as a hair-wash, and for washing fabrics. A decoction is used in Hong-Kong for killing earthworms in lawns.

Cassia and Cinnamon.—Cassia-bark has been shown by Ford to be derived from *Cinnamomum Cassia*, Bl., but the botanical origin of two other cinnamon-barks is unknown. One is the thick and extremely dear bark, so much esteemed by the Chinese as a medicine, which comes into China from French Laos, being carried across the Red River northwards into all parts of China. The other bark is the so-called Saigon cassia, a regular article in the New York market. It is imported from Hong-Kong, and comes from Annam, being neither a product of Saigon nor Cochin China. The bark is cultivated in the wild mountains of Annam by natives, who call it "moi." In 1896 the export from Annam was 241,000 kilos.

Star-anise.—The true star-anise, the product of *Illicium*, Hk f., only occurs in Kwangsi and Tonkin. In Japan *Illicium anisatum*, L., produces poisonous fruits, which closely resemble the true fruits, and enormous quantities of it are imported into China, but what it is used for Dr. Henry has been unable to find out. Such questions are difficult of elucidation, and the lecturer acknowledged the help he had received from Mr. Holmes in clearing up difficult points. Chinese cubebs, for instance, have been shown by Mr. Holmes to be the product of *Litsæa citrata*, Blume. A similar tree, *Litsæa pungens*, Hemsley, yields in Hupeh "mountain pepper," used by the Chinese as a condiment. Huang po, a yellow bark used as a dye, has been shown to be produced by *Phellodendron amurense*, Rupr.—an identification which the Japanese have accepted from Mr. Holmes and the lecturer.

The lecture finished with a suggestion for a botanical exploration of China, comparatively nothing being known of the upper surface of the forests owing to the immense height of the trees. Attention was also drawn to wood oil yielded by the seeds of *Aleurites cordata*, M. Arg., which was used as a varnish, and the great variety of substances yielding tannin, as certain acorn-cups and the cones of *Platycarya strobilacea*, S. et Z.

The President said that China was evidently an exceedingly interesting country, especially from the botanical point of view. It seemed to be well worth further investigation, and he hoped a scientific expedition would some day take the matter in hand.

Mr. E. M. Holmes paid a tribute to Dr. Henry's knowledge of Chinese drugs, and said the Society's museum, which contained probably the best collection of Chinese drugs in Europe, owed much valuable information to him. Mr. Holmes recalled the work which Daniel Hanbury did many years ago on Chinese remedies, and which is printed in "Science Papers." The Chinese characters of the drugs are appended, and it is a tribute to the accuracy of the work that only one of the characters has since been found to be upside down. A work on Chinese drugs, published in 1871 by Dr. Smith, remarkable for its inaccuracy, had been unfortunately taken as a standard by the Chinese Customs authorities, but his own collection of Chinese drugs, as well as the Chinese drugs shown at the Colonial and Indian Exhibition were in the Society's museum. Dr. Henry had been through the whole of the collections and had made a series of useful notes on them. The gelsemium used in China was not the same as that used in Europe, and the Corean ginseng, which was worth its weight in gold, probably owed its medicinal value to its action as a heart-stimulant. Coptis contains about 8 per cent. of berberine, a higher percentage than any other berberine-containing plant. Mr. Holmes confirmed what Dr. Henry said about the identity of the "Russian" rhubarb being as yet unknown, and said that the fungus mu-erh, which was soft like a human ear, could probably be cultivated in this country. In regard to the Saigon cassia official in the U.S P., a New York firm had, he believed, the monopoly of the drug, as the whole of the supplies went through one firm. He had never been able to find out whether *Illicium religiosum* was an intentional addition to star-anise, but from what Dr. Henry had stated he thought it might be accidental. (Dr. Henry had said that the Chinese suffered very much from cholera, which might be due, he suggested, to poisonous anise which produced similar symptoms). In regard to the introduction of Chinese products into Europe, Mr. Holmes thought that some of the saponin-yielding plants might be advantageously employed for washing silks and other delicate fabrics, and that tung oil could in some cases replace linseed oil; indeed, the fruits of *Sapindus Mukorossi* and tung oil had been recently imported into this country. Professor Greenish had examined the bandoline-bark, but had not been able to stain the mucilage-secreting cells so as to show them on the screen.

Dr. Barker-Smith asked if Dr. Henry could give his impressions as to the success of Chinese medical practice. Were there any drugs unknown in Europe which had, for instance, pronounced resolvent action?

Mr. Hills asked if botany was taught in China at all.

Mr. R. A Robinson, jun., inquired as to the Chinese blistering-beetles. Was there any recognised industry?

Dr. Henry, in reply, said it was impossible to know much about Chinese medical practice, as one could not get sufficiently into the confidence of native doctors, and there were no schools of medicine. The Chinese were not impressed by European medical practice, but admitted that they (the Europeans) shone in surgery. His impression was that the Chinese had a good deal of empirical skill in medicine, but he said he had come across a statement that trepanning was practised as far back as the fourth century. Botany was not taught in China, and the importation of a scientific botanist a few years ago was not attended with much success, because that gentleman was only acquainted with microscopic botany. Blistering-beetles are an article of trade, but he had confined himself rather to the vegetable materia medica, and had not been in a district where the beetles were collected.

A vote of thanks was accorded to Dr. Henry for his paper.

EXAMINATIONS IN EDINBURGH, APRIL, 1902.

THE Registrar of the Pharmaceutical Society of Great Britain has furnished us with the following list of persons who have satisfied the Examiners at the recent Major and Minor examinations held in Edinburgh:—

Major Examination.

Candidates examined and passed 3

Baxter, Alex. C., Edinburgh | Bintcliffe, J.W., Holywell Green
Rodwell, Henry, Glasgow.

Minor Examination.

Candidates examined ...	...	...	...	122
„ failed ...	...	...	...	79
„ passed ...	...	...	...	43

Allan, David Souter, Aberdeen
Anderson, Wm. G., Edinburgh
Blackburn, Sidney Richard, Newcastle-on-Tyne
Brittain, Richd. H., Edinburgh
Bruce, F., New Deer, Aberdeen
Cox, Horace Nelson, Edinburgh
Craig, Thomas Forrest, Kelso
Dainty, J.E., Barrow-in-Furness
Dewar, A. O. C., Cupar, Fife
Dick, Jas. Anderson R., Forfar
Forrester, Ethel M. G., Edinburgh
Fraser, David Wilson, Ayr
Frost, Wm. Thos., Worthing
Gibson, Wm. Wightman, Buckie
Granger, Ernest Richd., Whitby
Gross, G. F. C., Barrow-in-Furness
Henderson, John Reed, Glasgow
Jones, Arthur A., Liverpool
Jones, Benjamin S., Crewe
Kelman, John, Edinburgh
Kirby, William, Northallerton
Lishman, Arthur, Newcastle-on-Tyne
McArthur, Donald, Glasgow
McDiarmid, Geo., Edinburgh
McGeorge, Richd., Edinburgh
McHardy, Alex., Dalkeith
MacLean, Jas., Conon Bridge
McLellan, J. Y., Kirkintilloch
Maxwell, William, Kelso
Michael, George, Edinburgh
Mungall, Allan, Avonbridge
Nicolson, Charles, Glasgow
Parker, Benjamin, Derby
Pollock, Thomas L., Penrith
Pugh, Francis Chas., Liverpool
Pyatt, Geo. Henry, Nottingham
Reid, David, South Shields
Smeddles, G. R., Barrow-in-Furness
Swan, William, Dumfries
White, C. H., Burton-on-Trent
Whyte, Edward, Dundee
Wilkinson, John Feather, Leeds
Wilson, Stewart, Glasgow

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1l., obtainable through any money-order office.

(*From the "Trade-marks Journal," April* 2, 1902.)

Device of "O" with arrow, and "Ospia" with arrow through "O"; for perfumery. By the "Ospia" Perfumery Company, 8 Ludgate Hill, E.C. 244,383 and 244,344.

"Repeater"; for perfumery. By A. H. Franks, 61 and 63 Upper Parliament Street, Nottingham. 244,641.

'Lienoline"; for a linoleum and leather polish. By C. J. Badham, Christchurch, N.Z. 241,196.

(*From the "Trade-marks Journal," April* 9, 1902.)

"Goldine" and other wording (no claim for the exclusive use of the word "Gold"); for gold-paint. By Tyler & Ashmore, 21 Albert Street, Birmingham. 244,037.

"Boardine" (the essential particular—no claim for "Board"); for a blackboard varnish. By J. Moncrieff, Perth, N.B. 243,814.

"Termifoe"; for a chemical wood-preservative. By Burgoyne, Burbidges & Co., Coleman Street, E.C. 244,147.

"Sulphol" (no claim for "Sulpho"); for chemicals. By A Boake Roberts & Co. (Limited), 100 Carpenters Road, Stratford, E. 244,797.

"Ligmolliene"; for patent medicines. By W. H. Malyon, Sturt Street, Ballarat, Victoria, Australia. 243,596.

Device (the essential particular) of a label for a rheumatism cure. By H. G. W. Claringbull, Fairfield Cottage, Belle Vue Park, Beeston, Notts. 243,999.

Device (the essential particular) of portion of a belladonna-plant for chemicals. By Gale & Co., 15 Bouverie Street, Fleet Street, E.C. 244,019.

"Ping Pong"; for goods in Class 3. By S. H. Ward, 48 Cranmer Street, Nottingham. 244,259.

"Malprecier"; for medicines. By A. A. Pyke, 22 Bishopsgate Street Without, E.C. 244,277.

"Eupnein"; for a medicine. By Schiefflin & Co., 170 William Street, New York, U.S.A. 244,330.

"Torrent"; for aërated-water machinery. By the Rylands Glass and Engineering Company (Limited), Barnsley. 244,459.

"Compoïd" (no claim for "Compo"); for goods in Class 40. By Falconnet, Perodeaud et Cie., 4 Place Carnot, Choisy-le-Roi (Seine), France. 242,125.

"Fruitose" (no claim for "Fruit"); for goods in Class 42. By S. M. Freeman, 7 Victoria Street, Liverpool. 242,865.

"Molascuit" (no claim for "Mola"); for food for animals. By G. H. Hughes, 155 Fenchurch Street, E.C. 243,536.

Combination of devices and facsimile of signature of the firm (essential particulars); for vinegar. By Dessaux Fils, 17 Rue de la Tour, Neuve, Orléans. 243,053.

"Ixondi Brand" device; for foodstuffs. By W. Dixon & Son, 29 Crown Street, Leeds. 244,282.

"Neufaline" and combination of devices (the essential particulars); for a detergent. By Charles Buchet et Cie., 13 St. Mary Axe, E.C. 243,723.

Shield device with picture of lady, and the word "Foscarina" (the essential particulars); for a perfume. By Ed. Pinaud, 18 Place Vendome, Paris. 242,701.

"Nutricap"; for hair-preparations. By E. Renton, 26 King Street, St. James's, S.W. 243,054.

'Gondola"; for polishes, &c. By Helen Pringle Kirtley, 86 Brighton Grove, Newcastle-on-Tyne. 244,039.

"Poli-Varn"; for leather and furniture polishes, heel-ball, knife-powder, &c. By John Packer Company, Honeywood Road, Willesden, N.W. 244,153.

"Limpet"; for a waterproofing-solution. By Douglas McNae, 530 Fulham Road, S.W. 244,326.

(*From the "Trade-marks Journal," April* 16, 1902.)

"Burnatine" (no claim for "Burn"); for a chemical-smoke preventive. By H. J. McBride and H. W. McBride, Hyde Park Bleach-works, Belfast. 243,972.

Device of steamer with words "Ilford Limited"; for photographic goods. By Ilford (Limited), Roden Street, Ilford, E. 240,679.

"Flashaxe," "Goldaxe," "Sensaxe," "Platinaxe," "Ceraxe," "Uranaxe," "Intensifaxe," "Redusaxe"; for chemicals. By Fuerst Brothers, 17 Philpot Lane, E.C. 244,665, 244,666, 244,667, 244,668, 244,669, 244,670, 244,671, and 244,672.

"Ping-pong Febrisum" (no claim for "Febris"); for goods in Class 2. By S. H. Ward, 48 Cranmer Street, Nottingham. 244,604.

Device and the word "Hämatogen" (the essential particulars. No claim for "Haemato"); for a blood tonic. By Nicolay & Co., Josephstrasse 22, Zurich III, Switzerland. 238,860.

Device and word "Biokon"; for a medicine. By H. E. Law, 2304 Van Ness Boulevard, San Francisco, California, U.S.A. 240,417.

Combination of devices (the essential particular); for a medicine. By J. B. Daniel, 32 and 34 Wall Street, Atlanta, Georgia, U.S.A. 243,592.

"Humpo"; for a medicine. By the Humpo Cure Company, 10 Featherstone Buildings, Holborn, W.C. 244,843.

Picture device; for goods included in Class 3 (but not including salves). By the Samaritan Healer Company, 67 St. Domingo Grove, Liverpool. 243,380.

"Varoma"; for lung and throat cures. By the Varoma Medical Company, 170 William Street, Borough of Manhattan, New York, U.S.A. 244,072.

"Phosferine" and label; for a medical preparation. By Ashton & Parsons (Limited), 17 Farringdon Road, E.C. 244,526.

"Varilla"; for a medicine. By J. W. Simpkin, 5 Nelson Terrace, Dundee. 244,676.

"Golden Swan" and device of swan on label; for baking-powder and egg-powder. By Pearce, Duff & Co., 79 Rouel Road, Bermondsey, S.E. 244,470.

Trade Notes.

Messrs. Leath & Ross, homœopathic chemists, 58 Duke Street, Grosvenor Square, W., inform us that they have a direct representative leaving for China, Japan, and India on Saturday.

Trade-trucks.—Messrs. Reigate & Mason, Wrottesley Street, Birmingham, send us a copy of their new season's price-list of carriers and delivery trucks. Several of the trucks are specially devised for chemists' use.

The regular trade-exhibition season is still some months off, but an announcement of the dates of the Confectioners', Grocers', and Brewers' exhibitions is made in our advertisement-columns, so that intending exhibitors may book space well in advance.

Messrs. Cresswell Brothers & Schmitz, Red Lion Square, W.C., inform us that they have no connection with the firm which recently traded in Cape Town under the firm-name of Cresswell, Sons & Co., nor do they employ any local or indent agents in Cape Town.

"Tabloid" Ammonium Chloride and Liquorice.—We referred last week to a new tabloid that Messrs. Burroughs Wellcome & Co. have introduced for the treatment of bronchitis, containing apomorphine, ammonium chloride, and liquorice. A similar preparation without the apomorphine is now available, put up in bottles of 100.

The Annual Report for 1901 prepared and published by the firm E. Merck, Darmstadt (16 Jewry Street, London, E.C.), contains a great deal of useful chemical and pharmacological information regarding the newer materia medica, besides an exhaustive monograph on the assay of opium, to which we hope to refer more fully on an early opportunity.

Photographic Chemicals.—Messrs. Harrington Brothers, manufacturing chemists, 4 Oliver's Yard, City Road, E.C., who have already a reputation for their photographic chemicals, send us a copy of the new list of the goods they are issuing. Besides selling the chemicals in bulk, many of them are put up in bottles ready for sale, and a special department is occupied in making and bottling developers and other solutions, according to the photographic chemists' own formulas.

Sphagnum, or dried moss, for which Mr. Martindale, 10 New Cavendish Street, W., has the sole agency, deserves to be better known in the colonies. It is used as an absorbent dressing, and has a pleasant peaty odour and antiputrescent qualities. The moss is sent out in sheets, like cardboard, ⅛ inch thick, and when wetted absorbs ten to twenty times its weight of water and swells up to the thickness of an inch. It makes an excellent poultice-material. Colonial readers who are not already acquainted with dried moss should write for a sample.

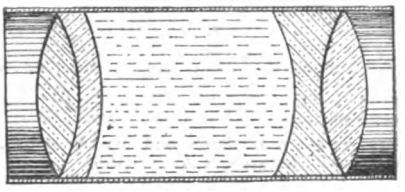
Seasonable Goods.—Messrs. T. Howard Lloyd & Co., Leicester, submit samples of three leading lines for the summer season—citrate of magnesia, Saline Grains, and Sulphur Saline. These are packed goods labelled with tasteful stock labels. For the Saline Grains and Sulphur Saline round-corner white bottles are used which show off the white or pale yellow of the contents. We find that as granular effervescent preparations they leave nothing to desire, and that, on placing the granules in water, the effervescence is well sustained.

A Good Line.—Messrs. Woolleys (Limited), Blackburn, have shown us a sample of their Sulphur-and-Sarsaparilla Health Salt which is in a different form from what such preparations usually are. The salt is in powder form, and of a brown colour; it smells like compound decoction of sarsaparilla, and when put in water dissolves at once, but leaves a nice foam on the top of the sparkling liquid. It is being introduced to chemists in tastefully decorated tins, which should go a long way to selling the preparation. The salt is packed under the distinctive name of the "Revo" brand.

For the Colonies.—Messrs. Kay Brothers (Limited), of Stockport, have recently received a testimonial written by the late Dr. Jeffreson, F.R.G.S., of Morocco, testifying to the efficacy of the "Vampire" fly-catcher as a snarer of mosquitoes. Messrs. Kay have also sent us a 1*d.* sample of "Tenasitine," their new cement. It is put up in collapsible tubes to retail at 1*d.* and 6*d.* each. The 1*d.* tubes are put up on cards, 1½ doz. to each card, and two cards are fitted in a box. In the Colonies Messrs. Gollin & Co. (Limited), of Melbourne, Sydney, and Auckland, will hold stock of both of these articles, which should find a ready sale amongst the clients of our Antipodean brethren.

Three Pharmaceutical Preparations reach us from Messrs. Parke, Davis & Co., 111 Queen Victoria Street, E.C., which are of considerable interest. The first is adenalin chloride solution (1–1,000), to which reference has been frequently made in our columns, especially as to its value as an astringent and hæmostatic. Cascara Evacuant is a new preparation of cascara sagrada, which originated from the fact, discovered by Messrs. Parke, Davis & Co., that cascara does not owe its laxative effect to the presence of the bitter glucoside alone, but also to a bitterless principle. By care in manufacture the two glucosides are retained unimpaired, and a product of great therapeutic activity is produced. The adult dose is only 5 to 20 minums. The third preparation is an elixir of glycerophosphates of calcium and sodium, which in flavour resembles an after-dinner liqueur. Each ounce of the elixir contains 8 gr of sodium glycerophosphate and 4 gr. of calcium glycerophosphate. We are also asked to state that reprints of papers on nargol and cupol are now ready, and are supplied to chemists for distribution to medical men.

Photographic Notes.



By a Pharmaceutical Camerist.

Photographic Vade-mecum.

Under the title of the "Practical Photographer's Vade-mecum" Messrs. Cadett & Neall (Limited), Ashtead, Surrey, have published a very useful pocket-book for photographers' use. On the inside of the front cover there is a view-meter by which the focal length of the lens registered for any required view is obtained, whilst in the back cover is fastened one of Lambert & Cadett's exposure-meters in which the slide-rule principle is employed. There is also a detachable exposure-record, a pocket-book containing many useful tables for photographers, and a pencil. The vade-mecum sells at 2*s.* 6*d.*

A New Lens.

Dr. Grun, of Southwick, Brighton, has at last made public the details of his new fluid-lens, which is claimed to be the fastest photographic lens yet invented. The illustration

given is taken from the United States patent specification, and shows the combination of two achromatic lenses, with an intervening space filled with cedar oil, the latter fluid being approximately of the same refractive index as the lenses. The idea of using cedar oil is taken from the oil-immersion lens used in the microscope, and with which pharmacists are fairly familiar. Fluid-lenses are not new; the panoramic water-lens brought out by Sutton is frequently referred to, but never much used. It is stated in *Photography* that a lens of 3 inches diameter is required to cover a lantern-plate, but if stopped down a much larger plate can be covered. Some remarkable results have been produced, such as taking photographs, with a quarter-second exposure, of a scene in a theatre, a minute exposure at midnight on a moonlight night, or a quarter-of-an-hour exposure on a pitch-black night. Dr. Grun has adopted a system of focusing by means of pegs working in holes, each hole being

Digitized by Google

graduated to a known distance, as focussing dimly-lit subjects otherwise is not easy.

Hints from Other Dealers

are always acceptable. I give extracts from two letters recently received which convey useful hints. *W. H. H.* (172/30) gives his views on plates and developers as follows:—

I have found that for copying or making enlarged negatives photo-mechanical plates give the best results, and customers I have advised to use them are more than pleased with the results. Chemists should not lose an opportunity of placing the various uses of plates before their customers. It is a mistake some dealers make of only having one developer, which cannot possibly suit all subjects, whereas, if several kinds are stocked and their special uses pointed out to the customer, he gets better results and thinks more of the dealer.

A Fixing-dish

is the subject *W. S.* (179/30) writes about:—

Some time ago, under "Photographic Notes," a suggestion was made for a rim to be put in the fixing-dish so that the plate could rest film downwards. This I have done for the last five years. In practice I employ pie-dishes for developing and fixing, and as these dishes can be had in a variety of sizes and shapes they are a great convenience. I wash negatives in a lavatory basin, regulating the flow by a wooden plug. For developing roll-films a pie-dish is very suitable.

Cristoid Films.

I have been trying some of Sandell's cristoid films which were mentioned in the *C. & D.* some time back. I did not find any difficulty in carrying out the instructions, the novelty of being able to develop the whole spool together making the process much less tedious than it otherwise would have been. The pyrocatechin developer made from the following formula answers equally well for plates:—

Pyrocatechin...	1 oz.
Potassium bromide	30 gr.
Sodium sulphite	4 oz.
Sodium hydrate	½ oz
Distilled water	1 pint

Store in the dark, and for use dilute 1 part with 4 to 5 of water.

Dark-rooms.

Dalbeattie.—D. Newall, 28 High Street.

Gillingham (Dorset).—W. Edgar Samways, The Square.

Weston-super-Mare.—S. Taylor, County Drug-stores.

Veterinary Notes.

By M.R.C.V.S.

Indigestion in Cattle.

WHEN the numerous and frequently opposite causes which induce indigestion are considered, it still remains a fact that the ancient remedies, consisting of purgatives and salines, are of real value in the majority of cases. The youngster who has made but a poor living on rough forest land, with little grass and much coarse woody fibre as his food, is liable to a form of indigestion, for which the best treatment, in the first instance, is an aperient. When the stalled ox has been the round of the shows at Christmas, and been surfeited with good living, he must, if he is to be held over for another season, have a purge of a similar nature.

Experience taught our stockmen and cow-leeches these things ages ago, but they could give no reason for the faith that was in them. They were satisfied to know what was a good thing to give to animals, or for themselves to take. Now the board-school boy requires a reason for everything; and science, with laggard steps, comes in a few centuries late, with proofs of what his ancestors believed—nay, proved in their own way, by results extending over the lives of generations of men, and handed down from father to son, before the present era, in which experience counts for nothing; and everything is for the young, who show but scant respect for the accumulated knowledge of seniors, and still less for traditions the wisdom of which is incapable of scientific demonstration.

In this matter of giving a bold aperient dose to cattle or horses suffering from indigestion arising out of wholly different diet and conditions of life, the old practitioners who survive may point with pride to the results of ten years' experimentation in the St. Petersburg Government schools of research. By a series of experiments, to only a few of which the space at our disposal will permit of reference, it has been proved that the digestive system of animals (including man) can accommodate itself to almost any change of diet, and subsist on the richest or the poorest of alimentary substances, provided only that the change is not made too suddenly. Well, we knew this. Our gluttonous ancestors knew it, when

> Long and loud those Saxon gleemen,
> Sang to slaves the songs of freemen.

Our horsemen, with their strange theories of humours, had found out, by observing many animals under their care, that those for whom a sudden change of diet was to be prescribed "did best" when an aperient was first administered. They gave their horses a physic-ball in spring and autumn; the origin of the custom may have been forgotten in many districts when people read nothing but a stale newspaper once a week, but they continued the practice until the new school of veterinarians (taught by medical men) promulgated the doctrine that a healthy animal needs no drugs. The bi-annual physicking fell into disuse, and as a result many more horses die of those *sequelæ* of acute indigestion than did so under the old *régime*.

The experiments at St. Petersburg proved that the composition as well as quantity of the gastric fluid is regulated by the nature of the food introduced into the stomach, but the numerous analyses show that the process is gradual. A legitimate deduction to be drawn from this is that removal of the ingesta and the excitation of the organs concerned in the complicated process of digestion will, as our forefathers believed, make ready for a change in a shorter time, and thereby facilitate the fattening of the ox, and the conditioning of the horse; or the reverse—the turning out to grass and suddenly reduced nitrogenous diet, as compared with that provided for the stalled animal. From its more purely veterinary aspect, rather than from the economic feeder's, this new light on digestion confirms the wisdom of preparation of the stomach and bowels for the sudden changes which the requirements of the farmer necessitate.

Students of the physiology of digestion are no doubt familiar with the case of the man St. Martin, and, at a later date, the woman Kütt, whose misfortunes, in possessing fistulous wounds through the abdomen into the stomach, were turned to such good account in the study of the digestive processes in the living subject. It was possible in their cases to ascertain the effect of the gastric secretion upon various foods, introduced in little bags, and withdrawn under varying circumstances and at different times. The ferment ptyalin, which is of so much importance in the salivary fluid of the mouth, was soon after recognised, and afforded additional proof of the need of thorough mastication and insalivation as a preliminary to gastric digestion. Our grandmothers insisted on our eating slowly; they had proved in their own way that it promoted digestion. Blacksmiths had found that horses "did" better if they rasped down irregular molars; they thought it was due to the finer comminution of the food, and knew nothing of ferments. It is now demonstrated that the act of grinding a particular kind of food in the mouth influences the character of the gastric secretion before the food reaches the stomach. This was ascertained by dividing the gullet of a dog and suturing the ends to the skin, so that in time, when the immediate inflammatory effects had passed off, the masticated food could be received into a vessel from the upper portion of the œsophagus, while the gastric secretions could be withdrawn from the lower portion.

The sympathy between the acts of eating and digestion in the stomach has always been insisted upon by observant persons, in or outside of the medical world, but we have here the most singular proof of their correlation to an extent not previously imagined.

The net result of the Russian school's experimental work is to confirm as facts what were previously well-supported

Digitized by Google

inferences. How can we make practical use of the information supplied in our work as prescribers for animals? My own answer to the question would be to continue to make good use of those things which have been proved to be serviceable in cases of indigestion, while waiting for better remedies. Among the more advanced veterinarians there is an increasing disbelief in medication; good old remedies have been thrown over because a scientific explanation was not immediately forthcoming. One of our most eminent veterinary surgeons recently expressed his distrust of opium and its preparations in cases of colic, and if he was correctly reported it would seem to be the duty of the vet. to look on and take notes of temperature and pulse—watch the case, as a lawyer might with a brief for some third party. Of what utility is such a man to the owner of the patient? It is unfortunately true that men of comparatively little learning often enjoy a greater average measure of success as animal-doctors than those leaders who have lost their way in a maze of professional agnosticism. To discard the old loves without good reason is notoriously unwise in other affairs, and he who would progress as well justify his existence as a practitioner of veterinary medicine should be

> The first by whom the new is tried,
> The last to lay the old aside.

The prescriptions in that excellent little work "Veterinary Counter-practice" have been largely instrumental in building up sound and lasting reputations: they have evidently been supplied by men who have proved their efficacy.

Reviews.

The "Ideal" Office Reckoner. By J. G. Inglis. Pp. 900. 3*s.* 6*d.*

As a time-saving device this book will prove a boon to many a hard-pushed business man. It contains twenty sets of tables and 300,000 calculations, the latter beginning at $\frac{1}{64}$th of a penny, and rising by pence up to 3*l.* The book is of a handy size ($7 \times 4\frac{1}{2} \times 1\frac{1}{2}$); the type is bold and clear, and is therefore easy for reference. The tables for the conversion of British currency into its foreign equivalent, and metric-system tables of weights and measures, with their British equivalents seen at a glance, strike us as being especially useful.

Sell's Directory of Registered Telegraphic Addresses, 1902. Henry Sell, 167 Fleet Street, E.C. Subscribers, 18*s.*; non-subscribers, 21*s.*

This hardy and ever-healthy annual in the crimson boards familiar to most British commercial houses, is a monument of labour, patience, and accuracy. The present volume contains nearly 50,000 alterations, comprising cancellations, new registrations and emendations in postal addresses, telephone numbers, trade descriptions, and so forth. Mr. Sell, who proudly refers to his publication as a "Directory of the Upper Ten Thousand of the Commercial World," not only supplies the busy business man with reliable information concerning the telegraphic designations of the leading commercial firms in London and the provinces, but his book includes a list of foreign consuls.

Modern Business Methods. (1) *The Home Trade.* (2) *The Import and Export Trade.* By Messrs. F. Hooper and J. Graham. $8\frac{1}{2} \times 5\frac{1}{2}$ in. Pp. 515. London: Macmillan & Co., Limited. 2*s.* 6*d.* and 3*s.* 6*d.* respectively.

These are two manuals designed to meet the requirements of the commercial courses of the various British Chambers of Commerce. The authors are men of practical experience Mr. Hooper being Secretary of the Bradford Chamber of Commerce, and Mr. Graham inspector for commercial subjects to the West Riding County Council. The first book, dealing with the home trade, gives some capital advice to young men entering commercial life. It commences with the duties of the office-boy, with a description of his utensils, the copying-press and the letter-book, and gradually progresses to the higher parts of the subject including chapters on the medium of exchange, banks and banking, bills of exchange, and so on. The companion volume aims at being a guide to the whole of the operations connected with the export and import of every class of goods. On reference to it an exporter may learn how to make the necessary calculations so as to invoice his goods to his foreign customer in detailed measures and weights that he can understand. This point has always been a source of weakness to British foreign trade, and the book is specially designed to meet these difficulties. It also contains chapters on foreign exchange, marine insurance, trade-routes, ships and charters, &c. In short, it may be recommended as a reference-book to business men and a text-book to commercial students.

Laboratory Companion to Fats and Oils Industries. By Dr J. Lewkowitsch, M.A., F.I.C. Pp. xii + 147. London: Macmillan & Co. 6*s.* net.

In this work the author, who is well known as a fixed-oil expert, has summarised in tabular form all the available numerical values necessary in the examination of the fixed oils and fats and certain allied products. Part I. bears the somewhat clumsy title, "System and Examination of Fats and Waxes." It deals chiefly with the properties of the acids and glycerides of ordinary oils, the chief analytical figures being set out in tables. Part II. is the chief portion of the work, consisting of a series of tables giving the so-called constants and variables of most of the known fats and fixed oils. The author here gives the figures without comment, and without indicating the source in the majority of cases. Considering the mass of unreliable work—due chiefly to the examination of impure samples—which may sometimes result in the publication of analytical figures, we think it would have been wiser to have specified the source of his figures, as, we believe, was done in the author's more ambitious work on the same subject. Not all the figures here given can be considered as satisfactory. For example, under cod-liver oil the iodine number is the solitary figure 167. That normal limits of a fairly wide character should have been given is emphasised by the figures given for the iodine number of the mixed fatty acids, which have a fairly constant relation to the same figure for the oil. The figures for the acids are given as 130·5 to 170 (*Journ. Soc. Chem. Industry*). We find figures for a sample of brown shellac which indicate the examination of only one sample, and that almost certainly an adulterated one. As a help for laboratory-work such figures as these are valueless. The tables dealing with commercial products of oils, &c., are very full, and will be found of great use to the specialist in this department. A number of sp. gr. and other tables at the end of the book enhance its value for laboratory use.

Diet: in Relation to Age and Activity. By Sir Henry Thompson, F.R.C.S., M.B. Pp. 126. London and New York: F. Warne & Co. 2*s.* 6*d.* net.

This little work is divided into Parts I. and II., Part I. being a reprint, with a few additions, from the May, 1885, edition of *Nineteenth Century*. The subject dealt with is one which appeals, or should appeal to all. Early in the first part a decided blow is given to so-called "Vegetarians," in which the writer, without running down "Vegetarianism" when fully carried out, points out how very few, if any, are real vegetarians. Flesh abstainers, rejecters, or avoiders they may be, but vegetarians they are not. It is strongly pointed out how absolutely necessary it is for one to regulate one's diet, and the amount of food taken, by the amount of exercise, in one form or another, one takes. Also how beneficial it is, the older one gets, to regulate the intake (of food), owing to decline of activity by age, otherwise the result can only be corpulence, with its resulting effect on the heart and lungs, neither of which can act easily owing to the gradually gathering fat around them. Coming to diet itself it is pointed out that often flesh diet is adopted too early in life, when cereal foods, fruits, and vegetables would be more beneficial. Temperature is also taken into account showing how useless it would be for a native of Iceland to attempt to exist on the food taken by a dweller in India and *vice versâ*. Simplicity and variety in diet are shown to be desirable and even important if one wishes to continue healthy and avoid corpulence, but special stress is laid on the fact that a proper mode of eating is equally important. "Early morning tea" finds favour with the author. A very good system for meals is included, and an excellent "diet-table."

The Flower-cure.

THE pharmacist often gleans much marvellous information and always gets a preponderance of amusement from the lay Press when it attempts the technical. In a recent issue of the *Red Letter* an article points out to a purblind public the complete assortment of marvellous medicines "growing in their own backyards." Why should the infants of Bethnal Green or Limehouse suffer from sore and inflamed eyes when all their devoted parents have to do is to pluck the common wallflower which is shedding its perfume and luxuriance in their backyards, and make an infusion of the leaves for the permanent relief of their hydrophthalmic offspring? Then "lily of the valley flowers, if chewed, will improve the memory to a marvellous extent." So saith the *Red Letter* oracle, and doubtless many chemists will now put some of their clients on a course of lily-of-the-valley chewing in order to induce recollections of "that little bill" so long unpaid. The perfume, we are told, may easily be preserved by placing a layer of the flowers on top of a layer of cold-cream, and "each day replacing the old flowers with new ones." The inhalation of the perfume which the cold-cream assimilates will cure the most violent headache. It is too bad not to specify the formula for the cold-cream, which is one of the factors in the production of so valuable an antipyretic. There are so many cold-cream formulas, and one might use the wrong one. The giddy Harriets of Whitechapel and Mile End need no longer pine for the beauteous complexion of their Mayfair sisters, for they have merely to cull the blue or yellow lupin (from the backyard), and make a decoction of the flowers. This will "clear all pimples, spots, and freckles from the face, and make the skin smooth and clear." The same result may be obtained by washing the face with the juice of the leaves of the elm-tree. The leaves of the pine boiled in vinegar and rubbed on the gums cure toothache. The kernels of the little nuts that grow on pine-trees (which, along with the elms, are reared, of course, in the backyard) are good for the lungs and help to cure consumption. An apoplectic subject will be restored to health by a necklet of mistletoe-twigs. The black-currant bush is a whole materia medica in itself. The fruit makes a jam which is invaluable for sore throats; smelling the leaves helps to cure a headache, while a decoction of the leaves makes an excellent hair-dye. "If you boil the unripe fruit and pods of the bean," writes the *Red Letter* Æsculapius, "you will obtain a decoction that, when drunk, will make you dream." This is the solitary statement made with which we are entirely in agreement. We are quite prepared to believe that the decoction will produce as successful a nightmare as anything that can be assimilated. Maiden-hair ferns cure insanity when chewed, and an infusion makes the hair grow strong and thick. But the best hair-restorer in the world (down, Tatcho!) is the juice of the common stinging-nettle. Let the bald one but gather lightly some green nettles, pound them in a mortar, "and rub the juice thus obtained well into the roots of the hair." The result, we are told, will be a luxuriant and costless growth. Tea made from the dried leaves of the ash-tree is an infallible anti-fat remedy, and the best way to clean the teeth is to chew unripe brambles. The green fruit not only cleanses the teeth but "benefits the enamel." An unsurpassable embrocation for the athlete is made by soaking willow-leaves in wine or brandy. The ashes of burnt willow-bark made into a paste with vinegar are a speedy cure for warts, corns, and all hardness of the skin. Hence, we suppose, the inferior salicylic-acid preparations of common chemists. Verbena-tea is equally good for a sore throat or for preventing the hair from falling out. A decoction of cowslip-root cures insomnia, inducing pleasant dreams. The roots boiled in ale make "the finest nerve-steadier obtainable." The rain-water found in the hollows of beech-trees is excellent for skin-eruptions and dryness of the scalp. Primroses cure headache and heal wounds. Marigolds raise drooping spirits and cure bee-stings. Wild mustard is good for rheumatism. And "they all cost nothing." Verily, there are more things in your own backyard, O sufferer, than are dreamt of in our materia medica.

Hot Filtering.

BEING considerably indebted to the "tips" column of your paper, and noticing in the DIARY for 1902 that a suggestion regarding hot filtering would be acceptable, I beg to offer for your acceptance a sketch and explanation of a "home-made" arrangement which has worked well and been in constant use for several years. At first glance it may seem somewhat complicated, but in reality the whole thing is simplicity itself, and if any one of your thousands of readers will take the trouble to set up the apparatus I feel certain he will find himself well repaid for his labour, since the filter requires practically no attention beyond an occasional glance at the reservoir.

The apparatus consists of a jacketed funnel, shown in part section in the sketch marked E, and a circulating boiler, F. For the inner (filtering) funnel I used a deeply fluted glass one 7 inches

in diameter, and for the outer, or jacket, a wedgwood which had lost its stem and seemed made on purpose. These were joined together by drilling a bung, slipping it over the stem of the glass funnel, trimming the sides to roughly fit the bottom of the wedgwood, and cementing the whole together with a stiffish paste of litharge and glycerin, taking care to keep the top of the glass a little above the top of the wedgwood. The cement takes about twenty-four hours to set, and becomes very hard, resisting the action of hot water perfectly. G is a piece of glass tubing, about 3 inches longer than the depth of the jacket, bent at a short angle at such distance as will allow the longer arm to nearly reach the bottom of the jacket. H is a tube of similar bore, 4 inches long, bent in the middle to a similar angle to G.

The next consideration is the circulating boiler F. A Merck's chloroform-flask (tin) was my first boiler, and when that rusted through, a 1-inch oil-of-lemon copper flask was substituted. A short piece of brass tube was soldered into the top, and a longer piece, about 4 inches, into the side, close to the bottom. The tube used was an old clinical-thermometer case—cap for the top and longer part for the bottom. Now join up G and H to top and bottom tubes respectively with suitable lengths of rubber tubing, fill the jacket with water, and syphon the boiler full, refilling the jacket with fresh water; place the boiler over the bunsen, and when the water in the jacket is at the required temperature check the gas-supply, as a very small flame will keep the water hot when once circulation is established.

C D is a simple device for replacing water lost by evaporation the right-angle end of D being inserted into a tightly fitting rubber stopper which closes the neck of C, and the other end dipping, about an inch into the jacket. C, of course, is filled with water and placed in position, after refilling the jacket as above described. A is a Winchester of the fluid to be filtered, so placed that the lip of the bottle is below the level of the filter-paper, thus keeping the filter full until the bottle is empty. A and C may be secured in position by slipping another ring over each and screwing tightly to standard.

Festivities.

Grimsby Chemists' Dinner.

The annual meeting and dinner of this Association was held at the Oberon Hotel, Grimsby, on April 10, Mr. R. Cook (President) in the chair.

The Secretary (Mr. H. W. Colley), in presenting the annual report, stated that the balance-sheet for the year showed a balance in hand of 4*l.* 11*s.* 6*d.* In reply to a Federation circular the committee had strongly expressed the opinion that all weed-killers containing scheduled poisons should be only sold by qualified chemists. It had also been suggested that wherever it was possible for higher-grade schools or technical-instruction committees to arrange suitable classes for the education of assistants and apprentices such classes should be promoted, and students should be encouraged to apprentice themselves in such places. The following officers were then elected: President, Mr. R. Cook, J.P.; Vice-President, Mr. C. Willson; Treasurer, Mr. J. Hawdon; Secretary, Mr. Herbert W. Colley; and Council, Messrs. Palmer, J.P., Carter-White, Dewing, North, and Sneath, with the officers mentioned.

Mr. H. W. Colley opened a discussion on the question of making the meetings more attractive, and the matter was relegated to a committee to report. Mr. C. Willson gave notice of his intention to move an alteration in one of the rules, and after further routine business had been transacted the company adjourned to the dinner.

The President occupied the chair, and about twenty were present. After the loyal toasts had been submitted from the chair Mr. Hawdon proposed "The Grimsby and District Chemists' and Druggists' Association," to which

Mr. T. D. Sneath first responded. He said he had been associated with the Association since its formation in 1894. It had been said that there was a lot of jealousy among the chemists of the town, but he most emphatically denied that statement. They had not always agreed upon all points, but they had had some most enjoyable meetings, and as he looked back on his connection with the Association, he could recall some very pleasant gatherings.

Mr. C. Dewing also replied. Mr. G. R. Cook gave "The President and Members of the Council," in which he spoke in eulogistic terms of the President, the Vice-President (Mr. Cor. Willson), and individual members of the Council. The President, in reply, said that during his thirty-one years of pharmaceutical life, he had always had the greatest pleasure in assisting his brother pharmacists. Mr. C. Willson said the Association was inaugurated in the cholera year, and since that time everything had been done to promote the interests of the chemists of the town, and also to ensure the safety of the public, to improve legislation, and to protect chemists from the inroads of outside piracy. Mr S. J. North, who responded on behalf of the Council, said that chemists should be a more united body. Dr. John Attfield once said "It is the pharmacists and druggists themselves who retard their own advancement by their want of unity, and their consequent want of power, and their resulting timidity." Mr. North then dropped into poetry, as follows:—

We have a worthy President, and the Vice a good compeer,
And each time that we toast them we raise a hearty cheer,
For we're satisfied that they would be difficult to beat;
So that is why we're anxious that each retain his seat.
When "Io" died of potassium and gave her life for our good,
She improved the genus Homo through the medium of his blood.
We do not emulate "Io" by dying in the cause,
But as your selected Council, we both watch and keep your laws;
In our pharmaceutic kinship we have a cause at heart,
And may the years be numerous ere from it we depart,
That our shadows will ne'er grow less, then there is nought to fear
In the reign of Edward the Seventh, and the Coronation Year.

"The Town and Trade of Grimsby" having been proposed by Mr. C. Willson, and replied to by Councillor Carter-White, Mr. H. W. Colley proposed "The Pharmaceutical Society." In the course of his speech Mr. Colley commended Mr. R. A. Robinson, the newly co-opted member of the Pharmaceutical Council, to the Association. He trusted Mr. Robinson would see to the safeguarding of the title to the qualified chemist. He considered it disgraceful that the Pharmaceutical Society had allowed Boots (Limited) to take the name of cash "chemists" for so many years in defiance of an Act of Parliament. The President, in his reply, made an appeal on behalf of the Benevolent Fund. "The Visitors" and "The Ladies" were also toasted During the evening songs were given by Messrs. Palmer, North, Carter-White, Cook, and others.

Staffordshire Chemists' Dinner.

The annual business meeting and dinner of the North Staffordshire Chemists' Association were held at the Alexandra Hotel, Stafford, on April 10, when a representative gathering of members and visitors assembled under the Presidency of Mr. John Averill, J.P. All the officers were re-elected at the business meeting, Mr. W. Oldham, J.P. (Burslem), being made a Vice-President, and reports from the Secretary and Treasurer were received and considered satisfactory. A vote of condolence with the widow and family of the late Mr. William Martindale was passed.

At the subsequent dinner the visitors included Mr. G. T. W. Newsholme, Mr. W. S. Glyn-Jones, Mr. W. G. Cross, Dr. B. H. Paul, Alderman F. Greatrex (Deputy-Mayor), Alderman P. Bridgwood, and Mr. J. J. Gibson.

The loyal toasts having been given from the chair, Mr. Edmund Jones (Hon. Secretary) proposed the toast of "The Pharmaceutical Society," in responding to which Mr. Newsholme alluded to the great increase in the number of provincial Associations, and said he had often heard that Association referred to as an example that might be followed. With regard to the employment of paid agents, as suggested by Mr. Averill, he pointed out that the Divisional Secretaries could do much in this direction. He thought that every loyal member of the Society would only be too glad to call upon chemists and show them the advantages of the Society. They ought not to be satisfied until the 6,000 members on the Register had been doubled.

Mr. Glyn-Jones and Dr. Paul also responded, the former saying he was convinced that a great deal of the awakening in the craft was due to the establishment of local Associations.

Mr. Cornwell submitted the health of the President, and Mr. Averill, in reply, thanked the members for having elected him President each year during the five or six years that the Association had been in existence, and also for the compliment they had paid him in holding that gathering at Stafford, it being usually held at either Hanley or Stoke. He thought they might claim to have done some good and beneficial work for the craft. Referring to the Act of 1868 Mr. Averill said it was passed for the safety of the public, and he thought the time had arrived when the chemist himself should have some protection. (Applause.) They wanted to urge the Council of the Pharmaceutical Society to take some decisive action so that the exact position of chemists and druggists might be defined. He was in favour of the division of the Minor examination, believing that if they were to examine a man in practical work first, and give him a little more time to study scientific work, there would not be so many failures as at the present time.

Mr. Gowen Cross proposed the toast of "The Local Association," to which Mr. Weston Poole replied, suggesting that they should strive as an Association to secure direct representation on the Committee which had been formed to promote the scheme for the extension of higher education in North Staffs.

Reading Chemists' Association.

A *conversazione* was held at Reading College on April 9. There was a fair attendance, and a very pleasant evening was spent. Mr. F. F. Tunbridge gave a demonstration with the *x*-rays, and Messrs. Cardwell and Tunbridge showed some good lantern-slides. Other objects of interest were exhibited by various members, and a musical programme was rendered by the ladies.

Digitized by Google

A Bayswater Smoker.

Another of the *recherché* smoking-concerts which are given periodically by the Western Chemists' Association was held at the Westbourne Restaurant, 1 Craven Road, W., on Wednesday evening, April 16, with the President of the Association (Mr. W. S. Gulliver) in the chair. There was a large attendance, and the programme was as high-class and as enjoyable as ever. The musical arrangements were under the direction of Mr. Henry Prenton, and with him were associated Messrs. Elliston Webb, Frank Peskett, and others. The tenor solos of Mr. Elliston Webb, who is an old favourite at these gatherings, were even more feelingly rendered than ever, while Mr. Frank Peskett, besides singing the baritone parts in the trios, was an efficient accompanist. The humour was provided by Mr. George Thatcher, whose songs "Will he?" and "Coronation Day" were especially applauded. Mr. Prenton himself is possessed of a pretty wit, and is, besides, a *sifflеur* of no mean calibre. The violin solos of Master H. Gennari created considerable enthusiasm.

Legal Reports.

Trade Law.

A Flashlight.—At the County of London Sessions on April 11, Mr. S H. Benson, the well-known advertisement-contractor, appealed against a conviction by Mr. Sheil, Magistrate at the Westminster Police Court, for unlawfully exhibiting a flashlight so as to be visible from Albert Gate, and to cause danger to the traffic in the thoroughfare, contrary to the London County Council by-law. The appellant held a lease for the outside of No. 1 Sloane Street, Albert Gate, W., for the purpose of displaying advertisements thereon. The flashlight against which the complaint was made was an electrically lighted sign advertising "Bovril." The name was duplicated in red and white lights, and at intervals it became visible and invisible with alternate changing to the red and white lights. Evidence was given by omnibus-drivers and others to the effect that the sudden transition from a brilliant red illumination to darkness, and then the reflashing of the sign by ordinary electric light, tended to frighten horses and to make crossing dangerous to pedestrians. The Bench decided that it was a flashlight, and disallowed the appeal, with costs.

The Duty of an Apprentice.—At Canterbury County Court recently, an action by a grocer's apprentice claiming 12*l.* 3*s.*, alleged to be due as wages, was heard by Judge Sir W. L. Selfe. It appeared that the boy was at first put to help in the cash department continuously three days a week. He did not like the work, and, after consulting his father, refused to serve in the cash office any longer, with the result that his employer stopped his wages to the amount claimed. In giving judgment Sir W. Selfe said the plaintiff was entitled to recover his wages subject to any claim defendant succeeded in proving against him for not fulfilling his part of the contract. The words of the contract were that the plaintiff was "to obey gladly the lawful commands of his master," and for the defence it was stated that plaintiff had not done that at all, particularly in respect to the cash-room. It was ridiculous to suggest that this was not a lawful demand on the part of the employer. It was clearly the duty of an apprentice to take the cash when required, and it was also plainly part of the business which he was to learn. He did not suggest that the employer should require the apprentice to put in all his time at the desk, because he would not then learn the business of a grocer. It was plain that the boy declined to do his bidding, but the employer was wrong in stopping his wages, and he gave judgment for the plaintiff for the amount claimed less 2*l.* for damages which the employer had satisfied him he had sustained through the boy failing to do his lawful commands.

High Court Cases.

In the King's Bench Division on April 11, Professor Lucian Edward Henry, an author, sued Mrs L. H Richards, the wife of Mr. John Morgan Richards, proprietor of the *Academy and Literature*, for 94*l.* 15*s.*, alleged to be due in respect of the purchase of a manuscript of a work entitled "Stray Thoughts." After a long hearing Mr. Justice Wright found for the defendant.

Stamp Act, 1812.

A Revenue Success.

At the Mansion House Police Court last week, before Mr. Alderman Vaughan Morgan, the Commissioners of Inland Revenue summoned Mr. John Morgan Davis, chemist and druggist, 89 Bishopsgate Street Without, for exposing for sale on November 13, 1901, a bottle of compound syrup of hypophosphites which was not stamped as required by the Act, also for selling on November 18 a bottle of IXL corn-paint which was also liable to duty. Mr. Dennis, who appeared for the prosecutors, stated that the syrup was labelled in such a manner as to recommend it for the cure of certain ailments, and he submitted that the letters IXL for the corn-paint could only mean a recommendation. For the defence Mr. Meyer explained that the label for the syrup merely contained quotations from medical works in regard to the therapeutic use of the hypophosphites, and the syrup was not recommended at all. He submitted with reference to the corn-paint that IXL was used generally by Mr. Davis in his business on toothbrushes and other articles, so that it did not refer exclusively to the corn-paint. After hearing the evidence Alderman Vaughan Morgan stated that he considered both offences were more technical than wilful, and while finding the charges proved would only impose the least penalty possible, 2*l.* 10*s.* and 2*s.* costs in each case.

Sale of Food and Drugs Acts.

Camphorated Oil.

In the Aberdeen Sheriff Court on April 10, William Robertson, general merchant, Colpy, Culsalmond, was charged with selling a quantity of camphorated oil which, on analysis, did not prove to be of the quality of the article demanded. Robertson pleaded guilty, and the Procurator-Fiscal (Mr. Maclennan) said it was the wholesale dealers who were really to blame, as they sold the oil to Robertson. Sheriff Henderson Begg ordered defendant to pay 22*s.*, the costs only.

At Birmingham on April 11, Thomas Wakefield, chemist and druggist, of Six Ways, Brookfield, was summoned for selling camphorated oil which contained only 86 per cent. of the B.P. quantity of camphor required. Defendant admitted that he sold the oil, which he made himself, but urged that the camphor had not had time to dissolve properly when he sold it to the health inspector. The presiding Magistrate observed that with his long experience defendant should have seen that the camphor was dissolved before supplying any customer. The Magistrates thought there had been no intention to defraud, and in the circumstances he would only be asked to pay the costs.

Bankruptcies and Failures.

Re William John Trythall, Cusgarne Gwennap and Carnon Chemical works, Perranwell Station, Cornwall, Chemical-manufacturer.—The adjourned public examination of this debtor was held at Truro on April 12, and after further declarations had been made debtor was allowed to pass.

Re Herbert Henry Presbury, trading as Moody & Catterns, at 73 Church Street, Camberwell, S E., Pharmaceutical Chemist.—This debtor attended on April 11 at the London Bankruptcy Court for public examination upon accounts showing debts 206*l.* 18*s.* 4*d.*, against assets 99*l.* 3*s.* 4*d.* In the course of his evidence the debtor stated that he had carried on the above business for fourteen years. Between 1895 and May, 1900, he was also interested in the manufacture of a chemical food known as Vitalia. At the latter date that business was transferred to Vitalia (Limited), of which he had since acted as manager at a weekly salary of 3*l.* He ascribed his failure and insolvency to the fact that he had neglected the business of "Moody & Catterns" in order to devote his time and attention to Vitalia. The examination was concluded.

Re Edward Howdall Hasselby, 55 and 57 Pevensey Road, late of 1 Eversfield Place and 33 King's Road, East Street, all St Leonards-on-Sea, Chemist and Druggist.—The public examination of this bankrupt was held at Hastings Bankruptcy Court on April 15. Particulars of debtor's affairs were given in last week's issue, page 574. In examination debtor stated that he gave up his chemist's business on January 21, 1901, in consequence of being pressed by Mr. Atkinson. He sold the business to Mr. John Smith for 1,000*l.* After giving up the chemist's shop

Digitized by Google

he kept a cycle-business, but he did not understand it, and hoped to be able to sell it as a going concern. He had kept books, but not sufficient to show his position, and had no cash-book. The examination was adjourned until May 13.

Re William Armstrong Lynass, 5 Ann Street, Belfast, Pharmaceutical Chemist.

A long list of creditors has been filed in this case, the amounts in a few cases only being stated. The following are creditors :—

Aërators (Limited), London
Ashton & Parsons (Limited), London
Baiss Brothers & Stevenson (Limited), London
Beaumont & Co., Edinburgh
Bishop, Alfred, & Sons, London
Breidenbach & Co., London
Bristol Castor Oil Company London
Burroughs Wellcome & Co., London
Bush, W. J., & Co. (Limited), London
Butcher, W., & Sons, London
Camwal (Limited), Bristol
Cantrell & Cochrane, Belfast
Clotworthy & Co., Belfast
Cohen, L. & M. (12*l.* 4*s.* 4*d.*)
Cork Company Limited)

Tyrer, T., & Co., London
Vigo, Jules, & Co., London
Warrick Brothers, London
Wilkinson, J., & Co., Manchester
Wood, Vincent, London
Woolley, J., Sons & Co., Manchester (18*l.* 11*s.* 1*d.*)
Yöst Typewriting Company, Belfast

The statement of affairs shows gross liabilities 3,336*l.* 4*s.* 4*d.*, and assets (less preferential claims), 745*l.* 19*s.* 6*d.* At a meeting of creditors held at the offices of Mr. D. McGonigal, solicitor, 10 Donegall Street, Belfast, on April 8, debtor made an offer of 3*s.* 4*d.* in the pound, payable in three months, which was unanimously accepted.

Re John Leach, the elder, Crawley, Sussex, Pharmaceutical Chemist.—The summary of this debtor's statement of affairs shows gross liabilities 1,888*l.* 12*s.* 5*d.*, of which is expected to rank 1,602*l.* 0*s.* 8*d.*, and net assets 5*s.* 8*d.* The cause of failure is alleged by the debtor to be "general falling-off in trade." He states that he only became aware that he could not pay his debts in full last August. The Official Receiver's observations show that, according to bankrupt's statement, he has been a chemist in Crawley since 1859, and carried on business at No. 1 The Terrace there for thirty years up to September 7 last. On that date he sold the business to his eldest son for 1,200*l.* The son paid 200*l.* in cash, and took over the mortgage on the business amounting to 1,000*l.*, his reason for selling the business being that he was pressed by the executors of a creditor for money lent to repay them a sum of 200*l.* His son had managed the business for six years, and had advanced him moneys. In August last he sold his furniture, but a creditor took garnishee proceedings and received 178*l.*, while he received 70*l.* only. The liabilities include 527*l.* due to his son, 220*l.* of which is said to be for money lent, 307*l.* wages, and three other claims amounting to 503*l.* for money lent. The partly secured creditor holds a policy on the bankrupt's life for 500*l.* The deficiency account shows :—Net profit arising and carrying on business from March 27, 1901, to September 7, 1901, when the business was sold after deducting the usual trade expenses, 48*l.* 5*s.*; deficiency, 1,601*l.* 15*s.* Total amount accounted for, 1,65*l.* Excess of liabilities over assets on March 27, 1901, 1,400*l.* Household expenses of self and wife's illness and funeral, 150*l.* Interest on loans and premium on policy, estimated 100*l.* Total amount accounted for, 1,650*l.*

The *Journal* of the Royal Agricultural Society of England is in future to be an annual volume, instead of a quarterly. The alteration seems to indicate retrogression.

Adjudication.

Roberts, Joseph Richard (trading as Thomas Roberts & Son), Southport, carrying on business at Bankhall, Liverpool, chemical manufacturer.

New Companies & Company News.

Walton-on-Thames Mineral-water Company (Limited).—Capital 1,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with F. J. Furnivall, and to carry on the business of mineral-water manufacturers, etc. Registered office, High Street, Walton-on-Thames.

Mill End Paper Mill (Limited).—Capital 5,000*l.*, in 1*l.* shares. Objects: To acquire the lease of the Mill End Paper-mills, Rickmansworth, and to carry on the business of paper-manufacturers and merchants, dealers in chemicals, drugs, and other materials, etc. Registered office, Sunnyside, Rickmansworth, Herts.

David Dreghorn (Limited).—Capital 50,000*l.*, in 1*l.* shares. Objects: To acquire and carry on the businesses of manufacturers of and dealers in soaps, glycerin, blues, blacklead, metal-polish, residual products, and general drysaltery carried on by D. Dreghorn at Smith Street, Kinning Park, Glasgow, and by Chancellor, Walker & Wallis (Limited), at Humber Soap works, Hull. The first directors are D. Dreghorn, G. B. Roger, and J. Crawford. Qualification, 250 shares.

Craig Sharp (Limited).—Registered in Edinburgh. Capital 2,000*l.*, in 1*l.* shares. Objects: To manufacture and deal in paints, pigments, and lacquers of all sorts, including anti-fouling and anti-corrosive paints and lacquers, chemicals and chemical compounds of all descriptions. The first directors are R. C. Sharp, John Walker, and A. Day. Qualification, 50*l.* Remuneration as fixed by the company. Registered office, 177 Maxwell Road, Glasgow.

Thermal Storage (Limited).—Capital 12,000*l.*, in 1*l.* shares. Objects: To acquire patents, inventions, and the like relating to thermal storage, and to carry on the business, among other things, of chemists and chemical manufacturers. Minimum cash subscription, 4,000 shares. The first directors are J. E. Hodgkin, W. East, and F. Levick. Qualification, 100 shares. Remuneration not less than 250*l.* per annum, divisible. Registered office, 17 Victoria Street, S.W.

Digit Disinfectant Company (Limited).—Capital 10,000*l.*, in 1*l.* shares (6,000 preference). Objects: To acquire a certain secret process of manufacture of disinfectants and sanitary compounds from John Buchanan, of Dudmanstane, Berry Brow, Yorkshire, to adopt an agreement with the said vendor, and to carry on the business of manufacturers of and dealers in disinfectants and sanitary preparations. No initial public issue. The subscribers are to appoint the first directors. Qualification, 100*l.* Remuneration, 200*l.* per annum, divisible.

Saccharin Fabrik A. G. vorm., Fahlberg, List & Co., Salbke-Westerhüsen, near Magdeburg.—Fahlberg, List & Co., has been converted into a joint stock company with the above title with a capital of 3,000,000m. Dr. Fahlberg, the former proprietor, has been appointed general director of the new company.

Carnos (Limited).—An extraordinary general meeting of shareholders of this company, to which creditors were invited, was held last week at the offices of the company, 8 Warwick Court, Gray's Inn, W.C., for the purpose of receiving a report from the liquidator, Mr. H. Crosby. It was stated that negotiations were pending for the sale of the

Digitized by Google

French patents, and also with regard to the disposal of the English business as a going concern. Since August the liquidator had carried on the business without loss, and the probability was that if the negotiations came to a successful conclusion the creditors would be paid in full. A resolution was carried authorising the liquidator to carry on the business for a further three months if necessary.

KODAK (LIMITED AND REDUCED).—In the Chancery Division of the High Courts on April 15, before Mr. Justice Buckley, a petition for reducing the capital of this company was presented. The company having sold to an American company all but its English assets, the consideration being shares of the purchasing company amounting to 1,250,000*l.*, it was proposed that these shares should be distributed as capital to the shareholders in the Kodak Company, with the exception of the 250,000*l.* ordinary shares held by the Eastman Kodak Company. The result would be that all the shares in Kodak (Limited) would be extinguished except these 250,000, so that the Kodak Company would be reduced to a capital of 250,000*l.* After some consideration Mr. Justice Buckley sanctioned the proposed reduction.

Birth.

JOSEPHS.—On April 9, at 68 Mildmay Park, N., the wife of Mr. Philip Josephs, jun., of a son.

Marriage.

CROFTS—BUTLER.—On April 8, at St. Mary's Church, Walsall, John Henry Crofts, chemist and druggist, to Helen, daughter of Mr. William Butler, Walsall.

Deaths.

BURN.—At Forres, N.B., on April 7, Mr. John Burn, chemical-manufacturer. Mr Burn was the proprietor of the North of Scotland Chemical-works, which he acquired from his father-in-law, Mr. J. T. Wilson. Mr. Burn entered the Town Council in the early seventies, and ultimately became Magistrate and Provost, filling the latter office for nine years. He was also Chairman of the School Board, Anderson's Governors, Cluny Hill Hydropathic, and Water Companies. He leaves a widow, four sons, and one daughter—Mrs. Falconer King, of Edinburgh.

DART.—At Bampton (Devon), on April 7, Mr. William Dart, chemist and druggist. Aged 71. Mr. Dart formerly carried on business in Southampton Street, Strand, W.C., and for many years was a member of the Strand Board of Guardians. He was a native of Torrington, and on his retirement from business (about five years ago) he went to reside at Bampton, where his brother is postmaster

GRIMES.—On April 11, 1902, at 8 Sydney Avenue, Blackrock, co. Dublin, Lily, wife of Mr. H. C. Grimes, representative in Ireland of Messrs. Evans, of Liverpool. Mrs. Grimes was one of the ladies committee of the recent Pharmaceutical Conference in Dublin, and her death has been heard of with much regret by all with whom she came into contact at and prior to the Conference.

LEWIS.—At Llangefni, Anglesey, on April 7, Mr. O. Lewis chemist and druggist. Aged 61. Mr. Lewis, who died very suddenly, had carried on business at Llangefni for a considerable number of years.

MACEWAN.—At 37 Hornsey Lane Gardens, Highgate, N., on April 15, Agnes Margaret, daughter of Mr. and Mrs. Peter MacEwan. Aged 18.

PATTEN.—At Newhall, near Burton-on-Trent, on April 3, Mr. James Hinde Patten, chemist and druggist. Aged 68

WALTER.—On March 29, at Glasgow, Mr. James Robert Walter, chemist and druggist, formerly of Kirkwall. Aged 30

WATTS.—On April 3, Mr. John Watts, chemist and druggist, Landport. Aged 56.

WILLIAMS.—At Llanfyllin, Montgomeryshire, on April 3, Mr. William Williams, chemist and druggist. Aged 62.

Recent Patents.

Coffee Extract.—Dr. Ekenberg, Gothenbourg, Sweden, makes coffee extract by the following method. Freshly ground coffee is exhausted with water under pressure at a temperature of not less than 105° C. The product is filtered, evaporated to dryness and powdered. More aroma is gained by condensing the vapours given off in roasting coffee. A little lactic or acetic acid may be used in the water used for exhausting the coffee. (11,474, 1901.)

Antiseptic.—Chas. Billing, chemist, 15 Wenham Street, Liverpool, obtains protection for an antiseptic or detergent made from monoborate of potash or soda, or a mixture of these with or without monoborate of ammonium. The monoborate is made by mixing boric acid and caustic potash in equivalent quantities or by neutralising borax with caustic potash; a little ammonia prevents the absorption of arbon dioxide from the air. (10,549, 1901.)

Boiler-covering.—A. T. Church, Grimsby, has been protected in the use of the following composition for covering boilers and steam-pipes:—

Cowhair	4 oz.
Chopped manilla	4 oz.
Yellow clay	5 lbs.
Asbestos pulp	1 lb.
Water	3 lbs.
Papier mâché	8 lbs.
Starch	4 oz.
Glue sizing	4 oz.

(12,737, 1901.)

Colic in Horses.—Sigmund Metzner, Kattowitz, Germany, has obtained a patent for the following colic-cure for horses:—

Hydrarg. subchlor.	5 grammes
Antim. tart.	8 grammes
Chloral hydratis	10 grammes
Rad. rhei	20 grammes
Rad. valerianæ	20 grammes
Rad. althææ	20 grammes
Muc. acaciæ, B.P.	5 grammes
Ol. tanaceti	20m
Ol. carvi	20m
Ol. menth. pip.	20m
Ol. petroselini	20m

(12,719, 1901.)

Domestic Dyeing.—Louis Aloy, Ostend, has obtained protection for a dyeing composition, adapted for domestic use, made as follows:—

Calcined sulphate of soda	540 grammes
Gum arabic	100 grammes
Raw sugar	100 grammes
Animal gall or bile	100 grammes
Potato-starch	100 grammes
Glycerin	20 grammes
Aniline-dye	40 grammes
Perfume	1 gramme
Formol	10 to 20 drops

This makes a paste, but a powder may be made by omitting the glycerin. Ten grammes of Panama wood extract may be used in place of a like quantity of gall. (11,359, 1901.)

Gas-igniter.—Dr. Angelo Simonini, Brooklyn, U.S.A. patents the following improvements in an igniting-device for gas. The lighter consists of a preliminary heater of platinum black and an igniter consisting of fibrous material impregnated with a solution of

Thorium nitrate	99 per cent.
Cerium nitrate	0·98 per cent.
Rhodium chloride	0·02 per cent.

The solution being dry, the upper portion is painted in lines or spots with an intermediate heater composed of a solution containing

Thorium nitrate	99 per cent.
Cerium nitrate	0·8 per cent.
Rhodium chloride	0·2 per cent.

(13,579, 1901.)

Our Town Traveller.

THE usual condemnation of the Budget proposals is *au fait*, and I have listened to many dissertations this week on the pettifogging character of Black Michael's schemes for raising money for the ensuing year. The principal plaint of business-men appears to be that a considerable disorganisation of trade is to be effected for a comparatively paltry result. Whether that be so or not is not within my province to state (even supposing I knew), but I managed incidentally to gather that the trade prospects, which seemed brighter with the new year, are increasing in brightness with the imminence of Peace. A hopeful, not to say buoyant, tone pervades the wholesale, and especially the export, community which augurs well for the future.

New ideas for the appropriate adornment of the pharmacy are always welcomed by the enterprising pharmacist. To that end the

York Glass Company (Limited)

have instituted a new set of shop-bottles, which are unique in design, and for which some practical advantages are claimed. These bottles are in the form of direct squares, and may be had in the usual shop-sizes to hold 5 oz., 10 oz., 20 oz., and 40 oz respectively. The usual colours are represented—actinic, white, and blue—and with the single exception of the shape they are like the ordinary round. The poison-bottles, however, are ribbed and appear to be even more distinctive to the touch than the ordinary round ribbed bottle. One advantage which the square series possesses is the fact that the label can be seen in its entirety at a glance. Shop-jars are constructed in the same manner and in two colours—maroon and pink—the pink series having gilt cornices. All these jars have rounded edges inside and outside and are nicely finished and good to look upon. A better and more secure grasp can be obtained of the square bottle or jar than of the round, and the squares are said to take up less space on the shelves. The recess labels of the York Glass Company are used, and the glass label being flat is not only stronger, but can be more substantially fixed to the bottle than a curved one, and there is therefore less liability to fracture. As a further means of ensuring uniformity in appearance and the security of the bottles, the York Glass Company have devised a very simple method of fixing the bottles on the shelves. A strip of wood is fixed lengthwise at the back, against which it is only necessary to push the bottles and jars so that they shall all stand square, and thus perfect alignment is secured. Equal space between the bottles is obtained by putting strips at right-angles to the longitudinal slips. These slips are tapered off towards the front, thus enabling bottles and jars to be slipped naturally and with ease into their places, while if at any time one should desire to convert the shelf to ordinary use it is only necessary to remove the dividing-slips. The illustration given herewith will show the means

which may be adopted. The method certainly appeared to work well in practice as I saw it in operation at the Company's London branch at 76 Finsbury Pavement, E.C., where Mr. Wilson demonstrated its utility, and where he will be glad to welcome any craftsmen who wish to inspect their new designs. These bottles, jars, &c., are produced at the same prices as the round series, and doubtless a judicious mixture of round bottles and square ones would have a not unpleasing effect in the pharmacy.

I looked in at 38 Wilson Street, Finsbury, E.C., afterwards and had a talk with Mr. Jones and Mr. Johnson, the London representatives of

Messrs. Wyleys (Limited),

of Coventry. These gentlemen report very satisfactory progress during the six months of their operations in the south. They have a nicely-fitted showroom where customers can inspect the series of pharmaceutical preparations and specialties put up by their firm. I was shown some chocolate-coated tablets of Blaud's pills, digestive-tablets, &c., which, in appearance, consistence, and taste, ought to commend them to the fastidious. These tablets are packed either loose or in bottles to retail at 1*s*. The shilling bottles when sold in quantities of three dozen have the name and address of the purchaser printed on each bottle. The same conditions apply to the Effervescent Tropels, such as lithia, Carlsbad, Vichy, and other waters. These are packed in glass tubes, each containing twelve or twenty-four respectively, and retail at 6*d*. and 1*s*. Each tube is afterwards packed in a box which is also labelled. Messrs. Wyley are putting on the market this season a selection of effervescent salines, packed in cartons of various devices to suit varying tastes. Photographic chemicals are likewise a specialty, these being sent out chiefly in neat little cartons. Antiseptic pastilles in considerable variety, with a soft gelatin base, are packed in nicely decorated 2-oz and 4-oz. tins These sell, I am told, with great rapidity, especially during the bronchial season, and I can believe it, for they are pleasant. Gelatin-coated pills and veterinary specialties are others of Messrs. Wyley's strong points. The duraplastic horse-balls (also with customer's name printed on orders of three dozen) are well known to agricultural chemists. The gelatin coating on these balls not only looks elegant, but preserves the consistency of the contents.

A visit to the London depôt of the

Luce's Eau-de-Cologne Company

at 12 Little Britain Street, Aldersgate Street, E.C., discovered a certain degree of chaos consequent upon extensive alterations taking place to cope with increasing business. Luce's eau-de-Cologne, which was first manufactured in Jersey by Mr. Henry Luce in 1837, is now prepared also at Southampton for handiness for export. The volume of business being done, according to Mr. Burden, is ever increasing, and several special styles he showed me which have been produced for the Coronation. These consist of boxed Cologne in various sizes. The larger size is in the form of a barrel, which reclines in a satin-lined leatherette covered case bearing on the outside well executed portraits of the King and Queen. The large-sized label bears a picture of the Victoria College, Jersey, but the distinctive feature of all is the Jersey flag, which appears on all genuine Luce's Cologne. The cases are to be had either in light or dark blue leatherette. At the same time Mr. Burden directed my attention to the fact that L'Ozonateur and Ozonatine, for which Messrs. Langton, Ford & Burden are the sole agents in Great Britain, are both selling excellently well. We have already referred to both these preparations (see *C. & D.*, November 23 1901, page 836), and have only to advise colonial buyers that indents should be made out on home shippers.

At 11 Queen Victoria Street, E.C. (about one minute's walk from the *C. & D.* offices), the inquirer will find Mr. Clive Meares, who represents the

Marvel Company of New York.

Mr. Meares has many pharmaceutical strings to his bow, but his pet project at present is the "Marvel Whirling Spray." The merits of this useful and well-made vaginal-syringe he demonstrated to me in the course of a recent chat. As its name implies, the syringe discharges its contents in a "whirl" instead of in the usual solid stream. The "whirl-spray" is a detachable cap at the end of a highly polished rubber pipe about 5 inches long. The pipe leads into an

Digitized by Google

indiarubber ball holding ½ pint of liquid, and a valuable addition is an adjustable soft rubber sheath which closes the vaginal inlet and prevents the fluid from escaping. A rubber nozzle cap is also supplied to prevent leakage if the syringe is carried filled for use when travelling. These caps and the nozzles may be had separately.

"The retail price," concluded Mr. Meares, "is 15*s*."

"But that is a long price." I urged. "How are you going to induce British chemists to stock so expensive an article?"

Mr. Meares was not to be dashed.

"I know the price is a big one," he said, "but the article is worth it. The material is of the best, as you can see, and, furthermore, the retailer will have about 5*s*. profit on each sale, and the chemist will have Protection."

He meant the Protection of Mr. Glyn-Jones, not of Sir Michael Hicks-Beach, as I afterwards gathered.

"Moreover," he said, "chemists will be able to buy any number under a dozen at the dozen rate; and for all good-sized orders a profit of about 50 per cent. is assured to the retailer."

I seldom go into the showrooms of

MESSRS. F. SCHUTZE & CO.,

at 89 Southwark Street, S.E., without encountering several novelties. The most recent productions in perfumery are headed in point of importance and appearance by "Violet Russe." This pleasant perfume is put up in elegantly finished bottles of three sizes, each bearing a striking label, which is a replica of the Russian Imperial Arms, embossed in gold on a purple background. The stoppers are tied with white silk bows, and silken cords trail down each side. They retail at 1*s* 6*d*., 2*s* 6*d*., and 4*s*. 6*d*. each. Messrs. Schutze have an extensive Scotch connection, for which they cater most successfully. The Heather-Scented Oatmeal Soap of Grant et Cie., which is packed in tartan wrappers, has been reinforced by a Heather-Scented Perfume, with label and trimmings to match, and a Heather-Scented sachet is appropriately added to complete the series. Messrs. Schutze are also the agents for "Mountain Glory," a perfume evolved by Mr. James Walker, chemist, Saltcoats, N.B. The label of this perfume is unique. It is a picture of fairies culling the Czarina's favourite flowers to make perfume. The wording of the label is printed in Gaelic as well as in English, and the cork is a gilt crown-shaped sprinkler. Half-a-dozen other new lines in floral extracts of various kinds I saw, with dainty art-labels to suit all tastes. The Coronation season, of course, is not forgotten; even the humblest may be made to participate, for I saw a series of Coronation lockets, in the form of a cross, to sell at 1*d*. each. These contain camphor or perfume as desired, and should attract the juvenile portion of the community during the coming festivities. "Patriotic Confetti" is another novelty. It is said to be antiseptic, and is certainly perfumed, and when not used for the purpose for which confetti is usually employed the package may be utilised as a sachet-powder. The bathing-season which is approaching is being adequately provided for. A bathing-cap of pure rubber, to which Mr. Schutze drew my attention, is certainly a novelty. It is made of very fine rubber, and is coloured to resemble agate. It is very light, and capable of being compressed into a very small bulk, and it is very pretty. A series of sponge-bags, aprons, bibs, and bathing-caps, made of "Silkateen," contain no rubber whatever. These are said to be practically imperishable, and are much sought after in hospitals and places of that description, as the articles may be sterilised by boiling without harm.

A GLASGOW critic, reviewing Mr. Gibson's "Urlyn the Harper," remarks that the writer resembles Browning in one respect: his meaning is often obscure.

MR. SEDDON, the New Zealand Premier, has publicly stated that the colonies are ripe for a preferential tariff. The Imperial authorities, he said, had intimated that they would not stand the bounty system much longer. The most effective way, would be for the colonies and New Zealand to grant a rebate or drawback on all the British manufactured goods brought into the colony by British ships, the Imperial authorities granting a similar rebate on colonial products upon which duties were now chargeable at home.

Oriental Imagery.

THE florid language of the native of the Orient is a never-failing delight to the products of a western civilisation. Our Indian empire abounds in men who carry their inherent extravagance of rhetoric into everyday business life, to the joy of their European brethren. And in no domain of industry is the power of rhetoric more necessary or more convincing than in what is popularly known as "the patent-medicine business." We receive periodically amusing literary productions from India which pass a half-hour most agreeably. The latest to hand is the price-list of B Basu & Co., "chemists and druggists," of Calcutta, who own "four most wonderful medicines—Bijoya Batika (wonderful fever-pills), Sarsaparilla (elephant mark), Fulela (unrivalled sweet-scented hair-oil), and a matchless tooth-preserve." These marvellous preparations, we are told, command universal respect, and are in demand throughout the world. They are eagerly sought for by Hindus, Mahomedans, and Christians. The prince and the peasant, the rich and the poor, the "literate and the illiterate" all hanker after them. Bijoya Batika, "for malarious fever," has no equal in the wide, wide world. Its marvellous efficacy has made its reputation not only in India, but also in England and the European Continent, "as well as in Persia, Arabia, Egypt, Natal, and other countries." It has saved the lives of thousands when Allopathic, Homœopathic, and Kabiraji medicines have failed, and "O! why," bursts forth the inspired writer, "should human beings be hopeless when such a wonderful medicine exists to relieve them of their sufferings and save them from the jaws of death?" Why, indeed? Bijoya Batika not only cures fever, but is a never-failing liver-stimulant; and, indeed, it cures "also most other maladies to which the human body is subject." There is a sweet comprehensiveness in the latter statement which cannot fail to be convincing. Then follow selections of testimonials from the "thousands and tens of thousands received." Gentlemen with highsounding sobriquets like "Pundit Shib Chandra Sarbabdhoum, the most distinguished Master of the Naya Philosophy in Bhatpara and principal and chief professor at the Moolazore Sanskrit College," and the more plebeian "Mrs. Rogers of Lahore," with many others, testify to the curative properties of the wondrous Bijoya. The "Elephant-mark" sarsaparilla when taken "after hard labour" (there is a suspicion of police-courts here) "exhilarates both the body and mind." Moreover, "it staves off premature old age, and makes the body strong and tight." Besides purifying the blood, it nourishes the bones, beautifies the complexion, kills worms, and increases the memory and intelligence. But all these things are as naught before the virtues of Fulela. Here the medicine-man lets himself go. This matchless hair-oil, he says, is an extract of seven of the most sweet-scented flowers of India. With the perfume and active principle of these sevenflowers have been chemically combined several highly efficacious Ayurvedic medicines. "The fragrance of Fulela is such that, when used, it permeates the atmosphere all around, and the gentle breeze wafting it to a distance makes the passers-by pause and look about for the source of this wonderful perfume, under the impression that somewhere near them must be a garden, where thousands of flowers have all of a sudden blossomed, turning this earth into the paradise of Indra, the King of the celestial regions. In fact, the fragrance of fulela is unequalled in this world."

Fulela is not only a hair-oil but it keeps the throbbing brain cool and the spirits cheerful and buoyant. It also removes freckles and pimples from the face, and makes the skin soft and shiny like that of a babe. It is, moreover, a disinfectant, poisoning the deadly microbes which lurk in the air, and "is the most precious present you can make to your beloved wife, your dear daughter, and all those whom you love." Of Fulela, Babu Amrita Lal Basu, manager of the Star Theatre, Calcutta, the great satirist and dramatist, writes:—"Of what flower is this—your Fulela? Is it from the flowery string of Cupid's bow? Have you quietly snatched a few fresh petals and diluted them in sweet oil? Otherwise how could it be, that in the simple softness of its odour there should be a charming enamouring power—a soul-enthralling agency? The fragrance calls back some long-lost sweetness, some lovely expressions of the forgotten past!"

Describing Mr. Basu in this connection as a satirist appears sinister somewhat, but enough has been written to show that our Western medicine-man is far behind his Eastern contemporary in the grace of speech. Could not a Beecham or a Geddes import an Oriental advertising-agent?

FROM Glasgow Village, East Bank, Rio Berbice. British Guiana, we have received a letter from a native gentleman who wants price-lists, but particularly sample-boxes of ointment. He says:—"Let me know if You could Supply me with Some Best ointment I am Suffering from the result of a Snake Bite from about three years now & Same cannot be heal I expended nearly one hundred Dollars in physician But it is of no use the ulcer is clean and level only required to be Heal But By no means same Cannot be heal if possible please let me have a sample Box of ointment and as soon as price list is received I will mail you my order."

Winter Session.

Royal Institution.

Lord Kelvin was in the chair at the Friday evening discourse on April 11, when Professor Dewar spoke on

The Problems of the Atmosphere.

He said, since it has become comparatively easy to manipulate the atmosphere in liquid form, many problems of practical utility have suggested themselves, and it cannot be overlooked that there are great potentialities in liquid air. The idea naturally occurred that it might be possible to separate the two main constituents of the atmosphere—oxygen and nitrogen—and thus provide a cheap source of oxygen for metallurgical and other operations. Experiments have been conducted with a view to separating the two gases as they liquefy, but as that happens at nearly the same temperature it was found to be impracticable. Fractional distillation has also been tried, and it is possible to get a gas containing as large a proportion as 90 per cent of oxygen, but the waste of liquid air is too great. Another method which promised some success was to separate by means of a centrifuge the spongy mass of oxygen from the nitrogen at the solidifying-point and in a vacuum, but the product did not contain more than 50 to 60 per cent. of oxygen. As a laboratory reagent liquid air is admirable for drying gases, in place of phosphoric anhydride or sulphuric acid.

The discourse then turned on whether there is any non-liquefiable constituent of the atmosphere, and it was found on experiment that an atmospheric air could be liquefied in such a way that the liquid contained all the constituents of the atmosphere, those that are more condensable as well as those that are less condensable than air, the latter being held in solution. From this, by a process of fractional distillation, the different constituents—crypton, neon, and xenon—can be definitely separated and sealed up in vacuum-tubes for spectroscopic examination. The question then arose as to how great the proportion of hydrogen is in the atmosphere. To determine this is a matter of difficulty. Gautier's laborious investigations yielded the result that marsh gas is present in varying amount, while hydrogen occurs to the extent of 20 parts in 100,000, and is almost constant whether the samples of air were taken from a forest or from the surface of the sea, from Paris or the Pyrenees. But it was doubtful, from experiments by Lord Rayleigh, whether such a large amount of hydrogen could really be present in the atmosphere, and it appeared probable that it was in some way introduced during the course of the inquiry.

To settle this point Professor Dewar endeavoured to separate the incondensable portion from the condensable by employing a liquefying-apparatus in which the solution of the former in the liquid was prevented, and by using a glass float in the liquefying-vessel he succeeded in liquefying the oxygen and nitrogen of the air, but collecting the hydrogen and helium as gases. Through this apparatus he could pass 100 litres of air in the liquid state in fifteen or twenty minutes, whereas Gautier required twenty-four hours to deal with the same amount. The incondensable residue thus obtained amounted to one thirty-thousandth or one forty-thousandth of the total—a very much smaller amount than that found by Gautier. It therefore became necessary to consider whether any considerable portion of the hydrogen escaped collection by the float-method. The answer was in the negative, for the lecturer by another method found the incondensable portion to be about one thirty-five-thousandth, while, when a known amount of hydrogen was added to air known to be free of any incondensable residue, it could be recovered by means of the apparatus.

Professor Dewar thinks the source of error in Gautier's observations was the metal pipe, 90 metres long, used for conveying the air to the testing-apparatus. His experience is that, using metal apparatus and drying-agents, it is easy to get contamination with small quantities of hydrogen.

Professor Dewar next spoke about the constitution of the upper atmosphere. The constituents up to a height of about nine miles had been ascertained to be present in practically the same proportion as at the sea-level, but according to Dalton's law there must be a continuous variation in the constituents at greater heights. Thus, at eighteen miles the carbonic acid should disappear, while at thirty-seven the oxygen, and at sixty-two the nitrogen, should have gone. Hence it is not to be expected that much change would be detected in the samples hitherto brought down by balloons, but he believes it will be found possible in the future to get samples by means of balloons from heights of twenty miles. Whether there is an universal interplanetary atmosphere, or whether our atmosphere is absolutely limited to a height of some fifty miles, is a disputed point; one school holds that interplanetary space has no gas and no temperature, another that it has a temperature of something like −140° C., the residue of temperature being due not to collision, but to initial velocity of the molecules.

Chemists' Assistants' Association.

At a meeting of the above Association, held at 73 Newman Street on April 10, presided over by Mr. J. W. Peck (President), Mr. E. A. Andrews, of St. Mary's Hospital, read some notes on

Extractum Belladonnæ Liquidum

Mr. Andrews, after stating that at St. Mary's they used about 3 cwt. of belladonna-root in a year in making the liquid extract, stated that he did not remember reading any account dealing with the important point of the long time necessary to finish a batch of the official preparation. I find, said the speaker, that it usually takes about a fortnight to complete a batch in the official method, and the shortest time that a batch can be prepared in, exclusive of estimation, is nine working-days. Needless to say, in hospital-work, as in every other business-place, time is a consideration, and I have made many experiments to produce a preparation which shall agree with that made by the B.P. process, but prepared in a shorter space of time. Some of my earliest experiments were in the direction of devising some means of automatically supplying the spirit to the drug, and, as we are dealing with a spirituous menstruum, the apparatus had to be such that evaporation would be reduced to a minimum.

Mr. Andrews then explained how he modified a process he saw described in Remington's "Practice of Pharmacy," in which three percolators are supported on retort rings attached to a central rod fixed in the counter, and projecting about 18 inches above the top of the fittings. This arrangement permits the percolators to be raised or lowered as required, and with the aid of screw-clips the rate of percolation can be regulated to a nicety. The percolators are fitted with a glass cover, through which a hole is drilled and a tube inserted to allow the menstruum to enter from above. Another tube at the bottom carries the percolate to the next percolator, the whole acting automatically

Having got a method which did not require much attention, steps were taken to see if the drug could be equally well exhausted in a shorter space of time, and finally the following modification of the B.P. process was adopted.

Take 40 oz. of menstruum, ordered in the B.P., and 2 lbs. of belladonna-root in No. 20 powder. Moisten 8 oz. of the powder with 4 oz. of the menstruum, pack moderately tightly in a percolator, and let stand from 5 P.M. till 9 A.M. the following morning. Attach to automatic supply, and allow menstruum to drip on to the drug at such a rate that it is moistened right through and a distinct stratum of fluid formed on the top by 2 P.M. Attach a receiver, and let rate of percolation be such that 4 oz. of percolate are collected by 5 P.M. Stop the flow of the menstruum. Use the 4 oz. of percolate to moisten a second 8 oz of drug; pack in a percolator; attach to this the tube of percolator 1, and let stand till 9 A.M. next morning. Allow the menstruum to drip into 1, and the percolate from 1 to drip on to the drug in 2 at such a rate that it is moistened through and a stratum formed on the top by 2 P.M. Attach a receiver, and collect 4 oz. of percolate by 5 P.M. This same method is adopted with the third and fourth quantities of drug, passing the percolate from 2 into percolator 3, and so on. At the end of the fourth day 4 oz. of strong percolate will have been collected; the remaining 8½ oz. are collected on the fifth day, allowing percolation to proceed at the same rate as on the preceding days. When the 40 oz. of menstruum has dripped into percolator 1, the latter is raised, and when percolation ceases, or is so slow that there is danger that the distinct stratum of fluid will not be kept on 2, it is disconnected, the marc pressed, and the fluid poured on 2. Percolators 2 and 3 are treated in the same manner.

Digitized by Google

Proceeding, Mr. Andrews said the advantages of this method are that a batch can be prepared in five days; the periods of maceration are convenient; a definite quantity of menstruum is used; the loss of spirit by evaporation is reduced to a minimum; and the amount of alkaloid extracted is about the same as when the strictly B.P. method is followed.

Mr. Andrews then dealt with other experiments made with a view to testing the relative efficiency of his process and that of the B.P. He prefers two gravimetric estimations to the B.P. method of one gravimetric and one volumetric test.

Mr. Andrews concluded with a reference to the diverse views as to what constitutes a No. 20 powder, and he blamed the 1898 Pharmacopœia for this.

A vote of thanks was accorded to Mr. Andrews for his paper.

Newcastle Chemists' Association.

A MEETING of this Association was held in the Hôtel Métropôle on April 9, Mr. Robert Wright (President) in the chair. A letter was read from one of the candidates for the Pharmaceutical Council asking the support of the Association in his candidature. It was decided that, as an Association, no action should be taken in the matter, but that members could vote for those candidates they chose.

Mr. F. R. DUDDERIDGE, F.C.S., of the local school of pharmacy, was on the card for

ARSENIC-TESTS,

and gave a very interesting *résumé* of the occurrence of this poison, together with the different methods analytically adopted in its detection. He had on exhibition the various apparatus employed for the several tests, as also specimen mirror tubes, &c., prepared by Mr. J. S. Hill, to illustrate his paper. Remarking on the preference shown by different workers for their own particular test, he said it was pretty much the same as the fact that each dispenser had his pet excipient in pill-making, varying in detail according to the material to be treated.

Discussion was purely complimentary, and owing to the lateness of the hour the further business on the agenda was held over for a special meeting to be held in a fortnight's time.

Dewsbury Chemists' Association.

A MEETING of the above Association was held on April 14. Mr. R. Gledhill, the newly-elected President, occupied the chair. A resolution of sympathy was passed with Mr. J. Walker, Cleckheaton, on the death of his mother.

FEDERATION PROPOSALS.

Letters were read from the Secretary of the Federation of Local Associations with respect to the withdrawal of the Dewsbury Association from the Federation. Mr. MERSON said he had seen an extraordinary report of the last meeting of the Dewsbury Association in the trade papers, and he was doubtful whether to take Mr. Broadhead's remarks seriously. The Federation was not by any means what they would all like it to be, but the Executive were in a difficult position. They had no right to decide arbitrarily what subjects should be put forward for discussion. They were simply the mouthpiece of various affiliated bodies. He would be pleased if the Dewsbury Association would make any suggestions, with a view to extending the usefulness of the organisation.

THE CURRICULUM.

The PRESIDENT next gave the Presidential address, and said that perhaps the first question of interest was the curriculum for the Minor examination. Referring to the debate at the last Council meeting, he said the Minor examination could very well have been divided without a compulsory curriculum. (Hear, hear.) Before a compulsory curriculum was introduced, their rights ought to be secured to them. If a more severe curriculum was enforced, they ought to have a monopoly of the Pharmacopœia. As to the Minor examination, he thought they would all agree that it ought to be divided. (Hear, hear.) Mr. Gledhill next alluded to the Council election, and said they ought to take more interest in the election of members. He did not find as much fault with the Council as most people did. Very often their silence was a sign of their soundness. He maintained that the Society was not backed up as it ought to be. The President also said the report of the Poisons Committee would be brought before them in the course of the year, and it seemed probable they would have to renounce some of their rights. He would fight against giving away a single poison; they ought rather to have an extension. As to prescription-dispensing, Mr. Gledhill contended that every person who dispensed a prescription, whether in a shop, an infirmary, or a surgery, should be qualified under the Pharmacy Act.

It was agreed to contribute 1*l.* 1*s.* to the Martindale Memorial Fund, and it was also decided to recommend members to vote for the following candidates at the Council election:—Messrs. Glyn-Jones, Harrison, Harrington, Campkin, Pickering, Young, and Carteighe.

Bristol Pharmaceutical Association.

A MEETING of this Association was held on April 9 at the Royal Hotel, the President (Mr. E. F. Young) in the chair. After the usual routine of business had been conducted, the VICE-PRESIDENT (Mr. G. T. Turner) read a paper on

THE MINOR EXAMINATION.

The present method of conducting the Minor examination leaves, Mr. Turner said, much to be desired, and the many suggestions and schemes that have been propounded to improve it have so far only had the effect of increasing its stringency. It was hard that a student who only fails in perhaps one or two subjects should be obliged to go through the whole ordeal again. A medical student is only re-examined in those subjects in which he has previously failed. Mr. Turner thought that no curriculum should be enforced on any student who was apprenticed before January, 1901, and that the Minor examination should be divided into three sections—(1) practical, (2) scientific, and (3) technical subjects. There is a strong feeling on the question throughout the country, and the speaker held that a canvass should be made of all members and associates of the Society; and that the decision of the majority, and not that of the Council, should determine the point. Before a curriculum is put into force better provision should be made in large centres throughout the country for the education and training of pharmaceutical students on the lines suggested by Mr. Paterson in his Federation paper. At the same time, Mr. Turner suggested that the objects of the Federation would be greatly furthered by putting the British Pharmaceutical Conference on a broader basis, so that papers on Parliamentary, educational, or commercial questions could be read before it.

An interesting discussion followed, in which Messrs. Young, Plumley, Taylor, Berry, and Boorne took part, there being unanimity with the opinions expressed in the paper.

At the conclusion of the business-meeting about thirty members and friends sat down to supper, and after supper a programme of vocal and instrumental music was rendered by Messrs. F. H. Blissett, H. E. Boorne, A. W. Cox, A. B. Francis, H. O. Isaac, C A. Stokes, G. T. Turner, T. Walker, T. Wilkes, and E. F. Young, which was much appreciated. Mr. E. W. Hill acted as accompanist.

Three Towns Junior Chemists' Association.

MR. J. STUART THOMPSON, lecturer on biology at the Plymouth Municipal School, gave a lantern-lecture on

INSECTIVOROUS PLANTS

to the Junior Section of the Plymouth, Devonport, Stonehouse and District Chemists' Association on April 9. The chair was taken by the President (Mr. C. T. Weary). The lecturer showed slides of the chief genera of insectivorous plants—namely, *Darlingtonia, Sarracenia, Nepenthes, Utricularia, Dionæa, Aldrovanda, Lattræa, Pinguicula*, and *Drosera*; and showed the means which the leaves of these plants possessed for capturing, digesting, and absorbing their animal prey. The subject was treated partly from an

Digitized by Google

historical point of view, and the discovery of Venus's Fly Trap (*Dionæa*) by Ellis, a London merchant, in 1768, and how it was enthusiastically described by Linnæus as "miraculum naturæ," was alluded to by the lecturer. He referred to experiments showing that the liquids poured out by different genera of insectivorous plants possessed deliquescent, mucilaginous, antiseptic, anæsthetic, rennet-like, and peptic properties. The extreme sensitiveness of insectivorous plants to organic fluids was described in the sundew, in which plant Darwin had shown that a leaf immersed in an extremely dilute solution of ammonium phosphate, only sufficient to supply each gland on the leaf-surface with $\frac{1}{20000000}$ gr., yet was strong enough to induce the inflection of the numerous tentacles on its surface.

A discussion followed, after which a vote of thanks to the lecturer was passed, the President regretting that the attendance was so small.

N.E. Lancashire Chemists' Association.

A special meeting of the Association was held on April 16 at the White Bull Hotel, Blackburn, Mr. W. H. Grimshaw in the chair.

Apprenticeship.

Mr. W. Holt moved—

That, in the opinion of this Association, it is desirable that the chemists of this district refuse to enter into apprenticeship agreements until training conditions and results justify such contracts.

He observed that his action was open to some criticism. It would be said by some that there were no apprentices to be had, but that was not strictly true—if they would modify the assertion by the word "capable," then he would agree. In his opinion, the time had come—in that part of the country, at any rate—when the question ought to be dealt with drastically. The dictionary definition of the word "apprentice" was one bound for a term of years to serve at some craft or trade under a master, who in turn binds himself to teach such apprentice that craft or trade. The present First, or Preliminary, examination opened out to the successful student many more worthy and remunerative callings than that of a chemist. He (the student) objected, first, to the little spare time he had to do the excessive "grinding" requisite for the severe Qualifying examination; then he objected to the long business-hours, the drudgery of the errand-boy and the porter; and, lastly, to the poor remuneration after qualifying. Mr. Holt said that the standard of examination was far above what was at present required in the great majority of shops. But that fact alone might not have deterred many capable men from entering the drug-trade provided the Pharmaceutical Society had been able to restrict the title and practice to the qualified man. The inability to bring about that much-to-be-desired object was no doubt one of the chief causes of the scarcity of good men, and was sure to have a discouraging effect upon the efforts of those who sought to bring about a curriculum or the much-talked-of university training. The only alternative to the lack of apprentices remaining to the chemist of that district was to employ errand-boys and ordinary manual labour (always taking care, of course, that the Sale of Poisons Act was duly observed), so that their obligations ended with the payment of wages for actual work done. He asked members to seriously consider whether they could continue to be parties to apprenticeship-contracts until something more tangible in the shape of privileges was conferred upon those holding the qualification—the natural consequence of which would be that a better class of youth would be induced to come forward, and their ability to teach him with credit to themselves would be greatly enhanced. (Cheers.)

Mr. J. Hindle, in seconding the resolution, said it was rather singular that, although he had had no conversation with the mover, his own views on the matter ran exactly on parallel lines.

Mr. R. L. Gifford said there was a tendency for apprenticeship to die out. He was informed this was observable in engineering and other callings. It certainly might be affecting them. In his opinion, however, the present acute state of the question arose simply and directly from the lack of inducement to follow the calling. This brought them to the same conclusion they arrived at some years ago—that their business was to deal with causes, to remedy root evils, so as to allow of natural development. The wise policy and the sensible must be to face the problem, which might be summed up thus: the State ordained qualifications, whilst unqualified practice was usual and general. The several phases of the broad question were: Primary evils—unqualified practice and use of titles. Subsidiary or consequent evils—(1) general exploitation of the calling; (2) unnatural growth of the abominable patent-medicine business; (3) retrogression of the drug-trade, where it ought to have developed professionally; (4) apprenticeship difficulty; failure to guard as a first and essential necessity against unqualified practice. This he regarded as the source of all their real evils.

Other members having spoken the motion was put and carried.

Business Changes.

Cohen's Drug Stores have been opened at 146 Commercial Road, E.

Messrs. J. B. Frank & Co., chemists, will shortly open premises at 111 Brixton Hill, S.W.

Messrs. Boots (Limited) will shortly open a branch at 7 King Street, Hammersmith, W.

Mr. N. Brunyee, chemist and druggist, is opening a business at Crowle, near Doncaster.

Mr. F. W. Fox, chemist and druggist, Redbourn, has opened a branch at Clarence Park, St. Albans.

Mr. H. J. Tottle, chemist, Epsom, has taken over the business of Mr. F. Oxley, Epsom, as a branch.

Mr Reuben Hird, chemist and druggist, Gloucester, has opened a branch business at 30 London Road, Gloucester.

Messrs. Lewis & Burrows (Limited), chemists, are about to open a new branch at 136A High Street, Clapham, S.W.

Mr J. H. Jones, chemist and druggist, has relinquished the business formerly carried on by him at 121 Finsbury Pavement, E.C.

Mr. G. S. Boutall, chemist and druggist, announces his intention of shortly vacating his premises 98 Strand, W.C., in consequence of their pending demolition.

Mr. J. Stevenson, chemist and druggist, has bought the business lately belonging to Mr. Percy Appleyard, chemist and druggist, at 39 Ledbury Road, Bayswater, W.

Messrs. Boots (Limited) have acquired the premises at 25 Grand Parade, Green Lanes, Harringay, N., which they will occupy as soon as the necessary alterations are completed.

Mr George E. Gratton, chemist and druggist, of Rhyl, has opened a branch pharmacy at Constitutional Buildings, Prestatyn, with fixtures supplied by Messrs. Evans, Sons & Co., of Liverpool.

The old-established business at Bilston, dating back one hundred years, which was formerly carried on by the late Mr. R. H. Kearnes, chemist and druggist, has been acquired by Mr. Heynes.

Messrs. Woolleys (Limited), wholesale druggists, Blackburn, are removing to larger works, Phœnix Mills and Laboratories, where the most recent steam and electrical plant has been installed.

Mr. H. L. Douthwaite, chemist and druggist, has acquired premises at Chepstow Mansions, Chepstow Place, Westbourne Grove, W., which he will occupy as soon as the necessary alterations are completed.

Mr. A. C. Kay, chemist and druggist, has removed from 26 to 38 High Street, Dover, where he has had a private house converted into a fine corner-shop. The fittings, &c., were supplied by Mr. H. Mills, Old Street, E.C.

Mr. C. Metcalfe Snow, chemist and druggist, who (as intimated in last week's issue) has commenced business on his own account at 2 Hope Street, Filey, is making a speciality of the dispensing of foreign prescriptions. He is also an F.S.C., and has instituted an optical department in connection with his pharmacy.

Westminster Wisdom.

(By our Parliamentary Representative.)

Shops (Early-closing) (No. 2) Bill.

Lord Avebury, nothing daunted, has presented a Bill with the above title to the House of Lords. It is designated "a Bill to provide for the earlier closing of shops"; and it was read for the first time in the Lords on April 14, and ordered to be printed. In the course of the Session it may succeed in getting through the Lords, but no further progress will be possible.

A Minister of Commerce.

Amongst the notices of motions is one by Mr. A. Thomas to the effect that seeing the present constitution of the Board of Trade is obsolete, in the opinion of the House the paramount importance of industry and commerce to the well-being of the Empire necessitates the proper administration of these interests by a department in no respect inferior to other departments of State, under the supervision and direction of a minister having the status of a principal secretary. To this department would be entrusted every function of the executive government especially relating to industry and commerce.

Rewarding Informers.

Mr. Layland-Barratt asked the Chancellor of the Exchequer on Tuesday whether in cases where penalties under 42 George 3. c. 59, for selling medicines without affixing the stamps in payment of duty required under that Act are not recovered by process of law, but are claimed by and paid direct to the Inland Revenue authorities, the informer is entitled to any portion of such penalties, and, if so, to what portion; and whether, if the informer is a Government official, he is entitled to a similar or any portion of the penalties? In reply, Sir Michael Hicks-Beach stated that the Board of Inland Revenue are empowered to grant rewards to informers, whether Government officials or otherwise, in cases of the kind referred to. The amount awarded to the informer depends upon the circumstances of each individual case.

The Ventilation of the House.

The frequent complaints as to the ventilation of the House of Commons have at length forced the Government to take some action. A Select Committee is to be appointed to inquire into the matter, consisting of Mr. Akers-Douglas, who, as First Commissioner of Works, is responsible for the condition of the place; Mr. Dillon, who is a licentiate of the Irish College of Surgeons; Dr. Farquharson, a medical member of much experience in his profession; Sir Michael Foster, professor of physiology at Cambridge; Mr. Goddard, whose knowledge as a civil engineer will no doubt be of service; Mr. John Penn; and Sir John Batty Tuke, one of the members of the General Medical Council. If such a body is baffled in finding a means of making the House really habitable, which it is not always at present, I fear a remedy does not exist outside demolition and reconstruction.

Anti-typhoid Inoculation.

The report on the results of the anti-typhoid inoculation, carried out under the directions of the War Office, has now been received. It deals with only 4,138 cases, and the aggregate results show a mortality of 8·2 per cent. in inoculated persons, as against 15·1 per cent. in uninoculated. The report, however, does not appear sufficiently conclusive in itself, and it seems expedient, in the eyes of the War Office, to obtain further statistics from the admission and discharge books before publishing it.

Arsenical Poisoning.

The last public appearance of Lord Kelvin before he left for America to be *fêted* by the scientists there was as Chairman at the meeting of the Royal Commission on Arsenical Poisoning. Most of the evidence taken related to the recent outbreak of arsenical poisoning in Halifax. Two of the witnesses represented brewing firms, one was a maltster, and one the medical officer of health of the borough. The brewers and the maltsters complained about the discrepancies in the results brought out by analysts from the analysis of the same beers, and they suggested that some standard method of analysis should be established so that they might get reliable guidance. From the evidence it could be also gathered that the brewers all over the country are seeking to improve their methods.

Sugar and the Budget.

Sugar has escaped further taxation. The Chancellor of the Exchequer claimed in his Budget statement that the duty imposed last year had been most successful. There has been an exceptionally good harvest of beet-sugar, and that has lowered the price to such an extent that, so far as wholesale purchasers are concerned, for several months past they have been paying not more than from 1*s.* 10*d.* to 2*s.* a cwt. more, after paying the duty of 4*s.* 2*d.* a cwt., than they paid a year ago. When the right hon. gentleman had gone thus far an uneasy feeling spread that a further imposition was about to be made. The apprehension was ill-founded. He went on to concede that the manufacturing industry which uses sugar as a raw material has been undoubtedly affected by the duty of last year, and he did not think it would be fair to disturb that industry again, in view of the fact that they had before them the possibility of having to work under altered conditions when the bounties are abolished eighteen months hence.

The Poisons Committee.

I have been making inquiries as to the probable duration of the proceedings of the Poisons Committee, but I find that the members themselves are somewhat hazy on the subject. It is not likely that anything in the nature of a report will be presented until the Session is well advanced.

Kew Gardens.

Mr. McLaren on April 15 asked the First Commissioner of Works if his attention had been called to the number of crippled, stunted, and half-dead coniferous trees in Kew Gardens which were no longer properly representative of the species to which they belonged, and whether he would suggest to the managers of the gardens the desirability of removing all such trees and replacing them by young stock, providing them as far as possible with the soil most suitable for their special requirements. The same hon. member also asked whether the right hon. gentleman's attention had been called to the complaints of the pollution of the air near Kew by the smoke-producing factories at Brentford, and to the complaints that the urban council of Brentford neglected or declined to suppress the nuisance; whether his attention had been called to the injury done to evergreen trees and shrubs in Kew Gardens by the smoke-laden air; and whether he will consider the feasibility of instituting proceedings against the offending parties. Mr. Akers-Douglas replied that the cultivation of coniferous trees is not attended with success in the northern parts of the gardens owing to the smoke of Brentford; but it is already carried on in the southern part on the lines suggested. The matter referred to in the second question is receiving most careful consideration.

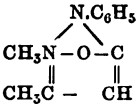
The cultivation of flax in Algiers has been neglected of late years, for that of vine-growing. In 1900 however the linseed exports increased slightly owing to Government bounties. France received the entire export.

There is an enormous increase in the cultivation of the poppy in China, as the peasant finds that it pays him better than wheat. He now saves himself the labours of ploughing, sowing, reaping, stacking, and threshing connected with the production of wheat. Formerly he had to carry his wheat to market; now, when the time comes to collect the opium, he spends a comparatively short time in the very light labour of scraping the poppy capsules with a knife and collecting the juice in a little pot, which when full he can carry to market in one hand and sell for far more than the whole of his wheat crop would have brought in.

Digitized by Google

Scientific Progress.

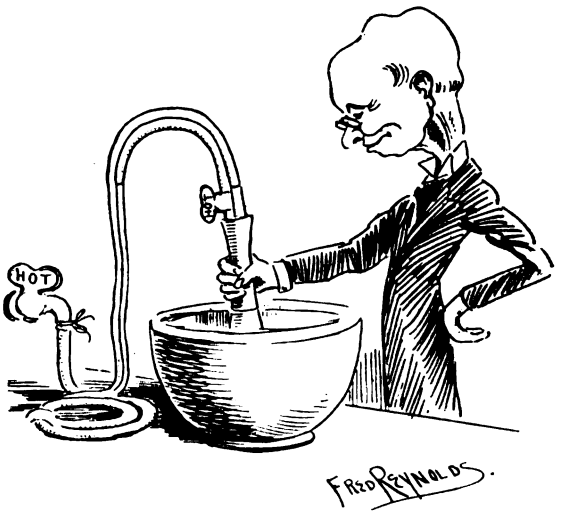
Estimation of Arrhenal.—M. A. Astruc, at a recent meeting of the Academy of Sciences, Paris, suggested a method for the alkalimetric estimation of disodium-methylarsenate, or arrhenal, based on the fact that in the presence of rosolic acid one molecule of arrhenal requires one molecule of a monobasic acid for neutralisation.



Quinine Camphorate.—Mr. T. G. Joyce, B.Sc., chemist to Messrs. Lorimer & Co., Islington, has succeeded in preparing a compound of quinine and camphoric acid. On analysing the substance, results are obtained which indicate the formula to be $[C_{10}H_{16}O_4\ C_{20}H_{24}N_2O_2)_2]_27H_2O$. It is soluble about 1 in 460 of water at 15·5° C., and crystallises in beautiful needles which melt at 184° C., decomposing to a yellow liquid. The salt is said to have sedative tonic properties.

A New Santonin Derivative.—By acting on santonin with hydroxylamine in the usual manner santonin oxime results. If this be allowed to react with amyl nitrite, and the resulting compound is crystallised from ethyl acetate, the new body separates out and is a well defined pernitroso santonin, of the formula $C_{15}H_{18}O_4N_2$. It melts at 193° C., and is powerfully dextrorotatory. A well-defined dichlorosantonin is obtained by treating santonin with freshly distilled nitrosyl-chloride. It forms white prisms, melting at 163°, and is also strongly dextrorotatory.

A New Sodium Phosphate.—M. H. Joulie (*Comptes Rendus*) shows that there exists a phosphate of sodium intermediate between monosodic and disodic phosphates which might be called the sesqui-sodic phosphate, and which corresponds to the formula $3NaO\ 3HO.2PO_5$. This phosphate differs from disodic phosphate (1) in being much more soluble in water and much more easily preserved in the form of a concentrated solution without crystallising; (2) in medicine it is active in much smaller doses; (3) it has a slight and not unpleasant taste; (4) it will probably be employed for hypodermic injections in more concentrated solutions than disodic phosphate.



Diphenylcarbazide Test for Chromic Acid.—M. P. Cazeneuve (*Bulletin de la Soc. Chim.*) says diphenylcarbazide is the most delicate reagent for chromic acid, without the possibility of confusion with any other metallic body; its sensitiveness reaches even more than 1 part in 1,000,000. Any chromate in aqueous solution, slightly acidulated with acetic or hydrochloric acid, gives an intense violet colouration with diphenylcarbazide in the form of powder. For testing cotton goods, the material is placed in a test-tube with 1 c.c. of a $\frac{1}{10}$-per-cent. solution of potash. The threads are instantly bleached in the case of chromate of lead or chrome yellow. The liquid is then made strongly acid with acetic acid. A few grains of diphenylcarbazide or of acetate of diphenylcarbazide added to the liquid develop, on agitation in the cold, a beautiful violet colouration. This reaction is trustworthy, sensitive, and rapid.

Antipyrin Derivatives.—A study of antipyrin and its derivatives by Michaelis and Pasternack (*Pharm. Zeit.*, 1902, 180), has resulted in the preparation of a number of new compounds which throw considerable light on the constitution of this interesting body. The corresponding sulphur and selenium compounds, thiopyrin and selinopyrin, which are prepared by the action of the potassium compound of selenium or sulphur, on antipyrin hydrochloride, have constitutions exactly analogous to that of the parent compound. This is suggested to be as follows:—

Chemistry of the Yellow Poppy.—Schlotterbeck and Watkins have just published (*Berichte*, 1902, 7) a full account of their researches on the yellow or celandine poppy, *Stylophorum diphyllum*. This plant was first investigated by Lloyd, who isolated a base which he provisionally called "stylophorine." From a considerable quantity of the crude alkaloid which the authors prepared, they have isolated by exhaustive fractional crystallisation five distinct alkaloids. Of these the principal is a base melting at 136° C., which from its chemical characters was easily identified as chelidonine. The second base is now named "stylopine," and forms needles melting at 202°. It has the formula $C_{19}H_{19}NO_5$. It is strongly lævorotatory, and forms well-defined salts, several of which were analysed. The third base melts sharply, and has been termed "diphylline." The fourth base was probably protopine, and the fifth was sanguinarine. In addition to these alkaloids, the plant appears to contain free-chelidonic acid, and possibly chelidoxanthin.

Things that Happen—Sometimes.

There was an old chemist called Porter,
Who invented a hot-water mortar;

But the first time he used it
He cursed and abused it,
For it scalded old pharmacist Porter.

The imports into Dahomey during 1901 include:—Perfumery, 89,112f.; soap, 53,969f.

Clerical Dispensers.—The *British Medical Journal* has had a circular forwarded to it which is being sent to clergymen by a well-known firm of pill-manufacturers. The circular says that as frequent inquiries for pills have been received from clergymen in rural districts, and as they believe the pills are mainly dispensed gratuitously amongst the poor, a list of the pills in most general demand for ordinary ailments is enclosed, together with their reduced prices. Then follows a price-list containing such pills as "pil. aperiens," "Blaud pills," "pil. hydrarg., *P.B.*," "pil. hydrarg.," "little liver pills," "phosphori pur.," "pil. quininæ sulph.," and "pil. tussi" at prices varying from 10*d.* to 2*s.* 3*d.* per gross! Indications are given for the use of these pills. For example, so-called "pil. hydrarg." contains colchicum, aloes, and hyoscyamus, and is labelled "gout and rheumatics"; "pil. quininæ sulph." is labelled "neuralgic," and "pil. tussi" "cough." The composition of the last-named pill is not given, but it certainly does not seem wise to place in the hands of the clergy such drugs as mercury, phosphorus, and colchicum without warning.

Observations and Reflections.

By Xrayser.

The Licensing Bill

which the Government will probably pass this Session will affect the business of a great number of chemists. The conditions under which the 50*s.* wine-licence is now granted are obviously ridiculous. A tradesman cannot have one without first getting a justices' certificate, but the Justices cannot refuse this if the applicant fulfils certain requirements. When this Bill has passed they will have "free and unqualified discretion," and many of them will certainly exercise it by stipulating that chemists shall only sell medicated wines. Then will come the definition of a medicated wine. Some people regard port wine when bought for an invalid a medicated wine. But worse than this. The Justices will grant a licence to A and refuse it to B in the same street, on the ground that one shop for the sale of medicated wine is sufficient in a given area. A pretty reason to give to B. This favouritism or selection will be very serious indeed to many grocers, from whom thousands of families have become accustomed to buy their modest clarets. But it is alleged that Mrs. X gets brandy surreptitiously from her grocer, and gets him to put it down in his book as nutmegs or pickles, or something non-alcoholic; and it is on this tale of the cock and the bull that the proposed legislation is founded.

Liverpool Chemists

had better take to ping-pong; their pharmacological entertainments are at an end. Professor Sherrington, under whose auspices inoculated rabbits and frogs' hearts were exhibited to them last December, "the experiments eliciting the heartiest applause," said on that occasion, in reply to a vote of thanks, "he would welcome anything which would tend to make the chemist take an interest in pharmacology." He draws the line of welcoming anything, it appears, at martyrdom, even when it offers itself in such a mild form as a police-court fine. Anyway, it is satisfactory to be assured that "such experiments in similar circumstances will not be repeated." We may or may not be pronounced anti-vivisectionists, but not many of us would desire that the law which forbids "any exhibition to the general public of experiments on animals calculated to give pain" should either be repealed or defied.

Scientific Martyrs

of the present day are not cast in the heroic mould. Mr. Andrew Lang, in *Longman's Magazine* in April, mercilessly criticises a life of Huxley which has recently been published. The author of the life lingers on "the tribulations through which the fighters of the sixties entered the kingdom of the free." The tribulation in Huxley's case consisted in selling large editions of his books. Mr. Lang suggests as a respectable martyr one Thomas Aikenhead, aged 20, who was hanged at Edinburgh in 1697 for alleging that Ezra wrote the Pentateuch. In these times Thomas would have said he had been inaccurately reported. Dr. A. S. F. Grünbaum, the gentleman who assisted Professor Sherrington in his performance to the Liverpool chemists, must have been pretty sure of a sympathetic hearer when he defended himself to the Home Secretary by alleging an error on the part of the *C. & D.* reporter. But what puzzles me is to distinguish the difference in delinquency between experiments made during the lecture or after it.

The Possessive Case

in connection with a compound medicine was at one time held by the Board of Inland Revenue to be conclusive evidence that the medicine was liable to medicine-stamp duty. As the administrators of that Act seem inclined to work round to that opinion again, it may be advisable to refer to a discussion which occurred about the end of the year 1887 and early in 1888. The question arose first in Scotland in reference to such popular medicines as Blaud's pills, Christison's pills, and Hamilton's pills. The Commissioners insisted that such titles held out the medicines as nostrums or proprietary medicines, and therefore liable to stamp-duty, but after some discussion they intimated that they would "concede" the use of the title, provided the formula were published on the label, or, in the case of Blaud's pills, if a statement appeared on the label that these were prepared in accordance with a formula in the French Pharmacopœia. Subsequently they agreed to a compromise such as "Iron Pills (Blaud)" or "Aperient Pills (Christison)." This was generally accepted by the trade, but the *C. & D.*, not satisfied that there was any need for concession at all, submitted a case to Mr. (now Sir) R. B. Finlay, Q.C., now Attorney-General, and published his opinion on February 11, 1888. It was quite definitely to the effect that the mere use of the title Blaud's pills, under the circumstances, did not render the medicine liable. Counsel's view was that "though in their original sense the words might convey an idea of proprietary right, yet in their current use they merely described the article sold." In the event of any new attack, the Board might be reminded of this opinion. I can hardly fancy that they would care to defy the opinion of their own legal chief, or, that if they did, any ordinary bench would uphold their temerity.

The Council Contest

this year is a disappointment. Messrs. Campkin, Morrison, and Pickering are, no doubt, capable men, but they are not standard-bearers; they do not represent any great principles or new policy. Besides, we are getting dainty; have we not a right to look for something like a novel programme from someone once at least every twelve months? *Toujours perdrix* palls. Where, too, are the Scotchmen? Four candidates last year and none this time. Scotch pharmacists have only themselves to blame on each occasion if they get less than their fair representation. And no new man from Lancashire this time; surely the red rose is not fading. With half the intelligence of the country, the county Palatine has only a fifth of the seats. It is to be hoped that the three new candidates will be able to hit on at least one grievance each, even if it is only a little one, or I do not know what is to become of poor journalists.

Bottle-collecting

appears to be coming into fashion, at least in America. I gather this from an attractively illustrated article in the *Century Magazine* for April. The cabinet of bottles there shown does not strike me as so prettily arranged as it might be; not nearly so pleasing to the eye as many a chemist's showcase. But the authoress dilates enthusiastically on the charm of the bottle (the empty one is meant), and on its infinite variety of shapes, colours, and uses. It is to his bottles that the chemist owes much of the picturesqueness of his pharmacy; perhaps his gold labels assist the effect, partly by colour, partly by mystery. But I think even more effect might be produced by a greater variety of style. I would like to see some of the ancient forms of apothecaries' containers restored to our shops, so that, if possible, each shelf should bear jars and vases and bottles distinguishable by sight as well as by touch from those on the neighbouring shelf. It might not pay, but a pharmacy so fitted, and with Chippendale cabinets holding perfumes and specialities put up in style to match, would be curiously attractive.

TO CHEMISTS, OILMEN, &c.

The Wrongful Use of Mineral Water Bottles and Beer and Stout Bottles.

The Members of the NATIONAL ASSOCIATION OF MINERAL WATER MANUFACTURERS, whose Registered Office is at 15 CALLS, LEEDS, will be much obliged if **Chemists, Oilmen, and others will refuse to supply CARBOLIC ACID, OIL, TURPENTINE, or any other Liquid** in bottles designed to contain **Mineral Waters, Ginger Beer,** or other **Non-Intoxicating Beverages,** or in bottles designed to contain **Beer and Stout.**

The filling of any such bottles by Chemists inflicts a serious loss on the Owners of the bottles, and the Manufacturers therefore appeal to all Chemists and others to see that the rights of Bottle Owners are respected.

ALL BOTTLES REFERRED TO IN THIS NOTICE are embossed with the name or trade mark of the Owner, and are easily distinguished; there should not therefore be any difficulty in recognising them and refusing to fill them.

Signed on behalf of the National Association of Mineral Water Manufacturers, WILLIAM TOOKE, *Secretary.*

THE CHEMIST'S COMPENDIUM.

An invaluable Pocket Book of Reference for Pharmacists. A complete Synopsis of the New British Pharmacopœia (1898). By C. J. S. THOMPSON. Second Edition, Revised. [2]

WHITTAKER & CO., Paternoster Square, LONDON, E.C.

PATENTS AND TRADE MARKS.

There are many worrying difficulties to be overcome in connection with the Registration of Trade Marks and the grant of Letters Patent, which members of the Retail and Wholesale Drug Trade can avoid by consulting an efficient agent, who would undertake all the trouble for an inclusive fee and obtain protection in the United Kingdom and abroad. Advice in the first instance free. Pamphlets gratis.

REGINALD W. BARKER.

56 Ludgate Hill, London.

The New Taxes.

THE annual Budget cannot fail to excite interest in the mind of every taxpayer; it is generally of some special

Digitized by Google

concern to the trader. We all knew this year that there would be heavy charges to meet, and nobody whose opinion is worth noticing has complained that the Chancellor of the Exchequer has thrown too large a proportion of the anticipated deficit on the current year. Sir Michael Hicks-Beach proposes to pay about one-ninth of the cost of the coming year's war, and leave the rest to posterity. Posterity will, no doubt, have its own burdens to bear; but it is not unreasonable to saddle it with some of the expense of what we are doing for it. We see no reason to quarrel with the Chancellor as to the exact ratio.

The taxes which are most resented are those which are directly appreciated. The extra penny on the income-tax and the doubling of the cheque-stamp will sting hundreds of thousands of people scores of times in the year. Every dividend paid to them, and every cheque they draw, will remind them of these taxes. But it can hardly be said that these imposts are unreasonable under the circumstances. The cheque-stamp is arousing a great deal of indignation, and the Chancellor is already indicating a willingness to climb down a part of the way if the pulling is continued, but nobody can allege that it is not a fair average apportionment of the national burden, so far as it goes. The private individual who draws a hundred cheques a year is, roughly, in about twice as good a position as the one who draws fifty, and the importance of businesses as at present conducted might, with at least equal accuracy, be measured by their cheque-books. Whether the result will be worth to the Government the annoyance the tax will cause, is a matter for them to consider; but certainly if businesses ought to be taxed at all, it would be difficult to hit on a simpler method of accomplishing this than by surcharging their cheques.

But the third tax—the 3*d*. per cwt. on imported grain and the 5*d*. per cwt. on flour—is a very different matter. It is difficult to over-rate the significance of this duty. The amount, it is true, is trivial—although from immediate indications it seems likely to work out at nearly a 10-per-cent. rise to the consumer—but it is not in the amount wherein the true significance lies. The proposed charge is only a fraction more than the registration-duty, which with even Cobden's and Gladstone's acquiescence, remained in force long after the corn-duties had been practically abolished, say the apologists for the new tax. How can you term that a protective duty? they ask. As such it is true it is almost valueless, though columns of Sir Michael's sophistries will not make the foreigner pay our import-duties. But the importance of the charge lies in the fact that it is an indication of policy: it is an outward and visible sign of the triumph of the protectionist party in this country. The leaders of that section openly accept this as an instalment, and as nothing else. For good or for evil they have for long pressed their views on Governments, and they will not willingly yield the 'vantage ground they have acquired from this Budget. That Sir Michael Hicks-Beach is at least half a convert to their views is clear from his speech. The choice of corn for import-duty is the boldest challenge that could have been offered to free-traders. If a temporary tax only had been intended it would have been far simpler and more productive to have doubled the sugar-duty. The very name of a corn-duty is ominous.

Free trade is an economic, not a political, subject. The repeal of the Corn Laws in 1846 was once described as the bagman's millennium. Whether it was a mistake or not, its apparent result was an immense stimulus to Britain's prosperity. Able men are now disputing that this was due to free trade. We do not enter upon that question here. But it is fair to expect that those who take part in the controversy should first familiarise themselves with the arguments which were fiercely maintained and combated in the early part of the last century, and which have been so long laid aside that they are now more than half forgotten, as is evidenced by the comments on the Budget which have appeared in many newspapers.

Anti-substitution.

THE question of substitution touches closely the interests of all manufacturers of medicinal specialities, on whose behalf much indignation has been expressed, especially in the United States. British proprietary-medicine makers have never been so rabid on this point as their American *confrères*. The latter appear to have the notion that when they gratify humanity with some remedy for the lungs, liver, or stomach, each of these organs becomes his own peculiar province—at all events, in association with the pill, emulsion, or cure which he has fixed up for it. The British maker, as a rule, regards competition with greater equanimity; he may worry himself about the "just-as-good" fraternity, but he takes care to keep that to himself, and keeps on telling the public that when they want the thing done well they should take *the* pill or whatever it may be. This, we fancy, is the better policy for Great Britain. After all there is not much substitution, and bare-faced imitation is rare. By substitution we mean palming off one's own article when another is asked for. Gleaning is more prevalent; it is the old and universal policy common to all trades of meeting a popular demand for an article—whether pills, pianos, or pinafores. Each has had its introducer, and if the trade in the article had remained with him we should have had neither variety nor profit in trade life. But the medicinal-speciality maker is peculiar. After building up a business of local or worldwide magnitude, he finds—or thinks he finds—his efforts dwarfed by the Machiavellian schemes of the substituting retailer. It is certainly unfair for a trader, by questionable methods of suggestion and presentation, to endeavour to reap the fruit of his opponent's outlay of brains and treasure. Direct imitations of a neighbour's specialities not only show an unbusinesslike want of originality on the part of the imitator, but they are transactions of debatable commercial morality. If, however, those who, in season and out of season, denounce the retailer who prefers to sell his own proprietary in place of the more widely advertised articles of his rivals, were to study the subject in all its bearings, they would probably find that the "substitutor" properly so called is as rare as we have said he is. A writer in a recent issue of *Printer's Ink*, who draws a ridiculous picture of the "intense hate" felt by the druggists of the United States for patent-medicine manufacturers, remarks of American druggists:—

> Many druggists make no bones about saying they never sell a patent medicine if they can possibly help it, and *as most customers have more confidence in the smooth argument of the drug-clerk than they have in the advertising*, the aggregate result is a tremendous loss to the advertisers.

There is seldom any attempt made to substitute. When the customer leaves the shop he knows exactly what he has bought, and if he has not got what he asked for ten chances to one he is quite as well satisfied. It is against human nature for any business man to sell an article on which he has no profit in preference to one on which he gains pecuniarily. And that is the crux of the whole question. Those manufacturers who assure their distributors a fair remuneration for their overturn have no complaint to make of substitution. The *Printer's Ink* writer says the cut-rate stores are mostly responsible for substitution, and points out that the

Digitized by Google

smaller druggist cannot be blamed for not caring to sell advertised goods for less than they cost him:—

He has no confidence in advertised goods, and believes that the advertiser sells the medicine to the cutter at lower prices than he does to him, so he starts to get even and knocks with a vengeance, and generally succeeds.

This further tribute to the power of the personal element in pharmacy from an unsympathetic observer who asserts that he knows "nearly every druggist from Los Angelos, Cal., to Spokone, Wash.," is worthy of note. He admits that before a proprietary article can be successfully vended there must be harmony between manufacturers and distributors. Having come to this conclusion it is astonishing to find that "the most practical plan" he can evolve for stopping the cutting and restoring harmony is the coercion of the druggist. He advocates that the largest manufacturers of advertised medicines form a corporation and establish a drug-store in every city of importance in the United States, and ship their goods direct to the corporation stores, and distribute through them only. Should the druggists doing business with the same town as the corporation store "desire to be fair, and offer their goodwill in selling the corporation goods," this genius would magnanimously allow them to do so, but a careful outlook should be kept for substitution, and the faithless druggist when caught should be placed under the ban. Druggists being an unprogressive class, the corporation store, he predicts, would in a short time become the leading store and set the standard of prices for the druggists of the community. We can imagine no scheme which would be more calculated to stiffen the back of the most supine druggist than this one. The corporation store, continues the prophetic writer, would be able to pay better wages and thus obtain better assistants. Good assistants would jump at the chance of a situation which did not depend on decrying advertised goods, and "this plan would raise the standard of the drug-clerk." This is an echo of the consideration which some in the American drug-trade are giving just now to the company-trading principle as carried on in the British drug-trade. Some seem enamoured of it, and wild-cat schemes are prevalent at present for imitating Mr. Jesse Boot. That is the only thing we can mention to account for the *Printer's Ink* writer's idea of meeting substitution by attacking the very people whom manufacturers should conciliate.

Methylation in Natal.

We are indebted to the Commercial Department (Intelligence Branch) of the Board of Trade for the loan of documents which they have received in regard to business in methylated spirit in Natal. The regulations previously made in 1897 have been rescinded, and under last year's Excise Act the Governor in Council has issued two notices, Nos. 128 and 130. The first deals with manufacture and storage. No distiller may methylate less than 270 gals. of spirit, of not less than 59° above proof, but spirit of 64° above proof or over may be methylated for use in the arts and manufactures in quantities of not less than 54 gals. The quantity to be methylated at any time must be a multiple of 9 gals., and the wood naphtha to be employed should be 60° above proof, and contain not less than 80 per cent. of methylic alcohol. We may note that in the United Kingdom the wood naphtha must contain between 72 and 80 per cent. of methylic alcohol and certain minimum quantities of other ingredients which give the deleterious character to the methylated spirit; the Natal authorities make no provision of this kind, but stringent regulations are made as to the examination of all materials employed and the supervision of the work of methylating. The Regulations provide that—

Imported methylated spirits mixed with any ingredient or substance of any description or kind whatsoever on being landed must be placed in an approved warehouse, and not be removed until a sample has been examined and certified by the Government chemist. The cost for conveying or examining samples and for marking packages is to be paid by the importer before the spirits are removed. Each package or vessel must be legibly marked in letters of not less than one inch in height, with the words "Methylated spirits" painted in oil colour. Crude methylic alcohol or imported methylated spirits must be contained in vessels not exceeding 100 gals. capacity.

The regulations as to sale of methylated spirit state that it is a mixture of 9 gals. of spirit of wine, not less strength than 59° above proof, and 1 gal. of wood naphtha. As already stated, spirit of not less than 64° above proof may be used for the arts and manufactures. The provisions as to the sale of methylated spirit by methylators and retailers are similar to those at home, but no quantity less than 2 gals. may be removed from licensed premises, and every vessel containing spirit must bear a printed label in legible letters stating the seller's name and description of contents. Licensed retailers are required to keep in stock a minimum or maximum quantity which is not specified in the regulations. The Excise has power to take samples not exceeding 1 pint on payment of the cost-price if demanded. These regulations indicate that the Natal restrictions on the sale of methylated spirit are intended to prevent its consumption by Kaffirs and depraved persons, whose purchasing-power does not amount to 2 gals. at a time.

RUSSIAN PHARMACY.

The celebration at St. Petersburg of the 200th anniversary of the opening of the first public pharmacies in Russia (see page 594) has called forth a number of historical notices on Russian pharmacy. It appears that the first foreign doctors who ventured into Russia about the end of the fifteenth century were both executed, but in spite of their untimely end a few doctors were practising in Russia in 1523. The Czar claimed their services almost exclusively for himself, and only allowed others to consult them as a special favour. During the reign of Ivan IV. the Terrible, Queen Elizabeth of England sent the English doctor, James Trengham, to Moscow, and he established the first court pharmacy Under Boris Godunoff and Michail Feodorowitsch medicine developed more and more, and in 1615 a few doctors were appointed to the Army. In 1620 a special institution, called the "Aptekarski Prikas," was founded, which performed many-sided functions. The doctors were subservient to it, and the pharmaceutical store was under its control. There were besides so-called alchemists, "who devoted themselves to the lock and clock making arts," and men were specially appointed to collect medicinal herbs. The second court pharmacy was opened in 1641. The appointments, plant, &c, of the court pharmacies at this time were very good. The chief pharmacy had a staff of forty men, and about 20,000kr. was paid out yearly—a large sum for that period. By this time Russians were admitted to the "Aptekarski Prikas," but they had to pass an examination. Their salary was, however, only 9r. yearly and 6 kopecks daily for board, whereas the foreign doctors received 700r. In 1692 Posnikow, the first Russian doctor, obtained the doctor's degree at Padua, and obtained permission on November 4, 1701, to practise in Russia. On November 22, 1701, Peter the Great granted the concession for the opening of eight independent pharmacies, and this is the occasion which was celebrated last month.

HISTORICAL PHARMACY.

The example of Mr. John Austen, of Sheffield, in collecting details of the old druggists of his town is to be commended

Digitized by Google

to the Presidents of other local associations. Mr. Austen has bought to bear on his task a rare archæological taste which it is not given to every chemist to possess, but this should not deter the historians of pharmacy from attempting to compile a record of local pharmaceutical progress. The work of Jacob Bell and Professor Redwood, who produced the very readable "Progress of Pharmacy," might be taken as a model, but for local historians the method adopted by the President of the Sheffield Society is inimitable.

LOMBARD STREET SIGNS.

The *Daily News* mentions that the firms in Lombard Street are to have a Coronation exhibition of signs that have been used at various times in that historic street. Amongst the signs we learn is one of the "Mermaid," the name under which one Edward Delves sold patent medicines. Who was Mr. Delves, we wonder? In more recent times one of that name was party to an important case under the Pharmacy Act bearing upon the sale of proprietary medicines. Is he a descendant? It is interesting to recall the fact that Robert Turlington, maker of balsam of life, was in business in Lombard Street early in the eighteenth century. His balsam was the subject of a patent granted in 1744. Perhaps he was Delves's successor, as there was no other patent-medicine dealer in Lombard Street at that time. The "Plough" was another Lombard Street sign, and gave the name to Plough Court—historic chiefly on account of the old-established business of Messrs. Allen & Hanburys, which has its head-quarters there.

AUSTRIAN PATENT LAW.

Mr. Ivan Levinstein, President of the Society of Chemical Industry, calls attention to the fact that by decrees of the Austrian Ministry of Commerce recently published and dated June 30 and October 10, 1900, fifteen patents of the Badische Anilin- und Soda-Fabrik were revoked on the ground that the patented articles were not manufactured in Austria, but imported from abroad. The patents referred to were for the production of artificial indigo, but the interest lies in the fact that the decrees give a clear idea of the "compulsory working" clause of the new Austrian patent law, The Austrian authorities laid it down that where a patent is being worked abroad, the holder must commence to work it on a manufacturing scale in Austria within a year, and that the public demand for the patented article has not to be considered. The decision will lead to the establishment of new trades and manufactures in the Austrian Empire, and a like result would, it is thought, result if the "compulsory licence" clause of the Patent Bill now before the House were replaced by some such provision as the following:—"A patent may be revoked by the Board of Trade if it is proved that the article patented in this country is made abroad and not in the United Kingdom."

CANCER-RESEARCH.

A draft scheme of organised research on cancer, formally adopted by the Royal College of Physicians on March 24, was approved by the Royal College of Surgeons on April 10. A fund is to be formed to promote investigations into all matters connected with cancer and malignant diseases by the establishment of laboratories, encouraging research, and assisting in the development of cancer-research departments. Should the discovery of the cause and nature of cancer be attained, and effective treatment be devised, the fund may be used for equipping hospitals for such treatment and for helping forward research in other diseases. Rules for the administration of the fund have been drawn up. The General Committee will have upon it representatives of the Local Government Board, the Colonial Office, the Royal Society, the Royal College of Physicians of Edinburgh, the Royal College of Surgeons of Edinburgh, the Faculty of Physicians and Surgeons of Glasgow, the Royal College of Physicians of Ireland, the Royal College of Surgeons in Ireland, and the Royal Veterinary Colleges of London, Edinburgh, and Ireland. It now remains for the money to be found wherewith to begin the work, and there seems every likelihood that it will be forthcoming. The Goldsmiths' Company have promised 5,000*l.*, and two other donors have offered the same amount. A feature of the scheme is the provision made for exchanging communications with workers in other countries, and in this way a friendly rivalry is sure to be promoted as to which country shall have the glory of solving the cancer-problem.

ZINC-OLEATE POWDER.

A complaint as to the zinc oleate of the Pharmacopœia is made by a correspondent of the *British Medical Journal*, as follows:—

> Oleate of zinc, especially in the shape of powder, is of great value for many skin-affections, such as trade-eczemas, but I have had almost to abandon prescribing it, as I find my patients are so frequently receiving from druggists wherever they go a coarse, rancid-smelling powder which is useless and sometimes injurious. The dispensers try to persuade me that the powder is good, but not fine enough, and that it should be applied as a dust through muslin. Several months ago I secured a very satisfactory powder prepared by a certain chemist, called the oleo-palmitate. For a while there were no complaints when I prescribed this preparation and sent my patients to one particular firm of chemists acting as agents for it; but to-day I have received a complaint and find it is due to this firm again giving my patients the ordinary oleate of zinc (B.P.) instead of the preparation which I had specially prescribed. Two months ago, in order to prove whether the objectionable smell and appearance of the British Pharmacopœia preparation was due to some chemical decomposition which might be common to the oleates, I made some experiments. Several samples were placed in different boxes and bottles, and some of the oleo-palmitate was placed in a chip box still containing a little of the ordinary rancid-smelling oleate to see if it would take on the same decomposition. An examination of the various samples gives to-day the following results: The oleo-palmitate in bottle, perfectly good; the same in box containing some of the British Pharmacopœia oleate, a shade yellow but otherwise unchanged; all the samples of this preparation were neutral, whereas all of the ordinary oleates, including a fresh sample from the shop as well as another supplied to a patient this week, were unfit for use.

The complaint of the bad-keeping qualities of certain kinds of zinc oleate is not new, but there is no difficulty in obtaining the finely powdered and well-keeping variety.

"The Art of Dispensing."

Subjoined is from a review of the sixth edition of this work which appears in the current issue of the *Practitioner*:—

> The exceedingly numerous additions, comprising about 200 pages, which have been made to the sixth edition of this work practically convert it into a new treatise. Although intended primarily for the dispensing chemist, it is for the prescriber a most valuable auxiliary to such books as Squire's "Companion" and Martindale's "Extra Pharmacopœia." Without the help afforded by a book of this kind we do not quite understand how one dare venture to prescribe many of the newer remedies in the newer forms of administration with any degree of certainty as to the result. It is true that the many-shotted blunderbuss prescription belongs to the past; but there is not a little reason to fear that the art of extemporaneous prescribing will soon belong to the past likewise. Unless the physician cultivates a close acquaintance with the materia medica, he will get into the habit of using a very restricted number of drugs or become the creature of the enterprising wholesale druggist. "The Art of Dispensing" provides a more than adequate amount of information concerning all the more recent forms of medication, and it is given in such a practical manner as to be eminently useful to those who prescribe as well as to those who dispense. Tablets, pastilles, capsules, bougies, pessaries, pastes, jellies, salve-mulls, and plaster-mulls are fully described, and the methods of manufacture explained. The idiosyncrasies, if we may use the word in this connection, of drugs are treated very fully; after perusing—say the paragraph on spirit of nitrous ether—no one would be in danger of falling into the many pitfalls besetting the prescriber of even this old-fashioned remedy. An excellent feature is the number of tables containing much information on solubilities, the interaction of organic chemicals, constitution and composition of morphine and quinine salts, etc. . . . Mr. MacEwan has produced a work which is quite indispensable to the pharmacist; it is also full of practical aids to the physician.

Wayside Medicinal Plants.

By John R. Jackson.

In days gone by, when every country housewife not only grew in her own cottage-garden the plants required to furnish the medicine of the family, but also prepared her own decoctions and infusions, the country-people had more interest in, and knew more of, the value of native plants than is to be found in the rural districts at the present time, notwithstanding the advance of general knowledge. Indeed, the system of progressive education which has caused country-folk to flock to the towns to attain that instruction has displaced from their minds the more simple object-lessons which surround us, and lie at our very feet in the hedge-rows and open fields of our rural districts.

At this season of the year these thoughts are more impressed upon us, as all Nature is now showing signs of returning life after the torpor of winter, notwithstanding that many plants have persistently continued in flower since September. The smaller periwinkle (*Vinca minor*) has been

Lesser Periwinkle (*Vinca minor*).

the most prominent example in this respect, the hedge-banks being studded with its bright flowers. It is surprising, as these wild plants make their appearance, to reflect how many of them have had a reputation in former days for some valuable medicinal property. The periwinkle (which is only considered a denizen in this country), though belonging to a dangerously poisonous family like the *Apocyneæ*, has long had a reputation as a medicinal plant, on account of its astringency and bitter taste—the former when dried, and the latter in a fresh state. On account of this astringency it was formerly much extolled for arresting hæmorrhage, either by introducing the bruised leaves into the nostrils for stopping bleeding of the nose, or by the administration of an aqueous decoction internally for hæmorrhoids and chronic diarrhœa. In much earlier times it was considered very efficacious as a gargle in inflammatory sore throats.

Lamium purpureum (the purple dead nettle) is another plant which is now in full flower in this neighbourhood. We are apt to pass over such a well-known and common plant as being of little or no interest. It has been used—probably on account of its heavy and disagreeable odour, especially when bruised, and its nauseous sub-astringent taste—in dysentery, pleurisy, scrofula, &c., being taken in the form of a decoction; besides which its external application has been recommended for reducing swellings, or to heal wounds, ulcers, burns, and scalds. In some parts of Northern Europe the young shoots are eaten as food in the form of greens.

A third plant which has lately been showing its modest white flowers from its shady habitation in the green hedge-banks is the wild strawberry (*Fragaria vesca*), the parent of the plant which yields the luscious dessert-fruit of our

Purple Dead Nettle (*Lamium purpureum*).

gardens, which is not only valued for its delightful flavour, but has the advantage over most other fruits that it may be eaten freely without producing ill effects. The medicinal value of the strawberry is due to its mucilaginous, slightly acid, and saccharine nature, so that it can be used in the preparation of a cooling and aperient beverage. Strawberries have been recommended as a valuable food-product for gouty subjects. The roots are slightly styptic, and have a bitter taste when dry; the leaves have astringent properties, and both roots and leaves at one time had the reputation of being diuretic and deobstruent, and they were formerly employed in jaundice, diseases of the urinary passages, diarrhœa, and other affections; besides which the bruised herb was applied as a poultice to old ulcers.

Wild Strawberry (*Fragaria vesca*).

A widely known and much-esteemed plant which is already sufficiently abundant to make its presence known by its sweet smell is the violet (*Viola odorata*). In both the blue and white flowered forms the plants are equally plentiful in the Devon hedgerows. The well-known fragrance of the petals is lost in drying, and to the taste they are slightly bitter and mucilaginous. The leaves and roots are also mucilaginous, and the latter at one time had the reputation of possessing similar properties to ipecacuanha, and were further used as a purgative. A syrup prepared from the flowers has been recommended as a mild laxative for children. At the present time one of the chief uses of violet-flowers is for crystallising as a sweetmeat for dessert.

Lympstone, Devon.

"Pharmaceutical Formulas."—We are now binding this work entirely in black buckram, which experienced librarians find is more lasting than leather. The price of the work remains the same—7*s.* 6*d.*, by post 8*s.*, from our offices, or for the published price from any wholesale house.

According to Mr. Peach, of the Geological Survey, the "American invasion" is of ancient origin. He has been telling the Glasgow geologists that the fossils of the Cambrian strata of the North-Western Highlands "are markedly American in facies," from which he infers free migration of species along the shore-line of a continent that lay across what is now the North Atlantic Ocean from America to Arctic Europe.

An Assistant's Experience.

Monte Carlo and the Riviera.

AS a Riviera resort Monte Carlo is known the world over by reason of its Casino, and it is hardly necessary to say that its position geographically is at the extreme south-east of France, in the tiny principality of Monaco, wedged in between Nice and Mentone, and in sight of the island of Corsica. Pharmacy here may be taken as typical of pharmacy generally along the littoral of the French Mediterranean.

The rise and development of the towns which now adorn the French and Italian Riviera has been one of the most striking facts of modern times. Hyères, near Toulon, was the first spot favoured by English visitors; then Cannes, Nice, Monte Carlo, and Mentone sprang into prominence. The fame of all these places as winter health-resorts spread with remarkable rapidity. Physicians advised their consumptive patients to shun the horrors of the northern winter and spend a few months in the life-giving sunshine on the golden coast. To-day, not merely invalids, but crowds of sybarites from all lands flock to the southern towns, which reap a rich harvest from their foreign guests, and as a consequence their needs are those which are most assiduously studied. The general tradesman originally could adapt his business to the wants of his customers without much difficulty. The Britisher cared little so long as he received what he wanted, and the shopkeeper was equally indifferent providing he made his 100 per cent. profit. But in the case of the pharmacist the matter was not so simple. The aristocrat afflicted, let us say, with the gout would leave a prescription for his favourite alkaline mixture with the French pharmacien. It might be an ordinary 8-oz. tablespoonful mixture; he would be startled to receive 2 oz. of a dark oily fluid in a wide-mouthed bottle, labelled "Usage externe," with, perhaps, a glaring skull and crossbones, just to remind him that man is but mortal, and that even gout is preferable to sudden death. Evidently such a state of things could not endure. The French chemist imported English drugs, and then began to employ English assistants, and to-day, in every business aspiring to the title of "Pharmacie anglaise," the staff is augmented by one or two Englishmen, and sometimes a German.

To one coming to the South for the first time the experience is akin to commencing the studies for the Minor, and the extent of one's ignorance seems appalling; but slowly the difficulties begin to disappear as the nomenclature becomes familiar, and soon the English assistant is as quick as his French colleague in finding the galenicals in daily use.

Almost any proprietary article can now be obtained. Showcases and stands are full of home-made patents and remedies. Here and there a bottle of unknown shape catches the eye, or, it may be, some quaint wording on a label; otherwise, the interior of an up-to-date "Pharmacie anglaise" has a homelike and familiar aspect. It is satisfactory to note that foreigners from all parts have the greatest trust in English pharmaceutical products. In many cases their faith is sadly misplaced, as many old-fashioned and useless quack medicines which have no sale at home have a ready sale here. There are many strange sights, and it is not the least amusing to find in the poorer parts of the town, unfrequented by visitors, small druggists floating the sign "English chemist" with the utmost audacity, and endeavouring to further the delusion by a display of a few ancient bottles of essence of rennet and a card of antiquated tooth-combs.

As the season lasts only from November to May, the profits of the year have to be made in those months, and the prices in the Riviera season are good. Dispensing-charges are slightly in excess of those in Bond Street and other good London houses. The cachet is much in evidence on the Continent, and bids fair to oust the nauseating mixture altogether from the realms of elegant pharmacy. All patents retail about double the list-prices: thus, 1*s.* 1½*d.* articles sell for 2f. 50c., and the 2*s.* 9*d.* size for 5f. 50c. The French coinage constitutes no difficulty after a few days' practice, the decimal system being in vogue, and everything reckoned in francs and centimes.

In the actual work of the pharmacy there is a sharp dividing line between the French and English departments. The English assistant works side by side with the French and German *employés*. His work at his own dispensing-counter differs widely from theirs, both in the substances used and the mode of preparation. French pharmacy has many strange characteristics; it is at once advanced and backward. Whilst the medical profession readily adopts all the synthetical preparations which are brought out, the people generally retain their faith in many of the older remedies, chiefly vegetable drugs. It thus happens that the French assistant during part of the day handles more rare chemicals than would be the case in most English pharmacies; at other times he may be employed in the preparation of some strangely unpharmaceutic compound, decoctions of herbs of no repute in England, infusions of lime-flowers, briar-leaves, marshmallow-root, &c. Wine is largely employed, and there is a syrup of almost everything. The stock is necessarily large, and it must be acknowledged that utensils are in most cases liberally provided. There is much to interest and many pleasures which are impossible to obtain in colder climates. To be able to rise at 7 A.M. and take a sea-bath before breakfast in the early days of January sounds rather like romance to the sojourner in the fog-bound isle.

The hours of labour in a season pharmacy are not excessive compared with those of the large cities. From 8 A.M. to 7.30 P.M. and 10 P.M. alternately, with one and a half hours for *déjeuner* in the morning, and the same in the evening for *dîner*, and alternate Sundays on duty, is the general order of things. Moreover, life is certainly much easier; one does not work at such enormously high pressure as the London or Parisian chemist. It is customary for an assistant to obtain a room in the vicinity and have his meals at a neighbouring restaurant or hotel. The food is generally excellent, and the savoury French dishes, with the plentiful supply of wine and fruit, will satisfy those with the most fastidious epicurean tastes.

The hours of leisure are pleasant; even the element of poetry creeps into the pharmacist's life when the day's toil is over, and he sits smoking his cigarette on the rose-covered verandah of a picturesque white villa on the shore of the blue Mediterranean, listening in the silver moonlight to the rich sonorous voices of strolling French and Italian musicians, who sing not of pill or potion! The Casino with its beautifully kept gardens is, of course, the centre of attraction to visitors of Monte Carlo, and the student of botany will find much to delight him, both in these gardens, and in those of La Mortola belonging to Sir Thomas Hanbury, which are situated about three and a half miles from Mentone on the road to Ventimille, and contain one of the finest floral collections in Europe.

The student of human nature will do well to enter the gilded salons of the Casino and watch the jewelled aristocrat rubbing shoulders with the ruined *roué* in the intense excitement of "rouge et noir" or "trente et quarante." It is as well, however, to leave what coin of the realm one possesses safely at home.

There are many places to visit on the free Sundays; Nice, the metropolis of the Riviera, is only fourteen miles distant—about three-quarters of an hour by train; and another hour's travelling brings fashionable Cannes in sight.

In the other direction, Roquebrune, Cap Martin, and Mentone are within a few miles, and are happy-hunting grounds for the pharmaceutic camerist, the brilliantly clear atmosphere, rich in actinic rays, being particularly suitable for photographic work. With a few dozen plates and a hand-camera he will be able to snap the glorious scenery on his rambles and take home some exquisite views, which will both charm his friends, and be a source of pleasure to himself in years to come in reminding him of happy hours and scented bowers.

To conclude. A season on the Riviera is good in every way for the young qualified chemist: besides enlarging his ideas and gaining some knowledge of the language, he gets an insight into continental pharmacy which, at a later date, he will be able to turn to profit and advantage in his own pharmacy wherever that may be established.

British Pharmacy in India.

The Second of a Series of Articles on the Anglo-Indian Drug-trade.

BOMBAY is the commercial gate to India, and probably for that reason business there is gigantic in proportions and small in profits. It would be the happy-hunting ground for the "cutter" with profitable extras, were it not that extras sooner or later become necessities in India, if they catch on at all.

Bombay is sometimes spoken of as the "urbs prima in India," and is certainly, owing to its natural position, and from the scenic point of view, well named. The shipping facilities of its splendid harbour are quite up to date, and the arrival of the mail-steamers on Friday or Saturday each week, with their proportion of tourist passengers, are sufficient to ensure that the business life of the city does not stagnate. The buildings in the city are as fine as anywhere in India, and as there are more well-to-do English in Bombay than in any other city of the Indian Empire pharmacy flourishes. The city is a good one for all that pertains to medicine, the humidity of the climate (Bombay is an island during a part of each day) being responsible for some of the prevailing *ennui*, so that tonics, fatteners, and vital restorers are ever in demand. The prevalence of plague of late has given an enormous impetus to the business in disinfectants, as the most phlegmatic resident cannot resist laying in a stock of disinfectants when a case of plague breaks out a few doors off. Disinfection by the public is fairly thoroughly done, and when it comes to official disinfection the quantity of mercuric chloride required is considerable. It should also be noted that, although homœopathic medicines are in great demand in some parts of India, the feature of Bombay medicine is distinctly allopathy.

Those who speak of Indian native drugs as fast going out of fashion speaks truly, but it is noteworthy that Anglo-Indian houses are not averse to keeping the best of them alive. This is particularly true of

The Staff of Messrs. Kemp & Co. (Limited).

Kemp & Co. (Limited) of Bombay.

This company was founded by a notable student of materia medica, Mr. David Skinner Kemp, who was one of the first apprentices in Scotland to become connected with the Pharmaceutical Society through the North British Branch. Mr. Kemp was then (1852) an apprentice with the late Mr. H. C. Baildon, and in 1855 he passed the Major examination. Shortly thereafter he went out to India, and in 1864 commenced business on his own account in Bombay. He took a keen interest in materia medica, and communicated many papers to the North British Branch, the most important, as events have shown, being one on Goa powder. This was in the year he commenced business. Goa powder had been used in India for about a dozen years before that. It was introduced into Goa, on the East Indian coast, by a Portuguese merchant, and the Portuguese colonists of Goa used it successfully in treating Indian ringworm, so that a trade in the article sprang up, which came largely into Mr. Kemp's hands. The origin of the powder was not known, but it was suspected that it came from Mozambique, and that it was made from orchella-weed. This is how the name "Goa powder" was applied to an article which really comes from Bahia, in Brazil; and the reason why the Portuguese merchant had it was that formerly the powder was largely exported from Brazil to Portugal, whence it was distributed to the various Portuguese colonies. To the Portuguese it was known as Po de Bahia, and in Brazil "it has from time immemorial been as much a household god as brimstone and treacle are to Englishmen." Mr. Kemp made it a commercial article, and sent home a pound or two to the North

Digitized by Google

British Branch, where it is still to be seen—a dark mauve powder that excellently testifies to the effect of light on the brilliant gold colour that the fresh araroba has. The indigenous department has ever since the foundation continued to be a feature of the business.

The business that Mr. Kemp established is now sumptuously housed in Elphinstone Circle, Bombay. When he first started he had as partners Messrs. D. C. Watcha and P. N. Powry, and the business was in 1882 converted into a limited company, Mr. Kemp remaining as manager until 1885, when he came home, and was succeeded in the management by Mr. J. Bristed, the son of a Margate pharmacist. Mr. Bristed held the position for four years. The present general manager (Mr. Alfred Pell) then took the helm.

The company's business is the largest of the kind in Bombay, and probably in India. Besides the palatial building in Elphinstone Circle, they have branches in Byculla, Cumballa Hill, and Esplanade Road. An idea of the staff that they employ may be gathered from the photograph which we reproduce. Mr. Pell is in the centre of the third row from the front, behind the tiny errand-boy. To his right sit Mr. J. Fraser, Mr. J. E. Bridgen, and Mr. R. A. Adams; and to his left Mr. T. de G. Derry, Mr. T. P. Liggins, and Mr. G. S. Drayton, who all hold responsible positions in the company's service. In common with another large Bombay business, Messrs. Kemp have a member of their staff as their agent and representative residing permanently in London. The firm have rather a reputation for "cutting" in the dispensing part of their business, the reason, it is said, being owing to the number of Parsees who are amongst the company's shareholders. In regard to the local feeling respecting this business, we cannot do better than quote from our correspondent's notes:—

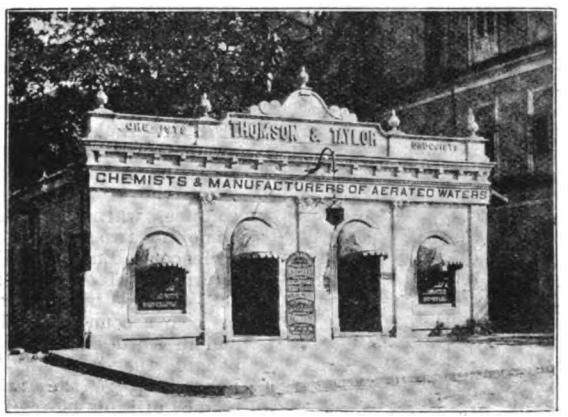
"All departments are under home-qualified European supervision. Seated in Mr. Pell's cosy office, but for the artless punkah, it requires no effort to believe you are facing one of London's magnates, for staring at you from the wall behind the official chair are many telephones and speaking-tubes, and the incessant clicking of the 'Yost,' and 'Remington,' and 'Hammond' trickles into the room from the mysterious regions behind.

"In dispensing the firm hold a record second to none in India, the growth of this department necessitating the coming into being of a branch on Esplanade Road to relieve the pressure, the branch shortly afterwards being located in the premises of the late firm of Bolton & Co., general merchants, whose business Kemp & Co. purchased, and are continuing as general merchants, with dispensary attached.

"Local consumption is responsible for a very great demand for the firm's proprietary preparations, those tonics *par excellence* for enervating Bombay (Easton's syrup and Parrish's chemical food) having a very large sale. From a list of some four hundred proprietary preparations—several of them giving prominence to the attention the firm have devoted to indigenous products—the following may claim to be the most popular. Equatorial hair-douche, chemical food, Easton's syrup, dill-water, extract of chicken, Goa powder, and lime-juice and glycerin. The Equatorial hair-douche is quite the most pronounced European proprietary success locally.

"At the firm's extensive analytical and manufacturing laboratory in Armenian Lane one sees the latest and best in labour-saving machinery—vacuum-pans, disintegrators, juice-extracting machines, mortars with machine-driven pestles, mincing-machines for extracts of chicken, beef, and mutton, carbolic-powder machines, stills for the preparation of sweet spirit of nitre and sal volatile, and numbers of cunningly devised mills and machines, most of them of American manufacture.

"As with chemists' businesses all over India, Messrs. Kemp & Co.'s aërated-water department forms an important feature, the handling of syphons being a special departure which has proved a great success.



"The firm's drug-list enumerates some three thousand items, the catalogue also including surgical instruments, dental goods, electrical apparatus, radiographic apparatus, hospital and patients' requisites, microscopes, spectacles, medicine-chests, aërated waters, proprietary preparations, patent medicines, toilet and nursery requisites, foods and dietetic preparations, wines and spirits, chemical, physical, and pharmaceutical apparatus, bacteriological and photographic goods."

The last mail brings a note that Messrs. Kemp's Esplanade branch is being removed alongside the Apollo Hotel—an improved position from a business point of view.

Esplanade Road, a leading thoroughfare of Bombay, is one of the best positions for trade that could be imagined. It is "on the front," and during the season many a tourist and traveller drops into the premises of

THOMSON & TAYLOR

to have a prescription dispensed, or get something else that savours of home. It is exactly thirty years since the business was founded by Mr. George Thomson and Mr. W. C. Taylor, and at the outset they settled to do the best class dispensing and family business. In a short time they added branches at Kalbadavie and Mazagon. The headquarters establishment in Esplanade Road is an attractive building, of which we show exterior and interior views. The signs

35 ESPLANADE ROAD, BOMBAY.

INTERIOR OF THOMSON & TAYLOR'S PHARMACY.

proclaim the character of the business—those between the doors proclaiming that the firm are wholesale and retail chemists, importers of drugs and chemicals, infants' and invalids' foods, mineral waters, druggists' sundries, select toilet preparations, perfumery, and all kinds of brush ware.

The history of the business during its thirty years existence is one of steady progress, although in that time the management has changed hands on three occasions owing to deaths. Mr. Thomson died in 1878, and Mr. A. Taylor took over the business entirely, and carried it on with energy, until he died in 1880. A short time thereafter Mr. W. C. Taylor purchased the business, and carried it on until his death in 1891, the name and style of the firm being retained but the branches at Kalbadavie and Mazagon were disposed of. Mrs. W. C. Taylor continued the business for some time under the management of Mr. Charles Bradshaw Robinson, chemist and druggist, who in a short time acquired the

Digitized by Google

business from her, and has conducted it ever since. The pharmacy is a splendidly appointed one, and has nothing about it of the store character. Owing to its position "on the front" it draws a great deal of business from visitors, and has always made a speciality of supplying travellers' medical outfits.

Pending the arrival of photographs from other houses in Bombay, we may take a trip north to Simla and Lahore, where

FRANK BLISS & Co.

carry on business as chemists and manufacturers of aërated waters. Mr. Frank Bliss, the proprietor of this business, is a Scotchman and a half-brother of Mr. Tom Bliss, the proprietor of Messrs. E. Plomer & Co., whose portrait was given in the first of these articles. Mr. Tom Bliss is one of the best known men in Indian pharmacy. To his firm in 1878 Mr. Frank Bliss went out as an assistant, and there he remained until about the middle of the eighties, when he came home for two years' experience in England. He returned to India and in 1894 started business on his own account in Simla, and in April of last year bought the business in Lahore, where the aristocracy of India moves for the winter months. The Lahore was business started some twenty years ago by Messrs. E. Gillon & Co. In the course of an interview with Mr. Bliss our correspondent gathered that he follows pharmaceutical affairs at home pretty closely. He said :—

MR. FRANK BLISS.

"During my time in India the drug-trade has been completely metamorphosed. Twenty years ago the trade in Northern India enjoyed complete immunity from competition, and the rupee of that period was a fatter rupee than is the coin of the present, while now the competition is exceedingly keen by reason of the native largely taking to the drugs of the West as a livelihood."

"What about the bazaar drug-dealers, Mr. Bliss?" queried our representative.

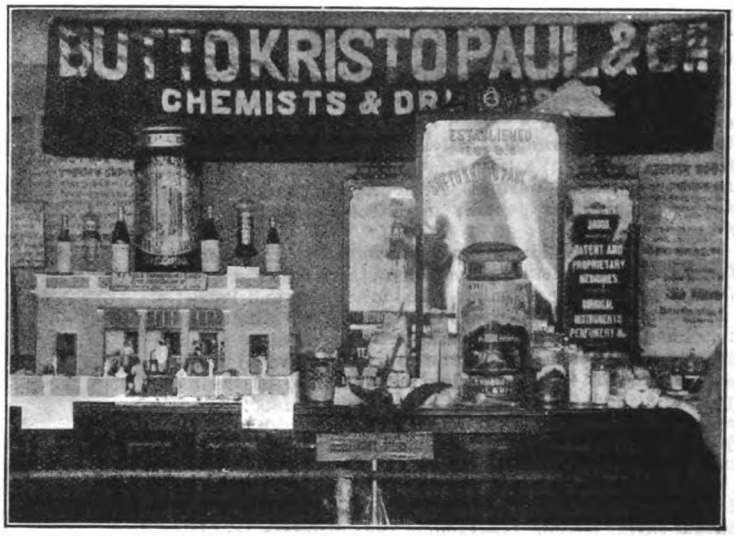
"On the whole I know of no reason why the Britisher cannot hold his own with the native."

"Have you found any change as regards the source of supplies?"

"Yes. One of the most characteristic changes between now and then is the large quantity of German drugs which find a ready sale in India. Some pharmaceutical products from Germany are of the cheap and nasty order, and it is to be deplored that they should have been allowed the footing they have obtained in the country. This, in my opinion, is due to supineness on the part of the English wholesale trade more than to pushfulness of the German."

"What about assistants?"

"It is difficult to get assistants these last few years to come to India. This I think a great pity, because to good men there is a large and hopeful field."



"What is this due to, do you think?"

"Well, I should say that the Society in Bloomsbury Square is not doing that amount of good which Providence has placed within its compass. The examinations which men have to pass under the present dispensation are unnecessarily severe on the technical side; while the side on which the main chance lies—the trade side—is left severely alone. The Society I think should strive to make tradesmen of those who pass under their portals, as well as chemists, and not leave it to chance whether they sink or swim in the struggle for life. Their policy appears to be essentially the one of "laissez faire," seeking nothing beyond the landing of bullion in the shape of entrance fees. My remedy would be transfusion of new blood at the Square, and a medicining to sleep of all the familiar prophets and duffers who now are held up as patterns for our imitation. It is notorious that the old time policy of the Society is what has caused the lack of youngsters entering the trade nowadays; but they do not appear to be conscious of it. If the *C. & D.* would take up this line and peg away at it steadily, they would be doing a great deal of good, not only to the individual, but to the trade generally, and we should hear much less about the increase of limited-company trading."

A Native Exhibit.

THIS is a photograph of the exhibit made by Messrs. Buttokristopaul & Co., native druggists, Calcutta, at the exhibition in Calcutta, for which we are indebted to Mr. Long, who is travelling for Messrs. Burroughs, Wellcome & Co. in India. Messrs. Buttokristopaul & Co. are reputed to be the most extensive exporters of chemists' goods in the country, their trade being largely wholesale as well as retail. The exhibit consisted of their special products, which include Indian arrowroot, of which a growing plant was placed in front of the exhibit, Edward's tonic or anti-malarial specific, which occupies the left half of the photograph, the miniature house being a model of the firm's Ghooghoodanga garden, where the free distribution of Edward's anti-malarial specific and tonic takes place.

The photograph testifies to the remarkable enterprise exhibited by this firm of native merchants, who have world-wide dealings in things pharmaceutical.

WILL students ever be able to do "Marsh" without an explosion? A Brum. teacher thinks not. A lady had a narrow escape this week. The flask was blown to "smithereens," happily no one was hurt. Mr. Otto Hehner's suggestion of putting a plug of cotton wool in the exit tube for a distance of a few inches minimises all explosive risks.

A SLIP IN NOMENCLATURE.—Maid: "Cook's aunt has been took to the asylum, mum." Mistress: "I am sorry to hear that. What is the matter with her?" Maid: "She's gone mad, mum." Mistress: "Yes, but there are various kinds of madness." Maid: "Oh, yes; it is the religious mange, the doctor says." Mistress: "Did he not say mania?" Maid: "Perhaps he did, but I think it was mange."

Australasian Examiners.

WE give on the following pages portraits of thirty-four of the Pharmaceutical Examiners of Australasia, which appeared in the February number of *The Chemist and Druggist of Australasia*. The shortened biographical notes are arranged alphabetically:—

Mr. C. R. Blackett, F.C.S., is the senior member of the Pharmacy Board of Victoria, and has held the position of Examiner ever since its examinations have been instituted. Many years ago he entered the Victorian Parliament, and his connection with pharmacy has gradually become less direct. Mr. Blackett is Government Analyst of Victoria.

Mr. T. F. Brown, of New Norfolk, is a native of Tasmania. He was apprenticed to Mr. A. P. Miller, who then had the business at New Norfolk. Mr. Brown afterwards went to England, where he passed the Minor examination. After remaining in England a few years, Mr. Brown returned to Tasmania, and purchased Mr. Miller's business. He is Examiner in Chemistry to the Pharmaceutical Society of Tasmania.

Mr. Walter J. Clewer is the Examiner in Dispensing for the Pharmaceutical Society of Tasmania. Mr. Clewer served his apprenticeship in Hobart with the late Edward Ash, and was for some seven years with Mr. A. P. Miller. He afterwards managed the business of the late Henry Hinsby, which he carried on in conjunction with the widow for some years, afterwards purchasing it.

T. Storie Dixson, M.B., M.Ch., Edin., is a native of Sydney, and took the arts course at the Sydney University. At Edinburgh he took the science and medical courses, and subsequently studied at Dublin, Berlin, Vienna, and Strasburg. Dr. Dixson examines in materia medica for the N.S.W. Pharmacy Board.

Mr. R. P. Francis, proprietor of the wholesale drug business of Duerdin & Sainsbury, Melbourne, is the third son of the late Mr. George Bagget Francis, of the firm of Hearon, Squire & Francis, London. He was born in 1855 at the historic house of John Bell & Co., 338 Oxford Street, his father at that time being house-manager and head of the laboratory. After six years at the City of London School he was apprenticed to Mr. T. P. Gostling, Diss, Norfolk. Mr. Francis passed the Minor examination in 1876, and the Major in the following year. After Continental experience he entered the establishment of John Bell & Co., but in 1880 came out to Melbourne as assistant to his uncle, Mr. H. Francis, with whom he remained till 1897. In 1897 he took over the wholesale business of Duerdin & Sainsbury. Early in 1900 he was elected to the Pharmacy Board, filling a vacancy caused by the resignation of Mr. Henry Francis.

Professor W. A. Haswell, M.A., D.Sc., F.R.S., is examiner in botany to the N.S.W. Board. He was educated at the Edinburgh University, and became Curator of the Queensland Museum in 1880, a demonstrator of zoology and comparative anatomy and histology at the Sydney University in 1882, and has been Challis professor of biology at the same university since 1890.

Mr. A. J. Higgin, F.I.C., was born in Manchester in 1859, and received his education at Owens College, Manchester, where he studied for three years under Professor Sir Henry Roscoe, and at Zürich University. He is assistant-lecturer on chemistry at the University of Adelaide.

Mr. James Lacey served his apprenticeship in Birmingham and afterwards acted as assistant with Giles and Schacht, of Clifton. He passed the Minor in 1877, came to Australia in 1883, and ever since has been in business in Bourke Street, Melbourne. He was elected to the Pharmacy Board of Victoria in 1898.

Professor Archibald Liversidge, F.R.S., obtained in 1867 a Royal Exhibition at the Royal College of Chemistry and Royal School of Mines at London. He had a brilliant career at the School of Mines and at Cambridge, in 1872 accepted the position of Professor of Chemistry and Mineralogy to the University of Sydney, and in 1878 was elected member of the Senate. He has been closely connected with technical education in New South Wales for many years, and is examiner in chemistry to the N.S.W. Pharmacy Board.

Mr. T. S. Loney was born in the West of England, apprenticed in London, and was afterwards with Allen & Hanburys, Plough Court. He received his pharmaceutical education at Bloomsbury Square, and passed the Major examination in 1876. After further experience at Plough Court, and a couple of winter seasons in the Riviera, he came out to Sydney in 1882. He took no active part in pharmaceutical politics until after the passing of the New South Wales Pharmacy Act, when he was elected a member of the Pharmacy Board, and was one of those appointed to conduct the first examination held under that Act.

Mr. Michael Mason is a Gloucestershire man, who served his apprenticeship at Salisbury, England. He passed the Minor examination in 1873. He came out to Tasmania about fifteen years ago, and has been ever since attached to the firm of H. T. Gould & Co, of which he is a partner. Mr. Mason has been Auditor of the Pharmaceutical Society of Tasmania for a number of years, and for the last two years one of the examiners.

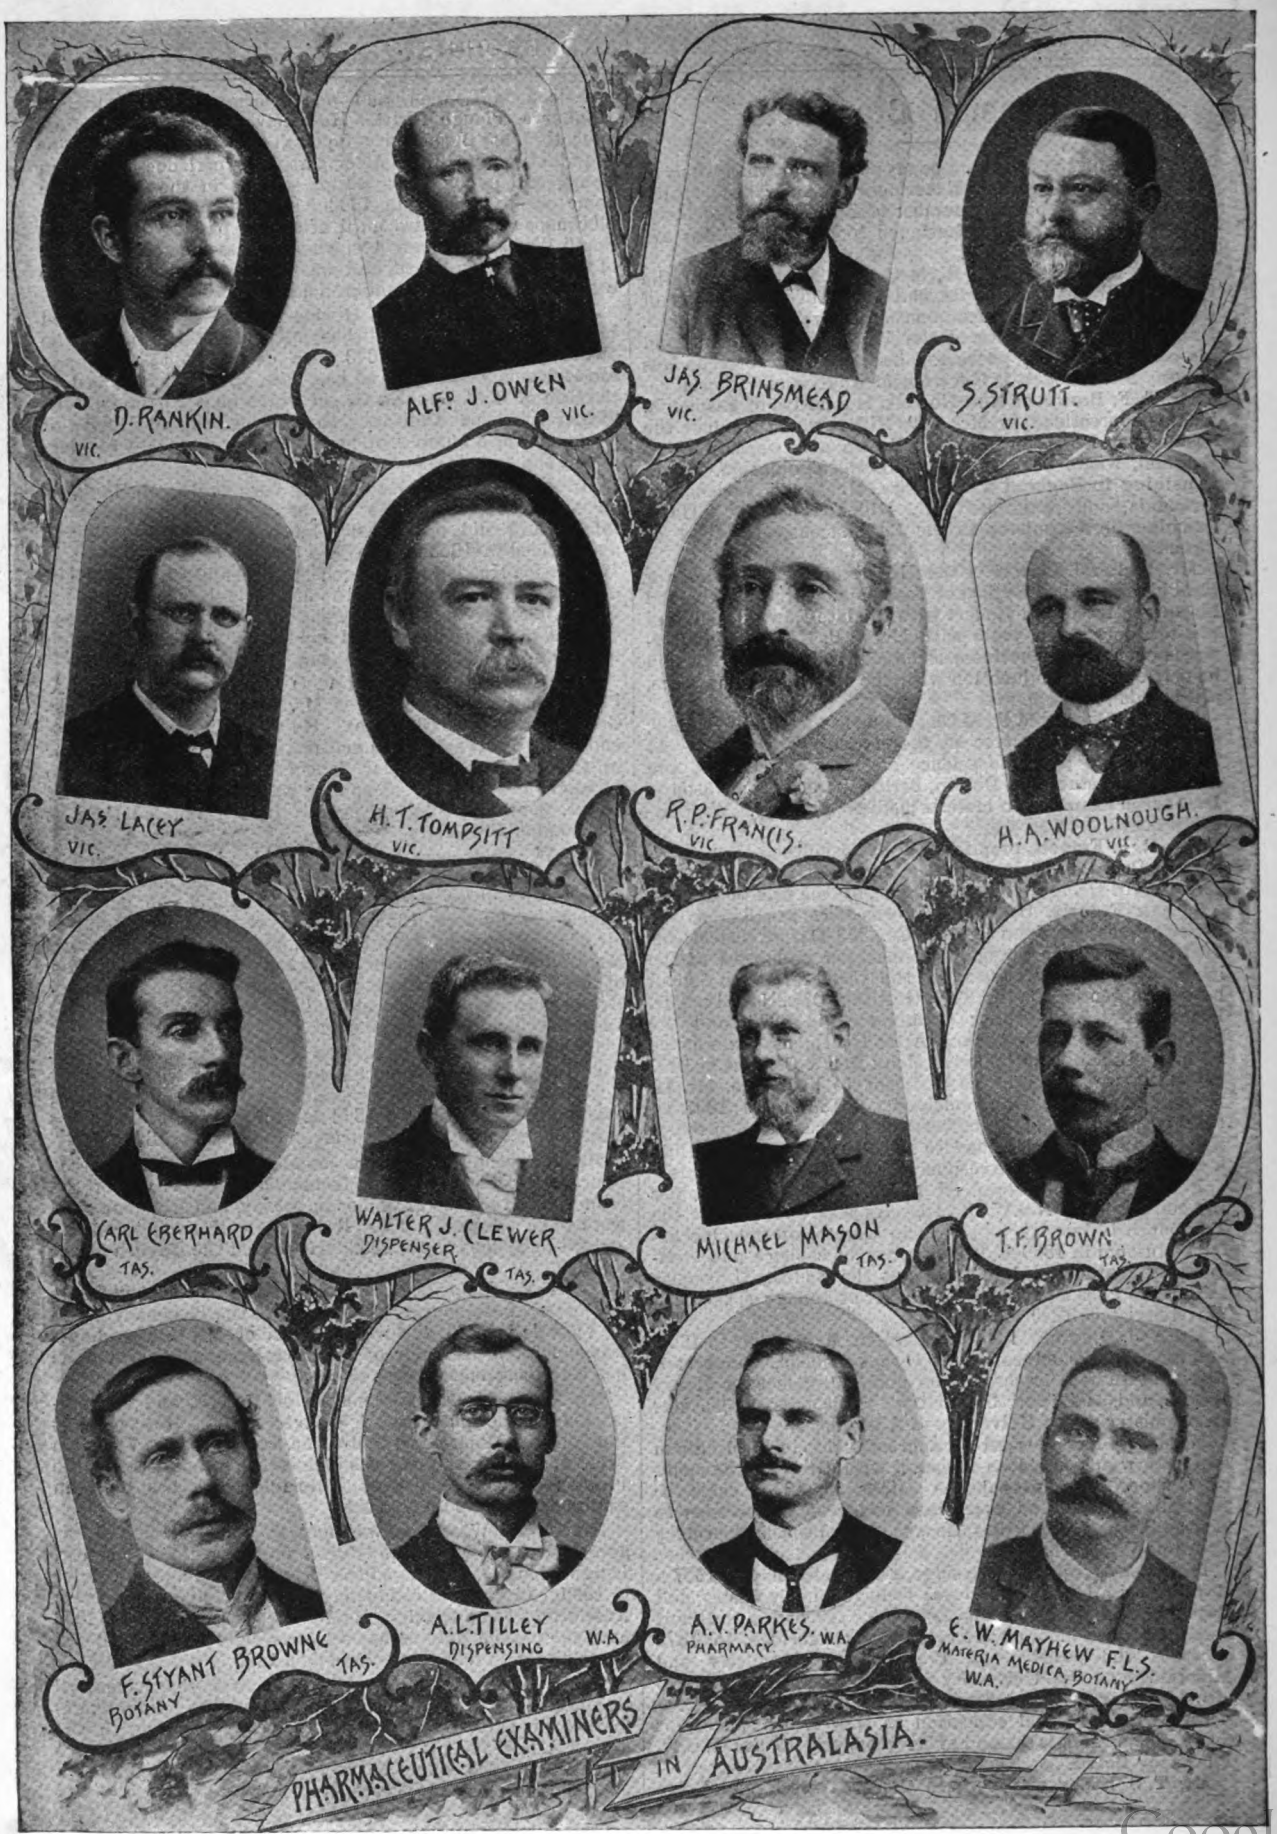
Mr. A. J. Owen, of Geelong, was born at Bristol, England, on August 31, 1847. He was brought to Australia as an infant, and did not revisit England till 1878. He was apprenticed in 1862 to the late Hon. John Hood, father of Mr. Justice Hood, a man of considerable ability and force of character, and founder of the firm of Felton, Grimwade & Co. After serving his apprenticeship, Mr. Owen went straight to the business at Malop Street, Geelong, of which in 1880 he became sole proprietor.

Professor E. H. Rennie, M.A., D.Sc., Examiner to the S.A. Pharmacy Board, is a son of Mr. Edward Rennie, Auditor-General of New South Wales. He was educated at Sydney, and in 1876 was appointed mathematical and science master in the Brisbane Grammar School. Afterwards he went to London and studied chemistry at the Royal School of Mines, South Kensington, and in 1881 graduated D.Sc. at the London University.

Mr. W. Short was born at Auckland, and served his apprenticeship with Mr. G. Denby at the Thames, N.Z. After filling other positions in that colony, he came to Sydney in January, 1885, engaged as assistant to the late Mr. F. C. Turner, in Oxford Street, and was afterwards with Mr. W. Parker, of Balmain, as branch manager for a period of three years. He manages the laboratories of the Australian Drug Company, and was elected a member of the present Pharmacy Board three years ago.

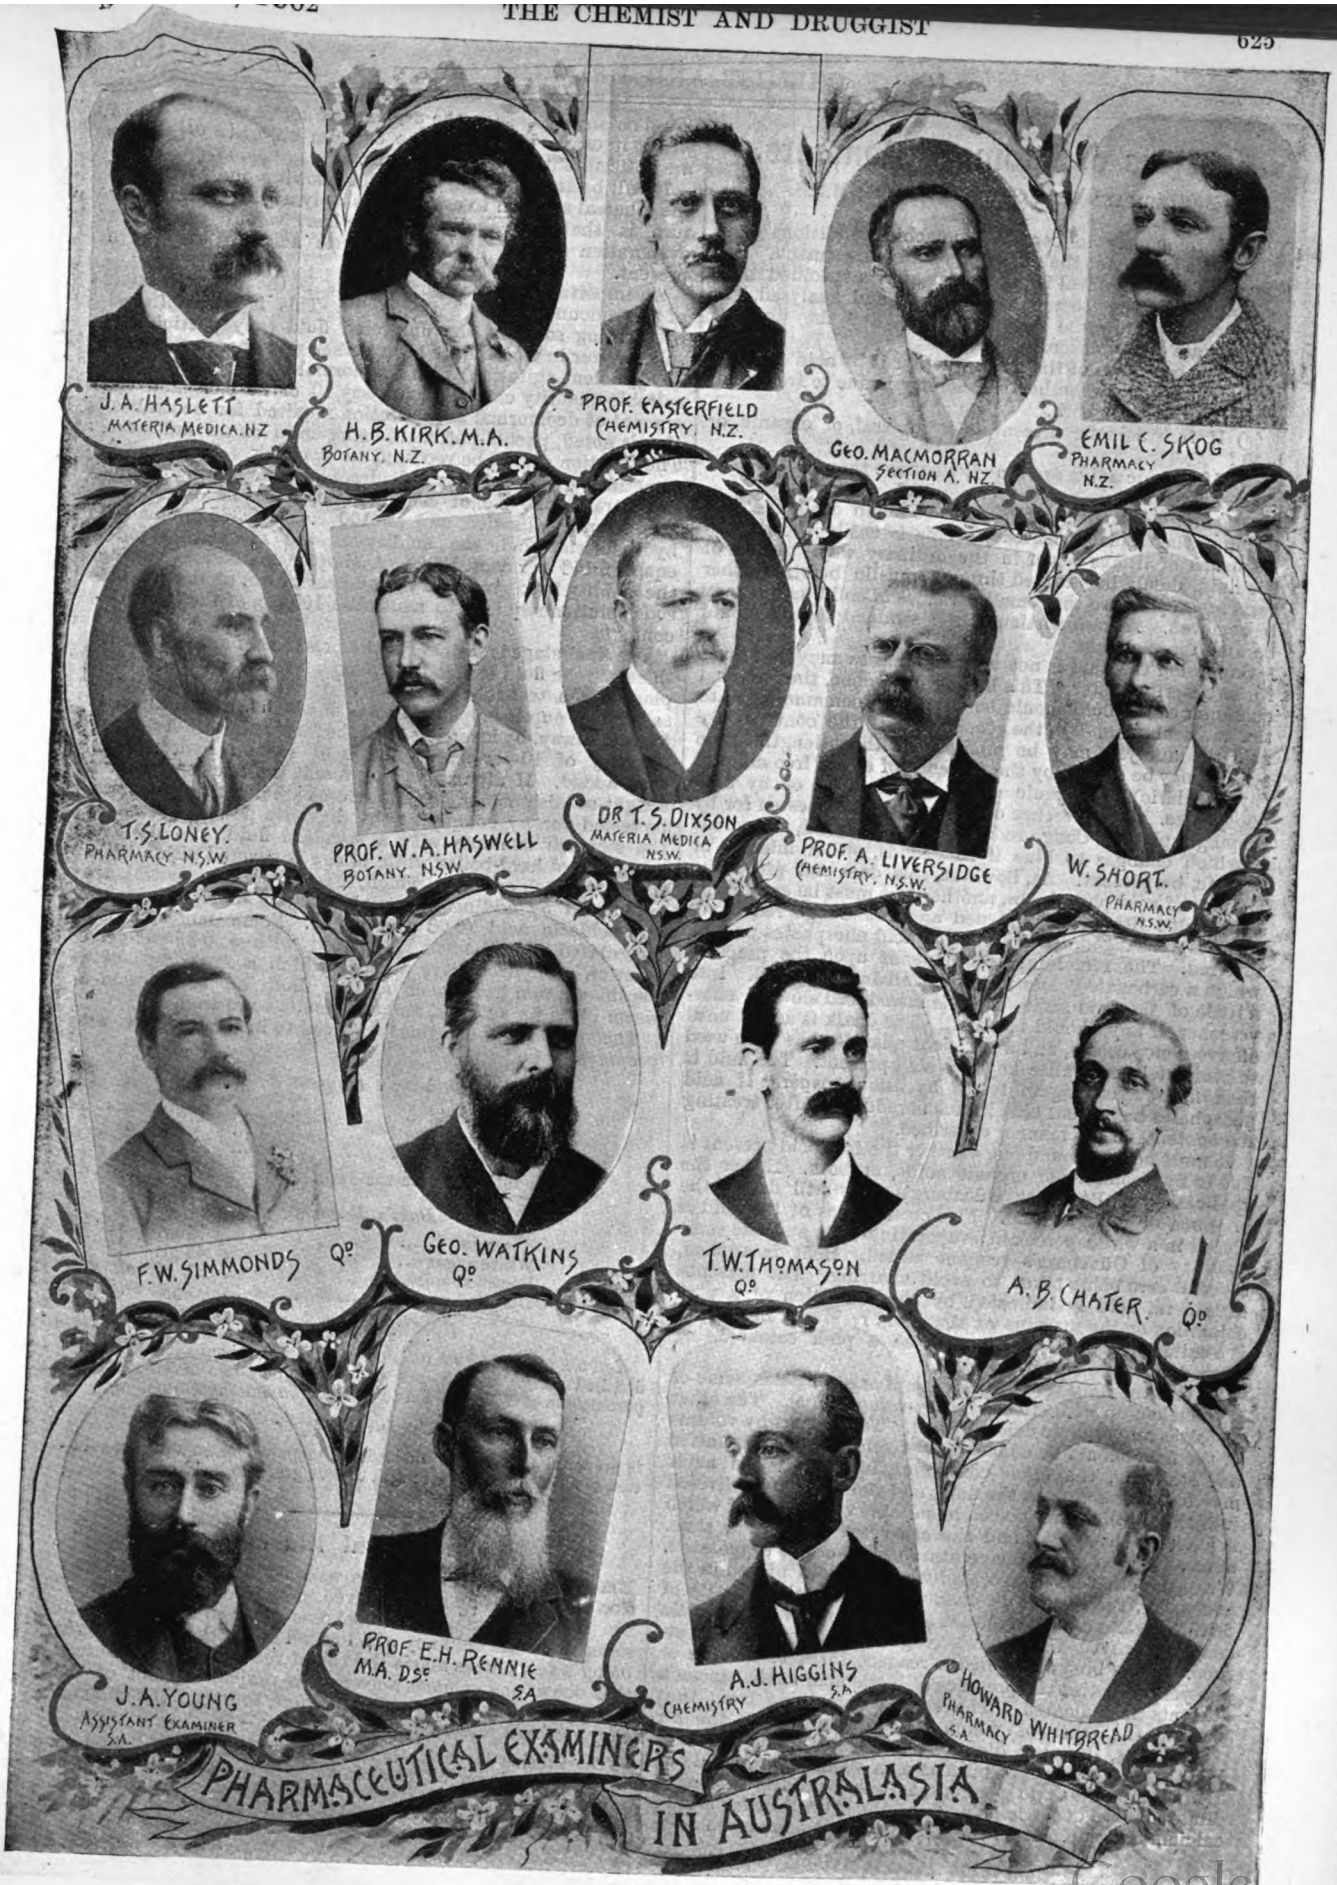
Mr. Samuel S. Strutt was born in the county of Nottingham, England. He served his apprenticeship with Mr. J. R. Robinson, of Dewsbury, Yorkshire, and passed the Modified examination in 1869. In 1872 he came to Victoria, and has been connected with the Pharmacy Board since 1886.

Mr. F. Styant Browne is a member of the Council of the Pharmaceutical Society of Tasmania, and was one of the founders. He is the examiner in botany, and has done good work in that capacity. Mr. Browne is a Norwich man, and arrived in Sydney about 1882. He passed the English Minor in 1879.



Mr. H. T. Tompsitt, of Rocke, Tompsitt & Co., wholesale druggists, of Melbourne, was elected to the Pharmacy Board of Victoria in 1884, and on the death of Mr. George Lewis was appointed Treasurer of the Board, an office which he has held continuously ever since.

Mr. Jas. T. Weaver is a native of Hobart, and the proprietor of the business of Weaver & Co. He studied at the College of Pharmacy, Melbourne, and passed the Victorian Final examination. He was one of the founders of the Pharmaceutical Society of Tasmania, and has been an examiner since its foundation.



Mr. Howard Whitbread was born at Cheltenham, and was apprenticed to Mr. John Paget, pharmaceutical chemist, Loughborough. He passed the Minor in 1888 and the Major in 1890. In the year following Mr. Whitbread came to South Australia. From the first Qualifying examination in 1893 until the present date he has been associated with the Board as examiner, and as a member since 1896.

Mr. H. A. Woolnough received his first pharmaceutical training at Norwich, England, and passed the Minor examination in 1873. He then secured a position with the firm of A. S. Watson & Co., of Hongkong, and remained there until about 1888, when he came to Australia, and took a pharmacy in Swanston Street, Melbourne.

Analysis of Stomach Contents.

By Hermann C. T. Gardner, F.C.S., M.P.S.

VERY frequently in certain stomachic conditions it is desirable to test the motor power of the stomach. For this purpose a test-meal is given, and after a specified time the contents of the stomach are removed and analysed. It is desired to know the following facts, and the stomach contents are tested accordingly:—

(*a*) The condition of the fluid, whether it be acid or not.

(*b*) If it be acid, whether the acidity is due to free acid, acid phosphates, or both.

(*c*) If free acid be present, is it mineral, or organic, or both?

(*d*) If organic acids are found, what are they?

(*e*) Are albumoses present, or pepsin?

The first thing then which has to be found out is the condition of the stomach contents. This is easily ascertained by means of litmus paper in the ordinary way. A part of the fluid should be strained through muslin before further tests are applied, so that small particles of solid matter may be removed. A fresh portion of the strained liquid should be used for each test.

Supposing the fluid is not acid, albumoses may be tested for as described later. This having been done, the non-acid character of the fluid should be noted and communicated to the medical man. On the other hand, if the contents are acid the analysis may be proceeded with at length. The acidity may be caused by the presence of either free mineral (hydrochloric), or organic acids in the fluid, or by acid phosphates. The presence of free acid is first tested for by dipping a piece of Congo red paper into the fluid, the colour of which changes to blue if free acids, either mineral or organic, be present. As, however, this does not prove the absence of acid phosphates, another test must be employed; but if blue litmus be reddened and the Congo red paper remains unchanged, the presence of acid phosphates may be inferred. The remaining test depends upon the property which a carbonate possesses of neutralising free acid. Into a little of the fluid some chalk is introduced slowly; effervescence, if any, should be noted. The chalk is added until effervescence ceases, and a sufficient quantity has been used to completely neutralise any free acid present. The fluid is then filtered and again tested by litmus paper. If acid phosphates be present blue litmus is reddened after treating the contents in the manner described.

It must now be found out whether the free acid present is due to hydrochloric or organic acids, or both. Either the application of Boas's or Günzburg's tests will detect the presence of mineral acid. Five or six drops of the fluid is placed in a white porcelain evaporating-dish, and the same quantity of Günzburg's reagent added. Heat is applied, especial care being taken to avoid charring. The presence of mineral acid is indicated by the formation of a pink coloration on the margins of the dried residue. Boas's test is similarly applied, but instead of a pink colour being formed, a purple colour appears.

To test the fluid for the presence of organic acids some of it is shaken up with ether in a separating-funnel. The ether dissolves any organic acids present. To one part by volume of the fluid should be added five of ether. After agitation and standing, the ether containing in solution the acids may be separated from the fluid, and should then be divided into two portions and placed in suitable vessels, one of which is placed in hot water, and the other set aside for a time, until at the ordinary temperature the ether has evaporated. When the ether has evaporated from the fluid placed in the hot water, the residue is dissolved in a small quantity of distilled water and the solution added drop by drop to a little freshly-prepared Uffelmann's reagent contained in a test-tube. If the blue colour of the reagent turns to a more or less yellowish tint the presence of lactic acid in the stomach contents is indicated. The residue remaining from that portion, the ether of which has evaporated at the air temperature, is also dissolved in water and carefully neutralised with sodium bicarbonate. This neutral fluid is then divided into two portions, to one is added extremely dilute solution of ferric chloride, to the other a little piece of calcium chloride. If on the addition of the ferric chloride a red coloration ensues, the presence of acetic acid is shown, whilst if on the surface of the calcium chloride oily drops are noticed, butyric acid is present.

It will be seen that the reason for allowing one portion of the ethereal solution to evaporate slowly at the air-temperature is that the application of heat would cause the evaporation also of acetic or butyric acids if they were present.

An important factor in the analysis is the determination of the amount of free acid present. This is accomplished by titrating some of the unfiltered fluid (any particles of solid matter in which have been broken up either in a mortar or by violent agitation) with decinormal soda solution. Any suitable quantity can be taken—say 10 or 20 c.c.—and the amount of decinormal soda solution required for neutralisation is noted, phenol-phthalein being used as an indicator. The titration should be repeated as a check. The result is sometimes given in terms of hydrochloric acid. Supposing in a titration 20 c.c. of contents take 8 c.c. of decinormal soda for neutralisation, and as 100 c.c. = 0·365 gramme of hydrochloric acid, the acidity of the stomach-contents equals 0·146 per cent. HCl. A simpler method of stating the acidity is to give it in the number of c.c. of decinormal soda solution required to neutralise 100 c.c. of the stomach-contents.

The final stage is to test for the presence of albumoses. In this case the fluid is first neutralised, then a little of it is placed in a test-tube previously rinsed with 10-per-cent. solution of cupric sulphate, excess of which has been allowed to drain away, by inverting the tube for a minute. An equal quantity of 10-per-cent. solution of sodium hydroxide is then added. If albumoses are present the solution assumes a light-reddish colour. If albumoses are absent pepsin may be tested for by comparing the digestive-power of some of the stomach contents with a standard fluid. To do this some grated hard-boiled white of egg is covered with a little of the stomach contents, which, if feebly acid or neutral, are acidulated by adding an equal quantity of a solution of hydrochloric acid (0·08 per cent.). Some more of the coagulated egg-albumen is covered with a 0·25-per-cent. solution of hydrochloric acid to which a few drops of a pepsin-solution have been added. Both are set aside in a warm place for an hour, and the results compared.

The special test-solutions referred to in the foregoing are prepared as under:—

Günzburg's Reagent.

Phloroglucin	2 grammes
Vanillin	1 gramme
Absolute alcohol	30 c.c.

It should be kept in the dark.

Boas's Reagent.

Resorcin	75 gr.
White sugar	45 gr.
Rectified spirit	1 fl. oz.
Distilled water	2½ fl. oz.

Uffelmann's Reagent.

Ten c.c. of 1-in-20 solution of phenol are mixed with 20 c.c. of distilled water, and (before use) a drop or two of tincture of perchloride of iron is added to produce an amethyst-blue.

Congo-red Paper

is prepared by steeping unsized white paper in an aqueous solution of Congo red of a strength of 0·01 gramme in 100 c.c.

An Optical Illusion.

Mr. J. Barclay, Birmingham, asks *Nature* for an explanation of an effect he has observed, produced by refraction of air. While looking at a bookcase through the heated air rising from the chimney of a lighted lamp, the line of sight being a few inches above the top of the chimney, he noticed that one of the volumes appeared to project in front of the row in which it stood. Mr. E. Edser, to whom the observation has been referred, writes in reply:—

The illusion is obviously due to the refraction of light by a cylindrical column of heated air, which acts as a divergent cylindrical lens. The refractive index of the air of the room may be taken, roughly, as equal to 1·0003. If the heated air rising

Digitized by Google

from the chimney of the lamp has a temperature of 300° C., its refractive index would, roughly, be equal to 1·00015. At the interface between the cold and heated air, the effective refractive index would be equal to 0·99985. Assuming the lamp-chimney (and therefore the column of heated air) to have a diameter of 1 inch, then the focal length of the cylindrical lens would be 0.00015. The distance of the book from the lamp was about 8 feet, or (say) 100 inches. Seen through the column of heated air, the distance v of the book from the lamp is given by the equation $1/v - 1/100 = 0{\cdot}00015$, from which v is found to be 99 inches. The book thus appears about an inch in front of its true position; as observed by Mr. Barclay.

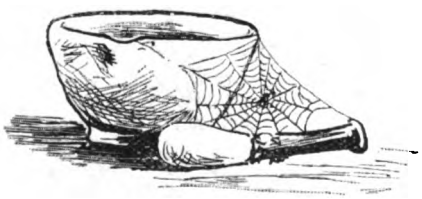
The Mortar.

Its Evolution.

I. THE STONE AGE.

II. THE BONE AGE.

III. THE BRONZE AGE.



IV. THE WEDGWOOD AGE.

Its Reminiscences: with Sketches.

By William Smart.

I AM of the perfect size for a mortar, neither large nor small, but serviceable and convenient. I regard No. 1 with ridicule and No. 12 with contempt! The intermediary

"I AM SHELVED."

numbers, ascending and descending, gradually improve as they reach the only perfect size, No. 8.

I am number eight!

When I was young—thirty years ago—I was pure as marble, my pestle was perfect, I was full of life and energy,

Digitized by Google

and eager for work. But, alas! my "clang, clang" will be heard no more; like the proverbial dog, I have had my day. My pestle, which has long caused me anxiety, has at length snapped, and I am shelved. My master and I have grown old together. We started business in a wee Fifeshire village thirty years ago, and have been partners ever since, and I flatter myself that during that time I, at least, have made some noise in the world.

"My Master and I have Grown Old Together."

Ofttimes, when there is no one near, my master regards me tenderly, and we dream of the past together. We are sad—for it is the privilege of the old to be sad and thoughtful—and stony though I be I would fain mingle my tears with his.

It is, however, with apprentices that I have come most into contact, and about whom I wish to speak. All sorts and conditions of them have put their arms around me—sometimes tenderly, sometimes otherwise—and I have watched the careers of all with interest. I remember well our first apprentice. He was a bright youth, bubbling over with life and happiness. He suited my humour well, for I, too, was young and vigorous in those days. He sang the good old songs to me as I helped him to mass pil. rhei co. or pills of that ilk. My cheerful "clang, clang" kept time to "Ben Bolt," "The Good Rhine Wine," or similar ditties.

"He Sang the Good Old Songs."

I was his confidant, too, for (when our master visited the village reading-room), did not he woo a sweet maiden over me? Then my "clang, clang," was soft and low. I had tact in such matters. His life-story is not an uncommon one. He went to Edinburgh, passed his "Minor" and "Major" with distinction, and then married the sweet maid. How happy I was! But, alas! not for long.

"He Wooed a Sweet Maid."

The young wife soon died, the bereaved husband gave way to drink, and anon came home to die.

What a wreck! Ah, me!

I have handled many of the studious, serious, and solemn species. They have invariably done well in after-life. I am proud of them, but I did not love them as I did the jolly lucky-go-merry fellow. My chief grievance was that they did not pay me sufficient attention. They invariably had a book before them as they used me, and naturally I felt slighted. But in spite of their neglect I always think of their careers with pride. One is a professor and many are doctors.

The type of apprentice I detested most of all was the careless one. I have known him use the wrong ingredients, though fortunately of a harmless nature. Instead of allowing

The Careless Apprentice.

me to mass the pills, he would endeavour to facilitate the process with his fingers, and, of course, ignominiously failed. I am glad to say few such have passed through my hands.

I do not wish to convey the impression that I was one-sided, and fit for pill-massing only. It was not so.

Nothing delighted me more than when my master's little children were perched by my side, and I became their playmate. They were all very fond of me, and many happy hours have we spent together. They are my sweetest memories.

Would that I could live them over again!

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

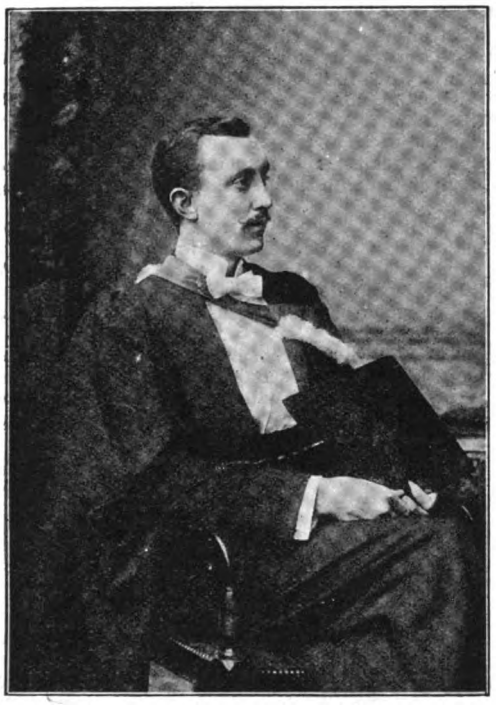
Personalities.



MR. JOHN CLAY, chemical-manufacturer, has been re-elected to the Hebden Bridge Urban District Council.

MR. WM. UNDERWOOD GRAY, chemist and druggist, Rothwell, has been elected a member of the Urban District Council.

MR. JAS. RICHARDSON DAVISON, chemist and druggist, Gosforth, has been elected a member of the Gosforth Urban District Council.

ALDERMAN FREDERICK MASON, chemist and druggist has resigned his seat on the Rotherham Town Council on account of ill-health.

AT the graduation ceremony in the McEwan Hall, Edinburgh University, last week, Dr. Bertram Prentice, son of Mr. John Prentice, chemist and druggist, Nicolson Street, Edinburgh, received the degree of Doctor of Science. As a boy Dr. Prentice began the study of chemistry under Professor Perkins, F.R.S., at the Heriot Watt College, Edinburgh, and quickly showed exceptional ability. He was appointed Professor Perkins's private assistant, and, later, demonstrator in chemistry at the College. He had meanwhile matriculated at the Edinburgh University, and in April, 1893, graduated as Bachelor of Science. In the following year he was awarded the Baxter Research Fellowship, and went to Halle a. Saale, Germany, to work

DR. BERTRAM PRENTICE.

under Professor Volhard, where he stayed until 1895, when he proceeded to Munich to work with Professor von Baeyer, his research being on pulegon, the active principle of pennyroyal, which was communicated to the German Chemical Society. In June, 1895, he received the degree of Doctor of Philosophy, "Summa cum Laude," from the University of Munich, his thesis being on "Some Derivatives of Dimethylacrylic Acid and Phenyldimethylpyrasolidone." It is interesting to note that his thesis for the Edinburgh doctorate was on the "Constitutions of Phenyldimethylpyrazolidone and Phenyl-Methyl-pyrazolidone"—that is, hydro-antipyrine derivatives. Dr. Prentice was appointed chief of the chemistry department of the Royal Technical Institute, Salford, in June, 1896, and still works there.

MR. RALPH CASSIE, chemist and druggist, 49 Newgate Street, has been re-elected senior churchwarden of Christ Church, Newgate Street.

MR. W. F. ELLIS, chemist and druggist, 4 Grand Parade, Green Lanes, Harringay, N., has been elected a member of the Tottenham Urban District Council.

DR. CHARLES FORSHAW, F.R.S.L., of Bradford, having sent a poem to Queen Alexandra, has received a reply from Copenhagen acknowledging its acceptance.

MR. JOHN HOLDING, chemist and dentist, Barnsbury, N., has been re-appointed vicar's churchwarden for St. Andrew's Church, Thornhill Square, N., for the seventh time.

MR. THOS. STEPHENSON, F.C.S., pharmaceutical chemist, late general manager of Phillips & Co. (Limited), Bombay, has returned to this country, and may be addressed c/o THE CHEMIST AND DRUGGIST.

MISS LUCY M. M. CUTHBERTSON has been appointed dispenser at the Victoria Hospital for Sick Children, Hull, and will take up her duties there on April 21. Miss Cuthbertson, who holds the Minor certificate of the Pharmaceutical Society, received her early training at the Women's Hospital, Birmingham, the institution with which the late Mr. Lawson Tait was so long connected.

MR. W. H. CHAPLIN (of Messrs. W. H. Chaplin & Co., Limited, 10 Villiers Street, W.C.) is making a strong personal appeal on behalf of the Wine and Spirit Trades Benevolent Society. Mr. Chaplin is, this year, Chairman of the annual banquet to be held on May 3, and he has issued a circular letter commending the objects of the Society and asking for subscriptions. All those interested in the Society who are desirous of contributing should communicate either with Mr. Chaplin, or with the Secretary, Mr. W. H. Cross, 27 Crutched Friars, E.C.

At the Counter.

OLD WOMAN (indignantly): "The last asafetiddy-pills ye gied me were fair stinking; I want fresh y'ns this time."

CHEMIST (solicitously): "Well, Mrs. McTurk, how are you this morning?" Mrs. McTurk (brokenly): Oh, Mr. Calomel, its a' ower wi' me; the professor says I ha'e gotten pandemonium o' the heart!" Adroit cross-questioning elicits the fact that she means "pericarditis."

NOT MYTHICAL.—The story of the Irishman who "writes for your address" is not so mythical as many people imagine it. Messrs. Kay Brothers, of Stockport, received the following communication some time ago:—

Dear Sir,—Answer this Back with your right address sincerely hoping it finds you. The Drugest are sold out with your Linseed Compound.

The letter bears neither the address nor the signature of the writer.

LICHFIELD LANGUAGE.—A Lichfield contribution is thus set forth:—

Sir you sent me word that you would supply me with some birdlime and good for the same as I could get it elce were that is 10*d.* pence a half pound and I have sent to you for to or three penyworth at atime lateley and you have sent me some that was very good and on Tuesday I sent to you for half a pound and you have sent me some stuff that wont half ole a Bird. I would not Beg it I knew you had got some of this stuff but it is no good and I have sent it you back if you have any of the other send me half the quantity and I shall be satisfied for it is worse then puting your hand in my Pocket and taking the money out.
it is ded robery.

The last paragraph strikes us as slighlty libellous.

THE following took place in one of the principal shops in a Midland city: Lady enters shop, and the manager (unqualified) goes to counter. Lady: "Have you ——'s hamatogen?" Manager: "Yes, madam." Lady: Can you tell me what the preparation is, what it is made from, and what it is used for?" Manager: "Oh, it is a preparation of logwood"; and when the lady wanted more information he got quite confused, so the lady went out without anything.

Photographic Exhibition.

THE Third Photographic and Optical Trades Exhibition was opened on April 11 at the Portman Rooms, Baker Street, W. There are several interesting developments in photography shown, the feature of the Exhibition being roll-films, film-cameras, and daylight-loading devices for cut films. An alphabetical arrangement has been adopted in the following short notes of the chief novelties.

DAVID ALLAN is showing a large variety of photographic metal-work, such as lamps and washers. There are several sizes of bichromate lamps, in which a glass cell of solution of potassium bichromate forms the front of the lamp, a groove being provided for an additional canary filter. Calcium tubes, with lever-off ends, requiring no elastic bands, are cheaper than the usual tubes for storing platinum-paper, and quite air-tight.

The ANGLO-AMERICAN OPTICAL COMPANY'S exhibit is devoted to opticians' goods, and consists of samples of the various kinds of trial cases and frames, and spectacles and eyeglasses. The "Perfection" revolving trial-frame is one of the best of its kind for taking the whole of the measurements of the face required for spectacles. The graduations are made on celluloid, and hence are very distinct.

J. ASHFORD shows many kinds of camera-stands, the newest being a very light one, called the featherweight "Giraffe." It extends to 56 inches, and closes into a space of 14¾ by 2⅝ by 1⅝. The "Newford" exposing-apparatus is an arrangement for exposing cut-films in the camera. It resembles a dark-slide, but has film-envelopes, so that changing can be done in daylight.

BAYER & CO. (LIMITED) have a stall opposite the entrance, where they show photographic chemicals. The chief new things are edinol developer, which is put up in powder, liquid, and cartridge form, acetone-sulphite (a salt designed to take the place of acetone and sodium sulphite), and the "Bayer" flash-light powder. The last-named is packed in tin boxes, with a partition down the middle to keep the component parts of the powder separate till required for use, so as to avoid fire-risk. The products of combustion are said to be given off as a "faint-blue wisp."

R. & J. BECK (LIMITED) exhibit "Frena" cameras and work done with the instruments. The "F.O.P. Frena" is a new size: it carries forty films or twelve plates (3¼ by 2⅝), and sells at a guinea; and would be worth introducing to photographic chemists.

T. P. BETHELL, whose "Crown" and "Monarch" cameras are known on account of their small price, shows a new quarter-plate magazine camera for six plates, which sells at 5*s*. The body of the camera is made of wood, and the arrangement for changing the plates is of the simplest. The "Regal" enlarger is a simple but efficient apparatus for enlarging from quarter and half plate negatives.

THE BROOKS-WATSON DAYLIGHT CAMERA COMPANY (LIMITED) introduce a new system of daylight loading and unloading of flat films. The chief part of the apparatus —which, however, is not quite ready yet—is a kind of dark-slide, to be known as the "Rajar," by means of which the films in a packet can be alternately exposed. We shall refer to the system again when we have had an opportunity of examining the finished apparatus.

BURROUGHS WELLCOME & CO. make a show of tabloid products for photographic use. The developers and various baths in tabloid form are fairly well known to our readers. A demand has arisen for the potassium-ammonium-chromate tablets for sensitising carbon tissue owing to their exceptional convenience. A new showcard depicting a lady amateur using "Tabloid" chemicals was on view, and the ease of using that form of developer was being shown by practical demonstration.

The BUSCH CAMERA COMPANY are exhibiting the "Pockam" camera, a compact form of roll-film and plate camera to which a rising and sliding front is fixed. Other forms of cartridge-film apparatus shown are the "Cycam" and the "Pocket" cameras; these are all fitted with the Busch lenses made by the Rathenower Optische Industrie-Anstalt.

W. BUTCHER & SONS have, since we recently described the season's novelties, brought out the "Cameo" camera, a very small quarter-plate apparatus, which folds to go in the pocket. A little adapter has been introduced for using two "Nippers" side by side to obtain stereoscopic pictures, and a two-guinea quarter-plate outfit, fitted with a time and instantaneous shutter on a rapid rectilinear lens, is capital value. The "Pilot" chemicals are convenient packages of various developers for users of small cameras.

CLEMENT & GILMER have hand-cameras from 30*s*. a dozen up to 10*l*. 10*s*. each. The latter, a panoramic camera, is fitted with a Zeiss swing lens. French lenses in great variety are also shown.

COLUMBIA OPTICAL AND CAMERA COMPANY exhibit "Pecto" cameras of the American folding type. A recent introduction is the "Columbia" film, a substitute for glass plates or celluloid films, but at the same price as plates. One portion of the exhibit is devoted to ophthalmological goods, where trial-cases and eyeglass-frames are much in evidence.

HARRY W. COX (LIMITED) shows *x*-ray apparatus, a portable field-service outfit being in working during the exhibition.

GEORGE CULVER (LIMITED) have an optical exhibit designed to show the process of spectacle-lens making, as well as the finished goods. A test-case at 11*l*., or with unmounted lenses at half that price, is a favourite with chemist-opticians. The speciality of this firm in pince-nez is called the "Revluc," which, whilst smart in appearance, fits well to the nose without unnecessary pressure.

L. GAUMONT & CO.'S stall is devoted to cinematographic apparatus and Planchon films. The proper way to develop the films, we were told, is to do the whole length together, passing the film through the developer from end to end until development is finished. The black backing-paper is coated with insoluble gelatin on the side which comes in contact with the sensitive film, the idea being to protect the film from injury due to impure paper.

C. P. GOERZ shows the Goerz anastigmats and the "Anschütz" camera. An improved device has been introduced for altering the width of the slits of the focal-plane shutters used in the "Anschütz" folding camera, which it is claimed can be manipulated with the greatest of ease, and cannot get out of order.

JOHN J. GRIFFIN & SONS (LIMITED) show novelties in papers and cameras. "Glycia" paper is a glossy printing-out paper, which apparently takes a variety of tones. We noticed also a bromide-toning outfit by means of which red, brown, green, or blue tones can be imparted to bromide prints.

G. HOUGHTON & SON have several interesting novelties. The principal one is the "Dalo" camera, where a new daylight-loading system for flat films is introduced. This is an ingenious arrangement by which flat films are wrapped

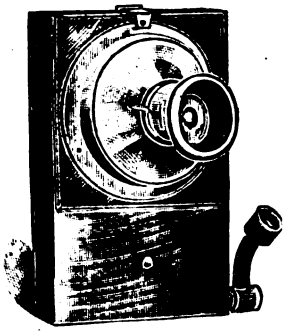
with black paper on flat spools, and can be released one by one after exposure. Another method of daylight changing for films or plates is shown in the "Mackenzie-Wishart" daylight slide. This involves the use of light-proof buckram envelopes, and the slides can be adapted to any camera. A complete new series of roll-film cartridges has just been brought out under the name of the "Ensign." These are celluloid films coated with Austin Edwards' emulsion, and bear a good profit to the dealer. "Fotabs" are compressed tablets of photographic chemicals wrapped in waxed paper, and packed in metal cases. The series comprises developers, a combined toner and fixer, and a fixing-bath.

A. C. JACKSON shows the "Ilex" cameras in several qualities and a new metal shutter—the "Ilex"—adapted for fitting either to the back or front of the lens.

Digitized by Google

JOHNSON & SONS exhibit large bowls of silver nitrate and gold chloride.

JOSEPH LEVI & Co. have several well-made cameras, the leading line being the "Klito." The "Packard" spotting-cakes are useful water-colour paints for spotting negatives or bromide prints. We saw also a specimen of a printing-frame, where the hinged back automatically opens when the back spring is released. This frame is shortly to be introduced.



J. E. LOCKYER, whose photographic specialities are well known to our readers, has added some new developers. One, the universal metol-quinol developer, is packed in attractive red cartons, and sells at 1*s.*, whilst the trade terms allow the dealer agood profit. A new style of packing "hypo" was shown. The package contains a dozen 4-oz. cartons of that indispensable chemical. The convenience of the package will be appreciated by amateurs. Mr. Lockyer is also showing his improved enlarging and copying apparatus, which is well made and good value.

D. A. LOWTHINE devotes his exhibit chiefly to mounts and albums, but here is also shown a daylight loading plate-camera.

MARION & Co. (LIMITED) have introduced a new hand-camera called the "Imperial." It is of the folding type, and only made in 5 by 4 size. An easy-working circular-print trimmer is a timely introduction now that circular mounts are so fashionable. Plates, papers, and mounts are shown in great variety.

LAMBERT MATTHEWS has lanterns and gas-generators in several designs, and a useful article in the shape of the "Sweetheart" adhesive cloth for mounting photographs. The "Sweetheart" is a kind of adhesive plaster, and a hot iron is used for mounting the picture.

THE QUINCEY PHOTOGRAPHIC DEVELOPMENT COMPANY show what they call a portable dark-box. It is an enclosed developing-dish fitted with a well, and has red-glazed window for watching development. A dark-room is not required with the "Quincey" apparatus. (See illustration.)

AUGUSTE ROMANET, who has recently opened showrooms in London, exhibits the "A. R. L." lenses and the "Bee" cameras. There is also a good line in telescopic tripods, and an ingenious folding opera-glass—"La Mignonne."

A. ROSENBERG & Co. show a portable oxygen-generator and the "Perfecto" steel tripod—a telescopic stand, the sliding portions being triangular and the head adjustable.

The ROTARY PHOTOGRAPHIC COMPANY (LIMITED) make a special line of bromide-paper, and in the interest of bromide photography publish the *Bromide Monthly*. The "Rotograph" and "Rotoken" are the two brands of paper sold.

OTTO SCHOLZIG exhibits prints obtained with the "Otto" P.O.P., "Siennatype" P.O.P., collodion-papers, and Dr. Jacoby's platinum-papers, which are a credit to the papers, and show the class of work they are suited for.

SEABROOK BROTHERS show thirty different styles of "Wizard" cameras," as good a value as any being No. 25, a 5 by 4 folding camera with three slides, selling at 3*l.* 17*s.* 6*d.* The orthoscope lens, working at *f.* 6, has only recently been introduced, and is credited with marvellous covering-power.

O. SICHEL & Co. have several special cameras, the chief being the "Premo" series. One of the latter for telephotography has a focal length of 26 inches in the 5 by 4 size. Studio cameras are also shown.

A. E. STALEY & Co. exhibit the Bausch & Lomb goods, including the "Volute," a new iris-di phragm shutter. This shutter gives exposures from $\frac{1}{150}$ second to 3 seconds, whilst the size of the diaphragm can be varied between wide limits

F. H. TAYLOR & SONS' stall is a pyramid of measures and bottles. The 1902 patent measure has the graduations in black, whilst the opposite side is sand-blasted so as to form a white background. Labelled bottles for developers are in various styles.

R. W. THOMAS & Co. (LIMITED) are making a feature of "twopenny tubes" of chemicals. The tubes of plate and paper developers, combined bath, bromide, metasulphite, and acid hypo, have distinctive colours, and they are sold separately or in sets. The "Bee" plates, being pushed just now, are the cheapest plates on the market.

The THORNTON-PICKARD MANUFACTURING COMPANY (LIMITED) have a good exhibit of cameras and shutters. The "Automan" series is new. These cameras are so called because on pressing a button they are at once put into position for taking a photograph. A triple-extension "Ruby" camera has been introduced for telephotographic work, a special lens-support being used.

TYLER & ENGLAND BROTHERS (LIMITED) have a good show of mounts, the "Métropole" embossed circles and the "Dudley" panels being two fresh lines. The photographs sent into the Teb competition are exhibited at this stall. A good guinea line is the "Empire" hand-camera: the back is self-locking and the shutter is adjustable for six speeds.

W. WATSON & SONS show an improved hanging bichrome lamp for electric light, and also a printing-frame for printing a complete spool of negatives without cutting up the separate exposures. An optical section of this exhibit is devoted to telescopes and microscopes.

W. D. WELFORD makes a special show of cloud and border negatives and compact printing-sets.

A. & M. ZIMMERMANN exhibit Schering's photographic chemicals. Adurol, a quinol derivative but more easily soluble, has advantages which should make it a popular developer. It is put up in powder, solution, and cartridges.

O. ZIMMERMANN & Co., agents for the "Agfa" developers and goods, show the various kinds. The latest introduction is the "Isolar" non-halation plates. These have a soluble backing between the film and its support, the backing disappearing during development. The "Agfa" booklets are now ready for supply to dealers for distribution.

The Exhibition closes at 10 P.M. on April 19.

Things Worth Knowing.

THE ASPIDESTRA is a mine of wealth to the student of botany, and, as it is a hardy plant and very common, can be studied almost all the year round. Its flowers are most curious.

THE ASH OF THE FERN growing on the hillsides contains much potash, and is used by Welsh housewives for washing linen and putting a shine on pewters and brasses.

COST OF PROTECTING INVENTIONS.—To have an invention protected all over the world it is necessary to take out sixty-four patents in as many different countries, the estimated cost of which is 500*l.*

IN STEWING RHUBARB, if a drachm of bicarbonate of soda, dissolved in a tablespoonful of water, be added to each pint of chopped-up stalks, the quantity of sugar necessary for sweetening will be considerably reduced, as the alkali neutralises the acidity.

TO MAKE STRONG GLUE.—An exceedingly strong glue, which will also resist the action of water, may be made by soaking ordinary glue in water until it is quite soft, and then dissolving it in linseed oil over a very slow fire until it is the thickness of jelly.

ARTICLES MADE OF INDIARUBBER, which have become hard and brittle, should be treated in the following way: Put the article to be treated in water to which has been added ammonia in the proportion of 2 parts of water to 1 part of ammonia, and leave it there till it becomes soft. The length of time will, of course, vary according to the condition of the article before treatment.

FOR BROKEN CHILBLAINS, Dr. Courtin, of Bordeaux, has found hydrogen-peroxide solution an excellent application. One part of the 10 vol. solution with 7 parts of warm water should be used to bathe the chilblains, keeping the feet in the bath for half an hour. A little borax should be added to neutralise the acidity of the solution.

Old Sheffield Druggists.

At a meeting of the Sheffield Pharmaceutical and Chemical Society at the Literary and Philosophical Society's Rooms on April 16, the President (Mr. John Austen) read a paper with the above title.

Mr. Austen divided his subject into three periods: the first dealt with pharmacy before 1800; the second, from 1800 to the foundation of the Pharmaceutical Society; and the third, from 1841 to the passing of the Pharmacy Act in 1868. Pharmacy and trade in drugs was in the seventeenth century mainly confined to physicians who had an apothecary attending them, and records furnish a few references. Among eighteenth-century physicians was Dr. James, who commenced practice in Sheffield in 1761—his famous antimonial powder still survives. Mr. Austen traced the evolution of the chemist and druggist from the assistants employed at the dispensaries set up by the physicians to counteract the monopoly of pharmacy which the apothecaries were obtaining. Some of the apothecaries, seeing their craft in danger, threw their lot in with the chemists and druggists, and then ensued the rivalry between the two classes which ended in the apothecaries being recognised as medical men and the chemists as pharmacists. The records of the eighteenth-century Sheffield druggists are scanty but interesting. John Kirby, in 1750, purchased a shop in the Hartshead, which afterwards became the office of the *Iris* newspaper. Kirby was probably succeeded in a short time by Dr. William Buchan, who is well known as the author of a popular work called "Domestic Medicine, or the Family Physician," of which 80,000 copies were sold during the author's lifetime. Buchan died in London in 1805, and was buried in Westminster Abbey. William Pearson began a prosperous business at 17 High Street in 1769, and died in 1794. He was succeeded by his executor, George Brown, who carried on the business until he failed in 1803. Brown seems to have come from a reckless family, and is said by Hunter, the historian, to have been "reduced to rags." Only three druggists are mentioned in the first Sheffield Directory (1774), the other two being Robert Wooffendall and Mrs. Ann Handley. Wooffendall opened his shop in 1770, but soon handed over his business to Ralph Hodgkinson, sen., who had been a peddling druggist, but built up a profitable business. He retired eventually to Eckington, and died in 1810. His son, of the same name, who succeeded him, became the chief druggist of the town, and Mr. Austen gave extracts from his recipe-book to show that he never adulterated his drugs. When Ralph Hodgkinson, jun., retired he was succeeded by Thomas Ramsay. Mrs. Handley carried on the business of her late husband, who came of an old Sheffield family. Mrs. Handley was succeeded by Benjamin Rose in 1798, who had a branch-business, and was prosperous. Another celebrated eighteenth-century druggist was Richard Sutcliffe, who had a shop in Church Street (1795–1809), and was noted for his skill in healing, his clever apprentices, and his dirty shop. Sutcliffe moved to South Moor Street in 1809, and Thomas Cooper took over the Church Street shop. In 1797 five additional drug-businesses are mentioned—Bagshaw & Wreaks, H. & R. Bowman, Cæsar Jones, James Rawson, and J. & W. Sanderson.

Second Period.

During the first ten years of the nineteenth century the following businesses were started in Sheffield: Benjamin Sykes, Waingate (1802); George Radley, Westbar (1803); W. Jervis, Westbar (1805); George Hawksworth, High Street (1805); and Joshua Gillatt, Market Place (1807).

Sykes died in 1804, and was succeeded by John Hinde. Radley removed his business to Westbar Green, and did a big paint trade. He was one of the first Sheffield druggists to use newspapers as advertising mediums. Green paint, then a novelty, was a special manufacture of Radley's. He died in 1825, and was succeeded by Chas. Elliott. Hawksworth served his apprenticeship in Wakefield, and was assistant to Robert Wreaks before he started in business for himself. He used to lend his six silver entrée-dishes and other silver plate to the cutlers' annual feast, from which it may be inferred that he was a man of means. He made a reputation for a "Buff mixture," containing rhubarb, magnesia, a little opium, and aromatics, which is still asked for in Sheffield as "Hawksworth's mixture." William Jervis, descended from the Dutch cutlers, was succeeded by his son George in 1811. Joshua Gillatt was probably apprenticed with Wreaks, and in his opening advertisement announced his intention of making up prescriptions with the "greatest care, accuracy, and neatness." Mr. Gillatt was closely identified with the Methodist movement, and is described as of a benevolent expression, with silvery-white hair and beard. He died suddenly in 1840, and his memorial tablet in Craven Street Chapel says "He was a friend to all, and death in him produced no terror—for he was also the friend of God."

The number of druggists in Sheffield continued to increase. In 1814 John Webster, who had been apprenticed to a relative—Henry Hodgkinson, of Stockport—started business in Fargate. He was an excellent Latin scholar, and turned out good apprentices. About the year 1815 large quantities of magnesia (then newly introduced) were sold for improving bread, the harvest of 1815 producing very poor corn; magnesia made the bread whiter and lighter. Mr. Webster retired in favour of a former apprentice—Benjamin Beek—

John Middleton Salisbury,
A Founder of the Pharmaceutical Society.

William Valentine Radley,
First Secretary (1841) of the local branch of the Pharmaceutical Society.

Fred. Machon,
First President (1841) of the local branch of the Pharmaceutical Society.

and devoted himself to horticulture, medicinal plants being a speciality of his. He died in 1870. In 1816 John Lofthouse took over the business in Snig Hill founded by John Rawson. John Lofthouse came from Tadcaster, and was one of four druggist brothers; he gave up his Sheffield shops in 1825 to his brother Thomas, and went to Hull, where with another brother he founded the business now known as Lofthouse & Saltmer. Six other druggists at this time were Josiah Blackwell, who afterwards carried on chemical-works, William Bower, who opened in the shop lately occupied by Mr. W. H. Dyson, William Harrison, T. Sewell, William Hoyland, and Thomas Ramsay (who succeeded Ralph Hodgkinson). Ramsay largely advertised summer drinks in 1820 and 1821. T. F. James followed Mr. Ramsay in 1823. John Wand, who began business at 67 Moorfields in 1820, was a medical botanist as well as a druggist; he was followed by John Moss, who almost made his fortune by the sale of a cholera-pill in 1832. Mr. R. T. Taylor, who took the business of Wm. Bower, of Westbar Green, in 1820, came from Doncaster. He gained considerable reputation with his aërated waters—Mr. Soyer, of the Reform Club, speaking of him as manufacturing "the perfection of soda-water." Mr. Taylor was a founder of the Pharmaceutical Society. Williamson's business at 10 High

OLLIVE SIMS (of Stockport).

Street successively passed into the hands of Richard Harrison (1820) and Mr. Margetts, when the business was moved.

The business owned by a member of the Association, Mr. Geo. Owen, has been in his family for upwards of eighty years. Geo. Owen, the grandfather of the present Mr. Owen, commenced business at 7 Broad Street Park, in 1822. He was born at Barlow, and was apprenticed to Hawksworth, in the High Street, and appears to have been fond of outdoor occupations and sports, music, and singing. In 1826 Owen took the shop in Westbar Green from Mr. R. T. Taylor (Dyson's old shop), and the *Iris* for July 18, 1827, records the destruction of the premises by fire—overheating linseed oil was the cause. Geo. Owen died in 1837, at the early age of 39, and his widow manifested remarkable skill and energy in continuing the business. Mrs. Owen continued to direct affairs till 1852, when her two sons took over the proprietorship.

In 1825 there were twenty-five chemists and druggists in business; among those not mentioned before being Robert Roper, who invented Roper's Royal Bath plasters and Roper's pills, which had an extensive sale at one time. On his death the business passed to his son, and then to Liversedge & Son, who confined themselves chiefly to the manufacture of Jem Cook's horse-powders and the gunpowder-trade. The business is now carried on as Robert Roper, Sons & Co. Robert Hudson came from Rotherham to Sheffield in 1824, and obtained a reputation as a "cow-doctor." He died in 1861, and his nephew succeeded to the business, which Mr. Graham now carries on. After speaking of Charles Elliott (Radley's successor) and A. Rowbotham, Mr. Austen recalled John Wilkinson, who was a surgeon and chemist, and whose business on his death was continued by his widow. Mrs. Wilkinson was the inventor of a white magnesia mixture known as "Wilkinson's mixture," the profits of which paid the rent. Mrs. Wilkinson's two sons succeeded her, and the business was removed to 30 South Street Moor. Between the years 1830 and 1833 there commenced business in Sheffield John Middleton Salisbury (a founder of the Society), Fred Machon (who, Gillatt said, was the best apprentice he ever had), and Henry Crawshaw (whose hobby was gardening). One of Mr. Crawshaw's apprentices, George Bailey Cocking, survives, and is 79 years old. Mr. Henry Harrison, who commenced business in 1835, was a founder of the Pharmaceutical Society, and removed in 1862 to the shop now in the occupation of Mr. Eardley. Mr. John Hill started business in 1838, and for many years had the reputation of being the first chemist in the town. He was noted for his care in dispensing. Mr. J. H. Appleton bought the shop of Henry Chambers in 1839, and claimed descent from the Appletons of Appleton-on-Wisk, and on his mother's side from the Meynells, who came over with the Conqueror. Mr. Appleton was proud of his ancestry, and used to tell a story of the invasion of England by the Scottish forces under the Young Pretender, when the pewter plate of an ancestor was melted into bullets. He died in 1880, and was followed by his son. The business which is now carried on by Mr. Newsholme, and which he acquired in 1877 from Mr. William Valentine Radley, was the business which Mr. Joshua Gillatt carried on till his death in 1840. Mr. Radley was a founder of the Society and a councillor in 1872 and 1880. He cultivated a prescribing business.

THE THIRD PERIOD.

Mr. Austen dealt with the formation of the Pharmaceutical Society, and gave the names of the ten members and three associates who joined in 1841. These formed a local branch and circulated the *Pharmaceutical Journal* and the *Lancet* among themselves. Mr. Austen next gave some interesting accounts of what the drug business was like in those days—it was eminently practical—and referred to several other druggists of those days, among them Henry Horncastle, John Smith, Thomas Austen, Robert Fisher, T. W. Maxfield, Savory & Merryweather (now Mr. Squire's shop), Mr. J. B. Wheen (father of the present Mr. Wheen), and Mrs. Harriett Lester (now Mr. Hewitt's).

The chemists' shops started between 1841 and 1868 included Abel Bywater, an authority on the Sheffield dialect, who received in 1859 a visit from Prince Lucien Bonaparte, who got him to translate the Song of Solomon into the Sheffield dialect. He died in 1873. John Gartside Elliott, or "Little Elliott" as he was called, began business in Gibraltar Street in 1844. He was the youngest son of Ebenezer Elliott, the poet and corn-law rhymester, who in a letter thus described his druggist son: "John the weakling, kind-hearted, intelligent, 5 feet 4 inches in height, and almost blind—druggisting in Sheffield in a sort of chimney called a shop. He is engaged almost without a moment's pause from 7 in the morning until 10 at night in dealing out halfpennyworths of drugs. Yet I think he is as likely to thrive as most of his neighbours." Mr. Elliott was, to say the least, eccentric, which gave him a wonderful reputation amongst the poorer classes. He died in 1888, having lived in retirement for two years. Joseph Leslie, who took William Shaw's business in Trippet Lane in 1843, came from Aberdeen. On leaving home his mother gave him this piece of advice: "Remember the poor, and always give a big pennyworth." He gave a quantity of medicine away, one mixture—"Leslie's Diet Drink"—being a great favourite. People came for the drink with jugs and bottles, and were invited to get as much as they liked for nothing. John Edward Herbert Jennings, another well-known Sheffield druggist, had a reputation for making excellent French polish. Joseph Cecil, who opened a business at 62 Westbar, was grandson of a saddler, who inherited the Rotherams' estate, and became Lord of the Manor of Dronfield. Joseph Cecil was well known to Sheffielders on account of his command of strong and impressive language. Samuel Elliott, otherwise "Rops" was almost as eccentric as "Little Elliott," but not so successful. The business carried on by

the late Mr. J. T. Miller was commenced in partnership with his brother in 1847. Mr. J. T. Miller was first engaged in the medical profession, but an attack of brain fever altered the course of his life, and he started in business in Gibraltar Street. Mr. Miller was passionately fond of analysis, and did a lot of work on the Pharmacopœia tests for drugs. Many of his researches were communicated to the Pharmaceutical Society's evening meetings. Miller's test for methylated spirit, in which bichromate of potash is used, is well known. Mr. Miller on one occasion (1876) expressed himself of the opinion that chemists should not foster the ignorant prejudices of customers by selling such impure articles as milk of sulphur.

Mr. George Bailey Cocking, who commenced business in Barker's Pool in 1848 and retired from business some twenty-five years ago, is the oldest chemist and druggist in Sheffield. He was apprenticed with Mr. Hy. Crawshaw, of Moorfields, in 1839, and has still very vivid recollections of those early days. Perhaps the most unpleasant work he had to do in his apprentice days was the powdering of Spanish fly, which was done in the cellar, and in spite of the thick handkerchief wound around his mouth and nostrils, he usually came out with blistered lips. In those days a great deal of the infants' mixture called "Dias Cordial" was made and sold by Sheffield chemists. This was composed of tincture of opium, aromatics, and black treacle, and Mr. Crawshaw had the reputation of making the best in the town, and Mr. Cocking says that during his apprenticeship he made hogsheads of it.

Mr. E. P. Hornby, the last President of the United Society of Chemists and Druggists, was a Sheffielder by adoption. In 1854 he purchased the old-established shop of Mr. Hawksworth in High Street. Mr. Hornby was born at Tuxford, where his father was the country doctor. He was 27 when he came to Sheffield, and remained for some eighteen years. Besides carrying on a very lucrative retail business he launched into the manufacture of acids and chemicals, and established the Sheffield Chemical-works, which were carried on for many years under the name of Hornby, Fairburn & Co., of Attercliffe, Sheffield. In 1873 he removed to Stockport, and purchased the old business at Lower Hillgate, founded by Ollive Sims in 1786, which was undoubtedly one of the finest in the country. It was here that Luke Howard, the founder of the far-famed Stratford House, received his early pharmaceutical training. Howard was Ollive Sims's first apprentice. The present senior of the Stratford firm well remembers Mr. Luke Howard talking about his experiences during that period of his education, and in a letter I received from him some days ago he adds: "It seems to have been a specimen of that excellent system of apprenticeship now unfortunately extinct." Ollive Sims was an elder in the Society of Friends, and was much valued by all who knew him. He had superior intellectual attainments, and was a scientist and a botanist. He died in 1836, aged 77 years. Mr. Samuel Kay, of Kay Brothers (Limited), managed the shop in Wm. Shaw's time, and after the death of Mr. Hornby in 1879, Messrs. Kay Brothers purchased the business and merged it into their own, but subsequently they turned it over to an old apprentice (Mr. Arnfield).

Mr. Austen concluded his paper with a short outline of the careers of Mr. J. T. Dobb, who is still living, and the late Mr. Joseph Watts, and with a sketch of the final struggle between the two Societies—the Pharmaceutical Society and the United Society of Chemists and Druggists.

The value of the lecture was enhanced by a series of druggists' portraits, the illustrations given in this article being typical of an interesting collection.

A New Formulary.

THE Society of Pharmacy of Antwerp has drawn up a Formulary with a view to promoting uniformity in medicines for which there is no official standard. The following are selected from the Formulary recently published in the *Journal de Pharmacie*:—

Simple Ointment.

Anhydrous lanoline	Equal parts.
White vaseline	

Iodised Collodion.

Iodoform in powder	1 oz.
Alcohol (90-per-cent.)	½ oz.
Ether	½ oz.
Collodion	8 oz.

Mix the iodoform with the mixture of alcohol and ether, and add the collodion. Should be prepared extemporaneously.

Hiera Picra Electuary.

Powdered saffron	1 oz.
Powdered cinnamon	1 oz.
Oil of mace	½ oz.
Powdered aloes	18 oz.
Honey	80 oz.

Mix.

Cod-liver Oil Emulsion.

Irish moss	1 oz.
Distilled water	50 oz.

Boil gently for half an hour, replacing the water that evaporates. Strain without pressure, so as to obtain 45 oz. of liquid. Separately mix—

Powdered tragacanth	3 dr.
Cod-liver oil	50 oz.
Oil of cinnamon	½ oz.
Essential oil of almonds	½ oz.

Add to the decoction of Irish moss with—

Glycerin	5 oz.

Shake thoroughly to form an emulsion.

Camphorated Chamomile Oil.

Infused oil of chamomile	9 oz.
Camphor	1 oz.

Dissolve and filter.

[The infused oil of chamomile is prepared by digesting 1 oz. of chamomile-flowers with 10 oz. of olive oil on a water-bath for two hours, straining, pressing, and filtering.]

Solution of Aluminium Acetate

(Burrow's Solution).

1.	Crystallised lead acetate	10 oz.
	Distilled water	30 oz.
2.	Aluminium sulphate (or potash alum 6½ oz.)	6 oz.
	Sodium sulphate	1 oz.
	Distilled water	50 oz.

Make each solution with heat, and when cold pour the lead solution into the aluminium solution and shake. Let the solution deposit during one or two days, and filter.

Lassar's Ointment.

(For Chilblains.)

Carbolic acid	½ oz.
Acetate-of-lead ointment	10 oz.
Lanoline	10 oz.
Olive oil	6½ oz.

Belladonna Mercurial Ointment.

Mercurial ointment	17 oz.
Extract of belladonna	2 oz.
Water	1 oz.

Dissolve the extract in the water, and mix with the mercurial ointment.

Syrup of Heroine.

Heroine hydrochloride	0·5 part
Distilled water	9·5 parts
Simple syrup	990 parts

Syrup of Calcium Lactophosphate.

Pure calcium carbonate	9 parts
Lactic acid (75-per-cent.)	22 parts
Phosphoric acid (10-per-cent.), sp. gr. 1·057	88 parts
Water	a sufficiency

Dissolve the calcium carbonate in the lactic acid, diluted with 108 parts of water, by heat; allow to cool, and add the phosphoric acid, shake, and add water to make 370 parts. Dissolve in the solution in the cold—

Sugar	623 parts

and add—

Oil of citron	7 parts

Digitized by Google

Fictional Pharmacy.

An Eighteenth-century Skit.

SOME time ago Mr. E. S. Vertue, chemist, Ipswich, sent us a volume of the *Aberdeen Mayazine* for 1797, which contains, amongst many other interesting things, a burlesque on the collegiate examination of the day. The *jeu d'esprit* is entitled "Modern Learning Exemplified," and is attributed to Dr. Porson, a well-known Cambridge professor. A set of questions are arranged in the usual style, a salt-box being the subject under discussion. The metaphysics, logic, natural philosophy, and anatomy of the salt-box having been separately gone into, the student is taken on to

SURGERY AND THE PRACTICE OF PHYSIC.

Professor: Mention a few of the disorders to which a salt-box is liable.

Student: A cracked and leaky fundamental; gaping of the joints in the lateral; luxation of the hinges; and an accession and concretion of filth and foulness external and internal.

Professor: Very well. How would you treat these disorders? Begin with the first?

Student: I would caulk the leaky fundamental with pledgets of tow, which I would secure in the fissure by a strip of linen or paper pasted over. For the starting lateral points I would administer powerful astringents, such as the gluten cornuosa, and would bind the parts together by triple bandages, until the joints should knit.

Professor: Would you not assist with chalybeates?

Student: I would attack the disease with prepared iron, in doses proportioned to the strength of the parts.

Professor: How would you manage the luxation of the hinge?

Student: I would first examine whether it was occasioned by the starting of the points which annex the processes to the superlateral or its antagonist; or by the loss of the fulcrum, or by an absolute fracture of the futures. In the first case I would secure the process by a screw; in the second, I would bring the futures together, and introduce the fulcrum; and, in the last, I would entirely remove the fractured hinge, and supply its place, *pro tempore*, with one of leather.

Professor: Very well, sir; very well. Now for your treatment in case of accumulated foulnesses, external and internal. But first tell me how this foulness is contracted?

Student: Externally, by the greasy hands of the cook; and, internally, by the solutions and adhesion of the saline particles.

Professor: Very true; and now for the cure.

Student: I would first evacuate the abominable vessel, through the *primæ viæ*. I would then exhibit detergents and diluents, such as the saponaceous preparation, with plenty of aqua fontana.

Professor: Would not *aqua cælestis* answer better?

Student: Yes; plenty of *aqua cælestis* with the marine-sand. I would also apply the friction-brush with a brisk and strong hand until the excrementitious concrete should be totally dissolved and removed.

Professor: Very proper. What next?

Student: I would use the cold bath by means of a common pump. I would then apply lintel-absorbents; and, finally, exsiccate the body by exposition, either in the sun or before the culinary or kitchen fire.

Professor: In what situation would you leave the superlateral valve during the exsiccating operation?

Student: I would leave it open to the extent, in order that the rarefied humidities might escape from the abominable cavities or sinusses.

The student having shown an apt and intimate knowledge of this section he is next taken in

CHYMISTRY.

Professor: You have mentioned the saponaceous preparation. How is that procured?

Student: By the action of a vegetable alkaline salt upon a pinguidinous or unctuous substance.

Professor: What is salt?

Student: It is a substance sui generis, pungent to the taste, of an antiseptic quality, and is produced by chrystalization, or the evaporation of the fluid in which it is suspended.

Professor: How many kinds of salt occur in a salt-box?

Student: Two; coarse and fine.

Professor: You have said that the saponaceous preparation is procured by the action of an alkaline salt upon pinguidinous or unctuous substance. Describe the process.

Student: If a great quantity of strong lye be procured by passing water through the wood-ashes, and if a very large body of a pinguidinous habit should be immersed in this lye and exposed to a considerable heat, the action of the lye, or rather of the salts with which it abounds, upon the pinguidinous body would cause the mixture to coadjulate into soap.

Notice was given at this instant that dinner was on the table. The examination was concluded, and the parties separated; the examiners rejoicing in the anticipation of a feast, and the examined happy in finding the fiery trial over.

Modern Fables.

Mr. GEORGE ADE, of New York, is the author of a collection of humorous "Fables" which have recently been published. They are fables in slang, descriptive of present-day life in the United States, and are almost as clever and as entertaining as the dialect dialogues of his compatriot "Mr. Dooley." The following, which depicts the daily trials of the American pharmacist, is illustrative of the style:—

THE FABLE OF
THE BUREAU OF PUBLIC COMFORT
AND
THE MAN IN CHARGE.

The Druggist stood in his Place of Business surrounded by Capsules, Hot Water Bags, Perfumes, and Fluid Extracts. A Man came in and said he wanted to look at the Directory. Then he asked if "Murphy" was spelled with an "f." He looked at the Hair Brushes, whistled a few bars of the "Spring Song" and went out.

A Small Boy entered and wanted to trade two empty bottles for a Piece of Licorice Root. The Deal fell through, because the Bottles had a Name blown in the Glass.

A woman came in and said she was waiting for a Friend. She had the Druggist bring her a Glass of Plain Water. She said she could not drink Soda Water because the Gas got up her Nose.

Another Woman came in for a Stamp. She did not have any Change with her, but was going to come in and hand him the Two Cents. some time; that is, if he was Small enough to remember it.

The next who came in was a Man with hardly any Chin. He wanted a Free Sample of Liver Pills and an Almanac telling the Date of the Battle of New Orleans, when the Sun rises and sets, and why the Chicken crossed the Road.

After him there came a Man who was in a Hurry, and wanted to use the 'Phone. He was vexed when he learned that Skinner & Skinner did not have any Number. He asked the Druggist why it was. The Druggist said he was sorry, and would See to it before the Man came in again.

Soon after two little Girls came on a Run and helped themselves to Picture Cards. They left the Door open, and a Boy in Overalls stepped in to ask if he could hang a Lithograph in the Window. The Druggist went back into the Laboratory and got a large stone Pestle. He was just ready to beat the Life out of the Cash Register when an Elderly Gentleman came in with a Prescription.

The Druggist Stayed the Blow and chirked up quite a bit. "This is where I catch even on the Day," he said.

It was no Morage. He had to and he did.

MORAL: *Don't Blame the Druggist.*

Another equally amusing sketch, "The Fable of Woman's True Friend and the Hopeful Antique," has a kind of pharmaceutical application. It is the tale of a Beauty Doctor who got her living "by selling Freckle Food and a Preparation for getting rid of Moles, called Moline. Her Hot Speciality was to Calcimine the Has-beens and feed them a little Ginger and send them into the Arena looking like Vassar Girls." All went well until the "Hopeful Antique" arrived. Her appearance was so hopeless that the hitherto-undaunted Beauty Doctor succumbed, and her reputation was only saved by the tact of a resourceful Private Secretary.

DR. G. B. FERGUSON contributes a paper to the *British Medical Journal* giving the excellent results which have followed from the subcutaneous injection of quinine for chronic malarial fever in preference to administering the drug by the mouth. The salt used is the acid hydrobromate of quinine, which is soluble in 6 parts of water, and 3 gr. dissolved in 20 minims of water is injected at a time. Six injections on alternate days are usually required in a serious case, the sites for the operation being the skin of the upper arm, the thighs, skin of the abdomen, or at the top of the chest, or between the sapulæ.

C. & D. Postcard Competitions.

Foreign and Colonial Section.

IN the lands beyond the seas our DIARY competitions still retain their favour. With each succeeding year we discover unsuspected friends hidden in remote parts of the earth, but where nevertheless THE CHEMIST AND DRUGGIST pursues its imperialising influence and cheers the brother pharmacist who has wandered far from the homeland. And as men do not wander to Peru, Argentina, Japan, New Zealand, Tasmania, South Africa, Russia, India, or over the Continent, merely for fun, but to obtain wisdom and wealth, so we find that the advertisement pages of our hardy annuals are not the most neglected part of that periodical. The competition-results, which increase in volume year by year, prove that the efforts of our advertisers are not only closely scanned, but that they are shrewdly criticised. This year, singularly enough, our foreign and colonial friends have come practically to the same conclusions regarding the questions put to them as our home subscribers. The story of Pears' soap, by a large majority, is voted the most interesting in the DIARY, while the pages and price-lists of Messrs. Burroughs Wellcome & Co. are said to be the most helpful. The best illustrated design by a considerable majority is voted to be that of Messrs. Stevenson & Howell on page 8, although many favoured the pictures in Messrs. Pears' collection, and not a few were enamoured of the Stella Polare device on page 231. Messrs. Cadbury, C. P. Goerz, G. B. Kent & Sons (Limited), Hearon, Squire & Francis (Limited), and many others, had admirers in this section. As at home, so abroad do the widely-advertised Beecham's pills seem to be the best-selling speciality, but Pears' soap, Daisy powders, B. W. & Co.'s preparations, Eno's fruit-salt, and various others have a fair following. The fifth, and perhaps the most interesting, question had, however, a different answer. Scott's emulsion, according to the greatest number of our foreign friends, is the article not advertised in the DIARY that ought to be. Bovril, the home favourite, comes next. The following ought also to be advertised:—

Seigel's syrup
Stearns's headache-powders
Steedman's powders
Williams' pink pills
Kodaks
Artificial-limb makers
Hicks' thermometers
Swan fountain pen
Horlick's malted milk
Koko
St. Jacobs oil
Angier's emulsion
Erasmic soap
Elliman's embrocation
Ilford photographics
Allcock's porous plasters
Benbow's dog-medicines
Cuticura preparations
Guttapercha
Lancaster hand-cameras
P.A.T.A.
Carter's pills

One gentleman in Upper India would like to see advertised "some preparation for the cure of hydrocele"; another in Burma would like to see the familiar list of "Books to buy published by the *C. & D.*"; yet another, in Rosario this time, wants a "good *hair*-preparation for chemists' *own* use," while a flatterer in New South Wales tersely says "Nil." The most coveted proprietary is Beecham's pills. Only one of all the competitors,

MR. A. E. HUSTLER, UNLEY, SOUTH AUSTRALIA,

managed to give the six correct answers, and to him we have therefore sent one and a half guineas.

Six others guessed five correctly, and we have given them 5*s.* each. They are the following:—

Mr. G. S. Houghton, c/o Mr. N. O. Ruffel, Kimberley, Griqualand West.
Mr. J. S Dodds, Akaroa, Canterbury, N.Z.
Mr. C. R. Kiver, Christchurch, N.Z.
Mr. J. D. Johnston, The Square Pharmacy, Launceston, Tasmania.
Mr. T. H. Kirkby, 177 Lambton Quay, Wellington, N.Z.
Mr. G. Barron, Waihi, Auckland, N.Z.

SHOP-HINTS.

We have appended a few of the more useful shop-hints. The first is, perhaps, the best, but it is too obvious to all good pharmacists:—

The most valuable shop-hint I can give to chemists is subscribe to the *C. & D.*, and read it.—JOHN KENDERDINE (Sale Street, Auckland, N.Z.).

It is a good plan to go round one's shelves periodically and pick out dead lines, putting them in suitable showplaces to keep them both before the buyer and seller, thereby often working off stock that might lie by for years.—H. E. CREASE (Karangabake, N.Z.).

QUICK DISPENSING!—With bismuth subnit. cum pulv. acaciæ mixtures, half fill bottle with menstruum, dry mouth and neck of bottle. Place bismuth and acacia on piece of paper and shoot direct into bottle. They will be as efficiently mixed with a slight shake as if rubbed down in a mortar.—AUGUSTUS STREDWICK (Kyneton, Victoria, Australia).

Put up in an elegant, attractive, and tasty style, as many of your own specialities and preparations as you can, as indicated in "Pharmaceutical Formulas," thereby ensuring an increase in your business returns.—CHARLES R. J. GLOVER (165 Gilles Street, Adelaide, South Australia).

"We give you what you ask for."—ROBERT W. BORTHWICK (89 Yokohama, Japan).

Obtain a licence to sell stamps and put them in an attractive envelope; it brings custom. Have a post-box handy.—C. R. KIVER (Christchurch, New Zealand).

[Mr. Kiver attaches a neat envelope to demonstrate what he means. It is about the size of a large powder-envelope, and bears his name and address, "Prescriptions for any doctor carefully dispensed," a picture in colours of a post-box, and the times of clearance.]

Don't change your assistants unless you wish to be a slave yourself.—G. E. GIBBARD, 287 King Street West, Toronto, Ont.

In this climate suppositories, &c., should contain a fifth of wax in basis, and be dispensed with lycopodium in the tin or bottle.—G. S. HOUGHTON, Kimberley, Griqualand West.

VERSES.

We have room for only three poets:—

Should chemists sigh at adverse fate,
Or burdened be with hours of toil,
What nectar will invigorate?
A luscious draught of castor oil!

—JAMES D. JOHNSTON, The Square Pharmacy, Launceston, Tasmania.

I like to read of Evans and Savars,
And I hardly think you'll say I am to blame,
Since their "sundries" fill my cases and their "chemicals" my jars,
And I conjure with their trade-mark and their name.
So I'm glad to see them figure large on page five-ninety-three
Of the up-to-date new DIARY of the good old *C. & D.*!
—H. J. MACMILLAN, The English Pharmacy, Rosario, Argentina.

Here are sachets "Marshall"ed in bright array,
And "Oil of the Night" that is made by "Day,"
And Tabloids "Wellcome"d in every land,
And trade-mark "Bull's Head" not made by Brand,
And Parrish's not manufactured by Squire:
Everything you may or may not require.
—J. A. MIERS, The Pharmacy, Mussoorie, India, N.W.P.

AWARDS.

Mr. Kiver's "hint" appears to us to be the most useful and Mr. Miers's verse is the most comprehensive. We have divided the guinea between these gentlemen.

Home Section.

MORE SHOP-HINTS.

FIRE-PREVENTION.—Many fires have originated during the manufacture of furniture-cream. It can be made with perfect safety by dissolving the wax and soap together in aq. by heat, and adding as hot as possible to the cold turps, and agitating until quite cool.—J. H. PAYNE (Thrapston).

Digitized by Google

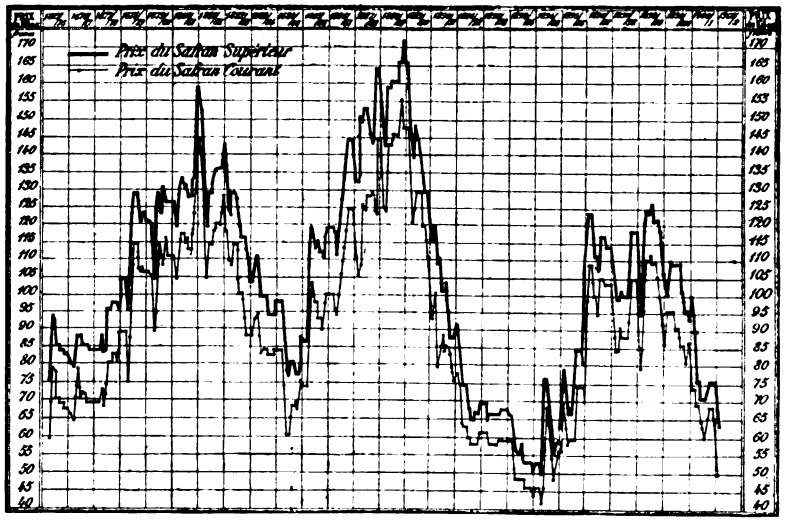
BE POLITE AND OBLIGING, civil without servility or haughtiness, never promising what is impossible, but fulfilling promises accurately and punctually, candid to all, and endeavouring by your whole conduct and ability to show yourself something more than a shopman—a chemist and a gentleman.—(ACETUM).

When we have "the year's progress" of a firm, and an "index price-list" of the products of that firm, with many hints for using those products, all given in rather less than thirty pages, such an advertisement shows a mind which "Burroughs" to the very foundation of the principles of advertising, and is, in every sense, truly "Wellcome."—A. MARSLAND (Ashton-under-Lyne).

SHOP HINTS.—Buy fair, sell fair, and take care of the profits. A place for everything and everything in its place. Never be idle, there is always something wants doing; if nothing turns up, turn something up. Business men attend only to business in business hours. Be civil and obliging to all; it costs nothing and is worth much. Let the business of others alone (drug-stores included), and attend to your own.—NORMAN W. HUNT (Chesterfield).

If the retail chemist will follow the example of the most successful firms who advertise in the DIARY, and who depend upon genuine merit and originality alone, and, while attracting the attention of the public and trade by all legitimate means, will abjure all imitations, substitutions, and everything underhand, and will do his duty by perfecting himself in the professional side of his calling, I'll wager he will have no time or inclination to think about "store competition," but will, like Messrs. Burroughs Wellcome & Co., obtain a well-deserved success.—P. T. TUGWELL (Brighton).

The prize-winners in this competition will be announced in an early issue.



Who was the Doctor?

ON page 1021 of our last volume we printed a paragraph from the *Times* of December 26, 1801, regarding an eminent physician of that time who got a hint from a lady patient to stop his visits, the hint being the dropping of a guinea from the five-guinea fee. We offered half-a-guinea to anyone who would tell us who the eminent physician was. The half-guinea goes to Mr. T. J. Wilkes, chemist and druggist, Swanage, who correctly says it was Dr. John Abernethy, the father of many famous medical stories. John Abernethy was born in London in 1760, and died at Enfield in 1831. In 1787 he was appointed assistant surgeon at St. Bartholomew's Hospital, and, shortly afterwards, lecturer on surgery and anatomy. On the decease of Sir Charles Blick, his former instructor, Abernethy was elected master surgeon, when St. Bartholomew's Hospital began to increase in reputation, and soon acquired a degree of celebrity far beyond anything it had hitherto attained. In 1814 he was appointed Professor of Anatomy and Surgery to the College of Surgeons. He was an F.R.S., and was remarkable for a rough and irritable manner when speaking to his patients. Withal he was a good man. We received from another subscriber the name of Doctor Jebb as the author of the above anecdote, but cannot find any connection between that doctor and the anecdote in any of the reference works we have consulted.

THE great Abernethy knew how to preserve his dignity, says Mr. Andrew Lang. He put up for a professorship in Edinburgh, and had to canvass a bailie who was a grocer, who had *une attitude digne*. "You have come young sir, in this creesis of your career, to ask for my vote for the Chair of Toxicockology?" "No, sir," said A. "I have come to ask for a pennyworth of your figs. Put them up, and look smart about it."

French Saffron.

THIS diagram shows the variation in values of Gatinais (French) saffron from 1875 to the present time. It will be seen that the highest point reached was in 1888–89, when the price in France was over 170f. per kilo., equivalent to 71*s.* 6*d.* per lb. The crop that year was barely 1,000 kilos., but the Spanish crop was a good average one. In 1894 saffron was at its lowest point, French being worth about 15*s.* 6*d.* per lb., in which year new Spanish was selling in London at from 19*s.* upwards, about the lowest point recorded. The firm who issue this diagram (Messrs. L. Thiercelin & Charrier) publish a useful circular in regard to the adulteration of saffron and its detection, from which we quote the following:—

1. Genuine saffron mixed with vegetable filaments tinted in red. This adulteration is very easy to detect. Moisten the ball of your thumb, place a pure saffron stigma upon it, and press the stigma firmly on a sheet of white paper. Genuine saffron will tint the paper yellow, while foreign vegetable filaments will colour it red or not at all, according to the manner in which they are dyed. Another test: Put about ½ gramme of saffron into nitric acid diluted with 50 per cent. of water. Pure saffron will not change colour while in the liquid for five minutes, but any foreign matter that may have been added to the saffron will become bleached.

2. Genuine saffron adulterated with molasses, emery-powder, or sulphate of baryta. Put a little of the suspected saffron into a glass of water. If, after having remained in the water for five minutes, the latter remains clear and has assumed a beautiful golden-yellow tint, the saffron is pure; but should the latter become dirty-yellow and cloudy, or a sediment be formed, it is safe to assume that the saffron is adulterated.

3. Saffron adulterated with honey or glucose has a sweetish taste and remains glued to the fingers when pressed.

4. Saffron adulterated with glycerin when pressed between two sheets of tissue-paper, such as is used in copying-books, leaves a greasy patch on the paper.

5. Powdered saffron adulterated with red-wood powder put into liquid ammonia assumes a claret colour; pure saffron gives a beautiful golden-yellow tint.

6. Powdered saffron adulterated with curcuma dyes petroleum-spirit yellow; pure saffron does not colour it at all.

Ash.—Pure saffron, according to the locality where it is grown, yields from 4½ per cent. to 7 per cent. of ash; saffron adulterated with molasses may contain only 1½ per cent.; and saffron treated with salts of potash and soda may yield as much as 25 per cent. of ash.

APT JUXTAPOSITION.—The following items appeared together in a recent issue of a Belfast newspaper:—

A young Irishman was killed by a fall down a hoist in Glasgow yesterday. He fell seven storeys.

COAGULINE.—Transparent cement for broken articles.

The cutting was sent by a Belfast chemist to Messrs. Kay Brothers (Limited), of Stockport, who in turn transmitted it to us.

Consular Counsel.

China.

On several occasions we have called the attention of exporters to China and the East to the necessity of making a more close study of the requirements and peculiar artistic taste of the masses and their desire for very cheap goods. We now learn from a report by the American Consul at Niuchwang that the Japanese are imitating a vast number of foreign goods and putting a cheaper quality on the market, they being especially shrewd in imitation of brands. The Consul writes, of course, from the American point of view, but what he says about advertising is interesting. For instance, as regards condensed milk, the Chinese have the idea that milk revives the youthful powers, and that it has special virtue as winter food for old people. Pictures and characters illustrating this idea, as well as the value of it for baby-food, would, he thinks, increase the sale. One of the causes of success by Germany is the attention given to the desires and wants of the Chinese in regard to small lines of goods, and the ornamentation of goods and packages. The number of Germans in China who are establishing themselves in China is increasing very fast. From an extended list of imported articles which are now being used by the Chinese we take the following as being of interest to the drug-trade:—

Description	Where made	Condition of Market
Acid, sulphuric ...	Japan	Sales increasing
„ nitric and hydrochloric	„	„
Borax	England	„
Brushes, tooth, best quality	„	„
Brushes, tooth, common	Japan	Sales great
Cameras	England	Sales limited
Chemicals, various ...	Germany and England	Sales fair
Dry plates, photographic	England	„
Drugs, various	„	Sales limited
Dyes, aniline	Germany	Very great
Ginseng	America	Sales increasing
„	Japan	Sales limited
„	Korea	Sales increasing
Milk, condensed ...	America	„
Morphine	England	„
Patent medicines ...	England and America	Sales fair
Perfumery, various ...	England, Germany, and America	Sales increasing
Perfumery-bottles with rubber-ball	Germany and France	Sales limited
Perfume, white rose (in small bottles)	Japan and France	Sales increasing
Quinine sulphate ...	England and America	„
Rose-soap, various sizes	France, Germany, and Japan	„
Soaps, toilet	France and Germany	„
„ cuticura ...	America	Sales limited
„ bars, yellow ...	England, Germany, and America	Sales increasing
„ honey (square pieces) in box of 100 pieces	England	„
„ Pears' (square pieces)	„	„
„ toilet Français	France	Sales limited
Tooth-powder in small tins of various sizes or glass bottles	Japan, France, England, and America	Sales increasing
Tooth-paste	„	Sales greater than powder

Chili.

British trade is holding its own in Chili, says Sir Berry Cusack-Smith, and promises to do so in the future. The figures relating to the imports of drugs, chemicals, &c., during 1900 do not, however, confirm this statement. Indeed, they prove that we are a bad second in the race, and that Germany is supreme:—

—	Total Import	British Share	German Share
	Pesos *	Pesos *	Pesos *
Cod-liver oil	36,033	2,290	23,411
Sulphuric acid ...	156,969	1,721	152,000
Turpentine	91,000	1,181	—
Red pepper	121,000	19,000	41,000
Sulphur	135,000	2,000	72,000
Borax	29,000	2,600	24,700
Capsules for bottles...	179,800	4,400	113,200
Drugs	1,971,700	329,700	1,011,600
Scented soap	63,500	16,200	22,600
Perfumery	242,400	25,600	51,000
Pepper	67,700	17,700	39,200

* 1 peso = 1s. 6d.

Turkey.

Difficulties accompanying the introduction into the interior of Turkey of foreign pharmaceutical preparations render it desirable to call attention to the regulations regarding this class of imports, says the American Consul at Harput. In an imperial order issued some time since concerning the sanitary examination of imports into the Empire, it is stated that the entrance of pharmaceutical specialities of unknown composition, or not meeting the requirements of the French Codex, is forbidden. An exception, however, is made in the case of such specialities of these two categories as have been approved by an "official academy" (*académie officielle*)—*i.e.* a chartered medical society. In order to secure the entrance of an article of this nature, the importer is required to secure an authorisation from the Imperial Medical College at Constantinople. The latter requires that the demand for such authorisation should be accompanied by a certificate from the "academy," endorsing the article in question, and either a sample of the article or its formula, where there is a departure from the requirements of the French Codex. All the documents in the case should be certified by the Ottoman Consul in the country of origin. Experience thus far has shown that the great majority of the documents presented in such cases are either so vague or so improperly certified that the desired permission cannot be granted. In most cases, a lengthy correspondence has been without result. In order to avoid future delays and difficulties of this character the Turkish medical officials urge strongly that great care should be taken to secure proper Ottoman consular certification for all papers submitted in connection with such importations. Further, they call attention to the requirement that all formulas should be written either in French or in Turkish, and quantities and proportions should be stated with the utmost clearness. In general the formulas and labels should be of such a character that they can be easily understood by official examiners possessing a very limited scientific knowledge and practically no familiarity with commercial terms. It is constantly to be borne in mind that Turkish officials look with exaggerated suspicion upon anything containing poisonous or explosive constituents. The extreme difficulty of securing potash chlorate for use as a throat gargle is an example in point.

Vanadium stimulates the gastric mucosa, increases the appetite, and thus improves the general condition of the patient. The drug has been found of especial service in cases of tuberculosis, chlorosis, neurasthenia, and occasionally in cancer of the stomach. Various combinations of vanadic acid have been tried. Strychnine vanadate—prepared by mixing sodium vanadate and strychnine sulphate—has been employed with satisfactory results in tuberculosis, neurasthenia, and atonic dyspepsia. Vanadates of caffeine and of quinine and a phospho-vanadic acid have also been prepared and used. The authors believe that they are justified in claiming an important place for vanadate of sodium among the stimulants of appetite and nutrition.—*B. M. J. Epitome.*

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: April 17.

THE heavy drug-auctions held to-day have certainly given a better tone to business this week, and a fair quantity of goods changed hands. Cardamoms sold at easier rates again, and decorticated seeds were lower. Sumatra and Siam benzoin were in good demand at steady prices, and buchu-leaves sold firmly. Both Rio and Cartagena ipecacuanha were a shade easier; kino was pressed for sale, and brought lower prices. Rhubarb was quiet; sarsaparilla and senna unchanged. Zanzibar and Jamaica beeswax were dearer.

Apart from the drug-auctions, the principal change "outside" is a reduction in codeine. Quinine is quiet and easier inclined. Morphine is in fair demand. Cod-liver oil is unchanged. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Oil, linseed	Menthol	Ipecacuanha	Cardamoms
Senna pods		Phenacetin	and decort. seed
Shellac		Soda nitrate	Codeine and salts
Wax, bees'—			Senna (Alex.) siftings
Jamaica			
Zanzibar			

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from April 3 to 9, inclusive:—Acid tartaric, 48, (@ Bari) 40; argol (@ Naples), 49; belladonna, 11 bls.; benzoin (@ Singapore), 50; camphor (@ Hamburg) 125 tubs 695 cs., (@ Kobe) 59; Calabar-beans, 6; cardamoms, 46; cascara sagrada, 1,007; castor oil (Ital.) 45, (Belg.) 122, (Fr.) 293 cks.; cinchona (@ Amsterdam) 220, (@ Ceylon) 39; citrate of lime (@ Syracuse) 22, (@ Messina) 49; coca-beans (Ceylon), 3; cochineal, 55; cod-liver oil (Nor.) 127, (from Hamburg) 50; cream of tartar (@ Marseilles) 13, (@ Barcelona) 10, (@ Bordeaux) 86; essential oils (@ Messina), 52; eucalyptus oil (Aust.), 174; gamboge (@ Singapore), 3; ginger (Jap.) 300 sks. 667 bgs., (@ W.C. Africa) 701 bgs.; guinea-grains, 12; gum tragacanth, 50; gum, unenumerated (@ Persia), 448; gum arabic (@ Aden), 69; honey (Calif.) 300 cs., (Jamaica) 138 pkgs.; ipecacuanha (@ Singapore), 9; kino (@ Cochin), 5; lime-juice (W.I.), 4 hds.; nux vomica (@ Cochin) 10, (@ Tellicherry) 210; lime, citrate (@ Messina), 54; orange-peel (@ Marseilles), 12; opium (@ New York) 25, (@ Genoa) 10; orris (Ital.), 35; peppermint oil (@ Hamburg) 102, (@ Japan) 85; pot. chlor. (@ Sweden), 50; pot. pruss., 28; quinine (@ Amst.), 10; sandalwood (E.I.), 289; senna (Tiny.) 42, (Alex.) 51; soy (@ Hong-Kong), 150; tamarinds (E.I.) 10, (@ Barbados) 62 brls. 26½ brls.; turmeric (E.I.), 10; vanilla, 2 cs.; wine-lees (@ Barcelona) 576, (@ Palermo) 405, (@ Messina) 299.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from April 10 to 15, inclusive:—Acid, boric (Ital.), 56; acid, lactic (@ Hamburg), 10; acid, tartaric (@ Bordeaux) 7, (@ Rotterdam) 24, (@ Amsterdam) 10; aloes (@ Bombay), 150; argol (@ Naples), 51; arrowroot (St. V.), 1,353; "balsams" (@ Hamburg), 5 cs.; calumba (@ Hamburg), 79; castor oil (Belg.) 28, (Ital.) 60 cs.; caraway-seed, 170; castor oil (@ Hamburg) 3 cs., (@ Rotterdam) 25; chamomiles, 5; chloral hydrate, 2; citrate of lime (@ Messina), 21; coca-leaves (@ Ceylon), 30; cod-liver oil (@ Norway), 353; cream of tartar (@ Rotterdam) 8, (@ Bordeaux) 44; drugs (@ Panama) 4, (@ Leghorn) 26, (@ Marseilles) 20; essential oils (@ Messina) 388, (@ New York) 51, (@ Palermo) 25; ginger (@ W.C. Heavy Chemicals.

The general tone of the heavy-chemical market remains without substantial change from recent reports. The volume of business passing, however, is somewhat heavier, and this applies both as regards home requirements and exports. Deliveries against existing contracts are being taken out fairly well. Values show little fluctuation.

Alkali-produce.—Ammonia alkali in strong demand, and same shows no sign of diminishing. Caustic soda and bleaching powder are both in increased request. Soda crystals, too, are moving more freely. Saltcake, chlorates, and prussiates quiet.

Magnesium-salts continue to move well, and are firm at unchanged figures. Magnesium chloride, 62*s.* 6*d.* to 67*s.* 6*d.* per ton; magnesium sulphate (Epsom), 62*s.* 6*d.* to 67*s.* 6*d.* per ton in bags, free on rails; carbonate of magnesia, 37*s.* 6*d.* to 40*s.* per cwt.

Zinc-salts are moving somewhat more briskly. Zinc sulphate, crystals, 6*l.* to 6*l.* 5*s.* per ton; zinc chloride, solution, 100° TW, 6*l.* to 6*l.* 5*s.* per ton.

Barium-products.—There is little new to be reported in this branch, the late firm tone steadily continuing owing to the main raw material, the mineral carbonate of barytes (Witherite) being still scarce. For the small parcel offering prices vary in accordance with strength and package. Chloride of barium, best ordinary refined crystals, in steady request, at 7*l.* to 7*l.* 10*s.* per ton in ordinary casks, and 6*l.* 15*s.* to 7*l.* 5*s.* per ton in bags. Blanc fixe, pure precipitated sulphate of barium in paste form, 7*l.* 5*s.* to 7*l.* 15*s.* per ton in usual casks; nitrate of baryta very firm and higher in value, with continued advancing tendency, 16*l.* 15*s.* to 18*l.* per ton for crystals in casks free on rails, and 17*l.* to 18*l.* 5*s.* per ton for powdered. Mineral sulphate of barytes moving steadily, but without change in value, 40*s.* to 100*s.* per ton for ground according to quality, package, and quantity. Hydrate of baryta, purest crystals, 14*l.* to 14*l.* 10*s.* per ton in usual 6–7 cwt. casks. Sulphide of barium, crude calcined, 70 to 75 per cent., 5*l.* 10*s.* to 6*l.* per ton in strong casks.

Liverpool Drug-market.

Liverpool, April 16.

Castor Oil.—The *Historian* with about 1,600 cases good seconds Calcutta has arrived, but the value remains steady at 2 13/16*d.* on the quay, and 3*d.* per lb. in store. First-pressure French is still obtainable at 2¼*d.* to 2 5/16*d.* per lb., but transactions are limited. 2⅜*d.* is still quoted for second-pressure French, but this price would be shaded.

Calabar beans.—Six bags at auction realised 1*s.* 2½*d.* per lb.

Grains of Paradise.—The sale is reported of 13 bags at 57*s.* 6*d.* per cwt. Holders on the spot are quoting 60*s.* for the remaining stocks.

Beeswax.—Further sales of Chilian mixed yellow to grey are reported at 7*l.* 10*s.* per cwt. Five blocks of Sierra Leone at auction found buyers at 6*l.* 16*s.* 3*d.* per cwt. in store.

Gum Arabic.—Although the market for Soudan sorts is said to be somewhat idle the sale is reported of 40 serons hard amber descriptions at 32*s.* per cwt.; 45*s.* to 50*s.* is asked for fine soft.

Turps.—The upward movement indicated last week is fully maintained, and 32*s.* 6*d.* per cwt. is asked for spot parcels.

Canary-seed.—Although the market is quiet there is no quotable change in the value, and good bright Turkish remains at 35*s.* to 35*s.* 6*d.* per quarter.

Quillaia bark.—Further transactions are recorded at 12*l.* 17*s.* 6*d.* to 13*l.* per ton. The article is in a very strong position.

African Ginger.—The recent arrivals of new crop have all been cleared and an advance has been established, 35*s.* 6*d.* per cwt. now being asked for good sound root on the spot.

Sulphate of Copper is still firmly held at 19*l.* 5*s.* per ton.

German Drug-market.

Hamburg, April 15.

Our drug-market is quiet and shows very little business.

Agar-agar continues firm at 315m. on the spot, and 295m. per 100 kilos. for forward.

Camphor.—Refined is unchanged, refiners quoting 435m. per 100 kilos., and second-hands 5m. to 10m. per 100 kilos. less.

Digitized by Google

Coca-leaves are firmer, and 260m. per 100 kilos. is now asked.
Condurango is quieter, with sellers at 120m. per 100 kilos.
Ergot is scarce, and 335m. to 340m. per 100 kilos. asked.
Menthol, on the spot, is scarce at 29m. per kilo., and forward 28½m.
Cumin-seed is firmer at 51m. per 100 kilos.
Kola is also firmer at 45m. per 100 kilos.
Japan Wax is unchanged, and firm at 70m. per 100 kilos.
Senega is unchanged at 510m. per 100 kilos.
Sugar-of-Milk is quoted 80m. per 100 kilos.
Quinine is firm at 43m. per kilo.
Wormseed is tending firmer; 87½m. per 100 kilos. is asked for prime green.
Jaborandi-leaves scarce, and little offered.
Castor Oil shows more demand; first-pressing, in barrels, is quoted 54m., spot.
Cod-liver Oil continues very firm, non-congealing oil of old crop being held at 105m., and new crop at 110m. per barrel.

Cablegrams.

Hamburg, April 20:—Antimony is firmer. Condurango-bark is quiet, and for cevadilla-seed 92m. per 100 kilos. has been paid.

* * * *

Smyrna, April 17:—The sales for the week ending Wednesday evening amount to 50 cases, at from 7*s.* to 7*s.* 3*d.* per lb. The United States has purchased the bulk.

* * * *

Bergen, April 16, 7 40 p.m.:—The market here is firm, at 105*s.* per barrel, f.o.b., for best Lofoten non-congealing oil. Fishing has not yet commenced at Finmarken. The catch of cod up to date amounts to 29,975,000, against 27,412 000 at the same time last year. This has yielded 15,543 barrels, against 25,903 barrels in 1901.

* * * *

New York, April 17:—Market here is quiet. The following articles have an easier tendency: Opium is now quoted $2 90 per lb., jalap 10c. per lb., peppermint oil $1.65, citronella oil 19c., and cassia oil 63c. per lb. Cod-liver oil is higher at $28 per barrel. Buchu-leaves are active at 20c. for round. Cape aloes is firmer at 6½c. per lb., and Cartagena ipecacuanha is lower, $1 20 per lb. being quoted.

London Markets.

Acid, Citric, is unchanged at 1*s.* 0¼*d.* to 1*s.* 0½*d.* per lb.

Acid, Oxalic, is quoted 2½*d.* to 2⅝*d.* per lb. net delivered.

Arrowroot.—The West India Committee in their circular dated April 15 state that the majority of St. Vincent growers signed an agreement on February 27 last to hold all arrow-root from March 20 at 2*d.* per lb., as a minimum price, irrespective of quality, the agreement to remain in force until November 23. This places the market in a somewhat anomalous position, and it is feared that buyers will now pick out all the best marks at 2*d* leaving "good manufacturing" root alone. If this is so it will tell hardly on some shippers later on. Fine St. Vincents in tins sold in auction at 3½*d.* to 3⅝*d.* per lb., but good in barrels was bought in at 2¼*d.* per lb.

Borax is quiet at the combination price of 13*s.* per cwt. for crystals and 14*s.* for powder. *Boric acid* is 22*s.* and 24*s.* respectively. In second hands there are sellers at quite 6*d.* under these prices.

Cinchona.—At auction on Tuesday the supplies were on a larger scale than usual, the total amounting to 4,236 packages, of which more than half was sold publicly. There was a fairly good demand, especially for rich barks, and the average unit obtained was 1⅝*d.*, against 1 $\frac{5}{10}$*d.* at the last Amsterdam sale. The following table shows the quantity of bark offered and sold:—

	Packages offered.		Packages sold.
East Indian cinchona	1,805	of which	1,324
South American cinchona (principally Calisaya) ...	1,271	„	1,153
Java cinchona	884	„	108
Ceylon cinchona	276	„	178
	4,236		2,763

The following table shows the quantities of bark purchased by the principal buyers:—

	Lbs.
Agents for the Mannheim and Amsterdam factories	122,106
Agents for the Brunswick factory	92,789
Agents for the American factories	78,287
Agents for the Frankfort and Stuttgart factories	71,735
Messrs. Howards & Sons	36,461
Agents for the Imperial factory	28,000
Druggists, &c.	39,839
Total quantity sold	469,217
Bought in or withdrawn	399,314
Total quantity offered	868,531

The prices obtained were as follows:—

South American.—Bolivian cultivated Calisaya, fair to good quill, 6¾*d.* to 11½*d.* per lb.; broken quill at 7⅜*d.* to 8⅜*d.*; flat at 1*s.* 4*d.* Pitaya, 2*d.* to 3⅛*d.* soft Colombian, 2⅛*d.*; and Cuprea, 2*d.* to 2⅜*d.* per lb.

Java.—Ledgeriana stem chips, 4*d.* to 1*s.* Succirubra, broken quill, 5*d.* to 5¾*d.*; branch, 3½*d.* to 6⅛*d.*; and root, 3¾*d.* to 5½*d.* per lb.

Ceylon.—Ledgeriana, good chips, 6*d.* to 8*d.* per lb. Succirubra, stem chips and shavings, 3½*d.* to 4¾*d.*; branch, 3⅝*d.* to 4¾*d.*; and root, 3½*d.* to 4*d.* Officinalis stem chips, 2⅜*d.* to 2⅝*d.*; good renewed, 7⅛*d.*

East Indian.—Ledgeriana chips, 7*d.* to 8*d*; branch, 3½*d.* to 5⅜*d.*; and root, 4⅜*d.* to 8½*d.*; red-stem chips and shavings, 3*d.* to 4⅜*d.*; renewed ditto, 3⅛*d.* to 3½*d.*; and root, 3*d.* Officinalis, good to fine chips and shavings, 5*d.* to 8½*d.*; ordinary to fair, 2⅜*d.* to 4½*d.*; renewed ditto, 3½*d.* to 8½*d.*; root, 4⅜*d.* to 8*d.*; and branch at 2½*d.* to 4⅜*d.* per lb.

The shipments from Java for the first half of the month were 470 000 Amsterdam lbs., against 455.000 Amsterdam lbs. last year, and 275,000 in 1900 In the drug-auction 40 serons sound Huanoco quill realised 6½*d.* to 6⅝*d.* per lb., and slightly damaged 5½*d.* Thirty-two serons from Paita sold at 1*s.* Fourteen serons Loxa quill sold at from 10½*d.* to 1*s.* 2*d.* per lb.

Codeine has been reduced 10*d.* per oz., makers now quoting 11*s.* 3*d* for the alkaloid in quantity to 11*s.* 8*d.* for small wholesale lots. Salts have been reduced proportionately.

Galls.—Chinese are quoted 49*s.* 6*d.* per cwt., c.i.f., for May-June shipment.

Gambier.—For good cubes 36*s.* per cwt., spot, has been paid.

Menthol.—According to cable advice, the market in Japan is firmer, Kobayashi brand having advanced 6*d.* per lb., now 13*s.* 3*d.* to 13*s.* 6*d.* per lb., c.i.f. The market here remains weak, and in auction to-day 4 cases Nippon brand sold without reserve at from 12*s.* 3*d.* to 12*s.* 6*d.* per lb.

Morphine is in fair demand. makers quoting 4*s.* per oz. for contract quantities of hydrochloride powder.

Oil, Castor.—Calcutta seconds are quoted 2⅞*d.* to 3*d.* per lb.

Oil, Citronella, is quiet at 10½*d.* to 10¾*d.* per lb. in cases.

Opium — Our Constantinople correspondent writes on April 12 that there has been a little more doing during the past week, and 3 cases "druggists'" and 10 cases "Malatia's" have changed hands at the parities of 7*s* 6*d.* and 9*s.* 2*d.* per lb., respectively. The weather is quite seasonable, and crop prospects continue as bright as ever. Our Smyrna correspondent writes on April 12 that the opium market is rather quiet, the sales amounting to 22 cases for England and the Continent. The crop-prospects continue good, but it must be borne in mind that there is still a lot of risk to run before the new opium is harvested. Meantime the favourable prospects, and the preference shown to the Persian drug on the London markets, have had the effect of further reducing prices another 2*d.* per lb. all round on this market, and if the Americans do not respond to present figures for another week or two, it is possible that we may see lower rates. We quote to-day 7*s.* 2*d.* to 7*s.* 6*d* for manufacturing descriptions as to quality, and for selected soft elastic paste opium, 7*s.* 10*d.* to 8*s.* 6*d.* per lb.

Oil, Cod-liver.—The market both in Norway and London

Digitized by Google

is unaltered this week, prices ranging from 108*s.* to 112*s.* 6*d.* per barrel, c.i.f., according to quality, and mostly subject to confirmation. Our Bergen correspondent writes on April 12 that there is no alteration in the cod-liver oil market. The Lofoten fishing is about closing, and there are no reports from Finmarken as yet. Best Lofoten non-congealing oil is now quoted 105*s.* per barrel, f.o.b. Bergen. The exports from Bergen amount to 2,955 barrels, against 3,060 barrels at the same time last year.

Under date of April 5, Mr. Joh. Rye Holmboe, of Tromsoe, reports that the prices asked by first-hand producers for crude oil are considerably higher than the quotations which are daily refused by foreign buyers. It seems as if the latter do not yet realise the actual state of affairs. The catch of cod and the production of oil up to April 5 for all districts is as follows :—

—	Millions (cod)	1,000 hectl. (oil)
1902	about 24·5	16
1901	22·8	26·6
1900	17·1	21·9
1899	21·2	25·2
1898	22·8	17·6
1897	37·5	25·5
1896	27·3	12

It may be of interest to note also the aggregate production of cod-liver oil during the preceding ten years in 1,000 hect. crude oil :—

1892	1893	1894	1895	1896
22·3	33·9	24·1	19·5	23·7
1897	1898	1899	1900	1901
33·8	26·4	33·6	32·8	34·3

The production up to April 5 averages 70 per cent. of the whole year's total.

In auction 111 cases Japanese oil, of rather strong flavour, partly sold at 30*s.* per cwt, and a further 20 cases had been sold privately.

Phenacetin.—In regard to the paragraph inserted under this heading last week, it now appears that the Bayer Company lay claim to certain trade-mark rights in the use of the word "phenacetin," which other makers of the product (in order to avoid trouble) have agreed to recognise. It is understood that the name of "phenacetin" will only be used on packages in conjunction with the statement that it is sold with the licence of the trade-marks holders. A circular has been issued this week quoting from 4*s.* 2*d.* per lb. for 10-cwt. lots on contract, to 4*s.* 9*d.* for small wholesale quantities of crystals and powder. Bayer's make is unchanged at 7*s.* 6*d.*

Quinine has been very quiet in second-hands, with an easier tendency, there being sellers of May delivery at 1*s.* 2*d.* per oz., and August at 1*s.* 2¼*d.*

Soda Nitrate is easier at 10*s.* 3*d.* per cwt. for ordinary and 10*s.* 4½*d.* for refined, on the spot.

Spices have been very quiet this week, and transactions small without much change in values. At auction on Wednesday only a few lots of Cochin *Ginger* were offered; "O" cut sold at 50*s.* to 50*s.* 6*d.* per cwt., but the remainder was bought in, washed rough at 40*s.* per cwt. Jamaica partly sold at 36*s.* 6*d.* per cwt. for dull lean. Penang *Cloves* were bought in at 7*d.* per lb. for fair; and Zanzibar at 3⅞*d.* for dark, and 3⅞*d.* for fair. June-August delivery is quoted 3 15/16*d.* Good long red Japan *Chillies* were bought in at 33*s.* per cwt. Some Zanzibar were offered, but only the sea damaged portion sold. *Pimento* quiet, small dark shelly sold at 2⅞*d.* to 3*d.*, fair quality being bought in at 3¼*d.* per lb. *Mace* was bought in at 1*s.* 6*d.* per lb. for middling red Penang. *Nutmegs* were ½*d.* per lb. lower for West India. Broken *Cassia-lignea* was bought in at 30*s.* per cwt. *Pepper* quiet and unchanged; Penang block was bought in at 5⅛*d.* to 5⅜*d.* per lb., and Singapore at 5¾*d.* June-August shipment is offering at 5⅞*d.* per lb. Siam white was bought in at 9¾*d.*, and Penang at 9½*d.* per lb.

Sulphonal is very quiet, Bayer's make offering at 5*s.* per lb.

London Drug-auctions.

* Sold privately.

Aloes.—Socotrine sold at unchanged rates, 72*s.* 6*d.* per cwt. being paid for softish in kegs; 25 cases ditto were taken out at 75*s.* A parcel of 17 boxes Curaçao sold at 28*s.* for good pale livery, 22*s.* for dull and darker ditto, and 24*s.* for black capey. No Cape offered.

Aniseed.—Eleven bags Russian sold at 19*s.* 6*d.* per cwt. gross for net.

Digitized by Google

Annatto-seed.—Two bags dull St. Vincent seed sold at 1¼*d.*; and 12 bags Madras at 1½*d.* per lb.

Antimony.—Japanese crude partly sold at 14*l.* per ton.

Areca.—Small to bold slightly wormy seed sold at 19*s* per cwt.

Argol.—Dusty grey Cape brought 45*s.* per cwt.; and powder 37*s.* 6*d.* From another catalogue 14 bags dusty grey Cape also sold at 45*s.* per cwt.

Balsam Copaiba.—For pale to cloudy Maranham 2*s.* 2*d.* per lb. was asked. Two cases of palish opaque balsam from Hamburg sold at 1*s.* 6*d.* per lb.

Balsam Tolu.—Good hard reddish balsam in small tins sold at 1*s.* 4*d.* per lb.

Benzoin was in good demand at from 7*l.* to 7*l.* 12*s.* 6*d.* for good fair Sumatra seconds, 6*l.* 15*s.* for fair, and 5*l.* 10*s.* to 5*l.* 17*s.* 6*d.* for ordinary seconds. Good glassy Palembang in tins sold at 37*s.* 6*d.* Siam was also in better demand; for small to bold pale loose almonds 26*l.* was wanted; grain siftings in block sold at 6*l.* 5*s.*, and for darkish brown block 62*s.* 6*d* was paid. Two cases of small partly blocky almonds sold at 5*l.* 17*s.* 6*d*, and blocky pickings brought 4*l.* 10*s.* per cwt.

Buchu sold at firm rates, 8*d.* per lb. being paid for a string of good green round leaf; and 7½*d.* to 7¾*d.* for slightly stalky and yellowish. From another catalogue 5 bales of fair, also rather stalky, sold at 8*d.*

Calumba.—Small to bold dull natural sorts sold at 7*s.* to 7*s.* 9*d.* per cwt, and fair brown at 10*s* 6*d.* to 11*s.*

Cannabis Indica.—For good tops 2*s.* 3*d.* per lb. was paid, at which figure sales privately are reported. Seventeen robbins of siftings were taken out, and from another catalogue 10 robbins of tops had been sold privately, with 2*s.* 6*d.* asked for siftings.

Cardamoms were about 2*d.* per lb. lower, selling at the following prices:—Ceylon-Mysores: extra bold pale smooth, 3*s.* 1*d.* to 3*s.* 3*d.*; fine bold pale, 2*s.* 10*d.* to 2*s.* 11*d.*; bold medium pale, 1*s.* 9*d.* to 2*s.* 3*d.*; medium to bold pale, 1*s.* 8*d.* to 1*s.* 10*d.*; small to medium pale, 1*s.* 4*d.* to 1*s.* 7*d.*; small palish, 1*s.* 2*d.* to 1*s.* 5*d.*; brown and split, 1*s.* to 1*s.* 2*d.*; bold splits, 2*s.* 2*d*; medium ditto, 1*s.* 8*d.*; small splits, 1*s.* 1*d.* to 1*s.* 2*d.*; seed, 1*s.* to 1*s* 6*d.* per lb.; Ceylon-Malabar, small to medium lean brownish, 1*s.* 4*d.*

Cascarilla.—For small and broken greenish quill 65*s.* was wanted; and for thin stringy 45*s.* was paid.

Coca leaves.—Fair green Ceylon sold at 9½*d.* to 11*d.*; ordinary to middling at 6½*d.* to 8½*d.*; and slightly damaged 4½*d.* per lb.

Croton-seed.—Fair, partly dark mixed sold at 25*s.* per cwt. Good bright were taken out without mention of price.

Cuttlefish-bone.—A parcel of 41 mats from Bombay brought 2¾*d.* per lb.

Divi-divi sold at from 7*l.* 17*s.* 6*d.* to 8*l.* 2*s.* 6*d.* per cwt.; and sea-damaged 7*l.* 15*s.*

Dragon's Blood.—Two cases of fair lump of mixed quality sold at 10*l.*, and 3 cases of Zanzibar drop realised 37*s.* 6*d.* per cwt.

Elemi.—Good pale Manila gum was bought in at 95*s.* per cwt.; and 1 case of fair, rather dirty, sold at 85*s.*

Ergot.—Six bags Russian has been sold privately, and the remaining 8 bags, partly mixed with ergot of wheat, were bought in at 1*s.* 9*d.* per lb.

Fennel-seed.—For rather stalky Bombay seed 13*s.* 6*d.* per cwt. was paid.

Galangal sold "without reserve," at from 22*s.* to 25*s.* per cwt.

Gamboge.—For 1 case of good rough pipe, partly blocky and mostly fine orange fracture, 14*l.* 5*s.* was paid, and 7*l.* for dull ricey Saigon pipe. Pickings were bought in at 15*l.*

Guaiacum.—Fair bright glassy block was held at 1*s.* 6*d.* per lb.

Honey.—Jamaica was in good demand at steady prices, nice pale liquid amber in barrels selling at 18*s.* to 19*s.* per cwt., dark and mixed in cases at 16*s.* to 16*s.* 6*d.* Good pale extracted honey brought 19*s.* 6*d.*, and nice set white was taken out at 25*s.*; 45 cases Australian sold at 13*s.* per cwt. for yellowish semi-liquid.

Ipecacuanha.—Rio sold at slightly easier prices, from 9*s.* 9*d.* to 10*s.* being paid for fair to good. For a string of 9 bags cultivated Johore root, native-picked and well annulated, a bid of 9*s.* 6*d.* per lb. is to be submitted. Of Cartagena forced sales were made without reserve, 4*s.* to 4*s.* 1*d.* being paid for fair annulated, and 3*s.* 10*s.* for sea-damaged.

Kino was plentifully offered, and to induce business lower prices were accepted. Three cases of fair black Cochin grain sold "without reserve, if pay charges," at from 6¾*d.* to 7¼*d.* per lb. African kino was bought in at 9*d.* From another catalogue 16 cases Cochin sold, "without reserve," at from 5¾*d.* to 6¼*d.* per lb.

Kola.—Twenty bags small West Indian sold at 1½*d.* per lb.

Lime-juice.—Twenty-five packages unworked West Indian sold at from 1*s.* 1*d.* to 1*s.* 2*d.* per gal.

Myrrh.—Fair Aden sorts were taken out at 75*s.* per cwt., and for a case of pale siftings 70*s.* was paid; 14 packages of *Bdellium*, catalogued as myrrh, brought 18*s.*

Nux Vomica.—Fair Calcutta seed (390 packets) was held at 7*s.* 6*d.* per cwt.

Oil, Cassia.—A parcel of 49 cases salvage cargo, *ex Asturia*, sold without reserve at from 2*s* 2*d.* to 2*s.* 4*d.* per lb. for 72-per-cent. cinnamic aldehyde. The above prices were net, no draft, and taken "with all faults."

Oil, Cajuput.—A parcel of 63 cases sold without reserve, on account of the underwriters, at from 1*s* 10*d.* to 2*s.* 1*d.* per bottle, net, no draft, and with all faults.

Oil, Lime.—West Indian distilled was in fair request at from 1*s.* 5*d.* to 1*s* 6*d.* per lb., and 3*s.* 3*d.* for hand-pressed.

Oil, Peppermint.—Nineteen cases Japanese dementholised oil sold without reserve at 3*s.* 3*d.* to 3*s.* 5*d.* per lb., and for 5 cases Kobayashi brand 4*s.* was paid. Oil, containing 40-per-cent. menthol, was held at 7*s.* 9*d.* per lb.

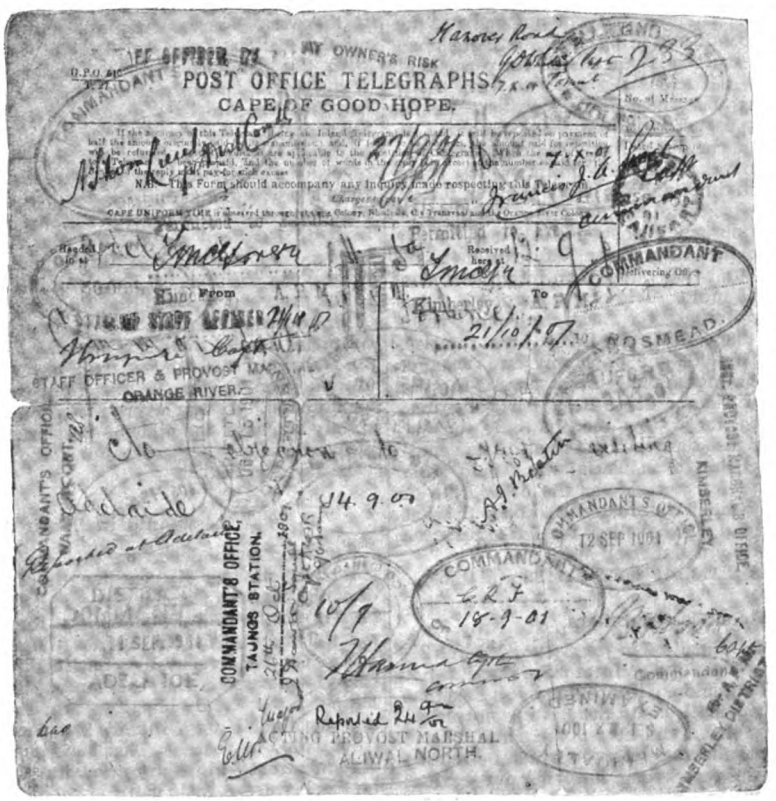
Oil, Rose (East Indian).—For "settlings" in bottles 2*d.* per oz. was paid.

Rhubarb.—Slow of sale in auction, although there is a fair business privately. The following were the sales:—Six cases of small to bold flat High-dried, with pale pinky fracture, 8½*d.* to 10*d.* per lb. One case of medium to bold round Canton, with three-quarter pinky fracture and one-quarter grey and dark, 1*s.* 10*d.*; and one case of medium to bold orange-coated flat Shensi, with fine pinky fracture, 3*s.* 7*d.* per lb. For small to bold round native high-dried, with about three-quarter pinky and grey fracture, 5¼*d.* was the limit, a bid of 5*d.* being refused.

Sarsaparilla.—Grey Jamaica sold at 1*s.* 2*d.* to 1*s.* 4*d.*, according to quality, 31 bales Lima sold at 11½*d.* to 1*s.* 1*d.*, and a further 10 bales at 1*s.* 2*d.* for good, and red native Jamaica at 8*d.* per lb., subject.

Senna.—The bulk of Tinnevelly leaf offered was again low, from ½*d.* to 1*d.* per lb. being paid for it. Pods were dearer, from 1¾*d.* to 2¼*d.* being paid. Fair Alexandrian leaf was held at 5½*d.* per lb; pods (3 bales) sold at 7*d.*; and siftings at 2*d.* per lb. Twenty-two bales stalky Mecca leaf sold at ¼*d.* per lb. without reserve.

Soy.—Ninety-seven packages soy containing stone jars of various sizes sold in bond at from 1*s.* 9*d.* to 2*s.* 1*d.* per case, and 7 barrels sold at 1*s.* 2*d.* per gal., all "without reserve" for account of the underwriters.



Wax, Bees'.—Good Jamaica sold at 7*l.* 17*s.* 6*d.* to 8*l.* 2*s.* 6*d.* Zanzibar was dearer, and everything was sold at from 6*l* 15*s.* to 7*l.* 5*s.* per cwt. Twenty-five cases East Indian sold at 6*l.* 10*s.*, and 7 cases Benguela at 6*l.* 15*s.* per cwt. Three bags Morocco sold at 6*l.* 12*s.* 6*d*, and 1 bag Australian at 7*l.* 10*s.* per cwt.

Wax, Japanese.—Two hundred cases sold "without reserve" on underwriter's account at from 25*s.* to 27*s.* per cwt. without draft discount and with all faults. For sound wax 35*s.* is the spot price. Twenty cases dullish square sold at 34*s.* 6*d.* per cwt. subject.

Travelling in the Cape.

THE difficulties which commercial travellers have to surmount in Cape Colony just now are very well illustrated by the annexed photographic reproduction of a pass, for which we are indebted to Mr. G. A. Wilson, of Messrs. C. E. Gardiner & Co., wholesale chemists, Port Elizabeth, South Africa, who was home recently and gave us a call to explain the intricacies of this curious document. It was granted to Mr. William Fortune, who represents the firm, and who started in September of last year on a seven-weeks' journey from Port Elizabeth. Each step in the journey had to be franked, as it were, by the military authorities. Mr. Fortune had permission to go on to Grahamstown and Fort Beaufort, and when in the latter town wanted to go on to Adelaide. He accordingly telegraphed to headquarters for the necessary permission, and received in reply the telegram as here shown saying "No objection to your visiting Adelaide." With this telegram, and the braid Scotch tongue in his head, Mr. Fortune managed in succession to get the military commandants to pass him on to the next place that he wanted to visit, and he thus went in succession from Adelaide to Bedford, Cookhouse, Somerset East, Cradock, Naauwpoort, Hanover, Kimberley, Taungs, Vryburg, then returned to Kimberley, and went on to Steynsburg, Aliwal North, Burghersdorp, and thence to Port Elizabeth. In each of these places Mr. Fortune persuaded the commandants to stamp the telegram, and a close examination of the document shows the sequence of the journey. One stamp indicates that he was medically examined, having touched a town in which there was plague. The document is almost unique, and Mr. Fortune has refused an offer of ten guineas for it.

Mr. Fortune is a Portsoy man, and served his apprenticeship with Messrs. Davidson & Kay, Aberdeen. After that he went to Edinburgh and studied under Mr. William Duncan, F.C.S., Royal Dispensary, passing the Minor in 1895. He went out to Port Elizabeth three and a half years ago, and is now well known to chemists generally in Cape Colony.

Mr. G. A. Wilson is the manager of Messrs. Gardiner & Co.'s wholesale warehouse. He is an Aberdonian, but his experience has been entirely in the wholesale—first with Messrs. Davidson & Sim, of Aberdeen, and then with Messrs. Wright, Layman & Umney, in whose warehouse he was for some years before going out to the Cape. Mr. Wilson spoke confidently about the future of the wholesale trade in South Africa, and he reported very good business while the war was at its height and since, owing to the difficulty that retailers had in getting goods from this side. His firm carried a big stock, and were naturally able to meet a good demand. The experience gained warrants them in extending considerably. They are now engaged in adding to the wholesale store an annexe three storeys high and 75 feet long.

It may be appropriate to mention under this heading a letter which we have recently received from a subscriber in Mossel Bay, bringing to our notice a "typically British method of doing business." It is a letter from a traveller for a London firm inviting him to take a journey to Cape Town, some hundreds of miles, in order to inspect his samples. Our subscriber was starting in business, and there was a chance of the traveller booking a good line. We do not suppose there are many travellers who ask their customers to do the travelling, and those who think that South African chemists are willing to relieve them on that score may take it that they are sometimes as coy as a maiden of sweet seventeen.

MEDICAL GLEANINGS.

CINNAMON IN INFLUENZA.

DR. J. CARNE ROSS (Withington, Manchester) writes to the *British Medical Journal* to call attention, during the present epidemic of influenza, to the good results he has obtained during the last eleven years from the employment of cinnamon. He originally used a decoction of cinnamon, or the drug in compressed tablets; he now finds that the oil of cinnamon, which is more easily obtainable, is more effectual than the decoction, and that it may be used with effect even though the disease has shown itself for over twenty-four hours. He prescribes 5 minims of the oil of Ceylon cinnamon in a tablespoonful of water every hour till five doses have been taken, after that the same dose every two hours till the temperature becomes normal, when the dose should be taken four times a day for three days. The patient is required to stay strictly within doors for twenty-four hours after the temperature has fallen.

CRURIN IN GONORRHŒA

CRURIN, a rhodonate of chinoline and bismuth with the formula $(C_9H_7NHSCN)_2Bi(SCN)_3$ is proposed as a non-irritating astringent injection in gonorrhœa by Jacobi. The injection is prepared by rubbing up 1 gr. of crurin with 5 gr. each of water and glycerin. Water is then added slowly to make 200 gr. The fluid which results is turbid, and has a precipitate. A quantity of 8 to 10 c.c. of the supernatant liquid is injected two or three times a day. Jacobi considers that crurin possesses some advantages over protargol.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

English Assistants in Paris.

Sir,—Referring to the letters of "Quite Enough" and "Senior" in the *C. & D.* for March 29 and April 5, I should like to give the result of my own experience of pharmacy in Paris. I have lived here a good many years, and attained to such a position that my permanent residence in this capital is likely. This is probably due as much to a favourable opportunity as to any special capacity on my part, as my conviction is that, other conditions being equal, an Englishman is better off in his own country than abroad for permanent residence—I mean for the men who have to earn their living. In Paris the arrangements and sleeping accommodation in the smaller pharmacies often leave much to be desired, and the different mode of living is frequently distasteful to the new arrival. But I should like to lay some stress on the value and importance, in my opinion, for all young men—be they pharmacists or mere laymen—of spending at least a year abroad if they possibly can. Such an experience, which enables them to study foreign methods and ways, cannot fail to be of value to an intelligent man of an observant turn of mind. I know that good English assistants are not easily obtained for Paris, consequently the better firms here are disposed to pay fairly high salaries, this question being, after all, one of supply and demand. I understand that men go more readily as assistants for the season to the South of France or to Italy, partly because they engage themselves for a few months only out of England, and partly because tempted by the climatic conditions. But as an Englishman in Paris who would from many points of view prefer to reside on the other side of the Channel, I should be much interested to know to what extent chemists in England who have had foreign experience consider the time passed abroad as well spent.

Paris, April 9. A Tale of Two Cities. (116/5.)

Volunteer Compounders.

Sir,—"Pharmaceutical Chemist," in your issue of March 29, has taken such a different standpoint from mine that it is not probable our views will coincide. He begins by saying that if I had acted on his advice I would not have been treated as I was. Might I say that I did not, unfortunately, have the pleasure of reading the former letter to which he refers? It is obvious now that we were wrong in giving our services to the War Office without first being assured that our profession would be properly recognised; but "Pharmaceutical Chemist's" solution of the problem does not seem feasible. The idea of one man, or any number of men, writing to the War Office asking for particular ranks is ridiculous, and one can imagine the look of amazement on the face of the official who has the duty of attending to such correspondence. The War Office requires to be approached officially to have any degree of success, but there does not seem to exist any suitable organisation among us, and our interests suffer accordingly. The fact of one man more or less refusing to volunteer because his particular request was not granted will not affect the final issue to any extent. Civilian help will probably be required even after hostilities cease, and our duty is to see whether something cannot be done so that, as chemists, we shall be recognised by the War Office when our professional services are required.

Yours faithfully,

Late Compounder R.A.M.C. (91/41.)

The Bradford Trouble.

Sir,—To cast oil on the troubled waters of the Bradford Association was the good intention of Mr. Waddington when he quoted from a private letter of mine which, to put it mildly, I had not expected to see mentioned in cold print. As the liberty was taken with an excellent motive, I should have allowed it to pass, but for your editorial interpolation in the report of the Bradford meeting. I have no recollection of using the word "garbled," but in writing a hurried letter which I supposed was strictly *entre nous* it is possible for an unhappy expression to crop up. I have always found the trade papers very fair and considerate, and for my own part I am greatly obliged to them; but in this case I feared the necessary condensation had weakened the emphasis I placed on my allusion to Mr. Waddington's letter, not as a personal matter, but as an example of a type. In my anxiety to consider the feelings of a respected friend I have been made to appear as if I had a personal complaint against the Press, which is not the case. Viewed in the light of the report of the Dewsbury meeting on March 10, the frothy ebullition of pathetic indignation on the part of some members of the Bradford Association seems quite inconsequential. On the Federation scheme I expressed the opinion that the attitude of the Bradford Association and the advocacy of one of its members were an example of glaring inconsistency. To my mind it still seems so, and I might just as well be annoyed with the Bradford members because their opinion differs from mine. The only other remark I made about Bradford was that I regarded is as a progressive association. This is serious, and I cannot imagine what I was thinking about to make such a statement. Should I have said that I regarded Bradford as an unprogressive association? These were the only remarks I made directly affecting Bradford. I am not responsible for what others said, neither is it my fault if Bradford assimilated the strictures applied elsewhere. It would be a disciplinary mental exercise to reverse the positions of Bradford and Dewsbury in relation to the proposed West Riding Federation. That the attitude of Bradford was erroneous is a matter of opinion, but the charge of loss of temper is amusing as a bad guess. I have no feeling of resentment, and never had, because I have always been convinced that there was something in the background. It was a very nice dinner. But Bradford has simply mistaken the piffle of post-prandial persiflage for the pathos of a Dewsbury axe to grind.

Batley, April 15. R. Broadhead.

Assistants in South Africa.

Sir,—Correspondence on this subject must of necessity spread itself over a great length of time, owing to the distance between Cannon Street and South Africa, and letters crop up in the *C. & D.* columns at intervals of two to three months or so. In the issue just to hand, December 28, 1901, I read the letter sent by "Satisfied." Heaven be praised, there is one assistant in this land of dust and khaki in that happy state! Truly his lines are cast in pleasant places, and methinks King William's Town must be the blissful spot from which he writes. That he is not long out from home is very apparent—his salary proclaims that at once; and when he has learned a little more of what experience teaches in matters South African, he will realise that King William's Town is not South Africa, and the whole has many varied parts. The letters of "Ulysses" and "Ixia" (*C. & D.*, September 14), are more to the point. They evidently have not found life such a bed of roses as "Satisfied," and what they say is a true statement of facts as they find them. The "cut-throat contract-prices for dispensing" referred to by "Ixia" are no fiction, as "Satisfied" seems to think, but prevail is most colonial towns of any size in which there are public institutions, hospitals, benefit societies, &c. Prices for ordinary dispensing vary very much in different parts of S. Africa, but on the whole are good and pay well. This is a country for "profitable extras," and side-lines pay even better than the legitimate druggist's stock. The assistant from a West-end up-to-date pharmacy can find no fault with the few drug-stores in Adderley Street when he lands in Cape Town, for plate-glass, polished floors, and flashing gold-labelled bottles *à la mode* are greatly in evidence. It is when he travels up country that his ideals get a bit shaken, but it is too late to turn back, and after a while he is quite used to things as they are and an occasional grumble relieves him. With regard to the "agreement" system, "Ixia" is quite right in stating that the signing of such at home is not

Digitized by Google

binding out here. Anomalous as it may appear (and even the Editor questioned it) it is nevertheless a fact, and cases have occurred where several assistants to my knowledge have broken it either for better or for worse; but it is really a question of honour and not of law, and individual cases must be judged on their own merits. The idea, I take it, in writing these letters to the *C. & D.* is to warn fellow-assistants at home from venturing to this country without due consideration of its pros and cons. That there is a great future before South Africa there is no doubt, and chemists of course come in with the rest and take their chances. Qualified men can always get good berths, and the present scarcity of assistants is as great as in England. Salary, the all-important item, is a variable quantity. What is wealth to "Satisfied" in the Eastern Province is hand-to-mouth for those farther West and North, the scale rising from East to West and Northwards. Reference to a map will be q.s. to the intending emigrant, but if he knows as much about bricklaying as he does about dispensing let him choose the former, for it will pay him better, such is the market value of our "professional" services; 15*l.* per month with room is an average amount, and when colonial experience has been gained 20*l.* to 30*l.* is given where the man is worth it. From a scenic point of view the coastal assistant scores, and there is usually more "life" to be had at the ports, but we cannot all stay where we land and somebody must do the trekking. To sum up the letters which have been written so far, the experiences given tend rather to deter than to encourage the home man to come out. Very few who do come regret the venture, notwithstanding "life's little worries," and just now there are many vacancies ready to be filled. We do not expect to be assistants all our lives, and the aspect of things will appear changed from the point of view of a boss. Meanwhile the earth revolves in its axis at the same old rate, and the *C. & D.* coming to hand each week helps us to keep up with it. GRIQUA. (152/57.)

From the Southern Seas.

A Pharmacist, whose business is in one of the Pacific Islands not far from the Equator, writes under date December 16, 1901:—"I read nearly every word of the *C. & D.* as the numbers arrive, and am quite *au courant* with such burning questions as 'The Improper Motion,' the 'Scarcity of Apprentices,' and so on. I wonder whether Mr. Glyn-Jones, Mr. James Reid, Mr. James Paterson, and other of your politicians know how eagerly their doings are watched and their writings read in this, and no doubt in other remote and lonely spots on our astonishing planet. Some of us exiles, I expect, take more interest in what your pages have to reveal of the happenings among the craft in the dear homeland than do many of the readers who are actually in the very midst of the turmoil. No less pleasing is the apparently unshakeable serenity and dignity of the editorial attitude even when opportunity seems to serve for acrimonious and 'smart' writing."

The Budget.

Mr. Vincent Wood, Victoria House, 4 Albion Place, Blackfriars Bridge, S.E., writes regretting that in the interests of the British manufacturers the Chancellor of the Exchequer has not suggested a small tax on manufactured goods brought into this country from abroad. Mr. Wood hopes that chemists and druggists will bring pressure to bear on candidates at the next general election, and in the meantime only buy British-made goods.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

194/56. *Simplex.*—See THE CHEMISTS' AND DRUGGISTS DIARY, page 285, for all particulars regarding the registration of a trade-mark.

194/50. *Veloderm.*—You are wrong. Refer to the lists of poisons in THE CHEMISTS' AND DRUGGISTS' DIARY, page 269 and page 270.

194/63. *Medcalf.*—Refer to THE CHEMISTS' AND DRUGGISTS' DIARY, page 288. It is exceedingly unwise to apply for patents for medicinal compounds.

125/11. *S.M.*—The DIARY puts the present law correctly, but in your quotation of the companies paragraph you use "never" for "must," which quite alters the sense.

194/66. *Medical.*—If you compare your labels with those you mention, you will find the difference. Toilet-preparations only pay duty if recommended for curing ailments.

196/20. *Alpha.*—You are labouring under the impression that "Vaseline" was removed from the trade-marks register before the appeal case. That was not so. It is the property of the Chesebrough Company, and can only be used to designate petroleum-jelly sold by them. Up to the present we have heard of no appeal to the House of Lords. Probably the firm who wish you to take their own manufacture under the name of "Vaseline," and who are prepared to take the full responsibility (which should be in proper legal form), can also give you information on the point. In any case you will be the scapegoat until the Court of Appeal decision has been reversed.

196/49. *Plate Glass.*—We cannot add to the information given in reply to "Windows," *C & D.*, March 22, page 476.

197/20. *J. N.*—The premises in which your girls are employed in packing 1*d.* lines are a workshop within the meaning of the Factory and Workshop Act, 1901. Write to the inspector for your district stating (1) the name of the workshop; (2) where situate; (3) address for service of letters; (4) nature of work; (5) nature and amount of power, if any; and (6) name of the person or firm carrying on the workshop. This must be done within one month after the premises are first used by the girls as a workshop. Penalty for contravention, 5*l.*

198/42. *W. F. G.*—Dentists who were in practice before the passing of the Dentists Act cannot now be registered. You may practise dentistry, and will not be interfered with so long as you do not call yourself a dentist.

203/16. *Rad. Rhei.*—Your essence of Jamaica ginger and liquid extract of cascara labels involve liability. Submit 3 and 4 to Somerset House. They are on the border-line.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

198/53. *Expert.*—For the present condition of the Australian Commonwealth tariff see the last issue of the *Chemist and Druggist of Australasia.* The tariff is in force subject to alterations.

188/59. *M. O. S.*—(1) We think the word will be registrable. Venture 5*s.* upon it by doing as directed in our DIARY under "Trade-marks Registration." (2) "Magnetic" being a descriptive word is not registrable. (3) Sulphate of copper is not a hair-dye of any power. You may try the B.P. solution, say, on sheep's wool, and dilute to the tint you require.

196/38. *C. H. C. F.*—There is as yet no prohibition under the Sale of Food and Drugs Act as to the use of aniline colours in food.

183/34. *C. J. E.*—(1) Influenza and Cold Mixture:—

Potass. citrat.	...	...	...	℥iij.
Liq. amm. acet.	...	...	...	℥iss.
Tr. aconiti	...	...	...	♏xxiv.
Spt. æther. nit.	...	...	...	℥iij.
Vin. ipecac.	...	...	...	℥j.
Aq. camphor. ad	...	...	...	℥vj.

℥ss. omni sec. vel tertia hora ex aqua.

(2) The formula for Pulv. Antim. Co. is in the B.P. under the name pulvis antimonialis. The latter was the name under which the powder was introduced in the P.L. 1788, but in the P.L. 1836 and 1851 it was called pulv. antim. co., but again

Digitized by Google

changed to pulvis antimonialis in the B.P. 1864. (3) The semi-fluid Boot-creams have a basis of gelatin (8 oz.), Iceland moss (1 oz.), water (½ gal.). This is coloured black or brown as desired with aniline dyes.

198/68. *H. F & Co.*—In the official classification of goods for which a Trade-mark can be registered "goods manufactured from indiarubber and guttapercha not included in other classes" appear in Class 40.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

200/41. Where can McGill's orange-blossom be obtained?

204/19. Makers of marking-ink in bulk for supplying to laundries.

203/60. Makers of lead syphons for drawing off sulphuric acid from carboys.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Tuesday, April 22.

Bradford Chemists' Association. Annual dinner

Wednesday, April 23.

Cardiff Pharmaceutical Association, Park Hotel, Cardiff, at 8 P.M. Smoking-concert.

Pharmaceutical Society of Great Britain (North British Branch). Evening meeting at 36 York Place, Edinburgh, at 8.30. Proceedings: "The Turpentine-test for Glacial Acetic Acid," by Thomas Dunlop; "The Titration of Boric Acid and Borax," by Thomas S. Barrie; "Some Methods of Dispensing," by William S. Glass; additions to library and museum.

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. "Opto-Technics," by Professor Silvanus P. Thompson.

Thursday, April 24.

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. Mr. C. Hymans on "Glass."

Midland Pharmaceutical Association, Birmingham. Annual meeting and dinner.

Optical Society, 7 Crane Court, Fleet Street, E.C., at 8 P.M. Presidential address by Mr. C. Hyatt-Woolf.

Friday, April 25.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Mr. J. Mackenzie Davidson on "*X*-rays and Localisation."

The Autobiography of a Mineral-water Bottle.

[At the dinner of the Mineral-water Bottle Exchange and Trade protection Society (Limited), on April 3, the President, Mr. Mark Beaufoy, said he hoped the time would come when some one would write the autobiography of a mineral-water bottle.]

THE gentle Spring had donned its verdure green,
The bursting crocuses with gaudy sheen
Had fringed earth's mantle with a yellow glare,
And bird-like songs of gladness filled the air.
The sturdy glass-blower carolled to the sun
As home he hied him when his work was done,
For on that day, some years ago—p'r'aps three—
In making bottles he had fashioned—me.
The furnace fire which warmed me into life
With British fuel glowed, and ne'er a fife
Or flute or piccolo was daintier blown
Than I, a Britisher by blood and bone.
Not Teuton craft, nor handwork of the Gaul,
Nor deft Bohemian could me subject call;
Erect I stood, symmetrical and strong,
A Barnsley bottle, simple I, and young;
A proud "ball-stopper," not a plebeian "cork,"
Evolved with skill amid the wilds of York.
Full soon my way into the world I fought,
Pursued by Idris and by Camwal sought,
Till, coyly hid and feeling sad and lone,
The lynx-eyed Beaufoy marked me for his own,
With liquid fed me, till I nearly burst
With effervescence destined for the thirst
Of belted Earl whose parching throat did flee
For comfort to the soothing S. and B.

But soon it happened; 'neath the sainted roof
Of him who 'ministers the grave reproof
To bold Unorthodoxy (and who cheers
The hearts of worshippers, who many years
Have heard the same old sermon) next I find
Myself established, and reception kind
Awaited me, until such time as he
Who thirsted most from dry theology
Bethought him how his dryness might assuage
And gain new strength the wordy war to wage:
"Verily, good Thomas, I do much desire
Slight larynx liquidation, for a fire
Seems burning fiercely in my tender throat,
So bring me that which quenches, for I'd quote
A few more lines my good friend to confound."
The servitor from cellar underground
Bore me, betimes, with lip on the up-curl
To soothe the Bishop as I'd soothed the Earl.

The peaceful silence of th' ecclesiast's home
Anon is left, for 'tis my fate to roam,
And back once more my emptiness to fill
A man, with wire-cased head, against my will
Begripes my inwards with strong ginger-ale.
I gasp! I burn! but live to tell the tale
Of my vicissitudes. Sad the descent
From homes ancestral, wealth and beauty blent
In those who first did fondle me. The balm
Of dainty white and dimpled rotund palm
Of parched but pondrous bishop did subside
Th' ebullient passions of my inward pride.
But now, alas! my joy is dashed awhile,
For in a cheerless dismal domicile,
Where one of Erin's sons with spouse and spawn
Herd all together from the dark till dawn,
Do I adorn the grimy mantelshelf,
And watch the navvy fling his hard-earned pelf
To eager helpmate; damming verbal gust
What time adown his throat I wash the dust.

At length we reach the final scene of all;
For, once beheaded and bereft of ball,
By sportive scions of Hibernian brood,
Cast forth, discarded, with much language rude,
I play the target for a tattered band
In vulgar backyard. Henceforth every hand
Is raised against me, and the half-bricks fly
Till prone in pieces agonised I lie.
Then form maternal swooping frights the crew,
Which scatters swiftly and is lost to view;
While she with ancient broom mops my remains
Into th' adjacent dustbin 'spite my pains.
With other refuse soon I find myself
On open dust-heap, mixed with broken delf,
And crystal vases humbled in their pride
(Whom men once treasured, though they now deride
Our shattered greatness). Then away we 're borne
The garden walls of villas to adorn
In stiff Suburbia. Thus our remnants feed
The passionless utilitarian's need.
Our pointed presence warns the area thief
Who'd steal the pudding or remove the beef;
While bold burglarious persons full of wants
Leave oft with us a portion of their pants.
And here I rest, and here I will remain,
Until re-incarnation comes again.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

TRANSATLANTIC BUSINESS.

THE Publisher desires to inform manufacturers and wholesalers that the issue of THE CHEMIST AND DRUGGIST for May 31 will be specially circulated to transatlantic buyers. Canada, the United States, and the West Indies will be thus covered, and, as export business in chemicals, medicines, and similar products with these countries is on the increase, the circulation of May 31 will be a good chance for improving the business of those who advertise in it.

Books to Buy.

For all about prescriptions: "The Art of Dispensing." 5*s.* 6*d.* by post 5*s.* 10*d.*

For compounding specialities: "Pharmaceutical Formulas." 7*s.* 6*d.*; by post 7*s.* 10*d.*

For apprentices: "Preliminary Examination Guide." 2*s.* 6*d.* by post 2*s.* 9*d.*

For treatment of horses, cows, &c.: "Veterinary Counter-practice." 3*s.* 6*d.*; by post 3*s.* 9*d.*

Summary.

FURTHER particulars of the Cancer Committee are given on p. 669.

GOOD HINTS on tablet-making by Mr. Sivewright are epitomised on p. 657.

THE PURE-BEER BILL has been defeated again, thanks to the scientific M.P.s (p. 675).

STUDENTS' VIEWS of the curriculum are expressed by a contributor in a note on p. 664.

THE names of those who have passed the Minor and Major this month are given on p. 661.

AN important High Court decision in regard to companies as persons is dealt with on p. 668.

THE CAIRO CHEMISTS' ASSISTANTS' ASSOCIATION is endeavouring to get shorter hours (p. 654).

BY THE WILL of the late Mrs. Sarah Southall several pharmaceutical families benefit (p. 677).

A SHOP in Newcastle-on-Tyne which has been a chemist's for 168 years, is about to be demolished (p. 650).

ARE WE DECADENT? is the question asked and answered *à propos* of the end of another winter session (p. 666).

THE FRENCH CHEMIST who has been in prison for a quarter of century as the murderer of his wife has been pardoned (p. 655).

ADULTERATION OF SHELLAC with common resin is shown by Mr. E. J. Parry to be best detected by iodine-absorption (p. 670).

THE CHEQUE-TAX is likely to be modified. There is much opposition to it (p. 677), and the Chancellor of the Exchequer is climbing down (p 675).

POINTS IN TRADE LAW regarding assistants breaking engagements, their agreements, and about the bending of customers' coins are reported (p. 671).

AN UNQUALIFIED ASSISTANT to the executors of a Bradford chemist has been fined under the Pharmacy Act for selling Kay's essence of linseed (p. 671).

MR. JAMES REID does not think Boots (Limited) will succeed in Scotland. He gives reasons why, and urges Scotch chemists to unite and cut proprietaries (p. 677).

EXTRACT OF NUX VOMICA still commands attention, Mr. Fraser McDiarmid being the last to comment upon the official process, and advising acid extraction (p. 657).

A DOCTOR who died in the East-end last week said he had got strychnine from a chemist in mistake for morphine. A Coroner's jury is inquiring into the matter (p 652).

THE STUDENTS' CORNER ANALYTICAL TOURNAMENT is concluded with the analysis reported in this issue. The winners are "Jegow" and "Algol," but four others get prizes (p. 648).

CARDIFF CHEMISTS' ASSISTANTS had the advantage last week of hearing their medical officer of health on the Sale of Food and Drugs Act. It is difficult, he says, to sample drugs (p. 658).

THE TURPENTINE TERRITORY of the United States is shifting owing to devastation of the old forests. Particulars of this, of the trade of last year, and the efforts to improve the industry are given on p. 667.

OUR OBITUARY COLUMN contains notes respecting Messrs. George Murdoch (Glasgow), Maxey (Wisbech), Leeming (Montreal), and the Secretary of the National Wholesale Druggists' Association, U.S.A. (p. 676).

THE PHARMACEUTICAL COUNCIL ELECTION offers profitable amusement to our subscribers and their assistants. We shall give three money prizes to those who send us postcards with particulars as specified in a note on p. 668.

BUSINESS in drugs and chemicals is intensely dull this week, and there are few changes of importance. Cannabis indica and Japanese wax are higher, buchu-leaves and shellac are firmer, and jalap and crude camphor are lower. Quinine is active, and morphine is in steady demand (p. 680).

A BIRMINGHAM CHEMIST who sold Lily headache-powders with the figure of a red cross upon them has been convicted, under the Merchandise-marks Act, at the instance of the maker of "Red Cross Powders." The defendant has appealed. We print photographs of the labels with our report on p. 672.

MR. WEARY, President of the Plymouth Chemists' Association objects to our selection of Mr. C. J. Park as a member of the Pharmaceutical Council who may give place to Mr. Campkin. He calls upon West of England chemists to support Mr. Park. Facts respecting the work of all the retiring candidates are appended to the letter (p. 678).

Corner for Students.

Conducted by Leonard Dobbin, Ph.D.

Students, please note. All communications should be addressed to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

All communications and reports must bear the names and addresses of the writers, not necessarily for publication. The reports of those who ignore this rule are liable not to be dealt with.

Qualitative Analysis.

A MIXTURE of not more than three salts will form the subject of the next exercise in qualitative analysis. The mixture is to be submitted to a thorough systematic examination, all its constituents are to be detected, and proof is to be given that the substances detected are the only constituents of the mixture.

Students' applications for portions of the mixture of salts (accompanied by a *stamped and addressed envelope*, not a stamp merely) will be received up to Tuesday, April 29, and the samples will be posted on the following day.

Students' reports will be received up to Saturday, May 10. Each report should contain a concise account of the work done, and should include a list of the constituents detected. In this list any substance regarded as an accidental impurity should be distinguished from the essential constituents of the salts composing the mixture.

Reports.

The powder distributed to students on March 26 contained 6 parts of antimonious oxychloride, 3 parts of sodium hydrogen tartrate, and 1 part of lithium carbonate.

The calculated composition of such a mixture is—

Sb	42·0
Na	3·7
Li	1·9
Cl	12·4
$C_4H_4O_6$	23·3
CO_3	8·1
O	5·6
H	0·2
H_2O	2·8
	100·0

The powder contained, however, as impurities, small quantities of lead, aluminium, iron, and calcium.

Samples of the powder were distributed to 72 students, and 23 reports were sent in for examination.

All our correspondents were successful in detecting antimony. The failures in detecting the other constituents of the powder were:—(*a*) Metallic radicals: Sodium, 4; lithium 12. (*b*) Acid radicals: Hydrochloric, 8; tartaric, 6; carbonic, 4. Besides the eight students who missed the hydrochloric radical altogether, ten reported it as a trace only.

This exercise has proved a decidedly difficult one in the hands of most of our correspondents, as may be inferred from the generally low scores in the list. The chief difficulty was one of a rather unfamiliar kind, and consisted in the fact that the antimonious oxychloride only yielded the ordinary reactions of chlorides in a distinct manner when something more than the ordinary mode of experimenting was resorted to. Boiling the powder with sodium carbonate and water for a short time did not decompose the oxychloride to any considerable extent, and hence the solution obtained, when tested for chloride, gave only slight indications with silver nitrate and nitric acid. Cold or slightly heated sulphuric acid was also practically without effect upon the oxychloride. Of the small number of students who succeeded in obtaining well-marked indications of the presence of chloride in quantity, some fused with sodium carbonate and detected soluble chloride in the fused mass; others treated the powder with dilute nitric acid and tested the filtered solution with silver nitrate; while others, again, heated strongly with concentrated sulphuric acid and detected the hydrochloric-acid gas evolved, or heated with concentrated sulphuric acid and black manganese oxide and observed the evolution of chlorine. One of the quickest and best methods for obtaining evidence of the probable presence of chloride in considerable quantity consisted in heating the powder with concentrated sulphuric acid until brisk effervescence (partly due to the decomposition of the tartrate) took place, and then holding in the upper part of the test-tube a glass rod moistened with a mixture of silver nitrate and dilute nitric acid. The liquid on the rod became markedly opalescent in a few seconds. The presence of the nitric acid along with the silver nitrate is necessary in order to prevent the formation of silver sulphite by the sulphurous anhydride produced from the sulphuric acid by the action of the tartrate. Silver nitrate used in this way is a test which may often be employed with advantage in the preliminary examination of complex mixtures.

Another cause of difficulty and error was the presence in the sodium-carbonate extract (to be used for the detection of acid radicals) of some dissolved antimonite, which gave reactions that were attributed in some instances to altogether different things.

Testing for the citric radical in the known presence of the tartaric radical is liable to uncertainty. Calcium tartrate is not completely precipitated on adding excess of calcium chloride to a neutral solution of a tartrate, even after prolonged standing in the cold; and the clear filtrate from such quantity of the precipitate as has been formed usually yields a further precipitate of calcium tartrate when warmed—a reaction which is often incorrectly attributed to calcium citrate. A thoroughly distinctive qualitative test for citrate in presence of tartrate is still wanted.

We would refer those students who failed to recognise as carbonic anhydride the gas which was evolved by the action of dilute hydrochloric acid upon the powder, to the method described in the *C. & D.* of December 28, 1901, page 1016, for dealing with traces of this gas. The quantity of carbonate in the present exercise was something more than a trace, however.

Prizes.

The First Prize for the best analysis has been awarded to

H. M. Winton, c/o Mr. Massey, chemist, Kelso.

The Second Prize has been awarded to

Joseph Matthews, c/o Mr. Marton, Abbey Corner, Kelso.

First Prize.—Any scientific book that is published at a price not greatly exceeding half-a-guinea may be taken as a first prize.

Second Prize.—Any scientific book which is sold for about five shillings may be taken as a second prize.

The students to whom prizes are awarded are requested to write at once to the Publisher naming the book or books they select.

Marks Awarded for Analyses.

H. M. Winton (1st prize) ...	93	Alex. T. Hope	80
Joseph Matthews (2nd prize)	92	Flora McDonald	79
J. H. Williams	82	Conor	78
Westminster	82	Algol	76

TO CORRESPONDENTS.

Special Memoranda, suggested by this month's reports:—

1. Do not proceed to examine the sodium-carbonate extract for acid radicals until you have ascertained that a portion of it, after acidulation with dilute hydrochloric acid, does not yield any precipitate on the addition of hydrogen sulphide. Should it yield a precipitate, the whole of the sodium-carbonate extract must be treated in the same way with hydrogen sulphide and the precipitated sulphides removed before testing for acid radicals.

2. The fact that excess of hydrochloric acid produces a yellowish precipitate when added to the ammonium-carbonate solution in which the arsenic-group sulphides have been digested is not a proof of the presence of arsenic. The precipitate so obtained must be further subjected to confirmatory tests.

3. Flame-coloration tests must be very cautiously interpreted when sodium and lithium are both present. A number of students mistook the lithium coloration as seen through blue glass for that of potassium.

H. M. WINTON.—The tests you applied scarcely proved the absence of magnesium, since the fact that the sodium-phosphate precipitate gave the crimson flame-coloration due to lithium did not preclude the possible presence of magnesium also in the precipitate.

JOSEPH MATTHEWS.—The small quantity of the hydrogen-sulphide precipitate which remained undissolved by sodium hydroxide (and of which your analysis did not reveal the nature) consisted of lead sulphide. When it was dissolved in hot dilute hydrochloric acid, the solution evaporated to a few drops only, and potassium iodide added, a distinct yellow precipitate of lead iodide was obtained. You did not prove magnesium to be certainly absent.

WESTMINSTER.—We are at a loss to understand your failure to find chloride in the mass obtained by fusing the original powder with sodium carbonate. The same test gave a well-marked positive result in our hands. Carnot's test for potassium, on the other hand, gave us no positive result. Read also the reply immediately preceding.

CONOR.—The precipitate you obtained on adding chloroplatinic acid and alcohol to test for potassium was almost certainly due to ammonium salts which had not been completely decomposed by ignition. Special care must be taken to ensure that the ammonium salts, which adhere to the upper part of the porcelain basin in which the ignition is carried out are sufficiently heated to effect complete decomposition.

ALGOL.—On strongly heating the original powder with sulphuric acid, and then holding a rod dipped in solution of silver nitrate in the gases evolved, you should have obtained in the liquid upon the rod a white precipitate which would not entirely dissolve in nitric acid. This was the readiest means of proving the presence of a halogen. The reactions you attributed to the presence of arsenic were really due to antimony.

EDINBURGUM.—We have not been able to confirm the presence of all the metallic radicals of which you found traces. On the other hand, more than traces of sodium and of the carbonic radical were present. The reactions which led you to conclude that strontium and potassium were present were probably due to lithium. Barium-group metals should be confirmed by the flame-tests.

TANGLEWOOD.—It would appear from your report that in order to test for arsenite you passed hydrogen sulphide through a solution obtained by boiling the original powder with solution of sodium carbonate. The solution so obtained certainly contained some antimonite, so that the formation of a yellow or orange precipitate did not prove arsenite to be present. We could not obtain the other reactions for arsenic which you mention.

CRIBDEN.—You should have stated how you obtained a solution of the original powder. If you dissolved it in hydrochloric acid, it was superfluous to add hydrochloric acid to the solution as a test for silver, &c. If you did not dissolve it in hydrochloric acid, then the solvent employed should have been named. You do not give any proof of the presence of arsenic.

RELLIM.—The powder did not contain barium sulphate, and no white residue was left after boiling it for some time with dilute hydrochloric acid. The sulphuric radical which you detected was probably due to sulphate present in the sodium carbonate which you used.

H. JOHNSON.—You found the hydrogen-sulphide precipitate entirely soluble in sodium hydroxide, but you do not describe any examination of the solution you obtained, and you simply assume that it consisted of antimonious sulphide only. The possible presence of other metallic radicals besides antimony should have been tested for.

THURIFER.—More useful indications would have been obtained by heating the original powder in a dry hard-glass tube than by heating it on the point of a penknife. Had you employed the former mode of treatment, you could not have failed to observe the very distinct blackening which the action of heat produced. You omitted to give the necessary summary of the constituents you detected.

F. W. CATON.—See last sentence of reply to "Rellim."

THE ANALYTICAL TOURNAMENT.

AT the beginning of the winter session we offered a *first prize* of books, value 2*l.* 2*s.*, and a certificate to the competitor obtaining the highest aggregate of marks in the six analyses for the months November, 1901, to April, 1902, and a *proxime accessit* prize of books, value 1*l.* 1*s.*, and a certificate to the competitor obtaining the second highest aggregate of marks in the six analyses. The competition attracted much attention both from new and from former correspondents, and some excellent work was sent in from month to month.

The first place in the tournament has been gained by "Jegow" (Mr. John G. Murdoch, c/o Wilkinson & Simpson, Limited, Newcastle-on-Tyne), with an aggregate of 551, made up, with remarkable steadiness, of 96, 99, 96, 94, 96, and 70, and to him the first prize is accordingly awarded.

The second place and prize are taken by "Algol" (Miss Annie M. Barr, 57 Kempoch Street, Gourock), with an aggregate of 527, made up, also with praiseworthy steadiness, of 92, 98, 94, 93, 74, and 76.

There is a tie for the third place, two competitors having 518 marks each, as follows:—

"Tungsten" (Mr. H. Longstaff, 223 Saltwell Road, Bensham, Gatehead-on-Tyne), 86, 96, 97, 93, 99, and 47; and

"Edinburgum" (Mr. Joseph Tait, 21 Oxford Street, Edinburgh), 89, 96, 86, 76, 97, and 74.

To both we shall send certificates, and any two of the books published by THE CHEMIST AND DRUGGIST mentioned later. The first and second prize takers will kindly inform us what books they desire.

In December we further intimated two prizes of books to be awarded to the competitors who obtained the greatest proportional advance in the aggregate for the third, fourth, fifth, and sixth competitions over their aggregate for the first and second competitions.

The awards of these prizes for progress fall to "Glacialine" (Mr. C. R. Wilkins, 40 Church Lane, Hornsey, London, N.), whose two aggregates are 121 and 321; and to "Westminster" (Mr. A. H. Edgar, 100 Harrington Road, South Norwood, London, S.E.), whose two aggregates are 150 and 340. The highest figures reached by "Glacialine," and by "Westminster" were 94 and 95 respectively, while their lowest numbers in any monthly competition were 54 and 60 respectively. To each of these competitors we shall send copies of "The Art of Dispensing," Procter's "Manual of Pharmaceutical Testing" and "Practical Methods of Urine Analysis."

Digitized by Google

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

The City branch of the Imperial Institute has removed from Cannon Street to larger premises at 49 Eastcheap, E.C.

At Derby, on April 22, a man named Mather was remanded on a charge of stealing four oil-barrels, value 18*s.*, belonging to Messrs. Blunt & Evans, chemists, of Market Place, Derby.

At Derby on April 17, John S. Booth, described as a traveller for a large London firm of manufacturing chemists, was fined 3*l.* 6*s.* for travelling on the Midland Railway without a ticket.

In consequence of the great success that has attended the Colonial Exhibition at the Royal Exchange, the Gresham Committee have consented to its remaining open until Saturday, May 3.

At Portsmouth Police Court on April 21, a man named Brewin had to pay 15*s.* 6*d.* costs for keeping a dog which had attacked and bitten Councillor F. G. Foster, chemist and druggist, Landport.

All persons having claims against the estate of the late Mr. Hy. Eccles, chemist and druggist, 17 West Square and 9 Westborough, Scarborough, are requested to send them to Messrs. Turnbull & Son, solicitors, Scarborough, forthwith.

A well-known drapery house in the East of London is that of J. R. Roberts' Stores (Limited). The directors have just reported that the grocery branch, including drugs, has been discontinued, and the stock, with certain plant and utensils, disposed of. This resulted in a loss of 1,864*l.*

The annual meeting of the Society of Chemical Industry is to be held at Liverpool on July 9, 10, and 11. At the request of Dr. T. Lewis Bailey, the Corporation have granted members of the Society permission to inspect the electric-generating stations which are under the control of the City Council.

The Arsenic Revival.

The Royal Commission on arsenical poisoning held a sitting at the Westminster Palace Hotel on April 17, when evidence was given by Dr. Woodyatt (medical officer at Halifax Infirmary), Mr. Thomson (analytical chemist of Manchester), and Mr. Fairley (public analyst of Leeds).

Mr. M. D. Penny, analyst to the Holderness Agricultural Club, in his annual report says that last October, whilst a party of gentlemen were out shooting in Holderness, they came across several dead birds, which had not been shot. One, a fine young partridge in splendid condition, was sent for analysis. It turned out to have been poisoned by arsenic. The poison was traced to the wheat in the bird's crop, and as the birds were nearly all found in a newly sown wheat-field, it is surmised that the arsenical dressing with which the wheat had been treated had been applied too freely or very carelessly.

L.C.C. Items.

It was reported by the Main Drainage Committee that the chemist had laid before them his fourth report on the experimental bacterial treatment of sewage, and the Council agreed that the report should be printed.

On the recommendation of the Building Act Committee, consent was given to Messrs. Kemball, Bishop & Co., chemical-manufacturers, of Three Mill Lane, Bromley-by-Bow, for the re-erection of a building, used as offices and a lodge, on the south side of the lane.

An Old Drug-shop.

Mr. Joseph Roberts, chemist, 17 Bigg Market, Newcastle-on-Tyne, has absorbed the business of Messrs. Taylor Gibson & Co., chemists and druggists, 30 Bigg Market. The old-fashioned shop of the latter firm, with its bow windows and small panes, has been carried on for 168 years by successive generations of the same family or their heirs, and is to be closed in a few days. When the premises were opened in 1734 the business carried on was that of "Retail Dispensing Druggists; Oil, Spice, and Cattle-Medicine Merchants," and as such it has continued up to the present time. A Taylor Gibson appears to have been a member of the firm 100 years

30 Bigg Market, Newcastle-on-Tyne.

ago, although the style of the firm in the earliest copy of Ward's first "Directory" is Gibson & Moor, the "Taylor" being a Christian name and not a surname. Until quite recently Mr. E. Smith, East Parade, Newcastle, had been connected with Taylor Gibson & Co. for half a century. He has now disposed of his interest in the business to Mr. Joseph Roberts, who, as already stated, will merge the same in his own business and premises immediately opposite. The old premises—as far as the freehold is concerned—have been bought for business purposes, and it is probable that the venerable bow windows, after resisting innovations for a century and a half, will soon disappear.

Mr. White's Report.

The report of the Derbyshire county analyst (Mr. John White) for the year 1901 states that the number of samples submitted to him under the Sale of Food and Drugs Act during the year was 1,032, of which 82 were adulterated and 35 more of inferior quality. Of 62 samples of drugs 5 were adulterated. The percentage of adulterated articles, calculated upon the total number analysed, was last year 7·9, against 7·2 in 1900, 7·5 in 1899, 6·2 in 1898, 6·8 in 1897, 7·3 in 1896, 8·3 in 1895, 14·3 in 1894. "This shows," continues Mr. White, "that a slight increase in the percentage of adulterations has occurred in the county during the past year, and also that the actual number of adulterated articles was higher than in any previous year. This increase, however, is happily not due to any outbreak of wilful or fraudulent adulteration, but is mainly caused by the discovery of arsenic in a number of samples of compressed yeast in the early months of the year. The amounts present varied from $\frac{1}{50}$ to $\frac{1}{500}$ gr. of arsenic per lb. of yeast. Used in the ordinary proportion for making bread, the worst of these samples would introduce approximately one part of arsenic per forty million (40,000,000) parts of bread: this may be regarded as an entirely negligible proportion. Adulteration in the county is by no means unduly prevalent, the percentage of adulteration being still well below the figure for England and Wales." Mr. White, in conclusion, says "it is time that, in the interest of infants and invalids, the indiscriminate dosing of milk with borax or boric acid was stopped.

Digitized by Google

'Mid Soap and Perfume.

On April 17 a large number of the members of the Chemists' Managers' and Assistants' Society visited the works of the Crown Perfumery Company, at Sidney Road, Homerton. They were received by Mr. Hathaway (the Secretary), Messrs. Wilkinson and Mawdesley, and other heads of the travelling and manufacturing staffs, and were shown the different stages in the process of the manufacture of soaps and perfumery, from the crude material to the finished product. The boiling and milling of the soaps were fully explained, several members recognising their own orders in course of execution. The methods employed in perfuming and medicating soaps were shown, and the stamping, finishing, wrapping, and boxing of the finished cakes were exhibited in full detail. A special interest was displayed in the preparation of the chemist's "own-name" soap, surprise being expressed at the evidence of such good value for the small cost In the perfumery departments the well equipped laboratories, where testing and blending are carried out by trained chemists, excited keen regard. The box-making machinery and the admirable packing arrangements were appreciatively inspected, and Mr. Pickering and Mr. Cullwick (the President and Treasurer respectively) expressed the thanks of the visitors to the representatives of the Company for their patient and instructive courtesy.

Midland Notes

The project to rebuild the technical school at Walsall has been deferred in view of the probable change of rule in the educational machinery.

Rumour hath it that a dissolution of partnership will shortly be announced in a well-known Midland firm of manufacturing chemists and druggists.

Lewis's (Limited), of Bull Street, Birmingham, have a large display of enemas, medicine-requisites, and surgical appliances, all at very cheap rates in their windows.

Young pharmaceutical botanists should take a trip to Burnt Green and walk in the direction of Hopwood, where they will be charmed by the great variety of botanical specimens of immediate and rare interest.

Diphtheria is assuming alarming proportions in Birmingham, and the principal schools refuse the return of pupils who have suffered from diphtheria unless they have a certificate stating that a bacteriological examination shows that they are absolutely free from the disease.

The Birmingham Consultative Institute, over which Mr. Arthur Chamberlain and the General Medical Council waged a wordy warfare, is apparently dead. At least, the professional chambers formerly occupied by Dr. Irvine at the Institute in Newhall Street are advertised to be let.

Mr. A. Southall (of Messrs. Southall Brothers & Barclay, Limited, Birmingham) and Mrs. Southall are taking a holiday in Italy for the benefit of their health. In the absence of both Mr. Southall and Mr. Thomas Barclay the large ship is being steered by the junior directors.

Mr. Sidney Fisher, formerly chemist, Six Ways, Aston, now dentist of same district, and many years Chairman of Aston Local Board, has resigned his seat on the Birmingham Drainage Board as one of the Aston representatives, owing to increasing demands of the work upon his time. The Chairman remarked that the Board would be sorry to lose Mr. Fisher, who had been a diligent member.

A council-meeting of the local Association was held on April 17, when arrangements were made for the annual meeting and dinner. A Federation Circular was under discussion, but what transpired has not become known. It is highly probable that such a matter will be deferred until the new Council is elected. Mr. John Barclay retires from the Presidency, and it is understood that either Mr. Gerrard or Mr. Brunt will be elected in his stead.

A well-known local pharmacist suggests a good method of bringing out the social qualities of chemists and druggists. He reminds us that just now the plum-blossom in the Vale of Evesham is at its full and suggests a trip on Wednesday afternoon, and tea and boating on the river with, perhaps, Mr. Sadler and his co-pharmacists at Evesham acting as guides. It is an open secret that herb-growing is much fostered in this district, and business could be combined with pleasure.

Fire.

On April 17 a fire broke out at the works of the Paget Prize Dry Plate Company, in Callow Lane, Watford. Only a few barrels of chemicals were saved, and damage estimated at about 20,000*l.* was done.

Cricket.

Boot's Cricket Club, Sheffield, *v.* Albert Cricket Club, Sheffield.—This match was played at Wadsley on April 17, resulting in a very easy win for the Boot's team by seven wickets.

Contracts.

Mr. Egbert Neville, pharmaceutical chemist, West Street, Fareham, has been appointed chemist to the Fareham Urban District Council.

At a meeting of the London County Council on April 22, the tender of Messrs. C. J. Hewlett & Son, of Charlotte Street, E.C., was accepted for the supply of drugs, &c., to the Farmfield Inebriate Reformatory.

The Orsett Board of Guardians on April 17 considered a communication from the Local Government Board, advising that in future the Guardians should provide expensive drugs and medicines instead of the medical officers. One member said that such a change would make a great difference in the salaries of the medical officers, and before coming to any decision in the matter the Guardians decided to seek further information from the superior Board.

At a meeting of the Barking Urban District Council on April 15, the General Purposes Committee recommended that the tender of Messrs. S. Cooper (Limited), Whitechapel, should be accepted for the supply of drugs to the hospital. Mr. Hambleton proposed that the recommendation should be deleted, and that the tender of Messrs. C. J. Hewlett & Son, of 40 Charlotte Street, E.C., which was originally recommended for acceptance, should be accepted. He pointed out that Messrs. Hewlett & Son agreed to allow 40 per cent. off list-prices, whereas Cooper (Limited) only offered 2½ per cent. Mr. Smith said 30*l.* a year was as much as the public health department spent on drugs. He believed that the last monthly cheque amounted to about 25*s.*, and he thought they ought to give that amount to a local chemist, and not go so far as Whitechapel. After further discussion, the committee's recommendation was carried.

A Matter of Principle.

At a meeting of the Holborn Borough Council on April 23, the Public Health Committee recommended, in reference to the failure of a prosecution against a chemist for the sale of methylated soap-liniment (see *C. & D.*, April 5, page 536), that the course adopted by the Town Clerk (Mr. H. C. Jones) in applying to the Magistrate to state a case be approved, and that he be authorised to take the necessary steps with a view of securing the decision of the Divisional Court of the King's Bench upon the subject. Professor W. R. Smith, J.P., who moved the adoption of the recommendation of the committee, said that there was a great principle involved in this case. Alderman G. P. Willoughby thought it would not be wise to add to their expenditure in a matter about which the ratepayers cared nothing. There was no duty cast upon them to further fight the case. Councillor E. Angel considered that a great responsibility was thrown on the Council in the case. A prescription, he said, might be a matter of life or death to a patient, and it was their duty, in the interests of their constituents, to see that the prescriptions ordered by medical men were properly compounded. Councillor the Rev. E. Canney said they would be throwing away their money by fighting the case. If it were a question of the compounding of a medicine it would be a different thing, but it was only a matter of a little salve. (Laughter.) Councillor J. S. Turner observed that it was a question which affected the whole of the empire. The decision of the Magistrate had been quoted as a precedent in every police court in London. The recommendation of the committee was adopted.

Vaccination Officers' Fees.

At the weekly meeting of the City of London Guardians on Tuesday, the following reply from the Assistant-Secretary of the Local Government Board was read:—

In reply to your letter, I am to state that a factory or other similar place at which a person is employed, but does not reside, cannot be regarded as the person's home within the meaning of the Vaccination Order, 1898, and a public vaccinator would not be entitled to the ordinary domiciliary fee in respect of any vaccination or revaccination properly performed by him at such an establishment on such an employé. At the same time, the Board have, upon the application of the Guardians of some other Unions, sanctioned, in order to avoid difficulty at audit, an arrangement for the payment, in the cases to which you refer, of a fee to the public vaccinator equal to that provided in his contract for vaccinations or revaccinations at a place other than the person's home.

The Committee recommended that application should be made to the Board to sanction a special fee of 2*s.* 6*d.* per case, and this was agreed to.

Marking-ink Internally.

At a meeting of the Bromsgrove, Droitwich, and Redditch Infectious Hospital Committee on April 15, it was stated that one of the nursing staff at the Hill Top Hospital had administered marking-ink in place of beef-juice to two of the inmates, who, however, recovered from the effects produced. It transpired that the marking-ink had been put into an empty meat-juice bottle by one of the nurses, the bottle afterwards having been placed in a cupboard by another nurse. A committee was appointed to investigate the matter.

An Unusual Death.

At the Fulham Coroner's Court, on April 21, an inquest was held on the body of John William Craske (49), a waiter at the house of the Pharmaceutical Society, 17 Bloomsbury Square, W.C. On April 19 Craske complained to William James Hobbs, the Pharmaceutical Society's messenger, that he felt queer, and he was given some quinine and some sweet oil was put in his ear to relieve the pain at the back of his head. Afterwards no fewer than six doctors saw him, but were unable to diagnose his malady, and as he became delirious he was removed to the lunatic ward at the Fulham Infirmary, where he died in delirium. Dr. Parsons, who had made an autopsy, said death was due to cerebro-spinal meningitis, which was exceedingly hard to diagnose.

A Surgeon's Death.

On April 18, at an inquest held at Woolwich on the body of Dr. Ingledew, a surgeon, who practised at Plumstead, it was stated that deceased had suffered from some affection of the legs, and the son of deceased said he believed his father took morphia daily. He used to dissolve it in water, and took various doses in an ordinary drinking-glass. On the day of his death he heard his father call to him from the dining-room. He appeared to be ill and died shortly afterwards. The evidence of Patrick Kavanagh, assistant to Mr. A. Goldthorpe, chemist, 70 Herbert Road, Plumstead, was to the effect that an order for ʒj. of morph. hydrochlor. was presented to him from Dr. Ingledew. The manager said Dr. Ingledew was in the habit of getting morphia, so witness gave the messenger the requisite quantity in a packet. He was not a qualified chemist, but the manager was. In answer to the Coroner he said he was well acquainted with the appearance of morphia and strychnine, and in reply to a juror said he would not have served it if he had not been satisfied that it was for Dr. Ingledew. Cross-examined by Mr. F. W. Beck (who watched the case on behalf of Mr. Goldthorpe), he said there was one poison-cupboard in the shop in which all poisons were kept. The bottle morph. hydrochlor. produced (a wide-mouthed quinine-tinted bottle) was the one from which he served the messenger. He had not taken anything out of the strychnine-bottle, which was also produced (a dark blue fluted bottle). They were kept on separate shelves. The sale was not entered in the poisons-book, because it was regarded as a wholesale transaction. The manager saw the order and the lad, and it was on his instruction that he was served. An insurance agent named George Thomas, who had known Dr. Ingledew for a long time, said to his knowledge the doctor had taken morphia, sometimes daily, for over two years, in doses varying from 10 to 20 grains. He used to dissolve a drachm of morphia in 12 ounces of water. On the day of the death he saw the doctor sitting in his arm-chair with one hand on his chest. The doctor said, "That man has sent me strychnine." The bottle which usually contained the solution of morphia was close by, and there appeared to be a dose out of it. Witness did not see the doctor make up what was in the bottle, nor did he see him take a dose. He ran to Mr. Goldthorpe's for some more morphia. He emptied out what was in the bottle into a basin, and used the bottle for dissolving the morphia he had fetched. Dr. Fuller was then present, and under his instructions he decanted what he had poured into the basin into another bottle, which Dr. Fuller took charge of. Dr. Fuller said there was nothing in deceased's appearance to indicate the cause of death, and the *post-mortem* examination disclosed no evidence of strychnine. The heart was very weak, and if deceased had been under the impression that he had taken strychnine instead of morphia the shock might have caused his death. The inquiry was adjourned in order that an analysis of the viscera and the contents of the basin might be made.

Marigold for Pneumonia.

At an inquest held at Wakefield on April 21, on the body of Emily Frances Haigh (22), daughter of Edmund Haigh, medical herbalist, Westgate Common, Wakefield, it was stated that deceased had contracted a chill, and her father ordered her a foot-bath, and gave her "a wineglassful of marigold-tea" three or four times a day. She got worse, and died before a doctor could be called in. Dr. Wood gave it as his opinion that death had occurred primarily through disease of the heart, and secondly through pneumonia. He could not say the girl's life could have been saved though he had been called in earlier. The jury returned a verdict of death from natural causes.

The Week's Poisonings.

Since our last report eight fatalities from poisoning are recorded, six being caused by scheduled poisons. These include strychnine (in the shape of vermin-killer), chlorodyne, carbolic acid (two), laudanum, and oxalic acid. The unscheduled poisons were salts of lemon (taken by a Bristol woman), and *Arum maculatum*, the flowers of which a Bardfield labourer's child ate with fatal results. Two young women have attempted to commit suicide by laudanum and carbolic acid respectively.—At the South Devon and East Cornwall Hospital, Plymouth, last week, a man named Smith called to have a wound on his hand dressed. By some means he secured possession of several bottles of poison, and while the nurse's back was turned he drank a large quantity of the contents, expiring in a short time.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Change.

Mr. Faussett Maxwell, L.P.S.I., late of Messrs. Graham & Co.'s State Pharmacy, Dublin, has started business on his own account at Dalkey.

An Explanation.

At the meeting of the Lurgan Board of Guardians on April 17, an explanation was made as to the large number of extras obtained from the local chemist. Dr. Darling said he never obtained any goods except on a regular contract, and one of the Guardians spoke to the same effect.

From Limited to Unlimited.

Mr. J. J. Cole, having been successful at the Licence examination of the Pharmaceutical Society of Ireland, has voluntarily wound up the limited company which he formed some two years ago. This seems rather a victory for individual management *versus* company pharmacy.

Digitized by Google

Examiner Resigning.

Mr. Forbes Watson, who has acted as examiner in chemistry at the Licence examinations of the Pharmaceutical Society of Ireland for the past four years, intends relinquishing the position after the next examination, which will be held in July. Mr. Watson, who is analytical chemist to Messrs. Guinness & Co. (Limited), requires his whole time for the duties of that position.

Begun Well.

At the recent examinations of the Royal College of Surgeons, Ireland, Mr. J. B. Kelly (third son of Mr. P. Kelly, Member of Council of the Pharmaceutical Society of Ireland), secured a prize of 2*l.* 2*s.*, and silver medal in practical anatomy, and third prize in descriptive anatomy in the First Professional course. Mr. Kelly is only 18 years of age, but has evidently started on the right path, and has many additional honours at his command.

Unqualified Dispensers.

The *Freeman's Journal* of April 17 called attention to the proceedings of the last Council-meeting which appeared in the *C. & D.*, April 12, in which the important matter of unqualified dispensers was considered. Reference was particularly directed to the action of the South Dublin Guardians in marking the circular sent by the Society as read, and it is remarked that it is the bounden duty of every Hospital Board and of every Poor-law Board to see that the L.G.B. regulations—which have been made, not in the interest of individuals, but for the preservation of the lives of patients and paupers—are strictly carried out; and that the action of the Pharmaceutical Society in the matter is perfectly right and proper and entitled to support from every influential quarter.

The New Ulster Medical Institute.

The foundation-stone of an institute in connection with the Ulster Medical Society was laid by Professor Redfern, M.D., F.R.C.S., on April 12. The site for the building has been leased from the governors of the Royal Belfast Academical Institution, and, when erected, the new institute will be fitted up in the most complete manner. It is expected that the building, which will cost about 6,500*l.*, and is given by Professor Whitla, M.D., will be ready this year.

A National Question.

In reference to the recent letter of Messrs. Leslie, Dublin, to the Dungarvan Guardians, taking exception to the Board advertising for English medicine tenders—on the assumption that there was a "ring" among the Irish houses (and which has already appeared in the *C. & D.*)—a further letter has been received by the Guardians from Messrs. Leslie. It is as follows:—

> We note the Guardians consider the tone of our letter uncalled for. We certainly do not see how this can be when they are trying to obtain goods from England. We very much doubt whether any English firm would take the bother of tendering, or, if so, if they would offer better terms than the first-class Irish manufacturers. At any rate, we are under no compliment to the Dungarvan Board of Guardians. Whenever we have obtained the contract our tender has been the lowest, and we have supplied them strictly according to the terms of our bond. We only expect to get the contract if we are lower than our competitors; or if we are the same figure as a rival, we consider we have a sort of claim for preference, being the old contractors, and there being no complaints against us.

Mr. Walsh: I would like to know whether there was ever any complaint against this firm for supplying medicine not up to the mark? The Assistant Clerk: Yes; at the time of the late Guardians. Mr. Power: I would also ask the Clerk to ascertain from Messrs. Leslie how much of the raw material they get from England. We should not be expected to pay more money for Irish goods than for English. It would demoralise Irish manufacturers if they were sure of being paid more for their goods here at home than could be obtained by English firms for the same article. The tenders were then considered. Messrs. Leslie's tender was 12½ per cent. off, Mr. Houghton (Cork) 4 per cent., and an English firm tendered at 10 per cent. off. Mr. Power proposed that the Cork firm (a local one) get the contract. Mr. Lynch seconded the motion. Mr. Hayes: If you do not take Leslie's, you should give it to the English firm that allows 10 per cent. Messrs. Leslie's contract, however, being the lowest, was eventually accepted.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

A Good Investment.

Mr. A. Gall, chemist and druggist, has purchased the valuable property at Nos. 2 and 4 Broad Street and 1 High Street, one of the best sites in Frazerburgh.

A Traveller's Death.

Mr Peter French, described as a traveller for a firm of Glasgow chemists, died suddenly in the Maxwell Arms Hotel, Dalbeattie, on April 11. Death was due to failure of the heart's action.

Chemical Industry.

The annual business meeting of the Scottish Section of the Society of Chemical Industry was held on April 15 in the Windsor Hotel, Edinburgh, Dr. Wm. Frew (Vice-Chairman) presiding. The report submitted by the Hon. Secretary (Dr. Thomas Gray, Glasgow) showed that the membership had increased to 314. The following officers were elected: Chairman, Mr. T. L. Patterson; Vice-Chairman, Mr. D. J. Playfair; Members of Committee, Messrs. T. Ewan, W. Frew, J. Hendrick, J. Hope, H. Ingle, and W. G. Johnston; Hon Secretary and Treasurer, Dr. Thomas Gray.

Business Changes.

Mr. G. Robertson, 4 Dowanhill Place, Partick, is about to open a branch in Whiteinch.

Mr. D. A. B. Leadbetter, chemist and druggist, has acquired the business of Mr. A. N. Bowman, Lochgelly, Fife.

Mr. Thomas McMaster, chemist and druggist, 322 Dumbarton Road, Glasgow, is starting a branch in the rising suburb of Scotstoun.

Inman's Stores (Limited) of Edinburgh, &c., have leased a large shop in Whyte House Mansions, Kirkcaldy, where they intend to open a general drug and dispensing business in a few weeks.

The partnership of the firm of Wallace & Watson, St. Vincent Place, Glasgow, has been dissolved, and Mr. D. Watson will, in the meantime, confine his attention to his Langside shop.

Messrs. F. Spite & Co., Victoria Road, Glasgow, whose drug-business there has hitherto been carried on as a department of the general store, are now giving up the latter, but will continue to occupy part of the premises, which is being fitted up as a first-class chemist's shop.

Personal.

Last week, at the conclusion of a series of lectures on sick-nursing and hygiene by Mrs. Peebles (wife of Mr. T. S. Peebles, chemist and druggist), at the Lochee Y.W.C.A., the talented lecturer was presented with a fine engraving of Queen Victoria, and her daughter, Miss Greta Peebles, with a gold brooch for playing the *rôle* of "patient."

Glasgow Notes.

A number of chemists who had their shops fitted up with electric light at the beginning of last winter find it to be a qualified success. It is expensive, and its lack of warmth keeps the windows dim.

In one district in Glasgow the small size of a much-boomed patent pill, with a leguminous name, is sold at a profit of a farthing, and other patents and proprietaries at proportionately starvation prices.

The Southern Medical Society is again on the trail. It has appointed a deputation to make strong representations to the Governors of the Victoria Infirmary respecting the abuse of the out-patient department in that institution.

Edinburgh District Chemists' Golf Club.

This club held their spring holiday competition at North Berwick on April 21, with the following results:—Captain's prize and Gibson handicap medal (after playing off tie), Mr. W. W. Ainslie, 99, scratch; (2) Mr. Duncan McLaren, 109 less 10 = 99; (3) Mr. James Stott, 103, scratch.

A Chemical Company's Affairs.

Messrs. Fraser & Fergusson, chartered accountants, Glasgow, have issued a circular regarding the affairs of Messrs. William Barr & Co. (Limited), manufacturing chemists, Bellshill. It is stated therein that, at a meeting of creditors with claims amounting to 10*l.* or over, a committee, consisting of Mr. William Wellings (of Messrs. Evans, Sons & Co., Liverpool), Mr. Allan Clark (of Messrs. J. Pattison & Co., Glasgow), Mr. A. E. MacDonald (of Messrs. W. H. Alexander & Co., Glasgow), and Mr. J. McAndrew Waddell (Glasgow), was appointed to inquire into the position of the business and ascertain if a cash composition of 10*s.* per pound could be arranged, the meeting expressing the opinion that such an offer should be accepted. The committee, in recommending the acceptance of the offer to the creditors, points out that, while the state of affairs shows a dividend of 14*s.* 6*d.* per pound, it is likely that, on a forced realisation, a very much smaller dividend would be paid. The business is being continued for the present under Mr. Fergusson's supervision. The statement of affairs shows the liabilities to include secured debts, 4,850*l.*; preferable debts, 200*l*; and unsecured debts, 4,299*l.* The total assets (less preferable debts) amount to 6,767*l.*

Glasgow and West of Scotland Chemists' Trade Association.

A circular has been issued on behalf of a committee by Messrs. J. W. Sutherland (convener), C. T. Cockburn, and J. Anderson Russell (interim Secretary), calling a meeting at the Atheræum, St. George's Place Entrance, Room 17, on Thursday, May 1, at 8.30 P.M. The object of the meeting is to discuss a draft constitution and rules, which have been drawn up by the committee, the ulterior purpose being to secure and maintain advanced and uniform prices for patent medicines and proprietary articles. The sympathy and support of the leading firms in Glasgow (grocers included) have been obtained, but grocers are not to be included in the Association. The draft constitution shows that the business of the Association is proposed to be conducted by an executive of thirteen members, including Chairman, Vice-Chairman, Secretary, and Treasurer, and the annual subscription will be 5*s.*

Holiday-money.

Three boys were each ordered to receive six stripes with the birch rod by the presiding Magistrates at Edinburgh Police Court, on April 23, for a theft of 3*l.* One of them, named Ford, was employed as a message-boy at the Dalry Road branch of the Scottish Drug Depôt (Limited). He was sent to the bank every morning with the previous day's drawings, and he had communicated this fact to his companions in trouble. Monday last was the spring holiday, and on Friday night the boys arranged that they should take a trip to Aberdeen with the money which Ford should be sent to bank on Saturday morning. They carried out their plan, and were arrested when they returned to Edinburgh.

South African News.

The East London and Eastern Province Agency for Quibell's dips and disinfectants, hitherto held by Mr. James Coutts, has been transferred to Messrs. Dyer & Dyer.

Apothecaries Exempt.—A Bill has been gazetted for introduction into the Natal Parliament, creating a burgher defence-force for the colony. Certain exemptions are made, these including apothecaries.

In Mourning.—Our Cape Town correspondent says that flags were half-masted in that city in the morning of March 27, and remained so till after the funeral of Mr. Rhodes. Mourning was generally displayed on the *personnel* of the drug-trade. The Pharmaceutical Society of Cape Colony placed a wreath on the coffin bearing the words "Supreme Regret."

Joy and Gloom in Kimberley.—Our Kimberley correspondent writes that Mr. W. Gasson, of the Belgravia pharmacy, has secured the contract for the supply of drugs to the Kimberley Mine and De Beers Mine Compounds. The contract is for two years, and expires in March, 1904. Business in the Diamondopolis continues brisk, and the outlook is very reassuring. The news of the death of Mr. Rhodes came, although not altogether unexpected, as a great shock to the drug-trade and populace alike. Flags everywhere were flown at half-mast.

Adjusting the Drug-prices.—The Prices Adjustment Committee (Cape Town) called a special meeting for March 26, but the attendance was small, doubtless owing to the fact of the news of Mr. Cecil Rhodes's death having just been published. There were present Mr. A. J. Rivett (of Lennon, Limited), Mr. D. K. Petersen (of P. J. Petersen & Co.), Mr. F. C. Mathew (of Heynes, Mathew & Co.), Mr. Geo. Darroll (of Cleghorn's pharmacy), Mr. Fred. Varley (of R. G. Darroll & Co.), and Messrs. J. Sloan and G. A. Deans. The question of printing and issuing the new list of prices was agreed to, 12*l* being voted for that purpose. Copies are to be distributed to all principals, who will be asked at the same time to send along any suggestions and remarks that they may feel disposed to make, within a fortnight after receipt thereof. It is understood that a further general meeting will then take place.

Colonial and Foreign News.

A Fire broke out in a branch of Merck's factory, at Darmstadt, on Monday, April 21. The latest information is to the effect that the fire was restricted to one large store, and the damages will not exceed 10,000m. (500*l*)

An Appeal is made in the *Times of India* on behalf of Dr. Thomas Blaney, who lies in St. George's Hospital, Bombay, with a fractured thigh, and is unable to pay for the necessary nursing and treatment. Dr. Blaney was chairman of Messrs. Kemp & Co. (Limited), Bombay, and is a well-known resident, having been connected with the Municipal Council for over twenty-five years. In the years of his prosperity Dr. Blaney attended hundreds of poor Parsees free of cost. Mr. Pell, the general manager of Kemp's, placed the facts before the public, and a generous subscription has resulted.

Analyst's Report.—The report of Major Collis Barry, Chemical Analyser to the Government of Bombay, shows that the number of analyses last year was in excess of any previous year. The largest number of analyses come under the head of medico-legal cases, and it appears that cases of suspected poisoning in the Presidency exceeded two hundred in three out of the last five years. Arsenic holds the field as the favourite poison; a decrease is noticeable under opium; while "other alkaloids" showed a sudden increase to ten from one or two cases in previous years. Arsenic is also the poison most frequently used on cattle, which is followed in frequency by the use of the seeds of yellow oleander. During the year an officer of the Royal Army Medical Corps was given instruction in radiography, and a large number of radiographs were taken in the various hospitals of Bombay.

Cairo Chemists' Assistants' Association.—The second general meeting of this Association was held in the first week of this month. The large attendance was representative of the principal pharmacies of the city. The President (Mr. N. Georgiadis), in an excellent speech, said the hours of duty in pharmacy are becoming more exaggeratedly and unnecessarily long, and considering the exhausting nature of the pharmacist's work of hand and brain, the many and various calls upon his knowledge and experience, and his position as a sort of counsellor and guardian of the public health, it is becoming an urgent necessity to seek a means of curtailing the number of hours (sixteen or seventeen out of the twenty-four at present being the day's "slavery"). These are admitted on all hands to be excessive, and consider-

Digitized by Google

ably longer than those obtaining in any city of Europe, or even the world. He exhorted the members to closer union for their mutual welfare, and set forth clearly the aims and object of the newly formed Association. They propose to attempt to induce the chief proprietors to agree unanimously on an earlier hour for closing, and, if possible, to secure rest on the Sabbath day. A discussion followed, and a committee was appointed to form a deputation to interview the principal chemists, and obtain their consent, if possible, to the closing of pharmacies not later than 10 P.M., instead of 11 P.M. and even midnight, leaving an assistant on the premises to answer the night-bell.

French News.

(From our Paris Correspondent.)

A Sacred Photograph.—An announcement of an unusual nature was made last Monday afternoon at the weekly meeting of the Paris Academy of Sciences by Dr. Yves Delage, professor of Zoology at the Sorbonne. According to him, what amount to photograph negatives of the body of Christ have been discovered, these negatives being the reddish-coloured stains found on the Holy Shroud kept in the Treasure Chamber at Turin Cathedral. This sacred relic, the authenticity of which is generally recognised, belongs to the Royal Family of the Savoy dynasty, but the secret of the stains on the Shroud have only been recently revealed. It was Dr. Paul Vignon, a professor at the Paris Sorbonne, who first discovered the analogy of the stains to the negative of a photograph, and when reproduced by photography a picture of the body of Christ was obtained of a startlingly realistic nature. The hands are crossed over the body, and the imprints of the nails are plainly visible; but their marks are on the wrists, and not on the palms of the hands as is usually supposed. The wound made by the spear in Christ's side is plainly seen, as well as the marks of the scourging on His back. The lacerations caused by the crown of thorns are visible, and also drops of coagulated blood. Commandant Colson, a well-known professor of physics at Paris, assisted in the scientific demonstration of this remarkable discovery. He showed that various chemical substances—as, for example, ammoniacal-vapours—can project a photographic negative on a screen in darkness. By reference to various very ancient texts, it was shown that the Holy Shroud had imbibed a mixture of oil and aloes. Experiments were made in connection with these substances, but without any result of importance until M. Armand Gautier, professor of biological chemistry at the Faculty of Medicine here, drew attention to the fact that the body of a man covered with blood and sweat, who has died in the sunlight after undergoing torture or severe pain, would give off strong alkaline vapours. Further experiments, bearing this in mind, led to the photographs being successfully obtained. A series of combinations of circumstances or chemical processes was necessary for obtaining this curious result, and Dr. Delage said last Monday that these coloured stains, which have always been thought to be bloodstains, are really themselves photographic negatives of the dead body of Christ. Were it not that the question of these interesting photographs has been brought forward under such serious scientific auspices, one might be inclined to treat the announcement with a certain amount of scepticism; but the fact that a distinguished member of the Paris Academy of Sciences has taken the matter up ought to be sufficient guarantee for enabling us to accept his remarkable demonstration with credence. Photographs showing both the negative and positive of the imprints on the Holy Shroud are now being exhibited at the office of the Paris *Figaro*, and I was able to inspect them last Wednesday. The face is, all things considered, very distinct, and does not in any way destroy the preconceived idea one has of the Christ's features.

Danval, the Convict-pharmacist, Pardoned.—On Thursday afternoon of last week M. Loubet, the President of the Republic, signed the pardon of the pharmacien Danval, who, as I have already mentioned, was condemned twenty-four years ago on the charge of having poisoned his wife with arsenic. As a result of the conference in favour of Danval, referred to last week, the President was petitioned to grant an audience to the delegates who had accepted the mission of approaching him, with a view to laying before him the scientific reasons for supposing that the ex-pharmacist is innocent of the crime which he has expiated. The delegates were informed that the President would receive them when he had personally studied the documents connected with the case. This formality having been gone through, an audience was granted at the Elysée Palace on Thursday, at 5 P.M. The delegates were headed by M. Trarieux, President of the League of the Rights of Man, and included several prominent scientific men who had taken an interest in the case, including Professor Cornil, Dr. Chatin, and Professor Béhal, of the Paris School of Pharmacy, also several office-bearers of the Syndicate of French Pharmacists and of the Association of Pharmacy Students, as well as members of the staff of *Le Journal*, which newspaper has taken a leading part in the movement in favour of Danval. The President of the Republic received these gentlemen with marked cordiality, and they found him a ready listener. The principal documents of the case were on his desk, and, after explaining that he had studied them with care, he proceeded to sign the decree that had been already prepared, adding, "The pardon; here it is!" M Loubet, who is himself a distinguished lawyer, chatted for some time with some of the delegates, and when they left he shook hands with each one He specially complimented M. Jacques Dhur, the reporter of *Le Journal*, who interviewed Danval at the convict settlement at New Caledonia, and started the campaign for obtaining a pardon. The news was at once telegraphed to Danval, and the following reply has been received from him:—"Bourail, April 19, 9.55 A.M. Thank you all for pardon. Hope to obtain revision for honour's sake.—Danval." This seems to imply that he is not yet quite satisfied, and that he hopes to get a full revision of the sentence. *Le Journal* has been reproducing in its pages the report of the sensational trial in question of twenty-four years ago, and there is a good deal of detail in the evidence and cross-examinations which do not by any means redound to Danval's credit. In fact the story of his former private life in many details is scarcely pleasant reading, and it was undoubtedly these facts that weighed heavily with the Judges in passing sentence, but as to the technical fact as to whether he poisoned his wife or not with arsenic, French scientific opinion is to-day practically unanimous in agreeing that there was a miscarriage of justice in condemning him. Most of the leading expert chemists, doctors, and pharmacists, have been interviewed on the subject, and they are apparently of one opinion. Amongst them I can cite such names as M. Berthelot, Professor Moissan, and M. Riche, Director of the Paris Mint and President for the current year of the Academy of Medicine. As a document of interest, I reproduce the petition for pardon recently received from Danval by the French Minister of Justice. It is dated from New Caledonia and reads:—

"Monsieur le Ministre,—The undersigned, Gilbert Louis Pierre Marie Mordefroy Danval, born on January 25, 1845, at Gannat, Allier, formerly pharmacist at Paris, transported to New Caledonia, under the No. 10676, and arrived February 11, 1879, per s.s. *Navarin*, has the honour to humbly solicit pardon for the life sentence to which he was condemned on May 10, 1878, by the Paris Court of Assizes, on the charge of poisoning Mathilde Jarry, his wife. Although the facts which led to his being condemned appeared to be materially against him, he swears to his innocency, and lays claim to good conduct and zeal in his work, in which he has set a good example since he is in New Caledonia. After having been employed for two years as assistant pharmacist at Bourail without receiving the slightest reproach, he received a concession in 1884 and since then has devoted himself to the culture of land, and although a stranger to agricultural work, he has earned a living for himself and family, with the aid of one employé, who has worked with him for seventeen years. Having married again, he has brought up a family of three children, a daughter now 16 years of age, and two sons, one 15, and the other 11 years old It is above all inspired by his paternal love and in the agony in which he is plunged by the uncertainty for his children's future that Danval desires to see this petition favourably received. What an affront for them! What misery for him to leave them in dying the souvenir of such a sentence without mercy! And the child is formed from examples! I have the honour to be, &c. (Signed.) Louis Danval."

Winter Session.

Chemical Society.

A very thinly attended meeting was held at Burlington House on Thursday, April 17, at 8 o'clock, when the chair was taken by Professor Tilden, in the absence of the President. After the reading of the minutes dealing with the last three meetings, Dr. Divers communicated a paper by Dr. P. C. Rây on

Mercurammonium Salts of Nitrous Acid.

Dr. Divers, who has accomplished a great deal of work on inorganic sulphamido- and nitro-compounds, is a chemist with a grievance against teachers and text-books. The latter still persist in ignoring the influence exerted by nitrous acid when metals such as copper, mercury, and silver are dissolved in nitric acid, or, as Dr. Divers would have us say, "nitric acid containing a trace of nitrous acid." Fortunately, however, for students of chemistry, most teachers are interested in teaching the broad principles of the science rather than in manufacturing animated encyclopædias of chemical information. After describing his own views on this matter at some length, Dr. Divers proceeded to give the gist of Dr. Rây's paper, which described a series of double nitrites of the hypothetical mercurammonium, NHg''_2H_2, which may be regarded as the basic radical of white precipitate and similar substances. Various reactions of these salts, and especially their behaviour with hydrochloric and hydrobromic acids, were studied, with the result that the author thinks he is justified in regarding them as mercurammonium salts, rather than double salts of mercury and ammonium.

The next paper was by Dr. Crossley on

Isopropyl Dihydro-resorcins.

Four of these substances have been prepared by condensing an appropriate ketone with malonic ester in the usual way. When they are heated with barium hydroxide two of them suffer fission of the benzene nucleus, whilst the others are unattacked. This difference in behaviour appears to depend upon the position of the isopropyl group. It is also interesting to find that the four types examined exist generally in the keto-enol modifications instead of the usual di-keto form.

Dr. Hewitt and Mr. J. H. Tervet then submitted a paper on

Oxonium Salts of Fluorane and its Derivatives.

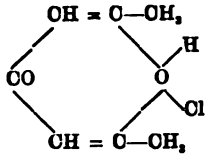
Dr. Hewitt some time ago put forward the theory that such substances as quinine, fluorescein, and other fluorescent bodies possess a chemical structure continually varying between two forms, and that the energy-changes thus produced result in the degradation of invisible to visible radiations. Whatever may be urged against the theory on physical grounds, a considerable body of facts has been collected in its favour on the chemical side, and the present paper added still more. The authors have succeeded in preparing from the colourless, non-fluorescent substance fluorane compounds with the mineral acids which are, as Dr. Hewitt had predicted, fluorescent and coloured. These salts are also interesting as exhibiting further examples of the tetravalency of oxygen in pyrone compounds.

As none of the authors of the remaining papers on the list were present, Dr. Tilden was about to propose that they be taken as read, when Dr. Morgan stepped into the breach with a contribution on the "Comparative Reactivities of Substituted Diamines" which gave an account of the action of methyl haloids on phenylene diamine and its homologues. The remaining papers, which were chiefly of an agricultural character and had brought together a number of agricultural chemists, were then taken as read, and the meeting was adjourned until Wednesday, April 30.

Chemists' Assistants' Association.

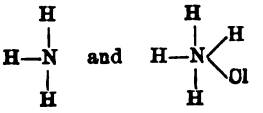
The meeting of the above Association, held at 73 Newman Street, W., on April 17, presided over by Mr. F. W. Peck (President) was devoted to an exhibition of objects connected with pharmacy and short papers.

Mr. C. T. Gardner, of the London Hospital, gave an explanation of a flask, designed by himself, for the preparation and sterilisation of gelatin injections, which was described in *C. & D.*, September 7, 1901, page 442



Mr. Hymans exhibited a powerful microscope and several slides of petrological subjects.

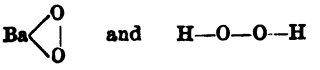
Mr. R. E. Lownsbrough produced some half-dozen bottles of a mixture of potassium bicarbonate and sodium salicylate in solution of varying degrees of blackness, and also one perfectly clear which had been prepared some three weeks since with distilled water saturated with carbonic-acid gas. He also exhibited some beautifully mounted specimens of "Plant Misfortunes," as he termed them; principally leaves attacked by various fungi.



Mr. W. Garsed gave a "lecturette" on

The Hydrochloride of Dimethylpyrone.

Oxygen, said Mr. Garsed, is generally regarded as being divalent, but dimethylpyrone having the formula—



—seemed to point to its being quadrivalent. All are familiar, he proceeded, with nitrogenous bodies, such as the alkaloids which have basic properties. It is assumed, in explanation, that the nitrogen in the salts, which is trivalent in the bases themselves, becomes pentavalent. On this hypothesis ammonium and ammonium chloride would be described as follows:—

Dimethylpyrone, however, is peculiar because, although it contains no nitrogen, it has basic properties, and forms stable salts such as hydrochloride and oxalate. The only apparent explanation of this property in dimethylpyrone is that in the salts the oxygen—divalent in the substance itself—becomes tetravalent.

Barium and hydrogen peroxides are generally described—

—but the existence of the substance under discussion, and the unstable nature of barium and hydrogen peroxides would show that the more probable formulæ are—

Mr. Snow described a case containing various crystals made during his apprenticeship some thirty years ago, and also some glycerin obtained in making emplastrum plumbi.

Mr. Tweedy showed some specimens of salt and a stuffed specimen of the Queensland platypus. He also exhibited an emulsifier, specimens of thyroid and suprarenal glands, dissected and undissected (lent by Messrs. Burroughs Wellcome & Co.), and jars, pots, and bottles, labelled at a cost of about 1½*d.*, for paint, gold, and varnish. Mr. Howie had also sent his prize photo of the summit of Ben Nevis.

Mr. Peck had a collection of micro-organisms of various diseases.

Mr. Franklin contributed a note on

An Old Pharmacopœia,

the second edition of Pharmacopœia Bateana, including the Arcana Goddardiana, published by Mr. James Shipton, a London apothecary. The formulæ given were the prescriptions of Dr. George Bate, a celebrated physician who flourished in the reign of Charles II. The book makes extensive use of the old alchemical symbols, and Mr. Franklin gave a running commentary of the contents.

Edinburgh Chemists', Assistants', and Apprentices' Association.

A MEETING of this Association was held at 36 York Place, Edinburgh, on April 16, Mr. J. G. Sclater (President) in the chair. The first communication was by Mr. FRASER MCDIARMID on

FLUID EXTRACT OF NUX VOMICA.

Mr. McDiarmid said of the fluid extracts introduced into the 1898 B P the fluid extract of nux vomica is the least satisfactory. The evolution of the present formula for the extract was as follows: In the 1867 B.P. the powder was boiled with successive quantities of rectified spirit till exhausted, and the liquors evaporated to a soft extract without standardisation. Experiments were made by Dunstan and Short with a view to improving the menstruum and securing a uniform preparation from the alkaloidal point of view. Rectified spirit extracts a large portion of the fatty oil of the seeds, and therefore a menstruum consisting of 4 parts rectified spirit and 1 part water was suggested and finally adopted in the 1885 B.P., whilst the extract was standardised to 15 per cent. of total alkaloids. According to Cripps, this solvent "dissolves the alkaloids very perfectly, but extracts scarcely any oil." Unfortunately, as dispensers well know, that is a figure of speech. The 1898 B.P. orders a solvent rather less alcoholic—70 per-cent. alcohol; *i.e.*, about 3½ of rectified spirit to 1 of water—with a similar result. A large proportion of the fatty oil in the seeds is present in the fluid extract, and consequently in the solid extract. Yet "Pharmacopedia" continues the legend about the non-solvent effect of the weaker menstruum. The whole matter has been thoroughly investigated by Greenish and Smith in the Research Laboratory, and suggestions made whereby the oil might be filtered out in the process, and Mr. McDiarmid has found that a liquid extract made as suggested by Greenish and Smith is greatly superior to one obtained by the official method, but the process is troublesome. Would it not be better to use a menstruum which would not dissolve the oil at all? A weaker alcohol, or, as suggested by Lucas for the solid extract some years ago, a mixture of acetic acid and water, might be adopted. Mr. McDiarmid then considered the different results which would be obtained from seeds containing widely different proportions of alkaloids. Supposing the finest Ceylon seeds were used, which contain as much as 5·3 per cent. of total alkaloids, and where the strychnine might be as 3 to 1 of brucine, then from 1 lb. of seeds one might obtain as much as 40 or 42 fl. oz. of standard liquid extract, whereas in another case only 11 oz. of standard extract was obtained. What, then, becomes of our boasted uniformity? The adoption of some process which will exclude the oil of nux vomica from the extract would conduce to ease as well as accuracy in the estimation process. Bird has worked out a method by which the oil is got rid of in the first part of the estimation, which is eminently satisfactory. Yet it is questionable if two operators, dealing with the same extract, would get approximately the same results. The separation of strychnine is not, in practice, the easy matter which one might infer from the pharmacopœial directions. Various modifications have been suggested, such as the employment of 5 instead of 10 c.c., the use of a measured quantity of wash-water in washing the strychnine ferrocyanide, the use of wash-water at fixed temperature; and yet, however carefully done, the strychnine residue always seems to turn red with nitric acid. Umney says the strychnine result is rather above the actual amount present; another writer says that a definite quantity is lost with each 10 c.c. of wash-water, and would add this to the amount really found; so that the ordinary pharmacist feels justified in saying that much remains to be done to furnish a formula for liquid extract of nux vomica which will produce a uniform preparation by whomsoever made.

Mr. SIVEWRIGHT said he had observed a very considerable variation in the colour of tincture of nux vomica made from different fluid extracts.

Mr. ROWLAND said it had been suggested that some makers use colouring-matter so as to ensure their fluid extract being always of the same colour.

Mr. HILL said some years ago Mr. Day showed that a very good and definite tincture of nux vomica could be made direct from the seeds by percolation. It could also be made quite definitely by estimating the seeds and percolating till exhausted. With regard to the suggestion to employ acetic acid, in the January number of Squibb's *Ephemeris*, the employment of a 10-per-cent. acetic-acid menstruum in the preparation of fluid extracts was recommended. Referring to the U.S.P. acetic fluid extract of nux vomica, it was stated that after standing a year it was still clear, and that the formula gave a reliable extract because of the solvent power of the acetic acid.

Mr. DUNCAN said it was very doubtful if the introduction of these standardised fluid extracts marked a real advance in pharmacy. He did not think they would ever be satisfied till they abandoned them altogether and employed strychnine itself or strychnine and brucine. He would like to ask if Mr. McDiarmid had had any trouble with the deposit, sometimes considerable, in fluid extract of ipecacuanha. He found it contained considerable quantities of lime and also alkaloid. It seemed as if it might be caused by using weaker alcohol for the second and third percolations.

Mr. CURRIE confirmed the experience that a fluid extract or tincture made in summer became hazy, and a layer of oil separated, in winter.

Mr. ROWLAND said the addition of 2 per cent. of acetic acid was most valuable in extracting kola-seeds.

Mr. MCDIARMID, in reply, said the colour of the extract varied with different seeds. One sample of seed might yield 40 oz. and another only 11 oz. from 1 lb. of seeds, and, therefore, there would be a difference in colour. He had observed in the case of belladonna extract that if heat was used the extract was darkened in colour, and probably it was the same with all extracts. He had examined the deposit in fluid extract of ipecacuanha and found alkaloid present.

The next communication was by Mr. ARCHIBALD CURRIE, on

THE SOLVENT ACTION OF SODIUM SALICYLATE.

Mr. Currie said he recently had a prescription for compound tincture of cinchona in an aqueous solution of sodium salicylate. On dissolving the sodium salicylate in the water and adding the compound tincture of cinchona last, the heavy flocculent precipitate produced gives a most unsightly mixture. By dissolving the sodium salicylate in about twice its weight of water adding the tincture to this strong solution, and then making up to the prescribed quantity by adding the remainder of the water, a mixture is obtained almost free from any precipitate. Mr. Currie was led by this to investigate the solvent action of sodium salicylate in the case of other tinctures containing substances of a resinous nature, and he found that, in almost every case where no fixed or volatile oil is present, sodium salicylate renders them soluble in water. Sodium salicylate renders the tinctures of catechu, arnica, myrrh, and digitalis, and fluid extract of cascara sagrada, miscible clear with water; but myrrh requires a very large proportion of sodium salicylate to bring it into solution, and even then is not quite clear, owing, perhaps, to the volatile oil.

The next communication was by Mr. JAMES SIVEWRIGHT on

COMPRESSED TABLETS.

Mr. Sivewright's paper consisted of a few directions which might be of use at the dispensing-counter. He considered that machines with a steady compressing action are better than those with a stamping action. The Freck machine was shown and spoken of as simple in construction and easily worked. The dies and all polished parts of the machine must be kept absolutely free from rust and brightly polished, or success is impossible. They should be coated with vaseline when not in use. The drug to be compressed must be in a granular, perfectly uniform powder. If this is not carefully attended to, the powder will not run readily from the funnel into the die, nor will the tablets be of the same size. There are some powders in this form which require no preparation, such as salol, potassium bromide, ammonium chloride, and granular pepsin, but the majority of powders and mixtures require to be granulated and to have some addition made before they can be compressed. Speaking generally, insoluble substances are granulated by the addition of sugar and water, and soluble substances by the addition of gum and water. About 10 per cent. of sugar or gum is a

Digitized by Google

suitable addition, very soluble or deliquescent substances requiring more gum than the less soluble. The powder is then sifted and dried. A No. 20 sieve gives suitable granules. A powder which has been granulated by the addition of sugar is much more liable to adhere to the die and punches than one prepared with gum acacia. Mr. Sivewright prefers gum, taking care not to compress too hard, and at the same time mixing with the powder about 10 per cent of powdered arrowroot, which causes the tablet to disintegrate. All insoluble substances should have a little arrowroot added. Water is sometimes objectionable in damping the powder—as, for example, when powdered rhubarb is mixed with sodium bicarbonate or magnesia. In such cases rectified spirit is used. The principal trouble in preparing tablets is caused by the powder adhering to the die. This is remedied by spreading out the granulated powder on a sheet of paper and dusting it over with talc, about 3 or 4 gr. being sufficient for 1 oz of powder. With some powders this is not sufficient, and an oil is necessary. This is applied by means of a spray. Thirty grains of vaseline or vaseline oil is dissolved in ether and a small quantity sprayed over the powder, which is dried before compression. Sometimes both oil and talc are used. When the tablets have to be dissolved talc and oil are inadmissible as lubricants, and powdered boric acid is used. Effervescent tablets are best made by granulating with acacia and preparing the granules in two separate portions—the sodium bicarbonate with any alkaline constituents in one lot, and the tartaric acid with any acid constituents in the other. The two sets of granules are thoroughly dried and mixed just before compressing, boric acid being used as a lubricant if necessary. A mixture of 3 parts sugar of milk and 1 part of cocoa gives a very useful basis for active drugs, such as cocaine and podophyllin. The mixture gives a very nice granular powder which never adheres to the dies.

Mr Duncan said it was not improbable that the solvent action of sodium salicylate was due to the fact that, salicylic acid being a weak acid, the resins combined with the sodium to form a resinate with liberation of salicylic acid, which was retained in solution by the alcohol present. With regard to compressed tablets, he observed that it was by volume, and not by weight, that they were adjusted; and he would like to ask if their accuracy could be relied upon. He had had experience of cocaine tablets where different tablets produced very markedly different results. He had recently seen a prescription for boric-acid tablets, directing three to be crushed and dissolved in water. In such cases it would surely be as well to have ordered powders.

Mr. Hill said Mr. Currie's mixture emphasised the importance of paying attention to the method of mixing in dispensing. The point about sodium salicylate was worth working out. He believed the salt had a solvent action on various substances, and he was not inclined to think there was any decomposition such as Mr. Duncan suggested. In the case of myrrh it might give a formula for an elegant antiseptic mouth-wash. One of the chief disadvantages of the tablet method of medication was that it tended to throw the dispensing of medicines into the hands of the large manufacturers, and reduce the retail pharmacist to a mere distributor. Mr. Sivewright had shown that the ordinary pharmacist could easily turn out all his own tablets if he only liked to try.

Mr. McDiarmid asked if the machine always compressed the same quantity into a tablet of equal size or would one operator produce one size and another a different size?

Mr. Sivewright, in reply, said there was an appliance for regulating the pressure so as to ensure the same size tablet. In practice, however, he never used it, as one very soon acquired the habit of operating so as to give practical uniformity.

Mr. Sivewright afterwards gave a demonstration of the use of the Freck machine by preparing some salol tablets.

Votes of thanks were accorded to Messrs. McDiarmid, Currie, and Sivewright.

Cardiff Chemists' Assistants' Association.

The last sessional meeting of this Association was held at the Queen's Café, in St. Mary Street, on April 18, under the presidency of Mr. A. Barrington Sparrow, when Dr. Williams, Medical Officer of Health to the Glamorgan County Council, delivered an address on

The Adulteration of Food and Drugs.

He said adulteration was a very ancient practice, and was probably resorted to in a very crude way soon after people commenced to barter goods. They found in ancient times the most frequent references to the adulteration of wine, but Pliny mentioned that bakers were also addicted to the adulteration of bread with what he termed soft sweet white wheat, which he (the lecturer) supposed was sulphate of lime. Heavy penalties were imposed on adulterators in the last century, but only with regard to articles which were specially taxed, and in reference to which adulteration meant a loss to the State. In 1724 there was a penalty of 100*l.* imposed upon whoever mixed burnt beans and vegetable matter with coffee, which did not pay any Excise duties. The first real step taken to protect the public against adulteration was in 1850, when the editor of the *Lancet* instituted inquiries into the matter, and pilloried the dealers in adulterated articles. In 1855 a Select Committee of Parliament was appointed to investigate the practice, and on the report of that Committee the first Adulteration Act of 1860 was passed for the appointment of analysts. In 1872 another Act was passed empowering inspectors of nuisances to purchase samples for analysis. A further Select Committee was appointed in 1874, and, as the result of their labours, the Act of 1875 was passed. Then followed the Act of 1879, the Margarine Act of 1887, and the amended Act of 1899. It was under Section 6 of the 1875 Act that the authorities in Glamorgan had taken all their proceedings, so that the onus of proof that the article analysed was not injurious to health fell upon the defendants. Dr. Williams then went into a very full exposition of the powers conferred by the Sale of Food and Drugs Acts. He said the officials of the Glamorgan County Council found it very difficult to know what samples to buy for analysis, especially when it came to drugs. At first adulteration was so exceedingly prevalent that one could scarcely take a sample of anything without finding adulteration, but that was not the case now, although he believed that a large amount of margarine was still sold as butter. He did not think that the inspectors took as many samples of drugs as they ought to do. That was a very wide branch, and bristled with difficulties, but he thought that much good could be done by sampling goods of definite composition. Of course no one purchased such things as Williams's pink pills, castor-oil pills, and life and death elixir; but with regard to properly regulated drugs the case was different, for it had been held that when a person purchased a drug for which there was a standard in the British Pharmacopœia, it ought to be composed of certain definite constituents. In Glamorgan they took principally for analysis almond oil, olive oil, camphorated oil, milk of sulphur, precipitated chalk, fluid magnesia, liquorice powder, tincture of iodine, and zinc and mercury ointments. He once went into a shop in North Wales for some camphorated oil, and they gave him bicycle-oil. (Laughter.) Prescriptions were very difficult to deal with. He did not remember any inspector taking one, but it could be done. Medical remedies made up according to special prescriptions might be purchased for analysis, but in those cases they had to obtain three portions of the prescription. If the analysis showed any variation from the prescription, proceedings could be taken, even though the purchaser got more of any particular drug than he demanded. Drugs not contained in the British Pharmacopœia—such as glycerin and lime-juice, oatmeal-soap, and proprietary medicines—they did not take for analysis. The lecturer quoted statistics showing how adulteration of articles of food had been very largely diminished in the district.

The President, in proposing a vote of thanks to Dr. Williams for his address, observed that chemists as a rule were too honest to impose upon the public, though he had no doubt that in different parts of the district acts of adulteration did occur. In some establishments they kept a bottle of sweet nitre specially for the inspector, but he supposed the inspector could, if he liked, demand a sample from a stock-bottle. A careless dispenser, he took it, might be called an adulterator.

Mr. J. Ferrier seconded the motion. He said it was impossible to keep spirit of nitre of the proper strength, and,

Digitized by Google

in his opinion, there ought to be no standard for that preparation.

The motion was carried unanimously.

Halifax Chemists' Association.

A MEETING of this Association was held on April 17 at the Old Cock Hotel, Halifax, when Mr. H. C. BRIERLEY delivered a lecture on

THE *X* RAYS,

which took the form of an account of the discovery of the *x* rays in 1896 by Röntgen, and an explanation of the phenomena involved. Mention was made of the uses of radiography to the surgeon, and a radiograph was taken in sight of the audience.

Songs were afterwards contributed by Mrs. Dixon, Mr. Brierley, Mr. W. S. Thompson, and the President.

Northampton Chemists' Association.

A SPECIAL meeting of the above Association was held at the Black Boy Hotel, Northampton, on Friday, April 18, to consider

THE EARLY-CLOSING QUESTION,

which was adjourned from the previous meeting, the President (Mr. W. D. Mayger) in the chair.

The PRESIDENT was in favour of closing at 2 o'clock on Thursday afternoons, which is early-closing day in Northampton, but said his own way was not so clear as other members' because he had a sub-post-office for telegraphs connected with his business. After some discussion, all the master-chemists present promised to close at 2 o'clock on Thursdays and at 8 o'clock other nights, Saturdays excepted, and the President consented to wait upon absentees and ascertain their views. It was also agreed to advertise in the Northampton papers the names of all the firms who would close early, and it was agreed that the early closing should commence on May 1. The President promised the Association that the telegraphic business should not stand in the way of his closing his chemist's business at the time agreed upon even if he had to erect a partition in the shop.

Mr. ARNETT also spoke with gratitude of the action of Mr. Dennis, Mr. F. C. Ashford, and Mr. Ingle, who were undoubtedly making sacrifices in order to fall in with the other members of the Association.

Mr. E. C. ASHFORD suggested that the Association hold a picnic or holiday in the summer. The idea was cordially taken up, and Mr. FLINTON HARRIS said that if the Association went up to London he would be delighted to arrange a river picnic from Richmond, and entertain them there.

Society of Arts.

PROFESSOR SILVANUS P. THOMPSON read a paper before the Society on April 23 on

OPTO-TECHNICS.

He began by estimating that there were no fewer than 15,000 to 20,000 persons engaged in the optical industries in the London district alone, using optical in its most inclusive sense. The number of simple opticians or of opticians who combine the trade with other business, such as pharmacy, he gave as at least 10,000 within the United Kingdom. All these required for the proper conduct of their business (*a*) mathematical knowledge and practice in calculating; (*b*) knowledge of the general physical properties of light, refraction, dispersion, reflection, &c; (*c*) practice in using, and comprehension of the principles of, such optical measuring-instruments as the spectometer and the spherometer, also the focometer and other instruments; and (*d*) nowledge as to the optical properties of glass of different kinds, and of a few other substances used in optical work—quartz, fluorspar, Canada balsam, water, cedar-wood oil, &c., acquired by observation with measuring-instruments. The optical manufacturer needs further and more specialised instruction. This brought Professor Thompson to the point of his paper, which was that at present there does not exist any institution where the necessary instruction can be obtained; and he suggested the creation of a special technical college—an opto-technical institute—devoted to the interests of optical science He spoke of the uselessness of the present South Kensington classes on sound, light, and heat to opticians, the attendance at which has decreased in the elementary stage from 5,162 in 1892 to 949 in 1901. The classes are not of practical value, and the examination-curse warps and blights them. Reference was made to the excellent classes in optics at the Northampton Institute, which is a step to the realisation of the lecturer's idea of monotechnic in preference to polytechnic schools. Opticians have begun to organise themselves by the institution of examinations by the British Optical Society and the Spectacle-makers' Company, and the foundation of the Optical Society. In four years the Spectacle-makers' Company has granted 364 diplomas, and given a stimulus which has been of great benefit to the trade. It is therefore a favourable time for the creation of an Opto-technical Institute, Professor Thompson sketching the outline of the three-years' course he suggests.

In the discussion which took place the CHAIRMAN (Dr. Glazebrook), Professor CAREY FOSTER, Mr. DALLMEYER, General WATERHOUSE, Mr C. BECK, Mr. LOVIBOND, Professor HERSCHEL, and Mr. BRIDGES LEE took part, all agreeing with what Professor THOMPSON had said; and the last-named, in replying, said the London County Council had the necessary money for the creation of the Institute in the unexpended balance of the technical education grant, which amounts to something like 20,000*l.* a year.

Manchester Pharmaceutical Association.

THE thirty-sixth annual meeting of the Association was held at the Victoria Hotel on Wednesday evening, April 23, the President (Mr. Geo. S. Woolley) in the chair. In the

ANNUAL REPORT,

which detailed the work of the session, reference was made to the deaths of Mr. Siebold and Mr. Martindale.

The Treasurer's accounts were submitted, and showed a balance in hand of over 14*l.*

The CHAIRMAN, in moving the adoption of the report and balance-sheet, said the work of the year had been very satisfactory. The papers had been of considerable merit and usefulness to those who attended. The attendances, however, had not been so good as he could have wished, and on one occasion the paper had to be abandoned because there was not an audience worthy of the occasion. He wished something could be done in that city and neighbourhood to make the Association better supported. He referred to the slight legislative efforts of the year, and spoke in graceful terms regarding Mr Siebold and Mr. Martindale, as well as Mr. Fawcitt. He also touched upon the question of pharmacy degrees and the position of Owens College on that matter, stating that a deputation from the Association is to wait on the authorities of the College in regard to it.

Mr. KIRKBY seconded the motion for the adoption of the report, which was carried.

ELECTION OF OFFICERS.

Mr. G. S. Woolley was re-elected President of the Association; Vice-Presidents, Messrs. H. Kemp and W. Kirkby; Hon. Treasurer, A. J. Pidd; Hon. Secretary, J. C. Kidd; other members of Council: J. Wild, W. Lane, J. Westmacott, J. Taylor, J. Woodruff Walton, E. Yates, J. Grier, and D. Lewis; Auditor, J. Blyton.

Mr. RYMER YOUNG, commenting upon the apathy of pharmacists in attending the meetings of the Association, said such apathy was almost universal at almost any scientific meeting, and it was increasing. Even in Lancashire they could not find another member anxious to join the Pharmaceutical Council. (Laughter.)

The CHAIRMAN submitted a letter received from Mr. C. E. Pickering, anxious to secure a seat on the Pharmaceutical Council.

CHEQUE TAX.

The CHAIRMAN commented upon the proposed increase on cheques (see his letter, page 677), and a resolution protesting against this increased 1*d.* on cheques was carried unani-

Digitized by Google

mously, a copy to be sent to the Chancellor of the Exchequer.

OTHER BUSINESS.

The following members were appointed a deputation to attend the Pharmaceutical Conference at Dundee: Messrs. Pidd, Johnstone, Kidd, Philips, Kemp, Grier, and Kirkby.

Mr. J. C. KIDD then read a paper on "Methods of Sight-testing," illustrated by chalk diagrams and various lenses.

Chemists' and Druggists' Society.

A SUB COMMITTEE of the Society and the Belfast Grocers' Association met on April 16 in the Board Room, Royal Avenue, to consider the matter of

THE PRICES OF PROPRIETARY ARTICLES.

Mr. JOHN WATSON presided, and briefly stated the object of the meeting which was to devise some plan whereby an adequate profit might be secured to all traders on the proprietary articles now so largely handled. The manufacturers had repeatedly stated that if the retailers could only come to a proper understanding on the subject there would be no trouble in getting a fair margin of profit This was a question that affected grocers as well as druggists, and for that reason both had joined issue. It would be a matter for the traders to consider, if better profits could not be obtained, whether those lines which did not bear a fair profit should be discouraged and eliminated from their trade-lists entirely.

Mr. J. D. CARSE (druggist) stated the matter was engaging the attention of associations across the water. He found that, out of thirty-four reports of meetings, twenty had dealt with this subject. He considered a list should be made of those articles cut in price, and a resolution fixing the price passed on the matter.

Mr. J J. MCKER (grocer) thought traders were very foolish in the way they displayed showcards and helped to push the sale of many of the non-profit-bearing lines mentioned. He hoped that the steps now being taken would result in good.

Mr JACOB WALSH (druggist) stated the public often made mistakes and told untruths with the object of getting an article cheaper. He believed that the fixing of minimum prices by the makers was the best and simplest way out of the difficulty.

After further discussion Mr. W. J. GIBSON (druggist) proposed, and Mr. J. J. MCKER (grocer) seconded—

That, as many proprietary articles handled in common by chemists, druggists, and grocers yield, owing to excessive cutting, a totally inadequate margin of profit, it is agreed that this sub-committee, representing these sections of the trade, respectfully urge upon the manufacturers of articles (as per list) to fix a minimum wholesale and retail price to admit of a fair and reasonable profit from handling the goods, and to arrange for the protection of the price so fixed.

It was decided that the sub-committee should meet again soon and compare lists, and, when ready, forward these to the trade Press, the makers of the articles selected, and the Proprietary Articles Association. Three members of each section were appointed, together with the Secretaries, Messrs. J. M. Breach (Grocers' Section) and W. J. Rankin (Chemists' Section).

Business Changes.

MR. REGINALD COLE, chemist and druggist, of Congleton, has opened a new business at Biddulph, Staffordshire.

MESSRS. BUXTON & GRANT, chemists, have opened a high-class pharmacy at 176 Whiteladies Road, Redland, Bristol.

MESSRS. G. W. KENNY & CO. (LIMITED), dispensing and family chemists, have opened a pharmacy at High Street, Moreton-in-Marsh.

THE premises lately occupied by Messrs. Eugène Rimmel (Limited), 96 Strand, W.C., are being pulled down for Strand improvements. The business is shortly to be reopened at Hotel Cecil Buildings, Strand.

Pharmaceutical Society of Great Britain.

NORTH BRITISH BRANCH.

EVENING MEETING.

THE last evening meeting of the session took place at 36 York Place, Edinburgh, on April 23, Mr. Peter Boa in the chair.

The first paper was on

THE TITRATION OF BORIC ACID AND BORAX,

Mr. THOS. S. BARRIE said the quantitative estimation of boric acid was until 1894 very laborious by Gooch's process, but in that year R. T. Thomson published his new process. The present contribution was intended chiefly to direct attention to the process and suggest a test for inclusion in the monographs upon the acid and borax in the next Pharmacopœia. In purely aqueous solution boric acid was neutral to methyl-orange and acid to phenolphthalein. On attempting to neutralise the acid in presence of the latter indicator with normal solution of sodium hydroxide, about a fourth part only of the theoretical amount of alkali required had been added when the solution began to show a red tinge, which deepened very slowly, and the end-reaction was indefinite. In the presence of glycerin, however—and the more glycerin the better—the end-reaction was very sharp. This action was probably due to the production of a less hydrated acid (metaboric) capable of forming a neutral salt under the conditions of experiment. On diluting this solution with much water it became slowly alkaline, due to the resolution of the metaborate formed into borax and sodium hydroxide. Mr. Barrie referred to the suggestions of various authors as to the proper quantity of glycerin which should be present before and after the testing was complete, and said his own experiments indicated that about 40 per cent. in the liquid at the end of the titration was best. In practice he dissolved about 1 gramme of the acid in 50 c.c. of water, added 50 grammes of pure glycerin and a few drops of phenolphthalein solution, and ran in the alkali in sufficient quantity (about 16 c.c.). It was important that the solution of sodium hydroxide should be free from carbonate, as small quantities of carbon dioxide spoiled the end-reaction. The following was suggested as a Pharmacopœia monograph for boric acid:—

One gramme of the acid dissolved in 50 c.c. of warm distilled water should require, after the addition of 50 grammes of glycerin and a few drops of phenolphthalein solution, 16·25 c.c. of volumetric solution of sodium hydroxide for neutralisation.

Many processes had been suggested for the estimation of borax, but Mr. Barrie thought an improved pharmacopœial test was to be found in the determination of the boric acid that the borax yields on neutralisation with semi-normal sulphuric acid. That idea was crystallised in the following, which he suggested should replace the corresponding part in the official monograph:—

One gramme of borax dissolved in 40 c.c. of distilled water should require for exact neutralisation (indicator, methyl orange) 10·55 c.c. of semi-normal sulphuric acid, and, after boiling, an addition of 50 grammes of glycerin should now require 10·55 c.c. of normal sodium-hydroxide solution to exactly neutralise (indicator, phenolphthalein).

Mr. DUNCAN agreed with Mr. Barrie in the experience he had had with Thomson's process of estimating borax. He had always found the methyl-orange process of the present Pharmacopœia come out too low. Although the process was a capital one he was not very keen about getting it introduced into the B.P. He thought they had quite enough processes in the B.P. already.

Mr. MCDIARMID asked Mr. Barrie if he used two indicators—methyl orange and phenol phthalein?

Mr. BARRIE said he did.

Mr HILL pointed out that Mr. Barrie had mentioned that in practice he used rather more than 40 per cent. of glycerin in the finished titration. He thought the figures he gave, as far as he could count, came just a little under that. He believed Thomson's process was now universally adopted by

Digitized by Google

analysts, and he thought it was highly probable that it might be introduced.

Mr. BARRIE, in the course of his reply, held that his figures were correct. Practical men did it all by weight.

Mr. HILL suspected that the others meant volume.

Mr. J. R. HILL read a paper by Mr. Thomas Dunlop on

THE TURPENTINE TEST FOR GLACIAL ACETIC ACID.

He said that subsequent to the publication, in August, 1899, of Mr. Alcock's suggested application of the converse of the B.P. test for oil of turpentine as a test for the strength of glacial acetic acid, he submitted to that test the stocks he received, but always with negative results, even although they responded to the sp. gr. and total acidity tests. This was in part confirmed by Mr. Duncan's paper of March, 1901, directing attention to the varying solubility of oil of turpentine in glacial acetic acid. In May of last year, however, a supply of glacial acetic acid which he received at first gave a negative result, but subsequently responded to the test. He, however, observed that separation had taken place on account of change of temperature, for on holding the test-tube in the closed hand for a few seconds and then shaking, solution was restored. But the solution was only temporary, for on the temperature again falling, opalescence was soon followed by separation. The temperature at separation was 18° C., at solution 22° C., whilst at 20° C. the liquid was bluish-white. Before 21° C. was reached, the acid could be seen separating from the point of the thermometer. His experience of the test since June had been that acids of full strength responded to it irrespective of temperature and pressure when it was used in the proportion of three volumes to five volumes of acid. As indicating the sensitiveness of the test, he stated that the addition of one drop (less than 1 per cent.) of water to a solution containing 100 minims of glacial acetic acid and 60 minims rectified oil of turpentine produced an immediate and complete separation, that at a temperature of 27° C. the mixture was quite milky, and that it took four volumes of this diluted acid to make a clear solution with one volume of rectified oil of turpentine. His observations on the influences of temperature and pressure on the test convinced him that the test was so unreliable that it should not be introduced into the Pharmacopœia as suggested, and where it already existed it ought to be deleted.

Mr. DUNCAN said his experience agreed with Mr. Dunlop's that the suggested test for acetic acid was of no use. The Pharmacopœia allowed the use of turpentine from various species of pines, and variations in sp. gr., odour, and boiling-point were also permitted, and with all these variations it was natural to expect variation in the solubility. Turpentine also, unlike many essential oils, became more soluble with age both in acetic acid and in alcohol. He pointed out that the Pharmacopœia defined glacial acetic acid as 99 per cent., the titration test indicated 98·9 per cent, and the boiling-point 99·2 per cent. Until the Pharmacopœia put some limit on glacial acetic acid and oil of turpentine it was needless to think of using one as a test for the other.

MR. MCDIARMID said he found that his stock of oil of turpentine dissolved quite readily in an equal volume of glacial acetic acid at 15° C.; a sample of Russian oil of turpentine with a tarry odour was also readily soluble. He (the speaker) could always get a clear solution, and he thought Squire was correct in saying that oil of turpentine was soluble in all proportions in glacial acetic acid. His acid on titration indicated 98·5 per cent.

Mr. LYON thought there was some confusion, and that more study was required to clear it up. His experience was similar to Mr. McDiarmid's.

Mr. MABEN thought Mr. Duncan had brought out a most interesting point about oil of turpentine increasing in solubility with age.

Mr. HILL pointed out that while the experience of chemists differed there seemed to be general agreement with Mr. Dunlop's opinion that this test should not be introduced into the Pharmacopœia. Mr. Dunlop had mentioned that one sample which dissolved began immediately to separate, and could not be dissolved again. On shaking it might be that those observers who found the oil of turpentine readily soluble would, if they had waited a little longer, have found the separation begin.

The next paper—by Mr. William Glass, on

SOME METHODS OF DISPENSING

was read by Mr. J. R. HILL in the author's absence. He said that in prescriptions for mixtures difficulties frequently occurred, and it was feared that the practice of chemists in solving them was not uniform. Nor did chemists indicate as a rule on the prescription how they solved the difficulty. The consequent variation in practice tended to produce in the public mind a suspicion that prescriptions were not always "accurately dispensed." Mr. Glass then proceeded to cite examples. In a prescription like the following—

Quininæ hydrobrom.	...	...	gr.	xxiv.
Aquæ	...	...	℥	viij.

M.

—the quinine salt might be dissolved by one chemist, and suspended and a "shake" label merely put on by another. Mixtures containing salts were usually, and ought to be, strained, but in cases where that could not conveniently be done without separating the part of the salt undissolved, if the salt was dissolved by means of hot water, precipitation took place in the form of crystals. In such cases the proper method was to dissolve by means of heat. If that did not alter the composition of the salt, strain, cool, and rub the separated crystals finely in a porcelain or glass mortar. Mixtures containing bismuth subnitrate without any suspending agent might be dispensed in various ways according to the opinion of the dispenser. The following might at least reasonably be adopted: (*a*) "Shake" simply, (*b*) mucilage of tragacanth, (*c*) mucilage of acacia, (*d*) glycerin. The first was hardly permissible unless the bismuth subnitrate was of a light, bulky nature, as was the case with some brands. The others would make little difference in the appearance of the mixture, only in the case of glycerin a sweetish taste would be detected. In the following—

Tr. digitalis
Sig.: ℿx. t.i.d.

—two methods of writing the directions might lead to different results. "Ten drops" might be a very reasonable interpretation of the physician's instructions, but the dose might vary according to the method of dropping and the size of the lip of the bottle, not to speak of exceeding the dose. "Ten minims measured in a glass measure" might very allowably be written on the label, and the patient supplied with a suitable measure, thus ensuring accuracy. With regard to powder-prescriptions, a note as to the fineness of the powder used might seem needless, but such dispensing-notes would sometimes establish confidence and prevent misunderstanding. Mixing by knife in small quantities where the ingredients were in fine powder might be preferable, but the mortar in most cases gave the best and quickest results. In a prescription like the following—

Pulv. rhei ...	...	...	℥	iss.
P. sodii phosph.	...	...	℥	ss.
P. sodii bicarb.	...	...	℥	iiss.

M.

—the sodium phosphate might be slightly dried and in powder, and in other cases "exsiccat." might be used. In the dispensing of pills the excipient used might be noted, as well as the means taken to finish it—whether with pill-finisher, French chalk, liquorice, or cassia-powder, sugar-coated, silvered, or varnished. He also mentioned the various methods of preparing ointments—by means of palette-knife on a porcelain slab, or in a mortar if the powders were not sufficiently fine. The material on which plasters were spread—whether on adhesive plaster, sheepskin, chamois, calico, or muslin—should also be noted. The want of some standard pharmacopœial material afforded at least freedom to use whatever might be most convenient. In regard to the spreading of blisters, it was easy to make an elegant emplastrum cantharidis, but the emplastrum cantharidis, B.P., was hardly ever satisfactory. The use of powdered flies or liquor epispasticus was a necessary addition. As to dosage, in preparing a dozen suppositories it was necessary to use materials for one or two more. In preparing pills and powders provision was not made for loss, and the consequence was that the patient never got the full strength of the medicine as ordered. In small quantities of potent drugs the loss was greater.

Digitized by Google

Mr. Henry said he was not much in agreement with him. He disapproved of dispensing potassium-chlorate mixtures with hot water. Although Mr. Glass sought uniformity, he gave four methods of dispensing bismuth mixtures without indicating a preference for any of them. There would be considerable difference between such a mixture dispensed with mucilage and with glycerin. They should not add to a doctor's prescription, and if no suspending agent was prescribed it should be dispensed with water. It was difficult to know how to deal with drops, as it depended on whether the medical man meant drops or minims. In one case, in which a doctor prescribed bromoform in drops, the desired effect was not obtained, and on the difference between drops and minims being explained to him he understood the reason.

Mr. Lyon expressed his disagreement with Mr. Glass in using dried sodium phosphate in dispensing, and also with Mr. Henry when he objected to the addition of a suspender to certain mixtures. He thought it was quite proper where it enabled them to make a pre entable mixture and did not affect the action of the medicine. He disapproved of the addition of powdered cantharides to fly-blister. He found, however, that emplastrum cantharidis B.P. was very variable, and could scarcely be got twice alike.

Mr. McEwan thought some of Mr. Glass's critics had misunderstood his purpose in contributing this paper, which was to point out different methods of dispensing and to suggest an agreement. He was surprised that tragacanth should be suggested as a suspender for bismuth.

Mr. Barrie thought they should always assume that medical men understood what they were about when prescribing.

Mr. Thompson gave it as his experience that mercurials in an ointment did not affect a steel spatula. In the absence of moisture or acid, flexible-steel spatulas coated with vulcanite answered well instead of a bone spatula.

Mr Hill said his idea of Mr. Glass's object was to point out that the chemist in dispensing a prescription should note on the prescription the particular method he had adopted, and the excipient or suspending agent employed. By that means uniformity would be attained.

The Chairman expressed the opinion that many dispensing difficulties arose from unnecessary interference with the prescription. With regard to minims, he related an instance where a graduated measure was returned as inaccurate, the patient dropped ten drops into the measure, and found it did not correspond with ten minims. He advocated the use of crystallised phosphate of sodium as an ingredient in a powder, and said his experience was that the B.P. cantharides plaster was satisfactory. It should not be used too soon after being made, and improved by keeping. He disapproved of making seven suppositories when only six were required, and he was in the habit of mixing powders on highly glazed paper.

Mr. Hill next communicated a paper on

COPPER IN NUX VOMICA.

He reverted to the subject because of a note he communicated at an evening meeting two years ago having been traversed by Mr. David Hooper, of Calcutta. Mr. Hooper had in the interval stated that he had examined some nux-vomica fruits from Mysore. He "ignited two of the largest, and examined the ash particularly for copper. There was no trace It is very evident that copper is not a natural constituent of strychnos-fruits." Mr. Hill said that since reading the original paper he had received communications from quite a number of pharmacists, stating that they had got the same greenish-blue mixture with a tincture of nux vomica in which they did not find copper, and also that they had examined nux-vomica seeds, which gave no indication of copper. In several of these cases he had been able to show that the small trace of copper had been missed in the way he himself nearly missed it at first. Mr. Hill proceeded to state the results of experiments he had made with nux-vomica seeds, which he had just received from Mr. Alexander Meldrum, of Calcutta, grown in the Botanic Gardens there. Two full-sized seeds were incinerated, and the ash treated with boiling dilute sulphuric acid and filtered. The clear filtrate was divided into two portions. To one was added about half an inch of the finest freshly polished iron wire. A similar piece of wire was placed for comparison in a smaller quantity of dilute sulphuric acid. In about two hours the wire in the solution of ash had a perfectly distinct coating of copper. After ten hours the coating was quite unmistakable and easily recognisable even by an untrained observer After twenty-four hours the iron wire in the dilute sulphuric acid was entirely dissolved, but the coppered wire, being insoluble in dilute sulphuric, remained unchanged. To the other portion of the filtrate ammonia was cautiously added. A distinct blue tint was seen by two trained observers when the ammonia reached excess, but the blue tint speedily became imperceptible. It might quite readily have escaped notice altogether. That was quite in accordance with his previous experience. It was also confirmed by Vedrodi. An iron bunsen was used for incineration. He proposed continuing the investigation, but meantime there seemed conclusive evidence that some nux-vomica seeds did naturally contain copper, that the original statement of Meissner to this effect was accurate, and that the dictum of Mr. Hooper at least requires qualification.

The authors of the various papers received the cordial thanks of the meeting, and, this being the closing meeting of the session, a vote of thanks was given to Mr. Boa, on the motion of Mr. Henry, for the kindly and genial way in which he had presided over the meetings during the winter.

COUNCIL PRIZES EXAMINATION.

Friday, April 18, 1902.

Botany [Four Questions].

(1) Explain how the starchy endosperm of a seed is rendered soluble for transmission into the embryo. (2) Describe fully the structure of an isobilateral foliage-leaf. What modifications would you expect to find in the leaves of moorland plants and in those of evergreens? (3) Give an account of the life-history of two of the following fungi: *Pythium*, *Penicillium*, *Claviceps* (ergot), *Erysiphe* (mildew). (4) Explain the morphology of the various fruits characteristic of the sub-orders of *Rosaceæ*. (5) Compare the structure of a mature ovule of an angiosperm with that of a gymnosperm. Describe fully the process of fertilisation found in the angiosperms.

Materia Medica.

(1) What are the active principles of ipecacuanha, and in what proportion do they exist in the drug? Give a process of assay. (2) Describe the jaborandi-leaflets of commerce. Give the botanical and geographical sources of the plant yielding jaborandi folia. Name the active principles, and give a method of extracting the most important one Mention any of the adulterants with which you may be familiar, and show the characters by which they may be distinguished from genuine jaborandi. (3) What are the characters of a good sample of opium? (4) How would you detect (*a*) Cotton-seed oil in olive oil? (*b*) Hard paraffin in beeswax? (*c*) Colophonium in balsam of Peru? (*d*) Turpentine in oil of lemon?

Chemistry.

1. Give an account of the preparation and properties of the following substances:—Orthophosphoric acid, iodic acid, chlorine peroxide, sulphur monochloride.

2. What is the chemical character of clay, glass, blast furnace slag? Explain the chemical action which takes place when manganous sulphate is mixed with borax and the mixture fused on a platinum wire in an oxidising and in a reducing flame.

3. Explain by chemical equations the following analytical reactions:—(*a*) The solution of arsenious sulphide in ammonium sulphite, (*b*) the prevention of the precipitation of magnesium by ammonia when ammonium chloride is present, (*c*) the production of a precipitate and its solution in excess of the reagent when ammonia is added to a solution of copper sulphate, (*d*) the oxidation of a ferrous salt by nitric acid.

4. Explain the origin and meaning of Avogadro's hypothesis, and give an example of its application to a chemical problem.

5. Give an account of the preparation of lactic acid and of its synthesis. What are the chief reactions which lactic acid undergoes? How is the existence of the different lactic acids accounted for?

6. State briefly the experimental facts on which Kekulé's (hexagonal) formula for benzene is based.

EXAMINATIONS IN LONDON, APRIL, 1902.

The Registrar of the Pharmaceutical Society of Great Britain has furnished us with the following list of persons

Digitized by Google

who have satisfied the Examiners at the recent Major and Minor examinations held in London:—

MAJOR EXAMINATION.

Candidates examined	42
„ failed	22
„ passed	20

Barritt, Percy, Streatham
Bennett, Reginald R., London
Cocking, Thomas T., London
Girling, William R., London
Hanbury, Frederick C., London
Hill, Arthur C, Manchester
Hills, James Stuart, London
Hole, William W., London
Hooper, Elsie S., London
Hunt, George P. A., London
Jones, John W., Dartford
Male, Charles Edgar, London
Neathercoat, Ernest T., London
Paterson, A. G. C., Scarborough
Phillips, Horace Stock, Wigan
Reavley, Robert, London
Robinson, R. A., jun., London
Smith, John B., Rusholme
Walker, George T., Birmingham
Young, William T., Leicester

MINOR EXAMINATION.

Candidates examined	315
„ failed	225
„ passed	90

Ashworth, A. E., Blackburn
Baker, Charles B., Nuneaton
Barker, Sidney F., Cambridge
Barrett, Walter Ernest, Leeds
Barritt, Edward C., Dalston
Brook, William B., Hereford
Bunnell, Albert E., Heywood
Campbell, George, Penrith
Carter, Arthur, Tamworth
Chesworth, C. P., Market Drayton
Colebrook, D., Shooter's Hill
Collitt, W. S., Northallerton
Davies, Henry C., Croydon
Delve, William H., Manchester
Edgar, A. H., South Norwood
Evans, John W., Rhuddlan
Falding, Walter B., Wakefield
Fletcher, Edward N., Halifax
Foster, James, Ellesmere
Fry, Albert, Taunton
Gaze, J. E., Bury St. Edmunds
Glaholm, W., Hebburn-on-Tyne
Goodwin, F. J., Stafford
Goodyer, William, Weston
Gower, Percival T., Tonbridge
Graves, Herbert H., Alford
Hall, Henry, Cardiff
Haselgrave, E. E., Wakefield
Henchley, E., Portsmouth
Hickson, John Alfred, Malton
Hinchco, J. H., Stoke-on-Trent
Holden, Benjamin, Blackburn
Holding, Walter E., Audley
Holmes, Oscar D., Sheffield
Holt, William, Blackburn
Horniblow, Kate N., Charlbury
Hough, Bernard G., Sale
Hoyles, George Edward, Hull
Hurn, William Henry, Norwich
Jensen, H. R., New Brighton
Johnson, H. T., Pateley Bridge
Jones, Albert T., Cardiff
Kenway, Bertha Anne, Clifton
Leicester, Charles, Oldham
Lowe, Frances W., Bristol
Lyall, David W., Montrose
Mackay, Charles, Bradford
Marris, George W., Grimsby
Mathews, F. C., Cirencester
Millar, Benjamin, Darlington
Mortimer, Henry, Batley
Nash, Alfred Wilkenson, Deal
Northey, John Henry, Alford
Nowell, A. H., Birmingham
Oliver, Seth H., Holsworthy
Osborne, Harold E. C., London
Owens, James Alfred, Kington
Paley, F. G., Aberystwith
Parson, Sydney J., Cambridge
Porter, George B., Driffield
Rees, Samuel T., Carmarthen
Reynolds, Benn R., Narbeth
Roberts, Arthur J., Falmouth
Rodhouse, Lewis, Leicester
Senior, Herbert Clare, York
Sewell, A. E., Peterborough
Slight, Harold, Nottingham
Slomau, Courtenay, Torquay
Smith, Philip S., Market Rasen
Spicer, William S., Dorchester
Spruce, Charles F., Llandudno
Spurin, Stanley B., Plymouth
Starmer, G. F., Tunbridge Wells
Sumption, W. C., Blackwood
Sykes, Archibald, Oulton
Talbot, John, Blackpool
Taylor, Walter P., Wellington
Todd, John, Cockermouth
Tracy, Charles H., Dorking
Trott, Edward Henry, Bolton
Twidale, Herbert, Newark
Waugh, Herbert L., Halifax
Williams, Arthur, Hayle
Willis, Francis E, London
Wilman, Francis A., Bradford
Wilson, William D., London
Wreathall, Robert D., Hull
Yates, Francis H., Blackpool
Yates, Henry Henley, Swinton
Yeomans, F. A., Warrington

THE demand for perfumery is rapidly increasing, says the American Consul at Suatow, and the article commands rather high prices. The two kinds of perfumery most in evidence are the French perfumes of Ed. Pinaud and the American perfumes of Colgate. Nearly all of this perfumery is in small bottles, up to 4 oz, a bottle containing 2 oz selling for $1 50.

AT a recent meeting of the Royal Academy of Medicine in Ireland Mr. G. J. Johnston read a paper on a case of swallowing of a metallic denture successfully treated by the internal administration of cotton wool. The denture seemed to be situated in the pyloric end of the stomach and sandwiches containing a thin layer of cotton wool in each were administered. A week after admission an aperient in the shape of ʒij. pulv. glycyrrh. co. was administered, and the denture was passed in the fæces rolled up in cotton wool.

Examination Experiences.

THE following are selections from the experiences of candidates at the recent Minor examination:—

My first subject was practical chemistry. "Find the percentage of iodine in a strong solution by means of $\frac{n}{10}$ thio." As the iodine was stated to be strong, I diluted it and used it to titrate the thio. The results of two independent determinations came out very closely, one being 3·999 per cent. and the other 4·002 per cent. The salt to analyse was ferri sulph. and pot. nit., but I had no time for confirmatory tests. In dispensing I had a cannabis-indica mixture, which, thanks to the "Art of Dispensing," gave no trouble. Pills containing ferri sulph., ext. aloes, and extracts were soon disposed of, although the silvering did not turn out very brilliant. A percentage solution and 150 grammes of ung. hydrarg. nit. completed this subject. The examiner wished me to make the ointment in a mortar, and seemed quite disappointed when I asked for a jar. A day or two afterwards I presented myself for the oral examination. I had first to go to Mr. Harold E. Matthews for "scripe." He gave me a long English prescription to translate into full Latin, two or three autograph ones also into full Latin, a percentage calculation, and a lot of doses. My next subject was pharmacy, with Mr. Edmund White. His first question was, "Have you ever made any of the extracts of the B.P.?" I replied that I had not. He then asked me if I had made any of the tinctures, to which I replied I had made most of them. He took me through the tinctures, asking reasons for methods of manufacture, doses, and strengths. Professor Thomson next took me in chemistry, asking me about acetylene, benzene, and most of the laws of chemistry in the Minor syllabus. It was altogether a very pleasant quarter of an hour. Mr. Marsden next examined me in materia medica. The specimens I was asked to recognise included kino, Tampico and Vera Cruz jalap, strophanthus-seeds, lupulin, kamala, squill, pareira, cane sugar, milk sugar, areca, black pepper, &c. Mr. Holmes took me in botany. A stem of a gymnosperm T.S. was the first thing shown. Was I quite sure it was not a root? A rhizome, branch with phylloclades and a compound leaf came next. He then showed me a daffodil and a hyacinth. Did they belong to the same natural order? Why not? Branch of a labiate in flower, and the inflorescence of a composite, completed the list. After a few more questions on absorption, assimilation, transpiration, and respiration, I was told to go and sit down. Soon after I was seated I was called up and told I had passed a very creditable examination.

LONDONER. (22/4.)

I commenced with dispensing; the paper read as follows:—

Make 200 c.c. syrup. ferri iodi. Send in a tared flask.

Potass. iodi	ʒss.
Tr. guaiaci ammon.	ʒiv.
Tr. cinchonæ	ʒiv.
Mucilag.	q.s. (ʒvj. used)
Aq. ad	ʒvj.

M. Ft. mist.

Sig.: ½ bis die.

Hyd. perchlor. ... ... gr. j.

Ft. pil. xxx. Varnish.

Sig.: 1 ter in die.

Suppos. acid. tannic. vj.

1 every night.

Send a blister, 4 × 2.

Practical chemistry followed, with the estimation of the strength of a solution of H_2SO_4 by means of $\frac{n}{1}$ NaOH solution, and a salt, which proved to be a mixture of bismuth oxychloride and strontium carbonate. On attending for the oral examination a few days after, I was called for prescription-reading first, and then to chemistry, which was commenced with an assurance that the first day's work had been very satisfactory, followed by a discussion of the oxides of chromium, chromates, bichromates, oxidation and reduction aldehydes, alcohols, phenols, and nitro-compounds. Then came a few questions on the balance, and that was over. I was next sent to botany, and commenced with a flower to refer to its natural order (*Rosaceæ*). I then gave the distinguishing features of the order, and was shown a piece of wood and asked to describe the annual rings and wood-vessels, and another piece with scattered bundles (a monocotyledon). I then described a few slides, and recognised a piece of fresh fennel, which concluded the botany examination. The next subject was materia medica, and I started by being asked to pick out the English aconite, and, after discussing this, kousso, hyoscyamus, jaborandi, and the opiums, also simarubra bark were given a little attention. Lastly, I was sent to pharmacy, and I went into the preparation of tr. opii, tr. camph. co., and vin. ferri, concluding with ol. ricini and the distinction between fixed and volatile oils; and then came at last the congratulation by the President. L. R.

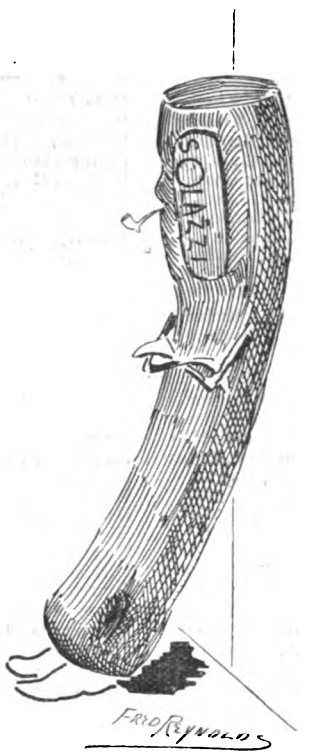
Pharmaceutical Education.

The Views of the Students.



At the present time, when the question of the future of pharmaceutical education and examination is apparently fast approaching a crisis, it may be permitted to a student, who has had good opportunities of knowing the feelings of the pharmacists of the future on this subject, to put into words briefly the opinions of those most nearly concerned with the suggested changes. The subject resolves itself into three main divisions—viz., the Scottish university degree, the division of the Minor, and the compulsory curriculum.

English students do not concern themselves greatly with Scottish degrees, and never will; many, of course, would not take advantage even of an English degree in pharmacy; but this much is certain—that if the University of London, which has already recognised Professor Greenish as a teacher of pharmaceutics, were to allow that subject to be taken, with chemistry and botany, in the Final examination for the ordinary B.Sc. degree, a large number of Major men would assuredly be induced to proceed to such a degree. This is an end for which the Council of the Society and Professor Greenish will doubtless work; and if the example of the Scottish University be likely to weigh with the London senate at South Kensington, English students will on that account, as well as on other grounds, heartily welcome the adoption of Mr. Tocher's suggestions.

To the Vice-President's dictum—that division of the Minor is not wanted by students—strong exception must be taken. The writer is in a position to state that this is a "consummation devoutly wished for," not only, though no doubt partly, because of the feeling that the examination would be easier to pass if divided, but it is almost universally held among students, as among the majority, surely, of their seniors, that a divided Minor would be at once fairer to the candidates and safer for the public interest. Writing as one who went through the ordeal less than a year ago, the writer can positively say that the sudden change from chemistry to pharmacy, and from pharmacy to botany, and from botany, perhaps, to prescriptions in the examination-room is itself very trying to the candidate, and is often fatally disturbing to the naturally nervous man. The argument that students would come up better prepared if they had fewer subjects to tackle at a time has already received sanction in the highest quarters, and need not here be entered into; suffice it to say that the truth of the argument is quite patent to students themselves.

With regard to the third and greatest educational problem—that of the "compulsory curriculum"—there is among students the greatest diversity of opinion. Even at the "Square" school, where students do voluntarily undergo a nine months' course of study for the Minor, it appears that by no means all are in favour of making such a course compulsory. At the other colleges it is even less desired; but so long as men continue, as is not infrequently the case, to "fluke through" the Minor after three months' work or less, so long will others try to do likewise, and will resent the enforcement of a further period during which money has to be spent, and not earned. If it be permitted to one of the youngest members of the Society to suggest a remedy, it is this: By some alteration of system (which should not be impossible to the body of experienced men who constitute the Examining Board) eliminate the present element of luck from the examination, so that the badly trained will be rejected as surely as that the well-trained man will be successful. Then, and then only, will the average student accept with composure the enforcement of a curriculum, and it will be just and equitable to enforce it. In spite of the statement by Mr. Allen at the Council last week, it is a fact, well known to lecturers at the schools, and emphasised lately by Mr. Grier, of Manchester, that under the existing system the Minor does not effectually separate the sheep from the goats. The question of fees and educational expenses need not be touched upon; but as things are, pharmaceutical students cannot be expected to be capitalists; and it is considered that the expense attending a curriculum would be no more than the average expense in which students are at present involved.

Things that Happen—Sometimes.

So Lazy!

(*A Study in Pronunciation.*)

From the sunny Spanish shore
(Think I've heard that said before),
Where you many a swarthy lass and lad see
Gazing each in other's eyes,
'Neath the blue and brilliant skies
Of my far-off home in mythical Sol-azzi;

Come I, glistening bright and black,
Keen to fill the chemist's lack
Of an adjuvant; and soon adorned and gauzy,
In the counter-case I'm laid,
And triumphantly displayed,
With an ornate ticket labelled "Prime Solazzi."

But the enervating clime,
Where I flourished in my prime
(And of which my recollection is but hazy),
Left it's imprint on my frame,
And Solazzi is my name,
For my nature is so lazy, O Solazzi!

A Medical Congress is to be held in Cairo from December 19 to 23, 1903.

Detecting Human Blood-stains.—A new use for rabbits has recently been discovered by a couple of Parisian medical men, who have given the results of their experiments to the Academy of Medicine in Paris. The serum of human blood, it seems, if injected into the veins of a rabbit is death to the rabbit; but if given in small at first but gradually increasing doses, the rabbit becomes immune to the poison. The serum of a rabbit so treated will then, when brought into contact with human blood, give under the microscope a characteristic precipitate which will enable the expert to recognise whether a blood stain is composed of human blood or not. Hitherto there has always been considerable difficulty in deciding as to whether blood-stains are, or are not, composed of human blood, for though the difference between the corpuscles of birds and mammals could be accurately determined, it has been impossible to distinguish between the globules of a man and those of a dog or a rabbit, a question of importance frequently arising in criminal cases.—*Truth.*

Observations and Reflections.

By XRAYSER.

The Pharmacy of the British Empire

(including for the present purpose Paris and the Riviera) was marvellously illustrated in the last *C. & D.* What a vast field for our industry lies before us! I know how inferior we British chemists and druggists are to the continental pharmaciens and apothekers, but we can nevertheless show these gentlemen something in the way of running businesses. Witness those illustrations of Bombay pharmacies, and many others in India and the colonies that have been published from time to time. Assistants, I note, are discussing whether they are paid as much as they deserve when they go abroad. Of course they are not: very few of us are properly appreciated. But they get the market-price, and they get what is better than cash—experience and education. Apparently they are wanted in most parts. "It is difficult to get assistants to come to India"; "good assistants are not easily obtained for Paris"; "qualified men can always get good berths" in South Africa. These are quotations from last week's articles. But all those countries want good men; and the difficulty is for a young man to know if he is a good man or a duffer. In the latter case, he is not wanted in British pharmacies abroad. So, too, if he makes a friend of the bottle: he had better go to the bad at home. But why the intelligent, temperate, and qualified young chemist, with no particular home-ties, should miss the chance of seeing the world which so cordially invites him I do not understand.

A Wider Basis of Taxation,

a phrase which, I fancy, Sir R Giffen has made familiar to us, is apparently the policy which has attracted Sir Michael. It is wonderful how phrases rule the world. Free-traders themselves carried on their great struggle and won their victory by the aid of half-a-dozen phrases. This one, suggestive of the soundness and substantiality of the pyramid style of architecture, attracts support as soon as it is uttered. But probably the Chancellor of the Exchequer himself, who is financially sound at heart, has discovered by this time that in seeking to spread wider the basis of taxation, he is actually only building pyramids the wrong end upwards.

Last Year,

after he had imposed the sugar-tax, Sir Michael learned to his astonishment that a lot of things imported contain sugar, and that all these would have to pay. Then he had to cram up enough information about the polariscope and the saccharometer to beat off his questioners in the House of Commons, the Customs officers meanwhile widening out the pyramid from the apex of the sugar-duty which the Legislature had agreed to. We have had a similar experience this year. "Flour and grain" were what the Chancellor proposed to tax, and when a day or two later he was asked if that expression included arrowroot, and macaroni, and rice, and a lot of other things, he made it manifest that such a development of his tax came as a surprise to him. But the Customs were ready the next morning with their list.

Protective Duties

of any kind are bound to expand in that way. Agriculture has got its toe in this year. The sugar-refiners, I notice, are discontented because the sugar-tax was not increased. Sir Howard Vincent sees in these taxes the promise and potency of the protection of British hardware. When that is attained chemical-manufacturers will have good cause to complain if they have to pay more for their pots and pans, and their own products are left uncared for; and so on in ever-widening circles A poor way of helping British industry in its contest with the world. In the *Pharmaceutical Journal* for August, 1842, a list of the duties chargeable on drugs, according to a revised and simplified tariff, appears. It occupies seven pages, and even then includes such comprehensive lines as "drugs not enumerated, 2*s.* per cwt.," "oils not enumerated," and so forth. The wholesale druggists' club of that day did its best to resist sacrilegious interference with this precious tariff. Let modern wholesalers try to realise what such a condition of things would mean to their modern businesses. To specify only one inconvenience, it may be mentioned that it was a common occurrence to pitch damaged or low-quality drugs into the sea rather than land them, because it was certain that they would not sell for the cost of the duty.

There may be a Suspicion

of a free-trade bias in the preceding paragraphs. Perhaps I may counteract this by advising reference to a clever, but, in my opinion, a fallacious, presentation of the other side in the essay entitled "How English Trade is Crippled," published last week by the Vinolia Company (advts., page 91).

Grocers should be Grateful

to their trade organ. The Editor of the *Grocer*, commenting on the Budget, congratulates himself, with the natural pride of a man who has served his generation, on his foresight. "The warning we gave the retail trade to be prepared for all eventualities has been proved fully justified," he says. It has; but I should like to ask how a tip of that comprehensive character could have possibly failed?

Mr. Austen,

in his very interesting sketch of "Old Sheffield Druggists," refers to dias cordial, which, in the earlier half of the last century, he tells us was made and sold in large quantities by the chemists of Sheffield. I presume it was so known, and perhaps labelled; but I have never seen the syllables of dia-scordium so divided before. A young pharmacist who talks glibly of phenylacetamide tells me he never heard of diascordium. And yet in pharmaceutical history it was not a bad second to theriacum. Of course, originally it was a preparation of the scordion or water germander. I am not sure how or when it drifted into an opiate. My own ancient recollection of it is that we prepared it extemporaneously when it was asked for by adding 1 drop of essence of peppermint to ½ oz. of syrup of poppies for a penny. The Sheffield chemists seem to have made it more scientifically. I suppose it has been elbowed out of pharmacy by Mr. Steedman and Mrs. Winslow.

A Word of Sympathy

with the Editor of this journal may perhaps be admitted into this page. He has suffered a heavy affliction by the loss of a beloved daughter, a young lady of singular promise, just as she was crossing the line which separates girlhood from womanhood. At the most famous of girls' colleges in London she had for several years literally swept the board of first prizes and scholarships, and last June matriculated with honours at London University. Only a word like this is permissible here; but there are few who will not appreciate how much this little paragraph covers.

Are we Decadent?

The famous French critic, M. Henri Taine, hardly exaggerated when, in his "Notes on England," he described this country as the breeding-ground *par excellence* of sects, factions, and societies. And there is an element of truth

Digitized by Google

overlain by the caricature of his statement that the Englishman who is big with an idea or grievance hastens to deliver it as a letter to the *Times*, or embodies it in a new society; indeed, of the making of societies there is no end, and the obscurest and feeblest of them pretends to enjoy exuberant health and prestige, forgetful of the fact that the journalistic and official reports of the transactions of all public movements are apt to be meretricious, especially if the reporter is also an officer of the Society. A report sometimes does less than justice to a meeting, and it never adequately reproduces the life and colour of the original. In many cases, however, the record charitably embellishes the facts, so that in general there may be as little resemblance between the narrative and the reality as between the flowing periods of a *Times* version of a Parliamentarian's speech in the House and the staccato and ungrammatical sentences of the "orator." These general observations have a particular application to the Pharmaceutical Associations of every description which are just bringing the winter session to a close with the time-honoured ceremonies of drum-beating, trumpet-blowing, and marching and countermarching of stage-armies. As far as appearances go every Association is more sound and successful than ever, and there are more of them in connection with the drug-trade than ever there have been before; yet it is an open secret that for the past decade or so it has not only become more and more difficult to form new associations, but also that it actually requires great and continuous exertion to prevent the hitherto stable old organisations from falling to pieces. In view of the greater number of Associations, and, to us, the most evident fact that reports of their meetings occupy six times the space that was given to such matters ten years ago, it appears ridiculous to say that matters are worse than they were. Yet they are. In most parts of the country, and in the largest centres particularly, there is the same dismal complaint of lessening membership and revenue, meagre meetings even for important and urgent purposes, and a paralysing apathy towards all questions of pharmaceutical science, politics, and economics. According to accounts untainted by illusions of memory, the average pharmacist of the present day does not compare favourably in this respect, in spite of his educational superiority, with his predecessor of twenty or thirty years ago, who took an active and intelligent part in the public affairs of his craft, and was an occasional and often effective contributor to its technology. At that time in all the populous centres there were powerful and vigilant local associations under whose *ægis* uniform prices and collective action for the vindication of trade interests were ensured. Now these Associations are mostly dead, moribund, or in a state of suspended animation which 'twere flattery to call "masterly inactivity." How can we account for the decadence? In the first place it is obvious that the causes are general, and not special to pharmacy, although the present condition of the latter is an instance of the prevailing process. There has been a marked decline in the intellectual life of the nation for some decades past, as shown by the growing passion for the frivolous and the base in politics, literature, and art, and the individual craving for morbid excitement in the form of so-called "sport." Notwithstanding the influence of compulsory education the skilled artisan of to-day is a less virile, capable, and cultured type than the handicraftsman of the early decades of the nineteenth century who figured in the great political and social reform movements of that period. We seem to have identified a *causa vera* of this degenerative change, in the observation of the fact that, whereas the old handicraftsman—*e.g.*, the hand-loom weaver—was master of his machine and art, his successor at the power-loom is a mere detail in the mechanism of the industry, often with little more intelligence and initiative than the loom which he tends. There can be no question that the first effect of the division and sub-division of labour, and the displacement of manual work by machinery, is to emasculate individuality by starving the mental and moral nature. In the sphere of pharmacy the influence of this factor can be clearly traced. No one regrets the relief from the drudgery of pill, plaster, and galenical making in the back-shop; yet the drudgery had its compensations, and was often a liberal education in the exercise of patience, industry, and self-reliance. The misfortune is that the pendulum has now swung as far on the other side, and the sub-division of labour is nearing the point at which it threatens to extinguish the individuality of the pharmacist by sinking it in that of the mere distributor of commodities—a condition that would inevitably tend to deprive him of all incentive to independent thought and action. In this connection the latter-day tendency towards the consolidation of business undertakings into "syndicates" and "combines" has also had a pernicious influence. The employé of the big concern is liable to demoralisation from two sources. First, he is the victim of excessive sub-division of labour; and, secondly, his concourse with a large body of fellow-employés is apt to be unsettling, rather than inspiring, and to give him a bias towards social or convivial pleasures to the detriment of his intellectual interests. The increasing pressure of modern business life is another potent factor. The general experience seems to be that it is harder to make a decent living in business than formerly, although in respect of hours and work we seem to be in no worse a plight than our predecessors. The human being, as an energy-transforming machine, is only capable of doing a definite amount of work, and, if the energy is consumed in muscular effort, in prolonged attention to detail, in strenuous and harassing devotion to business, or is dissipated in idle amusement, it is not available for public-spirited action for the common good, or for pursuit of knowledge for its own sake.

If we have interpreted the facts truly, the conclusion of the whole matter seems to be not that human nature is decaying, for that is an incredible supposition, but rather that we are passing through a transition stage, in which economic change and industrial expansion have proceeded so rapidly as to displace and strain the intellectual energies and interests of the individual. If the immediate prospects of readjustment and recuperation are not brilliant, we still have a reasonable faith that ultimately the resources of civilisation will restore the balance, and that with an unavoidable recasting of their programmes, and devolution of their work into local and general, chemists' associations will flourish again in actuality rather than in printed reports.

The Turpentine Industry.

HIS MAJESTY'S CONSUL at Charleston throws some light on the condition of the oil-of-turpentine industry in the United States in a report just issued by the British Foreign Office. It is well known that the old process of collecting crude turpentine by "boxing" the tree is very wasteful and destructive, for it has devastated many forests in certain Southern States, and thousands of acres of old turpentine lands have been thrown away for want of a more enlightened method of collection. This has led to a transition of the business to Georgia, Florida, and Alabama, now the principal centres of the industry. Professor Charles H. Herty, of Georgia State University has experimented with the view of ascertaining if there is not a better method of collection

Digitized by Google

and distillation, and it is hoped that the U.S. Government will co-operate by devising rules for the protection and preservation of the pine-forests, or even establish an experimental turpentine-farm for the purpose of gathering information and utilising to the best advantage all pine-products. It appears from the report that the trade in turpentine oil and allied products in 1901 was not so advantageous to farmers and dealers as might have been expected from the high range of prices. Indeed, the opinion among the naval store factors was "that the trade would have been in a much better condition generally had the high price of 54c. per gal. for turpentine never been seen." They believe that an average price enabling the operators to reap fair profits would have prevented the over-production which had such a prejudicial effect on the trade everywhere. As it was, many dealers lost their heads and an enormous crop was produced, resulting in a demoralised condition of the market. A new development in the business last year was the organisation of the National Tank and Storage Company of Savannah, which has built large tanks for holding oil of turpentine at the railway termini, the idea being that shippers will take advantage of storing their supplies in them, and thus wait the market if necessary, while the company gives warehouse receipts upon which owners may obtain advances from the banks.

For some time past there has been an upward movement in the turpentine-market, which appears to have been engineered by some of the large traders in Savannah. Very high prices—namely, 52c. to 53c.—have been quoted from that port, but 45c. to 47c. appears to have been the highest figure paid, and at present there are many buyers both in London and New York who are afraid to trust the market at this level, especially as the season has just opened. Advices to hand this week report a drop in the market to the extent of 8c. per gal. This is tantamount to a confession of failure on the part of operators to sustain the "bull" movement. The situation, however, cannot be described as "weak," as there is expected to be a 10-per-cent. shortage in the new season's crop, and heavy rains in the turpentine country have prevented extensive work. It is also stated that operators intend to curtail production in the interest of higher prices, but that statement must be accepted with reserve, as there is no combination or syndicate among the operators to control the output. Many of the best holdings have lately been acquired by some of the large and influential holders, who in turn lease them to the operators. In Florida recently considerable lands have been acquired by Savannah factors, who intend to work them when their Georgia holdings decline.

The receipts at Savannah from April 1 (the beginning of the season) to December 31, 1901, were 300,348 barrels of turpentine oil and 958 327 barrels of resin, and the exports during the same period were 274,225 barrels of turpentine oil and 778,105 barrels of resin. Of the exports, 198 992 barrels of turpentine oil and 363,611 barrels of resin were shipped to foreign countries, and the rest to American ports and interior places by railway.

Last year witnessed a decided improvement in the system of transportation of turpentine oil to foreign countries. Formerly it was principally carried by sailing vessels, but now tramp steamers have secured the bulk of the carrying business, which means quick deliveries and low freights.

Companies as Persons.

The Divisional Court has refused to allow limited companies to escape the provisions of the Sale of Food and Drugs Acts. Some months ago the Richmond Magistrates overruled an objection taken to a summons against Messrs. Pearks in connection with their milk-blended butter, to the effect that the word "person" in the Acts does not include a limited company. About the same time the Southampton Bench upheld that contention, and dismissed a summons against a limited company in regard to a sale of milk, on the ground that corporations are outside the Act. Both decisions were appealed against, and by a singular coincidence they came before the High Court on Wednesday of this week. The main authority relied upon by counsel for Messrs. Pearks was the case that decided the company-pharmacy question—the Pharmaceutical Society *v.* the London and Provincial Supply Association (Limited). The decision in that case was freely discussed by the three Judges and counsel on both sides, but it did not appear to have any very direct bearing on the decision in these cases. The interpretation Act, 1891, enacted that where in any Act creating an offence punishable on indictment or summarily, the word "person" is used, it must be held to include a corporation, unless the contrary intention appears. The companies in these cases said the contrary intention did appear in the Sale of Food and Drugs Acts. The "person" of the Pharmacy Act, they said, is an individual who can pass examinations, and companies are not that sort of person. The "person" of the Sale of Food and Drugs Acts is an individual capable of being sent to gaol for a second offence. Under Section 3 companies cannot pass examinations, and are consequently outside the Pharmacy Act; companies cannot be sent to gaol, and are therefore outside the Sale of Food and Drugs Acts, is, roughly put, one of their main arguments. It is a defence under one of the sections for the "person" charged to prove he had no guilty knowledge of the act complained of. Companies, counsel contended, could not have knowledge, guilty or otherwise; therefore the Legislature could not have meant to include them in the word "person." Then came the argument so fatal in the Pharmacy Act case. The act complained of is the physical act of a servant of the company, and though the company may not be amenable, the offence can be reached by a summons against the servant, and if there be a conviction, the companies would, of course, be the people who would pay, said counsel. It is significant that the Lord Chief Justice and Justices Darling and Channell attached very great importance to the point raised. Though it was well argued in the first of the cases, they postponed their decision until they had heard the other case later in the day, in order that everything that could be said on either side should be before them, and they subsequently delivered judgments on the point. Mr. Justice Channell put the matter very clearly. Criminal offences requiring "mens rea" cannot be committed by corporations. Section 6. of the S. F & D. Act prohibits absolutely a certain act being committed. No one must sell to the prejudice of the purchaser an article different from that demanded—he must not do it innocently even. To do so is a *quasi*-criminal offence of such a character that a company can commit it. By the hand of their servants they can sell, and as an individual master is under the Act expressly liable for the acts of his servants, a company ought to be, and is, equally liable. The Lord Chief Justice expressed his satisfaction at being able to come to that decision, for, he said, if they had been compelled to otherwise decide, grave difficulties would have been placed in the way of administering the Act. It would often, he said, be extremely difficult to bring the offence home to the actual offender. Most people will share his Lordship's satisfaction. If the London and Provincial Supply Association case was being heard to-day, instead o

Digitized by Google

thirty years ago, it is not improbable that a different decision would be arrived at; and if ever a company-case under the Pharmacy Act arises which can be differentiated from the old case, the Society might do worse than spread a little milk-blended butter on it, and try the Courts again.

COUNCIL ELECTION COMPETITION.

There is so little interest this year in the election of the Council of the Pharmaceutical Society of Great Britain that we almost hesitate to start a vote by our subscribers and their employés or members of their families on the event. However, it may give them some amusement (and the guinea which we set aside as a prize) to arrange the surnames of the ten candidates in the order that they will appear on the poll. The candidates are as follows:—

A. S. Campkin, Cambridge	*J. W. T. Morrison, Tring*
M. Carteighe, London	*C. E. Pickering, London*
W. S. Glyn-Jones, London	C. J. Park, Plymouth
J. F. Harrington, London	A. Southall, Birmingham
J. Harrison, Sunderland	J. R. Young, Warrington

Those whose names are in italics are not at present on the Council, the rest are. Postcards should be received not later than Monday, May 19. They should be marked with a large A on the top at the back.

HALF-A-GUINEA

will also be awarded to a reader of the *C. & D.* who sends us before May 13 the best reasons on a postcard for rejecting any three of the ten candidates. Also half-a-guinea for the best reasons why any of the three new candidates should be supported. The reasons against postcard should be marked B, and reasons for C.

TESTIMONIALS TO ASSISTANTS.

A subscriber calls our attention to a correspondence he has had with an applicant for a situation as junior assistant, and with his recent employer. The young man, who wrote in the style of a boy of 10 or 12, was really 18 years of age, and had been a little over two years at the business with a pharmaceutical chemist, whose letter in reply to our subscriber gave the lad a rather flattering character. This seemed so inconsistent with the lad's illiterate letter that our subscriber asked why so desirable a young man had left the Ph.C.'s employment, whereupon he was informed that the lad had been taking things out of the shop without his employer's knowledge. We feel that although the testimonial was given out of pure good-heartedness this sort of thing is a distinct injustice to the trade at large, and we hope this note may be the means of furthering more straightforward dealing between chemist and chemist with regard to recent employés.

"BIRMINGHAM CHEMISTS, BEWARE."

Our occupation is threatened: the *Birmingham Daily Post* has discovered that Inland Revenue officers are on the war-path, and paying particular attention to Birmingham chemists just now. So our contemporary prints a little article under the above heading. There is nothing in it which has not often been told in these pages, but it may be of interest to show how the matter strikes a stranger to the subject:—

> It is the practice (says the *B.D.P.*) of a large number of chemists to prepare and vend specifics of their own manufacture, and, consciously or unconsciously, some of them are avoiding the Government impost on such wares. That many of them sin in ignorance is not at all improbable, considering the difficulty which occasionally arises in the determination whether the medicine-stamp is requisite or not. Even the authorities, it would seem, are not without their doubts at times, for there are instances recorded in which Somerset House has on occasion held a liability to attach to labels which had been previously passed as outside the scope of the Act and *vice versâ*. Broadly speaking, the chemist may be said to incur responsibility for the duty when he retails medicine in respect of which he claims a proprietary right or any secret or art of preparation, when the sale of the article takes place under the authority of letters patent, or when any recommendation in its favour is held out to the public to induce them to purchase. Of these regulations perhaps the last-mentioned is that which most frequently lands the seller in trouble. . . . Chemists are occasionally caught napping through the display of a seductive showcard in their window, relating to some particular remedy which they are offering to the ailing world. The Inland Revenue is empowered to exact a penalty without recourse to a court of law, and as a rule the offender expiates his sin of omission in this way. He pays his guinea, or whatever the sum may be, and thereby discharges his debt to the law. Otherwise police-court proceedings invariably ensue. So far as can be gathered, prosecutions of the kind in question have been few in number in Birmingham during recent years, though in this respect the city, it is said, has far from an immaculate past.

This last touch is so delightfully satirical that we expect the Midland Chemists' Association to rise up and defend its purity.

CANCER-RESEARCH.

The investigation of cancer has been discussed by a medical contributor of the *Times* during the past week, and indications are given of the difficulties by which the work is surrounded. The resemblance between sarcoma and carcinoma renders it necessary that both diseases be studied, and the affinities of cancer with other diseases, such as tumours and tuberculosis, will have to be gone into. Then, again, there is the theory of the constitutional origin of cancer, and the geographical distribution of the disease to consider. Charts and statistics seem to show that cancer is in some way related to the soil, and that it prefers clay and alluvial deposits to gravel and elevated land. There is evidence also, which cannot be discarded altogether, that the disease occurs more frequently in certain villages or groups of houses, and it has been supposed that the water-supply may be in some way concerned with this strange visitation. The doctrines that emphasise the influence of environment must be checked by such facts that the disease may appear as the result of an injury, and that it has many affinities with diseases that have nothing to do with environment. In the majority of cases cancer shows no power of retrocession or natural cure, nor has it been altered by medical treatment, but occasionally it is recorded that the disease has at last tended, at least for a time, to get well of itself. Such cases may be brought into line with researches in immunity and immunisation. There is also some evidence that certain forms of the disease may be influenced by the action of organs in parts of the body remote from the disease. After discussing the doctrine of the external origin of the disease as one which may be taken as a working theory for the present, two things are emphasised—first that secret remedies, quack medicines, and the like "cures" for the disease are at best entirely useless, and often seriously harmful, and that to prescribe for the cure of cancer stuff like Mattei's fluids and Radam's microbe-killer is to practise on human credulity; next, that, if only all cases of the disease were at once subjected to operation in the very first stage, a considerable number of them would be absolutely and permanently cured. It is the freedom from pain and apparent insignificance of the disease at first that cause the delay till it is too late for surgery to be successful once and for ever.

NOT RETALIATION, ONLY—

The recent decision prohibiting the import of preserved meats and foodstuffs containing boric acid into Germany has aroused the ire of the country of canned goods. It is now announced that the investigations of the Bureau of Chemistry of the Agricultural Department at Washington have proved that a large percentage of the beers, 88·9 per cent. of the canned meats, sausages, &c., and about 20 per cent. of the fruits now imported from Germany into the United States are preserved with boric acid. And so America proposes to apply the *tu quoque* principle to Germany—"not through any spirit of retaliation," it is carefully explained, "but simply

Digitized by Google

as a protection to the American manufacturer and exporter." But America, as usual, will go one better. For Professor Wiley, chemist of the Department of Agriculture, has reported that the paint used in decorating toys imported from Germany contains, in many instances, a harmful amount of lead. Some of the German toys even bear arsenical paint, another authority says; and the drugs exported from Germany are not as pure as they pretend to be. Steps are to be taken to have these things rectified, and lively times may be looked for. The plan proposed is to apply to importations from foreign countries the law made by the respective Governments to control the purity of the food-products for internal consumption. There is a certain element of fairness in this proposal, for, as Professor Wiley points out, the laws of Germany and certain other foreign Governments (England and France included) allow the exportation of borated food-products, while providing stringent regulations prohibiting their use in the country of origin. But how the plan will work remains to be seen.

"MINOR" PARAGRAPHS.

Brief notices in local newspapers regarding some of those who have passed the Minor examination are exceptionally frequent this month. The most striking one is the following:—

The First Lady Chemist in England.

The Pharmaceutical Society have granted a certificate of registration as a chemist to Miss Horniblow, an assistant to Mr. G. C. Rowe, chemist, of Braintree. Miss Horniblow, who is only twenty-one years of age, passed successfully through all the examinations, and thus becomes "the first lady chemist in England," we are told; but lady dispensers are surely no novelty? We do not quite know what "the first lady chemist" means, but there are several Majors in the ranks of the fair, and we fancy this is simply a case of the "last" being "first."

The Adulteration of Shellac.

By E. J. Parry, B.Sc., F.I.C.

As the analysis of shellac is at the present moment attracting some attention, and users of the article are beginning to realise that adulterated shellac is the rule rather than the exception, there are several points to which it may not be amiss to call attention. Since writing the note which appeared in this journal (October 26, 1901, page 689), I have examined a large number of samples of shellac, the majority of which were clearly adulterated, and a small number of them were certainly pure. When a sample was obtained of undoubted purity, I have taken the opportunity of making from it samples by adding definite amounts of common resin, so that, except for the small alteration in percentage composition that takes place during melting, I had a series of samples of known composition. The utility of agreement on a standard method of determining the amount of adulterating resin in the case of a body of somewhat variable composition need hardly be insisted upon; but as I have seen certificates by analysts of repute in which results varying by over 5 per cent. were recorded for absolutely identical samples, the exact method of calculation should be agreed upon.

There can be no doubt that many of the statements recorded in various works are quite useless as a guide to the analyst. The solubilities given by Dieterich in his "Analyse der Harze," and to which he appears to attach importance, are, for analytical purposes, in my experience useless. In dealing with a mixture of resins which have been melted together, if one is practically insoluble in a given solvent, the powdered resin is protected to a very great extent from the action of the solvent even when a considerable amount of a soluble resin is present. The protective action depends to a great extent on the fineness of the powder, but I am convinced that no solubility determinations yield anything like quantitative results. Nor can the constants quoted be relied upon, as many of the samples dealt with are unmistakably adulterated. For example, in that useful little work by Lewkowitsch which has recently appeared ("Laboratory Companion"), one sample only of shellac is quoted, but from the figures given it was clearly adulterated.

My own experiments point to the determination of the iodine-absorption value as by far the most reliable of all methods for ascertaining the amount of common resin present. So long as the conditions of the determination are kept constant very concordant results can be obtained. No pure sample that I have examined has given figures anything like so high as those so often quoted, and with experimental mixtures the results are more concordant than those obtained by the determination of the acid and ester numbers. Of adulterated samples which I have met with during the last few months, many contained from 20 to 35 per cent. of resin and some over 40 per cent.

Trade Notes.

Mr Max Philipon, 3 Savage Gardens, E.C., has been appointed agent in this country for the New York Quinine and Chemical Works (Limited).

Mr. R J. Reuter, of 6 Well Street, Jewin Street, E.C., agent for Mülhens' No. 4,711 Eau de Cologne, informs us that his new post-office telephone number is 4711—a curious coincidence.

Pink Tops are getting to be quite familiar in the household. They are the most recent form in which phenalgin is put up, and Mr. E. J. Reid, 11 Dunedin House, Basinghall Avenue, E.C., is the agent for the manufacturers. For headache, and other nervine disorders this is a convenient form of prescribing the remedy.

"Day's Diary" is the name which Mr. John T. Day 40 Finsbury Square, E.C., gives to a penny "diary for the week," which he has just "presented to the world." It gives on the left-hand page the coming events of the day, and there is space on the right-hand page for that day's engagements. To Londoners it will be useful, and those visiting London should certainly have a copy of it, for it gives them lists of arrangements for churches, theatres, concerts, exhibitions, excursions, races, dinners and balls, golf, cricket, and lots of other things that are useful to know.

Trade-Marks Applied for.

(*From the "Trade-marks Journal," April* 16, 1902.)

"Brigade"; for coffee-essence. By A. H. Bolton, 5 and 6 Price's Lane, Dublin. 241,741.

"Chrysomel"; for food substances. By P. Bellingham Smith & Co., 23 Rood Lane, E.C. 244,770.

"Lutrine"; for a detergent. By J. Maddocks, 29 Canal Road, Bradford. 243,410.

"Mountain Glory" and device of fairies picking flowers (the essential particular); for a perfume. By James Walker, 19 Dockhead Street, Saltcoats, N.B. 241,526.

"Embo"; for cleansing polishes and creams. By W. & H. Miers (Limited), Phœnix Leather-works, Meanwood Road, Leeds. 244,608.

"Air Tabloids" are being advertised in Paris They are tablets of sodium peroxide or potassium peroxide, so compressed that when put in water they give off oxygen and absorb carbonic-acid gas.

Legal Reports.

Trade Law.

Terminating an Engagement.—At Chesterfield County Court recently, Judge Smyly, K.C., gave judgment in a case in which a grocer claimed 2*l.* damages from a former employé for leaving his employment without notice. Defendant admitted that he left without notice, but he had offered to forfeit a week's wages, which plaintiff would not accept. Judge Smyly said the domestic servant, and the master of the domestic servant, had, by custom, a right to end a contract by payment of wages in lieu of notice; but that was only by custom. There had been many cases tested, and in each the question was raised as to whether the workman was a domestic servant or not, because if he was not the custom did not apply. He thought that, unless some custom was proved, a shopman had no right, by merely forfeiting a week's wages, to leave his work. There was certainly in that case no evidence of such custom. He therefore found for the plaintiff for the amount claimed, with costs.

Assistants' Agreements.—A drapery firm in Bradford had in their employ a Miss Vimpany, who in April, 1895, agreed that she would not within five years after the determination of the agreement with them carry on business on her own account as draper or milliner, or enter the employ of any other person or persons in any such business within a radius of ten miles of the Bradford Town Hall. In March, 1901, she left, and commenced business at Calvert's Buildings, Commercial Street, Leeds. Her old employers objected, and a few days later a company was incorporated under the name of Madame Vimpany (Limited), at Calvert's Buildings. Before Mr. Justice Farwell, in the High Court on April 18, the employers claimed an interim injunction to restrain Miss Vimpany from infringing her agreement; but the Judge would not agree to this, thinking it better that the motion should stand till the trial, as an interim injunction might seriously injure the defendant's business.

Testing Coins.—In one of the London police courts last week, the wife of a butcher had to refund to a customer 2*s.* in respect to good coins which she had bent. Mr. Button, the victim, said that on Monday, April 7, he bought some meat at the shop and tendered a sixpence in payment. Defendant said the coin was bad, and bent it. He offered another sixpence, and this was also bent and declared to be bad. He then tendered a shilling, which defendant bent, and observed it was the worst coin of the lot. He had received the coins from the London and County Bank two days before. Having marked them, he took them to the bank and a cashier tested and weighed them. They were declared to be perfectly correct. The Magistrate (Mr. Chapman) stated that by the Act, if anyone suspects a coin, he is entitled to bend it. If he bends it and it turns out to be a good coin, he has got to pay for the true value, and take the bent coin for what it is worth. He directed defendant to pay the prosecutor 2*s.* and receive the bent coins in exchange, also to pay 10*s.* costs.

Pharmacy Act (1868).

An Ex-army Compounder Fined.

At the Bradford County Court on Tuesday, April 22, the Council of the Pharmaceutical Society sought to recover a 5*l.* penalty, under Section 15 of the Act, from Wm. Adams Cole, who is employed by the trustees of the late Thomas Clarkson, carrying on business at Tyrrel Street, Bradford. Mr H. M. Dawson (Messrs. Beldon & Ackroyd) appeared for the Pharmaceutical Society; Mr. Neumann was for the defendant; and Mr. Hines watched the case on behalf of the trustees of Clarkson.

Mr Dawson said the action was brought to recover penalties from the defendant for selling poison, he being an unqualified person.

Mr. Neumann, to shorten the case, admitted that defendant was not registered, and that the article sold was a poison. The defence was that he did not sell the poison. Entries of all the sales made in the shop were recorded on sheets of paper, and it was shown that on the day in question the article referred to was entered by an assistant, and therefore it was the assistant who had sold it, and not Cole.

Arthur Foulds, private inquiry agent, in the employ of the Pharmaceutical Society, deposed that on Saturday afternoon, January 18, he purchased from the defendant in Clarkson's shop a bottle of Kay's essence of linseed. There was nobody else in the shop at the time. In cross-examination, witness said there was no possibility of his being mistaken, and Cole had not been pointed out to him that day in the court. Cole was easily recognisable, because he was a man so entirely different in appearance from the ordinary shop-assistant.

Mr. Neumann said the defendant's statement was that he did not sell the essence, and did not even know until he received the summons that they had had any of it in the shop. The entry of the sale was in the handwriting of Mr. Oddy, an assistant.

His Honour: Do you say that Mr. Oddy sold the essence?

Mr. Neumann: I say Mr. Cole did not sell it. The fact that this man has got up in the box and sworn positively that Mr. Cole sold it quite clears Mr. Oddy. (Laughter.)

Mr. W. A. Cole gave evidence in support of his solicitor's statement, and in cross-examination said he was employed as a compounder of medicines. He went to the shop twelve months ago, believing himself to be a qualified man, and there was no other qualified man on the premises. The qualification which he thought was sufficient was one conferred on him by the War Office. He passed an examination in 1860 and naturally thought he was qualified, but unfortunately he was not registered. He was under the impression that he was qualified to take charge of a chemist's shop and sell all things that a chemist could sell. He had not kept a chemist's shop before he was employed by the trustees in 1874.

His Honour: If you were called away for some reason after you had made the sale, I suppose you might say to Mr. Oddy, "Just enter so and so," and he would then put it down that you had sold it?

The Defendant: It is possible that I might do so, but I did not sell that article. I do not remember it, and it is an article that one would remember. And I never remember seeing this gentleman in the shop.

His Honour: But you cannot remember every article you have sold.

The Defendant: I remember not selling that.

Arthur Oddy, being examined, said: I could not distinctly say that I sold that poison, but it is down in my handwriting, so I suppose I must have sold it.

His Honour: But you would put down sometimes things which Mr. Cole had sold?

The Witness: Yes.

His Honour: Yes, it is obvious that that would be so. Do you say, Mr. Neumann, that the private-inquiry agent is committing wilful perjury?

Mr. Neumann: I am entitled to say that there is the word of two men against that of one, and that he may be mistaken.

His Honour: It is the impression of two men against the oath of one who is trained to this matter, went there for the express purpose, and comes and says he has no doubt at all. I never place much reliance upon either myself or somebody else in regard to a matter to which their attention was not attracted at the time. How could he be mistaken about two men who are so entirely different in appearance?

Mr. Neumann: I can only suggest that he has seen the two in the shop and is confusing them. In cases of this kind two people should go into the shop.

Mr. Dawson: You had better amend the Pharmacy Act then.

His Honour: In the fact that you admit that this article was sold in the shop at the time alleged you have the strongest confirmation of the story of the plaintiffs' witness.

Mr. Neumann: But I am rebutting it with what is also strong evidence.

His Honour: The evidence of two men who come here and say, "We don't remember," is the weakest kind of evidence.

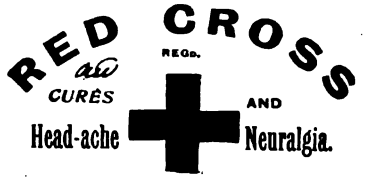
Mr. Neumann went on to argue that the conflict of testimony left a doubt, and that in such cases where there was a doubt the defendant ought to have the benefit of it. The Pharmaceutical Society might have strengthened their case by having two men in at the purchasing.

His Honour said he did not know that it was a matter against Mr. Cole's character, for he believed that he was qualified, and he could not say that the trustees or anybody else were to blame; but the offence had been committed, and there would have to be judgment for the plaintiffs.

Mr. Neumann asked if his Honour would add a recommendation to his judgment.

His Honour said no doubt there would be some representative of the Pharmaceutical Society present, and they would

Digitized by Google



know what was right and wrong in reference to the consequences of the judgment. He had not a sufficient understanding of the circumstances to enable him to express an opinion which was of any value. He must give the judgment, and leave the Pharmaceutical Society to enforce it in the way which they thought fit.

Merchandise-marks Act.

Red Cross Powders.

At Birmingham Police Court on April 17, H. G. H. Jennings, chemist, Hockley Street, Birmingham, summoned Frederick Gibson, chemist, Gooch Street, under this Act for unlawfully applying a false trade description—a red cross—to headache and neuralgia powders. The prosecutor, it transpired, obtained in 1900 copyright for an envelope on which the dominant characteristic and trade-mark was a red cross. His powders were sold in this, and they had become known all over the country, said counsel, as "Red Cross Powders." The defendants also sold headache-powders which up to the beginning of the present year were known as "Lily" powders, from the design on the envelopes. But he had recently stuck a red cross on the envelopes, and sold the powders as "Red Cross" powders, with the result that the prosecutor's sales had been materially affected. The Act, counsel submitted, was passed with a view to stopping frauds of that description. For the defence, it was urged that the red cross was a well-known emblem with chemists, and the "Lily" powders having been adopted by other firms, the defendant used the red cross to distinguish those of his manufacture from colourable imitations. In the witness-box the defendant admitted that when he began to use the red cross he knew of the existence of "Red Cross" powders, but he did not know they were made by Jennings. The Magistrate found the defendant guilty of applying the mark, and fined him 10*l.* and 5*l* 5*s.* costs. Notice of appeal was given, and the destruction of the labels was delayed pending the result.

We append reduced facsimiles of the two packets. The first shows the plaintiff's, the wording being printed on

the powder wrapper. The second is defendant's powder envelope:—

Sale of Food and Drugs Acts.

Sweet Spirit of Nitre.

At Wootton Bassett Police Court on April 18, Frank Kempster, of Purton, was charged with selling sweet spirit of nitre which, according to the analysis of Dr. Bernard Dyer, contained only 0·25 per cent. of ethyl nitrite The inspector said that the full price—6*d.* per oz.—was charged. A fine of 20*s.* was imposed, with 17*s.* 6*d.* costs.

At Brandon Police Court on April 14, Mr. William Hildyard, chemist and druggist, Thetford and Brandon, was charged with having sold 4 oz. of sweet spirit of nitre which the analyst (Mr. F. Sutton, of Norwich) certified to consist of ethyl nitrite 0·25 per cent., alcohol and legitimate water 32·00 per cent., water 17·75 per cent. The sample thus contained only one-seventh of the minimum proportion of ethyl nitrite required by the B.P. Mr. A. E Day, in defence, raised an objection to the analyst's certificate as being too vague, as the separate proportions of alcohol and legitimate water should have been stated. He called Mr. Hildyard, who stated that he had sent the constituent parts to his manager at Brandon (Mr. Thomas Silk) to make up, and they were at full strength. It was impossible to keep sweet spirit of nitre for retail up to sample strength, as every time the stopper was removed considerable evaporation occurred. Analysts agreed that the minimum stated by the British Pharmacopœia was too high. The Bench said they could not but find that the sample was deficient in strength, but at the same time they absolved Mr. Hildyard of any personal responsibility and fined him the mitigated penalty of 10*s.* and 8*s.* 6*d.* costs. Inspector Reeve stated that he took at the same time a sample of cream of tartar, which the analyst found perfectly genuine.

High Court Cases.

Tiemann's Ionone Patent (8,736 of 1893).

In the Court of Appeal on April 18, before the Master of the Rolls, Lord Justice Stirling, and Lord Justice Cozens-Hardy, an appeal stood on the list in respect to the dismissal by Mr. Justice Cozens-Hardy (*C. & D.*, August 5, 1899. page 258) of a petition for the revocation of a patent granted to Johann Carl W. F. Tiemann, of Berlin, for the manufacture of ionone. When the appeal was called on in its turn, no counsel appeared for either the appellants or the respondents, and the Court ordered the appeal to be struck out.

Incandescent Mantles

The case of the Welsbach Incandescent Company *v.* United Chemical-works and another came before the King's Bench Division on April 21, Mr. Justice Ridley sitting without a jury. Mr. Bucknill appeared for the plaintiff company, and said the parties had agreed upon terms—viz., that the action should be stayed, the defendants admitting the validity of the plaintiffs' patent, and taking a licence upon agreed terms; each party to pay their own costs. Mr. McNeill, for the defendants, assenting, an order was made accordingly.

A Sporting Transaction.

In the Dublin Nisi Prius Court on April 19, before Mr. Justice Wright, a case was mentioned in which Mr. Isidore Bradlaw, chemist, Grafton Street, Dublin, sued one John Casey to recover damages arising out of a sporting transaction. Mr. Moriarty, counsel for the defendant, said his Lordship and the jury would not be troubled with the case. Prior to the assault the parties were good friends, and they hoped to be so in the future. The defendant regretted what had taken place, and had consented to pay the plaintiff's costs. Mr. O'Shaughnessy, K.C., who represented the plaintiff, said that his client had instituted the proceedings to merely vindicate himself. The matter would be ended by making a consent a rule of Court.

Bovril (Limited) *v.* Humphrey.

In the Chancery Division on Friday, April 18, Mr. Justice Buckley had before him a motion by the plaintiff company for an injunction to restrain the defendants, booksellers, of Paternoster Row, from publishing any advertisement or placard containing a statement that bovril is made of any substance other than beef. The learned counsel stated that the defendant appeared in person, and consented to treat the motion as the trial of the action, submit to a perpetual injunction in terms of the notice of motion, and pay the plaintiffs' taxed costs of the action. He also, in addition, consented to allow an apology, which he had signed, to be inserted at his own expense (such expense not to exceed 10*l.*) in such newspapers as the plaintiffs should desire; and on that the plaintiffs waived all claim to damages.

The defendant (who was present in court) said that he left himself in the hands of his Lordship.

Mr. Justice Buckley: Do you consent to an order in the terms mentioned?

Digitized by Google

Defendant: Yes.

Mr. Justice Buckley said he thought it would be a hardship upon the defendant to allow the apology to be advertised indefinitely, even at the plaintiffs' own expense, and limited such advertisements to a period of one month.

Stamp Act, 1812.

"DELIGHTFULLY SOOTHING"—APPEAL.

IN the King's Bench Division on April 23, before the Lord Chief Justice and Justices Darling and Channell, Sir Edward Carson, K.C., applied for a rule nisi for a mandamus directed to the Brentford Magistrates, calling upon them to show cause why they should not state a case in the matter of an information laid against Mr. Sanguinetti for selling "Pure gum pastilles: Influenza. Delightfully soothing," &c, unstamped. Sir Edward explained that the Magistrates dismissed the information, and were asked to state a case. They first replied that the application was frivolous, and subsequently they said they would state a case if informant would enter a condition that in any event the Inland Revenue would pay the costs. Counsel contended that the justices had no right to make such a condition. Their Lordships granted the rule.

County Court Cases.

DEBT ACTIONS.

IN the Westminster County Court on Tuesday, April 22, Judge Woodfall had before him the case of Corbyn, Stacey & Co. *v.* Teeson, in which the plaintiffs sought to enforce payment of a judgment debt due to them from the defendant, a retail druggist, carrying on business at 49 Parliament Row, Old Hall Street, Hanley. It was stated by the plaintiffs that the defendant was the proprietor of the business in question, and employed two assistants. The defendant, however, sent an affidavit to the Court, in which he swore that the business belonged to his wife, and that the profits were only about 25*s.* a week. He absolutely denied that they kept two assistants, and said they did not keep so much as a shopboy. His Honour made an order for payment by instalments of 1*l.* a month, subject to committal for ten days in default, and remarked that the defendant had held himself out to the plaintiffs as the proprietor of the business.

IN the same Court on Tuesday, his Honour Judge Woodfall had before him the case of Fryer *v.* May, in which the plaintiff, a dealer in fancy goods, sought for the committal of the defendant, a chemist carrying on business at Upper Norwood, for non-payment of a judgment debt in respect of goods supplied in the way of trade. The defendant appeared, and said his shop at Norwood was a total failure, and was now closed, therefore he could not afford to pay. His Honour made an order for payment by instalments of 1*l.* a month, subject to committal in default.

A LABORATORY-TAP THAT DID DAMAGE.

IN the City of London Court on Tuesday, April 22, before Judge Rentoul, K.C., the London Oil-storage Company (Limited), 23 Leadenhall Street, E.C., sought to recover 10*l* 1*s.* 6*d* from Mr. John T. Norman, F.C.S., analytical chemist, of the same address, for damage done to their premises through the negligence of the defendant or his servants. Mr. James H. Welfare stated on behalf of plaintiffs that defendant's office was on the floor above their's, and in November, 1901, damage was done to the plaintiffs' premises through water coming down from the floor above. Their papers and general office-utensils were deluged, and the coat and hat of one of their clerks were quite spoiled. They had had to make good the damage, and they now sought to make the defendant responsible. The evidence of Frank Smith, night porter to the landlords, and of his wife, showed that the leakage was due to a tap having been left full on. Sidney Wood, day porter, thought the water had been left on all night for some chemical test, and the tube fastened to the tap had fallen off. Simpson, the housekeeper, said that since the accident a stop-cock had been provided which would shut off the water from defendant's premises.

Mr. D. J. Arthur, defendant's solicitor, said his client could only be held liable for the results of his own or his servant's acts or those of his agents. At 11 o'clock the previous night everything was all right. The defendant and his servants had left the office some hours before then, and they would not have any access to the defendant's laboratory. Both the plaintiffs and defendant left the keys of their offices in charge of the housekeeper.

Mr. Welfare said the defendant carried on his business of a chemist entirely at his own risk. It was not an ordinary and natural use of premises to have taps and cisterns in their rooms which were intended for offices.

Judge Rentoul said there were numerous difficulties in the way of the plaintiffs recovering. One of the attendants might have gone into the defendant's premises and turned the tap on. A man who brought a dangerous thing on his premises, and who did not take extraordinary care, was no doubt responsible for it; but in the present case the matter was different. Every night the defendant gave his key to the housekeeper, who might by chance have left the tap on.

After some conversation between Bench and Bar, Mr. Arthur said he hoped the Court had not assumed that a chemical laboratory is an "unnatural employment."

Judge Rentoul said that was exactly what he had to look into. It was not a usual thing to have an office used as a laboratory, but it was frequently done. That he knew.

Mr. Arthur said there were sixty chemists with laboratories who were carrying on business in the City of London.

Judge Rentoul said that was very probable, but that was a very small number. It was quite clear that the owners of mill-dams carried them on at their own peril, and that they were liable for any damage which was occasioned, whether there was negligence or not.

Mr. Arthur added that the plaintiffs must contend, in order to recover, that the defendants' liability was the same as if he had been in charge of a wild beast.

Mr. Welfare: I say that a laboratory is a wild beast for these purposes. (Laughter.)

Judge Rentoul said he would take time to consider his decision, and judgment was reserved accordingly.

Bankruptcies and Failures.

Re JOHN LEACH the Elder, Crawley, Pharmaceutical Chemist.

THE statutory meeting of creditors was held at Brighton on April 18, and the debtor having no offer was adjudged bankrupt, and the Official Receiver is the trustee under an order made for summary administration. The following are creditors:—

	£	s.	d.
Barclay & Sons (Limited), London ...	48	15	7
Benjamin, A., London	10	3	10

E. P. Guest (Limited).—Capital 500*l.*, in 1*l.* shares. Objects: To carry on the business of pharmaceutical chemists and druggists, dealers in photographic materials, vendors of patent and veterinary medicines, oil and colourmen, &c. The first subscribers are: Mrs. J. Guest, High Street, Brentwood; E. G. Martin, High Street, Brentwood, chemist; Miss L. M. Baddeley, 30 Dunsmure Road, Stamford Hill, N.; J. W. Baddeley, 19 Moor Lane, E.C., wholesale stationer; M. Baddeley, 19 Moor Lane, E.C., wholesale stationer; W. Baddeley, 19 Moor Lane, E.C., wholesale stationer; and Miss E. M. Baddeley, 30 Dunsmure Road, N. No initial public issue. Registered without articles of association. Registered office, High Street, Brentwood, Essex.

G. W. Kenney & Co. (Limited).—Capital 1,000*l.*, in 1*l.* shares. Objects: To carry on the business of wholesale or retail chemists, druggists, opticians, manufacturers of and dealers in drugs, medicines, proprietary articles, surgical, photographic, scientific, optical, and other instruments, appliances, and materials, &c., and to employ qualified persons to act on the Company's behalf as pharmaceutical and analytical chemists, advising chemists, dentists, opticians, &c. The first subscribers are: G. W. Kenney, High Street, Moreton in-Marsh, chemist; F. W. Crisp, High Street, Moreton-in-Marsh; Mrs. M. M. Crisp, High Street, Moreton-in-Marsh; Mrs. E. M. Kenney, High Street, Moreton-in-Marsh; C. N. Cook, High Street, Moreton-in-Marsh, grocer; J. Davis, High Street, Moreton-in-Marsh, grocer; and F. F. Elliott, Station Road, Moreton-in-Marsh, surveyor. No initial public issue. Table "A" mainly applies. Registered office, High Street, Moreton-in-Marsh, Glos.

Evans, Gadd & Co. (Limited).—Capital 50,000*l.*, in 1*l.* shares (34,000 preference). Objects: To acquire the business of wholesale and manufacturing chemists, wholesale and manufacturing stationers, and dealers in ammunition and gunpowder carried on by Evans, Gadd & Co., at 97, 98, 99, and 100 Fore Street, Exeter, and at 23 and 24 Redcliffe Street, Bristol, to adopt an agreement with Henry Gadd and William J. Wippell, and to carry on the business of wholesale, retail, and manufacturing chemists and druggists, analytical and consulting chemists, vendors of patent medicines and druggists' sundries, oil and colour merchants, chemical manufacturers, distillers, perfumers, soap makers, tobacconists, mineral-water manufacturers, manufacturers of photographic, surgical, and scientific apparatus and materials, stationers, printers, lithographers, photographic-printers, photo-lithographers, advertising and general agents, paper-manufacturers, manufacturers of and dealers in explosives and ammunition, &c. The first subscribers are: H. Gadd, 31 St. David's Hill, Exeter, J.P., manufacturing chemist, W. J. Wippell, 5 Powderham Crescent, Exeter, manufacturing chemist; H. W. Gadd, 42 Union Road, Exeter, manufacturing chemist, H. E. Boorne, 49 Woodstock Road, Redland, Bristol, pharmaceutical chemist; H. H. Wippell, Ivy Bank, Exeter, manufacturer of church furniture; S. C Gadd, 31 St. David's Hill, Exeter, manufacturing chemist; and Mrs. A. Gadd, 31 St. David's Hill, Exeter. No initial public issue. The number of directors is not to be less than three nor more than six. The first are H. Gadd, J.P., M.P.S., W. J. Wippell, H. W. Gadd, M.P.S., F.C.S., and H. E. Boorne, Ph.C., F.C.S. Qualification, 500*l.* Remuneration of ordinary directors as fixed by the company. The four first-named are managing directors, and may hold office until 1913. Remuneration of managing directors as fixed by agreement.

[This conversion is made, we understand, for family reasons.—Ed.]

Salt Union (Limited).—In the Chancery of Lancaster, sitting at Manchester on Monday, Vice-Chancellor Hall granted an application for a reduction of the capital of the Salt Union (Limited) from 3,000,000*l.* to 1,400,000*l.* The Vice-Chancellor directed that the word "reduced" should be added to the name of the union for a month.

Borax Consolidated (Limited).—The directors announce that the half-yearly coupon No. 6 of the preference share warrants to bearer will be paid on and after May 1 at the offices, 77 and 78 Gracechurch Street, E.C., or in France by the Banque Privée and Messrs. Jacquier, Falcoux et Cie., at Lyons. The directors have also decided to pay an interim dividend of 5*s.* on each ordinary share for the quarter ended December 31, 1901, being at the rate of 10 per cent.

Singleton & Cole (Limited). — At the annual meeting of shareholders in Birmingham on April 22, the Chairman (Mr. H. C. Clarke) moved the adoption of the report, which showed that, notwithstanding the general upset in the trade, there was a disposable balance of 10,785*l.*, and proposed a dividend of 7 per cent. for the second half of the year, making 6 per cent. for the year. The balance-sheet, the Chairman remarked, was the best presented since the reconstruction of the company. It was impossible to prophesy, he said what effect the action of the great rivals in the tobacco trade would have upon their business, but so far they had nothing to complain of. They had, many strings to their bow, and considered they were in a far better position than many other tobacco manufacturers. The report was adopted.

"Pharmaceutical Formulas."—We are now binding this work entirely in black buckram, which experienced librarians find is more lasting than leather. The price of the work remains the same—7*s.* 6*d.*, by post 8*s.*, from our offices, or for the published price from any wholesale house.

Westminster Wisdom.

(By our Parliamentary Representative.)

Cheque-duty.

In a discussion on the Budget resolution in the House of Commons on Monday evening, the members spoke more about the proposed cheque-duty than the income-tax, which was the question before the house. In the course of his reply Sir M. Hicks-Beach said:—

I am astonished at the importance that is attached to this. I perhaps did not realise it—(cheers)—and I have already undertaken not only to inquire into the matter, but to see what I can do to remedy the objections that have been made to this increased duty. I understand that the position is this. It is thought that the duty should not be unduly heavy on traders and those who use small cheques in the way of business. If it were so, of course it would work in one of two ways. It would either induce them to draw fewer cheques than they have done, which would not be to my advantage, because it would reduce my revenue, or it would be an exceptionally heavy burden upon them as compared with the taxation which they ought to bear. I feel that that is a fair argument and one which I must endeavour to meet with regard to the tax. Then there is another matter. It is argued by bankers, and, I think, reasonably, that it would be quite intolerable as a matter of business to have more than one stamp—(hear, hear)—so that smaller cheques would have a different stamp from those which were of a higher value. I have to endeavour to meet both these objections to the tax. I have a scheme under my consideration which I hope may do it, but it is not yet in such a perfect shape that I am able to mention it to the Committee; but I think I see my way to maintain the tax and to meet both those objections. (Laughter.)

The hostility to the duty inside and outside the House is such that it scarcely required Sir Michael's assurance to know that as originally proposed the duty will not go.

Water-standard for Butter.

Replying to Sir E. Strachey on Monday afternoon, the President of the Board of Agriculture (Mr. Hanbury) stated that regulations will at once be issued under Section 4 of the Sale of Food and Drugs Act, 1899, declaring that the presence of more than 16 per cent. of water in any sample of butter shall raise a presumption that the butter is not genuine. The regulations will come into force on May 15.

Microbes in the Commons.

It appears that the recent tests of the air in the House of Commons showed a very good result as regards the amount of carbonic acid, which was only 5·2 volumes in 10,000—very little in excess of the quantity usually met with in the air of cities, and far less than is generally present in places of assembly. The bacteriological test revealed an undue number of micro-organisms, but none of them were found to be disease-producing. The full reports by Dr. Thorpe, the principal of the Government laboratory, will be laid before the Select Committee on the Ventilation of the House, the appointment of which I mentioned last week, and the First Commissioner of Works proposes that further experiments shall be made in order to discover the cause of the presence of so many microbes, with the view to taking suitable measures of improvement. It is probable that the same scientific test will be applied to the atmosphere of other public buildings.

Dr. Farquharson is to ask the First Commissioner of Works, in connection with this matter, whether he will apply the same scientific test to the atmosphere of other public buildings, such as the Central Criminal Court and the British Museum Library.

"So-called Temperance Drinks."

The other day the Chancellor of the Exchequer was asked to state to what extent, if any, during the last three years so-called temperance drinks have been charged with duty as containing over 2 per cent. of proof spirit. Sir Michael Hicks-Beach replied that there is no law which enables the Board of Inland Revenue to charge duty upon these drinks if they are found to contain more than 2 per cent. of proof spirit, but during the last three years proceedings have been instituted in 136 cases in which a penalty had been incurred by the sale of such drinks without licence.

Foreign Competing Goods.

Within the past few weeks twenty-two petitions, signed by 197,175 persons, have been presented asking for the imposition of a Customs revenue-duty on foreign competing goods. No doubt the idea of the petitioners was to influence the Chancellor of the Exchequer in framing his Budget, and in this connection it is amusing to find that Sir Michael Hicks-Beach was called upon by some of his constituents in Bristol to present one of the petitions himself. He must have chuckled. The Bristol signatures numbered 9,825. Mr. Chamberlain presented one from 48,200 persons in Birmingham, Mr. Gerald Balfour from 6,637 persons in Leeds, Mr. David MacIver from 23,360 persons in Liverpool, and Mr. James Lowther from 11,083 persons in Cardiff. The other petitions came from Battersea, Burnley, Swansea, Middlesborough, Sheffield, Leicester, Barrow-in-Furness, Kidderminster, Fulham, Hanley, Bradford, Nottingham, Huddersfield, Islington, Newcastle-on-Tyne, Glasgow, and Coventry.

Patent Law Amendment.

The Government's Bill to amend the patent law was down for second reading on Monday, but it had to be postponed. Should the opportunity for debate ever arise this Session, which is doubtful now, Mr. Joseph Lawrence will move a resolution to the effect that no Bill dealing with the subject will be satisfactory which does not provide for the removal of the advantages which foreign inventors and manufacturers possess over British inventors and manufacturers by reason of the inequalities between the patent laws of Great Britain and those of the leading continental nations.

A Budget Question.

Mr. Warr raised a new point in connection with the Budget on Monday. He asked the Chancellor of the Exchequer whether the intention of the flour-tax resolution is to include under the word "flour" such articles as sago-flour, mandioca-flour, dextrin, and tapioca-flour, all of which articles are unfit for human food, and are used exclusively in the manufacture of fine goods for sizing-purposes and for the purpose of commercial gum-making. Sir Michael Hicks-Beach, in answering, stated that the articles specified are liable to duty under the Budget resolutions. He was not aware, however, that sago and tapioca flour, for example, are unfit for human food.

Monopoly Sale of Opium.

Mr. Caine, who asked the Secretary for India on Monday whether the Government of Burmah has, in taking over the monopoly sale of opium for that province, made arrangements for the retail sale of cooked opium, specially prepared for smoking-purposes, was informed that some modifications in the regulations for the licensed sale of opium in Burmah have been recently introduced, "but I have no information," Lord George Hamilton added, "of any such arrangement as the hon. member refers to."

Indian and Mauritius Sugar.

In view of the announcement that a grant-in-aid will be given from Imperial funds to the West Indian sugar colonies, Mr. Greene asked the Secretary for India the other day whether it is intended to assist Indian native and Mauritius sugar-growers by the imposition of import-duties against the Austrian and German cartels until the bounties are abolished in accordance with the terms of the Brussels Sugar Convention. Lord George Hamilton's answer was that there are countervailing duties on sugar in operation in India against the bounty or cartel system of foreign countries, and if these duties are proved to be insufficient it is in the power of the Government of India to raise them.

The Pure-beer Debate.

The debate on the second reading of the Bill to amend the law relating to the manufacture and sale of beer, on Wednesday, developed some points of interest to chemists. In the Bill of last year no substitutes of any kind for malt were allowed, but on this occasion there is a clause running: "It shall not be lawful in brewing or preparing beer for sale to use a less quantity of barley malt than 85 per cent. of the total saccharin-yielding materials employed, the quantity of

Digitized by Google

materials other than barley malt being calculated according to their respective equivalents in malt as fixed for the time being for the purposes of the charge of duty on beer." All substitutes for hops are, however, prohibited, as was the case in last year's Bill. Dr. Farquharson strongly protested against the latter prohibition. Such substitutes as quassia are not, in his opinion, deleterious, and it would be oppressive to stop their use. Colonel Brookfield retorted with the remark that the majority of brewers state that they do not use these subetitutes, and all the promoters desired to do was to make the practice law. The great speech of the day, however, was made by Mr. Fletcher Moulton, who favoured the House with an eloquent account of the evolution of brewing as an industrial science. He described the Bill as an attempt to render criminal the processes by which certainly one-third, and probably one-half, of the beer now made in England is manufactured, and to prevent science from having its natural reward. The sugars obtained from starch which were stigmatised as substitutes are practically identical with sugar of malt, for they are all produced from starch, and these so-called substitutes are, in fact, the result of true scientific steps taken to make beer better and cheaper. He went on to argue that it is not the function of Parliament to step in and stop the natural development of a great industry. It was suggested by a subsequent speaker that the Opposition to the Bill was inspired by the manufacturers of substitutes and the brewers who used them, but, apparently with the object of refuting the statement, the member who spoke next was Sir Michael Foster, who stoutly objected to the Bill. He said it was a standard for materials in beer, not a standard for beer, and he submitted that if saccharin ingredients were restricted to 15 per cent. it would be impossible to brew good light beer from English barley. Another speaker, who may be mentioned in a line was Mr. Chaplin, who replied to Mr. Moulton's argument in regard to the use of substitutes. He contended that the sugar of these substitutes is produced by the use of acids, and it is through these acids that the country had had all the trouble over arsenical poisoning. Eventually the Bill was rejected by 212 votes to 140, and the advocates of "pure beer" went home dejected.

Personalities.

Mr. G. J. Gostling, J.P., C.C., of Stowmarket, has been again unanimously re-elected Chairman of the Urban District Council.

Mr. J. C. Arnfield, pharmaceutical chemist, Stockport, has been elected a Vice-President of the Stockport Tradesmen's Association.

It is not often that a man passes the Minor examination on his birthday, but this happy coincidence of events was experienced by Mr. George Marris, of Grimsby, at Galen Place last week.

Amongst the pictures in the Royal Drawing Society's Exhibition is one by Master Stainer, son of Mr. J. W. Stainer, F.C.S., pharmaceutical chemist, Folkestone. The young artist is in his sixth year.

Mr. Marmaduke Richards, manager of Messrs. Maynard & Co. (Limited), Singapore, expects to arrive in England about May 1 for a six months' holiday. Letters to him may be addressed c/o Messrs. A. Durant & Co., 32 Gresham Street, E.C.

Mr. Julian Horrell, pharmaceutical chemist, whose re-election to the Broadstairs Urban District Council we noted in our issue of April 12 (page 579), has been unanimously elected Chairman of that body, by virtue of which office he becomes a Justice of the Peace.

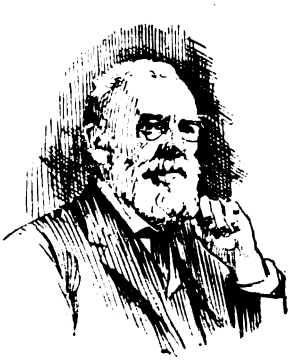
Mr. Henry Peet, J.P., chemist and druggist, was recently returned at the head of the poll for the Exchange Division of Liverpool, and at the first meeting of the Liverpool Select Vestry he was unanimously elected Chairman for the year. Mr. Peet has been a member of the Select Vestry for seventeen years.

Mr. C. E. Fox, the pharmaceutical Mayor of Bethnal Green, received the Princess of Wales on Wednesday afternoon, on the occasion of her visit to the church of St. James the Less. The Princess, who was attended by Lady Eva Dugdale and the Hon. Alexander Hood, graciously shook hands with the Mayor, who presented an illuminated address in a carved West India satinwood casket, a specimen of local workmanship, and with the Mayoress, Mrs. Fox, who presented a splendid bouquet.

Marriages.

Alderton—Parker.—At St. Peter's, Mowbray, Cape Colony, by special licence on March 26, W. B. Alderton, of Messrs. A. S. Smith & Co., chemists, Johannesburg, to Maude Grace, only daughter of the late Mr. George Gwyn Parker of Manor Lodge, Teddington, England, and of Mrs. Parker, Leigh, Kent.

Barker—Lloyd.—On April 16, at St. Matthew's Parish Church, Buckley, by the Rev. W. P. de Winton Kitcat, assisted by the Rev. J. George (vicar of Bistre), Mr. R. Barker, junr., chemist and druggist, Buckley (third son of Mr. R. Barker, chemist, Mold), to Mary, younger daughter of Mrs. Lloyd, Sandycroft Farm, Buckley.



Hunt—Andrews.—On April 15, at Holy Trinity Church, Coalbrookdale, Shropshire, by the Rev. C. B. Crowe, vicar, Henry Lionel Hunt, chemist and druggist, Reading, to Clara, second daughter of the late Mr. W. H. Andrews, of Lewisham, and niece of Mr. J. V. Rawle, Ironbridge.

Walsh—Doogan.—On April 16, at St. Patrick's Church, Glen, Maghera, co. Derry, Mr. John Walsh, M.P.S.I., eldest son of Mr. Louis Walsh, Maghera, to Tillie, third daughter of the late Mr. M. Doogan, Draperstown, co. Derry.

Deaths.

Falkner.—On April 11, at Oxford, Mr. Richard Falkner, chemist and druggist, formerly of Banbury. Aged 75.

Leeming.—Mr. Thomas Leeming, senior partner of Messrs. Leeming, Miles & Co., wholesale druggists, Montreal, died at Lakehurst, N.J., on March 31. Aged 65. Mr. Leeming was born in Burnley, Lancashire, and in 1840 he went with his parents to Montreal, where his father, Joseph Leeming, and his uncle established the commission house of Joseph & John Leeming. Mr. Leeming's boyhood was spent at Kemptville, a frontier settlement in the Ottawa region, and on his father's death he continued the Canadian business. With him gradually grew the development of the concern, and in 1883 he went to New York to assume charge of the present house of Thos. Leeming & Co. Mr. Leeming was a man of keen business enterprise, had travelled extensively, and his genial and charitable nature brought him many friends. He is survived by three sons and two daughters.

Madden.—On April 14, Dr. Thomas More Madden, Merrion Square, Dublin, at his residence in co. Wicklow. Dr. Madden was physician to the Mater Misericordiæ Hospital, and examiner in midwifery in the Royal College of Surgeons. He was the author of books on climate and gynæcology and contributed an interesting account of ancient Irish medicine to the *Medical Magazine* in 1899. Dr. Madden was 64 years of age.

Maxey.—On April 15, at his residence, 2 Union Place, The Crescent, Wisbech, Mr. John Thomas Maxey, chemist and druggist. Aged 45. Mr. Maxey, who died suddenly from cerebral hæmorrhage, succeeded to the business of his father. He leaves a widow and five children.

Digitized by Google

MERRIAM.—At Charles City, Ia., on March 26, Mr Andrew B. Merriam, Secretary of the National Wholesale Druggists' Association of America. Aged 76. Mr. Merriam was born in Salem, N.Y., and served his apprenticeship to the drug-business with Mr. J. C. Ayer, of Lowell, Mass. In 1848 he went to Cincinnati, where he ultimately established the business of A. B Merriam & Co. While in business in that city the Western Wholesale Drug Association was formed, with Mr. Merriam as Secretary. This was finally merged into the National Association, and Mr. Merriam has been continuously Secretary since 1876, with the exception of the years 1879 and 1880.

MURDOCH.—At Stirling, on April 21, Mr. George Murdoch, chemist and druggist, of the old-established firm Murdoch Brothers, chemists and druggists, Sauchiehall Street, Glasgow. Aged 80. Mr. Murdoch was an unobtrusive but representative pharmacist of the old school. He had travelled daily between Stirling (where he resided) and Glasgow since 1851. In the late fifties his firm was innocently involved in the Madeline Smith *cause célèbre*, though the circumstance that the arsenic which caused L'Angelier's death was supplied to Miss Smith by one of Murdoch Brothers' assistants, the recently deceased Mr. James Dickie, of Crosshill. There were no scheduled poisons in those days, but it was proved at the trial that the sale had been made with all reasonable precautions. Miss Smith was known to Mr. Dickie, and she explained that the arsenic was for poisoning rats in her father's house at the coast. Mr. John Murdoch, of Sussex House, Leadenhall Street, E.C., drug and chemical export agent, is a son of the deceased gentleman.

PECHMANN.—Dr. Hans von Pechmann, Professor of Chemistry at the Tübingen University, was on April 19 found dead in his private room at the chemical laboratory of which he was principal. He had been suffering from a nervous complaint for some time, and appears to have committed suicide by taking poison.

ROBINSON.—On April 17, at Zurich Villa, Pendleton, Manchester, Margaret, wife of Alderman Benjamin Robinson, J.P., chemist and druggist (of Messrs. B. Robinson & Co., Limited).

STANDRING.—At Manchester, on March 31, Mr. John Standring, chemist and druggist. Aged 70.

Recent Wills.

BUTLER.—The will of the late Mr. John Livesey Butler, drysalter and druggist, of 64 Harehills Avenue and Hirst's Yard, Briggate, Leeds, has been proved at 2,946*l.* gross, and 996*l.* net personalty.

HILLS.—The will of Mr. Thomas Hyde Hills, surgeon, of 7 St. Peter's Terrace, Cambridge, has been proved at the Peterborough District Registry by his executors, Mrs. Catherine Isabella Hills, widow, and Mr. Walter Hills, 225 Oxford Street, London, W., brother. The gross estate is valued at 13,353*l.* 3*s.* 6*d.*, and the net personalty 12,638*l.* 11*s.* 2*d.*

SOUTHALL.—The late Mrs. Sarah Southall, of Edgbaston, who died on January 11, in her 101st year, left personal estate of the net value of 35,262*l.* By her will, dated July 7, 1892 (with three codicils), she appointed as executors her daughter Margaret, wife of Mr. William Henry Evans, Llantwit Major, Glamorgan; her son-in-law, Mr. William Ransom, of Hitchin; her nephew, Mr. John Tertius Southall, of Parkfield, Ross, J.P.; and her grandsons, Mr. Francis Ransom, of Hitchin, and Mr. Thomas Southall Dymond, of Chelmsford, chemical agricultural lecturer. To the three last-named the testatrix bequeathed 300*l.*, to her grandson George Cecil Dymond 100*l.*, to her other grandsons and to her great grandson Paul Englehart 100*l.* each, to Joseph Henry and John William and Edmund Shorthouse 300*l.*, to her daughter Mrs. Evans 250*l.*, to her daughter Isabel 100*l.* and such furniture as she may choose to the value of 100*l.* She bequeathed the remainder of her household effects to her said two daughters, and left 4,000*l.* and one-fourth of her residuary estate in trust for the son and two daughters of her daughter the late Mrs. Anna Mary Ransom, and 4,000*l.* and one-fourth of her residuary estate in trust for the children of her daughter Ellen Dymond, and 4,000*l.* and one-fourth of her residuary estate in trust for her daughter Mrs. Evans and her children, and 5,000*l.* and the remaining one-fourth of her residuary estate in trust for her daughter Isabel.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

The Cheque-duty.

SIR,—I am rather surprised to find from your leader, in your issue of last week, on the new taxes that you seem inclined to support the Chancellor in his imposition of an extra penny on cheques. As a corrective, I venture to send you a copy of a resolution passed by the Board of the Manchester Guardian Society for the Protection of Trade, which will show you what the Manchester merchants think of the new tax. If the proposal be carried out, and I earnestly hope it never will, it will prove a constant source of annoyance and a great obstacle in the way of the transaction of business.

Yours faithfully,

Manchester, April 22. GEO. S. WOOLLEY.

Resolution passed by the Board of the Manchester Guardian Society for the Protection of Trade, 15 Fountain Street, Manchester, at a special meeting, held April 21, 1902.

That this meeting of the Board of Directors of the Manchester Guardian Society for the Protection of Trade, which comprises over six thousand business men and firms in Manchester and a large surrounding neighbourhood, is of opinion that the proposed additional tax of a penny on cheques is impolitic—on the grounds that it will discourage the use of cheques in small businesses; will discourage the useful and increasing practice of keeping banking accounts by small traders; and will be a retrograde step, leading in a considerable measure to a return to the practice of cash payments, which must tend to the hoarding of coin with its temptations, dangers, and disadvantages: that these discouragements to the use of cheques will be found to be so considerable in their result that the yield of the tax will be much smaller than expected; the Board therefore ventures to hope that the suggested tax will be abandoned.

[*Note by the Editor.*—A resolution in similar terms was passed by a meeting of London bankers and merchants held on the same day, and the very general opposition to the tax is practically certain to secure modification of it. See note on page 675].

Mr. Glyn-Jones, Secretary of the Proprietary Articles Trade Association, has addressed the following letter to the Chancellor of the Exchequer.

SIR,—I am requested by the committee of the above association to respectfully call your attention to their views upon the proposed increase in the stamp-duty upon cheques. The association consists of about three thousand retail chemists, and of over eighty firms who are either manufacturers of, or wholesale dealers in, proprietary articles. The members of this association represent a class of traders upon whom the increased tax will fall, proportionately, more heavily than upon most traders. The volume of business transacted by chemists and druggists generally, is small, and in thousands of cases the total weekly turn-over does not exceed 12*l.* to 14*l.* The number of cheques used cannot be safely estimated by the amount of money involved. The variety of articles stocked, and the many varied sources of supply necessitate the keeping of an unusually large number of accounts, and in consequence a chemist in a small way of business often draws as large a number of cheques as other traders whose volume of business is tenfold more. Payment by cheque is the safest and most convenient form of remitting either large or small amounts, and there are other reasons why it is of the utmost advantage to all concerned that traders, however small their businesses may be, should keep banking accounts. It is feared that, if, in addition to the bank charges, every payment made through the bank is to cost 2*d.*, very many small traders will give up keeping banking-accounts.

My committee are also of opinion that the additional cost of cheques will so reduce the number that will be drawn, that the enhanced rate of duty will not produce an increased revenue. In their opinion the more likely result will be that, whilst causing much interference with the present practice and custom of business firms in regard to the payment of their accounts, the change will produce little, if any, increase in the revenue from cheques. As an instance of the probable reduction in the number of

Digitized by Google

cheques, I would point out that this Association receives during the year from its members, thousands of cheques varying in amount from 5s. to 21s. A small proportion of our members at present, instead of drawing a cheque for the amount, request one or other of the wholesale houses with whom they do business to pay the amount annually and charge it to their accounts. The increased duty is likely to lead to the majority of our members adopting this method of payment, and, if so, 50 to 100 cheques will suffice where 3,000 were necessary before. The committee believe that charitable and other institutions and associations will be likely to suggest some such method of remitting subscriptions.

Upon the grounds that the increased duty will be felt unduly and disproportionately by the small trader, who already bears more than his share of taxation, and that it is unlikely that the increased tax will produce a revenue which would compensate for the inconvenience and consequent irritation it will cause, my committee, with great respect, urge you to withdraw the proposal. —I am, &c.

The Invasion of Scotland.

Sir,—There is a pretty general opinion throughout the South of Scotland, amongst those best informed, that Boots (Limited) are about ten years too late in crossing the border to do any good to themselves. I agree with this. Things are very keen cut over all the South of Scotland, and, for anything I know to the contrary, the North is in no way behind. I do not think it would be difficult for Scotland to deal this company a blow, which would react favourably on our oppressed brethren in England.

I think Glasgow chemists do well to keep as private as possible any steps they may be taking, in view of fresh competition; but as this is a matter which affects Scotland generally, an effort might, with advantage, be made to have a general conference of Scotch chemists, with a view to harmonious and united action. I have ever stood by the doctrine that the chemist's enemy is not the neighbouring chemist, but the grocer, the store, and the unqualified competitor generally; and this view has made far more progress in Scotland than in England. It is this spirit of harmony and unity which has rendered the positions of the lawyer and the medical man practically impregnable in this country, and in this spirit rests the salvation of the chemist. The clear duty of the chemists in any district is not to fight amongst themselves about who is to get the business left to qualified men by unqualified, but to fight shoulder to shoulder against unqualified men securing business, to the proceeds of which they have no moral right. By grasping this fact, chemists in a district can not only defy fresh competition, but they can really better their own position by getting back from unqualified men actually in the field business already alienated. There never were more drugs used in this country than are being used at the present time. The point for us to remember is that somebody must supply these drugs, and if we secure the supply the increased demand places us in a position to cut prices keen. If patent medicines must be sold without profit, it is better for us to sell them, and get a chance of pushing our own articles, than to allow some unqualified man to sell them and push his. Another point which chemists ought to bear in mind is that the stores' branch shop must pay a qualified man's salary, *plus* dividends, whereas the chemist has only his salary to secure. The chemist is really in a better position to cut than the store. Chemists will answer, "Are we not to have a larger income at 35 or 40 years of age than a young fellow of 25 can get?" I answer, "Yes. If you have been worth your salt, your personal connection as a chemist is worth another salary to you as large as a man of 25 can get." It must be remembered that the stores' branch has no personal connection, and we all know that in the drug-business personal connection goes a long way. Chemists have, in many cases, relied altogether too much on personal connection, however.

I think a man ought to make his income out of vigorous, up-to-date, healthy business tactics; and he can always get a supplement out of his personal connection, which the store cannot get. Yet another point. Stores, generally, have been in no way slow to throw dirt on chemists in the form of newspaper advertisements. I do not ask chemists to retaliate by throwing dirt on stores; but I think they might, in advertising, so word their advertisements as to let the community know that limited companies dealing in drugs are seldom controlled by men who know anything about drugs. I have found people actually incredulous, when informed as to the real trades learned by men calling themselves cash chemists, and I am quite sure that in Scotland the shop known to be entirely controlled by a qualified man would have a large pull over a shop known to be controlled by grocers, tailors, and people of that type. Of course, this point is based on the assumption, as are all my other points, that chemists everywhere are prepared to sell patents without profit, and quote drugs in bulk, at prices which shall compare favourably with the lowest stores' and grocers' lists.

Dumfries, April 21. James Reid.

The Council-election.

Sir,—Will you allow me a word in connection with the leading article on "Pharmaceutical Councils" in your issue of April 12? In that article you have, not for the first time, made a "dead set" at Mr. Councillor C. J. Park, of Plymouth, who is seeking re-election. You have taken the trouble to make an elaborate analysis of the number of times he has spoken at meetings and of the number of meetings he has attended. With regard to the former, everyone knows that the real work of councils is done in committee, and long speeches at Council-meetings are frequently nothing more than a waste of time and a species of "playing to the gallery." Such occasions often serve to illustrate the old proverb that "Speech is silver," but "Silence is golden." According to your own statement, Mr. Park has during the last three years attended no fewer than twenty-two Council-meetings, and, seeing that each of these meetings entails a railway-journey to and from town of about five hundred miles and a considerable expenditure of money and time, I think that fact alone is sufficient to prove that he has sacrificed much to justify the confidence which has been reposed in him at past elections. Mr. Park is an ordinary workaday pharmacist, and knows what it is to feel the fag of a long day behind the counter and to meet the keen competition of the present time. May I be allowed to say that at any rate the chemists of the West of England, many of whom are subscribers to your journal, will not thank you for endeavouring to unseat their well-tried representative, and they and their fellow-pharmacists in other parts of the country, while not objecting to fair all-round criticism, will wonder why you have taken the trouble to dissect Mr. Park's attendances, &c., and have allowed the other members of Council to go "scot free." Mr. Park is one of the rank-and-file, and is the sort of man we want on the Council, and those of us in the West who know him are going to vote for him, and our "brother-chips" in other parts will do wisely if they follow our example. I may say that Mr. Park has no knowledge of the fact that I am sending you this communication.

Yours truly,
C. T. Weary,
Divisional Secretary, President of Plymouth, Devonport, Stonehouse, and District Chemists' Association.

[Mr. Weary is angry and may not, therefore, have looked into the records of the retiring candidates—so far as attendance and participation in discussions are concerned. We subjoin the figures; A = meetings attended, and D = number of times the members have joined in discussions:—

Messrs.	1899		1900		1901	
	A	D	A	D	A	D
Carteighe	10	12	10	27	9	20
Glyn-Jones ...	7	8	11	30	11	17
Harrington ...	11	1	8	5	11	4
Harrison	10	4	7	5	8	9
Park	7	1	8	2	7	0
Southall	7	0	6	6	8	6
Young	11	7	7	3	10	7

From long experience of the Council and its workings we know that the public meetings are a good index of how the members participate in the committee-work.—Editor *C. & D.*]

*** *Exceptional pressure on our space this week compels us to hold over Replies to Correspondents. We shall send proofs to those who ask for them.*

Festivities.

Nottingham Dinner.

The thirty-third annual dinner of the Nottingham and Notts Chemists' Association was held at the Victoria Station Hotel, Nottingham, on April 17, and although these gatherings are always of a most enjoyable character, this year's assembly constituted a record, for departures were made from conventional paths, and the arrangements were considerably elaborated on comparison with previous years. Mr. R. Fitzhugh, J P. (the President), occupied the chair, and there was a large muster, including Mr. A. E. Beilby (Vice-President), the Mayor (Councillor E. N. Elborne), Ald. J. Bright, J P., Mr. A. Page, J P., the Chief Constable (Mr. P. S. Clay), and Messrs. A. Eberlin and W. Gill (Hon. Secretaries).

After dinner Dr. C H. Cattle proposed "The Nottingham and Notts Chemists' Association." He said the organisation had been in existence thirty-five or thirty-six years, and interest in it was in no way diminishing. A great deal of its success was attributable to the able leadership of Mr. Fitzhugh (the President), who had presided over the work of the Society for a period of nineteen or twenty years. (Applause.) From the very first an important function of the Association had been the education of young men to take their part a chemists in the future. It would always be a pleasant recollection that he was associated with the educational work of the Association prior to the establishment of the University College and the revision of arrangements. The public of Nottingham owed a great deal to the skill which was shown by the chemists as a body in the dispensing of their prescriptions, and it seemed to him that the accurate dispensing of medicines for the sick was by far the highest function of the chemist. Mr. W. Gill responded. After referring to the educational work of the Association, he said, if the public were to be well and faithfully served, it was necessary that chemists should be better paid, and a thoroughly educated class. He considered that the Food and Drugs Act was one of the best friends the chemist really had. Mr. A. E. Beilby proposed "The health of the Mayor, Corporation, and Magistrates of Nottingham," to which the Mayor and Alderman Bright responded. Mr. C. A. Bolton proposed "The Visitors," on behalf of whom the Chief Constable responded. Mr. E. Gascoyne proposed "The Pharmaceutical Society."

Mr. F. R. Sargent, whose name had been coupled with the toast, said the educational policy of the Society had often been criticised, but the future would see the chemist much more of a professional man than he had been hitherto. In the matter of analysis the chemist to-day did not do a tithe of what he would in the future. Mr. A. Eberlin proposed "The health of the President," and Mr. Fitzhugh said as long as he was able he would take the deepest interest in the Society. He was pleased to see so many present who had benefited by the Society, and he hoped it would continue to be regarded as it was now—the leading provincial organisation of its kind. (Applause.)

The musical items which interspersed the speeches were rendered by the Cecilia Glee Quartette, with Mr. A. Williamson as accompanist.

Bradford Dinner.

The annual dinner of the Bradford Chemists' Association was held on April 17 at the Royal Hotel. The chair was occupied by the President (Mr. Arthur Hanson), and a company of forty-four included Alderman J. Harrison (Sunderland), Mr. F. C. Long (Leeds), Mr. R. C. Walshaw (Huddersfield), Mr. R. Broadhead (Dewsbury), Mr. A. R. Tomlin (Barnsley), Mr. W. Pollard (Wakefield), Mr. Gibson Dixon (Halifax), and Mr. W. R. Black (Halifax).

Mr. A. R. Tomlin proposed "The Bradford Association," and expressed the opinion that the Council of the Pharmaceutical Society was all the better for the influences which were brought to bear upon it from Yorkshire.

Mr. F. A. Wilcock (Hon. Secretary of the Association), responding, said that all the Yorkshire Associations would be strengthened by the formation of the proposed West Riding Federation, and that there was no reason why that new organisation should in any way interfere with the national Federation.

Alderman Dunn proposed the toast of "The Pharmaceutical Society," expressing his great satisfaction that the traditions of the Society had been so far broken through, that Mr. Newsholme had been elected as the first President from the provinces, and that there was now an excellent scheme in operation for the representation of every part of the country by district secretaries. He hoped that before long something would be done in the way of making the Pharmaceutical Council more fully representative of the provinces. Whilst he did not want to say anything in disparagement of the services of the London members of the Council, who had done such good work for the Society, it was obviously impossible for gentlemen who had spent all their lives in London to understand the difficulties and the aspirations of the provincial members of the Society.

Alderman Harrison, in responding, spoke of the new Pharmacy Bill. They in Bradford, he said, seemed inclined to depart from the principles of the Act of 1868, whereas the Council of the Pharmaceutical Society wished to give these a wider and more perfect application. That Act laid down the principle that no person should assume the title of chemist and druggist or deal in poisons unless he was qualified under the Act. They in Bradford were rather inclined to extend that principle, so that medicines could only be sold by registered persons. He did not think that Parliament would listen to any such step as that. The cry of pharmacy for the pharmacists was a fine cry enough, but it was not practical. The Council did in the Bill try to go a step further than they had gone in the Act of 1868. In that Act the monopoly of the qualified pharmacist was confined to the selling of scheduled poisons, but in the new Bill they were going a step further in asking that the dispensing of physicians' prescriptions should be confined to registered men. In that they were taking a wise, a practical, step, for there was nothing more likely to commend itself to the judgment of those who were called upon to pass judgment upon such matters, than that medicines of such potent character as were now prescribed by physicians should be dispensed only by properly trained and qualified men. Although it might be said that this was a small matter by comparison with the sum total of the drugs which they should have in their hands, he could assure them that it was in reality an important matter. He hoped that, as time went on, and there was more enlightenment in regard to the potent character of the drugs dispensed, it would be seen that such progress had been made that one who might have been a thoroughly qualified man for the work of thirty years ago would be likely to be hopelessly at sea if placed behind the counter to-day. He quite differed from the conclusion that they in Bradford had arrived at, that the present was not an opportune time to take up the question of a curriculum. He believed that if the chemist and druggist was to hold his own, and to be in a position in which he might look for a further extension of powers from Parliament, he must be thoroughly qualified.

Other toasts followed whilst the intervals between the speeches were filled in with music rendered by Mr. Bailes and Mr. Sol Taylor, and a ventriloquial sketch by Mr. H. C. Datton.

Cardiff Pharmaceutical Society.

The first smoking-concert of this Society was held on Wednesday, April 23, at the Park Hotel. Mr. Robert Drane presided, and there was a good attendance, several members of the medical profession and representatives of some of the wholesale houses being present. An excellent programme had been prepared, the artists including Miss Jones (daughter of Mr. J. A. Jones, last year's vice-president), Miss Hilda Evans (of the Welsh Ladies' Choir), Mr W. J. Shapland Dobbe (of the Goodwillie Singers), and Messrs. W. A. Arbuckle, H. Vincent Morgan, Luxton, Gerhold, Poole, and Nolan. The programme had been arranged entirely by Mr. A. J. Bellamy, the Hon. Secretary.

The illuminated address presented to Mr. A. Hagor, expressive of the obligation of the members to him for the way in which he managed the affairs of the society as their first president, was on view. It was enclosed in an oak frame, and signed by Mr. R. Drane on behalf of the members, who placed on record their consciousness that the success of the Society was largely attributable to Mr. Hagon's energy and enthusiasm and capacity for business.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: April 24.

THE week under review has been duller than usual, and complaints that there is "nothing doing" are heard in many quarters. Quinine is practically a dead-letter, no transactions being reported in the "outside" market up to Wednesday. Morphine is unaltered and in steady demand. Holders of cannabis indica have again advanced their prices, and higher prices have been obtained for Japanese wax. Buchu-leaves are firmer, and so is shellac. Jalap is flat and lower, and crude camphor is also cheaper. Gamboge is firmly held, and menthol, although cabled again firmer from Japan, is flat here. Orris remains very cheap, and scammony root is firm and scarce on the spot. Potashes are easier. Cod-liver oil is unaltered, and American HGH peppermint oil is a shade easier on the spot. Strychnine is offered very cheaply, and pilocarpine is lower. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Cannabis indica	Ammonia sulphate	Chillies	Camphor, crude
Gambier	Buchu	Ginger (Cochin)	Ginger (Japan)
Vanilla	Oil, linseed	Potashes	Jalap
Wax, Japanese	Shellac		Pepper, white and black
			Pilocarpine

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from April 16 to 23, inclusive:—Acid, citric (@ Bordeaux), 20; acid, tartaric, 16; aloes (@ Bombay) 49 cs., (@ Mossel Bay), 17 cs.; areca (@ Marseilles) 13, (@ Colombo) 166; argol (@ Spain), 40; arrowroot (@ Sydney), 5; asafetida, 35; borate of lime (@ Mollendo), 8,031; borax (@ Chili), 1,240; cantharides, 4; cardamoms, 244; caraway-seed, 285; cascara sagrada, 360; castor oil (@ Calcutta) 1,617 cs., (@ Coconada) 255 cks., (@ Antwerp) 63 brls., (Ital.) 41 cs. (@ Marseilles) 111, (Belg.) 112; chamomiles, 10; cinchona (@ Calicut) 386, (@ Marseilles) 47, (@ Colombo) 151, (@ Mollendo) 480; citrate of lime (@ Palermo), 38; cocculus indicus, 300; cod-liver oil (@ Aalesund) 166, (@ Bergen) 10, (@ Christiania) 50; cream of tartar (@ Barcelona) 15, (@ Bordeaux) 97; drugs (@ Smyrna), 30; essential oils (@ Messina), 178; eucalyptus oil (@ Melbourne), 26; drugs (@ Trieste), 66; galls (Persian), 279; gentian, 15; ginger (@ Bombay) 385 pkgs., (@ Cochin) 547, (@ W.C. Africa) 1,201 bgs., (@ Calicut) 200 bgs. 25 cs., (@ New York) 255; glycerin, crude (@ Adelaide), 190; guinea-grains, 2; gum olibanum (@ Aden), 39; gum sandarac, 307; gum tragacanth, 745; gum, unenumerated (@ Persian Gulf), 1,072 bgs. 808 pkgs.; honey (Chil.) 235 (Calif.) 500 cs., (@ Ancona) 100 cs.; insect-powder, 35 pkgs.; kainit, 1,500 bgs.; kino (@ Cochin), 25; kola (@ Ceylon), 1; lemon-juice (@ Messina), 30 pps.; lemongrass oil (@ Cochin), 203; lime, acetate of (@ New York), 1,592 bgs.; lime-juice (W.I.), 15 pns.; liquorice-paste (@ Smyrna), 100 cs.; nux vomica (@ Bombay) 320 bags, (@ Mangalore) 400, (@ Cochin) 256; opium (@ Smyrna) 70, (@ Colombo) 20, (@ Persia) 171; orris (Ital.), 24; pepper (@ Bombay), 361; peppermint oil (@ Hamburg), 10; potashes (@ Portland), 29; potash chlorate (@ Gothenburg), 143; quicksilver (Span.) 5,000, (Ital.) 30; saffron, 23; sandalwood (E.I.), 568; sarsaparilla (@ Hamburg), 68; shellac 1,555, button ditto 526; soda acetate, 40; soda bicarbonate (@ New York), 328 bgs.; soda crystals (@ Antwerp) 160, (@ Ghent) 1,000; sugar-of-lead, 64; sulphur (@ Catania), 183; tamarinds (@ Barbados), 150 brls.; tartar (@ Rotterdam), 7; tartar emetic (@ Hamburg), 26; turmeric (@ Bombay) 195, (@ Calcutta) 500; vanilla (@ Marseilles), 51 cs.; wax, bees' (Mor.) 6, (Chil.) 43. (@ Marseilles) 25, (@ Havre) 8, (Aust.) 8. (@ Antwerp) 13, (@ Hamburg) 46. (Ital.) 34; wax, ceresin (@ Dusseldorf), 11; wine-lees (@ Marseilles), 180.

German Customs Tariff.

The Customs Tariff Committee of the Reichstag have adopted Clauses 134, 135, and 133 of the Tariff Bill without amendment, placing a duty of 8m. per 100 kilos. on egg-yolk if intended for food. Yolk if prepared for manufacturing purposes or otherwise treated is exempt from duty. Albumen is also free. The Committee also disposed of Clauses 137 to 144, dealing with honey, beeswax, spermaceti, isinglass, &c. In the case of Clause 137 the maximum weight up to which honey in hives with live bees is to be admitted free of duty was reduced from 20 kilos. to 15 kilos. The other clauses were adopted as they stood.

Heavy Chemicals.

There is a slightly better demand both for main and miscellaneous products being experienced in the heavy-chemical market, and this is apparent both on home and export account. Matters, however, cannot be otherwise described than quiet, as there is certainly room for much improvement. Values, with few exceptions, continue without change from recent reports.

Alkali Produce.—Ammonia alkali continues steady and in brisk request. Bleaching-powder and caustic soda are both moving better than they have been doing of late. Soda crystals are in better demand, whilst saltcake, chlorates, and yellow prussiates keep very quiet, and generally are depressed.

Benzols dull: 90 per cent. at 8½*d.*, and 50 per cent. at 7½*d.* per gal.

Sulphate of Ammonia still maintains a very firm position, and tendency is towards higher figures.

Alumina Products.—The all-round demand for the various different products continues to be very steady and satisfactory. Values are without change, and likely to remain so. Crystal alum moving well, both for home and export: loose lump, 5*l.* to 5*l.* 5*s.* per ton; lump, in tierces, 5*l.* 5*s.* to 5*l.* 10*s.* per ton; ground, in bags, 5*l.* 12*s.* 6*d.* to 5*l.* 17*s.* 6*d.* per ton, with usual extras for various sized casks. Sulphate of alumina, best qualities and pure white, practically free of iron, 87*s.* 6*d.* to 95*s.* per ton, in ordinary casks, with customary allowances for bags and loose slabs. Aluminous cake, 52*s.* 6*d.* to 60*s.* per ton. Aluminoferric, 55*s.* to 65*s.* per ton, in accordance with condition and package. Hydrate of alumina, purest and highest strength Al_2O_3, 11*l.* 15*s.* to 12*l.* 5*s.* per ton, in large casks. Hydrate of alumina, special pulp, 12*s.* 6*d.* to 15*s.* per cwt. Hydrate of alumina, special pulp, dried, 37*s.* 6*d.* to 38*s.* 6*d.* per cwt., in usual casks; ground, 38*s.* to 39*s.* per cwt. Aluminate of soda, highest strength Al_2O_3, and carbonate of alumina, 35*s.* to 37*s.* 6*d.* per cwt, according to quantity, &c.

Liverpool Drug-market.

Liverpool, April 23.

Castor Oil.—The market is quite free from any fresh features of interest. Good seconds Calcutta is to be obtained at 2¼*d.* per lb. on the quay, and 2⅛*d.* in store. First-pressure French finds sellers at the same prices. A sale of second-pressure French is reported at 2⅛*d.* per lb.

Grains of Paradise.—A further sale of 6 bags is reported, at 60*s.* per cwt., and now 65*s.* is asked for the small stocks remaining.

Calabar-beans.—Two bags at auction found a bidder of 10½*d.* per lb. The owner's idea was 1*s.* 2½*d.*, and they eventually changed hands at 1*s.* 1*d.*

African Ginger.—The market is entirely cleared of new crop, and the only parcel offering is 5 tons afloat, at 36*l.* per ton. Much higher prices are expected, as the crop is said to be over.

Honey is in slow request, with little or no business passing. Values are not quotably changed, but sellers show a disposition to meet the views of buyers.

Chillies (S.L.).—Fifteen bags rather brown offered at auction and brought forth a bid of 40*s.*, but owners declined to sell at this price, wanting 45*s.* per cwt.

Canary-seed.—The week has been marked by a series of sales ranging from 40 to 120 bag-lots, 35*s.* to 35*s.* 6*d.* per qr.

Arsenic is quiet, at 13*l.* per ton net.

Sulphate of Copper is steady, at 19*l.* per ton.

Acacia Sorts.—Importers are all talking of better prices in consequence of the short supplies from the Soudan. Forty serons of hard amber sorts realised 32*s.* per cwt.

Beeswax.—The stocks available on the spot are being reduced to very narrow compass. A further arrival of Chilian has taken place by the s.s *Orellana*, but it is not expected to affect the market-price. Value of grey to yellow wax remains at 7*l.* 5*s.* to 7*l.* 10*s.* per cwt., and pale yellow, 7*l.* 12*s.* 6*d.* to 7*l.* 17*s.* 6*d.*

Quillaia.—Bids for large quantities under 13*l.* per ton have been refused, holders remaining very firm at the figure named for their stocks.

Digitized by Google

German Drug-market.

Hamburg, April 22.

Our drug-market continued quiet; very little business doing at present.

AGAR-AGAR is firm; spot has sold at 300m., and forward 295m. per 100 kilos.

ANTIMONY is also firmer, at 25m. per 100 kilos.

ANNATTO-SEED.—Some arrivals have been sold at about 28*s.*

CANTHARIDES is getting scarce, at 525m. per 100 kilos.

CEVADILLA SEED is dull and lower, at 92m. to 91m. per 100 kilos.

CUMIN-SEED is firmer, at 50m. to 51m. per 100 kilos.

ERGOT is very firm; for Russian 340m. per 100 kilos. is asked.

ELEMI is tending lower, at 190m. per 100 kilos.

MENTHOL, for spot delivery, is scarce, at 29½m. to 30m. per kilo.; higher prices for shipment are asked from Japan.

IPECACUANHA is quiet; Rio is quoted 22m. to 21¾m., and Cartagena 9½m. per kilo.

KOLA is firm, at 45m. per 100 kilos.

SUGAR-OF-MILK is quoted 78m. per 100 kilos.

COD-LIVER OIL is very firm; old crop costs 105m., and new crop 110m. per barrel.

American Drug-market.

New York, April 15.

Business is rather quiet, and the market has a tame appearance.

ALOES.—Cape is in reduced supply, and holders are asking 6½c. to 7c. per lb.

BEESWAX is firm, with only small parcels offering at prices ranging from 30c. to 35c. per lb., according to quality.

BUCHU-LEAVES are in good demand, and the market is firmer. Prime green leaves are quoted up to 20c., though less will buy. Ordinary are offered down to 16c. per lb.

CASSIA OIL is easy, and high-test oil is offering at 62½c.

COD-LIVER OIL is moving upward, in sympathy with primary markets. A few small lots might be had at $27, but $28 is generally asked.

ERGOT.—Russian is quoted 39c. to 42c., and Spanish at 40c. to 42c., but business is limited.

JALAP is easy under increasing supplies, and values show a decline to 10c.

MANDRAKE (Podophyllum) has sold at 4½c., and more can be had at this figure.

MENTHOL is easier, and the quotation of $3.90 to $4 can be shaded for large lots.

OIL OF PEPPMINT demand is slow, and holders seem more anxious to realise. Supplies are offered at $1.65, and could probably be obtained at a concession from this figure. The position of the article does not seem to warrant this decline, as it is not likely that this year's crop will exceed that of last year to any extent.

OPIUM is slow of sale, and the open quotation of $2.90 for case-lots can be shaded.

SENNA is in active request, chiefly the Tinnevelly variety, for which 5c. to 14c. is asked, according to quality.

Cablegrams.

BERGEN, April 23, 6 P.M.:—The cod-liver oil market is quiet, at 105*s* per barrel, f.o.b., for best non-congealing Lofoten oil. The catch of cod to date amounts to 34,700,000, against 30,055,000 at the same time last year. This is expected to yield 17 095 barrels, against 27,640 barrels in 1901. At Finmarken a small beginning has been made.

* * * *

HAMBURG, April 24:—Refined camphor is unchanged. Condurango and cevadilla-seed are quiet. Cod-liver oil is firm.

* * * *

NEW YORK, April 24:—Business is dull. Opium is easy at $2.85. Quinine is unsettled at 28c. to 30c. per oz. Golden-seal is easier at 50c. per lb. Cape aloes is scarce at 7c. Jalap is easy at 10c. per lb., and buchu-leaves are dull, 16c. per lb. being wanted for sound leaf. Peppermint oil is easy at $1.65 per lb.

ARROWROOT.—At auction on Wednesday, Bermuda was bought in at 1*s.* 5*d.* per lb. Fine St. Vincents in tins sold at 3⅞*d.*; good in barrels was bought in at 2*d.* per lb.

BALSAM PERU.—According to a continental report the "syndicate" of producers in San Salvador has recently been dissolved, which has led to an easier feeling there. On the spot genuine thick balsam is practicably unobtainable, but thinnish is offered at 6*s.* 3*d.* per lb.

BUCHU firmer since the sales, 8½*d.* to 9*d.* per lb. being wanted for good green sound leaf.

CAMPHOR. — For July-September shipment Formosan crude camphor has been reduced by the monopoly to 135*s.* per cwt., c.i f., but there is no disposition to operate for that position. Japanese crude for April-May shipment is quoted 145*s.*, c.i.f., with buyers at 140*s.* Spot is scarce.

CANNABIS INDICA —Good green tops are 3*d.* per lb. dearer, 2*s.* 6*d.* being now the price; and siftings, which are very scarce, are quoted 2*s* 3*d.*

CANTHARIDES.—Natural Russian is quoted 2*s.* 3*d.*, and sifted 2*s.* 4*d.* per lb., c.i.f.

CASCARA SAGRADA.—Business is reported at 25*s.* per cwt, spot.

COCOA-BUTTER.—The auction to be held at Amsterdam on May 6 will consist of 80 tons Van Houten's, 3 tons Helm, 13 tons de Jong and 10 tons Mignon brand, while on the same date here 100 tons Cadbury's will be offered.

ERGOT is scarce, but a little Russian can be had at 1*s.* 8*d.* per lb. It is said that the only parcel of Russian offered on the Hamburg market is mixed with ergot of wheat; 1*s.* 6½*d.* per lb., c.i.f., is quoted for it. Spanish for delivery is quoted from Hamburg at 1*s.* 7*d.*, c.i.f.

GALLS.—Chinese are easier, with sellers at 4*s* 9*d.* per cwt., c.i.f.

GAMBOGE remains very firm. Fine Siam pipe has been sold at 16*l.* 10*s.* to 17*l.* per cwt, and pickings at 14*l.*

GINGER.—According to a Colonial-office report the exports from Jamaica were

	1899–1900	1900–1901	
Cwt. ...	20,205	26,350	+31·3 per cent.
£ ...	60,615	66·324	+ 9·4 „

JALAP is lower and pressed for sale. There are sellers of good heavy at 5*d.* per lb. net, spot.

KINO.—Most of the cheap lots of kino sold "without reserve" in auction last week have been resold.

LIME-JUICE has been in good demand, but spot stuff is very scarce and firmly held. Good raw West Indian has been sold up to 1*s.* 5*d.* per gallon.

MENTHOL is cabled firmer again from Japan, but here the market is flat and practically nothing doing.

MORPHINE.—Makers report a steady demand at the unaltered price of 4*s.* per oz. for hydrochloride powder. With every indication of a good crop of Turkish opium this season, there is not much prospect of the present low value improving.

OIL, ANISE STAR.—The spot price is 4*s.* 3*d.* per lb. with small sales thereat.

OIL, BERGAMOT, shows no change, 7*s.* 3*d.* per lb., c.i.f, being quoted by one importer.

OIL, CAJAPUT.—Although the price in Amsterdam is 2*s.* 9*d.* per bottle, good green can be had on the spot at 2*s.* 3*d.*

OIL, CASTOR —Calcutta is quiet at 2¾*d.* per lb. for seconds.

OIL, CHAULMOOGRA, is offered at from 2*s.* 3*d.* to 2*s.* 10*d.* per lb., according to quantity.

OIL, COD-LIVER.—The London market is quiet, and although there is no change in the quotations the tone is not quite so firm as it was. There is a good inquiry for second quality oil, but little is to be had. The Lofoten fishing is now over, and the total yield is estimated at 9,595 hectolitres against 15,889 hectolitres last year. Newfoundland oil of last season's crop has been sold at 4*s.* per gallon (equivalent to 100*s.* per barrel), and is scarce. Our Bergen correspondent writes on April 19 that the market has assumed a more quiet tone, and no further advance has taken place probably owing to the fact that there has been little buying for foreign account. There is likely to be no further movement either way until the result of the Finmarken fishing is known. So far only a small beginning has been made. The quotation for best non-congealing Lofoten oil is unchanged at 105*s.* per barrel, f.o.b. Bergen. The exports from Bergen to date amount to 3,350 barrels against 3 203 barrels at the same time last year.

OIL, GERANIUM.—Both Bourbon and Algerian oils are very firm and scarce.

Digitized by Google

Oil, Lemongrass.—Two steamers have arrived from Cochin with 203 cases.

Oil, Lime.—West Indian distilled is obtainable at 1*s.* 6*d.* per lb., and hand-pressed at 4*s.* 6*d.* In last week's issue we inadvertently reported a sale in auction of hand-pressed oil at 3*s.* 3*d.*; the sale in question referred to a tin of sour orange oil.

Oil, Peppermint.—For American HGH oil 8*s.* 10½*d.* per lb. is still asked, but it is quite probable that 8*s.* 9*d.* would now buy.

Oil, Petitgrain.—Paraguayan oil is a weak market, there being plenty of offers from Ascuncion at 15f. per kilo. and less.

Oils, Fixed.—Cochin *Cocoanut* oil is quoted 37*s.*, spot, in hogsheads, and Ceylon 32*s.* 6*d.*, spot. *Linseed* is firmer at 30*s* 3*d.* in barrels, landed terms. *Rape* steady at 25*s.* 3*d.* per cwt., spot, and 26*s.* 6*d.* for refined. *Cottonseed* unchanged at 25*s.* 6*d.* to 26*s.* 6*d.* for refined. Fine Lagos *Palm* is 25*s.* 6*d.* per cwt.

Opium.—Smyrna, April 11: The market is quiet, sales amounting to 30 cases talequale descriptions at the equivalent of 7*s.* 6*d.* to 7*s.* 9*d.* per lb., c.i.f. The arrivals amount to 3,214 cases, against 4 007 cases at the same time last year. The fine qualities of opium are much sought after in view of the low price to which the article has fallen, but large holders show no disposition to realise, preferring to hold on until the harvest commences.

Orris.—Very cheap, fair Florentine sorts being quoted by one importer at 21*s.* 6*d.* per cwt., c.i.f.

Pilocarpine was reduced last week to 62*s.* per oz. for 1-oz. lots.

Pimento.—The exports from Jamaica during 1899–1900 amounted to 123,973 cwt. (valued at 173,562*l.*), against 100,547 cwt. (valued at 110 602*l.*) in 1900–1901, or a decrease of 18·9 per cent. in quantity, and 36·3 per cent. in value.

Potashes.—The scarcity has been relieved by several arrivals lately, and Montreal pot are easier at 25*s.* 9*d.* per cwt., and 40*s.* for pearl.

Quinine.—No business is reported this week, and quotations are nominal. The spot price is about 1*s.* 2*d.* per oz.

Saffron is firm at 23*s.* 6*d.* per lb., net, for best Valencia. There are rumours of a syndicate being formed among the growers in Spain, but it is discredited here.

Scammony-root.—Is very scarce and firmly held at 30*s.* per cwt. on the spot.

Seeds.—Russian *Anise* is quiet at 19*s.* 6*d.* per cwt. Dutch *Caraways* steady at 21*s.* 6*d.* per cwt. Morocco *Coriander* firm at 10*s* per cwt. *Cumin* steady at 26*s.* per cwt. for Morocco, and 34*s.* to 35*s.* for Malta. *Canary* very slow at 36*s.* 6*d.* per quarter for Turkish. *Linseed* steady at 59*s.* to 60*s.* per quarter for fine. Morocco *Fenugreek* has been sold recently at 6*s.* 6*d.* to 6*s.* 9*d.* per cwt. for large parcels.

Shellac.—In auction 453 chests were offered, of which 80 sold at about 3*s.* per cwt. advance on last sales, the value of fair second orange TN being 118*s.* to 119*s.* Good red sold at 119*s.*, and fair reddish part blocky 117*s.* to 118*s.*; 38 cases Garnet and 85 cases Button were bought in. Privately the market has been rather firmer this week, owing to the scarcity of sellers. Forward delivery has been firm, and has fluctuated little; the business done includes 300 cases August delivery at 123*s.*, and September 124*s.* per cwt.

Spices.—On Wednesday, at auction, Cochin *Ginger* was easier; washed rough sold at 38*s.* per cwt. for rather small, and at 40*s.* for good bold in cases; Calicut brown rough was bought in at 48*s.*, and "O" cut at 58*s.* Japan was 2*s.* per cwt. lower, fair to good quality selling at 30*s.* to 32*s.* per cwt. Jamaica in good supply sold with competition at steady prices, common to good common at 34*s.* to 40*s.* per cwt., middling dull to fair washed at 41*s* to 47*s.* 6*d.*, and good washed at 51*s.* to 57*s.* African is quoted 36*s.*, and Bengal 42*s.* per cwt. Penang *Cloves* partly sold at 6½*d.* per lb. for ordinary. Zanzibar are offering at 3 13/16*d.* per lb. on the spot. The market for future delivery has been stagnant, and the quotation for June–August is lower at 3 13/16*d.* per lb. Good Japan *Chillies* sold at 35*s* 6*d.* and Nyassaland at 46*s.* to 51*s.* per cwt. Japan *Capsicums* were bought in at 25*s.*; good Nyassaland sold at 42*s* per cwt. *Cassia-lignea* was bought in at 55*s.* per cwt., good broken at 50*s.* per cwt. *China-cinnamon* at 25*s.* per cwt., and *Cinnamon-chips* at 2½*d.* per lb. *Pimento* easier, ordinary partly sold at 2⅞*d.* to 3*d* per lb. Black *Pepper* lower; Penang was bought in at 5½*d.* to 5⅝*d.* per lb. and fine Wynaad at 6¼*d.*; good Alleppy sold at 5⅝*d.* Singapore is worth 5⅝*d.* to 5 1/16*d.* per lb. on the spot, and business has been done at 5 1/16*d* for June–August shipment. Fair Singapore white sold at 9¾*d.* per lb., being lower; good to fine was bought in at 10¾*d.* to 11¼*d.* Penang is offering at 9¼*d.* on the spot.

Sticklac.—Siam to arrive is quoted 63*s.* per cwt., c.i.f.

Strychnine.—The advent of a new American make of strychnine, which is being offered at very low prices, has unsettled this market, and may probably lead to a reduction in the combination price. Pure crystals of American make are quoted at from 1*s.* 6*d.* to 1*s* 9*d* per oz., the inside price for contract quantities of 500 oz.

Sugar of Milk.—American is quoted 40*s* for small wholesale quantities. From Hamburg 38*s.*, c.i.f., is quoted in ½-ton lots.

Sulphur.—The stocks in Sicily at the end of March amounted to 275,537 tonnes of 13 Sicil. cantars against 201,196 cantars at the end of March, 1901.

Turmeric.—Small sales of Bengal have been made at 15*s.* per cwt, and 11*s.* 9*d.*, c.i.f., for arrival. Fair bright but bulby Madras finger has sold at 17*s.* 6*d*, and ordinary small lean shrivelled at 12*s.*

Vanilla.—In auction the small supply of 305 tins was offered, of which about 250 sold at firm to 1*s.* dearer rates. Fair to good Seychelles sold at from 10*s.* to 15*s* per lb for 6 to 7½ in., 8*s.* 6*d.* to 9*s.* 6*d.* for 5 to 6 in., 6*s.* 6*d.* to 8*s.* 6*d.* for 5 to 5½ in., and 4*s.* to 7*s.* 6*d* for 3½ to 5 in. Ordinary foxy 5 to 6 in., 7*s.* to 7*s.* 3*d*; and common brown, 3*s.* to 6*s.* 9*d.* per lb.

Wax, Japanese, is dearer, 36*s.* having been paid for good squares on the spot.

Coming Events.

Wednesday, April 30

Public Dispensers' Association, St. Bride's Institute, Bride Lane, Ludgate Circus, E.C., at 8 P.M. General meeting.

Chemical Society, Burlington House, W., at 5.30 P.M. Papers to be read:—"The Preparation of Absolute Alcohol from Strong Spirit"; "The Vapour-pressure and Boiling-point of Mixed Liquids"; and "The Correction of the Boiling-point of Liquid from Observed to Normal Pressure"; by Mr. S. Young. "The Properties of Mixtures of the Lower Alcohols, with Benzene and with Benzene and Water"; "Fractional Distillation as a Method of Quantitative Analysis"; and "Vapour-pressures and Specific Volumes of Isopropyl Isobutyrate"; by Messrs. S. Young and E. C. Fortey. "Nitrogen-bromides containing the Propionyl Group," by Mr. F. D. Chattaway.

Edinburgh Chemists', Assistants', and Apprentices' Association, 36 York Place, Edinburgh, at 9.15 P.M. The annual business-meeting, when the Ewing Pharmacy-prize will be presented and an address given by the President on "The Pharmacist in Literature."

Chemists' Managers' and Assistants' Society visit the factory of Messrs. Idris & Co. (Limited), Pratt Street, Camden Town, at 3.45 P.M. Tickets can be had from Mr. G. Cullwick, 48 High Street, Notting Hill, or Mr. C. E. Pickering (President), 52 Acacia Road, St. John's Wood, N.W.

Huddersfield Chemists' Association, Queen's Hotel, at 7.30 P.M. Smoking-concert.

London Chemists' Association. A meeting of the members resident in South London will be held at the Surrey Masonic Hall, Camberwell, S.E., at 3.30 P.M., to appoint a local Committee for South London.

Thursday, May 1.

Chemists' Assistants' Association, 73 Newman Street, W, at 9 P.M. Musical and social evening. Mr. A. W. Waring will preside.

Glasgow and West of Scotland Chemists' Trade Association Athenæum (Room 17), St. George's Place, at 8.30 P.M.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

AMERICAN AND CANADIAN ISSUE.

THIS issue of THE CHEMIST AND DRUGGIST will have an extra circulation to buyers of druggists' goods in Canada, the United States, and the West Indies. It falls on May 31. An interesting statement regarding the drug-trade of U.S.A. will be found on page 699, and should be read by all houses wishing to improve business.

GUINEAS TO GET.

WE offer a guinea to any subscriber, or member of his family, or *employé*, who arranges the surnames of the ten candidates for the Pharmaceutical Council in the order that they will appear on the poll. The candidates are:—

A. S. Campkin, Cambridge	*J. W. T. Morrison, Tring*
M. Carteighe, London	*C. E. Pickering, London*
W. S. Glyn-Jones, London	C. J. Park, Plymouth
J. F. Harrington, London	A. Southall, Birmingham
J. Harrison, Sunderland	J. R. Young, Warrington

The names printed in italics indicate the new candidates.

Please write on postcards, and send them not later than Monday, May 19.

Also half-a-guinea for the best reasons on a postcard for rejecting any three of the ten candidates. Send in before May 13.

Another half-a-guinea will be given for the best reasons why any of the three new candidates should be supported. "Reasons" postcards should be sent before May 13, to the Editor, 42 Cannon Street, E.C.

Summary.

CURIOUS information about jalap is graphically portrayed on p. 696.

RECENT observations on *x* rays by Mr. J. M. Davidson, M.B., are reported on p. 691.

THE "Holy Shroud" of Turin was made about A.D. 1400, so it now appears (p. 688).

THERE is little in the Wolverhampton Exhibition of pharmaceutical interest (p. 690).

A PENNY is to carry a ½-oz. letter to Australia, but not back, nor just yet (p. 701 and p. 700).

OPTICAL matters, sight-testing, and glass are subjects which happen to fall together on p. 693.

A MINISTER OF COMMERCE is not a taking idea, so far as the Government is concerned (p. 701).

Some points for manufacturers from the London Chamber of Commerce will be found on p. 685.

THE British Homœopathic Association is a new body, with the Earl of Cawdor at its head (p. 686).

AN ATTEMPT to stamp out the Japanese druggist in favour of the certificated pharmacist has failed (p. 698).

MR. THOMAS BARCLAY has given us some particulars of his Norway trip in an interview reported on p. 696.

JOHN ISLIP is still sending orders to chemists for goods for which he does not pay. Beware of them (p. 669).

THE GRASSE EXPOSITION of perfumes and oils was rather interesting. An illustrated report of it is on p. 689.

THE latest druggist's whisky-story was told by Sir Harry Bullard in "the House" on Wednesday. It is on p. 701.

THE names of those who passed the Apothecaries' Society's Assistants' examination last month are printed on p. 686.

"XRAYSER" makes a pertinent and practical suggestion in regard to the appeal in the pure-gum pastille case (p. 697).

THE Public Dispensers' Association want Bloomsbury to take a hint from Dublin in regard to the qualification of hospital compounders (p. 694).

THE VICE-PRESIDENT of the Pharmaceutical Society (G.B.) writes to say that he is in favour of dividing the Minor—conditionally (p. 708).

THE TRAINING OF APPRENTICES has been discussed by Liverpool chemists, Mr. Wallbridge, of St. Helens, leading off with a helpful paper (p. 691).

THE LOCAL GOVERNMENT BOARD OF ENGLAND has no special list of medicines for Poor-law purposes, but has given us a list of "expensive medicines" (p. 699).

A SALARY of 80*l.* a year is not good enough for a dispenser, said a chemist to the Prescott Guardians, who are having second thoughts about the matter (p. 684).

THE Chancellor of the Exchequer is having a bad time with his pet cheque scheme. He thinks of giving a 1*d.* rebate on cheques under 2*l.*, and the House of Commons laughed at him (p. 701).

MOST interesting particulars regarding the preparation of absolute alcohol were communicated to the Chemical Society on Wednesday. At the same meeting several pharmacists were elected Fellows of the Society (p. 707).

A 4-oz. bottle of bromidia was taken by an eminent barrister, and at the inquest which followed it transpired that the makers do not label the preparation poison. Their agent writes to us about it, but we emphasise the illegality (p. 685).

MR. D'EYNCOURT has, after all, to state a case for the High Court with reference to the Sale of Food and Drugs Act action against Boots' Cash Chemists (Southern) (Limited), and on the prejudice and commercial-standard points (p. 702).

VINEGAR OF SQUILL, according to Mr. Bevan, the Middlesex analyst, should contain 4·2 per cent. of free acetic acid. This contention broke down utterly at Highgate on Wednesday in face of skilled pharmaceutical evidence, and a summons against a Hornsey chemist was dismissed (p. 703). Other cases on p. 714.

THE business tone remains much as previously reported, and no important fluctuations have occurred. Citric and tartaric acids are in more demand at the cheap prices now ruling. Saffron comes higher from Spain. Wayne County peppermint oil is a shade easier. Quinine is a nominal market. The auctions of first-hand drugs are reported on p. 711.

Digitized by Google

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Mr. T. Hadfield, chemist, of Beaumont Road, Plymouth, has been appointed dispenser to the Three Towns Friendly Societies' Medical Aid.

Whilst a man named Nightingale was making a purchase in Martyn's Drug-stores, Queen Street, Wolverhampton, on April 24, he fell down dead in the shop.

A disastrous explosion of chemicals occurred on April 28 at a large residence at Laurie Park Avenue, Upper Sydenham, destroying a laboratory and doing other mischief.

Thomas Mather, who was last week remanded on a charge of stealing four oil-barrels belonging to Messrs. Blunt & Evans, chemists, Derby, has been sentenced to fourteen days' hard labour.

A man named William Hollis, who is described as a chemist, but whose name is not in the register of chemists and druggists, was remanded at Stoke on April 25 on a charge of attempting to procure abortion.

At an inquest held at Greenwich on April 25 evidence was given by Mr. William Cork Plumer, chemist and druggist, of 60 Lamb's Conduit Street, W.C., who identified the deceased man as his brother, Mr. J. G. Plumer, surgeon-dentist, Greenwich. Deceased was killed while attempting to get on a moving train at Lewisham.

The special committee appointed by the Bromsgrove Droitwich, and Redditch Hospital Committee to inquire into the circumstances attending the administration of marking-ink for beef-juice (see *C. & D.*, April 26, page 657), reported that the matron and nurse who administered the fluid had been guilty of carelessness, and both are to be requested to resign.

At Blackburn on April 23, William Heaton, a weaver, was sentenced to one month's imprisonment for stealing a fox terrier dog, valued at 30*l.* It was stated that the prisoner enticed the dog to his house and boiled it down to extract the fat, which he sold as a cure for rheumatism—a practice he had carried on for years, and which he had been taught by his father.

The prolonged hearing of the charges of conspiracy to defraud and falsification of books against ten past and present directors of the Patent Novelties Manufacturing, Belgian Manufacturing and Trading, and French Royd Oils Companies was concluded at the Manchester Assizes on April 29, when Bradley, Thomas Balshaw, and Charlesworth were found guilty, and sentenced to eighteen months', nine months', and three months' hard labour, respectively.

On Friday evening, April 25, an interesting gathering was held at the Grand Hotel, Bournemouth, under the presidency of Mr. G. H. New, to bid farewell to Mr. A. F. Lawrence, who for many years has been the proprietor of the old-established pharmacy in the Square, which he has recently disposed of. Mr. Lawrence intends taking a rest, and before leaving the country his friends entertained him to dinner, and gave him some handsome presents, notably a travelling-trunk beautifully fitted and engraved by a well-known Bond Street firm.

An Example from Northampton.

In accordance with the decision arrived at by the members of the Northampton Chemists' Association (see *C. & D.*, April 26, page 659), the following chemists have announced their intention of closing their shops at 2 P.M. on Thursdays and at 8 P.M every other day, excluding Saturdays: Mr. A, Armitt, St. Giles's Street; Mr. E C. Ashford, Gold Street and St. James's; Mr. F. C. Ashford, Far Cotton; Mr. F. Cowdery, 4 Parade; Mr. E. E. C. Dennis, Adnitt Road; Mr. G. Ingle, Barrack Road; Mr. F. Kirby, Abington Street and Kettering Road; Mr. W. Lucas, Kettering Road; Mr. W. McKinnell, Wood Hill; Mr. W. D Mayger, Regent Square; Mr. L. North, Bridge Street; and Mr. Sindall, Wood Hill.

Colonial Gifts on View.

The Prince of Wales, President of the Imperial Institute, has decided that the gifts and addresses which were presented to the Prince and Princess on their visit to the colonies last year, shall be exhibited to the public at the Imperial Institute, and that the proceeds of this exhibition shall be contributed to the "Coronation Gift" to King Edward's Hospital Fund. The exhibition will be opened to the public on Thursday, May 15, and will occupy the east half of the special exhibition gallery of the Institute. The west half of the gallery will contain a free exhibit of products from Canada, Rhodesia, and Queensland.

Weights and Measures.

The annual meeting of the Incorporated Society of Inspectors of Weights and Measures was held on Thursday, Friday, and Saturday of last week in the County Hall, Spring Gardens—Mr. R. Jarvis, of Birmingham, presiding over a large attendance of members. The annual report showed that during the year thirty-one new members had been enrolled, thus making a total of 272. The statement of accounts showed a balance in hand of 16*l.* After formal business had been transacted, papers were read by Mr. C. McDonald, of Glasgow, on the city of Glasgow's suggested amendments to the Weights and Measures Act, and by Mr. C. Ingrey (consulting engineer to the Westminster City Council) on weighing-machines. In connection with the gathering there was an exhibition of the latest improvements in weighing-machines. At the dinner, held in the Throne Room of the Holborn Restaurant on April 24, Mr. B. S. Straus, L.C.C., presided.

Pure Drugs.

The Portsmouth Board of Guardians have received a communication from the borough analyst (Mr. J. Moore Murray), in which he reports that the analysis of samples of all the drugs from the stock at the workhouse dispensary proves them to be pure and to comply with all requirements of the British Pharmacopœia. Two samples of milk were found to be deficient in cream, and the Board withheld the contractor's cheque.

The Value of Remonstrance.

The Prescott Board of Guardians, having advertised for a qualified dispenser at a salary of 80*l.* per annum, a "fully qualified" chemist of Liverpool has written to the Board stating that the wages were about equal to those paid to a dock-labourer, and suggesting 180*l.* as much nearer the mark. Three candidates—from Prescott, Leicester, and Manchester—were interviewed by the Board, but it was discovered that neither of them was qualified. The only other applicant for the post was Miss Bywater, of London. The chemist's letter quite upset the mental equilibrium of the Board, however, for they referred the subject to a committee.

A Rising Drug-bill.

At a meeting of the Tonbridge Board of Guardians on April 25, one of the members pointed out, compared with the corresponding period of last year, the cost of drugs during the past quarter showed an increase of 29 per cent. Compared with the year prior to that, the cost had gone up 38 per cent., and compared with three years ago 90 per cent. In 1899 drugs cost 112*l.*; in 1900, 156*l.*; in 1901, 165*l.*; and in 1902, 216*l.* If they went on at that rate, he said, they would have an increase at the rate of 100 per cent. next year. It was decided to ask the medical officer for an explanation.

The Supply of Expensive Medicines.

The Loughborough Board of Guardians, on April 22, again considered the suggestion of the Local Government Board that all expensive drugs and medicines for the workhouse should be provided by the Guardians at their own cost, instead of by the medical officer out of his salary. At a previous meeting (see *C. & D.*, April 19, page 588) the Board decided to ask the superior Board to supply them with a list of what were considered expensive medicines. This has been done, and it was decided that the drugs and medicines enumerated in the list should in future be supplied by the Guardians.

Digitized by Google

Medical Officers and Drugs.

The Dorking Board of Guardians, on April 24, considered the question of allowing the medical officer of the workhouse (Dr. Batson) a stated sum for drugs. It was suggested that 20*l.* a year would be a fair allowance, and in the course of the discussion it appeared that out of a salary of 30*l.* a year the medical officer had to pay between 16*l.* and 18*l.* a year for drugs. One member opposed the increase on the ground that the medical officer had not asked for it, but the Board decided to allow 20*l.* a year.

London Chamber of Commerce.

At a meeting of the Manufacturers' Section, held at Botolph House, Eastcheap, E.C., on April 30, Mr. Eastman presiding, it was agreed to circularise the members of the Section regarding arrangements for closing and the payment of *employés* on the two Coronation days and the Saturday following. The Secretary of the Section (Mr. Musgrave) reported that as far as he could gather the proposed L.C.C. regulations regarding lamps and signs were "no forrarder." On the proposition of Mr. W. Sanland the formation of a sign-manufacturers' sub-committee of the Section was agreed to. Mr. Spicer drew the attention of the meeting to a recent decision in the Scotch courts, whereby the consignor was made liable under the Workmen's Compensation Act for injury done to a carter during the transmission of goods. As an outcome of the discussion a sub-committee was appointed to go into the question. The report of the Parliamentary Committee was then taken. With regard to patent-law reform the committee, on the motion of Mr. David Howard, strongly supported the Manchester Chamber of Commerce in their contention that the Board of Trade should have power to revoke a patent if worked abroad and not in this country, and urged the co-operation of the General Purposes Committee and the Council of the London Chamber with the Manchester Chamber on the matter. Messrs. S. B. Boulton, David Howard, and G. J. Jacobs (with power to add) will represent the Manufacturers' Section on the General Purposes Committee. The committee further decided to support Mr. Gerald Balfour's Patent Law Amendment Bill, subject to the amendments suggested. They also approved Mr. Lough's Labour Bureaux Bill, and the Canal Traffic Bill, but opposed Colonel Denny's Home Industries Bill, the Workmen's Compensation Bills of Mr. McKenna and Mr. Joseph Walton, the Steam Engines and Boilers (Persons in Charge) Bill, and the Wages Boards Bill of Sir Charles Dilke. The report was unanimously adopted.

Restriction Required.

An inquest was held on April 28, at the City Coroner's Court, on the body of Mr. Gerald Geoghegan, the well-known barrister, who was found dead in his chambers. The Coroner (Dr. Waldo) said that on a table by the side of the deceased a bottle labelled "Bromidia" was found. It bore no poison-label, yet the mixture contained a deadly poison, scheduled under the Poisons Act. Mr. George Peter Pond, chemist and druggist, 68 Fleet Street, E.C., deposed to selling a bottle of bromidia to Mr. Geoghegan, whom he had known since 1868. He was not in the habit of selling bromidia, but often used it in doctors' prescriptions, and he knew that deceased took it occasionally by medical prescription. The Coroner: Do you know what this bromidia really is? Mr. Pond: I do now, but did not previous to this unfortunate affair. I have since looked it up, and find that it is really an article being sold under a false idea. There are few chemists but have been under the impression that it was a harmless mixture of bromides, whereas it really contains chloral hydrate, bromide of potash, Indian hemp, hyoscyamus, and other things. The Coroner: And under the Poisons Act nothing containing chloral hydrate should be sold without a "poison" label? Mr. Pond: That is so, but this has the Government stamp to seal it. The Coroner remarked that it was quite clear that owing to the Government stamp and no poison-label appearing on it chemists had been deluded into thinking it was not a poison. Dr. P. G. Cotter said deceased had evidently swallowed 4 oz. of the mixture, and had, therefore, taken about 450 gr. of chloral hydrate—enough to kill several men. Bromidia, he thought, could be bought at almost any grocer's or oilshop. He explained that it cannot be obtained in small quantities except in medical prescriptions, but it can be got in 4-oz. bottles, with the Government stamp. The Coroner said the evidence had disclosed a most serious matter, and the jury returned a verdict of death by misadventure, adding a rider that steps should be at once taken to place proper restrictions on this and all similar poisons sold in this way without a proper label.

Messrs. Roberts & Co., 76 New Bond Street, W., writing to us as agents for Messrs. Battle & Co., say in regard to "the exceptional conditions under which the late Mr. Geoghegan is supposed to have become possessed of an entire bottle of bromidia:" "'. . . This preparation is not a secret remedy, as the formula is published in all the pamphlets that have been issued to the medical profession for nearly twenty years. Bromidia is not a popular remedy, and not intended to be supplied to the public at all. It is a pharmaceutical preparation put up in ½-lb. and ¾-lb. bottles only, and intended to be used solely for dispensing-purposes. No circular or other printed matter accompanies the bottle, and beyond the plain bromidia label and a label giving the dose, there is no indication of its use. Every bottle is wrapped in a plain piece of paper bearing the imprint '½ lb. Bromidia, Battle & Co.,' and a label-notice printed in red ink indicating that the preparation is supplied unstamped by the authorisation of the Inland Revenue for dispensing-purposes only, and that in the event of any part of it being sold to the public, it must be stamped in accordance with the value, and must be labelled 'Poison,' with name and address of the vendor."

[To this we may add that Section 17 of the Pharmacy Act, 1868, requires the bottles to be labelled "Poison" by the makers or their agents, and this obligation should not be left to wholesalers and retailers, as the contents are declared in the following paragraph:—

"FORMULA.—Every fluid drachm contains 15 gr. each of pure chloral and purified brom. potas., and ½ gr. each of gen. imp. ext. cannabis ind. and hyoscyam."

The exemption from the poison label when dispensed does not apply to sales by wholesale or retail, and the omission from the label should be remedied forthwith.—EDITOR.]

Birmingham Notes.

A local Board of Guardians has recently elected an optician to attend to the eyesight of the inmates of "the House."

In the printed circular price-list of "Ladies' Mantles, &c.," issued by a large local firm of universal providers, there appears above the head-line the legend "Blaud's pills, 2¾*d.* per gross."

A Birmingham herbalist, William Albert Key, 163 Bromsgrove Street, was sentenced to six weeks' imprisonment for delivering certain printed matter of an indecent nature, with the intent that it should be posted in public urinals.

Mr. Councillor F. Corder Clayton, Ph.C., in asking the Council to sanction a further loan of one million on account of the waterworks, stated that it represented a row of sovereigns from Birmingham to Bromsgrove, and if in pennies it would take an express train, travelling forty miles an hour, five days to pass them.

Following the precedent of the Professor of Chemistry, Dr. J. H. Pointing, F.R.S., the Professor of Physics, invited Principal Lodge to discourse upon physics to the students of the 'Varsity and others, and on Tuesday last the first lecture was delivered on "Aberration of Light." As other lectures are to be given, doubtless many students of pharmacy will avail themselves of the advantages thus offered free.

A very curious bit of electrical apparatus may be seen in Edmund Street (near the University). It consists of a drum of unusual section, which causes a make-and-break twice per revolution, and each time lights three incandescent lamps, which after contact is broken become extinguished. Such a machine would be a valuable adjunct to the advertiser if his wares were printed on the lamps, and the window darkened.

A most remarkable display of the variations of the daffodil was exhibited at the Edgbaston Botanical Gardens last week, an attempt being made to foster the cultivation of narcissus and to popularise these grounds at the same time. A visit was paid to the gardens on April 28 by a party of pharmaceutical students, which included two ladies. The whole morning was devoted to the study of the plants both in the houses and in the natural-order beds. The show of azaleas was magnificent.

Penzance for Pleasantry.

His Worship the Mayor of the westernmost borough of Penzance appears to have ideas of his own concerning the 'universal fitness of things," for at a recent meeting of the Town Council he called attention to a show-card in the window of Mr. Samuel Carter, chemist, 27 Market Place, Penzance, advertising a coal-tar soap, and on which the words "Smallpox epidemic" appeared in large letters. In a report of the Council-meeting in the *Cornishman* the Mayor's remarks appear under the heading, "A Distasteful Poster." The Mayor said he did not know whether the Council had the power to prevent the displaying of unsightly posters, but he noticed that in one shop-window in the town a soap-advertisement displayed the word "smallpox" in very large type. That might do very well in London, but in a resort like Penzance it might cause alarm by creating the impression that smallpox was prevalent. Whereupon one of the councillors—presumably a grocer—said he was very glad to say that it was not a grocer's but a chemist's window. Mr. Carter informed our correspondent that this incident had acted as an excellent advertisement for the soap.

"Sour Grapes."

Clacton-on-Sea has had a little startler in the shape of an advertisement in the local paper by Mr. W. Maskew, pharmaceutical chemist, headed "Sour Grapes." Subjoined are the essential particulars, to borrow a trade-mark phrase:—

Æsop once wrote a fable on the above subject, and had he lived in Clacton at the present day he might have excelled his existing records.

I am now speaking on the subject of chemists, who may conveniently be divided into two classes—those who mind their own business and these who talk about and take a great "interest" in other people's.

I am now on the eve of entering my fourth year at Clacton, and thank my many customers for their ever-increasing support, and feel it necessary to contradict the rumour that I am leaving Clacton, as reported "on good authority."

The supply of chemists is perhaps greater than the demand, so that it would be more honourable to meet fair competition than to tell "any more funny stories."

It is my misfortune to be the only legally qualified PHARMACEUTICAL chemist in Clacton, so that my position may remain unique. I ignore all attempts to coerce me to raise my prices, and shall continue as in the past to buy the best of drugs, and publish my prices in a list. Send for one; it may save you pounds.

It is a neat advertisement, but rather a boomerang.

Extension of Homœopathy.

The Earl of Cawdor presided over a meeting held at Stationers' Hall on Tuesday to consider the desirability of a movement for the development and extension of homœopathy in this country. It was resolved to form a British Homœopathic Association for the development and extension of homœopathy in Great Britain, and in particular for the creation and endowment of lectureships, the provision of the means for original research, and the dissemination of a knowledge of homœopathic therapeutics among the medical profession. The Earl of Cawdor was appointed President, the Earl of Dysart and Lord Calthorpe Vice-Presidents, and Mr. Joseph Howard, M.P., treasurer. It was also decided to establish a "Twentieth Century Fund" of at least 10,000*l.*, and during the proceedings a first list of promises of support was read, amounting to nearly 1,000*l.*

Apothecaries' Assistants' Examination.

At the recent examination at the Apothecaries Hall, London, the following candidates were granted the certificate of qualification to act as an assistant to an apothecary in compounding and dispensing medicines: L. Allengame, C. A. Andrews, L. F. Andrews, E. W. Bardsley, S. L. M. Barton, C. M. Bell, A. D. Brown, F. E. Bullen, M. Burt, A. Davidson, C. K. Dawson, W. H. Derbyshire, E. F. Durrant, M. E. M. Fyson, F. Hemming, W. I. Hoare, E. A. Howell, F. E. Keen, M. G. A. Kellett, S. Langdon, R. M. Lloyd, J. S. Mackintosh, F. F. Martin, R. B. McBride, C. R. McKinney, H. G. Mildred, I. Monro, M. de S Morris, S. T. Morris, D. E. Moser, H. I. Munns, J. G. Neale, A. A. Nicholls, A. W. Norton, C. A. Owen, S. H. Page, L. Parsons, M. I. Patton, M. Rafferty, H. J. Sharp, V. A. Shaw, J. S. Shillington, C. F. Slater, G. M. Smith, C. F. Stewart, E. A. Stowell, S. A. Taylor.

Successful Metropolitans.

The following gentlemen obtained the medals at the spring sessional examination of the Metropolitan College of Pharmacy. They were also successful in passing the Minor examination held this month: Silver medal, Mr. David Watson Lyall; bronze medals in chemistry, pharmacy, and botany, Mr. Lewis Rodhouse; bronze medals in materia medica and dispensing, Mr. Charles Ballard Baker. During the present week the college has been visited by Messrs. Branch and Hallam, both of whom have been for a considerable time with the troops in South Africa.

Fires.

On April 25 a fire broke out at New Wortley in the Oldfield Lane branch of Taylor's Drug Company (Limited). The outbreak was subdued by a policeman and a civilian, who had burst open the shop-door and extinguished the flames with buckets of water before the fire-brigade arrived. The fire is supposed to have been caused by a waste-paper basket being left near the fireplace. The damage done was trifling.

A fire occurred on April 21 at the establishment carried on by the executors of the late Mr. F. Hallam, chemist and druggist, 22 High Street, Burton-on-Trent. The outbreak was caused through the spontaneous combustion of some closely-packed sulphur, and some difficulty was experienced in dealing with the fire on account of the dense fumes. The damage is estimated at about 100*l.*

Public Notices.

All claims against the estate of the late Mr. Robert Bennet, chemical-manufacturer, Hayfield, Derbyshire, must be sent in by May 30 to Mr. A. Walker, Spring Bank, New Mills, near Stockport.

The executors of the late Mr. George Thomas Hemming, chemist and druggist, of Longton, Staffs, announce that all claims against the estate must be sent to Mr. Henry Hawley, solicitor, Longton, by May 16.

The executors of the late Mr. Joseph Jones, chemist, of 322 Jones Terrace, Burnden, Great Lever, near Bolton, intimate that all claims against the estate must be sent to Mr. T. Y. Ritson, 7 Wood Street, Bolton, by June 2.

A dissolution of partnership is announced between Mr. Donald McNish and Mr. Charles Maybury, who formerly carried on business at Goldsmith Place, Nottingham, as "The Nottingham Chemical Company." The business will be continued under the old style by Mr. Charles Maybury.

Poor Management.

The Chemists' Managers' and Assistants' Society were to have visited Messrs. Idris (Limited), Camden Town, on April 30. The tickets gave the time of assembly at 3 45 P.M., but up to 4.45, when our representative left, no one from the Society had put in an appearance. Messrs. Idris had prepared for the visit.

Boots' Athletics.

The annual meeting of Boots' Athletic Club was held at Nottingham on April 28. Mr. E. S. Waring (Vice-President) was in the chair. The Secretary reported that there were 139 members on the roll of the club, and that a balance of 34*l.* remains in the Treasurer's hands. The football team had played 21 matches, winning 12, losing 9; and during the last cricket season 17 matches had been played by first team—6 won, 8 lost, 3 drawn. The second team played 10 matches—won 2, lost 7, drew 1. The prizes for batting and bowling were won in first eleven by Messrs. White (average 22 runs per innings) and R. Brown (26 wickets, average 47·6). In the second team a prize went to Walter Streets. Music was interspersed with the business proceedings.

Boots' (Sheffield) C.C. v. *Walkley Tradesmen C.C.*—This match was played at Walkley on May 24, and resulted in a drawn game. Walkley Tradesmen, 133; Boots (Sheffield), 35 for five wickets.

Digitized by Google

The Week's Poisonings.

The fatalities from poisoning since our last report have not been numerous, only six being recorded. These include five from the scheduled poisons chloral, laudanum, prussic acid, and chlorodyne, and one from hydrochloric acid. The last-named was taken by a young woman at Finsbury who had quarrelled with her sweetheart. Two chloral cases are recorded, the case of Mr. Geoghegan mentioned elsewhere, and the other happened at Worthing, where a paperhanger, named Chatfield, took it in overdose for insomnia. The laudanum was taken by a Barnsley woman, and a Nottingham man took an excessive dose of chlorodyne. A brewer's agent at Retford obtained ½ oz. of prussic acid from Mr. T. L. Hollely, pharmaceutical chemist, East Retford, for the purpose of poisoning a dog. He also obtained 1 oz. of laudanum from Mr. Rowland Smith, chemist, Retford, and was afterwards found dead in his chair, with the two bottles that had contained the poisons beside him.—Seven cases of attempted suicide by poisoning have been reported. The Secretary of the Upholsterers' Club was charged at Bow Street, on April 30, with attempting suicide with carbolic acid. Laudanum was tried by a Sheffield filer, a young woman at Folkestone, and a labourer's wife at Hull, a labourer at New Southgate took some sulphate of copper, and a Leicester shoe-hand took oxalic acid, but all recovered, and were arraigned before the Magistrates. A Stockton riveter, while intoxicated, drank a quantity of liniment containing laudanum, but he, too, got over it.—A man employed at Horwich locomotive-works was found by a local doctor to be suffering from "slow poison." The doctor taxed the man's wife with administering the poison, and she bolted, and has not been heard of since.—At an inquest held at Huddersfield on the body of the five-months-old son of a chemical labourer, the evidence showed that the mother had given the child a small dose of his grandmother's medicine, which contained paregoric. The doctor who saw the child after death said the $\frac{3}{16}$ gr. of opium which the child got was dangerous, but the jury found that the child died from natural causes.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Analyst Appointed.

Mr. Robert Barkley, Belfast, has been appointed analyst to the Union of Magherafelt, instead of Sir Charles Cameron, Dublin, resigned.

A New Style.

Veterinary Food and Drug Stores is the title given to a shop opened in Victoria Square, Belfast, by a veterinary surgeon. Quite a number of articles stocked by druggists are displayed.

Laying Poison.

At the Coleraine Quarter Sessions on April 26, a solicitor named Mooney sought to recover 35*l.* from a butcher for poisoning two dogs by, as he alleged, laying strychnined meat on his land. Judge Overend, in dismissing the case, as the wrong-doer had not been properly identified, said the fine for laying down poison on lands was 10*l.*, except when a notice had been posted in a conspicuous place, and notice in writing given to the nearest constabulary-station. It was annoying for people to have their sheep pursued by dogs; but actions could be brought for injury.

A Student Still.

Mr. David O'Sullivan, M.P.S.I., manager of Hamilton, Long & Co.'s Rathmines branch pharmacy, was at the sessional examination last week of the City of Dublin Technical Schools adjudged a prize-winner in the first class (advanced stage) of practical inorganic chemistry. He also carried off the prize in the second class (elementary stage) of theoretical organic chemistry.

Business Changes.

The Ballymena branch of Ulster Chemists (Limited) has been secured by Mr. James Acheson, L.P.S.I., former manager and also original owner and vendor.

The Coleraine branch of the Ulster Chemists (Limited) has been taken over from the liquidator by Mr. R. F. McCartney, M.P.S.I., who has for a considerable time successfully managed the business.

The old-established drug-businesses which were owned by the late Dr. Ward, L.A.H., Lisburn, are to go to the hammer on May 6, in one or several lots. The estate embraces the Medical Hall (known as Ward & Co), Phelan & Co.'s drug-business, and the mineral-water concern, which traded as Belfast and Lisburn Aërated-water Company.

A Druggist's Lecture.

Mr. W. J. Gibson, of Belfast, gave an interesting lecture a few evenings ago to an Antrim audience, entitled "Three Hundred and Sixty Miles with a Gipsy Caravan." The lecturer described a holiday spent by himself and a few chums in the West of Ireland. A large number of interesting views of the tour were shown on the screen by Mr. A. R. Hogg, R.D. The slides were made by the lanternists from photos taken on the campaign.

Assistants Scarce.

The scarcity of good drug-assistants in Ireland still continues; complaints come from South and North. A large number went from Ireland to the front as compounders, and this thinned the ranks very considerably.

A Limited Company's Position.

At the last meeting of the Rathdown Board of Guardians a letter was read from the Local Government Board enclosing another from Messrs. Boileau & Boyd (Limited), Dublin, who forwarded a newspaper-report showing that the Guardians had decided to confirm the acceptance of the tender of Messrs. Hayes, Conyngham & Robinson (Limited), chemists, for the supply of drugs, notwithstanding that a director of that company was a member of the Board. The L.G.B. wrote that in the circumstances the Guardians should not enter into a contract with Messrs. Hayes, Conyngham & Robinson, but should obtain the supply from some other firm. Messrs. Boileau & Boyd also wrote, stating that if the bonds were perfected with Messrs. Hayes & Co. they would take legal action. Sir Henry Cochrane moved that the next lowest tender be accepted. This was done, and Boileau & Boyd were appointed. Sir Henry Cochrane observed that in his opinion the Local Government Board was wrong. He himself was managing director—in fact, the practical owner—of a firm which tendered to several unions, and if it were his tender he would certainly challenge the Board. If Sir Thomas Robinson were a private individual it would be different, but the Guardians could undoubtedly accept the tender of a public limited company.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Frauds Alleged.

A man named James McArthur is on remand at Perth charged with obtaining articles from Crieff traders by means of fraud. Amongst other things, the accused is said to have succeeded in obtaining bottles of chlorodyne from various chemists by false pretences.

Business Change.

Edinburgh is booming! Under the style of the "National Bank Pharmacy," Messrs. Duncan Brothers will shortly open at 28 Nicolson Street as high-class chemists and perfumers. The business is, we understand, to be run on "store" lines.

Personal.

Lieutenant G. A. Clark, son of Mr. Richard Clark, D.L. (Messrs. Raimes, Clark & Co., Edinburgh), 3rd Batt.

Digitized by Google

Seaforth Highlanders, at present in South Africa attached to the Gordon Highlanders, has received a commission in the Line, having been appointed second lieutenant in the 1st Royal Scots Fusiliers. Lieutenant Clark leaves South Africa shortly, to join his regiment in India.

The Ardeer Explosion.

Captain Thompson, H.M. Inspector of Explosives, in his report on the explosion of nitro-glycerin at Messrs. Nobel's works at Ardeer, in January last, considers the disaster probably occurred while the man who was killed was skimming off the soda solution. The metal handle of the skimmer probably struck the tank, igniting the thin film of nitro-glycerin. The skimmer-handles are now made of wood tipped with indiarubber. Altogether 3,582 lbs. of nitro-glycerin and gun-cotton exploded.

Glasgow Notes.

The Glasgow Southern Medical Society has just issued a protest against the edict of the General Medical Council with reference to the keeping of open shops or medical halls and the sale of poisons. It describes the ukase "as being unwarrantable, oppressive, and vexatious." This derangement of epitaphs is more laconic than logical.

Mr. Stewart, a member of the Govan Parish Council, objects to the new parish district dispensaries being used for distributing doles to the poor, and other parochial but non-medical work.

Mr. Quarrier, founder of the Bridge of Weir Sanatoria for Consumptives, in the course of an interesting lecture on "The Prevention of Consumption," observed that it is a hopeful thing that in Scotland, with its changeable climate, they can do things as well as if patients went to the Riviera. The results, according to medical testimony, are quite as good.

Quite a number of Glasgow young men are leaving to push their fortunes in South Africa, and many of the adventurers consider a medicine-chest an essential part of their outfit. Some chemists who are supplying the medical stores are rather puzzled as to what they should send. There is a consensus of judgment, however, that mosquito-oil, quinine, and chlorodyne are *de rigueur*.

A man is lying in the Royal Infirmary suffering from the effects of vitriol-throwing by his discarded paramour. According to a special law, of which little is known outside works on medical jurisprudence, this is still a capital offence in Glasgow. The law had its origin in the once frightful frequency of the crime in this city.

Grocers and Aërated-water Bottles.

At a meeting of the Edinburgh and Leith licensed grocers held in Edinburgh on April 25, the regulations imposed by the Aërated-water Manufacturers' Bottle Exchange on the retail trader were adversely discussed. The attempt to prevent any manufacturer filling bottles that were branded with another manufacturer's name was said to be an annoyance and loss to the retailer. The meeting passed resolutions to the effect that "the rules of the Exchange are a departure from recognised commercial principles in respect that they make trade difficult instead of easy"; that the trade "take steps to defend their own interests as well as those of the public against the rules of the Bottle Exchange"; that "it be remitted to the Association to take action in accordance with the foregoing resolution"; and that "it be recommended that all bottles be charged for, and that only plain bottles be used."

Strychnine for Prairie Pests.—Professor Lantz, of the Kansas State Agricultural College, has told a *New York Commercial* reporter that he has about exhausted the supply of strychnine in the big drug-houses of New York and Philadelphia. He is using the poison in quantities of 200 oz. to kill prairie dogs. It is estimated there are seven millions of these pests on the plains of Kansas. In view of the fact, however, that one leading New York drug-house is now offering strychnine on the British market at prices below other makers, it is difficult to see where the exhaustion comes in.

French News.

(From our Paris Correspondent.)

Business Change.—M. Charles Hoffmann, manufacturing chemist, has removed from 41 rue des Franc-Bourgeois, Paris, to 94 rue du Pré, à Montreuil-sous-Bois (Seine).

The Pardon of Danval.—At the opening of his first lecture on toxicology at the Paris School of Pharmacy, after the pardon of Danval had been signed, Professor Behal received quite an ovation from the students, who cheered him repeatedly. M. Behal took a prominent part in the movement which brought about the pardon.

British Chamber of Commerce in Paris.—The annual report of the British Chamber of Commerce in Paris for the year 1901 has just been published, and is another proof of the active and useful work carried on by this important commercial body. The membership now stands at 230, and the Treasurer in his report makes an appeal for increased support from firms trading with France. During the past year twenty-eight new members were elected, 235 trade-references supplied, many agencies and situations were filled, 1,785 letters and over 12,000 circulars were issued, and a mass of information upon a great variety of subjects of interest to traders with France was distributed to inquirers.

Mr. Charles Bernard, Pharmacist and M.P.—What is fame? is an old question. "Famous men and things are those that figure on illustrated postcards" is a modern definition, presumably by a French or German schoolboy. If so Charles Bernard is henceforth famous, for he figures in a caricatural collection of French postcards with some pharmaceutical allusion under his counterfeit presentment. Nay, more, he figures on the front page of this week's *L'Indiscret*, a "comic" journal which does not belie its name. Take a scruple or two of innocent fun and sufficient quantity of suggestiveness, and you have the journal of this class. Charles Bernard looks like the late Lord Randolph Churchill, and I fancy he resembles him mentally.

The General Elections have been the absorbing topic of interest in Paris during the past fortnight, and rarely has party feeling run so high in this country, but on the whole the supporters of the late Ministry hold their own. Amongst the pharmacien-candidates I may mention as two typical cases, M. Astier, who is the proprietor of a pharmacy in the Avenue Kléber, Paris, and a manufacturer of pharmaceutical preparations. He has been re-elected to the Chamber of Deputies by the arrondissement of Privas (Ardèche), with 10,705 votes, against 7,335 obtained by his opponent. In politics M. Astier is a Radical-Socialist, and will probably figure in the history of pharmacy in France as the author of the proposed new pharmacy-law that was before the late Parliament but not finally passed. Another pharmacien, M. Alard, who was a candidate at Limoux, in the Aube Department, secured 1,263 votes only in the Conservative interest, against 10,316 obtained by the successful candidate.

The "Holy Shroud" at Turin.—The reproductions of the portrait of Christ, as photographed from His shroud, have attracted a large number of visitors at the offices of *Le Figaro* and the *Temps*, where they have been on view. But, on the other hand, as might be expected, the authenticity of the Holy winding-sheet at Turin is being put in doubt; in fact, a few days ago, at the Paris Academy of Inscriptions, M. Léopold Delisle, the Curator of the National Library, stated that he expressed the opinion eighteen months ago that the relic is not authentic, in which he is confirmed by Canon Chevalier and Abbé Lalore, who belong to the Bollandiste' Jesuit Society, which makes a speciality of recording the acts and lives of the saints. Canon Chevalier especially claims to have proved beyond doubt that the Turin relic was manufactured 1,400 years after the death of Christ. There is another shroud, kept at the Paris National Library, and M. de Mély, an eminent archæologist, has photographed it a few days ago. He obtained a negative similar to that produced at Turin, and says the figure is the proof of a wood-engraving printed in red, but not painted, on stuff.

Grasse Exposition.

FROM April 10 to April 20 the little town of Grasse was bustling with unusual activity, and was gay and festive in appearance in honour of the "Exposition," of which the inhabitants are justly proud. No more fitting spot could possibly have been chosen—a beautiful garden situated on the summit of a hill, with a foreground of magnificent mountains, gave it a panoramic aspect grander than any artificial effect that could possibly be produced by human agency.

The stalls were worthy of the occasion, and the greater number of them naturally exhibited the products for which Grasse is famous—namely, perfume essences, oils, and pommades. The largest exhibit was that of the "Syndicat

PAVILION OF THE PERFUMERS' SYNDICATE.

des Parfumeurs de Grasse et des Alpes-Maritimes," the syndicate consisting of Albert Bermon, Bertrand Frères, Bruno Court, Antoine Chiris, Martineng Cresp, Euzières et Lafitte, Aîné Hughues, Maubert Isnard, Lautier Fils, T. Mero et Boyveau, Jean Niel, Aragon Pelissier, Pilar Frères, Roure Bertrand Fils, Schmoller et Bompard, T. B. Sélin, Sozio et Andrioli, Tombarel Frères, Vimard et Mouschein, and Warrick Frères.

The pavilion contained specimens of the oils manufactured from the natural flowers of Grasse, together with many varieties and blends of alcoholic essences—rose, violet, jasmin, mignonette, and lavender occupying prominent places. The next structure was devoted to a display of olive oil manufactured in different districts of Grasse, and contained many hundreds of bottles in all stages of refinement, exhibited by "La Collectivité des Fabricants et Négociants de l'Huile d'Olive de Grasse." Amongst the smaller stalls, that of Botu Pappazoglou et Cie. was noticeable. Here were fine samples of otto from Bulgaria; the distinctive labels showed the districts where the otto came from—Kasanlik, Karlovo, Brezovo, or Esk-Zagra. M. Sittler had a show of his specialité, "Bruyère Impératrice"; whilst M. Bing Fils et Cie., of Paris, had a case of musk, the value of some of the pockets being as much as 2,850f. per kilo. Perhaps the stuffed civet-cat and musk-deer which presided over this case attracted most attention from the visitors.

Mm. Gerard Fils, of Paris and London, utilised most of their space to a display of bottled perfumes as sold in London and Parisian pharmacies. Attracting a great deal of attention was a beautiful cork model of the Grand Hotel, well known to Englishmen as the holiday residence of Queen Victoria, carved in the manufactory of MM. Gullabert Frères.

Other stalls containing products of interest to pharmacists were those of M. Imbert et Cie., lithographers and label-printers, from the plainest to the most elaborate die-productions; and MM. Aimedien et Nègre, with their mountains of crystallised violets, roses, and fruits of every description.

With a well-conducted band playing in the grounds, the sun shining as it only can shine in the South, and the delightful odours wafted from the many perfumes, it is little wonder that the "Exposition de Grasse" attracted many visitors from all parts, and reflected great credit on its

WHERE THE OLIVE OIL WAS SHOWN.

director (M. Paul Cordo). By the courtesy of M. Lautier, we are able to give the following facts relating to

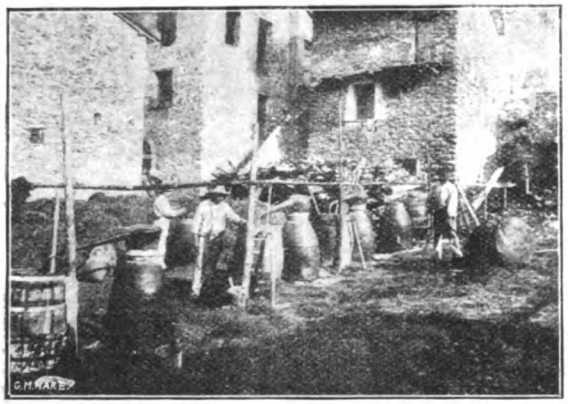
THE PERFUME-INDUSTRY.

In spite of the competition raised by the production of artificial perfumes, Grasse still holds the premier position in the world. The flowers mostly cultivated are cassia, jasmin, jonquille, mimosa, carnation, orange, mignonette, rose, and violet. The principal essential oils manufactured are absinthe (cultivated and wild), bitter almonds, anise and anethol, spikenard, basil, coriander, tarragon, eucalyptus, rose-geranium, clove, orris (concrete and liquid), cherry-laurel, lavender, marjoram, peppermint, myrtle, neroli (essence des fleurs d'oranger), thyme, patchouli, petit-grain (essence des feuilles de l'oranger begarde), rue, rosemary, rose, sage, wild thyme, vervain, vetiver.

Two-thirds of the products of Grasse is exported. The following figures give an idea of the annual output of Grasse and its environs: 2,000,000 kilos. orange-flowers, 1,500,000 kilos. roses, 1,200,000 kilos. jasmin, 400,000 kilos. violets, 300,000 kilos. tubéreuse, 100,000 kilos. cassie-flowers, 150,000 kilos. carnations, 80,000 kilos. mimosa, 60,000 kilos. mignonette, 50,000 kilos. jonquilles, and large quantities of narcissus, freesia, &c. Grasse distils as well thousands of tons of mint and geranium each year. Workmen are also sent into the French Alps with the necessary apparatus for distilling the oils of Alpine flowers. One of the illustrations shows an improvised distillery at Moulinet where lavender oil is being prepared.

The precess of preparing essences, as carried out in M. Lautier's distillery is in outline as follows: The beef and pork fat, fresh from the slaughter-house, is purified and spread on glass plates. The freshly-gathered flowers are then

Digitized by Google



pread thereon, and after a time the fat becomes saturated with the flower-odour. The fat is then scraped off and exhausted with alcohol, and any fat retained by the alcohol is separated by exposure to a temperature of − 18° C. Filtration frees the essence from extraneous matter.

The preparation of perfumed oils is similar, but, instead the fat, flannel saturated with oil is stretched over the

View in Lautier Fils' Distilleries.

frames, and when the perfume has been extracted from the flowers the oil is obtained from the flannel by means of hydraulic presses. In the case of violets and some other flowers, where the perfume is particularly delicate, the flowers are plunged into melted fat, then treated as in the cold process. A special room is devoted to the comparatively new process of extracting perfumes and concrete

Distilling Lavender Oil at Moulinet.

essences by such solvents as benzene, bisulphide of carbon, and chloroform.

For the manufacture of essential oils the plants are placed in huge copper stills and a current of superheated steam passed through. The kind of still used is shown in the view of the distillery.

Overheard at a Dinner.—Young medico (*æt.* 22) and friend about the same age, in conversation. Friend remarks: "I see you medical men write prescriptions much more legibly now than you used to do." Y.M. (pompously): "Well, you see, chemists are not nearly so well educated now, and we have to write plainly, or they would not be able to read them."

In the *Nineteenth Century and After* for April Dr. Edridge-Green traces the evolution of the colour-sense, propounding the hypothesis that primitive man saw all objects of a uniform hue, just as they appear in a photograph, but that he had a very acute perception for differences of luminosity. In course of time a new faculty of the mind—a colour-perceiving centre—became developed.

Wolverhampton Exhibition.

People in the Midlands will this summer have an excellent opportunity of enjoying themselves by visiting the Wolverhampton Art and Industrial Exhibition, which was opened by the Duke of Connaught on Thursday. There they will get the maximum of enjoyable entertainment with a modicum of technique. The Exhibition is situated in the West Park, and facing New Hampton Road are a magnificent industrial hall and a machinery-hall, with a Canadian building and a large restaurant between. Behind these lie the Exhibition grounds, in which are many attractions, such as a spiral toboggan, a Canadian water-chute, and a "voyage through fairyland," in which "2,500 square yards of fairy cloudy crystal rock, besides many waggon-loads of glistening glittering stalactites, have been employed to make a fairy cavern." In this great cavern winds a river, and there are mountains, glens, and all that the visitor wants in it to make her think she is in fairyland. Besides, there are a "hall of laughter," water-launches, swan-boats, concert-hall, bands, and restaurants to refresh the spirits and bodies of the wearied. About 300 firms are exhibiting, but very few of them are connected with the drug-trade, even indirectly. In the industrial hall we noticed during a preliminary run over that the following have secured good places:—

Daniel Read & Son, 19 Queen Street, Wolverhampton, show surgical-instruments, trusses, abdominal belts, artificial limbs, and the like.

The Anglo-American Oil Company (Limited) exhibit "Royal Daylight" and "White Rose" petroleum oils, besides spirit for motors and stoves.

J. & J. Colman (Limited), Norwich, exhibit mustard, corn-flour, self-raising flour, and starch.

Cerebos (Limited), Newcastle and London, have but one article to show, and they do it well. It is Cerebos salt.

Fisher Perry (Limited), Wolverhampton and Birmingham, include aërated waters in their exhibit of alcoholic and temperance beverages.

Bovril (Limited), Old Street, London, E.C., exhibit all Bovril specialities.

Pattison & Gear (Limited), Wednesfield, display cocoa and chocolate products, as well as confectionery and milk-proteid.

Reade Brothers & Co. (Limited), Wolverhampton, as specialists in varnish and japan, make an extensive display of them.

The Patent Borax Company (Limited) show Californian borax and specialities made from it.

Brand & Co. (Limited), Mayfair, W., have an attractive exhibit of their specialities for invalids and other dietary preparations.

Mander Brothers, Wolverhampton and London, exhibit, in a fine kiosk, specimens of varnishes, colours, and enamels for all classes of work.

The Co-operative Wholesale Society (Limited), Manchester, give a fair idea of their wide range of manufactures, which include soap and candles.

Jeyes's Sanitary Compounds Company (Limited), London, E.C., show their disinfectants and soaps.

The machinery-hall contains few exhibits pertaining to pharmacy, but the mechanically inclined may see many things worthy of inspection, the town being a centre of electrical and engineering industries. Here also we noticed an exhibit by Messrs. Stern Brothers, Gracechurch Street, E.C., and Glasgow, of oils, greases, petroleum-jellies, and machine-lubricants generally. In the corridor of the concert-hall there are some exhibits from the Day School of Science and the Municipal Science and Technical School. We understand that the promoters of the Exhibition have spent a quarter of a million pounds on it, and in order to make it pay they require 70,000 visitors a week.

Soapworks at Calais have a yearly production for local consumption valued at 21,600*l.*

Of the total of 185 tons of chemical products imported into Corunna in 1901, 91 tons was imported from the United Kingdom, 44 tons from France, and 28 tons from Germany.

A bracelet or anklet made from the hair of a cow's tail is an infallible Mashona remedy for rheumatism. The operculum of a shell to be found only on the Zambesi is worn by those natives who can afford it as a charm against disease and death.

Winter Session.

Royal Institution.

SIR JAMES CRICHTON BROWNE occupied the chair at the Friday evening discourse on April 25, when Mr. J. MACKENZIE DAVIDSON, M.B, took for his subject

X RAYS AND LOCALISATION.

Mr. Davidson first gave an historical sketch of the work which led up to the discovery of *x* rays by Professor Röntgen in 1895, paying a graceful tribute to Sir William Crookes (who was present) for his researches on radiant matter. Mr. Davidson had the story of the discovery of the *x* rays from Professor Röntgen himself. It appears that the professor was in the habit of using a screen of barium platinocyanide in looking for invisible rays in the spectrum, that salt being an excellent substance for the purpose, and afterwards, in using a Crooke's tube, he noticed that some barium-platinocyanide crystals on the table glowed. Whilst investigating the cause of the glowing, Röntgen chanced to interpose his hand between the screen and tube, and was astonished to see the shadow of his bones. It is noticeable that the paper in which Röntgen presented the results of his discovery contains practically all that is known of *x* rays at the present time, subsequent work having merely resulted in improvements in the apparatus. A model was exhibited to show the origin of the *x* rays at a point where the cathode-rays are focussed. The anticathode or anode does not, however, stop the whole of the stream, as other rays are given off from the glass of the tube. The fact that radiation takes place from a comparatively large surface prevents sharp shadows being obtained, and a device to obviate this defect was exhibited in the shape of a box covered on all sides except one by red-lead. The red-lead box has the further advantage of protecting the operator from the unpleasant physiological effects sometimes experienced from stray *x* rays. Speaking of tubes with osmium anodes Mr. Davidson mentioned that although such tubes stand very high currents, the vacuum is unstable. A screen, prepared by Messrs. Johnson, Matthey & Co. (Limited), of six squares of different fluorescent substances was exhibited to show the varying colour and intensity of the fluorescence produced by *x* rays. The substances used were two kinds of barium platinocyanide, potassium platinocyanide, calcium tungstate, zinc silicate, and uranium ammonium fluoride. The following experiment was performed to demonstrate that the action of *x* rays on the photographic-plate is different from that of light: A photographic plate 20 by 24, in two light-tight envelopes was exposed beneath a metal design to the action of *x* rays for two minutes. The plate was then taken out of the envelope and exposed to the light of the room for five minutes, and on subsequent development in the light with hydroquinone and caustic-soda developer, a clear but reversed image was obtained. If, however, the plate is exposed to light first and then to *x* rays, the latter make very little impression. The importance of this is that it suggests the possibility of making plates which are much more sensitive to *x*-rays than to light, and which can be manipulated in daylight. The last few minutes of the discourse were occupied with a description of the lecturer's method of stereoscopic localisation of foreign bodies, which has been applied with success even in cases of metal fragments in the eyeball.

Liverpool Chemists' Association.

AT a meeting of the members held at the Royal Institution on Thursday evening, April 24, Mr. Harold Wyatt, jun. (President), occupied the chair. The SECRETARY announced several donations; and Mr. J. H. Gray, Dale Street, Liverpool, was elected a member.

CHLOROFORM AND GAS-LIGHT.

Mr. WARDLEWORTH initiated a brief discussion on the administration of chloroform in gas or oil light, when irritating fumes of chlorine are given off. He called attention to the fact that manufacturers give a warning about this in a printed note. The PRESIDENT and Mr. P. H. MARSDEN confirmed the observation, and Mr. Marsden asked his fellow-members about their experience with chloroform made from methylated spirit. Mr. WOKES said in his experience the most frequently used was the pure, but the PRESIDENT remarked that he had had considerable experience in connection with an institution which was in the habit of employing chloroform made from methylated spirit, and it was worthy of note that they were invariably successful when employing the methylated chloroform, and the only accident that he could recall occurred when chloroform made from pure spirit was used—in fact, they had three bad cases running, and in each instance the chloroform from rectified spirit had been employed.

Mr. A. C. ABRAHAM said that it is an invariable rule with medical men when an expensive operation is taking place for them to use the best. He had to admit that very frequently the methylated article is better purified than when made from pure spirit, the reason being that when methylated spirit is used they do not mind losing a great deal in refining in consequence of the cheapness of the spirit, but with pure spirit the reverse was the case.

Mr. J. G. WALLBRIDGE (St. Helens) then read a paper on

THE TRAINING OF APPRENTICES.

He commenced by referring to the varied character of pharmaceutical establishments as judged from their windows, stating that although the higher-class pharmacies confine their window-shows to specie-jars, sponges, and probably a few packed pharmaceuticals, that is an example which it is impossible for the majority of the trade to follow. But whatever the stock of a pharmacy or druggist's shop be, he maintained that the individual who employs the pharmaceutical apprentice, should be able to teach him the business as far as the Minor certificate covers it. He dealt briefly with the classes of master, saying that he should be endowed with a fair amount of patience, a strict sense of justice, able to command explicit obedience, and temperate in all things, even language. Speaking of the classes of youth, he preferred the boy educated in the National or Board school, the last year or two being in a Higher-grade or Grammar school where the education has included Latin, French, mathematics, and chemistry, and before leaving school, the youth should, if possible, take a University Local examination certificate. Mr. Wallbridge regretted that the Pharmaceutical Society had stopped its own Preliminary examination, and advised that it should be restarted with the additional subjects added when the examining was dropped. He also supported Dr. Symes's recent advocacy of the division of the Minor examination, and suggested that it should be arranged in two parts—the *Primary*, to include chemistry, prescription-reading and botany; and the *Final*, to include dispensing, practical and theoretical pharmacy, and materia medica. The subjects of the Primary examination he considered to be continuous with the school studies. He then proceeded to speak about the term of apprenticeship, saying it should be for four years, and the youth might be admitted to the Primary portion three years after passing the Preliminary examination—which should be done before apprenticeship. The fourth year of the apprenticeship would then be clear for devotion to technical studies. Employers take apprentices chiefly because they are a cheap form of labour, but to this there is no objection if the master conscientiously does his duty to the lads. In respect to "Why are youths apprenticed?" Mr. Wallbridge said the semi-professional character of pharmacy no doubt attracts many, and he pointed out that it pays to qualify, because the average wage of unqualified assistants is 35*s.* a week, and the average for qualified 60*s.*, the difference thus being 65*l.* a year, which he considered to be an excellent return for the 120*l.* the education costs. Mr. Wallbridge further urged that some scheme of registering indentures might be established by the Pharmaceutical Society, apart from registration as the result of examination. He then unfolded

THE SYSTEM OF TRAINING,

which was the purpose of his paper, and this we give in his own words, with the omission here and there of a colloquialism, the paper really being in the nature of a talk

Digitized by Google

designed to foster discussion at the meeting rather than one written for publication :—

Suppose we take a boy, and the indentures have been signed for four years. Our shops or pharmacies vary very much in character, but all need a deal of cleaning and keeping tidy, so that we cannot do better than instil the cleaning and tidying habit into the boy at the start. Alongside of this the boy should be taught to be a keen observer, making "mental" notes often, for it is the accumulation of little facts that is required to turn out the exact and model chemist and druggist.

We really cannot explain much technically until the boy has been with us for some six months, and has taken his turn at dusting the shop-rounds many a time, and has learned that "tinct. camph. co." means "paregoric," that it is light-brown in colour, and has a pleasant smell, which he recognises as aniseed; that cupri sulphas is blue, and that ferri sulphas is green. During a few moments of each day we could whet the observing appetite of the youth by comments upon the articles he so frequently handles. We might tell him why the name "copperas" is applied, and that dragon's-blood is not the blood of the dragon, but a product of the vegetable kingdom. Before this stage even he might have been keeping up his knowledge of Latin by declining in full magnesii sulphas, spiritus chloroformi, and tinctura belladonnæ, with observations on the special declension to which each word belongs. How many candidates trip on spiritus, and little points of Latin grammar! The apprentice could be set to write fully the declension of such irregular words as calomel, aloes, enema, &c.

During the early stage, also, the youth should be shown the use of the label-damper, twine-box, sealing-wax, &c.—points that seem nothing in themselves, but of considerable importance, as the improper use of any might go far to impress any examiner or master subsequently. How many assistants use the label-damper? I have been told that marks are deducted at the Minor examination if a candidate use his tongue. Many seem to think it clever to break twine with the finger, each operation meaning the loss of several inches of twine. Many use the teeth as a cork-presser; some, when dispensing, shake up a mixture by putting the forefinger over the neck of the bottle instead of using a cork. In pouring liquids from one vessel to another how much is frequently spilled through carelessness! Do we notice that many spill nitric acid and suchlike on their hands? No; the substance itself acts as a warning.

A youth should be trained in exactitude from the commencement, and in the examination-room or when he comes to dispense in a good pharmacy he will have plenty of time to give deeper thought to the more technical considerations. By explaining to a boy what these little points mean when he faces an examiner he will be encouraged not to overlook any of them.

I next deal with

THE EXAMINATION-SUBJECTS

and how we can help the apprentice in regard to them.

Chemistry.—We can suggest that he perform every experiment for himself and make his own notes, offering to assist him by catechism and explanation when difficulties occur. The vivid impression made by observation of experiments hardly ever dies, whereas book knowledge may be transient. I shall never forget trying to make some potassium ferrocyanide, the smell of the roasted raspings of horses' hoofs being even now (sixteen years after) well within memory. We should occasionally show our apprentice how to distinguish between magnes. sulph. and zinci sulph, liq. ferri perchlor. and liq. antim. chlor., and other such close likenesses. As soon as he is able to analyse encourage him to compete for the prizes offered by THE CHEMIST AND DRUGGIST in their "Corner for Students" column. I can speak from experience of the great value of this competition.

Botany we can treat similarly, assisting the youth at times by demonstration of plants, also with the microscope, and from time to time asking him points which he has studied, and encourage him to mount specimens of plants with full descriptions attached.

Prescription-reading.—We should occasionally set our apprentice (say, in the second year) to write out the prescriptions in our own prescription-book in the opposite language to what they appear therein, with particular attention to full Latin and good penmanship. The directions might even be written on an imaginary label without any ruled lines. Later on in the apprentice's career the master might take a prescription and go over it in this manner: Take the opening sign, ℞. What does this mean? its part of speech? word or words it governs? &c. Magnesii sulphatis: How is this made? its tests and dose? ℥j.: What does this sign mean—480 gr. or 437½?—and so on through a prescription, the apprentice having gone through the first portion of Pereira's "Selecta è Prescriptis."

Materia Medica can be made a specially interesting subject to an apprentice in his second or third year, for the chief points can be brought daily under his notice. A habitat map should be fixed up in the back shop for reference. The youth may be permitted to attach a label to the side of each drug-drawer stating the natural order, botanical name, B.P. preparations, and active principles of the drug. Drugs not found in any particular pharmacy should be obtained by the master: a small collection is not expensive, although we should be more familiar with the articles of everyday use than the rarer ones. Occasionally the master could review the progress his apprentice has made, and supplement the same by remarks of his own, such as comparing true with false jalap, dandelion with pellitory, &c. The chemical materia medica could be similarly dealt with as to the formula of the chemicals, source, solubility, &c.

Pharmacy.—Every master ought at least to be able to give his apprentice some clear and precise definition of an emulsion, a pill, a plaster, meaning of percolation, boiling-points, distillation (fractional, destructive, &c.), and take the trouble at some time to practically illustrate the same. The youth should be encouraged to make a small quantity of almost every B.P. preparation, even though at his own cost. The lack of practical study no doubt causes many a failure in the examination-room. The containers of the scheduled poisons might bear a label stating if in Part 1 or Part 2. The strength and dose of the preparation might also be marked.

Dispensing.—This all-important subject is difficult to deal with, as the average chemist has so few prescriptions, and these usually of a very ordinary character. My plan is to resort to dummy prescriptions. Supposing we occasionally supply copaiba-mixture; then let our apprentice make an 8-oz. bottle, and, if satisfactory, put on one side. Let this be repeated as soon as the one be sold. If we have no demand for some pills, or any mixture of the "tricky" class, let the youth make samples, and throw them away afterwards; the cost cannot be much. But in every case mind that each bottle or package is finished off exactly as in an examination-room—labels trimmed, mixtures measured, powders weighed separately, the pills weighed when finished and compared with the quantity of ingredients used, strict cleanliness, and to remember that "time is taken into account in awarding marks."

Photographic.—If we deal in photographic goods at all, we could encourage our apprentice to take up this branch. During leisure we could explain a little of the why and wherefore, optical and chemical, of the various processes, and we should be repaid by his intelligent explanation of difficulties to customers.

DISCUSSION.

Dr. CHARLES SYMES started the discussion by saying that on the manner in which an apprentice has been trained, and the way in which he has applied himself to his duties and studies, depends his position at the end of his pupilage. At that time the apprentice has still much to learn, and the question arises, Is he fit to be an improver or a junior assistant? Probably he is not much concerned about either, and the examination may be the matter most in his mind, as it is a great terror to most young men. This, Dr. Symes fully commented upon, saying that the object of pharmaceutical training and education is not to pass the examination, but to fit the student for the duties of life. He maintained that if the Minor examination were conducted under the best conditions, the percentage of failures would not be so great, and he was astonished that some persons thought that the present condition of things, which is admittedly far from perfect, should not be altered until there is an enforced curriculum. Such persons forget that 95 per cent. of those who go up for the examinations have taken a course of study. He said he was perfectly confident that the Council of the Pharmaceutical Society should divide the Qualifying examination, and when this comes about, as it assuredly must, the result of an efficient apprenticeship and a well-spent assistantship will be better valued in the examination-room.

Mr. T. F. ABRAHAM, in moving a vote of thanks to Mr. Wallbridge, complimented him upon the value of his paper. He thought the present condition of affairs up to the Minor examination to be deplorable, and that the distress suffered by young men in examination might be avoided by chemists filtering out the unfit to begin with, and also by the Minor examination being divided. The latter he especially commented upon, for he thought the present system not good in its results. He had often been shocked by the want of adaptability on the part of persons who had passed the Qualifying examination. Some showed great ignorance of the metric system, others lack of knowledge affecting the laws of pharmacy; and as to the art of pharmacy, he had recently come across a Major man who did not know how to use a sieve—he had found him using it upside down, laboriously rubbing the powder through the mesh. The same individual

Digitized by Google

did not know how to use an ordinary pill-machine. Mr. Abraham also stated that many young men have no real appreciation of dosage, and the general conditions of knowledge convinced him that chemists should have it in their power to make the system of education more suitable for the object which they have in view.

Mr. R. C. COWLEY, having seconded the vote, said apprenticeship is an exceedingly serious question, and from his extensive knowledge of men he believed the fault to be with the system, not with the youths. He believed in a compulsory curriculum, in order that the course of study might be extended, as there is a tendency to cram it into the shortest possible space. He would not object to the division of the examination into three or four parts for much the same reason, and thought the mental anguish which many candidates suffer would be minimised by this division, as they would concentrate their attention definitely on one or two subjects at a time. He was also sure that the Pharmaceutical Society would benefit by the division of the examination.

Mr. WOKES supported the compulsory curriculum.

Mr. MARSDEN, speaking in reference to the division of the examination, said this should not be done without a definite curriculum in public institutions periodically visited by the Pharmaceutical Society or other recognised authority, as is the case with the medical examinations. He protested against employing apprentices continually in the capacity of errand-boys, and considered that the Pharmaceutical Society had been well advised in discontinuing the conducting of the Preliminary examination.

The PRESIDENT then summed up the discussion, defending the abolition of the three-subjects Preliminary examination, and adding that if the Pharmaceutical Society had done nothing else beyond the wiping out of this objectionable examination it would have justified its existence. He also remarked upon the high position of British pharmacy as an art when compared with that on the Continent and in America, in spite of our want of system and compulsory training.

Mr. WALLBRIDGE, in reply to the vote of thanks, stuck to his contention that the abolition of the Preliminary examination, so far as the Society's conduct of it is concerned, was ill-timed and premature.

LIVERPOOL UNIVERSITY.

Mr. T. F. ABRAHAM then laid before the meeting the proposals for the new university scheme, and said that it had been suggested by the University College authorities that chemists as a body should do something towards helping the movement forward, because the authorities feel that in applying for their charter they should be able to say they have the support of all sections of the community. It was thought that chemists, being an order of specially educated men, ought not to stand aloof from such a movement. Mr. Abraham accordingly moved that the Association desired to identify itself with the movement, and that a meeting of the Council should be held at an early date to draw up a scheme for carrying this into effect. Mr. COWLEY seconded the proposition, which was supported by Mr. P. H. MARSDEN, and carried unanimously.

Optical Society.

AT a meeting of this Society on April 24, the newly elected PRESIDENT (Mr. Charles Hyatt-Woolf) delivered his presidential address. He sketched the rise and progress of education, organisation, and prosperity in the optical trade from 1891. At that time, eleven years ago, measures for the certification of opticians and the foundation of an institute on the lines of the Pharmaceutical Society were advocated. Referring to the conversaziones of the Optical Society, the President thought efforts should be made to exhibit a larger variety of ophthalmological instruments at those meetings. A collection of trade catalogues would be a useful addition to the library, and benefit would result from a closer association of the Society with local organisations. Mention was made of the committee which is considering the question of the education of opticians, and of the utility of the classes in optics held at the Northampton Institute. The Spectacle-makers' Company was criticised for its action in abolishing the consultative committee, and the British Optical Association praised for requiring sight-testing as part of a curriculum from the candidates for its examination. The demand for spectacles is likely in the next ten years to exceed anything hitherto attained, and the recent Army Order which allows the wearing of glasses by soldiers would, the President thought, do much to remove the deep-rooted prejudice against spectacles and increase the number of opticians.

In the speeches that followed Mr. DIXEY said the army sight-tests require reorganisation, and Mr. BRAHAM thought the Society should communicate with the railway companies and point out that refractional defects of the eye can be corrected by glasses. The railway companies at present dismiss those of their servants whose eyes become defective, and the fear of losing a situation naturally leads to deceit on the part of the men.

Sight-testing.

AT the meeting of the Manchester Pharmaceutical Association on April 23, Mr. J. C. KIDD read a paper on the above subject. Mr. Kidd said the correction of refractive errors of the eye is a business which the pharmacist by his education is particularly fitted for, and touched on the subjects of light, refraction, reflection, and lenses. He said the best way of distinguishing concave and convex lenses is to look at an object through the lens, moving the latter from side to side. If the object appears to move in the opposite direction to the lens, the lens is a convex one; but if it moves in the same direction, a concave lens is being analysed. The unit of measurement is expressed by the power of the lens to focus parallel rays, and the lens which brings parallel rays of light to a focus at one metre is taken as the standard and called a 1 Dioptre lens. A lens focussing parallel rays at half a metre is double the strength of a 1 Dioptre, and is called a 2 D. lens.

Mr. Kidd next dealt with the structure of the eye, and the defects of its refractive system—hyperopia, myopia, and astigmatism. The correction for hyperopia is found by placing a weak convex lens before the eye and increasing the strength until the lens makes the sight worse: the next weakest lens is the one required. In myopia the weakest concave lens which can be clearly seen through represents the amount of the defect, and is the lens required. For astigmatism cylindrical lenses are used. Presbyopia—a normal defect of the eye due to age—was next described, and its correction by means of convex lenses explained. Convex lenses relieve the strain caused by the excessive action of the ciliary muscle. Mr. Kidd afterwards gave a practical demonstration of the methods he uses for sight-testing.

Chemists' Assistants' Association.

A MEETING of the above Association was held on April 24, Mr. J. W. Peck (the President) in the chair. There was a good attendance of members, and Mr. CHARLES HYMANS read an interesting paper on

GLASS.

The paper dealt at some length with the early history of glass, its composition, properties and manufacture, after which Mr. Hymans referred to the glass used for optical and chemical purposes, and the materials used in the manufacture of glass. Silica is used in the form of fine white sand, that obtained from the Isle of Wight containing as much as 97 per cent. pure SiO_2. Soda is used either as the carbonate or sulphate. Potash is chiefly used as carbonate, and nitrate is also added when necessary. Lime was originally used as carbonate in the form of chalk, but the oxide is now preferred. Lead is chiefly used as Pb_3O_4 and PbO_2. Barium is used as a partial substitute for lead in some flint glasses. It gives greater hardness and durability, without impairing the brilliancy of the glass. Oxide of manganese is often used as a decoloriser against iron. White arsenic, As_2O_3, is also occasionally used in small quantities as an oxidiser. Alumina, Al_2O_3, is almost invariably present as an impurity, owing to the solution of small quantities of the clay, of which the melting-pots are made, in the silica.

Digitized by Google

With regard to coloured glass Mr. Hymans said that glass is capable of dissolving and holding in solution, when cold, many metallic oxides and salts, and some of these are capable of imparting to it various colours. Gold or sodium seleniate produces a fine ruby tint, and cupric oxide an inferior red. Cobalt produces a blue tint, and various shades of green are obtained from chromium, and cuprous and ferrous oxides, which latter, in excess, gives black glass. Uranium gives a canary yellow, and sulphide of antimony a fine orange tint. Silver gives a pale yellow, as do ferric salts and lead in excess. Nickel gives a bluish tint to potash glass, and a hyacinth to soda glass; in excess a violet. Manganese, according to the quantity used, imparts a rose, purple, brown, or black tint; smoked glass is generally made by its use. Opal glass contains various opaque substances, a cheap kind being made with guano.

The paper was illustrated by specimens of sheet, block, and tinted glass, which added considerably to the general interest of the subject.

Three Towns Junior Chemists' Association.

A meeting of the Association was held at Plymouth on April 23, Mr. Norman Harris in the chair.

The Secretary (Mr. Lovatt) gave a *résumé* of the work of the Association, and mentioned that although the classes on materia medica, prescription-reading, and microscopy would be discontinued during the summer, it was hoped to arrange botanical rambles.

Mr. E. J. Groombridge was then elected Chairman in place of Mr. Harris, who is leaving the district, and on Mr. Groombridge taking the chair he presented Mr. Harris, on behalf of the members, with a gold-mounted cigarette-holder, which the retiring Chairman suitably acknowledged.

A smoking-concert is being arranged for May 7.

Barnsley Chemists' Association.

The monthly meeting of this Association was held at the Royal Hotel, Barnsley, on April 24. A discussion as to the candidates the Association should support at the coming election of the Council of the Pharmaceutical Society ended in a resolution to support Messrs. Glyn-Jones, Campkin, Harrington, Harrison, Southall, Young, and Morrison.

The question of a Federation of West Riding Chemists' Associations was next discussed, and it was agreed to support the Dewsbury Association in forming the Federation.

Midland Pharmaceutical Association.

The financial statement and annual report of this Association, which are to be presented at the annual meeting at the Great Western Hotel, Birmingham, on May 6, have been circulated. The receipts shown in

The Financial Statement

consist of subscriptions 14*l.*, donations 18*l.* 0*s.* 6*d.*, with a balance of 3*l.* 7*s.* 6*d.* brought forward from last year; whilst the expenditure includes printing and postage 15*l.* 11*s.* 3*d.*, and 18*l.* 9*s.* 6*d.* hire of rooms, federation and university subscriptions, and special expenses. A balance of 1*l.* 7*s.* 3*d.* is carried forward.

The Association has a membership of 177.

The Annual Report

reviews the work of the session, and adds that it has not been thought desirable to hold meetings to discuss the proposed new Pharmacy Bill whilst the parent Society is unable to obtain pharmaceutical legislation. On January 31, 1901, the Association approved of the draft Pharmacy Bill, and further progress on the part of the Pharmaceutical Council must now be awaited. The subject of pharmaceutical education has been recently brought to the front, owing to a scheme which has been proposed for enabling pharmacists to obtain advantages under the Carnegie gifts to the universities of Scotland. This and other matters are promised the attention of the Council early in the next session.

London Chemists' Association.

Mr. F. W. Truman presided over a private meeting of members of this Association, resident in South London, at the Surrey Masonic Hall, on April 30.

Messrs. J. Brown, C. Bunker, J. Butterworth, S. Dawson, R. H. Jones, A. Pellew, F. H. Powell, H. Slator, F. Truman, D. White, W. Watson Will, and R. Willson were appointed to form a local committee to arrange regular meetings of members in South London. These are to be held as far as possible in different districts.

A resolution protesting against the new stamp-duty on cheques was unanimously adopted, and the Secretary was instructed to forward it to members of Parliament representing South London constituencies.

Public Dispensers' Association.

A meeting of the above Association was held on Wednesday, April 30, and was well attended.

The President (Mr. W. Duff), in opening the meeting, said that it had been suggested that Mr. G. F. Forster, the late Hon. Secretary, be made an honorary member of the Association. Mr. Lindsay therefore proposed, and Mr. Welford seconded, that this be done, and the motion was carried unanimously.

Mr. H. T. Samuel proposed a vote of sympathy and condolence with Mr. MacEwan, Editor of The Chemist and Druggist, and his family, in the bereavement they had sustained in the death of his daughter. This was seconded by Mr. Hewitt, and carried unanimously in silence.

The Chairman announced that the Council of the Association had under consideration a list of those members of the Pharmaceutical Society who sought a seat on the Council, and he thought that the meeting as a whole would do well to vote for the following candidates: Messrs. Glyn-Jones, Campkin, Young, Pickering, and Carteighe. It was decided to do this. Before the meeting closed, however, the Chairman received a letter from Mr. Pickering, in which he asked that he might be allowed to canvass the support of the Association, and he added, that he was strongly of opinion that none but those holding the diplomas of the Pharmaceutical Society should be allowed to hold any public appointment, and also that he intended to defend their just rights."

Mr. H. T. Samuel proposed that the Association form a register of *locum tenens*, of men of proved ability, who have given satisfaction to members of the Association, and that all such selected men be charged a registration-fee of 2*s.* 6*d.*, but those who were already members of the Association he not be required to pay such.

It was moved by Mr. Miller, and seconded by Mr. Spencer, that the Secretary be instructed to call the attention of the Pharmaceutical Society of Great Britain to the circular recently issued by the Pharmaceutical Society of Ireland in regard to hospital compounders.

Mr. Welford spoke at some length on the matter, and pointed out that 30,000 bottles of medicine containing scheduled poisons were distributed by public institutions every day. The matter could not be overlooked, especially as a Poisons Committee is now sitting to consider the sale of poisons.

The motion was carried unanimously.

After other business the meeting adjourned.

Personalities.

MR. S. A. PALMER, of Sydney and Melbourne, manufacturer of "Vitadatio," is now on his way to England.

DR. JOSEPH SWAN, F.R.S., is to receive the gold medal of the Society of Chemical Industry at the annual meeting to be held in Liverpool on July 9.

MR. J. C. ROBSON, pharmaceutical chemist, Middlesborough-on-Tees, has been elected a member of the Guisborough Board of Guardians.

MR. T. H. WILLIAMS IDRIS returned to London on April 24 from a business tour in South Africa on behalf of Messrs. Idris (Limited), Camden Town, N.W.

MR. JAMES SMITH (of Messrs. Hirst, Brooke & Hirst, Limited, wholesale druggists, Leeds) has been appointed Chairman of the York Commercial Travellers' Association.

MR. ALFRED D. BREEZE, Chairman of the Plymouth Incorporated Mercantile Association, and Mr. Frank Maitland, chemist and druggist, Stonehouse, have been elected upon the committee to discuss the amalgamation of the Three Towns.

LIEUTENANT-COLONEL CLIFFORD PROBYN as Mayor of Westminster presided at a meeting in the Hippodrome this week, at which music-hall celebrities and other public entertainers decided to arrange for amusing the half-million poor people whom the King is to feast in Coronation week.

MR. HORACE BROCKLESBY, director of Messrs. Lorimer & Co. (Limited), Islington, N., is an exhibitor in the Royal Academy, whose annual exhibition will be opened to the public on Monday. His picture (the first he has submitted to the Academicians) is a simple composition, representing an early evening effect taken from the Downs, Isle of Wight, looking eastward, on an ebb tide.

DR. ALBERT S. GRÜNBAUM, of University College, Liverpool, has been crossing swords with Mr. Stephen Coleridge in the columns of the *Times* lately. Mr. Coleridge referred to the experiments performed by Dr. Grünbaum in illustration of Professor Sherrington's lecture to the Liverpool Chemists' Association. In a letter to the *Times* of April 26, Dr. Grünbaum repeats the inappropriate statement made to the Home Secretary, that the experiments were "not given, as reported in the Press, in illustration of a lecture."

MR. IVAN LEVINSTEIN is to be nominated for a second term of office as President of the Society of Chemical Industry. He has shown exceptional vigour in the office, and his knowledge of the patent laws makes it most desirable that the Society should have the full benefit of his experience while legislation is pending. For the vacancies on the Council of the Society Professor Ramsay, Dr. F. B. Power, Mr. Thomas Tyrer, and Mr. E. Grant Hooper have been nominated. Dr. John Clarke is to succeed the late Mr. Robert Irvine on the Council.

MR. JAMES CURRIE, Director of Education in the Soudan, and principal of the Gordon Memorial College at Khartoum, states, in his annual report, that the committee "above all tender their thanks to Mr. Henry S. Wellcome for his gift of a completely equipped bacteriological and analytical laboratory." Mr. Currie then refers to the origin of the laboratory in his report:—

> As regards a small laboratory, I suggested it more in a spirit of expectation than as a practical proposal. However, among the visitors to Khartoum last winter was Mr. Henry S. Wellcome, of the well-known firm of Messrs. Borroughs Wellcome & Co. I chanced to mention the subject to him, and he at once intimated his intention of presenting to the college an efficient bacteriological and analytical laboratory, equipped with all apparatus. This offer was accepted by the governing body. It has subsequently been arranged that the Soudan Government is to contribute to the upkeep of the laboratory. The working plans of the laboratory are at present in the hands of Colonel Friend, R.E., the Director of Works, and when the rooms are finished I propose to begin by appointing as good a bacteriologist as can be secured. Much depends on the stamp of man that, with our limited means, is obtainable.

WE had a call this week from Mr. H. V. Prentice, chemist and druggist, and partner in the firm of Griffiths & Co., Valparaiso. Mr. Prentice was for some years with Messrs. Watson & Co., of Hong-Kong and Manilla, and thereafter started business in Crouch Hill, London, N., but sold it fully six years ago to Mr. Beattie, and went out to Valparaiso. His firm—Mr. Thomas Griffiths being the senior partner—is the only one of English pharmacists in Chili, Germans having the grip of the drug-trade there as well as in some parts of Brazil. Messrs. Griffiths & Co. have an excellent connection in Valparaiso, especially in dispensing and in the manufacture of aërated waters. It is necessary before one can start a chemist's business in Chili to pass the Pharmaceutical examinations; for example, Mr. Prentice, after submitting his Minor certificate, had to pass the practical and *viva-voce* parts of the examination which were conducted in Spanish; this was no drawback to him, as his residence in Manilla made him well acquainted with that language. Mr. Prentice expects to return to Valparaiso before Christmas. Letters may be addressed to him c/o THE CHEMIST AND DRUGGIST, 42 Cannon Street, E.C.

Deaths.

FORSTER.—At 105 Clayton Street, Newcastle-on-Tyne, on April 20, Mr. John Robert Forster, chemist and druggist. Aged 93. Mr. Forster was born at Blythe, and for some years was in business in that town, where he served on the Local Board, and was connected with the Blagdon Lodge of Freemasons, of which he was a Past Master and Treasurer. He went to Newcastle eighteen years ago, and since then had belonged to the St. Nicholas Lodge of Freemasons. One of his sons is Dr. W. R. Forster, of Broomhill.

MARSHALLSAY.—At Richmond, on April 19, Mr. Henry Raynold Marshallsay, chemist and druggist, formerly of Wareham. Aged 31. Mr. Marshallsay succeeded to the business of his father in 1894, but owing to ill health he had to relinquish it in March, 1901. Since then he had resided at Weymouth, but died while on a visit to his sister, at Richmond. The funeral took place at Wareham amidst general manifestations of regret.

MOFFAT.—On April 1, at 14 Port Royal Street, Kingston, Jamaica, Mr. Charles Dunwell Moffat, pharmaceutical chemist, was found dead in bed, and the cause of death had not been ascertained when the West Indian mail left. Mr. Moffat served his apprenticeship to pharmacy with Mr. G. T. W. Newsholme, Sheffield, and as an apprentice showed distinct talent, several papers by him on the manufacture of galenicals being printed in the *C. & D.* before he passed the Minor examination in October, 1892. Subsequently he had other provincial and London experience, and passed the Major examination in January, 1895. For some time he was an unattached member of the *Pharmaceutical Journal* editorial staff, and about six years ago went out to Jamaica as a Government analyst. This he threw up a few years later, and two years ago started business on his own account, representing Messrs. Ferris & Co., Burroughs Wellcome & Co., and other firms. For some time Mr. Moffat, who was about 35 years old, had been in indifferent health, suffering from insomnia. He leaves a widow and two young children.

MUNRO.—At Tain, N.B., on April 17, Mr. Donald George Munro, chemist and druggist. Mr. Munro had been in business in the town for about thirty-six years. He was a member of the Town Council and a magistrate.

MURISON.—On April 27, at Stoneleigh, Warltersville Road, Crouch Hill, N. (suddenly), Ethel May, eldest daughter of Mr. John Murison, chemist and druggist, managing director of Parke's Drug-Stores (Limited). Aged 22. Miss Murison was shortly to be married, and was in perfect health. On Sunday—a few minutes after returning from the morning service—while gaily talking with her cousin, Miss Lilly Lorimer, about her engagement, she suddenly complained of her head, and died in a few seconds. The autopsy revealed an effusion of blood on the brain, apparently the result of a slight bruise above the right ear, which she had got a few days before, and which she had thought so trifling that she had not even mentioned it to her mother.

PEARCE.—At Atholl Lodge, Fort Paragon, Margate, on April 27, Mr. H. J. Pearce, J.P. Mr. Pearce, who had been a member of the Margate Borough Bench, was in business for many years as a chemist in Calcutta.

About Norway.

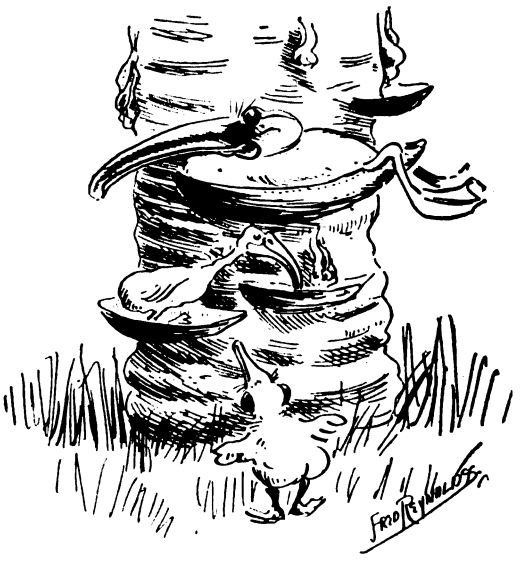
Cod-liver Oil Manufacture and Pharmacy.

MR. THOMAS BARCLAY, of Southall Brothers & Barclay (Limited), Birmingham, has just returned from a visit across the Arctic Circle to the Lofotens. The primary object of the visit was to inspect the cod-liver oil factory which the firm for the last twenty years have maintained at Balstad, in the Lofotens; but Mr. Barclay took occasion during the tour to collect a mass of information concerning the life and habits of the fisher-folk, who spend a large portion of their lives on the wild Norwegian coasts. Mr. Barclay gave some of his experiences of the country to a representative of the *C. & D.* the other day. The hospital at the Lofotens, a large wooden structure, has, he said, a fund controlled by the Government, called the Medicinal Fund, for the benefit of the fisher-population. The fund may also be used to purchase a boat or a house for the fishermen in exceptional circumstances. The money is raised by making a charge on the merchants of 40 ore (about 4*d.* or 5*d.*) for each barrel of oil manufactured, 7 ore per barrel of salted cod, and 18 ore per 100 kilos. of dried cod. At the fishing-station at Balstad there are about 500 fishing-boats, which, with those of the adjacent villages in the same district, number about 2,000. Speaking of the fish-supply, Mr. Barclay mentioned that the reports up to April 12 show that the aggregate number of cod-fish caught in the whole of the Norwegian fisheries this season was estimated at 30,800,000, and even under the most favourable conditions this quantity was not likely to be increased beyond a few millions * The average during the years from 1866 to 1900 was 53·8 millions. In the early part of the year the sei fish approach the fishing-grounds, these are followed by the cod and the sei mixed, and then by the cod alone. The oil is manufactured under various conditions, some of it being made on old boats which are hired for the season. The oil is cooked on board these boats, the livers being brought to them by the fishermen. There are also numbers of little factories up and down the coast, which are of a very primitive character, and the oil made in such circumstances is naturally of a very poor quality. The oil is bought from these small factories by merchants from Aalesund, Christiansund, and Bergen, who in this way accumulate large quantities, and offer it in bulk to the various markets of the world.

It will interest *C. & D.* readers to know that there are only two pharmacies in the whole of Norway which can be sold absolutely by the proprietors—one at Bergen and one at Christiania. In all the other cases the King has the nomination of the proprietor, and the business cannot be sold outright by those who have them. One of the two free pharmacies is worth, Mr. Barclay had been informed, 55,000*l.* Mr. Barclay went over the establishment and found it equipped in such a way that it would be quite impossible for anything of the kind to be carried on in this country unless with the same amount of protection which exists in Norway, as a profit could not be made with such a large amount of plant and machinery in use for such a small business. Seven qualified assistants are employed, and the warehouses are quite out of proportion to the size of the business. But protected as they are—only a certain number of chemists being allowed in each place, and the prices being regulated as well—they are able to do things in a different way from what they are in this country. They grind their own drugs, manufacture their own extracts and galenicals, and do all kinds of distillation which cannot be done in this country on such a small scale if the businesses be meant to pay.

* Our Trade Report telegrams give later information.—Editor.

Duty-paid chemicals to the value of 1,270*l.* were imported into Galveston, Texas, during 1901, against 1,821*l.* in 1900. The U.K. supplied 353*l.*, Germany 630*l.*, Holland 246*l.*, and Austria-Hungary 41*l.*



"Indian Tamer," at 1*s.* 10*d.* per packet, is a new line that occurs in a grocer's price-list, sent to us by a subscriber, who suggests that "Boer tamers at this price would be bought largely by the Government."

Things that Happen—Sometimes.

The Research Chemist.

There was an old chemist of Salop,
Who thought he knew all about jalap;

He used shells to collect it,
But the birds did detect it,
So he got no sale for his jalap.

Early Laboratories.—In the note this subject (*C. & D.*, April 12, page 556), the year of the opening of the Pharmaceutical Society's laboratory accidentally dropped out. It was 1842, or eight years after Professor Turner's place was advertised.

Lagos Poisons Bill.—At a recent sitting of the Lagos Legislative Council, on the motion to go into Committee on the Sale of Drugs and Poisons Bill, the unofficial members unsuccessfully combated the question of making the Bill operate retrospectively, particularly in the case of Dr. R. Z. Bailey, who, it was held, had familiarised European medicines with the native community. Council having resumed, the Bill was read a second and third time and passed. The Hon. Acting Colonial Secretary and Hon. Acting Treasurer were appointed a Committee to present the Bill to the Governor on behalf of the Sovereign.

Observations and Reflections.

By XRAYSER.

Decadent,

are we? I for one am not disposed to submit to judgment without at least a protest. First I am not sure that the charge is proved against chemists' associations. I cannot say that we have been getting much nutriment from these bodies lately, but it is surely not fair to look at a week's reports and say, "See what twaddle we are getting from X, Y, and Z; how different from the far-away days when A, B, and C used to pour upon us the light of their wisdom." The truth is we are comparing the life's work of A, B, and C, with single utterances of X, Y, and Z. Secondly, it should be borne in mind that the intellectual energy of pharmacy has been largely transferred, within the past generation, from meetings to journals, and it will hardly be argued that these show signs of decadence. But even if the case were established against associations, which I do not admit, the decadence of the individual pharmacist would be far from proved, and this I should be inclined to dispute to the last ditch.

The Modern Pharmacist

is, in my opinion, a very much better man than his predecessor in the title, and as one of the latter class my bias can hardly be on the side of my supplanters. The younger generation may not have had the training with the pestle, the pill-machine, the plaster-iron that we had, but they are as good judges of pharmaceutical products as we have ever been, they are better business men, and I think they are honester. Perhaps they owe some of their commercial shrewdness to the teachings of their enemy, and it may be that the Sale of Food and Drugs Acts have stimulated their morality. However these things may be, it is certain that the young men of pharmacy are facing the new conditions they are meeting with good courage and with sound udgment. These qualities will give them victory, for business talent armed with qualification will ensure for them, in the long run, an advantage over rivals of perhaps equal business ability but without the qualification.

The London Chemists' Association—

that is, the General Purposes Committee—have issued another circular, in which they say they "feel it desirable, in appealing to chemists to join the Association, to explain more fully than can be gathered from the rules, the work the Association will undertake." Explaining previous utterances seems to form a large part of the labour of this interesting committee, but it was assuredly necessary in this case, for the rules certainly did not suggest some of these interpretations of them. But it may occur to some difficult persons that the explanations themselves want explaining. The second of the chief objects of the Association, for example, is thus defined: "To protect various trade customs (particularly those affecting London chemists), which are often neglected, and for that reason not sufficiently recognised by magistrates and others in authority."

A Trade Custom

which is often neglected is a contradiction in terms, and could certainly have no legal validity. It must be practically universal before it can be recognised by Courts of law. But what are the trade customs which are to be thus powerfully protected? The circular referred to is especially addressed to Camberwell chemists, and it may be recollected that the idea of a metropolitan association originated in that wise borough, and was based on a demand that the chemists there should be permitted to sell carbonate of magnesia for magnesia. Is this a specimen of the trade customs referred to? On the reply to this question will depend the opinion concerning the Association which at least some London chemists will form.

The Cheque-stamp Tax

hits the people who can make their objections to it heard. Meetings of merchants and bankers in the City of London, protests from 6,000 Manchester merchants, and on behalf of 3,000 P.A.T.A. people—these multiplied many times over are arguments which cannot fail to influence a Chancellor of the Exchequer. Naturally none of us welcomes the additional penny, but my faith in and respect for Sir Michael's courage and consistency will be shaken if he yields to this clamour and at the same time sticks to his bread-tax, which hits worst the inarticulate multitude. A neat way of escaping the impost in regard to the payment of small sums has been suggested to me, and I have not seen it proposed in print. It is to give a bill due, say, seven days after date, instead of a cheque. The stamp-duty on such bills is 1*d.*, and the Government find the paper.

The Inherent Injustice

of our law system is exemplified by the rule for a mandamus granted by the King's Bench Divisional Court in the case of the Board of Inland Revenue *v.* Sanguinetti. The Board, having failed to extract a penalty from Mr. Sanguinetti through magistrates, now call for another deal in the High Court. The matter cannot be worth many shillings to Mr. Sanguinetti, but it will probably cost him 100*l.* or more to present his objections to the claim to the High Court, and if he does not appear at all, the chance that the Judges themselves will work up a defence for him is, to say the least, slender. If I were Mr. Sanguinetti, I would address a polite letter to each of the three Judges who will hear the appeal, and in that I would state my case fully, intimating at the same time that I was not going to employ counsel so as to help the Board get its Act interpreted after formal argument. It may be said that the Judges would pay no attention to such letters. I think they would. It is their duty to see that justice is done, not to merely watch a gladiatorial combat between two highly paid barristers. It would be their duty to read a properly worded letter and understand its arguments, and it is quite likely that this unconventional procedure would succeed quite as well as feeing an advocate who would, perhaps, give twenty minutes to studying his brief just as the case came on.

Dr. Farquharson

is probably the M.P. most familiar to pharmacists. I do not know how many of our abortive Pharmacy Bills he has not taken charge of. He has made many a pleasant little speech at the Society's dinners, and I believe he is popular in medical circles. But he has certainly not done himself full justice hitherto. In Harmsworth's *New Liberal Review* for April there is an article by the doctor entitled "The Compleat Member," which is the bright star of this month's rather gloomy periodical literature. It is not merely humorous, though it certainly is that, but it is a very clever piece of fencing with the new rules of procedure. The writer sketches the art of making way in the House, and urges that to do so effectively the aspiring member ought to have no other occupation. "If you want to succeed in political life, and at last to plant your gluteal muscles on the front bench, you must be what the police-courts call a gentleman," he advises. And if you have acquired an outside reputation before going into the House you must be careful not to excite the House's jealousy when you get there. Dr. Farquharson tells us that for this reason Mr. Chamberlain was advised to try to break down for a moment in his maiden speech. The Right Honourable Joseph trying to break down is surely a pretty touch of humorous fancy.

Editorial Comments.

Japanese Pharmacy.

THE last mail from Yokohama brings us some interesting information in regard to an attempt which has been made during the recent sitting of the Parliamentary Diet to amend the law which controls the sale of pharmaceutical products. Japanese pharmacy law resembles the Irish and continental in principle more than that of Great Britain, for there are two classes of retailers—namely, pharmacists proper and druggists. The latter class are by far the more numerous, and they may legally sell any drugs and chemicals to physicians and to the public. Physicians are authorised to dispense medicines or to give prescriptions when required; but people generally look to their doctor for the medicine, as the number of dispensing pharmacies and dispensaries throughout the Empire is comparatively small. The Bill recently introduced for the amendment of the law proposed to limit the sale by druggists to articles specified by the Minister of the Home Department, and the preliminary list included the whole materia medica, with few exceptions, the sale of which, it was proposed, should be restricted solely to qualified and registered pharmacists—druggists being empowered to purchase these things only from registered persons, and to sell them to physicians, and not directly to the public. When the Bill was submitted to the Diet on February 15, there was great consternation amongst the druggists, and the agitation throughout the country quickly rose to a condition of intense excitement. The druggists claim that at present such a law would cause immense public inconvenience owing to the fact that there are only 3,000 registered pharmacists in Japan, while there

Digitized by Google

are about 40,000 druggists, and if the sale of drugs and chemicals be confined to registered pharmacists the latter would take advantage of the monopoly by charging abnormally high prices—another proof of the adage that human nature is alike all the world over, for exactly the same argument has been used in Germany, and is being used in Whitehall to persuade the Poisons Committee that registered pharmacists are not the people to entrust the sale of poisons to. Apart from that consideration the Japanese druggists say their existing rights would be practically extinguished if the Pharmacy Bill were carried into law. They admit that the spirit of the Bill is good, and they would agree to it if its enforcement was postponed for ten years. The opposition to the measure was such that the Diet considered it advisable to refer the Bill to a Special Committee of nine members, but before this Committee had come to a decision the Diet closed on March 10. The registered pharmacists maintain, and rightly, that the larger proportion of the druggists now in business in Japan have no knowledge of drugs and chemicals, and so slight an acquaintance with the business in which they are engaged that it is in many cases quite dangerous for them to be entrusted with the work of distributing medicines to physicians and the public. Consequently some measure for preventing the spread of the evil must sooner or later be adopted, and it is fully expected that the Bill will again be laid before the Diet next Session.

American Trade.

WITH reference to the American and Canadian issue of THE CHEMIST AND DRUGGIST, which falls on May 31, some official figures about United States imports of druggists' and allied goods are worth quoting. Those which we subjoin show in dollars the value of imports of the goods named during the eleven months which ended on November 30, 1901—the last available Washington statistics:—

Brushes	1,076,111	Sulphur	2,658,879
Chemicals, drugs, and dyes	8,039,563	Other chemicals bring up the total under this heading to	50,921,876
Dyewoods, &c. ...	932,975	Ginger-ale	253,299
Glycerin	1,857,114	Glass bottles ...	446,613
Gums	6,473,675	Glue...	404,722
Indigo	1,452,946	Oils	7,138,217
Liquorice-root ...	1,858,995	Paints, pigments, &c.	1,390,541
Lime, chlorinated ...	1,520,568	Perfumery and toilet-preparations	559,135
Mineral waters ...	695,614	Soap, toilet, &c. ...	681,670
Opium	2,106,834	Spices	3,600,952
Potash salts ...	3,507,212		
Quinine sulphate, &c.	805,319		
Soda compounds ...	5,997,664		

Business-houses on this side sometimes do not realise what can be done in these branches with our American cousins, but the above figures are expressive and tell their own tale. It is also well to bear in mind that the United Kingdom sells more to as well as buys more from the United States than any other country. The following are the official figures for the fiscal year 1901:—

From and To	U.S.A. Imported	U.S.A. Exported
	$	$
U.K.	143,365,901	631,266,263
Germany	100,293,666	191,072 252
France	75,454,098	78,923,914
Italy	24,618,157	34,468,939
Netherlands	20,596,272	81,352,470
Switzerland	15,799,400	255,360

The U.S.A. imports from the United Kingdom are a third of her total imports from Europe, but ten years ago the proportion was larger. Germany has pocketed the difference and more—in fact, British houses tend to lose grip of the American market. There is every reason why that should not be, for we buy more American goods than all the rest of Europe put together, and it is not so long ago since the same formula might have been used in respect to United States purchases of British goods. We may also note that the United States imports four times more chemicals, drugs, dyes, and medicines than she exports. During the eleven months of 1901 the value of such exports from U.S.A. was £13,127,760, which included all the patent or proprietary medicines (£3,028,943). One can judge from these figures and the prominence of certain American medicines in the United Kingdom what scope there is for business enterprise in the United States on the part of British houses.

Expensive Medicines.

IT has often puzzled Boards of Guardians, and especially those that burden their medical officers with the supply of drugs to the poor, to know what are expensive medicines. The Local Government Board very properly discourages this practice, particularly in regard to workhouse supplies. The Board's officials argue that, medical officers being in many instances not too well paid, the further expense of having to supply medicines is bound to result in a hardship either to the doctor or to his patients. In many rural districts, however, as a courteous L G.B. official has just pointed out to a representative of our staff, the supply of medicines for the poor by the medical officer is the only workable plan. The medical men in such cases generally put their opinions as to what are expensive medicines before the Guardians or Councillors as the case may be, and are generally awarded a gratuity to cover extraordinary expenses. The Local Government Board is ever ready to advise Guardians or other public bodies who are in a quandary on this point, and its method is to compile a list of what are considered expensive medicines by various Boards of Guardians, and to send this list on to the troubled ones for consideration. We append a specimen list of the articles judged expensive by the Board of Guardians in a populous London district:—

Cod-liver oil	Opium in powder
Sulphate of quinine, unbleached	Tincture of opium
Ether, rectified	Tincture of muriate of iron
Iodide of potassium	Sulphate of morphine
Chloroform	Spirit of wine
Gallic acid	Bismuth

There are many other articles that might be included in this list—antitoxins, for example, and some of the more costly synthetic remedies, but as medical officers have each divergent prescribing idiosyncrasies, the Local Government Board wisely forbears from binding Guardians down to a hard-and-fast rule, and advises the promotion of a mutual arrangement between public bodies and their medical officers.

BEWARE OF "JOHN ISLIP."

We have printed repeated warnings respecting a man who calls himself John Islip, and who writes to chemists from 28 Red Grove Road, Putney, S.W., asking them to send him goods including chlorodyne, peroxide of hydrogen, Rendall's pessaries, and sundries. He also asks for quotations for glacial acetic acid. On May 2, 1900, this man was convicted at the Clerkenwell Petty Sessions for obtaining credit under false pretences. He is an undischarged bankrupt, and as we have this week again received complaints in regard to him we wish to give the trade another warning. Islip, in the present instance, received goods as an old customer of a firm's predecessor and sent a second order, but has not

C

Digitized by Google

paid the first, and the firm are unable to get the money out of him. The firm are prepared to take proceedings against him, but as no steps can be taken unless credit to the extent of 20*l.* has been obtained, nothing can be done to punish the man, and the police are powerless. He is a military-looking person, smart and gentlemanly in appearance, and with hair turning grey. He writes on handsomely embossed paper, the lettering being usually in red or blue ink. A facsimile of a letter from him will be found in THE CHEMIST AND DRUGGIST, of February 15, page 284. All chemists in or near London should have this facsimile placed at their desk, or other prominent position, where they and their assistants can see it. One might as well destroy goods as send them to Islip.

"SPIRITS OF SALT."

The morning newspapers give fairly accurate reports of the bromidia-poisoning case, but the *Daily Express* is the only paper which succeeds in informing the public that chloral hydrate is "spirits of salt." It is not difficult to surmise how that error arose, even although, as one correspondent wickedly suggests to us, "the *Express* keeps an expert for these things."

ASSISTANTS' CHARACTERS.

A warning in regard to references and testimonials respecting chemists' assistants who have recently been employed by limited companies may not be out of place, following the paragraph in this column last week. References from companies cannot be relied upon unless they are obtained from the head offices of the companies, who alone usually know why assistants are discharged. Dishonest assistants sometimes give a reference to a fellow-assistant at a branch address, who in many cases gives a flattering testimonial.

COCAINE IN CALCUTTA.

According to Mr. Kailas Chunder Bose, the use of cocaine hydrochloride as an intoxicant is spreading to a fearful extent in Calcutta. Mr. Bose gives, in the *British Medical Journal*, several cases which have come under his observation to show the demoralising effects of the habit. He thinks the people of Calcutta acquired the habit from Bhagalpore, where cocaine is a social necessity. Inebriates say that the hilarity produced by cocaine is instantaneous, and is followed by no deleterious results; but observation shows that insomnia and anorexia, followed by dyspepsia and diarrhœa, result. The drug is generally taken in the form of tablets or powder, and chewed with betel-leaves and slaked lime. Restrictions on the illicit sale of cocaine are urgently needed in Calcutta, where it is sold clandestinely by hawkers, and it is possible that the regulations recently issued may answer the purpose by rendering it difficult for such people to obtain supplies of the drug.

THE CHEQUE-DUTY.

It is almost inconceivable that the chief of the finance department of this country should make such a ridiculous proposal as the rebate of a penny on each cheque for sums under 2*l.* The arrangement would require the return of cheques by banks to the drawers, which custom is by no means universal in the provinces, and presentation of the cheques at a money-order office for repayment. The latter provision is most strongly to be objected to, because in many instances it will mean submitting one's monetary transactions to a trade rival, the keeper of the post-office, and leaving the cheques with him. The Chancellor had far better permit penny cheques for the smaller sums, and those who use them for larger amounts would put a penny stamp upon them at the signature space. To large business houses penny and twopenny cheques would not be much more inconvenience after a while than are various values of stamps.

A LABELLING SUGGESTION.

The suggestion is being revived that the Legislature should require that each poison-label have printed upon it a list of the most readily obtainable antidotes for the particular poison to which the label is affixed. A correspondent of a provincial journal calls attention to the fact that the antidotes for a poison need not exceed eight lines, and he thinks such directions could be easily incorporated on a poison-label. The example given is for oxalic acid from Messrs. Wright, Layman & Umney's (Limited) card of antidotes:—

> Give chalk or whiting, or plaster from walls or ceilings (tablespoonful), or even slacked lime (a teaspoonful in fine powder), mixed with two tablespoonsful of vinegar (do not give soda or potash to neutralise the acid), promote vomiting with mustard (a tablespoonful) stirred to a cream with water, give olive oil and mucilaginous drinks, stimulants, whisky, &c, and warmth to the extremities.

The directions could be abbreviated without disadvantage, so as to get them within the limits of a slip-label. The subject is one which the Council of the Pharmaceutical Society might consider, as the particular mission of the present poison regulations in preventing accidental poisoning could be rendered more effective if the label bore some indication of the antidote.

DISTINGUISHABLE BY TASTE.

Another proof of the necessity for the addition of "liquid disinfectants" to the substances that should be dispensed in poison-bottles, is provided by *Truth* of last week. Speaking of the sins of the Crickhowell Rural Council in the matter of grappling with infectious disease, Mr. Labouchere says that after describing "the only attempt made at disinfection" as a "farce," the sanitary inspectors, in their report, state that at one house, where a woman lay sick of typhoid fever, her husband produced a bottle which had been filled with Sanitas fluid by an officer of the Council. The bottle was labelled "Scotch whisky," and there was nothing to indicate that it contained a disinfectant or that the liquid was not intended for internal use! "To place chemical disinfectants without distinctive labels in the hands of a rural population is," he says, "to invite calamity; yet this is apparently a common practice." In this particular instance the disinfectant named is not poisonous, and there might have been no "calamity" even supposing the Sanitased Scotch whisky had been taken internally, but with the majority of disinfectants in common use this practice puts a premium on fatal accidents.

IMPERIAL PENNY POSTAGE.

Cabled messages from Melbourne state that the inward postage on letters from any parts of the British Dominions to Australia has been reduced from 2½*d.* to 1*d.*, but the outward rate will be the same as before. The reduction on inward postage appears not to extend to countries that are not British, but there is some doubt on the matter as a whole, and it will be seen that Sir John Long asked a question about it in the House of Commons on Tuesday, with the result that the Postmaster-General advises that no change is yet authorised from this side. Mr. Henniker Heaton, M.P., who specialises on this subject, has tried to explain matters, and in a later newspaper-paragraph says he has received a cable message from Australia stating that if fines for insufficient postage be marked on letters by the Post Office on this side in the case of letters carrying only a penny stamp, they will not be collected by the Commonwealth Government. Meanwhile, it may be noted as a certainty that the Post Office announce that on and after May 1 the prepaid postage on letters from this country for all places in China where British post-offices are maintained will be reduced to 1*d.* per ½ oz, the rate already in force for letters addressed to Hong-Kong. British post-offices are at present established in China at Amoy, Canton, Foochow, Hankow, Hoihow, Liu Kung Tau (Wei-Hai-Wei), Ningpo, Shanghai, and Swatow.

The Stamp-duty on Cheques.

The method of meeting the agitation for a revision of the proposed stamp-duty on cheques, which the Chancellor of the Exchequer has devised, does not seem to commend itself to the majority of members. Its announcement was received with the nearest approach to general ironical laughter which I have heard in the House for a long time, and that fact is ominous. Without further comment I shall give the Chancellor of the Exchequer's words:—

What I propose is this. As hon. members are aware, the stamp-duty on cheques is paid for in the first instance by the banker, and then charged by him to his customer's account. It is the universal practice in London, and also very largely in the country, when a customer sends his pass-book to be made up to return to him with the pass-book the cheques which he has drawn. I propose that this shall always be done, and that then the customer, on presenting at the nearest money-order office any cheques which he has drawn under 2*l.*, shall be entitled to be paid the extra 1*d.* on all such cheques. The result will be to relieve all cheques under 2*l.* of the new duty.

Sir Michael was questioned by Sir F. Dixon Hartland, Sir Henry Fowler, and Mr. Bartley about the matter, their object being to see whether he realised the absurdity of the new proposal, but he was obtuse.

Mr. Lough reverted to the matter on Tuesday, when he asked the Chancellor of the Exchequer whether his attention had been drawn to the case of a single business in which 4 000 cheques a week are issued for amounts under 1*l.*; and whether he had made any estimate of the loss from his proposed revenue which would be caused by the concession he had announced in the cheque-duty, and what had been the basis of such estimate. The answer was in these terms:—

The hon. member has been good enough to send me some particulars of this case to which he refers, from which I gather that it is that of a firm carrying on a large tea-business, which is so profitable that they are able to give pensions of a few shillings a week to the widows of customers who have bought a certain quantity of tea. I do not see that they are entitled to special consideration in the matter of this or any other tax. As to the estimate of loss by the proposal I made on Monday [that given above], I had already allowed for the loss of a large sum by a diminution in the number of the same small cheques to which the proposal referred. So far as I can judge from the statistics of the comparative number of such cheques which I have been able to obtain, I think that an addition of 40,000*l.* to the loss I already anticipated should cover the amount.

Developing an Alum-mining District.

It appears that the Government of India have allotted a sum of two lakhs of rupees for expenditure in the present financial year on a railway which, if continued, will form the first section of the proposed Cutch-Bombay line. At present the development of the mineral wealth of Cutch is restricted to the alum-mines at Müth, but the proposed railway will, of course, tend to cheapen the cost of transport from these mines.

The Taxation of Glucose.

The attention of the Chancellor of the Exchequer has been drawn to the fact that flour is used in the manufacture of grape sugar (glucose), which is already taxed in proportion to its value as compared with ordinary sugar, and it has been suggested to the right hon. gentleman that there should be an exemption of flour so used from the proposed new duty on flour. While expressing the opinion that he does not think that any exemption would be possible, the Chancellor has promised to consider whether there might not be a rebate off the existing Excise-duty on grape sugar. Mr. Kimber considers that unless an exemption or some rebate is made, imported grape sugar will only pay 2*l.* 15*s.* per ton import-duty, against 3*l.* 5*s.* per ton paid by the home-manufactured article.

Ophthalmia and Ringworm in London.

According to the latest information in the possession of the Local Government Board, the number of children suffering from ophthalmia and ringworm in the Metropolitan Poor law schools is 413 and 325 respectively, and in Metropolitan workhouses and infirmaries 351 and 294 respectively.

The Cremation Bill,

which has passed through the House of Lords, was considered by a Committee of the House of Commons on Tuesday. Briefly stated, the purpose of the Bill is to enable burial authorities to establish crematoria, and to provide for the proper regulation of the burning of human remains. In the course of the Committee stage Mr. Jacoby raised the question of the danger of death by poisoning escaping detection through cremation, and Mr Jesse Collings stated that in framing the regulations every care would be taken by the Home Office to guard against this danger.

Postage to the Commonwealth.

It seems that it is premature to post letters for any part of the Australian Commonwealth with stamps of the value of less than 2½*d.* per ½ oz. The Postmaster-General has received a telegram on the subject from Australia, but the meaning of the message is not clear, and he is making further inquiries. "In the meantime," he specially points out, "the rate of postage to all parts of Australia remains 2½*d.* per ½ oz."

Australia and the Metric System.

When asked by Sir John Leng on Tuesday whether the Australian Commonwealth contemplates the adoption of the decimal system of coinage and a metric system of weights and measures, Mr. Chamberlain confessed that he had no information on the subject. He will probably be asked the same question in a week or two, as the matter, in view of its bearing upon the state of things in these respects at home, is being watched with considerable interest.

A Minister of Commerce.

There is not much probability of any steps being taken by the Government at present to meet the demand for a Minister of Commerce, which has within the last few weeks agitated a considerable section of the House. When invited to express an opinion on the subject on Tuesday, Mr. Balfour kept silence. Old parliamentary hands did not expect anything else, but some of the young men felt fairly confident that the Leader of the House would say something in view of the recent conference in one of the Committee-rooms. In time these novices will learn that Ministers are not in the habit of paying much attention to conferences of the kind. If the committee which has been appointed to promote the agitation mean to achieve anything, they must enter upon an active propaganda amongst their fellow members, and I venture to prophesy that one of their first discoveries will be the utter lack of interest in the subject which characterises the mental attitude of three-fourths of the House.

Sir Harry Bullard's Story.

In the course of the debate on the Bill for the closing of public-houses on Sundays, which came up on Wednesday, Sir Harry Bullard opposed the proposal. One of his grounds of objection was that if the public-houses were shut clubs would be open, and people might also go to the chemists' shops. In regard to the latter he had had an experience himself, but he was careful to point out that it was in Colorado. He went into a drug-store. "What shall I give you?" said the assistant. "I don't care," was his reply. Away went the assistant to a row of taps and filled a glass with as good whisky and water as he ever drank in his life.

Dr. F. S. Palmer notes in the *B.M.J.* that he has observed several cases of urticaria acuta in children who have eaten stewed rhubarb. The symptoms are best relieved with a full dose of castor oil.

In 1901 400 tons of calcium carbide was imported into Buenos Ayres, against 590 tons in 1900. There is a factory in Cordoba producing, by electrolysis, some 400 tons annually, all of which is used locally.

"Pharmaceutical Formulas."—We are now binding this work entirely in black buckram, which experienced librarians find is more lasting than leather. The price of the work remains the same—7*s.* 6*d.*, by post 8*s.*, from our offices, or for the published price from any wholesale house.

Legal Reports.

High Court Cases.

Tale of a Bath-cabinet.

Mr. Justice Phillimore and a common jury decided in the King's Bench Division last week the case of Barnes *v.* the Buckeye Bath-cabinet Company, in which the plaintiff, a widow, sued for damages for injuries caused by an explosion in a vapour-bath supplied by the company. From the evidence it appeared that Mrs. Barnes suffered from rheumatism, and Dr. Mitchell recommended her to get one of the baths. She bought one from the company in October last, and used it at first with plain water, but on the third of the month she read the pamphlet supplied with the cabinet, and, noting that turpentine was recommended, she got her niece to put in ½ oz. of turpentine and a pint of water in the pan and light the lamp. She then had the bath, and after being a quarter of an hour in it there was a violent explosion, and she was burnt all over the body. She was not well again until Christmas In support of plaintiff's case Mr. S. A. Vasey, F.C.S., testified that a mixture of turpentine-vapour and air is explosive at 100° F., but he admitted that in his experiments he got only a slight explosion, and none in one of the cabinets. The turpentine used by the plaintiff did not contain petroleum, for which he had tested. Mr. Sohn, F.I.C., F.C.S., gave evidence of a like nature for the defendant company, stating that he had failed to produce an explosion of turpentine when he repeated the conditions under which the plaintiff was alleged to be injured. One part of turpentine-vapour in 7 of air produced a mixture which exploded at the boiling-point of turpentine—320° F., and from the capacity of the cabinet he reckoned that not more than 1 of turpentine in 250 was present. After hearing counsel and his Lordship, the jury found for the plaintiff, damages 100*l.* and costs.

Dye Patents.

In the Chancery Division on Friday, April 25, before Mr. Justice Buckley, Mr. Cripps, K.C., on behalf of the Badische Anilin und Soda Fabrik moved against W. G. Thompson & Co. (Limited), Cooper Street, Manchester; William Goulsden Thompson, Brookfield, Manchester; William Gregory Thompson, Basford House, Old Trafford, Manchester; Walter Thompson, Cooper Street, Manchester; George Nicholl, 36 Brownville Road, Heaton Moor, Stockport, Chester; the Star Chemical Company, King Street, Manchester; William Thompson, Dorset, Manchester, and the Basle Chemical-works, Switzerland—for an interim injunction to restrain defendants, their servants and agents, until the trial of the action or further order from importing into England and selling in this country any dyes or dyestuffs made in accordance with plaintiffs' patents dated 1891 and 1892. It appeared from an affidavit made by Dr. Ehrhardt, of the plaintiff company, that in 1897 Mr. Justice Wills held patent No. 9633 of 1892 to be valid, and the company had imported into this country tons of dye (rhodamine 6 G) made under it, and the Society of Chemical Industry at Basle, who are licensees, also sold the dye in this country. The 1891 patent (No. 14,723) is for the manufacture of rhodamine G.—another fast red dye. Dr. Ehrhardt was of opinion that the defendants had for years systematically infringed the patents by selling dyes not made by the plaintiff company. These dyes were imported and sold under the name of Safflower Red 6 G and Safflower Red G.

Mr. Astbury, K.C., on behalf of the defendant, took the objection that the affidavit on which the motion was founded merely meant the information and belief. He submitted that there was authority for saying no order would be made upon such an affidavit. The source of information and belief must be given.

Mr. Justice Buckley held that there was sufficient upon the face of the affidavit to show that the deponent spoke from definite information. His Lordship accordingly made the order.

A similar order was made in an action by the same plaintiffs against William Hay and another, of Manchester.

Breach of Agreement.

In the Chancery Division on Thursday and Friday of last week, Mr. Justice Kekewich had before him the case of the Savile Town Chemical Company *v.* Bateman and others. The action was one brought by the plaintiffs, a company formerly trading as Robert I. Bateman and Co., to enforce a covenant contained in a deed of arrangement whereby the business of the defendants and others was assigned to the plaintiffs, restraining the defendants from trading as manufacturing chemists and chemical-merchants within 150 miles of the plaintiffs' place of business at Dewsbury, and, secondly, to restrain the defendants from soliciting customers of the firm. There was a counterclaim by defendants.

Mr. Warrington, K.C., and Mr. J. G. Wood appeared for the plaintiffs, and Mr. Ashton Cross represented the defendants.

It appeared that defendants—Robert Bateman, Richard Waddington, and Godfrey Bateman—were in 1899 engaged in carrying on a business in partnership as manufacturing chemists at Dewsbury. In that year they required further capital, and arranged to turn themselves into a company, which was known as Robert I. Bateman & Co. By the agreements entered into the consideration to be paid by the company to the vendors was 3,500*l.*, to be satisfied by the allotment of fully paid shares. The agreements also contained the covenant which was sued upon. The company was incorporated on December 12, 1899, with a capital of 10,000*l.*, divided into 2,000 shares of 5*l.* each. The first directors of the company were to be Waddington as chairman, Robert Bateman as managing director, Godfrey Bateman, and another gentleman who had advanced money to the firm. Subsequently the other directors expressed themselves dissatisfied with the management of Robert Bateman, and on September 12, 1900, a resolution was passed removing him from his position. On March 8, 1901, the defendant Godfrey Bateman also resigned his position. Almost immediately afterwards there was started in premises nearly confronting the plaintiffs' works the business of manufacturing chemists which was carried on under the name of the Explosive Acids Company. It was admitted by Godfrey Bateman in an affidavit filed by him that he was employed by that company, and the plaintiffs contended that this company was in fact Godfrey Bateman. With regard to Robert Bateman the evidence was that he began to trade as a chemical-merchant immediately after he ceased to be managing director of the company, though the plaintiffs had only recently discovered it.

Evidence was called on both sides, and in the result his Lordship granted the relief asked. He accordingly gave judgment for the plaintiffs, with costs, and dismissed the counterclaim.

Lin. Saponis Meth.

Under the impressive form of "The King *v.* E. C. T. D'Eyncourt and Cowling (*ex parte* Boots Cash Chemists (Southern), Limited)," the now celebrated methylated soap-liniment case in which Boots (Limited) have figured came before a Divisional Court of the King's Bench, consisting of the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice Channell, on Wednesday, April 30. We have previously reported that Mr. D'Eyncourt, the Magistrate, had been called upon to show cause why a *mandamus* should not issue to compel him to state a case for the opinion of the High Court. The case now came on for argument as to whether the rule should be made absolute.

Mr. Newton Crane appeared to show cause against the rule; Mr. Macmorran, K.C., and Mr. Bonsey appeared in support of the rule.

Mr. D'Eyncourt's affidavit was read by Mr. Newton Crane. It narrated the events which transpired in court, as reported in the *C. & D.*, November 2, 1901, page 733, November 30, page 889, December 7, page 925, and December 14, page 945. Mr. D'Eyncourt first dealt with the evidence as to the sale of the business of Day's Company to the Boots Company, remarking that the defendants "did not verbally ask for a case on the point of ownership. He (the Magistrate) found as a fact that the defendants were the owners of the business at 167 Upper Street on the date in question, and on that date, by their servants or agents, sold the article complained of, and that the act had been committed." The evidence as

Digitized by Google

to the nature, &c, of the article was next dealt with by the Magistrate, and the affidavit proceeded:—

The Magistrate then declined to hear further evidence to the same effect on that point, as he considered, having regard to the decision in Dickens *v.* Randerson, the complainant having demanded a medicine contained in the B P., he must be taken to have demanded that such medicine should be compounded of the component parts therein prescribed, and that the medicine sold was to his prejudice.

The defendants then wished to offer evidence that there was a commercial standard for liniment of soap different from that prescribed by the B.P., but they did not suggest that they could prove that the standard was known to the public, or to persons other than those engaged in the trade. The Magistrate considered that such evidence was inadmissible, having regard to the case of Dickens *v.* Randerson, the facts of which, in his opinion, were indistinguishable from those in the present case. He therefore declined to hear such evidence, and said he should fine the defendants 20*l.* and 10*l.* 10*s.* costs.

The solicitor for the defence then asked him to state a case on points raised by him—namely, that there was no evidence of sale to the prejudice of the purchaser, and that he had improperly excluded evidence of a commercial standard. He (the Magistrate) said he would take time to consider the application, and proceeded to hear another case of the same nature; and after about a quarter of an hour, thinking it would save expense and further litigation if he were to hear the further evidence tendered by the defendants that the sale was not to the prejudice of the purchaser, he did not decline to state a case, but informed the defendants' solicitor he would give him an opportunity of calling further evidence upon that point in the case; but he declined positively to call such evidence, as he said he (the Magistrate) had given his decision. He said he would adjourn both cases for a week to give the defendants a further opportunity of calling such evidence, and on the adjourned day (November 30) he asked the defendants' solicitor whether he would proceed to give the evidence he had tendered. The solicitor replied that he was not then instructed for the present defendants, and they declined to call any further evidence. He thereupon convicted the defendants, and fined them 20*l.* and 10*l.* 10*s.* costs. It was against this conviction that he had been asked to state a case.

Mr. Newton Crane explained that the rule *nisi* had been obtained on the affidavit of Mr. F. W. Beck, of Neve, Beck & Kirby, solicitors, Lime Street, E.C., which he read. This showed that though the sale was made on August 22, 1901, it was not until October 14 that the assignment of the business from the one company to the other was made, and that Mr. Beck had called the attention of the solicitor for the prosecution to the fact before the hearing. At the date of the sale there was nothing in the shop to indicate that the business was Boots'. He also contended that there was no sale to the prejudice of the purchaser, and that there was a commercial standard for liniment of soap. The affidavit concluded:—

The Magistrate declined to hear certain further evidence, and stated that the purchaser was entitled to get the article as prescribed by the Phamacopœia. He accordingly convicted the defendants, and imposed the full penalty of 20*l.*, with ten guineas costs. Mr. Beck then intimated that he should ask for a special case for the opinion of the High Court, which the Magistrate agreed to grant, and offered to hear evidence upon the point as to whether the sale was or was not to the prejudice of the purchaser; but as he had excluded such evidence, and given his judgment without hearing it, Mr. Beck declined to again tender it, and the Magistrate thereupon adjourned the hearing of the case, and another case of the same nature, for a week. Mr. Beck protested against the adjournment, on the ground that the case had already been heard and disposed of, and when the case was called on again, on November 30, Mr. Beck said he did not appear, and the Magistrate then stated that he confirmed the conviction of the previous week.

Mr. Newton Crane said the affidavit raised three points as to why the rule should be made absolute. The first was that the Court was in error in finding that the premises in which this drug was sold were in the ownership of the defendants at the time the sale was made by their agent; the second, that no evidence was admitted by the learned Magistrate to show it was to the prejudice of the purchaser; and the third, that there was another standard than that of the British Pharmacopœia. With regard to the first, that was a question of fact, and the Magistrate had found that the premises were in the possession of the defendants at the time of the sale. With regard to the other two points, he thought that the Magistrate had wisely refused to state a case here, on the ground that the application was frivolous, because he distinctly offered to admit this evidence. The solicitor refused to offer any evidence, and the Magistrate adjourned the case for a week, and then the solicitor told him he did not appear in the case.

The Lord Chief Justice said they did not at present see why the Magistrate should be ordered to state a case.

Mr. Macmorran referred to a number of documents, including the assignment, and pointed out that there was nothing about the purchasing company carrying on the business. The evidence of Spreckley, the manager, was to the effect that he was employed by Day's Company. He submitted that the true construction of the documents was that Boots Cash Chemists were not the owners at this time, and not the employers of the persons who sold the drugs. The other point, with regard to the sale of the article called soap-liniment, was far more important. The Magistrate seemed to have thought that because soap liniment was a thing mentioned in the B.P. it necessarily followed nobody could sell soap-liniment without complying with the exact requirements of the B P., and so he refused to receive evidence to show there was a commercial standard for this particular article.

The Lord Chief Justice: On the ground that it was not known to the public.

Mr. Macmorran said the Magistrate heard practically no evidence.

Mr. Justice Darling: Did you propose to prove there was a standard known to the public?

Mr. Macmorran: Certainly. The Magistrate refused to hear evidence as to a commercial standard, but offered to receive evidence on the question of whether it was a sale to the prejudice of the purchaser.

After some further discussion,

The Lord Chief Justice said he thought there should be a rule absolute for a case to be stated, as there were those two points as to what the evidence was and the effect of it, and also the question of whether there was a commercial standard for a soap-liniment.

The other Judges concurred.

Stamp Act, 1812.

INFALLIBLE PEARL OINTMENT.

AT the instance of the Commissioners of the Inland Revenue, Emily Machin, of High Street, Pensnett, was fined 2*l.* 10*s.* and costs, at Brierley Hill Police Court on April 24, for exposing for sale "Machin's Infallible Pearl Ointment," without a proper cover, wrapper, and label issued by the Commissioners of Inland Revenue, and without being duly stamped. An Inland Revenue officer deposed to purchasing in defendant's shop a box of the ointment for 6*d.*, the only label on the box being one stating that the ointment was a cure for certain ailments. Defendant expressed regret, and undertook not to repeat the offence.

Apothecaries Act.

AT Halifax County Court on April 24, before Judge Cadman and a jury, the Apothecaries' Society sued George Pearson, trading as a chemist and druggist at Sowerby Bridge, to recover penalties for having acted as an apothecary, he not being registered as such.

The evidence for the prosecution showed that the Halifax and General Medical Aid Society was an organisation of 1,600 members, who were entitled to free medical attendance and medicine when ill in consideration of a contribution of 1*d.* per week. Defendant was appointed their medical officer, for which he was paid 150*l.* per annum, with house, rates, water, and gas free. He had, in addition to filling this office, attended and prescribed for private patients. Defendant put in his certificate as a registered dentist, and argued that, being found able to treat one part of the body, he was fit to treat the whole.

Judge Cadman: If you had gout you would not pull a tooth out. (Laughter.)

Defendant claimed that the case was one that involved the livelihood of thousands. People in the markets who sold cough-sweets, and those who dealt in allspice, would be liable to be sued if he was adjudged to have committed a breach of the Act. He was fighting against the compulsory starva-

Digitized by Google

tion of himself and family. Not having appropriated the title of apothecary or claimed to be an apothecary, he submitted that he had done nothing he was not entitled to do. Mr. Shepherd, counsel for the Society of Apothecaries, put in a handbill issued by defendant, in which he offered to supply "an honest bottle of medicine for any ailment for an honest 1*s.* 1*d*," and invited "every pale person to consult him, buy his cheap medicine, and have their blood fed and nourished."

His Honour (to defendant): Then you are in opposition to Mr. Pink Pills? (Laughter.)

Judge Cadman pointed out that, whilst defendant might be a very able man, there was reason why this unregistered practice should be stopped, otherwise they might have every Tom, Dick and Harry putting up as medical practitioners, with disastrous results to the community. The jury gave a verdict for the Society for a 20*l* penalty.

Sale of Food and Drugs Acts.

Alum in Baking-powder.

At Diss Petty Sessions on April 23, John Petts, grocer, Diss, was charged with selling a packet of Wilsea's baking-powder which Mr. F. Sutton, county analyst, said contained 39 per cent. of alum. In his (Mr Sutton's) opinion it was injurious to health. Questioned by Mr. Kent (who defended) witness said he formerly held a different opinion, and in an important case at Cambridge twenty years ago said that it was not injurious when used in small quantities as in baking-powder, and this opinion was held by Dr. Tidy, Dr. Beverley, and others who gave evidence. Mr. Kent submitted that a small quantity of alum in baking-powder was not injurious to health within the meaning of the Act in question. The Bench being equally divided in their opinion, the case was dismissed.

Inaccurate Dispensing.

A case under Section 7 was heard at Nottingham Guildhall on April 25, when John Joseph Iley, chemist's assistant, 214 Arkwright Street, Nottingham, was summoned for selling a compounded drug—namely, potassium iodide 2 dr. made up with infusion of quassia to 8 oz.—which was deficient in potassium iodide to the extent of 36 per cent. Reuben Widdowson, chemist and druggist, of 214 Arkwright Street, was also summoned in respect of the same offence. Mr. H. W. Day prosecuted, and Mr. A. Barlow appeared to defend on behalf of the Chemists' Defence Association. Mr. Day held that that Mr. Widdowson was responsible for the act of his assistant, Iley, who made up the prescription in this case. The analyst's certificate showed that the sample of the mixture obtained from Iley contained 9·5 gr. of potassium iodide per fl. oz., whereas it should have contained 15 gr. Mr. Barlow argued that in law the summons was bad, but the Bench overruled the objection. Mr. Barlow then pleaded guilty on behalf of the assistant. He characterised the prosecution as a trumpery one, because, after, all what had occurred was an act of carelessness on the part of an assistant, and for that Mr. Widdowson, who was not present from first to last, was sought to be made responsible. There was no suggestion of any fraud, and the actual amount of profit that would accrue to Mr. Widdowson through the carelessness of his assistant was exactly one halfpenny. The Bench said they were convinced it was an act of carelessness on the part of Iley, who was fined 20*s*. The charge against Mr. Widdowson was dismissed.

Camphorated Oil.

At Sheffield, on April 28, Theresa Moore was fined 10*s*., including costs, for selling camphorated oil which on being analysed was found to contain only 17 per cent. of camphor. For the defence, it was stated that the bottle containing the oil had not been opened since its arrival from the wholesale chemist's until the inspector was served. When the oil left the manufactory it was said to be of full strength, and it must have deteriorated by keeping.

Vinegar of Squills.

At Highgate Petty Sessions on April 30. before Sir John Glover, Mr. W. Reynolds, the R-v. G. Hennessy and other Magistrates. Joseph Reed, chemist, 27 Turnpike Lane, Hornsey, was summoned for selling vinegar of squills which was not of the quality demanded. and to the prejudice of the purchaser, being 38 per cent. deficient in acetic acid. Mr. Kirby (Messrs. Neve, Beck & Kirby, solicitors) appeared for the defendant. The case had been adjourned. owing to the illness of the county analyst, Mr. Ed. Bevan, who certified as follows:—

I, the undersigned, public analyst for the county of Middlesex, do hereby certify that I received on the 23rd of January from Mr. Anty a sample of vinegar of squills, EM. 88, for analysis (which then weighed about 3 oz.), and have analysed the same, and declare the result of my analysis to be as follows: I am of opinion that it is deficient in acetic acid to the extent of 38 per cent. This opinion is based on the fact that the sample contained only 2·5 per cent. of acetic acid, whereas it should have contained at least 4·2 per cent. of acetic acid.

Mr. A. Bridge, inspector to the County Council, who prosecuted, was proceeding to open his case, when the Bench suggested that he should give the facts. He accordingly gave evidence as to the purchase.

Mr. Bevan next gave evidence in support of his certificate. In answer to Mr. Kirby he said vinegar of squills contains glucose.

At this point Sir John Glover wished to get the complete analysis of the sample, and Mr. Bevan said he had his notes with him, but the only additional fact was the figure for extractive matter.

Mr. Kirby: I am going to submit that the certificate is wrong in form.

Mr. Bevan: A full analysis is never given. I give all that in my opinion is sufficient for a prosecution. I submit that is so here. If they dispute my analysis that is another thing.

In further cross-examination the witness said sugar and albuminous matter was extracted from the squill by the acetic acid. He was of opinion there was very little esterification. Very little of the acid combined with the sugar, if it did at all, even through age.

By Mr. Reynolds: If that had taken place, he would not have detected it.

By Mr. Kirby: I very much doubt if the process took place. Even if it had, that would not have affected the extractive matter. It ought to contain 9 per cent., but only 4 per cent. was found. He did not think the calcium and other salts in the squill would combine with the free acid. He took his standard of 4·2 per cent. acid from the B.P. strength of dilute acetic acid, knocking off 0·7 per cent. to allow for other things in the preparation. He admitted there was no standard in the present B.P., although there was in the last.

Does that not suggest, queried Mr. Kirby, that the standard was not reliable, and that that was why it was left out?—Witness: You had better call Professor Attfield, who wrote the B.P.

The cross-examination was continued without eliciting any point of importance; and Mr. Bridge having called attention to the High Court decision in Dickens *v.* Randerson,

Mr. Kirby opened his case, relying upon the certificate being contrary to Section 18 of the 1875 Act, also that the preparation was subject to change, for on keeping the free acetic acid reacts with the albuminoids and natural sugars of the squill through the agency of the micro-organisms, whereby the acid is fixed, and therefore is not detected when free acetic acid alone is sought for, as the analyst had done in this case Besides, there was loss by filtration and also by evaporation in keeping.

Mr J. S. Ward (Hodgkinsons, Clarke & Ward) said he had special knowledge of this article, and his observations enabled him to say that vinegar of squill, freshly made, and in strict accordance with the British Pharmacopœia, contains only 3·7 per cent. of acetic acid. It loses free acid at the rate of 0·1 per cent. per month, owing, in part, to esterification. Here he corroborated Mr. Kirby's statement on this point. A little acid is also lost by evaporation.

Sir John Glover: What is the medicinal value of the acid?

Mr. Ward: I do not think acetic acid at all important. It does not matter in vinegar of squills what quantity of acetic acid there is. The dose is very small.

Cross-examined: He did not know defendant, who was not a customer of his firm's. He thought the vinegar was originally made according to the B.P. He had made

Digitized by Google

examinations from time to time. After five months he found a diminution of 0·71 of acid. The vinegar was kept in an ordinary corked bottle. Chemists did not think the acetic acid affected the medicinal value of the article. He did not think there was any carbonate of lime in squill, but oxalate would be found. The solid matter in it would vary.

Mr. Bridge: Suppose there is a standard?

Mr. Ward: You cannot have a standard potato.

Sir John Glover failed to see the value of this cross-examination. It was not helping them to a conclusion.

In answer to the Bench, the witness said when freshly prepared the article would contain about 3·6 per cent. of free acid, and he thought it would be a good article, though after keeping it had less acid. Squill was the important principle.

Mr. Charles Thomas Bennett, analytical chemist to Messrs. Wright, Layman & Umney, Southwark Street, said he would not expect to find 4·2 per cent. of acid in vinegar of squill at any time after manufacture. The figure would vary from 3·3 to 3·6. The article would lose by evaporation and decomposition.

Cross-examined: Even if there was only 4 per cent. of solids, he should think it was made according to the B.P. In his opinion, 9 per cent. was much too high.

Sir John Glover, at this point, said: The evidence is not such as to justify a conviction, and the summons will be dismissed.

Bankruptcies and Failures.

Re ALFRED MCLAREN POST, 96 and 98 Leadenhall Street, E.C., Managing Director of A. M. Post (Limited), Manufacturers of Post's "C B.Q."—The public examination of this debtor was held at the London Bankruptcy Court on April 25, before Mr. Registrar Brougham. The accounts show total liabilities, 8,293*l.* 9*s.* 9*d.*, and assets valued at sufficient to provide a surplus of 75*l.* 5*s.* 3*d.* In the course of his evidence the debtor stated that an American doctor gave him a formula for a cure for gout and rheumatism. He brought it over to England, and with a capital of 60*l.* commenced business at the above address. In November, 1897, A. M. Post (Limited) was formed to take over the business, and witness was appointed managing director, with powers to draw 10*l.* a week against his shareholding in the company. No dividend had been paid, the syndicate having carried on the business at a loss. The examination was concluded.

Re JOHN LEACH the elder, Crawley, Sussex, Pharmaceutical Chemist.—This debtor was examined at the sitting of the Brighton Bankruptcy Court on April 24. He stated that he had been in business as a chemist and druggist at Crawley since 1859. Part of the time he was in partnership, and in 1894, on the death of his partner, he paid to his executors the sum of about 400*l.*, but had to borrow money to do so. The business began to decline just before his partner's death, and had continued that way since. To "prop up matters" he borrowed other sums from time to time; one amount was 200*l.*, borrowed about six years ago. He had borrowed money from his son for some years. The Official Receiver (Mr. A. O. Jennings): Why did you keep the business on when you had to borrow for some years? Debtor: I was expecting to have to break up my home. My expenses would then be very much less, and I thought I should realise sufficient. Instead of that I was pressed, and got into this hole. He went on to say that he had never had any idea of taking his son into partnership. He sold his residence, known as "The Flushings," and it realised 12*l.* less than the charges on it. His wife died in July last, and he sold the furniture in August for about 300*l.*, of which 179*l.* was garnisheed. In September last he sold the business to his son for 1,200*l.*, the reason being that he was afraid a creditor would come in and ruin the business. The mortgage (about 1,000*l.*) on the premises was transferred to his son, who paid him 200*l.* in cash. The price was a fair one. He (debtor) had no occupation now, but assisted his son a little in his business. He expended the 200*l.* he received from his son in the payment of a debt of 110*l.*, and the expenses of his wife's illness and funeral. His son had been an assistant in the business for six years, at a salary of 2*l.* 2*s.* a week and rent free, and there was a large amount owing to him for wages. His son came into a reversion of about 900*l.* on his mother's death. The examination was then concluded.

Re THOMAS W. PILLEY, 5 Old Trinity House, Water Lane, E.C., and at Denmark Hill and Wood Green, Analytical and Manufacturing Chemist.—This bankrupt applied, on April 25, at the London Bankruptcy Court, to Mr. Registrar Brougham for an order of discharge. The Official Receiver reported that the failure occurred in July, 1901 the liabilities amounted to 1,048*l.* 9*s.* 11*d.*; the assets had realised 50*l.*, and a first and final dividend of about 4*d.* in the pound would be paid to the creditors. From 1890 to September last the bankrupt acted as secretary to Mellin's Food Company for India (Limited), but was dismissed from office in consequence of these proceedings. In May, 1900, he, with some scientific experience, began to trade as a manufacturing chemist at 5 Old Trinity House, with a capital of 500*l.* in cash and shares. He then entered into an agreement with Messrs. Voss & Co., the petitioning creditors, who undertook to supply him with all essences and extracts he might require at the lowest possible price, payable monthly. He attributed his failure to bad debts, created by his traveller, who since the bankruptcy had, with others, been prosecuted, at the instance of the Director for Public Prosecutions and convicted for, *inter alia*, unlawfully obtaining goods from the bankrupt by false pretences. It was in consequence of delay in obtaining payment of the book-debts due to him that the bankrupt was unable to meet the accounts of the petitioning creditors. The only offence reported by the Official Receiver was that the assets were not equal in value to 10*s.* in the pound on the claims by the unsecured creditors. Mr. Carr, on behalf of the petitioner, opposed the application, and submitted that the bankrupt obtained goods on credit from his clients by falsely representing his position. After hearing Mr. Whateley in support of the application, the learned Registrar imposed the minimum suspension of two years, on the ground of insufficiency of assets.

Gazette.

Partnerships Dissolved.

Forder, J., and **Duff, H. A.**, under the style of Forder, Duff & Co, Abbey Lane Stratford, E., manufacturing chemists.

McNish, D., and **Mayburyh Charles**, under the style of the Nottingham Chemical Company, Nottingham.

The Bankruptcy Acts, 1883 and 1890.

ADJUDICATION.

Meggitt, Joseph Bloom, Nottingham, director and manager of Samuel Meggitt & Sons (Limited), of Sutton-in-Ashfield, Nottinghamshire, glue and chemical-manure manufacturer.

New Companies & Company News.

LUTO SOAP COMPANY (LIMITED).—Capital 500*l.*, in 1*l.* shares Objects: To carry on the business of manufacturers, refiners, and preparers of and dealers in soap, oil, oleaginous and saponaceous substances, and all kinds of unguents and ingredients, pharmaceutical, manufacturing, and general chemists and druggists, manufacturers of and dealers in toilet-requisites, manufacturers of card, wood, metal, and other boxes and cases, perfumers, printers, stationers, &c. No initial public issue. The first directors are G. H. Holmes, G. E. Rowe, T. Yates, Mrs. H. E. Holmes, H. Holmes, Mrs. A. Holmes and A. Holmes. Registered office, 15 Castle Gate, Nottingham.

MOLAR'S (LIMITED).—Capital 1,000*l.*, in 1*l.* shares. Objects, To acquire the business carried on in England by Herbert Cohen: and to carry on the business of dentists, dental surgeons, manufacturers of artificial teeth, manufacturers of and dealers in dental, anatomical, and surgical appliances, &c. The first subscribers are: H. Cohen, 20 High Street, Birmingham, artificial-teeth manufacturer; A. Jacob, 51 Stirling Road, Edgbaston, jewellery-manufacturer; Mrs. A. Cohen, 20 Portland Road, Edgbaston; Mrs D. Jacob, 51 Stirling Road, Edgbaston; R. Thomson, 20 High Street, Birmingham, seedsman; S. S. Thomson, 20 High Street, Birmingham, seedsman; and F. W. White, 34 Cannon Street, Birmingham, solicitor. No initial public issue. Herbert Cohen is sole director for life. Registered office, 20 High Street, Birmingham.

THIERRY (ADOLF) (LIMITED).—A present issue of 30 000 1*l.* cumulative preference shares in this company is now offered. On application 5*s.* per share is payable; 5*s.* is due on allotment; and the balance on call, not less than three months afterwards. The prospectus states that the average net profit for 1899 and 1900 was 5,405*l.*

SOUTHALL BROTHERS & BARCLAY (LIMITED), BIRMINGHAM.—The prospectus of an issue of 40,000 1*l.* preference shares, to increase the capital of this company is given in our advertisement-columns. The original share-capital of the company was 200 000*l.* (70,000 preference and 130,000 ordinary 1*l.* shares), and the continued growth and extension of the company's business has rendered an increase of

Digitized by Google

capital necessary. An addition of 60,000*l.* to the capital was sanctioned by the shareholders, and the present issue concerns 40,000*l.* of that amount. The shares are to be issued at 1*s.* premium, and are cumulative as to dividend (5 per cent.) and preferential as to capital.

Edward Cook & Co. (Limited).—The annual general meeting was held on March 29 at the East London Soapworks, Bow, E, Mr. Samuel Hall presiding. In moving the adoption of the report, the Chairman said the profit on the last year's working was 15,183*l.*, and there was left, after paying debenture and preference interest, trustees' fees, and the balance of the preliminary expenses, 5,500*l.*, which with 3,384*l.* brought forward from 1900, made a total of 8,891*l* undivided profit. The directors had thought it desirable to carry forward to the present year 5,056*l.*, which, was more than enough to pay the preference dividend for 1902 out of profits already earned. The remaining 3,834*l.* they had divided among the six managing directors. The report was unanimously adopted, and the payment of a 5 per cent. preference dividend approved.

Dr. Tibbles' Vi-Cocoa (Limited).—The annual meeting held on April 30, at the Cannon Street Hotel, disclosed a good year's working. The chocolate business, an adjunct of Vi-cocoa, has increased enormously during the year, and the sales are likely to increase when Boisselier's chocolates become better known. The vacancy on the board of directors, occasioned by the death of Dr. J. H. Trouncer, is not to be filled up, and a saving of 250*l.* a year will thus be effected. A shareholder inquired if Freeman's baking-powder, which belongs to the company, was making satisfactory progress, and was informed that the returns from that item were satisfactory to the directors. Some criticism as to goodwill were made, but an amendment proposed as to the manner of dealing with goodwill and reserve was withdrawn, and the report passed.

Allison, Johnson & Foster (Limited).—The balance-sheet of this company in liquidation has been issued by the liquidator, Mr. W. P. Burkinshaw, 2 Parliament Street, Hull, who states that, valuing the assets as a going concern, there is a margin over the liabilities of about 2 900*l.* He has endeavoured to sell the business as a going concern, but has failed, and at a meeting of the cash creditors (representing seven-elevenths of the whole liabilities) it was resolved that the estate be realised. The liquidator is not sanguine that 20*s.* in the pound will be realised, but trusts the deficiency will be small. The capital and liabilities include 9,000*l.* (in 10*l* shares, fully paid), 7,058*l.* cash creditors and interest, 3,988*l.* trade creditors. Amongst the assets are stock-in-trade, valued at 6,871*l.*; book debts, 4,120*l.*; plant, utensils, &c., at book value, 1,902*l.*; profit-and-loss account to date, 6,123*l* ; advances to shareholders (by Messrs. W. A. Allison, F. E. Johnson, and H. I. Foster), 283*l.*

Trade Notes.

Messrs. H. Lyon & Mayer, 34 Leadenhall Street, E.C., ask us to state that they trade under that name and no other.

Messrs. Kay Brothers (Limited) tell us they have made several small improvements in "Vampire" fly-catcher this season.

A Gift of 25,000 Bottles of Yorkshire Relish from Messrs. Goodall, Backhouse & Co., of Leeds, has just been accepted by the Lord Mayor of London for the King's Coronation dinner to the poor.

Photographic Notes.—Messrs. G. Houghton & Son, 88 and 89 High Holborn, W.C., inform us that Mr. Reichert, the inventor of the Tyma developing-trough, will demonstrate its use at their premises each Monday, Wednesday, and Friday, from 1.30 to 3.30 P.M., until further notice. Mr. Reichert will develop the exposed spools which photographic chemists take with them. Messrs. Houghton send us a copy of the new Letts's "Photographer's Peerless Note-book." The book contains exposure-tables, information as to permits, developer formulæ, postal information, weights and measures, list of dark-rooms, and an insurance policy for 500*l.*, and sells at 1*s.*

Thermofuge is the name of a plastic application brought out by Messrs. Parke, Davis & Co., 111 Queen Victoria Street, E.C., for use in place of poultices. It is a paste made of aluminium silicate, ammonium iodide, boric acid, thymol, eucalyptus oil, and glycerin, and is warmed before spreading on lint and using as a poultice. It is put up in opal jars with aluminium covers, and the thermofuge, from its composition, is an admirable and cleanly substitute for poultices.

The Princess and the Tooth-brushes.—When the Princess of Wales visited Bethnal Green last week, she took away with her a "Coronation" box of tooth-brushes of a sorted sizes, stiffnesses, and trims, which had been specially made for her as a specimen of the work done by the girls of Bethnal Green. The tooth-brushes were prepared in the factory of Messrs. G. B. Kent & Sons (Limited), at Victoria Park, E., and Messrs. Kent also sent a display showing tooth-brushes in the various stages of manufacture.

Merck's Photographic Chemicals.—A useful booklet has been compiled by Mr. E. Merck, Darmstadt (London office, 16 Jewry Street, E.C.), of the essential features of the most important chemicals employed in photography. Developing-agents such as pyrocatechin, pyrogallol, quinol, and iron oxalate, reducers such as cerium sulphate and ammonium persulphate, intensifiers, and toning and fixing baths are dealt with, many formulæ being given. A list of synonyms of photographic chemicals—confined, however, to the English and German equivalents—is given at the end. Copies of the booklet are supplied to photographic chemists for distribution.

Maltova.—The Maltova Food Company, 11 New Station Street, Leeds, are introducing under this name a preparation of extract of malt with concentrated fresh eggs. The combination is particularly useful for children and others to whom malt and cod-liver oil is repugnant, and we find that it is not only pleasant to taste, but is taken with extreme readiness by children. The preparation is a good one, and in a sense may be regarded as carrying out the lecithin treatment which is now so popular with continental physicians in wasting diseases. "Maltova" is neatly put up, and retails at 1*s.* 6*d* ; also in larger bottles. The prices are to be protected under P.A.T.A. conditions.

Mr. F. X. Roellinger, with Mr. Arthur Colton, manufacturer of pharmaceutical machinery, Detroit, Mich., U.S.A., is again on a visit to this country. He has brought with him several of the automatic pill-machines which are simply fed with mass and deliver finished and coated pills of any size desired. A number of these machines are in use in England, and they are revolutionising the modern pill-making industry. Another machine which Mr. Roellinger has brought is a power-tablet one, almost dwarf in size, but a giant in working-power, as it makes 135 tablets a minute. Any firm who wishes to see these machines may address Mr Roellinger at the *C. & D.* office, 42 Cannon Street, London, E.C.

For Summer Drinks.—The special catalogue of counter-fountains (to supply iced drinks on draught), aërating-plant, and American-drink requisites which Messrs. Farrow & Jackson (Limited), of 16 Great Tower Street, E.C., have just issued is an attractive well-illustrated production. Many kinds and styles of soda-fountains are shown, and the prices are within the reach of even the minor capitalist. The latest designs which Messrs. Farrow & Jackson (Limited) have produced are named the "Britannic" fountain, the "Imperial" fountain, and the "Coronation" fountain. The latter is built of a richly veined marble, of varied colourings, relieved with onyx bands, and the whole is surmounted by a silver-plated canopy of open metalwork with plated and gilt brass pillars, ornamental sides and a border of plated frosted icicles. The canopy is coronal in suggestion, which with the crowned lion and shield at each corner of the plinth completes the regal scheme.

A Compressed Laxative.—Even the popular and seductive compound liquorice powder is jibbed at by many fastidious medicine-takers. The difficulty the ordinary person experiences in mixing the powder with water or other liquid vehicle is responsible for this in some measure, and the fact that particles are often left in the mouth induces a disagreeable aftertaste. Therefore, argue Messrs. Burroughs Wellcome & Co., "Tabloid Liquorice Compound" is indicated,

Digitized by Google

and that is the reason we have a bottle containing five-and-twenty 30-gr. compressions of the laxative of childhood before us. Two to four may be swallowed, with water, for a dose. We have tried one, and find that it disintegrates readily in the mouth, so that its prompt assimilation lower down is assured. "Tabloid" liquorice compound is sent out in bottles containing 25 and 100.

Chemical Society.

A MEETING was held on Wednesday afternoon last, with Professor Emerson Reynolds, V.P.R.S., in the chair. The attendance was good. After declaring the ballot for election of Fellows open, the President called on Dr. Young to read a series of papers contributed by himself and Miss E. Fortey, B.Sc. The first of these dealt with

The Preparation of Absolute Alcohol.

It is well known that it is impossible to prepare absolute alcohol by fractional distillation alone, and consequently recourse is usually had to such dehydrating agents as quicklime, anhydrous copper sulphate, and metallic sodium to remove the last traces of water. Dr. Young proposes to accomplish this dehydration by the application of a principle elucidated during the last few years by physico-chemical researches on the boiling-points of mixed liquids. When a mixture of liquids, thoroughly miscible with each other, is distilled, it usually happens that at some point in the process a distillate of constant composition and boiling-point is obtained, which it is impossible to separate into its constituents by further distillation alone. For example, alcohol containing 5 per cent. of water, and hydrochloric acid of sp. gr. 1·16 are such constant-boiling binary mixtures. Now, if there be added to such a mixture a third substance miscible with both constituents, there can be obtained a ternary mixture and three binary mixtures, and under certain conditions, depending on the nature of the substances, it may be possible to cause the added liquid to pair off with one of the others to form a low-boiling binary mixture removable by distillation. Dr. Young finds that this is the case when 95-per-cent. alcohol is mixed with its own volume of benzene. On distilling this solution, a mixture of benzene, alcohol, and water, boiling at 64·85° C. is obtained, then the alcohol-benzene distillate, boiling at 68·25° C., and so on until finally pure absolute alcohol, boiling at 78·3° C., is left in the still. It should be added that the method is only possible when an efficient still-head is employed. Following up several points raised in the course of this investigation, Dr. Young and Miss Fortey have carried out a series of experiments on the properties of mixtures of water with

The Lower Alcohols.

Methyl alcohol, they find, does not form a binary mixture with water, and so can be prepared in an absolute condition by simple distillation with an efficient still-head. With propyl, isopropyl, and tertiary butyl alcohol the benzene treatment answers best. Absolutely pure alcohols are not obtainable in this way, thus the sp. gr. of ethyl alcohol after the benzene treatment was 0·00009 too high, owing to the presence of a trace of benzene. This amount could not be detected by chemical methods, but was observed at once by an expert perfumer, to whom it was submitted. Even this trace, however, can be removed by redistillation with hexane, and after this treatment even the perfumer's nose apparently is satisfied by the purity of the alcohol. The authors also exhibited two specimens of their recently described still-head, which are made by Messrs. Griffin, and which they have examined and found to be efficient.

In the discussion which followed, Dr. Thorpe drew attention to a curious belief which runs through Excise literature that mixtures of alcohol and water only very slowly assume their proper volume, apart from the alteration due to change of temperature. This belief, he finds, originated in a phrase used by Gilbert, who investigated years ago, for the Inland Revenue Department, the properties of mixtures of alcohol and water, and who set aside his mixtures "for many months to secure proper interpenetration of their parts."

Dr. Divers called attention to the fact, alluded to by Dr. Young, that many anhydrous copper salts are soluble in methyl alcohol although not at all in ethyl alcohol—as, for instance, anhydrous copper sulphate and acetate.

The next paper, by Dr. Orton, on "Nitramine Benzenes," was followed by one in which Dr. A. Scott dealt with

The Atomic Weight of Tellurium.

Dr. Scott has recently observed that when tellurium is heated with methyl iodide, a trimethyl derivative is obtained which crystallises well, gives well-defined salts with iodine and bromine, and is a satisfactory material for accurate determinations. He has, therefore, determined the iodine and bromine in the two salts of this trimethyl tellurium, and so established a ratio between the atomic weights of the elements, bromine, iodine, and tellurium, from which he has calculated the atomic weight of the last-named substance. The value lies between 127·66 and 127·88, while that now in general use is 127·6. In answer to an inquiry from Professor Dunstan as to whether he had found any evidence of the existence of a second element in the tellurium employed by him, the author announced that he is now engaged in fractionating a large quantity of the methyl compound with the object of establishing the homogeneity or otherwise of the elements.

The following pharmacists were among the Fellows elected: Professor Ashe, of Dublin; Mr. Mathieson, J.P., of Innerleithen, Peebles; Dr. W. H. Martindale; and Mr. J. W. Peck.

Business Changes.

ON APRIL 26 a new branch of Lindsay's Drug-stores was opened at 65 Chrisp Street, Poplar, E.

MR. A. DAVEY will shortly open a drug-store at Royal Parade, London Road, West Croydon.

MR R. LLOYD GRIFFITHS, chemist and druggist, has purchased the business of Mr. J. Goodman at 27 London Road, West Croydon.

BOOTS, CASH CHEMISTS (SOUTHERN) (LIMITED) are about to open new branches in Broadway, Walham Green, and in Edgware Road, W.

THE business formerly carried on by Mr. Frank Whittaker, chemist and druggist, at 285 Oxford Street, Manchester, has been taken over by Messrs. Boots (Limited).

IT is the retirement of Mr. James Spilsbury, F.I.C., F.C.S., pharmaceutical chemist, which has made the change in Messrs. Blackwell, Hayes & Co.'s partnership.

MESSRS. WIDENMANN, BROICHER & CO., 33 Lime Street, E.C., agents for Messrs. Zimmer & Co., of Frankfort, have granted a procuration-signature of the firm to Mr. W. Bredt.

MR. LEONARD SALTER representative of Messrs. Allen & Hanburys (Limited), of Lombard Street, E.C., has removed from 34 Azalea Terrace South, Sunderland, to 6 The Avenue, Sunderland.

MR. EDWARD FILMER, for some years manager to Mr. F. J. Oliver, of Gabriel's Hill, Maidstone, has purchased Mr. E. Vinson's business at High Street and Middle Row, Maidstone, where he intends to carry out considerable alterations and improvements.

SALE OF DAZZLER PUTZ POLISH.—At the Hull Police Court on Wednesday, John Weldon, a grocer, was, under the Petroleum Act, fined 1*l.* and costs, and 1*l.* for analyst's fee and 1*l.* solicitor's fee, for selling petroleum spirit without a proper label attached to the vessel containing it. The "spirit" was in the form of Dazzler Putz metal-polish.

THE "WILLIAM MARTINDALE MEMORIAL" FUND.—As we are closing for press we receive an additional list of subscriptions to this fund in which further sums amounting to nearly 150*l.* are specified. We hope to give the names next week. Other subscriptions should be sent to Mr. G. S. Taylor, the Hon. Secretary, 17 Bloomsbury Square, London, W.C. The subscriptions so far ensure the provision of the bust, and take the fund a good way on for a Martindale medal or something of the kind.

Correspondence.

Division of the Minor Examination.

Sir,—In an article on pharmaceutical education from a student's point of view, which appears in your issue for April 26, I am credited with the opinion that division of the Minor examination is not wanted by students! In your own report of the proceedings at the last Council-meeting I was reported as having made a like statement, which is possibly the foundation upon which your contributor based his premises. It happens, however, that my real opinion is that a division of the Minor examination is an actual necessity—not only for the relief of pharmaceutical students, but also for the advancement of general knowledge in the ordinary everyday requirements and necessities of social and business life, as well as pharmacy and its allied sciences. Judging from your report, however, as also from a remark made by my colleague Mr R. A. Robinson whilst I was speaking, it is evident that I did not make myself quite clear upon this point; for although I said that there appeared to be no disposition on the part of really well-trained students to find fault with the examination as at present conducted, I certainly did not intend to imply that they would not like or do not wish the Minor examination to be divided. On the contrary, I have for many years held fast to the conviction that a division of the Minor examination, based upon a defined course of study during pupilage, would be the greatest possible boon to the pharmaceutical student; and as I have given expression to that opinion on many occasions, and still hold firmly to the same belief, I would not like there to be any misapprehension upon this important subject. I may be excused, perhaps, for pointing out that in an address delivered at Sheffield in October, 1900 (published in the *Ph.J.* and *C. & D.*, October 20. 1900), I dealt as thoroughly as I was able to do with the division of the Minor examination. I do not think your contributor can be cognisant of this, and if he will kindly extend to me the favour of reading it, I need hardly say more than that the views there expressed remain unaltered.

Kilburn, N.W. Charles B. Allen.

The Council Contest.

Sir,—The ten gentlemen who are seeking our votes at the coming election seem very shy at putting their views before us. I should strongly advise members to abstain from voting for those who will not give a straightforward answer to the following question:—

Will they, if elected, undertake to move a motion in the Council, that the Council take immediate proceedings against all persons or companies who are using the title chemist without legally complying with the regulations of the Act of 1868?

Grimsby, April 26. Herbert W. Colley, M.P.S.

Mr. A. Sydney Campkin (Cambridge), one of the nominees for a seat on the Council, in the course of a letter addressed to us says:—

While I do not claim to be a standard-bearer in the battle of qualified men against unqualified trading companies, I do claim to have been an earnest worker in the ranks of my fellow-chemists for many years past, having had a long personal experience of their needs, and of the various branches of the business, not confined to the limits of my own locality; also having been actively engaged in administrative public work of a varied character for upwards of a quarter of a century.

It is most essential that the Act of 1868 should be enforced, and that personal qualification such as is demanded by that Act should ensure personal protection in return, and the liability and responsibility of limited companies, owned by a number of unqualified shareholders, should be the same as those of an unqualified person. Poisons, potent drugs, and medicines should only be obtainable from, or dispensed by, qualified men, who have a direct ownership in the establishment. Protection of title and identity of ownership should be demanded.

I would strongly support the proposal to divide the Minor examination, as a measure of justice and in the interest of employer, *employé*, and the public, independently of an amended Pharmacy Act, the production of which seems at present remote.

Any proposal to extend the usefulness of the Society, in its broadest sense, to the body of chemists throughout the Kingdom should have my warmest support, and if this is secured the time will not be far distant when its membership will be largely augmented by the inclusion of the remainder at present not within its circle. In such an event its Council would speak in no uncertain tone in any demand for legislative reform.

We have, on the morning of publication, received another letter from *Mr. C. T Weary*, and regret that space and time only enable us to print the subjoined quotation:—

What is of more interest [than statistics of attendance and speechifying] to the great majority of provincial chemists is that a candidate shall be in ordinary retail business, that he shall be thoroughly approachable and in close touch with his pharmaceutical *confrères* and all their present day difficulties and keen competition. Such a man we have in Mr. Park, and the fact that he has on past occasions received the undivided support of his brother chemists here, to whom he is so well known, and which will not be withheld on this occasion, will do him more good than either the manner or the matter of the *C. & D.* remarks will injure him.

Diascordium.

Sir,—Diascordium, under the names dias cordial and Dyer's cordial, is still occasionally asked for in country places, and I have a formula for it in an old MS. recipe-book which closely resembles that for Godfrey's cordial. It is not a week since I was last asked for it as an ingredient in a cough-mixture. To say, as "Xrayser" does, that it was originally a preparation of scordium, is like calling paregoric a preparation of camphor. The fact is that from its first invention by Frascatorius diascordium always had opium for one of its chief ingredients, and its synonym in the old Paris Codex was *Electuarium opiatum astringens*. The Paris formula has seventeen ingredients, that of Frascatorius nineteen, that of the old Pharmacopœia Londinensis twenty-one. The proportion of opium in the original formula was gr. j. in ʒv. gr. xij. Its narcotic strength was increased in some of our later Dispensatories by the substitution as a vehicle of syrup of poppies for honey.

I am, &c.,

Epworth, April 25. C. C. Bell.

Another Cause for Chloroform Fatalities.

Sir,—I notice that in one of the medical journals a surgeon states that whenever solutions of oxalic acid and permanganate of potassium are used for disinfecting-purposes in the operating-theatre, he has noticed that the patient under chloroform is seized with a suffocative cough and symptoms of bronchial irritation, even apparently remote from the direct effects of the nascent oxygen. He was at a loss to account for this, but your readers are doubtless aware that in the presence of nascent oxygen chloroform may suffer decomposition, and the results described by the surgeon are evidently those of chlorine poisoning.

Yours truly,

Dublin, April 21. J. C. McWalter.

Shellac—Beware of "Calcutta Tares."

Sir,—We recently had a small transaction in orange shellac, and, as is our custom, turned out the cases on receipt to ascertain the tares, whereupon we found three cases (empty) weighed respectively 4 lbs., 5 lbs., and 6 lbs. more than stated on our invoice. The total gross weighings of these three cases showed 4 lbs. more than invoice; thus we were charged for 11 lbs. weight of shellac more than we received. The cases were in good condition when received by us, and therefore we could not claim on the railway company, but requested sellers to hand us credit-note for the short weight, only to get the reply, "All shellacs are sold Calcutta weights and tares, and we can make no allowance." As we paid 120*s.* 6*d* per cwt. for the shellac, it will be seen on three cases (4 cwt. 1 qr. 23 lbs. net) there was a loss of 11*s.* 10*d.*, or practically 2*s.* 8*d* per cwt. added to cost-price.

We think it our duty to warn buyers and recommend stipulations in all cases for actual English weights. We may say in the case in point we were quoted "per cwt." without any stipulation, and ordered accordingly. If buyers will pay attention and assist in checking such exactions, it will be a material benefit to the trade, and you will assist by publishing this little experience of ours.

Yours faithfully,

Robert Street, Sheffield, April 24. W. Pickard & Co.

"The First Lady Chemist in England."

In last week's issue (page 670) we commented on a paragraph which had appeared in many local newspapers, alluding to the success of Miss Horniblow, "an assistant to Mr. G O Rowe, chemist, Braintree," in gaining the Minor certificate, and naming her "the first lady chemist in England." We have since had a call from Miss Horniblow, who is much distressed at the inaccuracy of the statement made, and who cannot in the least account for its inception. Miss Horniblow lays no claim to being "the first lady chemst," having, as she says, amongst her own friends many Majors and Minors of her own sex of several years' standing. Moreover, she is not an assistant to Mr. Rowe, of Braintree, although it was with him she served her apprenticeship.

Legal Queries.

208/54. *Peter.*—The Board of Inland Revenue do not interfere with the dispensing of wines forming part of a prescription of a general medical practitioner. Indeed, you will see by reference to THE CHEMISTS' AND DRUGGISTS' DIARY, page 284, that a part of a section of an Act of George II. specially exempts "spirituous liquors . . . made up for sick, lame, or distempered persons only," and this would strictly apply to a prescription directing the addition of tincture of nux vomica 2 dr. to a bottle of vibrona, the prescription being dispensed for a sick person by a chemist who has not a wine-licence.

204/24. *Spiro.*—In the registration of a label or wrapper at Stationers' Hall there is no possibility of refusal, and registration is always strong evidence of priority in the case of common-law infringements of one's rights. Registration of the name of a proprietary article as a trade-mark may be attended with some difficulty, which, in the case of a provincial applicant, can only be got over by instructing a trade-marks agent to secure the registration. Registration at Stationers' Hall costs 5*s.*, and as a trade-mark at least 25*s.*, but a trade-marks agent will give you an inclusive fee for the official expenses and his own work. This would amount to three guineas or more. A trade-mark is certainly preferable.

209/6. *Chemicus.*—(1) The assistant whom you had engaged practically admitted his liability, and you could establish a claim for damages against him; but it is questionable whether it is worth your while to notice the matter further. (2) In the present state of the law limited companies are "chemists" if they choose to call themselves so. We know of one case in which a large company recently complained through a solicitor about a chemist and druggist for advertising a list of chemists in the town which did not include the name of the company; but as no further action was taken in the matter we presume it has been considered to be not worth while proceeding.

190/3. *J. H.*—(1) The title "Corn-solvent" does not by itself render a preparation liable to stamp-duty. The phrase "Remove the dead skin" is on the border-line of liability, and we would recommend you to submit the label to Somerset House for opinion. (2) An "ester" is a compound of an alcoholic radical with an acid radical; for example, acetic ether is an ester.

Miscellaneous Inquiries.

195/5. *J. W. W.*—**Boot-sole Finish.**—We have reported on this substance a good many times, but as we do not seem to have given the formula within the last three years we repeat it:—

Pipeclay	℥iiss.
Iron peroxide...	℥ss.
Boric acid	℥j.
Oil of citronella	♏v.
Gelatin	℥iss.
Water to	℥x.

Dissolve the gelatin in the water, and gradually add to the other ingredients, previously well triturated together.

189/64 *Loki.*—The statement does not occur in the forthcoming revised edition of "Urine Analysis."

154/74. *Maltex.*—Please repeat the query referred to in your postcard.

196/35. *Pro Bono Publico.*—You have found a mare's nest Tinctura iodi decolorata means decolorised tincture of iodine, not tincture of colourless iodine, as you seem to think. Why worry yourself about the thing? You cannot have chemically free iodine which is colourless; but if it is any consolation to you we may call your attention to the fact that some, at least, of the iodine in tr. iodi decolor. is in the ionic state.

200/5. *W. T. O.*—Such advertisements as that which you send us are quite common. It is a fact that preparation for the Apothecaries' Society's Assistants' certificate takes six months, although candidates now have to produce evidence of training for a longer period.

206/49. *Phonograph.*—The mixture is, we presume, for indigestion, as it contains bismuth. subcarb., sodii bicarb., and spt. ammon. arom.

186/70. *S. & Co* —**Linen-polishing Block.**—This is made by making hot French chalk into a paste with melted paraffin wax, and cutting into blocks.

202/41. *Unguentum* —The special **Sulphur Ointment** is prepared by mixing sulphur hypochloride ℥j. with vaselin. alb. ℥j. The odour of such an ointment is much more pronounced than ordinary sulphur ointment.

181/64. *Constant.*—**The Pills for Syphilitic Complaint** are pil hydrargyri gr. j. c. ext gentian. gr. ss. This combination taken for some time acts as a tonic alterative.

8/4. *E. W. H.*—**Garget** is inflammation of the udder of cows, and the treatment consists of saline aperients internally and cooling ointments or lotions locally. The preparation you send, which your farmer-customer uses, is applied in cases where a quarter drops out or mortifies, and has been made by Clater's formula:—

Ol. lini	Oj.
Acid. sulphuric.	℥ij.
Ol. terebinth....	℥ij.
Ol. origani	℥ij.
Tr. myrrh.	℥ij.

Add the acid, a little at a time, and with constant stirring, to about half the linseed oil When cold add the other ingredients and the rest of the linseed oil.

"Veterinary Counter-practice" gives further particulars of the treatment of garget.

208/5. *Cannabis.*—**The Sauce** you send owes its pungency to the fact that the vinegar with which it is compounded has been fortified with acetic acid. A formula such as the following will make a similar product:—

Garlic	2 oz.
Pimento	1 oz.
Nutmegs	1 oz.
Black pepper	1 oz.
Capsicums	½ oz.

Rinse and boil with ½ gal. of best vinegar, when cold strain and add—

Salt	2 oz.
Sugar	2 oz.
Acetic acid	2 oz.
Mushroom ketchup	1 pint
Browning	a sufficiency
Malt vinegar to make	1 gal.

8/4. *Turkey.*—The **Cattle-food** is certainly medicated with carbolic acid, but as you give no particulars of its use we have not pursued our investigations further.

203/31. *H H. H.*—**The Boiler-fluid** consists of caustic alkali and tannin. The full formula was given in the *C. & D.*, February 10, 1900, page 267.

206/50. *Suffolk* —The red particles in the **Horse-tonic Powder** are portions of the pericarp of capsicums. The proportion of capsicum present is small—not more, we judge, than ½ to 1 per cent.

188/29. *Nemo* —**The Hop-wash** is, as you surmise, composed of gas-liquor and soft soap; it is not arsenical.

Digitized by Google

192/9. *Pulsatilla.*—**Eczema-ointment.**—This contains cocaine, which accounts for the doctor charging what seemed a high price. A similar product is made of—

Cocaine	gr. vj.
Vaseline	℥ss.
Lanoline	℥ss.
Zinc oleate	℥j.

Mix well.

185/10. *H. & L.*—**Worm-powder for puppy of six months.** We make this out to be—

Santonin	gr. iij.
Black antimony	gr. v.
Powdered cassia	gr. xv.

195/15. *A. M.*—(1) **Washing-liquid.**—Your sample consists of equal parts of strong liquid ammonia and oil of turpentine. (2) **Brass-polish.**—This has the following composition:—

Benzine	1 oz.
Oleic acid	1 oz.
Solution of ammonia	½ oz.
Water to make	1 pint

The bottle to be well shaken before use.

178/48. *R & Co.*—**Stable-liniment.**—The specimen you send is prepared as follows:—

Oil of thyme	equal parts
Oil of spike	
Oil of turpentine	
Linseed oil	

204/64. *D. N.*—There used to be a collection of hints to amateur photographers in Fallowfield's *Annual*, or you could compile some useful information from the almanac published by the *British Journal of Photography*.

207/49. *Tees.*—The Educational number of The Chemist and Druggist (September 7, 1901) contains a concise account of the methods of entering the medical profession.

207/72. *W. C. M.*—**Enamel Skin-paint.**—We do not know to what your customer is referring. Would flexile collodion, containing calamine in suspension, be what is required?

204/44. *Hematite.*—**Powders for Lotion for horses swollen legs.**—Alum (6 oz.), lead acetate (4 oz.), zinc sulphate (4 oz.). The powders are coloured, and sold separately, to be added to 1 gal. of water.

201/53. *Opium.*—Oxalic acid is best for removing ink-stains from cloth, but it may affect the colour of the material. You could experiment on an out-of-sight part of the garment.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

207/71. **Manufacturers or agents for Quilline foam.**

207/10. What is "Smokeline," or where obtainable?

214/12. Who supplies André's Doré, a liquid gold paint?

210/47. Who makes Delcroix millefleur and violet powder

213/58. Makers of Cranswick's flexible-back clothes? brushes.

208/4. Names of American makers of cheap indiarubber (or imitation) corks.

211/26. Makers of coffee-leaf cigarettes, or where can they be obtained?

213/65. Makers of or London agents for Tilley's curd-soap and Henley's beef, celery, and iron wine.

Cape Town University.—A sum of 40,000*l.* is available for the building of the front section of an ultimate quadrangle for this University. Mr. Aston Webb, A.R.A., of Queen's Anne's Gate, Westminster, S.W., is to act as assessor in a competition for designs for the work. A premium of 400*l.* will be paid to the author of the design placed first, 200*l.* to the second, and 100*l.* to the third.

Coming Events.

Monday, May 5.

Society of Chemical Industry (London Section), Burlington House, Piccadilly, W., at 8 P.M. Mr. J. S. Braine and Professor V. B. Lewes on "The Mixed Carbides of Manganese and Calcium," and Mr. Oscar Guttmann on "Dangerous Chemical Substances."

Wolverhampton Chemists' Association. Juniors' night. "Hints on the Study of Botany," by Mr. Phillips.

Tuesday, May 6.

Midland Pharmaceutical Association, Great Western Hotel, Colmore Row, Birmingham, at 7 P.M. Annual meeting, followed at 7.30 by the annual dinner.

Wednesday, May 7.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W., at 11 A.M. Council-meeting.

Pharmaceutical Society of Ireland, 67 Lower Mount Street, Dublin, at 3 P.M. Council-meeting.

Hastings and St. Leonards Pharmaceutical Association, Castle Hotel, Hastings. First annual meeting and dinner.

Three Towns Junior Chemists' Association, Farley's Hotel, Plymouth, at 8 P.M. Smoking-concert; tickets, 1*s.* each, may be had from Mr. Edgar Lovatt, 17 Trafalgar Place, Stoke.

Newcastle-on-Tyne Chemists' Association, Hôtel Métropole, at 8.30 P.M. Special meeting.

Thursday, May 8.

Chemists' Assistants' Association, 73 Newman Street, Oxford Street W., at 9 P.M. Annual general meeting.

Friday, May 9.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Professor J. Norman Collie on "Exploration and Climbing in the Canadian Rocky Mountains."

South African News.

Moving North.—Mr. E. P. Butler, who prior to the outbreak of war was with Mr. C. W. Hyland, of Johannesburg, and recently with Mr. Alex. Cleghorn, Cape Town, has returned to the Rand, where he proposes opening on his own account.—Mr. Harry Richards, chemist and druggist, late of Warminster, Eng., has left for the Transvaal. He joins the staff of Mr. George Rankin, of Klerksdorp.

A Mysterious Cattle-disease.—A Reuter's telegram from Bulawayo says that a cattle-disease which has been raging in Rhodesia has reached Gwelo, and it is feared that it will dislocate all transport. The veterinary surgeons do not understand the disease. The Bulawayo Chamber of Mines has telegraphed to the Government that the new cattle-disease threatens to paralyse the mining-industry, as it is impossible to get supplies to the mines. Transport-riders who had loaded for Selukwe have turned back. The disease seems exceedingly virulent.

Mourning the Colossus.—All business houses in Cape Town and vicinity were closed at 1 o'clock on April 3, the day of the state funeral of the late Mr. Rhodes. The pageant was one the like of which has never before been witnessed in South Africa. The streets paraded by the *cortège* were draped in black, and deep mourning was conspicuous on every hand. Among the drug-stores and pharmacies both those of Messrs. P. J. Petersen & Co. and of Messrs. Heynes, Mathew & Co. were heavily draped, while a huge Union Jack flew at half-mast over the premises of the latter firm. Messrs. Lennon's block of buildings was draped in black and heliotrope, relieved with white. On the morning of the funeral, while the body was lying in state in the Parliament buildings, several peninsula chemists passed through to pay their last respects to the deceased statesman. The Pharmaceutical Society was officially represented at the funeral by the President, Mr. Geo. Darroll. Some smart photographic work took place on the afternoon of the funeral. The *C. & D.* man observed a bromide enlargement in the window of Messrs. P. J. Petersen & Co., Adderley Street, before 6 o'clock in the evening. The picture was that of the *cortège* wending its way down Cape Town's principal thoroughfare.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: May 1.

NO improvement is noticeable in business, although the fact that an auction of first-hand drugs has been held this week has given slightly more stimulus to that department of produce. Citric and tartaric acids are receiving more attention as the best season of the year approaches, and present prices are very low. Quinine has again been neglected, and values are nominal. Buchu-leaves are firmly held, and the low prices asked for jalap have led to fair sales. Spanish ergot has been sold at unchanged rates, and good sound is still scarce. Wayne County peppermint oil is slightly easier, but HGH is unchanged. It is reported that low prices cannot be expected for American roots, &c., during the coming season, as labour for collecting same is scarce in the United States. Higher prices are asked for saffron from Spain. The following are the principal changes of the week, including those recorded at the drug-auctions:—

Higher	Firmer	Easier	Lower
Aloes, Cape	Oil, rape	Acid, citric	Areca
Oil, palm	Saffron	Cardamoms	Dill seed
Sarsaparilla (native Jam.)		Coca-leaves	Quinine
Wax, bees', Madagascar		Ipecac. (Rio)	Thyme-seed
		Oil, cod liver	Wax, bees' (Jam.)
		Oil, peppermint (Wayne Co.)	
		Soda, nitrate	

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from April 24 to 29, inclusive:—Acid, citric (@ Bordeaux), 14; acid (tartaric (@ Bordeaux) 3, (@ Antwerp) 4, (@ Rotterdam) 24; aniseed (Russ.), 141; antimony (@ Kobe) 50, (@ China) 840; areca (@ Marseilles), 40; arrowroot (@ St. V.) 791, (@ Montserrat) 104; argol, 1,187; asafetida (@ Baltimore), 9; benzoin (@ Singapore), 50; bleaching-powder (@ Treport), 57; borate of lime (@ Antofagasta), 2,100; cardamoms (@ Marseilles) 80, (@ Ceylon) 29; castor oil (@ Antwerp) 75, (E.I.) 100; chaulmoogra oil, 10; chloral hyd., 5; cinchona (@ Ceylon) 351, (E.I.) 65; coca-leaves (@ Ceylon) 14, (@ Antofagasta) 10; cod-liver oil (@ Aalesund) 75, (@ Hamburg) 15; cream of tartar (@ Bordeaux) 216, (@ Barcelona) 193, (@ Rotterdam) 5; dragon's-blood, 9; drugs (@ Yokohama), 31; essential oils (@ Hong Kong) 30, (@ Melbourne) 8 cs.; galangal, 67; gentian, 20; ginger (@ Yokohama) 1,580, (@ Kobe) 500, and 1,373 *in tr.*, (@ Jamaica) 1,264; gum arabic (@ Alexandria) 52, (@ Hamburg) 33 cs.; gum sandarac, 178; gum, unenumerated (@ Singapore), 230 cs.; honey (Jam.) 134, (Calif.) 100; ipecacuanha (@ Cartagena), 21; lime-juice (W.I.), 35; lime oil (W.I.), 52; olibanum (@ Bombay), 535 cs.; opium (@ Colombo), 7; peppermint oil, 40 cs., (@ Japan) 50 *in tr.*; poppy-heads, 11; pot. chlor. (@ Treport), 84; pot. prussiate (@ Rotterdam), 20; quillaia, 35; sandalwood (@ Amsterdam) 350 bgs., (@ Bombay) 68; sarsaparilla (@ Panama), 5; senna (@ Suez), 16, (Tiny.) 37; shellac, 1,058; soy (Chin.), 100; sticklac, 157; tamarinds (@ Demerara) 101, (@ Antigua) 59; turmeric, 287; vanilla (@ Antwerp) 119 bdls., (@ Mauritius) 24 cs., (@ Bordeaux) 17 cs.; wax, bees' (@ Marseilles) 170, (Chil.) 11, (Morocco) 110; wax, Carnauba (@ Pernambuco) 171, (@ Ceara) 42; wax, ceresin (@ Dusseldorf) 20, (@ Hamburg) 85; wax (Japanese (@ Kobe), 50; wine-lees (@ Alicante) 1,033, (@ Barcelona) 287; wood oil, 72 *in tr.*

Liverpool Drug-market.

Liverpool, April 30.

CASTOR OIL.—The quay parcels of good seconds Calcutta have been cleared off, and 2¼*d.* per lb. is the firm spot price in store. First pressure French is held at the same price.

GRAINS OF PARADISE.—Sales of good bright are reported at 65*s.* per cwt., which is now the lowest for any other parcels offering.

QUILLAIA-BARK.—Sales of ton lots are reported at 13*l.* per ton, with every indication of yet higher prices.

HONEY continues to flag in interest, and some holders are beginning to show a greater desire to meet the views of buyers. A sale of Pile I. Chilian is reported at 24*s.* 6*d.* per cwt. The stocks of prime Californian, liquid and set, however, are only in limited compass.

AFRICAN GINGER.—Parcels afloat constitute all that is offering at the moment; 36*l.* per ton is still asked.

CANARY-SEED continues quiet, at 35*s.* to 35*s.* 6*d* per quarter.

ACACIA SORTS.—More business has been doing during the week, and sales are reported at 30*s.* to 42*s.* 6*d.* per cwt., according to quality.

BEESWAX.—The new arrivals of Chilian and Peruvian are to be offered at auction. In the meantime the recent advance is fully maintained by holders of the small stocks on the spot; 7*l.* 5*s.* to 7*l.* 17*s.* 6*d.* per cwt. covers the range of values.

TURPENTINE has advanced materially during the week, and now 33*s.* 9*d.* per cwt. is the quotation on the spot.

LARD, PALM OIL, TALLOWS, OLIVE OIL, LINSEED OIL, COTTON-SEED OIL are very firmly held indeed, and show an advance on recent quotations. It is expected that all these staples will advance in the near future.

German Drug-market.

Hamburg, April 29.

Our drug-market is still quiet, and shows only little business.

ALOES (CAPE) is very firm, 90m. per 100 kilos. being asked.

AGAR AGAR has stiffened a little owing to higher quotations from Japan, spot values range from 295m. to 300m. per 100 kilos.

ANTIMONY.—Chinese is firmer on the spot at 25m., and forward 24m. per 100 kilos.

BALSAM COPAIBA is firm, at 400m. per 100 kilos.

CAMPHOR (REFINED) is unchanged at 435m. per 100 kilos., and 420m. in second hands.

KOLA-NUTS show a better demand, and we have had no arrivals lately. Holders ask 45m. to 55m. per 100 kilos.

CORIANDER SEED is firm, at 20m. per 100 kilos.

ERGOT OF RYE continues firm, Russian on the spot is quoted 340m., and Spanish 345m. per 100 kilos.

FENUGREEK-SEED is firmer, at 16m. per 100 kilos.

LYCOPODIUM is firm but inactive, at 455m. to 460m. per 100 kilos.

MENTHOL is also firm; spot delivery is quoted 29½m. to 30m. per 100 kilos.

MYRRH is scarce at 145m. per 100 kilos. for sorts.

IPECACUANHA is quiet, with Cartagena quoted 9½m. to 9m. per kilo.

JAPANESE WAX is very firm, at 69½m. to 70m. per 100 kilos.

QUININE is unchanged, at 43m. per kilo.

SANTONIN is very firm and not obtainable below the makers' prices.

SPERMACETI is quoted 217½m. to 220m. per 100 kilos.

STAR-ANISE OIL is unchanged, at 10¼m. to 10½m. per kilo.

COD-LIVER OIL is firm, new non-congealing oil is held at 110m. per barrel.

Japanese Drug-market.

Yokohama, March 21.

Since my last report, export business has been fairly brisk, while the import business has been at a standstill, owing to the great excitement throughout the country against the proposed Drug Law Amendment Bill (see page 698).

In export articles the demand for dry ginger has been very good, and large quantities have been shipped to Europe and U.S.A., India buying none. Since the middle of last month not less than 10,000 piculs has been exported, the bulk of which went to England and the Continent. In consequence, quotations advanced after almost every transaction; at present 16 yen per picul is wanted, but without buyers. Holders are very strong, and not anxious to sell, in anticipation of still higher prices. If the demand continues and exports made, even at present quotations, the stock will soon be exhausted. Menthol crystals are firmer, and higher prices are asked Present quotations are 8.20 yen to 8.30 yen per catty, according to holders. Home consumption is going on very slowly, and export demand has not been so brisk in face of the higher quotations; still, the stock seems to be gradually decreasing. Oil of peppermint is firm at 2.60 yen per catty; stock is estimated at only 700 catties. Birdlime can be had at 38 sen per lb., at which some business is re-

Digitized by Google

ported. Refined camphor is unchanged. Iodides are higher owing to brisk demand; iodide of potassium is 3.50 yen, iodoform is 5.65 yen per lb., and resublimed iodine 5 yen per lb. Copper sulphate is quoted 14 yen to 14.25 yen per case of 60 kilos., and demand is slow. Caustic soda (60 to 62 per cent.) of Japanese make can be had at 7 yen per picul.

In import articles carbolic acid is firmer, at 43 sen per lb. in bottles, and in drums 36 sen is asked. Tartaric acid is selling well, at 56 sen per lb. in kegs. Citric acid in crystals is slow of sale, at 65 sen per lb. Bismuth subnitrate is firm, at 26 yen to 26.5 yen per lb., without any cheap sellers; demand may increase, as consuming season is approaching. Cocaine is steady, at 10.30 yen per oz., owing to light stock. Cape aloes is steady, at 30 yen per picul. Balsam copaiba is firm, at 1.02 yen per lb., while balsam Peru is weak at 2.75 yen per lb., although it costs about 3 yen per lb. to import. Condurango is going slowly into consumption, at prices ranging from 23 yen to 25 yen per lb. in bags; stock is estimated about 100 bags. Ergot is in light supply, although price is unchanged, at 97 sen to 1 yen per lb. There are now no cheap sellers of Rio ipecacuanha, and 7·15 yen per lb. is wanted. Morphine is lower, at 41 yen to 42 yen per lb. for hydrochloride. Quinine is lifeless, but steady at 56 sen to 57 sen per oz. for sulphate and 85 sen to 86 sen per oz. for hydrochloride. Sulphonal is lower, at 2.80 per lb.; while santonin is exceedingly high, at 9.30 yen per lb., but demand is very slack. Saffron is rather weak, at 17.50 yen to 18 yen per catty. Sugar of milk is steadier, and holders now ask 24 yen per cwt. Senega is higher, at 1.40 yen per lb., owing to light stock.

Cablegrams.

Bergen, April 30, 7 10 P.M.:—Fair prospects in regard to the fishing are reported from Finmarken, and the market for best non-congealing medicinal oil remains easy, with sellers at 102*s* per barrel, f.o.b. Bergen. The total catch of cod to date amounts to 36 400 000, against 31 300.000 at the same time last year. This will yield 17,180 barrels, against 38,520 barrels in 1901.

* * * *

Hamburg, May 1:—Large arrivals of elemi have taken place on this market. Kola-nuts are firmer. Ergot of rye and santonin are both firm.

* * * *

New York, May 1:—A quiet tone prevails. Opium is dull of sale at $2·85 per lb. Quinine quiet at 28c. per oz. Buchu-leaves are firmer at 18c. per lb. Cod-liver oil is easy at $29 per barrel. Cinchonidine is easier at 24c. per oz. Mandrake (podophyllum) root is strong at 4½c. per lb. Bleached beeswax is higher, 31c. per lb. being wanted.

Acid, Citric, is steady, and in more demand at 1*s*. 0¼*d*. per lb. for English crystals.

Acid, Tartaric, is in good demand at from 10½*d*. to 10⅝*d*. per lb. for foreign crystals or powder. English is 11¼*d*. to 11½*d*.

American Drugs.—The following are a few current c.i.f. quotations: Mandrake-root, 24*s*. per cwt; blood-root, 3½*d*. per lb.; serpentaria, 1*s*. 7*d*; gelsemium, 21*s*.; wahoo of root, 9*d*.; witch hazel, 2*d*. to 2½*d*.; lobelia, 8*d*. per lb.; golden seal, 2*s* 2*d*. per lb., spot.

Arrowroot very quiet. At auction Bermuda was bought in at 1*s* 4*d*. to 1*s*. 8*d*. per lb., and all the St. Vincents at 2⅛*d*. to 3¾*d*. for good to fine.

Balsam, Canada, is quoted 2*s*. 2*d*., c.i.f., in casks, and 2*s*. 4*d*. in cases.

Buchu.—Very firm. A small arrival has been sold at 8*d*. per lb. for round green and yellowish mixed leaf.

Camphor.—Refined is in good demand, tablets being especially in request. In crude Formosan camphor, 135*s*. per cwt., c.i.f., has been paid for a fair quantity. Japanese crude is quoted 135*s*. to 137*s* 6*d*., c.i.f., for June-August shipment, and spot is quoted 145*s*.

Cascara Sagrada.—For three-year-old bark 26*s*. per cwt., spot, is asked.

Chamomiles remain cheap, especially the lower qualities, which are offered at from 45*s*. per cwt., c.i.f., for good brown, and from about 48*s*. to 58*s* for fair whitish with a few brown. Good white are held for extreme figures, 70*s*. to 80*s* per cwt. being quoted.

Cinchona.—The auctions to be held in Amsterdam on May 15 will consist of 5,488 bales and 424 cases, weighing 506,365 kilos. The above amount contains 24,047 kilos quinine sulphate, or an average percentage of 5·35 per cent. for the manufacturing bark, against 5·39 per cent. in the April auction and 5·45 per cent. for the ten auctions held in 1901. The shipments of the bark from Java during April were 990 000 Amst lbs., against 791,000 and 524 000 in April of 1901 and 1900. From January to April the shipments have been 3,100,000 Amst lbs., against 3 382.000 and 2 418,000 for the corresponding periods of 1901 and 1900. In the drug auctions 24 serons grey Huanoco quill sold at from 6¾*d* to 7*d* per lb. for fair bright sound, and rather lean and dull at 6¾*d*., with sea-damaged at 5⅛*d*.

Cinchonidine, of German make, is quoted 1*s*. per oz. in bulk, with a slight demand.

Cocaine is steady, and makers report a fair demand for hydrochloride on the basis of 17*s*. 9*d*. per oz.

Copper Sulphate is easy, at 18*l* 5*s*. to 19*l*. 10*s*. per ton on the spot, according to brand. In Liverpool 18*l*. 15*s*. to 18*l*. 17*s*. 6*d*., f.o.b., is quoted.

Ergot has been in more inquiry, and several sales are reported, including Spanish at 1*s*. 8*d*. per lb., spot; to arrive, 1*s* 6¾*d*. to 1*s*. 7*d*.. c.i.f., is quoted.

According to official figures, exports from Vigo, Spain, during 1901 amounted to 19,105 kilos., valued at 2,729*l*.

Galls.—Chinese are slow of sale, at 55*s* per cwt., spot; and for arrival, usual shape offer at 46*s*. 6*d*., c.i.f. Blue Persian are offered at 59*s*. to 60*s*. per cwt., spot.

Gambier.—Cubes are firm at 37*s*. per cwt. spot. Ton lots for April shipment have been sold at 35*s*.

Glycerin continues firm, at from 67*s*. to 70*s*. per cwt. for double-distilled, s.g. 1·260, in tins and cases, and 4*s*. less naked.

Gum Mastich.—Fine pale drop is quoted 1*s*. 4*d*. to 1*s*. 7*d*. per lb., but business is very quiet and stocks large.

Iodoform is quoted at 11*s*. 2*d*. per lb. by one maker, which is 3*d*. under the combination price.

Jalap.—On the spot, 5*d*. per lb., net, has been paid for about a couple of tons.

Oil, Camphor, is very scarce, one holder quoting 45*s*. per cwt. c.i.f.

Oil, Castor, is slow of sale with a small business in Calcutta seconds at 2⅜*d*. per lb.

Oil, Cod-liver.—Agents' quotations range from 108*s*. to 110*s*. per barrel, c.i.f., with a quiet market. Old oil continues to rise; up to 102*s* 6*d* has been paid on the spot. Our Bergen correspondent writes on April 26 that the market has become quieter, on account of reports from Finmarken coming in. There seems no reason, however, to become anxious, as the fish in those districts also are very lean and the livers poor. The exports from Bergen to date amount to 3 440 barrels, against 3,344 barrels at the same time last year.

Oil, Palm.—Lagos has advanced to 27*s*. per cwt., spot.

Oil, Sassafras, is scarce, 1*s*. 7*d*. per lb., spot, being quoted for genuine.

Quinine.—There is no business to report in the outside market this week, and quotations are nominal. To-day spot has been sold at 1*s*. 0¾*d*. per oz.

Saffron.—Advices from Spain announce an advance of 1*s*. per lb. owing to a fair demand; best Valencia is now quoted 24*s*. 6*d*. per lb.

Shellac.—On Friday of last week the market closed quite 3*s*. lower, owing to a drop in the Calcutta price. At the reduction, however, a good business was done, fair Second Orange TN selling on a basis of 115*s*. to 116*s*. per cwt. In the delivery market over 1 000 cases were sold, including May at 114*s*., June 115*s*. to 114*s*., August 117*s*., and September 117*s*. The next day, however, there was a recovery of 5*s*. from the lowest point in "futures," May delivery closing with sellers at 116*s*., June 117*s*., and August 118*s*. to 120*s*. This week the improvement has not been maintained and subsequently there was a decline of about 2*s*., August and September delivery selling at 117*s*. to 118*s*.

Soda-salts.—On the spot 70-per-cent. white caustic is quoted 10*l*. 10*s*. per ton, and 9*l*. 15*s*., f.o.b. Liverpool.

Digitized by Google

Crystals, in barrels, 65*s*., and bags, 62*s* 6*d*. per ton, ex wharf or ship. Nitrate is easier, at 10*s*. 4½*d*. per cwt. for refined.

SPICES continue remarkably slow, and business is of only a retail character. At auction on Wednesday all the parcels of Cochin *Ginger* offered were bought in; cuttings and small rough at 40*s*, washed rough at 40*s*. to 42*s*, Calicut brown rough at 42*s*., bold rough slightly limed at 50*s*., unassorted native cut at 60*s*., and bold roughly cut at 70*s*. per cwt. Japan is selling privately at 32*s* 6*d*. per cwt. for ordinary rough limed. Penang *Cloves* were bought in at 8*d* per lb. for fair red. Zanzibar are very quiet, but steady at 3 15/16*d*. per lb. for June-August delivery. Stems were bought in at 1¼*d*. per lb. *Chillies* were bought in at 32*s*. per cwt. for long red picked; a small lot of ordinary sold at 31*s*. East India *Capsicums* were bought in at 25*s*. per cwt. for cherries, and at 22*s* for long on stalk. *Pimento* neglected and bought in at 3*d*. to 3⅛*d*. per lb. *Mace* quiet; middling pale Penang was taken out at 1*s*. 8*d*. per lb. Black *Pepper* slow, but unchanged in price, Singapore being quoted 5⅝*d*. per lb. on the spot, and 5¾*d*. to arrive; good Lampong was bought in at 6*d*., and Penang at 5⅞*d* per lb. East India estate grown sold at 5½*d*. to 5⅝*d* per lb. Very fine bold picked Tellicherry white sold at 1*s* 7½*d*. per lb., and fine coriander with red eye at 1*s*. 4¾*d*, the pickings bringing 8¾*d*. to 11*d* per lb. Fine Singapore was bought in at 1*s*., and good at 10¾*d*. Fair quality to arrive has been sold at 9⅛*d*. Penang is unchanged at 9¼*d*. on the spot, and 9*d*. for shipment.

TONKA BEANS.—The exports from Ciudad Bolivar during 1901 show a considerable decrease as compared with the previous year, the figures being: 1901, 7,571 kilos. (904*l*.); 1900, 86,460 kilos. (9,272*l*.).

VALERIAN is quoted 18*s*. to 20*s*. per cwt., c.i.f. On the spot sales in small quantities are reported at 22*s*.

London Drug-auctions.

AT the auctions of first-hand drugs to-day there was a rather dull tone, and several important staples, such as benzoin, ipecac, and rhubarb, were neglected. Cape aloes brought extreme prices; cardamoms sold irregularly, but easier; seeds were firm and in demand. Dill seed and guaiacum sold cheaply, while gamboge was firmly held. Jamaica honey was steady. Rio ipecac. was a shade easier, but 3*d*. advence was asked for Cartagena. Grey Jamaica sarsaparilla was unaltered, and higher prices were paid for Madagascar beeswax. The following table shows the quantity of goods offered and sold:—

	Offered	Sold

ALBUMEN.—Chinese egg partly sold at 1*s*. 3*d*. per lb.

ALOES.—Cape was quite 5*s*. per cwt. dearer, 17 cases selling with good competition at 40*s*. to 41*s*. for fair to good bright seconds. Rather dull and drossy sold at 38*s*., and very drossy at 32*s*. to 33*s*. per cwt. A lot of 49 cases Socotrine aloes, in semi-liquid condition, was bought in.

ANNATTO-SEED.—For dull Madras seed 1½*d*. per lb. was asked.

ARECA were about 3*s*. lower, 60 bags of small to bold slightly wormy seed selling at 16*s*. per cwt., and 40 bags of fresh water-damaged, but in fair condition, sold with all faults at 11*s*. to 11*s*. 6*d*. per cwt.

BALSAM COPAIBA.—Para was the only description offered, and it sold readily at 1*s*. 6*d*. per lb. for thin bright clear in kegs.

The exports from Ciudad Bolivar during 1901 amounted to 16,287 kilos. (1,578*l*.), against 8,474 kilos. (860*l*.) in 1900.

BALSAM, TOLU.—Fine hard balsam in small tins, of good flavour, was held at 1*s*. 6*d*. per lb.

BENZOIN.—Sumatra was neglected in auction, only 2 cases selling at 7*l*. 2*s*. 6*d*. per cwt. for good seconds, with small to bold almonds and rather false packed. For a case of small to bold palish free Siam almonds of good flavour 19*l*. per cwt. was refused, 22*l*. being wanted, and for partly blocky, pea and bean size, 7*l*. 15*s*. was refused.

CALABAR-BEANS.—For good, 1*s*. 4*d*. per lb. was wanted, and fair 1*s*. 1*d*.

CARDAMOMS sold at very irregular prices, bold being steady, and medium and small sizes easier. Decorticated seeds were in good demand, and sold at firm rates, 1*s*. 6*d*. to 1*s*. 7*d*. being paid. The following prices were paid for Ceylon-Mysores: Good bold pale bright, 2*s* 11*d*. to 3*s* ; bold and medium pale, 2*s* 7*d*. to 2*s*. 11*d* ; bold medium pale, 2*s*. 2*d*. to 2*s*. 3*d* ; small and medium palish, 1*s*. 8*d*. to 2*s*.; small pale, 1*s*. to 1*s* 1*d*.; splits, medium, 1*s*. 1*d*.; brown split and pickings, 1*s*. 1*d*. to 1*s* 4*d*. Ceylon-Malabar pickings, 4*d*. per lb., subject, and broken decorticated Malabar seed, 1*s*. 2*d* Of 7 cases native wild long offered, 1 case of small to bold sold at 2*s*. 9*d*., and 5 cases medium and leaner ditto at 2*s*. 3*d*. to 2*s*. 4*d*., subject.

CASCARILLA.—For small, partly silvery, quill 60*s*. was refused, 65*s*. being wanted.

CASSIA-FISTULA.—Good pod from Dominica, part rattly, sold at 30*s* to 35*s*. per cwt.

COCA-LEAVES.—A case of good green Ceylon realised 1*s*. 1*d*, fair greenish, 9*d*., and slighly damaged, 6½*d*. per lb. Privately, green Truxillo-leaves are quoted 9*d*. per lb., spot.

DILL-SEED.—Fair Bombay seed sold cheaply at 7*s*. 3*d*. per cwt.

ELEMI.—Twenty boxes of hard gum and of little flavour, said to be "specially refined," were taken out at 5*l*. per cwt., no bids being made.

GAMBOGE.—For good Siam pipe, mostly bright orange fracture, slightly blocky, 17*l*. was wanted.

GUAIACUM.—Small to bold loose drop was taken out, but afterwards sold privately at 2*s*. per lb ; rather blocky drop ditto sold at 1*s*. 2*d*.; and for siftings 8*d*. was paid.

HONEY.—Jamaica sold at steady prices, from 16*s*. 6*d*. to 19*s* 6*d* per cwt being paid for fair to good amber-coloured liquid, and 14*s*. 6*d* to 16*s*. for dark-amber liquid in cases. Brown to palish set in barrels brought 15*s* to 16*s* 6*d*.; and banana-coloured set was held at from 15*s*. to 16*s*.

IPECACUANHA.—Holders were rather firmer in their ideas of value for Cartagena, 4*s* 3*d* being the "stand-out" price; but no business was done publicly at this figure, and bids of 4*s*. were to be submitted for a few bales. Rio root was slightly easier, 9*s*. 6*d*. to 9*s* 9*d*. per lb. being paid for fair lean to bold root; for good bright natural 9*s*. 10*d*. was wanted. Five bales of sea-damaged sold at from 8*s*. 7*d*. up

Digitized by Google

to 9*s.* 4*d.* per lb., according to damage. Cultivated Rio was held at 9*s.* 9*d.*

KINO.—Neglected in auction, but privately black Cochin grain has been sold at 9*d.* per lb.

KOLA.—A barrel of small, partly shrivelled, West Indian sold at 2*d.* per lb.; 3*d.* was refused for medium to bold bright West Indian, 3½*d.* being wanted.

MENTHOL.—Kobayashi brand was held at 12*s.* 9*d.* per lb.

MYRRH.—For small to bold good pale picked gum 6*l.* per cwt. was wanted.

NUX VOMICA.—Medium to bold bright seed, from Bombay, was held at 10*s.* 6*d.* to 12*s* per cwt.

OIL, CASSIA.—Ten cases of 70 to 75-per-cent. c.a. sold, without reserve, at from 2*s.* 3½*d.* to 2*s.* 4*d.* per lb., being a fair price.

OIL, LEMONGRASS.—Privately 6*d.* per oz. is quoted on the spot, and 5$\frac{1}{16}$*d.*, c.i.f.

OIL, LIME.—Sold at unchanged rates, 1*s.* 6*d* per lb. (no allowance for draft or trett) being paid for 4 cases of West Indian distilled.

OIL, ROSE (BOMBAY).—Settlings sold readily at 1*d.* per oz. There was plenty of good oil on offer from 5*d.* per oz., upwards.

ORANGE-PEEL remains cheap, good bright thin strip selling at from 5*d.* to 6*d.* per lb.

QUASSIA.—Five tons of chips were held at 13*l.* per ton.

QUILLAIA.—A bid of 12*l.* 10*s.* per ton was refused for 35 bales.

RHUBARB.—Quiet, but steady. Several cases of medium to bold round Canton, of good coat but slightly spongey, with three-quarter pinky fracture and one-quarter grey and dark, sold at 1*s.* 9*d.* For 3 cases small to medium flat high-dried, with seven-eighths pinky fracture and one-eighth dark, sold at 8½*d.* per lb. Good Canton trimming root was held at 2*s.* 6*d.*; and good pickings were bought in at 1*s.* 8*d.* nominally.

SARSAPARILLA.—Grey Jamaica was in fair supply, and sold at steady rates, 1*s.* 1*d.* to 1*s.* 3*d.* being paid for slightly country damaged and part rough. Another holder of 15 bales of fair to good asked 1*s.* 4*d.* to 1*s* 6*d.* per lb. Native red is scarce and dearer, 11*d.* to 11½*d.* per lb. being paid.

SEEDLAC.—There was good competition for the 51 bags offered, which sold at from 96*s.* to 100*s.* per cwt.

STROPHANTHUS.—Rather brownish Kombé seed sold cheaply at 1*s.* 9*d* per lb; for good green 2*s.* 3*d.* was refused, 3*s* 3*d.* being the limit.

TAMARINDS.—Fair squashy Antigua in barrels sold at 11*s.* per cwt. "in bond."

THYME-SEED.—Twenty bags of good clean quality from Bombay sold cheaply at 5*s.* per cwt.

TURMERIC.—Good bulbs from Bombay brought 12*s.* to 13*s.* per cwt.

TURTLE, DRIED.—Sold at 2*s.* 6*d.* per lb., subject.

WAX, BEES'.—Jamaica sold at from 7*l.* 15*s.* for dark brown and mixed, to 7*l.* 17*s* 6*d.* to 8*l.* for fair brown, being steady. Madagascar was in good demand and dearer, good pale yellow to grey selling at from 7*l.* 7*s.* 6*d.* to 7*l.* 12*s.* 6*d.*, dark grey 6*l.* 17*s.* 6*d.* to 7*l*, and wormy from 6*l.* 5*s.* to 6*l.* 15*s.* per cwt. Good Zanzibar sold at 7*l.* 17*s.* 6*d.*; slightly wormy in rolls, 7*l.* 5*s.*; and very wormy, 6*l.* 10 per cwt. Two cases of Calcutta sold at 6*l.* 5*s.* to 6*l.* 10*s.*

MORE VINEGAR-OF-SQUILLS CASES.

MR. EUGENE MCSWEENEY, 432 Green Lanes, Tottenham, was on Thursday fined by the Magistrates 10*s.* and costs for selling vinegar of squills deficient in acetic acid. A similar charge against Mr. S. C. Hudson, 60 Green Lanes, was dismissed. Mr. Kirby asked the Magistrates to state a case, and they are considering it. A full report will be given next week.

Camphor Notes.

IT is an accepted fact that the Japanese Government camphor monopoly has not met with the success that was expected of it, and in order to put matters on a more satisfactory basis for the monopolists, the Government have also desired to control the hitherto unfettered production in Japan itself, which production appears to have increased by leaps and bounds since the introduction of the Formosan monopoly, and the high prices which followed. In order to conserve the Japanese industry, another Camphor-monopoly Bill applicable generally to the mainland of Japan was introduced by the Government in February. It was read for the first time in the House of Representatives and afterwards referred to a Committee. In introducing the Bill, Mr. Ohmori, Minister of Home Affairs, briefly stated that the object of the measure was to maintain the production of the camphor in Japan and to strengthen one of the sources of the wealth of the Empire. Baron Kodami, the Minister for War and Governor-General of Formosa, and Mr. Goto, the Director of the Formosan Administration Bureau, were in favour of the contract for the disposal of the camphor being given to Messrs. Samuel, Samuel & Co., and it is stated that a private agreement had already been come to. When the Bill came before the House of Peers it was thrown out. Why, is not very clear. If it had become law, Japan would have controlled from 80 per cent. to 90 per cent. of the world's output, and the advantages to the country are so obvious that the Bill will probably be brought forward again by the Government.

* * * *

The Department of Agriculture and Commerce in Japan some time ago despatched Mr. Matsuda, an expert of the Formosan Government Office, to the various provinces of Kyushu (Formosa) to investigate the amount of camphor producible in the interior during the coming fiscal year. He reports that the two prefectures of Miyazaki and Kagoshima are the centres of production of camphor, the other two—Kumamoto and Fukuoka—coming next. In Kagoshima the production seems to have reached about 900,000 kin. (1,200,000 lbs.) during the preceding year, representing one-half of the gross amount of camphor produced throughout the island, and it may be expected that about the same amount will be produced in the coming fiscal year. So that altogether an output of 1,800 000 to 2,000,000 kin is expected. Mr. Matsuda reports that the prospects of such a large output depends entirely on a considerable rise in value, but if there should be a sudden fall in price, it will be impossible to maintain the present production for any length of time. At present no fewer than two million camphor-trees, apart from those recently planted, are in Miyazaki, and 700,000 in Kagoshima. The total number of camphor-trees in the Government and private forests throughout Formosa is innumerable (says Mr. Matsuda), and more than 40,000,000 kin of camphor (equivalent to about 470,000 cwt.) could be obtained if all the camphor-trees were cut down for manufacturing-purposes.

* * * *

The process of pacification in Formosa has been going on since the island was ceded to Japan, but in South Formosa lately the small Japanese army of occupation have had a series of slight reverses in attempting to suppress the banditti, and there have been numerous conflicts with varying success. The Japs, it appears, are at a disadvantage in having to keep intact their line of communication throughout a large and difficult country, but until they have completely subdued or pacified the natives they cannot hope to carry out their monopoly successfully. At the present time (according to Mr. Matsuda's report) the Government have to face the serious fact that camphor is being produced from the ten or fifteen year old trees clandestinely cut down from their forests, or from the stumps of these stolen trees, as well as the boughs and leaves of young shoots growing on such stumps.

AT Gijon, Spain, a factory for refining camphor and making celluloid has been established.

AN AMERICAN ISSUE

OF THE CHEMIST AND DRUGGIST will be circulated on May 31 to buyers of all kinds of druggists' goods, in Canada, the United States, and the British West Indies. The object of it is to make these buyers as well acquainted as possible with the goods offered by our advertisers, and as this issue is practically the only journalistic means these important buyers have of getting into touch with manufacturers and merchants in this country, we cordially commend the issue to their attention. Good advertisements, descriptive of manufactures and novelties, inserted in the issue should bring an excellent return in inquiries and orders. Address the Publisher of THE CHEMIST AND DRUGGIST, 42 Cannon Street, London, E.C., for full particulars.

GUINEAS TO GET.

WE offer a guinea to any subscriber, or member of his family, or *employé*, who arranges the surnames of the ten candidates for the Pharmaceutical Council in the order that they will appear on the poll. The candidates are :—

A. S. Campkin, Cambridge	*J. W. T. Morrison, Tring*
M. Carteighe, London	*C. E. Pickering, London*
W. S. Glyn-Jones, London	C. J. Park, Plymouth
J. F. Harrington, London	A. Southall, Birmingham
J. Harrison, Sunderland	J. R. Young, Warrington

The names printed in italics indicate the new candidates.

Please write on postcards, and send them not later than Monday, May 19.

Also half-a-guinea for the best reasons on a postcard for rejecting any three of the ten candidates. Send in before May 19.

Another half-a-guinea will be given for the best reasons why any of the three new candidates should be supported. "Reasons" postcards should be sent before May 19, to the Editor, 42 Cannon Street, E.C.

Summary.

TEN MARRIAGES are recorded on p. 740.

CAPE TOWN CHEMISTS have fixed up their prices (p. 571).

APRIL TRADE was much better than it was last year (p. 734)

"JOHN ISLIP" furnishes us with another warning note (p. 717).

USEFUL NOTES on the analysis of cod-liver oil are given on p. 749.

A LITTLE LOVE STORY is related by our Paris correspondent (p. 719).

THE PHARMACEUTICAL SOCIETY'S annual report is printed on pp. 723–5.

MR. J. W. PATTERSON (Newcastle-on-Tyne) is this year's Pereira medallist (p. 722).

XRAYSER is sarcastic about the way the chemist's apprentice is looked after (p. 731).

A METHOD of obtaining arsenic-free zinc is described by Mr. Otto Hehner (p. 747).

AN additional list of subscriptions to the Martindale Memorial Fund is printed on p. 752.

THE SCOTCH INVASION brings us more correspondence from Glasgow protestants (p. 741).

MR. JOHN GLOVER, inventor of the well-known sulphuric-acid tower, is dead (p. 740 and p. 747).

WE ARE NOT DECADENT, says the Secretary of the Bradford Chemists' Association, in a letter on p. 741.

A DESCRIPTION of the method of using sodium silicate solution for preserving eggs will be found on p. 738.

THE Pharmaceutical Council elected nine honorary members and four corresponding members on Wednesday (p. 721).

THE NEW FELLOWS of the Royal Society are mentioned on p. 716. They include two chemists, Messrs. Baker and Pope.

WHAT is new milk? Not natural milk containing less than the normal amount of fat, says the High Court of Justice (p. 733).

A MANCHESTER CHEMIST has paid Mr. Thomas Beecham 40*l.* as damages and costs for selling spurious Beecham's pills (p. 726).

DANGEROUS CHEMICAL SUBSTANCES have been tabulated by Mr. Oscar Guttmann in a useful, if slightly alarming, manner (p. 747).

THE PHARMACEUTICAL COUNCIL CANDIDATES playing at the old game of musical chairs are depicted on p. 730, with appropriate comment.

THE PHARMACEUTICAL SOCIETY'S (G.B.) financial statement for 1901 shows a deficit of 1,654*l.* We explain why this is, in an article on p. 732.

A GLASGOW AND WEST OF SCOTLAND CHEMISTS' TRADE ASSOCIATION has been formed, but the meeting (which is reported on p. 736) was not very enthusiastic.

ON the motion of Dr. J. C. McWalter, the Apothecaries' Hall of Ireland has decided to ask the General Medical Council if it is legal for the Institute of Chemistry to examine in therapeutics (p. 718).

THE Tottenham vinegar-of-squill cases are reported on p. 727. We comment on the subject in an article on p. 733, and ask subscribers to tell us how much extractive their preparation contains.

MR. SCLATER, President of the Edinburgh Chemists', Assistants', and Apprentices' Association, read the second part of his essay on "Pharmacy in Literature" as a valedictory address. It is abstracted on p. 737.

MR. THOMAS TYRER, in quitting the chairmanship of the Chemical Section of the London Chamber of Commerce, made an interesting speech on spirit-drawback and the use of duty-free alcohol in chemical manufactures (p. 750).

The principal changes in the drug and chemical markets include advances in sal ammoniac, sublimed sulphur, sulphate of ammonia, and a reduction in nitrate of soda. Cream of tartar is firmer, and quinine in the speculative market has slightly improved (p. 744).

THE Pharmaceutical Society of Ireland has taken proceedings against several Dublin druggists for compounding, and Mr. Swifte is taking time to consider his decision, doubt being expressed whether compounding *per se* is an offence under the Pharmacy Act, 1875 (p. 726).

THE Privy Council's letter of 1886 in regard to the compulsory curriculum in pharmacy was read at the Pharmaceutical Council meeting on Wednesday. It shows that the Privy Council did not object to the division of the Minor examination; also that by-laws may be put one by one (p. 723).

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Mr. W. J. Smith has been appointed chemist and druggist to the Swindon and District Hospital.

In his annual report to the Norwich Town Council the medical officer states that so far as drugs are concerned the Food and Drugs Act is still a dead letter in that town.

The Brigg Magistrates on April 22 fined a farm-servant named Walter Mettam 20*s.* and 9*s.* 6*d.* costs for giving wheat which had been dressed with poison to his employer's horses.

Messrs. Wingfield & Co., Great Clowes Street, Manchester, have secured the contract for twelve months' supply of druggists' sundries to the electricity department of the Salford Corporation.

At Belper County Court on May 1, Mr. Chas. Wm. Southern, chemist and druggist, Belper, obtained judgment against Dr. E. J. H. Hoskyns for 19*l.* 16*s.* for goods supplied. The debt is to be paid at the rate of 5*l.* a month.

At Daventry on April 23, James Beattie, of Ashby St. Ledgers, was summoned for illegally putting strychnine on worms and placing it in mole-runs in order to destroy moles. For the defence it was contended that worms were not "flesh," and the Bench dismissed the case.

The Tonbridge Board of Guardians, on May 2, are exercised about the amount of their drug-bill, which during the year totalled 205*l.* 11*s.* 3*d.* for drugs used in the workhouse. The Board requested the medical officer and the master to see what economies could be effected during the next half year.

The driver of a motor-tricycle lost control of his machine while riding in Coulston Street, Sheffield, on May 1, and ran into the window of the store-room of Boots (Limited), breaking two large squares of plate-glass, valued at 20*l.* The machine was badly damaged, but the rider escaped unhurt.

By-and-by Londoners will have an atmospheric novelty to arrest their attention. It is an airship which Messrs. Spencer, of Highbury, are constructing for Mellin's Food (Limited), who will float it as an advertisement during the summer months. It is to be ready in three weeks, and the aëronauts will make trial trips over London *à la* Dumont.

At Bow Street on May 1, William Prendergast, *alias* Edward Barrow, was remanded on a charge of conspiring with Charles Frederick Way to obtain money by fraud. The prisoner and Way carried on business as drysalters at 190 High Holborn, under the style of Barrow & Way. Way has been sentenced to a term of imprisonment, but Barrow eluded all attempts at arrest until April 30.

The smoking concert arranged in connection with the Huddersfield Chemists' Association last week passed off satisfactorily. The attendance was not so large as had been hoped, but a very cordial feeling pervaded the gathering. The President (Mr. R. C. Walshaw) guided the proceedings. The ex-President of the Dewsbury Association (Mr. W. Stead) was present, and contributed to the evening's enjoyment.

Three chemical-works fatalities are reported. A labourer was suffocated in an acid well at the works of the United Alkali Company, Hebburn; two men were suffocated in the "still" at the Blackshaw Beck Tar Distillery, Buttershaw, near Bradford, and a man died in Halifax Infirmary from injuries sustained through falling into a vat containing vitriol at the dye-works of Messrs. W. H. Hellawell & Co., Sowerby Bridge.

New Royal Society Fellows.

The following candidates have been selected by the Council of the Royal Society to be recommended for election as Fellows:—Mr. H. Brereton Baker, Professor Henry T. Bovey, Professor R. Boyce, Mr. John Brown, Mr. William Bate Hardy, Mr. Alfred Harker, Mr. Sydney S. Hough, Mr. Robert Kidston, Mr. Thomas Mather, Mr. John Henry Michell, Mr. Hugh Frank Newall, Professor William Matthew Flinders Petrie, Mr. William Jackson Pope, Mr. Edward Saunders, and Dr. Arthur Willey. Of these Mr. Baker and Mr. Pope are the chemists. Both are young men, and well entitled to the honour. Mr. Baker is head-master of Alleyn's School, Dulwich, and M.A.Oxon., formerly a fellow of Balliol. His chemical investigations have been directed to prove that the presence of water-vapour is essential in some familiar chemical reactions, such as the darkening of silver chloride on exposure to light, and the explosion of a mixture of hydrogen and oxygen when heated. Some of these experiments have necessitated drying the gases for six months. Mr. Pope was a pupil of Prof. Armstrong, and his early contributions to the Chemical Society were on crystallographic subjects, but lately he has done for the nitrogen and sulphur atoms what van 't Hoff did for carbon, and he was marked out for the F.R.S. while he was Lecturer on Chemistry at the Goldsmiths' Institute, New Cross. He is now at the Municipal Technical School, Manchester.

Determined to Have Him.

The Board of Agriculture having declined to ratify the appointment of Mr. E. Wightman Bell, chemist, of Spalding, as district agricultural analyst under the Holland County Council, that authority further discussed the question at its meeting at Spalding last week. The General Purposes Committee brought up a recommendation that the Board should be approached once more with a request for its approval of the appointment on the ground that the County Council felt the greatest confidence in Mr. Bell's competence to carry out the duties. Councillor Hall said if the department was not prepared to move in this matter, which had been so long delayed, their member was prepared to raise the question in the House of Commons. The Committee's recommendation was adopted, and it was agreed that in order to get the sanction the appointment should in the first instance be for twelve months.

L.C.C. Items.

At a meeting of the London County Council on May 6 the estimates for the expenditure during the year 1902–3 were agreed to. The salaries in the Chemist's Department were passed, showing the estimated expenditure to be 4,355*l.* 16*s.* under that head, made up as follows: The chemist, 1,000*l.*; two senior assistants at 475*l.* and 400*l.*; five assistants, first-class (ranging from 215*l* to 260*l*); four assistants, second-class (ranging from 162*l.* 10*s.* to 200*l*); two assistants, third-class, at 110*l.* and 130*l.*; one assistant at 50*s.*; one laboratory attendant at 30*s.*; one messenger at 28*s.* Amongst the receipts to be set against this was 100*l.* from the Asylums Committee for the services of the chemist in the analyses of food.

The Main Drainage Committee estimated that at Barking 16,590*l.* would be required for chemicals and lime. Last year the sum spent was 13,747*l.* At Crossness the estimate for the same item was 9,285*l.*, against 7,755*l.* spent last year.

Emergency Medicines.

The Blean (Kent) Board of Guardians, on April 30, discussed an account from Messrs. Bing & Son, chemists, Canterbury, for 5*l.* 0*s.* 1*d.*, due for drugs to the infirmary. There was no entry in the medical officer's book authorising the supply, but the medical officer (Dr. Salt) said the articles were required in cases of emergency. It was pointed out that they should have been entered in the order-book, and it was suggested that the medical officer should be allowed to do that, in order that the Board might make the payment, but this suggestion was opposed, and by a large majority it was decided not to pass the account, the Chairman informing the medical officer that he could appeal to the Local Government Board.

A "Procrustean" Device.

At a meeting of the Cardiff Board of Guardians on May 3, a communication was read from the Local Government Board asking for the observations of the Guardians on a letter received from the five medical officers of the district protesting against the institution of new prescription forms for the old card system. "These forms," the letter said, "though taking many times as long to write as the cards,

Digitized by Google

have no value as a record to the medical man. The Guardians suggested the use of a code for prescriptions, but the medical officers do not think it right to adopt such a procrustean device without at least a protest in the interests of the sick." Mr. Ames said the change arose out of a return showing that though the number of patients to whom medicine was dispensed was the same in 1895–96 as in 1900 the bill for the medicines had gone up from 136*l.* to over 300*l.* The Mayor (Mr. Beavan) said it seemed absurd that the dispenser should give out medicine and have nothing to show for it. Supposing he were to give wrong medicine by mistake, what was to show that the prescription was the same as that given by the doctor? After some discussion, the matter was referred to the Dispensary Committee.

All Genuine.

Out of 151 samples taken under the Food and Drugs Act in the county of Durham last quarter, only one was of drugs, and that was pure.

Amongst the samples analysed in the borough of Hastings last quarter were two of sal volatile and three of milk of sulphur, all being genuine.

Fire.

A disastrous fire occurred on May 1 at Crag Mills, Shipley, occupied by Mr. J. E. Baker, soap-manufacturer, damage to the extent of about 1,000*l.* being done.

Birmingham Notes.

The county-court Judge held last week that "on or about June 1" was not unreasonably translated "the 6th."

Under the heading "Matrimonial," the *Birmingham Daily Post* has the following:—"Lady-chemist (with means) to assist to develop good, sound, progressive business; excellent prospects. Address: D 339, *Daily Post*."

An Auricula show is being held at the Botanical Gardens, to encourage the growth of this primula. It is understood that this succession of displays is in great part due to Professor Hillhouse, who is well known to local pharmacists.

An ancient trouble has been revived in our midst. "Do you sell [a certain chemical preparation of a crystalline form]?" "Yes; certainly, sir." But the potassium salt is supplied in place of the sodium variety. Lawyer's letter; much worry; guinea unearthed.

It appears, after all, that several pharmacists have fallen foul of the Inland Revenue authorities in connection with the stamping of proprietary articles and the use of the possessive case. Names cannot yet be mentioned, but one would have thought that Alpe might have taught some of the recalcitrants wisdom, especially seeing the majority are by no means back-street traders.

The constant change in managements and assistantships in pharmacies is still noteworthy. Be it suburban or central business, high class or medium, there appears the same spirit of unrest—the young man snapping eagerly at a post which promises a fraction more salary or a concession in time. To meet this it is rumoured that one pharmacist has started a method of paying his hands at so much per hour; but Rumour is an unreliable jade.

An excellent feature of the Wolverhampton Exhibition is that, after organised parties have visited any section in which they are specially interested, they are invited to spend an hour at the different factories round about. Such a thing might fill in a pleasant afternoon if the Birmingham pharmaceutical brotherhood would meet their Wolverhampton friends and inspect the show together, with tea afterwards. It is only a matter of getting the officers of both Associations together for a few minutes to formulate plans.

The *Birmingham Mail* has been investigating an alleged slackness in labelling, &c., at the Birmingham Dispensary. Their representative has allayed public uneasiness, however, for he found few irregularities in the labelling of the 130 prescriptions that were dispensed on the morning of his visit to Union Street. It was discovered that great care was exercised with poisonous medicines, the labelling being carefully attended to. Sometimes loquacious ladies did get their medicines mixed up, necessitating an inquiry at the window as to "which was mine and which 'hern.'" "People are always leaving pills behind them and saying they have never had them," was the dispenser's complaint.

"John Islip."

We are indebted to Mr. Charles Cater Islip, M.P.S. (Messrs. Warrick Brothers), who has no connection with "John Islip," for an order which Messrs. Warrick Frères, of Grasse, have received from "J. Islip, 28 Redgrave Road, Putney, London, S.W.," for "une littre white rose and one of your price-lists." The man enclosed a card, "Captain Islip, late T. H. Battalion, R.E.," and gave as reference "Mr. C. J. Bennett, 29 Longridge Road, Earl's Court, London, S.W.," at which address there is in the London Directory a Mrs. Bennett. Mr. Charles C. Islip would be pleased to hear that the undesirable person with the same surname had been laid by the heels again. "It really seems," he adds, "a kind of long-firm swindle on a small scale." What is wanted is someone to give the "Captain" 20*l.* worth of goods on credit, then to take proceedings against him.

A Burglary Charge.

On May 7, at the Brentford Police Court, William Hammerton and Arthur Russell were charged with breaking and entering the shop of Thomas Lewis Salter, chemist and druggist, at 2 Bradninch Place, Southall, and stealing 3*s.* 1*d.* in money, four bottles of perfume, a cake of soap, a nail-brush, and twelve sulphur-tablets, value 7*s.* 6*d.* A jeweller who lives next door to Mr. Salter's shop heard noises during the night, and called Mr. Salter, who does not live on the premises. Another friend was called and the three gentlemen entered the shop, captured the men red-handed, and handed them over to the police. The prisoners were remanded.

Female Pills.

At an inquest opened on the body of a married woman named Tippetts, by the Manchester Coroner on May 7, the husband stated that at his wife's request he obtained a box of "Female pills" from Mr. Mellor, a neighbouring grocer. His wife had told him him two months before that she was pregnant, and he had an idea when he bought the pills that they would prevent her having any more children. There was a card in the shop-window stating that the pills contained "steel and pennyroyal," and the shop-keeper told him they were very good pills, and that he sold a lot of them. The Coroner (Mr. Sidney Smelt) told witness that he would find himself in a very awkward fix, if, after these confessions, it was found that the pills had killed deceased. A *post-mortem* examination is to be made.

Cricket.

Boots' C.C., Sheffield *v.* Trinity Wesleyan C.C.—This match, in connection with the Sheffield Shop Assistants' Association Cricket League, was played at Millhouses on May 1, and resulted in a very easy win for Boots' by 8 wickets.

The Week's Poisonings.

The fatalities from poisoning that have occurred since our last report include five (out of a total of fifteen) that were caused by unscheduled poisons. Hydrochloric acid and ammonia were each responsible for two and phosphorus caused the fifth. A peculiarity in connection with one of the ammonia poisonings is the fact that the victim, Miss Florence Louise Bacon (28), of Fittleworth, had a strange habit of drinking diluted ammonia as a tonic beverage. Daniel Bacon, a gentleman of independent means, said deceased knew that he took ammonia at times as a drink, and she possibly imitated him, thinking it would do her good, but he always took it very much diluted. The scheduled list comprises 3 carbolic acid and 3 laudanum victims; two persons died from the effects of oxalic-acid poisoning, one from cyanide of potassium and another from chlorodyne. In one of the laudanum cases a Grantham woman consumed a bottle of opium and opodeldoc; a Sunderland general dealer succeeded in getting a shilling's-worth of laudanum from Mr. G. Ritson, chemist and druggist (to whom he was well known) on the pretence that it was for a lotion for a horse. He took the lot and died. The remaining laudanum suicide was a tradesman at Stratford. An old couple poisoned themselves with carbolic acid at Heaton Norris, the same poison being taken

Digitized by Google

by a young wife at Norwich who had lost her baby.—At St. Bartholomew's Hospital on April 3, an inquiry was held into the circumstances attending the death of John McDonnell. Evidence was given by deceased's son, John McDonnell, a druggist's assistant, who said his father resided alone. Deceased appeared as usual on the day of his death, but was found writhing in apparently the most awful pain, and unable to speak. He died two hours later. The Coroner's officer said that a most minute search had been made of the deceased's room, but no paper, phial, bottle, or glass that had contained poison could be found. Dr. A. W. Thrawl stated that the *post-mortem* examination showed that the cause of death was either oxalic or hydrochloric acid poisoning.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Change.

A medical hall is shortly to be opened in Keady by Mr. John McBirney, L.P.S.I. Mr. McBirney has been with Messrs. Fannin, of Dublin, for some years.

Dispenser Appointed.

At a meeting on May 1 of the Guardians of the South Dublin Union Miss Christina M. Jessop. L.P.S.I., was elected apothecary to the Union at a salary of 80*l.* per annum.

Personal.

Dr. H. F. Conyngham, son of Mr. Henry Conyngham, M.P.S.I., Dublin, has returned from British North Borneo for a few months' rest. He has recovered from the wound which he received in the engagement with a native tribe.

Mr. C. S. O'Hare, L.P.S.I., Mayobridge, Newry, who was returned unopposed as Warrenpoint representative on the Down County Council, had half-a-dozen nomination-papers sent in from the different electoral divisions on his behalf.

An Apprentice's Death.

At Tralee, County Kerry, on May 4, Jeremiah Gleeson, aged 19 years, chemist's apprentice, belonging to Ballybrack, near Killarney, was found in the lavatory at the rear of Mr. Dowling's medical hall with symptoms of strychnine-poisoning. A medical man was summoned, but Gleeson succumbed in a few minutes. The deceased had only been five months apprenticed to Mr. Dowling.

Apothecaries' Hall of Ireland.

At the quarterly meeting of the Governor and Company of Apothecaries' Hall, held on May 1, it was proposed by Dr. J. C MacWalter, M.A., and seconded by Dr. J. Evans: "That, in the opinion of this Company, the action of the Institute of Chemistry, in examining candidates in therapeutics and issuing certificates of qualification in that subject, constitutes an infringement on the rights of the medical profession, and that our representative on the General Medical Council be requested to ascertain the legality of the practice." The motion passed unanimously.

Mr. Murray's Estate.

On April 29 in the Chancery Division, Dublin, before the Master of the Rolls, in the estate of Wm. Bloomfield Murray, deceased, Evans & Co. *v.* Murray, came before the Court on further consideration of the Chief Clerk's certificate. The particulars of the debts and assets were fully set out in the certificate, and the estate was now found to be practically solvent. The costs of Mr. W. H. Spence at the inquest held about deceased, and also the costs of the solicitor in connection with the inquiry as to the liability of the Insurance Company, were ordered to be provided for out of the assets.

The Kelp Industry.

On May 3, in the Land Commission Court, Dublin, the question was discussed in a test case as to the right of a landlord to demand rent on seaweed used by tenants in the manufacture of kelp. Judge Meredith, in making an allowance for the landlords for the sea-weed so used, said the production of kelp was a recognised industry and a source of profit. The kelp industry of Ireland had suffered, and was suffering, from foreign competition, which extended from colossal proportions to the smallest degree.

Analyst Appointed.

At the last meeting of the Tuam Board of Guardians, Mr. Walter Thorp, of Limerick, was appointed analyst to the Union at 7*l.* a year, and 5*s.* for each analysis over twenty. The vacancy was caused through the resignation of Sir Charles Cameron, and Mr. Thorp was the only applicant.

Medicine Trouble.

The Guardians of the Boyle Union at their last meeting received a letter from the L.G.B. as to why the Guardians had accepted Mr. Boyers' tender for drugs when it was not the lowest, but discussion on the matter was adjourned.—A complaint was made by the analyst that some tincture of rhubarb contained too much alcohol, and the contractor offered to exchange it for a fresh supply.

The Guardians of the Strokestown Union are required by the L.G.B. to re-advertise for tenders and enter into a new contract, as the method adopted by the Guardians in allowing a firm to amend a tender will stop legitimate competition. The Guardians decided that it would be more satisfactory to have medical appliances contracted for by the same firm as the medicines, and are asking the L.G.B. to agree to the same.

At the Sligo Guardians' meeting the contractor (Mr. Boyers) complained that the apothecary would not sign his invoices for the Finance Committee, and the apothecary said that more drugs were sent than were ordered. In regard to the latter it was decided to keep the extra quantity, but the charge made by the contractor is to be investigated at a full meeting of the Board. The Sligo Guardians also had before them a certificate from Sir Charles Cameron as to drugs he had received for analysis from one of the Dispensaries:

Cod-liver oil.—Sp. gr., 0·927; pure and free from rancidity; full saponification. Aromatic spirits of ammonia.—Sp gr. 0·897; ammonia, 2·27 p.c.; 76·6 p.c. of 90-per-cent. alcohol; oil of lemon and nutmeg present as prescribed. Arsenical solution.—Sp. gr., 1·0125; 10 c.c. discharged the colour of 19·9 c.c. of the volumetric solution of iodine. Correct.

The Guardians considered that they were getting good value in medicines from their contractor, Mr. Henry Boyers, Sligo.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Poisoning.

A young woman named Stannier died in the Edinburgh Royal Infirmary on May 6 from the effects of poisoning by carbolic acid, a quantity of which she drank on the previous day.

Personal.

Mr. Harry Dryerre, assistant to Messrs. Oswald, Robertson & Co., pharmaceutical chemists, Bridge of Allan, has won a 25*l.* bursary of the Stirling Educational Trust.

A Methylated-spirit Victim.

In a case heard at the Aberdeen Sheriff Court on May 1, in which a stone-polisher named Kane was charged with failing to provide his five children with sufficient food and clothing, it was stated that accused was a victim to methylated spirit, and was almost a wreck. It was a practice with such men to get hold of fish, which they sold for the matter of 2*d.*, and with this sum they got as much methylated spirit as would make half a dozen of them helplessly drunk. Sheriff Robertson said methylated-spirit drinking was a most detestable form of vice, and accused was sent to prison.

A Day's Ramble.

On Friday, May 2, the students of the West of Scotland College of Pharmacy had an interesting and profitable botanical ramble to Langside, which was conducted by the Principal (Mr. Barrie). Before leaving Langside a photograph of the party was taken. The next ramble will be from Lanark to Falls of Clyde on Victoria Day (May 22), leaving Glasgow at 10.15 A.M. Further information may be had at the College, students and others interested in plant lore and sports being invited.

Glasgow Notes.

A tea-canvasser named William Barton, about 30 years of age, died in a Glasgow temperance hotel on Saturday from the effects of an overdose of laudanum. Barton is believed to have belonged to Fife, but for the past twelve months he had been lodging in Glasgow. On Friday he left his lodgings and took a room in the hotel under a fictitious name.

The new sewage-works at Dalmint are being pushed forward vigorously. When they are completed practically the whole of the Glasgow sewage will be treated, and the long-delayed purification of the Clyde will be an accomplished fact. In the apprentice's indentures of a hundred years ago the masters undertook not to give the apprentice Clyde salmon more than three times a week. If the age of salmon should come back, will the apprentice also return?

A newspaper man prints a yarn from a "chemist" commenting upon a paragraph bewailing the increase of a mythical "drug-habit." The veracious *raconteur* regrets to state that the vice is common amongst chemists' assistants and apprentices. Only the other day, when he went into a friend's shop, he was horrified to find the "junior apprentice," who had been left in charge, lying insensible behind the counter with an unstoppered bottle of chloroform beside him. It was with the utmost difficulty that he resuscitated this victim of the deadly chloroform-sniffing mania.

Some mystery surrounds the death of Wm. Edwards (45), assistant to Mr. John McGowan, chemist and druggist, 141 Garogod Road. On Monday evening (April 28) the dead body of Edwards was found lying on a couch in the back-shop there, and near at hand a 1-oz. phial of prussic acid almost full. Earlier in the day Edwards told his employer that he had been bleeding at the nose, and had taken some ergot to stop it. Subsequently he retired into the back-shop to take a rest, and a little later his body was discovered as described. The casualty surgeon who examined the body was unable to certify the cause of death.

Dr. Moses Thomas, who has been entertained to dinner and presented with a handsome testimonial on the occasion of his retirement after thirty-five years' service as Superintendent of the Royal Infirmary, gave some interesting reminiscences of his tenure of office. The few survivors of the medical staff of 1837 include Sir Wm. Gairdner and Lord Lister. In that year the number of operations was 321; last year the total reached 2,039. They did not cease to receive smallpox patients until 1872, but since then rapid progress had been made, so that now, in view of the reconstruction of the buildings, the institution is on the eve of becoming one of the best equipped in the kingdom.

Business Changes.

Inman's Stores (Limited), Edinburgh, are opening a branch in Earl Grey Street, which we had thought to be already packed with the physicing fraternity.

Messrs. Gibson & Co., chemists, advertise that they open this week a branch shop at 13 Leith Street, Edinburgh. They say "they will continue to undersell the drug-stores in every department. Gibson & Co. are not a limited drug-company, but are chemists, the sole partners in the firm—J. A. Gibson and F. M. McIntosh—being qualified chemists and members of the Pharmaceutical Society. In nine years they have built up the largest chemists' business in Scotland."

THE faculty of the Syracuse (New Jersey) College of Medicine has issued orders for the expulsion of any student found playing ping pong.

French News.

(From our Paris Correspondent.)

POISONED BY HIS BOOTS.—A rather curious case was tried in one of the Paris police-courts a few days ago. A M. Weingardt prosecuted a blacking-manufacturer for "injury by imprudence," resulting from the use of special blacking. The case for the plaintiff was that a bootmaker had undertaken to dye a pair of brown boots black by means of a dye, which, according to the advertisement, is the only one that instantaneously dyes and softens the leather of boots, &c. M. Weingardt's boots were duly dyed, but after wearing them for several hours he began to show symptoms of poisoning, and a pharmacist to whom he applied confirmed him in this opinion. The trouble was traced to the boots, and a complaint was lodged with the police. The result was that a bottle of the dyeing preparation was seized at the works of the maker, and three experts, MM. Brouardel, Riche, and Thoinot, were named to pass a technical opinion on the ingredients containing it. Their report was that the dye was a poisonous concoction having aniline as a base that could perfectly well have produced the serious symptoms from which the plaintiff had suffered. Rabbits which had been smeared with the substance died in twenty-four hours. The defendant declined any responsibility in the matter on the ground that there was no proof that the dye had been used in accordance with the instructions on the bottle. Judgment was postponed.

THE FATAL REMEDY.—She was a pretty "parfumeuse," Mlle. Juliette B., employed with a well-known firm of manufacturing perfumers at Levallois; he was a bookkeeper, Alcide D. by name, engaged in Paris, and they married. Both kept their employment, and they took a comfortable apartment at Garenne-Colombes, a suburb of Paris. Having more rooms than they required for their own use, they decided to let one, and a pharmacist's assistant—the handsome Emmanuel B.—employed at Corbevoie, took up his abode with them. Six weeks passed pleasantly, and then an incident occurred which led to a change in the even tenour of their lives. One night Mme. Juliette was taken suddenly ill during the night, and her husband, in despair, roused his lodger, who possessed a small travelling case of drugs and was able to administer a calming potion. The next morning the husband was extremely profuse in his thanks to one who, he considered, had saved his wife's life. A cordial friendship sprung up, and the pharmacist became one of the family. Little theatre parties and dinners followed, and M. Alcide continued loud in his praises of Emmanuel. But one day the husband, having obtained a short holiday, decided to spend a few days with his father, who resides in the country. On his return, however, he found the apartment empty and his wife away. From the neighbours he learned that soon after he had left she had packed her trunks and driven away with the good-looking pharmacist. Adding insult to injury, they had taken with them about 1,400*l.* worth of bonds. The husband was in despair and talked of suicide, but finally decided to solicit the help of the police in tracing the fugitives as the more sensible course.

American Notes.

PRODUCTS FROM SUGAR-BEET REFUSE.—It is intended to erect a factory at Saginaw, Mich., for the purpose of manufacturing syrup, acetic acid, and vinegar from the refuse molasses of sugar-beet, and a company has been organised with a capital of $150,000. Robert McKinnly, the promoter, has been making an investigation with sugar-beet for years, and has found an excellent grade of vinegar can be made from them.

THE ASSISTANTS AGITATE.—The Drug Clerks' Association of Chicago is trying to obtain shorter hours for its members. A maximum of 140 hours for each two weeks is suggested, with "overtime" pay for service extending beyond that. The Association is also agitating for better sanitary conditions in sleeping-quarters, a more aggressive enforcement of

Digitized by Google

the pharmacy law concerning unregistered clerks, and more pay. The clerks have created considerable interest in this movement by enlisting the sympathy and assistance of the newspapers, and editorials and news articles in considerable number have appeared in the Chicago dailies.

A Liquor Crusade.—The State Commissioner of Excise has notified druggists of Manhattan and Brooklyn, that his Department has evidence that they have violated the Liquor Tax law by selling liquors without a prescription by a physician and by selling liquors to be drunk on the premises, and he informs them that, having violated the law, they have violated the conditions of their $500 bond, and that that sum is therefore payable to the State Commissioner of Excise at once. Many of the accused are members of the Manhattan Pharmaceutical Association of New York City, and so many communications respecting the matter were received by the Association that a special meeting was held on April 4 at the College of Pharmacy. After a thorough discussion it was decided to fight the issue, and the matter was placed in the hands of the attorneys of the Association. A fund to defray the legal expenses is being raised by the Association. The fines aggregate $100,000.

Lady Demonstrators.—American manufacturers of proprietary articles are very ready to back up the efforts of the retailers on their behalf by demonstration, and it is a common thing in the American Drug Store to see the centre of the floor space occupied by a table or stand presided over by a young lady fully competent to describe and dilate upon the remedy displayed thereon. A sample package is presented free to each person entering the store and the young lady in charge is ready to supply literature, circulars, &c., and to descant in a charming and entertaining manner upon the merits of the preparation. Needless to say these lady demonstrators are chosen with a view to their personal attraction as much as their conversational abilities. The American advertiser is never backward in making use of the fair sex to assist him in his deep laid plans to catch the eye of the public. An enterprising druggist did this with such effect the other day in New York that he was compelled to abandon it, owing to the crowded state of the sidewalk outside his store window. He engaged the services of an exceedingly prepossessing young lady whom he placed in the centre of his window appropriately surrounded. Her duty was to exhibit to the crowd outside a series of printed cards setting forth the merits of certain special lines to be had inside. Of course in a window display of this character everything depends upon the lady, and in this particular case she acquitted herself with marked success.

Business Changes.

Boots (Limited) have opened a branch at 13 High Street, Dartford.

Mr. L. Whelan has recently opened a pharmacy at 4 College Terrace, Grange, Guernsey.

Mr E. H. Kellam, chemist and druggist, has taken a shop in the new Royal Arcade at Yarmouth.

Mr. J. W. Huke, of the Victoria Pharmacy, Regent Road, Yarmouth, has taken a branch shop on the South Quay in that town.

Mr. Filmer, who has started business on his own account, was an assistant with, not manager to, Mr. Fred J. Oliver, Maidstone.

Mr. D. A. Evans, chemist and druggist, has purchased the old-established business of Messrs. Steele & Marsh, Milson Street, Bath.

Mr. A. E. Baylis, chemist and druggist, has taken over the branch business of Mr. A. W. Smith at Barnard's Green, Malvern, Worcestershire.

Mr. Francis G. Moore, chemist and druggist, has purchased the business lately carried on by Mr. C. R. Sharman at 2 New Road, Gravesend.

Mr. Samuel Taylor, chemist and druggist, Great George Street, Leeds, is retiring from business this month, after forty years' consistent work, and is to be succeeded by Mr. Charles Thackrah.

Mr. R. Westland, chemist and druggist, has purchased the business at 3 London Road, Tooting Junction, formerly belonging to Mr. F. Wimble.

Mr. F. Kirby, chemist and druggist, Northampton, has transferred his business from the corner of York Road to 58 Abbington Street, Northampton.

Messrs. Dunn Brothers & Co, chemical-manufacturers, 53 Brown Street, Manchester, have removed to Northern Assurance Buildings, Albert Square, Manchester.

The firm of Hermann Mayer, Senior, vanilla importers, has removed from 3 and 4 Bury Court, St. Mary Axe, to more commodious premises at 42 Crutched Friars, E.C.

Mr. H. G. Adams, chemist and druggist, late of Market Harborough, has acquired the business in High Street, Newport, Salop, formerly carried on by Mr. G. L. Douthwaite.

Mr. Robt. Robinson, of Windermere, has acquired the business of the late Mr. A. Pumphrey, 63 Commercial Road, Bournemouth, after having managed the same for the last fifteen months on behalf of the executors.

In consequence of the Barbican fire Messrs. A. Goldschmidt & Co., druggists'-sundries manufacturers, 4 New Zealand Avenue, E.C., have taken temporary premises at 147 Farringdon Road, pending the rebuilding of the Barbican premises.

Personalities.

Mr. Alfred H. Mathew, of Messrs. Heynes, Mathew & Co., Cape Town, is now visiting England. Letters addressed to our office will find him.

The governing body of the Jenner Institute of Preventive Medicine has appointed Major Ronald Ross, F.R.S., to be head of a new department in the Institute at Chelsea.

Mr. A. E. Grey, of Messrs. Botwright & Grey, manufacturing opticians, Clerkenwell, E.C., was returned at the top of the poll in the recent by-election for the Finsbury Borough Council.

It will be seen from our report of the Tottenham vinegar-of-squill cases that the summons against Mr. Eugene McSweeny was dismissed. It was, we regret, put the other way in a brief note last week.

Mr. Walter E. Goff, pharmaceutical chemist, of Messrs. Horrell & Goff, pharmaceutical chemists, Dartford, has been elected chairman of the Building and Sanitary Committee of the Dartford Urban District Council.

Mr. George Romilly, a well-known planter of Meppadi, Wynaad, has been appointed officiating director of Government Cinchona-plantations, Ootacamund, vice Mr. W. M. Standen, who has proceeded on leave.

Mr. R. E. Wright, chemist and druggist, who is well known as one of the originators of the Chemists' Assistants' Union and an assistants' candidate for the Pharmaceutical Council, has accepted an appointment under the Cape Government at Robben Island, Cape Town.

Dr. Charles Forshaw, Bradford, has been elected the first honorary member of the "Erkenwald" Masonic Lodge, No. 2,808, London, having written a Masonic ode which the brethren of this Lodge sang in Barking Church on the occasion of its restoration last year.

Mr Henry Thomas Durant, F.C.S, pharmaceutical chemist, who recently returned from the United States after seven years' experience as a metallurgical chemist at gold and silver mines in Mexico and South America, will shortly proceed to Rhodesia in a similar capacity. Mr. Durant, who is an old "Square" man, had rather a sharp attack of malarial fever, but has quite recovered now.

The *Lancet* points out that as long ago as 1888 Dr. Paul Tassinari of Pisa subjected the germs of various deadly diseases (such as anthrax, cholera, and typhus fever) to the action of dense clouds of tobacco-smoke during periods of 100 to 150 hours, and he came to the conclusion that in most cases, and especially when large cigars had been employed as generators, the development of pathogenic bacteria was either partially or wholly arrested. But lest the popular belief in tobacco-smoke as a disinfectant be strengthened, it should be pointed out that nobody retains smoke in his mouth for 100 hours at a time.

Pharmaceutical Society of Great Britain.

COUNCIL MEETING.

WEDNESDAY'S meeting was largely occupied with formal business. The reply which the Secretary sent to the Privy Council in answer to the recommendation to institute a curriculum was read. Nine honorary members were elected, four of these had previously been corresponding members, and four corresponding members were elected to fill the vacancies in the ranks of that class. The report of the North British Executive was read in abstract, a good word being put into it for the Divisional Secretaries. The Benevolent Fund has benefited by a donation of 15*l.* from the organisers of the Chemists' Ball, and the Council, on the recommendation of the Committee, made two grants to needy applicants. Mr. Cooper suggested that it would help the Fund if a banquet were held in connection with it annually instead of every ten years. The Martindale legacy to the library has been received, and the Library Committee will consider what should be done with it. Mr. A. G. C. Paterson was appointed Redwood Scholar for the ensuing year, and as a result of examination Mr. J. W. Patterson was awarded the Pereira medal. At Dr. Symes's request the letters from the Privy Council in 1886, which were quoted at the last Council meeting, were read with the object of obtaining the exact wording. Mr. Carteighe explained that the letters do not express the whole of what took place as numerous interviews were arranged to discuss the matter.

The usual monthly meeting of the Council took place on May 7 at 16 Bloomsbury Square, W.C. There were present the President (Mr. G. T. W. Newsholme), Vice-President (C. B. Allen), Treasurer (S. R. Atkins), and Messrs. Carteighe, Cooper, Corder, Cross, Gifford, Glyn-Jones, Harrington, Harrison, Hills, Park, Robinson, Symes, Taylor, Wootton, and Young.

The meeting began at 11.20 A.M. by the reading of the minutes of the previous meeting, after which it was announced that letters of thanks for sympathy had been received from Mrs. Hawtayne and Mr. Percy M. Randall (on behalf of his mother).

Mr. F. ANDREWS also thanked the Council for the kind manner his services as Divisional Secretary had been spoken of at the last Council meeting.

THE COMPULSORY CURRICULUM.

The PRESIDENT next called on the SECRETARY to read the reply sent to the Privy Council in reference to the suggested curriculum, which was as follows:—

The Council of this Society has had under its consideration the report of Dr. Stevenson on the examinations held by the Board of Examiners for England and Wales during the year ending March 31, 1902. In accordance with the request of the Lords of the Council, I directed special attention to Dr. Stevenson's remarks in that report with respect to the necessity for the institution of compulsory courses of instruction in at least chemistry and pharmacy. I am desired to state in connection therewith that the Council of this Society is much gratified to find that the Lords of the Council now recognise that the establishment of compulsory courses of instruction is highly desirable—in fact, practically essential.

More than twenty years ago the late Dr. Greenhow urged this view, and Dr. Stevenson has persistently reiterated the same recommendations. As a result of Dr. Greenhow's representation, the Society in 1885 formulated and approved by-laws providing for the division of the qualifying examination and the institution of periods of study between the portions of the same. Official approval of those by-laws was withheld by the Lords of the Council, as they had been advised that any conditions precedent to a candidate presenting himself for examination would be beyond the powers of the Society. The Council of this Society has since made the following attempts to obtain the necessary power by legislation for bringing about the course which, in the opinion of the Privy Council visitors, has appeared so essential—the Pharmacy Act Amendment Bills, introduced into the House of Commons in 1887, into the House of Lords in 1888, and in the House of Commons in 1891. As these were private Bills it was found impracticable to carry them through. In addition to the above, several draft bills have been prepared by the Council, the latest of which is now before your department, and the Council hopes it will have the support of the department in its efforts to secure the desired legislation. I desire to point out that the Council of this Society, whilst unable to enforce a curriculum, has for some years put forward the recommendation that all candidates, before presenting themselves for examination, should receive a systematic course of instruction occupying a period of not less than six months, and that such period of study should include at least sixty lectures in chemistry, eighteen hours' work in each week in practical chemistry, forty-five lectures and demonstrations in botany, and twenty-five lectures and demonstrations in materia medica. This recommendation is printed on every copy of the syllabus of the examination issued by me, so that every candidate has it before him. I enclose a marked copy.

The acknowledgment of the letter was also read.

Mr. T. Tickle wrote that he would be pleased to represent the Society at the Congress of the Royal Institute of Public Health at Exeter as desired.

THE PROPOSED NEW BY-LAWS

were confirmed by the Council in accordance with the charter, and a special general meeting of the members of the Society is to be held after the general meeting on May 28, to consider, and if thought desirable, to approve of (*a*) the new by-laws, and (*b*) the alteration in the poison-regulations so as to include liquid disinfectants.

ELECTIONS AND RESTORATIONS.

A large number of members were restored to the Society, some new members and student-associates elected, and the diplomas of the recently qualified pharmaceutical chemists were ordered to be issued stamped with the seal of the Society.

HONORARY MEMBERS.

The PRESIDENT next proposed that the following be elected honorary members of the Society:—

Brandis, Sir Dietrich, K.C.I.E., Ph.D., F.R.S.

Guignard, Leon, Director of the School of Pharmacy, Paris.

Hanbury, Sir Thomas, K.C.V.O., F.L.S.

King, Sir George, M.B., K.C.I.E., F.R.S.

Macalister, Donald, M.D., Chairman of the Pharmacopœia Committee of the General Medical Council.

Saunders, William, F.R.S.E., F.L.S.

Sorby, H. C., D.Sc., F.R.S., Vice-President of the University College, Sheffield.

Stockman, R., M.D., F.R.C.P.E., F.R.S.E., professor of materia medica, &c., Glasgow University.

Wiesner, Julius, Ph.D., professor of plant anatomy in the Botanico-Physiological Institute, Vienna.

The names, the PRESIDENT explained, had been considered by the Council, and had been posted in the library, as required by the by-laws. A short reference to each gentleman was made, and

Mr. WOOTTON suggested that when the elections were communicated to the honorary members they be asked to send signed portraits to put in an album, which the Society might keep.

The TREASURER: I think that is very desirable.

Mr. CARTEIGHE: We might try the experiment. It is customary abroad to send portraits on such occasions.

The following

CORRESPONDING MEMBERS

were next elected:—

Freeman, W. G., B.Sc., F.L.S., Department of Agriculture, Barbadoes.

Jadin, Fernand, Professeur agrége (vegetable anatomy), School of Pharmacy, Paris.

Prain, David, Surgeon-Major, M.B., F.R.S.E., Botanic Survey of India.

Thoms, Dr. H., Professor of Chemistry, University of Berlin.

THE NORTH BRITISH BRANCH.

The SECRETARY announced that the report of the Executive of the North British Branch had been received, and he read the following summary:—

The Executive has met four times during the year and has considered and transmitted to the Council an important draft

Digitized by Google

scheme for securing a course of training for pharmaceutical students in the four Scottish Universities, of the principle of which the Council has expressed approval.

The Executive has also considered a modification of the conditions governing the acceptance of Preliminary-examination certificates, and transmitted a recommendation to the Council which has been approved.

The jubilee of the institution of the Branch and the diamond jubilee of the Pharmaceutical Society were celebrated by a dinner of Scottish pharmacists in December.

The evening-meetings have been successful and fairly well attended. At the same time it is felt that they were not by any means so well attended as they might be. This is the more to be regretted, because the Executive feel assured that the opportunities for social intercourse furnished by these meetings do much to further the interests of the Society and its members and student associates.

The Library shows an increase of 549 volumes circulated, and the increase was in both town and country readers.

The question of local organisation has received the careful attention of the Executive. The Divisional Secretaries in Glasgow district and in Aberdeen have had their respective areas defined and lists of the registered chemists in each division have been prepared. Much yet remains to be done in the other districts. The Executive cordially recognises the loyal way in which the Divisional Secretaries have responded to all the calls made upon them, especially in regard to supplying local information on important questions at present occupying the attention of the Council. The experience of the last year has convinced the Executive that the scheme of local organisation is fitted to be a powerful instrument in furthering the objects of the Society, and are impressed with the importance of maintaining it in a condition of the greatest possible efficiency.

Mr. Robinson: Could not the report have been sent round to the Council, so that the members could consider it?

The President: There has been no time, as the report came late.

Mr. Robinson: I only ask on principle, as I can't follow a report read out by the Secretary.

The President: That is quite right; the report should have been in before.

Finance.

The report of the Finance Committee, which was next read, showed the following balances:—

General Fund Account	£4,301 0 7
Benevolent Fund Account	703 14 9
Donation Account	223 0 0
Orphan Fund Account	43 14 3

and submitted for payment from the General Fund Account, 2,161*l.* 18*s.* 4*d.*, and 5*l.* from the Benevolent Fund.

The Committee also recommended that in future the expenses in connection with the competitions be defrayed from the General Fund. The following is an analysis of the accounts submitted for payment:—*Journal*, 533*l.* 8*s.* 2*d.*; examiners' fees, 533*l.* 9*s* 7*d.*; current expenses, 450*l.*; taxes and insurance, 288*l.* 3*s.* 3*d.*; repairs, 109*l.*; salaries, 90*l.* 8*s.* 4*d.*; sundry accounts, 166*l.* 19*s.* 2*d.*

The President, in moving the adoption of the report, drew attention to a donation of 15*l.* from the Committee of the Chemist's Ball. It was very gratifying, he said, to receive such a donation year by year, and even those who did not dance would see that some good came from the Ball. The Society had also received a donation from the late Mr. Martindale of 17*l.* 19*s.* (19*l.* 19*s.* less duty) towards the library of the Society, and the Library Committee would consider how the money should be applied. The President explained that it was owing to the abolition of the Preliminary examination that it was recommended that the cost of holding the Scholarship examinations be defrayed by the General Fund.

Benevolence.

The report of the Benevolent Fund Committee was considered in committee, after which

The Vice-President, in moving the adoption of the report, said that only two cases were before the Committee, but it must be remembered that for some time the number of cases had been abnormally large. Grants of 13*l.* and 10*l.* were made.

Mr. Cooper said it was a pity that so few children were eligible for the Orphan Fund when the conditions were such that it was easy for chemists to avail themselves of the fund. He suggested also that if the Benevolent-fund banquet were held yearly instead of once in ten years, it would give wealthy manufacturers an opportunity of attending and benefitting the fund.

The President said it was not a matter of money, but of orphans for the Orphan Fund.

Mr. Cooper said that was his point. Every assistant should subscribe to the Benevolent Fund, so that he could receive the benefits in the future, if he should unfortunately require them.

The recommendations of the Committee were adopted.

The Library Report.

The report of the Library, Museum, School and House Committee was next considered. It dealt with the attendances at the Society's libraries and museum, and with administrative matters relating to the school and house. Owing to the resignation of a demonstrator, the appointment of Mr. R. R. Bennett in that capacity was recommended. Three students who passed the April Major were admitted as workers in the research laboratory for the rest of the session. The Committee also considered a suggestion from a divisional secretary that statistics concerning the conduct of shops where drugs are retailed be collected, but decided that in the absence of statutory powers the suggestion was impracticable. Some fencing was authorised to be purchased for the Shortlands property, and an offer to lease some vacant land adjoining was accepted. The draft annual report was drawn up, and the Editor of the *Journal* consulted, whilst the recommendation of Professor Collie that Mr. A. G. C. Paterson be appointed Redwood scholar, was approved of.

The President, in moving the adoption of the report, explained that they had been advised that the fencing was necessary to protect the Shortlands property, from which the Society drew ground-rents. The offer to lease a piece of vacant land adjoining was considered advantageous, as the rent would be as much as they would get if a house stood thereon.

Mr. Glyn Jones said he had some remarks to make about the *Journal*, which the President would no doubt think it advisable should be in committee.

The President: I think it will be better to defer the matter till the end of the public business.

Divisional Secretaries.

Mr. D. Arnott, Pontypridd, was appointed Divisional Secretary for Glamorganshire East, and Mr. Owen Jones for Denbighshire West.

The President mentioned that there are still several places not represented, and he would be glad to receive nominations. The city of Norwich, for instance, is still unrepresented.

Mr. Corder: Application has been made to several chemists, but they all refuse.

Mr. Glyn-Jones: Are members of Council debarred from being divisional secretaries? (Laughter.)

The President: No.

Appointments.

In accordance with the recommendation of the Library Committee, Mr. A. G. C. Paterson was appointed Redwood scholar for the Session of 1902-3, and Mr. R. R Bennett, demonstrator in the chemical-laboratory of the School of Pharmacy.

A part of the General Purposes' Committee's report made public referred to the examination for the Pereira and Society's medals. There were thirteen candidates in the competition, and three obtained more than the necessary number of marks to qualify. The mottoes being made known resulted in Mr. J. W. Patterson being awarded the Pereira medal, Mr. W. T. Young the Society's silver medal, and Mr. R. R. Bennett the bronze medal.

The examiners were thanked for their services.

Examiners' Report.

The report of the Board of Examiners on the April examinations revealed the fact that, in London, of 42 Major candidates 20 passed, and of 315 Minor candidates 90 passed. In Scotland all three Major candidates passed, and out of 122 Minor candidates 43 passed. It was also noted that 34 Preliminary certificates had been received from apprentices or students. The Board also asked to be authorised to accept a certificate in general knowledge from the Society

Digitized by Google

of Apothecaries. The Edinburgh Board of Examiners mentioned that a sub-committee had been appointed to consider educational matters that might arise from time to time.

The PRESIDENT said the Society of Apothecaries' examination was no longer on the list of those authorised by the Society, but the examination included the necessary six subjects. In regard to the sub-committee appointed in Edinburgh the London Board did the same some time ago.

The report was received and adopted.

Mr. Tickle and Mr. Pinches were appointed to conduct the examinations for the Jacob Bell and Manchester scholarships in July next.

DIVIDING THE MINOR.

The PRESIDENT: Now, Dr. Symes, perhaps you will bring forward the motion standing in your name.

Dr. SYMES then proposed that the letter sent to the Society by the Privy Council in 1886 be read. He explained that last month, in bringing forward a motion in reference to dividing the Minor, he was very anxious to show that there was nothing to prevent the Council dividing the examination under their present powers. In doing this, he quoted a letter from the Privy Council, but his rendering was challenged by Mr. Carteighe, who told Mr. Glyn-Jones also that the words "or to divide" were always omitted. Later on Mr. Carteighe interrupted him (Dr. Symes) by saying "Periods of time between portions of examination." Dr. Symes went on to say that as so much depended on the words of the Privy Council's letter, he thought it would be well if the letter were read to the Council; it would then be seen what was in the way of dividing the Minor. This was not a personal matter at all—he claimed to be fairly pachydermatous—but his recollection was that the letter made no reference whatever to the division of the Minor.

Mr. HARRISON seconded the motion, and

The PRESIDENT said he hoped it would not be thought that anything was being kept back. The letter had been read on more than one occasion to the Council, the last time in August. The letter was published in 1883 in the annual report, and a further letter on the same subject appeared in the *Pharmaceutical Journal* for July 10, 1883.

The motion being agreed to, the SECRETARY read the letter as follows:—

Privy Council Office,

55040. January 28, 1886.

SIR,—Adverting to your letter of the 17th July last and to other correspondence on the proposed alterations in the By-laws of the Pharmaceutical Society of Great Britain, which have been passed by the Council, and were confirmed on the 2nd of July at a Special General Meeting of the Society, I am directed by the Lord President of the Council to state that His Lordship is advised that the alterations in the existing by laws cannot, as they now stand, be properly confirmed by the Privy Council.

The Lord President is also advised that the members of the Society assembled in Special General Meeting have no right to prepare amendments to the formulas referred to them under Section IV. (1), but that they have a right to have the formula relating to each by-law referred to them separately; that they cannot be required to accept or reject the propositions of the Council *en bloc*; that if the formulas were not submitted separately, the alteration in the by-laws cannot properly be confirmed by the Privy Council till this has been done; that the formula relating to a by-law cannot be altered by the Council at either of the two subsequent meetings of the Council held under Section IV. (1), but can be confirmed only; that if the formula relating to any by-law has been so altered at a second or third meeting, the alteration in the existing by-laws cannot properly be confirmed by the Privy Council. That by-laws which impose any precedent condition upon persons who tender themselves for examination under the provisions of the Pharmacy Act, 1868, are contrary to Section 6 of that Act.

This observation does not apply to reasonable regulations for securing order and efficiency in the examination itself, or for enabling examiners to have proper materials before them upon which they can be satisfied as to the qualifications of the persons examined before they can grant the certificates, provided that such regulations do not prevent free access to the examinations.

For the above reasons his Lordship is advised that the By-laws Nos. 11, 12, 24, and 25 cannot properly be confirmed by the Pharmaceutical Council.

C. L. PEEL.

A subsequent letter was in the following terms:—

With reference to your letter of March 13 last, with regard to the proposed alteration of the by-laws of the Pharmaceutical Society, in which you call attention to the last paragraph but one of my letter of January 28 last, I am directed by the Lord President of the Council to state that that paragraph was not intended to convey that it would be competent for the Board by any regulation to require evidence of (say) a three months' course of instruction in chemistry, or to require a candidate failing to satisfy the examiners in any subject to attend a course of lectures on the subject before he presents himself a second time, or to impose any condition precedent whatever on a candidate tendering himself for examination. The Lord President is advised that it would *not* be competent for the Board so to require. The words of the paragraph in question were intended to express that the examinations should be of such a character as to enable the examiners to satisfy themselves of the practical skill, knowledge, and qualifications of the candidates, and for these purposes they might require practical tests to be submitted to the candidates.

Dr. SYMES: All I submit is that ——.

The PRESIDENT: Excuse me, Dr. Symes, but all your motion asks is that the letter be read. I ought to rule you out of order, but the Council would no doubt be glad to hear the grounds of your inquiry.

Dr. SYMES: All I wish to say is that no such words as were said to be there last month occur in the letters. There is nothing there to prevent us dividing the Minor.

Mr. CARTEIGHE: It seems that I am the culprit, and I willingly apologise to Dr. Symes. I should like to say, however, that those letters do not represent the whole thing which was brought out in interviews I had with the Privy Council Secretary.

Dr. SYMES: Thank you.

Mr. YOUNG: The letters bring out the interesting fact that the Society cannot be required to accept or reject by-laws *en bloc*, but can do so piecemeal.

Mr. CARTEIGHE: We have had rulings both ways. It depends on who are the law officers of the Crown.

Mr. GLYN-JONES: As I understand it, the letter says the by-laws may be put before a meeting one by one, but if one is objected to and amended that one must go before three meetings.

Mr. WOOTTON: Three or four years ago the by-laws were required to be accepted *en bloc*. I know that, as I was the victim. (Laughter.)

Mr. HILLS: I should like to point out to Dr. Symes that his motion on dividing the Minor was rejected on the general principle of inexpediency, and its rejection had nothing to do with the Privy Council letters.

The Bradford Association forwarded a resolution in regard to improving the *Journal*, which was referred to the Library Committee.

The Council then went into committee to consider the conduct of the *Journal*, and the annual report and financial statement, which latter are here appended.

Sixty-first Annual Report.

EXAMINATIONS

The number of candidates presenting themselves for the Minor examination during the year 1901 was 1,479—411 less than in 1900—and of that number 497 passed. The percentage of rejections was 66·39, as against 71 in the previous year. For the Major examination 104 candidates were examined, and 67 failed—both the number of candidates and the percentage of failures showing a slight increase upon the corresponding figures for the preceding twelve months. Seventy persons were registered as "apprentices or students," upon production of certificates in Preliminary knowledge granted by approved examining bodies. Reporting upon the Qualifying examination, Dr. Stevenson, the Government visitor to the London board, directs special attention to the circumstance that 67·9 per cent. of the unsuccessful candidates owed their rejection to incompetence in the practical portion of the examination, and that the safety of the public imperatively calls for competent skill and knowledge in practical pharmacy and practical chemistry. He further expresses the opinion that "until pharmacists themselves agree to require compulsory courses of instruction in at least pharmacy and chemistry there will continue to be a large percentage of failures." The Privy

Digitized by Google

Council has requested the Council of the Society to particularly consider this portion of the remarks of Dr. Stevenson.

Evening Meetings.

In London, contributions to the scientific meetings of the Society have been made during the session by Professors Norman Collie and H. Greenish, Dr. Augustine Henry, Messrs. T. E. Wallis, W. H. Lenton (E. Northway Butt Scholar), F. A. Upsher Smith, W. Garsed (Salters' Research Fellow), P. W. Squire, and E. M. Holmes. In Edinburgh the session opened with an address by Dr. Leonard Dobbin, and subsequent papers were contributed by Dr. J. Gordon Sharp, Messrs. G. F. Merson, D. B. Dott, W. S. Glass, J. R. Hill, T. Dunlop, T. S. Barrie, and J. F. Tocher. The papers and the discussions to which they gave rise are published in the *Pharmaceutical Journal*.

Library and Museum.

The supervision of the arrangements for the preservation and classification of the books and specimens in the libraries and museums has occupied the attention of the Library, Museum, School, and House Committee, and the Council is able to report a steady development in this department of the educational work of the Society. Considerable progress has been made in the direction of simplifying the arrangement of books in the Library, as well as improving the method of displaying some of the more illustrative materia-medica exhibits in the Museum. The Council desires to acknowledge a number of donations of books and specimens during the year from members and others interested in pharmaceutics or the allied sciences.

The School.

The sixtieth session of the School of Pharmacy was opened in October by an address by Dr. A. P. Luff, senior physician of St. Mary's Hospital (a former student and prizeman of the School). The number of entries this session for the full course of training, as well as the painstaking and thorough character of the work of the teaching-staff, should afford gratification to the members of the Society.

Research.

Investigations have been proceeding throughout the year under the direction of the Professor of Chemistry and the Professor of Pharmaceutics. Much of the work has been undertaken at the request and for the information of the Pharmacopœia Committee of the General Medical Council. Mr. Upsher Smith (Demonstrator in the Research Laboratory), Mr. W. Garsed (the Salters' Research Fellow), and Mr. W. H. Lenton (E Northway Butt Scholar) have all been engaged in this work, and the results have been embodied in valuable papers read at the evening meetings of the Society or otherwise published.

Benevolent Fund and Orphan Fund.

Six additional annuitants were elected in December last, so that at the end of the year forty-two persons were receiving a regular income from the Fund. The total expenditure for the year amounted to 2,870*l.*, of which sum no less than 965*l.* was given in casual grants. Subscriptions to the Fund have been fairly well maintained, but they do not keep pace with the growth in the number of deserving applicants for assistance.

The Orphan Fund continues to maintain in the London Orphan Asylum the son of a former member and subscriber to the Benevolent Fund. Several other suitable cases for the benefit of this useful Fund have been brought to the notice of the Council, but as in each instance the essential conditions laid down by the will of the founder—Thomas Hyde Hills—had not been complied with, no help could be given.

Legal.

The number of alleged cases of infringement reported to the Registrar during the year was 409, showing a large increase as compared with the previous year, when the number was 236. Each case was carefully investigated, and in nearly 200 instances the Registrar was authorised to proceed for the recovery of penalties.

The cases in which proceedings were instituted for offences under Section 15 of the Pharmacy Act, 1868, do not call for comment, but attention may be directed to one case under Section 17, in which proceedings were instituted and a conviction obtained in the police court at Newcastle-under-Lyme against a firm of florists, who had sold an insecticide containing nicotine in a bottle labelled "brandy," which had caused the death of a man who had drunk a small portion of the liquid in mistake for beer. Defendants obtained permission to appeal to the High Court, but, with the consent of the Magistrates, the appeal has since been abandoned.

By an appeal case in the High Court of Justiciary it has been decided that the Sheriffs in Scotland have power to inflict imprisonment in default of non payment of penalties for offences under the Pharmacy Acts.

It has also been definitely settled by another appeal in the same Court that the Society's Registrar is entitled to prosecute in Scotland under Section 17 of the Act.

The attention of the Council has been directed to the habitual employment of unqualified persons as assistants in open shops by medical practitioners, thereby causing such persons to commit breaches of the Pharmacy Act, 1868. The Council, considering that such action was a source of danger to the public, lodged a complaint with the General Medical Council, with the result that several medical practitioners were called before that body in November last to give an account of their conduct in this respect, and severally expressed their regret.

The General Medical Council has since issued a notice to the effect that in the opinion of the Council such practices are professionally discreditable, and fraught with danger to the public, and has notified to the profession that any registered medical practitioner who is proved to have so offended is liable to be regarded as guilty of infamous conduct in a professional respect, and to have his name erased from the Medical Register.

By-laws.

The proposed new by-laws referred to in the last report have been reconsidered, with especial reference to the provisions dealing with cases of candidates absent from examination on account of illness. A modification in By-law 23, Sect. X., has, consequently, been proposed by the Council, providing for the payment of the nominal re-entry fee of 1*s.* by candidates whose absence has been excused by the Council or either of the Boards of Examiners. The new by-laws, as amended, were read a first time at the meeting of the Council in April, and will be submitted to a special meeting of the Members of the Society on May 28 for confirmation. With the exception of the modification above indicated, the proposed by-laws are identical with those confirmed by the Society in August, 1900.

Parliamentary.

The draft Pharmacy Bill adopted by the Council in March 1901, has been the subject of correspondence with the Privy Council Office and the Colonial Office, and the President has, in connection therewith, had interviews with the chief permanent officials of those departments. In view, however, of the appointment by the Privy Council of a small committee for the purpose of considering the changes that might be desirable in Schedule A to the Pharmacy Act, 1868, and having regard to the expression of opinion by the Clerk of the Council that "when the report of the Committee is received it will then be a convenient time to consider what amendments of the law may be expedient to give effect to the wishes of the Society," the Council resolved not to proceed further with the draft at present.

The Departmental Committee of inquiry on the Sale of Poisons—of which Mr. Martindale was up to the time of his death a member, and of which Mr. Walter Hills is now a member—commenced its sittings in November. Evidence on behalf of the Society has been submitted to the Committee by the President, Vice-President, Messrs. Carteighe, Cross, and J. W. Sutherland, whilst the Registrar, and the Assistant Secretary in Scotland appeared as witnesses in response to the expressed desire of some of the members of the Committee to have information concerning points of procedure in connection with the administration of the Pharmacy Acts.

Poison Regulations.

Consequent upon representations by Coroners and others, the Local Government Board suggested to the Council that

Digitized by Google

it appeared desirable that the Regulations adopted pursuant to Section 1 of the Pharmacy Act, 1838, should be amended to include liquid disinfectants. The Council, after consideration, adopted at the April meeting a resolution proposing the alteration of the Poison Regulations by including within the scope of Clause 3 of the Regulations liquid disinfectants containing poison. This alteration will be proposed and submitted to the members at a special meeting on May 28.

Dispensers Committee.

The desirability of ascertaining as far as practicable the conditions under which dispensing is performed in public institutions in Great Britain, induced the Council to appoint a committee to collect information on that point. That committee, with the valuable assistance of the divisional officers of the Society, was enabled to obtain particulars in regard to 716 institutions, and the data so procured were, after classification and tabulation, embodied in an instructive report which was published in the Journal of March 8, 1902. The committee has not yet completed its investigation.

North British Branch.

The report of the executive of the North British Branch was presented to the Council at its last meeting, and a comprehensive *résumé* is published in the *Journal* for May 10, 1902. In connection with the work of the Society in Scotland during the past year reference must be made to the admirable educational scheme formulated by Mr. J. F. Tocher, and sent to the Council in April by the Executive. The object of the scheme is to secure a course of training for pharmaceutical students in the Scottish universities and the Council cordially approved the principle of the scheme.

Honorary and Corresponding Members.

The following corresponding members were elected honorary members at the last meeting of the Council:—Sir D. Brandis, Sir George King, Sir Thomas Hanbury, Wm. Saunders, and Professor Julius Wiesner. M. Léon Guignard (of the School of Pharmacy, Paris), Dr. Donald Macalister (Chairman of the Pharmacopœia Committee of the General Medical Council), Dr. Sorby (of Sheffield University), and Professor Ralph Stockman, M.D., F.R.S.E. (of Glasgow University), were also elected honorary members. As corresponding members, W. G. Freeman, F. Jadin, Dr. Thoms, and Dr. Prain were elected.

Obituary.

The following honorary members and corresponding members have died during the year:—Dr. Cornu, Dr. Stevenson Macadam, Professors Bretschneider, Herrera, Van Eeden, and Hamberg, and Mr. G. H. Hawtayne. The following deaths have also to be recorded:—William Martindale (past President of the Society), J. T. Davenport (also a past President of the Society, and for many years a member of the Board of Examiners for England and Wales), W. B. Randall (a former member of Council), J. Bowerbank (a founder), E. M. Burden, T. M. Deighton, Wm. Readman (founder) J. Rodman, J. Wild, and J. Stevenson (divisional officers).

The Balance-sheet of the General Fund

shows that the assets of the Society, consisting of ground-rents, freehold houses in Edinburgh, and leasehold premises in London, amount to 35,727*l.* 15*s.* 8*d.*; sundry debtors of the Society 2,694*l.* 17*s.* 1*d.*; and cash in hand on December 31, 1901, 1,622*l.* 19*s.* 5*d.* The liabilities are put down at 37,226*l.* 15*s.* 10*d.*; deduct balance of revenue account, 1,654*l.* 2*s.* 7*d.*, thus leaving 35,572*l.* 13*s.* 3*d.* The Society owed 1,580*l.* 2*s.* 11*d.* to sundry creditors, 2,068*l.* 12*s.* is put down as examination-fees in advance, and 824*l.* 4*s.* school-fees in advance. Total assets, 40,045*l.* 12*s.* 2*d.*

Benevolent Fund.

During the year the receipts amounted to 3,218*l.* 5*s.* 7*d.*, made up of subscriptions 1,623*l.* 19*s.*; ground-rents, 1,149*l.* 4*s.* 7*d.*;

Digitized by Google

dividends, 151*l.* 5*s.* 7*d.*; donations, 117*l.* 15*s.*; rent of The Elms, Strawberry Hill (two quarters), 126*l.* 17*s.* 7*d.* The expenditure for the year included 1,875*l.* for annuities, grants, 965*l.*; interest, 208*l.* 11*s.* 9*d.*; stationery, &c., 55*l.* 12*s.* 2*d.*; and law and professional charges, 111*l.* 1*s.* 8*d.* The expenditure was thus 49*l.* 3*s.* 10*d.* in excess. The assets of the fund amount to 44,582*l.* 14*s.* 11*d.*, including debts payable and annuities paid in advance, 1,017*l.* 3*s.* 9*d.*; cash, 251*l.* 4*s.* 3*d*; and 10,000*l.* of borrowed money, the net amount thus being 31,582*l.* 14*s.* 11*d.*

The Scholarships and Prize Funds Account

show that the Bell Scholarship's income was 56*l.* 7*s.* 4*d*, and the expenditure 70*l.* 4*s.* 3*d.*; the Pereira and Hills Prize Fund 14*l.* 14*s.* 9*d.*, of which 13*l.* 14*s.* 9*d.* was spent; and the Burroughs Scholarship 27*l.* 2*s.* 6*d.*, of which 5*s.* 6*d.* was expended; Manchester Scholarship, income 24*l.* 13*s.* 2*d.*, expenditure 5*s.* 6*d.*; Redwood Scholarship, 20*l.* 15*s.* 5*d.* received, expenditure 5*s.* 6*d.*; Hanbury Memorial, 11*l.* received and 22*l.* 5*s.* 6*d.* expended; and E. N. Butt Scholarship, income 50*l.*, expenditure the same.

The Orphan Fund

had an income of 51*l.* 15*s.* 6*d.*, and spent 30*l.* for the support of an orphan at the London Orphan Asylum, the balance in hand being 318*l.* 15*s.* 9*d.*

The Waterall Legacy gave a dividend of 27*l.* 0*s.* 4*d.*, and 24*l.* was paid to the annuitant and 3*l.* 3*s.* to the lawyer.

Legal Reports.

High Court Cases.

A Beecham Action.

On Friday, May 2, an application was heard before Mr. Justice Farwell in the Chancery Division on behalf of Thomas Beecham, manufacturer of "Beecham's Pills," St. Helens, to restrain Mr. Harold S. Lockwood, chemist and druggist, 91 Rochdale Road, Manchester, from selling or offering for sale as Beecham's pills any pills not manufactured by the plaintiff. The defendant, through counsel, consented to an order for a perpetual injunction, and to pay 40*l.* to the plaintiff as damages and costs.

Saccharin Corporation (Limited) *v.* Flawith.

In the Chancery Division on May 3, Mr. Justice Buckley had before him a motion for judgment in this action for infringement of patent. Mr. Colefax, for the Company, said it was a motion for judgment in default of appearance in this patent action against one J. B. Flawith. The company asked for judgment in terms of the notice of motion with an injunction and inquiry as to damages. Defendant did not appear to answer the present application, and his Lordship made the order asked for.

The Anger Divorce Suit.

In the Court of Appeal on Thurday, May 1, before the Master of the Rolls and Lords Justices Stirling and Cozens-Hardy, the case of Anger *v.* Anger and Johnson was heard on appeal of the respondent, Mrs. A. L. Anger, from an order of Mr. Justice Barnes, who had granted the husband, who is now employed, and has been since 1898, with Messrs. Fellows & Co., manufacturing chemists, a decree nisi on the ground of the adultery of his wife with the correspondent, Alfred Henry Bevis Johnson. The respondent, in the court below, denied the adultery and alleged that the petitioner had been guilty of cruelty towards her, and had endeavoured to procure abortion, and asked for a decree of judicial separation. At the trial the learned Judge found for the petitioner, on both issues, and it was against his judgment that the present appeal was brought. Mr. Hugo Young addressed the court on Thursday on behalf of the appellant, and on Friday Mr. Barnard did the same in support of the finding of Mr. Justice Barnes. Their Lordships gave judgment on Monday, May 5, dismissing the appeal and holding that the facts did not warrant them in saying that Mr. Justice Barnes had not arrived at a right conclusion.

Pharmacy Act (Ireland).

Charges of Illegal Compounding.

On May 2, in the Southern Divisional Police Courts, Dublin, before Mr. J. G. Swifte, K.C., a number of cases were listed for hearing at the suit of the Pharmaceutical Society of Ireland, for alleged illegal compounding of medical prescriptions. At the outset Mr. Scallan (of Messrs. J. S. Scallan & Co., solicitors) said he appeared for Mrs. Josephine Preston and Mrs. Margaret McDermott (trading as Bowers & Co.), of 164 Great Brunswick Street, Dublin, and asked for an adjournment until that day three weeks. Mr. R. Keating Clay, J.P., solicitor (of Messrs. Casey & Clay) on the part of the Society, did not object, and

Mr. Swifte adjourned the case accordingly until Friday, May 23. The summons in this case charged the defendants with keeping open shop for compounding medical prescriptions.

The case against Frederick William Sweny, 1 Lincoln Place, was then taken. In this there were three summonses similar to above, for three different dates in February, 1902. Mr. Clay, J.P., prosecuted on behalf of the Society, and the defendant was represented by Mr. P. O'C. White, B.L. (instructed by Messrs. Ennis, Son & Machin).

Mr. F. W. Leslie (Inspector for the Society) deposed to getting a prescription made up by Mr. Sweny on February 11. There was no one else in the shop at the time but Mr. Sweny. He did not see "Sweny & Co. (Limited)" over the door, but knew there was a pharmaceutical chemist on the premises.

Mr. G. D. Beggs (President of the Society) deposed that the name of Mr. Sweny was not on the register of pharmaceutical chemists, although on the list of registered druggists was that of Frederick William Sweny, 1 Lincoln Place. In cross-examination by Mr. White, witness stated there was no pharmaceutical chemist named Thompson on the register as at Lincoln Place, but there was Robert L. Thompson, Sandymount. There was also a Mr. Robson, of the Medical Hall, Charleville.

Mr. Clay: That is in co. Cork. He might as well be in South Africa, so far as this case is concerned.

Mr. White: Does that close your case, Mr. Clay?

Mr. Clay: It does.

Mr. White read the summons, and said that no offence had been committed. It was an offence to sell a prescription, but, looking through the Act, he could find no offence for compounding a prescription. "Selling" was not charged; but even if it were, it could not be proved against Mr. Sweny, for he did not sell—he did not get the money, which went to the limited company, who were the owners of the establishment. On October 19, 1899, F. W. Sweny & Co. (Limited) were registered as a company; they were the persons who held the premises, and the name was over the door. By lease of January 1, 1900, Mr. Sweny assigned the premises to the Company, their successors and assigns, for twenty-one years. The memorandum of association (the certificate of which he afterwards put in) showed that Mr. Robert L. Thompson, pharmaceutical chemist, held one share of the premises; Mr. Walter J. Healy, pharmaceutical chemist, another share; and Mr. John Robson, pharmaceutical chemist, was always on the premises to compound these medicines on behalf of the Company.

Mr. Swifte: Does he reside there?

Mr. White said not, but he attended in the shop daily. Mr. Thompson was a director (as well as a shareholder) of the Company; and by an agreement dated January 1, 1900, Mr. Fredk. Wm. Sweny was appointed general manager of the Company at a salary of 120*l.* per year, payable weekly, and he was to have power to employ all requisite assistance. Their position was this: they had two registered pharmaceutical chemists as owners, one of whom was also a director, and they employed a pharmaceutical chemist. These were a company that kept open shop for sales, and they were entitled to do so.

Mr. Swifte: The question here is that the prescription was made up by an unqualified hand.

Mr. Clay: And it was dispensed.

Mr. White: I contend that there is no offence for compounding in the Act of Parliament. I might compound medicine and take it myself—not sell it. Mr. Sweny could not sell because the money went to the Company.

Mr. John Robson, pharmaceutical chemist, then gave evidence in support of counsel's statement. He attended the shop daily from 9 A.M. to 9 30 P.M., with 1½ hour off for dinner. In cross-examination he denied that Sweny compounded prescriptions, but he assisted witness in compounding. Mr. Thompson, who is a traveller, attended the shop

Digitized by Google

four or five times a week. The three prescriptions that Leslie got were entered in the book by Sweny.

Mr. Clay: That is so absurd a suggestion that nobody will attend to it.

Mr. Keating, clerk, 16 Talbot Street, deposed, in reply to Mr. White, that he was secretary of Sweny & Co. (Limited). He had seen Mr. Robson in the shop in Lincoln Place at all hours of the day.

Mr. Leslie was recalled and said he paid Mr. Sweny 10*d.* for the prescription on February 11.

Mr. White submitted that the case should be dismissed. There was no charge of selling preferred, and that was the only offence in Section 30 of the 1875 Act. The case of Boyd's in the Irish courts, and also the case of the Pharmaceutical Society of Great Britain *v.* The London and Provincial Supply Association (Limited) in the House of Lords, showed that where a company kept properly qualified men to do the work the company was not responsible. In this case Leslie waited until the chemist (Robson) went to his dinner, and then he got up this prosecution. The sale was by the Company, and there was no charge of selling preferred.

Mr. Clay said that the offence consisted not merely in selling, but for keeping open shop for retailing, dispensing, or compounding medical prescriptions. In this case he had proved that Mr. Sweny dispensed because he made up the prescription and handed it to Leslie.

Mr. Swifte: You do not charge him for dispensing?

Mr. Clay said that the Section mentioned retailing, dispensing, or compounding. They were disjunctive terms, and he submitted that, if his views were right, he was entitled to a conviction. It was clearly proved that Sweny had compounded.

Mr. Swifte: Open shop is kept by the Company, not by Sweny.

Mr. Clay: Not with keeping open shop; but I say he compounded and dispensed, and I treat it as the same offence.

Mr. Swifte: I will look into the case, and deliver judgment on this day three weeks.

Mr. Clay: I will hold over the other two cases against the same defendant until then.

The next case was against Frederick John Adams, of 24 Aungier Street, for compounding a prescription on February 20 last, he not being a qualified pharmaceutical chemist.

Mr. Dodd, solicitor, defended.

Mr. Leslie deposed that on February 20 he went into Dr. McKenna's shop, 24 Aungier Street. He saw defendant there, and gave him a prescription to make up, which was done, and witness paid 6*d.* for it. Defendant said he was 19 years old.

Mr. G. D. Beggs deposed that the defendant's name was not on the register of pharmaceutical chemists. It could not be, for he was not the age.

The defendant was then called, and stated that he is an indentured apprentice to Dr. McKenna, and had passed the Preliminary examination. He made up this prescription under the direction of Dr. McKenna, who told him the price. By Mr. Clay: Dr. McKenna is apothecary to the South Dublin Union, and discharges his duty in the Union between 10 A.M. and half-past one or two o'clock. He also goes back to the Union on certain days. Witness was left in charge of the shop when the doctor was away. When he compounded this prescription the doctor was at his dinner, and witness sent and asked him about it. He told witness the price, and how to file the prescription.

Mr. Swifte: What directions did the doctor give you about this prescription?—He told me how to make it up.

Mr. Clay: I suppose you are aware there is a deadly poison in this?—There is.

Dr. Michael McKenna was then examined by Mr. Dodd, and corroborated what Adams had said about the dispensing of the prescription, concluding, "He is as well able to make up a prescription as I am."

Mr. Swifte: That may be, but the law does not allow him to do it.

Mr. Clay: Under the terms of your appointment as apothecary to the South Dublin Union, you are bound to devote your whole time to the duties of your office; to reside in the district; not to engage in trade on your own account; and if the Guardians provide a residence for you, you must accept it—is not that so?—Yes.

Do you mean to tell the Magistrate that you contend that this boy of yours has a right to make-up prescriptions, especially one with a deadly poison in it—is that your case? Of course, if you take an overdose of that medicine it is a poison, but as it is there, it is a simple draught.

How do you know that he put in the proper quantity?—Because he is thoroughly trained.

Do not you know that you have a right to have a qualified pharmaceutical chemist to manage your shop when you are not there yourself?—I do not know that I need be there always. I was on the premises, and gave directions how this prescription was to be compounded.

You did not come out to see that he put the proper quantity in it; and suppose a patient was poisoned, would you be free of negligence?—There would be no charge of poisoning. The boy is thoroughly competent. This is an ordinary draught.

Mr. Swifte said it had not been proved that Adams kept open shop.

Mr. Clay: We do not charge him with that. Dr. McKenna is the owner of the shop. Dispensing and compounding is the offence. If we are wrong in that, we must try something else. We want to get your opinion whether the law is being carried out or not in these cases.

Mr. Swifte: Well, I will give judgment on this day three weeks.

Sale of Food and Drugs Act, 1875.

SWEET SPIRIT OF NITRE.

MR. H. S. ANNAL, chemist and druggist, of High Street, Melksham, was summoned on May 1 for selling sweet spirit of nitre, which on analysis was found to be deficient in ethyl nitrite to the extent of one-seventh of its proper strength. The prosecution said there was no suggestion of intent to defraud on the part of Mr. Annal, the deficiency no doubt being caused by evaporation. Defendant did not disputes the facts, and a fine of 10*s.*, including costs, was imposed.

AT the West Riding Police Court on April 26, William Allen, of Knottingley, was ordered to pay the costs (26*s.* 6*d.*) for having sold sweet spirit of nitre deficient in ethyl nitrite. Defendant said he was new to the business, and had at times neglected to replace the cork in the bottle after selling.

VINEGAR OF SQUILL.

AT Tottenham Police Court on May 1, Eugene McSweeney, chemist and druggist, 432 Green Lanes, Tottenham, was summoned by Mr. A. L. Bridge, inspector under the Sale of Food and Drugs Act, for selling vinegar of squill which was deficient to the extent of 60 per cent. in acetic acid. Sidney Charles Hudson, chemist and druggist, 601 Green Lanes, was similarly summoned, the alleged deficiency being stated at 40 per cent. Mr. Kirby (Neve, Beck & Kirby) appeared for the defence.

Mr. Bridge said the prosecution was under Section 6 of the Act, and the question arose whether vinegar of squill was a perishable article within the meaning of the Act.

Mr. Kirby: No. The point is whether it is liable to decomposition.

The Chairman: Whether it is a stable compound.

Mr. Bridge said that in ordinary circumstances decomposition would not take place in vinegar of squill. If it were left free to the air, which it should not be, etherification would set in.

Mr. Bridge then entered the witness-box to prove the purchase on January 22, at Carlton's Drug Company, Green Lanes, of 8 oz. of vinegar of squill. He was served by Mr. McSweeney. Mr. Bevan, the analyst, reported that the vinegar was deficient in acetic acid to the extent of 60 per cent.; it contained only 1·56 per cent. of the acid, and should contain 4·2 per cent. When witness made the purchase McSweeney remarked to another person behind the counter, named Wheeler, that it was thick, but witness only wanted it to test for acetic acid.

In cross-examination, witness said that he was perfectly well known to Wheeler, who, he had since ascertained, was the liquidator of the Carlton Drug-stores. McSweeney said he was the manager and had only been there a short while, and had not had time to look round. Wheeler obtained the

Digitized by Google

article from the stock-bottle, and McSweeney then called attention to its thickness, but he did not demur to selling it, because witness offered to wait until he had got it into proper condition. Witness denied that he told the defendant that he could compel him to sell the article, but after all was over he said it was a moot point whether a druggist could be compelled to sell from his stock-bottle.

With respect to the summons against Mr. Hudson, Mr. Bridge said that he visited his shop on January 7 and asked for 6 oz. of vinegar of squill. The defendant supplied him from the stock-bottle. Mr. Bevan certified that it was deficient to the extent of 40 per cent. in acetic acid, as it contained only 2·05 per cent. In reply to Mr. Kirby, witness said that he was known to the defendant, who told him that he hardly ever sold vinegar of squill. As a matter of fact the drug was hardly ever sold to the public.

Edward Bevan, county analyst, confirmed his certificates. In cross-examination, he said the article was liable to decomposition, but not in the same sense as butter and milk. It altered after being kept a month or two.

Mr. Kirby at this stage took the objection that the certificates were bad, because they did not in either case contain a statement that the article had undergone no change which would interfere with the analysis. The schedule to the 1875 Act laid it down that in the case of milk, butter, or any article liable to decomposition, the analyst must specially report whether any change had taken place in the composition of the article that would interfere with the analysis.

The Chairman inquired if decomposition had taken place, or deterioration.

Witness: Deterioration; it is not such a decomposition as would interfere with the analysis. In reply to further questions, Mr. Bevan said that one sign of decomposition was fungoid growth, and this growth would affect the quantity of acetic acid to be found. He did not think there would be etherification. He could not say whether, in fact, any decomposition had taken place in the samples he analysed. Therefore it was not possible to state whether any of the deficiency was due to decomposition.

The Chairman: These samples had not undergone any decomposition which prevented you making a complete analysis?

Witness: No.

Mr. Kirby quoted from the "Encyclopædic Dictionary" the definition of the word "decomposition," and contended that the decomposition spoken of by the witness came within the meaning therein given.

Mr. Bridge submitted that if there were no decomposition to interfere with the analysis it was unnecessary to say so in the certificates.

The Bench, subject to hearing further evidence, overruled the point on the ground that the decomposition was not such as to make the analysis untrustworthy.

Mr. Bevan was further questioned by Mr. Kirby. He said that no standard was stated in the Pharmacopœia for the percentage of acetic acid which ought to be present in the finished vinegar of squill. He would expect to find 9 per cent. of solids in the article.

Mr. Kirby said, that being so, the utmost quantity of acetic acid that could possibly be in the article was 3 8 per cent., and he showed Mr. Bevan a rule-of-three sum that proved this.

Witness admitted that possibly his standard of 4 2 per cent. was too high.

Wm. Chattaway, F.I.C., pharmaceutical chemist, Vice-President of the Institute of Analysts and superintendent of the Apothecaries' Society's laboratories, said that when properly stored the article slightly deteriorated, but not appreciably. The vinegar of squill, as sold by the defendants, was not in his opinion a proper article for sale. Witness did not consider the standard for the percentage of acetic acid in vinegar of squill should fall below 3·8 per cent., but admitted that Mr. Bevan's standards for acid and extractive were too high.

Mr. Kirby, in addressing the Bench, said that in addition to his former point that the certificates should state that the samples had undergone no change, he also relied on the fact that there was no standard for the percentage of acetic acid which ought to be present in the finished article of vinegar of squill. He was, however, not prepared to say that the quantity found in the samples was a proper per centage. He thought it was bringing the Sale of Food and Drugs Acts into contempt in trying to prove a deficiency of acetic acid in an article which was never sold to the public.

Martin Priest, Associate of the Institute of Chemistry, Henry S. Coupland, pharmaceutical chemist, and Charles Thomas Bennett, pharmaceutical chemist, each gave evidence that there was no standard for the percentage of acetic acid in vinegar of squill, and that the article was liable to decomposition in respect of the fact that the acetic acid reacts with the extractive matter of the squill so that some of the acid is fixed or decomposed. Mr. Bennett admitted that he would not consider 1·56 per cent. of acetic acid sufficient if the article were freshly prepared.

The defendant (Mr. McSweeney) explained that the inspector had been in the shop looking at the scales and weights. He then asked Mr. Wheeler for vinegar of squill, and witness, noticing a sediment in the bottle, told him he should not sell it. The inspector said he could compel him to do so, and it was only because of that he allowed Mr. Wheeler to give it. After the vinegar was handed over and paid for by the inspector, the latter insisted that he (the witness) should again hand it over to him. Witness (who had only been in the shop a day) protested against his being compelled to do so.

The Bench dismissed the summons against McSweeney, and imposed a fine of 10*s.* and costs on Hudson. Mr. Kirby asked the Magistrates to state a case, and the Bench said they would consider the matter when written application was made. This was done on May 7, and sureties given.

County Court Cases.

Blame the Law.

At the Clerkenwell County Court on May 5, the Keene Company, 75–76 High Holborn, W.C., sued George Marston, chemist and druggist, 5 London Road, Twickenham, to recover 2*l.* 5*s.* for goods sold. Defendant objected at the outset that there was no affidavit annexed to the summons, and that inasmuch as the transaction took place in Twickenham, Judge Edge had no jurisdiction. The evidence of Frederick Arthur Smith, in the employ of plaintiff was that he took the order for the goods, but never agreed to receive the money. The Judge said that as plaintiff's traveller did not undertake to call for the money at Twickenham, that disposed of defendant's plea of no jurisdiction. As to the affidavit, he was satisfied that it had been duly served. Defendant said he would swear the traveller told him he would take the money when he came round.

Mr. Smith: And I swear that I did not.

The Judge (to defendant): My opinion is that you are experienced in this sort of trickery.

Defendant: You are not justified in saying that.

The Judge: I am perfectly justified. You owe this money, and you are fighting it on every possible ground.

Defendant: Am I not justified in objecting to your jurisdiction?

The Judge: You are not justified in saying that this man is telling untruths.

Defendant: But I am telling the truth as well.

The Judge: Yes, a good many people say so, but I don't believe them. Verdict for plaintiffs with costs.

The Judge acceded to plaintiffs' application for an order upon defendant to pay their traveller's return fare from Nottingham.

Defendant: The law has been very unjust in this case.

The Judge: Yes, blame the law. The case is decided.

At the Westminster Court

this week Judge Woodfall has decided the following cases:—

Challenger v. *Wardle.* — The defendant is a chemist and aërated-water manufacturer, carrying on business at Acre Lane, Brixton, as the Brixton Syphon Water Company. The plaintiff, a carman formerly employed by him, in December last was sent out with a horse and van, and when in Park Lane the horse became restive and finally broke away the front of the van. He followed that up by kicking plaintiff, who sought damages for the injuries; 65*l.* and costs was the verdict.

Bargrave v. *Ryan.*—The plaintiff applied for the committal of defendant, described as a chemist at High Street, Whitechapel, for non-payment of a judgment debt for trade goods supplied. The defendant said he was only manager of the business, and

Digitized by Google

gave the order in that capacity. The Judge, nevertheless, made an order for payment by instalments of 10*s.* a month.

Breidenbach & Company v. *Parkes' Supply Stores.*—Here an order was made for payment in fourteen days of an account for goods supplied, defendants not being represented. [The defendants are in no way connected with Parkes' Drug Stores (Limited.)]

Bankruptcies and Failures.

Re G. B. TOWLER, Heath Town, Staffs, trading as a Chemist.—The Official Receiver of the Wolverhampton Bankruptcy Court announces that he has completed the realisation of this debtor's estate, and that the assets will only allow of the payment of a first and final dividend of 1*s.* 8*d.* in the pound.

Re THOMAS O'SULLIVAN, 89 The Quay, Waterford, Chemist.—A list of creditors has been filed without any amounts. It contains:—Fasset & Johnson, Thomas Christy & Co., Crown Perfumery Company, Burgoyne, Burbidges & Co., Koko, Harker, Stagg & Morgan, Allen & Hanburys, William Sutton & Co., Anglo-American Optical Company, D. & W. Gibbs (Limited), Hugo Lorenz, Alfred Bishop, Burroughs Wellcome & Co., Hodgkinson, Prestons & King, Fannin & Co., McMaster, Hodgson & Co., Hoyte & Son, R. Gibson & Sons, A. de St. Dalmas, J. Richardson & Co., Sumner & Co., Blake & McKenzie, Evans, Sons & Co., Vinolia Company (Limited), Idris & Co., Ayrton & Saunders.

RECEIVING ORDER.

Gould, Alfred, Knatchbull Road, Brixton, S.W., carrying on business at White's Row, Commercial Street, E., isinglass-manufacturer.

New Companies & Company News.

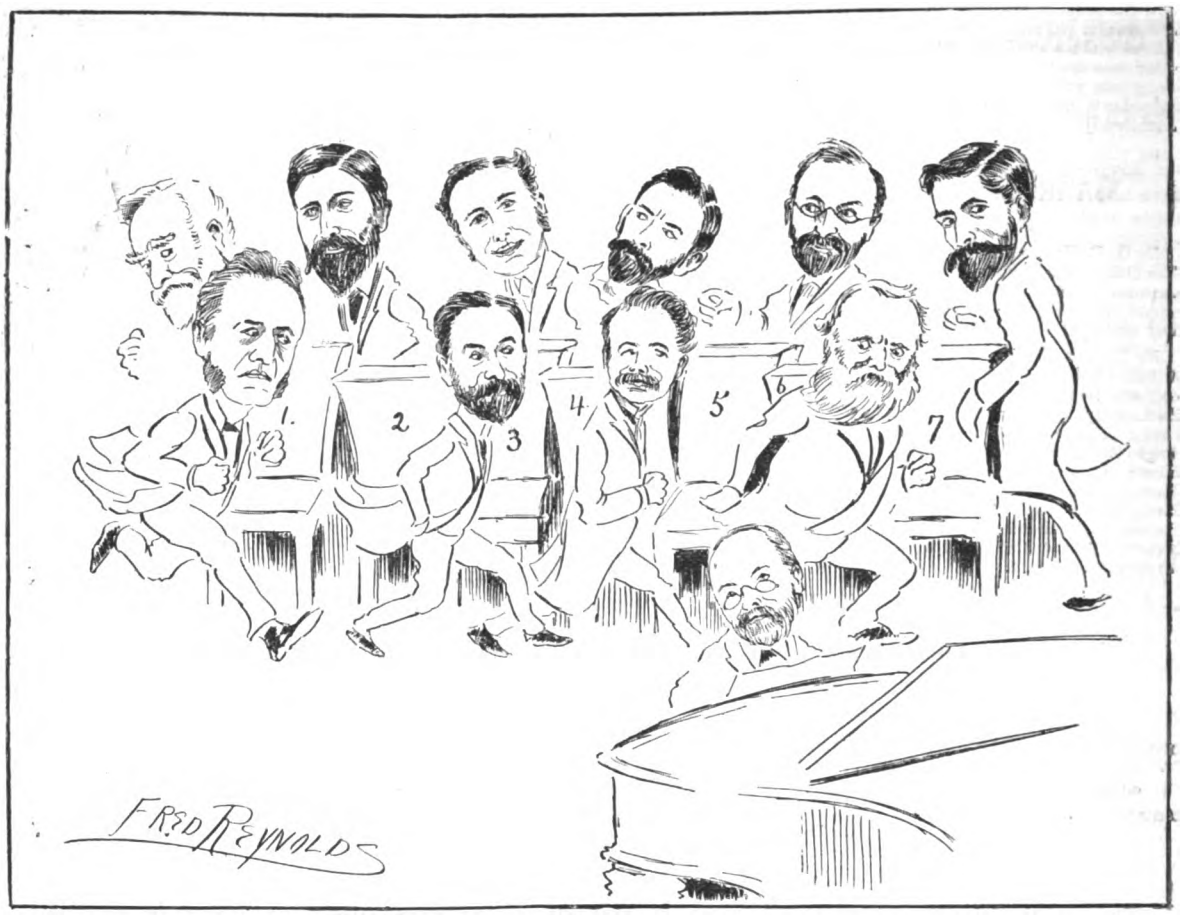
PACIFIC PHOSPHATE COMPANY (LIMITED).—Capital 250,000*l.*, in 1*l.* shares (125,000 preference). Objects: To adopt an agreement with the Pacific Islands Company (Limited) to prospect, research, examine, and explore any territories for phosphate, guano, and similar substances, and to carry on the business of miners, distillers, manufacturers, and importers of and dealers in any chemical or other preparation.

GARRY & CO. (LIMITED).—Capital 500*l.*, in 1*l.* shares. Objects: To carry on the business of a medical hall and general trade connected therewith. The first subscribers are:—Mary A. Garry, Greville Street, Mullingar; Mrs. M. Daly, Rivervale, Multifarnham; Miss Mary Daly, Martinstown, Mullingar; Miss Margaret Daly, Martinstown, Mullingar; C. Daly, Martinstown, Mullingar, farmer; Miss E. Garry, Mullingar; J. Donohue, Mullingar, auctioneer; and Miss M. M. Keane, Mullingar. Registered without articles of association. Registered office, Greville Street, Mullingar, co. Westmeath.

EWEN SYNDICATE (LIMITED).—Capital, 15,000*l.*, in 1*l.* shares. Objects: To adopt agreements (1) with A. Classen and (2) with J. M. Ewen, J. K. George, A. E. Hitchcock, A. E. Messer, and A. Riekman, to acquire any inventions relating to the manufacture or extraction of glucose, fermentable sugar and alcohol, or to turning to account the by-products of the same, and to use and deal with such inventions. No initial public issue. The first directors are J. M. Ewen, J. K. George, A. E. Hitchcock, and A. Riekman; qualification, 100 shares. Remuneration, 100*l.* each per annum. Registered office, 27 Clement's Lane, E.C.

NORTH BRITISH CYANIDE COMPANY (LIMITED).—Capital 6,000*l.* in 2*s.* shares Objects: To acquire by purchase or otherwise inventions for the production of chemicals, and other inventions which may be of advantage to the company, to secure such inventions by patents in the United Kingdom and elsewhere, and to carry on the business of manufacturers of and dealers in chemicals, &c. The first subscribers are: W. D Cairney, 45 Renfield Street, Glasgow, C.A.; T. Campbell, 45 Renfield Street, Glasgow, clerk; J. French, 45 Renfield Street, Glasgow, C.A.; J. Baird, 20 Albion Street, Edinburgh, solicitor; R. Baird, 4 Brighton Place, Portobello, writer; J. Barr, Harburn West Calder, coal-master; and A. Brown, Milverton, Lenie, accountant. The first directors are John Baird, William Cairney, and John Barr. Qualification, 1,000 shares. Remuneration as fixed by the company. Registered office, 45 Renfield Street, Glasgow.

DR. MELCHER'S SHOWER YOKE COMPANY (LIMITED).—Capital 2,000*l.*, in 1*l.* shares. Objects: To acquire the rights of Mrs. S. Schafer and Miss S. M. Schafer, trading at 3 Golden Square, W., as "P. & F. Schafer," under an agreement between the Meilink Manufacturing Company and Dr. E. Melchers of the one part, and the said P. & F. Schafer of the other part, for the sale of Melcher's shower-bath yokes, and the goodwill of the business of the said Mrs. S. Schafer and Miss S. M. Schafer in connection with the sale of the said shower-bath yokes, and to carry on the business of manufacturers of and dealers in shower-yokes, medical and surgical implements, chemicals, machines, tools, &c. The first subscribers are: Miss S. M. Schafer, 24 Vale Court, Maida Vale, W.; H. C. C. Turner, 185 Isledon Road, Finsbury Park, N., traveller; G. Andres, 15 Great Russell Mansions, W.C., merchant; J. W. Krebs, 5 Cathcart Road, S.W., gentleman; B. A. W. Andres, 45 Holland Park, W., merchant; F. J. Spahn, 33 Cloudesley Square, N., clerk; and M. J. J. Stock, 45 Holland Park, W., merchant. No initial public issue. Registered without articles of association.



GARRETTS (LIMITED).—Capital, 1,500*l.*, in 1*l.* shares. Objects: To acquire and carry on the business of a chemist, druggist, optician, oil and colourman, &c., lately carried on at 33 Commercial Street, Newport, Mon., as "Garrett Brothers," and to adopt an agreement with S. Dean, G. Bell, C. Cullum, G. F. Lovell, T. Morgan, T. Pullin, F. J. Roberts, W. Mason, C. J. Dalton, W. H. Shute, W. L. Moore, E. W. Schofield, and J. Matthias. The first subscribers are:—B. Brown, West Wick, Corporation Road, Newport, Mon., managing clerk; A. Jacobs, 37 Harrow Road, Newport, Mon., clerk; T. Berryman, Glen View, York Place, Newport, Mon., accountant; F. L. Cooper, 2 Caeran Road, Newport, Mon., solicitor; W. C. Thomas, Balmoral Villa, Park Square, Newport, Mon., insurance-secretary; F. Reed, 16 Ombersley Road, Newport, Mon., clerk; and H. O. Williams, 201 Chepstow Road, Newport, Mon., clerk. No initial public issue. The number of directors is not to be less than three nor more than five; the subscribers are to appoint the first. Qualification, 50*l.* Remuneration as fixed by the company. Registered office, 33 Commercial Street, Newport, Mon.

CASTNER-KELLNER ALKALI (LIMITED).—The report for the year ended March 31 shows a net profit of 68,319*l.*, which with the amount brought forward from last account, makes a total of 70,583*l.* An interim dividend at the rate of 4*l.* per cent. per annum has been paid for the six months ended September 30 last, absorbing 9,000*l.*, and debenture interest amounts to 10,956*l.*, leaving an available balance of 50,630*l.* Out of this the directors recommend that 15,000*l.* be appropriated to depreciation reserve, increasing that account to 40,000*l.*; that the whole of the amount standing to suspense amount (lawsuits), 6,102*l.* and 4,938*l.*, expenses and costs of amalgamation, together 11,040*l.*, be written off; and that a dividend at the rate of 8*l.* per cent. per annum be paid for the six months ended March 31, amounting to 18,000*l.*, making, with the interim dividend paid in November last, 6*l.* per cent. for the year, leaving to be carried forward to the next account a balance of 6,590*l.*

HUNTER'S experiments fixed the average temperature of the human body at 98·9° F., which is in close accordance with the results of recent observers. Davy showed that whether man was examined in the tropics or in cold countries little difference could be observed, but later observations show that there are slight but constant and seasonal variations amounting to one or two degrees.

ASPARAGUS is a well-appreciated vegetable which has well marked and well-known physiological effects on man; seakale like most of the other members of the order to which it belongs has antiscorbutic properties; salsify and scorzonera are nourishing and palatable vegetables and deserve to be more generally grown. A book on the cultivation of these vegetables has just been brought out by Mr. C. Ilott, F.R.H.S.

The Old Game of Council Chairs.

It seems odd to explain a Reynolds cartoon, but for the benefit of those who don't know, we may state that, in the sketch, Mr. Carteighe leads the top row of Council candidates, followed by Messrs. Park, Harrison, Morrison, Pickering, and Glyn-Jones. A gap is between the last named and Mr. Southall, and following him are Messrs. Rymer Young, Harrington, and Campkin. Who will get into the chairs, and why? See page 715.

See the merry gentlemen all hopping round the chairs,
Each of them expectant of a seat,
Smiling bland and broadly, unheeding all their cares,
None of them desirous of defeat;
Eager to be Councillors and keen to serve the craft;
Only seven vacancies to fill,
Praying for a gentle breeze their little ship to waft,
Safe into the haven calm and still.
Ten merry gentlemen gaily hopping round,
Pleasant merry gentlemen they are;
Dancing deft and lightly to the sweet harmonious sound
Of the musical melodious Registrar.

From turgid, titled Bond Street, from haughty Kensington,
From learned Temple Chambers come they fain;
From Sunderland and Birmingham and eke from Warrington,
Hobnobbing with the Sphinx of Mutley Plain.
And keen to break the phalanx from the city on the Cam,
Comes the gay but pertinacious candidate
Who has served his fellow-citizens and thinks his work no sham,
And who annually appears to tempt his Fate.
Ten merry gentlemen bobbing up and down,
Honest willing gentlemen they are;
Dancing to the music of the king without a crown,
The suave but subtly simple Registrar.

The Champion from Marylebone whom all assistants know,
Joins spectacled and eager in the fray;
He poses as the cutters' most uncompromising foe,
And through the trade morasses threads his way.
Another still we notice: he's a hardy annu-al,
But what partic'lar wisdom he would bring
To the Council, we confess we really cannot say at all;
We but know him as "the gentleman from Tring."
Ten merry gentlemen so nimbly sprinting round,
Capable and strenuous they are;
Prancing high and sprightly, like a panther on the bound,
And watching for the wary Registrar.

Speed on, ye merry gentlemen, and very soon we'll learn,
The favoured ones our fickle Craft doth choose.
But let the vanquished not despair, nor for election yearn,
For they might get contumely and abuse.
The wicked *C. & D.* might start and boldly criticise
Their speeches—that is, if they chance to speak;
And if they don't they'll flaunt their record in the public's eyes,
And make them weigh them up—and others seek.
Ten anxious gentlemen trying to be gay
(Some of them are shivering in their shoes);
All are feeling confident they're sure to win the day,
But the pensive Registrar doth sadly muse.

Observations and Reflections.

By XRAYSER.

The Chemist's Apprentice,

so wisely and kindly discussed by the Liverpool Chemists' Association last week, is likely to have a very different time of it from that which many of us enjoyed when we walked in his shoes. It is gratifying to have lived long enough to know how valued we old apprentices are now we are no longer available. Our pompous masters — I, for one, have long forgiven mine — always treated us as, at the best, necessary evils. Now, how they seek to coax us or our present-day representatives. Our hours are to be modified, our menial work lightened, and Mr. Wallbridge would even tempt us with a habitat map in the back shop. My own impression is that before things settle down satisfactorily all round some few sovereigns per month will have to change hands.

The Liverpool Chemists,

to their credit be it said, recognise the cruelty which the examinations looming in the future impose on their apprentices. Dr. Symes alludes to them (the examinations) as a great terror, Mr. Abraham perceives the "distress" they occasion, Mr. Cowley calls it "mental anguish," and Mr. Wallbridge proposes to fit a youth for them by reminding him of them from the commencement of his term. He is always to have in view the time when he will have "to face the examiners." The real reason for all this terror is that the examinations as now conducted do not correspond with the boy's business; that is the root of the mischief, and the boy should be told that frankly from the first. But at the same time he should be advised not to worry. He can learn his real business as an apprentice, and included in that he will learn a lot of essential things which are not recognised in the examination room. As for the other things, the things he cannot learn in his business, and which he will never want in his business, but which he must learn for the examinations, why he will have to—no, not cram, but acquire the necessary knowledge at the end of his apprenticeship by a special course of study.

Companies versus Individuals.

It is the individual who has made trade, who has invented things, who has organised, who has created possibilities of profit. Having accomplished his mission so far he retires, and the capitalist company swoops down on the nest and grabs all the eggs. That is a more or less accurate way of characterising the condition of business bequeathed to us by the last century. But there are still many contests to be decided between companies and individuals for particular sections of the field of commerce in some of which the former have the natural advantage by reason of the metal they carry, while in others, where intellect and personality count, the money advantage may be neutralised. In many of these combats there is little doubt that the result would dispose of the pretensions of companies if our old friend the law would not keep intervening for the benefit of these "artificial persons" of its own creation.

The Artificial Persons

cannot pass examinations. Therefore, says the law, if they want to be chemists, or dentists, or doctors, they may be such without any examination. They fail in business; there is no three years for them to wait for an order of discharge before they may begin again. They only reconstruct. They prefer to risk their creditors' money rather than their own. They secure theirs by debentures. Lately it has been contended that as they cannot go to prison the Sale of Food and Drugs Act ought not to apply to them; up to now the law has not quite seen its way to that conclusion. Now we come across another possible anomaly. In last week's Irish news I read that Messrs. Hayes, Conyngham & Robinson (Limited) have been deprived of a Poor-law contract because Sir Thomas Robinson, a director of the company, is also a guardian. That seems just. But another guardian, Sir Henry Cochrane, said he believed the Local Government Board's ruling was wrong. If Sir Thomas Robinson had been a private individual, it would have been correct, but a company, Sir Henry maintained, was not subject to the same condition. He himself was managing director, in fact practically the owner, of a firm which tendered to several unions, and if he were in Sir Thomas Robinson's place he would challenge the L.G.B. A cool claim, certainly, but I fancy Sir Henry is right in law.

American Trade

is a great trouble to many people. The vast difference between U.S. exports to the United Kingdom and U.S. imports from the United Kingdom suggests that we are not getting fair play. The figures given last week show a balance of nearly one hundred million pounds per annum in favour of the United States. It is a bigger difference still when reckoned on this side, because exports here are valued at a lower figure than when they have crossed the Atlantic, while imports have correspondingly increased. But there is nothing to trouble about. For this hundred million pounds worth of goods we, in a sense, pay nothing. Our exchanges of actual cash practically balance each other. We part with no gold for all that vast bulk of corn, and cotton, and pork, and patent medicines, and what not that we get from America. Most of it is merely the payment of interest on British investments in the United States. Moreover, as pointed out last week, the United States is still one of Great Britain's largest customers. Only India, Australasia and Germany buy more from us.

Mr. Campkin's Programme,

as set forth in his letter last week, is vast enough to satisfy the hungriest of electors. I suppose he realises the immensity of what he claims, but I should like to know whether he has any serious intention of striving to secure it if he should be elected. If he has, it must be said that sending Mr. Campkin to the Council could only result in a wicked waste of time. Take this one sentence from the second paragraph of his letter: "Poisons, potent drugs, and medicines should only be obtainable from, or dispensed by, qualified men, who have a direct ownership in the establishment." I do not know how much the term "medicines" may include, but restricting it, as possibly was meant, to prescribed medicines, there still remains in that sentence far more than any sane member of Parliament would dream of endorsing if it were put into statutory language. It means, at least, that the schedule of substances to be sold by chemists only would be multiplied tenfold, and that no unqualified person might be even a shareholder in a company owning a drug-store. The question is not whether we should like these things, nor even whether they ought to be; it is whether there is any sort of use in even discussing them.

Three Little Items

are all I gather from a glance through the last part of the Oxford English Dictionary. First, we are authoritatively told that the proper pronunciation of "lichen" is "leiken." In most dictionaries "litchen" is given as an alternative pronunciation, and in some that only is prescribed; but "it is now rare in educated use." The spelling of "licence" (the substantive) is stated definitely to be with "ce," not "se," at the end. "License," "though often met with, has no justification in the case of the substantive," though it may be used as a verb (like "practice" and "practise," "advice" and "advise"). "Licorice" is merely mentioned as an alternative form of spelling "liquorice," from which it appears that the latter is considered the superior method, but the Dictionary has not reached that word yet. Certainly we should not call the stuff "lickerish," for this word appears in the Dictionary as a genuine English word, meaning "something palatable."

Editorial Comments.

A Poor Year.

ALTHOUGH it is impossible to hide the fact that the deficit of 1,654*l.* in the Pharmaceutical Society's financial statement for 1901 is serious, we are not disposed to take a pessimistic view of the matter. It is well to remember that the present is essentially a period of transition. We have previously explained that the resolution to abandon the conduct of the Preliminary examination by the Society itself is detrimental, in so far as we withdraw from the public a living standard of elementary education for pharmacy, while it diverts from the treasury of the Society the considerable revenue which it hitherto derived from the conduct of the examination. The financial statement proves the correctness of this, for the revenue derived in 1901 from the registration of students amounted to exactly 144*l.* 18*s.*, compared with 3,120*l.*, the average for the five years preceding. It is evident, therefore, that this loss alone accounts for the deficit, and any elaborate analysis of the expenditure of the year would be, in face of that fact, superfluous. We may also note that in 1900 the revenue from the Preliminary examination was 4 051*l.*, and the surplus on the whole account 2,859*l.*, and in 1899 2,944*l.* and 1,943*l* respectively, so that the amount transferred to the "accumulated funds" was 4,802*l.* We regard this as in the nature of a reserve to tide the Council over the "Preliminary" hiatus, which may be reckoned to last for another three or four years, when the youths who have entered the trade since 1900 will be ready for the Minor examination, and so registering as students at the rate of about 500 to 600 a year. In this way an addition of

Digitized by Google

1,000*l.* to 1,200*l.* annually to the Society's income, with practically no further expenditure, may be reckoned upon. We still think, nevertheless, that it would have been much better for the Society to get the students to pay the Society for examining them, and to continue paying the College of Preceptors the small fees for doing the work, than to send the students to the College to pay 25*s.* for the examination and the Society 2*l.* 2*s.* for registration. That is what the whole thing comes to at present, without the more serious factor that there is to the public really no pharmaceutical Preliminary examination. Apart from the adverse balance the accounts present no exceptional feature. We observe a lot of minor economies all round which greatly reduce the extra expenditure on law and the *Journal* deficit. The latter is a little larger than it has been for some years, owing, we are told, to business being bad. It would be impolite for us to comment further upon that matter. The law costs are abnormally large—too large we were almost writing, but during the year there were three important appeals which must have run into hundreds each, without giving any monetary return. These were the Scotch appeals respecting imprisonment and the Minor re-examination fee, and the Agency Appeal in the English High Court. Besides, the Glasgow doctors' shops matter required expensive working up and attendance in London of professional men from Edinburgh. That costs money. The Society probably received about 1,000*l.* from its legal actions in the course of the year, and beyond that 1,452*l.* 9*s.* 3*d.* was spent. This is the largest amount of any single year since the Society has had to administer the Pharmacy Act, 1868, the next largest sum being 1,169*l.* spent in 1880, when the great company case was fought. We feel that the lawyers' bills require the closest scrutiny. It appears to be particularly regretful that with a larger income from members, and a sound tendency towards retrenchment in all departments of the Society's work except those mentioned, there should be such prodigality in law costs as to embarrass the financial position of the Society.

Vinegar of Squill.

MR. EDWARD J. BEVAN deservedly holds a high place amongst British chemists on account of his researches, in conjunction with Mr. C. F. Cross, on the carbohydrates. It might therefore reasonably be assumed that when Mr. Bevan was asked, in his capacity as a public analyst, to report upon a liquid known to contain carbohydrates and a tolerable percentage of free acid, he would have brought to bear upon the matter that exceptional knowledge which has made his reputation. The proceedings in the vinegar-of-squill cases seem to negative the supposition. It has long been known to pharmacists that the acetic acid in this preparation enters into combination on keeping. This was the case when it contained alcohol, and is so yet, because there are in squill-extractive mucilaginous and saccharine matters which react with the acid, even although micro-organisms are excluded. Mr. John S. Ward gave excellent proof of this in the Highgate case, his experiments, corroborated by experts from other manufacturing-houses, having shown that the loss of free acetic acid in five months amounted to 0·71 per cent. With his knowledge of the chemistry of carbohydrates Mr. Bevan did not deny the accuracy of these statements either from theory or results; indeed, when the Tottenham cases came on next day he went there fortified with a supporting witness, who is a pharmacist. But the fact is established that the amount of acetic acid in vinegar of squill diminishes from the day it is made; whether it is in consequence an "article liable to decomposition" in the sense of the 1875 Act schedule is one of the points of appeal that we may not discuss, but that the acid takes part in the hydrolysis of the carbohydrates seems conclusive.

The question of a standard also arose in the case. The British Pharmacopœia has none, in the sense that it gives no tests nor an assay process. In the circumstances the public analyst is justified in making a reasonable one. Mr. Bevan selected the acetic-acid content as the basis of his standard, and hit upon 4·2 per cent. as the necessary figure, but in the course of his evidence he added that the preparation should contain 9 per cent. of extractive matter. Upon this combined standard one chemist and druggist was convicted, and that fact, apart from the actual quality of the article sold, is a serious matter for the whole trade, therefore it is desirable to emphasise the protest by the solicitor for the defence that Mr. Bevan's factors are inconsistent with each other, so that his standard is fallacious and unreasonable. Dilute acetic acid, with which vinegar of squill is made, contains 4·27 per cent. of acetic acid, and if the vinegar contains, as Mr. Bevan stated on oath, 9 per cent. of extractive, it follows that 100 parts contain 91 parts of dilute acetic acid, or 3·88 per cent. of real acetic acid. In practice the vinegar, when prepared strictly according to the B.P., contains immediately when made 3·8 to 3·7 per cent. of real acetic acid. This was supported by evidence. The German Pharmacopœia allows for a loss of acetic acid in the process, as the menstruum prescribed contains 5·4 per cent. of acetic acid; but the titration test of that Pharmacopœia requires only 4·8 to 5·1 per cent. of the acid in the finished vinegar. The extractive content assumed by Mr. Bevan is ridiculously high, and means that about three-fourths of squill-bulb is soluble. Four per cent., as mentioned by Mr. Bennett, is nearer the mark. Dieterich found in acetum scillæ (Austrian Pharmacopœia, strength 1 in 10) from 3·98 to 5·51 per cent. of dry extractive. It is desirable that more factors should be obtained, and we shall be pleased if subscribers who have the facilities, and who make acetum scillæ, will evaporate 10-gramme quantities (or ʒiij.) to dryness, and let us have the results, and particularly the age of the sample.

One point in the prosecution can scarcely be passed without comment—viz., the observation of the solicitor for the defence that such cases as this are a travesty of the law. With that we in a great measure agree, and it is astonishing to find that in the first city of the Empire the initiative in so important a matter as this has been taken without adequate advice. We can conceive no reason for buying vinegar of squill for analysis, except that it appeared to the inspector to be a likely thing to secure convictions on. There is absolutely no ground for supposing vinegar of squill to be liable to adulteration; the essential ingredient (acetic acid, according to the analyst) is not a thing anyone would dream of omitting for the sake of greater profit. The decomposition natural to the article, but which was unknown to the prosecutors until they were told of it by the defence, is the sole ground for suspicion, and that, we submit, has not been shown to impair the quality of the article, nor has there been the slightest complaint by medical men or the public that squill preparations are of poor quality.

What is New Milk?

A COURT of the Bench Division at the High Court of Justice consisting of the Lord Chief Justice, Mr. Justice Darling and Mr. Justice Channell, last week decided on appeal in the case of Smithies *v.* Bridge, in which the appellant Smithies was convicted under Section 6 of the 1875 Act for supplying milk exactly as it came from the cow, but which contained only 2·09 per cent. of fat. The convic-

Digitized by Google

tion was upheld by the Chelmsford Quarter Sessions, and has been also by the High Court, although Mr. Justice Darling was for allowing it. He feared that the decision might be applied to some other natural product as to which there is no standard—*e.g.*, apples from an apple tree which has been sending the malic acid into its roots. His Lordship thought it was a principle capable of dangerous application to say that a man could be convicted where, without any element of fraud, he sells a natural product in the state in which it is produced. The Lord Chief Justice pointed out that the order of the Board of Agriculture as to the solids and fat of milk does not establish a standard for what is or what is not genuine, but is only *prima facie* evidence, nevertheless the purchaser when he asks for new milk is entitled to have an article which is not other than ordinary new milk by reason of any special way in which the cows have been treated. In the present case the milk was the morning drawing, obtained sixteen hours after the last milking. The decision is satisfactory, notwithstanding Mr. Justice Darling's clever analogy, because, had the appeal been sustained, it would have made a most dangerous ruling which clever and unscrupulous cow feeders would not have been slow to take advantage of. It is perfectly well known that the morning milk after a long interval is poor in fat because the fat is assimilated by the cow, and it is also known that milk may be naturally "watered" by feeding the animals upon brewers' grains. A decision different from that of last week would have encouraged this quasi-natural watering.

ROTHAMSTED EXPERIMENTAL STATION.

The Lawes' Agricultural Trust Committee, at a special meeting held on Friday, May 2, appointed Mr. A. D. Hall, M.A., principal of the Agricultural College, Wye, to succeed the late Sir Henry Gilbert, F.R.S., as director of the Rothamsted experimental station. Principal Hall, who received his training at Oxford, and has since distinguished himself by his successful development of Wye College as a centre of agricultural education, will thus carry on the historic experiments that were jointly conducted by Sir J. B. Lawes, Bart., and Sir Henry Gilbert for over half-a-century at Rothamsted, and it is anticipated that not only will the continuity of the work of the past be maintained, but that the progress of science will be advanced in new directions at this national centre of agricultural research. The manor of Rothamsted is situated in the county of Hertford, and is mainly included in the parish of Harpenden. It has been in the possession of the Lawes family since 1623. In that year it was purchased from the owner, Edmond Bardolf, for John Wittewronge, a minor, whose ancestor, Jacques Wittewronge, had about 1564, on account of religious persecutions, left Flanders and settled in Stantonbury in Buckinghamshire. John Wittewronge was first created a knight, and afterwards a baronet, by Charles II. In the absence of male heirs the baronetcy lapsed, and the Lawes family succeeded to the estate by marriage with Mary Bennet, a great-granddaughter of John Wittewronge. John Bennet Lawes, the first of the name, died in 1822, and was succeeded by his only son, John Bennet Lawes, the founder of the Rothamsted Agricultural Station, who died in 1900, and was succeeded by his only son, Sir Charles Bennet Lawes, Bart., the present owner, to whom the King has now granted license and authority to take and use the surname of Wittewronge in addition to and after that of Lawes, and also to quarter the arms of the Wittewronges with his own.

SOCIETY OF CHEMICAL INDUSTRY.

The official arrangements for the annual meeting, to be opened at University College, Liverpool, on Wednesday, July 9, at 11 A.M., by Mr. Ivan Levinstein (the President), include luncheon at the Adelphi Hotel, a garden-party at Seaforth Hall, and reception by the Lord Mayor in the Town Hall—all on that day. On Thursday there are to be excursions to various works in the district, including the United Alkali Company's works at Widnes, and Lever Brothers' soap-works at Port Sunlight. The annual dinner is to be in the Adelphi Hotel that evening, and there will be a whole day excursion to Llandudno and Beaumaris on Friday. Dr. John Clark, Mr. E. Grant Hooper, Dr. F. B. Power, Professor Wm. Ramsay, F.R.S., and Mr. Thomas Tyrer have been nominated as Vice-Presidents.

STAMPING B.P. PREPARATIONS.

Mr. W. S. Glyn-Jones has been summoned by the Inland Revenue authorities to show at the Stepney Police Court on May 16, at 2 P.M., why he should not stamp ammoniated tincture of quinine. He sold a bottle of it, for the purpose of a test case, to one of the Revenue officers, labelling it :—

AMMONIATED TINCTURE OF QUININE, B.P.

A well known and highly recommended remedy for colds.

A teaspoonful in water every four hours until relieved.

Mr. Glyn-Jones claims that he as a chemist and druggist is entitled under the exemption of the Stamp Act, 1812, to sell the article unstamped when so labelled. The case promises to afford the drug-trade an important ruling.

APRIL BUSINESS.

The trade of the United Kingdom in April picked up well, so far as the Board of Trade returns show. Imports were 46,199,928*l.*, or 3,518,052*l.* better than April, 1901, 235,004*l.* of this increase being in chemicals, &c., and 141,415*l.* in oils. Exports also improved by 1,505,498*l.*, the total being 23,492,529*l.* Here also chemicals improved to the extent of 215,443*l.* on a total of 1,028,188*l.* The following are the more interesting figures in exports :—

Aërated waters	62,579 doz.	10,010*l.*	—
Bleaching materials ...	75,989 cwt.	23,619*l.*	+
Copper sulphate... ...	11,223 tons.	222,945*l.*	+
Medicines...	—	114,117*l.*	—
Quinine salts	63,232 oz.	4,355*l.*	
„ (foreign) ...	13,552 oz.	793*l.*	
Soda compounds ...	370,959 cwt.	116,611*l.*	+
Quicksilver	128,148 lb.	14,434*l.*	

The signs at the ends of the lines indicate decrease or increase. In medicines the decrease was only 735*l.* The exports of soaps increased by 20,702*l.* during the month.

THE DISPENSING OF POISONS.

We have frequently drawn attention to the necessity for the employment of none but qualified dispensers in public institutions. It still remains an anomaly, however, that a considerable majority of public dispensers possess no legal qualification whatsoever. This fact was brought out in a startling manner by the statistics presented by Mr. R. Welford at a meeting of the Public Dispensers' Association last week. According to Mr. Welford there are over 300 dispensers employed in public institutions in London, many of whom dispense 400 prescriptions a day. Taking half that number, to allow a margin, there are some 60,000 prescriptions dispensed per diem, and at least half that number contain scheduled poisons. In the report compiled by the Association for presentation to the Pharmaceutical Council it was stated in the 716 institutions of which particulars were obtained, only 29 per cent. of the dispensers held the pharmaceutical qualification, while 5 per cent. had the assistant's certificate of the Apothecaries' Hall. Thus only one-third were qualified, and assuming, therefore, that there is something like equal distribution, no fewer than 20,000 lots of scheduled poisons are distributed to the public daily by unqualified persons in London alone. A searching analysis might tend to reduce Mr. Welford's actual figures

Digitized by Google

considerably, but even supposing 10,000 were found to be a more correct estimate, the subject certainly calls for serious attention.

Westminster Wisdom.

(By our Parliamentary Representative.)

APPOINTMENTS ON WEST AFRICAN MEDICAL-STAFF.

No Indian medical men, although having British degrees, need apply for appointments on the West African medical-staff. Mr. Chamberlain told Mr. Caine the other day that they are not eligible. "Why exclude them?" further queried the member for Camborne. "It is a matter for argument," replied the Colonial Secretary, "but there are circumstances which render the employment of medical men of Indian birth in West Africa undesirable." Mr. Caine: "I will raise the matter on the right hon. gentleman's salary." Mr. Chamberlain: "By all means."

DUTIES UPON FOREIGN-MANUFACTURED GOODS.

An interesting debate is promised on the second reading of the Finance Bill. One of the proposals to be put forward is that no scheme of national finance will be acceptable to the House, under the circumstances of the time, which does not make provision for raising a substantial revenue by Customs duties upon foreign-manufactured goods.

A METHOD OF STATING ANALYSIS.

Mr. Ffrench is deeply concerned about the trade morality of the sellers of artificial manures. He has asked the President of the Board of Agriculture whether his attention has been called to the fact that the sellers of artificial manures are enabled to obtain for them much more than their value owing to the method of stating analysis on trade circulars and price-lists. It appears that the way "nitrogen," "potash," and "phosphates" are put down is what vexes the soul of the hon. member. Mr. Hanbury stated, in reply, that the vendor of any fertiliser in a quantity not less than ½ cwt. is required to send to the purchaser an invoice stating the name of the article, whether it is an artificially compounded article or not, and what is at least the percentage of the nitrogen, soluble and insoluble phosphates and potash, if any, contained in it, and that invoice acts as a warranty. It was considered when the Act was passed that this afforded an adequate protection to the purchaser, and Mr. Hanbury has not had sufficient evidence to show that this has not been the case.

THE CHEQUE-DUTY.

This matter has made little progress since my last report. It was stated early in the week that the clause dealing with the matter in the Finance Bill will simply retain the 1*d.* cheques for sums under 2*l.*, and make sums over that pay 2*d.*, but since then the Chancellor of the Exchequer has received an influential deputation of bankers, and has stated, in reply to a question in the House, that he will have nothing to say about the matter until the Finance Bill is introduced.

Scientific Progress.

A New Source of Dulcite.—This interesting member of the carbohydrate group has been isolated by Thoms from *Salacia fluminensis*, one of the *Hippocrataceæ* of Rio de Janiero. Its identity was confirmed by its melting-point, composition, and formation of a hexacetyl derivative melting at 171° C.—(*Apoth. Zeit.*, 1902, 234.)

A New Chloral Compound.—By the condensation of one molecule of urea with one each of chloral and bromal, a crystalline compound of all three bodies is produced, which is proposed as a remedy where a sedative is prescribed in certain modified forms. Its exact therapeutic properties are being examined, and will be reported later.

A New Arsenical Remedy.—The anilide of meta-arsenic acid has been introduced as a new arsenical remedy under the name of "Atoxyl." It has the composition $C_6H_5NHAsO_3$, and contains 37·69 per cent. of arsenicum. It is a white, odourless powder, with a strong saline taste, and is soluble in cold water to the extent of about 2 per cent., and in hot water to 20 per cent.

The Coniine Bases.—Ahrens (*Berichte*, 1902, 1330) has isolated a new derivative of the alkaloid coniine from the residues of the preparation of coniine supplied to him by Merck. This residue has a high lævorotation, and its principal component was found to be normal methyl-coniine. It is a colourless oil, smelling like coniine, boiling at 176° C., and of the high lævorotation −82°. Its sp. gr. is 0 8349. Attempts were made to prepare pure lævo-coniine from a mixture of the inactive and dextro bases. The highest rotation that could be obtained by separation with tartaric acid in the usual manner was −15°. The pure dextro-coniine, however, has a rotation of + 18°.

A New Glucoside.—Barger (*Berichte*, 1902, 1296) has isolated a new glucoside from *Saponaria officinalis*—which he terms "saponarin," and which, on account of its yielding a blue colour with solutions of iodine, appears to have been mistaken in micro-chemical examinations for a species of starch. It was prepared by making a watery extract of the dried leaves and acidifying the filtered extract with acetic acid. After a time a white precipitate settled out, which consisted of nearly pure saponarin. It was purified by solution in sodium-carbonate solution, reprecipitation by means of acetic acid, and recrystallisation from water. It then formed white, doubly refracting needles. It is only slightly soluble in cold water and alcohol, and to the extent of one in a thousand in hot water. It is dissolved easily in alkaline solutions. No formula is suggested for it, but its composition is: C = 50.66; H = 6·30: O = 43·04. It yields a sugar on hydrolysis, and one or more bodies not identified. An examination of its decomposition-products led the author to consider that it is a glucoside of the flavone series.

"Truths."

But, thanks to Jaubert, you and yours
No more need seaward roam;
No more need seek that ozone-cure
Where Neptune's billows foam;
You now can buy it in a box
Quite easily at home—
Packed, within limits quite the snuggest,
In pastilles—sold by any druggist.

For, whilst the chemist up-to-date
The Jaubert Pastille stocks,
You, we repeat, can purchase health
Packed neatly in a box;
Can stay at home when folks, less wise,
Rush to the coast in flocks;
And test, with grateful assiduity,
The Paris savant's ingenuity!—*Truth.*

IT MAY INTEREST young and enterprising members of the dental profession to know that the demand for dentistry at reasonable prices on the part of the Army in India is at present very much in excess of the supply. The charges of European dentists are virtually prohibitive to the Army, as much as 30*l.* being charged for a set of artificial teeth.—*Truth.*

MR. ALABONE AND HIS TREATMENT get more than a page in *Truth* this week. In one part of the article we read:—

The *modus operandi* of this gentleman, with his advertisements, American degrees, and diagnosis by printed interrogatories, and with or without his private inventions, bears too close a resemblance to that of many an unscrupulous impostor denounced in these columns for me to suggest that, having purged his original offence, he ought now to be readmitted to the Royal College of Surgeons.

Referring to the removal of Mr. Alabone's name from the Medical Register, *Truth* says:—

There is no denying the fact that the particular offence for which Mr. Alabone was condemned is one which the most eminent lights of the profession habitually commit with impunity. If the notice of Mr. Alabone in *Moonshine* was one requiring the subject of it to justify himself before his College, such justification was equally required from Sir William Gull, Sir James Paget, Sir Andrew Clark, Sir James Crichton Browne, and all the other subjects of similar notices in the same paper.

AT a recent meeting of the Academy of Medicine, at Paris, it was stated by M. Giesel that compounds of radium produce a perception of light in the eye even when a screen is interposed between the eye and the radium compound. The screen may be of metal and the whole of the visual field appears full of light. The same sensation of light is felt if a glass tube containing a few centigrammes of radium chloride be pressed against the temple.

Association Affairs.

Glasgow and West of Scotland Chemists' Trade Association.

Between thirty and forty registered chemists met in Room 17 of the Athenæum, St. George's Place, Glasgow, on Thursday evening, May 1, at 8.30, to consider a proposal for the formation of an Association similar to that which has been so successful in Edinburgh and district, and which deals solely with commercial and legal matters, leaving the practical and scientific to other bodies. The attendance was disappointingly small. It included about half-a-dozen country chemists, amongst them Mr. James Reid of Dumfries, and a few drug travellers. The tone of the meeting was rather subdued, and somewhat depressing. It was observed that some pillars of the Glasgow and West of Scotland Pharmaceutical Association were conspicuous by their absence, and it is an open secret that the organisers of the meeting have overlooked the fact that the old Association did well in regulating prices in the past, and might do so again.

Mr. J. W. Sutherland, managing director of Messrs. Frazer & Green (Limited), was voted to the chair on the motion of Mr. J. Anderson Russell. Mr. Sutherland opened the proceedings by requesting reporters to withdraw, as "an official report would be sent to the journals by the Secretary." He explained the objects of the Association, saying that the new forms of competition with which chemists in the district are threatened required that there should be agreement amongst them in regard to trade matters. He referred to the recent success in advancing the prices of proprietary articles as an indication of what it was possible to do by united efforts, and concluded by asking someone to move the adoption of

The Draft Constitution.

This has already been outlined in The Chemist and Druggist. It consists of twelve clauses, which provide that the Association shall consist of those engaged in the retail and wholesale trade, either on their own account or as members of firms. Gentlemen not eligible for membership may be elected honorary members. Its objects shall be to promote the trade interests of its members, and to maintain their rights in the exercise of their business. The business of the Association shall be conducted by an executive of thirteen members. The chairman shall call a meeting on a requisition signed by six members, or as circumstances may require. The annual subscription shall be 5*s*. The annual meeting shall be held in October in each year.

The Chairman's request for a mover revealed the fact that the persons present were slow to take initiative, but ultimately Mr. John Foster moved and Mr. Archibald McNaught seconded its adoption. After a long pause Mr. C. T. Cockburn rose, as one of the promoters of the Association and originator of the recent proprietary price-list. "Fair profits on patents and proprietary articles" was his text. The time has come, he said, when we must have that, and from information received he was able to tell the meeting that if they or a majority of the retailers were agreed the manufacturers would back them up and co-operate with them.

"How?" queried a gentleman. "And supposing this Association is formed, are we to stand by ourselves, or shall we be affiliated with the P.A.T.A.?"

The Chairman promptly ruled that this was not the time to go into matters of that kind: they could not discuss what they would do until the Association was formed.

Mr. Cockburn continued his speech. He objected to the compulsion exercised by the P.A.T.A., and thought it fatal to the success of that organisation. If a retailer cut the price of a single article on the protected list, he laid himself open to getting supplies of all the others stopped, and the manufacturers did not like that.

When Mr. Cockburn sat down there was another pause, the silence being broken only by the Chairman's courteous requests for speakers. At last a country chemist got up, and greeted the formation of the Association with enthusiasm. Next Mr. J. P. Gilmour chimed in with a welcome to the proposal as a means of promoting the general trade-interests of chemists and fostering good feeling amongst them, but he regretted that they should do anything which would help to perpetuate the traffic in "patents."

Mr. James Reid (Dumfries) then gave the meeting a taste of his piquant style. So far there had been some clever manœuvring to get round the central point without touching it, but he went straight for it. There is no use, he said, beating about the bush. Boot was the enemy and the meeting was a council of war. Mr. Reid's counsel to the meeting was "cut down patents to rock-bottom prices." He read extracts from his recent letter in the *C. & D.*, and treated the meeting to an account of the methods of Boots (Limited), reminding his hearers of the mess Edinburgh chemists made of it when Inman went there. "Ignore them," was the policy then adopted, and if the same was now done in Glasgow the results would be as disastrous.

The Chairman did not agree with what Mr. Reid said about Boots (Limited), who, he explained, had different prices for different towns, and took very good care when they went to a place where there was a strong association and well maintained prices to fall in with the tariff, but if there was keen cutting Boots showed the public that they could cut too.

Mr. Arthur McKellar did not like the way the discussion was tending and said so, whereupon the Chairman put the motion to the meeting, and the constitution was adopted without a dissenting voice.

The Executive Committee

was then appointed, the following being chosen:—Messrs. C. T. Cockburn, James Cockburn, T. Dunlop, J. Fraser (Paisley), J. P. Gilmour, J. H. Hart (Partick), George Mackie, Robert McAdam, John McMillan, Archibald MacNaught (Greenock), John Murchie (Bridgton), James Reid (Dumfries), and J. W. Sutherland. The last-named was appointed convener, and Mr. T. Dunlop is to act as Secretary and Treasurer.

This was practically all the business, but the Chairman asked authority to prepare

That Report for the Journals.

Silence almost implied consent, but it was broken by Mr. John McMillan interposing with a motion not to send a report to any newspaper or any journal, and so it was unanimously decided. It goes without saying, therefore, that this is not an official report, and we agree with the remark made by one who was at the meeting, "There was absolutely nothing worthy of concealment." The meeting broke up twenty minutes before "closing-time."

Mr. Tocher's Scheme at Home.

A meeting of chemists of the North-east of Scotland was held in Gordon's College, Aberdeen, on Friday evening, May 2, under the auspices of the Aberdeen Pharmaceutical Association and the East Aberdeenshire Association. The subject for the evening was an explanation by Mr. Tocher, F.I.C., Peterhead, of his scheme of pharmaceutical education. There was a large attendance of chemists presided over by Mr. Andrew Craig, who in a few introductory remarks expressed the hope that all present would take part in the discussion of Mr. Tocher's paper. Mr. Tocher then delivered his address, which followed the lines of those which we have already printed, the University degree for pharmacists being specially dealt with. At the close of the address the Chairman said Mr. Tocher admitted that the Minor qualification is sufficient for the pharmacist, yet he proposed to educate him still further. The public would not appreciate the degree; they did not at present appreciate the Major qualification. Probably half-a-dozen gentlemen would go in for the degree annually, and were they to have this upheaval in their educational system for the sake of such a small number? He did not think the ordinary chemist's apprentice was in a position to attend the lectures for the months necessary. He had seen it reported that Lord Elgin had stated that no one could participate in the benefits of the Carnegie Trust unless he intended to take a degree, and this would exclude pharmaceutical students.

Mr. Giles then moved the following resolution:—

That this meeting of the chemists of the North-east of Scotland, having heard Mr. Tocher explain his scheme of pharmaceutical education, approves of the principle of it, providing, as it does, a

Digitized by Google

university training for students working towards the Qualifying examination, and the institution of a degree in pharmacy constituting a voluntary and honours course.

Mr. Giles added that he heartily approved of the scheme, which he believed to be the best solution of the educational problem, while it elevates the status of the chemist more than anything of the past sixty years, especially if at the same time the sole right to dispense medicines and deal in poisonous drugs were reserved to them. He claimed that the doctor and the lawyer have such a right as regards their profession, and suggested that the right of the prescriber to dispense medicines should be considered.

Mr. Charles Simpson seconded the motion.

Mr. James Paterson doubted if the university course would be practicable. He thought if the scheme were to be gone into and prove a benefit to the future pharmacist the Society should accept passes in several of the subjects of the universities.

Mr. Johnston was perfectly sure Mr. Tocher would see his scheme carried out.

The resolution was unanimously adopted, and Mr. Tocher replied.

Edinburgh Chemists', Assistants', and Apprentices' Association.

THE annual business meeting of this Association was held at 36 York Place, Edinburgh, on April 30, Mr. J. G. Sclater (President) in the chair. The Secretary (Mr. P. K. Brown) read the report of the Prize Committee on the examination for

THE PHARMACY PRIZE

presented by Mr. J. Laidlaw Ewing, and which was awarded to Mr. Thomas Lyon, pupil with Mr. George Lunan, 20 Queensferry Street, who had obtained 90 per cent. of marks. Greenish's "Materia Medica" and Squire's "Companion" were the books he got.

The Secretary read next

THE ANNUAL REPORT,

and the Treasurer (Mr. John Wright) the financial statement, which showed that the membership had increased and that there was a balance of 3*l.* 10*s.* in hand. It was agreed to give 1*l.* 1*s.* to the Benevolent Fund.

The President delivered, as a valedictory address, his second instalment of

THE PHARMACIST IN LITERATURE,

an abstract of the first portion having appeared in THE CHEMIST AND DRUGGIST, November 9, 1901, page 785. Mr. Sclater on this occasion dealt first with men of letters who had been pharmacists, and then with pharmacists who had been dabblers in literature or were friends of literary men. In the biography of James Melville, nephew of Andrew Melville (after Knox, Scotland's greatest ecclesiastical reformer), is quoted an incident which shows at a glance the character of at least one good apothecary. Andrew Melville was put in the Tower by James I. His nephew had tried all he could to mitigate the imprisonment, but without avail. He had to quit London in a fortnight, and we read that on the day he and Scott were setting out for the North two or three of their acquaintances in London visited them, and one of these—a Mr. Crosbie—"a guid brither apothecarie of calling, brought with him a great bag of monie and also meikle as he could weill carrie in his oxter." Again, when Amyat, the King's chemist, was in town, he said to Smellie, the bookseller, "Here I stand at what is called the Cross of Edinburgh, and can in a few minutes take fifty men of genius by the hand." This exclamation, Mr. Sclater asserts, was not so extravagant after all; for Smollett, who began life as an apothecary, said of the same period that "Edinburgh was a hotbed of genius," and certainly the latter part of the eighteenth century was the palmy days of Edinburgh as a literary centre. Mr. Sclater then related the story of the finding of the Book of St. Albans (in which a Gainsborough chemist figured, the book having been sold to him for shop-paper), as an example of the value of a chemist knowing a good book when he sees it. After alluding to Macaulay's sneer at the apothecary's boy, Mr. Sclater went on to say that literature and pharmacy are an incompatible mixture if prominence is to be attained in either. Men who have started life as pharmacists, but devoted their lives to literature, have been hopeless failures as chemists. Some have failed in both. Keats started life as an apothecary, being bound apprentice for a term of five years to a surgeon at Edmondton named Hammond, but before the five years were nearly over Keats had quarrelled violently with his master and left him. Crabbe, the poet, was first an apothecary, but after many vicissitudes in the "hated profession" he left it, taking with him only a passionate love for botany, which never forsook him. Mr. Sclater mentioned some ancient men of talent who were associated with the apothecary's art, and quoted some of their queer opinions about physic, gradually working round to Samuel Johnson, whose "Life," by Boswell, he strongly commended his hearers to read. [Take Carlyle's essay thereon as a taster.—EDITOR.] The "Life" affords many interesting passages about physic, and to these Mr. Sclater did full justice. He then told how Godfrey & Cooke's business was founded, showing, through the kindness of Mr. T. E. Greenish, the present proprietor of the business, the original portrait of Ambrose Godfrey Hanckwitz, the founder. Next Mr. Sclater mentioned the picture of pharmacy in Garth's poem "The Dispensary," Burns's "Death and Dr. Hornbook." Boswell's description of a visit to the museum of Mr. Richard Green, apothecary, Lichfield, was then referred to, as well as many other apothecary friends of Samuel Johnson, including Dr. Bathurst, Mr. Diamond of Cork Street, Mr. Holder of the Strand, Dr. Laurance, Mr. Devaynes, and Robert Levet. The vicissitudes of Oliver Goldsmith, and the classical meeting of Johnson and John Newbery, gave the President a grateful theme. Newbery's most lasting fame, he said, was achieved by his writing and publishing many books for children. "The History of Little Goody Two Shoes: To all Young Gentlemen and Ladies who are Good, or intend to be Good, this book is inscribed by their Old Friend, Mr. John Newbery, in St. Paul's Churchyard," was written by Goldsmith. Many well-known anecdotes were retold of Mr. Newbery. Goldsmith was himself at one time an apothecary's assistant. After his tramp through the Continent with his flute he returned to England with only a few pence in his pocket, and offered his services to several apothecaries as a journeyman, but without success. Eventually he got employment in the laboratory of a chemist near Fish Street Hill, but only remained in it a few months. After this he set up as a doctor.

Tobias George Smollett, also connected with John Newbery in the same manner that Johnson and Goldsmith were, began life as an apothecary. He was born at Renton, Dumbartonshire, in 1721. He was early apprenticed to a Mr. George Gordon, surgeon and apothecary in Glasgow, who in after years was very proud of having had the great novelist as his pupil, and would say, as he gave a rap to his snuff-box, "Gie me ma ain bubbly-nosed callant wi' a stane in his pouch."

Coming to the nineteenth century Mr. Sclater began his review with an appreciative sketch of Jacob Bell's literary associations, which included Charles Dickens, who one day was in the historic Oxford Street shop, and observed a poor lad working about the shop in whom Mr. Bell had taken an interest. Eventually this lad became the prototype of Smike in "Nicholas Nickleby," and to this day the junior assistant in Bell's is called "Smike." Mr. Walter Hills is doubtful of giving a sanction of authenticity to the story, but admits that "there is a rumour to that effect."

Henry Russell, the composer and singer, was apprenticed to a chemist, and when about ten years old (that is five years before the Bardell *v.* Pickwick case), was left in charge of the shop. He discovered just in time that he had served a customer who had asked for Epsom salts with poison sufficient to kill fifty people. On this he gave up the profession. This incident is said to have been told to Dickens and to suggest the incident of the chemist in the Bardell *v.* Pickwick case. In like manner Mr. Thomas Hyde Hills was, according to the late Sir Richard Quain, the prototype of the Cheeryble brothers.

A prominent Edinburgh pharmacist still living was on intimate terms with Dr. John Brown, author of "Rab and his Friends," and tells many delightful stories of him. The life-long friendship that existed between Robert Louis

Digitized by Google

Stevenson and Mr. H. B. Baildon was finally detailed, and extracts relating to pharmacy that appeared in Stevenson's works were given, as well as some reference to his acquaintance with the late Mr. Powell, of Hyères, which was charmingly described in THE CHEMIST AND DRUGGIST by the late Mr. W. Lloyd Williams, when Stevenson died.

A cordial vote of thanks having been accorded to the President, the following were elected

OFFICE-BEARERS FOR NEXT SESSION:

President, J. W. Plenderleith; Vice-President, J. G. Sclater; Secretary, Albert E. Kelly, 11 Elm Row, Edinburgh; Assistant Secretary, J. Garrow; Treasurer, E. O. Rowland; members of Committee, Messrs. Brown, Buist, Harley, Hutcheon, Lyon, Wood, Wright, and Tait; Prize Committee, the President, Vice-President, and Secretary, and Messrs. Cowie, Duncan, and Harley.

Chemists' Assistants' Association.

THE last "Musical and Social Evening" of the present session of the above Association was held at 73 Newman Street, W., on May 1. Mr. A. W. Waring, of 3 Bucklersbury, E.C., presided, and there was a good attendance of members. Songs were contributed by Messrs. E. H. and J. A. Barker, Blin, Donally, Easton, Everson, Jones, Milner, Morley, and Latreille, and Mr. H. Ffoulkes gave a humorous recitation. The duties of accompanists were ably performed by Messrs. Coupland and Parker. A collection was made on behalf of the Benevolent Fund of the Pharmaceutical Society, and half-a-guinea was obtained.

Cardiff Pharmaceutical Association.

A GENERAL meeting was held on April 30 at the Park Hotel, the Treasurer (Mr. A. Hagon) in the chair. It was decided that as the picnic of 1901 was so successful another should be held this year, in July, and a committee, composed of Messrs. H. S. Fargher, H. H. Prosser, R. Prust, J. D. Jenkins, J. Reynolds and the Hon. Secretary, was elected to make the necessary arrangements.

The question of the stamping of patent medicines was down for discussion, but was postponed. A suggestion was made that smoking-concerts should be held more frequently, and effect was given to this by the unanimous decision to commence the next Winter Session with one.

The meeting which was to have been held in May has been postponed.

Wolverhampton Chemists' Association.

THE meeting held on Monday, May 5, was a juniors' night, and Mr. S. Phillips (the President) gave them some excellent advice in the course of his paper, entitled "Hints on the Study of Botany." He considered that chemists should study botany well, especially because medical men no longer learn it, so that chemists may be able to take the places as botanists which medical men will vacate. For field work he recommended "Farmer's Practical Botany" and "John's Flowers of the Field." Pharmaceutical students should take the list of plants in the Minor syllabus as the basis of their studies and herbaria. The President was thanked for his lecture on the motion of Mr. Warner, seconded by Mr. A. C. Weaver.

Midland Pharmaceutical Association.

THE annual meeting of this Association was held on Tuesday, May 6, at the Great Western Hotel, Birmingham, Mr. J. Barclay (President) in the chair. There were also present Messrs. T. Barclay, A. W. Southall, G. E. Perry, F. H. Alcock, W. M. Freeman, A. W. Gerrard, J. Poole, J. T. Cattell, and G. H. Brunt (Hon. Secretary).

The President moved the adoption of the annual report, a summary of which we published last week. Mr. J. T. Cattell seconded the motion, and it was agreed to.

EARLY CLOSING.

The Hon. Secretary announced the receipt of a letter from Lord Avebury stating that his Lordship understood the Association to be in favour of the Early Closing Bill, and asking for a petition in its favour. Mr. Freeman could not understand how the impression had got abroad that the Association was in favour of Lord Avebury's Bill, as the resolution passed only expressed sympathy with the movement. The President reminded the members that the resolution stated that, whilst in sympathy with the early-closing movement, the Association was not sufficiently acquainted with the details of any particular Bill to give it their support. It was resolved to reply to Lord Avebury to this effect.

THE NEW COUNCIL

was constituted as follows:—Birmingham and Aston: Messrs. F. H. Alcock, J. Barclay, T. Barclay, F. Barlow, G. H. Brunt, F. Stokes Dewson, W. M. Freeman, G. E. Perry, J. Poole, F. H. Prosser, W. C. Scott, A. Southall, A. W. Southall, C. Thompson, J. Wakefield, and T. Wakefield. Brierley Hill: Mr. F. R. Fletcher. Dudley: Mr. G. T. Owen. Moseley: Mr. T. W. Lowther. Stourbridge: Mr. W. R. Sellick. Wallsall: Mr. J. O. Morris. North Warwick: Mr. J. C. Cattell. Wolverhampton: Mr. F. J. Gibson. Coventry: Mr. J. Hinds. Handsworth: Mr. F. Smith. Oldbury: Mr. A. W. Gerrard. Sutton Coldfield: Mr. T. Cattell. Warwick: Mr. C. P. Pratt. Wednesbury: Mr. G. Morris.

THE ANNUAL DINNER

was held after the meeting, under the presidency of Mr. J. Barclay, who, in addition to the gentlemen already mentioned, had the support of Dr. Hall Edwards, Mr. Leedham Green, and others. After the toast of "The King," the Chairman proposed "The Pharmaceutical Society," referring, in the course of his speech, to contemplated legislation and the draft Bill of last year, as well as to pharmaceutical education and the scheme for a degree in pharmacy. He held the view that the man who had been trained in the university was better able to deal with any subject which came before him than the man who had not had the advantage of such training. He was all for higher education in pharmacy, and he hoped before long something in that direction would be done in Birmingham.

Mr. A. W. Gerrard acknowledged the toast, and spoke of the beneficial influence the Society had exercised in connection with the production of the British Pharmacopœia, and touched upon topical subjects, especially the sale of poisons, and shops which look like those of chemists and druggists. He suggested that the Pharmaceutical Society would do real good work by making strict inquiry into the methods by which these businesses were carried on, and by whom, and by taking strong and energetic measures to have these shops closed or carried on on legitimate lines the Society would do good service.

Mr. Thomas Barclay proposed "The Medical Profession," which Dr. Hall Edwards acknowledged. The only other toast was "The President," proposed by Mr. Hollick, who took occasion to comment on the recent Inland Revenue prosecutions, which, he urged, were not in accordance with the spirit of the law. The speeches were interspersed with music.

Egg-preservation.

FEW subjects have brought us so many inquiries this year as the use of solution of sodium silicate in preserving eggs. We have replied to all, and now quote a useful paragraph from the *Times* based on observations made in the Rhode Island Experimental Agricultural Station:—

Of all the substances experimented with, however, water glass solution proved to be the most worthy of commendation. This material may be obtained of druggists at about 2*s.* 6*d.* a gallon. It is easily manipulated, and the solution may be repeatedly used. The eggs should be completely immersed in the solution, and, if any eggs float, an inner cover which will sink them below the surface of the liquid should be used. In several tests where the eggs were placed in stone jars inverted saucers were used for this purpose. The water glass, or soluble glass, which was employed was of sp. gr. 1·12, and was diluted with water to a 10 per-cent. solution—that is, 1 pint of water glass added to 9 pints of boiled water. It was found, however, that the strength could be reduced to as low as 3 per cent., and the solution still retained a complete preservative power over eggs after an interval of ten or eleven months. The outlay on water glass at 2*s.* 6*d.* a gallon would amount to about a third of a penny per dozen eggs. In addition there would be the cost of the jars or other receptacles, which may be of stoneware, glass, or wood.

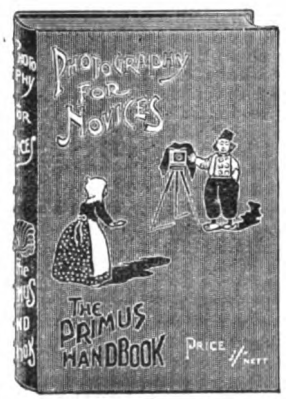
Trade Notes.

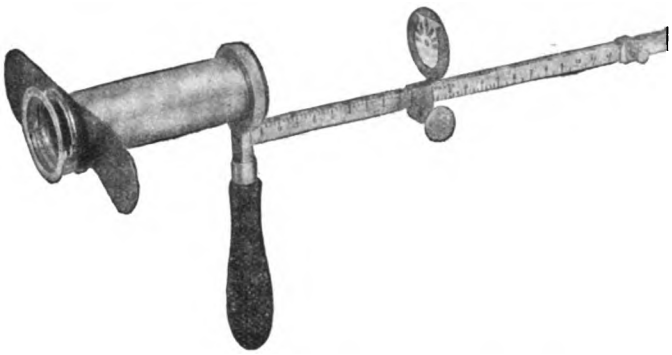
KING EDWARD VII. has appointed Bovril (Limited) as purveyors to him of bovril.

MESSRS. AUG. LEVERMORE & CO. are now on the telephone, their number being 4613 P.O. Central.



MESSRS. ALBERT & BERMON, proprietors of the perfumery establishment of Pérengie Jeune, were one of the syndicate of perfumers at the Grasse Exhibition reported on last week.

A NEW SANDERSON.—The list of excellent roll-film cameras which have been placed on the market within the last few months has received an addition in the Roll-film Sanderson Hand-camera, which is brought out by Messrs. Geo. Houghton & Son, 88 and 89 High Holborn, W.C. The advantage of being able to use either plates or roll-films with the Sanderson camera is obvious, and for high-class trade the Sanderson is the ideal camera to push.



"SOLOID" MICROSCOPIC STAINS. — Messrs. Burroughs Wellcome & Co. submit for our inspection a series of microscopic stains in soloid form which they are preparing for use by bacteriologists and others. In each case six tablets of the stain are included in a package and one tablet suffices to make from 10 c.c. to 100 c.c. of solution. The following are the stains, which are put up in this manner: Bismarck brown, borax methylene blue, eosin, eosin-methylene blue (Louis Jenner), fuchsine, gentian violet, Gram's iodine solution, hæmatoxylin (also Delafield's), methylene blue, methyl violet, and thionine blue. The utility of these especially in keeping is obvious.

MANUALETTES FOR CHEMISTS' ADVERTISING.—No. 2 of this series which Mr. A. C. Wootton is editing, and Messrs. James Townsend & Son, of Exeter, are publishing, is a catching little treatise entitled "the Claims of the Camera." It tells graphically how photography originated, what are its attractions, how to begin it, and adds to prices for cameras and materials useful notes on developing, and all that takes place photographically inside and outside the dark room. The manualette is just the thing that photo-chemists need to give a fillip to the season's trade, and Messrs. Townsend & Son offer it on so reasonable terms as to price (e.g. 24*s.* for 250) and alteration of the printed matter that the humblest retailer can adopt a scheme of advertising which would be beyond him if he had to start *ab initio*. The manualette is beautifully printed and illustrated.

"PHOTOGRAPHY FOR NOVICES."—Messrs. W. Butcher & Sons, Camera House, St. Bride Street, E.C., have obtained the record in photographic manuals by publishing under this title a most attractive octavo volume of about 200 pages, in which Mr. Percy Lund tells the young photographer all about apparatus, the dark-room, what to take and how to take it, negative-making, print-making, trimming, and framing, lantern-slide making and enlarging. The book is illustrated with pen-and-ink sketches and a series of half-tone engravings which admirably show how not to do it, or how to secure good results. To the work is appended a useful encyclopædia descriptive of the terms and materials used in photography. Messrs. Butcher inform us that the first edition of the book extends to 30,000 copies. It is bound in blue linen decorated on the cover as shown in the illustration, and retails at 1*s.* Chemists and druggists are to get a good profit on it, and we think it will sell wherever it is shown.

THE PUNCTUMETER is the name of a new optical instrument which Messrs. Raphael, Wheway & Redfern (Limited), 51 Clerkenwell Road, E.C, are putting on the market. It is designed for the ready diagnosis of myopia, hyperopia, and astigmatism by estimating the puncta remota of the eyes. The illustration shows the instrument to be constructed on

the principle of the near point rules, but the interposition of a convex lens enables a greater use to be made of this means of measuring eye-defects. Astigmatism is measured by means of trial lenses placed in one end of the lens tube and graduated so that the axes of the defect can be accurately fixed. A booklet has been issued to explain the use of the punctumeter, from which chemist-opticians will see that this method of sight-testing is practical.

Marriages.

BINGHAM—RADFORD.—On April 30, at St. Mary's, Snibstone, by the Rev. F. W. Atkins, William Arthur Bingham, chemist and druggist, Bournemouth, to Florence, second daughter of Mr. James Radford, Snibstone Lodge, Ashby de la Zouch.

BLAND—HEATH.—At Hull, on April 28, Henry Moffatt, eldest son of Mr. Henry Bland, chemist and druggist, Manchester, to Alice, daughter of the late Mr. W. Heath, of Hull.

BROOM—WILLIS.—At Holy Trinity Church, Ilfracombe on April 29, Frank Willy Broom, of Fore Street, Devonport son of the late Mr. W. W. Broom, Queen Street, Exeter, to Florence Willis, second daughter of the late Mr. B. P. Willis, of Ashford Grove, Ilfracombe.

GLASS—PEEBLES.—At Darling's Hotel, on April 30, by the Rev. William Grant (uncle of the bridegroom), assisted by Rev. W. H. Spinks, Kirkcaldy, J. Grant Glass, chemist and druggist, Edinburgh, to Margaret Smith, younger daughter of Mr. John Peebles, chemist and druggist, Kirkcaldy.

HOSKIN—REID.—On April 29, at Christ Church, Cork, by the Rev. A. J. Brady, Harry Hoskin, M.P.S.I., Sovereign Street, Clonakilty, to Ellen, eldest daughter of Henry Reid, Ovens, co. Cork.

HUNT—PATERSON.—On April 29, at the Wesleyan Chapel, Wellington, Shropshire, by the Rev. E. Devonport, assisted by the Rev. A. J. Norman, Frederick Edward Hunt, chemist and druggist, to Pattie, youngest daughter of the late Mr. Edward Paterson.

LEWKOWITSCH—MORRIS.—On May 5, at the Hampstead Registry Office, Julius Lewkowitsch, Ph.D., of "The Laurels," 71 Priory Road, West Hampstead, to Kate Morris, third daughter of Louis Morris, 55 Belsize Avenue, N.W.

PARRY—ROBERTS.—On April 30, at Horeb Wesleyan Chapel, Llanrwst, by the Rev. P. J. Roberts, Arthur Parry, chemist and druggist, Llanrwst, to Jennie, only daughter of Mr. O. Roberts, Tal-y-Bont, Llanrwst.

SMITH—WATEER.—April 2, at Crumlin, co. Antrim, by the Rev. Thomas West, M.A., Frederick Thomas Smith, Medical Hall, Antrim, third son of Mr. Wm. Smith (Evangelist), to Minnie, youngest daughter of the late Mr. Jas. Wateer, Onahilt, co. Down.

WARREN—DIXON. — April 24, at St. Mary's Church, Athlone, by the Rev. Dr. Campbell, Arthur Warren, chemist, Ballinasloe, son of Mr. H. Warren, to Sarah (Sadie) Dixon, youngest daughter of the late Mr. John Dixon, Athlone.

Digitized by Google

Deaths.

Boe.—At Cape Town on April 10, on his way to England, Mr. John A. Boe, chemist, Natal. Aged 41. Mr. Boe was the youngest son of the late Rev. James Boe, Dunblane, and was well known to the younger pharmaceutical generation in Edinburgh some years ago, as he then took an active interest in the local Association.

Edwards.—At 141 Garngad Road, Glasgow, on April 28, Mr. William Edwards, assistant to Mr. John McGowan, chemist and druggist. Aged 45.

Flinn.—The death occurred at Everton on April 30 of Dr. J. J. Flinn, J.P., a well-known Liverpool citizen. Dr. Flinn, who was over 70 years of age, spent the earlier portion of his life in Cumberland. When quite young he went to Liverpool to be apprenticed to an apothecary. He was afterwards in the employ of Messrs. Evans, Sons & Co., of Hanover Street, Liverpool, and subsequently commenced business as a chemist and druggist in William Henry Street, Everton, in the shop which was afterwards occupied by the late Mr. R. Parkinson. He then qualified as a medical practitioner and established a lucrative practice in Everton, where he had been a prominent figure in public life for about forty years.

Glover.—At Hully Avenue, Newcastle-on-Tyne, on May 1, Mr. John Glover (the inventor of the Glover tower). Aged 85.

Born in Newcastle in February 1817, and the son of a working-man, John Glover was as a boy apprenticed to a plumber, and he worked at that trade for fourteen years. During that time and in the evenings he studied at the old Mechanics' Institute at Newcastle, chemistry being amongst his subjects. This he became so expert in that he was able to take a position at the Felling Chemical-works, then Messrs. Lee & Co. (afterwards Messrs. H. L. Pattinson & Co.), and ultimately went to Washington as manager of the large works there. It was while at Pattinson's works (1847-48) the idea occurred to him that the way sulphuric acid was taken from the Gay-Lussac tower and freed from nitrogen compounds by reducing from 140° to 120° Twaddell was a very wasteful process. The idea was new to him but common to all vitriol-makers, only none of them had seriously attempted to overcome the waste. Mr. Glover tried many experiments until he hit upon a plan which he thus narrated to the Society of Chemical Industry in 1893, when the first gold medal of the Society "for conspicuous service to applied science" was bestowed upon him:

> I came to the conclusion that it must be by an oxidising atmosphere that I should accomplish the separation of nitrogen oxides and sulphuric acid, and during the next ten years when I was engaged in the design of chemical works and other things, I worked at the matter and made laboratory experiments with the deoxidising atmosphere. Well, the results were good, but I did not expect when I applied the process on the manufacturing scale that the sulphurous acid would do anything else than remove the nitrogen oxides. It was a surprise to me that it not only did this but helped to concentrate the acid.

The first Glover tower was built in 1859, and its utility, and although it was ten years later before Lancashire appreciated the value of the invention, which Mr. Glover had not patented, its value since has been such that Mr. Thomas Tyrer in 1896 estimated that in nitre alone the tower had up to that time saved this country 300,000*l*. The benefits from non-contamination of the atmosphere are incalculable. Mr. Glover made little by his invention, and the *Newcastle Chronicle* happily compares him with the late Mr. Lewis Thompson, whose discoveries with regard to dyes have benefited mankind the world over. "Probably modesty, like virtue, has its own reward; but the more modern plan is not to be over modest, and to get the reward in money. If Mr. John Glover and Mr. Lewis Thompson had had the pushfulness of Mr. Pierpont Morgan or the German chemical manufacturers on the Mersey, they would have been millionaires when they died."

Lingard.—On April 26, at Oldham, Mr. Joseph Lingard. Aged 60. Mr. Lingard, prior to going to Oldham about twelve years ago, was in business as a chemist at High Street, Cheadle.

Lockhart.—At 15 Princes Street, Pollokshields, on April 30, Mr. John Lockhart, chemist and druggist. Aged 63.

Macdonald.—At Glasgow, on April 30, Mrs. Marion Macdonald, druggist, late of London Road.

Mornement.—On May 3, at Anson Road, Southtown, Yarmouth, Mr. Henry Mornement, chemist and druggist. Aged 83. For a long period Mr. Mornement had carried on a successful business in King Street, but he retired some time ago. He was one of the oldest Yarmouth tradesmen.

Rowley.—At Gloucester, on April 23, Mr. Seth Breaks Rowley, chemist and druggist, formerly of York. Aged 55.

Skinner.—At Lossiemouth, on April 26. Mr. John Skinner, chemist and druggist, late of Govan. Aged 62. Mr. Skinner was a man of much originality of character, who had a successful business career.

Stonham.—On May 5, at 65 King Street, Maidstone, Mr. Thos. Goland Stonham, chemist and druggist. Aged 81. Mr. Stonham served his apprenticeship at Rye, and after being for some time in London he entered the pharmacy of Messrs. Argles & Duke, of Bank Street, Maidstone. On the death of Mr. Duke, Mr. Stonham was taken into partnership, from which he only retired in 1899, when Mr. F. J. Oliver took over the business. Of his six sons, two have served in South Africa; one, Major Stonham, recently returned home, while the other is still at the front.

Some Drug-standards.

At this week's meeting of the Society of Public Analysts, Mr. H. Wippell Gadd, F.C.S., of Exeter, replied to some notes on the analysis of drugs by Sir Charles Cameron in the *Analyst* for March, with remarks on tinctures of asafetida and nux vomica. In regard to the total extraction of the former, he commented upon Sir Charles Cameron's statement that it should be 5 per cent., and stating that he had recently prepared a tincture, on the experimental scale, from a selected gum (which fell well within the B.P. limits, as it yielded only 3 per cent. of ash), and the resulting product yielded 10·9 per cent. solid residue. He also mentioned that powdered asafetida is difficult to get and to keep in the pulverulent condition, as pure gum reduced to powder speedily agglutinates and forms a solid mass. He has tried to overcome this difficulty by adding about 12½ per cent. of powdered sugar of milk to selected gum—a form of adulteration which would seem to be excusable under the circumstances, especially as the product answers the pharmacopœial requirements, yielding only 4 per cent. ash, and 63·5 per cent. soluble in 90-per-cent. alcohol. Sir Charles Cameron maintains in regard to tincture of nux vomica that the alcoholic strength is 52·2 per cent. Mr. Gadd found commercial samples to vary from 64·4 to 67·9, and, as the tincture is made from a liquid extract varying in alcoholic strength, the strength of the tincture cannot be expressed by a single whole number. A liquid extract made exactly by the B.P. method would have an alcoholic strength slightly under 70 per cent., but to obtain such we must start with a nux vomica containing at least 1·5 per cent. of strychnine: the average of commercial samples of nux vomica examined during the last two or three years is 0·6 per cent. It has, therefore, been found necessary to use rather more than double the official quantity of beans, and consequently the amount of extractive obtained in the percolate has been so excessive that it has been almost impossible to reduce the latter to the one fluid part specified in the Pharmacopœia, and consequently either a stronger alcohol than 90-per-cent. has to be used for diluting, or the alcoholic strength will be considerably reduced. Taking the alcoholic strength of the liquid extract as 60 per cent., theoretically the strength of the tincture should be just over 65 per cent.; but it would, of course, be unreasonable to condemn a sample which was not more than 1 or 2 per cent. below this. Mr. Gadd also pointed out that in Sir Charles Cameron's notes the quantities of strychnine and quinine in syr. ferri phosph. c. quin. et strych. are given in ten times the official amount.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Council Contest.

SIR,—May I be allowed to answer Mr. Colley's query in last week's *C. & D.* with a most emphatic "Yes."

Yours very faithfully,
C. E. PICKERING.

52 Acacia Road, St. John's Wood,
May 6.

SIR,—I am desired by the Grimsby and District Chemists' and Druggists' Association to forward for publication the following resolution:—

That this Association pledges itself to vote only for candidates who pledge themselves to take action in support of a test-case being taken in favour of the protection of the title of chemist, and that they do all in their power to administer the Pharmacy Act in distinct accordance with that section which states that only those who comply with its regulations shall legally assume the titles therein protected. And that they trust other local Associations will help and support them in this action.

All candidates are respectfully asked to forward their views on this question to

HERBERT W. COLLEY (Hon. Secretary).
253 Cleethorpe Road, Grimsby.
May 7.

Are We Decadent?

SIR,—I feel that it requires a considerable amount of courage to enter the lists against a gentleman who so emphatically proclaims that present-day chemists are decadents, but I think it only right that a protest should be made against (in my opinion) such an unwarranted assumption. My experience of pharmacy and pharmaceutical affairs, as secretary of one of the largest provincial associations, leads me to believe that, in the north of England at any rate, there is at the present time no lack of interest shown by chemists in their local associations, and that they are in a more flourishing state than at any previous period. Within the last decade, since you take that period as a standard, six or seven associations have been organised in the West Riding alone, and I am not aware that there is any difficulty in maintaining them in a healthy and efficient state. As to "dismal complaints of lessening membership and falling revenues," we have not experienced these misfortunes so far, and, given a little energy and common-sense amongst our local leaders, we may reasonably hope that these "dismal complaints" may never be our lot. Of course there are always some things in connection with association work that one would like to see altered, but just because the things that are do not square with things as one would like them to be, is no excuse for asserting that pharmaceutical organisation is a huge bubble only waiting to be pricked. In fact, the whole article reads more like the pessimistic utterances of a disappointed man sighing for the "good old times" when chemists made, or were supposed to make, fabulous profits, than a serious attempt to point out the evils from which chemists suffer at the present day, and indicate a remedy for them.

I am, Sir,
Yours faithfully,
FRED. A. WILCOCK.

Bradford, May 2.

[The secretary of another of the largest associations in the north of England wrote to us on April 28: "Just a line to say how much I have appreciated your leader of last Saturday on the decadent tendencies of the times. I hope sincerely it will do good." We sincerely believe that the article strikes a note which has been left untouched too long; but there is no reason why those of Mr. Wilcock's way of thinking or the opposite should not express their views.—EDITOR.]

"The Invasion of Scotland."

SIR,—I agree with Mr. Reid in many things he states in his letter of April 21. But why make so much noise about Boots (Limited) opening here? As far as cutting is concerned, Glasgow cannot be much worse. From what I hear of Boots (Limited) their business seems to be carried on properly and legally, and why complain and go on kicking? This can have no other result than to sharpen up the opposition. Moreover I am informed that Boots (Limited), before opening in a new place, ascertain the local prices and adopt the same. If the principle of "cutting off the nose to spite the face" is adopted by the chemists, Boots (Limited) will be prepared to cut, and cut again, with the result that all would be losers, and the individual chemist not the least. As much cannot be said of all chemists. I have known them in similar circumstances, after ascertaining the cut-prices in the district, straightway to cut lower. I am not aware that Glasgow chemists are taking steps in view of fresh competition. If they are organising secretly (and Mr. Reid seemingly thinks it is the right thing), then surely he must have forgotten himself in writing in such a stage-whisper-like way. If they are, I am sure their organisation will be on healthy and business-like lines. Let every chemist look properly after his own shop and customers, and he need not fear stores or limited companies.

It occurs to me that the retail chemists might better their position by combining in their buying. Most goods can be got at much better terms in quantities that would be too much for the individual. The wholesale houses in Scotland issued a new net price-list recently a perusal of which, and comparison with makers' net-prices in quantity, will surprise many. The wholesale houses have been combining all the time, the result being that for many "proprietaries" they are taking as much profit, and in some articles more, than the retailer has who disposes of one for their dozens and grosses. The wholesale houses ought to give more consideration to those who support them. Stores and limited companies as a rule buy from the makers, and are, therefore, in a better position than the average chemist. If one takes the trouble to look over a year's invoices, it is surprising the magnitude of the turn-over of proprietaries. Everything, to my mind, lends itself to a combined-buying arrangement being successful. It is the custom now for makers of proprietaries to quote lowest terms to any buyer. A town like Glasgow could be arranged into districts, which with little trouble and harmonious working would overcome any difficulty as to distribution. The general combine, apart from the district arrangement, would be of service in case of proprietaries less in demand. I am prepared to go even further, by stating that I am strongly of opinion that with such a combine a properly equipped laboratory is quite practicable for the preparation of many forms in which drugs have to be dispensed nowadays and for the supply of which the chemist has to trust the factories.

Glasgow, April 29. X. F. F. (218/53.)

SIR,—At a meeting held in Glasgow on Thursday, May 1, it was decided to form an association to protect and further the interests of local chemists. The prime movers in the scheme are the very men who initiated extreme cutting here, and who for years have shown small mercy for those they are so anxious at the moment to embrace as "brother-chemists." Why this right-about-face? and why the apparent quaking at the knees? Simply because the local atmosphere is at present heavily charged with Boots, and these giants of the drug-trade have an acute attack of Boots on the brain and nerves. Instead of showing a bold front to the invader, and endeavouring to fight him with his own weapons, these valiants go down on their knees and beg of those they have misrepresented to the public for years "to come over and help us." Those of us who have had to fight our battles alone will, I trust, continue to do so, and now that the cutters are getting a taste of their own sauce let them paddle their own canoe.

Yours truly,
TIT FOR TAT. (219/37.)

[We have received several other letters in regard to this matter, especially referring to the meeting held in Glasgow last week and reported on page 736.—EDITOR.]

The Violet Powder of the Shops.

Sir,—In their own interests your readers ought to examine the composition of the violet powder which they are retailing. Some which I analysed lately was composed of sulphate of lime, and there was not the slightest trace of starch powder present.

Yours faithfully,
D. P. H. (24/37.)

Medicine stamp Duty.

Sir,—There has always been a suspicion that the officers who are the informers in this department get a share of the fines paid, and this is now confirmed on the authority of Sir Michael Hicks-Beach (*C. & D.*, page 611). This is quite opposed to the information given in a leading article of the *C. & D.*, December 21, 1901, page 1,000, where it is said, "Officers get no share of the fine, nor is any inducement held out to them to trap offenders." I am, &c,
W. C. (208/48)

[Our information was obtained from one of the head Inland Revenue officers in the course of an interview arranged with the Chairman of the Board.—Editor.]

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

210/10. *Pharmac.*—Our view in regard to the use of the Royal Arms by tradesmen other than those holding warrants from Royalties is upheld by the Solicitor-General, who in the House of Commons recently declined to alter the law so as to make it clear that persons who displayed the Royal Arms on shop-fronts, trade-labels, or in other ways without implying that they do so by authority are not infringing the law. The Solicitor-General, in his reply, stated that it is illegal to use the Royal Arms for business purposes without authority if *they are so used as to lead the public to believe that the person using them is carrying on business under authority.* He added that the question whether the public has or has not been misled is one of fact to be determined in each particular case. This is substantially what we have already said.

209/32. *R. S.*—As long as an article differs in name from another, and is not put-up in the same or similar manner, it is not a colourable imitation.

210/55. *Jacobus* writes as follows regarding a Pharmacy Act case:—

In a case which has just come under my notice, a local solicitor has attempted, on behalf of the Pharmaceutical Society, to serve a claim upon an unqualified manager of a branch shop for a penalty of 5*l.* for retailing, &c., a certain poison. So far the claim does not hold good, as they have not the manager's name, and have served the claim under a wrong name altogether. Moreover, the man is leaving the situation in a few days' time, as he is just completing a month's notice. What further action can the Society take in such a case, and are they likely to follow him up? Also are they not bound to specify the particular sale and article for which they claim the penalty? Also, if approached in a proper manner, will the Society accept a mitigated penalty? Again, the solicitor appends a further charge of 5*s.* for his own expenses, which I scarcely think will hold, as the Society, I suppose, should pay their own costs in such a case.

It is probable that the matter will not go further. The next step would be to summon the assistant for the penalty. His name must be correctly specified, and the poison which he sold. The Society never accepts mitigated penalties, and it is entitled to costs. The private application for the penalty specified in the Act and nominal costs, is a procedure which the Society need not take, and this merely gives the culprits the opportunity of settling up without going into court.

215/10. *Bollo*—Foods are not liable to medicine-stamp duty, and unless you direct the "cereal food" to be given in doses it will not be liable.

212/20. *R. T. D.*—Vaseline is not liable to stamp-duty, as it is an entire drug. Cascara-sagrada elixir is liable, because it is a preparation, and your label recommends it for habitual constipation. Dentifrices are not liable, though said to "prevent decay."

215/59. *A. J. C.*—There are several Rivalentas on the market, and, as far as we are aware, the word is common property.

220/12 *Dentalax.*—Your indentures as a dentist's apprentice will be accepted in Australia, New Zealand, and South Africa, as evidence of training, but not for registration. You must pass the colonial examination.

220/22. *Sulphonal.*—The usual agreement with chemists transfer agents in placing businesses on their books for disposal is to pay commission on sales to persons introduced by the agents. If it can be shown that a sale has been entirely independent of introduction by the agent no commission could be enforced.

219/55. *Sussex*—Your label is not liable to stamp-duty. See paragraph "Entire Drugs" in our Diary, page 231.

167/30. *Thankful.*—When you employed the plumber to repair the gas-jet in your window, it was your duty to give him free access to the window. It was your duty to remove the carboys, and unless you specifically agreed with the plumber in regard to that matter the consequences of the breakage of the carboy by the plumber rest upon you.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

202/4. *J. P. R*—Phosphorus-paste.—The following is one of the recipes given in "Pharmaceutical Formulas":—

Phosphorus	ʒj.
Carbon bisulphide	℥ss.
Beef dripping	ʒiij.
Biscuit-powder	ʒ̄ij.
Compound tragacanth-powder ...	ʒss.
Oil of anise	gtt. x.
Oil of peppermint	gtt v.
Boiling water	ʒiss.

Heat the dripping until it is quite clear, and transfer to a hot mortar; pour into this the carbon bisulphide in which the phosphorus has been dissolved; stir, then add the two powders and the oils, and finally the boiling water all at once, kneading the mass thoroughly until a perfect mixture is obtained.

185/23. *Ajax.*—Dissolving Cotton-wool.—Dr. F. B. Power pointed out, in his paper before the 1900 Conference, that the B.P. test for cotton-wool is incorrect: the copper solution should be a "solution of ammonio-cupric oxide, prepared be precipitating cupric hydrate in the presence of a little ammonium chloride, and dissolving the well-washed precipitate in a 20-per-cent. solution of ammonia" (see *C. & D.*, July 23, 1900, page 153).

131/36. *E. I. H.*—Hydrochloric acid, oxalic acid, and ammonium persulphate have been each recommended for removing pyrogallol-stains from the fingers, but the difficulty is to apply the remedies to the stains round the nails.

202/62. *Camdux.*—The charge for the hire of a camera is 5 to 10 per cent. of the cost of the apparatus per day, with a considerable reduction for a week or longer.

214/18. *J H.*—Inquiries addressed to the Conductor of the Corner for Students should be appended to the reports on salts sent in.

215/43. *G. R. W*—Dimatos is offered by Messrs. Southall Brothers & Barclay (Limited), Birmingham.

203/73. *Veteran.*—Surely you do not expect that relief can be obtained from the Pharmaceutical Benevolent Fund without due inquiry by the Secretary on behalf of the Council? Applicants have nothing to lose by giving all particulars required, and they are kept private.

Digitized by Google

188/30. *Tat.*—We cannot now trace the information on the obesity-cure.

219/44. *Granville.*—**Wall-paper Cleaner.**—See *C. & D.*, December 28, 1901, page 1049.

203/25. *H. S.*—**Dental Impression-wax.**—Analysis does not furnish the exact composition of your sample, but the formula given in the *C. & D.*, September 21, 1901, page 514, resembles it very closely.

196/72. *Photo.*—**Books on Practical Photography.**—Sir W. de W. Abney, "Instruction in Photography," 3*s.* 6*d.* (Sampson Low); Chapman Jones, "Science and Practice of Photography," 2*s.* 6*d.* (Iliffe & Son), are both good. There are also several cheaper books on the subject, but these are often written from some particular plate-maker's point of view, which detracts from their value.

142/2. *Mel.*—**Fly-paper Gum.**—See *C. & D.*, August 10, 1901, page 294. We cannot repeat the formula yet awhile.

206/71. *E. M. W.*—The *Optician*, weekly (123, 124, and 125 Fleet Street, E.C.), The *Dioptric and Ophthalmometric Review*, monthly, 17 Shaftesbury Avenue, W.C., and the *British Optical Journal*, monthly (Harp Alley, Farringdon Street, E.C.), are the only journals in this country devoted to optics.

208/63. *J. W. A.*—**Egg-preserving.**—Refer to pages 410 (March 8) and 477 (March 22), also note in this issue. Surely you have heard of water-glass before?

206/57. *S. E.*—We have examined the samples of marmalade, and suggest that the source of the mould in the one sample is the vegetable parchment. The method of preparing the preserve is apparently faultless, and steps should be taken to sterilise the parchment covers before use.

208/54. *Peter.*—(1) **Indiarubber Solution** for tyres is made by dissolving 1 oz. of masticated caoutchouc (negro-head) in a pint of coal benzine. When solution is effected the product is concentrated by evaporating part of the solvent. (2) **Recovering Silver from Old Fixing-baths.**—Into a cask or precipitating jar put the fixing-baths as produced, and add potassium sulphide in the proportion of 4 oz. to 6 gals. of liquor. Stir well, and in twenty-four hours drain off the clear supernatant liquid and throw it away. More waste baths are added until the quantity of precipitated sulphide is considerable, when, having drained the precipitate as dry as possible, it should be dissolved in nitric acid, and the solution of silver nitrate evaporated, redissolved, and crystallised until pure. The sulphide may be precipitated by sulphuretted hydrogen or hydroxylamine if preferred.

187/66. *Zero.*—(1) **Ice-cream.**—A formula for this was given in the *C & D.*, September 15, 1900, page 485, which we cannot further elaborate. (2) A varnish is used for **Glazing Confectionery** composed of:—

Tolu balsam	5 oz.
Shellac	1 oz.
Rectified spirit	1 pint

This varnish is used particularly for chocolate goods. (3) **Freezing-mixtures.**—Some recipes for these are given in the new edition of "Pharmaceutical Formulas," and four were given in the *C. & D.*, August 25, 1900, page 350. If a freezing-mixture kept cool indefinitely one of the problems of the universe would be solved. Iced water is best for keeping butter cool in the summer, as the salts of a freezing-mixture would contaminate the butter.

208/36. *A. E. D.*—**Instruction in water, milk, and urine analysis** can be had at most of the schools of pharmacy that advertise in the *C. & D.* Communicate with the Secretaries and state your requirements.

22/4. *Anacardium.*—We do not do analyses unless they are likely to yield some useful information, and as you give no particulars of the "toilet preparation" we cannot judge whether it is worth examining.

192/38. *Vet.*—If you send us a packet of the horse-gruel we will examine it.

209/69. *Cape Town.*—Carbolic acid is extensively used in the manufacture of picric acid, and picric acid is used as an explosive in shells, so that if peace is declared in South Africa there may be some slight downward influence upon the price of carbolic acid.

210/24. *Toning.*—When the two solutions of your Combined Bath are mixed, they should be allowed to stand, and filtered bright before adding the gold solution. Alternative formulæ are given in this year's DIARY.

206/20. *Inquirer.*—You are quite mistaken in assuming that Minor candidates are not expected to detect ordinary adulterants, for the syllabus says: "The candidate is required to detect impurities in such as are included in the Pharmacopœia." It is this, no doubt, to which Dr. Thomas Stevenson refers in his report, and by "standardisation" he may refer to the volumetric determinations which are part of the Minor syllabus. In fact, you have found a mare's nest.

208/37. *Clifford.*—There is no reason why perchloride of mercury should be an ingredient in **Mixtures for the Blood**, nor potassium iodide either. Try the following:—

Ammonio citrate of iron	ʒij.
Potassium chlorate	ʒj.
Conc. comp. decoction of sarsaparilla	℥j.
Spirit of chloroform...	ʒj.
Recently boiled water to	ʒviij.

Mix.

Dose: A tablespoonful.

Thanks for your remarks in regard to your correspondence with the Board of Inland Revenue. As we have repeatedly stated, the word "specialities" placed on handbills dealing with medicines renders them liable to stamp-duty. Your blood-purifier is, of course, clearly liable.

214/26. *L. J. M.*—The apparatus used for making ointments on a large scale is figured in THE CHEMISTS' AND DRUGGISTS' DIARY for 1898. The kind of apparatus will depend on the quantity and variety of ointment you wish to make. The advertisements in the *C. & D.* and THE CHEMISTS' AND DRUGGISTS' DIARY will supply you with the names of the makers of pharmaceutical machinery.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

218/41. Address of makers of Mincasea food?

201/70. What is benzoinol, or where can it be obtained?

Coming Events.

Monday, May 12.

Dewsbury Chemists' Association, Church House, Church Street, at 8.30 P.M.

Tuesday, May 13.

Royal Photographic Society, 66 Russell Square, W.C., at 8 P.M. Mr. F. Mollmorgen on "A New Apochromatic form of Zeiss Planar Lens."

Thursday, May 15.

Optical Society, 7 Crane Court, Fleet Street, E.C., at 8 P.M. Dr. C. V. Drysdale on "The Testing of Optical Instruments."

Friday, May 16.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Sir Robert Ball on "The Nebular Theory."

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

2 Cannon Street, London, E.C.: May 8.

THE business tone shows a slight improvement on that of the last few weeks, transactions as a rule being of small dimensions. In heavy chemicals the principal alteration has been an advance in sal ammoniac as the result of a combination among makers. Sublimed sulphur on the spot has also advanced owing to scarcity, and sulphate of ammonia is dearer all round, supplies being scarce. Nitrate of soda has been reduced, and is more plentiful. Caustic soda is firm, and soda ash steady. Druggists' grade of cream of tartar is firmer and rather scarce. Citric and tartaric acids show no alteration. In drugs, buchu-leaves are wanted, but unobtainable in first hands. Chamomiles show an improved demand. Jalap is inquired for, and still remains cheap. Cod-liver oil is tending lower, and is quiet. Essential oil of camphor is scarce. Quinine has revived somewhat from the recent depression, shellac is flat, and saffron is very firm. The following are the principal alterations of the week:—

Higher	Firmer	Easier	Lower
Ammonia sulphate	Cream of tartar	Capsicums	Ginger (Cochin)
Buchu	Quinine (sec. hand)	Soda nitrate	Oil (cinnamon
Ginger (Jamaica)			
Linseed oil			
Sal ammoniac			
Sulphur (sublimated)			
Wax (Japanese)			

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from April 30 to May 7, inclusive:—Acid, citric (Fr.), 10; acid, tartaric, 18; annatto-seed, 58; arsenic (@ Oporto), 513 brls.; balsam copaiba (@ Maranham), 5; benzoin (@ Singapore), 25; borax (@ Tocopilla), 1,789; buchu, 10; camphor (@ Hamburg), 366 tubs 330 cs.; canary-seed, 50; caraway-seed, 200; castor oil (Fr.) 28 cs. 155 cks. 249 brls., (@ Antwerp) 142; cinchona 20, (@ Mollendo) 384 bls.; cod liver oil (@ St. John's) 10, (@ Aalesund) 151, (@ Bergen) 55, (@ New York) 25; colocynth (@ Marseilles), 20 cs.; coriander-seed, 222; cream of tartar (@ Bordeaux), 142; drugs (@ Leghorn) 118 pkgs., (@ N. York) 51, (@ Monte Video) 16 bls.; ergot (@ Hamburg), 8; essential oils (@ Messina), 83; fennel-seed, 1,437 bgs.; galls (Chinese), 100 cs.; gamboge (@ Singapore), 50 cs.; ginger (@ Bombay), 150; gum arabic (@ Suez), 117 bls.; gum sandarac, 17; honey (Chil.), 45 bls.; jaborandi, 14; lemon juice (@ Messina), 30 pps.; lime-juice, 6 pns.; myrrh, 31; opium (@ Smyrna) 48, (@ Constantinople) 14; potash salts, 70; "roots" (@ Rio) 23 pkgs., (@ Bahia) 8 pkgs.; sarsaparilla (@ New York), 60; shellac (@ Calcutta), 350; soda bicarbonate (@ New York) 384 pkgs.; sulphur (@ Catania), 15; tartar (@ Antwerp) 43, (@ Naples) 12, (@ Bordeaux) 122; wax, bees' (@ Natal) 43, (Span.) 51; wax, Carnauba (@ Pernambuco) 306 bags, (@ Tutoia) 71; wax, ceresin (@ Dusseldorf) 21, (@ Hamburg) 20; wine-lees (Span.), 346.

The Bulgarian Rose-crop.

Kezanlik, May 3.

At the earliest the new rose-harvest will hardly begin before June 5, or about a fortnight later than last year. At first it was thought that the rose-distillation this year would begin as early as May 10, which would have been the earliest on record, as the winter was excessively mild and the spring at the outset rather warm; but in a mountainous country like the rose-district of Bulgaria extreme sudden changes in the weather occur, and such has happened this year, especially during March and April. The extremely cold wave during the middle of March, lasting a whole week and followed by the heavy hoar-frosts in April, was an unexpected surprise. Both the cold wave and the heavy hoar-frosts caused some damage to the rose-bushes in the lowlands by killing the first buds, but as all the rose-bushes had not yet begun to throw out their buds, the damage was not so pronounced and extensive as to greatly affect the prospects of the general crop. Besides, such early damages can always be easily retrieved by favourable weather later on, and especially during the budding and harvesting seasons. To some extent this has already been done by the steady fall of rain during the whole of this week. The effect of this rich rain at this propitious time, when the rose-bushes are throwing out their buds, cannot be fully ascertained just now, but the benefit to the crop in general is immense. Even the owners of old stock, who predicted a poor crop before the rain, admit now that an average crop is assured. Favourable weather during the distillation of the harvest can make a most unpromising crop the richest, as it happened in 1900, and *vice-versâ*. Just at present the prospects are for as good a crop as last year. The old stock of otto left over from last year in the hands of growers and jobbers is estimated at about 12,000 T. oz. Some of the exporters, too, have pretty heavy stocks on hand. All other crops throughout Bulgaria are in splendid condition and promise rich harvests.

London Drug Statistics.

The following statistics are compiled from information supplied by public warehouses. They relate to the receipts and deliveries of some of the leading drugs from and into the London public warehouses for the month of April, 1902, and to the stocks on April 30.

—	April		Stocks		1902	
	Landed	Delivd.	1902	1901	Imprtd.	Delivd.

* Stocks lying at Smith's Wharf and Brewer's Quay are not included in this return.

† Includes the quantity at Red Lion, Bull, and Smith's Wharves; also the Docks.

Digitized by Google

Heavy Chemicals.

A gradually increasing business continues to be transacted in the heavy-chemical market, the export department in particular being distinctly busier, and generally speaking the tone is better both on prompt and forward account. All-round demand in the home branch keeps up well, and deliveries on contracts are for the most part fully up to the average. General miscellaneous products are in better request. Dyers, calico-printers, and bleachers are all well engaged, and carpet manufacturers also find trade fairly satisfactory. Papermakers are moderately busy, doleful reports to the contrary notwithstanding, and large quantities of raw materials are as usual going into consumption. Soap-manufacturers are busy with good demand for both manufacturing and household qualities. An increased demand for disinfectant soaps is also specially noticeable. The paint and colour trades, as is customary at this period, are very busy. Regarding values there is not much of change to be noted; for the most part they are steadily maintained.

ALKALI PRODUCE.—In this branch there is little change from recent reports. Caustic soda, bleaching-powder, and ammonia alkali are all in steady and increased demand.

SULPHATE OF AMMONIA.—Good business has been done and prices are very firm, with tendency towards further advancement. Beckton June-September, 12*l.*; Beckton terms, 12*l.*; London, 12*l.* 2*s.* 6*d.* to 12*l.* 5*s.*; Leith, 12*l.* 5*s.* to 12*l.* 6*s.* 3*d.*; Hull, 12*l.* Exports from Leith last week were heavy, and amounted to 1,201 tons.

Liverpool Drug-market.

Liverpool, May 7.

CASTOR OIL.—There is a much firmer feeling among the holders of good seconds Calcutta at the moment, 2½*d.* per lb. being asked and paid. The importers seem confident as to an improved position in the future. French is practically unchanged in value.

BEESWAX.—There was considerable competition for the recent arrival of Chilian, the final result being that 3 pkgs. Pile 1 realised 7*l.* 15*s.* per cwt.; 8 pkgs. Pile 2 sold at 7*l.* 12*s.* 6*d.*; and 5 pkgs. Pile 3, at 7*l.* 5*s.*; while 2 pkgs. of rather soft wax realised 7*l.* per cwt.

TURPENTINE has fully maintained the recent advance, and 33*s.* 6*d.* to 33*s.* 9*d.* per cwt. has been paid; 34*s.* is now asked.

HONEY.—Several parcels of low quality changed hands for shipment abroad at reduced prices. Holders of Chilian here are asking nominally 19*s.* to 28*s.* per cwt., according to quality, but these prices might be shaded for quantity. Californian honey is in better supply, and ranges in value from 30*s.* to 40*s.* per cwt., but the demand is light owing to the season.

ACACIA SORTS.—Further sales are reported at prices ranging from 30*s.* to 43*s.* per cwt., as in quality, but the bulk of the transactions is limited. A parcel of 63 serons roughish sorts sold at 27*s.* 6*d.* per cwt.

CANARY-SEED.—Further sales are reported at 35*s.* to 35*s.* 6*d.* per qr., 200 bags realising 35*s.* per qr.

CARNAUBA-WAX.—Forty-one bags of grey have been sold at 49*s.* per cwt.

AFRICAN GINGER.—New crop is obtainable at 34*s.* 6*d.* per cwt., being slightly easier, but the quantity available is limited.

QUILLAIA-BARK. — Further sales are reported at from 12*l.* 17*s.* 6*d.* to 13*l.* per ton.

SULPHATE OF COPPER is steady, at 18*l.* 12*s.* 6*d.* to 19*l.* per ton.

ARSENIC.—Slightly easier, at 12*l.* 15*s.* to 13*l.* per ton.

GRAINS OF PARADISE.—Small remaining stocks are held for 65*s.* per cwt..

German Drug-market.

Hamburg, May 6.

Our drug-market is very quiet, and shows very little business at present.

BALSAM PERU is quiet at 12m. per kilo.

CAMPHOR (REFINED) is also quiet and unchanged; refiners still ask 435m. per 100 kilos., and second-hand holders quote 420m. per 100 kilos.

KOLA is in good demand; the stocks are getting small here, and 47m. to 55m. per 100 kilos. is asked.

CUMIN-SEED is steady at 51m. per 100 kilos.

ERGOT is unchanged at 340m. per 100 kilos.

ELEMI is declining, and is now quoted 135m. per 100 kilos.

MENTHOL is firm and scarce at 30m. per kilo., spot.

IPECACUANHA is quiet, with Rio quoted 21½m. and Cartagena 9½m. per kilo.

GALANGAL is lower at 35m. per 100 kilos.

WORMSEED is very scarce, and tending upwards; fine green is quoted 87½m. per 100 kilos.

STAR-ANISEED is quiet, at 120m. per 100 kilos.

COD-LIVER OIL is very firm, with non-congealing oil of new crop quoted 110m. per 100 kilos.

ESSENTIAL OILS are practically unchanged.

Cablegrams.

HAMBURG, May 7:—Japanese wax has advanced to 71m. per 100 kilos. Agar-agar is firmly held, and kola is advancing. Quinine is dull of sale.

* * * *

SMYRNA, May 7:—The sales of opium for the week ending Wednesday evening amount to 25 cases, including Yerli at 7*s.* 4*d.* per lb., f.o.b., and selected Karahissar at 7*s.* 2*d.* Market is steady.

* * * *

BERGEN, May 7, 7 20 P.M.:—Stormy weather has prevailed in the Finmarken district this week, and poor results are reported, the fish being small and the livers lean. The market has, in consequence, a rather firmer tendency, but 100*s.* per barrel, f.o.b., is quoted for best Lofoten non-congealing oil. Up to date the total catch of cod amounts to 37 227.000, against 33,191,000 at the same time last year. The output of steam-refined oil is 17,473 barrels, against 28,948 barrels in 1901.

* * * *

NEW YORK, 2.40 P.M.:—A dull tone prevails. Opium has declined to $2 82 per lb. Buchu-leaves have advanced to 24c. per lb. Cannabis indica is advancing. 65c. per lb. now being quoted for tops. Senega is quoted 50c per lb., and is quiet. Peppermint oil is firmer at $1.75 per lb., and thymol has declined to $2 10 per lb.

London Markets.

ACID, CITRIC, is quiet at from 1*s* 0½*d.* to 1*s.* 0½*d.* per lb.

ACID, TARTARIC, is unchanged at 11½*d.* to 11½*d.* per lb. on the spot for English, and 10½*d.* for foreign.

ALOES.—About 120 kegs good bright Socotrine aloes have arrived this week; also from 50 to 100 boxes dull livery Curaçaos.

BALSAM PERU.—For forward delivery 5*s.* 1½*d.* per lb., c.i.f., is quoted, and 6*s*, spot.

BENZOIN.—Immediately after the auction last week a fair quantity of Sumatra gum was disposed of, including good seconds at 7*l.* 15*s* per cwt., fair seconds at 6*l.* 17. 6*d*, and middling at 6*l.* 2*s.* 6*d.*

BUCHU-LEAVES are practically unobtainable in first hands. 10*d.* has been paid for a small lot. Tea bales will be offered in sale next week.

CANARY-SEED.—There was a considerable increase in the export of canary-seed from Cadiz during 1901. The total amount exported was 165 tons against 70 tons in 1900, and 100 tons in 1899. Of the total quantity exported in 1901 the United Kingdom took 103 tons, and the remaining 62 tons went to Cuba, France, and the Canary Islands.

CANNABIS INDICA.—Business was done in tops last week at 2*s.* 6*d.* per lb.

CASCARA SAGRADA.—For three-year-old bark 23*s.* per cwt. is quoted.

CHAMOMILES have been in better demand, and several parcels have been sold at about the prices quoted last week.

COCA-LEAVES.—Green Truxillo are quoted by one holder at 9*d.* per lb. net, spot.

COCOA BUTTER.—At the auction in Amsterdam on May 6, 80 tons Van Houten's sold at 66½c. to 68½c. (average price 67 70c. against 66·90c. at the previous auction). Thirteen tons De Jong sold at 63c. to 63½c., and of 10 tons Mignon offered only 480 kilos. sold at 62½c. per ½ kilo. In the London auction 100 tons Cadbury's sold at 1*s.* 0½*d.* to 1*s.*, closing at 1*s.* 0⅛*d.* per lb.

COPPER SULPHATE.—The exports from Huelva, Spain, during 1901 to the United Kingdom amounted to 204 tons, against 129 tons in 1900. Nearly 2,000 tons were sent to France and Algiers alone, and a further 4,000 tons were produced locally for consumption in the Peninsula. The Rio Tinto Company was the principal exporter.

CREAM OF TARTAR is a shade firmer, 74*s.* 6*d.* per cwt. being quoted for 98-per-cent. powder, which is rather scarce on the spot; 95-per-cent. powder is quoted 71*s.* 6*d.*, first white crystals 70*s.* 6*d.*, and powder 72*s.* 6*d.* per cwt., spot.

DRAGON'S-BLOOD.—Nine cases of lump and 4 cases reed have arrived this week.

Digitized by Google

Ergot is unaltered here, but said to be cheaper in Hamburg, from which port 1*s.* 6½*d.* per lb, c.i.f., is quoted for Russian. On the spot 1*s.* 7*d.* has been paid for Russian and 1*s.* 8*d.* for Spanish.

Galls.—Chinese are lower with sellers at 45*s.* per cwt., c.i.f.

Gamboge.—The ss. *Oriental* has arrived with 50 cases from Singapore.

Insect Flowers.—The stock in Trieste at the end of April amounted to 121,800 kilos., against 124,800 at the end of March. The receipts in April amounted to 24,400 kilos., and the deliveries to 27,400 kilos. The following are the current quotations, f.o.b.:—Trieste: "Open" flowers, 74*s.* to 76*s.* per cwt.; "half-open," 93*s.* to 110*s.*; "closed," 116*s.* to 127*s.*; and wild, 131*s.* to 148*s.* per cwt.

Ipecacuanha of both descriptions has been in fair demand for the United States at unchanged rates.

Jalap is in fair inquiry, and there is still a quantity on offer at 5*d.* per lb. net.

Lemon Juice (Conc.).—Under date of April 30 a lifeless market is reported for concentrated lemon-juice and citrate of lime, and holders quote 12*l.* per pipe, f.o.b., for May shipment. Shipments to consuming markets have been large during the last two months, and buyers are well stocked.

Lithia Salts may probably be dearer, but there is nothing definite at present.

Menthol.—Quiet with small sales of Kobayashi at 12*s* 9*d.* and Yazawa at 12*s.* 6*d.* per lb. spot. To arrive 13*s.*, c.i.f., is quoted. It is reported that 30 cases Kobayashi brand have been withdrawn from the market, owing to the receipt of a telegram from Japan not to sell at present prices.

Morphine.—The importation of morphine and salts into Amoy during 1901 amounted to 12,431 oz. (3,600*l.*), against 16,776 oz. (4,865*l.*) in 1900.

Oil, Camphor.—White essential oil of camphor is firm, and scarce; 34*s.* per cwt. has been paid.

Oil, Castor.—Quiet. Hull make is quoted 24*l.* 15*s.* per ton, and seconds 23*l.* 15*s.* for October-December delivery, ex wharf London. Belgian is 25*l.* for firsts, and 23*l.* for seconds, ex wharf.

Oil, Cod Liver.—There is little doing in this article, with the market tending easier, although reports as to continued poor fishing come to hand. Some business has, however, been done at 102*s.* per barrel, f.o.b. Our Bergen correspondent writes that the market is decidedly weaker, though the reports from Finmarken up to date are not at all encouraging. There appears to be fish enough, but the weather has been boisterous. Best Lofoten non-congealing oil is to be had at perhaps a trifle below 100*s.* per barrel, f.o.b. (see cablegram). The exports to date amount to 3,558 barrels against 3,518 barrels at the same time last year.

Oil, Olive.—The last crop of olive oil in the island of Corfu amounted to 100,000 barrels, of which more than half has been already exported, the principal buyer being Russia, where, in consequence of its purity, this oil is extensively used for lighting churches. It is stated that there are ten million olive-trees on the island, and that a good crop ought to produce 400,000 barrels of oil, but that the machinery and methods used are more or less primitive, and this quantity is rarely attained.

Oil, Peppermint.—Advices from New York say there is no possibility of lower prices, but until the extent of the new planting is known, it is difficult to say which way the market will turn. For American HGH oil importers quote 8*s* 3*d.* per lb. net, and pure Wayne County at 7*s.* 3*d.* net, both spot. In secondhands H.G.H. is quoted 8*s.* 9*d.* and Wayne County 7*s.* 6*d.* London terms: Japanese dementholised is quiet at 3*s.* 9*d.*, spot.

Oils, Fixed.—Linseed has advanced to 32*s.* per cwt. in barrels, landed terms. Cochin cocoanut is 37*s.*, spot, and Ceylon, 33*s.* spot. Refined cotton, 27*s.* to 27*s.* 9*d.* per cwt.; and Lagos palm, 27*s.*

Poppy-heads.—Large are unobtainable, and for small 12*s.* per 1,000 has been paid.

Quinine.—There has been a slight improvement here, and a small business was done on Wednesday at 1*s.* 1¼*d.* per oz., spot, with further buyers, but no sellers.

Saffron remains firm at from 24*s.* to 24*s.* 6*d.* per lb., net, for B.P. quality.

Safrol, in small quantities, is quoted 1*s.* 6*d.* per lb.

Sal Ammoniac.—As the outcome of a combination on the part of manufacturers, an advance of 3*l.* per ton has taken place. Firsts are now quoted 42*l.*, and seconds 40*l.*, per ton.

Shellac.—On the spot a moderate business has been done, TN Orange selling on a basis of 112*s.* to 117*s.* per cwt. Good and fine Orange marks are worth from 126*s.* to 135*s.*, spot. AC Garnet is quoted at about 116*s.* spot, and 114*s.*, c.i.f., to arrive. Futures have been dull and lower. August delivery has been sold at from 115*s.* to 116*s.* per cwt.

Soda Salts.—Hyposulphite is quoted 7*l.* 10*s.* per ton, in kegs, on the spot, and 7*l*, in casks, f.o.b. Tyne or Liverpool. Bicarbonate is quoted 7*l.* 5*s.* per ton, in kegs, ex warehouse, and 6*l.* 15*s*, f.o.b. Liverpool. Caustic, 70-per-cent. white, is 10*l.* 10*s.* per ton, spot. Crystals, in 3 cwt. barrels 65*s.*, and bags 62*s.* 6*d.* per cwt., ex ship or wharf; and 67*s.* 8*d.* per ton, f.o.b. Liverpool. Nitrate has declined, owing to more plentiful supplies; refined is quoted 10*s.* per cwt., spot.

Spermaceti.—American refined is offered at 1*s.* per lb., c.i.f., net.

Spices.—The market is still very quiet. At auction on Wednesday Cochin *Ginger* was steady; small washed rough sold at 36*s.* per cwt., fair quality being bought in at 40*s.* Jamaica, in good supply, sold with competition at 1*s.* to 2*s.* per cwt. advance on medium and good qualities, but slightly lower for Rhatoon. Common to good common sold at 34*s.* to 42*s.* 6*d.*, middling to fair 44*s.* to 50*s.*, and good bright washed at 52*s.* 6*d.* to 61*s.* per cwt. A parcel of good rough limed Japan was bought in at 36*s.* per cwt. Fine Penang *Cloves* sold at 1*s.* per lb., but good were bought in at 10*d.* fair at 7*d*, and dark damp at 6*d.* per lb. Zanzibar have been quite neglected, the quotation for June-August delivery is nominally 3 15/16*d.* per lb. *Pimento* slow, ordinary was bought in at 2 7/8*d.* per lb. East India *Capsicums* on stalk were bought in at 26*s.* per cwt. Penang *Mace* was bought in at 1*s.* 3½*d.* per lb. for good pickings. *Cinnamon-quillings* sold at 7½*d.* per lb., and one lot of ordinary dusty chips at 2½*d.* per lb. *China cinnamon* was bought in at 30*s.* per cwt. *Cassia-lignea* and chips were both bought in. Black *Pepper* is quiet, at 5⅝*d.* per lb. for Singapore on the spot, and at 5⅝*d.* to 5¾*d.* for arrival. White is firmer, with more business doing; fair Singapore was bought in at 9¾*d.*, and good coriander kind at 10¾*d.* per lb. Fair Singapore has been sold at 9½*d.* per lb. to arrive, and Penang at 9 1/16*d.*; the latter is quoted 9¼*d.* on the spot.

Sulphur is dearer, sublimed being quoted 6*l.* 5*s.* per ton, ex wharf.

Thymol.—Quiet, at 7*s.* 3*d.* per lb., in bulk.

Turmeric.—Split Cochin bulbs are worth 10*s.* 6*d.* to 11*s.* per cwt. on the spot. Bengal is slow of sale, at 15*s.*, spot.

Wax, Japanese.—Spot is scarce and firmly held at 36*s.*, and 34*s.* to 35*s.* per cwt., c.i.f.

Affairs of Park, Macfadyen & Co.

The *Financial Times* is informed that owing to non-receipt of remittances and the generally depressed state of trade in the West Indies, Messrs. Park, Macfadyen & Co., of 21 Lime Street, E.C., and having branches in New York and Jamaica, have placed their books in the hands of Messrs. C. F. Kemp, Sons & Co., and have instructed them to prepare a statement of Messrs. Park, Macfadyen's affairs, and to convene a meeting of those interested at the earliest possible date. The firm is an old established one in the West Indian trade, and, under various styles, has been in existence some thirty years. Up till quite recently they have kept their engagements very regularly, though there have been some indications of tightness in the state of their finances. The liabilities are said to be considerable, and it is stated that a Manchester house of importance is largely interested.

Laboratory-tap Case (*C. & D.*, April 26, page 673).—Judge Rentoul, K.C., gave judgment in this case to-day. He found for the defendant, as he could not find that there had been any negligence on his part. It was very unfortunate for the plaintiff, but it could not be helped.

Digitized by Google

Society of Chemical Industry.

LONDON SECTION.

A MEETING of this Section took place at Burlington House, W., on May 5, with Mr. Otto Hehner in the chair.

PURE ZINC.

After the minutes of the previous meeting had been read, the Chairman referred to the joint report of that Section and the Society of Public Analysts on the detection of arsenic. A meeting of the latter Society is to be held to discuss the report, and members of the Society of Chemical Industry are invited to attend. Many of the members have experienced a difficulty in obtaining arsenic-free zinc to use in the arsenic-test, and Mr. Hehner said they would doubtless be glad to hear of a plan he had found to answer splendidly. The zinc is melted in a clay crucible, a small quantity of metallic sodium dropped in, and stirred till the sodium is oxidised, when an arsenic-free zinc results. The process can be repeated if thought desirable.

CARBIDES OF MANGANESE AND CALCIUM.

Mr. J. S. Brame read a paper by himself and Professor V. B. Lewes bearing the above title. Attempts have been made to prepare mixed carbides of manganese and calcium, with the object of yielding a mixture of acetylene, methane, and hydrogen when acted on by water. Using a mixture of manganic oxide, lime, and coke in the electric furnace, it has been found that when the manganese is in excess no calcium carbide is produced, and similarly when the proportion of lime is large no manganese carbide results. Manganese carbide is a silvery grey substance, which gives off methane and hydrogen when acted on by hot water, and if a demand for a mixture of these gases with acetylene should arise it can be satisfied by mixing the separately produced carbides of manganese and calcium.

JOHN GLOVER.

At this stage the Chairman called upon Mr. Tyrer to say a few words about the late John Glover. Whilst Mr. Tyrer was President he presented the first gold medal of the Society to John Glover for his contributions to chemical industry. Mr. Tyrer referred to this and to the able summary of Glover's work which Dr. Ferdinand Hürter gave at that time. "They speak," said Mr. Tyrer, "of the pieces of canvas a few feet square in the Academy behind this room as being priceless, but they can never become as priceless as the work of John Glover." (Applause.)

Dr. Messel seconded the vote of sympathy and condolence proposed by Mr. Tyrer, and gave some particulars of the career of John Glover. He was the son of a foreman cooper at some chemical-works at Newcastle, and was apprenticed to a plumber. His spare time was spent in studying chemistry, and shortly afterwards his opportunity came, when pyrites was introduced as a source of sulphur in sulphuric-acid making. The greater heat required for pyrites necessitated improved means of cooling the gases. The pipes or flues required would have been endless, and it was here that the well-known Glover's tower came in. The invention was given to the world without reward, and resulted in the great cheapening of sulphuric acid. As something like a million tons of sulphuric acid is produced annually, the saving effected by Glover's invention must be enormous.

The resolution was carried unanimously.

The Chairman then called on Mr. Oscar Guttmann to read his paper on

DANGEROUS CHEMICAL SUBSTANCES.

Mr. Guttmann explained that some years ago a committee was appointed by the Society to report on the precautions necessary in storing and handling dangerous chemicals, and the paper he had prepared would, he hoped, form a basis for the committee's report. He explained that he had not included poisonous alkaloids in his list, nor yet carbonate of soda, which has been known to destroy the vegetation for miles around when sent forth from works' chimneys in powder form. Reference was made to the way in which the vapour of spirit travels along the floor for great distances, and to the lighting of stores containing inflammable substances. Electric light, if installed with proper precautions, is perfectly safe. In extinguishing fires caused by chemicals special precautions are necessary; in large conflagrations of dangerous substances it is generally useless to attempt extinction, and all efforts should be directed to saving surrounding property. Dangerous chemical substances were divided into seven classes, and from these Mr. Guttmann singled out the following substances for special remarks. The temperatures given are on the Centigrade scale:—

Acetic Acid and Acetates.—When mixed with chromic acid they explode. A mixture of sodium acetate and potassium nitrate explodes on heating. If textile fabrics or dry wood are impregnated with lead acetate, they take fire very readily, and continue glowing like tinder.

Amyl Acetate—Boiling-point, 138°; burns easily. A mixture with air explodes.

Acetone.—Boiling-point, 56°; igniting point below 0°. At ordinary pressure it dissolves 31 times its own volume of acetylene, at −81°, 2,000 vols.

Acid, Nitric.—Is liable to decomposition by the sun or heat. Strong acid sets fire to cellulose matter, such as hay, straw, bags, &c. Acid of 1·279 sp. gr. also ignites straw. Acid of 1·246 sp. gr. also ignites hay and straw, if the acid is heated to about 45°. Acid of 1·30 to 1·388 sp. gr. ignites hay and straw, at ordinary temperature, in thirty-five to forty-five minutes; weaker acids take several hours. The nitrous acid formed when nitric acid is decomposed in contact with organic matter is dangerous to inhale.

Acid, Chromic.—Ignites organic matter, also alcohol, ether, and acetic acid.

Alcohol.—Even diluted it gives off inflammable vapours, 30 per cent. alcohol being inflammable at 29·5°. Ethylic alcohol vapour is not explosive at ordinary temperatures, only when highly heated.

Alcohol, Methylic.—Ignition point at 0°; is more easily inflammable than ethylic alcohol, and its vapours are explosive at ordinary temperature.

Aluminium.—When powdered is inflammable and explosive. Mixed with oxygen-carriers for flash-light, it can be exploded by a blow.

Ammonia.—The gas in a concentrated state causes fatal results. It is dangerous in contact with oxygen, chlorine, and iodine.

Benzine (petroleum spirit).—Boiling-point, 90°; flash and ignition point, 15°. Agitation of textile fabrics in benzine generates electricity, which gives rise to explosions; the addition of soap solution has proved to be a good remedy. Benzine vapours have a stupefying effect. *Benzole* (from tar) has similar properties.

Camphor.—On subliming, explosive vapours of camphor oil are formed. Cloth impregnated with camphor burns like tinder.

Carbonaceous Dust.—Fine dust mixed with air is explosive. The presence of oxygen-carriers and heating facilitate explosion. Dust explosions known with coal, lampblack, woody matter, flour, starch, sugar, dextrin, malt, &c.

Chlorine.—In contact with phosphorus or finely divided antimony, arsenic, or copper, also with paper soaked in oil of turpentine it takes fire.

Chlorite of Lead.—Explodes at 100° or on grinding, ignites with sulphur or antimony pentasulphide.

Chlorate of Potassium.—In large quantities it explodes by heat, especially when carbonaceous matter is present. Mixed with phosphorus, sulphur, cyanides, or metallic sulphides, even small quantities explode. Sulphuric acid and hydrochloric acid develop chlorine peroxide, which explodes at 70°. *Chlorate of Sodium* is more sensitive than potassium chlorate.

Chromates.—Inflammable in contact with sulphuric acid, or with oils, petroleum, ether, phosphorus.

Ethers generally.—The vapours are explosive in the cold. Vessels should not be filled completely.

Ether, Ethylic.—Ozone, oxygen and oil of turpentine cause formation of explosive ethyl peroxide. Peracids make it self-inflammable. The smallest electric spark ignites ether vapour. Pulverulent matter added to warm ether makes it boil over.

Ethyl-Compounds of Metals (aluminium, antimony, bismuth magnesium, zinc) are self-inflammable in air (so are the methyl, compounds). Bismuth-triethyl explodes at 150°; lead-triethyl explodes with iodine or bromine.

Lead Peroxide.—On grinding with sulphur or sugar ignites; it explodes with amorphous phosphorus, and becomes incandescent with sulphurous acid.

Magnesium behaves like aluminium. It burns in hydrochloric acid.

Metals, Dust (bronze powders), must be protected by olive-oil against oxidation and moisture. Explosive with air, and especially with oxygen-carriers.

Naphthalene.—Dust and vapours are explosive. Explosions occur in stills through the choking of the outlet. Textile matter preserved with naphthalene burns like tinder.

D

Digitized by Google

Nitrate of Ammonium.—Slightly heated with acetic acid it takes fire, whilst *Nitrite of ammonium* explodes on heating and by a blow.

Nitrates (Potassium, Sodium)—Explode when melted in presence of carbon. Large explosion of saltpetre took place at the Tooley Street fire in 1861. Water poured on molten saltpetre may produce conflagration. *Nitrites of potassium and sodium* explode if heated with potassium cyanide or with ammonium salts.

Nitrate of Tin.—According to Weber an explosive variety exists, which is sometimes found on soldered joints of saltpetre pulverising drums.

Nitrate of Ethyl.—Boiling-point, 86·3°. Rapidly heated it explodes at 87°.

Nitrate of Methyl.—Boiling-point, 66°. Explodes on heating and by a blow.

Oxalate of Silver.—Explodes when quickly heated, or touched with incandescent platinum wire on hot metal plate.

Permanganates.—With sulphuric acid they ignite ether, alcohol, resin, oils, &c. Potassium permanganate ground with sulphur or phosphorus detonates. Concentrated solution in alcohol is liable to explode. Caution is recommended where in contact with organic matter; paper-lined barrels containing it have been known to take fire.

Phosphide of Calcium.—In contact with water produces self-inflammable phosphoretted hydrogen.

Propyl-Compounds of Metals (aluminium, zinc).—Self-inflammable in air.

Sodium Peroxide.—Takes fire when moistened in contact with organic matter, and may explode if confined.

Sulphur.—The dust is explosive, and can be ignited by sparks or electric discharge. Explodes when ground with lead-peroxide, potassium chlorate, or lead chlorite.

Sulphur Monochloride.—Fumes in air, and has a penetrating smell, but is not inflammable.

Sulphate, Dimethyl, and Diethyl.—Gases dangerous to larynx, eyes, and lungs.

Sulphides, Metallic.—Large quantities in the open may ignite. Iron sulphide on iron pipes removed from the ground may become incandescent through absorption of the oxygen. A mixture of antimony-pentasulphide and chlorate of potash is explosive.

Sulphide, Carbon-di-.—Explosive with air. Boiling-point, 46°. Ignites and flashes at −20°. Spontaneous combustion at 145°. Stored in iron vessels iron sulphide is formed, which may explode by a blow. A fire of carbon disulphide in a closed room extinguishes itself through formation of sulphurous acid. The vapours of carbon disulphide are ignited even by a safety lamp.

Superphosphates.—If not free from sulphuric acid and when mixed with sodium nitrate may ignite the bags through the formation of nitric acid.

Stannous Oxide.—Burns in contact with a red-hot body.

Turpentine, Oil of.—Flash-point, 35°; ignition point, 45°. Iodine explodes it.

Zinc Oxide, Commercial.—Frequently consists of about equal quantities of zinc oxide and zinc dust, and is therefore liable to heating through oxidation.

DISCUSSION.

Mr. Hinchley inquired what the author meant by ignition-point and flash-point; he did not understand the use made of those terms in the paper.

The Secretary then read a communication from Dr. Dupré, who thought the paper too inclusive; for instance, potassium chlorate in large quantities is liable to explode, but should not be placed in the same category as dynamite. The vapours of alcohol are not explosive except when mixed with air, and even then much heat is required. In regard to charcoal being liable to spontaneous ignition, he only knew of two cases of lampblack fires ascribed to this cause, and neither case was conclusive.

Mr. Tyrer also thought the statements in the paper too sweeping. He made experiments some years ago on the action of nitric acid on straw, and did not succeed in igniting the straw. He could hardly credit the statement that the weak acid could do so. He was astonished to find methylic alcohol classed amongst dangerous goods, and was afraid the paper would hardly help manufacturers in their case against the carriers. The list required a wider classification. In regard to lighting stores containing dangerous goods, electric light is safe, and as an extra precaution the globe surrounding the electric bulb should be filled with water. The books on dangerous substances he had consulted were the most unfortunately compiled books it had ever been his misfortune to read.

Mr. Walter Reid (who has been appointed to succeed Mr. Hehner as Chairman of the Section) recognised the subject as a very thorny one, but could not at all understand paraffin-wax and ceresine being classed as dangerous, nor the inclusion of acetate of lime under the same heading as phosphorus. Flour, too, could only by a stretch be classed as dangerous; surely it would not be necessary to have a little magazine in their households to store it in. (Laughter.)

Mr. Brame thought the paper would defeat the object it had been written for; they should beware of alarming the public. The carbide industry is much hindered by the restrictions imposed on the storing of calcium carbide. He did not think calcium carbide should be classed with dynamite.

Other speakers thought the conditions under which some of the substances explode should be defined, and it was mentioned that charcoal, produced by the action of acid on organic matter, is very liable to explode on drying.

Dr. Dvorkovitch objected to classing petroleum oil as dangerous; some twenty million tons of the oil were annually carried without accident. If the oil catches fire it burns out quietly. An example was recently furnished by a tank steamer in the Suez Canal, which was on fire for ten days, but caused no damage to surrounding steamers or property.

Another member said the vapour of glacial acetic acid is not very poisonous, but is inflammable at high temperatures. He had tried to get an explosion with flour, but could only get a small flame.

Mr. Marshall said many explosions of flour have occurred. He knew of one resulting from the grinding of malt.

Mr. Hooper said the conditions under which the substances explode should be stated. In the course of his official duties he had examined a brown-paper parcel, which had caught fire in the post. The parcel contained zinc-dust, which, however, would be perfectly safe if sent in a metal package.

Mr. Jenkins, as a railway chemist, said the companies would certainly not be alarmed by the paper, as they depended on expert advice in these matters. He knew of an interesting explosion caused by dilute sulphuric acid at a station on the Great Eastern Railway, particulars of which he would communicate to the Society.

Mr. Guttmann, who was greeted with applause, in reply, said, after the shower of abuse, in polite language, he was surprised at such a reception. (Laughter.) Many of the speakers had misunderstood the spirit in which the paper was written. All the statements he had made have been published and gone about unchallenged. He had known any amount of flour-mill explosions, and the explosive properties of carbonaceous dust were well known. He recalled explosions of benzine used in a wax-purification process and in chemical-cleaning works, and there is plenty of proof that charcoal, even when old, is liable to spontaneous ignition. That there is considerable risk in transporting petroleum, the reports of H.M. explosives inspectors amply proved. He (the speaker) would take a dynamite cartridge, light it, and only put it down when it burnt too close to his fingers, but that would not justify him in saying dynamite was not dangerous. The ignition-point referred to the temperature at which a liquid takes fire, whilst the flash-point had to do with the firing of the vapour. Nitric-acid fires were of common occurrence; he himself had had eighty tons destroyed at one time. The paper was written for the purpose of discussion, but he thought they should have approached it from a higher standpoint.

The Chairman summed up the discussion. He said all chemical substances are dangerous, but the paper should only have included those that are dangerous under ordinary commercial conditions. If alcohol is dangerous, surely whiskey is—(laughter)—and they had seen in that room that air, under the influence of a powerful alternating current, takes fire, but that would be no reason for classing it as dangerous. Acetic acid is explosive when mixed with chromic acid, Mr. Guttmann said, but why mix them?

Votes of thanks to the authors of the papers concluded the meeting.

MANCHESTER SECTION.

THE last meeting of the session of the Manchester Section was held at the Victoria Hall on May 2, Dr. Gerland presiding.

Digitized by Google

MORE ABOUT ARSENIC.

Mr. Wm. Thomson read a paper on his method of determining arsenic in malt, beer, &c, and on the preparation of the reagents used therein. After criticising the report of the joint committee of the Society of Chemical Industry and the Society of Analysts on this subject, he said that he had never been able to obtain sulphuric acid free from arsenic nor hydrochloric acid either. He had tried the method of purifying hydrochloric acid recommended by the joint committee, but still there was arsenic in it. His method of purifying the acid was to dilute the purest acid obtainable with about one-third its volume of water, put it into a retort, add about a gramme per litre of chromic acid to it, and distil. It still, however, was saturated with chlorine, and to get rid of that he passed a current of air through the distillate, which removed it. At that stage no trace of arsenic would be discovered. To purify sulphuric acid he used chromic acid in a non-tabulated retort. The quantity was about a gramme of chromic acid or of potassium permanganate to the litre; then distilled and the distillate was free from any trace of arsenic. Nitric acid could be obtained nearly always free from arsenic.

A discussion took place as to what had become of the Manchester committee which was to report on arsenic-tests. Mr. Carter Bell said the committee proposed to dissolve, but it was eventually resolved to ask the committee to report.

NOTTINGHAM SECTION.

A MEETING of this Section was held at the Municipal Technical School, Leicester, on April 30, Mr. L. Archbutt, F.I.C., being in the chair. The first paper read was by Mr. S. R. Trotman, F.I.C. (city analyst of Nottingham), and Mr. H. Peters, A.I.C., on

THE ANALYSIS OF COD OIL FOR LEATHER-DRESSING.

Mr. Trotman explained that the ordinary analytical constants do not give much indication of the likelihood of the excessive formation of a resinous substance found to be most objectionable when certain cod oils are used in tanning. Since the resinous matter consists chiefly of oxidised acids, it occurred to the authors that the measurement of the power of absorbing oxygen which an oil possesses would give a rough but useful indication of its value for leather-dressing. The oxidation is carried out by means of normal permanganate-solution. A black precipitate settles out. The filtrate is titrated with a solution of ferrous sulphate, and at the same time a blank experiment is done in an exactly similar way. The difference between the two titrations gives the amount used to oxidise the oil. The constants of a very good and a very bad oil may be given as examples. These were found to be respectively: Oxidation-value, 10·1 and 90·9; iodine-value, 130 and 448; saponification-value, 180·2 and 186; acid-value, 21 and 22·58. It may thus be seen that the range of the oxidation-value is very great as compared with that of the other constants.

Mr. Jackson asked what methods were used in estimating the iodine-values.

Mr. Archbutt said he would like to know whether these analyses were made on the filtered oils, as otherwise there might be extraneous organic matters interfering with the results. It seemed to him that the oxygen-number does not give much more information than the iodine-value. The bad oils reach in most cases the figure 300, whilst the good ones are well below 200. There is, therefore, a sharp line dividing the good from the bad. He had found the Wijs method of determining the iodine-value both expeditious and accurate, and the test-solution keeps its strength for many months.

Mr. S. F. Burford also thought that the iodine-value had advantages over the oxidation-value. He suggested that the determination of the refractive indices might also give useful indications.

Mr. T. F. Harvey said he had occasion to test medicinal cod-liver oils, and always employed the method of Wijs. The acetic acid used should be strong—99 per cent. He liked it very much better than the old method of Hübl, as it was not only easier, but gave closer results. Figures given by the old method were 138·8 to 159·6. By the Wijs method he had obtained 159·72 to 176·9 on thirteen samples. This was practically 167—the figure given by Lewkowitsch in his recent work, which probably was an average. He had found his Wijs solution absolutely unchanged after a period of three months, so that for all practical purposes it is very stable.

Mr. H. Peters, replying to the discussion, said that they had used the old iodine-method with mercuric chloride in alcoholic solution. The oils were filtered in each case. The iodine-value was, of course, a measure of the unsaturated bodies; but their object had been to determine the oxidisable bodies, which could also be effected in less time than was taken up by an estimation of the iodine-value by the old method. The reason for filtering the black matter obtained in their method is because it makes the end reaction more sharply visible.

Mr. Trotman then read a further paper, by the same authors, on "The Determination of Nitrates in Water by the Indigo-carmine Method"; and Mr. J. Golding also exhibited "An Improved Modification of the Kjeldahl Apparatus for Estimating Nitrogen."

Royal Institution.

THE Friday evening discourse on May 2 was by Professor A. E. Tutton, who gave a *résumé* of his experiments on the

CONSTITUTION OF CRYSTALS.

Sir William Crookes was in the chair. Professor Tutton said experimental work on the constitution of crystals offers attractions of a particularly fascinating kind—a crystal being the most beautiful of inanimate things in nature. The study of crystals involves also the consideration of light—the most beautiful form of energy. Passing on to consider the external morphology of crystals, a large cluster of diamonds was exhibited, illuminated both from the back and front, to show that transparent crystals send out two kinds of emanations—reflections of white light from the exterior faces, and coloured rays which have penetrated the interior of the crystals and been there reflected and refracted. For the last eight years Professor Tutton has been studying crystals to discover the connection between chemical relationship and crystalline form. The result has been the propounding of a new law, that in any series of salts the properties of the crystals show progressive changes in the order of their atomic weights. The experiments were conducted with either the single or double sulphates or selenates of potassium, rubidium, and cæsium, and lantern-slides were exhibited to show that the optical ellipsoid not only progressively changes its dimensions, but rotates round the symmetry-axis of the crystals. The method of measuring the angles of crystals by means of the goniometer, and a series of interference-figures, were also shown on the screen, the most remarkable of the latter being those produced by calcium sulphate before and after heating.

NEW OFFICERS.

The annual meeting of the members was held on May 2, when the usual reports were received and adopted. The Duke of Northumberland was elected President, and Sir Wm. Crookes Secretary, for the ensuing year, and amongst the managers are Sir Francis Laking, Mr. George Matthey, Dr. Ludwig Mond, Dr. Hugo Muller, and Mr. James Wimshurst, whilst the names of Dr. H. E. Armstrong and Dr. W. S. Squire are in the list of visitors. Sir Wm. Crookes has also been elected a Vice-President.

AMONG the articles imported at the port of Newport News, Va, during 1901, were the following:—

	Value £		Value £
Cocoanut oil	57,590	Oxalic acid	411
Palm oil	12,102	Carbonate of potash ...	7,820
Sal ammoniac... ...	8,168	Chlorate of potash ...	7,882
Ammonia sulphate ...	1,785	Sulphate of potash ...	11,881
Glycerin	30,313	Kainit	9,470
Castor-beans	8,079	Pepper	1,790
Bleaching-powder ...	4,151	Chloride of lime ...	22,614
Desiccated cocoanut ...	1,546	China clay	20,009
Shellac	439	Cocoa-butter	13,737

London Chamber of Commerce.

Chemical-trade Section.

AFTER an interval of sixteen months this section met at Botolph House on Tuesday afternoon, May 6. Mr. T. Tyrer presided, and the others present were Messrs. Thomas Bennett (Vice-Chairman), S. B. Boulton, Thos. Christy, David Howard, Peter MacEwan, and Dr. Messel. As this was the last occasion on which Mr. Tyrer presided as chairman of the section, he took the opportunity of giving the members an interesting *résumé* of the

WORK DONE BY THE SECTION

during his period of office, making his remarks retrospective, so far as the spirit-drawback question is concerned, and leading up to a query as to whether the section had justified its existence or not; also whether now that the Manufacturers' Section has taken over much of the work that the Chemical Section had previously done, there might not be a further devolution. Speaking on the spirit question, he first touched upon the drawback on medicinal preparations, where, he said, the diplomatic method of dealing with the authorities had proved infinitely preferable to rushing it, as, step by step, they had succeeded in getting all they wanted. No one could deny that the movement was unnecessary, as a large proportion of the medicinal preparations used even by the Army and Navy were, before the drawback question was started, manufactured originally in Germany. At the time the first concession was granted Mr. Howard was chairman of the section, and there was the most distinct evidence that the authorities did not wish to impose, but rather remove, hindrances. In the same way, when Mr. Howard and Mr. White approached them on the question of manufacturing chloroform, ether, chloral hydrate, &c., in bond, they certainly did not discourage the idea but looked upon the suggestion in a wonderfully open-minded way. From the speaker's own knowledge the attitude of the Government authorities had not decreased, but increased, up to a week ago. He pointed out in regard to German competition, which they felt at home in the cutting of prices, and in their own and the colonial markets being made the dumping-ground of German goods, that over-production had something to do with it. Thus export druggists complained that certain brands of British chloroform cost 2*s.* 1*d.* per lb. in Australia, against German at 1*s.* 1½*d.*

No rebate which the British Government could ever give would, he said, bridge over that difference, which was solely due to the very low price at which German alcohol is being sold now owing to over-production. The interesting article in THE CHEMIST AND DRUGGIST of March 22 proved that. Except the cost of spirit, export druggists have in this tincture matter little to complain of now. Mr. Tyrer next dealt with manufacturing in bond with duty-free spirit. Here, he said, the security of the revenue was the first consideration, and some provincial men objected to London manufacturers receiving special facilities, which they might not be prepared to take. The idea was not encouraged in official quarters. In this matter the Section had had the co-operation of perfumers, and Mr. Gosnell told them all about the difficulties of manufacture in bond—they had to work in official hours, 9 A.M. to 3 P.M., and pay the Inland Revenue officer who locked them in and out. Their consideration then was the facilities which German manufacturers enjoy in the use of duty-free alcohol. As to that, he had described the German regulations in his address to the Society of Chemical Industry in 1896, but since then the restrictions to the use of duty-free alcohol had been growing in Germany, and are now quite stringent, owing to risks of revenue loss. These are known to our authorities, and, summing up the matter, he said unless our manufacturers are prepared to submit to individual supervision and enormously heavy bonds, it was hopeless to get any facilities from in the present state of the British treasury.

The meeting then proceeded to elect a Chairman and Vice-Chairman. Mr. F. Harwood Lescher had sent a letter nominating Mr. Charles Umney, and Mr. Bennett was also asked to act, but ultimately it was agreed to draw upon the younger members, Mr. John C. Umney being invited to take the chairmanship, with Mr. D. Lloyd Howard as vice-chairman.

The meeting next considered the

PATENT LAW AMENDMENT BILL,

and after an explanation from Mr. Boulton about what the General Purposes Committee and the Manufacturers Section had done, Mr. David Howard urged the Section to support the measure, and a resolution to that effect was passed.

South African News.

BUSINESS CHANGES.—Mr. J. M. Goodenough, chemist and druggist, has acquired the Plumstead Pharmacy, at Wynberg, formerly carried on as a branch by Messrs. Darroll & Co.

MORE NEW DOCTORS.—The following gentlemen have been authorised to practise medicine in Cape Colony: Arthur Leopold Gurney, M.B., (late of Eastbourne, England); George Kelbe Moberly, L.R.C.P., and Andrew Gilmour, M.B. (late of Edinburgh, Scotland); Edmund Gauss, M.D. (Vienna); Robert Edward Franklyn Pearse, M.R.C.S., formerly at Jagersfontein, O.R.C.

THE CATTLE DISEASE.—Latest reports from Rhodesia state that the epidemic of redwater among the cattle is spreading with unabated virulence, and only the stock of a few farmers and transport riders has escaped the infection. At Umtali not a single span of oxen is available for transport purposes. The singular rapidity with which the animals sicken and die is only equalled by the extraordinary infectiousness of the disease, which attacks a whole herd of cattle simultaneously.

NATAL NOTES.—The regular quarterly meeting of the Natal Pharmacy Board took place on April 10, when all were present with the exception of Mr. J. E. Marchant, M.L.A., who had to attend to his duties as a member of the Legislative Assembly.—Mr. Edward Tracey Chamberlain, chemist, who was a Town Councillor of Newcastle (Natal), died suddenly on April 11. He had been in delicate health for some time. Mr. Chamberlain was highly esteemed in business and in all other capacities, and his death is greatly regretted.

TRADE-MARKS.—Trench's Remedies (Limited), of 33 South Frederick Street, Dublin, have applied in Maritsburg, Natal, for registration of the trade-mark "Trench's Remedy" and two T's crossed in a circle, in class 3, in respect of medicinal compounds for human use.—Application has been made to the authorities in Bloemfontein, O.R.C., for the registration of trade-marks by Ashton & Parsons (Limited), 17 Farringdon Road, London, E.C., manufacturing chemists, "Phosferine," Class No. 3, in respect of chemical substances for use in medicine and pharmacy, and by Foster-McClellan Company, trading as Doan's Backache Kidney Pills Company, 8 Wells Street, Oxford Street, London, for Doan's "Backache Kidney Pills," Class 3, in respect of pills for human use.

CAPE TRADE IN 1901.—At the annual meeting of the Cape Town Chamber of Commerce on April 7, the President (Mr. J. W. Jagger) delivered his annual address, in the course of which he said that the trade of South Africa during 1901 had been a record. With the conclusion of the war, he was afraid that the trade of Cape Town would have to face a set-back, although the trade of Port Elizabeth and East London must go ahead, seeing that a large part of their business is with the Transvaal and the Orange River Colony. The President dealt in detail with the imports and exports of Cape Colony, the figures relating to which have already been published in the *C. & D.* Other topics alluded to in the address included the war at the docks, railway statistics, colonial agriculture, gold-mining, and new markets

CAPE EXHIBITION.—The arrangements for the forthcoming exhibition to be held in Cape Town in 1903-4 are progressing, we are assured by the organiser, Mr. A. P. Baker, who has returned to England to complete the arrangements on this side. It is questionable whether Cape Town is the best place to hold the exhibition. Some think that Johannesburg

Digitized by Google

would be the best place, and even Bloemfontein would have been more central than either. However, it has now been decided to pitch the exhibition on the shores of Table Bay in the South African metropolis. Mr. Baker has got all the capital necessary at his disposal. The Cape Town Chamber of Commerce has not gone out of its way to further the scheme, bearing in mind, without doubt, the Kimberley fiasco, and the more recent exhibition at Grahamstown.

CAPE TOWN PRICES ADJUSTMENT.—The Committee on this matter has issued a retail price list for Cape Town and vicinity, and will ask the trade to confirm it at a general meeting to be held in the course of a few days—writes our correspondent on April 16. It is not based on getting a certain profit on every article sold, or even on such lines as are in the chemist's hands solely, but on what "can be got," so no great disturbance in over-counter figures is anticipated or meant. As the list stands at present there are a few impossible prices in it, but these will doubtless be straightened out at the meeting. The gentlemen comprising the Committee have put a great deal of work into the arrangements, and with a few alterations their labors should be rewarded with success. The representative of a foreign house doing a large export business with South Africa, in course of conversation with our correspondent, said: "It is my people's wish that the retail trade should have a living profit on our goods, and we will do our best to see that they get it. The local wholesalers make absolutely nothing on some of the patents they handle, but they make it up on others, and thereby do considerable injustice to the retailer purchasing the 'others' locally, who is unable to get his share of the profit supposed to be shared between the wholesaler and retailer."

PORT ELIZABETH NOTES.—Under the latest Martial Law Regulation no "aboriginal native" is permitted to possess intoxicating liquors. By order of the commandant two of the locations were searched, and large quantities of "Kaffir beer" and other liquors were found. The occupiers of huts where liquor was found were arrested, and tried before the Resident Magistrate. The accused received sentences varying from fourteen days' to three months', with hard labour. One of the cases was of interest to chemists. The "native" said the brandy found in his possession was obtained from a chemist. The case was adjourned for investigation. It again came before the Court on April 9, when Mr. R. Jackson said he was the manager of the Princes Street branch pharmacy of Messrs. J. A. Willet & Co. He recognised the accused, and remembered him coming, on April 1, with a prescription from Dr. Wright, also an order for 10 oz. of brandy. The order was produced. He supplied only 8 oz. of brandy. Mr. Brown, for the accused, contended that the brandy in the gill-bottle was taken from the 8-oz. bottle, and diluted with water. On that contention he asked that the case might be dismissed. The prosecution, however, emphasised the evidence of witnesses who found the liquor, and swore the 8-oz. bottle was full when found. The native was prosecuted, not for what the chemist supplied, but for the other bottle of liquor. The "boy" got fourteen days' imprisonment, with hard labour.—The building of the new premises for the National Bank having exceeded the anticipated period, Messrs. Gardner & Co. have been unable to obtain possession of the present bank premises for their new branch, but hope to get it soon.—Merchants are still greatly inconvenienced by the delays in the disembarkation of goods, due to congestion of traffic arising out of the "military exigencies."—A chemist in one of the lower quarters of the town is advertising as follows:—

Every purchaser will be presented with tickets, representing value of goods bought. By returning same to value of 40s. a discount of 1s. will be granted, together with a bicycle ticket. The party possessing the greatest number of cycle tickets at the end of the year will be presented with a bicycle.

THE insanitary form of swearing by kissing a book is purely one of custom. There is no direct authority for it in any Act of Parliament, or rule, or book of practice. The date also of its introduction is unknown.

IN disinfecting a steamer at Sydney in which a case of plague had occurred the ship was fumigated four times with sulphur, more than three-quarters of a ton having been burnt. This was in addition to spraying twice with corrosive-sublimate solution.

Colonial and Foreign News.

STASSFURT MINES.—It is reported that the Virginia Carolina Chemical Company is trying to get the control of the German trade in potash fertilisers.

BUSINESS CHANGE.—Messrs. Brummerstaedt & Groh have transferred their offices and warehouses from 25 rue de la Senne to 71–73 rue du Canal, Brussels (Centre).

NO SCARCITY.—There are now in Germany, according to the last census, about 2400 pharmaceutical apprentices; about 750 pass yearly their assistant examination. Of these about one hundred disappear before the State examination, leaving, however, far more than can ever be independent owners of pharmacies.

RUSSIAN STATISTICS.—According to statistics issued by the Medical Bureau of Moscow, the total number of medical practitioners in Russia is 20,092. Of these 642 are women. There are also 1,824 dentists. The number of pharmacists is 3,781. The proportion of medical practitioners to population is 1 to 6,500, and of pharmacists 1 to 35,000.

THE OPIUM-TRADE OF INDIA.—The revenue from opium brought 2,764,000*l.* into Indian coffers in 1900–1901. The poppy area was in 1897–98 540,000 acres—a reduction of 32,000 acres on 1896–97, and an increase of 80,000 acres on 1889. In India the poppy area is almost entirely confined to the valley of the Ganges and to the Central India native States.

INSPECTION TO BE INSTITUTED.—Owing to the want of proper means, there has been hitherto no revision of Italian pharmacies. The Ministry has now, however, enjoined the officials in charge of medical affairs to inspect pharmacies, paying particular attention to the validity of the certificate of the owner, the locality, and the storage and quality of the drugs in stock.

THE PHARMACY ACT IN TURKEY.—In the vilayet of Aidin fines ranging from 2*l.* to 6*l.* each have been inflicted upon several persons who, without licences, have been practising as doctors or as chemists in that province. The Government has instructed the provincial authorities to take stringent measures against all such unlicensed practitioners and to send them to Constantinople to be examined at the Imperial School of Medicine.

KEEPING DOWN THE DUST.—The *Upper Burmah Gazette* of March 29 contains an account of experiments made in Mandalay by Major Strickland and Count Carldarari, with the assistance of Mr. King (of Messrs. Curtis & Co.), in laying the dust of the roads. The method consists in sprinkling with earth oil or petroleum exactly in the same manner as when water is used. A preliminary experiment made in front of Messrs. Curtis's dispensary by Mr. King demonstrated the immense advantage of the method, and this was extended to the greater part of Merchant Street. The *Gazette*, in referring to the matter, says: "The thanks of the public are due also to Mr. King, who was able to give the Deputy Commissioner and the Municipal Secretary valuable hints as to how the experiment should be carried out. Mr. King has evidently not lost his interest in the affairs of the town since he ceased being a Municipal Commissioner."

CHINESE *v.* PERSIAN OPIUM IN AMOY.—Persian opium has been practically driven out of the Amoy market, the importations have fallen from 1,981 chests in 1897 to 65 chests in 1901. It has been superseded by native opium, to which it is nearly allied in flavour and strength. In Hong-Kong there was a heavy stock of some 3,000 cases of the Persian drug last year, and there being no demand prices fell until merchants were eager to realise at $320 an actual loss of $200 per chest. The total imports of opium into Amoy amounted to 2,200 chests, of which nearly 2,000 were Benares, which sold at between $850 and $950, leaving a good profit. It appears that the native growers have not yet acquired the art of making their opium into hard balls as is done in India. When they succeed in this, and in improving to some extent the quality and colour of their drug, their competition will probably make itself felt even more than at present.

Trade-Marks Applied For.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1l., obtainable through any money-order office.

(*From the "Trade-marks Journal," April* 23, 1902.)

"ENSIGN"; for photographic chemicals and films. By G. Houghton & Son, High Holborn, W.C. 244,809.

"URINIM"; for a veterinary colic cure. By Sigmund Metzner, 8 Holtzestrasse, Kattowitz (Oberschleisen), Germany. 244,466.

Device and the words "PIED PIPER" and "LET EM ALL COME (the essential particulars); for a vermin-killer. By James Walker, 19 Dockhead Street, Saltcoats, N.B. 244,506.

"MALTASSA" (no claim for "Maltass"); for chemicals. By R. McAlley, Barkside, Falkirk, N.B. 244,516.

"CHLORODOL" and "FEBRODYNE" (no claim for "Chloro" or "Febro"); for cattle-medicines. By Stephen Pettifer & Sons, Malmesbury, Wilts. 244,780.

"JELLOIDS" (no claim for "Jelly"); for chemicals and capsules. By Warrick Brothers, 7 Portpool Lane, E.C. 242,343 and 242,344.

"LE SŒMNOFORME"; for an anæsthetic. By Albert Rousseau, 61 rue de la Rousselle, Bordeaux, France. 244,194.

"WA-PO" and facsimile signature (the essential particulars); for a medicine. By Alexander von Wagner, 36 West Strasse, Chemnitz, Germany. 243,951.

"ANÆSTHESINE"; for chemicals. By Die Farbwerke vormals Meister, Lucius & Brüning, Hoechst a/Main, Germany. 244,958.

"GLYCIA"; for photographic paper. By J. J. Griffin & Sons (Limited), 26 Sardinia Street, Lincoln's Inn Fields, W.C. 245,071.

Combination of devices (the essential particular) representing three beehives and three shamrocks; for honey. By the Congested Districts Board for Ireland, 23 Rutland Square Dublin. 243,250.

"SPEEDALOSE"; for a glucoside. By A. Boake, Roberts & Co. (Limited), 100 Carpenters Road, Stratford, E. 244,695.

"PHEASANTINE" (no claim for "Pheasant"); for a poultry-meal. By A. & F. Wilcox, Sandyford, Stone, Staffs. 244,782.

"BORAMUS"; for soaps. By G. Stevenson & Co., 9 Pott Street, Hyson Green, Nottingham. 243,751.

Device of a stag (the essential particular); for laundry-blue. By W. G. Nixey, 12 Soho Square, W. 243,845.

"FOAMINE" (no claim for "Foam"); for soaps, &c., perfumery, and toilet-articles. By Yardley & Co. (Limited), 6 Ridgmount Street, Tottenham Court Road, W.C. 244,597 and 244,598.

Floral design; for toilet-articles. By the Me-Mosa Company, 46 Dover Street, Piccadilly. 242,705.

"SOLARINE"; for polishing-preparations. By the Solarine Company, 80 Market Street, Chicago, U.S.A. 244,047.

"TANBO" (no claim for "Tan"); for furniture and metal polishes and creams. By W. & H. Miers (Limited), Meanwood Road, Leeds. 244,607.

"KORTINE"; for a liquid polishing-paste. By the Kortine Company, Sycamore Street, Sheffield. 244,652.

(*From the "Trade-marks Journal," April* 30, 1902.)

"GLUCINE"; for chemicals. By Lyons' Ink (Limited), Park Street, Cheetham, Manchester. 242,632.

"TRUSTINE" (no claim for "Trust"); for a gelatinous composition. By La Société Anonyme du Trust Chimique, 33 Place Bellecour, Lyons, France. 244,579.

AN AMERICAN ISSUE

OF THE CHEMIST AND DRUGGIST will be circulated on May 31 to buyers of all kinds of druggists' goods, in Canada, the United States, and the British West Indies. The object of it is to make these buyers as well acquainted as possible with the goods offered by our advertisers, and as this issue is practically the only journalistic means these important buyers have of getting into touch with manufacturers and merchants in this country, we cordially commend the issue to their attention. Good advertisements, descriptive of manufactures and novelties, inserted in the issue should bring an excellent return in inquiries and orders. Address the Publisher of THE CHEMIST AND DRUGGIST, 42 Cannon Street, London, E.C., for full particulars.

GUINEAS TO GET.

WE offer a guinea to any subscriber, or member of his family, or *employé*, who arranges the surnames of the ten candidates for the Pharmaceutical Council in the order that they will appear on the poll. The candidates are:—

A. S. Campkin, Cambridge
M. Carteighe, London
W. S. Glyn-Jones, London
J. F. Harrington, London
J. Harrison, Sunderland
J. W. T. Morrison, Tring
C. E. Pickering, London
C. J. Park, Plymouth
A. Southall, Birmingham
J. R. Young, Warrington

The names printed in italics indicate the new candidates.

Please write on postcards, and send them not later than Monday, May 19.

Summary.

TWO more Beecham actions are reported (p. 774).

THE increased cheque-duty has been abandoned (p. 764).

DUNDEE is to have a cancer hospital and laboratory (p. 756).

THE extractive in vinegar of squill is the subject of several letters on p. 777.

SEVERAL pharmacists were capped at London University on Wednesday (p. 773).

THE B.P.C. RESEARCH-LIST is printed on p. 767, and some comments upon it on p. 772.

THE preservation of the title of chemists is discussed by several local Associations (p. 763).

BUTTERFIELD'S SYRUP has been in court again, but an amicable settlement was arrived at (p. 774).

"XRAYSER" makes a practical suggestion as to the disposal of the Martindale library legacy (p. 769).

IT IS impure celluloid that catches fire. So it has been stated recently in the House of Lords (p. 764).

WE describe graphically the chief subjects of scientific interest at this week's Royal Society soirée (p. 766).

AN Ancoats chemist, who rendered first aid to an injured woman, has been unsuccessfully sued by her (p. 774).

DEWSBURY still pegs away at West Riding Federation, Mr. Broadhead supplying the requisite calefacient (p. 762).

THE DIVISION OF THE MINOR, with Dr. Symes as the executioner, is gruesomely limned by Mr. Fred Reynolds (p. 768).

THE P.A.T.A. is a more efficient organisation than that of any other trade, according to Mr. H. W. Macrosty, B.A. (p. 769).

GERMAN PAPERS on cerium oxalate and ipecacuanha indicate a want of attention to English work on the subjects (p. 771).

THE Irish Pharmaceutical Council has discussed a proposal to get the Royal University to grant a degree in pharmacy (p. 759).

AN action by Lewis & Burrows (Limited) against a branch manager reveals a curious system for adjusting the daily returns (p. 776).

WE discuss the present position of the Pharmaceutical Council contest, and give a map showing the distribution of the members (p. 770).

THE CAPE PHARMACEUTICAL SOCIETY objects to proprietary medicines being sent there stamped, and is moving in the matter (p. 758).

COLONIAL SUBSCRIBERS will be specially interested in our notes on the exhibition of the Prince and Princess of Wales's presents (p. 780).

THE Irish Pharmaceutical Preliminary examination is henceforth to be spread over two days—to the candidates' advantage (p. 759).

MR. FREDERICK ANDREWS, a well-known London West-end chemist and a former member of the Pharmaceutical Council, died on May 9 (p. 785).

BLACKBURN asks members of the Pharmaceutical Society not to vote for Messrs. Carteighe, Glyn-Jones, and Southall, for the reason given on p. 763.

THE LONDON CHEMISTS' ASSOCIATION appears to be making progress. We report a General Purposes Committee meeting held this week (p. 763).

THE CHEMISTS' ASSISTANTS' ASSOCIATION is not in a good way, and at the annual meeting there was a protest against a self-elected Council (p. 762).

SOME ART NOTES picked up at the Royal Academy and the Paris Salons will be found on p. 785. A reproduction of the Pasteur jubilee picture is included.

THE inquest on the death of the Woolwich doctor has resulted in a verdict of death from strychnine given in error for morphine. The inquiry is reported fully on p. 761.

LORD AVEBURY altered his Shops Bill so as to make it conform with the Select Committee's resolutions, and introduced it a second time this Session. The Lord Chancellor protested, and the Bill was thrown out on Monday (p. 764).

WE give portraits and biographical notes of six of the new honorary members of the Pharmaceutical Society—Sir Dietrich Brandis, Dr. Leon Guignard, Sir George King, Dr. Donald MacAlister, Dr. Sorby, and Professor Stockman (p. 787).

ST. VINCENT ARROWROOT, West Indian lime oil, lime-juice, and tamarinds are all held for higher prices. Crude Formosan camphor is dearer; menthol and cream of tartar are firmer; spermaceti is easier; and strychnine is lower. The drug-auctions are reported on p. 781.

Digitized by Google

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

A meeting of the Western Chemists' Association is to be held on May 21 at the Westbourne Restaurant, Paddington, W., at 9 P.M.

The late Mr. Henry Tate, a director of Henry Tate & Sons (Limited), sugar-refiners, left an estate of the value of 722,440*l.* 18*s.* 8*d.*

At Stamford on April 28, a confectioner named Elson died from gangrene, caused, it is supposed, by cutting a corn and subsequently applying some corn-cure.

Sir William Thiselton-Dyer, Director of the Royal Botanic Gardens, Kew, on Saturday, May 10, opened the Hartley Botanical Laboratories of the Liverpool University College.

A sample of tincture of iodine and another of sweet spirit of nitre were the only drugs examined last quarter by Mr. A. Bostock Hill, public analyst for Hereford, and both were found to be genuine.

Thieves entered the Imperial College of Pharmacy on May 8, and stole Mr. Frederick Davis's overcoat, umbrella, and various other things, including a season-ticket, cheque-book, and about 15*s.* in silver.

George Hales (14) was ordered to be birched at Chatham Police Court on May 5 for stealing two boxes of tooth-powder, value 1*s.*, from his employer, Mr. A. W. Morgan, chemist, Railway Street, Chatham.

The Arsenic Commission on May 9 examined Mr. Fletcher Moulton, K.C., and Mr. Gordon Salamon, F.I.C., F.C.S. The latter stated that the amount of arsenic in malt has been diminishing during the last six months.

The Dispensing Committee of the Pharmaceutical Council met on Wednesday of this week, and Mr. William Duff, President of the Public Dispensers' Association, attended by request to lay some facts before the members.

The Duke of Northumberland occupied the chair at the Friday evening discourse on May 9, when Professor Norman Collie gave his well-known lantern-lecture on the "Canadian Rockies." Many representatives of pharmacy were present.

At the Provincial Grand Lodge of Staffordshire Freemasons, held at Wolverhampton on May 10, Wor. Bro. Edmund Jones, chemist and druggist, Hanley, P.M. 418, P.P.G. Steward, was appointed by Lord Dartmouth to the office of Prov. Grand Pursuivant.

Lieut.-Colonel Clifford Probyn, Mayor of Westminster, gave a dinner last week at Prince's Hall Restaurant, Piccadilly, in honour of the President of the Royal Academy. A distinguished company of artists, noblemen, and municipal workers responded to the Colonel's invitation. "The health of our Host" was proposed by Mr. McDougall, Chairman of the London County Council.

Contracts.

Mr. C. E. Lewis has been appointed chemist and druggist to Eton Urban District Council for the ensuing year.

Marlow Urban District Council has accepted the tender of Mr. C. P. Dye, of Marlow, for the supply of disinfectants.

Yarmouth Town Council on Tuesday appointed Mr. A. E. Richmond to be chemist to the Isolation Hospital for the ensuing twelve months.

The High Wycombe Rural District Council has accepted the tender of Mr. Horace Ridley, chemist and druggist, of Princes Risborough, for the supply of disinfectants.

School of Pharmacy.

By permission of Price's Candle Company, a party of students from the "Square" was shown over their works at Battersea on Wednesday afternoon, May 14, a complete tour of the extensive premises being made; and very interesting and instructive it proved. The Company are mainly candle-manufacturers, but their "night-lights" and soaps are equally well known. The life-history of a candle is a long story, and the details of its development from the crude material as imported from America to the finished article which leaves the works make up several chapters. "Coronation" candles and other "Coronation" specialities were seen in the course of manufacture, and very smart they looked. Night-lights of all sorts and kinds were being rapidly made in large quantities, and the dexterity of the girls engaged in finishing them off was amazing to the uninitiated. The manufacture and the milling of soaps were seen in various stages. A description of the decomposition of tallow and other fats was attentively listened to, and much interest was taken in the huge apparatus employed in the purification of stearin and glycerin. The departments for the making of cardboard boxes and wood boxes for packing were afterwards visited, and an inspection made of the commodious and well-equipped laboratories of the firm. Unanimous satisfaction was expressed by the visitors for the kind invitation of the firm and for the courtesy of the officials who conducted the sections of the party.

Cricket.

Bleasdale's C.C., York *v.* Raimes C.C.—This match was played on Bleasdale's ground at York on May 10, and resulted in a win for Raimes' by 17 runs. Henderson, for the winners, took 5 wickets for 1 run.

Burgoyne, Burbidges & Co. C.C., played a match with Renklaf C.C. at Honor Oak on Saturday, May 10, and won by 60 runs. The scores were: B.B.'s 103 for 9 wickets (declared), and Renklaf 43. For the winners C. P. Winchester (41), and E. H. Barton (25), batted well, and R. M. Dealtry took 8 wickets for 25 runs.

The cricket club of the Cardiff Chemists' Assistants' Association played their first game at Roath Park on Wednesday, May 7. The teams were captained by Mr. Ferrier and Mr. Morgan. The latter team won by 4 runs, the scores being 66 and 62 respectively. Mr. Ferrier bowled well for his side, taking seven wickets; and Mr. Sparrow for Mr. Morgan's and Mr. Gee for Mr. Ferrier's batted well, making 22 and 28 runs.

The Constable's Device.

At the South-West London Police Court on May 12, Henry Wilson (40), described as a chemist, of 3 South Street, Wandsworth, was charged with being disorderly in a public place. A police constable said there was a quarrel between some neighbours in which the prisoner and his wife appeared to be concerned. As the prisoner was disorderly and refused to go away, he took him into custody. The prisoner, in defence, asserted that as he was on private property at the time the constable had no right to interfere, and in arresting him he did so unjustifiably. The constable when questioned on the subject admitted that the disorder took place on private property, but at the time of the arrest the prisoner was in the public street. The prisoner said the officer invited him into the street in order to obtain his name and address. Mr. Garrett (the Magistrate) observed that a policeman could not entice a man to come into the public street and then arrest him. The prisoner would be discharged.

Sheffield Improving.

In his quarterly report to the Sheffield City Council, Mr. A. H. Allen, public analyst, states that included in the 301 samples analysed by him were four of ground ginger, six of compound liquorice-powder, two of paregoric, and eight of camphorated oil. With the exception of one sample of camphorated oil, which contained only 17 per cent. of camphor, all were found to be genuine.

Birmingham Notes.

The prominence given to water-glass as a preservative of eggs has made quite a run on the article locally.

On the city magistracy bench Professor Pointing, F.R.S., University professor of physics, now finds a place. Pharmacy is represented by Mr. Thomas Barclay, and medicine has several representatives, amongst whom are Sir James Sawyer, M.D., Dr. Warden, and others.

Digitized by Google

There seems likely to be a photographic boom this summer, and with increased facilities for getting abroad by cycling, cheap week-end tickets, and the like, the photographic chemist has an excellent opportunity for business.

The curriculum regulations for the degree of Bachelor of Commerce of the Birmingham University have just been issued. The term is for three years, and it is urged that two modern languages and chemistry should form a part. At present Latin and one modern language will be accepted. Matriculation examinations will be held in June and September.

In a tussle between Messrs. Robert Peel (3) and Messrs. William Sykes (3) the rendezvous was Messrs. Southall's premises, Bull Street. The Sykes trio had used these premises to get to a neighbouring jeweller's shop, and were heavily laden with gold ornaments, when two of them were arrested in a room of a disused public-house adjoining the chemists' premises, and which they have recently acquired.

The sturgeon is known to the pharmacist chiefly as a source of isinglass, ichthyocolla, or fish-glue; but it is interesting to know that a dealer in our city has had possession of one of these animals of such great dimensions that the King has commanded that it be sent to him for inspection. The monster weighed 470 lbs., was 12 feet long, and had a girth of 6 feet, and was caught on the bank of the Wash, near Boston, where it had been left stranded by the receding tide. Caviare—the table delicacy—is obtained from the roe of this fish. The Caspian and Black Seas supply the largest specimens, where they attain the length of 20 to 25 feet, and weigh 3,000 lbs.

Through the courtesy of the Vinolia Company's representative a *C. & D.* correspondent made a tour of inspection of the newly-inaugurated exhibition at the Bingley Hall. Although pharmacy is not much in evidence, there are many things that will interest the pharmacist. The Vinolia Company show original packages of otto, essential oils, tonquin beans, and the like. A student of dietetics learns much, and there is a small but excellent display (in the gallery) of hydrometers and thermometers. Messrs. Cadbury are there, of course, and so is Van Houten. An excellent line of food-warmers and stand for gas-burner is shown by Mr. John Thacker, a local maker.

Female Pills.

The adjourned inquest on the body of Edith Ellen Tippetts, wife of a Manchester warehouseman, was held on May 9. Particulars of the former hearing were in last week's issue (page 717), and it was now stated that the *post-mortem* examination showed that death was due to peritonitis, which had been brought on by puncturing the uterus with some instrument, such as a knitting-needle. Evidence was given by Mr. Robert Mountain, chemist and druggist, 8 Bury Road, Rawtenstall, the proprietor of the "female pills" which were suspected as the indirect cause of death. Mr. Mountain deposed that he was not the actual maker of the pills, but that they were his speciality. They contained dried sulphate of iron, powdered Barbadoes aloes, powdered colocynth, powdered southernwood, oil of pennyroyal and an excipient. In reply to the Coroner (Mr. Sidney Smelt) witness said the pills were for anæmia, amenorrhœa, and constipation. "Who told you they were good for these things?" said the Coroner. "It is the outcome of my experience," replied Mr. Mountain. "I have dispensed thousands of prescriptions, and have been acquainted with medicines for twenty-nine years. I am also familiar with medical literature, and understand the use and action of drugs and their properties and characteristics." Continuing, he said he did not prescribe, and the pills were not intended to act as an ecbolic. He was convinced they would be useless for that purpose, and if people asked for them in that connection he would not supply them. The Coroner said if the pills were taken in large doses they would only act as a purgative, and this statement was confirmed by the two doctors who made the *post-mortem* examination. The jury eventually returned a verdict that deceased died from peritonitis due to an injury to the uterus, there being no evidence to show how it was caused.

The Week's Poisonings.

Ten poisoning fatalities are reported since our last issue, half of them being due to unscheduled poisons. Phosphorus paste and chloride of zinc (in the form of soldering-fluid) are coincident in having caused two deaths each; the other unscheduled medium employed being nitric acid, taken by a petty officer at Chatham, who afterwards jumped into the sea. The phosphorus was taken by an Ipswich man and a Birmingham woman, and the chloride of zinc was taken (by misadventure in both cases) by a Grimsby fisherman and a labourer at Barry. The scheduled list includes two deaths from carbolic acid, two from laudanum, and one from oxalic acid. The last-named was taken by a Chudleigh labourer; a Bromsgrove manufacturer and a Bremerhaven seaman took laudanum in overdose, while the carbolic-acid victims were a Radford man and a labourer's wife at West Gorton. The carbolic acid was procured in the latter case from Mr. J. F. Fieldsend, chemist and druggist, of Gorton Brook, Manchester, on the pretence that it was to be used for cleansing-purposes. The Coroner at the inquest on May 13 exonerated Mr. Fieldsend from any negligence, and said he had taken every possible precaution. — Besides the fatalities mentioned, eight attempts at suicide by poisoning are recorded. A Plaistow cabinet-maker tried oxalic acid ineffectually; a Birmingham widow took laudanum, but not enough; while an Oldham factory-girl tried the same poison, with the same result. An Evesham woman, whose husband illused her, took a quantity of "Kill-germ," and nearly died. A woman appeared at Worship Street Police Court on May 8, charged with attempting suicide with red precipitate powder, and a commercial traveller was arraigned at Southport for taking a large quantity of tincture of belladonna. An Ongar man took a quantity of spirit of salt, and a Wherstead youth got an 8-oz. bottle of carbolic lotion (1 in 40) from Mr. F. Palmer, chemist and druggist, Ipswich, and a 6-oz. bottle of carbolic acid from an assistant in the shop of Mr. F. Thurston, chemist and druggist, Ipswich, a quantity of either or both of which he drank, but lived to be committed for trial.—A young woman at Appledore mistook embrocation for brandy, and swallowed a liberal dose. The timely application of the stomach-pump saved her life.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Musical Success.

Mr. Joseph Walsh, of Butler's Medical Hall, Lower Sackville Street, Dublin, won the silver medal in the tenor class at the Feis Ceoil on May 6. Mr. Walsh, who is well known for his musical ability, is an assistant of the Apothecaries' Hall of Ireland.

Must Give Less Medicine.

The Killarney Guardians have been informed by the Local Government Board that the cost of medical and surgical appliances for the year ended March 31 was considerably in excess of that in similarly classed unions. In the event of a recurrence the Local Government Board stated that they would refuse recoupment upon the excessive expenditure. The Chairman said that in medicine alone the cost was 140*l.* higher than Tralee. The Clerk said their expenses were 500*l.* less than the previous year. It was decided to ask the Local Government Board what course the Guardians were to adopt to reduce the cost of medicines in hospital.

Poisoning Cases.

A young farmer died last week at Limavady from poisoning with strychnine, self-administered.

On May 8, a three-year-old child of Mr. M. J. Harty trainer, of Alston House, Croom, co. Limerick, picked up a bottle containing embrocation, and drank some of the contents. The mother at once took the child to the doctor, but it died on the way.

The Analyst's Decision to be Final.

The Strokestown Guardians have been written to by the Local Government Board relative to the analyst's report on a sample of liniment, and they asked the Guardians to inform the contractor that when a drug is reported by the analyst to be below the standard the contractor must replace it. In the present instance four months elapsed before the drug was replaced. The contractor was also to be reminded that he agreed to accept the analyst's decision as final and conclusive when entering into the contract.

Want Irish Soap.

At a recent meeting of the Sligo Board of Guardians Mr. Jinks objected to Lancashire soap being used in the workhouse in preference to an Irish-made soap, and he moved that the resolution giving the contract to an English firm be rescinded. After some discussion the Guardians agreed to rescind the contract, and to advertise for Irish-made soap.

Local Medicine Preferred.

At the last meeting of the Boyle Board of Guardians the Local Government Board wrote asking why the lowest tender for medicines, &c, was not accepted. The Clerk said that Mr. Boyers's tender was 13 per cent. under the standard, while a Liverpool firm tendered at 20 per cent. off. The Guardians, however, gave the contract to Mr. Boyers to avoid sending for medicines to Liverpool. A reply in these terms was sent to the Local Government Board.

Contract Cancelled.

At the meeting of the Cavan Board of Guardians last week a letter was read from the Local Government Board stating that they could not alter the decision of their medical inspector, which led to the cancelling of the contract of Mr. Cole, chemist, Cavan, for the supply of medicines. The Guardians then considered the tenders, and that of Messrs. Hunt, Dublin, at 10 per cent. off, being the lowest, was accepted.

Personal.

Dr. Ninian M. Falkiner's presidential address at the opening meeting of the Section of State Medicine of the Royal Academy of Medicine in Ireland on "The Registration of Disease" has been published in pamphlet form by Mr. John Falconer, 53 Upper Sackville Street.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

A Chlorodyne-drinker.

On May 8, an old man named M'Arthur was sent to gaol for two months at Perth for fraud. The indictment contained fifteen different charges, nine being for obtaining bottles of chlorodyne from a chemist in Crieff by fraud.

Cancer-investigation.

Mr. J. K. Caird, a Dundee manufacturer, has offered to the directors of the Dundee Infirmary to erect a cancer-hospital at a cost of over 18,000*l.*, containing six wards capable of accommodating from ten to twenty beds, and a ward for private patients. He has also promised to guarantee 1,000*l.* a year for five years for a laboratory for original work in cancer-research. The offers have been gratefully accepted.

A Question of Skill.

Evidence was led before Sheriff Henderson, in the Edinburgh Sheriff Court, on May 8, in an action raised by Mrs. Margaret Lawrie, or Craik, against William Edwards, surgeon dentist, 61 Queen Street, Edinburgh, in which she claimed 100*l.* damages for injuries said to have been sustained in connection with a dental operation conducted by defender. Eighteen teeth were extracted from Mrs. Lawrie's mouth by the defender, but after the operation the pain and swelling in the gums was so great that she was unable to use the new set of false teeth provided. In her evidence she said she took five splinters of bone from her gums, and had to take opiates to relieve the pain. She was practically an invalid for some months after the operation. A dentist who was examined said in his opinion there had been negligence in the operation, but not want of skill. Several dentists deposed to the skill of defender, and the Sheriff reserved judgment.

Glasgow Notes.

It is understood that the new Trade Association will shortly begin business in earnest, but no information is yet available as to its first line of defence or offence.

An inspection of local chemists' windows shows that there is everywhere a marked increase in the proportion of packed goods and specialities made up on the premises, or bearing the occupier's name and address.

A Glasgow chemist who employs female assistants says that in respect of cleanliness, regularity, honesty, and reasonable submissiveness he prefers them to males, but in his experience they do not learn the business so thoroughly because they expect to get married and quit it.

In the "Answers to Correspondents" column of a local weekly newspaper the genius who enlightens the world with his encyclopædic knowledge informs an inquiring aspirant that the "profession of a chemist and druggist is an eminently genteel calling, particularly suited to ladies, whose more sympathetic nature and manner in dealing with the sick and suffering ought to make them more popular as assistants and successful in the business than men."

Owing to the continued east winds and lack of sunshine vegetation is very backward all round Glasgow. The catkins of the willow and hazel are still abundant, and the flowers of the elm and ash have just appeared. There is an abundance of wood-anemone, lesser celandine, wood-sorrel, and primroses, and here and there a small colony of male or female *Mercurialis perennis*, and the seedlings of such sturdy umbellifers as bishop's weed, sweet cicely, and cow-parsnip. But even the exuberant daisy and dandelion are in arrears, and the woods and copses are comparatively bare.

Business Change.

Mr. James Freeland, chemist and druggist, Dunoon, has moved into larger premises in the fashionable Clyde summer resort. They have been fitted throughout with new fittings in excellent taste. An important attraction is a compact soda-fountain, one of the first to be introduced at the northern seaside places. On the opening day free drinks were dispensed at the fountain, and the musically inclined were treated to selections of popular music on the gramophone.

A Miner's Claim.

In the Court of Session, Edinburgh, an action has been raised against Dr. William Craig, of Cowdenbeath, by a miner named Foy, for 500*l.* damages. Foy was in the employment of the Fife Colliery Company (Limited) last summer, during which time a deduction was made from his wages for the services of the defender. In May last his wife gave birth to a child, at which he had to procure the services of a nurse, and when defender was called in it is stated that through ignorance or neglect he did not discover that the child's limbs were dislocated, and that owing to the suffering it endured the child died. Defender says his terms of engagement did not include attendance at confinements, and that after he was called in the child was properly treated.

French News.

(From our Paris Correspondent.)

A Question of Plague Propagation.—At the last meeting of the Paris Academy of Medicine Professor Proust read a paper by M. Garnaleia, of Odessa, regarding the propagation of plague by rats. The result of the Russian scientist's researches is that plague is not transmitted from one rat to another, but that they are liable to taint alimentary products, such as rice or grain. He suggests that attention to this fact may be an important factor in securing immunity from plague for Europe.

MLLE. CASSIVE'S MASSAGE.—The well-known actress, Mlle. Cassive, has been sued by her medical adviser, Dr. Verdier, for his fees. His bill included 157 visits, massage with electricity (faradisation and galvanisation), at 20f.—3,140f. Mlle. Cassive regarded the charges as excessive, and refused to pay, but the Court held "that the fees claimed are not out of proportion with the state of fortune of the patient," and awarded the full amount.

POISONED PAINT.—It is reported from Avignon that a M. Fernand Robinet has just died in that town under somewhat extraordinary circumstances. About four months ago he had his bedroom painted in what is known as the "new art" style, and his death is attributed to arsenic-poisoning inhaled from the paint. It was only when the symptoms of poisoning were manifested in a peremptory manner that he was treated for arsenical-poisoning, but it was too late. He succumbed to efforts caused by vomiting provoked by large doses of magnesia. The police have taken the matter up.

THE CASE OF DANVAL, the convict-pharmacist, who was recently pardoned, has given rise to a great deal of interest and some discussion in pharmaceutical circles here. As a whole pharmacists are, of course, glad that one of their calling should, to some extent at least, be relieved of the stigma of having poisoned his wife, but Professor Carles, of Bordeaux, has voiced the views of our experienced and hard-thinking men here in saying that a good many people are of opinion that the first steps taken in this matter by some of our French scientists were not happy, and that they would have gained in authority and respect in confining themselves to their laboratories and academies, in showing a little more circumspection in newspaper interviews, and a less noisy propaganda with a public incompetent to understand their scientific arguments.

MINIMISING DISPENSING RISKS.—A death was caused last year at the Lariboisière Hospital, Paris, through a nurse giving a patient a dose of poison instead of the remedy prescribed by the doctor. The mistake arose from the fact that the labels on some of the jars in the hospital dispensary had become partly obliterated. In order to minimise as far as possible the risk of such fatal errors M. Mourier, Director of the Assistance Publique, has decided that in future all poisonous substances used in the various Paris hospitals shall be kept in special receptacles, impossible to be confused with ordinary bottles and jars containing non-poisonous substances. These new receptacles are now being tried at the Lariboisière Hospital. They take the form of glass bottles for quantities of 15 grammes to a litre, and jugs or jars for larger quantities. They are triangular in form, and the bottles will be of yellow glass, with two sides fluted. In this way it is hoped that confusion will in future become impossible, and the risk of dispensing errors therefore greatly minimised.

American Notes.

TO REDUCE COST OF SULPHUR.—The claim is made by Mr. John S. Fleming, Vice-President of the United States Sulphur Reduction Company that by a process which will be used by the company the cost of sulphur will be reduced by one-half. The company will manufacture sulphur from iron pyrites.

NO INTENTION TO VIOLATE.—The prosecution instituted by the Philadelphia Pharmaceutical Board against John Wanamaker, the well-known dry-goods store magnate, for having violated the "poison laws," by the sale of a poison, without the necessary regulations, has fallen through. This prosecution was based on the alleged act of a salesman at Wanamaker's store in selling the Board's local agent an ounce of corrosive sublimate, in the photographic department, without obtaining the name and address of the buyer or asking for what use it was intended, also that it did not bear a poison label. The Magistrate dismissed the case in view of the fact that there had been no intention to violate the law regarding the sales of poisons.

AMERICAN PHARMACEUTICAL ASSOCIATION.—The semi-centennial meeting of this body will be held at Philadelphia in the week beginning September 8. The convention which formulated the constitution and by-laws and adopted the present name of the Association was held in a hall of the Philadelphia College of Pharmacy, Zane Street, on October 6 and 7, 1852. It is anticipated that, on the occasion of the golden jubilee all of the living ex-Presidents of the Association will be in attendance, viz.: Dr. J. W. M. Gordon, Cincinnati, O., 1864; Frederick Stearns, Detroit, Mich., 1866; E. H. Sargent, Chicago, Ill., 1869; Dr. Enno Sander, St. Louis, Mo., 1871; Albert E. Ebert, Chicago, Ill., 1872; John F. Hancock, Baltimore, Md., 1873; Professor C. Lewis Diehl, Louisville, Ky., 1874; Wm. Saunders, Ottawa, Can., 1877; Dr. Geo. W. Sloan, Indianapolis, Ind., 1879; James T. Shinn, Philadelphia, Pa., 1880; Professor John Uri Lloyd, Cincinnati, O., 1887; A. K. Finlay, New Orleans, La., 1891; Professor Joseph P. Remington, Philadelphia, Pa., 1892; Edgar L. Patch, Stoneham, Mass., 1893; Wm. Simpson, Raleigh, N.C., 1894; Professor James M. Good, St. Louis, Mo., 1895; Joseph E. Morrison, Montreal, Can., 1893; Henry M. Whitney, North Andover Depôt, Mass, 1897; Charles E. Dohme, Baltimore, Md., 1898; Dr. Albert B. Prescott, Ann Arbor, Mich., 1899; and John F. Patton, York, Pa., 1900.

South African News.

NEWLY REGISTERED.—The following have received licences to practise in their respective professions in the Cape Colony: Mr. James Gray, M.B. (formerly of Quirindi, New South Wales); Mr. Oscar Edgar Lynott, D.D.S., Phila., U.S.A. and Mr. Needham James, L.D.S., R.C.S., Eng. (not on British Dental Register, 1902).

PATENTS.—Jean Baptiste Germeuil Bonnaud, a chemist, Dover, Eng., is applying at the Cape for a patent covering "improvements in nitrocellulose compounds for various useful purposes." There is also a requisition for "an automatic washing and developing machine for photo plates and prints" by Harry Alexander Alston, of Cape Town.

BUSINESS CHANGES.—Mr. S. C. Sivertsen, of Observatory, Cape Colony, has purchased the businesses carried on in Mowbray and vicinity under the style of Godfrey & Co. It is understood that the Mowbray shop will be entirely refitted.—Messrs. Cameron & Hamilton, chemists, Sir Lowry Road, Cape Town and Salt River, have purchased the entire block of buildings at Observatory, Cape Town, wherein they had leased and were fitting a pharmacy. The deal is one of the biggest conducted here by a retail firm.

NATAL EXCISE-DUTY ON SPIRIT.—With further reference to the article on methylation in Natal (see *C. & D.*, April 19, page 616), the Excise-duty on spirit made in the colony has been fixed at 7*s.* 6*d.* per gal. There is to be a rebate of duty on rectified spirit of wine made from spirit distilled in the colony, and used by chemists and druggists in the preparation of medicines, perfumery, and non-potable articles. Methylated spirit made from colonial spirit, and wine made in Natal under a licence, are exempt from duty.

NO LOYALTY, NO LICENCE.—A sagacious scribe on a Cape weekly thinks "it would be an exceedingly wise thing to do with rebel doctors, chemists, and dentists, whether British or foreign, what has already been done in the cases of two rebel attorneys, and that is to have their licences to practise permanently withdrawn, and their names removed from the register." The mischief some of these fellows are reported to have caused is very dreadful, the writer states, and he is convinced that loyal subjects could not possibly object to that procedure on the part of the executive.

NOTHING LACKING.—In the course of a descriptive visit to the canvas town of Zeildorp, a writer in the *Bloemfontein Post*, where the refugees are sheltered, states that the dispensary was visited, in which there was nothing lacking for the latest improved treatment. "We do not allow our drugs to get stale; that is the reason why we don't get the largest-sized bottles," said Dr. Laurence. "Fresh consignments are constantly arriving, for we only keep enough stock for our immediate needs. And there is no limit as to expense, either. This drug"—lifting a 20-oz. bottle—"is 18*s.* a pound, and we can use half-a-pound a day if we like. As for medical comforts, well, if any patient does not get sufficient I have only myself to blame, for the Government gives me an absolutely free hand in the matter."

Digitized by Google

The Merchandise-mark Act (Cape Colony) is a model of what an Act of Parliament should be in its way, but it is perhaps unfortunate that its provisions are rarely if ever enforced. For example, Clause 2 provides that the expression "trade-mark" means a trade-mark registered in accordance with the Cape Act, or without registration if such mark is protected in the United Kingdom or in any British possession or foreign State; while the expression "trade-description" means any description, statement, or other indication, direct or indirect (*a*) as to the number, quantity, measure, gauge, or weight of any goods, or (*b*) as to the place or country in which any goods were made or produced. This last clause (*b*) particularly applies to all packed pharmaceutical goods imported into the country ready for delivery to the public, but is more honoured in the breach than in the observance.

In the Orange River Colony.—By a proclamation in the "Gazette," it is enacted that from April 17 no person not already practising in the Orange River Colony shall be entitled to practise as a physician, surgeon, dentist, chemist, or druggist unless duly registered in the Colony. The certificate of registration will be issued on production of the diploma, accompanied, if required, by a sworn declaration as to its authenticity and the identity of the applicant. Those entitled to a certificate must be either persons entitled to practise in Great Britain and Ireland, or, the holders of a foreign diploma from a country which grants to British practitioners equal privileges. This is the official announcement of the extension to the Orange River Colony of the provisions for the regulation of medicine and pharmacy already in vogue in the Transvaal.

Pharmaceutical Society of Cape Colony.

A general meeting of the Society was held in Hofmeyr's Chambers, Cape Town, on April 17, the President (Mr. Geo. Darroll) in the chair. The attendance was rather small, but among those present were the Vice-President of the Society (Mr. F. W. C. Thomas, member of the Colonial Pharmacy Board), Messrs. Geo. Hamilton, R. S. Smiles, Alex. Cameron, H. Magness Elgar, and the Secretary. Mr. A. J. Rivett, resident director of Lennon (Limited), was represented by proxy.

Before the business of the meeting was proceeded with the President referred to the great loss South Africa and the whole Empire had sustained through the death of Cecil John Rhodes, and a vote of sympathy was passed and recorded, all members standing with bowed heads.

Various Matters.

Minutes of the previous general meeting were then read and confirmed. The Benevolent Fund amounts to 37*l.* 15*s.*, and officers to administer same were appointed, consisting of the President in office as Chairman, and the Treasurer, while the provisional members of the committee are Messrs. S. Johnson (Lennon, Limited) and E. L. Ralling. The Secretary intimated the receipt of von Herkomer's portrait of Dr. John Attfield, presented to the Society by Mr. Francis Oldfield, of Waverley, near Bloemfontein, O.R C. Mr. Thomas asked that the picture be framed and hung at his expense.

A communication from the Editor of The Chemist and Druggist relative to the Martindale memorial was read, and the Secretary was directed to thank the Editor for the particulars extended, which were fully appreciated.

Arrangements to hold a chemists' dinner were placed in the hands of a committee, and the function will take place at an early date.

Unstamped Proprietary Medicines.

The question of the continued exportation to South Africa of certain British proprietary medicines stamped was brought up on a motion of the President, who had been pressed by a section of the trade to deal with the matter, and he handled it at some length. A member stated that a certain British proprietary medicine went out to New Zealand unstamped, but the proprietors refused to export to South Africa in the same manner. This occasioned various caustic comments, but it was decided that it was a matter to be dealt with by South Africa as a whole, and therefore the other trade organisations would require to be approached. Correspondence with the Eastern Province Association, the Natal, Transvaal, and Rhodesia Societies is to be initiated accordingly.

New Members.

The following were made members: Messrs. F. W. Good, I. J. van Niekerk, R. E. Wright, W. J. Strange, A. P. Brown, and E. S. MacKenzie. Messrs. R. S. Smiles and F. H. Carman re-joined.

The proceedings then terminated.

A Hospital Dispensary.

We recently had an opportunity of inspecting the dispensary of the Mount Vernon Consumption Hospital at Hampstead. The hospital is a rectangular building, with a frontage of about 170 feet, the main entrance being in the centre. The principal staircases are just inside the entrance, and a wide corridor runs from end to end with rooms arranged on either side. The ground-floor contains the administration-offices, whilst the out-patients' department and the dispensary are situated in the basement. It must not be inferred from its situation that the dispensary is small and dark; on the contrary, for size and convenience few dispensaries can compare with it in comparison with the size of the hospital. There are 100 in-patients, but a much larger number of out-patients, some 4,699 new out-patients being treated last year. The dispenser is Miss Hilda Rosenthal, who holds the Apothecaries' Assistants' certificate. Miss Rosenthal, who has held the post of dispenser for two years, was trained at the Manchester College of Pharmacy, and at the time of our visit was filling the medicine-basket for the in-patients. The prescriptions are on large folio sheets, and contain a chart showing the extent of the lung-mischief. As may be expected, the tonic-syrups are much in evidence, but the variety of drugs in use is by no means limited. Chinosol in pill form is one of the newer medicaments which is being tried at present. The dispensary is shelved on all four sides, except where poison and alkaloid cupboards and the out-patients' window are, and the drugs are arranged in gold-labelled bottles in classes. A table in the centre is brightened by vases of flowers—a sure sign that a lady dispenser is employed—and a general tidiness, which mere man cannot hope to successfully imitate, prevails. Cod-liver oil, which is supplied to nearly all the patients, is kept in a large iron drum, fitted with a tap, and has frequently to be replenished. It is interesting to note that the open-air treatment is being extended, as many as forty patients sleeping in the open air. The use of paper handkerchiefs is now being restricted by the more general use of Dettweiler's sputum-flasks. The sputum is burnt and the flasks sterilised each night, and a steam disinfector is used to render all clothing innocuous before it is sent to the laundry.

An anonymous supporter of the hospital has recently given 100,000*l.* to provide and partially endow a country branch and convalescent home, and the foundation of the new hospital at Northwood, Middlesex, was laid by Princess Christian on May 13.

NEWCASTLE CHEMISTS' ASSOCIATION.

A special meeting of this Association was held on the evening of May 7, to consider the question of a compulsory curriculum and division of the Minor examination. Mr. Robert Wright, President, occupied the chair. Mr. F. R. Dudderidge opened the discussion, and advocated the division of the Minor, but was opposed to a compulsory curriculum. The President, Messrs. B. Noble, T. Maltby Clague, E. Bennison, Gibson, and Gilderdale having spoken, the following resolution was carried by a large majority:—

That this Association supports any well-devised scheme for the division of the Minor which will allow candidates to pass the subjects separately.

Mr. Bennison next spoke strongly in favour of a compulsory curriculum, but had not the sympathy of the meeting, the following being carried:—

That this Association is not prepared to pass an opinion on the subject.

Delegates were appointed to represent the Association at the Pharmaceutical Conference in Dundee, and at the annual meeting of the Federation, which will be held at the same time and place.

Pharmaceutical Society of Ireland.

COUNCIL MEETING.

THE Council met at 67 Lower Mount Street, Dublin, on Wednesday, May 7, Mr. George D. Beggs (President) in the chair. There were also present Messrs. John I. Bernard (Vice-President), Patrick Kelly, T. Batt, J. E. Connor (Newry), T. N. Moffitt (Belfast), George Brown, R. Blair (Cork), T. H. Edgar, J. Smith, R. Simpson, Vincent Johnston, and Professor Tichborne.

COMPOUNDING IN INSTITUTIONS.

Replies were read from several institutions acknowledging the receipt of the Council's memorandum on the subject of compounding by unqualified persons, and the sale of poisonous medicines and liniments in improper bottles. The Managing Committee of the Meath Hospital forwarded a copy of a resolution which they had passed stating that they

recognised the importance of the subjects mentioned in the memorandum, and were fully alive to the necessity of safeguarding the public in the dispensing of poisons; that they had long since taken ample precautions in the matter; and that they would gladly afford any members of the Council who visited the hospital an opportunity of satisfying themselves that that was so.

A letter from the Royal Victoria Hospital, Belfast, stated that in that hospital all the medicines were dispensed by duly qualified licentiates of the Pharmaceutical Society, and that poisons and liniments were only supplied in bottles intended for the purpose.

A letter from Steevens' Hospital, Dublin, stated that the subjects dealt with in the memorandum should have the attention of the Governors of the hospital.

The reply of the Secretary of Jervis Street Hospital said:—

I am directed to thank your Society, and to say that the recommendations contained therein have been already acted on in this hospital.

The reply of the Royal City of Dublin Hospital, Baggot Street, stated that Mr. Wells, pharmaceutical chemist, was in charge of the compounding department of the hospital, and that the necessary steps had been taken with regard to the supplying of poisonous liniments in proper bottles both in the hospital and in the dispensaries.

A letter from the Royal Hospital for Incurables stated that the Resident Medical Officer of that institution was a fully-qualified medical practitioner, that under no circumstances were nurses allowed access to the dispensary except for the purpose of removing medicines recently compounded, and that there were no students in the general hospital.

The reply from the Incorporated Dental Hospital stated that the memorandum had been laid before the Governors and duly noted.

The letter from the Richmond, Whitworth, and Hardwicke Hospitals stated that the memorandum would receive the best attention of the Governors.

The PRESIDENT: We have done our duty and there is nothing more to be said.

The VICE-PRESIDENT: We ought to pass a vote of thanks to the Editor of the *Freeman's Journal* for the very able article which he published on the subject. The Council, I am sure, feel that the *Freeman* has done its duty even though it has not induced the Board of Guardians to do theirs.

The article referred to was read by the Registrar for the information of members of Council who had not seen it

The VICE-PRESIDENT moved a vote of thanks to the Editor of the *Freeman*, and the motion was seconded by the PRESIDENT and passed unanimously.

EDUCATION IN CORK.

In reference to an application of Mr. E. A. O'Keeffe, Head Science Master of the Crawford Municipal Technical Institute, Cork, for the recognition by the Council of the botany class of that institution,

Mr. BLAIR said it was not yet possible to start a class for materia medica in the Institute, but he would be very glad if the Council would recognise the botany class. The master of the class was the Curator of the Museum of Queen's College, Cork, and was very highly qualified.

The VICE-PRESIDENT: What provision is there for instruction in materia medica?

Mr. BLAIR: At present it is done in the College.

The VICE-PRESIDENT: Do we accept their certificates?

Mr. BLAIR: Yes.

On the motion of Mr. BLAIR, seconded by the VICE-PRESIDENT, the application of the Crawford Institute was granted.

A donation was received and acknowledged from the Pharmacy Board of Queensland, of a copy of their register.

REPORTS FROM THE EXAMINERS

showed that at the recent Preliminary examination there were 31 candidates, of whom 16 passed; that at the examination for the Licence, 23 candidates presented themselves, of whom 9 passed; that at the Registered Druggists' examination 1 candidate presented himself in Dublin and 8 in Belfast, of whom 3 failed; and that at the Assistants' examination, 4 candidates came up, of whom 3 passed.

A report was read from the special committee which had been appointed to confer with the examiners on the proposed alterations in the conduct of the examinations. After a discussion on this, in which the PRESIDENT, the VICE-PRESIDENT, Professor TICHBORNE, and other members took part, the following decisions were arrived at:—

As to the Preliminary examination—that it shall in future be held on the first Tuesday and following day in January, April, July, and October, commencing at 11 A.M.; that both examiners shall be present during the two days; that the first day shall be devoted to papers, and the second to the oral examination, unfinished papers to be disposed of on the second day; that the examiners shall, for their own guidance and for the information of the Council, draw up a time-table showing the time allowed for each subject; and that a fee of 1*l.* 1*s.* be allowed to each examiner for his second day's work.

The PRESIDENT moved the adoption of an addition to the regulations to the effect that the minimum percentage of marks should be required in all the sub-divisions. At present in the Latin examination the minimum percentage was 20, given for both translation and grammar combined, the result of which was that a candidate might get through whose knowledge of grammar was very defective. The effect of the amended regulation would be that the candidate would have to get at least 20 per cent. in both translation and grammar.

The President's motion was unanimously agreed to.

The PRESIDENT said, as to the Licence examination, that the recommendation of the examiners was that the first day (Wednesday) should be exclusively occupied with papers, all of which should be given in on that day. This would prevent candidates engaged in writing answers to papers being taken away from that work to answer oral questions. Half of the following Thursday should be taken up with practical chemistry, and the other half with practical pharmacy. The whole of Friday should be given to Oral examination in all the subjects.

These recommendations were adopted, and a further resolution was passed appointing the examiners to act as inspectors on the first day, when papers are to be handed in.

AN IRISH PHARMACY DEGREE.

The VICE-PRESIDENT brought forward a motion asking the Council to "consider the advisability of applying to the Royal Commission on University Education in Ireland to provide a university degree in science for Irish pharmacists." This, Mr. BERNARD said, was a suggestion from Dr. McWalter to meet a want which had been long felt. Heretofore, when licentiates completed their examinations, they did not go any farther. The object of the proposed degree was to induce them to seek higher qualifications so as to enable them to secure Local Government Board appointments. The Vice-President read a long letter from Dr. McWalter, setting forth the grounds on which he maintained that the establishment of the proposed degree was desirable. It would tend to raise the standard of qualification of the whole body of pharmaceutical licentiates. The letter pointed out that such degrees were given on the Continent.

The PRESIDENT seconded the motion. They might not at first have a large number of licentiates looking for the

Digitized by Google

degree, but still it would be a stimulus to aspiring pharmaceutical chemists to pursue their studies.

Professor Tichborne said that two years ago he proposed the establishment of a kind of fellowship or second grade for the purpose of inducing the licentiates to pursue higher studies in order to better their position. He knew at the time that he was not going to succeed with the motion because of a feeling amongst some members that they would not like to have a superior grade lording it over them. He pressed the motion, however, and was very decidedly beaten. They were now asked to do the very same thing. He was not going to oppose the present motion because he should be sorry to oppose anything that appeared like progress; but they should remember that no university would give any degree to a person who was not one of its own graduates; and even if it did offer such a degree as that sought to be established it would be open to any graduate of the university. It was not likely that it would be made a *sine qua non* that the person coming up for it should be a pharmaceutical chemist. They might now pass a resolution to the effect that some such degree was desirable.

The Vice-President said he could not see that there would be any harm in asking for the establishment of such a degree as that suggested. He did not believe that there would be any jealousy on the part of ordinary licentiates towards the holders of it. At present under their Acts of Parliament the Society could only give a pharmaceutical chemist's licence. He thought the Society had been too much out of the public gaze except in the matter of prosecutions. Besides, there were positions held by foreigners which licentiates of the Society should seek to obtain.

Mr. Kelly said he was not present when Professor Tichborne brought forward the proposal which he had mentioned. If he had been he would have supported it. No one desired to see pharmacy going ahead more than he did. But they should remember that the licentiate would have to graduate in the university from which he sought the degree; and the obtaining of B.A. in the Royal University meant a great deal of hard study and the expenditure of much money. In Germany and elsewhere on the Continent education was much cheaper than it was in Ireland. The Council might refer the matter to a committee.

On the motion of Professor Tichborne the consideration of the subject was postponed for a month.

Photographic Notes.

By a Pharmaceutical Camerist.

A Dark-room Scheme

is unfolded this month in the *Photogram*. The idea is to compile a list of dark-rooms available for plate changing and developing, and, in order to make the fact known, to supply a distinctive sign for affixing to the premises. Chemists who have dark-rooms and desire to have their names included in the directory should send particulars to the Editor of the *Photogram*. The sign, of which a facsimile is given here, is printed on cardboard (10 by 7) and varnished, and is supplied free to owners of dark-rooms who will display it. I believe the sign can be also had in enamelled iron for outdoor positions—which costs money, I suppose.

WHERE THIS SIGN IS SEEN A DARK-ROOM IS PROVIDED FOR THE USE OF TOURIST PHOTOGRAPHERS. A LIST OF SUCH DARK-ROOMS ALL OVER THE WORLD IS PUBLISHED BY THE EDITORS OF THE PHOTOGRAM, EFFINGHAM HOUSE, ARUNDEL ST., LONDON, W.C.

A New Catalogue.

"Wizard" Cameras have become well appreciated since the *C. & D.* noticed their introduction two years ago, and the makers do not stop at the point of perfection they had then attained. The new catalogue of "Wizards at Work," which Messrs. Seabrook Brothers & Co., 21 Edmund Place, Aldersgate Street, E.C., have just issued contains a number of new features in camera construction and finish, and the catalogue itself is an artistic production. Any *C. & D.* subscriber will get a copy on applying to the firm.

Alcohol in the Developer

is scarcely a new idea. It was used in the early days of dry-plate photography, with the idea of preserving the pyrogallol developer, and was abandoned because it was found to be unnecessary. It is, however, proposed by Dr. Hauberrisser, in the *Photogram*, to use alcohol in the developer as a hardener, and the following formula is suggested:—

Sodium sulphite	80 gr.
Amidol	8 gr.
Water	3½ oz.
Alcohol (96-per-cent.)	3½ oz.

The alcohol is added after the amidol and sulphite have completely dissolved. The developer may find uses under certain conditions, but the cost of the alcohol is prohibitive in this country, and the volatile nature of the solvent is a disadvantage in hot climates.

Ensign Developers.

Chemists will have noticed that Messrs. G. Houghton & Sons, High Holborn, W.C., have placed on the market a series of "Ensign" photographic specialities. The latest additions are developing cartridges and toning and fixing cartridges. The two-tube system has been adopted in the case of the developer, the smaller tube contains the metol and quinol; and in the toning and fixing cartridge a tiny inner tube contains the gold salt. This method of packing has the advantage of stability and the "Ensign" goods being also attractively labelled should sell well. The developers are sold in boxes of half-a-dozen cartridges, or boxes containing a set of developing, toning and fixing chemicals sell at 1s. There are several different developers in the series.

Dark-rooms.

Frome.—Wilfred L. Watson, 14 Cheap Street.
Lutterworth.—T. H. Dewey, High Street.

Personalities.

Mr. H. W. Smith, chemist, of Niagara Falls, Canada, and Mrs. Smith are now on a visit to England.

Mr. Alexander Smith, chemist and druggist, Kuala Pilah, Negri Sembilan, Straits Settlements, formerly of Elgin, N.B., is now on his way home for a short visit.

Mr. F. M. Fisk, European manager to Messrs. Parke, Davis & Co., and Mr. Thomas Maben, F.C.S., of the firm's scientific staff, sailed by the *Oceanic* on Wednesday for New York.

Mr. Councillor O. A. Clark, chemist and druggist (of Messrs. Nunn, Hinnell & Clark), is one of the deputation of the Bury St. Edmunds Town Council to visit the Septic Tank system of sewage at Exeter.

"Mr. T. J. Wise, the eminent bibliographer of our modern poetry," is how Mr. Edmund Gosse speaks in this month's *Century* of a well-known Mincing Lane gentleman, who is an equal authority on certain drugs.

While on their visit to Wales last week the Prince and Princess of Wales opened the new hospital at Rhyl. The favourite watering-place was beautifully decorated in honour of the Royal visit, the Secretary of the Decoration Committee being Mr. P. J. Ashfield, chemist and druggist, Rhyl.

Mr. Edward Evans, jun. (of Messrs. Evans, Sons & Co., Liverpool), has been re-elected to the leadership of the Liberal party in Liverpool, a position he has held with conspicuous ability for many years. Mr. Evans has also consented to again be President of the Liberal Federal Council.

Mr. Geo J. Seabury will sail for Europe on the *Oceanic* on May 28 in order to study on advanced lines foreign steamship subsidy laws, taking as a basis the English, German, and French laws, either for peace or war. Also, their departments of commerce and the industries, and several collateral subjects, including the position of pharmacists in the armies and navies of Europe. He proposes to draw up a Bill covering these subjects.

Strychnine for Morphine.

AT the Woolwich Union Relief Offices on Friday, May 9, Mr. E. Negus Wood (Deputy Coroner) concluded the inquest with reference to the death of Dr. George Ingledew, aged 53 years, 19 Nightingale Vale, Woolwich. At the previous sitting (see *C. & D.*, April 26, page 652) Dr. Fuller expressed the belief that death was due to shock, but the relatives suggested that deceased had been given strychnine instead of morphine, and the inquiry was adjourned to ascertain if that was so.

Mr. F. W. Beck, solicitor, now appeared for Mr. Goldthorpe, chemist and druggist, Plumstead, from whose shop the morphine had been obtained.

John Morley, the deceased's messenger-boy, gave evidence as to being sent on the night of April 14 by Dr. Ingledew to Mr. Goldthorpe's shop with a note and a shilling, and getting a white packet from the assistant.

Mr. Patrick Cavanagh stated that he had been in Mr. Goldthorpe's employ about a fortnight on April 14, and had been about a week at the Herbert Road shop. "When the lad brought the note to me," he said, "I took it round the counter and asked the manager if it was wrong or right to serve the lad. Mr. Ingham said, 'Yes, it is all right; Dr. Ingledew often buys morphia here,' and he told me where the morphia was kept."

The Coroner: Are you sure you did not give strychnine?

The Witness: Positive, for I have never served strychnine in that shop.

The Coroner: Do you know the difference between strychnine and morphia, or not?

The Witness: Oh, yes; I know the difference distinctly.

The Coroner: Was there any date or signature on the order?

The Witness: No date, but it had Dr. Ingledew's initials.

By Mr. Beck: He had not served any poisons before to anyone, nor did he know where they were kept. On this occasion Mr. Ingham told him which was the poison-cupboard, and told him that the morphine was kept two shelves from the bottom. He weighed 1 dr., according to the order. Never having been to the cupboard before, he had to look carefully for the bottle. It was labelled "Morphinæ hydrochlor."

By the Coroner: The strychnine and morphine bottles were quite dissimilar in appearance. He had over three years' experience at the trade.

Mr. John Bertram Ingham, chemist and druggist, manager of Mr. Goldthorpe's shop, 160 Herbert Road, Plumstead, deposed to authorising the sale of morphine, which was not entered in the poison-book because the order came from a medical man. Nor was the order kept.

The Coroner: You should have kept it, and I do not agree with you that it was not necessary to do so.

A long discussion here followed between the Coroner, Mr. Beck, and the witness whether initials were a legal signature, the Coroner adding that they had only the bare statement that even initials were there.

Continuing his evidence, Mr. Ingham said that during the last twelve or fourteen months he had received a similar order from Dr. Ingledew about every ten days or a fortnight for morphine. None of the orders were kept. He would not have accepted such an order from a stranger.

Mrs. Mary Catherine Ingledew, widow of deceased, said she saw the boy Morley bring back the white packet with a yellow poison-label on it. The deceased put the packet into his pocket, but later gave it to Mr. Thomas, his assistant, to make up. The powder looked a dirty white, and was not a perfect powder; it seemed imperfectly crushed. It was put in a 12-oz. bottle, and only water added. Deceased did not take any that night, but about 11.30 the next day she found him sitting in his armchair, and he said, "That man has sent me strychnine instead of morphia; go and get me some morphia." The bottle was then on the shelf, but some was gone out of it. The remainder was turned into a basin, and some morphine fetched in the bottle. She at once sent for Dr. Fuller, but the deceased was seized with spasms, and his arm became as hard as iron, his face rigid, and he died very shortly after.

By Mr. Beck: He was in the habit of taking morphine every few days, and sent the boy for some, as he had used all he had. She did not believe he had any strychnine in his surgery. Mr. Thomas, the deceased's dispenser, always made up this mixture for the deceased, and when he went to do so on this occasion he said, "This looks very inferior stuff."

The Coroner: Have you anything else to add?

The Witness: I would like to know of Mr. Ingham how many shelves there are in the cupboard, and was the bottom reckoned by Mr. Cavanagh as a shelf; and, again, where was the strychnine kept?

Mr. Ingham: There are five shelves, and the strychnine would be on the bottom one and the morphia on the second.

Mrs. Ingledew: From the contradictory evidence they do not seem to know where anything is kept.

The Coroner: You must not say that.

Dr. Fuller (recalled) said that the story of the spasms he first heard that day. He now thought death was caused by strychnine.

Mr. Thomas was then called, and said that though he acted as the deceased's dispenser or assistant he was not acquainted with drugs, and did not know the difference between strychnine and morphine.

The Coroner: How on earth, then, do you make up the drugs?

The Witness: I worked only by the labels on the bottles.

The Coroner: I do not think I would like you to make up my medicines. Such so-called dispensing is shocking.

The Witness: They were always done under the doctor's eyes.

The Coroner: For a person to coolly talk of mixing drugs without the slightest knowledge of them suggests to me a danger that is almost criminal in my views.

The Witness: But I could read the labels all right.

The Coroner: Do not argue such a subject with me. You have heard my views on such dispensing.

Continuing, the witness said that the deceased used to take 10 to 15 gr. of morphine at a time. Witness had obtained morphine for the deceased of Mr. Wing, chemist, of Powis Street, Woolwich; also of Mr. Palmer, of Woolwich Common, and of Mr. Harwood, of the New Road. Mr. Wing charged 1*s.* 2*d.* per dr., and Mr. Goldthorpe 1*s.* per dr. He had also got strychnine, but it was liquid, not a powder.

Mr. Beck: Had the deceased any strychnine in his surgery?

The Coroner: How could he possibly know when he does not know the appearances of strychnine?

Mr. Beck: But he would know if the strychnine-bottle was empty.

The Coroner: That would not prove none was there. What made you say, "This looks very inferior stuff"?

The Witness: It looked different to me from the usual morphia, for it seemed crystals, and not a powder. He did not draw Dr. Ingledew's attention to the matter, and it did not occur to him it was wrong.

The Coroner: You go in for a little study and examination before you mix up any more drugs, or you may find yourself in an awkward position. It is useless asking you any more on a subject you admit total ignorance of.

Dr. Fredk. Womack, of 2 Greencroft Gardens, South Hampstead, stated that he was toxicological expert to the L.C.C. and lecturer at St. Bartholomew's Hospital. The bottle containing what had been the contents of the stomach he found contained 8 oz. of a solution which he found contained 4·5 gr. of strychnine. The contents of the stomach thus did not contain a fatal dose, but probably some had already been absorbed. There was no trace of morphine in the contents of the stomach. He had heard the evidence, and believed death was due to strychnine.

The Coroner then summed up, and the jury, after a long consultation in private, returned the following verdict:—

That the deceased, George Ingledew, died suddenly from the effects of strychnine, which was supplied by Mr. Cavanagh to the deceased through the boy Morley, in mistake for morphia, which the deceased had been in the habit of taking, and ordered. We, however, are unanimously agreed that Mr. Cavanagh did not supply strychnine with felonious intent, but by a mistaken idea that he was serving morphia. We further agree that Mr. Thomas, who was an inexperienced man, should not have had the control of drugs with which he dispensed the deceased's medicine, and he ought to be severely cautioned against further dispensing.

The Coroner having expressed agreement, the proceedings closed.

Association Affairs.

Hastings and St. Leonards Pharmaceutical Association.

The first annual dinner of this new Association was held last week at the Castle Hotel, Hastings. The President of the Association (Mr. F. Rossiter) was in the chair, and supporting him were the Mayor of Hastings, Dr. Batterham (President of the East Sussex Medico-Chirurgical Society), Dr. Jowers, Dr. South, Dr. Pritchard, Dr. Ballingall, and Dr. Sanderson, and Mr. C. B. Allen (Vice-President of the Pharmaceutical Society). Mr. John Smith was in the vice-chair, and amongst others present were Messrs. A. Batting, G. Batting, H. Exbank Smith, F. Tree, E. Ripley, T. D. Vint, A. C. Tharle, H. Cheshire (Borough Analyst), Sidney Smith, H. C. Edwards, W. Dawes, G. Parker (Bexhill), A. E. Marriott, F. J. Crisford, A. Barnes, and Messrs. Rogers and Booth (Tunbridge Wells).

The Chairman gave the loyal toasts, afterwards congratulating the members of the Association on the success of their first dinner.

Mr. Tharle proposed "The Mayor and Corporation," and Alderman Langham (Mayor of Hastings) responded.

Thereafter Mr. John Smith gave "Medicine and Pharmacy," two departments of scientific work running on the same lines, for he regarded the trained medical man and the trained pharmacist as workers in the same field. As pharmacists they delighted to do honour to the medical profession, for they knew it was a hard and arduous calling, and that its members lived and carried on their labours in the light of public opinion.

Dr. Batterham, replying for "Medicine," thought that Mr. Smith might fairly have placed pharmacy in the first place in his kindly speech, for the work of the skilled pharmacist was closely allied to the practical side of medicine. Mr. Smith had alluded to the work of a distinguished pharmacist, Mr. Martindale. All medical men appreciated Mr. Martindale's labours, and owed him a deep debt of gratitude.

Mr. C. B. Allen, who responded for "Pharmacy," traced the early development of pharmacy, and gave a history of the various legislative efforts that had been made to organise pharmacy, and protect the public from unskilled practitioners. He said he had come away from a meeting of the Pharmaceutical Council, which had sent hearty greetings to that Association, and wished it every success. Pharmacy, it had been said, was the outcome and offspring of medicine, but, as a distinguished pharmacist had observed, it was not the handmaid of medicine, but its wife. (Applause.) He then detailed the various steps taken by the old apothecaries of England to guard their interests, from the first Act of Parliament, passed in 1511, to recent times.

The Mayor, in proposing "The President," spoke of Mr. Rossiter as being the right man in the right place. He had known Mr. Rossiter for many years, and knew that whatever he took in hand he did exceedingly well, as witness his work for so many years as Secretary of the School of Art and Science. Mr. Rossiter returned thanks, after which Mr. T. D. Vint gave "Our Guests," for whom Mr. Rogers responded. The annual meeting was adjourned until Thursday, May 15.

Three Town Juniors Smoke.

The Three Towns Junior Chemists held a successful "smoker" at Farley's Hotel, Plymouth, on May 7. Among those present were Mr. C. T. Weary (President of the Senior Section) and Messrs. H. P. Hearder, F. A. Spear, and Downing. Mr. E. J. Groombridge occupied the chair, and the Secretary (Mr. E. Lovatt) had arranged a capital programme of music, to which Messrs. Weary, Cocks, Spear, Downing, Groombridge, Richards, and Lacy contributed. Mr. Lamble acted as accompanist.

Chemists' Assistants' Association.

The annual general meeting was held on May 8 at 73 Newman Street, W., Mr. J. W. Peck (President) in the chair. Messrs. Frost and Bateson were elected scrutineers to examine the voting-papers for the election of the new Council, and Mr. Tweedy read the literary report of the session. Mr. Strother (the Hon. Treasurer), in dealing with the financial statement, pointed out that there were thirty-six patrons of the Association, but only twenty-seven had paid subscriptions, while sixty-five members had paid for this year. The balance carried forward was 3*l.* less than last year. Messrs. Britton and Snow had acted as auditors, and were thanked.

Mr. Snow, as an old member and founder, said he believed that more spirit was shown in the old days when the Association was first formed. He suggested that the members might take districts and call upon every chemist's assistant in that neighbourhood with the view of getting them to join the Association.

Mr. Tweedy objected to "touting for members."

Mr. Lownsbrough said some 150 members were on the books, but only sixty-five had paid. Twenty-four new members had been elected, but of these thirteen had never attended a meeting, so that only 50 per cent. of the new members were any good to the Association.

Mr. Jones was of opinion that a great lack of business was shown in the conduct of the affairs of the Association. The meetings were late in starting, and frequently at the time a meeting should be in progress a committee was sitting in the other room.

Mr. Franklin supported this view.

Mr. Frost complained that no notice had been given to members as to nominations for the Council. He had been a member two years himself before he received even a voting paper. He suggested that an addition should be made to rule 4, "that nominations for the Council should be forwarded to the secretary on or before a certain date in April of each year to be fixed later."

Mr. Ffoulkes supported this motion. He stated that the lack of new blood to the association had been lamented and the Council had let this opportunity of infusing new life slip past. The Council apparently nominated each other, year by year, and elected one another annually to the executive posts.

The motion was ultimately carried.

A scrutiny of the voting papers, thirty-five of which had been received, showed that Messrs. Latreille, Tweedy, Lownsbrough, Matthews, Peck, Strother, Thompson, Franklin, Garsed, Coupland, Britton, Jones, Haylings, and Hymans, were members of the new council, and that Messrs. Curry, Barker and Wendon were the unsuccessful candidates.

The scrutineers having been awarded the thanks of the meeting, Mr. Ffoulkes proposed a vote of thanks to Mr. Peck, the President of the past year.

This was seconded by Mr. Coupland and carried unanimously, amidst acclamation. This terminated the business of the evening, and ended the session.

Dewsbury Chemists' Association.

This Association wound up the session on Monday evening with a meeting held at the Church House, Dewsbury, under the presidency of Mr. R. Gledhill.

Federation.

The correspondence read by the Secretary (Mr. G. Walker) included a letter from the Bradford Association, intimating that, after further considering the proposed formation of a Federation of West Riding Chemists' Association, that Association had expressed it approval of the scheme.

The President remarked that the Barnsley Association approved of the scheme, but had not intimated their approval. It was stated that the Halifax and Wakefield Associations also approved, the only West Riding Associations disapproving being Leeds and Sheffield. The Secretary was instructed to write to the Associations which had not formally conveyed their approval, in order that the scheme might be got into shape for next session.

Mr. Broadhead said they might congratulate themselves at the close of the session that their Association was active and progressive. They had dealt with many important subjects during the session, such as the division of the Minor and the compulsory curriculum, upon which they were in the ranks of the forward movement. It seemed to be becoming recognised that a federation of local associations in West Yorkshire was a practical and workable idea. He was rather glad that it had met with a certain amount of

Digitized by Google

opposition. It proved that in certain quarters, where apathy and inertia seemed to be the guiding principles of political advancement, there was a feeling that such a powerful organisation as the proposed federation was likely to be a source of danger to those who regarded stagnation and apathy as the proper conservation of vested interests. The Federation would break through a good deal of that apathy, and would be able to deal with many subjects more effectively than any number of small associations. It would be able to deal with the question of the

PRESERVATION OF THE TITLE

very effectively. He reminded them that he introduced the question before the Association eighteen months ago, with a view to suggesting to the Council of the Pharmaceutical Society that steps be taken to check the abuse of the title. It was right that the time was inopportune, the draft Bill being prominently before the country. That Bill was anything but prominently before the country now, though he scarcely agreed with those who said it was as dead as Queen Anne. It was under the influence of a powerful anæsthetic, and would take a great deal of reviving. (Laughter). If its heart was as weak as the hearts of some of its supporters, it was a bad job for the draft Bill. They had, however, an Act of Parliament, which was only half-administered. It was decided under the Act that only qualified persons shall perform certain acts, and it was further enacted that only qualified persons shall use certain titles. How was the Act enforced as regards titles? Not at all. He believed that if they could only get a Council that would take a test case there would be no fear of losing it. At the same time he believed that, if a case were taken to the highest court and lost, it might be the very best thing that could happen for pharmacy. There was, however, not much fear of losing. The objection to this course was, he believed, very largely private objection. In certain quarters it would be inconvenient, but there were ways and means whereby everything could be regulated, if it were decided that the titles could only be used by qualified individuals, just as the practice was conserved to them. If they could get the new members of the Council to give a pledge to support a test case, they would be doing a very important thing. Could anything be done to obtain the opinions of candidates for the Council? It was no use approaching the Council itself, because resolutions had previously been sent up and no notice taken of them.

After some discussion as to how the candidates should be approached (the session being at an end and the election near at hand), a resolution was adopted recording the Association's desire to ascertain the opinions of the candidates on the preservation of the title in conformity with the 15th section of the Pharmacy Act of 1838, it being hoped that the candidates would reply through the trade Press.

The Asscciation then adjourned until September.

London Chemists' Association.

THE meeting of the General Purposes Committee of this Association at the Holborn Viaduct Hotel on May 14 was more businesslike in tone than any of its predecessors. The quantity (and quality) of the attendance was encouraging, and the business, although informally conducted, showed symptoms of definite aim. There still appears, however, an inexplicable shyness in admitting the Press to assist at the deliberations. The Chairman of the committee (Mr. Albert Cooper) presided, and there were also present Messrs. J. F. Harrington (Kensington), H. Cracknell (Bayswater), W. J. I. Philp (Notting Hill), G. P. Pond (Fleet Street), C. E. Pickering (Marylebone), C. J. G. Bunker (Great Dover Street, S.E.), A. Pellew (Walworth), P. H. Barton (Cambridge Road, N.E.), F. E. Bustard (Tottenham), F. W. Truman (Old Kent Road), W. A. Goodall (Fulham), S. W. Dawson (Norwood), R. Willson (New Kent Road, S.E.), and the Secretary (Mr. R. H. Jones). The first business raised was by the Secretary, who intimated that about 3,000 circulars had been printed, and copies had been sent to members of the committee and of the Association. However, there were several minor mistakes discovered in the wording of the circular, and "Xrayser's" comment in the *C. & D.* of May 3 (page 697) was specially mentioned. It was agreed that there was reason for criticism of the particular "object" referred to, and the paragraph was accordingly changed to read:—

To protect various trade customs (particularly those affecting London chemists), which are not sufficiently recognised by Magistrates and others in authority, and are sometimes overruled in Courts of Law. To support the Pharmaceutical Society, or any other trade organisation, in any action taken with this object, or, failing their action, to take the initiative.

It was ultimately agreed, on the motion of Mr. Cracknell, that the circular, with this and other corrections, be reprinted and distributed, as originally proposed. Mr. Truman then reported the success of a meeting of South London chemists in the Masonic Hall, Camberwell, which had resulted in an accession of nearly a dozen new members to the Association. The Chairman then made feeling reference to the death of Mr. Frederick Andrews, of Leinster Terrace, W., who was a member of that committee. He (Mr. Cooper) had known Mr. Andrews for many years, and they all knew the keen interest he took in trade matters. He had been a member of the Pharmaceutical Council for some years, and did his duty faithfully and well to his brethren and the craft generally. He moved a formal motion of condolence, to be sent to the family, and, after Mr. Bunker had seconded in a few appreciative phrases, the meeting expressed its silent acquiescence upstanding.

The next subject of interest referred to the annual general meeting. The Secretary suggested that, although the rules distinctly said the annual meeting was to be held in May, this year it had better be postponed till June. This led to a complicated discussion, as Mr. Barton, Mr. Pickering, and others deprecated the evident desire to break the newly formed rules; but things were ultimately straightened out by Mr. Pond, who moved that, owing to exceptional circumstances (such as the annual meeting of the Pharmaceutical Society and the coronation of King Edward VII.), the annual meeting be this year held on June 18. Mr. Pickering, as an amendment, suggested May 29, but he had no backers, and June 18 was agreed upon *nem. con.* Mr. Pond evidently appeased Mr. Pickering by stating that the Association was so infantile and irresponsible in its unreasonableness that it could not quite keep its own rules yet, but it would promise to do better in future. A committee, consisting of Messrs. Bustard, Barton, Truman, Cracknell, and Glyn-Jones, was appointed to draw up a report to be submitted to the annual meeting, and auditors are to be appointed later. The Secretary made the satisfactory statement that the Association financially is already sound. He had a balance of over 10*l.* in hand. Fourteen new members were elected, and, discussing again the annual meeting, it was resolved that everybody connected with the trade be invited to attend, and, in order that as much publicity be given to it as possible, the announcement of the meeting is to be advertised in the trade journals. It was likewise agreed, on the suggestion of Mr. Bustard, that a motion be brought forward for discussion at the annual meeting, urging the Pharmaceutical Society to bring a test case into the courts to decide the question as to the right of a limited company to use the title of "chemist."

N.E. Lancashire Chemists' Association.

A GENERAL MEETING of the North-East Lancashire Chemists' Association, called to consider the coming Pharmaceutical Council election, was held at the White Bull Hotel, Blackburn, on Tuesday night, May 13, Councillor Critchley presiding. The following resolutions were passed:—Moved by Mr. W. Holt, and seconded by Mr. G. B. Pickworth:

That in view of reiterated expressions of this Association that practising under trade names simply is not in accordance with Section 17 of the Pharmacy Act, 1868, and as we cannot expect such traders to forget their private interests when the interests of the general body are at issue, we recommend our members to strike out the following names on the voting-paper: Messrs. Carteighe, Glyn-Jones, and Southall.

Moved by Mr. W. Pickup, and seconded by Mr. W. Holt:

That this meeting requests the committee to consider the advisability of petitioning the Council of the Pharmaceutical Society, asking them, in view of recent legal decisions, to take a test case *re* the use of title by companies.

The Association wishes to express its satisfaction as to the way in which Mr. R. L. Gifford, its representative on the Council, has endeavoured to carry out the wishes of the Association, and also to express its appreciation of his services.

Westminster Wisdom.

(By our Parliamentary Representative.)

The Cheque-duty.

Mr. Austen Chamberlain, on behalf of the Chancellor of the Exchequer, informed Mr. Patrick O'Brien last week that if anybody has been so forgetful as to place an extra penny stamp on bank-cheques they can get the penny back from the Commissioners of Inland Revenue under the provisions of the Stamp Act, 1891, Section 10.

It is Abandoned.

One of the first things which the Chancellor of the Exchequer did this week was to announce to the House of Commons that he had decided to abandon the proposed additional duty on cheques. The effect upon the House was marked. Had the Government fallen the Opposition could not have cheered with greater vigour, and, although this was not a matter for surprise, the bulk of the Ministerialists showed with emphasis that they also were glad that the obnoxious thing had been got rid of. The Chancellor made no excuses; his surrender was unconditional, and it was this that saved him from the undiluted bitterness of humiliation. Had he endeavoured to defend himself the House would have become abusive. His frankness tickled the humour of the audience, and the cheers of his opponents quickly became lost in good-natured laughter. Nevertheless, some of his admissions were damaging. He said that when he proposed the tax on all cheques he did not appreciate to how very large an extent these cheques were drawn for very small sums by persons even of very small means engaged in business. Surely he ought to have got up all the facts before he took any step. He also expressed surprise that the alternative he had proposed did not commend itself to bankers. The opinion of bankers could have been obtained very easily before the alternative plan was stated in the House. In these sentences I am merely summarising the uncomplimentary gossip of the Lobby. It seems to have been the feeling in the country that impressed him most. He had never expected so great an outcry. To use his own words, he found this feeling prevailing so largely that he could not anticipate receiving nearly as much from the additional duty as he had supposed, owing to the large extent to which payment in cash would be substituted for payment by cheques. Therefore, as the duty was not based on any particular principle, and as the amount which he should expect to receive from it was comparatively small, he had decided not to press it further. By way of postcript I ought to add that even now all members are not pleased. Certain gentlemen are known to have been at great pains to prepare speeches sufficiently powerful to transfix the Chancellor to his seat. The speeches must now be burned, and there is some lamentation.

Another Shops Bill Gone.

Lord Avebury's Shop Hours (No. 2) Bill has gone the way of No. 1, but its fate was decided in the House of Lords on Monday in a somewhat curious fashion. In February it will be recollected his Lordship introduced the first Bill, which was rejected. He then prepared a second. No doubt he believed that the changes he had made with the view of conciliating the Opposition were very important, but as a matter of fact the only material difference was a provision that the order of the local authority to close shops within a given area at a certain hour should be confirmed by Parliament, and it was the want of something drastically different that led to the destruction of the measure. Lord Avebury introduced the Bill in a brief speech. He said he thought he had succeeded in producing proposals which were not marked by the defects which roused the ire of certain noble lords in February, and he dwelt on the importance of something being done. He was followed by the Earl of Wemyss, who reiterated all the old arguments against the Bill. It was class legislation, and as such the House of Lords ought to have nothing to do with it. At this point an unexpected turn was given to the debate. The Earl of Morley, who acts as chairman of Committees in the Upper Chamber, raised the question whether under the rules of the House the Bill could be entertained at all. He pointed out that to all intents and purposes it was practically the same Bill which their Lordships rejected three months ago, and there was an excellent rule that no Bill could be introduced a second time in the same session. The Lord Chancellor took the same view, and so did the new official leader of the Opposition, Earl Spencer, but the noble earl pleaded that the Bill was one in which the rule might be waived. The mere suggestion is an indication of the free-and-easy way in which the Lords are wont to transact their business. It was apparently a dread that things might be thought to go on in too free-and-easy a style if the concession were made that instigated the Prime Minister to intervene. He said he was "much impressed" with the views of the noble lord on the Woolsack and of his deputy, and he did not see how they could depart from the precedent which guided their debates. This settled the matter, for the Earl of Cork at once got up and moved the previous question, the carrying of which rung the knell of the Bill. Nothing more can be done in the matter this year.

Appointment of a Commercial Committee.

Arising out of the agitation for a Minister of Commerce, a Commercial Minister has been appointed among members of the House of Commons which "shall deal with matters that may arise from time to time affecting the welfare of the trade and commerce of the country, and which shall further the progress of Bills relative to those interests."

British Trade with India.

Lord George Hamilton says he is unable to give any undertaking that the Indian Customs duties will be removed or reduced. It had been suggested by Sir John Rolleston that the duties on goods entering India from the United Kingdom might be removed so as to get rid of a hindrance to British trade.

The Sugar Question.

The Colonial Secretary has promised that there will be a full opportunity of discussing the proceedings of the recent Sugar Convention and the final protocol before it is ratified. No date is fixed.

Manufacture and Sale of Celluloid.

A discussion of some length took place in the House of Lords on Tuesday on the danger of using articles made of celluloid. Lord Saltoun, who stated that a member of his family had sustained serious scalp-wounds through the burning of a celluloid comb, asked "whether the Government would, in view of the fact that celluloid is a highly inflammable and sometimes explosive substance, manufactured chiefly from gun-cotton, and that it is used freely in articles of attire such as combs and collars, cause such modifications to be used in its manufacture or place such regulations upon its sale as would render impossible the recurrence of the many serious accidents which have resulted from its unrestricted sale." Lord Belper replied on behalf of the Home Office. He pointed out that celluloid, if free from impurity, will not take fire except at a very high temperature, and the accidents that have occurred must have been due to the impurity of the materials employed. During the last few years all celluloid factories in which gun-cotton enters into the process of manufacture have been brought under the provisions of the Explosives Act, and are under licence. The result is that greater attention is now paid to the purity of the materials than was formerly the case. Of course it is impossible to extend this supervision to the manufacture of celluloid abroad. Celluloid is used for an enormous number of purposes, and it would be a matter of very great difficulty either to interfere with or restrict the sale. Under these circumstances, and in view of the very small number of accidents compared with the large quantity of articles sold, the Home Secretary does not see his way to interfere by legislative means. He seems to think, however, that something might be done in the way of warning the public of the danger.

In 1901 drugs, chemicals, &c., weighing 7,856 tons were shipped from the United Kingdom to Stettin, against 4,714 tons in 1900. Similar products were exported from Stettin to the United Kingdom weighing 1,714 tons, against 2,031 tons in 1900.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1l., obtainable through any money-order office.

(*From the "Trade-marks Journal," April* 30, 1902.)

"PALM BRANCH" and device; for chemicals in Classes 1, 2, and 3, aniline dyes, beeswax, colouring-matter, fullers' earth, gelatin, glycerin, &c., mineral and aërated waters, brushes, metal-polish, furniture-polish, plate-powder, &c. By Raimes & Co. (Limited), 24 Prince Regent Street, Stockton-on-Tees. 244,351, 244,352, 244,353, 244,354, 244,356, and 244,358.

"OKAPI BRAND" and device; for chemicals in Classes 1 and 3, and for perfumery and toilet-articles. By Hamel & Horley, 102 Fenchurch Street, E.C. 245,055, 245,056, and 245,062.

"ELASTILITÉ"; for chemicals. By the Imperial Varnish and Colour Company (Limited), 6 Morse Street, Toronto, Canada. 245,090.

"GRAPHOIDS" (no claim for "Grapho"); for compressed photographic chemicals. By Brady & Martin, Northumberland Road, Newcastle-on-Tyne. 245,200.

"LESCOL"; for chemicals and perfumery, &c. By the Lescol Manufacturing Company, 99 George Street, Camberwell Green, S.E. 244,553 and 244,554.

"IFOR" (the essential particular in a label-device); for a whooping-cough mixture. By J. Rowlands, Aubryn, Montgomery. 243,015.

Label-device and the word "SINAPOL" (the essential particulars); for an embrocation. By Sadler, Firth & Ross (Limited), 26 Great Guildford Street, Southwark, S.E. 243,687.

"KENI"; for photographic apparatus. By A. L. Adams, 26 Charing Cross Road, W.C. 245,043.

"REFILLETIERE" (no claim for "Refill It"); for ink pellets and ink. By Cochran & Co., Greenland Street, Liverpool. 244,092.

Combination of devices (the essential particular); for gelatin. By J. & G. Cox (Limited), Gorgie Mills, Edinburgh. 244,318.

Device of the Eiffel Tower; for food-substances. By G. Foster Clark & Co., Hart Street, Maidstone. 214,411.

The device of a ruby and the word "RUBY" (the essential particulars); for baking-powder. By the Parazone Company (Limited), 11 Bothwell Street, Glasgow. 245,258.

"VOLKA" (no claim for "Volk"); for mineral and aërated waters. By R. White & Sons (Limited), Cunard Street, Camberwell, S.E. 243,159.

Combination of devices and *facsimile* signature (the essential particulars); for a cleansing fluid and for a toilet-preparation. By Scrubb & Co., Guildford Street, S.E. 241,230 and 241,231.

"BATHESMA" (no claim for "Bathe"); for a toilet-bath preparation. By H. P. Truefitt (Limited), 13 Old Bond Street, W. 243,691.

"SERO"; for perfumery and toilet-articles. By the Rose Remedy Company, 434 Strand, W.C. 244,914.

Star device enclosing arm and hand holding an arrow; for furniture and metal polishes and polishing-preparations. And device (the essential particular) of a newly-hatched chick and the words "JUST OUT"; for leather polishes. By Day & Martin (Limited), Borough Road, S.E. 244,284 and 244,285.

(*From the "Trade-marks Journal," May* 7, 1902.)

"DOVE BRAND" and picture of dove; for chemicals. By W. & C. Pantin, 147 Upper Thames Street, E.C. 244,637.

"NONEX"; for a chemical composition. By G. & T. Earle (Limited), Dalton Street, Wilmington, Hull. 245,654.

"VERMILINE"; for a vermin-destroyer. By Mary Anne Aitken & Son, Drug-mills, Mitcham, Surrey. 244296.

"LUTO"; for goods in Class 2. By J. F. Smith & Co., 3 Calvert's Square, Stockton-on-Tees. 244,923.

"AMISNEEP"; for chemicals. By J. Poynter, Son & Macdonalds, 72 Great Clyde Street, Glasgow. 245,125.

"TUSSANO"; for chemicals. By C. J. Hood & Co. (Limited), 34 Snow Hill, E.C. 242,982.

The signature "HOLMES & Co." (the essential particular) and the word "RUBENS"; for an embrocation. By Holmes & Co, Kirk Royds, New Mill, near Huddersfield. 243,074.

"CAMALATA"; for medicated toilet-articles. By Dorothy Dixon, 12A Eccleston Street, Belgravia, S.W. 244,007.

"RECTONES" (no claim for "Recto"); for a medicine. By Oppenheimer, Son & Co. (Limited), 179 Queen Victoria Street, E.C. 244,613.

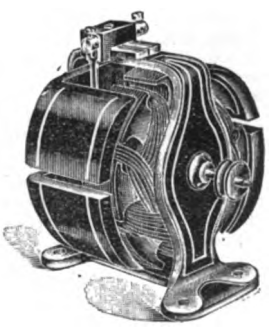
"AERIAL"; for a corn-plaister. By W. B. Pritchard & Son, Wilton Chambers, 10 St. Ann's Square, Manchester 244,644.

"CAMFORT"; for tanning and dye-stuffs. By the Island Trading Syndicate (Limited), 14 Wormwood Street, Old Broad Street, E.C. 245,160.

"PETOL" and circular device with smoking vessels and "Petol" four times round the edge; for charcoal, tar, &c., and for a food-preservative. By A. C. Kennedy, Eustace Lodge, Robin Hood's Bay, Yorkshire. 245,213, 255,223, 245,218, and 245,226.

"OZEE"; for spectacles and optical instruments. By Alfred Burnett, 451A Brixton Road, S.W. 244,009.

Trade Notes.



MR. CHARLES B. ALLEN, pharmaceutical chemist, 20 High Road, Kilburn, N.W., is now on the telephone company's service—No. 180 Hampstead.

LIME-FRUIT CORDIAL AD LIB.—The offer of Messrs. Evans, Sons & Co., of Liverpool, and Messrs. Evans, Lescher & Webb, of Bartholomew Close, E.C., to supply free as much Montserrat lime-fruit cordial as is required for the King's dinner to the poor has been accepted.

AS A CORONATION SOUVENIR, Messrs. John Gosnell & Co. (Limited) are putting up Cherry-blossom perfume in a new art style; the bottle is of unique shape, and the case in which it lies is satin lined. The retail price is 4*s.*, the minimum retail price being 3*s.* 4*d.* "Famora" perfume is put up in similar style.

"TABLOID" KINO COMPOUND has been added to Messrs. Burroughs Wellcome & Co.'s list (compare *C. & D.* DIARY, page 291). Each compression contains pulv. kino co. B.P., gr. v., and the articles are put up in bottles of 100. The new preparation is useful and portable for summer diarrhœa, and we find that ready disintegration and solution are a characteristic of the compound.

MESSRS. F. DARTON & Co., of St. John Street, Clerkenwell, have just introduced a twin-telescope field-glass of exceptionally high power, which is equal in field and magnifying power to a +8 binocular prism-glass. The glass is well made and beautifully finished, the price in aluminium being 3*l.* 12*s*, and in bronze 2*l.* 15*s.* in case. The figure included in this paragraph is drawn from a tiny electric motor which the firm are now making. It is twice the size of the illustration, yet is powerful enough to drive a phonograph or a window model. It is quite silent in use, and the absence of the "burr" is an advantage.

ROYAL SCARLET CATALOGUES are issued by Messrs. Ayrton & Saunders, 34 Hanover Street, Liverpool, one containing prices of druggists' sundries and the other consisting simply of illustrations. This arrangement is useful for chemists as the latter can be shown to customers without disclosing the cost price of the articles. The catalogues are excellently produced, and are being sent to customers as the opportunity occurs of including them in packages of goods. The firm are offering something good in seidlitz-boxes this week.

Digitized by Google

Business Changes.

Boots Cash Chemists (Limited) are opening two pharmacies in the principal thoroughfares at Brighton, and also one at Worthing.

Mr. A. J. Appleton, chemist and druggist, 501 Attercliffe Road, Sheffield, has built a new and handsomely fitted branch pharmacy at Darnall.

Mr. D. Albert Evans has been appointed manager of the business of Messrs. Steele & Marsh, Milsom Street, Bath, with the option of purchase [corrected announcement].

Mr. H. R. Maynard, chemist and druggist, Horncastle, has opened a branch business at Woodhall Spa, with fittings supplied by Messrs. Ayrton & Saunders, of Liverpool.

Messrs. Lennon (Limited) have removed their London offices from 75 Leadenhall Street, E.C., to premises erected for them at 53 to 58 Queen Elizabeth Street, Tower Bridge, S.E.

Mr. Harold Wyatt, sen., chemist and druggist, has retired from the drug-business formerly carried on by him for many years at 223 Stanley Road, Bootle, and is now residing at Willesden. No alteration, however, has been made in the carrying-on of the business, of which Mr. Harold Wyatt, jun., pharmaceutical chemist, is now proprietor.

Recent Wills.

Barnaby.—The will of Mr. Henry Barnaby, chemist and druggist, who died at 31 Port Hall Road, Brighton, has been proved at the Lewes District Registry by his executors, Mr. Frederick Harry Syms, of Horsham, and Mr. John Henry Pinder, 47 Hamilton Road, Brighton. The gross value of the estate is 5,233*l.* 4*s.* 1*d.*, and the net personalty 5,190*l.* 16*s.* 1*d.*

Hewitt.—The will of Mr. John Henry Hewitt, of 211 Graham Road, Hackney, formerly head cashier to Messrs. D. & W. Gibbs (Limited), who died on February 8, has been proved by his widow, the sole executrix. The gross value of the estate is 1,145*l.* 10*s.* 8*d.*, and the net personalty 1,091*l.* 9*s.* 9*d.*

Johnson.—Probate of the will of Mr. Henry Johnson, chemist and druggist, 62 Huddersfield Road, Barnsley, who died on December 7, has been granted to his executors, Mr. James Gibson, chartered accountant, and Mr. Robert Dixon, architect and surveyor. The gross value of the estate is 30,683*l.* 13*s.* 3*d.*, and the net personalty 22,189*l.* 13*s.* 2*d.* The testator left his furniture, &c., and 100*l.* to his wife, Sarah Ann Johnson; to his nephew and niece, Robert Johnson Butcher and Ada Butcher, 1,000*l.*; and to his trustees 50*l.* each. He directed his trustees to pay an annuity of 25*l.* during life to his sister Mary Johnson, and an annuity of 400*l.* to his wife until the youngest child attains 21, when it is to be reduced to 300*l.* The remainder of his estate is to be held by the trustees for all his children in equal shares.

Kirby.—The will of the late Dr. Edmund Adolphus Kirby, of Bournemouth, of the firm of Messrs. H. & T. Kirby & Co. (Limited), Newman Street, W., who died on March 4, has been proved by his executors. The deceased left a gross estate valued at 54,005*l.*, including net personalty 42,709*l.* To the United Kingdom Beneficent Institution the testator bequeathed 1,000*l.* in trust, to found two annuities of 25*l.* each for widows or daughters of medical men.

Payn.—The estate of the late Mr. Stapleton Payn, of the firm of S. Payn & Co., of Faversham, chemical-merchants, who died on October 30 last, has been valued at 24,694*l.* 15*s.* 9*d.* gross, including personalty 15,026*l.* 14*s.* 6*d.* He appointed as executors of his will of September 6, 1895, his son, Mr. Arthur Stranson Payn, of 15 Bedford Row, W.C., solicitor, and Mr. Charles Cremer, of Preston Lea, Faversham, brickmaker. The executors are authorised to carry on or discontinue his business.

Thompson.—The will of Mr. Henry Thompson, pharmaceutical chemist, of 102 Highbury Hill, N., who died on January 19, has been proved by his executors, Mr. John Keynes Upward, retired costume manufacturer, 48 Aberdeen Road, Highbury, and Mr. Herbert John Thompson, Argyle House, Sevenoaks, clerk, brother of the testator. The gross estate is valued at 485*l.* 8*s.* 9*d.*

Birth.

Duckett.—On May 12, at 3 Linacre Road, N.W., the wife of Frederick William Duckett, of a son.

Royal Society.

The first *soirée* of the season took place at Burlington House on May 14. The President (Sir William Huggins) received the guests, amongst whom were Sir Michael Foster, Dr. T. E. Thorpe, Sir Wm. Roberts-Austen, Sir Francis Laking, Sir Gabriel Stokes, Dr. Gladstone, Sir Wm. Crookes, Professor Armstrong, Principal Oliver Lodge, Sir R. Douglas Powell, Professor Meldola, Lord Rayleigh, Professor Dewar, Sir W. S. Church, and Sir Thomas Sanderson.

The Exhibits,

always interesting, did not strike us as showing many new features. Mr. J. Mackenzie Davidson was again showing his stereoscopic *x*-ray transparencies and the development of photographic negatives in ordinary light (*C. & D.*, May 3, page 691). Mr. W. R. Pidgeon exhibited a portable electrical influence-machine suitable for *x*-ray work in camp, whilst Mr. Cossor was there with a new therapeutic *x*-ray tube constructed so that the rays pass through an area of the tube from 1 to 2 inches in diameter, and can by this means be exactly localised when treating disease. Apparatus for colour-photography was shown by Mr. Sanger Shepherd, the process being the one recently explained in the *C. & D.*, April 12, page 576; and Sir H. Trueman Wood gave a lantern-demonstration of the three-colour process during the evening. Professor H. A. Miers showed some attempts to reproduce polarisation-effects by the three-colour printing. The photographs were taken by limelight, with an exposure of from seven to twelve seconds with the red screen, ten to eighteen seconds with the green screen, and from 2½ to 4½ seconds with the blue screen.

The Badische Anilin und Soda Fabrik displayed specimens to illustrate Professor Heumann's method of producing synthetic indigo. The initial material is naphthalene; this is converted by oxidation with sulphuric acid into phthalic anhydride, then into anthranilic acid and phenylglycin—ortho-carboxylic acid. The last body, by treatment with caustic alkali at a high temperature, yields indoxyl, which is afterwards oxidised into indigo. University College was showing some lecture-models, and the circular slide rule and planosphere, dated 1670, which tradition connects with Sir Isaac Newton. Professor Silvanus Thompson again exhibited the various editions of Gilbert's "De Magnete" and the Gilbert Club translation. Dr. Wm. Gilbert was born in Colchester 1540, died 1603, and was President of the Royal College of Physicians and physician to Queen Elizabeth. The stone implements recently excavated at Stonehenge were shown by Sir Edmund Antrobus, the hammerstones and mauls used in trimming and shaping the stones being very remarkable. The mauls are dense sarsen, weighing from 37 to 64 lbs., and each has a rude waist around which a band and thongs of hide could be fixed so that it could be used by three or more men. Mr. W. A. Shenstone exhibited some lenses and a prism of vitreous silica which he has succeeded in making. Professor Wyndham Dunstan had brought from the Imperial Institute specimens of the poisonous fodder-plants which he and Dr. Henry recently reported on. He was also showing *Hyoscyamus muticus*, and several Indian aconites and the alkaloids obtained from them. Specimens of Indian and Australian gums—*Cochlospermum*, *Gossypium*, and *Sterculia acerifolia*—remarkable for the fact that they develop acetic acid on exposure to air, were shown. Another resin, *Callitrus verrucosa*, resembles sandarac in its properties. Professor W. Ramsay was showing that to many people the colour of a vacuum-tube containing krypton is lilac, whilst to others it appears to be green. The colour is also influenced by the wearing of spectacles; at least, so Professor Ramsay told us—it made no difference to our representative. The Marine Biological Association have been investigating the scales of fish, and find that it is possible to determine the age of individual fish with considerable precision. The lines of growth are shown under the microscope, corresponding to the annual rings seen in a transverse section of a tree. Mr. Vernon Harcourt's apparatus for regulating the administration of chloroform was also shown; and Lieut.-Col. Bruce and Mr. J. E. Dulton exhibited specimens of a new trypanosoma, which has been discovered in the blood of cattle and native African children.

British Pharmaceutical Conference.

RESEARCH-LIST.

THE following subjects are suggested for investigation, and the Executive Committee hopes that members of the B.P.C. will undertake to work at one or more of these questions. New subjects have been added to the list to replace those already worked out.

The Hon. Secretaries wish to call attention to the fact that a special fund was raised last year to defray expenses connected with original research. The Executive Committee will be glad to receive applications from members for grants from the above fund.

PLANT-ANALYSIS.

(1) ARNICA.—What is the active principle, and what are the relative proportions of it in the root and flower?

(2) ASH.—What are the percentages of ash that should be found in the following drugs in powder?—Rhubarb (*R. rhaponticum, R. palmatum, R. officinale*), storax, guaiacum-resin, digitalis, catechu, cambogia, belladonna (leaves and root), araroba, aniseed-fruit.

(3) CASCARA SAGRADA.—What is the nature of the various resins contained in the bark? The cascara sagrada of commerce apparently consists of two species, *R. Purshiana* and *R. californica*, the latter having a much paler fracture. It is desirable to ascertain how far these differ in activity, percentage of active principles, yield of extract, &c. (See *Year-book of Pharmacy*, 1893, page 131, and *Y.B.P.*, 1899, page 134.)

(4) CASTOR OIL.—A research having for its object the isolation of the purgative principle either from the oil or seed is required. (See *Year-book of Pharmacy*, 1898, page 184; 1899, page 163; 1901, page 125. See *Pharm. Journal*, [4], 5, page 84, and *P.J.*, [4], 11, page 152.)

(5) CHAMOMILE.—Research upon the bitter principle of *Anthemis nobilis*. (See *Bulletin de la Société Chimique de Paris*, [2], 41, page 483.)

(6) CIMICIFUGA RACEMOSA (*Actæa racemosa*).—Further information is needed on the chemical nature of the constituent or constituents to which the rhizome of the plant owes its activity. (See *Y.B.P.*, 1885, page 149.)

(7) DAMIANA is reported to contain a bitter substance, resins, and volatile oil. As the liquid extract of the leaves is now extensively used, a thorough systematic examination of the drug is desirable.

(8) DULCAMARA.—It is uncertain whether this drug contains the alkaloid solanine or not. Experiments upon it are therefore needed.

(9) EUPHORBIA PILULIFERA.—Required, a report upon the chemistry of this drug.

(10) FUCUS VESICULOSUS.—The medicinal virtues have been attributed solely to the presence of iodine and bromine. It is not improbable that the drug may also contain some organic constituent of importance. A complete chemical investigation is required.

(11) MEZEREON-BARK.—What is the chemical nature of the acrid principle of this bark?

(12) PAPAVER RHŒAS.—An examination of the red colouring-matter of the petals is required.

(13) SENNA-FRUITS.—A comparison of the constituents of the leaves and fruits would be of interest.

(14) SIMARUBA-BARK.—A comparison of the constituents of this drug with those of quassia-wood is desirable.

(15) STROPHANTHUS.—Information is desirable on the best methods of separating the different active principles obtained from strophanthus-seeds:—(1) *Y.B.P.*, 1878, page 54 and page 162; (2) *Y.B.P.*, 1899, page 59; (3) *Y.B.P.*, 1901, page 167; (4) *P.J.* [4], 6, page 385; (5) *P.J.* [4], 6, page 506.

(16) TARAXACUM.—What is the active principle of the root? To what constituents are the cholagogue and diuretic properties due?

(17) VERATRINE.—Can a process be devised for preparing an alkaloid of more definite composition than the official veratrine from cevadilla seed? (See *Y.B.P.*, 1898, page 58; *Y.B.P.*, 1899, page 54.)

(18) PROXIMATE ANALYSES of following drugs are required:—*Cereus grandiflorus, Citrullus colocynthis*, and *Cassia fistula*.

CHEMISTRY.

(19) ADEPS.—A satisfactory test for the presence of cotton oil is needed. A good test for lard oil is required.

(20) FERRI ARSENAS.—The official test supplies only the means of determining the amount of ferrous iron present. It has been suggested that a method for the determination of the arsenic content should be ordered. (See *P.J.* [4], 7, page 530.)

(21) GLYCERIN.—Required, a good method for estimating this substance, applicable, if possible, to pharmaceutical preparations.

(22) OLIVE OLIVE.—An inquiry into the British Pharmacopœia tests for this oil, and their bearing on the purity of commercial samples, is much needed.

(23) RESINS, &c.—Is it desirable to introduce acid and saponification values into the official descriptions? If so, experiments to determine the limits of these for the more important resins, &c., should be carried out.

(24) SODIUM ARSENATE.—A better method of assay than that now official would be welcome.

(25) TANNINS.—The various methods employed for the estimation of tannin in astringent drugs and preparations give very discrepant results. Required, a thorough research into the comparative merits of these processes.

MATERIA MEDICA AND PHARMACY.

(26) CANNABIS INDICA.—Preparations of uniform strength of this drug are a desideratum. Experiments are also required as to best method of preparation and solvent. Experiments are also needed to determine the difference in yield of resin, cannabine, and cannabinol between the guaza of Bombay and the ganjah of Calcutta.

(27) COMPRESSED DRUGS AND COATED PILLS.—Required, a report on the strength and quality of the compressed drugs and coated pills of commerce.

(28) EFFECT OF CULTIVATION, SOIL, CLIMATE, AND TIME OF COLLECTION ON MEDICINAL PLANTS.—Compare the proportions of active constituents of indigenous plants grown in different districts, and the effect upon these constituents of time of collection.

(29) ERGOT.—The determination of the proportion of alkaloid extracted from ergot by the official processes for the various preparations.

(30) EXTRACTION OF DRUGS BY PRESSURE.—This mode of extraction (see Dr. Symes's suggestions in *Y.B.P.*, 1888, page 356) is likely to produce good results with a number of drugs. Required, a series of experiments in this direction, showing the effect of the process on the quality and yield of extracts as compared with the corresponding products obtained by the ordinary modes of extraction.

(31) EXTRACTUM TARAXACI LIQUIDUM.—The sp. gr. and proportion of solid residue appear to vary much in commercial specimens. Is this due to variable amount of extractive in the dry root, and, if so, should the strength be adjusted by the percentage of extractive, as in the official method for the preparation of extractum pareiræ liquidum?

(32) JABORANDI.—The leaves as imported are much mixed with stalks. Should the leaves be completely separated from the stalks for the making of official preparations? What is the alkaloidal strength of old leaves, young leaves, and stalks?

(33) LIQUOR SENNÆ CONCENTRATUS.—In this preparation the senna is exhausted by repercolation; in the liquor for preparing syrupus sennæ, B.P., a process of double maceration is employed. Which is the better method?

(34) MISPRONUNCIATION OF LATIN PHARMACOPŒIA NAMES IN COMMON USE.—It is suggested that a short prosody be compiled for purposes of reference.

(35) OLIVE OIL.—It has been suggested that for some galenical preparations purified cotton seed oil, arachis oil, or sesame oil might be substituted for olive oil. A series of plasters, liniments, ointments, &c., should be prepared with each of these oils, and the resulting products compared.

(36) PEPSIN.—A good method of assaying, peptonising, and not merely determining the dissolving power of pepsin, suitable for inclusion in the British Pharmacopœia, is wanted. (See Allen, *P.J.* [4], 5, 561.)

(37) PODOPHYLLUM-RESIN.—Much of the podophyllin in the market is of foreign manufacture, and does not answer the requirements of the official resin. An examination of commercial specimens would be of value.

(38) STANDARDISATION.—It is suggested that the Pharmacopœia preparations of aconite, stramonium, strophanthus, Calabar bean, colchicum, and jaborandi should be standardised. Processes of assay are required.

THE ALABONE "CURE."—The conclusion of a two page article on this subject in this week's *Truth* is:—"There is *primâ facie* evidence that the treatment has had remarkable success, and those who, like Colonel Trench, have seen its success conspicuously demonstrated are right in considering the matter worthy of serious investigation in the interests of the hundreds of sufferers whom medical science is at present unable to save or relieve. My view, therefore, is that the treatment ought to be thoroughly and impartially tested; and even if the result is to prove it worthless, and to finally stamp Mr. Alabone as a mere imposter, the result will not have been wholly without value. It is not to the credit of the medical profession that a matter of so much national moment should be dismissed with a sneer or a jeer, or considered exclusively from the stand-point of professional 'trade-unionism.'"

Scientific Progress.

New Compound from Cordia Excelsa.—Thoms (*Ber. Deut. Pharm. Gessell.*, 1902, 140) describes a new crystalline compound which he has isolated, with Dr. Peckolt's aid, from the fresh leaves and the bark of the Brazilian plant, *Cordia excelsa*. The body was termed "Cordianin" by Peckolt, who first isolated it, but it appears to be identical with the compound allantoin.

Cinnamon Oil.—The principal constituent of cinnamon oil is cinnamic aldehyde. In addition to this eugenol and phellandrene have also been recognised in small quantities. Schimmel & Co.'s chemists have made an exhaustive investigation of the oil, and have isolated quite a number of hitherto unrecognised bodies in addition to those named. Amongst them is methyl-amyl ketone, which has already been isolated from oil of cloves. In addition there were found pinene, cymene, furfurol, benzaldehyde, nonyl-aldehyde, cumic aldehyde, linalol, and caryophyllene. Two other compounds are probably present—viz., hydrocinnamic aldehyde and linalyl isobutyrate.—(*Pharm. Zeit.*, 1902, 279.)

Bitter-almond Oil.—In one of a series of papers on the Essential oils which are being published by E. Kremers with a view to assist in the revision of the next edition of the United States Pharmacopœia, the question of Bitter-almond oil is discussed (*Pharm. Review*, 1902, 127). From the examination of twenty-six samples, it is clear that most of the oils of commerce have come into contact with synthetic benzaldehyde more or less, and that pure oil is the exception and not the rule. Only five samples were free from chlorinated compounds, and the amount of benzoic acid varied from 3 to 12 per cent. The author asks for ample criticism, in order to assist his object in furthering the revision of this group of bodies in the new edition of the U.S.P.

A New Urine-deposit.—Dr. T. R. Bradshaw (the *Lancet*) has identified monohydric magnesium phosphate in the urine of a patient who had been taking for dilatation of the stomach magnesium carbonate and sodium bicarbonate in moderate doses, and also powdered magnesia. The deposit is in the form of sparkling crystals, which under the microscope are seen to be very thin, elongated needles. It dissolved in acetic acid without effervescence, but was insoluble in alkalies. It yielded the reactions of a salt of magnesium, and after solution in dilute acid gave a yellow precipitate, with ammonium molybdate and with ammonio-nitrate of silver—reactions which showed it to be an orthophosphate. On heating, the deposit changed to pyrophosphate.

Artificial Musk.—As is well-known, the basis of the artificial musk of commerce is a trinitrobutyl toluene. A large number of analagous compounds have been prepared in order to see whether they, too, have a musk-odour, and it has been found that in general similar compounds of this series have but a feebly musk-like odour, and are useless for commercial purposes. This is the case with the nitro-butyl-xylenes, and the amyl and propyl toluene derivatives. Numerous other compounds are of a distinct musk like odour, but appear to be merely weak imitations of the ordinary artificial musk, and are the subjects of patents only for the sake of covering the master-patent. Among these the most interesting is trinitro-butyl hydrindene, in which the three nitro-groups are not symmetrically arranged.

The Valuation of Cortex Granati.—Stœder (*Pharm. Weekblad.*, 1902, 21) gives the following method for the valuation of this bark. Twenty grammes of the dry powdered bark are shaken well with 100 c.c. of chloroform and 5 c.c. of ammonia for twelve hours, when 20 c.c. of water is added and the whole allowed to separate. Seventy-five cubic centimetres of the chloroformic solution are filtered (=15 gm. bark) and from the filtrate about two-thirds of the chloroform are distilled off. The remainder is transferred into a separator, and the flask washed with 5 c.c. of chloroform, and the alkaloids are shaken out with dilute hydrochloric acid. They can now be estimated by weighing and by titration. The mean molecular weight of the alkaloids is found to be 147·5.

Oil of Sweet-orange Flowers.—The composition of the oil of the flowers of the bitter orange, or true neroli oil, has been the subject of numerous researches recently. Theulier has now made an exhaustive examination of the oil from the flowers of the sweet orange, usually known as Portugal neroli. The pure oil has a sp. gr. of about 0·860, rotation of +29° 30′, and an ester content calculated as linalyl acetate of about 6·5 per cent. It does not dissolve in 90-per-cent. alcohol, and no methyl anthranilate could be found. This latter fact at once explains the inferiority of the Portugal oil as compared with the Bigarade oil of neroli, since methyl anthranilate is undoubtedly one of the most characteristic constituents of the latter oil. Theulier has isolated from the oil a solid hydrocarbon melting at 55° C., apparently identical with that from the Bigarade oil, and the terpenes dextro-limonene and dextro-camphene, as well as the alcohol linalol and its esters.

Things that Happen—Sometimes.

A Trio of Minor Sonnets.

Mr. Carteighe: It seems that I am the culprit, and I willingly apologise to Dr. Symes.—*C. & D.*, May 10, page 723.

By those who seek what students all desire
  The sturdy Symes undaunted takes his stand,
And speaks, in words of eloquence and fire,
  The thoughts that wise men think. He scorns the band
Of scribes, pedantopedic and profuse,
  Who'd build up words obfuscate and obese;
The silent Solons who our minds confuse
  With no superfluous wisdom, till they seize
The fleeting moments, and, with mien profound,
  Give forth in vein oracular their word;
Egregious milky wisdom it is found,
  That with much standing hath begun to curd.
    (Thus, breaking silence, on our patient ears
    Falls pent-up "brief remark" to calm our fears.)

The battle-axe the Doctor wields with force
  Until the bloated Minor weakly squirms,
With limbs dismembered. Loud with voices hoarse
  Our youths applaud; but fierce resentment burns
In breasts of brave Curriculists, who pose
  As sole upholders of our craft and kin;
And, rallying to their chief, they firm oppose
  The doughty students' champion—and they win.
The Liverpudlian arguments are scoffed
  By order of officialdom supreme;
But narrow is the gain, and pride is doffed,
  When some prove not so lamblike as they seem.
    (The die is cast; once more the fight is done,
    But hope remains: the triumph theirs—by ONE.)

The Ancient Moon (whom keen impatience irks
  When opposition manifest becomes,
And who, by custom, hath engendered quirks
  Of quoting from those unauthentic tomes
That traitrous Memory often-times collects)
  The Doctor contradicts and crisply snaps
A statement at his head which he affects
  To be Pronouncement Privy; thus he raps
The Doctor sharply and the doubting Glyn.
  They meekly bow, accepting bald rebuff,
But dubious hearers, thinking it no sin,
  Unearth the letters—with a sequel rough.
    (O Moon! beware lest reminiscent slips
    Become the genesis of thine eclipse.)

Observations and Reflections.

By XRAYSER.

The 1,452*l.* 9*s.* 3*d.*

"balance of charges" on the wrong side of the Pharmaceutical Society's law account has been criticised very gently so far. I hope some earnest member will press for details at the annual meeting. We are told that during the year "in nearly 200 instances the Registrar was authorised to proceed for the recovery of penalties." Only about thirty of these cases have come before the Courts, so that it would seem a pretty fair assumption, allowing for defaulting defendants, that 150 five-pound notes were collected without any expenditure beyond postage. That 750*l.* has gone in addition to the 1,452*l.* balance, making some 2,200*l.*, sunk on legal matters in 1901. For such a sum we ought to have acquired some substantial advantage, or at least have suffered some crushing defeat.

In 1880, the Year of the Great Company Case,

as it was opportunely pointed out in last week's editorial, the balance of law costs amounted to 1,169*l.* There was at that time practically no income from penalties collected in uncontested cases, so that that figure (1,169*l.*) compares not with the 1,452*l.* of 1901, but with the 2,200*l.* made up as shown above. The one English case which last year could have cost a big sum was that of the Worcester florist agency, and as the heaviest bill paid since that appeal amounted to 294*l.*, the cost of that case may be set down at 250*l.* at the outside. For the remaining 1,950*l.* we have had two High Court decisions in Scotland, one interpreting a by-law and the other authorising imprisonment if fines under the Pharmacy Act are not paid, and the Medical Council work, which was important and perhaps rather costly. But it is impossible to assess the costs of these cases at 1,000*l.* Then, I find, on looking through the *C. & D.* law reports, that in 1901 there were, besides the High Court cases, twelve reports of actions under the Pharmacy Act in England and Wales, and seventeen from Scotland. The seventeen realised in fines much less than half what was got from the twelve. The N.B. Branch can hardly have paid its way in 1901.

Mr. Martindale

left nineteen guineas to the Pharmaceutical Society for its library, but it is reported that the Society had to pay about 2*l.* legacy-duty on this bequest. Many people probably, myself for one, and evidently Mr. Martindale for another, were under the mistaken impression that legacies of sums under 20*l.* were not subject to duty. That was so, it appears, under an Act of 1815, but the concession was repealed in a Revenue Act of 1831 so far as bequests of money are concerned. Legacy-duty is still not chargeable in regard to otherwise liable goods—as, for instance, jewellery, books, furniture, when the value is under 20*l.*; but there has been no exemption since 1831 in respect of money legacies.

The 17*l.* 19*s.*

will, I hope, be spent in a special purchase: on something that will ear-mark it as the Martindale bequest Some medico-pharmaceutic work or series is naturally suggested as appropriate. Among useful books of this character not at present in the Library may be named the New Sydenham Society's "Lexicon of Medicine and the Allied Sciences." This is in five large volumes, and is a grand dictionary and much more. It gives formulas and excellent monographs on drugs, as well as on diseases. Buck's "Handbook of the Medical Sciences" is an American work of great value. It is in eight volumes of about 800 pages each, and is noted for its illustrations as well as for its articles. The most wonderful medical encyclopædia is Raige-Delorine's and Dechambre's "Dictionnaire Encyclopedique des Sciences Medicales." It consists of one hundred volumes of some 800 pages each. The world's medical literature was ransacked by its contributors to provide this work. As an indication of the scale on which it is compiled it may be mentioned that its treatise on opium occupies 130 pages.

The Shop Hours Bill

is not likely to get forward on such "sympathy" as the Midland Pharmaceutical Association gives it. The Hon. Secretary of that body had a letter from Lord Avebury asking for a petition in favour of his measure as he understood that the association approved of it. The Hon. Secretary "cannot understand how the impression had got about that the Association was in favour of the Bill; the resolution passed only expressed sympathy with the movement." Lord Avebury has actually been officially informed that the Association was not sufficiently acquainted with the details of his Bill to support it. Those details have been published again and again; a copy of the Bill was, I recollect, sent by this journal to all chemists' associations in the country; and I expect it was in response to this communication that the M.P.A. "expressed its sympathy" with the movement. We shall know in future what value to place on Birmingham "sympathy."

Some Trade Problems

are cleverly discussed in a book recently published by the Fabian Society entitled "Trusts and the State; a Sketch of Competition." The author, Mr. H. W. Macrosty, B.A., a gentleman who I believe has been a contributor to the *C. & D.*, presents effectively the contrasts which result from a survey of the history of trade. Up to the time of Adam Smith or thereabouts Kings and Emperors assumed the duty of taking care of trade. "The crafts have been devised," ran a decree of the Emperor Sigismund in Germany in 1434, "that everybody by them should earn his own daily bread, and nobody shall interfere with the craft of another." The old trade guilds were based on a similar principle, and a number of Tudor statutes enforced it in this country. But as trade grew kings and statutes were found to be nuisances, and there came a time when manufacturers and merchants prayed to be rid of them. The great French minister Colbert, contemporary with our Charles II, is said to have invited the merchants of Lyons to a conference, and to have asked them what he could do for them. "Let us alone; *laissez faire*" they replied. But it was a century later before that policy was seriously advocated. It made its way, and the Nineteenth Century became

The Era of Competition.

The first half of that century was the period of experiment; the second half was the period of free development. The Fabian philosophers are not in love with free competition, and Mr. Macrosty quite fairly shows how all sections of traders are getting a bit tired of it. They speak of it as "unhealthy," as "ruinous," and as "suicidal." In scores of cases they are combining to suppress it, and yet they do not hail Mr. Pierpont Morgan as exactly their deliverer. In the course of this demonstration Mr. Macrosty sketches among other organisations for checking competition the P.A.T.A. "Chemists and Druggists," he says, "have a more efficient organisation than any of the other trades, and this has perhaps made them better able to tackle the problems of competition." So it seems to an outsider. The Fabian ideal is the substitution of "collectivism" for competition; the control of industry by association, but not by associations directed and controlled by Mr. Pierpont Morgan or Mr. Rockefeller, or indeed for any individual advantage at all.

Editorial Comments.

The Council Election.

THE contest for the seven vacant chairs on the Council of the Pharmaceutical Society of Great Britain might be dead were it not for the fact that Mr. C. E. Pickering, President of the Chemists' Assistants' and Managers' Society, loses no opportunity of letting the electors know that he is a candidate. Mr. Campkin has also placed his views before the electors, and it may be inferred from the support which has been given to him on previous occasions that his views are not far wrong, and that he will get a place on the Council when there is an opportunity. Mr. Morrison, of Tring, is the only other new candidate, and he stands, we believe, as a country chemist, situated far enough from London to be non-metropolitan in feeling, and yet sufficiently near it to be able to give London time to the duties of the office. The other seven candidates are the retiring members. From these we have heard and asked nothing, and we may assume that they stand upon their records. Mr. Glyn-Jones, however, assures us that he so well appreciates the trust reposed in him three years ago that he again solicits the suffrage of the electors; and this, we dare say, is what the other six mean by accepting nomination again. They are Messrs. Carteighe, Harrington, Harrison, Park, Southall, and Young. Were these gentlemen opposed by seven other stalwarts it might be desirable to examine more closely the work they have done as councillors. In our issue of April 26, page 678, we gave some particulars, apart from which there is little to go upon. We suggested that a place could be found for Mr. Campkin (hitherto the most popular of the trio) by unseating Mr. Park; and since then the Dewsbury Association has also found a place for Mr. Pickering by the exclusion of Mr. Alfred Southall. The Barnsley Association would displace only Mr. Park. With grim irony Blackburn asks voters to score out the names of Messrs. Carteighe, Glyn-Jones and Southall, because they trade under other names. The Grimsby Chemists' Association asks the electors to vote only for candidates who pledge themselves to support a test case being taken in

Digitized by Google

favour of the protection of the title of chemist—that is, to take proceedings against such a company as Boots' Cash Chemists (Limited) for using the title conferred by the Pharmacy Act upon persons qualified by examination. Mr. Lord Gifford made this one of the planks of his platform, and the fact that he has been on the Council a year without public mention of the matter might be regarded as proof that the question has not been raised. We understand that the contrary is the case. One difficulty is that the highest legal authority in the country is so convinced that companies may under the present law use Pharmacy Act titles that he introduced into the House of Lords a Bill specially dealing with the matter. What is the use of going to law on a point about which we know the highest tribunal

of the land is against us before we begin, and will be at the end? Perhaps the action against the London and Provincial Supply Association would have been decided differently if it had been taken on the title-question, but it happened to be taken on another issue, with the result that the House of Lords ruled that the first fifteen sections of the Pharmacy Act of 1868 do not apply to companies at all—they are outside altogether, and can do as they like. Although the precedent then established has been set aside with difficulty in actions under the Sale of Food and Drugs Acts, there is no hope that it would be in proceedings under the identical Act on which the precedent was made. To us it appears this fact that companies are outside the main provisions of the Act and that the Lord Chancellor has endeavoured to bring them within are the best grounds for effort that can possibly be had, and fresh legislation is the direction for effort—not renewed litigation on a sentimental basis.

As illustrative of the Council contest, we have prepared a sketch map of Great Britain, showing where the sitting members and the three new candidates are located. The latter are indicated by crosses, Mr. Campkin having the northernmost position and Mr. Morrison westernmost. Leaving the merits of the candidates out of consideration, the contest can be reduced to one of territorial representation, and in that case it will be seen that three of the retiring members are the solitary representatives of important centres of population—namely, Mr. Harrison (of Sunderland), Mr. Southall (of Birmingham), and Mr. Park (of Plymouth). The two best represented parts of the country are Lancashire and London, and the retiring members are Messrs. Carteighe, Glyn-Jones, Harrington, and Young; we do not suppose the districts would suffer much by the rejection of three of these, but the Council would seriously. The sketch is not given, however, as light and leading on the present contest—rather for guidance in the future. It shows the haphazard manner in which the Council is reconstituted year by year. This requires the careful consideration of local Associations, and if the President of the Society would devote some of his exceptional territorial knowledge to carrying his scheme further by the creation of territorial caucuses for the nomination of new councillors he would do the Society perhaps a greater service than the scheme now in force has done. As we shall give next week the result of our postcard vote, we shall be obliged if those who are interested in this subject will post their cards to us by Monday next.

German Thoroughness.

THE traditional idea of German thoroughness may not infrequently be questioned when one observes the extent to which, particularly in recent years and in pharmaceutical periodicals, current chemical literature is either overlooked or ignored by German writers. The circumstance which suggests this remark is the publication of a rather lengthy paper by Dr. C. R Böhm, in a recent issue of the *Pharmaceutische Zeitung* (pp. 297-8), entitled "Cerium Oxalicum Medicinale." The author of this paper was apparently unaware of a recent investigation of the same subject by Power and Shedden, communicated to the Society of Chemical Industry (*C. & D.*, June 16, 1900, page 992), and published officially in the *Journ. Soc. Chem. Industry*, vol. xix., pp. 636-642. The paper was abstracted in the *Chem. Centralblatt*, 1900, ii., page 621, and the *Chemiker Zeitung*, 1900, page 568, so that it is within reference to German workers. Although the paper by Dr. Böhm, unlike Power and Shedden's, contains but little experimental data, it discusses the subject in many respects on similar lines, but with the wrong assumption that "up to the present no attention has been given to this preparation in pharmaceutical and medical circles." The absence of analytical details will also serve to explain why Dr. Böhm still assumes cerium oxalate to contain nine molecules of water instead of ten molecules, as was shown by Power and Shedden, and subsequently confirmed by Meyer and Marckwald (*Ber. Berichte*, 1900, 33, page 3003). It may be remembered that we called attention in November last to the fact that some German drug-merchants and pharmaceutical analysts in dealing with ipecacuanha ignore Paul and Cownley's research on the drug by returning the whole of the alkaloid as emetine, especially in the case of the Cartagena drug. This charge may now be wiped out, for Dr. P. Siedler, the chemist to a leading Berlin house, has recently addressed

Digitized by Google

the Pharmaceutical Association there on ipecacuanha amongst other things. He examined both kinds of ipecacuanha, isolating and weighing the alkaloids, which he sent to Dr. Kobert for physiological examination. The following shows the percentages which Dr. Siedler obtained, and those by Paul and Cownley:—

	Emetine	Cephaëline	Psychotrine
Rio (Siedler)	1·0	0·5	0·1
„ (P. & C.)	1·45	0·52	0·04
Cartagena (Siedler) ...	1·0	1·0	0·2
„ (P. & C.) ...	0 89	1·25	0·06

There are sufficient differences between these figures to call for some comparison with the English workers' results. In 1895 Dr. Robert B. Wild, of Manchester, examined emetine and cephaëline physiologically, and reported that emetine is weaker in emetic power than cephaëline. Dr. Kobert has come to exactly the same conclusion, and it is inferred in the paper that the extract of rich-in-emetine Rio-root has a weaker action than the rich-in-cephaëline Cartagena-root. If care is not taken, that statement may be accepted in some quarters as proof that Cartagena ipecacuanha is better than Rio, whereas the emetic properties of the roots are solely referred to, and the author is careful to explain that as an emetic Cartagena ipecacuanha is preferable to the Rio, while as an expectorant in lung-affections the Rio is the better. This is what Dr. Wild said, but we should not be surprised to find Dr. Kobert get all the credit on the Continent On one point Dr. Kobert is first in the field. He finds that psychotrine has no emetic action, and that the fatal dose for a guinea-pig is 0·2–0·3 gramme per kilogramme body-weight. The fatal dose of emetine is 0·047 gramme, and of cephaëline 0·032 gramme per kilogramme. The emetic action of the alkaloids is not, as in the case of apomorphine, due to influence on the brain-centre, but to direct action on the sensory nerve-ends of the stomach-coating. As a corresponding member of the Pharmaceutical Society since 1892, Dr. Kobert has had the original papers of the English workers on this subject, and we hesitate to regard the absence of reference to them in the paper before us as indicating that he is not acquainted with, or has ignored, them. It cannot be expected that all pharmaceutical workers in one country should be acquainted with the current literature of others, but it is the rule that workers in classic subjects should glean English, French, and German literature, and in their publications give all credit to those who have worked before them. Our German *confrères* here show weakness.

Modest Research.

We print to-day a research list compiled by the Secretaries of the British Pharmaceutical Conference. It contains several subjects which young pharmacists past the examination stage and careful in experiment might well undertake. They may do work of this kind with advantage to themselves and at little cost, for the Conference has a special fund from which grants may be obtained for the purchase of materials. In days gone by several gentlemen, who now put "F.R.S." behind their names, did much of the work upon which their fame was built with the aid of grants from the fund, and there is little reason why the present young generation should not do the same. Applications should be made to the Secretaries, British Pharmaceutical Conference, 17 Bloomsbury Square, London, W.C. In mentioning this matter, we cannot avoid bringing in a little card issued by the American Pharmaceutical Association with the *Transactions*, received a few weeks ago:—

Suggestions.

The Committee on Practical Pharmacy and Dispensing offers the following list to indicate the style of matter that may be brought before the Section. Greater latitude, however, is enjoyed by members, and anything of practical value will be gladly welcomed.

Subjects.

Mortar and Pestle, or Spatula and Tile. Which offers the greater advantages for making pills, ointments, or suppositories, considering time and efficiency?

"Time is Money." Practical methods for saving it at the prescription-counter.

Filtering Eye-solutions. Effective and speedy methods.

Glycerin. Its more extended employment as a solvent, with the object of making preparations that are miscible with water.

Predigested Foods. Practical methods for preparing and preserving them.

Formulas.

Wines, Syrups, and Elixirs of the various Glycerophosphates. Simple and in combination.

Petroleum Emulsions. Simple and in combination, with hypophosphites, creosote, guaiacol.

Oily Sprays, Petroleum, &c., containing cocaine, phenol, iodine, menthol, eucalyptol, &c.

Mixture of Magnesium Hydrate.

Solution of Iron and Manganese Peptonates. Simple and with combinations.

Exhibits.

Capsule filling and sealing devices, with products.

Suppository machines, moulds, and improvised apparatus, with products.

Powder-dividing and folding devices, blocks, patterns, &c., with products.

Prescription-containers, labels, and wrappings of all kinds.

Filing-devices for prescriptions.

The Enno Sander prize of fifty dollars will be awarded the most deserving paper or combination of papers, formula and exhibit, presented.

This, it will be seen, touches branches of work not covered by the B.P.C. list, but highly appreciated by the rank-and-file. Perhaps some may get thoughts for a Conference-paper from it also.

EXPORTING STAMPED PROPRIETARIES.

From the report of the meeting of the Pharmaceutical Society of Cape Colony (on page 758) it appears that South African pharmacists consider themselves unjustly treated by manufacturers of proprietaries who export their products to the colony already stamped. Certain exporters who follow this practice, when questioned on the subject, are reported to have said that the stamp showed that the product was genuine, and they had no intention of shipping unstamped goods to South Africa. Our South African brethren complain, however, that the same firms have exported their wares unstamped for many years to other parts of the world, and even to other parts of the British Empire. It is evident that the competition in the drug-trade is as keen throughout the Cape peninsula as anywhere in the world—the recent move to adjust and maintain uniform prices recently made by the leading South African drug houses is proof of this—but it is not only a question of money, but a matter of principle that is involved. The South African trader asks, with some show of reason, why he should pay 18*s.* per gross extra for 13½*d.* articles to the British Government, when the Colonial Government collects 20 per cent. duty on the 18*s.* or the value of the stamps, and especially seeing such a course is unnecessary. Now that the trade organisations have the matter in hand it will be interesting to watch developments.

HOW TO TAKE QUININE IN MALARIA.

Major Ronald Ross, in the ninth edition of his book on "Malarial Fever" (2*s.* 6*d.*, Liverpool University Press), gives some useful notes on taking quinine. He explains that, as quinine is wanted in the blood, and not in the stomach, the best form is to take it dissolved by means of acid. The next best form is that of the powder shaken up in water. Quinine in pills, tablet form, or capsules takes longer before it is absorbed into the blood, and if pills or tablets are used they should be previously immersed in water for a few

Digitized by Google

minutes so as to disintegrate them. The bitter taste of suspended or dissolved quinine can be corrected by taking one or two mouthfuls of food immediately after the medicine. Just before meals, especially before breakfast, is the best time for quinine, and its presence in the blood should be announced by a ringing in the ears within half an hour. Details of the doses needed in malarial fever are given—for a first attack 10 gr. of quinine should be given about every twelve hours for a week, which may be increased to 15 or 20 gr. In cases of vomiting it may be necessary to reduce the dose, and it is often useful to administer a saline purgative with the first dose of quinine. If a person has once become infected with malarial fever, he must continue to take quinine regularly for at least three or four months, so as to ensure extermination of the parasites, otherwise relapses are sure to occur.

NAVAL MEDICAL OFFICERS.

Following on the reorganisation of the Army Medical Service comes a set of new regulations for the entry of candidates for commissions in the Medical Department of the Royal Navy, and regulations as to the promotion and pay of naval medical officers embodying the provisions of an Order in Council of March 24. The regulations for entry are practically a repetition of those already in force, with the exception that chemistry and physiology are now made voluntary subjects of examination, and 600 marks are allowed for French and German. The full yearly pay and allowances will be on the following scale:—

Rank	On Entry or Promotion	After Four Years' Full-pay Service	After Eight Years' Full-pay Service
	£ s.	£ s.	£
Surgeon	255 10	310 5	365
Staff-Surgeon	438 0	492 15	—
Fleet-Surgeon	547 10	602 5	657
Deputy Inspector-General	766 10	—	—
Inspector-General	1,300 0 Consolidated	—	—

The hospital allowances, in lieu of provisions, for officers and their servants, and for fuel and lights, are 67*l.* (at home) and 112*l.* (abroad) for Deputy Inspectors-General; 53*l.* and 112*l.* for Fleet-Surgeons and Staff-Surgeons; 39*l.* and 108*l.* for Surgeons. It is now required that the medical officer undergo a post-graduate course of three months at a Metropolitan hospital.

TAHITI VANILLA.

In the May number of *Chambers's Journal*, Mr. A. McFarlane of Moorea, Society Islands, contributes an interesting article on vanilla-growing in Tahiti, after reading which one is tempted to sigh for the life of a vanilla-planter. Tahiti, he says, has the finest tropical climate in the world—no hurricanes, no malaria or fevers—and a friendly race of natives to live among. A man with three or four acres of vanilla has a competence; with ten or more he is rich, and for one who likes to "potter" around among flowers there is no life more attractive, says Mr. McFarlane. So much has been written about vanilla planting and curing that Mr. McFarlane's article necessarily traverses old ground, but he gives several interesting facts in describing the methods employed in the South Sea Islands. Although Tahiti is one of the largest vanilla-producing countries, yielding annually nearly 100 tons of pods, the product is the worst vanilla that reaches the European market. This is mainly due to the native planter, who does not give the necessary attention to the curing, which is the most important work. There is no secret about the method of curing, although some pretend that there is. It consists in alternate exposures to the sun, always under dark-coloured blankets, and sweating in the house in light tins or boxes. The average price of Tahiti vanilla is 6*s.* per lb., and as Mr. McFarlane, who is a cultivator and curer of vanilla, estimates that it costs 2*s.* per lb. to grow and cure, a good margin of profit is left for the grower. Most vanilla-planters suffer from small itching blisters on the hands, resembling "prickly heat," which is brought about by the constant handling of the beans. Mr. McFarlane has found a specific in his own case, and that is a mixture of equal parts of carbolic acid, glycerin, and rosewater rubbed on the hands—rather strong in carbolic, we think; perhaps he means carbolic lotion.

East Indian News.

ILLEGAL SALE OF COCAINE IN CALCUTTA.—At the instance of the Excise authorities, a native for selling cocaine without a license, was fined 30*r.*, with the alternative of a month's imprisonment.

THE IMPORT DUTY ON PERFUMERY IN CEYLON.—The *Ceylon Gazette* has published the draft of an Ordinance to increase the import duty on perfumery and spirits imported as perfumery to 7*r.* per gallon.

A WEDDING PRESENT.—Captain W. T. Grice, commanding F (Trade) Company 1st Calcutta Volunteer Rifles, was presented on April 28, with a beautiful bowl-shaped centrepiece of solid silver, bearing the crest of the regiment and an inscription, by the members of the company, on the occasion of his marriage.

HOLIDAYING.—Amongst the passengers on board the s.s. Arabia which left Bombay for England on May 3 were Mr. and Mrs. W. Donald Smith (of Messrs. W. E. Smith & Co., chemists, Madras), and Mr. and Mrs. W. T. Grice (of Messrs. Smith, Stanistreet & Co., Calcutta).—Mr. Tom Bliss (Messrs. E. Plomer & Co., Lahore) is expected to arrive in London in the first week in July.

LONDON UNIVERSITY.

THE first "presentation" of the reconstituted University took place on Wednesday, May 14, in the "Great Hall," a temporary building, much in need of replacement, which formerly did duty as the concert-hall of the Imperial Institute. The occasion was celebrated with great ceremony, and many processions of gaily-robed professors, mayors, and students, who assembled in various parts of the building, and marched to the meeting-place under the care of stewards. The newly-elected Chancellor of the University (Lord Rosebery) presided, and was supported by the Vice-Chancellor (Sir Henry Roscoe), the Principal (Dr. Rucker), and the members of the Senate. After the welcome of Lord Rosebery, and his reply, Dr. Rucker read his report on the work of the University during the past year, and announced the establishment of courses of University extension lectures to be given in the metropolitan area, and the appointment of Dr. R. G. Roberts to act as inspector of secondary schools. With the grant of 10,000*l.* per annum, made by the County Council, two professorships of chemistry—general and organic—are to be founded at University College, whilst the teaching of German in the colleges and polytechnics is to be undertaken by a group of new university lecturers. Engineering is also to receive attention by the better equipment of the laboratories at King's and the City and Guilds Institute. These and other movements indicate a re-awakening, and Dr. Rucker dealt with satisfaction on the fact that last year over 600 contributions to scientific societies and journals were made by teachers and students of the University.

The ceremony of presenting prize-winners and graduates to the Chancellor then proceeded. Among these we observed Mr. Harold Wilson, B.Sc., examiner to the Pharmaceutical Society; Mr. A. C. Bodey, B.Sc., formerly lecture-assistant in chemistry at the "Square" school; Dr. T. A. Henry, a former Bell scholar of the Society; and Dr. W. H. Eccles, who began his career as a pharmacist in Lancashire. This ceremony over, Sir Michael Foster, M.P., congratulated the presentees.

Legal Reports.

High Court Cases.

A Fromm's Extract Loan.

In the Court of Appeal on May 12, Lords Justices Vaughan Williams, Romer, and Mathew had before them the case of Day and another *v.* Powell and another, on the appeal of the plaintiffs from the judgment of Mr. Justice Channell in the King's Bench Division in April, 1901. The action related to a loan of money by the plaintiffs to Fromm's Extract Company (Limited), of which defendants (Powell and Warner) were directors. Mr. Justice Channell held that Warner was not a party to a promissory note given by Powell in respect to the loan, and against this judgment plaintiffs appealed. The appeal was dismissed, with costs.

Beecham Actions.

Mr. Justice Buckley, in the Chancery Division, on Friday, May 9, had before him a motion by the well-known pill-manufacturer of St. Helens for an injunction to restrain a Mr. Prebble, of Liverpool, from passing off pills not of plaintiff's manufacture as and for such pills. Mr. Martelli appeared in support of the motion, and Mr. Green appeared for the defendant, and consented to the motion being treated as the trial of the action. His Lordship granted a perpetual injunction against defendant, and made an order for him to pay an agreed sum for damages and costs.

In a similar action, Beecham *v.* Nelmes, the defendant was represented by Mr. Todd, and consented to a similar order.

A Dye Dispute.

Mr. Justice Buckley, in the Chancery Division, on Friday, May 9. had before him the case of the Badische Anilin und Soda Fabrik *v.* Thompson, which related to alleged infringement of patents for dyes. His Lordship recently granted the plaintiff company an interim injunction restraining the Star Chemical Company, of Manchester, certain gentlemen residing in Manchester and Stockport, and the Basle Chemical-works, Switzerland, from importing into England, and selling in this country any dyes or dye-stuffs made in accordance with plaintiffs' patents dated 1891 and 1892. Mr. Upjohn, K.C., on behalf of the Basle company, now applied that the order to serve notice of writ on that company might be discharged. The ground of the application was that the action was brought to restrain acts not intended to be done, and that the Basle Chemical Company were not necessary parties to the action. It was further contended that the application for leave to serve out of the jurisdiction was not supported by the evidence required by the rules. His Lordship held that a sufficient case was disclosed upon the affidavits to warrant the leave to serve out of the jurisdiction being granted, and dismissed the motion with costs.

Three motions by defendants in other cases of a similar nature were directed to stand over until after an appeal from the decision could be disposed of.

The Two Syrups.

Mr. Wm. Butterfield, chemist and druggist, Blackburn, was the plaintiff in an action before Mr. Justice Wills at Liverpool Assizes on May 8, in which he sought to recover damages from an Accrington grocer, named Hughes, for alleged misrepresentation in respect to the sale of Butterfield's Syrup. The plaintiff also asked for an injunction restraining the defendant from selling the syrup. The Judge asked whether it was "our old friend Gripe-syrup" and plaintiff's counsel said it was, explaining that nine out of the ten cases of a similar kind had been disposed of. Defendant had for years been a customer of the plaintiff, but he had been induced by a former traveller of the plaintiff's, named Alsop, to take the latter's syrup, on the representation that it was practically the same as plaintiff's, while it was cheaper. In the defendant's shop this imitation was sold as "Butterfield's Syrup." For the defence it was urged that a mistake had been made by defendant's wife in selling Alsop's syrup for that of the plaintiff, and Mr. Justice Wills suggested that the parties should make a settlement. It was ultimately agreed that a juror should be withdrawn on the defendant giving an undertaking in terms of the injunction sought for, each party to pay his own costs.

County Court Cases.

The Good Samaritan.

At the Manchester County Court, before Judge Parry, on May 9, an action was heard in which Ellen Shepherd, the wife of a provision-dealer, sued Henry Clinton, trading as H. Clinton & Co., chemist, Every Street, Ancoats, for 50*l.* damages for the loss of a thumb, due to the defendant's alleged unskilled treatment. In October last plaintiff, having cut her thumb, went to the defendant, who dressed the injury and charged her 4*d.* When she called again, the defendant declined to take the plaster off, and told her to go to a doctor. She went to Dr. Thompson, who had to amputate the thumb. Dr. Thompson said the plaster was too tight, and had been kept on too long. The defendant said he only rendered first-aid, and told the plaintiff to go to a doctor. The 4*d.* was to cover the cost of the material. The Judge said the defendant had merely acted the part of a good Samaritan, and nothing could be said which in any way affected his position as a professional man. The plaintiff had shown a wrong feeling by bringing the action for the purpose of trying to get money. There would be judgment for the defendant, with costs.

Garnisheed.

At the Southwark County Court on May 13, Judge Addison, K.C., heard a garnishee summons issued by Messrs. W. W. Flood & Co., wholesale druggists, of High Street, Borough, S.E., against Dr. D. Villesid, of 10 Westminster Bridge Road, for 19*l.* 10*s.*, Dr. G. W. Brown being the judgment debtor. It was stated that Dr. Brown sold his practice at Westminster Bridge Road for 750*l.* to Dr. Villesid, it being agreed that a balance of 100*l.* of the purchase-money, less certain deductions, should be paid in two instalments covering a period of twelve months. At the time the practice was sold there was a judgment against Dr. Brown for drugs supplied to him, and the plaintiffs now sought to garnishee the sum. It was contended for the garnishee that money actually due and payable could not be garnisheed, but against that it was argued that an existing debt such as this was, payable at some future time, could be attached. Judge Addison said there was an existing obligation to pay 100*l.* within twelve months, and that must be attached to the extent of 19*l.* 10*s.* and the costs. Continuing, the Judge said: If this were a debt for a carriage accident or anything of that kind I could sympathise with Dr. Brown, but I cannot sympathise with him when he does not pay his druggists' bills. Mr. Barbcur, solicitor for Dr. Villesid, the garnishee: He is at the Front now. His Honour: Oh, then that is all the more reason why the druggists should have this order for their money. Mr. Barber: Under this agreement Dr. Brown is to receive half the profits from Coronation seats to be let at the surgery. That money will come in sooner than the other so I suggest that should be attached. His Honour: That is something which may accrue, and therefore it cannot be garnisheed. That money will not be owing until it has been received by Dr. Villesid. You cannot attach a conditional debt. Eventually his Honour made an order requiring Dr. Villesid to satisfy the judgment against Dr. Brown, the costs of the plaintiffs, as also his own costs, as he had not made any default out of the 100*l.* he owed Dr. Brown when such sum should become due.

Bankruptcies and Failures.

Re Joseph Bloom Meggitt, The Laurels, Mansfield, Director and Manager of Messrs. Samuel Meggitt & Sons (Limited), glue and chemical-manure manufacturers, of Sutton-in-Ashfield.—A meeting of creditors was held at Nottingham on May 9. The statement of affairs showed liabilities expected to rank for dividend 3,705*l.* 15*s.* 4*d.*, and assets 282*l.* 4*s.* 7*d.* The Official Receiver said the firm was turned into a limited-liability company n 1893, and debtor had been managing director, at a salary which atterly had been about 600*l.* a year. He also returned himself

Digitized by Google

as the holder of 1,178 fully-paid 10*l.* shares; but these shares, even if they were valuable, were not available, as they were deposited with a creditor to secure a loan and interest amounting to 1,520*l.* The bankrupt attributed his insolvency to heavy household expenses and loss of income consequent on no dividend accruing for the past two years on the shares he held in the company. This, said the Official Receiver, struck him as an inadequate explanation of such a statement of affairs, and he suggested that extravagance had been a very large factor. The deficiency-account disclosed that, during last year, against 550*l.* of income, debtor's expenditure had been 1,000*l.* The office of trustee was left in the hands of the Official Receiver, and Messrs. Hameyer, Linney, and Wilkinson were appointed to confer with the trustee.

Re E. E. BURFORD (trading as Burford Brothers), 22 Canal Street, Albany Road, chemical merchant.—This debtor has petitioned the London Bankruptcy Court, and upon the application of Mr. Lewis Barnes the usual receiving-order was made, together with an adjudication in bankruptcy. The liabilities are estimated at 17,000*l.*, and the assets at something between 5,000*l.* and 7,000*l.*

Re EDWARD HOWDALL HASSELBY, 55 and 57 Pevensey Road 1 Eversfield Place, and 33 King's Road, East Street, St. Leonards-on-Sea, chemist and druggist.—The adjourned public examination was held at the Hastings Bankruptcy Court on May 13, before Mr. Registrar Knight. The liabilities are 1,139*l.* 14*s.* 11*d.*, and assets 299*l.* 18*s.* 5*d.*, the causes of failure being stated as due to "losses through assisting Marchant in cycle business, through liabilities incurred on my behalf, and misappropriation of moneys, and also losses on trust accounts, and on guarantees paid for Mr. Atkinson, my solicitor." No further questions being asked, and the debtor having made the statutory declaration, he was allowed to pass.

Deed of Arrangement.

Sudlow, Thomas Wilson, 158 High Street, and Dinsdale Terrace, Stockton-on-Tees, chemist and druggist. Dated, May 3; filed, May 10. Liabilities unsecured, 2,975*l.* Composition of 6*s.* in the pound payable forthwith. The following are among the creditors:—

	£	*s*	*d.*
Balcombe, A. G. (Trustee of), Huddersfield	784	0	0
Barnett & Foster, London	23	0	0
Bleasdale (Limited), York	37	0	0
Bratby & Hinchcliffe, Manchester	36	0	0

RECEIVING ORDER.

Park, W. C., Macfadyen, J. J., and **Park, James,** trading as Park, Macfadyen & Co., 24 Lime Street, E.C., Park, Son & Co., at New York, and Turnbull & Co., at Kingston, Jamaica.

ADJUDICATION.

Burford, Ernest Enoch, carrying on business under the name or style of Burford Brothers, Albany Road, Camberwell, S.E., salt, oil, vinegar, and chemical merchant.

ORDER RESCINDING ANNULMENT OF ADJUDICATION.

Loten, William Lowson, Kingston-upon-Hull, chemist.

New Companies & Company News.

MEDICAL, SURGICAL, AND HYGIENIC EXHIBITORS' ASSOCIATION (LIM.).—Registered with 100 members, each liable for 1*l.* in the event of winding-up. Objects: To hold or co-operate in the holding of medical, surgical, hygienic, and similar exhibitions, to negotiate with railway and carrying companies for reduction in fares and freights, to arrange public dinners or entertainments given by the associated exhibitors and their friends, &c. The first subscribers are: F. Weiss, H. Blair, A. Cooper, H. V. Down, A. P. Smith, H. E. Wilkinson, G. A. Back, F. W. Abbott, A. A. Ball, J. E. Morgan, H. T. Baker, and F. J. Rebman. The subscribers are to appoint the first directors.

DURBAN OIL AND SOAP COMPANY (LIMITED).—Capital 12,000*l.*, in 1*l.* shares. Objects: To adopt an agreement between the Société Francaise pour l'Industrie et les Mines of the one part and the company of the other part, and to carry on the business of oil and soap manufacturers, chemists, druggists, drysalters, oil and colour men, importers and manufacturers of and dealers in pharmaceutical, medicinal, chemical, industrial, and other preparations and articles, compounds, cements, pigments, varnishers, dyes, candles, oleaginous and saponaceous substances, unguents, and ingredients, etc. Minimum cash subscription, 40,000*l.* The subscribers are to appoint the first directors. Remuneration (except managing director), 100*l.* each per annum, and 50*l.* extra for the chairman.

"MAHAL" (LIMITED).—Capital 500*l.*, in 1*l.* shares. Objects: To carry on the business of manufacturers of a hair-producer known as "Mahal," manufacturers of and dealers in patent medicines, cosmetics, washes and similar preparations, &c. The first subscribers are:—E. J. Noble, 37 Oxford Road, Kilburn, secretary; E. A. Haggard, 4 St. Alban's Place, S.W., Major (retired); M. B. Rose, 31 Fletching Road, Clapton, warehouse manager; E. F. Moody, Evelyn Villa, Evelyn Road, Richmond, assistant secretary; M. H. Dwyer, 40 Waldemar Avenue, Fulham, S.W., clerk; F. P. Bailey, 12 Hemberton Road, Clapham, clerk; and G. E. Mason, 27 St. Luke's Road, Bayswater, W., clerk. No initial public issue. Registered without articles of association. Registered office, 10 Norris Street, Haymarket, S.W.

LINDSAY'S DRUG-STORES (LIMITED).—Capital 500*l.*, in 1*l.* shares. Objects: To carry on the business of chemists, druggists, drysalters, oil and colourmen, and importers and manufacturers of and dealers in pharmaceutical, medicinal, chemical, and other preparations, drugs, dryware, proprietary articles, photographic and scientific apparatus and materials, &c. The first subscribers are:—R. Simpson, 5 Welby Street, Knatchbull Road, Camberwell Road, S.E., chemist; A. Van Zwanenberg, 74 Highbury New Park, N., merchant; W. G. Ireland, 40 Rendlesham Road, N.E., traveller; Mrs. F. M. E. Ireland, 40 Rendlesham Road, N.E.; J. Dowson, 5 Welby Street, Camberwell, S.E., accountant; Mrs. C. A. Simpson, 5 Welby Street, Camberwell, S.E.; and A. Zwanenberg, 74 Highbury New Park, N., meat-salesman. No initial public issue. Registered without articles of association.

PLYMOUTH CO-OPERATIVE DRUG COMPANY (LIMITED).—Capital 2,000*l.*, in 1*l.* shares. Objects: To take over the business of chemists and druggists carried on at 20 Cornwall Street, Plymouth, as the "Plymouth Co-operative Drug Company," and to adopt an agreement with W. F. Goodwin. The first subscribers are:—E. T. Cocks, 7 Lansdown Place, Plymouth, chemist's assistant; W. J. Manley, 34 Turret Grove, Plymouth, chemist; H. E. Cocks, 7 Lansdown Place, Plymouth, dentist's assistant; Miss B. M. Moysey, 21 Lisson Grove, Plymouth; J. B. Moysey, 21 Lisson Grove, Plymouth; J. G. Millman, 1 Maybank Road, Plymouth, shipping agent; and J. W. Bridle, 9 Queen's Gate, Plymouth, solicitor. Minimum cash subscription, 50 per cent. of the shares first offered to the public. The first directors are E. T. Cocks, W. J. Manley, and H. E. Cocks. Office, 20 Cornwall Street, Plymouth.

Digitized by Google

SOUTHALL BROTHERS & BARCLAY (LIMITED).—We are informed that the new issue of preference shares has been subscribed "twice over."

LIEBIG'S EXTRACT OF MEAT COMPANY (LIMITED).—The directors, at a board meeting held on May 8, resolved to recommend, a distribution of a final dividend on the ordinary shares, for the year 1901, of 15 per cent., free of income tax, making with the interim dividend of 5 per cent. paid on February 15 last, 20 per cent. for the year.

BRUNNER, MOND & CO. (LIMITED).—The directors have decided to declare a dividend on the ordinary shares for the past six months at the rate of 35 per cent. per annum, which, with the interim dividend at the rate of 30 per cent. per annum, makes 32½ per cent. for the year. A sum of 60,000*l.* is to be added to suspense account, and 37,000*l.* carried forward.

WATKINS (LIMITED), wholesale druggists, &c., Hong Kong. The third annual general meeting of the shareholders was held on March 27, at 66 Queens Road, Central, Hong Kong, when Mr. G. A. Watkins presided. The report, which was adopted, states that the amount standing to credit of profit-and-loss account after providing for bad and doubtful debts was $1,387.50. In the accounts submitted last year was a clerical error, the stock including a portion of the plant and machinery of the value of $8,741.97. This sum is included in the amount $13,544.51 passed to equalisation of dividend fund at the last meeting, so that the net profit was $10,129.47. It is proposed to transfer from the equalisation of dividend fund to the credit of profit-and-loss account this sum of $8,741.97, which will then stand at $10,129.47, to pay a dividend of 9 per cent. for the year, which will absorb $9.000, carry forward to equalisation of dividend fund $4,802 57, and to profit-and-loss account $1,129 47.

AN EMBEZZLEMENT CHARGE.

AT the South-West London Police Court on May 8, Joseph Milne (26), chemists' manager, was charged with embezzling 3*l.* 17*s.* 8*d.*, and further with stealing and receiving 30*s.* and 2*l.*, belonging to his employers, Messrs. Lewis & Burrows (Limited). Mr. E. W. Gough, chemist and druggist, general manager to the prosecutors, stated that in February last the accused was appointed manager of the company's branch at 17 Lavender Hill, S.W., and owing to a letter written by one of the assistants to a director, he (the witness) examined the prisoner's accounts, with the result that the 2*l.* "change-money" which the prisoner should have had in his till was found to be missing, and although the takings of two days amounted, according to the pay-sheet, to 16*l.* 11*s.*, the sum actually banked by the accused was 12*l.* 3*s.* 3*d.* In addition to this, a sum of 30*s.*, which the accused had received from his two assistants, was also missing. Questioned by the prisoner, witness admitted that the accused had borne a good character during his four years' service with the company, and that he had proved himself a capable manager, having pulled the business up 20*l.* in a fortnight. When he (Mr. Gough) acquainted prisoner of the shortage he replied, "I am aware of it," and took about 4*l.* from a shelf in a store-room at the back and gave it to him. Robert Evans, deputy-manager, stated that when prisoner gave him the money to bank on the previous morning, he said it was 3*l.* short, but gave no explanation. There had been no "rest" money in the till lately. Prisoner: Didn't we generally move the money from the till overnight and put it in different parts of the shop? Witness: Yes. In case it should get stolen?—Yes. Are you not under notice to leave this firm?—Yes. Didn't you put it down to my fault?—No. You said you thought that conversation I had with the general manager in the back store was the cause of your being dismissed?—Yes, I did say that. Do you think I have ever used any of this money for my own personal benefit?—I cannot say. Have you ever seen anything to give you that idea?—No, never. The Magistrate observed that if prisoner put by the 3*l.* in some part of the shop to take care of it, that was not being short of it. Witness: It should have been banked. Dealing with the alleged theft of 30*s.*, witness said prisoner about three weeks before remarked that his banking-money was short by 30*s.*, and asked for 15*s.* to help to make it up. He (Evans) gave him the money from his till, and another assistant handed over a similar amount. The Clerk: How do you make up the 15*s.* loss from your till? Witness: By customers' money. If a customer came in for a bottle of embrocation I put the shilling in the till and didn't write out a bill. Prisoner: Sometimes, after a quiet day, haven't I said we will make it up, and haven't we made it up out of the "rest" money? Witness: Yes, we made it a good day. Wasn't that done very often?—Yes, very often. The Magistrate: That was to prevent inquiries being made about small takings?—Yes, sir. And when we saw we had the best week and didn't want to lose the opportunity of reaching a certain figure this winter, we put a certain amount to it to make it larger?—Yes. The Magistrate: Then your accounts were purely fictitious, that's what it comes to. You may as well have had none at all, or better. By further cross-questioning prisoner elicited that the "rest" money was used to make up good days until it was finished. When they had a poor Saturday prisoner often put a shilling or two out of his own pocket to make it up. The general manager remarked that this tinkering with the accounts was a revelation. Prisoner was remanded for a week.

The hearing was resumed before Mr. Garrett on May 15, when Mr. H. T. Waddy appeared to prosecute, and Mr. J. T. Lewis (Lewis & Lewis) defended. Mr. Waddy said it would be proved that the takings on May 5 and 6 were 16*l.* 1*s.*, but the prisoner only accounted for 12*l.* 3*s.* 4*d.* The day after, when the prisoner was questioned, he went out, and returned two hours later, and then produced about 4*l.* from another till, which he said was the missing money, and alleged it had been there all the time, but the prisoner was then aware that this till had been examined. The evidence of Mr. Gough was read over, and Mr. Waddy produced the assistants' takings-books.

Mr. Gough said that it was the duty of the prisoner or his assistants when making a sale to enter the amount on a carbon-book, one sheet of which the customer would receive as the receipt, and the duplicate was for the company.

By Mr. Lewis: There was no suggestion that the prisoner attempted to abscond. He only produced 4*l.*, whereas he should have produced 3*l.* 17*s.* 8*d.* and 2*l.* "rest" money. Prisoner did not say, "Here is the 3*l.* 17*s.* 8*d.* and 1*l.* of the 'rest' money." Prisoner did say he hid the money for safety, as it was his day's holiday. Prisoner did not give any satisfactory explanation of another 23*s.* he had from the other assistants' "rest" money in April.

Mr. Lewis: My instructions are that the prisoner produced 4*l.* 17*s.* 8*d.*, which would be 1*l.* short of the "rest" money only.

Mr. Gough added that the directors had such confidence in the prisoner in February as to appoint him manager of this branch, but beyond that he would rather not speak.

Robert Evans, the deputy-manager, recalled and further examined, said that on one occasion, to account for money put out of the "rest" money into the till to give the appearance of a good day, the "rest" money was made up by not entering moneys received from some customers. When Mr. Milne borrowed 15*s.* of witness, he said, "Don't enter any sales until the till is made up again." These sales had never been accounted for.

Mr. Garrett: Then what you mean is, you entered sham sales to make appearances of good sales, and left out actual sales to make up the deficiency?

Witness: Yes, that is so.

Mr. Garrett: Most extraordinary!

Mr. Lewis: Have you heard of these irregularities in the other shops of the prosecutors?

Mr. Garrett would not allow this question.

Harry Richmond Sharman, assistant for the last three months at the shop, also deposed to making shortages good by not entering receipts. This he did by prisoner's instructions. Evidence was also given by F. D. Heath, G. F. Barratt (inspector for Lewis & Burrows, Limited), and P.C. John Lewis.

Mr. Lewis said that the prisoner reserved his defence, and called no witnesses, and he was committed for trial at the next South London sessions on May 21. Bail was allowed in one surety of 50*l.*, and Mr. W. Watson Will, of the Metropolitan College of Pharmacy, Kennington, was accepted.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Pharmacy in Norway.

SIR,—In your issue of May 3, page 698, it is noted "that only two pharmacies in the whole of Norway can be sold absolutely by the proprietors." This is a misunderstanding either by Mr. Thos. Barclay or your representative. The fact is that we have thirty-six pharmacies which can be sold by the proprietors. The value mentioned (55,000*l.*) seems to be much exaggerated. The number of the other pharmacies is about ninety-five. Yours truly,

H. MONRAD-KROHN,
May 6. Proprietor of Loveapotheket, Bergen.

Vinegar of Squill.

SIR,—In the editorial comment on the Vinegar of Squill prosecutions in your last issue, you imply that I suggested 4 per cent. as a standard for total solids. This is a mistake as I gave no figure as a standard, though in my cross-examination at Highgate I stated that in my opinion 9 per cent. and even 7 per cent. was too high to be taken as a minimum. A number of samples examined by myself in the Analytical Laboratory of Messrs. Wright, Layman & Umney (Limited) have usually fallen within the limits of 7 and 9 per cent., but I am not in a position to state how low the limit may fall if squill of different character were used in manufacture. The free acetic acid strength has in my experience varied from 3·3 to 3·6 per cent. in samples representing batches prepared on the large scale by the B.P. process, the so-called deficiency being, without doubt, due to (1) moisture and extractive matter in the squill and (2) loss by evaporation during manufacture and filtration, both of which factors must necessarily vary and render it difficult to fix a standard even for a freshly prepared article. Since deterioration certainly occurs it is much more difficult, if not impossible, to say what should be the minimum acidity of a sample which has been prepared some time. The percentages given above represent grammes per 100 c.c. both in the case of acetic acid and of total solids. The specific gravity usually falls between 1·033 and 1·039. Yours faithfully,

48 Southwark Street, S.E., May 13. C. T. BENNETT.

SIR,—I have estimated acetum scillæ made last November with the result that 10 grammes gave 10·03 per cent. solid residue or if absolutely charred 6·48 per cent.

Yours faithfully,
337 Lordship Lane, S.E., May 13. F. E. RUBBRA.

Batch made January 27, 1902. Ten grammes evaporated to dryness gave 0·801 gramme residue, showing 8·01 per cent. of dry extractive.

Dawlish, May 13. GEO. JNO. CUTCLIFFE.

[Other communications received on this subject will be given next week.—EDITOR.]

The New Glasgow Association.

SIR,—I am surprised at the cold-water douche which your paper has attempted to throw upon the Glasgow and West of Scotland Chemists' Trade Association. [We are also surprised, as the solitary editorial comment we have made about the Association was agreement with a correspondent regarding the privacy of the meeting. The cold douche is local, we fear.—EDITOR.] I have always understood your journal to be a pioneer and champion in all matters which tended to the advancement of chemists' interests. As to your reference to the old Association, allow me to point out that this Association is something quite distinct and apart from it, embracing all who handle patent or proprietary articles, and therefore works on wider and broader lines. It also has the hearty approval and support of the leading members of the old Association. Its aims and objects are not what some of its critics would have us believe, a bending of the knee to the stores, but to promote a strong and united body, capable of bringing into line those irreconcilables who have been the stumbling-blocks in the trade for many years, and whose attitude is just the one to bring about that curse to all traders, a trade war, which it is the Association's object to avert by all the means at its disposal, or, failing in that, to meet those trade enemies in one united front, against which they shall throw themselves in vain. The decision of having a private meeting was to encourage those present to frankly state their views, which an open meeting might otherwise have prevented; but it seems there was not quite so much honour amongst us as we took for granted.

Yours, &c.,
Bridgeton Cross, Glasgow, May 12. J. MURCHIE.

Protection of Title.

SIR,—Will you allow me to draw the attention of voters at the coming election (particularly Grimsby members) to the fact that in my election address I make the protection of the title my chief care. For several years I have repeatedly drawn attention to the facility with which capitalists and unscrupulous traders have been and are still being permitted to use a title to which they have no legal claim. It will be my first act, when on the Council, to know how much longer we are to suffer from this injustice, and why action has not been taken in certain cases where information of this infringement has been given. A test case on the title-question has never been attempted, so that the case of the London and Provincial Supply Association so often quoted does not apply here. The present Acts, if properly used and enforced, will be found to be held by the judges quite sufficient to put a stop to this. What right, for instance, have Messrs. Spiers & Pond or Messrs. Jesse Boot to the title? What examinations have qualified them? Doubtless there are very few chemists who cannot supply the Society with plenty of material for any number of test cases. It is a serious matter, and I intend having it seen to. Should the present Acts, after a test case has been heard, fail to protect the title, then will be the time to amend them, and immediately. I trust every other Association will take the same step as Grimsby. Your obedient servant,

52 Acacia Road, St. John's Wood, C. E. PICKERING.
May 12.

[Mr. Pickering sends us a copy of his address for publication. We have no room for it, but any one interested can get a copy from him.—ED.]

"Lichen" and "Pharmaceutical."

SIR,—Referring to "Xrayser's" note on the pronunciation of "lichen," it is the rule with derived words to retain, as far as possible, the pronunciation of the original. "Ch" usefully illustrates this, as we have it from several different sources. In Greek-derived words it has the sound of "k" (*e.g.*, chemist, character, chaos), in those from the French it has that of "sh" (chivalry, chateau), while in words of Saxon origin or very early importation it is "tsh." Of course, the number of exceptions is very great; if "lichen" had been in common use in England for hundreds of years, the ordinary speaker would probably have irrevocably settled its pronunciation in the Saxon way. In this connection the word "pharmaceutical" is interesting; we give the first "c" the sound of "s," but a Greek scholar, not having heard the word before, would almost inevitably render it "k." This point was discussed some years ago during the hearing of a Pharmacy Act case; I am sorry I cannot now refer to the passage, but perhaps you, Mr. Editor, can do so, and, if not too long, quote the explanation there given.

Yours,
5 Pond Street, N.W., May 12. A. W. BROMLEY.

[After the Pharmacy Act, 1852, was passed, the Pharmaceutical Society drafted by-laws, one of which enabled the Council to elect as members of the Society chemists who had been in business before the charter was obtained, and others who had been in business before the Act passed, and whose *bonâ fides* was certified. Against this a section of the members protested, and applied to the High Court for a mandamus calling upon the Registrar to furnish a proper register. The case came on in November, 1854,

Digitized by Google

and was decided by Lord Campbell on January 26, 1855, his judgment, against the applicants, being confirmed on appeal. It was in an early stage of this trial that the pronunciation of the word "pharmaceutical" arose. The Attorney-General, who led for the Society's registrar, was asked by Lord Campbell why he pronounced "c" soft. He replied that it came from the Greek, but when it became English it must be subject to English rules. He had, however, been cautioned, he said, by some of his learned friends as to the pronunciation. Sir Fitzroy Kelly, who was for the applicants, bowed to the opinion of his learned friends, who were so much superior to him in learning as in everything else. The Attorney-General said that was rather bad, as it was Sir Fitzroy Kelly himself who had cautioned him. Sir Fitzroy Kelly remarked that whatever his Lordship should say was the pronunciation should be the mode to be adopted. Lord Campbell replied, "Then let it be soft. Be it so."—Editor]

Dividing the Minor Examination.

Sir,—It seems to me that the question of division or no division of the Minor examination is misleading, the real and vital question being whether the examination should be made easier for the candidates or not—a lower standard or not a lower standard is the real question. I am strongly antagonistic to any attempt to allow men to receive their diplomas on less exacting terms than I myself received it. Having been compelled to expend energy and capital in obtaining a qualification, I object to others being granted the same qualification on less stringent terms. It would be most unfair on the part of the authorities to do any such thing, unless they are prepared to compensate me for the surplus amount of energy and capital I have expended in attaining to what they would thereby admit to be an unnecessary and more or less unjust, and even exorbitant, standard of efficiency. An influx of men into the trade at a reduced standard of efficiency would seriously handicap the younger generation who have obtained their diplomas during the last five or ten years, and who in ten years to come will constitute the backbone of the body-pharmaceutical. I would also like to point out that such a course as lowering the standard of a diploma is without precedent and contrary to all right custom. It is recognised at the schools and universities and medical colleges that the standard of efficiency must be raised from time to time, and the reason is obvious. Let it be granted that the physician or lawyer of to-day has just the same standard to attain as his predecessors of thirty years ago in order to get his diploma, and what happens? Why, the man is not fit for his position.

It is my firm conviction that the men who are rejected time after time at the pharmaceutical examinations deserve to be rejected. Who are they? Have we not all seen them? They are the men who are "just going up to see what it is like." They are the men who come late to their lectures and benches—who can afford to stop work for half an hour during a simple analysis or volumetric estimation, to smoke a pipe or have a friendly chat with other overworked individuals of like mind. They are the men who can afford to go to a theatre one night, and another night to the rooms of a fellow-student (to work with him), and a third night, to entertain their friend at their own rooms for the same purpose, and all this in one short week. They are the men who never honestly toil at their work, and go up simply on the chance of getting through. These are the men who fail and revile the examiners and persuade their undiscerning friends that the examination is abnormally hard, or that it is all a case of luck. There must be dozens of young chemists up and down the country who agree with me on this subject and whose sentiments I am now expressing. They cannot help regarding any reduction in the standard of efficiency as a direct betrayal of their vested interests. I would call upon all such to resist this and vote for no candidate at the coming election who has any sympathy with such a retrograde movement, whether by division of the examination or otherwise.

Yours sincerely,
William Shadforth.

[We have much condensed this letter, the writer of which appears to be unaware that fifty years ago medical diplomas in this country were granted after one examination corresponding to the present "Final." Now the examination is divided into three to four parts, and the subjects of each part can be taken separately. This is intended to reduce "cram" and secure greater efficiency.—Editor.]

Medicine-stamp Duty.

Sir,—I have had a conversation with an Excise officer regarding "W. C.'s" note on this subject and your remarks thereon. The officer says "W. C." is right, and that the Inland Revenue officer at headquarters who told you that informing officers get no part of the fine is wrong, or rather "not quite correct." It is true that informers get no share of the fine, but they do get money rewards, and my friend has had such. This reward is sometimes 5*s.* when the fine has been only 1*s.* or there has been no fine at all, and in that sense only is the reward "no part of the fine."

Yours faithfully,
W. G. (227/18.)

Diascordium.

Sir,—Whilst diascordium still holds its place *sur le tapis* I beg to send you the following formulæ which may be of some interest to many of your readers. I have lately had the pleasure of perusing at my leisure a very interesting old book—viz., the Pharmacopœia Genevensis, A.D. 1780, which gives the following formula:—

Confectio Japonica.

℞ Catechu præparati, uncias tres.
Radicis tormentillæ,
Nucis moschatæ,
Thuris, singulorum uncias duas.
Opii, in sufficienti quantitatæ vini albi hispanici soluti, sesqui drachmam.
Syrupi corticum aurantiorum, ad mellis consistentiam inspissati, triplum pulvum pondus.

Misce secundum artem, ut fiat electuarium quod vicem diascordii supplebit.

Hager, 1840 edition, gives two formulæ which I find from personal experience far behind that of the French Codex.

Yours truly,
Geneva, May 6. Wm. B. Payne.

Dickensiana.

Sir,—I beg to remonstrate with your correspondent—page 737—who states, on the authority of the late Dr. Sir R. Quain, that Mr. T. H. Hills was the prototype of Cheeryble Brothers. First, how could he represent two individuals? Second, the name of the celebrated firm was suggested by Messrs. T. & W. Grant, of Manchester. Also Tim Linkerwater was confidential clerk in their warehouse; his daughter, a most engaging young lady, was Florence. Two other interesting characters were his talented sister and her husband Mr. Burnett, with their dear little invalid boy, who was Paul Dombey. I have dispensed for all of them, and was frequently in their company. Mr. and Mrs. Burnett were admirable musicians, and conducted the singing at Rusholme Road Chapel, which was charming and entirely vocal.

Yours faithfully,
Deal, May 14. R. G. Mumbray.

Dispensing Notes.

A Minor Prescription.

Sir,—Would you have the kindness to inform me what extract should be used in the following prescription, which was given at the recent Minor examination?—

Ext. belladonnæ	...	...	... 3j.
Adipis benz. ad	...	...	... 3j.

M. Ft. ung.

Yours truly,
Cortex. (205/1.)

[Where the kind of extract of belladonna is not specifically stated, extractum belladonnæ viride, B.P. 1898, which is the original extractum belladonnæ, may be used for internal purposes. In the above case root-extract is indicated.]

Camphor-and-Salol Pills.

214/60. *Ibrox* asks how the following pill should be made:—

Pulv. digitalis	...	...	... gr. j.
Camphor. ...	...	...	... gr. ij.
Ext. belladonnæ	...	...	... gr. ½
Salol.	...	...	... gr. i j.

Ft. pil. Mitte xij.

[The best plan is to mix the salol and camphor; when liquefied add 15 gr. of Roe's excipient (see *C. & D.*, December 28, 1901,

Digitized by Google

page 1044, or "Pharmaceutical Formulas," ed. v., page 587); mix well, then add the digitalis and belladonna, and mass with compound tragacanth powder.]

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

174/21. *Arsenic.*—You do not clearly express the grounds of liability, but in the event of any action being taken against you, you should have little difficulty in proving that the powders did not make the horse ill.

226/44. *Nemo.*—There is no law to prevent any person, qualified or not, compounding or selling in Great Britain a preparation of rhubarb, pepsin, soda, and bismuth.

226/11. *E. H. J.*—You have no remedy against the solicitor who merely acted as the agent of your debtor, who alone is responsible for the debt unless you have committed yourself to transfer the obligation to his wife; and that would be valueless unless she has a separate estate.

226/53. *J. P.*—If a debtor pays an account to a creditor after he has been served with a summons, the proper course, in order to get costs, is to pay the money into court.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

135/47. *Comb.*—Dead finish for Ebony is obtained by giving the wood two coats of fine copal varnish and rubbing smooth with pumice-stone. A third coat of varnish is then applied and rubbed down with rotten-stone; and, lastly, a coat of thin copal is applied, allowed to become quite dry, and polished with chamois leather and the palm of the hand.

135/17. *Caput.*—To make the hair grow on a bald patch on a boy's head requires persevering treatment with a Stimulating Hair-lotion, such as the following:—

Cantharidin	gr. j.
Acetic ether	℥vj.

Dissolve with gentle heat, and add—

Rectified spirit	℥iij
Castor oil	℥j.
Oil of lavender	♏xv.

This is rather strong, if frequently applied. It is better to dilute the lotion with an equal quantity of spirit. If after a course of this lotion no improvement is noted, try the use of pilocarpine-ointment (pilocarpine nitrate, gr. iv.; lanoline, ʒss.; vaseline, ʒss.).

196/54. *P. N W.*—Sodium chloride can be used as a diluent in making mercuric chloride and potassium bichromate tablets. The best lubricant is an ethereal solution of vaseline.

21/3. *A. T. J.*—The Lamb-drench, of which you give no particulars, is coloured chalk.

197/56 (*Leicester*) and 213/17 (*Nicholas*). — Dry Shampoo:—

White Castille soap...	℥j.
Oil of lavender	℥j.
Rectified spirit	℥viij.
Water	℥iij.

Macerate for a day or two, filter, and add—

Liquid ammonia	℥j.

Mix.

184/22. *Ebona* —The lime-cream made from formula V., page 78 ("Pharm. Formulas"), can be thinned by adding more lime-water, but the addition would have to be made in an emulsifier to be successful.

190/20. *F. G.*—(1) An Udder-wash for drying cows and preventing sore nipples is made of alum 2 oz., water 1 pint, suitably coloured. The external treatment will need supplementing by doses of alum (4 oz. in 3 pints of water) internally twice a week. (2) The application of solid caustic potash is the best for preventing calves' horns growing.

198/39. *C. & Co.*—McDade's Mixture (Liquor stillingiæ compositus):—

Ext. smilac. liq.	℥ij.
Ext. stillingiæ liq.	℥ij.
Ext. cappæ min. liq.	℥ij.
Ext. phytolaccæ liq.	℥ij.
Tr. xanthoxyli	℥j.

M.

Dose: ℥j. in water thrice daily before meals, gradually increased to ℥ss.

158/18. *Extractor.*—(1) To Stop Bleeding after Tooth-extraction.—A 1-in-10 solution of tannin in tincture of myrrh or tincture of perchloride of iron is generally sufficient, but a newer method is to use powdered suprarenal capsule tablets or adrenalin solution. (2) There are several ways of Painlessly Extracting Teeth—(*a*) by inducing complete anæsthesia with nitrous oxide, chloroform, or ether, (*b*) by local application of cocaine, ether, or ethyl chloride. The last mentioned is probably the safest, but the freezing process is far from pleasant.

144/32. *O. D.* (Constantinople).—(1) It is usual to combine aniline blue-black with aniline black in colouring boot-cream so as to overcome the brownish tinge of the latter. (2) Lecithin from Eggs is prepared (Strecker's process) by extracting the yolk of egg with alcohol-ether and adding an alcoholic solution of platinic chloride. A compound of lecithin and platinic chloride is precipitated, and this is shaken with silver oxide, and the filtrate freed from silver by passing sulphuretted hydrogen through it, and evaporating.

197/45. *J. P. P.*—(1) Hair-wash, to suit your label:—

Liq. ammoniæ	℥ss.
Tr. capsici	♏xxx.
Glycerini	℥iij.
Aq. coloniensis	℥j.
Aq. ad	℥viij.

M.

(2) Safe Influenza and Fever Mixture.—See *C. & D.*, April 19, page 645.

175/21. *J. Adkins.*—The duty on patent medicines imported into New Zealand is now 15 per cent. *ad valorem*, to which it was reduced from 40 per cent. last year. We understand the patents you name have had an increased sale since the reduction.

219/10. *Zeta.*—Naphthalin melts at 176° F., so that the heat of the water-bath is sufficient. The vapour is inflammable, and the operation should be conducted out of doors.

213/39. *G. A.*—(1) Eucaine is a synthetic compound, closely allied to cocaine. The hydrochlorides of α-eucaine or η-methylbenzoyltetramethyl-γ-oxypiperidin carbonic acid methyl ester and β-eucaine or benzoylvinyldiacetonalkamine are met with in commerce, and are distinguished by the relative solubility, α-eucaine being the more soluble. β-eucaine is the less toxic, and is used in 2-per-cent. solutions for extractions. (2) Registering Trade-mark — See THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 285.

215/67. *E. W. B.*—(1) The subject of aniline dyes is too big to be treated in these columns. You should consult such works as Schultz & Julius's "Organic Colouring-matters" (Macmillan) and Hurst's "Dictionary of the Coal-tar Colours" (Heywood). (2) Is it a stencil ink you require, or an aniline ink for stamping?

214/66. *Sugar-coater.*—The process of Sugar-coating Pills is the same as confectioners use in making comfits. It is described in Gunter's "Modern Confectioner" (Dean & Son).

Digitized by Google

203/21. *D. H.*—**Pancreatised Cod-liver Oil :—**

Cod-liver oil	150 parts
Water	50 parts
Malt extract	200 parts
Scale pancreatin (soluble)	1 part
Sodium chloride	2 parts
Sodium bicarbonate...	2 parts

Dissolve the pancreatin with the salts in the water, and mix with the oil and malt extract as in emulsion-making. Flavour can be added.

202/28. *Mortar.*—We do not understand your failure with the white liniment, as you adopt the best process for mixing. Try an increased quantity of egg.

200/74. *T. T. L.*—**Blood-purifying Mixture :—**

Ext. sarsæ co.	℥ij.
Potass. iodid.	ʒj.
Glycerini	℥ij.
Sp. chloroformi	℥ss.
Ol. sassafras	♏xx.
Aquæ ad	℥xx.

Dose: For adults one tablespoonful three times a day after meals.

211/74. *Country Chemist.*—A solution of ammonium persulphate will remove the metallic appearance which has appeared on an old negative.

213/3. *Subscriber.*—The only way of making the Soothing Tincture miscible with water would be to reduce the quantity of oil of aniseed, but that would alter its medicinal value.

203/6. *J. E. S.*—**Cod-liver Oil Emulsion with hypophosphites.**—A formula for this was given in the *C. & D.*, March 23, 1901, page 470, or by adding sodii hypophosph. ʒiv., calcii hypophosph. ʒiv., to the formula given in the *C. & D.*, April 19, page 634, a good preparation results. The hypophosphites should be dissolved in part of the water.

214/20. *D. W.* (Ghent).—**The following Distemper is satisfactory for use on the walls of cellars :—**

Paris white	560 parts
Zinc oxide	160 parts
Plaster of Paris	160 parts
White dextrin	39 parts
Copper sulphate	9½ parts
Gum acacia	16 parts
Borax	9½ parts
Alum	9½ parts

A pint of boiling water is required for each pound of powdered distemper.

214/74. *Rusticus.*—**(1) Codeine is calmative, but nothing like so powerful as morphine. It can be given in bronchitis. (2) Dental-cement**

Zinc oxide	98 parts
Magnesium oxide	2 parts

Mix, and when required for use make into a stiff paste with syrupy phosphoric acid.

213/51. *Nemo.*—The compound is a dental-cement, but we do not recognise it from your description.

215/65. *P. & L.*—We have not a formula for cloudy ginger-beer essence.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

223/63. **Makers of De Sancti's pills.**

226/33. **What is or who makes Duroleum?**

227/28. **English agents for the "Handy" sheet soap.**

227/18. **What is buckskin chalk, and where obtainable?**

215/74. **Name of an institution where Swedish massage is taught.**

211/11. **Dealers in American gas-black for stove-polish manufacture.**

224/24. **Makers of thin wood boxes such as are used for packing Eau de Cologne in.**

THE COLONIAL PRESENTS.

On Wednesday of this week a representative of the *C. & D.*, in response to the invitation of the directors of the Imperial Institute, went to the private view of the presents which the Prince and Princess of Wales received during their tour round the world. The presents are displayed in the North Gallery, and have been arranged according to the progress of the *Ophir*, making a topographical display that may give some idea of the comprehensive nature of her great voyage. The walls of the gallery are decorated with the names of the places visited, starting with Gibraltar at the east end of the gallery. After Gibraltar come Malta, Aden, Ceylon, Singapore, Straits Settlements, Australia, New Zealand, Mauritius, South Africa, Canada, finishing appropriately with the address of welcome presented by the Mayor, Aldermen, and Burgesses of Portsmouth on their Highnesses' return to England. Illuminated addresses bulk largely in the collection, among which are noticeable addresses from the Victorian British Medical Association, signed by Dr. Nield, President, Dr. Vance, Secretary, and eight members of Council. There is also a handsome joint address from the Medical Society of Victoria (President, Dr. Martin), the Melbourne Medical Association (President, Dr. Thomson), and the Medical Defence Association (President, Dr. Syme). The University of Melbourne, the Queensland Medical Association, the St. John's Ambulance Association of New Zealand, the Royal Society of Arts and Sciences, Mauritius, the medical profession in Natal (headed by Dr. Jas. Hislop), also contributed illuminated addresses. Items of strictly pharmaceutical interest there are none; but there is shown a photo of "the old gum-tree at Glenelg," a bent, old eucalyptus-tree, bearing a board, which states that on this spot the colony of South Australia was proclaimed on December 28, 1836, while a piece of wood from the self-same tree is exhibited in another part of the gallery. A copy of "Australian Botany," handsomely bound in red morocco, presented by Mr. Guilfoyle, of Sydney, and a portfolio of crimson leather, containing dried specimens of Australian plants, comes from the director of the Melbourne Botanic Gardens, and sundry other books and pictures, illustrative of the natural history of the various countries, are also to be seen. Several exhibits of minerals from Australia are of interest to chemists, notably No. 314, a casket of Gothic design, of carved colonial woods, containing thirty-five specimens of gold; a box (No. 311) containing specimens of Tasmanian minerals; and a maple-wood box (No. 319) containing thirty-six minerals from the Tasmanian Museum and Art Gallery. Among these last are tin, nickel, lead, copper, iron, antimony, calcium, wolfram, zinc, bismuth, and gold—pure and in combination. Perhaps the most interesting, and at the same time most beautiful, of the collection is a model of a diamond-mine (No. 561). The outer casket is made of silver, each panel containing eight rough diamonds set in gold leaves. The inside is an exact representation of a Kimberley diamond-mine, in pure blue ground, with rough diamonds deposited therein. The "tip-trucks" are made of pieces of shell which burst at Kimberley during the siege, and in each truck is a rough uncut diamond. The sheds, &c., are all made of silver, and the casket stands on a base of marble, encrusted with rubies and garnets from De Beers Mine. There is a magnificent display of furs, chiefly from Canada, and a goodly show of native weapons, ornaments, and such-like from Australia, New Zealand, and South Africa. The caskets containing the addresses are many of them exceedingly handsome, notably an ivory casket, presented by the planters of Ceylon, inlaid with no fewer than 512 jewels. The exhibition is very interesting, and well worthy a visit.

St. Vincent Arrowroot.

The appalling disaster which has overtaken the island of St. Vincent has brought about dearer prices for arrowroot, which is the staple product of the island, and a note about the position of the London market will be found below. A Colonial Office report on the trade of St. Vincent for the year ending 1900 (!) was recently issued, from which we learn that the commercial outlook of the island previous to the disaster was not bright, especially in regard to the arrowroot-industry, which was the only remaining source of wage-earning employment to the agricultural labourer.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: May 15.

THERE is a little more activity in the markets this week induced by the fact that an auction of "new and old" drugs has been held, at which plentiful supplies were offered. Privately the fluctuations include advances in St. Vincent arrowroot, lime-juice, lime oil, bay oil, and tamarinds, which have been brought about by the volcanic eruptions in the West Indies. Crude camphor has been slightly advanced by the monopoly, and there has been more demand; refined is quiet. Menthol is held for higher prices, being scarce on the spot. Cream of tartar is firmer, and tartaric and citric acids are unchanged. American spermaceti is easier, and strychnine and salts have been reduced. Quinine is very quiet, and opium remains easy. The following are the principal changes of the week, including those recorded at the drug-auctions:—

Higher	Firmer	Easier	Lower
Aloes, Curaçao (gourds)	Cream of tartar	Copper sulphate	Ammoniacum
Ammonia sulphate	Menthol	Oil, lemon-grass	Areca
Arrowroot	Oil, castor	Spermaceti (Amer.)	Calumba
Buchu			Cardamoms
Camphor (Formosa crude)			Croton-seed
Gambier			Gamboge
Ginger (Jamaica)			Oil, cassia
Kola			Strychnine
Lime-juice (W.I.)			Turmeric
Oil, bay			Wax, bees' (bleached Calcutta)
Oil, lime (W.I.), distilled			
Tamarinds (W.I.)
