AT the Ash Wednesday meeting of the Council, Mr. Martindale's death was the chief topic, the Council testified to his good qualities, and passed a resolution of sympathy with the family. The vacancy on the Council is to be filled up at the March meeting. The Registrar's report was received; it shows that there were 13,420 chemists on the registers at the end of 1901, and that the Society has 6 592 adherents. The Benevolent Fund Committee made grants amounting to 115*l.* 8*s.* When the report of the Library, Museum, and House Committee came before the Council, Mr. Wootton and Mr. Gifford complained of the lack of information in the report; but the President said the minute-books were open to inspection by any member of the Council. In answer to Mr. Gifford it was announced that the Dispensers Committee will probably report next month. The President, Vice-President, and Mr. Young are to go on a jaunt to Manchester in September, having been elected delegates to the Sanitary Congress. Mr. Wootton suggested that the President should read a paper on the sale of poisons. The meeting finished with the reading of a persuasively eloquent letter from Cardiff, suggesting that the Society should act as sponsors in the educational scheme which is being promoted by the local association.

The monthly Council-meeting, postponed from last week owing to the funeral of the late Mr. Martindale, took place on February 12 at 16 Bloomsbury Square, W.C. There were present the President (Mr. G. T. W. Newsholme), the Vice-President (Mr. C. B. Allen), Treasurer (Mr. S. R. Atkins), and Messrs. Carteighe, Cooper, Corder, Gifford, Glyn-Jones, Harrington, Hills, Park, Savory, Southall, Taylor, Wootton, and Young.

Messrs. Cross, Symes, and Storrar wrote to say they were unable to be present, and Mr. Harrison had met with a slight accident when coming to the Committee-meeting on the previous day, which kept him indoors.

DEATHS.

The PRESIDENT read a letter from Mr. Horace Davenport thanking the Council for their sympathy on the death of his father.

The PRESIDENT then said it was his painful duty to refer to the sad death of their colleague, Mr. William Martindale, who died suddenly since the last Council-meeting. As a member of the Council Mr. Martindale was a sincere worker, and one whom they greatly admired His death was a loss to pharmacy throughout the whole world. He was assiduous in the performance of his duties, a great worker, and had held a prominent position in the world of pharmacy for many years. The President then enumerated the official positions which Mr. Martindale has filled:—

Member of the Board of Examiners ...	1873–1882.
Member of Council	1889–1902.
Treasurer	1899.
President	1899–1900.
President of the British Pharmaceutical Conference	1891 and 1896.

He also contributed largely to the last two editions of the Pharmacopœia, and was a Fellow of the Royal Botanical Society. The President said he had only referred to Mr. Martindale's official positions in pharmacy, but there were many other directions in which he had made his name known and esteemed. In his character there was an absence of duplicity and no room for insincerity. Mr. Martindale was a victim of his acute sense of duty. He (the speaker) had often heard him use the expression, "Every man is a debtor to his calling," which showed the way he looked upon life. The President also mentioned that Mr. Bateson, Kendal, had written a sympathetic letter to the Council, in which Mr. Martindale was referred to as "a friend who has ever had their fullest confidence and esteem." Mrs. Martindale also thanked the Council for the very beautiful wreath which was sent to the funeral. The President finished by proposing a resolution expressing the esteem with which Mr. Martindale was held and sympathy with the family.

The VICE-PRESIDENT said although he had not had the advantage of knowing Mr. Martindale so long as some of his colleagues, he had been brought a good deal in contact with him. There was no question that pharmacists all over the world had lost a friend. Mr. Martindale was a practical pharmacist, and the actual practice of his vocation was, he knew, more congenial to him than pharmaceutical politics. No one could talk with him without gaining something from the conversation. Some three or four weeks ago Mr. Martindale, at the suggestion of his medical adviser, went to the Scilly Islands for rest, as he was told the air was a considerable stimulus to the nerves. He (the speaker) was in the West of England at that time, and came in contact with Mr. Martindale. When returning, Mr. Martindale called on a pharmacist in Penzance whom he only knew as a member of the Society, and that gentleman had since written to say that in that three-quarters of an hour's conversation he felt that he had a life-long friend in Mr. Martindale. That chemist had since written to express his sympathy with him and his colleagues, which was a typical expression of what pharmacists felt all the world over. It would be a long time before they would get over the shock of the vacant chair which had been created amongst them. He felt for the family exceedingly, and especially for his eldest son, who was a pupil with him for some time.

Mr. HILLS said it was hardly necessary for him to add any further words to what had been said, but he would not like the occasion to pass without paying a tribute to the worth and character of one whom he had known over thirty years. As a pharmacist he was a star of the very first magnitude, and that position was gained, not only by intelligence and industry, but because he had his heart in his work and took very great interest in the work of his life—the art of pharmacy. As regards the man, and as a colleague, he could only speak of him in terms of affection. He was upright, conscientious, and honourable, and as a friend kind, loyal, and generous.

The TREASURER, who spoke with some emotion, said although ample and honourable testimony had been borne to the worth of Mr. Martindale, he wished to express his feelings He first met Mr. Martindale in 1859 at the Conference meeting in Exeter when the late Daniel Hanbury presided. Mr. Martindale was then in delicate health, and shortly afterwards he (the speaker) met him at Dartmouth walking under the protection of a wall—a tall, good-looking young man wearing a respirator, and with every appearance of an invalid. He spent a day with him and had a very pleasant talk, of which he had still a vivid impression in his mind, although it was thirty-three years ago. He next met Mr. Martindale at Hastings, when Mr. John Williams was President. Mr. Martindale invited the President, Professor Redwood, and the speaker to spend a day and night at his house at Winchelsea, where they received very generous treatment. Mr. Martindale had most diligently worked up the history of that ancient place, and he and Mr. Williams, who was distinguished for his knowledge of archæology, were deep in conversation on the ancient history of the Cinque Ports. He also recalled an instance of Mr. Martindale's extreme generosity. He was speaking to him one day of an honourable member of the craft, who was, however, very poor, "passing rich on 40*l.* a year," and was telling him how he would like a copy of the Extra Pharmacopœia, but could not afford to pay for it. Next day Mr. Martindale brought him (the speaker) a copy of the book, neatly wrapped up, and said, "Atkins, send that to your friend with my kind regards." This was not the only instance he knew of his very generous help to struggling men. He would like to suggest that some abiding record of Mr. Martindale's personality should be placed in that house in the shape of a portrait. Mr. Martindale, he added, was well known to the medical profession. Quite recently a medical man had come into his shop, and, taking a copy of the Extra Pharmacopœia out of his pocket, said, "We doctors know Mr. Martindale as well as you pharmacists."

Digitized by Google

Mr. CARTEIGHE said he took it that the family would recognise how deeply they felt Mr. Martindale's loss, and would not take it that the length of the speech implied the measure of their respect. He said this because he felt he could not trust himself to speak.

Mr. CORDER said that when in any difficulty in regard to pharmaceutical matters he used to write to Mr. Martindale, who always gave his advice freely.

Mr. COOPER said he had known Mr. Martindale for thirty-five years. His (Mr. Cooper's) son was a pupil of Mr. Martindale's; and some time ago, when he had illness in his family, Mr. Martindale kindly offered his house at Winchelsea for two months.

Mr. SOUTHALL said he appreciated Mr. Martindale's character and the excellent work he had done for pharmacy.

The resolution was then put, and carried in silence, the members upstanding.

THE VACANCY.

The PRESIDENT said he thought he should be consulting the feelings of the Council if the filling of the vacancy was postponed till the next meeting, and a resolution to that effect was passed.

The SECRETARY said that in accordance with Section 4 of the Pharmacy Acts Amendment Act, 1898, the following councillors retire in May:—Messrs. Carteighe, Glyn-Jones, Harrington, Harrison, Park, Southall, and Young.

ELECTIONS.

Two pharmaceutical chemists were granted diplomas, eleven persons were restored to the Society, one to the register, and a number (not stated) elected either members or student-associates of the Society.

THE REGISTRAR'S REPORT.

Mr. BREMRIDGE submitted his report of the position of the Society for 1901. This showed that 64 persons were restored to the Society and 428 elected. At the end of 1900 there were 5,467 members, and during last year 471 names were removed through death, secessions, &c., making the membership 5,451, or with the 399 "life compounders" 5,850. The number of student-associates has again fallen, being now 742, against 796 at the end of 1900, and 884 in 1899

The Analysis of Examinations for 1901 shows that only 70 persons registered as apprentices or students. For the Major examination 104 candidates presented themselves, and 37 passed, the failures in London being 63·75 per cent., and in Edinburgh 50 per cent. For the Minor examination there were 1,064 candidates in London; 313 passed, making a rejection percentage of 70·58. In Scotland, out of 415 candidates 231 failed, making the percen age of rejections 55·66. There were no candidates for the Modified examination.

The Registers show that at the end of 1901 there were 13,420 chemists on the register, of whom 2,180 are pharmaceutical chemists. The additions made to the register were the 497 successful Minor candidates, and 12 persons who were restored on payment of a fine, making a net decrease of the numbers on the register of 263. The erasures during the year were 772, 450 being due to death, 17 at the request of the registered persons themselves, and 305 in accordance with the power given to the Registrar by Section 10 of the Pharmacy Act, 1868, to strike off the names of those persons who do not respond after two registered letters have been sent to the last-known address.

Mr. BREMRIDGE supplemented the information given in his report, and said that great attention had been given to the statutory registers during 1901, and no efforts spared to increase their accuracy. Under Section 10, 894 registered letters were sent out, as well as 677 special communications made on the suggestion of Divisional Secretaries, to persons who were known to have altered their address Altogether there were 807 erasures, 554 additions, and 1,709 alterations of addresses in the registers during the year 1901.

The PRESIDENT, in moving that the report be entered on the minutes, said the report showed what a lot of work had been done during the year. Their thanks were due to the Divisional Secretaries for the energy they had put in the work; there was, however, still room for improvement, and he hoped the Divisional Secretaries would go on in the same energetic way.

Mr. GLYN-JONES: Has the report been published before?

The PRESIDENT: No.

The SECRETARY: A reference was made to it in the *Journal* a fortnight ago.

Professors Smithell and Potter and Mr. P. H. Marsden are to be invited to conduct the examination for the Pereira medal.

FINANCE.

The report of the Finance Committee was next read. It showed the following balances:—

	£	s.	d.
General Fund Account	1,172	17	4
Benevolent Fund	242	10	5
Donation Account	117	15	0
Orphan Fund	320	17	3

and submitted for payment 2,383*l.* 9*s.* 7*d.* This sum is made up as follows:—Law expenses, 762*l.* 8*s.* 8*d.*; *Journal*, 533*l.* 4*s.* 5*d.*; examiners' fees, 412*l.* 4*s.* 7*d.*; current expenses, 300*l.*; repairs, 126*l.* 17*s.* 11*d.*; salaries, 90*l.* 8*s.* 4*d.*; sundry accounts, 157*l.* 15*s.* 8*d.*

The PRESIDENT, in moving the adoption of the report, mentioned that a small sum in the accounts was for insurance of the presidential badge.

BENEVOLENCE.

The report of the Benevolent Fund Committee was taken in committee; after which

The VICE-PRESIDENT, in moving its adoption, said the committee did a full afternoon's work, and voted more money than they had in hand, relying on the funds coming in. Two or three of the grants were supplemental to those raised by relatives, the grants being five of 13*l.*, two of 10*l.*, one of 20*l.*, and one of 10*l.* 8*s*

The report was adopted.

The VICE-PRESIDENT here mentioned the cases of Robert Valentine Honman, the orphan of a pharmaceutical chemist, who is a candidate for the Watford Orphan Asylum, and Alice Hayes, who is making a third application for admission to the British Home for Incurables. He hoped the trade would use what influence they had for these two pharmaceutical candidates.

LIBRARY REPORT.

The report of the Library, Museum, and House Committee was next read. It contained the usual monthly statements of attendance at the libraries and museums, and mentioned that the school staff and research professors had reported, and also that Parkinson's bill for 136*l.* was correct.

The PRESIDENT said there was no report from the *Journal* sub-committee, as it met this time after the Library Committee instead of before as usual; and was about to propose that the report be adopted, when

Mr. WOOTTON asked whether it would not be possible to have rather more comprehensive reports of the committee. It was an important committee, controlling something like 80 per cent. of the Society's expenditure, yet there were really no details given to guide them in passing the report. He was quite aware that any questions to the President received very polite attention, but he was bound to say they did not get much information. He appreciated Mr. Lord Gifford's trouble last month in framing his questions about the *Journal*, as there was no information on which to base them. He himself asked some time ago about the Scotch report on the Carnegie Trust, and was told it was under consideration, but he had heard nothing about it since. Dr. Symes on several occasions asked about the Research Committee, but obtained little information. Some six months ago he (Mr. Wootton) asked a question about the Burroughs scholarship, and was told Mr. Carteighe was preparing a scheme about which he had heard nothing.

Mr. CARTEIGHE: We want the money first.

Mr. WOOTTON explained that what he asked was where the money goes when there are no candidates for the scholarship—does it go to accumulate the fund, or to the general fund.

Mr. CARTEIGHE: Under the trust it is added to the capital.

Mr. WOOTTON: The particular part I should like more information about is as to the expenditure of the committee. To my mind nothing in the report justifies us in adopting it.

Mr. GIFFORD agreed with Mr. Wootton that the report

Digitized by Google

was inadequate. It was a stereotyped reproduction of a report that they got month after month. The report ought to be informative. He also took it that there would be a report from the *Journal* sub-committee next month.

Mr. GLYN-JONES: I should like to ask, for my own information, if the sub-committee was appointed by the Council direct.

The PRESIDENT answered in the negative, and proceeded to say that the minute-books were open to the Council. There was no desire to hold back information. It was as difficult a matter to frame answers to vague questions as it was to put the questions. He was quite willing and anxious to put his colleagues in possession of any information he had. There was no desire to burk the Carnegie Trust question, and he understood there was to be a meeting soon in Scotland to discuss it. At present the scheme was more or less informal and incomplete, but they could depend on it that one of these days the question would come up again. The *Journal* Sub-committee met this time after the Library Committee, and not before, as it usually does. He might say, however, that it was not altogether desirable that the details of the work of the committee should be made public, but any member of the Council was open to see the minute-books.

DIVISIONAL SECRETARIES.

Mr. R. E. Dobell was elected divisional secretary for Tavistock, and Mr. W. R. Black for Halifax in place of Mr. Clement Fielding.

THE DISPENSERS COMMITTEE.

Mr. GIFFORD: If it is not out of order I should like to ask if there is any information as to the Dispensers Committee, which was appointed some time ago.

The PRESIDENT: There is nothing before the Council, but I may tell you that the committee is not dead.

The VICE-PRESIDENT said, as Chairman of the committee, he would like to say that it was hoped to have the report ready for next month. His recent enforced absence in the West of England had taken up most of his spare time.

Mr. GLYN-JONES added that Mr. Allen was not entirely to blame; a meeting was appointed but both of them wrote at the same time asking it to be put off.

Mr. WALTER HILLS: And you have nothing else to do (Laughter.)

EXAMINATIONS.

The Board of Examiners reported on the examinations recently held in London. Of 10 Major candidates 2 passed, and out of 268 Minor candidates 64 passed. Certificates had been received from 30 persons applying for registration as students, and the Board recommended three certificates which were doubtful to be accepted: one of these was of the Higher School examination of the Cape of Good Hope, and the other two were continental certificates. The Board regretted they could not accept the Intermediate examination of the Wiltshire County Council educational scheme and are still considering the questions of the Scotch Leaving certificate, and the Durham and Birmingham University examinations which were referred to the Board by the Council. For the purpose of dealing with such questions the Board of Examiners had appointed a committee of their members. The Board also recommended that a delegate be sent to the Conference of Head-masters for the consideration of preliminary education. In regard to the Major examination the Board are of opinion that it might be limited to April and December, but do not think it desirable to curtail the number of examinations for the Minor.

The PRESIDENT said, while it was not pleasant to see the number of passes so small, it was gratifying to see that some thirty certificates had been sent in from apprentices or students. Last year there were only seventy altogether, so that it looked as if matters were improving in that respect.

Mr. GLYN-JONES again raised the question of sending the certificates backwards and forwards between the Board and the Council, and was informed that whereas formerly the certificates used to go before two meetings of the Council and two of the Board of Examiners they now only go once to the Council and twice to the Board.

The TREASURER asked if the information about the Preliminary had been sent to the Wiltshire County Council, as he knew the Secretary of the educational department was eagerly expecting to hear.

The SECRETARY: It has been sent.

Mr. TAYLOR: Would you care to hazard an opinion as to whether the cause of the high percentage of failures in the Minor is due to increased stringency of the examinations, or to unpreparedness on the candidates' part.

The PRESIDENT: That is difficult to answer, but I should say the candidates are very badly prepared.

Mr. CARTEIGHE said a good many came up several times. He knew of a case of a man who had a shot every three months for the Minor and Major, so that he was ploughed four times out of six. It used to be thought a disgrace to fail in examinations, but now a man thinks he has done an unusual thing in passing first time.

Mr. J. E. Saul was appointed delegate to the Congress of Head-masters.

MORE DELEGATES.

The Sanitary Institute, which is to hold a Congress in Manchester from September 9 to September 13, asked the Society to appoint delegates to attend. The President, Vice-President, and Mr. Young, were appointed.

Mr. WOOTTON: Could you submit a paper to the Congress on the sale of poisons?

The PRESIDENT: That is a useful suggestion.

Mr. CORDER: Perhaps Mr. Wootton would write it?

The PRESIDENT: The suggestion is a good thing, and I may do something of the kind.

CORRESPONDENCE.

Mr. Foster, writing on behalf of the dispensers of the Birmingham district, asked for an interview with the Council. He wrote some time ago and was asked to give an idea of what he had to put before the Council. He now replied that he wished to impress on the Council that the public is not sufficiently protected in having the dispensing of poisons largely done by unqualified persons, by which he meant persons who have not the Minor qualification, also that dispensers are not sufficiently represented amongst the Divisional Secretaries, those gentlemen being almost always chemists in business.

Mr. GLYN JONES said he did not remember the previous correspondence, but was told it came up some months ago.

Mr. CARTEIGHE: Anyhow the matter can be referred to the Dispensers Committee, who can interview the gentlemen, if they think fit.

The President of the Cardiff Association wrote in regard to the pharmaceutical education scheme which the Association is maturing. The Principal of the Cardiff University College will conduct a course if the Association will guarantee twenty students, or an income of 250*l.* a year for three years, after which the college will accept complete responsibility. The letter went on to say that knowing the interest the Society took in educational questions it would "add grace and dignity if the Society would act as sponsors to the scheme, and if they did so it would increase the membership of the Society." The "Welsh metropolis" would be able, it was thought, to furnish the required number of students immediately.

The councillors smiled as the delicate flattery was read to them, and referred the letter to the nearest committee.

Another letter was then read from the "Welsh metropolis," in reference to the difficulty of appointing a Divisional Secretary in place of Mr. Sanders. It appears that a meeting was called at the suggestion of the Secretary, but only three people attended; but it was suggested that Mr. Hagon, the President of the Cardiff Association, might be disposed to take the office. Mr. Hagon did not jump at the offer, but asked if the Society could not make some concession to the Association in the way of membership-fees. The Association had forty-seven members: could not the Society accept payment of a lump-sum?

The Scotch Educational Department informed the Society that it is proposed to make a slight modification in the leaving-certificate examination. At present two modern languages can be taken, but in future one of the languages must be higher or lower Latin. The regulation, however, is not to come into force before 1904.

The Coroner for North Staffordshire wrote in regard to a case of poisoning with insecticide, and the General Purposes Committee to deal with his letter.

This ended the public business.

Pharmaceutical Society of Ireland.

COUNCIL-MEETING.

THE Council met at 67 Lower Mount Street, Dublin, on February 5, at 3 o'clock. The President (Mr. George Beggs) occupied the chair, and the other members present were the Vice-President (Mr. J. I. Bernard), Messrs. Kelly, J. E. Connor (Newry), Moffitt (Belfast), Golding (Birr), W. V. Johnston, J. Smith, Brown, and Professor Tichborne.

The PRESIDENT, before commencing the business, welcomed Mr. W. V. Johnston, the new member of Council, who briefly returned thanks.

THE TREASURER'S ILLNESS.

The PRESIDENT said he was sure they were all sorry to know that their Hon. Treasurer (Mr. Grindley) was seriously ill. He had learned, however, from daily reports that he was slowly improving; and he was sure they all trusted that his recovery might be as speedy as possible, for his absence from amongst them was a great loss. It was necessary, until he should be restored to them, to appoint a temporary Treasurer to sign cheques; and he proposed Mr. Smith for the duty.

Mr. KELLY seconded the motion, which was unanimously agreed to.

MISCELLANEOUS BUSINESS.

Mr. JOHNSTON was elected a member of the House and School Committee.

A letter from the Privy Council Office acknowledged the receipt of the resolution which the Council had passed in favour of the introduction of a course of theoretical chemistry for the Licence examination.

EDUCATIONAL MATTERS.

A report was read from Messrs. Moffitt and Tate, who had been requested to ascertain what facilities are afforded in the Municipal Technical Institute of Belfast for the study by pharmaceutical students of practical chemistry. The Institute had applied for recognition by the Council, and the details given in the report showed that the 100 hours' bench-work required by the Society's regulations would be afforded within the time-limits.

The PRESIDENT thanked Messrs. Moffitt and Tate for their lucid report, and said he was sure the Council would now accept certificates from the Institute.

Mr. MOFFITT said he had taken instructions for inquiries from Mr. Kelly, and he now asked him if he was satisfied with the information given.

Mr. KELLY: Oh, perfectly.

The PRESIDENT moved that the application of the Institute for recognition be granted.

Mr. KELLY seconded the motion, which was passed unanimously.

Mr. MOFFITT said the school had become one of the finest in Ireland since Mr. Templeton got it.

A letter was read from Mr. Blair, member of the Council, transmitting a statement from the Principal of the Crawford Municipal Technical Institute of Cork stating what the courses of practical chemistry were in that institute for pharmaceutical students—viz., one lasting seventeen weeks, another twenty-five weeks, and a third fifty weeks, each of 100 hours.

On the motion of the VICE-PRESIDENT, seconded by Mr. SMITH, the first two courses were recognised.

Another letter from the same Institute asked for recognition of their botany course, and it was decided to postpone the consideration of this application until further information was obtained.

A letter was received from the Secretary to the Sanitary Institutes Congress, to be held in Manchester next September, inviting the Council to send delegates, and

Consideration of the letter was postponed until next meeting.

EXAMINATIONS.

Reports from the Examiners showed that at the last Preliminary examination 21 candidates presented themselves, of whom 11 passed; at the Licence examination 17, and 5 passed; at the Pharmaceutical Assistants examination 3 were examined and passed; and at the Registered Druggists examination in Belfast 4 attended and 3 passed.

THE CHEMISTRY SCHOOL.

The PRESIDENT moved, pursuant to notice—

"That 50*l.* be allocated out of the funds of the Botany and Materia Medica School to establish a School of Theoretical Chemistry; and that from January 1, 1902, 6*l.* a year rent be charged to the Botany and Materia Medical School for room, gas, &c.

There was a sum accumulating to the credit of that School on which they might fairly encroach, he said.

The VICE-PRESIDENT seconded the motion, which was unanimously agreed to.

DONATIONS

were received from the British Pharmaceutical Conference of a copy of the *Year-book* for 1901, and from the Directory of the Wellcome Chemical-research Laboratories of copies of four pamphlets.

Thanks were voted to the donors.

ASSISTANTS' EXAMINER.

The PRESIDENT proposed—

That Mr. Henry O'Connor, Ph.C., M.P.S.I., be appointed to examine for the qualification of pharmaceutical chemists' assistant;

saying he was sure Mr. O'Connor would conduct the examination to their entire satisfaction.

The VICE-PRESIDENT, in seconding the motion, said it was a strong testimony in Mr. O'Connor's favour that when it was known that he was a candidate for the office no one came forward to oppose him.

Mr. O'Connor was then unanimously appointed.

CONSULTING DRUGGISTS.

Mr. MOFFITT said that within the last year or two, registered druggists in his locality had opened consulting-rooms in their places of business and brought medical men who gave consultations there and wrote prescriptions which were compounded in the establishments. He wished to know for the information of members of the Society in the north if that was legitimate.

The PRESIDENT: They are infringing the law.

The VICE-PRESIDENT: The only way in which we can deal with it, is to bring the matter before the College of Surgeons. We should have sworn information on the subject.

Mr. MOFFITT: Have you power to control them?

The VICE-PRESIDENT: I do not think the Pharmacy Acts do, but I believe we can find a way to do it if we get sworn information.

Mr. MOFFITT: Competition is so keen in the north that the registered druggists are making their places of business exact duplicates of the pharmacists' shops.

On the motion of Mr. SMITH, seconded by Mr. KELLY, Mr. D. S. Jarden, of Rathgar, co. Dublin, was elected a member of the Society. Other business having been disposed of, the Council adjourned.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

Festivities.

Boots' at the Midland.

There was a "lurid glare" about the beautifully decorated tables at the Midland Grand Hotel, St. Pancras, N.W., on the evening of February 6, when, on the invitation of Mr. Jesse Boot, the managers and assistants of Boots' Cash Chemists (Southern, Limited) and a few friends of the host (numbering about 200 in all) sat down to dinner. The "luridity" was by no means repellant however, and the colour-effect combined with the gastronomic delicacies provided were calculated to weaken the denunciation of the most ardent stickler for "legitimate" pharmacy. Mr. Boot presided, being supported in an office in which he was palpably ill at ease by the presence of Mrs Boot, Dr. E. T. and Mrs. Pritchard, Alderman and Mrs. Duckworth, Alderman Batty Langley, M.P., and others. The toast-list included "The King," "The House of Commons," and "Our Host." Alderman Duckworth proposed "The House," and Alderman Batty Langley, in his reply, made some outspoken comments on The House and its occupants which delighted his audience, his finest point being, perhaps, that "political prescriptions sent to the House of Commons by the country were not always accurately dispensed." Dr. E. T. Pritchard, in proposing the Chairman's health, prefaced his remarks by disclaiming any title to the possession of the "pomposity of a sesquipedalian verbosity" spoken of by Dr. Johnson, but he very soon proved that he at least had a "natural exuberance of speech," as Mr. Boot put it, that was more suitable and much more entertaining. His audience cheered the doctor, cheered Mr. and Mrs. Boot, and were with difficulty repressed until Mr. Boot replied. In the course of his response Mr. Boot said:—

You know our popular trade journal—The Chemist and Druggist—keeps a poet on its staff. We cannot afford that yet. We only keep the Pharmacy Act. Our poet friend a short time ago described me as

> Trying to imitate Lipton the Knight
> By absorbing the whole of the Day.

It was good humouredly meant and good-humouredly taken, at least as far as I am concerned, but, apart from construing it literally the spirit of the words are quite foreign to my ideas. I despise no man's ambition, but I retain my own intact. I thoroughly believe that a man's life consisteth not in the abundance of things that he possesseth . . . I want everyone in this business to feel its benefits individually—without favouritism—according to their merit and their position. I could not detail to-night how I should like to accomplish this, but it is to be done, and until it is done my ideal will be unaccomplished. Until I can make the business to work out sufficiently satisfactory to enable all our managers to enjoy a comfortable life under a fair scale of remuneration, with the prospect of some secured provision against accident, sickness, or old age, my life's aim is still unreached. . . . I am aware that progress must necessarily be slow, laborious, and difficult, but as William Morris so finely puts it in his final words on the "Beauty of Life," "To us who have a cause at heart, our highest ambition and our simplest duty are one and the same thing. For the most part we shall be too busy doing the work that lies ready to our hands to let impatience for visibly great progress vex us much. And surely since we are servants of a cause, hope must be ever with us."

During the dinner the "Westminster Singers" soothed the ebullient emotions with roundelay and volkslied. The toasting accomplished, the guests retired to the anterooms while the dining-room was metamorphosed into a dainty drawing-room for conversazione and music. Coffee and tobacco were consumed along with glees, part-songs, humorous ditties, and musical sketches, the Westminister Singers being by this time reinforced by Mr. Griffith Humphreys and Signor Mori's Viennese band.

C.M.A.S. Bohemians.

On the evening of Ash Wednesday, February 12, members and friends (of both genders) of the Chemists' Managers' and Assistants' Society to the number of over 100 met in the Council Chamber of the Holborn Restaurant, and partook of the mild Bohemianism of an excellent concert. Everything was well done, from the opening speech of the Chairman (Councillor W. S. Glyn-Jones) to the "Picotee" scented programmes and the Epsom-salted tickets of admission. The presence of the feminine element in considerable force served to chase away the sombre and austere gloom which are characteristics of the normal pharmaceutical countenance; and the eccentricities of the gramophone, combined with the soothing strains of orchestra and songster, finally effected a permanent cheerfulness. The programme contained thirty-four items, and carriages were ordered for 11.30 P.M., which was indeed a close enough limit. The concert was begotten in aid of the Benevolent Fund of the Pharmaceutical Society, and it certainly was not the fault of the organisers if a considerable sum is not placed to the credit of that worthy object. The principal artistes were Miles. Florrie Dawes, Aitken, Eleanor Druce, and Mabel Reilly, and Mrs. Cullwick; Messrs. C. Chapman, J. W. Johnston, Dick Sawyer, E. R. Bricknell, Mawdesley, J. Jones, and Will Ford. Besides these, an excellent orchestra discoursed varied numbers, and there were violin, flute, and cornet solos. Mr. Harry Reilly was the accompanist.

Sheffield Dancers.

The annual chemists' ball, under the auspices of the Sheffield Pharmaceutical and Chemical Society, was held in the ballroom at the Royal Victoria Hotel on February 6. Tastefully decorated with palms and flowering plants the ballroom had a charming appearance. The dancers numbered about 120, and amongst those present was Mr. G. T. W. Newsholme, wearing his chain of office as President of the Pharmaceutical Society of Great Britain. Music was provided by Mr. Orley's band, and Messrs C. F. Carr and H. Antcliffe discharged the duties of M.C.s. The stewards were Messrs. J. Austen, P. Carr, R. Douglas, E. C. Exell, G. Squire, and J. W. J. Turner.

Halifax Chemists' Association.

The annual dinner of this Association was held at the Old Cock Hotel on February 6, the President (Mr. Gibson Dixon) in the chair. Supporting him were Messrs. W. S. Thompson (Vice-President), W. C. Hebden, J.P., J. B. Brierley, J. Swire, G. M. Cobb, W. R. Black (Hon. Secretary), and others. After an admirable dinner, the usual loyal toasts were honoured, and Mr. G. J. Parkes (Nottingham) gave "The Town and Trade of Halifax," to which Mr. W. C. Hebden replied. Mr. A. Hanson (Bradford) proposed "The Halifax and District Chemists' Association." He repudiated the idea that chemists were a despondent class of men, saying it was a pleasure to see them gathered together enjoying themselves. He thought local Associations were doing a good work, and the West Riding was doing especially well, seeing they now had Associations at Bradford, Halifax, Huddersfield, Dewsbury, Wakefield, and Barnsley. The President, in responding, said the Association had done a little to better themselves by the co-operative buying of patents. They did not go in for scientific discussions, and the reports of their meetings in the trade journals usually took up about three lines; but, nevertheless, the Association did a lot of really useful work. They usually met to talk over business matters. Mr. F. D. Crossley (Manchester) gave "Kindred Associations." Regret was expressed at the absence of Mr. Silson (Bradford) and Mr. Broadhead (Batley). Mr. Walshaw (Huddersfield), responding, said he thought the Pharmaceutical Society had been timid in not protesting against the illegal use of chemists' titles. Associations must be on the alert, and pay greater attention to pharmaceutical politics. Mr. F. P. Sargeant (Leeds), who also replied, thought the proposed West Riding Federation of Associations might be able to do greater things than the individual Associations could do. The status of the chemist could not be increased by further education, and the drug-store question would doubtless be an object of consideration from now till doomsday. He exhorted everyone to be active and go-ahead, and let who would be professional. Mr. W. R. Fielding proposed "The Pharmaceutical Society," and Mr. C. Fielding responded. "Past Officers" was duly proposed by Mr. Tom Briggs and replied to by Mr. W. S. Thompson. Songs were rendered during the evening by Messrs. Hanson, Parkes, F. C. Carr (Normanton), Marchant, Crossley (humorist), and the President. Mr. Cornwell was an efficient accompanist. The menu was headed "Digestive Ferments," with sub-headings "Decocta" (soups), "Hirudines" (fish), "Sundries (Maw's)" for cutlets. "Our own proprietaries (very profitable)" included sirloin of beef and saddle of mutton;

Digitized by Google

while the turkey and roast fowl were classed as "Infants' foods" Then came "Confectiones" (pudding, &c.), "Unguentum" (cheese), and "Perfumery" (infusum byni, spiritus frumentis, &c.) "all at store-prices."

DINING AT WIGAN.

The second annual dinner of the Wigan and District Chemists' Association was held in the Wigan Conservative Club on February 5, the President (Mr. T. Johnson) being in the chair. He was supported by the Mayor of Wigan (Alderman Kellett, chemist and druggist), the Vice-chair being occupied by Alderman Paillips. The usual toasts were proposed, as well as that of "His Worship the Mayor," who stated in reply that he served his apprenticeship in Wigan thirty-five years ago contemporary with the President, and he trusted the good feeling which now existed amongst the members of the craft in the town would long continue. The remainder of the evening was passed in recitation and so forth, the contributors being Messrs. Phillips, Aspinall Dawson, Fairhurst, and Winstanley (Hon. Secretary).

Trade Notes.

YOUNG'S CAMPHOR-CROSSES are seasonable articles in these smallpox days. They sell at 1*d.* each.

THE stock-in-trade, fittings, &c., of Hewitts (Limited) trading as chemists at 41 Crook Street, Bolton, is announced for sale by auction on February 19.

SCHLEUSSNER PLATES.—The attention of *x*-ray workers and photographic dealers is called to the offer in our advertisement-pages of free samples of the special Schleussner plates for Röntgen work.

LUCE'S EAU DE COLOGNE COMPANY (LIMITED), of Jersey, Southampton and London has been awarded a gold medal and diploma of honour at the 1902 International Exhibition at Marseilles.

IN THIS CORONATION YEAR it is almost natural to use the figure of a crown in connection with trade; it may, therefore, be useful to bear in mind that the Crown Perfumery Company long ago registered the figure of a crown as a trade-mark in the sections which include perfumery, soaps, and toilet preparations. The company notify in our advertisement section this week their exact claims in this regard.

NEW PERFUMERY.—We have received from Messrs. C. J. Hewlett & Son, of Charlotte Street, Great Eastern Street, E.C., samples of their perfumes "Coronation Bouquet" and "Ixia." The latter is described as "the flower of the South African veldt," and has attained considerable popularity in South Africa, Australia, and New Zealand. "Coronation Bouquet" is the first to hand of "Coronation" perfumes, and is a nicely-produced boxed perfume with an enticing odour. Both the "Bouquet" and "Ixia" are likely to prove popular sellers. These perfumes are supplied in bond, in fancy bottles (as shown in the illustration) at 13*s.* and 26*s* per doz., or they may be had in stoppered lundborgs at 9*s.*, 15*s*, and 26*s.* per doz., subject.

THE body-weight is nowadays as important an observation as temperature in the case of phthisical patients and children, but there has been no attempt up to the present to give medical attendants an easy means of reading the daily weight. This is now supplied by Henry D. Kelf, pharmaceutical chemist, 38 Melbourne Grove, S.E., who through Messrs. S. Maw, Son & Sons has placed on the market a series of three weight-charts—No. 1, 1 lb. to 3 stone; No. 2, 3 stone to 9 stone; and No. 3, 8 stone to 14 stone—which permit of periodic entries, thus making the plot for a curve. Mr. Kelf thinks the charts will also be useful to chemists in health-resorts for keeping the records of their customers' weights.

SUGAR IN URINE.—Messrs. Burroughs, Wellcome & Co., have recently added nitro-propiol to their list of "so'oid" reagents. Nitro-propiol was introduced some two years ago as a test for glucose in urine, and is particularly useful as confirmation of other tests. Indigo-blue is developed in the sugar solution, and eventually indigo is precipitated. The tablets contain ½ gr. of nitro-propiol, and the directions for use are:—

Add one to a mixture of 10 minims of urine and 3 drs. of water, and boil. If glucose be present, the liquid will assume a deep blue colour, owing to the formation of indigo-blue. If the colour does not appear quickly, continue the boiling for about five minutes before deciding on the result of the test.

Personalities.

MR. F. W. DOWN, chemist and druggist, has been elected Secretary of the Hatherleigh Constitutional Club.

BROTHER E. R. HOBLYN, chemist and druggist, has been appointed J. S. of St. John's Lodge 1,247 of Freemasons, Plymouth.

W. BROTHER W. B. EDGELER, P.M., P.P.G., Supt. Wks. (chemist and druggist, Petersfield), has been re-elected Treasurer of Lodge of Friendship No. 928.

MR. W. W. GREEN (of Messrs. Brookes & Green, drug and produce brokers, 25 Mincing Lane, E.C.) has been elected chairman of the Wanstead District Council.

PROFESSOR WYNDHAM R. DUNSTAN (Director of the Scientific Department, Imperial Institute) delivered a lecture to the Society of Arts last week on "The Coal Resources of India and their Development." Lord George Hamilton presided.

AT the Installation meeting of the Lodge of Union No. 38, Chichester, on February 6, Bro. Samuel Baker was advanced to the Senior Warden's chair. Bro. Baker has been a member of this lodge (one of the oldest in the province of Sussex) since 1879.

MR. ABRAHAM TAYLOR, chemist, Morley, was on Monday elected a member of the Morley Town Council. Mr. Taylor, who is the secretary of the local Tradesmen's Association, had two cloth-manufacturers as his opponents, but was returned by a majority of 184.

MR. J. F. MARLAR, chemist and druggist, Colchester, has been elected trustee of the Maldon District of Oddfellows, of which he is a Past Provincial and Grand Master, and has also recently received a presentation from the members of the Colne Valley Chapter of Royal Arch Masons in recognition of his services last year as Principal.

MR. A. E. EKINS, pharmaceutical chemist, who is Mayor of St. Albans, held a reception at the Drill Hall, St. Albans, on February 6 of members of all the courts and lodges of the friendly societies in the town. Between 1,300 and 1,400 persons were present, and the Mayoress was presented with a gold brooch set with diamonds and rubies.

WE are losing one of the ablest of our provincial correspondents through the appointment of Mr. A. G. Gardiner, of Blackburn, as editor of the *Daily News*. Mr. Gardiner has been in touch with the North-East Lancashire Chemists' Association since its formation, and he has an intimate knowledge of pharmaceutical politics which may yet be of great service to pharmacy when he comes to direct the policy of so influential a newspaper as the *Daily News*.

A TRADE INTELLIGENCE BUREAU has been established at Christiania under the auspices of the Government. It is to assist all branches of trade by providing them with detailed particulars as to market for Norwegian goods duty, freight, credit, &c. The information collated, will as a rule, be supplied free of charge.

(By our Parliamentary Representative.)

Supply of Lymph.

Mr. Bartley returned to the question of the supply of lymph on Monday, February 10. He asked the President of the Local Government Board whether he will take steps to provide with the least possible delay an adequate supply of Government lymph, so that every qualified medical practitioner shall be able to purchase lymph in such quantities as he may require, and at cost-price?

Mr. Long, in his reply said the duty undertaken by the Government in 1898 was to provide for primary vaccination by public vaccinators, and this duty has been completely fulfilled. It has also been the desire of the Government as far as possible to provide public vaccinators with lymph for revaccination, and this has been done to the utmost extent practicable. In ordinary times it has been found sufficient to issue from 8 000 to 10 000 charges of lymph weekly, but since the smallpox epidemic began this output has been increased to some 50,000 charges a week. He explained the difficulties in connection with the manufacture and supply of glycerinated lymph; also that there is great fluctuation in the demand owing to the habit of many persons deferring vaccination until smallpox is imminent. In a single fortnight recently the applications for lymph from public vaccinators, which had previously risen to four times the normal demand, suddenly more than doubled. Mr. Long added that an ample supply of glycerinated calf-lymph can be obtained from unofficial sources, and that there is no reason to doubt that it is satisfactory in quality. He considered it would be unfortunate to enter into competition with private enterprise in this matter, and did not see his way to accede to Mr. Bartley's suggestion.

Mr. Bartley: May I ask whether there is a guarantee that this is really efficient?

Mr. Long: There is no guarantee at all in connection with either official or non-official lymph. Two years ago there was an independent inquiry by the *Lancet* into lymph generally supplied. On that occasion they found considerable fault with the lymph supplied by the Local Government Board, and placed it fifth in the order of merit. It is impossible to guarantee lymph, and all the Local Government Board do is to secure that the utmost care and trouble shall be taken in its preparation in the hope that it will prove pure and efficacious. The lymph supplied by private firms is of excellent quality, and is as good as we can supply ourselves.

Mr. Pease: Is it a fact that a large quantity was received from the French Government?

Mr. Long: No, sir. I am not aware of any lymph being supplied by the French Government, but there is a considerable manufacture of lymph in France by private firms. So far as I am aware it is of a thoroughly satisfactory character.

At present any individual, experienced or not, may set up the production and sale, without licence or inspection, of vaccine lymph. Mr. Bull thinks this good ground for asking Mr. Long if the Government intends to enlarge its establishment, so as to be in a position to supply its own lymph to the profession generally, or to exercise some control over those outside sources from which private practitioners under existing conditions are compelled to derive their supply.

An Irish Question.

A doubt has arisen in Ireland as to the eligibility of those officers (including the apothecaries) of the different county infirmaries who, on the passing of the Local Government Act 1898 were transferred to the County Councils, to share in a system of pensions, and a question is to be put in the House to clear up the matter.

Patent-law Amendment.

In the House of Commons the same evening the President of the Board of Trade (Mr Gerald Balfour) introduced a Bill to amend the law with reference to applications for patents and other matters connected therewith. The Bill is based on the recommendations of the 1900 committee, and deals with the question of examining the specifications of letters-patent previously obtained in the United Kingdom and granting compulsory licences. He said he was aware that the public are of opinion that the committee were not absolutely unanimous with respect to the recommendations, but he had followed closely the lines of them. A considerable interval should elapse between the first and second readings in order to give those interested an opportunity of studying the provisions.

Lord Avebury's Bill.

The Shops (Early-closing) Bill which Lord Avebury re-introduced into the House of Lords on January 27, does not differ materially from the measure considered by the Select Committee last year. The memorandum which prefaces the measure has been slightly altered, and now concludes with the unanimous finding of the Committee that present hours "are grievously injurious to health," that "the subject is one of urgent importance," as "such serious warnings from the heads of the medical profession cannot safely be disregarded." The Bill consists of sixteen clauses and a schedule, and the ninth clause enables pharmaceutical chemists, chemists and druggists, and registered druggists to supply medicines, drugs, or medical appliances after appointed hours of closing. We observe that petitions in favour of the Bill are occasionally presented to the House, and those Chemists' Associations which last year gave it their support might now strengthen Lord Avebury's hands by petitioning in favour of it. The Early-closing Association, 21 New Bridge Street, London, E.C., has prepared a form of petition, of which copies can be obtained from Mr. J. A. Stacey, the Secretary.

Things that Happen—Sometimes.

Our Customers.

Assistant: "There's a lady in the shop wants a dose, and there's nothing the matter with her; what shall I do?"

The "Boss": "Give her something to make her ill, and then give an antidote!"

About three years ago a Japanese commercial museum was established in Singapore. The American Consul has recently visited it, and among the many articles he finds there are toilet requisites, toilet boxes, brushes, &c. He advocates the establishment of an American museum on the same lines.

Observations and Reflections.

By XRAYSER.

A Master in Pharmacy, if ever any man deserved that designation, was William Martindale. He was a man who would have made himself master of any business he might have been engaged in, for he had a strong intellect and untiring industry. But we cannot imagine him as anything else than a pharmacist: a typical pharmacist if that means the kind of professional of whom our young men dream dreams; but untypical if it means only a good specimen of the bulk. Mr. Martindale carved out for himself a position which unfortunately is too rare; he was essentially a physicians' pharmacist. He laid the foundation of that reputation at University College Hospital; he consummated it when he published the "Extra Pharmacopœia." There is not room for many such, but it is the object to aim at; and, given the qualification, there will be pretty sure to be the opportunity to utilise it in some degree in almost every locality.

The Crowning Triumph of Mr. Martindale's career was his selection by the Privy Council to represent pharmacy on their Poisons Committee. Let it be distinctly understood: he represented British pharmacy, not the Pharmaceutical Society merely. He was, I think, particularly gratified by this official recognition of his capacity, though through his conscientiousness the work caused him a good deal of anxiety. I have heard it suggested that he was too complaisant towards his antagonists to be our ideal champion. This was certainly an unjust appreciation. He was judicially minded, could see both sides of an argument, and that characteristic was probably the one which specially recommended him to the Privy Council. And it was in truth the wisest form of diplomacy. Mr. Cross, of Camlachie, who is aiming at undermining the Pharmacy Act, is a partisan pure and simple. The other members of the Committee who will have to judge between him and our side are not men to be imposed on by hollow arguments, and I am confident that if Mr. Martindale had lived he would have greatly influenced the report, even if he could not have had his way entirely. I had a long conversation with him quite lately, and we talked almost exclusively about the Committee. He was an ardent believer in the principle of the Pharmacy Act, and his mind was well stored with facts and arguments in support of it. His absence from the Committee at the critical stage looks bad for us, but, after all, it will only postpone the battle which we have to fight with Mr. Cross; and I am not afraid of Mr. Cross when we come to marshal our arguments against his in the open.

Mr. Barnard Proctor told us twenty years ago that "he was a benefactor to his kind who should make one pharmacist grow where two grew before." The stores, Mr. Boot, the Pharmaceutical Society, and the Chancellor of the Exchequer have been trying to earn Mr. Proctor's benediction since then, and success is now in view. The "Register of Chemists and Druggists" for 1902 shows a reduction of 263 in the number of persons qualified by law to carry on the business of pharmacy in Great Britain. It is true that this reduction is more than accounted for by the big biennial sweep whereby 305 names were erased, but it is also a fact that there were not enough new qualifications to balance the losses of the year. The Registrar reports that 497 persons passed the Minor in 1901. He also reports 450 deaths and 17 names erased at the request of registered persons. That shows a balance of 30, but this margin is not sufficient to allow for deaths unreported, for emigrations, and for withdrawals from the business. The ten-guinea fee may have had some influence in reducing the number of candidates; the new Preliminary will have more before long. Meanwhile, those of us who remain on the Register ought to benefit by the statistical position.

The Population of the British Isles is steadily augmenting while our numbers are at best little more than stationary. That is to say, our quarry is improving, and though we know the condition is not in all respects healthy, we may leave the difficulties to our successors on the principle of Madame de Maintenon's "after us the deluge." There have been four censuses since our Register was created, and comparing the population of Great Britain with the numbers of chemists on the Registers at the same dates we get the following results:—

	1871	1881	1891	1901
Population	26,07?,284	29,710,012	33,028,172	36,998,032
Registered chemists	13,200	13,655	14,658	15,600

In other words, each chemist in 1871 could look for an average *clientèle* of 1,975, in 1881 this had risen to 2,175, in 1891 to 2,253, and in 1901 to 2,435.

Rational Remedies is not a very hopeful title for the co-operative competition with proprietary preparations which the Cardiff chemists are eager to enter upon at the instigation of their President, Mr. Drane. It gives away the best weapon to start with. "Mysterious medicines" would have a far better chance. *Mundus vult decipi*; it is the occult in put-up physic which is the attraction. The old patents were boomed into fame by the baffled attempts of the College of Physicians to discover their composition. Under any title it is not quite clear what is to be got from this joint enterprise. Every chemist who associates himself with it is probably already selling his own discoveries wherever he can. Is he going to do better financially under a pooling scheme? It is to be hoped, however, that the Cardiff chemists will try the experiment: it will yield "at least an interesting reminiscence," as Bismarck said when somebody consulted him about accepting the crown of Bulgaria.

Doctors' Labels as affected by the Pharmacy Act are being discussed in the *Lancet*. Thousands of doctors who dispense their own medicines no doubt send these out, often containing a scheduled poison, with labels which do not bear the name and address of the seller, as required by the statute, even supposing that they keep a copy of the formula. The name and address, they say, savours of advertising, and the *Lancet* agrees with this view, and recommends its correspondents to go on disregarding the Act. But do they "sell"? "I resent the suggestion that I sell medicines," writes one practitioner; "I charge for treatment, not for medicines." There is something plausible in this contention, and it would be interesting to have it argued in the High Court. There is a little evasiveness, not to say evasion, about it, but it might answer. Anyway, as a last resort the troubled doctors can find a way out of their difficulty by handing over their dispensing to the men who are specially qualified to do it, and who do not suffer in their unctuous rectitude by using labels with their names on.

ACCORDING to the *Independance Belge*, Dr. Camille Leuriaux, of St. Gilles, has discovered a curative serum for whooping-cough.

Methylated Liniments.

In December last two Dalston chemists were summoned at the North London Police Court for selling soap-liniment which the analyst (Mr. Leo Taylor, F.I.C.) certified was made with methylated spirit instead of rectified spirit. The two cases were adjourned for eight weeks in order that the Government analysts might examine the reserved samples. Last Friday Mr. Mead heard the adjourned summonses, and read certificates from the Government Laboratory to the effect that the samples of soap-liniment examined did not contain methylated spirit. The cases were withdrawn, the Borough Council having to pay costs. There the matter, so far as the public representatives are concerned, ends, but the payment of the comparatively trifling costs is not full restitution for the injustice done to two respectable chemists in hauling them before the Magistrate and accusing them of selling inferior medicines when there was not the slightest ground for the charge, the borough analyst having erroneously concluded that the slight tint of colour he obtained in applying Riche and Bardy's test indicated the presence of methyl alcohol. It is known to pharmaceutical chemists that the test gives very definite results with methyl alcohol and dilutions of it, but commercial ethyl alcohol, which has never come within sight of methylic products, gives a degree of coloration, and such complex mixtures as soap-liniment made with ethylic alcohol also respond to the test. We may recall the fact that MM. Riche and Bardy communicated their method to the French Academy of Sciences in 1875. It was printed in the *Comptes-rendus des Séances de l'Académie des Sciences* (vol. lxxx., page 1076), and was also translated into English chemical and pharmaceutical journals of that year. The test depends on the formation of methyl-aniline violet, and is sensitive to 1 per cent. of methyl alcohol. It is given as follows in Allen's "Commercial Analysis":—

Ten c.c.'s of the sample of alcohol previously rectified, if necessary, over potassium carbonate, are placed in a small flask

Digitized by Google

with 15 grammes of iodine and 2 grammes of red phosphorus. Methyl and ethyl iodides are formed, and should be distilled off into about 30 c.c. of water. The heavy oily liquid which settles to the bottom is separated from the water and transferred to a flask containing 5 c.c. of aniline. The flask should be placed in cold water in case the action should be violent; or, if necessary, the reaction may be stimulated by gently warming the flask. After one hour the product is boiled with water and solution of soda added, when the bases rise to the top as an oily layer, which may be drawn off with a pipette after filling the flask with water up to the neck.

The next part of the test consists in oxidising the base, and this may be accomplished by tin bichloride, iodine, potassium chlorate, or, as is usually done with Hofmann's mixture, of quartz sand (100), sodium chloride (2), and cupric nitrate (3). One c.c. of the liquid is mixed with 10 grammes of the oxidising agent by means of a glass rod, and when thoroughly incorporated is introduced into a glass tube and kept at a temperature of 90° C. in a water-bath for eight or ten hours. The product is then exhausted by three treatments with warm alcohol, the liquid filtered and made up with alcohol to 100 c.c. The product at this stage is, if the sample be pure alcohol, of a deep red colour but if methyl alcohol be present it is violet, varying in depth of colour with the quantity present. The liquid is next diluted with distilled water, and examined by colorimetric methods of comparison. The difficulty which students find in distinguishing blue and red tints of litmus crops up here, but to eliminate error as far as possible, and to preserve a record of the experiment, Riche and Bardy recommended dyeing a hank of white merino in the mixture. Millard and Stark, in a paper communicated to the British Pharmaceutical Conference (*C. & D.*, September 6, 1890, page 321), gave reasons for preferring white floss silk, but we find pure absorbent cotton suits the purpose equally well. After diluting the liquid with 1,600 times its volume of water, it is transferred to a porcelain dish, a piece of absorbent cotton immersed in it, and the liquid brought to the boil. The cotton is then taken out and dried. In making comparisons care has to be taken to use the same quantities of test liquid and cotton. In the North London cases there was not the slightest doubt that the soap-liniments supplied were made with ethylic alcohol, but in face of the borough analyst's certificates and the summons issued on the strength of them, it was necessary for the defendants to prove their *bona fides*. Happily the Government analysts at Clement's Inn Passage have independently established this, but it may be useful to show how exceptionally careful public analysts should be when testing such complex mixtures as soap-liniment for methyl alcohol. Mr. J. Stinger Ward (Messrs. Hodgkinsons, Clarke & Ward) instituted a series of experiments with the test, in which he employed the following varieties or compounds of spirits:—

1. Liniment of soap, reported by analyst to be methylated, but found methyl-free by the Government analyst.
2. Methylated soap-liniment.
3. Liniment of soap, containing 5 per cent. of methylated spirit.
4. English grain spirit from stock.
5. Danish grain-spirit from docks.
6. German potato-spirit from docks.
7. Spirit No. 6, with the additionof oil of rosemary equivalent in strength to lin. saponis B.P.
8. Spirit (No. 6) with oil of rosemary and soft soap as lin. saponis B.P.

Each one of these samples dyed the cotton more or less. We have repeated the dyeing experiments, and can corroborate Mr. Ward's observations. Although all the cottons were tinted, there was no possibility of making any error when No. 2 was taken as the standard of comparison. This sample of wool came out of a bright violet colour; No. 3 had a distinct violet tint; No. 4 (from English grain spirit) had just the faintest suggestion of pink, whilst Nos. 5, 6, 7 and 8 had varying faint tints ranging from heliotrope to violet. It is curious to note that the oil of rosemary and soft soap as in Nos. 7 and 8 have a tendency to give a violet tinge to the cotton, and yield a colour of about equal tint to No. 1, the tint of which was scarcely distinguishable from that of No. 3. A rough idea of the tints may be gathered from the cover of our Winter Issue. Nos 1 and 3 were a shade deeper than the tint of the words "Winter Issue," and No. 2 not unlike the dark background on which the words are printed. In the experiments 400 c.c. of a dilution of 1 in 1,600 was used, but if a stronger solution is taken there is no difficulty in getting a dark colour on the cotton-wool, yet even then it bears no comparison with the intense violet yielded by methylated spirit. In short, there is no difficulty in telling what is methylated spirit and what is not. Care must nevertheless be exercised in performing the test. In every case it should be pushed to its extreme point—*i.e.*, cotton should be dyed with the resulting solution sufficiently diluted. Care should be taken in selecting the stuff; ordinary white merino wool contains sulphur. The best results are obtained with pure absorbent cotton. To ensure accuracy the suspected liniment should be distilled over potassium carbonate, as originally recommended by Riche and Bardy, before subjecting the spirit to the test. Another point which has not been previously noted is pointed out to us by Mr. Ward. It is that the boiling of the iodides of ethyl and methyl with soda-solution should be performed in a flask with a reflux-condenser. This is of some importance, bearing in mind the lower boiling-point of methyl iodide, as if neglected the proportion of methyl and ethyl present in the original sample will be misrepresented. In case of doubt the iodides should be subjected to fractional distillation before proceeding with the test. We hope these North London cases will be seriously considered by public analysts. The fact that the Government chemists have emphatically stated that the liniments were free from methylated spirit is alone sufficient to put them on their guard, for there are few analytical processes with which the Government chemists are more familiar than those for the detection of methylated spirit. The data which we have given show very clearly that there is an ample margin for the elimination of error.

Pharmacy in the Transvaal.

WE have been waiting, with more than usual interest it may be confessed, the first influences of British rule upon pharmacy in the Transvaal and Orange River Colony, for the chaotic condition of things before the outbreak of the war was a real scandal, and some of the more enlightened members of Mr. Kruger's Government had recognised the truth of the statements submitted to them on behalf of the Pharmaceutical Society of the Republic for early reform of the Pharmacy Law. As soon as Lord Milner took up the reins of government he was approached by Mr. Robert Batters, President of the Society, who submitted a statement on the subject, and made several suggestions for maintaining the standard of qualification. Since then Mr. J. H. Dinwoodie and others have joined in the representations, and the result is a proclamation dated January 2, to which brief reference was made last week, and which we now print in full (see page 281). It is no secret that South Africa has been made the happy dumping-ground of medical and allied practitioners from the American and European continents, and although there may have been some precious things amongst them, there was much that is common to all dumping-grounds. So far as pharmacy is

Digitized by Google

concerned it is undoubtedly the case that efficient men with the British and Irish certificates, and a few German apothekers of unquestionable respectability, had to meet competition with men who had no real training in the art of pharmacy, and who in their sober moments must have been as astonished as everybody else that their names were on the registers of pharmacists in the Transvaal or Orange Free State. What is true of pharmacy is also true, more or less, of medicine and dentistry. It was impossible for this to go on even under a Boer government, and Lord Milner in his proclamation ensures that it will not continue. It is correct to recognise the rights of those who were in business out there before the war, but, henceforth, every person who desires to practise as a chemist and druggist in the Transvaal (the proclamation does not include Orange River Colony) must obtain a licence signed by the Secretary to the administration. If the applicant is entitled to be registered as a chemist and druggist in Great Britain or Ireland he will obtain a licence on furnishing proof of identity or good character, but in all other cases more thorough inquiry is to be made as to the validity of the diploma, and the applicants' right to practise elsewhere under the diploma In a temporary measure of this character precision is not to be expected, consequently we find that the diploma or certificate from Ireland may or may not include that of registered druggist, although this grade, unlike that of the Irish pharmaceutical chemist, is not legally entitled to compound medical prescriptions. Again the more stringent provision as to foreign diplomas also applies to those from the British colonies, so that Australian pharmacists, Canadians, and South Africans who think of settling down in the Transvaal must face the possibility of non-registration unless they prove to the hilt their desirability, if not ability. The provision in regard to reciprocity of registration so far as physicians, surgeons, and dentists are concerned, is in line with home feelings. We are surprised that pharmacy is excluded from the clause, which will secure henceforth the exclusion of continental medical practitioners from the Transvaal, as there is no reciprocity at present between Britain and other European countries in medical and dental registration. Application for registration in the Transvaal has to be made in the following form, with which the applicant must submit a sworn declaration by two witnesses as to identity and character:—

I, ... being desirous of practising in the Transvaal as a..... make oath and say—

(1) I am at present registered (or entitled to be registered) in Great Britain (or Ireland) as a.....

(2) I am duly admitted and lawfully qualified to practise in Great Britain (or Ireland) as a.....

(3) [For applicants not possessing a British qualification.] I am in possession of a degree or diploma (which I annex hereto, and which I declare has not been cancelled, withdrawn, or suspended) granted by.....entitling me to practise as a ..... in .....

(4) I have never been convicted in any Court on a charge of professional misconduct.

(5) I declare that by the laws of .....British subjects, legally qualified to practise as..... ...in Great Britain and Ireland are afforded privileges equivalent to those in respect of which the present application is made.

(Signature, &c.)

Although this form is used for chemists and druggists, doctors and dentists, the fifth paragraph is to be struck out when chemists and druggists apply for registration. Eventually the great majority of pharmacists in the Transvaal will be those holding the British qualification, for Austrian and German apothekers and French pharmaciens with full qualification are not wandering men, and their utility to a community doctored by British practitioners would, to say the least, be doubtful.

January Trade.

THE first issue of the Board of Trade returns for 1902 shows several alterations indicative of enterprise on the part of the compilers. First we notice that the monthly summaries are now extended to three years, so that comparison with the details is now completely uniform. Classification has also undergone some change, and a few important items have been added. Thus the imports and exports of quinine and quinine salts are now shown separately. Indigotin is now shown by itself instead of being included under "Other coal-tar dyes"—5,336*l.* oil imported last month, and 53,167*l.* worth of indigo. The former item in January, 1901, was part of 464*l.* Sugar is now distinguished from molasses, and the imports and home consumption of saccharin are shown for the first time, corresponding figures for the exports being also given. The statistics of tobacco and cigarette imports are also given in much greater detail than formerly. There are other minor alterations affecting various trades, and if any doubt should exist as to what the values in the returns precisely mean, the following note appended to the summary table will set it at rest:—

The values of the imports represent the cost, insurance, and freight. Those of the exports the cost and shipping charges, and are known as the "free on board" values.

It is just as well to have this fact stated although it may be pretty generally known. British trade during the first month of the year does not show change from recent conditions; there was an increase of 4,143,832*l.*, or 9 per cent., in the imports as compared with January of last year; a decline in exports to the extent of 498,957*l.*, or 2 per cent., and an improvement of 289,139*l.*, or 5·7 per cent., in re-exported goods. The rise in imports was in part due to larger purchases of duty-free food and drink, and principally to exceptional imports of raw materials for textile-manufactures. In dutiable articles of food and drink there was an advance of 1,298,812*l.*, which may be attributed to speculative purchases made in anticipation of further import-duties. In sugar, for example, there was an increase of 2,683,000 cwt. in quantity and 1,068,000*l.* in value. Cocoa and coffee were also affected to a less extent; but the imports of tea declined, probably owing to Lord Curzon's cable and the Chancellor's recent sympathetic speech on Indian tea. As to exports, the small decrease already noted is chiefly due to the lower price of coal, but there was a falling-off of 96,000*l.* in chemicals, most of which is due to copper sulphate, the decline amounting to 5,971 tons, or 140,994*l.* As a set-off alkali advanced by 11,358*l.*, "other chemicals" by 27,819*l.*, and medicines by 5,043*l.* Last month we exported 47,721 oz. of British quinine and quinine salts, amounting to 3,261*l.*, which works out at 1*s.* 4¼*d.* per oz.; we also exported 17,600 oz. of foreign-made quinine and salts, valued at only 496*l.*, or about 6¾*d.* per oz. These are mysterious figures, which we shall not venture to readjust, especially as they show an approach to sixpenny quinine—a point believed to be fabulous if not miraculous. The margin between the values of the British and foreign quinines is too wide to attribute to packing, but an explanation of the divergence may be found in the charitable disposition of exporters towards those of their customers who happen to live where there is no income-tax, but flagrant import-duties at the port of arrival. The month's quinine account stands as follows:—

Imports.	Exports.	
	17,600 oz. foreign, value	£496
	47,721 oz. English, value	3,261
22,290 oz., value £1,169	65,321 oz.	£3,757

Digitized by Google

It will be seen that the foreign quinine, which, when exported, is valued at 6¾*d* an oz., costs 1*s.* when it comes to us. Quinine is a trifling business compared to that in saccharin. During January we imported 768,844 oz. of saccharin, 316,818 oz being for home consumption, and the total value was 27 781*l.* A decrease of 384,225 lbs. in the imports of quicksilver is recorded, and in confirmation of the statements made in our Trade Reports recently that a large business had been done in the metal, we notice that the exports last month amounted to 214,448 lbs., an increase of 121,416 lbs. compared with January, 1901. Taken altogether the export returns are not discouraging, and when the war is out of the way there is every indication that trade will considerably improve. In a letter to the *Standard* Sir Howard Vincent, who is now in South Africa, states that 'a tremendous boom has already commenced, and may, on the conclusion of peace, attain any dimensions, especially if a reasonable fiscal preference be given, as in Canada and New Zealand, to British over foreign goods." We hope that British wholesale druggists and chemical-manufacturers will get in on the ground floor.

THE CALENDAR.

Some interesting things can be gathered from the 1902 calendar of the Pharmaceutical Society (Great Britain). It is in fact a calendar, the pages from 7 to 18 containing as varied a lot of matter as the most catholic could wish, the very first item being sufficient to produce a smile to last throughout the year. It is—

> Annual subscriptions to the Society due for 1902.
> Dog and establishment licences renewable.
> Scotch public holiday.

The gradation is beautiful; members' subscriptions due, dogs to be paid for, Scotch public holiday—January 1—the day of all others in the calendar that needs no emphasis. There are many useful items in the calendar. Our attention was next arrested by the poisons schedule on page 57, perhaps because there is a Part 3 look about it which is not quite pleasing. The following diagram shows the style:—

PART 1 (Poisons named)	PART 2 (Poisons named)

EVERY COMPOUND containing a poison within the meaning of the Act when prepared or sold for the destruction of vermin.

This is an ingenious way of placing vermin-killers. It has been decided in lower Courts that certain vermin-killers are in Part 1. We have pointed out that they were never specifically placed there, but the new way of ranging them places them neither in the one nor the other. Now there is a fourth way of dealing with the matter. When the schedule was enlarged in 1869, vermin-killers being amongst the items mentioned, it was resolved that "of the same" preparations of prussic acid, of cyanide of potassium and all metallic cyanides, of strychnine and of atropine ought to be deemed in the first part of the schedule. It may reasonably be argued that vermin-killers are one "of the same," therefore that if they contain prussic acid, a cyanide, strychnine, or atropine, they are in the first part. It is impossible to stretch the resolution more than that, and it leaves arsenical vermin killers in Part 2. From all which it is evident that the authoritative body should really have the matter settled one way or other; the pseudo-third part is objectionable.

POISONS COMMITTEE.

The Poisons Committee met on Thursday, February 6, Sir Herbert Maxwell, M.P., in the chair. The death of Mr. Martindale, a member of the Committee, having been announced, the Committee adjourned. We understand that the Committee will not meet again till early in March. Last week several witnesses, including Dr. Muir, Dr. Voelcker, and Mr. Bowen-Jones, were in attendance, but no evidence was taken. It is possible that a new member will be appointed to take the place of Mr. Martindale, although this course is not obligatory. From various sources we understand that those who are leading the opposition to the pharmaceutical view of the matter are not without misgivings as to the attitude of the House of Commons. In the House they are aware that the Pharmaceutical Society has several doughty champions, and that if any drastic changes are recommended in the report an opportunity for discussion will be sought upon some suitable vote of supply. But the delay caused by Mr. Martindale's death makes that opportunity more remote than ever, and the chances are that it may not occur until in a new Session a departmental Bill on the subject is introduced. We have received the following communication:—

> The Lord President of the Council was this day pleased to appoint Walter Hills, Esq., to be a member of the Committee to consider Schedule A annexed to the Pharmacy Act, 1868, in the place of William Martindale, Esq., F.C.S., deceased.
>
> (Signed)
>
> February 12, 1902. A. W. FITZ ROY.

VETERAN STUDENTS.

The report of the Registrar of the Pharmaceutical Society referred to in our report of the Council meeting (page 257) shows that the Society has on its rolls 742 student-associates. The list begins with a distinctly absorbing name, that of Abdul Karim Abdurahman, who resides neither in Cabul nor Constantinople, but in this most cosmopolitan of all cities, London William Sherwood York, of Godshill, happily ends the list. Between these two names are many that recall old memories. We pick out the following who are student-associates of twenty years' standing or more:—

Arthur Chadwick, Leeds	passed	1879
Frederick Chapman, London	,,	1871
Christopher Coulthard, Carlisle ...	,,	1855
James G. Davies, Rowston	,,	1880
William Day, Oswestry	,,	1880
H. W. Emerson, West Hartlepool ...	,,	1876
A. T. Gott, Bradford	,,	1877
Edward H Grimwade, Croydon ...	,,	1879
Edward Hill, Lower Tottenham ...	,,	1880
A. C. Hubbard, Walsall	,,	1873
John Johnson, jun., Aberdeen... ...	,,	1879
William Jones, Bolton	,,	1879
W. A. Jones, Stoke-on-Trent	,,	1880
F. Kirkham, Bury St. Edmunds ...	,,	1878
H. C. G. Lane, Salisbury	,,	1881
W. H. Legat, York	,,	1873
T. C. Leicester, Brighton	,,	1869
Thomas Lloyd, Stratford	,,	1877
Josephine MacManus, Berkswell ...	,,	1877
Joseph Middlebrook, Sheffield ...	,,	1874
John W. Norfolk, Beverley	,,	1872
G. E. Phillips, Ashbourne	,,	1872
G. F. Pond, London	,,	1876
F. W. Richardson, Hull	,,	1876
T. A. H. Roderick, Pontypool ...	,,	1876
T. P. Sage, Leicester	,,	1872
E. J. Shaw, Stourbridge	,,	1867
J. W. Shaw, Guisborough	,,	1874
G. E. Sindall, Knaresborough... ...	,,	1871
J. M. Watts, London	,,	1876
W. N. Wheeler, London	,,	1877

It will be seen that all these persons have reached their pharmaceutical majority as apprentices, and many, doubtless, are no longer associated with pharmacy in a direct manner—Mr. Wm. Day, for instance, who last year sold the fruits of his successful enterprise to Mr. Jesse Boot. Mr. Coulthard holds the palm, but he has company in another who passed the Preliminary examination before it was compulsory, and the Society has reason to be proud of this list of veterans, young though some of them are.

Winter Session.

Royal Society.

AT a meeting of the Society at Burlington House on February 6, the Prince of Wales was formally admitted a Fellow, signing the historic roll of fellows. Sir WM. CROOKES read two papers on "The Stratification of Hydrogen" and

RADIO-ACTIVITY AND THE ELECTRON THEORY.

He described his attempts to prepare pure hydrogen and experiments on the stratifications exhibited by the purified gas under the influence of an induction current. The researches begun in 1884 have been continued at intervals to the present time. Some beautiful experiments in radiant matter were then shown, after which the lecturer said he had spoken of "radiant matter" and "electrons" as if they were identical. Nearly twenty-five years ago he was led by experiments in highly rarefied tubes to assume the existence of matter in an ultra-gaseous state. Later, in a lecture delivered before the British Association at the Sheffield meeting, 1879, he first used the expression "radiant matter." "In studying this fourth state of matter," he said, "we seem at length to have within our grasp and obedient to our control the little indivisible particles which, with good warrant, are supposed to constitute the physical basis of the universe. We have seen that in some of its properties radiant matter is as material as this table, whilst in other properties it almost assumes the character of radiant energy. We have actually touched the borderland where matter and force seem to merge into one another." In twenty-five years one's theories might change, although the facts on which they were based remained immovable. What he then called "radiant matter" now passed as "electrons," a term coined by Dr. Johnstone Stoney to represent the separate units of electricity, which was as atomic as matter. What was puzzling and unexplained on the "radiant matter" theory is now precise and luminous on the "electron" theory, and thus his early hypotheses fell into order by the substitution of one expression for the other. A chemical ion consists of a material nucleus or atom of matter, constituting by far the larger portion of the mass, and a few electrons or atoms of electricity. The electrons are the same as the "satellites" of Lord Kelvin and the "corpuscles" or "particles" of Professor J. J. Thomson. Electrons probably left the negative pole with a velocity nearly uniform, modified to a considerable extent by the degree of exhaustion, and to a less extent by the electromotive force behind them. Many experiments have shown that the liberated electrons do not behave as a gas; they have not properties dependent on intercollisions, mean free path, &c.; they act more like a fog or mist, are mobile, and carried about by a current of air to which they give temporary conducting powers, clinging to positively electrified bodies and thereby losing mobility, and settling on the walls of the containing vessel if left quiet. On the other hand, the crowd of hydrogen or mercury atoms, by virtue of molecular motion and intercollisions, act as gases. Whilst their mean free paths are conditioned by the degree of exhaustion, there might be amongst them a certain number of actual free paths differing widely on each side of the mean. Under the influence of the electromotive force, and at the right degree of exhaustion, those atoms arrange themselves in groups, while the rushing swarm of electrons driven from the negative pole meet them and render them visible. According to Professor J. J Thomson the mass of an electron is about $\frac{1}{700}$ part of that of the hydrogen atom, and as these masses start from the negative pole in a vacuum tube with a velocity of the order of half that of light, it is easy to see that their heating, phosphorescent, and mechanical power must be stupendous. The basis of the electron, as foreshadowed in 1879 in the case of radiant matter, is probably the same in all cases—the protyle from which the chemical atoms are assumed to be formed. On the two-fluid theory the electrons constitute free negative electricity, and the rest of the chemical atom is charged positively, although a free positive electron is not known. It seemed to him simpler to use the original one-fluid theory of Franklin, and to say that the electron is the atom or unit of electricity. Then a so-called negatively charged chemical atom is one having a surplus of electrons, the number depending on the valency, whilst a positively charged atom is one having a deficiency of electrons. Differences of electrical charge might thus be likened to debits and credits in one's banking account, the electrons acting as current coin of the realm.

After Lord KELVIN and Lord RAYLEIGH had briefly congratulated the lecturer, the PRESIDENT called on the Prince of WALES to say a few words, which he did, thanking Sir William Crookes for his clear exposition, and assuring the Fellows that he has a hearty sympathy with scientific research.

Chemical Society.

A MEETING of this Society was held at Burlington House on Thursday evening, February 6, when the chair was taken by Dr. Armstrong, F.R.S., in the absence of the President. The list of papers down for reading presented the unusual feature of containing eight which dealt with the application of physical methods to chemistry—a striking proof of the increasing attention now being devoted to this branch, which has so far been somewhat neglected in this country. Dr. M. O. FOSTER contributed a paper dealing with the conversion of

α CAMPHOR DERIVATIVES

into the β compounds of the substance. About a year ago the author described what he then regarded as the "enolic" form of ordinary ketonic camphor—*i.e.*, a substance in which the carbonyl group had become tertiary owing to the absorption of a contiguous hydrogen atom. By examining the reactions of this substance with bromine, he has shown that his former view of its structure is no longer tenable.

The second paper was read by Mr. INNES, and recorded a series of investigations into the influence of temperature on

THE ASSOCIATING POWER OF BENZENE,

a subject which on the surface does not appear to offer anything of interest to pharmacists. Since, however, it concerns one of the fundamental laws of physics and chemistry, a short account of the principal results may be of interest It has now been definitely established by experiments in many directions that when a solid substance is dissolved in a liquid it behaves exactly as if it were in a gaseous state and occupied the same space as the volume of the solution in which it is contained, and, just as in the case of bodies like sulphur and iodine—the vapours of which at different temperatures consist of molecules of different complexity—so the molecules of the substance in solution may be simple or compounded of two or more molecules—*i.e.*, they may or may not be "associated." It is the effect of increase of temperature on this "association" which Mr. Innes has studied. He finds that in all cases the "associated" molecules tend to become simple ones as the temperature is increased up to the boiling-point in the case of benzene, although beyond 80° C. certain anomalies appear in some instances.

The next paper was by Dr. W. H. PERKIN, sen., and dealt with the application of magnetic rotation to the determination of the constitution of such substances as

PINENE, LIMONENE, CAMPHOR, AND CAMPHENE.

The investigation involved the measurement of rotations of open-chain compounds and their corresponding closed-chain relatives. The results obtained are in excellent agreement with the formulæ now usually assigned to these constituents of volatile oils, and illustrate clearly the services which physical methods carefully applied may render in the examination of substances whose chemical reactions give contradictory results.

The transport number of ions in dilute solutions was the subject of the next communication, by Messrs. STEELE and DENISON, and described a new method of determining the electrical conductivity of very dilute solutions of salts.

BRITTLE PLATINUM.

Professor W. W HARTLEY, F.R.S., contributed the fourth paper, which, in his absence, was read by Dr. Scott, F.R.S. Some time ago the Dublin branch of the Dentists' Association submitted to Professor Hartley a number of platinum points which had been employed in the preparation of teeth,

Digitized by Google

and had become brittle, and therefore useless for the purpose. Careful spectrographic examination failed to show the presence of any foreign matter, but the author concludes that the brittleness is due to the presence of minute traces of carbon and sulphur, although what evidence there is for this view was not stated. The matter appeared to interest several of the Fellows present, and by some of them the brittleness was regarded as due to a change in the molecular condition of the metal rather than to the presence of impurities, a suggestion which is in accord with Sir W. Crookes's observation that the blackening of platinum crucibles after repeated heating is due, not, as is generally supposed, to the formation of a carbide of the metal, but to an alteration in the structure of the surface.

Owing to the lateness of the hour the remaining papers, which did not include any of pharmaceutical interest, were taken as read; and Dr. ARMSTRONG announced that the next meeting will be held on Wednesday, February 19, at 5 30 P.M., for which, it is understood, papers of special interest to the brewing industry will be read, besides others which the authors wish to be communicated to a Wednesday meeting.

Society of Chemical Industry.

MANCHESTER SECTION.

THE Section met at the Victoria Hotel, Manchester, on February 7, when Dr. GERLAND read another paper on detecting minute quantities of arsenic, which differed from the last in that he had found cadmium a better substance to use in his process than bismuth. Dr. W. F SUTHERST, F.C.S., then read a paper on "The Chemical Changes in the Ripening of Cheese."

Edinburgh Chemists', Assistants', and Apprentices' Association.

A MEETING of the Association was held in the Pharmaceutical Society's House, 36 York Place, Edinburgh, on January 29, Mr. J G. Sclater (President) in the chair.

Mr. D. MCEWAN read a paper on "The Manufacture of Leather," after which Mr. W. B. COWIE read a note on

GLYCERIN OF STARCH.

The directions for making this preparation as given in the Pharmacopœia are so indefinite that it is almost impossible for operators to obtain anything like similar products. As it is a matter of considerable importance that the consistency of the preparation should always be uniform, and a great advantage to be able to calculate the exact quantity of each ingredient before mixing, and as a finer product is often obtained by first mixing the active ingredient in the water or glycerin previous to gelatination, Mr. Cowie suggested the following formula and directions as yielding a superior product:—

Starch ...	...	...	1 oz.
Glycerin ...	...	(by weight)	8 oz.
Distilled water	...	...	2 oz. or q.s.

Mix, heat them together, stirring constantly, until a translucent jelly is formed; then evaporate until the product weighs 10 oz.

This Mr. Cowie followed by a

NOTE ON COLLODION.

In this he said he has found that if the pyroxylin be first soaked in the alcohol and then shaken up with the ether, solution takes place immediately, and on this account he suggested that the official directions for the preparation should read:—

Place the pyroxylin in a bottle, add the alcohol, and see that the pyroxylin is completely soaked; then add the ether quickly, shake, set aside for a few days; decant the clear collodion.

To avoid loss caused by measuring the collodion on making flexible collodion, Mr. Cowie said it is much better and more economical to weigh the fluid. The equivalent in weight can easily be obtained by multiplying the volume by the sp. gr., which is approximately 0·789–0·800

A short discussion was followed by votes of thanks to the author.

Plymouth Chemists' Association.

A MEETING of junior assistants and apprentices was held on Wednesday evening, February 5, to discuss a proposed

THREE TOWNS JUNIOR CHEMISTS' ASSOCIATION.

Mr. W. NORMAN HARRIS presided, and in introducing the subject mentioned that considerable reluctance had existed for some years among the apprentices in taking any interest in the local Association, and trusted that now they would start with renewed vigour and form a strong committee to carry out the scheme they had in view. He thought that means should be adopted to bring about a closer union amongst the junior members of the trade to assist each other educationally and also to hold social gatherings. He recognised the difficulty in making such an association a success owing to constant changes, but with determination they would succeed, so that those following would continue their efforts.

Mr. LOVATT said that he had received a number of responses to the circular he had sent round, and now they had accomplished what had never been done before—viz, a gathering of more than thirty junior members. He pointed out that the senior Association was started to give assistance to junior students, and referred to some of the things that had been done, such as classes carried on by Mr. H. Marston Morgan and others, which, owing to the paucity of students, had to be abandoned. He formally proposed that:—

A Three Towns' Junior Association be formed, and affiliated with the Senior Section, the juniors electing their own officers and delegates.

Mr. GROOMBRIDGE seconded, and, after remarks by Messrs. STANCOMBE, ANCLIFFE, LORD, and MONK, the proposal was put and carried unanimously.

The following officers were elected:—Chairman, Mr. Norman-Harris; Vice President, Mr Groombridge; Hon. Secretary, Mr. E. Lovatt; Committee, Messrs. Ancliffe, Lord, and Stancombe; Junior Delegates, Messrs. Groombridge and Stancombe.

A vote of thanks was proposed to Mr Lovatt for organising the meeting, who, in reply, said their thanks were really due to Mr. C. T. Weary, their popular President, from whom the idea originated.

Chemists' Assistants' Association.

AT the meeting held at 73 Newman Street, W., on February 6, Mr. J. W. PECK (President), who was in the chair, referred to the great loss that pharmacy has incurred in the sad death of Mr. William Martindale. He intimated that the evening would be devoted to

IMPROMPTU DISCUSSIONS.

Slips containing suggested topics were placed in a hat and each member drew one out. The subject which fell to the President was "restrictions upon the sale of nostrums containing dangerous poisons," and he did not think that more restrictions could be enforced, as only registered chemists can sell them. In the discussion that followed it was stated that Fellows's syrup is often sold without getting a signature in the poisons' book, and that compressed tablets containing strychnine are frequently sold indiscriminately. The case of a woman who purchased Easton's syrup tablets and mercuric-chloride tablets, and took the latter in mistake, was cited. It was also stated that a chemist had been proceeded against recently for supplying a woman with tablets containing morphine without complying with the law, and the suggestion that the formulæ of all proprietary medicines should be published was approved of.

Mr. SNOW dealt with the decline of the art of making B.P. galenicals in modern pharmacy, the principal reason for purchasing being want of time, he thought. Other reasons given were that chemists have neither time nor apparatus for standardising B.P. preparations. Many things can be bought cheaper—confection of senna at 2½*d.* per lb. was instanced.

Mr. S. C. TWEEDY, who is an enthusiastic amateur photographer, said that the question of what side-line should a chemist in a country town take up had fallen to him.

Digitized by Google

There is, he said, nothing like photography, if the chemist uses discrimination. A chemist who has two or three assistants already full up with work cannot expect to run this side-line profitably without extra help. He knew one case where a man had a good business and took on photography. He neglected pharmacy, and the photographic side developed to such an extent that the business eventually became entirely photographic. His parting advice was: use discrimination, get extra help, buy well, do not keep too large a stock, and you will find photography profitable. A closely allied subject was, Would the study of photography be of commercial value to the chemist's assistant? Mr. Richards had to reply, and his answer was in the affirmative.

Mr. S. T. Frost, in reply to the question, Is a pharmaceutical degree possible? said (Scotch-like) Is it desirable? A lengthy discussion followed, the bulk of opinion being in favour of a degree.

The question, Do you think that a retail pharmacist is justified in closing his pharmacy for the weekly half-holiday? fell to Mr. Feoulkes, who said that in dispensing towns the chemists take turns in keeping open. He thought it desirable that a chemist should, once a week, get away from his business and enjoy himself in a rational manner.

Mr Goodall dealt with the decimal-system, and the new Pharmacy Bill fell to Mr. Franklin.

A few questions were unavoidably left.

Young Chemists' Association.

The members met in the Working Men's Club, Gallowgate, Newcastle-on-Tyne, last week, under the presidency of Mr. Barry Noble to hear a discourse by Mr. G. F. Merson, F.C.S., on "Pharmaceutical Processes." Mr. Merson dealt with the fundamentals of the art of pharmacy, explaining such phenomena as solution, evaporation, distillation, sublimation, comminution, elutriation, and the like in such a way as to awaken personal interest and to encourage daily observation and further inquiry. At the conclusion of the discourse, which occasionally sparkled with humour, Mr. Merson was cordially thanked.

Dewsbury Chemists' Association.

On Monday evening Mr. Pilkington Sargeant, F.C.S., Leeds, lectured to the members of the Association and their apprentices on "Bacteria." At the close appreciative speeches were made, and a vote of thanks passed to Mr. Sargeant.

Manchester Pharmaceutical Association.

At the meeting held at the Victoria Hotel on Wednesday evening, Mr. G. S. Woolley (the President) in the chair, Mr. T. H. Wardleworth, of Liverpool, gave his lecture on "Jamaica." At the close the Chairman moved, Mr. Harry Kemp seconded, and Mr. C. Johnson supported, a vote of thanks to the lecturer.

Reading Chemists' Association.

At a meeting held at Reading College on Thursday, January 30, Dr. Luxmore, F.I.C., read a paper on "The Commercial Value of Scientific Training." Dr. Luxmore traced the value of science in the evolution of modern inventions and manufactures, and emphasised the value of scientific training in the development of powers of observation and application. A general discussion followed.

Bradford Chemists' Association.

On Tuesday evening, February 11, Mr. Percy Lund delighted the members with a lecture on "Nature's Poets and Nature's Pictures." Having selected a number of the best specimens of poetical descriptions of scenery, Mr. Lund photographed scenes which appeared to him to answer the descriptions. There was a large attendance, and the lecture was highly appreciated. At its close a vote of thanks was awarded to Mr. Lund for his lecture on the proposition of Mr. Hanson (the President), who occupied the chair. Thereafter the Chairman said it was his duty to ask them to pass a vote of condolence with the widow and family of

The Late Mr. Martindale.

That this meeting of the Bradford and District Chemists' Association has heard with deep regret of the removal from the world of pharmacy of Mr. Wm Martindale, ex-President of the Pharmaceutical Society. The Secretary is desired to convey to Mrs. Martindale and her family the sincere condolence of this Association with them in their sad bereavement.

He thought that every chemist and every doctor in the whole world almost would have heard of Mr. Martindale in connection with his work in pharmacy. He was engaged in the work connected with the promotion of the new Act which they all hoped was going to be passed in regard to the poison laws, and other very important work for chemists.

Mr. A. H. Waddington seconded the motion. He said he felt it was a very difficult matter indeed to properly lay before a meeting of chemists any statement of the work of the late Mr. Martindale, who, up to the time of his death had been working so arduously for the benefit of the whole of the pharmacists of Great Britain. Some of them might remember a remark made by an ex-mayor of Bradford when he was leaving office, to the effect that he would rather prefer to work out than to rot out. He thought they might fairly say of the late Mr. Martindale that his frame of mind was similar to that—that he had worked himself out for the benefit of his fellow-pharmacists. The deceased gentleman was indeed *facile princeps* amongst pharmacists. Many of them who had never seen him or made his acquaintance knew him and knew of his reputation. He thought that a study of his life would stimulate those of them who were younger than Mr. Martindale to devote their lives to the important objects which he had worked for. Having referred to the chief events in Mr. Martindale's career, Mr. Waddington proceeded to say that his death reminded him of the words in the Old Testament, "The fathers are fallen asleep, and the prophets—where are they?" He could not help thinking that the removal of Mr. Martindale ought to be a call to the chemists of the country, the young men especially, that they should rise and take up the positions which were so frequently being rendered vacant by the removal of their old leaders. If ever they were in a position in which they especially needed leaders it was to-day

The resolution was then passed by the members all rising in their seats.

Recent Wills.

Davenport.—Mr. John Thistlewood Davenport, pharmaceutical chemist and joint proprietor of Dr. J. Collis Browne's chlorodyne, of 13 Eaton Gardens, Hove, and 33 Great Russell Street, Bloomsbury, who died on December 29, has left personal estate of the net value of 109,062*l.* 14*s.* 5*d.*, the gross value being 113,515*l.* 10*s.* 10*d.* By his will, dated April 3, 1894, he appointed as executors and executrix his sons, Mr. John Metcalf Davenport and Mr. Montague Davenport, and his daughter, Miss Cecilia Davenport. He bequeathed the goodwill and stock-in-trade of his business, excepting the business in chlorodyne and his interest in the premises Nos. 33 and 34 Great Russell Street, to his son Horace. By an agreement made on January 15, 1857, between the testator and the late John Collis Browne, joint proprietors of "Chlorodyne," it was provided that the recipe for chlorodyne should be known to three persons only, one of whom should be the manufacturing agent and the other two nominees of the Browne and Davenport interests respectively. The testator's son Horace having been appointed manufacturers'-agent, the testator nominated him also as Davenport trustee, and bequeathed to him his share and interest in the chlorodyne business in trust as to one-third thereof for his said son Horace, and as to the remaining two-thirds for the testator's other children. The late Mr. Davenport bequeathed to his brother Augustus 500*l.*; to his assistant, Thomas Sherburn, 300*l.*; to his coachman, Thomas Smallwood, 100*l.*; and he left the residue of his property in trust for all his children, but as to the share of his son Mr. Stewart Forbes Davenport upon special trusts for him. Testator bequeathed his gold watch to his son, John Metcalf Davenport.

Key.—Mrs. Susan Key, widow of the late Mr. Wm. H. Key, chemist and druggist, Pontypridd, who died last December, has proved the deceased gentleman's will at 345*l.* 9*s.* 6*d.*

Legal Reports.

High Court Cases.

TREATT *v.* SAMUELSON.

MR JUSTICE JOYCE will not apparently be called upon to give judgment in this case, as the partnership has been dissolved by mutual consent on terms which have not transpired, but it is understood that each party pays his own costs, and that the offer made by Mr. Hughes, K.C., on the last day of the trial formed a basis for the settlement.

ARSENICAL GLUCOSE.

THE last, or at least penultimate, stage of the recent arsenic scare was reached in the Court of Appeal on February 8, when the Master of the Rolls gave judgment in the appeal by Bostock & Co. (Limited), glucose manufacturers, against the decision by Mr. Justice Bigham, in the action brought against them by Richard Holden (Limited), brewers, Blackburn, for the recovery of damages in respect of loss of beer and trade therein, consequent on defendants supplying them with glucose contaminated with arsenic. Mr. Justice Bigham awarded 1,800*l.* damages, including 300*l* potential profit on beer destroyed, and 50*l.* for printing and advertising. The appeal was for the reduction of the damages by 350*l.*, on the ground that the profit and advertising should not have been allowed. The Court of Appeal, however, sustained Mr. Justice Bigham's decision, with costs.

Sale of Food and Drugs Act.

SOAP-LINIMENT.

AT North London Police Court on Friday, February 7, before Mr. Mead, the adjourned summonses "The Hackney Borough Council *v.* Tice," and "The Hackney Borough Council *v.* Hall" were called. Both summonses were taken out under Section 6 of the 1875 Act, and alleged that the respective defendants did, on October 26, 1901, sell soap-liniment not made according to the British Pharmacopœia—viz., with rectified spirit—but with methylated spirit. Sanitary-Inspector Mansell said he made the purchase and paid 1*s.* 4*d.* in each case. Mr. Leo Taylor, the borough analyst, gave the certificate that the samples had been prepared with methylated spirit, hence the prosecution. Both defendants denied that the compound was of the inferior kind, because they had paid best prices for it from the wholesale dealers; and both got an adjournment in order that the third portions of their samples might be submitted to the Government laboratory.

Mr. Mead (the Magistrate), in reopening the case last Friday, said he did not hear the original argument, but looking at the Government certificates thought he could dispose of the cases. The certificate he held in his hands was with regard to Sample No. 487, which corresponded with the liniment purchased from Mr. Tice, 4 Dalston Lane, N., and said: "We hereby certify that we have analysed the sample, and declare that it does not contain methylated spirit." Mr. Mead: That will discharge him.

Mr. Williams (who appeared for the Borough Council): I would suggest that your worship allow me to withdraw the summons on payment of certain costs.

Mr. Tice: I have paid a guinea for the analysis, and have had to close my shop to come here, as I have no one to leave in charge. Consequently I have been put to loss and inconvenience. When Mr. Fordham first heard these cases, he told me to remind him of the costs.

Mr. Mead: It does not matter to me whether the summons is withdrawn, or whether it is dismissed; but I think Mr. Tice should have something for his personal attendance, as well as the guinea he has paid. The costs will be altogether 2*l.* 1*s.*

In the case against Mr. Ralph Hall, 552 Kingsland Road, Mr. Kirby, who represented the defendant, said he had arranged with Mr. Williams, of the Hackney Borough Council, that this summons should also be withdrawn, with 5*l.* 5*s.* costs. The defendant had to pay the costs of the second analysis, and this 5*l.* 5*s* would include that fee.

Mr. Mead agreed, and marked his book, "Summons withdrawn, with 5*l.* 5*s.* costs."

SWEET SPIRIT OF NITRE.

AT Coventry on January 31, Mary Hull, grocer, Withybrook, was fined 2*s.* 6*d.* and costs for selling sweet spirit of nitre which on analysis was found to be 95 per cent. deficient in ethyl nitrite. It was stated that the nitre had been in defendant's possession for four years, and was stored in a corked bottle in the shop-window.

County Court Cases.

A CLAIM FOR WAGES.

AT York County Court on February 4, James Cleghorn, chemist's assistant, sued George Coverdale (Limited), chemists, York, for 2*l.* 17*s.* wages. The plaintiff stated that he was manager of one of the defendant's branch-shops in December last, and on the morning of Christmas Eve the defendant informed him he would be required to be in attendance at the shop between 8 and 9 o'clock on the evening of Christmas Day and Boxing Day. Plaintiff told defendant he had made arrangements for going away, as he did not expect to have to work on Christmas Day, and consequently could not attend on that day, but would do so on Boxing Day. Defendant thereupon dismissed him and forbade him to enter the shop again. His contract made no mention of public holidays. Mr. Wilkinson, on behalf of the defendant, submitted that Christmas Day should be treated as a Sunday, when, by his contract, the plaintiff was to be at the shop from 8 to 9 P.M. and that as he refused so to attend the defendant was justified in dismissing him for wilful disobedence. Mr. Carter, for the plaintiff, contended that as Christmas Day fell on a Wednesday the plaintiff was entitled to be free after 1 o'clock, according to his contract; and that the defendant could have insisted on his working up to 1 o'clock, but did not do so. Judge Templer, in giving judgment for the plaintiff for the amount claimed and costs, stated that he was entitled to treat Wednesday according to his contract, irrespective of Christmas Day falling thereon, in the absence of any special condition in the contract; and that there was not sufficient grounds to warrant the defendant summarily dismissing the plaintiff.

THE SODA-FOUNTAIN.

AT Liverpool County Court on February 6, Messrs. J. P Jackson & Co., Duke Street, Liverpool, sought to recover 45*l.* 12*s.*, the price of a soda-fountain supplied to the New Brighton Pier Company (Limited). The defendants resisted payment on the ground that the machine had been taken on trial, and had never been taken over by the defendants; moreover it was not made in accordance with the specifications. Mr. John Perkins Jackson in evidence admitted that one part of the machine, which according to the specification was to be of alabaster, was made of marble, which, he said, was more expensive and more suitable for the purpose. The specification required "silver fittings," and those supplied were plated, but Mr. Jackson said in the trade the term "silver fittings" meant plated unless solid silver was specified. After a long hearing the case was adjourned in order to enable the parties, if possible, to come to terms.

WAS IT A LIBEL?

AT the Mansion House, on February 7, Mr. George Crocker chemist and druggist, Brixton Road, was summoned for publishing a libel concerning Mr. Richard William Eaton, a stockbroker. The libel complained of was contained in a letter addressed by the defendant to the Committee of the London Stock Exchange, dated January 18, in the course of which he accused Mr. Eaton of unfair closing. This was in connection with civil proceedings in the High Court. (See *C. & D.*, January 18, page 88.) Mr. Timbrell (for the defendant) submitted that the libel complained of was a matter for a civil Court and not for a criminal Court. In the case of "The Queen *v* Labouchere" (53 L.J., N.S., Q.B.D.) it was laid down that, to entitle a person to ask a Court for a criminal information for libel, he must occupy some public office and the libel complained of must attack him in relation to such office, not as a private person. The chief clerk quoted the later case of "The Queen *v.* Carden." Mr. Timbrell, in continuing his argument, referred to the case of "King *v.* Topham," in which it was

Digitized by Google

said that private character was to be vindicated by private action—which meant that the person had his civil remedy. The prosecutor in this case had his civil remedy. Mr. Alderman Alliston said he thought the document was a libel. Mr. Timbrell objected to the admission of the letter complained of, on the ground that it was a privileged communication. Mr. Alderman Alliston said he would admit the letter subject to that objection. Defendant was committed for trial at the Central Criminal Court, where a true bill has since been returned.

About Debts.

On Tuesday, February 11, in the Westminster County Court, Judge Woodfall heard the case of Fox *v.* Marston, in which the plaintiff applied for the committal of the defendant, who he said, was a chemist carrying on business at Homerton, for non-payment of a judgment debt in respect of goods supplied. The defendant said he was out of business, and had no means to pay with. The Judge said trade debts ought to be paid, and made an order for payment of 10*s.* a month.

At the same time the case of Taylor *v.* Severn was disposed of. Here the defendant was an analyst, living in good style at Earl's Court, and had a very extensive practice, so the plaintiff said. The defendant did not appear, and the Judge made an order for payment in fourteen days, subject to committal to Holloway for ten days in default.

In the case of Bowden *v* Lane, the defendant, a chemist's assistant in a Battersea drug-store, was ordered to pay his tailor's bill in instalments of 5*s.* a week, which was what he offered.

Pearson *v.* Whyte dealt with cigars supplied to defendant, said to be a chemist carrying on business at Highgate. Mr. Whyte denied the latter assertion, and said he was willing to pay the amount due in a week. Judge Woodfall made an order to that effect.

Bankruptcies and Failures.

Re William Longwood Fewster, Dewsbury, Chemist and Druggist.—At the adjourned public examination of this debtor at Dewsbury, on February 4, the examination was ordered to be closed without further questions being asked.

Re E. S. Balchin, Gosport, Chemist and Druggist.—As trustee under this failure, the Official Receiver of the Portsmouth Bankruptcy Court has issued a report to the creditors, announcing a supplementary dividend of 4*s.* 2½*d.* in the pound.

Re Thomas Philip Garrett (trading as Garrett Brothers) 33 Commercial Street, Newport, Mon, Chemist and Druggist.—The public examination of this debtor took place on February 6 at Newport. After debtor had given particulars of his failure, as set forth in our issue of January 25 (page 174), the examination was ordered to be adjourned.

Re Peter Campbell Forbes, Morley, late Chemist and Billposter.—At Dewsbury, on February 4, the Official Receiver (Dr. E. E. Deane) stated that the accounts ordered to be filed by this debtor had only reached him that morning, and he had not, therefore, had an opportunity of examining them. The Registrar (Mr. T. L. Chadwick) asked what explanation debtor had to offer; but it was pointed out that a telegram had been received stating that Mr. Forbes would be half an hour late. The Registrar said he felt inclined to adjourn the examination *sine die*; but the examination was ultimately adjourned until March 11.

Re S & E. Ransome, 49 Leadenhall Street, E.C., Colonial and General Merchants.—A sitting for public examination was held at the London Bankruptcy Court on February 7. The statement of the firm's affairs showed gross liabilities 44,412*l.*, of which 33,381*l.* were expected to rank, and estimated net assets 3,133*l.* The debtors are S. J. & A. J. Ransome, and they state that the business of S. & E. Ransome, colonial merchants, of which they are the only surviving partners, was founded in 1852. They attribute their insolvency to losses by accepting bills of exchange and entering into guarantees on behalf of other persons and firms, including Algernon Wallis, trading as Wallis, Sons & Co., and Rogers Brothers, against whom receiving-orders have been made. The hearing was adjourned.

Yunnan Opium to the value of 66,538*l.* (1,427 piculs) was exported from the province of Mengtse during 1900. Most of it went to Hong Kong.

New Companies & Company News

Sligo Wholesale Bottling Stores (Limited).—Registered in Dublin. Capital 2,000*l.*, in 1*l.* shares. Objects: To carry on the business of wholesale bottlers, manufacturers of mineral waters, &c. Registered office, Sligo.

Burnett & Co. (Limited).—Capital 500*l.*, in 1*l.* shares. Objects: To carry on the business of dentists, dental surgeons, manufacturers of and dealers in artificial teeth and plates restorers and fillers of natural teeth, manufacturers of gold crowns and gold or porcelain bridges by the system known as the Crown Bar and Bridge Work, &c. The first subscribers are:—E. F. Burnett, 43 North Street, Romford, dentist; Mrs. A. S Burnett, 43 North Street, Romford; Mrs. I. Colquhoun, 23 Exeter Road, Southsea; E. Burnett, 43 North Street, Romford, dentist; Miss M. I. Colquhoun, 23 Exeter Road, Southsea; W. J. Pickard, National Provincial Bank of England (Limited), Portsea; and W. G. Colquhoun, 23 Exeter Road, Southsea, engineer. Registered office, 43 North Street, Romford, Essex.

Calder and Mersey Extract Company (Limited).—Capital 60,000*l.*, in 1*l.* shares. Objects: To acquire and take over as a going concern the business of manufacturers of tanners' extracts, heretofore carried on at Dewsbury, Yorks, by the Calder Extract Company (Limited), and so much of the business carried on at Ditton, Lancs, by William Moloney & Co. (Limited), as consists of manufacturing and dealing in tanners' extracts and other materials used by tanners, and to carry on the business of manufacturers of tanners' extracts, chemical manufacturers, manufacturing chemists, &c. No initial public issue. The first directors are W. T. Howroyd, A. Oldroyd, W. Parr, W. Moloney, and T. E. Gate. Qualification, 500*l.* Remuneration as fixed by the company.

W. B. Fordham & Sons (Limited).—The accounts of W. B. Fordham & Sons (Limited), after provision has been made for depreciation, &c., enable the directors to recommend a final dividend at the rate of 6 per cent. per annum for the half-year ended December 31, making, with the interim dividend already paid, 6 per cent. for the year.

Bouillon Fleet (Limited).—The petition of S. G. Sheppard for the winding-up of this company was in the list on February 6, before Mr. Justice Byrne; but on a statement that an application was being made to the House of Lords, and that time was required for the answering of affidavits, the petition was directed to stand over for a fortnight.

"Sanitas" Company (Limited).—The directors of this company have resolved to recommend the payment of a final dividend of 4½ per cent. and a bonus of ½ per cent. making, with the interim dividend already paid, a total distribution for the year ended December 31, 1901, of 7½ per cent. per annum; 500*l.* is carried to depreciation account, 1,500*l.* to reserve, and 2,167*l.* 2*s.* 2*d.* forward to 1902.

United British Castor Oil Company (Limited).—The *Financial Times* of February 12 devotes a column of its space to the proposed amalgamation of this company with the British Indian Oil Mills. The company was floated, says our contemporary, in November, 1898, with a capital of 36,000*l.*, to acquire the business carried on under "Mitchell's

Digitized by Google

Process." The prospectus estimated a net annual profit of 8,547*l*. The first balance-sheet showed a loss of 660*l*., and the next a loss of over 3 630*l*. A loss of 2 570*l*. was shown on the year's working, and at the annual meeting in December, 1900, a resolution was passed for the sale of the company's business. In the report just issued the directors announce that they have been unsuccessful in obtaining any favourable offer, but that recently the amalgamation scheme, to which we have referred, has been mooted, and that after an investigation of the proposal by a committee appointed by them they recommend its adoption. The proposal is that the capital of the new company shall be 30,000*l*., and this is severely criticised.

BOVRIL (LIMITED).—The directors report that the net profit on last year's trading amounts to 157,672*l* making with the balance (14,182*l*) carried forward from last account a total of 171 854*l*. Debenture interest and interim dividends on preference and ordinary shares paid during the year have absorbed 62,500*l*. The directors now propose to pay the balance dividends of 5½ per cent. on preference and 7 per cent. on ordinary shares, amounting to 40 000*l*. They recommend a dividend of 4 per cent. on the deferred shares (30,000*l*.), leaving 25,000*l* to be carried to reserve, and 14 3 4*l*. to be carried forward. The report states that the sales of bovril show an improvement upon previous year, but Government orders for emergency rations, &c, have been smaller than in 1900. The profit upon the entire year's business is not so great as in the preceding twelve months, though larger than in any other previous year. The retiring directors, Viscount Duncannon and Dr. Farquharson, both offer themselves for re-election.

Birth.

HULME.—On February 4, at Wood Green, London, N., the wife of Harold Edwin Hulme, pharmaceutical chemist, of a son.

Marriage.

COGHLAN—GLYNN.—On February 4, at the Cathedral, Ennis, by the Rev. P. J. Donnelly, Patrick Coghlan, L.P.S.I., Jail Street, Ennis, to Minnie, daughter of the late John Glynn, Knockaderra, Ennis.

Deaths.

ASHLEY.—At Derby, on February 10, Mr. William Ashley, chemist and druggist. Aged 69. Mr. Ashley had carried on business at 4 Cheapside, Derby, for close upon fifty years. He had been attending to his duties as usual during the day of his death, but was found in the evening by his son, who assisted him in the business, lying dead on the floor of an anteroom. The deceased had suffered from a weak heart for several years past; and at the inquest Dr. Sims certified that death was due to syncope.

GILL.—The death took place on February 7 of Mr. James Payne Gill, who held a responsible position with the firm of Messrs. Grimwade, Ridley & Co., wholesale chemists, Ipswich. Aged 45. Mr. Gill had been with the firm, whom he had served with exemplary devotion, since early life. He was well known in the musical world at Ipswich where he had been choirmaster at St. Clement's Congregational Church for nearly twenty-five years. Mr. Gill organised and trained the Band of Hope choirs of the town, aggregating 300 voices, which had given summer festivals at the Crystal Palace. Indeed, with every musical festival in Ipswich during the past two decades he was prominently associated, having been Hon. Secretary of the Nonconformist Choir Union until it was merged with the existing Choral Society.

MAXEY.—At Malvern, on February 6, Mr. William Henry Maxey, chemist and druggist. Aged 49 years. For about twelve years Mr. Maxey had carried on business at Worcester in succession to Messrs. George & Welch, Broad Street. He was a native of Lincolnshire, and was for a time with Messrs. Savory & Moore, in London, then commenced business in Sheffield, and subsequently removed to Worcester, entering into partnership with Mr. Henry George. His brother-in-law, Mr. C W. Turner (Messrs. Anderson & Virgo), is also in business as a chemist in Worcester. Mr. Maxey took an active interest in local affairs, being secretary and treasurer of the St. John's Nursing Association, churchwarden of St. Nicholas parish, and a prominent Freemason, being P.M. of Lodge No. 280. He had for several mouths past suffered from cancer, and a short time ago underwent an operation which, however, only afforded temporary relief, and, his sufferings being very acute, his passing away was really a happy release from an illness which he had borne with great fortitude throughout. He was held in great esteem by a very wide circle of friends. Mr. Maxey leaves a widow, but no family.

MENNEN.—At Newark, N.J., on February 3, Mr. Gerhard Mennen, from blood-poisoning, the result of a carbuncle on the neck. Mr. Mennen, just previous to his illness, was arranging to visit England for the purpose of introducing his talcum-powder, which is one of the most extensively advertised toilet-lines in the United States.

SAMWAYS.—At The Square, Gillingham, on February 6, Mr. William Samways, chemist and druggist. Aged 76. Mr. Samways, who had resided in Gillingham over fifty years, had built up a very successful business in connection with which for a number of years he held the Postmastership. In 1860 he joined the local corps of Volunteers, and was a most consistent member until he retired, after thirty years' service, with the rank of colour-sergeant. He was a well-known shot, and had won a large number of prizes. He was a member of the School Board, and also had a seat on the governing body of the grammar school.

STAFFORD.—At New York, on January 27, Mr. William B. Stafford, for many years a prominent wholesale druggist in the city. Mr. Stafford was born in Madison, N.Y, and went to New York in 1855, shortly afterwards becoming a partner in the wholesale drug-house of Dudley & Stafford. He retired from active commercial life in 1872, but still continued to look after his business interests. Among the older generation of New York business men he was very well known and universally respected.

STEBBING.—At Gordon Road, Lowestoft, on February 10, Mr. Walter Stebbing, chemist and druggist. Aged 58. Mr. Stebbing was first in business at Norwich, and on leaving there removed to Lowestoft, where for some time he acted as dispenser at Lowestoft Hospital. He had been closely connected with public life having sat in the Town Council for three years for the South Ward, and he had also been a member of the Board of Guardians, but resigned this position when his health began to fail.

STRATTON.—Recently, at Belfast, Mr. William George Stratton, chemist and druggist (Great Britain) and pharmaceutical chemist (Ireland). Mr. Stratton was a gifted young pharmacist who took prizes in our Students' Corner, and at various times communicated papers to this journal and to the British Pharmaceutical Conference. He was for some time an assistant with Mr. E. H. Farr, and passed the Minor examination in 1894. Afterwards he went to Belfast, and qualified as a pharmaceutical chemist in Ireland in 1899. If any of Mr. Stratton's old pharmaceutical friends have a portrait of Mr. Stratton, we would be obliged if they would send it to us on behalf of his sister.

TUFTS.—At Boston, U.S.A., on February 3, Mr. James W. Tufts, President of the American Soda-fountain Company. Aged 66.

VALLANCE.—On February 8, at Fieldhead, Mansfield, Gertrude Daisy, the dearly loved wife of Arthur Clayton Vallance, pharmaceutical chemist, and second daughter of the late Percy Woolley, of Manchester. In her 31st year.

PHARMACISTS AND MORPHINE.—A clerk employed in Paris has summoned two pharmacists on the charge of supplying his wife with morphine, from the abuse of using which she is now seriously ill. The plaintiff claims 1,000f. (400*l*.) as damages, and contends that the morphine was supplied without a doctor's prescription. The Judge ordered an expert inquiry into the facts of the case before giving it consideration. As a matter of fact, morphine is a substance regarding which Paris pharmacists are more than usually careful as to how and to whom they supply it, especially as the supply of the drug without a prescription is illegal.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

The Late William Martindale.

Mrs. W. Martindale and family wish to convey their sincere thanks for the many expressions of sympathy received from kind friends on the occasion of their sad bereavement.

19 Devonshire Street, Portland Place, W., February 9.

Quality of Benzoin.

Sir,—In common with Messrs. Kemp & Son, I was somewhat surprised at the low percentage of soluble matter found in commercial samples of benzoin by Messrs. Southall Brothers & Barclay. Of course much depends on how the samples are taken, most cases having an outside layer which consists largely of bark. I find, however, on looking over the laboratory-books of my firm for the last two years that the average has been 87·5 per cent. of soluble matter. This has been obtained in commercial samples, which fairly represented the bulk of the case in each instance. I note with pleasure that Messrs. Southall reiterate their opinion that 18 per cent. extractive should be the minimum standard for compound tincture of benzoin. That this is not too high a standard is evidenced by the fact that a sample, made from commercial drugs in the official proportions, examined by me this week, yielded 19·3 per cent. extractive.

Yours obediently,

Exeter, February 8. H. Wippell Gadd.

Sir,—Messrs. Southall Brothers & Barclay kindly sent me their laboratory report. The note on benzoin is important, and if correct will account for many chemists being fined under the Sale of Food and Drugs Act for selling Friar's balsam deficient in benzoin. I was in some doubt as to the figures given by them, and resolved to try a sample of good commercial Sumatra benzoin such as I have seen used by good houses. The result obtained on a 2-lb. sample corrresponded with the best results obtained by Messrs. Kemp & Son—viz., 87½ per cent. soluble in S.V.R. Working on 2 lbs. of benzoin it is easy by careful percolation to obtain a product containing 1 part of soluble benzoin in 2 fluid parts. Dry the marc, weigh it, and make the tincture to the required strength by further addition of S.V.R. I obtained 28 oz. of soluble benzoin and barely 4 oz. of residue, chiefly small pieces of wood and sawdust. I note "Squire" says the "tears are soluble 1 in 5." Yours faithfully,

Dartford, February 11. Walter E. Goff.

The Gospel of Hope.

Sir,—Education at the present time is more or less in the mind of every thinking man, and it speaks well for chemists and druggists, as also for pharmaceutical chemists, that they are apparently as keenly interested in the subject as the rest of the community. It is possibly true that the interest of these particular gentlemen is to a degree stimulated by the small number of apprentices available, but even this being so the fact remains that a genuine interest does exist among them. In the consideration of pharmaceutical education it is essential that the views of men who have been through the educational pharmaceutical mill, either official or non-official, should carry due weight. They know what the trade of pharmacy requires, and what the Pharmaceutical Society in its qualifying examination exacts, and some pharmacists, who are also examiners, recognise that fitness to satisfy the short sharp official test is no guarantee of technical ability or business aptitude; indeed, no examination could estimate the latter, and very few the former. Perhaps the crux of the whole matter is that in a quasi-scientific calling such as the trade of "practical pharmacy and dispensing" the business is not entered upon in the proper spirit. There still lingers in the minds of some silly people that pharmacy is a "genteel" trade, that it is a "clean trade," that it will suit "our boy, who is far from strong." The result of these superstitions was that in the past sometimes the pharmaceutical ranks have been recruited from a not altogether virile class. Anyway, the time is now here when with the majority of parents this "genteel" and "clean" superstition is exploded, and the Pharmaceutical Society in raising the standard of its entrance examination has very rightly shut the door against a perennial crop of young gentlemen whose primary education left much to be desired. That a drastic change of the kind would cause inconvenience to those who cannot readily adapt themselves to new conditions is not fortunate, and that they should be perturbed at seeing the supply of cheap labour at once swept away is not wonderful, but inasmuch as the change will be for the ultimate good of the trade, any inconvenience these gentlemen may be put to does not count for very much. In some three, or at most four, years hence the apprentice of to-day will show of what stuff he is made, and, if the right youth has been caught, he in his life conduct will do more for the trade than all the anti-cutting associations and other imperial methods of financial salvation will do in a century. The first thing either this young man or his parents will do when he has elected to take a hand in the pharmaceutical game is to stipulate that during his apprenticeship he shall have time for study—not an hour or an hour and a half grudgingly given on certain mornings in the week, with perhaps some odd and indefinite period in the evening, but proper periods set aside when he must avail himself of the best means of acquiring knowledge for his life career. There is much the master should teach the apprentice, and he is very often anxious to do so; but the master of to-day is the child of very bad conditions, and, although the spirit no doubt is very willing, the particular knowledge required by the examiners is very weak. This being so, the apprentice is too often allowed to put off his studies until he is out of his time. He then gravitates to one of the many men who make pharmaceutical teaching a speciality, and in the end, if his means and endurance last long enough, becomes one of the fortunate 25 per cent.

Under the new order of things it is to be hoped a class of apprentices will be obtained who when they are ready to take up the responsibilities of life for themselves will see hope where others see only despair. To such people there is much in the trade that is attractive. The scientific pharmacist will then no longer be a Utopian dream. Pharmacies in more than name will exist, and the master and assistant will both be equally skilful in cleaning a window and estimating the amount of alkaloid in a complex mixture. The first step towards this end has been taken—no doubt others will follow. The meeting of the Manchester Pharmaceutical Association and kindred societies are all working to the same end, and, although many consider these the darkest days of pharmacy, the right men can see in the near future a bright dawn breaking. Yours faithfully,

H. J. Carson.

7 Great Castle Street, W., February 11.

A few Questions for "Xrayser."

Sir,—Why does "Xrayser" constantly misrepresent the London Chemists' Association and its members? He says: "We look to Mr. Pentney and his associates to send a tremor through the County Council and stagger Parliament." What absurdity, what exaggerated falsification of facts! Yet I do hope the London Association will make representations on behalf of London chemists to the local authorities, and to the Government if necessary, when public servants maladminister the various laws and regulations applying to one trade—making a protest that will prevent frivolous prosecutions. I hope we shall be able to influence the Associations in the provinces to put pressure upon their respective members of Parliament to support the new Bill which I trust will compel every director of a limited drug company to be a registered chemist, thus making the drug-trade for druggists only; also that only qualified chemists be allowed to be employed as doctors' dispensers, thus prohibiting the dispensing by nurses which seems to be so fashionable

Digitized by Google

Does "Xrayser" think isolation is stronger than combination? Does he not think that it requires united action to defeat the new Poisons Bill which is looming in the near future, taking the sale of poisonous sheep-dips, &c, out of the hands of the chemists into those of the ironmonger and others? If associations have been found beneficial in the country, why not in London? Is he not, as I am, astounded that the first city in the world is so far behind the rest of the country in this matter? Surely chemists must get some good by meeting and exchanging ideas as to how to meet the common foe—competition. To speak of the General Purposes Committee as self-created is absolutely untrue, as those at the meeting can testify. Now will "Xrayser," without jeers or sneers, answer these questions or will he be content to throw his stones and run away? If he is a friend of the chemist let him shed his *x* rays into the mystery of how to better his brothers' lot, enlighten their dark gloom, awaken their dull perception by the profound wisdom of his mighty suggestions, which will result in the salvation of all chemists from all evil for all time and earn for himself the gratitude of the living; while chemists yet unborn will bless his name and teach their children to lisp it as a saviour of mankind. In conclusion, allow me to express a hope that chemists will not sit down, fold their hands, and lament their "heavy yoke"—but bestir themselves as men prepared to defend their rights, dearly bought by a long and expensive education. I hope they will join the London Association and help themselves and others out of the miserable condition they so much lament, and assist to keep the Association from passing into everlasting night.

Yours faithfully,
98 Queen's Road, Dalston, N.E. J. C PENTNEY.

Photographic-chemist's Title.

SIR,—In answer to inquiry in the *C. & D.*, January 18, I beg to suggest "photographic chemist," or, if this is objected to as being too long a word, "photochemist"—this might be further abbreviated to "phochemist" (why not? as in olden times some were called alchemists), or even "phomist." By the by, I have omitted "photographemist," but this is rather too long. Yours truly,
A. C. G. (129/4.)

What is Lapis Infernalis?

SIR,—My view of it:—

Yours, &c.,
FRED REYNOLDS.
Leeds, February 1.

SIR,—With reference to Mr. C. C. Bell's inquiry on this point, I find, from a copy of the Edinburgh Pharmacopœia (1744) in my possession, that the first item under "Metallorum Præparationes" is "Causticum Lunare seu Lapis Infernalis." I have not seen any explanation of the origin of the synonym, which is probably, however, like Mars = iron, sal Jovis = stannic chloride, saccharum Saturni = plumbi acetas, of astrological significance, after the analogy of *sub lunâ*. Yours, &c.,
385 Cathcart Road, Glasgow, J. P. GILMOUR.
February 10.

Licoricine.

SIR,—It has been well known to me for some time that the manufacturers of the above preparation place two distinct kinds upon the market, one with, and the other without, chlorodyne, and I have not failed whenever the opportunity occurred to impress this upon my customers. I feel that such action on the part of the manufacturers is most reprehensible, and it deserves to be thoroughly exposed.

Yours faithfully,
MIDLANDER. (145/15.)

Poison-bottles.

SIR,—Referring to the sad poisoning-case that occurred here this week through a poor woman drinking lin aconit. c. belladon. supplied by a doctor in a medicine-bottle (see page 252), I would like to point out that a resolution from the Halifax Chemists' Association was sent to the "Square" a short time ago on this subject. It was brought before the Council, referred to a committee, and buried. Last evening I was talking to a Halifax medical man on the subject, and he made a remark which hit the nail on the head: "Who is going to pay for the poison-bottles?" Really, sir, how long shall patients' lives be in danger for the sake of a penny?

Yours sincerely,
GIBSON DIXON,
President Halifax Chemists' Association.
Corn Market, Halifax.

Dispensing Notes.

A Strong Lotion.

The following prescription is sent by a Manchester correspondent (102/17), who would like the opinions of other dispensers upon it:—

Protargol.	...	...	...	...	℥xviij.
Aquæ ad	...	...	...	...	℥xij.

M. Ft. lotio.

Sig.: ℥j. ex aqua frigidi Oj. utend. ut dictu nocte maneque.

Pepsin in Pill.

SIR,—Please give your opinion as to the best excipient for the following pills:—

Pepsin. porci ...	...	...	...	gr. iv.
Aloes barbad....	...	...	...	gr. j.

Ft. pil. Mitte xxiv.

Yours faithfully,
PEPSIN. (147/35.)

[In this case use powdered pepsin, rubbing it well with 3 gr. of powdered tragacanth and the aloes, then mass with a mixture of equal parts of glycerin and water.]

A Gelatinous-mixture.

SIR,—Recently I had the following to dispense:—

Oxy. scillæ	...	...	...	♏xx.
Syr. tolut.	...	...	...	℥ss.
Fellows' syrup	...	...	...	℥ss.
Pot. citrat.	...	...	...	gr. vij.
Aqua ad	...	...	...	℥j.

In a few days it became stringy, and in a week quite gelatinous. The chemist who dispensed it before sent it out so that it kept perfectly for more than a fortnight. Can you help me to find out why the two mixtures differed in keeping properties? REG. (30/97.)

[The cause of the mixture going thick is viscous fermentation. The oxymel or syrups were perhaps not quite fresh.]

Legal Queries.

135/55 *Physic.*—If the terms of the Pharmacy Act, 1868, were strictly interpreted, the erasure of a man's name from the register would at once stop him carrying on business as a chemist and druggist. It has nothing to do with membership of the Pharmaceutical Society, and the name is restored at any time on payment of 1*l.* 1*s.*

137/34 *An Old Subscriber.*—See our Diary, page 284, for full particulars regarding the sale of medicated wines.

137/62. *Woodshave.*—If the manager of a limited company is a pharmaceutical chemist actually in practice as such he is exempt in England and Wales from serving on all juries whatsoever, but he must see, when the jury-lists are prepared in September of each year, that his name is not there.

149/39. *Remo* in December last received from a customer a postal order for 20*s.* in payment of a bottle of bovril, which he supplied, and gave the change. There was no name on the order, and "Remo" had it cashed at the local post-office next day. The Post-office authorities now demand the return of the 20*s.*, as the order had been stolen. Can he be compelled to refund the money?—[Yes. Postal orders are not negotiable, and those who receive orders under such circumstances as "Remo" take a risk which, however, so rarely brings them into contact with the authorities that it is generally supposed there is no risk at all.]

140/52. *Fairplay.*—If you can prove to a Court that you agreed to admit the charge for the two tins conditionally upon the wholesale house allowing you for them, and can now show that the wholesale house decline, you may certainly refuse to pay the vendor of the business in respect to the valueless tin. It was a mistake on your part to permit under any circumstances the entry in the stock-sheet of the full price for the tins as charged by the wholesale house.

140/74. *Calamine.*—You will fine all particulars in regard to the registration of trade-names or trade-marks in The Chemists' and Druggists' Diary.

139/73. *R. H.*—The individual shareholders of a limited company cannot recover income-tax paid on any dividends they receive, although their income, inclusive of such dividends, is less than 160*l.* a year.

141/43. *Xylem.*—If you take an apprentice on a month's trial you must keep him the whole month. It is not fair to him or his guardians for you to make up your mind at the end of the first week.

143/68 *C. A.*—Your label for Erasmus Wilson's hair-lotion does not render the preparation liable to stamp-duty.

143/51. *Salol.*—All scales and weights found in any premises used for the purpose of trade are liable to inspection and stamping. If the inspector finds any unstamped and incorrect weights on such premises, the owner is liable under the Act.

Information Wanted.

136/34. Maker of "Komo-ammonia."

150/24. Makers of the "Equifex" spray disinfector.

147/65. Who is the maker of Mackenzie's throat-lamp?

139/50. Where can ext. echinaceæ angust. be obtained?

147/67. Address of the makers of Le Clere's pills and other preparations.

141/70. What is "Blondine comp."—an inhalation for asthma—composed of?

149/29. Who puts up the "Ideal" perfume which retails at 7*s.* 6*d* and 15*s.* a bottle?

146/27. Present address of makers or vendors of Sironpette, a volatile disinfectant put up in bottles shaped like a hand-grenade?

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

140/27. *Ipecac.* sends us a "voluminous" deposit from 2 pints of Vin. Ipecacuanhæ, B.P., asking if it contains any alkaloid. The deposit was more voluminous than ponderous, as it weighed when dried less than 14 gr. (0·915 gramme), and the alkaloid in it was trifling—viz, 2 milligrammes. If all precipitates from vin. ipecac are like this, the deposition may be considered negligible so far as its influence on the activity of the preparation is concerned.

140/38 *Three Spires.*—You will get some hints on caricature drawing in the "Life of Charles Keene." Do you expect to become a caricaturist by reading up the subject?

143/37. *F. C. H.*—**Obesity-remedies.**—For internal use the fluid extract of fucus vesiculosus is given in doses of from 1 dr. to 2 dr. before meals. In some cases the effect is very marked, but in others it takes several weeks to effect an appreciable diminution in weight. As an external remedy lin. potass. iodid. c. saponе rubbed gently in assists the internal treatment.

141/38. *Barnardo.*—If you do not want the silver-hair dye solution of a blue colour omit the copper sulphate. We have not heard of agricultural treacle as used in Texas.

144/44. *Capillus.*—The latest information as to **Removing Superfluous Hair** was given in the *C. & D.*, December 28, 1901, page 1048. The electrolysis method was given in the *C. & D.*, July 15, 1899, page 97.

141/62. *Opium.*—(1) **Camphor Ice.**—See *C. & D.*, December 21, 1901, page 1009. (2) **Black Oils:**—

Oil of turpentine	...	...	...	℥xx.
Linseed oil	...	...	...	℥lx.
Sulphuric acid	...	...	...	℥ij.

Mix the oils, add the acid gradually, stirring well; then add—

Barbadoes tar	...	...	...	℥iij.

Mix well, set aside for ten days, and decant the clear portion.

143/13. *Anti.*—We are not acquainted with a method of purifying butter with sodium silicate, and question if such a method exists.

141/51. *XL.*—Your inquiry was replied to in the *C. & D.*, September 21, 1901, page 514.

141/10. *Leo.*—Water-glass is silicate of soda or potash, and can be had from any wholesale house. The thick syrupy liquid as received is diluted with nine times its bulk of water for use in preserving eggs.

19/17. *W. B.*—Your inquiry should be addressed to the Proprietary Articles Trade Association.

132/38. *Sq.*—**Stocktaking.**—The article you refer to appeared in the *C. & D.*, January 4, 1896, page 18.

121/69. *Sterlin.*—We do not know the composition of Tucker's asthma-remedy.

122/28. *C.*—**Sesquicarbonate of Soda.**—The kind you refer to is chiefly used in this country for wool-washing. It has the formula $Na_2CO_3.NaHCO_3.2H_2O$, and is made by preparing a solution containing the proportions shown in the formula, and allowing it to crystallise not below 35° C., keeping it agitated all the time. This salt has the advantage of being neither efflorescent nor deliquescent, and yet readily soluble in water.

130/30. *W. R.*—The quinine sulphate which is official is the normal sulphate or di-quinine sulphate, hence the name quinine disulphate. The acid sulphate is formed when quinine sulphate is dissolved in water by the aid of sulphuric acid. The latter salt is soluble in water to the extent of 1 in 12, whereas quinine sulphate is but slightly soluble (about 1 in 740).

Coming Events.

Friday, February 14.

Mr. George S. Valentine Wills celebrates his birthday this year (February 14) with a smoking concert to the Westminster College students in the Crown Room of the Holborn Restaurant, at 7.30 for 8 P.M. Former students are invited.

The Annual Concert of the Wholesale Chemists' and Druggists' Cricket League will be held in the Holborn Town Hall this evening at 8 o'clock, when a good programme will be submitted. Those who have not tickets may pay at the door.

Wednesday, February 19.

Western Chemists' Association, Westbourne Restaurant, Paddington, W., at 8 P.M.

Chemical Society, Burlington House, Piccadilly, W., at 5.30 P.M., the following papers will be communicated:—"Enzyme action," by Mr. A. J. Brown; "On the Velocity of Hydrolysis of Starch by Diastase: with Some Remarks on Enzyme Action," by Messrs. H. T. Brown and T. A. Glendinning; "Polymerisation Products from Diazoacetic Ester," by Mr. O Silberrad; "Condensation of Phenols with Esters of Unsaturated Acids, part VII.," by Messrs. S. Ruhemann and H E. Stapleton; "The Union of Hydrogen and Oxygen," by Mr. H. B. Baker.

Three Town's Junior Chemists' Association. The first annual dinner will be held at Day's Restaurant, Devonport, at 8.15 P.M., Mr. Norman Harris in the chair. Tickets may be obtained from Mr. E. Lovatt (Hon. Sec.), 17 Trafalgar Place, Stoke.

Young Chemists' Association, Newcastle-on-Tyne, at 8.15 P.M., in the Working Men's Club, Gallowgate, to draw up fixed rules.

Thursday, February 20.

Chemists' Assistants' Association, 73 Newman Street, W., at 9 P.M. Musical and social evening.

Friday, February 21.

Pharmaceutical Society of Great Britain (North British Branch), York Place, Edinburgh. Meeting and conference of registered chemists at 11.15 A.M., when Mr. J. F. Tocher (Peterhead) will explain the Carnegie-trust scheme, after which discussion is invited. An adjournment will take place at 12 for luncheon.

Business Changes.

MR. W. F. NOVIS has opened a drug-store at 406 Caledonian Road, N.

MR. LEONARD WHELAN, chemist and druggist, has started business at 4 College Terrace, The Grange, Guernsey.

MR. D. W. A. DESMOND, chemist and druggist, Custom House, E, is opening a branch at 85 Katherine Road, East Ham, E.

MESSRS. SWIRE & Co., chemists, have opened a business at 3 Murton Terrace, Gosforth, Newcastle-on-Tyne. [Corrected announcement.]

MR. VICTOR J. WOOLLS, chemist and druggist, Margate, has opened a branch pharmacy at the Old Post Office, Ethelbert Square, Westgate-on-Sea.

MESSRS. J. CLEMPSON & F. A. BURGESS have taken over the businesses of the late Mr. Gristock, 42 South Street, Manchester Square, and 97 High Street, Marylebone, W., and will be carried on as Gristock & Co.

MESSRS. CARTER WHITE & Co., 73 Freeman Street, Grimsby, have recently had alterations made to their premises, the interior window fittings and wall-cases being supplied by Messrs. Evans, Lescher & Webb, 60 Bartholomew Close, London.

MR. R C. TREATT notifies by circular that the partnership hitherto existing between Mr. Percy Samuelson and himself was dissolved on February 5 by mutual agreement. Mr. Treatt will continue to carry on the business "without any other change," under the style of "R. C. Treatt & Co.," at Dunstan House, Mincing Lane, E.C. Mr. Samuelson has commenced business on his own account as an essential-oil merchant, under the style of "P. Samuelson & Co.," at 27 Mincing Lane, E.C.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: February 13.

THE market tone in drugs and chemicals continues quiet, with few changes of importance. A small cinchona auction was held this week, at which the unit was unchanged. Quinine has ruled quiet throughout, although the market is firm. Opium is still tending downwards owing to the prospects of a good crop this year, and morphine keeps on the easy side. Menthol is a trifle easier, and there are lower offers of thymol. In essential oils lemon is cheaper, and star-aniseed oil is obtainable at last week's prices; peppermint is dull. Higher rates are asked for insect-flowers from Trieste, and damiana-leaves also come higher from New York. Cardamom-seeds have sold in large quantities at the recent low prices. Cream of tartar is easier, and tartaric and citric acids are dull. Phenacetin has shown more demand, and cod-liver oil is dearer. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Damiana-leaves	Oil, castor	Cream of tartar	Canary-seed (c.i.f.)
Insect-flowers	Oil, geranium (Bourbon)	Menthol	Ginger (Cochin)
Oil, cod-liver	Saffron		Oil, lemon
Oil, linseed			Pimento
Sarsaparilla (Mexican)			Thymol

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from February 6 to 12, inclusive:—Acid, acetic, 23½ tons, 52 balloons; acid, boric (@ Hamburg) 8, (Ital.) 9; acid, carbolic, 40; acid, citric (@ Bordeaux), 14; acid, lactic (@ Boston), 20 pkgs.; acid, oxalic (@ Rotterdam), 15 cks.; acid, tartaric (@ Rotterdam) 20, (@ Amsterdam) 8, (@ Bordeaux) 20, (@ Marseilles) 10; aloes (@ Mossel Bay), 31; annatto seed (@ Ceylon), 4; antimony (@ Hamburg), 286; antimony regulus (@ Barcelona), 84; areca, 18; argols (@ Naples) 75 casks, (@ Barcelona) 109, (@ Rotterdam) 63; arrowroot (@ St. V.), 1,329 brls. 53 tins; arsenic (@ Antwerp) 60, (@ Hamburg) 10; bleaching-powder (@ Antwerp), 49; bromine, 137 cs.; buchu, 12; camphor (@ Hamburg), 40 cs.; camphor oil (@ Hamburg), 20 cs.; canary-seed, 50; cardamoms, 216; caraway-seed, 150; castor oil (@ Antwerp), 164; chamomiles, 6; chillies (Jap.), 92; chloral hydrate, 13; cinchona (@ Calicut), 209, (@ Ceylon), 32; cinnamon (@ Ceylon), 142; cinnamon oil, 6; citrate of lime (@ Messina), 70 cks.; citronella oil (@ Rotterdam), 20 cs.; cloves (@ Penang), 28; cocculus indicus, 37; cod-liver oil, 22 cs.; cream of tartar (@ Bordeaux) 143, (Span.) 20, (@ Genoa) 4; croton-seed, 35; cumin-seed (Maltese), 30; cuttle-fish bone (@ St.-Nazaire), 16; dragon's-blood, 2; drugs (@ Rotterdam) 10; essential oils (@ Messina) 223 pkgs., (@ Palermo), 3, (@ Hamburg), 50 cs.; eucalyptus oil (@ Australia), 123; fennel-seed (@ Salonica), 931; gingelly oil, 20; ginger (@ Cochin) 488, (@ Jamaica) 34; glycerin, 80; gum thus, 100; honey (@ N.Y.), 10; liquorice (@ Naples), 223 pkgs.; liquorice-paste (@ Smyrna), 100 cs.; liquorice-juice (@ Bari), 32 cs.; musk, 1 cs.; nux vomica (@ Madras), 270 bags; oil, aniseed, 50 cs.; olive oil (@ Marseilles) 90 cks. 592 cs. 2 brls, (@ Bari) 56 cks. 30 cs., (@ Corfu) 63 cks., (@ Leghorn) 148 pps., (@ Bordeaux) 285 pkgs. 662 cs., (@ Seville) 10 brls.; opium (@ Constantinople) 66 cs., (@ Smyrna) 20 cs., (@ Salonica) 16 cs., (@ Seville) 198 brls.; orris (@ Leghorn), 13; pepper (at Singapore) 1,210, (@ Penang) 808, (@ Calcutta) 683, (@ W.C.A.) 40; peppermint oil (Jap.), 50

in tr.; petrolatum, 6; pimento 480 bags, (@ Bordeaux) 75; potash prussiate, 7; quicksilver (Ital.), 50; quinine sulphate (@ Amsterdam), 105 cs.; roots (@ Marseilles) 47 bls. 5 cs., (@ New York 10; saccharin (@ Rotterdam), 6; sal ammoniac, 13; sandalwood oil (@ Amst.), 12 cs.; shellac (@ Rotterdam) 65, (@ Calcutta) 655; button lac, 453; strophanthus, 52; squills, 13; sulphur (@ Catania), 564 cks. 100 brls. 652 bgs.; sulphur oil (@ Palermo), 55; tamarinds (@ Leghorn), 44 cks.; tonka-beans (Para), 2; turmeric (@ Bombay), 321; wax, bees' (Span.) 39, (Ital.) 21; wax, ceresin, 25; wine lees (@ Barcelona), 794 bgs.; yellow berries, 411.

Heavy Chemicals.

There is little of particular importance or of change to be reported regarding the general condition of the heavy-chemical market. At all the main centres a quietly steady demand on home account, with some increase in the export branch, and values ruling steadily firm and mostly unchanged, remain as the principal features.

Alkali Produce.—General demand for most main products is slightly on the increase, and this is specially noticeable as regards bleaching powder and caustic soda, which for a time have been flat. Ammonia alkali maintains a steady position. Soda crystals firm and in good request. Saltcake, too, is in better demand. Chlorates and prussiates remain quiet.

Brown Acetate of Lime is in steady request, and although unchanged at 5*l.* 5*s.* to 5*l.* 7*s.* 6*d.* per ton, is firm thereat, and tendency is rather towards advancement.

Benzols are quiet and lower; 90 per cent. at 10*d.* and 50 per cent. at 8½*d.* to 9*d.*

Green Copperas stands unchanged and firm at late rates, and continues to move off well. Best Lancashire makes, 42*s.* 6*d.* to 45*s.* per ton, f.o.b. Liverpool; Welsh, 13*s.* 6*d.* to 15*s.* per ton, free on rails, in bulk.

Tin Crystals quiet, and lower at 7¼*d.* to 7½*d.* per lb.

Calcium Chloride in steady request at unchanged rates of 60*s.* to 65*s.* per ton.

Bichromates of Potash and Soda keep very quiet, and show no improvement in value. Potash, English and Scotch deliveries, 3*d.* per lb., less 4 per cent. Glasgow. Export price is ¼*d.* per lb. less and net. Soda, for English and Scotch deliveries, 2¼*d.* per lb, less 4 per cent. Glasgow; for export ¼*d.* per lb. less and net.

Liverpool Drug Market.

Liverpool, February 12

Castor Oil.—There is no quotable change in the price of good seconds Calcutta, which still remains at 3 3/16*d.* to 3¼*d.* per lb., and first-pressure French, 2 15/16*d.* to 3*d.*; second-pressure, 2⅝*d.* Business has been done at these figures, but only in retail quantities. For forward positions the Calcutta market seems, if anything, a little easier, and the same remark applies to French.

Quillaia-bark.—Further sales are reported at 12*l.* 10*s.* to 12*l.* 17*s.* 6*d.* per ton.

Grains of Paradise.—Fourteen bags just landed were offered at auction, but no bids were forthcoming. Owners say that their idea is 65*s.* per cwt.

Beeswax.—Chilian is still obtainable at 7*l.* 5*s.* to 7*l.* 15*s.* per cwt., but the quantity available is very small.

Sulphate of Copper continues to move up, and makers are now asking 20*l.* 5*s.* to 20*l.* 10*s.* per ton.

Acacia Sorts.—Further arrivals of Soudan descriptions have taken place, and sales are reported of 10 serons hard amber sorts at 34*s.*, and 10 serons soft at 42*s.* per cwt.

African Ginger.—The new crop is beginning to arrive, and 30*s.* to 32*s.* per cwt is the price quoted for good quality.

Arsenic.—Powdered white is firm at 15*l.* per ton net.

Honey.—In Chilian honey 75 barrels Pile X have been sold at 28*s.* to 30*s.* per cwt., and small lots of Pile I at 23*s.* 6*d.* to 24*s.* Low grades have also met with a fair demand, business including 75 barrels Peruvian and 30 barrels no Pile Chilian at 16*s.* per cwt.

Spermaceti.—A small business has been done in refined Chilian at 1*s.* 1*d.* per lb., being firmer.

Wax, Carnauba.—In fair inquiry, but business is only moderate, including 49 bags Ceara and Maranham grey at 53*s.* to 54*s.*, and 45 bags yellow at 66*s.* 6*d.* to 71*s.* per cwt.

German Drug Market.

Hamburg, February 11.

Our drug-market shows rather a better tone, with more orders for consumption.

Agar-agar for spot delivery is rather scarce at 370m. to 360m. per 100 kilos., while forward delivery is quoted 335m. to 330m. per 100 kilos.

Camphor (Refined) is quiet and unchanged.

Condurango is very firmly held and in good demand, holders asking 90m. per 100 kilos.

Cumin-seed is steady at 51m. to 52m. per 100 kilos.

Cevadilla-seed is dearer, to-day's quotation being 75m. per 100 kilos.

Ergot.—Spanish is quoted 320m. to 330m. and Russian 310m. to 330m. per 100 kilos. Some orders from America have come in.

Ipecacuanha is quiet and lower, owing to the decline in London. Rio is quoted 22½m. and Cartagena 11m. per kilo.

Menthol is quiet, with only a small demand. Spot is 30m. and forward 29m per kilo.

Senega.—Western is reported lower from abroad; there are forward offers at 470m. per 100 kilos., c.i.f.

Spermaceti.—American is firm at 235m. per 100 kilos., spot.

Shellac is very firm, and stocks here are not very large. TN is quoted 255m. per 100 kilos.

Worm-seed shows a fair business and a very firm market; brown seed is held at 62m. to 63m. and green seed at 80m. per 100 kilos.

Oils (Fixed).—Cod-liver is very firm at 70m. per barrel for non-congealing oil. Linseed has advanced again. Palm is more freely offered. Castor is steady, but demand remains very small.

Oils (Essential) are all practically unchanged.

Cablegrams.

Smyrna, February 12.30 p.m.:—The sales for the week ending Wednesday amount to 200 cases, at from 7*s* 8*d.* to 8*s.* per lb. Market is steady.

* * * *

Hamburg, February 13:—Condurango-bark is firmly held, and worm-seed is very scarce. Refined camphor is unchanged.

* * * *

New York, February 13:—An active business is in progress. Opium is lower at $2.97 per lb. Buchu-leaves are dull of sale at 18*c.* per lb. for round. Jalap is neglected at 12c. per lb. American bleached bees'-wax is firmer at 30*c.*, and golden seal is active at 50c. Ergot is easy at 39c. Thymol has declined to $2.72 per lb, and cocoa-butter at 31c. is easy.

Acid, Tartaric, has a dull tone, at from 11¼*d.* to 11½*d.* per lb. for English and 10½*d.* for foreign.

Arrowroot.—At auction on Wednesday fine St. Vincents was bought in at 2½*d*, and good at 1½*d.* per lb.

Balsam Peru.—Genuine thick balsam is very scarce, both here and on the Continent, and prices will probably be higher.

Canary Seed is lower to arrive, Turkish having been sold at 35*s.* per quarter, c.i.f. terms; but spot price is unchanged at 38*s.*, stocks being very small.

Cardamoms.—A considerable business, amounting to several thousand pounds, has been done in decorticated seed this week, principally for export, at from 1*s.* 9*d.* per lb. upwards.

Cinchona.—At the auctions on Tuesday the small supply of 1,399 packages were offered, and everything was sold at and since the sale at steady prices, the unit being 1½*d.* per lb.

The following table shows the quantities of bark offered and sold:—

	Packages offered		Packages sold.
South American cinchona ...	572	of which	572
East Indian cinchona	552	,,	402
Ceylon cinchona	168	,,	168
Java cinchona	107	,,	30
	1,399		1,172

The following were the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
Agents for the American factories	60,250
Agents for the Brunswick factory	53,102
Agents for the Imperial factory	31,622
Agents for the Mannheim and Amsterdam factories	20,770
Agents for the Frankfort and Stuttgart factories	12,482
Messrs. Howards & Sons	2,236
Druggists, &c.	15,170
Total quantity sold	195,632
Bought in or withdrawn	55,914
Total quantity offered	251,546

The following prices were paid:—

South American.—Bolivian cultivated Calisaya, quill, 6*d.* to 11*d.* per lb.; and broken, 4½*d.* to 7*d.*

Digitized by Google

JAVA.—Ledgeriana, stem-chips, 11⅝*d.* to 11¾*d.*; stem and branch ditto, 9*d.* to 10*d.* Succirubra root, 4*d.* to 6½*d.* per lb.

CEYLON.—Officinalis, chips and shavings, 3¾*d.*; stem and chips, 3½*d.* Succirubra chips and shavings, 3⅝*d.* to 7⅛*d.*; broken quill and chips, 9/11*d.* Ledgeriana, chips, 6½*d.*; chips and shavings, 5¾*d.*; stem and chips, 6¾*d.*; broken quill and chips, 7½*d.* per lb.

EAST INDIAN.—Ledgeriana, bold root, 7⅜*d.* to 7½*d.* Succirubra, chips and shavings, 2¼*d.* to 2⅝*d.*; stem and chips, 3*d.* to 3½*d.* Officinalis, twigs and small, 2⅜*d.* to 4⅞*d.*; ordinary dark chips, 4*d.* to 4¾*d.*; fair to good, 5½*d.* to 6*d.*; renewed stem chips and shavings, 6½*d.* to 7⅛*d.* per lb.

The auction to be held at Amsterdam on February 27 will consist of 8,331 bales and 136 cases, weighing 755,959 kilos.

CIVET.—The value of the civet exported from Zaila (Somali Coast) during the year ended March 31, 1901, amounted to 139,176rs., showing an increase of 114,351rs. over the figures of the previous year. The British Consul at Zaila states that Abyssinian merchants frequently export civet as an easy way of sending their money to the Coast. It is free of export-duty.

CREAM OF TARTAR is quiet and easier, best white crystals being quoted at 70*s.* per cwt.; powder, 72*s.*; 98-per-cent. powder, 73*s.* 6*d.* to 75*s.*; and 95-per-cent., 72*s.* to 73*s.*, according to holder.

DAMIANA-LEAVES are quoted higher from New York, and 6*d.* per lb., c.i.f., is now wanted.

DIGITALIS-LEAVES are offered at 36*s.* c.i.f.

FENNEL-SEED is quoted 19*s.* per cwt., c.i.f.

FENUGREEK-SEED.—The exports from Tangier in 1900 amounted to 3,182 cwt., valued at 795*l.*

GALLS.—In Chinese galls 51*s.* 6*d.* per cwt., c.i.f., has been paid for December shipment.

GAMBIER.—Small sales of fine pale have been made at 37*s.* per cwt., spot.

GELATIN.—German leaf for photographic purposes is quoted 1*s.* 2*d.* to 1*s.* 5*d.* per lb.

GENTIAN is very firm and scarce at 16*s.* to 17*s.* per cwt., c.i.f.

GLYCERIN is a strong market, and in some instances makers ask higher prices.

GUARANA is quoted 3*s.* 6*d.* per lb., spot.

HENBANE-LEAVES are offered at from 33*s.* to 43*s.* per cwt., c.i.f.

HONEY.—Practically all the cheap parcels of Jamaica have been cleared off the market for the Continent, and several holders ask higher rates.

INSECT-FLOWERS.—The market in Trieste is dearer in consequence of a limited stock. Demand is regular. The stocks in Trieste at the end of January, 1902, amounted to 137,000 kilos, against 160,400 kilos. at the end of December, 1901. The receipts in January were 137,000 kilos. and the deliveries 40,900 kilos. The following are the current quotations, f.o.b., Trieste:—"Open" flowers, 68*s.* to 74*s.*; half-open, 88*s.* to 110*s.*; closed, 116*s.* to 127*s.*; and wild, 131*s.* to 148*s.* per cwt.

LITHIA CITRATE.—The reduction last week applied to *citrate*, not carbonate, as stated.

MAIZE-STARCH powder is very firm, in consequence of the shortage in the American maize-crop; 12*s.* per cwt., ex wharf, is quoted.

MENTHOL.—The market is easier inclined, it being possible to buy half-case lots at 14*s.* per lb., spot, but no business is reported. There is some inquiry for parcels near at hand with sellers at 13*s.*, and buyers at 12*s.* 6*d.*, c.i.f.

MUSK.—There has been an arrival of about 250 oz. from Shanghai, consisting of Pile I. and Pile III. unsorted, so that the market is easier inclined.

OIL, ANISE, STAR is obtainable at 4*s.* 4½*d.* per lb, spot, but in one direction 4*s.* 6*d.* to 4*s.* 9*d.* is quoted. Business has been done on the Continent at less than the foregoing figures.

OIL, CASTOR.—Medicinal Italian has been in fair demand, and market is inclined to be firmer; 35*s.* 6*d* to 36*s.* per cwt. is an importer's quotation. French is nominal at 33*s.*, in cases. Hull make is also firmer, at 29*l.* 15*s.* per ton in barrels, and 3 9/16*d.* per lb. in cases, for medicinal in small quantities for February delivery, ex wharf London. A Calcutta report, dated January 16, states that during the preceding fortnight demand has been principally from the Cape and U.K., but as production and stocks have increased a gradual but steady decline has set in. Business for January-February delivery has been put through at 10r. to 3r. per B. maund for Liverpool seconds, in cases, but less would now buy.

OIL, CITRONELLA, is unchanged, at 9½*d.* to 10*d.* per lb. for commercial Ceylon oil.

OIL, COD-LIVER.—Our Bergen correspondent writes on February 8 that very little progress has been made in regard to the new fishing. Official reports from Lofoten fully confirm the earlier private information that the livers are very poor and lean. The prospects for the fishery, however, are still considered fair. The quotation is unaltered at 71*s.* per barrel, f.o.b. Bergen. The exports from Bergen to date amount to 1,002 barrels, against 638½ barrels at the same time last year. More interest has been shown in new oil this week in London, and agents' quotations vary from 76*s.*, c.i.f., up to 90*s.*, according to brand. It is said that 20 casks of new oil have been sold at 80*s.* net, and another agent reports business at 90*s.* per barrel, c.i.f.

OIL, GERANIUM.—Genuine Bourbon oil is firmer, producers in the island having advanced their prices 2*f.* per kilo. On the spot, 18*s.* 6*d.* per lb is quoted.

OIL, LEMON.—Prices come easier from Messina, well-known brands being quoted 2*s.* 6*d.* to 2*s.* 8*d.* per lb., c.i.f.

OIL, LEMONGRASS.—Quiet but steady, with small sales at 7⅛*d.* per oz., spot.

OIL, PEPPERMINT.—Quiet generally. JBH "pure" has been sold at 7*s.* 3*d* per lb., being unchanged. HGH is slow of sale, at 9*s.* to 9*s.* 3*d.*

OIL, SANDALWOOD.—Guaranteed B.P. quality is quoted by one drawer at 10*s.* 6*d.* per lb. for quantity.

OIL, SASSAFRAS, is quoted 1*s.* 7*d.* to 1*s.* 8½*d.* per lb, according to quality.

OIL, SPEARMINT, is quoted 5*s.* 6*d.* per lb., net, to 5*s.* 9*d.*, according to brand.

OPIUM.—The London market remains easy, Persian, on the spot, being quoted 10*s.* 3*d.* to 10*s.* 6*d.* per lb., and to arrive, a fair quantity has been placed recently.

SMYRNA, January 31.—The market here is unchanged, sales for the week amounting to 40 cases, including 16 cases current Bogaditz at the equivalent of 8*s.* 6*d.*, 7 cases current Yerli at 8*s.* 3*d.*, 12 cases new and old choice Karahissar at 8*s.* 2*d.* to 8*s.* 4*d.* per lb., c.i.f. The arrivals to date amount to 3,035 cases, against 3,029 cases at the same time last year. The prospects for the crop this year still remain good. The stock in Smyrna is now about 2,662 cases, against 2,313 at the same date last year, and in Constantinople 498 cases, against 528 cases.

PHENACETIN.—A firmer feeling has developed, business having been done at 4*s.* 3*d.* per lb. for contract quantities.

QUININE.—Although business has been very quiet in the absence of sellers at current prices, there is a firmer tone about, and on Wednesday a small sale of German sulphate in bulk was made at from 1*s.* 1¾*d.* to 1*s.* 1⅞*d.* per oz. for June delivery, but to-day the inside figure has been accepted.

SAFFRON.—Reports from Spain state that the market is quiet but firm. There are no medium and low grades on offer at present, growers preferring to hold for higher prices. Fair to good current quality is quoted 21*s.* 6*d.* to 22*s.* 6*d.* per lb., f.o.b., in large cases. In London 23*s.* 6*d.* to 24*s.* 6*d.* per lb., net, is quoted for genuine Valencia, being 1*s.* dearer.

SANDALWOOD.—The exports from Western Australia for the first nine months of 1901 amounted in value to 46,000*l.*, compared with 39,000*l.* for the twelve months of 1900, and 30,000*l.* in 1899.

SARSAPARILLA.—For Mexican 4*d.* per lb., c.i.f., is now quoted for not less than five bales.

SASSAFRAS-WOOD.—A parcel is offered at 10*s.* per cwt., net.

SENEGA.—Reports from the United States intimate that the stocks there are well held, and that 2*s* 6*d.* per lb. is asked. Here there has been a fair inquiry this week, but no business is reported, and although consumers' stocks are getting low,

Digitized by Google

buyers are deferring their purchases in the hope of lower prices. A small lot of 10 bales is offered at 2*s*. 3*d*., and when these have been cleared 2*s*. 6*d* may possibly be asked.

SERPENTARY.—One holder quotes 1*s* 8*d*. per lb., net, spot.

SHELLAC.—There has been a fair spot demand this week on a basis of 119*s*. to 121*s*. per cwt. for fair second orange TN. AC Garnet is scarce at 122*s*., and good to fine Button has been sold at 120*s* to 125*s*. Futures have been quiet, the sales including February 121*s*., March 123*s*. 6*d*., May 126*s*. to 125*s*., and June 126*s*. 6*d* per cwt. At the public sale on Tuesday 304 cases were offered, of which 214 cases second orange were withdrawn, being held for higher prices. Twelve cases OOC matted Garnet sold at 105*s*. per cwt.

STICKLAC.—Siam for arrival is quoted 60*s*. per cwt., c.i.f., delivered weights.

SUGAR OF MILK.—Italian powder is quoted by makers at 39*s*. per cwt.

SPICES.—Business has continued to be very quiet, and prices generally are easier. At auction on Wednesday Cochin *Ginger* was lower, dull small washed rough being sold at 44*s*. 6*d*. per cwt., while fair quality was bought in at 48*s* to 50*s*, Calicut brown rough at 47*s*, and good "C" cut at 58*s* per cwt. Jamaica partly sold at steady rates, small dull at 39*s*. to 40*s*, and middling washed at 43*s*. per cwt. Japan is firm on the spot at 42*s*, but easier to arrive at 29*s*, c.i.f. terms. Zanzibar *Cloves* have been weak, and on Wednesday March-May delivery sold at 3 13/16*d*. per lb. Fair quality was bought in at 3 7/8*d*., and dull at 3 3/4*d*. per lb. *Clove-stems* were bought in at 1 5/8*d* per lb Japan *Chillies* were bought in, but good red picked Nyassaland sold at 53*s*. 6*d*. per cwt. *Pimento* lower; ordinary quality sold at 2 1/4*d*., and good at 3*d*. per lb. *China-cinnamon* was bought in at 30*s*. to 35*s* per cwt *Pepper* quiet, but steady for black. Greyish Alleppy sold at 5 3/4*d*. per lb. Heavy Penang was bought in at 6 1/4*d*., and Singapore at 6*d*. per lb. White also quiet at late quotations.

SULPHUR.—A report from Messina, dated January 31, states that the statistical position is getting worse. Arrivals from the mines, which during November had stopped owing to the floods, resumed their normal course in December and January, and stocks increased considerably, the total at the end of December being 100,000 tons in excess of the previous year. It has been asserted that the production could not increase owing to the difficulty of deepening the mines, but this, it seems, is not quite the case. Anyhow, a considerable diminution in exports is undeniable. The consumption of Sicilian brimstone during last year was reduced by one-fifth —from about 550,000 tons to about 450,000 tons. A collapse in prices is inevitable, even before the expiration of the remaining four years of the Anglo-Sicilian contract. The monopoly continues to refuse any concession in price. The current quotations are:—Best unmixed seconds, 85*s*.; thirds, 74*s* 9*d* ; current thirds, 71*s* ; refined block sulphur (100 per cent.), 86*s* 6*d*. per ton of 13 Sic. cantar, f.o.b.; refined roll sulphur, in 3 cwt. casks, 95*s*. 6*d*.; sublime flowers, pure in bags, 103*s* 3*d*.; ditto, current in bags, 94*s*. 3*d*. per ton of 20 cwt., f.o.b

THYMOL is about 6*d*. lower, with sellers at 8*s*. 6*d*. per lb. spot, and 7*s* 6*d*. for April shipment.

TURMERIC.—Fair bright Madras finger has been sold privately at 20*s* per cwt., mixed bulbs and finger at 18*s*. to 19*s*., and good whole bulbs at 15*s*. Bengal is offered at 15*s*. 6*d*. to 16*s*. 6*d*. At the drysaltery-auctions 287 bags were bought in.

WAX, JAPANESE.—Small sales of good quality are reported at 35*s*. per cwt.

THE Kildare County Infirmary is in need of an apothecary who will be paid the munificent salary of 12*l*. per annum. Mr. John Heffernan, of Kildare, is the one to apply to for this unique appointment. There are also wanted two ward-maids at the same salary "with rations"; one cook, 14*l*. per annum with rations; and one porter, who will receive as much as the apothecary, and rations sufficient, no doubt, to share with that lean gentleman should he not join forces with the cook. Kildare is well named.

Direct Steamship-Service between Norway and London.

The Norwegian "Bergenski-Nordenfeldski" Steamship Company intend to start running cargo boats fortnightly between Trondheim and London, calling at Christiansund N., Aalesund, Bergen, and Stavanger, beginning this month. It will be interesting to learn whether they will be able to divert any of the Norwegian cod-liver-oil business, the bulk of which is received *viâ* Hull.

Californian Quicksilver.

The total receipts of quicksilver at San Francisco for 1901 amounted to 19,931 flasks, against 21,039 in 1900, and 24,021 in 1899. These receipts do not give the full output of the Californian mines, as there is a good deal of quicksilver shipped from the mines direct to buyers. Exports from San Francisco by water for 1901 were as follows: Siberia, 2; Korea, 12; Japan, 24; South America, 20; Central America, 1,008; Mexico, 3,686; British Columbia, 32; New York, 90; total, 4,874 flasks, against 7,299 in the year 1900 No quicksilver was sent to China last year, although that country took 1,000 flasks in 1900 and 3,000 flasks in 1899. There was also a decrease in shipments to Mexico.

Adulterated Olive Oil.

The United States Consul-General at Coburg reports that Professor Goldburg, in an article on the adulteration of table or salad oils, proves very conclusively that these products are being chemically imitated in a very perfect manner by the use of odourless and tasteless products of naphtha. From a notice issued by the Board of Health of Moscow, he finds that out of 101 samples of goods sold as olive oil, examined by its chemists as to purity, healthfulness, &c., only 19 were pure olive oil, 10 were mixed more or less with other vegetable products such as cottonseed oil, sunflower-seed oil, &c., and 72 samples consisted (though labelled and sold as olive oil), of mineral products entirely, the principal ingredient being made from naphtha products of over 300°.

German Coal-tar Dyes.

According to the annual report for 1900 of the Union for guarding the interests of the chemical industry in Germany, the average dividend of the coal-tar dye industry was about 2 per cent. below that of the preceding year. The unfavourable circumstances from which the textile industry—the principal consumer of tar colours—had to suffer, rendered the sale very difficult. The endeavours of the tar-colour industry to counteract this difficulty by extending the scope of their operations became consequently most intense. This was done by the introduction of numerous new dye stuffs suitable for special purposes of varied kinds. There has been a still further decline in the consumption of vegetable dyes in favour of the tar colours, especially synthetic indigo. To what extent the employment of this article has progressed is shown by the fact that its export in 1900 rose by 100,000m., while at the same time the imports into Germany of natural indigo decreased by 4,300,000m.

Ceylon Exports in 1901.

With further reference to the figures published in the *C. & D.* February 1, page 211, it will be noticed that the exports of cardamoms increased by 22,249 lbs., probably owing to the fact that more land came into bearing last year; the Indian exports also increased by 26,407 lbs. Over one-fifth of the entire crop appears to have been shipped from Ceylon in December, so that owners would appear to have been holding back for better prices. As regards cinnamon the returns show the largest export of quills yet recorded, notwithstanding which prices fluctuated very little and remain at a high average: 54c. per lb. appears to be the average price realised for usual assortment quills in Colombo. Germany is now the chief buyer both of quills and chips, the United Kingdom only taking second place, while Spain and the United States took large supplies compared with previous years. The continued increase in direct business with foreign countries is a feature in connection with cinnamon. The export of chips was smaller, but prices were good, averaging from 70r. to 72.50r. per candy. Most of the cinnamon shown as exported to America goes eastward to San Francisco, which is now becoming the port of distribution for Mexico and other countries of Central America and the West Coast of South America. The exports of "wild" cinnamon have practically ceased.

OPIUM has almost ceased to interest foreign importers at Foochow, a single Indian firm only importing a few chests a year. During 1900, 2,700½ chests, of foreign opium arrived; of these only 225 were imported by foreigners, all the rest were consigned to Chinese firms. The quality of the drug imported from Hong-Kong has from time to time been inferior, and the Chinese say that it is adulterated while in the colony.

South African News.

THE new issue of shares in Messrs. Lennon (Limited) has been fully subscribed.

RETURNING.—Mr. J. Donaldson, chemist, who was for six months with Mr. W. N. Cooper at Mafeking after the siege, and had been in Kimberley for some time, was entertained by a few Kimberley friends on the eve of his return to his business in Pretoria.

THE CIVILIAN'S CHANCE.—Military traffic over the western system of the Cape Government railways has not been so heavy during the past few weeks, with the result that more attention to civil traffic is in evidence, and the wholesale drug-merchants are busy.

WATER-SHORTAGE.—When the mail left (January 23) Cape Town and its more immediate suburbs had only water enough for a sixty-days' supply, consequently there is a possibility of the city experiencing something like a water famine, as the rainy season does not commence till May.

DR. T. C. VISSER, formerly health officer of Johannesburg Stadsraad, has been found guilty of misprison of treason and breaking the oath of neutrality. The trial took place at Johannesburg in the second week of January, a superior charge of treason not being proven. Sentence had not been declared when our report left.

NATAL TRADE RETURNS.—The Customs returns for 1901 show imports of 9,789,104*l.*, against 6,075,227*l.*; exports (colonial) 1,212,852*l.*, against 571,346*l.*; non-colonial exports, 3,579,245*l.*, against 563,976*l.* for 1900. The Customs revenue was 797,441*l.*, against 655,041*l.* The non-colonial exports include raw gold 652,052*l.*, and also exports to the Transvaal and O.R. Colony. Military stores are not included in the above figures.

THE BRITISH ADVANCE.—It is interesting to note the effect of the advent of Tommy Atkins, writes our Mafeking correspondent, on the patent-medicine trade. In the old days, and amongst old colonials, Carter's was the favourite pill, and the most popular blood-purifier was Ayer's sarsaparilla. Since the troops have been stationed here, however, the leading lines are Beecham's pills and Clarke's blood-mixture. Eno's fruit-salt is, and always was, vastly popular amongst all classes.

WIRELESS TELEGRAPHY.—The Marquis of Graham is in South Africa as Lloyd's representative. Provisional arrangements have been made with the Cape Government to establish wireless telegraphy on Dassen Island, thirty-five miles from Cape Town, and on Bird Island, a similar distance from Port Elizabeth. Government messages are to be transmitted free by Lloyd's staff, while the ordinary rate, 1*s.* for twelve words, will cover private messages, *plus* an extra charge of 3*d.* It is understood that as soon as the necessary apparatus and plant are installed, the Union-Castle mail steamers will be fitted up with the requisite instruments.

BUSINESS IN BULAWAYO.—A correspondent in Bulawayo reports that business is greatly hampered by the want of stock, which at the time of writing (January 14) could only be imported at the rate of a few hundred pounds weight per month. Huge stocks are lying at Port Elizabeth awaiting the removal of the restrictions, and everyone is impatient for the end of the war and the good times that are bound to follow. Later advices from Cape Town state that in response to representations from the local Government, the military authorities have granted permission for the shipment by rail of 150 tons per week. This will stimulate trade.

A BOOM IN SANATORIA.—Messrs. Wessels have sold the Claremont Sanatorium to Mr. Ricei for 45,000*l.*, and have purchased a large tract of land fronting the beach, at the seaside resort of Muizenberg, where they are to erect a similar institution.—Dr. Sellar, of Cape Town, has recently made large private purchases of land at Kraaifontein township, the new suburb of Cape Town, where he intends building a sanatorium.—Dr. Daniell, of Caledon, has retired from business, and will shortly return to England. His successor at the well-known Cape Spa will be Dr. Frederick Willmott, of Mowbray, who will also have the medical superintendence of the Caledon Sanatorium.

THINGS IMPROVING.—There has been a decided improvement in dock affairs at Table Bay of late, writes a Cape Town correspondent. Steamers are now berthed with less delay, while the discharge of the cargo has received better attention, thereby giving vessels quicker despatch. The delivery from the dock to the merchant's store has also considerably improved, but there still remains much to be desired in this direction. For years Cape chemists, in common with other importers, have suffered severely owing to shipping delays, and it is high time that something was done to relieve this state of affairs. The hands of the Table Bay Harbour Board are being forced by the Durban officials, who show gigantic improvements in every direction, and make no secret of the determined bid they are throwing for the "over-berg" trade.

THE PROPOSED CAPE EXHIBITION.—Mr. A. P. Baker, F.R.C.I., the general manager of the proposed British and Colonial Industrial Exhibition, 1903, in an address to the Cape Town Chamber of Commerce on January 20, asked for the co-operation and advice of that body in connection with the exhibition. It had been said, he remarked, that the holding of an exhibition was a little premature on account of the war not being over, but it would take six or eight months to arrange the preliminaries, by which time the commerce of the country, even if brigandage was still going on, would not be interfered with. He came out with the confidence of British manufacturers who had hitherto participated in exhibitions with which he had been connected, and with their (the Chamber's) support he would guarantee its success. He was of the opinion, after careful consideration, that Cape Town was the best centre for holding the exhibition. Mr. Baker suggested the appointment of an Advisory Board by the Chamber of Commerce, and pointed out that he required no local financial assistance to carry out the scheme. The President said he would not take a resolution that day, but would refer the matter to the Management Committee.

ORANGE RIVER COLONY IMPORTS.—The following articles appear in a list of goods imported into the Orange River Colony during the quarter ended September 30, 1901, in comparison with the third quarter 1898:—

	From Cape Colony		From Natal	
	1898	1901	1898	1901
Drugs and chemicals ... £	4,380	3,975	172	515
Ginger, green and dry lbs.	985	1,918	8	8
Medicinal preparations £	2,366	2,125	535	149
Ochre ... ... lbs.	16,687	965	8,724	123
Oils, essence and perfumed ... ... £	212	—	—	—
All other kinds gals.	48,033	24,181	8,730	5,499
Paints, colours, turps, varnish ... ... £	956	78	262	41
Perfumery, cosmetics, powders, and toilet-soaps ... ... £	182	164	59	87
Soap, common ... ... lbs.	196,849	172,374	30,193	22,839
Spices ... ... ,,	3,801	3,579	888	799
Spirits, imported gals.	4,404	8,584	581	1,912
Manufactured in Cape Colony ... gals.	29,597	3,867	1,154	166
Tamarinds ... ... lbs.	346	243	4	—
Tea ... ... ,,	37,377	23,880	8,247	3,274

NEW PROFESSIONAL REGULATIONS.

WE reported last week that the Administrator of the Transvaal had instituted new regulations as to the practice of the various branches of medicine in the Transvaal and Orange River Colony. By this week's mail we received copies of the proclamation and a letter on the subject from a British pharmacist on the spot, which we believe to express local feeling on the matter. We give the full text of the proclamation:—

PROCLAMATION.

Whereas it is desirable to make provision, until the establishment of a Medical Board, for the admission of duly qualified

D

Digitized by Google

persons to practise as Medical Practitioners, Dentists, or Chemists and Druggists in this Colony:

Now therefore, by virtue of the authority in me vested, I do hereby declare, proclaim, and make known as follows:

1. In this Proclamation the term "Medical Practitioner" means every person duly admitted and lawfully entitled to practise in this Colony as a physician and surgeon on the day before the taking effect of this Proclamation, and also every person duly qualified by licence under this Proclamation to practise as a physician and surgeon within this Colony.

The term "Dentist" means every person duly licensed and *bonâ-fide* engaged prior to the taking effect of this Proclamation, in the practice of dentistry or dental surgery in this Colony, either separately or in addition to his practice as a physician and surgeon, or chemist and druggist; and also every person duly qualified by licence under this Proclamation to practise as a dentist within this Colony.

The term "Chemist and Druggist" means every person duly licensed in this Colony on the day before the taking effect of this Proclamation as an apothecary or chemist and druggist, and also every person duly qualified by licence under this Proclamation to practise as a chemist and druggist.

2. Every person who, on the day before the taking effect of this Proclamation, shall have been duly admitted and lawfully qualified to practise as a physician, surgeon, accoucheur, dentist, apothecary, or chemist and druggist in the Transvaal, shall, notwithstanding the publication of this Proclamation, be entitled to continue to practise or carry on his calling as aforesaid, without obtaining the licence referred to in the next succeeding section.

3. On and after the day on which this Proclamation takes effect no person, save and except such person as is referred to in the last preceding section, shall be entitled to practise as a physician, surgeon, dentist, or chemist and druggist, unless he has obtained a licence signed by the Secretary to the Transvaal Administration, and previously to obtaining such licence such person shall submit his diploma or other certificate of his being duly qualified to practise as a physician, surgeon, dentist, or chemist and druggist, for the examination and approval of the said Secretary, who may require, by sworn declaration before a Justice of the Peace or by other evidence, such proof of identity and good character of such person, of the authenticity of such diploma or certificate and of the right of the holder to practise elsewhere under such diploma or certificate, as he shall deem fit, and any person wilfully making a false statement in such declaration shall be liable to the penalties provided by law for the crime of perjury, provided always that the Secretary to the Transvaal Administration shall, if satisfied with the proof of his identity and good character, grant a licence to every applicant whose name appears in a British Medical Register, or who is entitled to be registered in Great Britain and Ireland.

4. No such licence as aforesaid shall be granted to any applicant to practise as a physician, surgeon, or dentist on the degree, diploma, or certificate of a foreign university or medical school unless it be proved to the satisfaction of the Secretary to the Transvaal Administration that—

(1) The said degree or diploma entitles the holder to practise as a physician, surgeon, or dentist as the case may be in the country in which it was granted.

(2) By the laws of the country in which such degree or diploma was conferred, British subjects legally qualified to practise as physicians, surgeons or dentists in Great Britain and Ireland are afforded privileges equivalent to those granted by licence under this Proclamation.

5. Every medical practitioner shall be entitled to practise as an accoucheur.

6. Any medical practitioner convicted of any offence affecting his moral character shall be liable to have his licence cancelled by the Secretary to the Transvaal Administration.

7. Any person who shall wilfully and falsely pretend to be or take or use the name or title of a physician, doctor of medicine, licentiate in medicine or surgery, bachelor of medicine, surgeon, general practitioner, dentist or chemist and druggist or any name, title, addition or description implying that he is duly qualified under this Proclamation to practise as a physician, surgeon, dentist or chemist and druggist, and any person who shall practise as a physician, surgeon, dentist or chemist and druggist, who is not entitled to practise as such under this Proclamation, shall be liable to a fine not exceeding one hundred pounds for each offence; and in default of payment he shall be liable to be imprisoned, with or without hard labour, for a period not exceeding six months, unless such fine be sooner paid.

8. So much of Law No. 12 of 1886 as is inconsistent with the provisions of this Proclamation shall be and is hereby repealed.

GOD SAVE THE KING.

Given under my Hand and Seal at Johannesburg, this 2nd day of January, 1902. MILNER, Administrator.

By Command of His Excellency the Administrator.

G. V. FIDDES, Secretary to the Transvaal Administration.

The disadvantages of Crown Colony Government (writes our correspondent in the commercial capital of the new colony) which Lord Milner himself has described as essentially autocratic, are such as to render it altogether unacceptable to Britishers, except as a temporary means of bridging over a period of reorganisation. But this form of government is not without its compensating benefits. Everything, of course, depends upon the enlightenment of the officials entrusted with its administration. Already we have evidence that in the hands of Lord Milner such powers as it confers upon our rulers will be used, not only with discretion, but also, when occasion demands, with promptitude. I refer in this connection particularly to the legislative side of his Excellency's functions. One instance will suffice to illustrate my meaning. For a considerable period the medical profession at the Cape has been agitating for the non-admission to registration in the future of men possessing degrees from Universities in countries in which British degrees are not recognised. It is quite conceivable that the old colony may have to wait some years before it secures Parliamentary sanction for its proposals, which are reasonable enough in themselves, and undoubtedly a desirable reform. In the meantime the Transvaal, with its less "popular" but more expeditious legislative machinery, has, in spite of the enormous mass of business devolving on the shoulders of its rulers, and without the slightest quibbling or argument whatsoever, obtained a law very much on the same lines as that desired in Cape Town. Clause 3 of Lord Milner's proclamation of January 2 is excellent, especially as it includes chemists and dentists. On the Register at the present time there are 47 British chemists, 16 with Orange River Colony "qualification," 13 Transvaal, 9 Russian, 4 from Cape Colony, and 29 from various other sources. Amongst these 118 chemists there are, as may be imagined, some wonderful, not to say "fearful," dispensers. Although many have not served an apprenticeship nor spent any time in the study of their profession, they will all be allowed to remain on account of their residence under the late Administration. The majority of British chemists here were afraid that they would transfer the notorious "Bloemfontein Trick" to one or two of the capitals of other States in South Africa, but these fears are all dispelled now. Every candidate for registration must be entitled to be so registered in Great Britain and Ireland. I have to thank the *Johannesburg Star* and THE CHEMIST AND DRUGGIST for repeatedly giving the hospitality of their columns in past years for the exposure of the corruption and bribery which prevailed in the Orange River Colony at that time, and which has undoubtedly assisted the Government to make the present clean sweep. I am very much more partial to our own people than I am to our enemies, and the foreign element having had their day, I would now like to see a large influx of British chemists to this State to open businesses, and qualified assistants to manage them, so that they may share the good times coming to us all in this our youngest, richest, and best colony. (17/102.)

Recent Patents.

Bottle-corks.—G. A. Trombert, Lyons, patents corks for bottles made by coating them with collodion containing 30 minims of oil of vaseline per litre. (11,330, 1901.)

Sealing-wax.—Carl Scholz, Mainz, Germany, provides sticks of sealing wax with an igniting compound on one or both ends, so as to do away with the necessity of a separate light for heating the wax. (12,916, 1901.)

Hardening Iron.—Otto Schramm, Berlin, patents a process for hardening iron in which powdered horse-chestnut is used for laying the welded iron on instead of powdered charcoal or horn clippings. (11,687, 1901.)

Ringworm-ointment.—Charlotte Woodall, head schoolmistress, and Catherine Crowley, assistant school-teacher, Slough, have obtained a patent for a ringworm-ointment, which in its most approved form is made from pure tobacco-leaf ground to a fine powder and mixed with fresh butter with a palette-knife on a tile. Tobacco-juice may be used, in which case it is added to an oleaginous emulsion. Preservatives and perfumes may be added if required. (12,986, 1901.)

War Experience.

THERE was a large attendance of members of the Midland Pharmaceutical Association, with their friends, at the Birmingham University on February 6, when Mr. Hall-Edwards lectured on his experiences in South Africa. The President (Mr. John Barclay, B.Sc.) was in the chair. Mr. Hall-Edwards was associated with the staff at the Central Hospital at Dielfontein as an *x*-ray specialist,

MR. HALL-EDWARDS LOCALISING A BULLET WITH THE "MACKENSIE-DAVIDSON" CROSS-THREAD LOCALISER.

and he found time to indulge largely in his favourite hobby of photography. He was thereby enabled to show on the screen a magnificent collection of pictures illustrating the nature and configuration of the war country, life and work at the hospital, and many incidents of the war. Each picture was made the subject of an interesting but brief description, and of particular interest to the audience were his remarks about the dispensary, which occupied one end of the main hospital building in front of the operating-theatre. There was a magnificent stock of drugs—everything, in fact, that the British Pharmacopœia contains, and most of the useful drugs it does not contain. Anti-diphtheric, anti-typhoid, and anti-enteric sera were stocked, and the quantities of bitter waters which had been presented to the dispensary, and which were found of the greatest use, were so large that they were given to the niggers as well, and enjoyed by them immensely. The prescriptions from the hospital wards were brought to the dispensary by the chief orderly of the ward in the morning, and were called for at a given time in the evening. As in the case of an ordinary surgery, a large number of stock mixtures were kept, in order to save time. As drugs ran out a fresh supply was obtained from the Army Medical Corps from the base at Cape Town. In every respect the hospital and dispensary were splendidly equipped.

Mr. Hall-Edwards also described some of his experience in *x*-ray work. During his fourteen months in the South some 280 cases came under his observation. In a large number of cases of fracture by gunshot injury examination by means of the *x* rays greatly facilitated the treatment; and he mentioned as an interesting

THE DISPENSARY, I.Y.H.

fact that, as a result of the knowledge gained by this means and the careful carrying-out of antiseptic precautions, it was only found necessary in two instances to resort to amputation.

Mr. Hall-Edwards was thanked for his lecture, on the proposition of Mr. C. Thompson, seconded by Mr. Barlow.

Scientific Progress.

Artificial Otto of Roses. — A German patent recently taken out for "artificial otto of rose" (No. 126,736, D.R.P.) claims rights for a mixture of geraniol, citronellol, phenylethyl alcohol, citral, seven to ten carbon aldehydes of the methane series, and linalol. The following is given as an example: 80 parts of geraniol, 10 of citronellol, 1 of phenylethyl alcohol, 2 of linalol, 0·25 of citral, and 0·5 of octyl alcohol.

Two New Remedies.—Pneumine is a compound formed by the action of formic aldehyde on creosote. It is a yellowish powder without odour or taste, and is insoluble in water. It is recommended as a useful form for the administration of creosote in tuberculosis. A corresponding compound is obtained by the action of formic aldehyde on guaiacol. This compound is termed pulmoform, and is a dimethylene compound of guaiacol. It closely resembles pneumine in all its properties.

Estimation of Formaldehyde.—Peska has made a comprehensive study of the various methods which have been suggested for the determination of formaldehyde (*Chemiker Zeitung*, 1900, 743). He considers that the quantitative transformation of the aldehyde into hexamethylenetetramine by the action of ammonia gives erroneous results on account of the retransformation of the compound into formaldehyde and a salt of ammonia by the action of even dilute acids. He considers that the iodometric method of Romijn is far more exact. The aldehyde is transformed into formic acid by excess of iodine in alkaline solution, and the excess of iodine determined by sodium thiosulphate. The other methods proposed he considers unreliable.

Esterification of Alcohols.—Charabot and Hebert contribute an important paper on the question of the formation of natural esters in the secretions of plants to the current issue of Bertrand's *Bulletin*. They have previously attempted to show, and partially with success, that the natural plant alcohols are transformed into esters in the organs of the plant which contains chlorophyll. They now raise the question, "Does the esterification take place simply by the action of acids in the plants, or is it assisted by the presence of a special dehydrating agent?" The opinion that the latter is the case is supported by the authors by experiment on linalol, an alcohol of wide occurrence in nature. They consider that the fact that the oil from lavender yielded a certain ester content, and that after allowing the plants to grow for fifteen days longer, this was increased by 8 per cent., whilst by allowing six molecular equivalents of acetic acid to act on one of linalol at 25° C., in which experiment an increase of only 1 per cent. was noticed, is evidence in support of their contention.

MEN TO AVOID.

WE now subjoin a reduced facsimile of a letter received recently by Messrs. Cooper & Co., of Kensington, from J. Islip, ordering certain goods to be sent to him. Another subscriber has also received an order. We may repeat that Mr. Islip has served a term of imprisonment for getting goods under false pretences, he being an undischarged bankrupt:—

28, REDGRAVE ROAD,

PUTNEY, LONDON, S.W.

Jan 29. 1902

Dear Sirs,

Please forward small order on other side at your earliest convenience and let me know price per gallon (for 5 or 6 gall) of Acetic acid

Yours truly

J. Islip.

We also received last week from Mr. Charles Davis, Leamington Spa, copy of an order which he has received from Henry Heath, Heath House, Lydd, Kent. It was for 6 doz. Rickman's syrup of camphor, 1*s.* 1½*d.*; 4 doz. of the 2*s.* 9*d.* size, and ½ doz. of the 4*s.* 6*d.* size. Mr. Davis wrote asking for the money, whereupon Mr. Henry Heath replied in his almost undecipherable writing as follows:—

HEATH HOUSE,

LYDD, 21 Jany 1902

KENT.

Henry Heath C. B. U.

Dear Sir, Your favour of 17th Inst. to hand. I am not, however, in the habit of sending goods on credit, but mean to do so in your case, and you can rely upon receiving mine by return of parcel, and remain

Yours truly

H. Heath

DEAR SIR,—Your letter with form of invoice of the 17th is before me. It is not, however, my custom to post cash in advance. You may, however, take it from me without any doubt that if you send me the goods I will, within five days of receipt, post you my cheque therefor.—Yours, HENRY HEATH.

C. B. U. means Court of Bankruptcy Undischarged. Mr. Heath is known by several aliases, and has served a term of imprisonment for obtaining goods under false pretences.

Trade-Marks Applied For.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1*l.*, obtainable through any money-order office.

(*From the "Trade-marks Journal," February* 12, 1902.)

Facsimile signature of proprietor; for medicines. By E. Nolzen, Luisen Strasse 27, 28, Berlin. 239,759.

"RENSON"; for cod-liver oil emulsion. By the Renson Manufacturing Company, 11 Woodbridge Street, Clerkenwell, E.C. 242,098.

Device of an anchor (the essential particular); for tonic bitters. By C. J. B. Wallis, 141 Trinity Road, Wandsworth Common, S.W.; also trading as the Medical and General Specialities Company at 300 Clapham Road, S.W. 242,635.

"KONAPHOS"; for a tonic. By A. Goldthorpe, 152 Plumstead Common Road, Plumstead, S.E. 243,196.

"KLUZO" (the essential particular; other matter on fancy label not claimed); for an eye-lotion. By F. Spoor, 2 Oxford Terrace, Bishop Auckland. 241,213.

Combination of devices and the word "OCCIDINE" (the essential particulars); for a medicine for ringworm. By Maclean Stuart & Co., 21 St. Andrew Square, Edinburgh. 242,380.

"OOPINAL"; for patent medicines. By Warr's Pure Drug Company, 2 Sagar Street, Hough Lane, Lower Broughton, Manchester. 241,651.

Pyramidal device, and the word "PYRAMID"; for glycerin. By J. Crosfield & Sons (Limited), Bank Quay, Warrington. 243,277.

Combination of devices, and facsimile signature of the applicant (the essential particulars); for tooth-stopping. By Dr. Fritz Hobein, Komotau, Bohemia, Austria. 241,563.

Device representing the cotton-plant; for surgical instruments and appliances. By Southall Brothers & Barclay (Limited), Lower Priory, Birmingham. 242,345.

Shield device, with drum centre; for filters. By the Empire Filter Company (Limited), 121 Finsbury Pavement, E.C. 242,927.

"KAUTONO"; for substitutes for butter and margarine. By the Globe Refining Company, Eugene Street, Pennywell Road, Bristol. 242,444.

"AËROX"; for mineral and aërated waters. By Bovril (Limited), 152–166 Old Street, E.C. 243,258.

The copy of the written signature of the applicants, and combination of devices (the essential particulars; "Quick-Klean" and other added matter not claimed exclusively); for a detergent. By Joseph Cook & Co., Garden Place, Hungate, York. 239,762.

"NOBLA"; for washing-powder. By F. J. Howe & Son, 58 Bedminster Parade, Bristol. 240,765.

"CARBONA" (no claim for "Carbon"); for night-lights and candles. By G. H. Lilley, 20 Malta Road, Leyton, and J. R. Bentote, 36 Grafton Road, Acton. 241,425.

Device of two heads with pipes and the word "TWIN" (the essential particulars); for soaps in Class 48. By R. Belfitt, 9 Lawson Road, Sheffield. 242,370.

"NIPHOLA"; for toilet and shaving soap. By D. & W. Gibbs (Limited), 105 High Street, Wapping, E. 242,430.

"LUTO"; for perfumed soap and shaving-soap. By G. H. Holmes, Campbell House, Shelford Road, Radcliffe-on-Trent. 242,821.

"LIENOLINE" (no claim for "Lino"); for linoleum and tan-leather polish. By C. J. Badham, Christchurch, Canterbury, N.Z. 241,196.

A NEW direct line of steamers from Antwerp to Cuban ports has been established by the North German Lloyd Steamship Company: they will run fortnightly.

EXPORT TRADE.

THE Publisher of the *C. & D.* has compiled some striking figures about the exports of British-manufactured goods by the drug and allied trades during 1901. He shows that the values were as follows:—

	£
Aërated waters	145,397
Brushware	155,281
Candles	432,707
Chemicals and chemical and medicinal preparations	8,942,109
Confectionery, jams, vinegar, and sauces	1,539,674
Glass bottles	440,710
Indiarubber-manufactures	1,086,841
Paints and materials	2,009,572
Salt	509,769
Seed oil	1,157,574
Soap	999,420

These do not include perfumery, varnishes, and other druggists' goods not separately enumerated, nor 3,885,242*l.* worth of colonial and foreign produce of kindred character also exported in 1901. This is in connection with the Merchant Shippers' Issue of THE CHEMIST AND DRUGGIST on March 8. We strongly advise all dealers and manufacturers of these classes of goods to insert announcements of them in the Issue. Instructions as to announcements should be sent as early as possible to The Publisher of THE CHEMIST AND DRUGGIST, 42 Cannon Street, London, E.C.

Summary.

THE PATENTS BILL is summarised in a note on p. 308.

THE DEAL MAGISTRATES have held that beeswax is not a drug (p. 298).

SIR WM. LENG, of Sheffield, who died on Wednesday, was eleven years in the drug-trade (p. 302).

LORD AVEBURY'S Early-closing Bill has been defeated in the House of Lords (p. 301 and p. 306).

FURTHER PARTICULARS of the new Lagos Pharmacy Law are given on p. 307. The Poisons Schedule is good.

RESULTS OF TREATMENT with antidiphtheric serum are graphically presented by Mr. Maben in a paper on p. 313.

THE MEDICINAL PLANTS cultivated in this country are described, with many interesting features, by Mr. Francis Ransom (p. 311).

MR. G. D. BEGGS, President of the Pharmaceutical Society of Ireland, writes entertainingly about his apprenticeship on p. 293.

NEW FACTS regarding oil of rue, a reaction for nitrates, sugar-estimation, corydalis alkaloids, and beeswax-adulteration are noted on p. 304.

THE EDINBURGH HIGH COURT has decided that the Registrar of the Pharmaceutical Society *has* power to prosecute under Section 17 (p. 300).

THE SACCHARIN CORPORATION (LIMITED) have again maintained the validity of their patents, a Mr. Dawson being the unsuccessful defendant (p. 296).

A DULL TONE prevailed at Thursday's drug-auctions. Cardamoms, buchu, ipecacuanha were cheaper, and benzoin and beeswax were dearer (p. 324).

THE validity of an agreement restraining a chemist's assistant has been sustained by Mr. Needham, the employer, in the High Court of Justice (p. 296).

THE I. R. INSPECTORS have been in Devonshire buying unstamped proprietaries (p. 288). A number of interesting P.M. questions are answered on p. 318.

THE BEST POLITICAL NAVVY, according to Lord Rosebery, is Mr. Edward Evans, jun. Our artist and poet find this a fitting subject for pencil and pen (p. 306).

THE C. D. A. is working hard before the Bow Street magistrate to show that methylated liniment at 2*d.* an oz. is not sold to the prejudice of the purchaser (p. 298).

OUR METHYLATED-LINIMENTS ARTICLE has brought interesting letters from Messrs. D. B. Dott, Hearon, Squire, & Francis (Limited), and E. J. Millard (p. 316).

XRAYSER'S SUBJECTS this week are Mr. Walter Hills, Licoricine, Methylated Soap-liniment, Transvaal Pharmacy, the New Calendar, and Mr. Boot's ideal (p. 305).

DRY HYDROGEN AND OXYGEN, when mixed together and heated to 1,000° C., do not explode or combine, so Mr. H. B. Baker proved to the Chemical Society this week (p. 310).

ASAFETIDA IN TEARS, yet containing only 20 per cent. of alcohol soluble matter, is now on the market. Mr. John C. Umney gives all particulars about it on p. 316.

LAST MONTH'S Students' Corner "salt" was a mixture of potassium permanganate, sulphate, and chromate. The result is given on p. 286, and the present state of the tournament on p. 287.

MISS MABEL F. STANLEY appears to be the first lady in this country to write a pharmaceutical book. It is reviewed on p. 294; also the new edition of "Quain's Dictionary" and Tilden's "Chemical Philosophy."

THE markets remain inactive, and no important fluctuations have occurred. Quinine is a shade firmer, but very quiet, speculators paying more attention to coffee. Tartaric acid is hardening, but citric acid is dull. Opium remains easy (p. 322).

A MEETING to wind up the affairs of the International Congress of Pharmacy, 1900, has resulted in the remaining funds being devoted to purchasing a souvenir for M. Crinon, and the balance is to be paid over to the Pelletier-Caventou monument fund (p. 291).

J. H. READ (LIMITED) bought the drug-business of Arrowsmith & Wyborn (Limited), carried on by Mr. John Pollard, who took possession again, for reasons which have been the subject of a case before Mr. Justice Buckley, who decided against Mr. Pollard with costs (p. 295).

Corner for Students.

CONDUCTED BY LEONARD DOBBIN, PH.D.

REPORTS.

THE powder distributed to students on January 22 contained 7 parts of potassium permanganate, 2 parts of potassium sulphate, and 1 part of potassium chromate.

The calculated composition of such a mixture is—

K	30·3
MnO_4	52·7
SO_4	11·0
CrO_4	6·0
	100·0

The powder was remarkably free from impurities, an exceedingly minute trace of iron being the only one recognisable when a relatively large quantity was submitted to analysis.

Samples of the powder were distributed to sixty-seven students, and thirty-nine reports were submitted for examination.

All our correspondents detected potassium and the permanganic radical as constituents of the powder; nine failed to detect the sulphuric radical, and nineteen failed to detect the chromic radical, but of the latter five reported the presence of chromium as a metallic radical.

This month's exercise furnished a good example of a mixture which, on account of its peculiarity of composition, required to be dealt with by special methods in order that the best results might be obtained with the minimum of trouble. Containing, as it did, a large proportion of potassium permanganate, which, if not reduced, interfered considerably with the analysis if carried out by following the unbending directions of "the chart," it was best to reduce the permanganate as a preliminary to testing either for metallic or acid radicals. Sulphurous acid, added in slight excess, reduced both the permanganate and the chromate, yielding manganous, chromic, and potassium sulphates; and when the excess of sulphurous acid was got rid of by boiling, the solution was ready for examination for metallic radicals in the usual way. Students who proceeded without reducing, got a precipitate containing sulphur on adding hydrogen sulphide, which was somewhat difficult to remove entirely by filtration, and which in nearly every case was assumed, without examination, to consist of sulphur only. Testing for the acid radicals in presence of the permanganate was distinctly unsatisfactory, and gave rise to a number of mistakes. A suitable solution in which to test for sulphate was easily obtained by boiling a little of the powder with concentrated hydrochloric acid, and then diluting with water. This operation reduced the chromate, however, as well as the permanganate, and, besides, yielded a solution which could not be examined for chloride. The halogens were best tested for in a solution reduced by means of sulphurous acid (free from traces of hydrochloric acid) and mixed, prior to adding silver nitrate, with enough nitric acid to prevent the precipitation of silver sulphite. After detecting the presence of chromium many students endeavoured to prove that it originally existed in the powder as chromate, and some ingenuity and skill were displayed in devising satisfactory methods. The best results were obtained by those who reduced the permanganate in neutral solution by heating with alcohol, or in alkaline solution by boiling with Rochelle salt, and then filtering in either case. One student obtained good results by reducing in the cold with sodium sulphite in presence of sodium carbonate, and filtering. The filtrate had a distinct yellow colour owing to the presence in it of unreduced chromate, which was easily confirmed by suitable tests.

So large a number of students reported the presence of calcium or of magnesium, or of both, that the mixture was examined with particular care for traces of these metals. When a quantity of the powder, equal to that sent out to each of our correspondents, was employed for this purpose, the presence of recognisable traces could not be established. The supposed detection of calcium or of magnesium in mixtures which contain manganese is a very common analytical error, and appears to be due to the fact that the precipitation of manganese as sulphide by means of ammonium hydrosulphide is only complete after some considerable time. As a consequence of this, manganous salt finds its way into the filtrate which is subsequently tested for the barium group and for magnesium, and it there gives rise to the formation of precipitates which mislead. The difficulty may be overcome by boiling this filtrate until the excess of ammonium sulphide is expelled, and then removing any further precipitate by filtration. A small quantity of the filtrate may with advantage be evaporated to dryness, and the residue tested for manganese by the sodium-carbonate and potassium-nitrate bead test before passing on to test for the barium group.

PRIZES.

The First Prize for the best analysis has been awarded to

W. MOFFATT, 7A Callerton Place, Newcastle-on-Tyne.

The Second Prize has been awarded to

J. I. AMUNDSEN, 7 Briery Vale Road, Sunderland.

First Prize.—Any scientific book that is published at a price not greatly exceeding half-a-guinea may be taken as a first prize.

Second Prize.—Any scientific book which is sold for about five shillings may be taken as a second prize.

The students to whom prizes are awarded are requested to write at once to the Publisher naming the book or books they select.

MARKS AWARDED FOR ANALYSES.

W. Moffatt (1st prize) ...	97	W. H., A.-in-M.	77
J. I. Amundsen (2nd prize)	96	A.B.C.	76

[One report was received which did not bear the name, pseudonym, or address of the sender.]

TO CORRESPONDENTS.

Special Memoranda, suggested by this month's reports:—

1. In the known presence of sulphate, test for oxalate in an acetic-acid solution by adding a saturated solution of calcium sulphate—not calcium chloride.

2. The evolution of a violet vapour when a solid substance is heated with concentrated sulphuric acid is not conclusive proof of the presence of iodine. Vapour of permanganic anhydride, Mn_2O_7, is also violet.

3. Both manganous salts and zinc salts give nearly white precipitates with potassium ferrocyanide in acid solutions

Digitized by Google

A number of correspondents fell into error through supposing that the test was a characteristic one for zinc salts.

4. Make sure that the solution of sulphurous acid, which is used for reducing-purposes in searching for acid radicals, is free from hydrochloric acid—an impurity which it often contains.

FILIX MAS.—The fact that you obtained a green liquid on treating the aqueous solution of the powder with hydrochloric acid and hydrogen sulphide was not evidence that the chromium was originally present as chromate. A reagent which reduced the permanganate in neutral solution, but did not reduce the chromate, should have been employed.

JEGOW.—Had you reduced the permanganate *completely* by means of sulphurous acid, and then boiled off the excess of the latter before adding hydrogen sulphide, you would have avoided the formation of the precipitate of sulphur and the troublesome filtration which it necessitated.

ALGOL, J. H. WILLIAMS, and Others.—See general remarks respecting the supposed presence of magnesium as an impurity.

TUNGSTEN.—It does not appear from your report that you added ammonium hydrosulphide to the ammonium chloride and ammonia filtrate in order to precipitate any manganese and zinc which it might contain. This important step should not have been omitted.

CYMENE.—The light-coloured precipitate which you mistook for aluminium hydroxide consisted of chromic hydroxide. Remember that chromic hydroxide dissolves in solution of potassium hydroxide just as aluminium hydroxide does, and that the chromium is only completely reprecipitated from the solution after somewhat prolonged boiling.

ALLYL.—Although probably not incorrect, it is not in accordance with ordinary usage to say that evolved oxygen "would burn at the end of the tube," and your meaning is liable to be misunderstood.

PHOTO.—Such a slender report as you have sent this month cannot do justice to your work. Thus you do not prove the absence of aluminium, lithium, or phosphates—to take a few possible constituents, almost at random—and your account of the examination for acid radicals as a whole was of a very superficial character.

S. W. CLARK and MERCURY.—In adding ammonium chloride and ammonia to precipitate the hydroxides of the iron group, you must have omitted to add the latter reagent in excess, otherwise you would not have failed to obtain a precipitate of chromic hydroxide.

BRASSICA.—The white precipitate which you took for zinc ferrocyanide really consisted of manganous ferrocyanide. Remember that both zinc and manganous salts give nearly white precipitates with potassium ferrocyanide in presence of dilute acids.

WESTMINSTER.—If your iron-group hydroxides were fused with sodium carbonate and nitrate on porcelain, the aluminium you found most likely came from the porcelain. The fusion should be carried out on platinum foil.

F. W. CATON.—We have not been able to obtain the red flame which you attributed to the presence of lithium, nor can we explain how you obtained it when using a platinum wire which you describe as clean. You should ascertain whether your solution of potassium ferrocyanide does not give a greenish-blue coloration when mixed with hydrochloric acid alone. Old solutions of ferrocyanide often give this reaction in so marked a manner as to lead to the conclusion that either the acid, or a solution to which the acid has been added, contains iron, when none is really present.

RICHARDUS.—You appear to have omitted to add concentrated sulphuric acid when applying the ferrous-sulphate test for nitrate. Hydrogen sulphide is the best reagent to use in testing an alkaline solution for any zinc which it may contain; potassium ferrocyanide is not an appropriate reagent in such a case.

A. B. C.—Non-formation of a sublimate on heating a substance in a test-tube does not prove the absence of antimony or cadmium, as there are various non-volatile compounds of these metals. You must have made some strange error in the quantitative experiment which led you to conclude that the powder contained much chloride.

ALOES.—The sulphate present was more than a trace, but the precipitate of barium sulphate was not very conspicuous at first, when produced in a solution in which permanganate was still present.

CRIBDEN.—The precipitate you obtained on adding barium hydroxide to eliminate magnesium, and took to be magnesium hydroxide, really consisted of barium sulphate. We are unable to obtain or to explain the reaction for oxalate which you describe.

IPSE.—The bleaching effect upon litmus-paper of the gas evolved on treating the powder with concentrated sulphuric acid was due to ozone or to permanganic anhydride liberated from the permanganate. Note that sodium hydrogen tartrate is a more delicate reagent for potassium than tartaric acid is; but see also Carnot's test for potassium as described in the Corner in November last (*C. & D.*, November 30, 1901).

TANGLEWOOD.—Note that the presence of any considerable quantity of acetic acid interferes with the prompt precipitation of silver chromate. You appear to have failed to detect chromate in consequence of overlooking this point. Lead acetate would have been a more suitable reagent to employ.

GLACIALINE.—The iron-group precipitate contained chromic as well as manganous hydroxide. It is unfortunate that you did not say how you examined this precipitate, as it might then have been possible to point out how you failed to detect chromium.

ANGUS SCOTT.—The green flame-coloration, which appears to have given you a good deal of trouble, was due to the manganous chloride present in the solutions which you tested. Moisten any manganous salt with hydrochloric acid, and test the mixture on a platinum wire in the Bunsen flame. The precipitate you took for calcium tartrate consisted of calcium sulphate. The white precipitate you obtained with silver nitrate in testing for acid radicals was most likely due to the presence of hydrochloric acid in the hydrogen-peroxide solution which you employed to decolorise the permanganate.

JAMES R. STOTT.—The violet vapour evolved when the powder was gently warmed with concentrated sulphuric acid was due to the volatilisation of some permanganic anhydride. In testing for "sulphur in any form," the powder should have been fused with sodium carbonate and some form of carbon free from sulphur, and the resulting mass tested for sulphide by means of a silver coin; or the fusion should have been made with sodium carbonate and potassium nitrate, and the mass then tested for sulphate.

W. MAXWELL.—The fact that silver nitrate gave almost no precipitate in the original solution after reduction with sulphurous acid and boiling (it really gave no precipitate when a solution of sulphurous acid free from hydrochloric acid was used) proved the absence of any considerable quantity of iodide. You will find several reagents mentioned in the general remarks, which reduce permanganate without reducing any chromate that may accompany it.

ALEX. T. HOPE.—You appear to have tested for chromate by adding lead acetate to a solution obtained by reducing the original substance by means of sulphurous acid. This was not correct analytical practice, as any chromate originally present would have been reduced to chromic sulphate; besides, the sulphate formed, as well as that originally present, would yield a white precipitate of lead sulphate.

LOO.—Sulphate should have been tested for in a portion of the original solution reduced by means of a reagent which did not contain sulphur; hydrogen sulphide was not a suitable reagent to employ in such a case as the present one.

G. H. PALMER.—It is almost impossible to estimate the value of your work from such a very fragmentary account of it as you sent. Send a detailed report next time.

PROGRESS OF THE TOURNAMENT.

THIS month's exercise is the fourth of the six exercises of the Analytical Tournament, and the state of the competition is very interesting on account of the close contest for the top positions. In submitting below the marks gained, so far, by the ten competitors who stand highest on the list of those who have sent in reports each month, we venture to express the hope that all of the ten will do their best, in the two remaining heats, to improve upon their highest records hitherto.

"'PHARMACEUTICAL TESTING' is just the thing for the busy pharmacist. Practical, concise, and easy of reference, it gives him the test by which he may ascertain the purity of most of the leading chemical preparations, &c., the quality of which it is his business to know."—Professor W. M. SEARBY, of the College of Pharmacy, San Francisco. (Published by the *C. & D.*, 2s. 6d.; by post, 2s. 9d.)

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Cotterill, the brewer's engineer who poisoned a vat of beer with red lead at Manchester, has been fined 1*l.* and 5*l.* damages.

The "Pharmacological Notes" in the *Lancet* of February 15 were "On Some Unsolved Problems as to the Chemistry of Drugs," the B.P.C. list being specially referred to.

Mr. Arthur Angell has been re-appointed public analyst to the Hants County Council, and Dr. Bernard Dyer as the district analyst under the Fertilisers and Feeding-stuffs Act.

Colonel T. Davies Sewell announces that the next examination for the diploma of the Spectacle-makers' Company will be held on June 4, 5, and 6, at the Carpenters' Hall, London Wall, E.C.

At Marylebone Police Court on February 18, a carpenter named Leaver was bound over on a charge of stealing a fancy tin box containing Epsom salts, value 4*d.*, belonging to a lady in North Kensington.

At the Manchester City Police Court on February 18, Edward Blackburn was sent to the Sessions for trial on a charge of obtaining 30*s.* by "ringing the changes" at the Oldham District branch of Boots (Limited).

At the Hants Assizes last week, Joshua Luke Durbin, dispenser to Dr. John Kyffin, of Gosport, was sentenced to six weeks' imprisonment for stealing sums of money amounting to 3*l.* 9*s.*, the property of his employer.

At the Central Criminal Court on February 14, George Crocker, chemist, of Brixton, pleaded guilty to having published a defamatory libel on a stockbroker named Eaton. Defendant withdrew the charges and agreed to pay costs, and was bound over to come up for sentence if called upon.

Mr. A. Angell, analyst to the Hampshire County Council, reporting upon the analyses made during the last quarter of 1901, said the percentage of adulteration was 3·2. The number of samples taken was 153; the number of samples adulterated, five—viz., two of milk, one of whisky, and two of butter.

The magisterial inquiry into the charges of fraud preferred against the directors and others connected with the "Patent Novelties Company (Limited)" concluded in Manchester on February 14, after occupying the Stipendiary Magistrate for thirty days. One of the defendants, Mounham, was discharged, and the others were committed for trial.

Henry Heath, of Lydd, wrote to Mr. W. Martin, Southampton, on February 12 for five dozen apiol and steel pills, which he did not get. Subscribers should note that Heath's orders are on postcards headed "You may send to Lydd Station"; and those who respond to this invitation have themselves to thank for falling into the trap.

At Kingsbridge on February 15, Jane Barbara Davis was charged with offering packets of lavender for sale from door to door without a licence. She pleaded that at Exeter the police superintendent told her she did not require a licence, and at Torquay she was told that as long as she sold nothing but lavender she did not need a licence. She was discharged.

Mr. A. W. Stokes, public analyst for Paddington, reports that 140 samples had been analysed by him during the quarter ended December 31, 1901. These consisted principally of milk and butter, with coffee, mustard, sago, tapioca, and two of medicated soap. The total number of samples analysed during the year 1901 was 466; but no drugs are mentioned as adulterated.

The Chemists' Opportunity.

At the meeting of the Kendal Board of Guardians on February 15, a report was received from a committee regarding the system of supplying drugs to the workhouse and the Board was recommended to offer the chemists in the town in rotation the right to supply the drugs at 10 per cent. over wholesale-list prices. It was also suggested that such articles as lint, cotton-wool, vaseline, bandages, extracts of meat, and Sanitas soap should be tendered for in the usual way. The recommendations were adopted.

The Cambridge Public Health Committee reported to the Council this week that a letter had been received from a chemist in the town asking for a share of the orders given by the Corporation for drugs, and that they had resolved that his application be considered when the tradesmen were appointed.

Mr. F. Thurston, pharmaceutical chemist, of the Queen Street Pharmacy, Ipswich, has brought out at a very opportune moment an "Anti-germ" perfume, highly charged with an antiseptic. It has quite a pleasant odour (says our correspondent) and there is no unpleasant suggestion of a disinfectant about it. The article is meeting with much popular favour.

L.C.C. Items.

It was reported by the Parks and Open Spaces Committee that Messrs. Burroughs Wellcome & Co., the lessees of Brockwell Hall and the adjoining ground, were willing to allow the Council to have the use of a strip of land to give further access to Brockwell Park, which will be a great convenience to the public.

At a meeting of the London County Council on February 18 it was reported by the Asylums Committee that they had accepted the following tenders for Horton Asylum:—Messrs. C. J. Hewlett & Sons, for drugs (40 per cent. discount); Messrs. Burgoyne, Burbidges & Co., for druggists' sundries (20 per cent. off).

Birmingham Notes.

The manufacturers of vaccine-lymph are having a good innings at Aston, where 5,000 of Kynoch's workpeople are to be vaccinated.

There are 667 students of chemistry at the Technical School, Suffolk Street. Very few of them are, however, connected with pharmacy.

As the result of a conference between the town authorities and the Guardians, it is thought desirable to establish an outdoor dispensary for dealing specially with phthisical cases.

Professor Frankland, professor of chemistry at Birmingham University and former examiner for the Pharmaceutical Society, is to have conferred upon him the honorary degree of LL.D. by St. Andrews University.

The local veterinarians held their annual meeting at the Grand Hotel on Friday last, when Professor Macqueen (London) discoursed upon some defects and diseases of horses' limbs, and their definition and importance.

The kindly interest taken by the chemical-manufacturers of Oldbury in their workmen is evinced by the recent generosity of Messrs. Chance & Hunt and Messrs. Albright & Wilson, who have built and endowed a literary institute costing something over 1,000*l.*

Major-General Phelps, in the *Birmingham Post*, describes coryza in elephants, and relates how he cured an elephant with the following recipe:—Nine tolas of sugar was triturated with 1 tola of camphor, and 1 tola of the mixture given at intervals of half an hour. The cure was speedy and unexpected, and gained the gratitude of the elephant and its mahaout.

Seeing so many announcements of shops to let in the suburbs suitable for chemists, an inspection of three was made, and, unwittingly no doubt, the landlord had formed a very poor estimate of the needs of an up-to-date pharmacy, for in all cases they were apparently overgrown cottages converted, and the shop-room was, as the saying goes, hardly big enough to swing a cat round without grazing its nose. What one could make of such places would depend largely upon the ingenuity of the shopfitter.

On the Warpath.

A raid has lately been made upon the chemists of Plymouth, Devonport, Stonehouse, and district by an official,

Digitized by Google

presumably from the Inland Revenue Department, Somerset House, with regard to the liability of labels to stamp-duty. In many instances labels hitherto considered by the trade and label-printers as being exempt have now been pronounced liable, and the usual official explanation has been asked for. A few chemists have had four or five labels seized, and it is to be hoped the authorities will considerably minimise the 10*l.* fine for each offence, which they have power to enforce.

An Exeter correspondent also writes: "The Inland Revenue people having been very busy amongst us of late and trapping not a few, I thought it my duty to do my best not to transgress again. The I.R. office being shut, I sent to the G.P.O. here for some 1½*d.* P.M. stamps. After a lot of consultation my apprentice was informed that they did not exist! He was told the same tale by other clerks the next day, but was able to get them from a small sub-office. I think it is time that our I.R. officials should instruct the P.O. authorities on their revenue duties if they wish us to stamp our medicines, as there is not a Revenue Office in every town."

Fire.

A lad in the employ of Mr. T. J. A. R. Burbank, chemist and druggist, Oxford, accidentally set fire to an oil-store at the rear of the pharmacy on February 14. The building is of corrugated iron, which prevented the fire from spreading. Two drums of benzoline and one drum of methylated spirit were destroyed, and other goods damaged.

Alleged Fraudulent Trading.

At Manchester Police Court on February 15 a man named Arthur Vickers was charged with obtaining money by false pretences. The Detective-inspector, who apprehended the prisoner at premises in Altrincham Street, off London Road, said the stock-in-trade in the office consisted largely of empty cardboard boxes. There were a mortar, a bag of charcoal, a quantity of material for making razor-paste, samples of paste in tins, which Vickers said was "Roachaline," for killing beetles. There were also samples of teething, headache, and other powders. There were a number of handbills relating to the "Lightning Manufacturing Chemical-company" at Newton Street, Piccadilly, and the Roachaline Company at Rusholme, but he seemed principally to advertise as "Calder Brothers," Britain Street, and the "Novelty Company," Spear Street. He charged the prisoner with obtaining 5*s.* in money from James Tait with intent to defraud. On searching him thirty-eight letters of complaint were found from persons in various parts of the country. James Tait, of Derby, stated that in consequence of correspondence with the Novelty Company he forwarded 10*s.*, but had received no goods up to that morning. A grocer's manager at St. Helens deposed that as the result of forwarding 6*s.* to the "Novelty Company" he had a parcel sent him containing 3 doz. 1*d.* headache-powders, 3 doz. 1*d.* rhubarb-powders, and 1 doz. 6*d.* "lightning chimney-sweepers." He sent most of the "lightning chimney-sweepers" up the chimney, but it was not much better. He considered the "sweepers" valueless. Prisoner was remanded on bail.

The Horse and the Window.

Two large plate-glass windows at the establishment of Boots (Limited) in High Street, Rotherham, were broken on February 14 by a horse backing a cart into them. Considerable havoc was played amongst the stock in the window, and a woman who was looking at the window-show was thrown amongst the broken glass, but escaped injury.

Football.

London College F.C. *v.* Muter's F.C.—Played at Shepherd's Bush on February 15, and produced a keen struggle, London College proving the winners by four goals to three. London attacked strongly at the start, running up three goals after twenty minutes' play; then Muter's had a turn, and at half-time the score was three to two in favour of London.

The Week's Poisonings.

Only five poisonings are on record since our last report. These were all caused by scheduled poisons. Carbolic acid was taken in two cases, the remaining three being laudanum, chlorodyne, and prussic acid.

Alleged False Pretences.

At Bow Street Police-court on February 19, George Hammond (57), described as a traveller, but who is alleged to be a ticket-of-leave man, was charged, on remand, with obtaining goods by false pretences. The evidence stated that prisoner went to Messrs. Pears' establishment in New Oxford Street, and produced a written order for 4 gross of soap tablets, supposed to have been sent by a firm in Camden Town. He was allowed to take some of the soap away with him, and it was afterwards found that the order was a forgery. The prisoner was further charged with obtaining in the same way half a gross of soap, from the Albion Soap Company, New Oxford Street, and 6 dozen bottles of bovril from Messrs. Petty, Wood & Co., wholesale grocers, Southwark Bridge Road. Whilst being detained at the Kentish Town Police-station, the prisoner attempted to throw into the waiting-room fire a counterfoil relating to the bovril. At Bow Street Detective-sergeant Stephens found on him a cloak-room ticket showing that the prisoner had deposited the bovril at a railway station. The prisoner was committed for trial.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Dr. J. C. McWalter, M.P.S.I., Dublin, has been elected a life-governor of the Convalescent Home, Stillorgan.

At the annual meeting of the Londonderry Corporation held on January 23, Councillor Donald Neil Stewart, M.P.S.I., pharmaceutical chemist, 98 Duke Street, Londonderry, was unanimously elected a member of the Technical Instruction Committee to represent the chemical and pharmaceutical branch of the department.

The Irish Calendar.

The calendar of the Pharmaceutical Society of Ireland for 1902 has just been issued. It contains all particulars appertaining to official pharmacy in Ireland, with lists of pharmaceutical chemists, chemists and druggists, and registered druggists. Statistics of the Society, and a summary of the accounts, are appended, with copies of the examination-papers set during 1901 at the various examinations. Copies can be had from the Registrar, 67 Lower Mount Street, Dublin. Price 1*s.* 6*d.*

Official Approval.

The Council of the Pharmaceutical Society of Ireland have been informed that the Lord-Lieutenant of Ireland and his Majesty's Privy Council in Ireland approve of the appointment of Mr. Henry O'Connor, M.P.S.I., as an examiner in place of Mr. William Vincent Johnston.

Nationalising Railways.

A conference of the Irish Traders' Association was held last week in Belfast. The question of excessive railway-rates and charges was vigorously discussed, and it was resolved "to start such an agitation as would make it compulsory on the Government to purchase the Irish railways and manage them for the benefit of the country." It was stated that goods could be brought from London to Belfast much cheaper than from Belfast to Clows, a neighbouring town, and that packages could be consigned from Dublin *viâ* Glasgow to the West of Ireland much cheaper than if sent direct. The average charges per ton on goods in England, Scotland, and Ireland were stated to be 2*s.* 7½*d.*, 2*s.* 3¼*d.*, and 6*s.* 7¼*d.* respectively.

Workhouse-drugs.

The Local Government Board has informed the Belfast Poor-law Guardians that the cost for medicines used in the workhouse is abnormally high, and has been so for some years. The Guardians point out that during the last year they retrenched to the extent of 9,000*l.* in their expenditure. The Infirmary Committee has been asked to investigate the cost of extra drugs, which had gone up from 376*l.* for the

Digitized by Google

half-year ended September 30, 1899, to 1,014*l.* for the six months just expired. They get no rebate on the outlay for extras. Dr. McDonnell said if the medical men had a free hand in the matter of extras the bills would tell their own tale of saving at the end of the year. The doctors get no encouragement from the Guardians, and as a result the bills are not looked after as they should be.

Oil-barrel Case.

In the Dublin Police Court on February 15 two youths named Warren were charged with the larceny of oil-barrels, the property of Messrs. McMaster, Hodgson & Co., chemists, and Hugh Moore & Alexander, wholesale druggists, the Linen Hall, Dublin. The accused were sent for trial to the city sessions.

A Source of Infection.

Sir Chas. A. Cameron, in a paper in the *British Medical Journal*, gives good reasons for supposing that new clothes may occasionally be a source of infection. The recruits of the Royal Irish Constabulary located in large barracks in Phœnix Park, Dublin, have been particularly liable to scarlet fever, and it has been difficult to account for. It occurred to Sir Charles Cameron that the new clothes supplied to the recruits were the source of infection. These clothes are made for the contractor by women in their own homes. Orders were issued to have all new clothes sterilised, with the result that from May 15, 1901, to January, 1902, no case of scarlet fever has occurred.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Changes.

Mr. A. Weir, chemist and druggist, has just acquired the business of Mr. W. Stavert, Selkirk.

Mr. J. R. Douglas, chemist and druggist, has purchased the business carried on for some years in Leith Walk, Edinburgh, under the style of the Edinburgh and Leith Drug Company (Limited).

Chemist and Postmaster.

Mr. Daniel Halley, chemist and druggist, 70 Great Western Road, Aberdeen, who lately acquired the old-established business at 31 Victoria Road, Torry, has now been appointed sub-postmaster of the Victoria Road Post-office. Mr. Halley has had a large business experience, gained throughout Scotland, England, and abroad, and, having been engaged for a number of years in a town sub-office, has an intimate knowledge of all post-office work.

A Hospital Dispute.

The doctors and the managers of Forres Leanchoil Hospital are at loggerheads. It appears from the statement of some of the medical men involved that, in accordance with one of the rules of the institution, the hon. medical officer in charge of the institution will attend all cases admitted "until any of the patients desire to be under the care of their ordinary medical attendants, or of the medical officer who sent them in." This rule, until a few years ago, was interpreted by the secretary and by the medical men generally as meaning that the patient when sent in was to be entirely under the charge of the medical officer. Latterly, however, the secretary is said to have advised a medical man not on the hospital staff that he was quite within his rights in attending any of his patients at the hospital. This new interpretation has led to friction, and several medical men have refused entirely to give their services to the hospital until more satisfactory rules are drawn up.

Dundee and the B.P.C.

A meeting of the Conference Local Committee was held on Monday, February 17, when representative members from Dundee and district assembled to make final or tentative arrangements in connection with the meeting of the British Pharmaceutical Conference. It was agreed that the date of opening the Conference meetings be Monday, August 11, and that the President's address should be given on Tuesday morning as usual. The Treasurer was authorised to call in all outstanding subscriptions, and it was arranged that a deputation should wait upon Lord Provost Hunter to know if it would be agreeable to him to welcome the Conference to Dundee. Several committees were also appointed. On the morning of February 18 a deputation of the committee were introduced to the Lord Provost in the City Chambers by Bailie Doig. Mr. Charles Kerr explained the character of the Conference, and the arrangements which had already been made for holding the ordinary meetings in the University College. His Lordship, in reply, said that it would give Mrs. Hunter and himself much pleasure to entertain the members of the Conference and their friends at a reception and *conversazione*, to be held in the Albert and Victoria Galleries on the evening of August 11. The deputation, after expressing their sense of the great pleasure and gratification which such an arrangement would confer upon them as a body, took their leave.

From Edinburgh.

The will of the late Mr. Thomas Hood, chemist and druggist, Leith (previously in Nairn, and at his death manager of the Edinburgh and Leith Drug Company, Limited), has been proved, the net personalty being 820*l.*

We have now recovered from the effects of our "Great Dinner" (writes a diner), and are preparing for our luncheon on Friday, when the leading lights of pharmacy will be prepared to lay down the law to the University authorities.

Almost simultaneous with the return of Lance-corporal Bowman from the front, after nearly two years' service, Messrs. Smith & Bowman returned to their completely reconstructed pharmacy, which is now one of the best and most handsomely equipped in the district.

Two assistants are just proceeding to "the front," one from Mr. Morrison, Elm Row, and the other from Mr. Wylie, College Street, but whether as combatants or not, we do not know. One of Messrs. Raimes, Clark & Co.'s assistants had passed his shooting and riding tests and medical examination for Fincastle's Horse, when the War Office stopped recruiting. A former apprentice of the same firm went out with the first batch of Scottish Sharpshooters and returned safely, while another, well known in athletic circles, joined the S.A.C. and succumbed to enteric a few months after he landed.

Glasgow Notes.

Rumour has it that for the first time in its history a lady is to be one of the entrants for the Kinninmont prize.

There has been a sudden and serious rise in the daily number of fresh smallpox cases, but there is still no rush for vaccination.

Judging from the brisk business being done at the local schools of pharmacy the new Preliminary has not yet affected the supply of students.

The series of popular lectures now being given at the expense of the Corporation includes one on "The Botanic Gardens" by Professor Bower.

Many local shop-keeping doctors declare that they cannot legally be interfered with by the Medical Council until its recently-advertised warning is sent direct to each registered practitioner.

A man, who is suspected to be an Inland Revenue officer, has been trying to make purchases of S. V. M. from chemists on Sunday. So far the tempter has been foiled by the philosopher of the pestle.

Glasgow chemists are not unduly harassed by the food and drug inspectors, but the latter have lately been taking samples of oil of almonds, olive oil, camphorated oil, sweet spirit of nitre, and eucalpytus oil.

Assistants complain that while wages and the conditions of service have greatly improved all over the country, Glasgow is strangely backward in these respects. Much of the blame is put on the doctors' shops.

The portents are against the immediate realisation of the early-closing movement. The decision of last Friday's meeting of the local Association to consign the report to the

Digitized by Google

ward and watching of the Council will make for alacrity of action. In the meantime it seems to be the "pious opinion" of two-thirds of Glasgow chemists in business that something should be done.

Messrs. John Mackay & Co., of Edinburgh, Glasgow, and Newcastle, whose largest establishment at Kinning Park, Glasgow, has hitherto been mainly devoted to the production of aërated waters, are about to make a bid for a bigger share of the drug trade in the West of Scotland. Mr. Alexander Napier, an experienced drug traveller, has been appointed resident representative in Glasgow.

French News.

(From our Paris Correspondent.)

SUDDEN DEATH OF "DOODICA."—One of the Siamese twins operated upon by Dr. Doyen on Sunday, February 9, died last Sunday from convulsions.

THE TREATMENT OF TUBERCULOSIS.—Drs. Robin and Binet are inviting medical men to visit their laboratory at the Hôpital de la Pitié for the purpose of studying their method of treating consumptive patients. The method consists in reducing the combustion of the tissues due to the over-inhalation of oxygen. Patients whose lungs are abnormally active through over-exercise or overwork are ordered complete repose, to keep their bodies warm, and breathe fresh air. Drinkers are ordered to give up spirits in every form. Consumptive patients from hereditary causes are ordered cod-liver oil, and to avoid over-exertion and tonics and stimulants of every sort. Mountain and sea air is also prohibited in certain cases as being too exciting.

POISONING BY TINNED MEATS.—In the course of an inquiry into the causes of poisoning by tinned meats and the means of preventing it, Dr. Brouardel, President of the Committee of Public Health of France, has addressed a report to the Minister of War, in which he states that accidents of this kind may arise from the introduction into the digestive-organs of poisons formed in advance in the tinned food, or by a process of microbic infection. He says that most tinned meats, in fact, an average of 70 per cent., contain living germs, which is apparently due to the fact that processes of sterilisation in use in industry are very uncertain. The report also contains details of the best measures to take for rendering such meat suitable as an article of food.

VAN'T HOFF AND WURTZ.—It may not be generally known that Professor van 't Hoff, the recent winner of the Nobel Prize of 8,000*l.* for chemistry, began his scientific career in Paris. It appears that in 1868 Jacob Henry van 't Hoff, then a lad of sixteen, entered the laboratory of Wurtz, the famous French chemist. The "Dutch Berthelot," is a native of Rotterdam, and took his D.Sc. at Utrecht University in 1874, but now professor at Berlin:—A curious calculation was made regarding Wurtz by one of his pupils of a mathematical turn of mind. The professor restlessly paced the platform while he delivered his chemistry lectures. At four miles an hour, during the thirty-five years he occupied the chair, he walked about twelve thousand miles, a very respectable pedestrian feat for a chemistry professor!

CACODYLIC MEDICATION.—At the meeting of the Paris Academy of Sciences last Monday, M. Armand Gautier communicated some new results obtained with cacodylic medication. In general the cacodylates have proved efficacious in the treatment of consumptives, but in addition these medicaments have a very pronounced antiseptic action. This latter virtue seems duly established by recent experiments made by a French army surgeon, Dr. Billiet, in the treatment of malarial fevers. Patients who had resisted trêatment by quinine for five months have been cured, reports the doctor, in about ten days by small doses of methylarseniate of soda administered either by the stomach or subcutaneously. It is claimed that not only is this substance more active and the cure more rapid than with quinine, but that it acts as a tonic, instead of debilitating as quinine does.

TRAGIC DEATH OF A PHARMACIST.—Last week Pierre Kœkly, the son of a retired pharmacist, killed his father, who was 71 years of age, by the discharge of a gun—accidentally, it is supposed. The unfortunate incident occurred at a little place called Vézelise, Vosges. It appears that the son's mental faculties are rather wanting, and as a child he had a badly balanced character, at the same time being very intelligent. In fact, he was reckoned one of the best students at the Nancy Faculty of Sciences, where he worked for some time. Later he studied chemistry in Germany, and travelled in the far East, where he contracted the opium-habit. His attitude since the tragic event has given rise to the supposition that he is not responsible for his actions, and he has consequently been put under observation in an asylum. It is reported that some years ago he caused the death of a sister, aged 18, by filling her bedroom with deleterious gases. He also pushed a cousin off an embankment, causing him to break both his legs. At that time he was put under restraint, but appeared to have recovered.

THE UNIVERSITY OF PARIS.—One of the subjects discussed by the International Congress of Superior Instruction held here during the Exhibition of 1900 was the best measures to be adopted for attracting more foreign students to Paris. The Council of the University has decided recently that the programme of the four Faculties and the Superior School of Pharmacy is to be issued early in April next in order that foreign students may be early informed of the subjects to be treated by the professors during the 1902–1903 session, and measures will be adopted for distributing the new programme, which was formerly not issued until October of each year. At the annual meeting for 1902, M. Guignard, Director of the Paris School of Pharmacy, was nominated Vice-President of the Council of the University for the current year. In the annual report of the work of the University it was shown that at the end of last year there were 245 professors attached to it, of which 17 belong to the School of Pharmacy. During 1901 there were, in all, 13,469 students inscribed at the Paris University. Of these, pharmacy accounted for 1,742, only 16 being foreigners, and 5 of those were Turks.

THE INTERNATIONAL PHARMACEUTICAL CONGRESS.—The members of the organising committee of this congress met recently for the purpose of finally winding up the affairs of the Congress, and to take a decision regarding the cash balance remaining in hand. M. Petit presided at the meeting, and the leading members of the committee residing in Paris were also present, including MM. Marty, Barillé, Crinon, Labélonye, Léger, Leidié, and de Mazières. The Treasurer, M. Labélonye, presented a cash statement showing a balance of 2,266f. in hand. The accounts were duly passed, and the President asked for suggestions regarding the disposal of the balance. M. Langrand proposed that it should be handed to the Committee of the French Pharmacy Conference held in 1898, who have the task of taking charge of the interests of pharmacists in the proposed new pharmacy law, and of getting it through Parliament. Several members present mentioned that amounts paid to the Congress were in almost all cases paid with the distinct object of assisting an essentially international movement amongst pharmacists, and consequently the committee would be scarcely justified in disposing of the funds in favour of an exclusively French work, however interesting it might prove. M. Langrand having withdrawn his motion, M. Marty proposed that a sum, to be decided on, should be devoted to the purchase of a souvenir for M. Crinon, the Hon. Secretary of the International Congress of Pharmacy, "in recognition of his activity and devotion." He further proposed that the balance should be paid over to the fund for defraying the cost of the Pelletier and Caventon monument. Both these proposals were adopted with unanimity. It was further decided that all the documents relative to the International Congress of Pharmacy of 1900 shall be lodged in the archives of the Chambre Syndicate des Pharmaciens de la Seine, 5 rue des Grands Augustins, Paris.

FOR VETERINARIANS.—A mysterious illness is decimating the horses in the Province of Verona. The stricken horse suddenly becomes furious, biting and knocking its head against any obstacle, whilst the hind parts remain paralysed. The horse dies in from twelve to forty-eight hours.

South African News.

PERSONAL.—Mr. H. T. Doble, Ph.C., of Kingwilliamstown, Cape Colony, son of Mr. H. T. Doble, chemist, Tavistock, has recently obtained the diplomas of M.R.C.S.Eng. and L.R.C.P.Lond.

THE NATAL GOVERNMENT have accepted the tender of Lennon (Limited) for a supply of medicines, drugs, &c., to the various Government departments in Durban for the ensuing six months.

NEW CHEMISTS.—The following have received licences to practise as chemists and druggists in the Cape Colony:—Harry Richards (British diploma 1888); Albert Nicolson (British diploma 1897).

A BOTTLE EXCHANGE has been formed by the Mineral Water Manufacturers of the Cape peninsula. Apart from seeing that empties reach their respective owners, the Association has power to prosecute persons infringing the rights of its members.

NO TYPEWRITING.—The recent Government notice prohibiting the acceptance of typewritten documents at the Deeds Office, Cape Colony, has not had a very kind reception. It would appear that the Cape Government got the idea from the Transvaal, where, in the olden days, duplicates in carbon were accepted, and it is these carbon copies that have become illegible with age. Had the Government insisted on all documents and copies being done direct from the machine, the difficulty would have been overcome.

POISONED BULLETS.—The recently issued report of Mr. Juritz, the Cape Government analyst, deals with the much-debated question of the alleged coating of Mauser bullets with verdigris by the Boers in the earlier stages of the war. Mr. Juritz states that he has examined bullets sent to him and has come to the conclusion that the green coating is not acetate of copper. Assuming that there is danger of blood-poisoning, the chief analyst inclines to the belief that there is quite as much danger from the employment of dirty or contaminated wax-coating as from the copper compounds with which the wax may have been mixed.

INVESTIGATION NEEDED.—A wounded soldier recently returned from the front was discovered in a small room at Woodstock, near Cape Town, together with his wife and two children, one of whom was suffering from diphtheria, and has since died. They were quite destitute. The woman stated that she had applied for assistance to the Somerset Hospital; also to medical men, but failed in her object. It is alleged that one medical man called, but on learning that the family were without money refused to attend or give a prescription. The local Municipal Authorities are making inquiries in the matter.

BUSINESS CHANGES.—Messrs. Cameron & Hamilton, of Cape Town, will open a drug-store at Observatory Road as soon as the necessary alterations can be made in the premises which they have acquired there. This will make their third establishment in the Cape peninsula.—Messrs. Heynes, Mathew & Co., inform us that they will take over the concern hitherto carried on under the style of J. T. Pocock & Co., as from February 1, and in future communications, &c., having reference to that business, should be addressed to them at their head-offices, Cape Town. The business thus acquired is one of the oldest at the Cape, being established in 1836.

PATENTS AND TRADE-MARKS.—Amongst the applications for letters patent this week is one for "a liquid egg-preservative," by Alfred James Davis, importer, of Cape Town, and one for "improvements in explosives," by Charles Frederick Brown, clerk, of Cape Town.—The following is among the applications to record trade-marks in the Cape Colony: A pictorial label, the same as that used on Scrubb's ammonia, by Messrs. Scrubb & Co., in respect of cleaning and toilet compounds in Classes 47 and 48.—Messrs. Brunner, Mond & Co. (Limited), alkali-manufacturers, announce their intention of applying to the Cape Town authorities to be registered as the proprietors of the trade-mark "Empire soda."—Mr. William David Eustace Watkeys, as agent for Mr. John Millar Cunningham, of Cape Town, has applied to the authorities at Bloemfontein, Orange River Colony, for registration of the trade-mark "Erbaisha," in connection with patent medicines.

SEVERAL NARROW ESCAPES.—A fire broke out in a photographic studio in the vicinity of Messrs. J. T. Pocock & Co.'s premises in Cape Town on January 22. Thanks to the prompt arrival of the brigade the flames were confined to the scene of the outbreak, and, with the exception of damage to an outhouse, the drug firm in no ways suffered.—Next evening a large ironmongery and general stores caught alight, and was completely gutted. A violent south-easter was blowing at the time, and at first it was thought that the whole corner would have to go, but the fire brigade managed to protect it; the homœpathic pharmacy next door would have been involved.—Yet another fire occurred in Cape Town on January 25, this time in another part of the town. The premises were occupied by Mr. A. John Oke, and Mr. F. Ingram, a soft goods importer and painter and decorator respectively. Both these gentlemen a few years since severed their connection with the drug-trade to take up their present pursuits.

East Indian News.

A "BEECHAM" FAMINE.—"We have for the past ten days been without a box of Beecham's pills," writes a Bombay correspondent; "and, as things go, this state of affairs is likely to remain with us for some time to come."

TELEGRAPHIC RATES TO INDIA.—The Eastern Telegraph Company announces a reduction in the tariff for telegrams to India, Ceylon and Burmah. Hitherto the rate has been 4*s.* per word, but on and after March 1 next the tariff will be reduced to 2*s.* 6*d.*

REWARDED.—Messrs. N. Powell & Co., chemists and surgical-instrument makers, Duncan Road, Byculla, Bombay, have been awarded a gold medal at the Indian Industrial Exhibition held at Calcutta in December for the aseptic surgical instruments and trusses made by them.

GENERATORS FOR SODA-WATER DUTY FREE.—The India Office have issued a Customs circular containing a decision to the effect that generators for making soda-water, which are worked by steam-power and are not adapted for working by manual or animal power, are exempt from duty.

CHEMIST AND FIREMAN.—Carbonic-acid gas has been successfully employed at Madras for extinguishing a fire in the hold of a steamer laden with jute. The carbonic acid was supplied by Messrs. Maclure & Co., chemists, Mount Road, and six cylinders, each containing 84 lbs. of liquid CO_2, were used with marked effect.

RINDERPEST TREATMENT.—Considerably more attention is to be paid by the Civil Veterinary Department of India to the inoculation of cattle for rinderpest, and arrangements are being made under which the Mukhtesar Laboratory will double its annual outturn of serum for inoculation purposes. This will provide treatment for 100,000 cattle.

PEPPER CULTIVATION IN MADRAS.—According to the annual report of the Wynaad Planters' Association, the cultivation of pepper in the Madras Presidency has been increasing largely during the past few years, and is paying handsome dividends; but unfortunately with the increase of the industry came the inevitable increase of theft. A disease which has shown itself for some time past among the pepper vines, has increased somewhat seriously during the year.

THE EARTH NUT CROP.—In Madras there has been a marked recovery in the area sown with ground-nut from the depression of recent years. In South Arcot the area reported far exceeds that of any previous year and is nearly three times the average of recent years. The recovery is chiefly attributable to the favourable character of the sowing season, but is also assigned to the introduction of a new variety. The export trade in earthnuts in recent years fell to a very low level, in consequence of bad seasons and the deterioration of seed; but with the introduction of a new variety and a return of good seasons in Madras, where the crop is most largely grown, the trade seems to be approximating to the dimensions it attained before the period of depression set in. The season's crop at Pondicherry has also been a bumper one, and it is expected that a million and a half bags will be available for exportation to Marseilles in the course of the current year, which means that the crop is likely to furnish occupation to all those connected with, or interested in, the nut trade until the next crop is due in October or November.

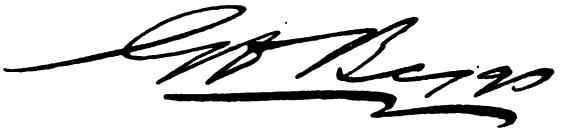
My Apprenticeship.



In Ireland.

LET me confess to begin with, that my present profession was not my first love, as previous to my entering on the thorny road of pharmacy I had the intention of following the desires of my early youth—viz., of becoming an artist, having shown some fair ability in that line. I would never tire of working at the easel. However, having a father with a very practical turn of mind, and he having, I suppose, the almost universal idea of the chemists' elevenpence-halfpenny profit

MR. G. D. BEGGS, Pres. P.S.I.

on the shilling, induced me to look with some favour to that particular business, and having had a small smattering of the school chemistry, I accordingly delighted his heart by consenting to enter the ranks of pharmacy. At that time we had no pharmaceutical diploma. So after looking about several of the retail houses in the city (Dublin) I was finally advised to go into one of the manufacturing houses. Accordingly my father made overtures to one of the oldest and best known houses in the trade, Messrs. Boileau & Boyd (established 1700), and they having a vacancy, preliminaries were arranged such as premium, &c., which I may here mention was 100*l.*, serving five years free, for which I was to be taught the art and mysteries of a chemist. The eventful morning arrived when I was to commence my career, and right well do I remember my feelings when I was introduced to the head of the firm, Mr. John George Boileau (who, I might mention, was a perfect martinet); in fear and trembling I listened to his reading my indentures, he laying particular stress on the several things I was not to do. This ordeal having concluded, I was handed over to the tender mercies of one of the junior office hands, and then and there I commenced my career as a chemist and druggist. There was a certain routine that the apprentices had to go through, the first duty being to call at the various steamer wharfs along the river to collect and pay the freights on all the incoming goods. This to my mind was not a bad sort of job to commence with, but after a little time I began to think that there was not much of chemistry in it, and accordingly I mildly remonstrated, but was very promptly informed that I would have to do as others before me had done. My next move was indoors to one of the departments where boxed goods and castor oil, pomades, &c., were put up, and here I may say I first learned how neatly things could be done. Having shown some aptitude for wrapping up parcels neatly (I find most of the assistants of the present day either cannot or will not take the trouble to turn out neatly wrapped parcels), after a time I was transferred to another department called the wholesale country. Here I was made conversant with the appearance of the various drugs and chemicals, and profited considerably; but still the goal of my ambition seemed to be far off, which was to be placed in the laboratory. From this department I was moved to the town wholesale, the work of which was very similar to that of the country. I might here mention that our firm had several contracts for fine drugs and chemicals from the Cochin Government, from Canada, Vancouver Island, &c. The several articles had to be very carefully put up, and these orders were generally done after hours; I was usually given the execution of these. Each article ordered had to be put up thus; 14 lbs. of a drug in fourteen 1-lb. bottles, which had to be first luted with a certain compound when melted, then capped down with gutskin, and finally covered with white capping-skin. I remember with what feelings I used to admire the multitude of articles on the counter each morning after my night's work. On my fourth year I got elevated to the retail, under the charge of one of the best retail hands in our city, Mr. Robert Ramsay. I took kindly to this branch, and after some time was given charge of it, but I still had the laboratory in view. It was in the fifth year that I was transferred to the laboratory and placed under the charge of our head chemist, Mr. Thomas Henry Redding. This was the goal of my wishes, and right well do I remember my first day's experience. Being, like Zaccheus, small of stature, I was placed on a box in front of one of the large steam pans, and directed to keep stirring the contents. What with the smell and the constant stirring, I, at the end of the day, had slight misgivings as to the laboratory pleasures. However, I was told after a few days at this sort of work I would get something of a lighter character to do, and accordingly I was placed in front of a large stone mortar, with pestle suspended or held in position by an iron ring from the wall, and by the time the day was over I had come to the conclusion that I would prefer the stirring. After some time I had work more to my taste, such as making magnes. cit. eff., ung. hyd. nit., æther. sulph. and all other compounds and chemicals that we manufactured. After some time I had temporary charge. On the completion of my time the firm presented me with a testimonial in the form of a gold watch and chain as a mark of their esteem. I continued with the firm as town representative for some seven or eight years, then left to embark in my present business. The firm not having a compounding department was a great loss to me, as I had to turn in after my day's work to one or two of the Dublin houses to learn this branch. During my apprenticeship I had to do rough and dirty work, still I look back with much pleasure on those days, and can generally say that it was my own fault if I did not learn the usual work of the chemist and druggist of the day.

THINGS WORTH KNOWING.

Vermicelli, if good, does not curdle milk.

Not a single infectious disease is known in Greenland.

Salt does not cake or deliquesce if mixed with a little arrowroot.

After peeling apples, dropping them into cold water prevents them becoming discoloured.

Cocoanut oil and potassium iodide do not develop free iodine so readily as other fatty bases.

To rid ships of rats, burning sulphur below decks has been shown to be effectual, the hatches being battened down.

A smoky lamp may be cured by soaking the wick in strong vinegar or B.P. acetic acid, and thoroughly drying before use. It ensures a bright and clear light.

A pint of powdered wood-charcoal put in a small cotton bag and then into a barrel of new cider will prevent fermentation, and the longer such cider is kept the more palatable it will become.

Ammonia carbonate rubbed upon a hot wet spade in a greenhouse has a miraculous effect in developing a profusion of flowers, buds, and leaves. The tints are said to deepen and increase in brilliancy after each application.

Reviews.

Introduction to the Study of Chemical Philosophy: the Principles of Theoretical and Systematic Chemistry. By WILLIAM A. TILDEN, F.R.S. $7\frac{1}{4} \times 4\frac{3}{4}$. Pp. x + 366. 5*s*. (With Answers to Problems, 5*s*. 6*d*.) London, 1901: Longmans, Green & Co.

THIS is one of the very few English books which attempt to introduce the student of elementary chemistry to the purely theoretical aspect of the subject. The statement made in the preface to this "completely revised and rearranged" edition that, as a consequence of the influence of new doctrines and the attendant modified phraseology, "the book has been completely recast, and in large part rewritten," led to the expectation that the new theoretical developments in chemistry would be accorded a prominent place in it. In our opinion the occasion of the preparation of this new edition furnished Professor Tilden with a great opportunity for furthering the advancement of the new theories respecting solution, electrolysis, chemical equilibrium, &c., which opportunity we regretfully find that he has failed adequately to embrace. The new views regarding some of these subjects are certainly dealt with, but instead of being brought before the student gradually and almost from the very outset, as of fundamental importance in the development of much of the subject-matter of the book, they take a quite subordinate position near the end; and we are unable to get rid of the impression that they are advanced not in that whole-hearted manner which implies conviction as to their validity, but rather as a more or less grudging concession to a prevailing fashion. To simply state that, for example, the headings "chemical equilibrium," "phase rule," and "transition point" do not occur in the index is to indicate to the student of the recent theories in chemistry that the treatment of the subject is not up to date. As regards some of the older matters with which the book deals, we think that the pruning-knife might with advantage have been much more freely applied than has been done. Thus it is difficult to appreciate how the author can suppose that something, chemically speaking, really worth doing has been accomplished when a graphic formula for crystallised zinc sulphate has been written (showing tetrad oxygen throughout, water of crystallisation included). Again, he states that the hypothesis originated by Van 't Hoff (not "Van t'Hoff," as on page 124 and in the index) regarding stereoisomerism "is now universally adopted," while four pages earlier he represents methyl isocyanide by the formula $C \equiv N—CH_3$. It would be interesting to know what is Professor Tilden's notion of a space formula for methyl isocyanide, in which the nitrogen atom is symmetrically disposed with respect to a carbon atom (not the one of the CH_3 group), which conforms with the requirements of Van 't Hoff's conception. Despite the beauty of the series of formulæ in which it occurs, the incorrect formula, N_2O_2, should now have been finally omitted from amongst those for the oxides of nitrogen. There is a very frequent looseness of style in the book which grates upon the initiated reader. For instance, on page 71 we read that

> the bulk of one part by weight of hydrogen is regarded as the volume of the atom of that element, and is selected as the unit for comparison of other volumes, atomic and molecular. Twice this bulk of hydrogen contains a molecule, and all molecules in the gaseous state occupy the same volume.

This can scarcely be regarded as either happily or accurately put, and it may easily mislead the uninitiated student. Notwithstanding the defects to which we have referred there is much that is valuable and suggestive in the book. We believe that Professor Tilden could thoroughly modernise its teaching without much difficulty, and to the very great advantage of its readers.

A Manual for Assistants' Examination, Apothecaries' Hall. By MABEL F. STANLEY. $6\frac{1}{2} \times 4\frac{1}{2} \times \frac{1}{2}$. Pp. 281. London: H. Renshaw. 3*s*. 6*d*

THIS little book is, as far as we are aware, the first one dealing with practical pharmacy which has been written in this country by a lady. It is mainly, therefore, because she is the pioneer pharmaceutical authoress, that we congratulate Miss Stanley on her production and present her portrait. The book itself is not ambitious. Nor does it profess to be; and we think the authoress has succeeded very creditably in the task which she essayed. "The chief object of this little manual," saith the preface, "is to give students studying for the Assistants' Examination, Society of Apothecaries, a guide of moderate dimensions, yet containing in concise form what should prove a useful adjunct to the ordinary text-books on materia medica, chemistry, and pharmacy." The book does this, and nothing more. The subjects have been arranged in the order given in the syllabus issued by the Society of Apothecaries, the first forty pages being devoted to "chemistry." Then follow "official pharmacy," comprising pharmaceutical and chemical processes for obtaining drugs from their crude sources, Latin terms used in prescriptions, and B.P. preparations. The official remedies and their preparations are reminiscent of the "class notes" of our student days. There is a sort of compressed "Squire" look about them which is rather entertaining, but the condensations doubtless contain all the information necessary for the students who aspire to the "Hall" mark. The "Notes on Dispensing," contained in thirty-four pages, are similarly concise. There are no elaborate directions given for the guidance of the dispenser. The following is a typical example of what occurs under "Excipients of some of the principal drugs":—

MISS MABEL F. STANLEY.

HYDRARG. PERCHLOR.—Sac. lac., glyc. trag.

A quaint paragraph in this section deals with colours of mixtures, but no explanation is vouchsafed as to the reason why "nitric acid and iron" should be "white" or "iodine and carbolic acid" should be "white." The book may be a useful pocket companion to others than those who aspire to be assistants to apothecaries, and, when such slips are corrected, it will be even more valuable.

Quain's Dictionary of Medicine. By Various Writers. Third edition, rewritten and revised, with fourteen coloured plates and other illustrations. Edited by H. M. Murray, M.D., assisted by J. Harold, M.B., and W. C. Bosanquet, M.A., M.D. Pp. xviii + 1892. London, 1902: Longmans, Green & Co. 21*s*. net.

THE new edition of Sir Richard Quain's well-known "Dictionary" keeps up the reputation of what may be called a medical classic. We must say, however, we do not admire the single volume form, although bound in green and gold—rather slenderly, and would advise those who want it to get the work in two volumes. A number of essential alterations have been made in the new edition, and generally for the better. Many articles which had little or no bearing on practical medicine have been omitted, and, what is of more importance, most of the useless repetitions which were specially irritating in the last issue have been got rid of. In place of these a number of entirely new articles have been introduced, some on "special branches" being particularly valuable. Perhaps a little too much favour has been shown to surgery, and in future selections it might be well for the editors to remember that their work is a medical dictionary. In addition to the new articles the old have been thoroughly revised, and give the most up-to-date information available on each subject. The extent of the work may be gathered from the list of contributors alone. There are nearly 300 of them and not a few are the recognised authorities on their respective subjects. It is almost invidious to make any special reference, but notice may be taken of the article on Actinomycosis by Professor Greenfield, of Edinburgh, which is practically the only account in English of a not unimportant disease. There are also excellent contributions by Major Ross on Malaria, and by Sir Frederick Treves on Physical Education. The list might be indefinitely extended, but it will suffice to say that the book is at once a dictionary and an encyclopædia of medicine. To the busy practitioner who wants to have at hand the latest and most reliable information it should be invaluable, and certainly it is difficult to imagine a better guinea's worth.

Legal Reports.

High Court Cases.

THE SALE OF A CHEMIST'S BUSINESS.

THIS case of J. H. Read (Limited) *v.* Arrowsmith & Wyborn (Limited) came on for hearing before Mr. Justice Buckley on Friday, February 14. Mr. Astbury, who appeared with Mr. Hodge on behalf of the plaintiff company, said the action was brought against Arrowsmith & Wyborn (Limited) and John Pollard. The defendant company was (if he might say so) a one-man company. Pollard was the company. He was managing director, and held all the shares. The action was for the purpose of enforcing an agreement by which the defendant company agreed to sell to the plaintiff company the whole of their business and assets. The plaintiffs also asked for an injunction to restrain the defendants from trying to interfere with the shop and premises which were the asset of the defendant company, for damages, and repayment of the money paid by them to defendants. The plaintiffs were a limited company, carrying on business as chemists and druggists in Victoria Street, London. The defendants Arrowsmith & Wyborn (Limited) were a company, registered in 1898 with a capital of 1,000*l.*, in 1,000 1*l.* shares, and it was formed for the purpose of carrying on the business previously carried on by Messrs. Arrowsmith & Wyborn, and which business had been purchased by the defendant John Pollard. Pollard, not being a member of the Pharmaceutical Society, and for the purpose of evading the Act, registered the business he purchased as Arrowsmith & Wyborn (Limited), in order that he might be enabled to carry on this chemist's business. Out of the capital of 1,000 shares, only 817 were issued, and they were all issued to Pollard except seven, which were issued to the signatories of the memorandum of association. Since the incorporation of the company Pollard had acted as its managing director, and he alone carried on the business. There were two nominal directors, but they were mere figureheads. The defendant Pollard did not attend very well to the business. In 1901 he was very heavily pressed by creditors, and the business went from bad to worse. Pollard instructed a man named Collins to sell the shop and premises as a going concern. On June 3, 1901, the defendants' shop and premises were taken possession of by the sheriff under execution by creditors, and the sheriff remained in possession from June 3 to 11. On June 11 the shop was shut up and the business was discontinued. The sheriff was paid out by the help of Collins, and on July 3 Collins, as agent for the defendant company, and instructed by Pollard, sold, or agreed to sell, the shop and premises to the plaintiff company for 950*l.* The plaintiffs paid 250*l.* by way of deposit, and the sale was to be carried out by a transfer of Pollard's shares. The verbal agreement was confirmed in writing. The 250*l.* was paid to Collins, and used by him to pay off the pressing creditors. On July 5 the plaintiff company were put into possession, and they stocked the shop, opened it, and carried on the business there without any objection, Pollard frequently coming in to see them. That went on until October 1, when Pollard came to the shop with Mr. Darrel, who he (counsel) thought was his father-in-law, and by some means got the plaintiffs' manager out of it, took possession, and refused to go. There was a disturbance in the place, and these two persons stayed in the shop all night. On October 3 an application was made to the Court, and on the 9th an order was obtained restraining Pollard from interfering with the plaintiffs in the business. That was a consent-order, Pollard undertaking until the trial not to interfere with the business, and the plaintiffs undertaking to keep an account, and pay the balance of the purchase-money, 700*l.*, into Court, to abide the result of the trial. Pollard, for some reason or other, seemed to have changed his mind between July 31 and October 1, and he had now passed a resolution to wind up the company voluntarily, and had appointed himself liquidator. The first resolution was July 29, 1901, and the confirmatory resolution was passed on August 19. Pollard, as liquidator, purported to rescind the contract with the plaintiffs, and refused to ratify it. Pollard at the time of the sale had deposited the whole of his shares with his brother, George Pollard, as security for a loan he had raised on them. George Pollard, as mortgagee of these shares after the action had commenced, brought a motion in the High Court, under Section 35 of the Companies Act, to ratify the register by putting his name on as a holder of these shares in the place of John Pollard. That motion was made on October 24, 1901, and an order was made upon it on December 5. The writ in the present action was issued on October 3.

Mr. Justice Buckley said that looking at the contract it appeared to be a contract not to assign a lease, but to assign some shares. How could it be said to be an agreement for an assignment of a lease?

Mr. Astbury remarked that the plaintiffs had been put in possession of the premises. He rather doubted if it was a contract for the assignment of the shares. The contract contained two inconsistent clauses, and there was no question as to which part of the contract the defendants had performed.

Mr. Justice Buckley asked what had been done in the winding-up.

Mr. Astbury said nothing, except that the plaintiffs' 250*l.* had been used for distribution amongst the creditors.

Mr. Crossfield, for the defendants, said he disputed that statement.

Mr. Astbury said he was in a position to prove it. They were suing upon a contract made between Perrett and Collins for the plaintiffs, and Robbins and Gore for the defendants.

Mr. Collins, member of the Corporation of Accountants, who had acted as auditor for the defendant, was then called for the plaintiff company, and his evidence corroborated Counsel's statement as to Pollard's position, and the sale of the business. The sale was negotiated on July 30 at the shop between himself and Mr. Gore and Messrs. Perrett and Lyndale for the plaintiffs. A clause to the effect that the transfer should be effected by the transfer of the whole of the shares to the purchasers was put into the receipt for the purpose of binding Pollard. Pollard afterwards told him that he was perfectly satisfied. When Pollard was asked as to what was to be done with the deposit, Pollard told witness to use it for paying off the pressing creditors of the company. On July 5 he handed over the keys of the premises to Perrett and put the plaintiffs in possession. He subsequently got a letter from Mr. Pollard saying that the sale had been effected without proper authority from the company. At that time he had paid away about 130*l.* of the deposit to creditors, but on receipt of that letter he retained the balance. Cross-examined, witness said that his instructions to sell were given verbally and not in writing. He did not think he had a scrap of paper from John Pollard about the sale.

Mr. Perrett, manager to the plaintiff company, was next called, and corroborated the last witness as to the interview of July 3. In cross-examination, witness said the provision relating to shares which appeared in the receipt was not inserted by his instructions. He went to buy the business and not the shares of the company.

This closed the plaintiffs' case.

Mr. John Pollard, who was then called for the defence, stated, in answer to Mr. Crossfield, that he asked Collins to endeavour to find a customer for the business, the price to be 1,600*l.* He asked Collins to get an offer which could be submitted to the Board. In June Collins did submit an offer of 800*l.*, but he told him not to accept it prior to July 3, and he did not authorise him to accept 950*l.* for the business. Cross-examined by Mr. Astbury, K.C., witness said he qualified as a chemist three years ago. The business was turned into a company because Arrowsmith & Wyborn had businesses at Brighton and elsewhere, and it was intended to unite them all. Arrowsmith & Wyborn were in the business; they each had a 1*l.* share. He maintained that the business was sold to the company, and not to himself or his brother.

You turned the business into a limited company to evade the Pharmacy Acts, and you never were a qualified chemist? —That is not so, I am a chemist.*

In further cross-examination witness admitted there was no agreement to sell any of the other businesses to defendant company.

* The Pollards on the 1902 register of chemists and druggists are:—Albert Pollard (Margate), E. W. Pollard, Ph.C. (Ryde), H. H. Pollard (Ryde), Jonathan Pollard (Bromley), William Pollard (Wakefield), and Wilson H. Pollard (Brighouse).

Digitized by Google

Mr. Frank Fairly, a wine-merchant and one of the original directors, said he never gave Mr. Pollard, Mr. Collins, or anyone instructions to sell the business. In cross-examination, witness said he did not receive any directors' fees. He did, however, as a director attend meetings.

This concluded the evidence.

Mr. Crossfield having addressed the Court, his Lordship gave judgement without calling for a reply. He said that Pollard was the defendant company throughout, and Pollard was holding himself out to those buyers as a person desirous of selling. There was no resolution by the directors to sell, but there never was any resolution by the directors as to anything except to wind up. He had some doubts with reference to the form of agreement before the defendant Pollard gave his evidence. The cross-examination had removed any doubt that he had, and the defendant had been good enough to prove the plaintiff's case for him. Here there had been made out an agreement which had been partly performed by accepting the deposit and allowing the plaintiffs to go into possession. He held that the agreement was one to purchase the lease of the premises, and not to purchase shares, and he directed that agreement to be specifically performed. The defendants' counter claim was dismissed with costs.

NEEDHAM *v.* HARRIS.

BEFORE Mr. Justice Darling, sitting to try short causes in the K B. Division on Friday, February 14, the case of Needham *v.* Harris was heard. Mr. Lowenthal, who appeared for the plaintiff, said he was a chemist carrying on business at Huddersfield, and having branches in other towns. The defendant was appointed manager of the Leeds branch in 1890. Towards the end of 1892 plaintiff discovered that the defendant had contracted habits of intemperance, and was in the habit of frequenting theatres, &c. It was found that there was a sum of about 500*l.* due on differences in stock and for neglect of duty in not accounting for sums received, &c. Plaintiff proposed to keep the defendant in his employ and give him a chance to retrieve his position, and defendant agreed to execute a mortgage on his life-policy and on his interest under his father's will. On that mortgage plaintiff now claimed 225*l.* The defendant, in his affidavits, stated that he had no recollection whatever of having signed the contract, and that if he did sign it it was under a misapprehension of its nature, and owing to misrepresentation on the part of the plaintiff. He also urged that there had been undue pressure used in order to compel him to sign the document, he having been threatened with exposure. The defendant, who was not represented by counsel, was sworn, and in answer to the Judge said he did not read the deed before he signed it, and he did not know anything about the 5-per-cent.-interest charged. Plaintiff said that if he did not sign the deed he would give him notice to leave. He signed it for the sake of his wife and children.

His Lordship: Did plaintiff say that to you when you signed it?

Defendant: Yes.

His Lordship: Was anybody else present?—No; it was signed behind the counter in the shop in North Street, Leeds.

You have sworn in your affidavit that you never signed the deed at all. Be careful.—I told my solicitor I did not remember signing the deed.

If you don't remember signing, it how do you remember it was signed in the shop?—That was ten years ago.

What had you been doing that you were compelled to sign it?—There was 20*l.* or 30*l.* short in the cash; that was the reason.

Mr. Lowenthal: As a matter of fact it is true, is it not, that you had contracted drinking habits?

Defendant: Certainly not.

On going through the books with Mr. Needham it was agreed that the deficiency was about 500*l.*?—No; about 30*l.* I gave up my furniture to settle all the claims against me. My furniture was worth 50*l.* or 60*l.*

Mr. Lowenthal said he did not dispute that the furniture was given up.

His Lordship said that if the defendant had not committed a robbery, but had simply taken money and not accounted for it, and then a threat was made to prosecute him for what was a civil debt, it would be duresse. If the furniture, on the other hand, or the deed was taken as a means of compromising a theft, then it was compounding a felony.

Mr. Lowenthal quoted a case in which the late Mr. Justice Cotton had said that threats were quite justifiable under similar circumstances.

The Plaintiff (Mr. Thomas Needham) was called, and said that his complaint against the defendant was that he had taken to drink, and that he was mixing with companions above his station.

His Lordship: Going with disreputable companions, you mean?—Yes.

In answer to further questions by his Lordship the plaintiff said he believed the defendant made a profit on the business, which he had not accounted for. He believed he had been living too fast.

A witness was called, who said that he was present when defendant signed the mortgage-deed, and that it was read over to him.

His Lordship said he had carefully gone into the case, and he was satisfied that Mr. Needham had not used any improper threats against the defendant to compel him to sign the deed, and that defendant, when he signed it, knew what he was doing. There would be judgment for plaintiff for the amount claimed, with costs.

SACCHARIN CORPORATION (LIMITED) *v.* DAWSON.

THIS action came before Mr. Justice Farwell in the Chancery Division on Tuesday, February 11. Mr. Colefax, for the plaintiffs, said that there were really two actions. The first was started in September, 1899, and the second in September, 1901. The plaintiffs, having started the first action, allowed matters to rest, because they did not think that the defendant was embarking upon such extensive infringement of their patents that it would be ultimately necessary to proceed with their action. But in the summer of 1901 they found that he was again infringing, and more seriously, and so they started the second action. The position of the plaintiffs was that they held all the patents which covered the commercial manufacture of a body called saccharin, and although the plaintiffs were not at present aware precisely what patent had been infringed—that was to say, they did not know the process by which it had been infringed—still they said that the article complained of must have been made by one or other of the processes described in their patents, and that their patents covered the process, whatever that process might have been. The defendant in his answers to interrogatories, said he had sold not saccharin, but "a sweet compound" to the Hollingwood Brewery and Bottling Company, near Manchester, but that at the request of that company he had sent them a 2-lb. sample of saccharin. That was his reply to the first action. But in the second action he admitted that he had imported 804 oz. of the "sweet compound," but had, according to the regulations of His Majesty's Customs, to be imported as saccharin. On these facts the plaintiffs alleged that the fact of the infringement was perfectly clear. In the second action the defendant questioned the plaintiffs' title, but the plaintiffs had a practical admission that they were the registered legal owners of the patent.

The defendant appeared in person.

After hearing the witnesses for the plaintiffs, Mr. Justice Farwell, in delivering judgment, said that on the evidence one or other of the plaintiffs' patents must have been infringed, and the plaintiffs were consequently entitled to an inquiry as to damages. With regard to the injunction, a somewhat similar action had been brought by the plaintiffs in 1900 ("Saccharin Corporation (Limited), *v.* Quincey,' 1900, 2 Ch., 246), and Mr. Justice Cozens-Hardy had refused an injunction on the ground that the parcel of saccharin in dispute in that action might have been made under the plaintiffs' patent of 1885, which had then expired, and in respect of which consequently no injunction could be granted. In the present case, however, there was no such difficulty. The evidence proved that the saccharin now in dispute could not have been made under the 1885 patent. He thought that the proper course would be to grant an injunction against the breach of all patents owned by the plaintiffs for the production of saccharin, but limited to the period which the patent with the shortest life had still to run. The defendant to pay the costs of the action.

A GOLDEN REMEDIES CHEQUE.

BEFORE Mr. Justice Darling on Friday, February 14, the action of Pryor and Another *v.* The Golden Remedies Gems of Health Company (Limited) was heard. Mr. Cannot said the plaintiffs were a firm of solicitors, and the action was brought to recover 75*l.* balance due on a dishonoured cheque for 100*l.* The sum of 100*l.* was due on certain chests of tea, and the company gave a post-dated cheque for the amount, and Mr. Ward, its manager, was asked to become security for the amount. He did so by giving his own cheque. Neither of these cheques was paid when they became due. Ward asked plaintiffs not to present his cheque when it became due, and gave a promissory note in its place. After that 25*l* was paid by the company, leaving 75*l.* due, which was not sued for. The defence, he believed, was that Ward had not received any consideration for his cheque or note. Mr. Montefiore, for the defendant, corroborated this, and Ward said he would submit to judgment for the amount claimed, with costs, as he had satisfied his clients that there was no defence. Judgment accordingly.

R LEHMANN & CO. (LIMITED) *v.* SWISS MILK SOCIETY.

IN the Chancery Division on Thursday, February 13, before Mr Justice Joyce, the plaintiffs moved for an injunction to restrain the defendants from passing off condensed milk in such a manner as to lead to the belief that it was the plaintiffs' milk. An application was also made that the mark of the defendants might be struck off the register. The plaintiffs are the owners of the "Cow" brand and the "Head" brand of condensed milk. The defendants had registered a mark called the "Cow-head" mark, and this the plaintiffs contended would lead to confusion. Mr. Justice Joyce said he did not think it was a case to be tried on motion.

THORNTON FILMS.

IN the Chancery Division on February 19, before Mr. Justice Kekewich, the case of the Thornton Pickard Manufacturing Company, of Altrincham, *v.* The Thornton Film Company (Limited) came up for hearing on a motion for judgment in default of defence. Plaintiffs, who are manufacturers of photographic appliances, claimed an injunction to restrain the defendant company, who were said to have set up a rival establishment in the same neighbourhood, from using the name, style, or title of the Thornton Company (Limited) or any other style or name which included the name of Thornton, or a name resembling the same, so as to induce the belief that the business carried on by them was the business of the plaintiffs, or had any connection therewith. The defendant company were not represented, and his Lordship granted an injunction as asked, with costs.

County Court Cases.

A SOAP TRANSACTION.

AT the Nottingham County Court on February 8, before his Honour Judge Masterman, D.C.L., the Sales Company (Limited), Monument Station Buildings, London, applied for a new trial of a case brought by them against Charles H. Cudy, of 37 St. Ann's Well Road, Nottingham, to recover 37*l.* 12*s* 6*d.* for goods sold and delivered, in which a verdict was given for the defendant. Mr. Herbert, for the plaintiff company, contended that the verdict was unreasonable, contrary to the evidence, and one which the jury could not have given had they viewed the whole of the evidence reasonably. The action was brought to recover the balance of the price of certain cases of Fels-Naptha soap. The defence set up was that the soap was not to be paid for until the whole had been removed from the station in Nottingham, and that it was sold upon those terms. He did not dispute that the first order given for the soap was on those terms, but that the second order, the one in dispute, was no so. Mr. Stevenson, for the defence, urged that it was impossible to conceive a case more fit to be decided by a jury of mercantile men, such as that which heard the case, than this one. It was a case where an American inventor had hit on an idea that he was going to revolutionise the soap-trade, and the advertisements being in most of the papers and in other prominent places, setting forth the special terms upon which the soap was sold, were known to the jury. Mr. Stevenson suggested that the plaintiffs having first brought on the action during the absence of Mr. Fels in America, now thought they would have done better by waiting for his return, and hence the present application. His Honour said he considered the application an amazing one, and if he were to grant it it would be perfectly useless for him to try cases with a jury. He saw no ground for saying that the verdict was unreasonable or unjust, and the application would, therefore, be dismissed with costs.

THE HUSBAND'S LIABILITY.

AT Marylebone County Court on February 14, Mr. John Trude Fripp, surgeon-dentist, Willesden Junction, N.W., brought an action against Mr. Charles King, Witley Bay, claiming twelve guineas in respect of professional services rendered. Mr. Fripp explained that in November last Mrs. King, wife of the defendant, sent her eldest daughter to him to have her teeth examined, and with the request that an estimate should be given for attending to all the dental work which might be necessary. He (plaintiff) furnished an estimate amounting to eighteen guineas, and subsequently received a letter from Mr. King in which he said, "Will pay for the necessary work for my daughter's teeth, but it seems a lot of money." Almost immediately after this work was commenced two younger daughters came with a request from Mrs. King that their teeth also should be seen to. He accordingly sent estimates for this additional work amounting to five and a half and six and a half guineas. When the whole of the work was finished an account for thirty guineas was rendered, but the defendant, while paying eighteen guineas in respect of the work done for the eldest daughter, repudiated his liability in regard to the remaining portion of the account, stating that in November he was living separate from his wife, who had an estate of her own, and that he had recently obtained a divorce from her. The letter concluded with an intimation that Mrs. King had the custody of the children and would have to pay for their maintenance. Plaintiff submitted that the two younger daughters having come to him within two or three days of the first visit of the eldest daughter he could not have acted otherwise than he had done. As a professional man he could not, of course, inquire into the family's domestic matters.

For the defence it was stated that the defendant agreed to be responsible for the account so far as the work done for the eldest daughter was concerned, but he made no arrangements whatever in regard to the other portion of the account as the wife had the custody of the children. Judge Stonor: The defendant says in his letter—referring to the 18*l.*—"it seems a lot of money," and I do not think that the plaintiff was justified in adding to the account without proper instructions. The Plaintiff: But when that letter was sent to me I had no knowledge that the parties were not living together. The Judge: If people take orders from a wife without ascertaining whether she has authority to pledge her husband's credit they do so at their own risk. The defendant bore out his counsel's statement, adding that he published in the Newcastle-on-Tyne papers an intimation that he would not be responsible for any debts incurred by his wife. His wife had an income of her own amounting to 450*l.* a year. He gave his wife no authority in regard to this account, or any general authority. Judgment for defendant, but without costs.

COMMISSION FOR COLLECTING ACCOUNTS.

IN the City of London Court, on February 18, before Judge Rentoul, K.C., an action was brought by John A. Griffin against the Dee Oil Company (Limited), 49 Lime Street, E.C., to recover 4*l.* 13*s.* 4*d.* for commission earned. From the plaintiff's statement it appeared that the defendants had sued him a month before for accounts which he had collected on their behalf, he having been one of their travellers. He now claimed for 5 per cent. commission for the collection of the accounts. The defendants' case was that there was no arrangement to pay the plaintiff any commission for collecting accounts. The plaintiff told the Court that he had no agreement for the payment of the commission, but the defendants gave him instructions to collect the various accounts, and he did not see why he should do it for nothing. The Judge thought it only reasonable that the percentage which covered the obtaining of the order should include collecting the accounts. The custom of paying for collection

Digitized by Google

was quite different in various trades. The representative of the defendant company said the plaintiff was formerly paid a salary as well as commission. He had three months' trial, and at the end of the three months business was not satisfactory, and the plaintiff received notice. A fresh arrangement was made, and he was put on commission only. Then it came to his knowledge that the plaintiff was collecting money from their customers and keeping it. They sued him, and obtained judgment. It was not the custom of the oil-trade to pay for collecting accounts. The plaintiff said he had been paid 5 per cent. commission for collecting accounts for other firms, and his opinion was that the defendant company advertised for a man like him, and when they had obtained his connection from him they did not want him any more. The Judge said that, as the plaintiff had no special agreement for the payment of commission, he could only rely on the custom of the oil-trade; and, as the custom had not been established, judgment must be entered for the defendants. They did not ask for costs.

Sale of Food and Drugs Act.

LINIMENT OF SOAP.

AT Bow Street Police Court on February 14, Arthur Spinks, chemist, 134 Theobald's Road, W.C., was charged before Mr. Marsham with selling liniment of soap containing 40 per cent. of methylated spirit. Mr. Walford, who prosecuted on behalf of the Holborn Borough Council, explained that the case had been adjourned at the request of the defendant, in order that the third sample taken might be sent to Somerset House for analysis. The liniment sold by defendant was not in accordance with the B.P., the standard by which it was usual to judge drugs. On the day the sample was obtained from the defendant thirteen samples were got from chemists. Of that number only three contained methylated spirit. The British Pharmacopœia was drawn up every three or four years by the General Medical Council, on which chemists were represented (*sic*). He (Mr. Walford) was not aware of the result of the analysis at Somerset House.

Mr. Marsham: They say it is compounded of methylated spirit.

The inspector and his assistant then gave evidence of purchase. In reply to Mr. F. W. Beck, the C. D. A. solicitor, who appeared for defendant, the inspector said he was aware that there were two kinds of soap-liniment. He paid 8*d*. for 4 oz. of the liniment, but that included the price of the bottle.

Mr. Beck: Do you know that it would be impossible to get rectified spirit at that price?—Witness: So far as my experience goes I think it would.

James K. Colwell, analyst for the Borough of Holborn, deposed to the analysis. On the day he received the sample in dispute, he was also supplied with twelve other samples for analysis. Of these only three contained methylated spirit. Cross-examined by Mr. Beck, witness said he had no knowledge of any other standard than the British Pharmacopœia. He was not familiar with the pharmacopœia of the London Hospital. Mr. Beck then handed witness Squire's "London Hospitals Pharmacopœias," and pointed out that the formulas there given showed that in the London Hospital liniment of soap was compounded either with methylated spirit or with rectified spirit. At the University Hospital only methylated spirit was used. Mr. Colwell said he did not recognise it as a standard.

Mr. Beck: Do you suggest that everything included in the British Pharmacopœia must be prepared in accordance with it?—Witness: Certainly.

Mr. Beck: Do you mean to say that if such things as starch, sugar, soap, turpentine, beeswax, sherry, lard, cotton-wool, figs, prunes, indiarubber, and brandy are asked for, the B.P. article should be supplied?—Witness: Yes.

Mr. Beck: What is methylated spirit?—Witness: Alcohol containing 10 per cent. of wood spirit.

Mr. Beck: So that, as a matter of fact, only 10 per cent. of the alcohol is other than rectified spirit. What was the total percentage of alcohol in the sample?—Witness: About 43 per cent.

Mr. Beck: Are you assuming that the whole of the spirit in the composition has been treated with wood-naphtha?—Witness: Very nearly, I think. Only 10 per cent. of what I call methylated spirit was a foreign ingredient. The other 90 per cent. was actually ethylic alcohol.

Mr. Beck then read portions of Dr. Attfield's speech at Plymouth, in 1900, in which he condemned the attempt to set up the British Pharmacopœia as a legal standard under the Sale of Food and Drugs Acts. Mr. Colwell said he had heard something of that, but had not paid much attention to it.

Mr. Beck: But you will before this case is over.

He then proceeded to quote other extracts from Attfield's "Digest" to the effect that the British Pharmacopœia is merely a guide to the prescriber. Those responsible for that publication, he said, had never sought powers to set up a standard, satisfactory or unsatisfactory, for household medicines. Dr. Attfield considered that it would be absurd to apply such a standard as the British Pharmacopœia to commercial articles.

Mr. Beck (to witness): Do not you think then that the compilers of the British Pharmacopœia recognise a medicinal and commercial standard?—Yes; there seems to be a distinction drawn.

Mr. Beck: If you were to ask for sugar, would you expect it to be supplied according to the British Pharmacopœia?—Witness: Yes.

Mr. Beck: What! If you went to your grocer for it?—Yes. The sugar of the British Pharmacopœia is a cane sugar. If I asked for refined sugar, I should expect to get it.

Mr. Beck: If you asked for turpentine from an oilman, would you expect to get B.P. turpentine?—If I went to a chemist's shop for it I should. I do not know much about turpentine.

Would you expect to get brandy according to the British Pharmacopœia?—I might not get it of the exact alcoholic strength.

Mr. Beck: But that is the very object of the British Pharmacopœia, to describe the exact strength. You might have the celebrated brand of 1864 or the fusel-oil article manufactured two years ago.

Witness: Liniment of soap is a compound.

Mr. Beck: I hope you do not suppose that brandy is not. (Laughter.)

In answer to further questions witness said soap-liniment had been sold for about thirty years. He had not heard much regarding it until about three months ago. Of course there was a difference between commercial articles and drugs. Mr. Walford, in re-examination, obtained the admission from Mr. Colwell that there were two standards for various articles—one for chemists and another for grocers.

After a prolonged hearing, the case was adjourned for a fortnight.

IS BEESWAX A DRUG?

AT the Deal Police Court on February 20, Stewart Dunn, chemist, was summoned for selling beeswax which Mr. Adams, public analyst, certified to be adulterated with 30 per cent. of paraffin wax. The case was prosecuted by the police superintendent, and Mr. Morice, barrister, defended on behalf of the Chemists' Defence Association. The constable who purchased the wax said he paid 15*d*. for 8 oz. Superintendent Chaney said he had purchased many samples previously from Mr. Dunn, and none had been found wrong before. In cross-examination witness said he had been instructed by the authorities to purchase beeswax from chemists only. He understood from Stone's "Justices' Manual" that it was a drug if bought from a chemist, but not if bought from another tradesman. He produced the third sample of wax, which consisted of three tablets, each branded "W.H.B."

Mr. Morice said he should prove that the defendant had bought this brand on the assurance that it was absolutely pure, and at a specially high price, but he was not proposing to challenge the analysis. He should rely on the legal point. Basing his argument on the reported case of Fowle *v.* Fowle, he said it had been held in that case that beeswax was not a drug. The fact that it was named in the British Pharmacopœia did not suffice to make it a drug. Soft soap, turpentine, resin, starch, and many other substances were named in the Pharmacopœia, but were not in ordinary cases drugs.

The Magistrates' Clerk, quoting from the judgment in Fowle *v.* Fowle, said an inference was conveyed that beeswax might be a drug if sold by a chemist.

Mr. Morice said if sold in a Bond Street shop to a doctor such a circumstance might be a special one, but the ordinary

Digitized by Google

sales by chemists in no respect differed from those made by other tradesmen. He was ready to call evidence if necessary; but he submitted that he had no case to reply to.

The Magistrates retired to consult. On returning to court, the Chairman said the Bench wished to say, in the first place, that they did not for a moment consider that Mr. Dunn's reputation had been in question. This was purely a technical dispute, and it had not been proved to their satisfaction that beeswax was a drug. They therefore dismissed the summons.

On the application of Superintendent Chaney, they agreed to state a case if applied for.

Mr. W. S. Glyn-Jones and Mr. A. C. Wootton were in court to give evidence for the defence.

Pharmacy Act, 1868.

PROSECUTION UNDER SECTION 17.

AT a sitting of the Justiciary Appeal Court, Edinburgh, on February 20, a decision under the Pharmacy Acts, by Sheriff Fyfe, Glasgow, was brought under review. The Sheriff held that under Section 17 of the Pharmacy Act (1868) the registrar of the Pharmaceutical Society had no title to prosecute Dr. Steele Smith in his shop in Springburn Road, Glasgow, for contravening the Act by selling poison to a purchaser without making the entries in a book kept for the purpose, provided by the Act, and having failed to label the bottle, and he dismissed the complaint. The Lords of Appeal now held that the Act empowers the registrar to prosecute under this section, recalled the sheriff's decision, and remitted to him to proceed with the complaint.

Bankruptcies and Failures.

Re WILLIAM LOWSON LOTEN, Chemist and Druggist, Hull.—At the Hull County Court, on February 14, an application was made for the annulment of a bankruptcy-order against this debtor. In making the application, it was stated that the receiving-order was made on November 30, 1900, and since the adjudication Mr. Loten had paid the amount of his liability in full, together with 4-per-cent. interest. As the Official Receiver had no objection, the application was granted.

Re ROGERS BROTHERS, 31 Mincing Lane, E.C., Colonial and Produce Brokers.

A SITTING of the London Bankruptcy Court was held on February 19, before Mr. Registrar Linklater, when Mr. E. B. Rogers was examined. Mr. E. S. Grey, Official Receiver, conducted the examination, and Mr. Carrington appeared for the debtors. The facts elicited have previously been reported, and after the evidence the learned Registrar said he had listened attentively throughout, and all he could gather was that the witness knew nothing about the sales, the consignment of goods, the bills, the exchange cheques, or the books, and yet he had been working from 9 at morn until 12 at night. Witness explained that he was buying and selling all day long. He knew nothing whatever about the obtaining of money on goods, and in fact he was not even aware that loans were being raised. At the rising of the Court the examination was adjourned for a week.

Re REGINALD BETTS, whose present address is unknown lately carried on business as a chemist and druggist at Market Hill, Framlingham.—The creditors met at the Great Eastern Railway Company's Hotel, Liverpool Street, E.C., on Tuesday, February 18, the Official Receiver (Mr. Frederick Messent) presiding. The Official Receiver stated the bankrupt commenced business as a chemist at Framlingham eight or ten years ago with borrowed capital, but several months ago he became pressed for money, and had to seek assistance from his friends. At that time he estimated his assets to be:—Book-debts, 75*l.*; goodwill of business, 300*l.*; stock, 200*l.*; equity of redemption of house and shop, 500*l.*; total, 1,075*l.* The liabilities were about 1,500*l.* At that time the debtor's furniture belonged to him. The bankrupt opened negotiations with Messrs. Gostling & Co., of Diss, and sold the business to them. Subsequently, on December 18, 1901, he departed from his dwelling-house, this being the act of bankruptcy. Mr. Messent further stated that the bank were creditors for 200*l.*, and they would, no doubt, appropriate the life-policy in reduction of their claim. The Official Receiver observed that Mr. Pankhurst, to whom the debtor stated he had sold his goods, hesitated to come forward. He could not say whether the amount for which the business was sold was a fair price. Mr. Walker (representing Mr. Garrard, Framlingham) expressed the opinion that it was sold for less than its value. The meeting decided that the Official Receiver should act as trustee, and he was instructed to make inquiry regarding bankrupt's furniture, alleged to have been sold, and to seize it if allowable.

Gazette.

Partnerships Dissolved.

Beaman, G. W. H., Beaman, H. S., and **Wyman, W. S.,** under the style of the Spa Road Beverage Company, Loftie Street, New Church Street, Bermondsey, S.E., manufacturers of mineral-waters, ginger-beer, and other beverages.

Hook, C., Lauder, F. V., and **Neilson, D. M.,** under the style of C. Hook & Co., Kneller Road, Brockley, S.E., manufacturers of tannic anti-fouling compound; so far as regards F. V. Lauder.

Lewis, F. B., and **Mossman, R. A.,** St. Leonards-on-Sea and Hollington, Sussex, physicians and surgeons.

Richardson, M. J., and **Robertson, A. W.,** under the name of Richardson & Robertson, Gosport, general medical practitioners.

Turner, G., and **Elliott, F. J.,** under the style of Elliott & Turner, Biddenden, Kent, grocers, &c.

The Bankruptcy Acts, 1883 and 1890.

APPLICATION FOR DISCHARGE.

Freeman, Delamark, Dorset Square, N.W., surgeon, discharge suspended for two years, ending January 16, 1904.

Scotch Bankrupt.

Vogt, Henri, under the firm name of Henri Vogt & Co., sometime residing at 64 Princes Street, and now at 124 Queen Street, Peterhead, lately carrying on business as a drug merchant at 6 Rood Lane, London.

Deed of Arrangement.

New Companies & Company News

CYANIDE PLANT-SUPPLY COMPANY (LIMITED).—Capital 1,000*l.*, in 1*l.* shares. Objects: To carry on the business of consulting-engineers, mining-engineers, assayers, chemists, &c. Registered office, 56 New Broad Street, E.C.

BELLAMY BROTHERS (LIMITED).—Capital 10,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on at Hamilton Street, Great Grimsby, and at Upgate Louth, both in Lincs., as "Bellamy Brothers," of which J. B. Bellamy and W. H. Bellamy are joint proprietors, and to carry on the business of mineral-water and cordial manufacturers, brewers of alcoholic and non-alcoholic beverages, &c. No initial public issue. The first directors are J. B. Bellamy, W. H. Bellamy, J. Brussey, and H. N. Hickson. Registered office, Hamilton Street, Great Grimsby.

CADRONES (LIMITED).—Capital 2,000*l.*, in 10*l.* shares. Objects: To take over the business of a chemist and druggist carried on by W. C. Jones at 2 Queen's Road, Bayswater, W., as "W. C. Jones & Co.," and to carry on the business of chemists, druggists, drysalters, oil and colourmen, opticians, &c. The first subscribers are:—W. C. Jones, 4 Queen's Road, Paddington, W., chemist; Mrs. M. Jones, 4 Queen's Road, Paddington, W.; Miss M. E. C. Jones, 4 Queen's Road, Paddington, W.; H. C. Jones, 4 Queen's Road, Paddington, W., gentleman; W. W. C. Jones

Digitized by Google

4 Queen's Road, Paddington, W., dental surgeon; T. A. L. Rogers, 16 Fenchurch Avenue, E.C., clerk; and Miss M. A. Bugler, 35 Riffel Road, Willesden Green. No initial public issue.

Durant & Co. (Limited).—Capital 16,000*l.*, in 1*l.* shares. Objects: To acquire the business, including the Dylisia and other trade marks, formulæ and processes, of manufacturers of toilet-preparations, ointments, creams, soaps and perfumes, carried on at 21 Rosbery Avenue, E.C., and 19 Mount Pleasant, Clerkenwell, W.C., by L. A. Lewis, A. J. Noyes, and F. C. Monnickendam, as "Durant & Co.," for 11,000*l.* (10,000*l.* payable in shares), and to carry on the business of manufacturers of and dealers in druggists' sundries, &c. The first subscribers are:—R. H. Monnickendam, 24 Oppidans Road, South Hampstead, clerk; J. F. Markham, 61 Constantine Road, Hampstead; traveller; W. S. Cool, 3 St. James' Square, S.W., civil servant; T. J. Mason, Braughing, Ware, Herts, clerk; L. A. Lewis, 10 Pandora Road, West Hampstead, N.W., Colonial broker; A. J. Noyes, 14 Mincing Lane, E.C., Colonial broker; and F. C. Monnickendam, 8 Wyndham Crescent, Dartmouth Park, N., perfumer. No initial public issue. The first directors are L. A. Lewis, A. J. Noyes, and F. C. Monnickendam (managing director for seven years, with 250*l.* per annum for the first three years and 300*l.* per annum after). Registered office, 21 Rosbery Avenue, E.C.

Bouillon Fleet (Limited). — Consideration of the winding-up petition has again been deferred, as the parties are negotiating.

United British Castor Oil Company (Limited).—A meeting of the shareholders of this company was held at Winchester House, Old Broad Street, E.C., on February 19, but the proceedings were private.

John Oakey & Sons (Limited).—The directors propose a final dividend upon the ordinary shares of 5 per cent. for the half-year ended December 31 together with a bonus of 2½ per cent., making 12½ per cent. for the year.

Alfred Bird & Sons (Limited).—The report of the directors for 1901 states that the profit for the year amounts to 35,524*l.*, which, with the balance brought forward, makes a total of 41,694*l.* The directors propose to appropriate this amount as follows:—Preference dividend for the year (already paid), 7,078*l.*; dividend of 10 per cent. on the ordinary shares, inclusive of interim dividends (5,625*l.*) already paid, 15,000*l*; to carry to a reserve fund 10,000*l.*, and to carry forward 9 616*l.*

Bovril (Limited).—The annual meeting of shareholders was held at the company's offices in Old Street, E.C., on February 14, Viscount Duncannon, C.B., chairman of the company, presiding. The chairman, in moving the adoption of the report and balance-sheet, referred to the death of one of their directors, Admiral Sir Edmund Commerell. He then took in detail the items in the report, particulars of which were given in last week's issue (page 273). He reported continual progress in the prosperity of the company. The net profits during the five years of the company's existence have been: 1896 (one and a-half months), 17,076*l.*; 1897, 144,941*l.*; 1898 146,486*l.*; 1899, 125,557*l.*; 1900, 180,600*l*; 1901, 157,672*l.* In round figures three-quarters of a million has been earned in five years. Mr. G. Lawson Johnston (Vice-chairman) seconded the adoption of the report. Mr. E. G. Flower said as it was proposed to add 25,000*l.* to reserve fund, raising it to 95 000*l.*, he desired to know whether the directors considered that a sufficient reserve in view of the enormous extent of the business of the company. In order to make the company's position stronger, he thought it would be better to increase the reserve fund, and he would suggest that ½ per cent. of the proposed dividend on the deferred shares should be utilised for that purpose. Mr. B. S. Straus asked if the profits of the year under review were larger than those of 1898 irrespective of all Government and war orders. The Chairman said the profits during the past year were considerably larger than those of 1898, which were the largest profits prior to the war. Dr. Brisbane wanted more information regarding Virol, and the Chairman, in reply, stated that he was not able to give any detailed information. Bovril (Limited) was interested in Virol (Limited) to the extent of 25,000*l.* The motion then put was carried unanimously. The retiring directors (Viscount Duncannon and Dr Farquharson) were re-elected, and the auditors were re-appointed.

Personalities.

Professor W. A. Tilden, F.R.S., has been appointed an elector to the chair of chemistry at Cambridge.

Mr. A. Herbert Willson has been appointed dispenser at the Stepney Union Dispensary in succession to Mr. A. F. Gray.

Mr. A. Sidney Campkin, J.P., chemist and druggist, has been appointed on the sub-committee of the Cambridge Public Health Committee.

Mr. H. Gadd, J.P., has been re-elected a member of the committee of the Exeter branch of the London Association for the Protection of Trade.

We note that Mr. T. H. W. Idris, of Pratt Street, Camden Town, N.W., has arrived safely in South Africa, as extracts from his letters home are appearing in the daily press.

Mr. Arthur S. Horne, of Hele's School, Exeter, has been temporarily appointed demonstrator of botany and chemistry at the Royal Albert Memorial College, Exeter.

Dr. John R. Gilmour, eldest son of Mr. William Gilmour, pharmaceutical chemist, Edinburgh, has been admitted by ballot to the fellowship of the Royal College of Physicians of Edinburgh.

Lieutenant George Ellis, M.R.C.V.S., son of Mr. A. Ellis, chemist and druggist, South Shields, has been selected by the War Office veterinary department and ordered to proceed immediately to Fiume in Austria to take charge of a large consignment of remounts for the army in South Africa.

Dr. Inglis Clark, of Edinburgh, lectured at Highgate, N., on Monday evening to a large audience on "Mountaineering." The lecture was exceptionally good, and was illustrated in a practical manner, the illustrations including about a hundred lantern slides of Scotch Mountains, the Tyrol, Mont Blanc, and the Italian Alps, the places photographed being parts which the lecturer has himself ascended.

Mr. T. C. W. Martin was presented with an illuminated address at a dinner given in his honour at the Old Parr's Head, Aldersgate Street, E.C., on Tuesday, February 18, by the committee of the Junior Pharmacy Ball. Mr. R. L. Cassie, on behalf of the committee, in presenting the address, spoke of the high appreciation and regard in which he was held by his late fellow-committeemen, and felt that this was but a small recognition of the excellent services rendered by him as M.C. of the ball and Chairman of the committee for the last twenty years.

Mr A. R. Fox, chemist and druggist, Exchange Street, Sheffield, has at a by-election been returned to the Sheffield City Council as the Liberal representative of the Crookesmoor ward. Mr. Fox is the only chemist occupying a seat in the Council Chamber of Sheffield Corporation. He was President of the Sheffield Pharmaceutical and Chemical Society twelve years ago, is now senior Vice-President, and three years ago was elected a Fellow of the Linnean Society. Since his election he has received numerous letters of congratulation from pharmacists in different parts of the country, including Mr. Newsholme, President of the Pharmaceutical Society of Great Britain. Mr. Fox is the principal partner of the firm of Wm. Fox & Sons, botanic druggists.

Dr. J. Reynolds Green, F.R.S., Professor of Botany to the Pharmaceutical Society of Great Britain, has been elected to a Fellowship of Downing College, Cambridge. This does not imply that Dr. Green will vacate the Bloomsbury chair; in fact, an authority on University Fellowships informs us that the new Fellow will be expected to do half-a-dozen things—viz. (1) attend to his duties as a member of Council, (2) attend College meetings, (3) attend chapel and feasts occasionally, (4) supervise or direct the studies of the natural science men, (5) give a course of lectures, perhaps, and (6) receive the quarterly emoluments, if any. The last two words are indicative of the fact that Downing College riches are in land, and the emoluments are proverbially low. Still, we have no doubt the professor will be equal to the half-dozen new duties that accompany the honour just conferred upon him.

Westminster Wisdom.

(By our Parliamentary Representative.)

LORD AVEBURY'S SHOPS BILL.

The debate on the second reading of Lord Avebury's Bill to regulate the closing hours of shops, which took place in the House of Lords on Tuesday, ended, as was expected, in the rej ction of the proposals. It cannot be imagined that the noble Lord himself anticipated any other result. In his proposals he had ignored one of the leading recommendations of the committee which considered the subject —namely, that the local authority should be empowered to pass provisional orders making such regulations in respect to closing as they might think fit. Instead of leaving the matter in the hands of the local authority, he stuck to his old proposal that action should only be taken upon a requisition from a two-third majority of the shopkeepers, and he thereby rekindled all the old opposition based on the alleged tyranny of majorities and the interference with the liberty of the subject. In passing, it may be noted that Sir Charles Dilke has abided by the views of the Committee in the Bill he has standing on the order paper of the Lower House. The Earl of Wemyss championed the minorities with his wonted vigour. Through his spectacles he could only see "intolerable tyranny," "mistaken philanthropy," and divers other most objectionable things. A few of his colleagues took their cue from him, and shook their solemn heads with good effect, as was afterwards proved. But the heaviest blow against the Bill was dealt by the representative of the Government (Lord Belper), who explained that the proposals had not the approval of the Home Office. This was the crack of the Ministerial whip, and noble lords who came down with doubts suddenly found themselves men of profound conviction. When things were in this state Lord Rosebery intervened. He endeavoured to compromise the Government and at the same time sap the newly gotten convictions of the waverers. "Was not it," he asked, "the Prime Minister himself who declared that it was desirable to give to local authorities such powers as might be necessary to carry out the general wishes of the shopkeeping community with reference to the hours of closing?" Then he asked whether the Government would, in the event of this Bill being lost, be prepared to give effect to that declaration of opinion? The thrust was cleverly placed. It drew laughter and cheers, and after a moment of uneasiness the Duke of Devonshire got up, and somewhat feebly endeavoured to turn the point by suggesting that the ex-Premier had himself complained that the Government programme was already too large. Thereupon the Lord Chancellor, assuming the rôle of the "common-sense adviser," expressed the opinion that it would be disrespectful to the Committee of last year to pass a Bill which was not on the lines of their report. I could not help wondering whether his Lordship of the Woolsack had forgotten his own definition of a "common-sense" view. One day he bluntly told a learned counsel that to argue from common sense was simply to argue from an exaggerated idea of one's own opinions. Be that as it may, the end of the Bill was defeat. Only 26 supported the second reading, while 57 went into the Opposition lobby. The result is that if anything in the matter is to be done this session it will have to be through Sir Charles Dilke's Bill in the Commons, and the state of public business there makes the chances of that measure anything but rosy.

CHEMISTS AND THE BILL.

A large number of petitions in favour of the Bill were presented. Among the petitioners were the following:—

Chemist and Druggist Society in Ireland.
Ulster Pharmaceutical Association of Belfast.
North-East Lancashire Chemists' Association.
Great Yarmouth Pharmaceutical Association.
Hull Chemists' Association.
Wolverhampton and District Chemists' Association.
Aberdeen Pharmaceutical Association.
Inverness Chemists' Association.
Grimsby and District Chemists' and Druggists' Association.
Sheffield Pharmaceutical and Chemical Society.
Glasgow and West of Scotland Pharmaceutical Association.
Dewsbury and District Chemists' Association.
Newcastle-upon-Tyne and District Chemists' Association.
Plymouth, Devonport, Stonehouse and District Chemists' Association.
Wrexham and District Chemists' Association.
Leicester Chemists' Social Union.
Forfarshire and District Chemists' Association.
East Aberdeenshire Chemists' Association.
Bradford and District Chemists' Association.
Cardiff and District Pharmaceutical Association.
Derby and District Chemists' Association.

PROPOSED MINISTER OF INDUSTRY AND COMMERCE.

Mr. D. A. Thomas has given notice of a motion suggesting the appointment of a Minister of Industry and Commerce to take the place of what he calls the obsolete Board of Trade. So far very little attention has been paid to it, for the simple reason that there is practically no prospect of its being discussed, at least this session. I believe a small number of members look upon the proposal with so much favour that they would go into the lobby for it, and undoubtedly there is a considerably larger number who would not be sorry to see a change, although they would not actively assist Mr. Thomas at present. It is not a secret that Mr. Gerald Balfour's appointment as President of the Board of Trade is responsible for a good deal of the discontent.

ONE BILL DEAD.

The bill to abolish the "conscientious objector" in regard to vaccination which was introduced in the House of Lords a fortnight ago by Lord Newton is already dead. It came on for second reading on Monday, but the discussion had not lasted long before it was pointed out that the present Act would run to the end of next year, and that this Bill if passed could only come into operation a few months before that Act would cease to have effect. In these circumstances the prevailing contention among their lordships was that it would be well to postpone any re-opening of the question till the Act came up for renewal or repeal, and this view was made the finding of the House by a considerable majority on a division.

THE TUBERCULOSIS COMMISSION.

In reply to Sir W. Foster, Mr. Long stated on February 13 that the two farms for experimental work are situated at Stansted, in Essex. They belong to Sir James Blyth, who has placed them at the disposal of the Royal Commission free of charge. Laboratories and other necessary buildings are being erected.

VACCINATING MONKEYS.

In the *Lancet* the other week, Dr. S. Monckton Copeman, one of the medical inspectors of the Local Government Board, described experiments in the vaccination of monkeys, the object being to find if children could be vaccinated with vaccine thus obtained. Mr. T. Bayley asked the President of the Local Government Board on February 13 whether the Board had given Dr. Copeman leave to vaccinate children with vaccine so obtained; and Mr. Long replied that Dr. Copeman informed him that he had made experiments of the kind. The Board have not given him permission to vaccinate children with lymph yielded by the monkey, and he has not in fact done so.

THE SUPPLY OF LYMPH.

The Government have announced through Mr. Long that they do not propose to ask Parliament for power to control the lymph supplied from sources outside the Local Government Board. Some members who have been following up the matter with much care are greatly dissatisfied, and there is talk of seeking an opportunity of raising a discussion when the vote for the Local Government Board comes on. The contention is that until the Board takes steps to supply all the lymph that is required by private as well as public vaccinators it is imperative that there should be some Government test of the quality of the article placed on the market by outside makers.

PRESERVATIVES IN FOOD.

Mr. Long was asked the other day whether he has taken any steps to carry out the recommendations of the Pre-

Digitized by Google

servatives Committee to standardise the percentage of preservatives allowable in other articles besides butter and milk. From the answer given it appears that the right honourable gentleman has not arrived at a decision as to the course to be followed. Legislation will, of course, be necessary to give effect to the recommendations.

SUGAR DUTIES.

A meeting of members was held in Committee Room 10 on February 17 to receive a deputation from the sugar and confectionery trades in opposition to any increase in the sugar duties. Sir Albert Rollit presided, and the deputation included Messrs. Rowntree (York), Stanley Machin, Blackwell, and others. These gentlemen stated their views, and were asked many questions bearing on the matter.

Trade Notes.

THE GAMEKEEPERS' ANNUAL for 1902 has just been published by Spratts' Patent (Limited), 24 and 25 Fenchurch Street, E.C. It contains articles on dog-breaking, pheasant-rearing, the game laws, game coverts, grouse-rearing, fish-culture, and such gamey subjects, and is priced at 1*s.*

WELLCOME EXPOSURE RECORD.—Messrs. Burroughs Wellcome & Co. inform us that they can now supply this book in the Italian language, and with exposure and other tables suitable for use in Italy, and other countries on the Mediterranean. The English edition has met with such a demand that a limited edition is being reprinted.

WHITE ARSENIC.—Messrs. Gironés & Henrich, Consejo de Ciento, 329 Barcelona, Spain, who are proprietors of large arsenic mines in the Pyrenees, call attention to their product in our advertisement pages. The firm have recently erected works at Badolona for the manufacture of the best white arsenic, and they are prepared to supply it in any quantity. Mr. J. Hernaman James, Assay Office, Swansea, is the agent in Great Britain, and intending buyers would do well to write to him for quotations.

Business Changes.

PARKE'S DRUG-STORES (LIMITED) have just opened premises at 18 Shepherd's Bush Green, W.

MR. J. R. JARRETT, chemist and druggist, has recently opened a business at Glasfryn, Trawsfynydd, Merioneth.

HEWITTS (LIMITED), chemists and druggists, announce that they are giving up their pharmacy at 41 Crook Street, Bolton.

MESSRS. CADRONES (LIMITED), homœopathic chemists, have removed from 23 Bayswater Terrace, to 4 Queen's Road, Bayswater, W.

MR. W. SPENCER TURNER, pharmaceutical chemist, has removed from Norwich, and has reopened his shop at Willingham, Cambs.

THE business of Mr. A. G. Bartley, dispensing chemist (lately conducted by Messrs. H. J. Bounds, Limited), 88 Westbourne Grove, W., has been transferred to Messrs. Lewis & Burrows, 78 Westbourne Grove, W.

THE business of the late Mr. J. R. Mowatt, pharmaceutical chemist, at 109 High Street, Cheltenham, has been purchased and is being carried on by Messrs. H. B. Lloyd, chemist and druggist, and F. H. King, chemist and druggist, under the style of Mowatt & Co.

DRUG-TRADE FIRE-INSURANCE.—Members of the Special Committee appointed by the drug-trade section of the New York Board of Trade and Transportation to protest against the new schedule have had a conference with the Warehouse Committtee of the Fire Insurance Exchange, with the result that the Committee will make such changes as they deem necessary and desirable in the present classification, and submit the revised schedule to the Fire-insurance interests at a future meeting for their approval.

Deaths.

GILSON.—On February 15, at Camden Road, N., after a long illness, Mr. Charles Boulter Gilson, late of the Scottish Pharmacie, Mentone. Aged 38.

LENG.—Sir William Christopher Leng, the Sheffield journalist, who died early in the morning of February 20 was at the age of seventeen apprenticed to Mr. Fulham, wholesale druggist and drysalter, Hull, and at the conclusion of his apprenticeship commenced business on his own account in Hull as a chemist and druggist. In a short time he found that the mere buying and selling of drugs did not afford sufficient variety for his versatile nature. He accordingly began to write articles for the local papers, and so well did these take that he began to look on business with a somewhat philosophical contempt. His brother (Sir John Leng), was at the time Editor of the *Dundee Advertiser*, and he wrote for that newspaper the foreign articles, and was finally induced by his brother to forsake pills for press work. At the end of eleven years in the drug trade, namely, in 1859, he joined the staff of the *Dundee Advertiser*, and five years lates removed to Sheffield, where he did excellent public service by the investigation and exposure at great personal risk of the system of Trade Union picketing which at that time disgraced Sheffield. Sir William's death followed upon a radical operation which he underwent a few days ago.

MICKS.—At Plâs Merfyn, Eltham Road, Lee, on February 17, Sir Robert Micks. Aged 67. Sir Robert Micks entered the Inland Revenue service in 1846. He was Receiver-General for Ireland, and subsequently secretary of the department in London. In 1892 he was knighted, and two years later he retired from the service.

REES.—At Ystrad, Rhondda, on February 8, Mr. David Rees, chemist and druggist. Aged 44.

WALKER.—On February 13, at Bath, Mr. Henry John Walker, chemist and druggist. Aged 80. Mr. Walker, who suffered from a weak heart, was found dead in his dining-room. He succeeded to the business founded by his father in Broad Street, Bath, and founded the mineral-water business now carried on as Walker, Raggatt & Co. Mr. Walker was for fifteen years a member of the City Council, for thirty-six years churchwarden of St. Michael's, and for forty-two years a member of the Floral Fête and Band Committee.

Recent Wills.

BOWERBANK.—Probate of the will of Mr. Joseph Bowerbank pharmaceutical chemist, of Cockermouth (one of the founders of the Pharmaceutical Society of Great Britain), who died on November 21, 1901, has been granted to his executor and executrix, Mr. Michael Falcon, Horstead House, Norwich, gentleman, and Isabella Falcon. The gross value of the estate was 66,244*l.* 7*s.* 6*d.*, and the net personalty 56,211*l.* 2*s.* 3*d.*

HUCKLEBRIDGE.—Probate of the will of Mr. Philip Huckle-bridge, chemist and druggist, 116 Ebury Street, Eaton Square S.W., who died at the Talbot Hotel, Cuckfield, on October 12, has been granted to his widow, the sole executrix. The gross value of the estate is 608*l.* 17*s.* 5*d.*, and the net personalty 486*l.* 1*s.* 8*d.*

HUDSON.—The estate of the late Mr. Joseph Hudson, of 41 Cardigan Road, Headingley, Leeds, drysalter, who died on November 8, 1901, amounted to 8,611*l.* gross, the net personalty being 8,455*l.*

TOMLINSON.—The will of Mr. James Tomlinson, chemist and druggist, Chelmsford, who died on October 17 at "The Limes," New London Road, Chelmsford, has been proved by his executors, Mr. Joseph Tilby, The Avenue, Gipsy Hill, Norwood, gentleman; Mr. Donald George Gaul, Unthanks Road, Norwich; and his widow, Mrs. Alice Tomlinson. The gross value of the estate was 7,075*l.* 10*s.* 1*d.*, and the net personalty 2,574*l.* 14*s.* 11*d.*

MR. HAMILTON KING, American Consul General at Bangkok, says the direct imports of American chemicals and drugs into Siam are exceedingly good. In 1900 they amounted in value to 11,177 Mexican dollars (about 1,117*l.*)

Elementary Dispensing-practice.

By JOSEPH INCE.

EMULSIONS—(*continued*).

WE now take up consideration of castor-oil emulsions which are to be compounded in a mortar only. See an excellent form in the B.P. 1898, page 216.

(1)

℞ Ol. ricini,
Mucilag. acaciæ, aa.... ... ... ʒj.
Aq. destillat. ad ... ... ʒj.

Mucilage in mortar, add oil and water alternately in portions and not too rapidly. When emulsified, add remaining water by degrees, bearing in mind that this class of emulsions will not bear rapid dilution. Neglect of this precaution is a frequent cause of failure.

(2)

℞ Ol. ricini ... ... ʒiij.
Ovi vitell. ... ... ½
Syr. flor. aurant. ... ... ʒss.
Aq. destillat. ad ... ... ʒiss.

Castor-oil emulsions differ in one respect from most others, in that when syrup is present it is better to add it directly to the oil.

Order: Yolk; ol. cum syrupo; water, slowly added.

(3)

Paris Codex Formula.

℞ Ol. ricini ... ... ʒj.
Pulv. acaciæ ... ... gr. xx.
Syrupi... ... ... ʒj.
Aq. destillat. ad ... ... ʒj.

Order: Acacia + oil + syrup + water, by degrees.

(4)

Evelina Hospital.

℞ Ol. ricini ... ... ♏ 96
Pulv. acaciæ,
Pulv. sacchari, aa ... ... ʒj.
Aq. carui ad ... ... ʒj.

Order: Gum and sugar in mortar; oil in portions, thinned with aq. carui, remainder of which to be added slowly last.

(5)

℞ Ol. ricini,
Syrupi, aa ... ... ʒj.
Pulv. tragac. comp. ... ... gr. x.
Ol. caryoph. ... ... ♏ij.
Aq. destillat. ad ... ... ʒj.
Tinct. hyoscyam. ... ... ♏iv.

In glass measure mix ol. ricini and ol. caryoph., to which, by stirring, add the syrup. This mixture to be added gradually to the compound tragacanth powder in the mortar, thinned down by a little water; dilute tinct. hyoscyam. with remaining water, and add last.

(6)

℞ Ol. ricini ... ... ʒij.
Tinct. catechu ... ... ʒj.
Mucil. acaciæ ... ... ʒiij.
Aq. destillat. ad ... ... ʒij.

Add the tincture to the oil, when it will form a jelly; add mucilage, and gradually dilute with water. Result, a light chocolate coloured emulsion. Many methods have been essayed with this emulsion, but none have proved as satisfactory as the one now given.

Turpentine emulsions.

These seem to inspire a certain hesitation in the dispenser's mind, for which there is no just cause. The oil is suspended with great facility, and the result is satisfactory. These emulsions are worked with alternate small portions of turpentine and water. When a turpentine emulsion has gone wrong in the making, add water, ten or twenty drops at a time, or more, until suspension has been restored—a statement already made, but which will bear repetition.

(1)

Simplest Formula.

Ol. terebinth.... ... ... ʒj.
Mucilag. ... ... ʒij.
Aq. destillat. ad ... ... ʒj.

Mucilage in mortar; turpentine and water alternately by degrees; when thoroughly emulsified, water may be stirred in in a gentle stream.

(2)

℞ Ol. terebinth.... ... ... ʒij.
Pulv. saponis... ... ... ϑij.
Aq. destillat. ad ... ... ʒj.

Soap in mortar. Repeat method (1).

(3)

℞ Ol. terebinth. ... ... ʒj.
Ol. olivæ ... ... ʒiss.
Pulv. acaciæ,
Pulv. sacchari, ad ... ... ʒss.
Tinct. opii ... ... ♏xv.
Aq. destillat. ad ... ... ʒij.

To the mixed gum and sugar add the previously mixed turpentine and oil; water by degrees; tinct. opii, diluted with remaining water, to be added last.

(4)

℞ Ol. terebinth. ... ... ʒij.
Spt. chloroform. ... ... ʒss.
Pulv. tragac.... ... ... gr. vj.
Aq. destillat. ad ... ... ʒij.

Spirit on the tragacanth; turpentine and water added by degrees alternately; remaining water last.

(5)

℞ Ol. terebinth. ... ... ʒj.
Mist. amygdal. ... ... ʒvij.

Answers pretty well owing to the gum acacia (1 in 12) present in the mistura.

(6)

Make linimentum terebinthinæ, B.P. 1898, page 174, strictly according to directions. No heat to be applied in dissolving the soft soap.

Hints and Verses.

A House of Bottles! (p. 565).
Where is the house
You should give a trial
For bottle or phial,
In old or new style?

This is the house!
For carboy or measure
We'll deem it a pleasure
To take, at your leisure,
An order or two.
We'll treat you quite fairly,
We always act squarely,
We never—or rarely—
Send goods that won't do.
This is the house J. & J. built!

—A. E. WARDEN (Waverley Park, S.E.).

A HINT for preserving front counter glass-case.—Have you ever noticed how the glass of the front flat counter-case becomes in time permanently covered with minute scratches? In some cases this is so bad that it is almost impossible to see through the glass, thereby rendering the case practically useless for the display of goods. These scratches are in nine cases out of ten caused by customers thoughtlessly tapping on the glass with their money while their purchases are being put up by the attendant behind the counter. Most people when they wish to make a purchase instinctively tender the money in payment at the time of asking for their goods, and our retail readers will accordingly find it a useful plan to take the money first (if change is required it can be handed out with the goods), and so deprive their customers of the opportunity of injuring the glass in the manner mentioned. This plan of taking the money first can easily be adopted in a polite way without attracting notice, and it will be surprising to see what a difference there will be, say, after a lapse of six months or so, between a new glass case and an old one where, in the latter case, the plan suggested had not been adopted. As an additional precaution it is useful also to have on the glass-case an indiarubber coin-mat of at least half-a-foot diameter.—C. B. VANCE (Greystones, Ireland).

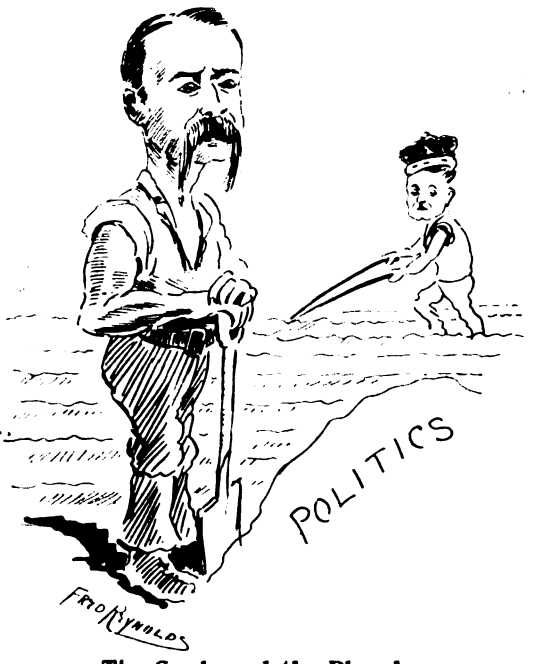
Scientific Progress.

Algerian Oil of Rue.—Von Soden and Henle have completed an investigation of this oil, and find that the ketones which are present are in every respect identical with those in ordinary oil of rue. They find about 90 per cent. of a mixture of normal methyl-nonyl and methyl-heptyl ketones present. In addition there is a small amount of esters, which have a marked effect on the odour of the oil. Although the ester has not been fully examined, it appears to be the acetic-acid ester of the secondary alcohol, and of the fatty alcohol corresponding with either one or both of the ketones.

Stylophorum Diphyllum.—Schlotterbeck and Watkins have examined this plant (*Pharm. Revue*, 1901, 10), and state that they have isolated the already known alkaloids—chelidonine, protopine, sanguinarine—and two new bases which they term stylopine and diphylline. Stylopine has the formula $C_{19}H_{19}NO_5$, but diphylline could not be prepared in a state of sufficient purity for reliable analysis. In addition to these alkaloids, the authors have found chelidonic acid and a crystalline body which appears to be identical with chelidoxanthine. Traces of a compound having an odour like coumarin were also detected.



A Delicate Reaction for Nitrates.—According to Cazeneuve, the following is one of the most delicate reactions for small quantities of nitric acid, and may be used for approximately correct estimations of the amount present. In the case of water, for example, 1 litre is evaporated, and the residue is redissolved in distilled water, and a grain of brucine is added. The addition of a little formic acid and a little water, after evaporation, causes a yellow colour to appear, which after twelve hours turns pink. Quantitative estimations are based on a comparison of the colours formed by different samples against a standard under fixed conditions. The method is better than the similar one with sulphuric acid, since the latter often contains nitrates, whereas formic acid seldom, if ever, does.

Sugar-estimation.—At a recent meeting of the Royal Dublin Society, Mr. Richard J. Moss described an improved volumetric method for the determination of sugar. In Pavy's modification of Fehling's method, cupric oxide is reduced in presence of a large excess of ammonia, which prevents the precipitation of cuprous oxide. The temperature of the boiling liquid varies from about 70° C. to 90° C., and the rate of reduction varies to a corresponding extent. Mr. Moss overcomes this objection to the method by using a much smaller quantity of ammonia, and conducting the titration under pressure, at the temperature of boiling water. The reduction of the cupric oxide is apparently instantaneous, and the results are very sharp and constant.

Corydalis Alkaloids.—A lengthy paper by J. Gadamer appears in the last issue of the *Archiv der Pharmazie* on the chemistry of the corydalis alkaloids in which he reviews all the recent work on the subject and gives details of his own new researches, in which he has been assisted by several colleagues. He divides the alkaloids into several groups, of which we have already given some details. He has now obtained two apparently stereoisomeric forms of inactive corydaline, one melting at 134° C. and the other at 156° C. A study of the reactions of this alkaloid leads him to assign to it a formula closely allied to those of canadine and berberine, the well-known bodies obtained from *Hydrastis canadensis*, the conclusions being akin to those of Dobbie recently communicated to the Chemical Society of London.

Adulteration of Beeswax with Resin.—It is well known that common resin is sometimes added to beeswax in order to counteract the effect of some other adulterant on the analytical figures, the resulting mixture having nearly all the usual constants for true beeswax. Ferdinand Jean gives the following as an accurate method for determining the amount of resin in such samples (*Ann. Chim. Anal.*, 1901, 448). One gramme of the wax is treated with 80 per cent. alcohol on the water-bath; when the wax is melted the mixture is well shaken, and after a time allowed to cool quietly. It is then filtered through balanced filter-papers. The insoluble portion is washed with cold alcohol until the washings are free from acidity, when the resin and stearic acid will be found in the filtrate, the beeswax and most other bodies being on the filter. The weight of the insoluble portion is taken, and the greater portion of the alcohol is driven off from the filtrate. The residue is taken up with ether, and the ethereal solution shaked with zinc oxide. When the solution is no longer acid the mixed stearate and zinc oxide are collected on a filter, washed with ether, and the ethereal solution of zinc resinate is decomposed with water and hydrochloric acid. The free resin can then be taken up with petroleum ether and dried and weighed.

Things that Happen—Sometimes.

The Spade and the Plough.

Mr. Evans is a great deal better known to you than he is to me, though he is tolerably well known to me. (Laughter.) He is, as you know, not merely one of the leading spirits of Liverpool Liberalism, but he is occasionally raised to the uneasy throne of the National Liberal Federation. I believe in that capacity, at its last gathering, he deserved well of his country. (Laughter and hear, hear.) I know that is an ambiguous expression, but I prefer to leave it ambiguous. In Liverpool he is distinguished by that constant "spade-work" of which we have heard so much. (Laughter and applause.) I believe there never was such a political navvy—(laughter)—as Mr. Evans, and it is in that spirit that I ask you to hold up your hands for a vote of thanks to Mr. Evans.—(The Earl of Rosebery at Liverpool, on February 14, in moving a vote of thanks to Mr. Edward Evans, jun.)

He thought he saw the chemist's friend
  Upstanding in a glade;
He looked again and found it was
  A navvy with a spade.
"If he keeps using that," he said,
  "Our fortunes will be made."

He thought he saw a coronet,
  Upon a yokel's brow,
He looked again and found it was
  A furrow and a plough.
"If these two get to work," he said,
  "There will be *such* a row."

He thought he heard a naughty word
  From orchid-labelled "toff";
He listened hard and found it was
  A Chamberlain-ic cough.
"If Agriculture's 'on,'" he said,
  "My premiership is 'off.'"

DIPHTHERIA-SERUM FOR SWEDEN.—The Royal Order regarding the sale of diphtheria-serum in Sweden which comes into force on May 1 has now been published, and it shows that all serum intended for sale in Sweden, whether imported or of home manufacture, has to be submitted to a comptroller in the bottles in which it is to be sold, and with notification of the date of manufacture, and the strength of the immunisation-units. After examination the comptroller is to retain some of the bottles of every lot submitted to him, in order that he may observe and re-test the serum, so that any number which has become unfit for use may be recalled. The serum may only be sold by pharmacists on the prescription of a Swedish doctor.

Observations and Reflections.

By XRAYSER.

Mr. Walter Hills

is an excellent choice for the Poisons Committee as the representative of pharmacy. I hope he has noticed the insecticide-poisoning case reported in the *C. & D.*, of February 8, page 220. Sold by a florist in a brandy-bottle with the brandy-label left on. Florist did not know it was a poison.

The Licoricine Information

given by Mr. C. Brown, of Didsbury, and Midlander, should be, if possible, brought to the knowledge of the public through a police-court. To sell under the same name a poisonous preparation by the agency of chemists, and under the same name a similar-looking mixture, but with the poison left out, through grocers is a flagrantly dangerous proceeding. Would not the Merchandise-marks Act meet this case?

Two Hackney Chemists

were summoned at the North London Police Court for selling soap-liniment alleged to have contained methylated spirit. Both denied the charge, and the Somerset House chemists have fully justified their denial. Thus for the hundredth time Somerset House has shielded innocent traders from inaccurate analysm. But it is as well to remind chemists that there are public analysts who would like to substitute a board of reference consisting largely of their precious selves for the Somerset House laboratory. Both chemists in this instance, I am glad to note, got costs, but one (who had to close his shop to go to the court) only got 2*l.* 1*s.*, while the other, who had employed a solicitor, got 5*l.* 5*s.*

Lord Milner's Proclamation

regulating the practice of medicine, dentistry, and pharmacy in the Transvaal is not a decree made to wear long. The difficulties thrown in the way of foreign practitioners are reasonable enough while martial law prevails, but they will probably have to be modified when Johannesburg becomes the World-City which Lord Milner has himself prophesied as its early destiny. But Lord Milner and his secretary can hardly have considered the full bearing of their provision against the "practice" of the arts of medicine, dentistry, or pharmacy by unqualified persons. So far as I know the unauthorised "practice" of these arts is not prohibited in any parts of the British Empire except to the extent that the Apothecaries Act of 1815 applies in England and Wales, and a new country with a vast miscellaneous and mining population, which the Transvaal will soon have, is hardly a promising place to begin the experiment. It may be noted in passing that prescribing chemists will be hit by this edict as much as anybody. But it may be said their practice is to be likewise protected. Yes; but there comes the task for Lord Milner's secretary. The practice of medicine, of surgery, of dentistry, may be more or less easily defined; but to define just what it may mean "to practise as a chemist and druggist," how much this covers, and how small a sale of a medicine or a chemical will infringe it, are problems which can easily be settled under martial law, but which would involve endless arguments in a court of law.

The New Calendar

published by the Pharmaceutical Society contains, besides the novelties noted last week, a useful list of judgments which have been given under the Pharmacy Act in the High Courts of England and Scotland. Sixteen are named, and the effect of each is very briefly indicated. In two or three of the references strict accuracy has been sacrificed to brevity. "Berry & Henderson," 1870, for instance, we are told, established that "provisions of Section 17 do not apply to medicines dispensed by persons registered under the Act." This is simply a quotation of the words of the statute, and does not indicate what the action established. The question in dispute was whether the particular mixture supplied (hydrocyanic acid and water), though ordered in prescription-form, but not by a physician, and with a fictitious name of purchaser attached came within the meaning of the term "medicines dispensed." The Court held that it did. Under "Society *v.* Piper," 1893, we are told that "proprietary preparations containing poison are not within the exemption of Section 16 relating to patent medicines." But they are if the article is patented. The words "not actually the subjects of letters patent" should be inserted after "proprietary preparations." In "Society *v.* Turnbull" (Scotland, 1895) it is stated, "Use of title is an offence in Scotland even when such title is associated with modifying words—*e.g.*, photographic chemist." Not always. The words, "when employed by an unregistered person" are wanted to make that statement correct.

Mr. Boot's Ideal

is worth emphasising. It is "to enable all our managers to enjoy a comfortable life under a fair share of remuneration, with the prospect of some secured provision against accident, sickness, or old age." Until this has been provided for, Mr. Boot tells us, his life's aim is still unreached; that is to say, one of his life's aims, his most cherished aim perhaps, but hardly his only life's aim. The "comfortable life" foreshadowed for the happy managers, I gather, is not yet fully provided; it has had to await the accomplishment of other objects—the organisation of the business, the satisfaction of the directors, proper provision for the managing director, and 12 per cent for the shareholders. The last-named gentry constitute a class which is never quite satisfied. Mr. Whitaker Wright has told us that if you give shareholders 20 per cent. they will complain that with more economical management you could have divided 30 per cent.; so in arriving at his ideal Mr. Boot will have to reckon with this element.

There is Another Side

to this "ideal" aspiration. Other people have ideals as well as Mr. Boot, and without for a moment disparaging his benevolence, it may be permissible to ask, merely as a problem in social economics, whether it is better that he or the 250 chemists whom he displaces should attain their ideals, or at least get somewhere near them. For, presumably, Mr. Boot's ideal and the ideals with which his 250 managers set out in life are incompatible. Nearly all the men who have adopted pharmacy as a career have contemplated independence as the object to be aimed at. To the extent to which their capital and their activity allow, Mr. Boot's companies and other companies working on the same lines have destroyed the possibility of attaining this end. The organisation of great manufacturing businesses and similar concerns in the present day renders the dream of independence practically hopeless in many departments of industry, but in retail trade there is no good reason why this should be the case. I believe it will before long come to be recognised as a distinct misfortune for the community that half-a-dozen capitalists should dispossess a thousand tradesmen in various lines all over the country. The names of Lipton, of Boot, of Lilley & Skinner, and of others are familiar in hundreds of English towns. The personalities behind these names are as mythical to customers as the red lions or the green men of a former generation. They pay rates no doubt, but they cannot render the service of the ordinary citizen. And this system is spreading. Is it to the general advantage?

Editorial Comments.

Early-closing.

LORD AVEBURY'S Bill to give shopkeepers the opportunity if they so desire, of closing early, has been throttled once more in the House of Lords, his motion for the second reading on Tuesday having been opposed by the Earl of Wemyss on the ground that the compulsory regulation by Parliament of the hours of labour of full-grown men is "an undue interference with individual liberty." That is the usual argument brought forward by the opponents of reform, but we are happy to note that the debate did not show outspoken sympathy with it, for the defeat of the Bill is rather due to a tactical blunder of the Noble Lord who has so long agitated this question. In his memorandum to the Bill no mention is made in the reference to the Select Committee of last year to the important proposition brought forward by the Prime Minister, the object of which would be to empower local authorities to make such regulations in regard to early-closing as they deem to be necessary for the districts over which they have control. Lord Avebury avoided that recommendation, and his omission was pointed out in the course of the debate by Lord Belper, who spoke on behalf of the Home Secretary, and because of this omission the Home

Digitized by Google

Secretary feels that he cannot give his assent to the Bill. Strange that the Government, if they are earnest about the matter, should not place a verbal amendment on the paper which would make Lord Salisbury's idea operative. The Bishop of Winchester, who immediately followed Lord Belper, made so powerful a speech on behalf of shop assistants, Earl Spencer backing him, that there seemed a likelihood of the opposition being of little avail, when the Earl of Hardwicke, who, like the Bishop, was also a member of the Select Committee, came to the rescue. He explained that on the committee there was a strong feeling, shared, he believed, by the noble marquis, by himself, and certainly by two others, that the Bill was absolutely unworkable. They were totally opposed to local option of any sort, and considered that, if a majority of two-thirds were to overrule the minority, very hard and cruel results would in numerous instances ensue. Another point raised was the difficulty of carrying out the proposals in a district where there might be more than one local authority, and it was not until the Prime Minister made his suggestion that it was possible to produce a report which had the consent of all the members of the committee. The Earl of Hardwicke thus let out the secret of the Select Committee which has been so well kept. It was at this stage of the debate, which had lasted fully an hour, that Lord Rosebery called attention to the fact that the committee reported there was a serious grievance to be redressed, "that earlier closing would be an immense boon to the shopkeeping community, to shopkeepers and shop assistants alike, and that the present hours are grievously injurious to health, especially in the case of women," and under the circumstances recommended the passing of provisional orders. Supposing, added his Lordship, the Bill is negatived or withdrawn, is the Government prepared to bring in a Bill on their recommended lines? The Duke of Devonshire's reply to this was a mocking reference to Lord Rosebery's Liverpool speeches, in which the noble earl expressed a great deal of doubt whether the Government would make effectual progress with the legislation they had promised, and the Lord Chancellor summed up the opposition by saying that the cardinal principle of the Bill, the mode in which the new regulations were to be enforced, was absolutely inconsistent with the recommendations of the committee. After this, defeat was inevitable, for, as our parliamentary representative points out, the majority in the House took the hint from the members of the Government, and voted against the measure. It is important to note that the reason advanced for its rejection is that the Prime Minister's recommendation was not adopted, because Sir Charles Dilke's Bill happens to embody that idea, and should it reach the House of Lords, this week's majority is bound, in consistency, to support it. That event may not happen this Session, but if chemists' associations petition in favour of it, as they have done for Lord Avebury's, there will be a better chance for progress.

Lagos Pharmacy Law.

WE have referred on several occasions recently to the ordinance promulgated by the Legislative Council of Lagos, and to the opposition which it has induced amongst traders in the colony. A copy of the ordinance has now reached us, and although its main provisions would doubtless be welcomed as enlightened legislation by British pharmacists, it can easily be understood that its stringency may appear objectionable to a community where trading restrictions have been hitherto unknown, and where different conditions of trading prevail. The Bill is entitled "An ordinance to regulate the dispensing and sale of drugs and poisons"—it is not intended to be merely a "wretched poisons Act." "Drug" includes any medicine, simple or compound, and any medicinal preparation, whether a poison, and a "poison" includes poisonous substances, poisonous drugs, poisonous compounds, and the following:—

Acetate of lead
Acid sulphuric
Acid nitric
Acid hydrochloric
Acid oxalic
Acid prussic and its preparations
Acid carbolic
Aconite and its preparations
Atropine and its preparations
Antimony and its preparations
Arsenic and its preparations
Belladonna and its preparations
Calabar-bean and its preparations
Cantharides and its preparations
Chloroform
Chloral hydrate
Cocaine
Conium and its preparations
Copper sulphate
Copper subacetate (verdigris)
Corrosive sublimate and its preparations
Croton oil
Croton chloral
Cyanides of potassium, and all metallic cyanides and preparations of cyanide of potassium and of metallic cyanides
Digitalis and its preparations
Elaterium
Emetic tartar
Ergot of rye and its preparations
Essential oil of almonds unless deprived of its prussic acid
Jaborandi and its preparations
Laurel-water
Mercury and its preparations
Nitrate (*sic*) of amyl
Opium and its preparations, including morphia and its salts
Preparations of morphine
Oxide of mercury (commonly known as red precipitate of mercury)
Ammoniated mercury (commonly known as white precipitate of mercury)
Strychnine, preparations of strychnine, and all poisonous alkaloids and their salts
Savin and its oil
Veratrum viride and its preparations

The word "poison," therefore, is broadly inclusive, and the Governor-in-Council has power to add other articles from time to time as they may crop up. No unlicensed person will be allowed to keep open shop for retailing, dispensing, or compounding, and any person "who shall mix, compound, prepare, sell, retail, or dispense any drug or poison" without a licence and without being registered, shall be liable to a 50*l.* fine, or twelve months' imprisonment, with or without hard labour, in default. Nor can an unregistered or unlicensed person use or exhibit the title "chemist" or "druggist." The examinations are to be conducted by a board of duly qualified medical practitioners, to be appointed by the Governor. The principal bone of contention in the colony appears to be contained in the conditions upon which the licences are to be granted. The candidate must satisfy the Board either that he is (*a*) a qualified chemist and druggist, G.B., or (*b*) that he has been employed in the compounding and dispensing of prescriptions in a hospital or dispensary in any of H.M.'s colonies or dependencies for three years; or he must (*c*) produce a certificate that he has been employed in the compounding and dispensing of prescriptions as an assistant to a duly qualified medical practitioner, apothecary or chemist and druggist for five years; or (*d*) produce either an affidavit that he has kept open shop for the compounding of physicians' prescriptions for the period of three years which immediately preceded the date on which the Ordinance comes into force, or a certificate that he has satisfactorily compounded prescriptions for a doctor during that period. It is Clause (*d*) which the opponents of the Bill have made so much of. They argue, as shown in our issue of January 25 (page 129), that this clause excludes druggists of long standing from the register, restricting that privilege to those only who have been in practice for the three years before the passing of the Ordinance. Although the phrasing is rather ambiguous, we scarcely think that interpretation can be seriously placed upon it. As we read it, the framers of the measure mean to include all who have been in business as druggists or have acted as dispensers for at least three years before the passing of the Ordinance. Provision is made for the keeping of a register by the chief medical officer,

Digitized by Google

who will publish a list of licences in the Government *Gazette* at stated periods. Another section which is likely to cause heartburning enacts that—

Any member of the Board may from time to time in the daytime, as often as the Board shall think fit, enter the shop of any druggist or the place where any druggist carries on his business or compounds, sells, or dispenses any drugs, and shall and may search, survey, prove, and determine if the drugs or wares used by such druggist in his business or occupation of a druggist are wholesome, fresh, true and unadulterated, and if he find that such drugs or wares are unwholesome, stale, untrue or adulterated, he shall seize such drugs or wares and cause them to be removed to some safe and convenient place, and shall forthwith cause a summons to be issued against the druggist whose goods have been so seized.

A poisons-book must be kept, and the requirements for the sale and dispensing of poisons are the same as those in the British Act. Besides punishing offenders in this section the Magistrate has power to suspend the licence of the convicted druggist for six months on the first conviction, twelve months on the second, and on any subsequent conviction to forfeit the licence altogether. A 5*l.* penalty awaits the druggist who refuses to compound, dispense, or sell, or who does so negligently. These regulations do not apply to "patents," proprietaries, or non-poisonous homœopathic medicines, if properly packed and labelled. Nor do they apply to mineral waters or the chemicals used in their preparation, nor to the following simple medicinal substances:—

Assafœtida (*sic*)	Rhubarb
Camphor	Carbonate of magnesia
Castor oil	Quinine
Epsom and Glauber salts	Bark (cinchona)
Linseed meal	Nitre (nitrate of potash)
Senna	

Vegetable gums, oils, or seeds (non-poisonous), and harmless herbal and native medicines are also exempt, the native herbalists and medicine-men being thus left at liberty to exercise their craft—we use the word in the strict sense without regard to home notions as to what pharmacy is. Dispensers already in the service of the Government are exempt from the operation of the ordinance "during such time as the Governor may think fit." Licensed druggists will be exempt from all jury service. The fees suggested are as follows:—On application, 5*s.*; on certificate, 10*s.*; on licence, 2*l.*; on renewal of licence, 10*s.* Lagos does not rank high amongst our colonies, but it is evident that its administrators have high ideas as to what it should be pharmaceutically. They are giving the drug-trade there a law which in the course of a dozen years or so should prove of such benefit to them, that they may fairly claim, as is the case in British colonies in the West Indies, direct representation on the Examining Board. That is a condition which should always be granted, and if the Pharmaceutical Council has the opportunity of advising the Colonial Office on the Lagos ordinance, they should take advantage of it by pressing the principle "home" for general acceptance.

The New Patents Bill.

MR GERALD BALFOUR'S "Bill to amend the law with reference to applications for patents and compulsory licences, and other matters connected therewith" has now been issued from the King's printers. The Bill is intended to give effect to some of the recommendations of the Patents' Committee, and contains some new provisions.

At present many patents are obviously void on account of novelty, but under the clauses of the new Bill the examiner is to search back for fifty years for the purpose of ascertaining whether the invention has been wholly or in part claimed or described in any specification issued during the period. Should the invention have been previously claimed or described the applicant will be informed and given the option of putting in an amended specification which in its turn will be investigated in the same way as the original claim. If the report that the examiner issues to the Comptroller satisfies the latter official that no objection on the ground of want of novelty exists the specification, will be accepted, and matters will run the usual course. If, however, the Comptroller is not satisfied he can, after hearing the applicant, and unless the objection be removed by amending the specification, determine whether a reference to any, and if so, what prior specifications should be made by way of notice to the public. An appeal can be made to the law officer from the Comptroller's decision—other clauses of this section provide that the investigations and reports shall not be taken to guarantee the validity of any patent, and also that an invention shall not be deemed to have been anticipated simply because of its publication in a specification deposited in the Patent Office pursuant to an application made not less than fifty years before the date of the application for a patent therefor, or of its publication in a provisional specification of any date not followed by a complete specification. For the search an additional fee not exceeding 1*l.* may be imposed, payable on the sealing of the patent. The second clause refers to the compulsory-licence clause in the principal Act, which clause is repealed and other provisions substituted with an object of facilitating the working of compulsory licences. This section is to apply to patents granted before as well as after the commencement of the Act which is, if it passes, to come into operation on January 1 next year.

The Bill seems to be an honest attempt to bring the English patent laws into line with those existing in other countries of like standing, and whilst it will impose much more work on the examiner of patents, it will protect the inventor by warning him that his idea has already been anticipated. It has for some years been a scandal that the Comptroller has had to accept specifications which were obviously invalid by reason of anticipation because he had no option in the matter. The number of patents granted in recent years has been increasing owing to this cause so that the wholesome check which should be the result of this Bill will mean a falling-off of the revenue from this source.

PUBLIC ANALYSTS AND ADULTERATION.

Speaking at the dinner of the Society of Public Analysts last week Mr. T. H. Elliott, of the Local Government Board, said public analysts perform a great deal of unrewarded work, but he believed it is work appreciated by the public, and he pointed to the fact that whereas 27,000 samples were analysed in 1890, 63,000 were submitted in 1900. He was sure that the co-operation of local authorities and public analysts had produced substantial results for the benefit of the community.

"PHARMACOPEDIA."

The authors of this recent work are in the happy position of being able, a few months after publication, to issue a list of errata. It is only authoritative works which can venture upon the acknowledgment of misprints even, and we take it that the authors of "Pharmacopedia" have had sufficient indication that their work has taken such an abiding place in pharmaceutical literature as to justify the collation of the errata. They ask us to state that a copy of the list will be sent free to any purchaser of the book if a stamped envelope or wrapper be supplied to the publisher, Mr. H. Kimpton, 13 Furnival Street, London, E.C., and they also announce that they will be glad to receive intimation of any further misprints, errors, or omissions which may be detected by readers of the book. These should be sent to Mr. Edmund

Digitized by Google

White, St. Thomas's Hospital, London, S.E., or to Mr. John Humphrey, 17 Bloomsbury Square, London, W.C. We ought to add that the list issued this week deals mainly with typographical errors.

UP-TO-DATE.

It is a good many years since we first called attention to an antiseptic hair-dressing establishment which was then in full swing in U.S.A., and has since been adopted in Paris. The idea has now, according to the *Lancet*, been taken up in London. In an aristocratic quarter an association has opened a hair-dressing shop where all the razors are fitted with detachable metal handles, so that both blade and handle can be sterilised. The combs are metal, and so are the backs of the brushes. Only hand-brushes are used, and for shaving each customer is given a separate dose of soap-powder, taken straight from a little capsule. The brush is sterilised after each using and the "operators" wear water-proofed sterilisable overalls. The head-rests on the chairs are pneumatic indiarubber pads which can easily be detached and washed. All the basins are made with pedal taps. No information is given as to what it costs to get shaved at this superfine establishment.

FOR SMALLPOX.

"Dr. V. A." informs the Paris edition of the *New York Herald* of a method of treating smallpox, the success of which he vouches for in a half-hearted sort of way. It is as follows:—

> The formulas: (1) Vaccine (pure and fresh cow-pox), 1 gr.; pure water, 4 oz. (2) Tartarus emeticus, 1 gr.; pure water, 4 oz. The patient must take a teaspoonful every hour alternately.
>
> In order to calm the fever and delirium, give every ten minutes a teaspoonful of the following potion:—Tincture of belladonna, 2 to 3 drops; pure water, 4 oz. For diminishing the burning sensation of the eruption apply compresses dipped in the infusion of hydrastis-canadensis powder, a teaspoonful in a pound of boiling water. A tablespoonful of this infusion in a glass of sugared water should be used as a gargle.

The effect of the treatment becomes apparent, he says, in twenty-four hours, and in forty-eight hours the disease is cut short, the fever is at an end, and the patient enters into convalescence and soon asks for food.

WARNING TO RADIOGRAPHERS.

Some time ago Dr. C. Mansell Moullin called attention to the injurious effects which sometimes occur in radiography from prolonged exposure to the discharge from the focus-tube. The violet rays, to which constituent of the *x*-rays the injury has been traced, are especially potent in their effects on living tissue, and it is well for operators to guard against untoward results. We have this week seen a typical case of severe dermititis from this cause. The patient, Mr. J. Orme, of Messrs. Müller, Orme & Co., High Holborn, W.C. has worked with the rays since their discovery, and has not till this month experienced any ill-effects. Mr. Orme on January 25 gave a demonstration of the *x*-rays at a *conversazione* at Owens College, Manchester. He was working with a 10-inch coil with a current of 30 volts, 6 amperes, toned with a Wehnelt break and suitable resistance. During the evening he exposed his hand for three hours, on and off, behind a barium-platinocyanide screen for the purpose of showing the transparency of flesh, and many remarks were made as to the smooth way the apparatus was working, and the perfect manner in which the bones were delineated on the screen. The first unfavourable symptoms were noticed exactly a week afterwards, and since that time the hand has swollen up and layers of dead tissue have been thrown off with great rapidity, sores resembling frost-bites appearing in places. Treatment does not seem to be of much avail, and it is probable that no great improvement will result until a layer of skin of sufficient vitality to begin repair is reached. We have given the particulars of this case in detail so as to impress on workers the serious nature of the injuries which may result from too long exposure to the *x*-rays. As to prevention, it has been pointed out that if the operator wears gloves, or puts a sheet of cardboard between the tube and the hand, injury from the violet rays is not likely to result, as these rays do not penetrate so deeply as the *x*-rays. This precaution should therefore be adopted in every case where the exposure exceeds a few minutes, and it is to be hoped that ready-guarded tubes will soon be placed on the market. It is needless to point out that the layer of cardboard or glove material makes no appreciable difference on the screen or in the resulting radiographs.

MEDICAL OPINIONS.

There is, we are glad to see, at least one medical man who recognises the justice of the General Medical Council's ruling on the sale of poisons by unqualified persons in "doctors' shops." In a temperately-worded letter to the *Lancet* this gentleman points out that the conditions on which poisons can be sold are clearly laid down in the Pharmacy Act, and that prescriptions containing scheduled poisons can only be dispensed in packages bearing the name and address of the seller. This latter fact calls forth a suggestion from another correspondent that doctors should be allowed to give their "at home" hours on the label as well as the name and address. The prescription-blanks used by physicians frequently have these particulars printed on them, and it does not seem a great step or a serious breach of medical etiquette to put the "at home" hours on the labels of the poorer dispensing-doctor.

TACHIOL.

Particulars are now to hand of the new antiseptic which bears the above name, but is chemically silver fluoride. Tachiol was the subject of a communication to the Royal Medical Academy of Rome on January 26 by Professor Durante, but the experimental work is due to Professor Paternò, who holds the chair of pharmaceutical chemistry in the University of Rome. Compared with mercuric chloride and carbolic acid and its derivatives the germicide properties of tachiol take a foremost place, whilst the toxic power being feebler is in favour of tachiol. Several estimates of the bacterial power of the new antiseptic are given, but are of little interest without a comparative study of the various substances with which it ranks. An investigation is being undertaken, and the full account is promised shortly. The therapeutic uses of tachiol in surgery give great promise; the fact that it does not coagulate albumen, and that injections as strong as 1 per cent. have been made into sinuses without untoward results are important observations. Silver fluoride (Ag F) is not a new salt; it has been known for years, and is prepared by dissolving silver oxide in hydrofluoric acid. The product is a deliquescent and very soluble salt, from which a more stable salt is prepared by drying *in vacuo*. Most of the water is driven off, together with some oxygen and hydrofluoric acid. There does not seem any good reason for giving the salt a fancy name, and Professor Durante does not explain why he has christened it "tachiol." It should be noted that it is the sub-fluoride of silver (Ag_2F), which is sensitive to light, and which finds use in photo-chemical investigation.

LONDON OPTICIANS NOTE.

The General Purposes Committee of the London School Board have reported on the question of the appointment of oculists for the purpose of testing the eyesight of the children in the senior departments. The committee recommends the appointment of the following seven oculists for one year at a fee of 50 guineas each for 200 school sessions:—Dr. H. G. Critchley, 166 Ebury Street; Mr. R. J. E. Hanson, 5 Harley Street; Dr. J. P. Henry, 41 Welbeck Street; Mr. H. R. B. Hickman, 5 Harley Street; Miss Ettie

Digitized by Google

Sayer, Fulthorpe House, Maida Hill; Mr. T. Snowball, 6 Grote's Buildings, Blackheath; and Mr. F. A. C. Tyrrell, 12 York Street, Portman Square. We have written to each of these oculists calling attention to the fact that there are amongst London chemists many who are competent opticians, and from their connection with pharmacy particularly conversant with the need for carrying out oculists' prescriptions in every detail. We have enclosed in the letters sent to the oculists above named a list of the chemists residing in the districts covered by the London School Board who have obtained the diploma of the Spectacle Makers' Company, and have expressed the hope that preference will be given to those gentlemen. There are, we know, many other chemists in London who cater for optical business, but whose addresses we have no means of obtaining. These should take advantage of the present opportunity to write direct to the official oculists informing them of their willingness to be of service in filling the many oculists' prescriptions which are sure to be written.

IN "TRUTH."

It rarely happens that anyone gets the better of Mr. Labouchere in the pages of *Truth*, but that is the experience of Mr. Edward Evans, jun., this week. *Truth* put into his mouth a statement as to the future of the Liberal party depending on Lord Rosebery being restored to the leadership. Mr. Evans asked for chapter and verse, and Mr. Labouchere responds with words from a speech by Sir E. Russell, also of Liverpool, and apologises to Mr. Evans. By the way, Mr. Reynolds puts rather a wearied look on Mr. Evans's face this week: his notion of spade-work, we presume.

Chemical Society.

THE first of the "afternoon meetings," as some are pleased to call the new style, was held on Wednesday of this week in Burlington House, W., at 5 30. Tea was served in the Library from 5 o'clock, and proved rather a pleasant function. When the Fellows and visitors assembled in the lecture-room below the observant witness discovered that ten benches were well filled, and six and a half of these with comparatively young men; indeed, although it was prophesied that the afternoon meetings would rob the Society of the benefits accruing to it from the presence of the younger members, and those of the glorious privilege of listening to their elders, as a fact there seemed on Wednesday a larger proportion of youth. Professor Emerson Reynolds presided, and on the front benches we noticed Professor Tilden, Dr. Odling, Dr. J. H. Gladstone, Dr. Horace Brown, Professor Adrian Brown, Dr. Divers, Dr. Muller, and Dr. Thorpe. Amongst those connected with pharmaceutical chemistry were Messrs. David Howard, W. L. Howie, C. A. Hill, Joseph Fell, Peter MacEwan, and T. A. Henry, D.Sc.

After the preliminary business of minutes and formal admissions had been disposed of, the President announced the arrangements made by the Council for the

ELECTION OF OFFICERS.

Drs. Hewitt and Thorne were proposed by Mr. D. Howard as auditors of the accounts, and this proposal was seconded by Mr. C. E. Groves and carried. Mr. Groves and Professor Purdie, of St. Andrew's University, are the retiring Vice-Presidents this year, and for their places Professor Meldola and Professor Percy Frankland, were nominated. Professor Meldola vacates the foreign secretaryship, which is to be taken by Professor William Ramsay. The new members of the Council are Mr. A. Harden, chemist to the Institute of Preventitive Medicine; Dr. Voelcker, chemist to the Royal Agricultural Society; Mr. Marsh, of Oxford University Chemical Museum; and Dr. Lewkowitsch, the fixed-oils expert.

The first paper was that of Mr. H. B. Baker, Dulwich College, on the

COMBINATION OF HYDROGEN AND OXYGEN.

Many attempts have been made by chemists, and particularly by Professors H. B. Dixon and Victor Meyer, to so thoroughly dry these gases that they will not combine when electric-sparks are passed through the mixed gases, but without success until a month ago, when the author was able to prepare a mixture of hydrogen and oxygen by electrolysing barium hydroxide. This mixture, when thoroughly dried over phosphorus pentoxide (a process that takes about six months), cannot be exploded by heating over a Bunsen burner or by the passage of sparks. Specimens of the dried mixed gases were shown, and Mr. Baker demonstrated in an elegant manner that molten silver can be dropped through this usually explosive-mixture without a sign of disturbance. The introduction, however, of such a trace of moisture as 3 milligrammes in a million litres of the gases renders the mixture explosive at the temperature of melting silver (about 1,000° C.).

The next paper was by Professor Adrian Brown on

THE ACTION OF ENZYMES,

and in particular that of invertase upon sucrose. Some years ago the author studied the rate at which sucrose is hydrolysed by this ferment, and came to the conclusion that the velocity of decomposition is independent of the amount of sugar present. This behaviour is altogether unlike that generally occurring in chemical reactions, and was at the time accepted as a peculiarity due to the vital activity of the enzyme. This point was also investigated by O'Sullivan for the action of diastase upon starch, with the result that this ferment was found to behave like a chemical hydrolyst—to use the term coined by Dr. Horace Brown to describe a hydrolytic agent. This difference has now been accounted for, since Professor Brown finds that in dilute solutions enzymes behave exactly like chemical agents—*i.e.*, they follow the law of mass action, but in concentrated solutions certain anomalies appear, concerning which only theories can yet be advanced.

This paper was followed by one on the hydrolysis of starch by diastase, contributed by Dr Horace Brown, F.R.S., and Mr. T. A. Glendinning. It appears that diastase converts starch into maltose in the same way as regards rate of change as invertase hydrolyses sucrose, and also shows the same differences of behaviour in strong and weak solutions. The explanation of this variant method of hydrolysis shown by enzymes is, according to Professor A. Brown, to be found in the loss of time due to the formation of a compound of the enzyme with the substance it decomposes and subsequent splitting up of this combination. While Dr. H. Brown assumes that the enzyme combines with the sucrose or starch, and since the latter is present in very great excess it may be assumed that there is a constant small quantity of this unstable combination with the enzyme present, and since as fast as it is formed it is decomposed, until at last the quantity of sugar or starch becomes so small that a normal mono-molecular action, as it is called by the physico-chemists, progresses to its final condition.

Curiously enough very little discussion took place on these papers which is rather unusual in contributions dealing with brewery problems, but Mr. Croft Hill observed that the reversible production of maltose from glucose by the action of the ferment maltase is not hastened beyond a certain point, no matter how much of the enzyme is present. The President was curious to know if Dr. Brown has isolated the compound of the enzyme and sugar which, he said, is the first stage in hydrolysis, but Dr. Brown said "No."

THE BALLOT

was at this stage declared by the President, all the applicants being elected. They included Messrs. David S. Smith Jardin, L.P.S.I., Rathgar House, Rathgar, Harry Lucas, pharmaceutical chemist, 1 St Agnes' Place, Kennington Park, S.E. (Demonstrator in Chemistry at the Metropolitan College of Pharmacy), and William Dennis, Ocean Road Pharmacy, South Shields.

It was now considerably after seven o'clock, but the President announced that a short paper on the polymerisation of diazoacetic ester would be read by Mr. O. Silberrad. This, however, contained nothing of pharmaceutical interest except the fact that the silver and mercury compounds which he obtained stood the action of alkalies for days in some cases. They are also exceedingly susceptible to light and had to be made under red glass; here is something for photographic experts to look into.

Digitized by Google

Winter Session.

Optical Society.

AT the meeting of this Society on February 13, Mr. J. T. SANDELL gave a demonstration of "cristoid" films. This class of film is made by coating plate-glass with two layers of sensitive emulsion and stripping the film when it is sufficiently set. The film which has, it will be seen, no gelatin or celluloid backing, is fastened to the black paper used in the daylight loading system by means of rubber plaster. Before development the length of film is immersed in a 1-per-cent. solution of formaldehyde, which converts it into a substance like the gutta-percha tissue with which pharmacists are familiar. The film is taken from the hardening-bath and put in the developer (Mr. Sandell prefers pyrocatechin and caustic alkali) and developed, fixed, and washed in the usual way. The gelatin expands and yields larger negatives than those exposed, but if this is an objection a bath of alcohol restores it to its original size. The film is dried by slightly squeezing it on to plate-glass or preferably a pulp slab. The demonstration was a great success, and the ease with which the films are manipulated was much admired.

Chemists' Assistants' Association.

AT the meeting held at 73 Newman Street, W., on February 13, the President being in the chair, Mr. F. RANSOM, of Hitchin (Herts), read some notes on

MEDICINAL PLANTS CULTIVATED IN GREAT BRITAIN.

He prefaced his remarks by stating that he would give a few facts concerning the more important plants, and at the same time make some observations based upon practical experience.

Aconite, the most potent of British medicinal plants, was first mentioned. After dealing with the plant from a historical standpoint, Mr. Ransom stated that, like most other plants that have been long in cultivation, there are many varieties of *Aconitum Napellus*, over sixty being known to botanists. These vary in the shade of colour of the flower, in the form of the leaf and in general growth. To what extent they may vary in therapeutic value is not known, but on medicinal-plant farms it is usually attempted to keep as closely as possible to the type, although some variations are generally to be seen. The aconite is now generally described as indigenous, wild specimens being found in various localities in the country, but it is very probable that it originally escaped from gardens. Although described as a perennial plant the term requires a certain modification, as an aconite root really survives but one winter. In the autumn the tap-root from which the flowering stem has been produced dies away, and its place is taken by a younger root which has developed gradually from the parent during the summer, and is destined to bear the flowering stem during the following year. Each root has, therefore only one year's existence. The last edition of the British Pharmacopœia requires aconite-root to be obtained from plants cultivated in Britain in order to ensure as far as possible the use of the correct species. When dried the British-grown roots cannot, however, be always easily distinguished from continental root, and as the price of the latter, being collected from wild plants, is much lower than the former the market is still supplied largely with the foreign drug.

Belladonna followed naturally upon aconite, and again Mr. Ransom gave his hearers an interesting historical sketch of the plant. The origin of the word "belladonna" is disputed, but the generic name, atropa, is derived from "atropos," one of the three Fates whose duty it was to cut the thread of life. Belladonna, continued Mr. Ransom, is probably the plant most extensively cultivated in this country for purely medicinal purposes. Although indigenous and growing wild in some of the southern counties in sufficient abundance to induce collection, it has for many years been one of the favourite plants for cultivation. Being a perennial and not so liable to destruction by insects and inclement seasons as some other plants, it requires less attention and a crop is more certain. There is, however, evidence that during the last few years the supply has exceeded the demand, and the abnormally low prices at which the fresh herb, the root, and the green extract have been offered, must have convinced many growers that they might have devoted their labour and lands to more profitable crops. Belladonna is grown from seed sown in the early spring, and produces little, if any, herb worth cutting during the first year. In the second and third years the best results are obtained, and the alkaloidal value of the root is believed to be at its highest at about the third year. It has been pointed out recently that the English-grown root contains more extractive than the foreign, an observation which he confirmed. This is not always an advantage; for the liquid extract in particular, a root with less extractive and of average alkaloidal value is preferable. The imported root is, however, very variable in strength, and during the last season it has been increasingly difficult to obtain a sample containing over 0·5 per cent. Estimations made from thirty-four samples of extracts showed a percentage of alkaloid varying from 0·27 to 0·70, while the mean of the thirty-four samples was 0·457 per cent. This affords, said Mr. Ransom, strong evidence of the wisdom of the compilers of the last edition of the Pharmacopœia in introducing standardised preparations of belladonna, and thereby securing approximate uniformity in strength. At the same time he pointed out that preparations of uniform alkaloidal value obtained from a drug so variable in strength, must vary much in colour and general appearance. It has been suggested that no root containing less than 0·47 per cent. of alkaloid should be employed, but even this would not secure uniformity in appearance, as the percentage of extractive is quite as variable as that of the alkaloid.

Henbane was next dealt with. During the Middle Ages, said Mr. Ransom, the root and seed were generally used, but neither of these is now officially recognised. According to A. W Gerrard, the root of the biennial plant collected during the first year is the richest in alkaloid, and it is quite possible that this may again become official. The seed has rightly been discarded, as there is very little alkaloid in it. It is questionable whether the second year's leaves and flowers of the biennial plant deserve the high reputation which they have obtained in this country, and from the experiments of Gerrard and others it would appear that the leaves collected from the plant during the first year of its growth are equally rich in alkaloid. *Hyoscyamus niger* is not essentially a biennial plant, as, under favourable conditions, it often develops and flowers during the first year. However carefully the seed may be collected, it generally happens that in a crop of henbane some of the plants grow up, flower, and die off during the same year that the seed is sown. In the summer of 1901, when the meteorological conditions were unusually favourable for rapid development, an entire crop in one field produced stems and flower-buds exactly similar to the second year's growth, during the season. The B.P. does not now specify that the leaf must be obtained from plants grown in Britain. The imported leaf is probably collected indiscriminately from the annual and biennial plant, and as it is produced chiefly in Southern Europe, where the summers are warmer than in England, it is probable that the biennial plant is the exception rather than the rule. A careful examination of foreign samples confirms this view, although it is not always easy to determine the variety with certainty. There can be no doubt that better results have been obtained with the British-grown plant, but this is probably chiefly due to the greater care with which the leaves are collected and dried. After dealing with the uncertainty of henbane as a crop, Mr. Ransom stated that several of the recent seasons have been peculiarly unfortunate for henbane, and for some months previous to the 1901 crop being collected the British biennial leaf was almost unobtainable from the growers. It was probably this liability of the crop to failure that influenced the compilers of the Pharmacopœia to allow the use of foreign henbane; but, if the first year's biennial and annual leaf were admitted, home-growers could probably ensure a sufficient supply.

Lettuce, said Mr. Ransom, is still grown to a small extent for the preparation of the green extract, which was formerly official. The extract is prepared from *Lactuca virosa*, an indigenous biennial plant, not found in sufficient quantity in a wild state to collect in this country. Lactucarium, or

Digitized by Google

lettuce opium, is the inspissated juice of this and other species. It has been produced to a considerable extent in the neighbourhood of Edinburgh, but the greater part is now imported from France and Germany. *Lactuca virosa* affords another example of a plant, usually biennial, becoming annual in character under favourable conditions of climate and cultivation.

Cucumber.—One of the most interesting medicinal-plants cultivated in this country is the squirting cucumber—*Ecballum elaterium* The fruit is gathered by hand during the latter part of the summer, the time chosen for picking being when the fruit is nearly ripe. If left too late much of the juice is lost by spontaneous dehiscence, while, if gathered too early, very little of the deposit known as elaterium is obtained. English elaterium, when freshly made, is of a pale-green colour, and in order to preserve this appearance it should be kept from the light. Elaterin, the active principle, should be present to the extent of about 25 per cent Mr. Ransom has found as much as 28 per cent. in the freshly-prepared drug. Elaterium gradually deteriorates on keeping, but it may continue to answer the official requirement of 20–25 per cent. of elaterin for several years. The squirting cucumber is one of the few plants which do not appear to benefit by a rotation of crops; a field in which it now grows luxuriantly has produced a crop annually for over thirty years.

Lavender was introduced into England in the sixteenth century, and has since been a favourite garden-plant. Attempts have been made to cultivate it for commercial-purposes in various parts of the country, but it is only within a radius of about fifty miles from London that much success has been attained. To succeed well it requires a sunny aspect or well-drained land, with careful cultivation, and a mild winter with a warm and dry summer. Lavender is generally propagated by cuttings or subdivision of the younger plants, and upon the care exercised during the earlier stage of growth much of the success depends. During the first summer after planting but little flower is produced, and it is not until the third year that the plants arrive at perfection. In their third and fourth seasons they usually produce their maximum amount of flower, after which many of the plants die off annually. Lavender is very subject to a fungoid-disease which attacks the roots and gradually ascends the stem, and the plant now in cultivation does not appear to possess the same vitality as formerly. The harvest usually commences about the second week in August, but varies much according to the season. The earliest record in connection with Mr Ransom's farm in Hitchin is 1868, when cropping commenced on July 17, and the latest September 3, 1894. The variations in the price of English oil of lavender may occasion some surprise to the retail pharmacist, but for an article for which there is comparatively small demand, and consequently a limited supply, the variations in the season and consequent yield of oil are sufficient explanation. One of the worst years on record is 1881, when the thermometer at Hitchin fell to 5° F. in the shade on January 22. The result was that a large proportion of the plants were killed, and consequently the amount of oil distilled during the following summer was very small. The value of the oil advanced accordingly, and during the following year the scarcity was so severe that the wholesale price was 200*s.* per lb. and upwards, and but little could be obtained. An almost equally disastrous season was 1895, again following an abnormally cold winter, when the thermometer fell to 0 deg. F. on February 22 It is noteworthy that these two disastrous seasons followed the two winters in which the lowest temperatures on record in the district were registered. Referring to buying oil of lavender as a speculation Mr. Ransom said it had often proved a profitable business, and that an abnormally low price did not necessarily indicate an inferior quality. The question is often asked, continued the speaker, as to the yield of oil of lavender from an acre of ground. One authority estimates it at from 15 to 30 lbs. Mr. Ransom thought 30 lbs. a very exceptional result, adding that 12 lbs. per acre approximates better to the average yield. The yield of oil per still varies very much according to the season and the actual weather at the time of harvest. Mr. Ransom exhibited a chart which he had compiled, showing the average yield of oil from a still of about 750 gals. capacity, during the last twenty years. The year 1887 came first with 12 lbs. 11 oz., while 1892 was the worst with only 5 lbs. 15½ oz. It is not until 4 or 5 years after distillation that the oil arrives at maturity, and it is therefore impossible to speak decidedly of last year's produce, but as far as can at present be judged it is above the average in quality. A few years ago the production of lavender received some attention in the daily press, and some well-intentioned editors recommended it to farmers as likely to prove a profitable crop. The author's firm has received offers of lavender from various parts of the country during the last year or two, the senders being ignorant of the fact that it is essential that distillation should take place very speedily after cutting. Much of the lavender has doubtless found its way to Covent Garden, but even there prices obtained have hardly been remunerative to the growers. It is probable that some farmers have now discovered that cereals are not the only crops upon which money may be lost. Referring to the difference in the estimation of the perfumer between English and foreign oil, Mr. Ransom said the chief differences in the composition are the smaller ester content and the larger percentage of cineol in the home product. A French oil presenting these characters would be considered to be of inferior quality. A few years ago, when much had just been discovered concerning the constitution of these oils it was predicted that English lavender oil would soon become a thing of the past and only of historical interest. It appears, however, that there remain subtle constituents still to be revealed, and even the most advanced German chemists have not yet placed on the market a synthetic product which can claim to be a substitute for English oil of lavender. It is often found that the freshly-distilled oil is below sp. gr. 0·885 as required by the British Pharmacopœia, and it is a question whether a slightly lower figure should not be substituted. On keeping, the oil gradually becomes heavier, and it is possible that it is intended to exclude the lighter oils of some seasons until they shall become fully matured by age. If so, it should be understood that an oil which fails to answer the official test is not necessarily adulterated, but may be immature.

Rosemary is not cultivated to any large extent in this country. The oil distilled from the home-grown rosemary is, however, very superior to that imported from the south, and the difference in commercial value between the British and foreign products is greater than in the case of any other essential oils. This may be due to the care exercised in distillation and the exclusion of all woody material from the still.

Peppermint.—Mr. Ransom had a good deal to say about this plant, which has been cultivated at or near Mitcham for the last 150 years. It is now also cultivated in Hertford, Bedford, Cambridge, and Lincolnshire. Two varieties of *Mentha piperita* are indigenous, but are not collected in the wild state. In Surrey the varieties cultivated are known as "black" and "white," the latter variety having a green, and the black a purple stem. The oil of the white variety commands a higher price on account of its more delicate flavour, but the yield per still is less, and the plant is not of such vigorous growth. Where both are grown together, the peppermint harvest usually follows that of lavender. The plant is often left on the ground for a few days after cutting, and this partial drying effects an economy in getting more of the herb into the still without affecting the quality of the oil. Mr. Ransom thought it not improbable that the superiority of English over foreign oil is due to the greater care exercised in cultivation—especially to the exclusion of weeds, which, if distilled with the peppermint, produced a more or less impure oil. Dealing with menthol as a constituent of oil of peppermint, he pointed out that the commercial value of the oil is by no means dependent upon the percentage of menthol present. It is difficult at times to find an English oil which will answer the characters and tests inserted in the last edition of the Pharmacopœia, which are mainly dependent upon the percentage of menthol present. It is probable, however, that much the larger part of English oil of peppermint is used in confectionery, where delicacy of flavour is of much more importance than medicinal activity. Several other plants belonging to the order *Labiatæ*, such as spearmint and pennyroyal, are cultivated in England, but the distillation of their oils is only carried on to a limited extent.

Poppies are grown for the capsules in various districts in this country. They are an uncertain crop, being very

Digitized by Google

dependent upon the weather. During recent years foreign-grown capsules have been imported, and this has tended to reduce cultivation in this country. The variety most esteemed is that with white petals and seeds. The cultivation of the poppy for the production of opium dates from a very early age, and even in this country it has probably been grown for a longer period than any other medicinal plant.

Rhubarb appears to have been introduced into this country in 1535 by Andrew Boorde, a Carthusian monk, but the species is uncertain. *Rheum rhaponticum* was grown from seed by Mr. Hayward, an apothecary of Banbury, in 1717, and that district still supplies the greater part of English medicinal rhubarb. Shortly afterwards *Rheum palmatum* appears to have been introduced. The seeds of *Rheum officinale* were obtained by the late Daniel Hanbury, and supplied to Mr. Usher of Banbury in 1873, and this species is still cultivated by his successors. Mr. Ransom pointed out that rhubarb is probably the only British-grown drug which is less valued than the foreign product, and that probably an exhaustive chemical investigation of the different varieties might throw some light upon the matter.

Liquorice formed the last subject of the paper. The root appears to have been grown, said Mr. Ransom, in Yorkshire for about 300 years, and Pontefract has become intimately connected with its cultivation. The roots are dug up during the winter from plants that are usually three or four years old. The flavour of the English root is undoubtedly superior to the imported article, but growers find it difficult to compete with that which is produced in Northern Europe and parts of Western Asia.

Replying to questions put to him by several members present, Mr. RANSOM said, referring to drugs imported from America, that, as they nearly all grow in a wild state there, English competition is out of the question.

The meeting closed with a hearty vote of thanks to Mr. Ransom.

North-East Lancashire Chemists' Association.

AT the meeting of the Association held on February 13 at the White Bull Hotel, Blackburn, Mr. J. HINDLE gave an interesting lantern-lecture on "Switzerland," which was followed by musical items, the vocalists being Mr. J. Walton and Mr. C. F. Critchley, Miss G. Hindle being the accompanist. The wives and lady friends of the members were present, and the affair was such a success that it was resolved to repeat the experiment at an early date.

Derby Chemists' Association.

THE annual meeting, which was postponed from December 4, was held on February 13 at Smith's Restaurant, Derby. There was a good attendance of members, Mr. R. W. Stevenson presiding. The SECRETARY presented a statement of accounts for the past year, which showed a balance in hand of 2*l.* 14*s.* 11*d.*

The election of officers was the next business, and Mr. Stevenson was re-elected President, and Mr. Southern (of Belper) Vice-President. It was resolved that Messrs. Dawson, Hefford, and Warrington be elected Vice-Presidents, and that the following gentlemen form the committee:—Messrs. Elmitt, Haynes, Hoare, and Pembleton. The Hon. Secretary (Mr. Cope) was re-elected.

The pharmacy and materia medica classes held in connection with the Technical College were reported to be doing useful work These classes, together with those for chemistry, physics, and botany, provide nearly all the teaching that is required by pharmaceutical students, and regret was expressed that so few chemists' assistants and apprentices avail themselves of the classes.

School of Pharmacy Students' Association.

ON Friday evening, February 14, at 17 Bloomsbury Square, W.C., Mr. A. N. HIRST, the senior Bell scholar for the present session, read a paper on "Dissociation," a good number of members, both ladies and gentlemen, being present. In a few introductory remarks the CHAIRMAN (Mr. E. T. Neathercoat) commented on the spirit of *bon camaraderie* that was so evident between all the students and regretted that "dissociation" would have to take place amongst them before long. Mr. Hirst's paper, though brief, was interesting, diagrams and blackboard demonstrations serving to illustrate the main points. At the close several queries were put to and successfully answered by him. The meeting terminated with the customary vote of thanks.

Cardiff Chemists' Assistants' Association.

THE members of this Association met on February 13 for the purpose of hearing a lecture by Dr. D. R. Paterson on

THE EFFECT OF QUININE ON THE MALARIAL PARASITE.

Mr. A. Barrington Sparrow presided, and was supported by Mr. R. Drane, and Mr. A. Hagon, the President and ex-President of the Cardiff Pharmaceutical Society.

Dr. PATERSON commenced by alluding to the importance of the malarial question to this country, in so many of whose possessions malaria makes it almost impossible for men to live, and then went on to sketch the history of the malarial parasite. He described first of all the life cycle of the parasite in the human system, and pointed out how the fits or accessions of fever in malaria are due to the ripening of the spores of the parasite and their discharge into the blood. Passing on next to the effect of quinine upon the malarial disease, the lecturer traced the introduction of cinchona and the discovery of its alkaloids, and said it was Professor Binz, of Bohn who first, in 1869, discovered the fatal effect of solutions of quinine upon low organisms. He showed that the addition of quinine to water in which amœboid organisms were swimming caused a cessation of their movements, and that stronger solutions of the drug brought about complete paralysis, the organisms shrinking up, and being apparently dead. From these and other facts Professor Binz maintained that the true cause of malaria is one of these organisms, and although his contention aroused much opposition at the time, it was finally shown to be correct by the discovery, about 1879, of the malarial organism in the blood. The study of the effect of quinine upon the malarial parasite is interesting from the fact that it is the only means by which the disinfection of the blood stream can be carried out. The Italian authorities have always been much interested in the malarial question, from the dire effect of the disease in the Campagna, and their use of quinine is very extensive. They give it in daily doses of two grammes for four days, of one gramme for four days more, and then two grammes every six days. For the milder forms of the fever, such as the spring tertian and spring quartan forms, this always has an excellent result; but in the more dangerous forms quinine has not such marked influence, so that one has to admit that in these latter cases complete disinfection of the malarial blood cannot be effected, although, on the other hand, Professor Koch, of Berlin, has mentioned that the only rational prophylaxis is the regular administration of large doses of this drug.

The lecture was illustrated throughout by a series of interesting diagrams. A vote of thanks was passed to Dr. Paterson for his address.

Glasgow and West of Scotland Pharmaceutical Association.

IN the absence of the President (Mr. W. L. Currie), Mr. J. A. Russell presided at the meeting held on Friday evening, February 14, in the rooms of the Association in West Regent Street, Glasgow, when Mr. THOMAS MABEN, F.C.S., read a paper on

THE PREPARATION OF ANTITOXIC SERUM.

The author referred especially to the results of the serum treatment in the Glasgow Fever Hospital, the statistics having been culled from the reports of Dr. A. K. Chalmers and Dr. Johnston. Previous to the introduction of the serum treatment of diphtheria, the average death-rate of patients treated in Belvedere Hospital from 1870 to 1894 was 42·6. In the six succeeding years, out of 1 212 cases treated, there were 262 deaths, or a death-rate of 21·6 per cent., so that in this hospital alone the serum treatment has saved upwards of 250 lives in the past six years. A rather singular feature in the

Digitized by Google

relationship between hospital treatment and the treatment in private practice is brought out in the consideration of the statistics for Glasgow generally. It is a well understood fact that the average hospital cases belong to a lower class of society than those treated in private practice. Moreover, large numbers go into the hospital only to die, being moribund when they reach the medical officer and nurse. In such circumstances one would expect that the hospital death-rate would be much higher than in private practice, and in the three years preceding the introduction of serum this was the case. During these three years, 1891–93, the total number of diphtheria cases in Glasgow was 1,868, of which 1,555 were treated privately, while 313 were removed to the hospital. In the former cases the mortality was only 29 per cent., while in the hospitals it was as high as 40 per cent. One would naturally have expected that since the introduction of serum the fall in the death-rate in private practice would have kept pace with the fall in hospital cases. It has not, however, done so. In the six years subsequent to 1894 there were in all 3,582 cases in the city; 1,270 were treated in the hospital and 2312 privately, the death-rate in the former being 21·6 and in the latter 26·6 If statistics prove anything these figures prove that hospital practice has shot far ahead of private practice in the treatment of diphtheria. Mr. Maben cited one case to show the marvellous effects of diphtheria antitoxin. Two days previously he visited the diphtheria-wards of the hospital and there saw a patient two years of age, who was a fortnight ago to all intents and purposes dead. She had actually ceased to breathe, the limbs were cold, and the pulse could not be felt, but with that devotion which characterises the angelic sisterhood, the nurse at once resorted to artificial respiration, maintaining this for some minutes till the medical officer arrived. Having rapidly performed intubation, the doctor injected 21,000 units of serum, with the result that the patient's life was saved. Her recovery has been rapid and continuous, and when he saw her she was happy and contented. This is by no means a solitary case. Besides lowering the death-rate the serum-treatment has also reduced the need for tracheotomy, and even when that operation is performed the mortality is reduced to one-half. The lecturer then described in detail the process by which anti-diphtheritic serum is prepared, dealing with it in the six stages which are followed until the germ-free antitoxin is filled into bulbs. When the serum referred to by Mr. Maben (Messrs. Parke, Davis & Co.'s) comes to the British market it is tested in the laboratories of the Royal Colleges of Physicians and Surgeons, and then certified as to its antitoxin-unit potency, freedom from micro-organisms, and from an excessive amount of antiseptic, so that it is impossible for such accidents to happen as have recently happened with the serum of municipal manufacturers in the United States.

DISCUSSION.

Mr. J P. GILMOUR referred to the theories regarding the action of anti-toxin. He inclined to the view that the reaction that takes place after administration is of the nature of a chemical reaction, because when equal potencies of anti-toxin and toxin are mixed together and the dose administered to an animal the result is nil.

Mr. GEORGE SINCLAIR wished to know whether the method introduced by Aaronson is still regarded as unsatisfactory. This method consists in precipitating the active principle of anti-toxin and then making a solution of this and injecting it. He believed that another process for the preparation of serum by which it is obtained much more rapidly had been brought out some years ago, in which an electric fluid was employed, but he was not aware whether this had been found to be practicable or not.

Mr. MABEN, in reply, said anti-toxin had been precipitated by chemical means, but this line of investigation had not been sufficiently pursued to enable them to say that the results are successful. Referring further to a point in his paper as to the variability in the potency of serum obtained from different horses and the consequent variation in the bulk of the dose, Mr. Maben pointed out that the mere bulk of a dose is not of vast importance No doubt for infants it is important that this serum should be as concentrated as possible in order that the dose might be kept small. But in injecting serum subcutaneously the only discomfort is that a feeling of pain appears to occur just at the commencement of the injection. After the first few cubic centimetres are injected the operation is perfectly painless, and there is even no feeling of discomfort with it. In this connection he referred to a series of remarkable experiments just carried out in Belvidere Hospital with smallpox patients. The particulars of these experiments will form the subject of a paper later on in one of the medical journals, and he was not at liberty to refer to them in detail, the only point he wished to state being that sometimes they inject subcutaneously as much as 32 oz. of immunised calf-serum at one injection. So that when dealing with adult patients the demand for a very small dose is largely sentimental.

EARLY CLOSING.

The next business was the presentation by the Secretary of the report on the movement for early closing. Out of 127 circulars sent out he had received 88 replies, and all of these were in favour of shorter hours. Fourteen of them thought that no fee should be imposed for the night bell. In the circumstances the Committee had not seen their way to go any further in the matter, and they solicited the instructions of the meeting. On the motion of Mr. MACKAY, seconded by Mr. J. P. GILMOUR, it was moved that the report be received and the Committee thanked for the work that had been accomplished. This was agreed to.

Western Chemists' Association.

ABOUT two dozen members were present at the meeting of this Association in the Westbourne Restaurant, Craven Road, W., on February 19. The PRESIDENT (Mr. W. F. Gulliver), referring to the death of

MR WILLIAM MARTINDALE,

one of the earliest members and a past-President of the Association, said he always took the keenest interest in the affairs of the Association and had its welfare at heart. He was the ideal pharmacist, and his loss would be keenly felt. He moved:—

That this Association has heard with the deepest regret of the death of Mr. William Martindale, one of the earliest members and a past-President of the Association, and desires to place on record its appreciation of the services rendered by him to pharmacy and to the Association. Further, it wishes to express the sincere sympathy of its members with Mrs. Martindale and the family in the sad bereavement which has fallen upon them.

The HON. SECRETARY (Mr. W. J. I. Philp), in seconding, said no resolution, however worded, could adequately express the sense of irreparable loss sustained by this Association and by the whole world of pharmacy in the death of their friend and colleague, Mr. Martindale. He was a man of high intellectual capacity and of wide experience, and was always ready to assist any of his humbler *confrères* who sought his advice. There are many to whom his personality was unknown who feel that they have lost a friend. Pharmacy has lost one who was universally regarded as *facile princeps et dux*. He was an indefatigable worker, a hard fighter, but a generous opponent. To a wider community than that of pharmacy there has been lost a genial and courtly gentleman equally incapable of a mean action and an ungenerous thought, while those who knew him intimately deplore the loss of a kindly, generous, and large-hearted friend, who leaves a memory of affectionate regret and the consciousness of a void that will never be filled.

Mr. J. F. HARRINGTON, as an old friend and fellow-councillor of Mr. Martindale's, referred to his death as a loss, not only to the Association, but to pharmacy throughout the world.

Mr. H. CRACKNELL thought of Mr. Martindale as a typical pharmacist and one whose life would remain as an example for ever before pharmacists.

Mr. DONALD WATSON, who spoke with much emotion, said Mr. Martindale was younger apprentice in the shop where he also was engaged in Carlisle. They had known each other for forty-five years, and in all that time he had always found William Martindale a true friend and straightforward and honest to the backbone.

The resolution was then passed in silence, the members standing, after which the meeting was immediately adjourned as a mark of respect to Mr. Martindale's memory

Digitized by Google

Mr. Watson had brought with him a photograph, taken in 1857, of the shop in Carlisle, with Mr. Martindale (then a lad), Mr. Watson himself, and their master (Mr. Martindale's uncle) standing in front of the shop. The photograph was passed round, and was an object of much interest to members.

Blackpool and Fylde Chemists' Association.

THE annual meeting was held at the Palatine Hotel on February 11, amongst those present being Messrs. Laurie, Turner, Billington, Ashton, Johnson, Buckley, Greenwood, Mogson, Boothroyd, and J. Sankey, Hon. Secretary. The minutes of the previous annual meeting having been read, the SECRETARY reported on the useful business done by the Association in arranging an interview with the candidates for the Blackpool division by-election, 1900, and explaining the Draft Pharmacy Bill. The candidates received the deputation most cordially, and considered the Bill, on the whole, a much-needed reform. The Draft Pharmacy Bill has been freely discussed at two of the meetings, and resolutions sent to the Pharmaceutical Society's Secretary approving of all the clauses with one exception. Through the pressure brought to bear by the Association, practical chemistry classes were formed and a laboratory completely fitted up, together with a competent teacher, by the Technical School Committee. The hours of closing have been amicably settled. The TREASURER (Mr. Turner) presented the balance-sheet, and spoke about the satisfactory financial position, there being a substantial balance on the right side. The election of officers followed—viz., President, Mr. Councillor Laurie; Vice-Presidents, Messrs. C. H. Turner and Keeley; Treasurer, Mr. Tom Ashton; Secretary, Mr. J. Sankey; and Committee, Messrs. Billington, Johnson, Buckley, Greenwood, and Boothroyd. At the close of the meeting the SECRETARY intimated subscriptions were that due on January 1 the members present, without exception, tendered their coin; and it was hoped absent ones and, in fact, all chemists in business in the Fylde, would follow this example at an early date.

Festivities.

CRICKETERS' REUNION.

The Wholesale Chemists 'and Druggists' Cricket Championship League held their second annual concert in the Holborn Town Hall, Gray's Inn Road, W.C., on the evening of Friday, February 14. It was in every sense a successful gathering, about four hundred ladies and gentlemen being present, and the musical entertainment arranged by Mr. W. H. Berry was much appreciated. The singers were all professionals, and if we were to select any names for special mention it would be those of Miss Maud Fowler and Miss Kate Willey, who both sang exquisitely, while the funny element was well represented by Mr. Frank Hook and Mr. and Mrs. Berry. The acting stewards were Messrs. C. Gordon Cowen, S. Tappenden and Collins, the last named taking the place of Mr. E. Sibley, Secretary of the League, who was unable to be present owing to family bereavement. During the interval Mr. Peter MacEwan, who presided, presented the silver Challenge cup to Mr. Collett Smith, Captain of the Wellcome Cricket Club, who for the third season in succession have been declared the champions. The chairman mentioned that there had been five competing clubs in 1901, namely, elevens connected with the establishments of Messrs. Burgoyne, Burbidges & Co., Burroughs Wellcome & Co., Dakin & Co., Davy, Hill & Co., and Howards & Sons, but of these the Dakin and Howards elevens have not entered for the 1902 competition, while an eleven from Messrs. Evans, Lescher & Webb's establishment have entered. He regretted that a livelier interest is not shown in the League by Metropolitan wholesale houses, because the league has not only been influential in sustaining interest in cricket, the best of all British games, but it is unique in being the only independent body in London which provides a common meeting ground for the representatives of the wholesale drug trade. For that reason alone he thought wholesalers should support the league well, and he appealed to the heads of the leading houses to encourage cricketing by their staffs, and he mentioned a few of those who in the past had teams which had either competed for the cup or shown their capabilities with the willow and ball. Amongst these were Messrs. C. J. Hewlett & Son, Hearon Squire & Francis (Limited), Wright Layman, & Umney (Limited), Hodgkinsons, Clarke & Ward, Allen & Hanburys (Limited), S. Maw, Son & Sons, Stevenson & Howell, Stafford Allen & Sons (Limited), and the Exchange "Strollers." He knew that some of the younger partners in these firms are or have been good cricketers, and if they would form elevens to compete for the Cup he was sure that Mr. Collett Smith would be the first to welcome the keener competition. Subsequently, a fitted leather cricket bag was presented to Mr. E. Sibley, Secretary of the League, as a mark of appreciation by his colleagues for the unfailing devotion and consummate energy with which he has furthered the interests of the League since its formation. Mr. Collins received the bag on Mr. Sibley's behalf.

NEWCASTLE ON-TYNE CHEMISTS' ASSOCIATION.

The annual "smoker" was held on Wednesday evening, February 12, in the Hôtel Métropole, Mr. Robert Wright (President) in the chair. There was a goodly gathering of the craft, together with sundry wholesale and other friends. The programme was attractive and well rendered, mostly by gentlemen connected either directly or indirectly with pharmacy.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION.

An excellent smoking concert, arranged by the Committee of the Cambridge Pharmaceutical Association, took place at the Bull Hotel, Cambridge, on February 13. Mr. A. Sidney Campkin, J.P. (President), presided, and said they had met to celebrate the successful negotiations for closing at 5 P.M. on Thursdays during the winter months. He was glad to say the arrangements are being loyally adhered to by chemists generally throughout the town, and he trusted, despite the slight difficulties they had encountered, they would now regard the change as a permanent one: it was greatly appreciated by both employers and employed, and he believed the public recognised this, and were helping them in the matter. (Applause.) Songs were sung by the President (by special request), Messrs. Collin, E. H. Church, J. Bourne, F. Pink, R. H. Bryan, F. G. Mills, Harry Spencer, and E. E. Hayward; Mr. H. Mason gave selections on a gramophone; Messrs. P. Gray and T. E Collier performed a violin duet; Mr. G. P. Hosegood and P. Fitzgerald recited, and Mr. J. Gambling executed sleight of hand tricks. The accompanists were Messrs. F. G. Mills and S. C. Coulson. The proceedings concluded with a hearty vote of thanks to the President and to the performers.

A ST. VALENTINE SMOKER.

The Council Chamber of the Holborn Restaurant was occupied on the eve of St. Valentine's Day by a gathering of students from the Westminster College of Pharmacy and their friends. Mr. G. T. Dobson presided, and he was supported by Mr. G. S V. Wills (Principal of the College) and other friends. Over 100 were present and the proceedings were enthusiastic and the entertainment enjoyable. In the course of the evening the Chairman in toasting "The Westminster College" intimated that he was an old student. Twenty-five years ago he made the acquaintance of Mr. Wills and the College from which he passed the pharmaceutical examinations. He (the speaker) had been out of pharmacy for some years, and like Rip Van Winkle he awoke to find things entirely changed. He congratulated Mr. Wills and the students on the success of the college. A dinner-gong and a framed address of congratulation on his birthday were then presented to Mr. Wills, who thanked the students and the Chairman. Not for many years, he said, had there been such a large number of students in the College. There were about 90 attending the school at present, including eighteen ladies, and since its inception Westminster College had passed 4,270 chemists—almost as many as there are members of the Pharmaceutical Society. The programme included selections on the cornet by Mr. J. Reay (an old Westminster student), pianoforte solos by Mr. H. A. Sutch (who was likewise an able accompanist), and songs by Messrs. W. Sutch, A. Kersey, Godolphin, A. Chapman and Fred Garrick. "Carriages, motors and cycles" were ordered for 11 P.M.

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

*** *We are compelled to hold over this week many letters and replies to correspondents.*

Testing Methylated Liniments.

SIR,—We note your interesting comments in the current issue of THE CHEMIST AND DRUGGIST with reference to the detection of methyl alcohol in lin. saponis. The "Riche and Bardy" method is undoubtedly a reliable one, but it is long and tedious. We have carried out some experiments applying Dr. Ashby's test. His method is to take "10 c.c. of the liquid to be tested, add 10 c c. of a freshly prepared 1 per cent. solution of sodium nitro-prusside and a few drops of ammonium hydrate. The mixture is allowed to stand for fifteen minutes. If a red colour develops, acetone or some of the other constituents of wood spirit is present." In the case of mixtures of methylated and rectified spirits this test is satisfactory, but the presence of the ingredients in lin. saponis necessitates a preliminary treatment. In this case 30 c.c. of the liniment were taken and about 15 c.c distilled over. This distillate contained the alcohol contaminated with essential oil and camphor. This was diluted with 30 c.c. of water, a few drops of sodium phosphate solution added, then a small quantity of calcium chloride solution. The gelatinous precipitate formed effectually carried down the essential oil and camphor. The mixture was filtered and the filtrate distilled. The first 10 c.c. obtained, which contained practically all the alcohol, was then treated by Ashby's process in the ordinary way. These tests should be applied in daylight, as by artificial light even pure samples show a slightly reddish tinge. We experimented with samples of lin. saponis B P., lin. saponis meth., and mixtures of these two in varying proportions, and found that the test was of sufficient delicacy to indicate the presence of methylated spirit in a mixture of 1 part of lin. saponis meth. and 3 parts of lin. saponis B.P. This test is a simple and rapid method for determining whether the liniment is prepared from methylated or rectified spirit.

HEARON, SQUIRE & FRANCIS (LIMITED).

38 Southwark Street, S.E., February 15.

[Samples of liquids sent with the above letter show the efficiency of the test. With the methylated liniment (after treatment with calcium phosphate) the test liquid is of a darkish, claret-like colour, and the froth notably tinted A mixture of rectified liniment 3 parts and methylated liniment 1 part gives a distinct colour tint, especially in regard to the froth, and when compared with the rectified-spirit liniment, which gives an amber-coloured test liquid and froth. While the test is not so delicate as Riche and Bardy's, it is better for the dispensing-counter, where the question for se tlement usually is not "Does the liniment contain methyl alcohol?" but "Has the liniment been made with methylated spirit or rectified spirit?" To the latter question Ashby's test gives a ready answer.—EDITOR.]

SIR,—Your remarks on the soap-liniment cases are very much to the purpose. It is astonishing that an analyst should not have taken the obvious precaution of comparing the tint produced in testing the suspected liniment with that produced by one known to be "methylated," in which case he would have avoided a serious error. It is another proof that many of the public analysts issue their certificates with apparently no consideration of the serious results that may ensue from their rash and inaccurate assertions. When the decision depends merely on a colour-reaction one must be particularly careful. It is quite different from the true analytical result, where one isolates a compound and proves by its chemical and physical properties what it really is. Riche and Bardy's test is no doubt a very good one in default of anything better, but it requires to be used with discrimination. Methyl compounds are probably much more largely distributed in plants than has been determined. We readily recognise salicylate on account of its marked odour and reactions; but other esters would more easily escape notice. Formic aldehyde under appropriate conditions is reduced, and is a potential source of methyl compounds. I do not quite gather what you indicate as being specially noted by Mr. Ward. The use that may be made of the lower boiling-point of the methyl iodide in order to obtain it in a concentrated state was fully explained by Professor Dittmar several years ago (*Quant. Chem. Analysis*, page 297).

Yours, &c.

Edinburgh, February 17. D. B. DOTT.

SIR,—In the Editorial article appearing in last week's issue of THE CHEMIST AND DRUGGIST reference is made to a paper communicated by Mr. Stark and myself in 1890 to the British Pharmaceutical Conference. You state that in examining the Riche and Bardy test we gave reasons for preferring white floss silk to white merino for preserving a record of the amount of methyl aniline violet present This is incorrect. As a matter of fact, no reason was given, but my notes show that for the purpose of exhibiting dyed specimens, indicating various percentages of methylated spirit, silk displayed the shades better than wool. Your suggestion that public analysts should be careful when testing soap-liniment for methylated spirit may well be extended to compound tincture of benzoin, which I have noticed on several occasions to give a violet dye, when tested with Riche and Bardy's method, although known to be made with pure spirit. This fact I found was also known to the Government analysts. The Conference paper, as its title indicates, was devoted to a comparative examination of the various tests for methylated spirit, and it is of interest to note that Mr. J. S Ward's experience with pure soap-liniment containing 5 per cent. of methylated spirit, distinguishable by this test, confirms our experience with the same percentage in pure alcohol. In the paper we sum up as follows:—

> We conclude that Riche and Bardy's test is both delicate and reliable, and that by it the presence of 0·5 per cent. of wood spirit (equal to 5 per cent. of methylated spirit) can be satisfactorily proved. But the process for its application, requiring, as it does, twelve hours' constant attention and some considerable outlay, is far from suited for the use of the ordinary pharmacist.

In addition, I would like to emphasise your remarks about the care required in performing the test, and especially the necessity of control experiments of known composition for comparison.

Yours faithfully,

40 Charlotte Street, E.C. E. J. MILLARD.

Asafetida.

SIR,—The note published on the subject of the pharmacopœial requirements for asafetida will be fresh in the memory of your readers (see *C. & D.*, December 1899). Attention was then called to the fact that it was absolutely impossible to obtain in commerce asafetida having the ash requirements of the British Pharmacopœia, and also the required solubility in alcohol. Reference was made in these articles to the fact that picked tears of asafetida might be found corresponding with these requirements. The object of this letter is to put buyers on their guard against certain shipments of tears of asafetida which look highly satisfactory, but which on closer examination are found to be a deliberate fraud. The tears have a duller appearance than is usually the case with genuine asafetida, and the fracture instead of being smooth and milky white is rough and greyish. I have been able to separate from these tears some with a milky white brittle fracture having an ash as low as 1·1 per cent, and others easily cut with a knife have an ash equivalent to over 60 per cent. The ash of an average sample drawn from three cases in question amounts to 57·6 per cent. (principally siliceous matter) showing how few of the non-adulterated tears can be picked from the cases in question. The proportion soluble in 90-per-cent alcohol is less than 20 per cent.

Yours truly,

48 Southwark Street, S.E. JOHN C. UMNEY.

Digitized by Google

Lymph-tests before Sale.

SIR,—Most of your readers doubtless retail calf-lymph, and many of them must have felt sore when the failure of the article to produce the desired vesicles, or its success in exciting some pustular eruption, has been laid to their charge. Authorities on the subject state that one should not use a tube of lymph if it is not translucent, or if it shows any haziness or a dull silver-grey streak, such as denotes the presence of micro-organisms. This appears to be a counsel of perfection, but one seldom, if ever, sees a lymph which would escape unscathed from such a test. Practically every tube of lymph has a hazy grey track in its centre, or is traversed by a silver-grey serrated streak, much like what one gets on a culture-tube of *streptococcus pyogenes albus*. On the other hand, it is only less annoying to sell inferior lymph than to use it, and if some rough practical tests could be devised by which the vendor and the user might estimate the value of a lymph before using it, the gain would be great for both.

Yours sincerely,

Dublin, February 16. J. C. MCWALTER, M.A., D.P.H.

Glasgow Patent-prices.

SIR,—In your issue of February 15 your correspondent says that "The recent effort to advance the retail prices of patents and proprietaries in Glasgow is a *fiasco*." It is evident that the wish must be father to the thought, and that your correspondent has not taken the necessary trouble to find out how this effort to benefit the trade has worked out. I have pleasure in saying that all the chemists who have signed the agreement are loyally carrying it out, and the statement is not accurate. One hundred and twelve firms were approached, and have signed the agreement, and only three refusals to sign it were met with in all that number, while of the three, one agreed to adopt the revised prices, and the other two are situated at the extreme end of two separate districts. Letters of satisfaction have been numerous, and if the writer of your paragraph wished to test the matter, by making a few purchases, he would have found the advanced prices asked for. Your correspondent is evidently disappointed at the small amount of the advance, but this matter was gone into carefully by business-firms who know that the days of face-prices and large profits are over, and they were chiefly desirous of securing a profit of 10 to 15 per cent. instead of no profit at all. I may say that the present agreement only holds good so long as there is no serious threatening of cutting-prices being adopted by any large firm. Since this matter was taken up, the local wholesale houses, including Edinburgh, have also agreed to advance their wholesale prices for a number of articles that were sold at a loss, or little or no profit, and any of the retailers who wish to go in for extreme cutting after February will have to do so at their own expense.

I am yours faithfully,

Glasgow, February 18. J. W. SUTHERLAND.

[We shall return to this subject next week.—EDITOR].

Mr. MacIver's Motion.

Mr. Vincent Wood, Albion Place, Blackfriars, S.E., writes calling attention to the motion which Mr. D. MacIver has on the notice-papers of the House of Commons (see *C. & D.*, January 25, page 173), in which it is proposed that a duty of 5 per cent., *ad val.*, be placed on all imports. Mr. Wood trusts Mr. MacIver will be successful in getting a Bill passed in Parliament to this effect. "As everyone is aware," he continues, "this country is flooded with cheap, foreign, inferior goods and pauper aliens who crowd our own workmen out of the labour market, and it would be as well if our buyers remember this, and endeavour to place their orders with British manufacturers only."

Consulting Druggist.

SIR,—It is rather amusing that the Pharmaceutical Society of Ireland has not some more important complaint than that referred to at the last meeting of Council. It is well known that half the pharmaceutical chemists in Belfast openly break the law by employing unqualified assistants, and also infringe very much on the domain of medical men, as many of the local L.P.S.I.'s have a private consulting-room, and openly charge for their advice. So that if the Irish Council wish to direct their attention to a grievance which they think they have against doctors for having consulting-rooms in druggists' shops, they should allow the local Chemists' Association to move in the matter. The Council might also direct the attention of the General Medical Council to this question of consulting-pharmacists. Statistics can be given by

Yours truly,

A BELFAST CHEMIST.

Dispensing Notes.

Strong Lotion.

SIR,—This lotion, though apparently strong, when diluted as directed by the physician, works out at less than 1-per-cent. protargol, which strength is used in Edinburgh frequently.

Yours truly,

N. (151/47.)

SIR,—In reply to your Manchester correspondent in last week's "Dispensing Notes," I do not think that the solution of protargol prescribed can be termed "a strong lotion." The strength as given in the prescription (when diluted) is about 1 per cent., whereas I have frequently dispensed a 3-per-cent. solution as an eye-lotion, and no ill-effects have been noticed. We also use a 50-per-cent. solution of protargol as a paint.

Yours truly,

H. D. KELF.

Dispenser East Dulwich Infirmary.

An Incompatibility.

The *Bulletin de Pharmacie du Sud-est* gives an unusual example of incompatibility in which fluoride of ammonium is ordered in a prescription with hydrochloric acid. Fluoric acid is liberated after standing a short time, and the bottle soon shows signs of corrosion.

A Curiosity.

An Edinburgh subscriber had to dispense the following the other day, and sends it as an exercise for Minor students:—

Extract. opii	gr. iss.
Extract. belladon.	gr. iss.
Cocain. hydrochlor.	gr. ½
Ferri alumen.	gr. ij.
Cupri. acetat.	gr. ij.
Acid. tannic.	gr. ij.
Acid. gallic.	gr. ij.
Ol. theobrom.	q.s.

Ft. pess. Mt. x.

Shake the Bottle.

SIR,—Will you kindly inform me whether a mixture containing acid. hydrocyan. dil., such as the following, should or should not be sent out with a "shake" label:—

Liq. bismuthi...	℥j.
Liq. morph. hyd.	♏lx.
Acid. hydrocyan. dil.	♏xlviij.
Tr. cocci	♏x.
Aq. chloroformi ad	℥iv.

M.

Sig.: ℥ij. in water every four hours.

The above mixture is quite clear—at least, when first made.

INQUIRER. (128/26)

[A "shake-the-bottle" label should be used. Owing to the extreme volatility of the acid the air-space in the bottle becomes saturated with the vapour, hydrocyanic acid, and it is to dissolve this that the remaining contents of the bottle are shaken before pouring out each dose.]

105/17. *Roup* (Birmingham).—There is no difficulty in massing equal parts of antimonial powder, calomel, and powdered ginger with copaiba. We have done it often. Use a thickish balsam, and when you get the mass weigh it into 72-gr. pieces, which divide into 24 pills.

105/21. *F. P.*—Sooner or later an ammoniacal sodium salicylate mixture changes in colour, whether made with artificial or natural salicylic acid. See note on this point page 243 of "The Art of Dispensing."

Digitized by Google

147/14. *Dingi.*—A 5-oz. mixture containing 1 gr. of extract of digitalis, and directed to be given "one spoonful every hour," implies, we should think, in the case of an adult, a teaspoonful, for the frequency with which the medicine is given indicates that a small dose is required.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

140/7. *An Apprentice.*—Thanks; but not in the case referred to.

139/34. *G. W.* submits a specimen of a handbill for extract of malt and cod-liver oil which has been held by the Board of Inland Revenue to be liable. The Board does not say why, but we have little doubt that it is due to the fact that the headlines are: "Your Children will grow Healthy and Strong if, *when ailing*, you give them ——'s Extract of Malt and Cod-liver Oil." Here the words "when ailing" clearly imply that the preparation is a remedy, and we recommend our correspondent to substitute for these headlines the following—"Healthy and Strong Children,' and under it, "By giving them," &c.

139/10. *C.*—There is no mystery about the licence case, February 1, page 204. The charge was for exhibiting without holding a licence. Compare paragraph on entire drugs, THE CHEMISTS' AND DRUGGISTS' DIARY, page 281.

147/28. *Inquirer.*—A horse-medicine containing opium must be labelled "Poison," and can only be sold by a registered chemist and druggist or medical practitioner, or by a veterinary surgeon for an animal under his care.

134/30. *X. Y.*—Of the labels which you send, the following involve liability to stamp-duty:—Children's cough-mixture, because it is ordered "to be taken when the cough is troublesome"; cough-lozenges, for the same reason; blood-purifier, because it is recommended for curing "abscesses, spots, pimples, and skin-eruptions."

147/18. *Sacch.*—A prize-competition depending upon the greatest number of empty packages returned is not a lottery, and is perfectly legal. A lottery is a distribution of prizes by lot or by chance: thus, if you were to put into each of one hundred packages a coupon, and three only entitled the purchasers to prizes and ninety-seven coupons carried no prizes, this would be a lottery.

145/62. *Perplexity.*—The sale of liniments prepared with methylated spirit (as sanctioned by the Board of Inland Revenue) is quite legal if the purchaser is informed of the fact at the time of the purchase.

146/46. *Cachet* puts up for sale by grocers who are not licensed to sell stamped medicines, headache and similar powders consisting of an entire drug, and the Board of Inland Revenue have required the retailers to take out a licence. In the case of the headache-powders you mention this may be due to the fact that the label makes the article proprietary, owing to the words "The Duplex Series" occurring on it, which are in the nature of a trade-mark, and "Cachet" is used as a prefix. One may say "Headache-cachets," or "Headache-powders in cachets"; but "Cachet headache-powders" is a doubtful title. We also note the words "A boon to the general community" on the label. The phrase is on the border-line of recommendation. "Beware of imitations" implies a claim to an occult secret in preparing them; and "No water or milk required, as in other powders" almost comes into Class IV. (THE CHEMISTS' AND DRUGGISTS' DIARY, page 200). Another label is for "Headache, tic, and neuralgia powders"; three complaints are thus specified, and the Board allow two—not more. It is open to argument whether the sale of any "headache-powders" consisting of an entire drug by unlicensed persons is legal or not. The Act specifies the conditions upon which they may be sold unstamped, and one of these conditions is that the retailer, if not a chemist, should be licensed.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

31/1. *Kimia.*—**Nauheim Treatment.**—The following represents the composition of a series of baths in use at one of the largest and best-known hydropathic establishments in England. The quantities given are for a bath of 40 gals.:—

No.	Sodium Chloride	Calcium Chloride	Sodium Bicarbonate	Hydrochloric Acid
1	4 lbs.	6 oz.	None	None
2	5 lbs.	8 oz.	None	None
3	6 lbs.	10 oz.	6 oz.	7 fl. oz.
4	7 lbs.	10 oz.	8 oz.	9½ fl. oz.
5	9 lbs.	11 oz.	1 lb.	18½ fl. oz.
6	11 lbs.	12 oz.	1½ lb.	27¾ fl. oz.

The salts in the form of tablets are the subject of letters-patent granted to Dr. Sandow; and Messrs. Buchner, Schacht & Co., 55 Fore Street, London, E.C, are the agents for the patentee.

141/13. *Sacch Fuecis.*—The precipitate in your Tonic-mixture is ferric phosphate. You will find the following modification of the formula go better:—

Quininæ sulphatis	gr. xij.
Tr. ferri perchlor.	℥iss.
Acid. phosphoric. dil.	℥j.
Aquæ	℥iij.

Misce et adde—

Glycerini	℥iij.
Tr. aurantii	℥ij.
Tr. nucis vomicæ	℥ss.
Sacchari usti	♏vj.
Aquæ ad	℥vj.

Set aside for a day and filter.

Dose: A tablespoonful in water thrice daily immediately before food.

Orange-flower water is not a nice addition in this case, the fresh orange-peel sufficing.

141/17. *Erica.*—**Profit-sharing.**—In estimating the net profits of a business for the purpose of profit-sharing with employés, the whole of the expenses of management should be included in the charges against gross profit. Your case being that of a retail chemist, you should allow at least 200*l.* a year for your services, and 5 per cent. for the capital invested in the business. Stock should be taken in order to ascertain whether the profits of the year have been affected one way or other by that factor. It is not usual to give any share in profits to those who have been less than a year in the employment, and the shares are distributed according to salaries rather than on the basis of length of service.

139/46. *A. A.* (Leghorn).—Smelling-salts are made by filling the bottle with roughly powdered ammonium carbonate and moistening it with a volatile essence such as the following:—

Camphor.	℥ss.
Ess. moschi	℥ss.
Ol. limonis	♏xxx.
Ol. lavand. ang.	℥j.
Ol. bergamot.	℥iij.
Ol. caryoph.	♏xx.
Liq. ammon. fort.	℥viij.

M.

143/58. *Alpha.*—**Preliminary Examination.**—The Irish Preliminary is not in the list of examinations approved by the British Society, but you should submit the certificate to the Council, who will take the advice of the Board of Examiners as to whether the certificate you possess can be accepted.

Digitized by Google

138/67. *P. A. T.*—The Pharmaceutical Society's school is the only one in London which is recognised for the full curriculum of the Irish Society. The Irish Licence examination is not very different from the present Minor examination. Irish assistants need not necessarily have passed the assistants' examination. Refer to the last Educational Number (September 7, page 419) for full particulars.

140/62. *H. H. H.*—(1) **Dry Shampoo**:—

Sapo. castil. alb.	℥j.
Ol. lavand.	℥j.
Spt. rectificat.	℥viij.
Aquæ	℥iij.

Macerate for a day or two, filter, and add—

Liq. ammon.	℥j.

M.

(2) **Jaborandi Hair-wash**:—

Quininæ sulph. acid.	℈j.
Tr. jaborandi	℥j.
Aq. coloniensis	℥ij.
Glycerini	℥j.
Spt myrciæ	℥ij.
Aq. rosæ	℥xj.

Mix, and after four hours filter.

270/19. *E. J. L.*—(1) Camphor dissolved in the paraffin, with the addition of a strong-smelling essential oil such as verbena, is a method of improving the odour of paraffin (2) **Solidifying Paraffin**.—There are three ways of doing this—(*a*) by means of soap; (*b*), with vegetable saponifiers; (*c*) with other substances such as gelatin. In the soap method 9 oz. of ordinary burning oil is heated with 1 oz. of stearic acid in a water-bath, aqueous soda added to neutralise, and the liquid agitated with an egg-whisk until it sets. If sodium silicate or sodium aluminate is added in place of soda harder jellies result. Quillaia is an example of the vegetable saponifiers used in the second method. Five per cent. of the ground bark is added to the petroleum, then 5 per cent. of water, and the mixture agitated till a jelly results. Gelatin, albumen, casein, and Ghatti gum required in the third process give indifferent results compared with the other methods.

8/7. *O. K. R.*—**Studying for the Major.**—In the Educational Number of the *C. & D.*, published September 7, you will find information as to the books required for Major study. Taking the classes you propose, and with home study, there is no reason why you should not easily master the subjects.

111/65. *Manx.*—**Waterproofing-cloth.**—The method you refer to consists of the deposition of lead sulphate in the fibres of the cloth. The garment is first dipped in a solution of lead acetate, and afterwards in a solution of a sulphate, sodium sulphate, for instance. A dip in a weak glue solution after the lead bath is beneficial. A modification of the above process is described in the *C. & D.*, August 26, 1899, page 377.

124/20. *G. B. & Co.*—**Gelatin-cement**:—

Gelatin	℥vj.
Acetic acid	℥iv.
Water	℥ij.
Alum	℥ss.

Heat together for six hours, skim, and add—

Rectified spirit	℥j.

Mix.

122/11. *Emulsion.*—(1) The furniture-cream formula would be improved if the quantity of castile soap were reduced by at least ½ oz., otherwise the recipe is a good one. (2) The superior whiteness of factory-made cod-liver oil emulsion is due to the use of emulsifying machinery. You cannot have a better formula than the one you are using.

146/28. *N. H.* (India).—"Acid magenta" is a colour which stands the addition of acids without change, and it is fairly permanent to light.

147/24. *Apud.*—**Moist Sterile Gauzes** are said to owe their moistness to an excess of glycerin, but we have no exact formula for their preparation.

146/32. *Cotton.*—**Silky Lustre on Cotton.**—This is produced entirely by mechanical means. Rollers with a large number of fine parallel lines (about 250 to the inch) are passed over the fabric at a great pressure and high temperature. If you are interested in the process you should consult patents 7,637 of 1895 and 19,633 of 1893.

139/50. *J. E. S.*—(1) **Syr. Rubi Aromaticus**:—

Blackberry-bark	4½ oz.
Cinnamon	½ oz.
Nutmeg	½ oz.
Cloves	¼ oz.
Allspice	¼ oz.
Sugar	20 oz.
Proof-spirit	q.s.
Blackberry-juice	q.s.

Make 35 oz.

The first five ingredients are reduced to powder and percolated with proof-spirit till 10 oz. of percolate is obtained. Add to this 15 oz. of blackberry-juice and dissolve the sugar by agitation in the liquid. Lastly, add enough blackberry juice to make up the volume to 35 oz.

(2) We are inquiring.

136/60. *L. D.*—**Iridescent Gelatin.**—We have not been able to obtain further information on this subject, but will keep your inquiry in mind.

24/25. *J. S.* (Detroit).—The account of a visit to the Pharmacie Centrale, Paris, appeared in the *C. & D.*, January 31, 1891, a number which is long ago out of print. It could probably be obtained by advertising in the coloured supplement.

134/52. *F. W. M.*—Formulas for **Kidney-pills** were given in the *C. & D.*, September 28, 1901, page 553, and July 28, 1900, page 219.

131/66. *Electric.*—Books on **Elementary Electricity.**—Thompson (S. P.), "Elementary Lessons in Electricity and Magnetism," 4*s.* 6*d.* (Macmillan). Jenkin (F.), "Electricity and Magnetism," 3*s.* 6*d.* (Longmans).

134/71. *S. W.*—The process used for **Darkening Oak** is, first to soak the wood in solution of ammonia and then cover with lime-wash and allow to dry. Fumigating oak with ammonia is also a very common practice amongst antique-furniture makers.

135/2. *Fotographer.*—The quantity of **Gold-chloride Solution** (1 gr. in 1 dr.) made from a sovereign is 30 oz 2 dr. A sovereign contains 113 gr. of pure gold, equal to 242 gr. of gold chloride.

135/18. *C. E.*—**Soldering-fluid.**—The following method produces a non-corrosive fluid:—Take a quantity of commercial quality hydrochloric acid and add granulated zinc till all action ceases, conducting the operation in the open air. Filter the solution and dissolve in each pint 2 oz. of sal ammoniac.

135/32. *Phenazone.*—**Water-softening.**—This is managed on a large scale by adding milk of lime to the water in a reservoir. The lime neutralises the excess of carbonic acid in the acid carbonate of lime present in the water, forming the normal carbonate which is precipitated and settles to the bottom. We are assuming that the hardness is "temporary" if "permanent" alkaline-salts are used, but are not available if the water is used for drinking-purposes.

131/49. *S. A.*—**Coal-saver.**—This is the usual thing—common salt—coloured with bole. What the makers say about saving coal, by producing more heat with less fuel, is rubbish.

117/66. *Daturine.*—The herb you send, used for asthma, is mainly coltsfoot. There is no stramonium present as far as we can judge.

119/50. *Spray.*—The American **Throat-spray** which possesses "wonderful powers in relieving attacks of asthma" is a solution of cocaine hydrochloride of approximately 3-per-cent. strength. The responsibility of a chemist who supplies such a preparation, except on a medical prescription, is very great. It is a Part 1 poison.

Digitized by Google

115/65. *R. R. K.*—(1) The manner of using logwood-chips for restoring black fabrics is to boil the chips with water and rub the strained decoction on the coat or dress with a piece of flannel previously treated in the same way with copperas solution. (2) The sample of benzine you send seems to be discoloured, and smells stronger than usual. (3) Toilet-lanolin :—

Rieger's almond-soap	ʒj.
Distilled water	ʒj.

Dissolve by heat and mix with—

Lanolin	ʒj.
Glycerin	ʒj.

Use a warm mortar for the mixing, and perfume with rose and neroli.

147/1. *W. A.*—Cashew-nut juice has been used for uterine complaints and as a diuretic, so that it is probable that the liquid extract possesses like medicinal properties. The dose is small.

147/4. *Statim.*—**Books for the Minor.**—Refer to *C. & D.* Educational Number, September 7, page 418. The "Tutorial Chemistry" is good, but does not cover the whole range of Minor chemistry.

147/53. *X H.*—As explained in the *C. & D.*, May 18, 1901, page 811, tables of alcohol strengths are the result of actual experiments owing to the unorthodox way mixtures of alcohol and water have of contracting, and that unequally at varying temperatures. You could consult the alcohol tables in Thorpe's "Dictionary of Applied Chemistry" at most good reference libraries.

146/69. *Perfume.*—**Fumigating Pastilles.**—As you wish to have a pastille without incense odour (due to benzoin and tolu) the following may suit you :—

Sandalwood, in powder	ʒij.
Cascarilla in powder	ʒj.
Vegetable charcoal	ʒij.
Vetivert	ʒij.
Lavender-flowers	ʒiv.
Potassium nitrate	ʒiv.
Oil of thyme	ʒss.
Oil of rose	ʒss.
Mucilage of tragacanth	q. s.

Make into a stiff paste, divide into cones, and dry.

132/21. *Ego.*—The Caulking-composition for placing in the cracks between the boards of the deck of a ship is resin melted with a small proportion of tallow and Venice turpentine.

119/23. *W. B.* (Paris).—The Paste Dentifrice is similar to the following :—

Powdered white soap	ʒj.
Powdered orris root	ʒj.
Precipitated chalk	ʒiv.
Powdered sugar	ʒss.
Oil of peppermint	♏viij.
Oil of rose-geranium	♏x.
Solution of carmine	q. s.
Glycerin	ʒvj.
Rose-water	sufficient to make a paste

It is the soap that gives the smooth taste you refer to, and it may be doubled if thought desirable.

132/23. *Agricola.*—**Scour-mixture** for calves, which "effects a speedy cure" :—

Pulv. cretæ præp.	ʒij.
Pulv. cort. quercûs	ʒj.
Ess. menth. pip.	ʒiv.
Aquæ ad	Oj.

Dose: Two tablespoonfuls, mixed with gruel, once daily.

128/60. *Munad.*—The Furniture-cream could probably be brought round by separating the solid portion, melting in a water-bath, and mixing in the liquid portion previously incorporated with more soap.

118/61. *Belgravia*—**Poulterers' Powder.**—This consists of boric acid 3 parts, borax 1 part. It is used for dusting on fowls after plucking, as a preservative

133/17. *Phenique*—**Liquid Carbolic Dentifrice** as your sample :—

Pulv. cort. quillaiæ	ʒiv.
Pulv. cocci	ʒj.
Ac. carbolici	ʒij.
Saccharini	gr. v.
Ol. cinnamomi	♏xv.
Ol. menth. pip.	♏xxx.
Spt. vini rect.	ʒxiiss.
Aquæ	ʒxiiss.

Macerate seven days, filter, and make up to 25 oz. with proof spirit.

117/65 *Poultry.*—(1) **Roup-powder.**—The following is an improvement on the powder you send :—

Potassii nitratis	ʒj.
Pulv. cubebæ	ʒj.
Pulv. lini	ʒx.
Pulv. glycyrrh.	ʒiv.

Mix a tablespoonful with the food for ten fowls.

(2) **Poultry-powder to increase the yield of eggs.**—Your sample lacks the spices which are necessary in such a powder. The following is a good preparation :—

Pulv. piper. nig.	ʒi.
Pulv. anisi	ʒij.
Pulv. calcii phosph.	ʒij.
Pulv. lini	ʒxij.

Mix a tablespoonful with the food for ten fowls.

148/13 *T. G. Forshaw.*—Thanks; but the note merely repeats what has already been said about opodeldoc. It would have been interesting a month ago.

148/51. *T. C. S.* (Liverpool).—When you write letters for publication, you should give your full name and address, and not write on both sides of the paper.

123/40 *Zylol.*—(1) Kola-syrup used for kola drinks always produces froth. You do not say what formula you use, but the recipes in THE CHEMISTS' AND DRUGGISTS' DIARY, 1900, may give you hints as to improving it. (2) **Billiard-cue cement** :—

Isinglass	ʒj.
Distilled water	ʒij.

Soak and dissolve, then add the following solution very cautiously :—

Ammoniac or sandarac	ʒss.
Rectified spirit	ʒij.

120/60. *R. J. W.*—**Spirit-gum**—The formula in "Pharmaceutical Formulas"—resin (1 oz.), castor oil (½ oz.), spirit (4 oz.)—is the usual one, but you can modify it by either increasing the resin or decreasing the castor oil.

114/58. *J. H. W.*—The only way out of the label difficulty is to have the labels supplied ungummed and stick them on the syphons with paste. There is no gum that will stand damp climates.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

150/30. English agents for Antiphlogistene.

154/12. Who puts up Chevalier's perfumes?

155/45. Where can "Sarsaparilla de Bristol" be obtained?

155/26. What is pyrazone, or, if proprietary, who makes?

155/8. Makers of Chapman's rose wafers, or where obtainable?

150/61. Makers of sponge felt, a substitute for spongiopiline.

19/19. English agents for Dazzle-Putz (Miller Bros. & Co., New York).

58/33. Is there any machine on the market for automatically folding powders, if so, where can it be obtained?

Doctoring the Poor.

IT is impossible to withhold a certain admiration for Mr. J. C. Purdue, the East-End herbalist and *bête noir* of Coroner Wynne Baxter. His persistence and obviously honest conviction of the rectitude of the path he has chosen commend him to the British love of doggedness and fair play. And especially to chemists must his persistence appear creditable, for many of the craft have known what it is to feel the rasp of a coroner's tongue when they dared to sell twopennyworth of cough-mixture to relieve the child of the poor woman who could not produce the doctor's sixpence. Last week (*C. & D.*, February 15, page 251) we recorded Mr. Purdue's seventh appearance before Mr. Wynne Baxter, and we have this week to record his eighth. A child died of burns, and Mr. Purdue was called in, the mother being quite aware he was not a doctor. The Coroner, therefore, could not work off his usual lecture. "Well, the mother knew you were not a doctor," he said to Mr. Purdue; "so there is nothing to say. At the same time, it is essential for the welfare of the public that it should be known." "I don't profess to be a doctor," retorted Mr. Purdue, as he handed the Coroner the following bill, which he distributes broadcast in the neighbourhood:—

A GREAT BLESSING FROM GOD TO HIS PEOPLE IN EAST LONDON

IS THE

Herbal Dispensary,

7 GALT STREET, LIMEHOUSE, LONDON, E.

FOUNDER AND LEADER:

J. C. PURDUE,

Member of the National Association of Medical Herbalists of Great Britain, 1864.

Fellow of the Council of Safe Medicine, London, 1893.

Member of the Medical Herbalists Protection Association of Great Britain, 1894.

The above Herbal Dispensary is open every Monday, Tuesday Wednesday, Thursday, and Friday mornings from 8 till 12, when the Public get advice and Herbal Medicine for 1*d*. Attendance with Herbal Treatment at own Residence from 6*d*. No charge for visiting.

Not a Doctor, Providence has decreed otherwise, only a 1*d*. Herbalist.

No needful or penniless person ever refused treatment. Over 42 thousand persons have been already successfully treated. No Funds, Gifts, Presents, or Testimonials ever asked for.

"Whatsoever a man soweth, that shall he also reap." Gal. 6, 7.

A *C. & D.* representative explored the unsavoury neighbourhood of Limehouse the other day until he chanced on Galt Street. No. 7 is a small shop of the typical herbalist stamp, and it betrayed no gaudy air of prosperity. A stone pestle and mortar were posed on one counter, and Mr. Purdue himself was engaged in making a batch of pills. The *C. & D.* emissary introduced the subject of coroners, Mr. Purdue cheerfully gave his views thereon, and also furnished his opinion of doctors with the utmost abandon.

"What I say is this," said Mr. Purdue, "if a poor man, woman, or child be sick, and any chemist, herbalist, or chimney-sweep can give something for their relief or cure, why should the doctors and their henchmen the coroners try to stop it?"

"But they say we have no skill and know nothing of disease," said the interviewer.

"Skill!" retorted the interviewed scornfully; "you should see some of the cases that come under my notice daily. Now, I'll tell you of one case that happened not very long ago. A poor woman in this neighbourhood was attended for six months by two doctors for rheumatism of the knee. Eventually I was called in and found that the woman's thigh was dislocated! I said so, the doctors were told on their next visit, and, strange to say, they acknowledged that the herbalist was right and they were wrong The woman was sent to the infirmary, and is now able to walk."

The most incredible portion of this story appeared to the interviewer to be the doctors' acknowledgment. Other cases were cited by Mr. Purdue of snatching physician-forsaken sufferers from the grave, but the foregoing will suffice.

In the course of further conversation, Mr. Purdue mentioned that he had been ten and a half years practising as a herbalist in the neighbourhood. He came from the country, and he asserts that but for the "persecution" to which he has been subjected he would have given in long ago. This "persecution" has acted as a stimulus to his efforts.

"I am doing the Lord's will on earth," said Mr. Purdue, "and these people [doctors and coroners] are trying to stop me; but they can't."

On one occasion he was fined at the instance of the Apothecaries' Society. He was called up in the middle of the night to see a child. He found it almost choking from diphtheria and did what he could, but the child died, and he was fined "for illegally practising as a physician."

The shop is characteristic of the man. Up till 12 o'clock daily, two large placards outside the door intimate that "advice and herbal medicine" will be given to all-comers for 1*d*. After 12 the ordinary mixture costs 6*d*. On the shop-door is the certificate of the "Medical Herbalists' Protection Association of Great Britain." Other framed certificates hang inside, and there is also a framed letter headed "Crowner's Law," which appeared in a recent issue of a London morning newspaper. In appearance Mr. Purdue betrays by bristling moustache and imperial, and keen dark eyes, the individual who will not be sat upon with impunity, and with all respect to Mr. Wynne Baxter we are inclined to think the herbalist does more good than harm.

Trade-Marks Applied For.

(*From the "Trade-marks Journal," February* 19, 1902.)

"PYROPHAN"; for photographic chemicals. By Farbenfabriken vorm. F. Bayer & Co., Koenigstrasse 27, Elberfeld, Germany. 241,892.

"GLYCOBENPHENE" (no claim for "Glyco"); for medicines. By the Henry Heil Chemical Company, 212 South Forth Street, St. Louis, Missouri, U.S.A. 242,087.

"COLCURA"; for a medicine. By T. S. Rendall, 76 Fleet Street, Torquay. 242,274.

Design representing Oannes, the fish-deity of the Chaldeans; for chemicals and food-stuffs. By Burroughs Wellcome & Co., Snow Hill Buildings, E.C. 242,324 and 242,325.

Picture device; for dyes and colouring-matters. By the Basle Chemical works, Neuhausweg 90, Basle, Switzerland. 240,885.

"SIGHTOPTIST"; for goods in Class 8. By J. J. Wood, 20 Lord Street, Liverpool. 243,128.

"DALOX"; for photographic paper. By J. J. Griffin & Sons (Limited), 26 Sardinia Street, Lincoln's Inn Fields, W.C. 243,124.

Picture of a charging bull; for salt. By the Salt Union (Limited), 45 Tower Buildings, Liverpool.

Facsimile signature of the firm (the essential particular); for a baking-powder. By J. Griffiths & Son, 24 Womanby Street, Cardiff. 242,525.

Combination of devices and the words "SHIELD" and "VASE" (essential particulars); for soups in powder and blocks, meat extracts, and cocoa preparations. By Solid Soup (Limited), 146 Wednesbury Road, Walsall. 242,559.

"RAMOGEN" (no claim for "Ram" or "Rahm"); for condensed milk. By A. Lauer, Zwingenberg an der Bergstrasse, Hessen, Germany. 242,877.

Device of Southampton Bargate (the essential particular); for food-stuffs. By Misselbrook & Weston, 15 The Strand, Southampton. 243,369.

"SCRUBBO"; for soaps (dry and in powder) and a polish. By Lever Brothers (Limited), Port Sunlight. 242,272 and 242,273.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: February 20.

BUSINESS shows no improvement, and no important changes have taken place this week. Quinine continues very quiet, and is, perhaps, a shade firmer. Menthol is slightly easier than when we last quoted. Tartaric acid has a hardening tendency, but citric acid is very quiet. Cannabis indica continues to sell at previous rates, but values must eventually be higher, as the Indian export-duty has been increased. Ergot is quiet and neglected. Saffron remains very firm, but unchanged. Italian castor oil has been in more demand at firm rates, and in eucalyptus oil there has been a good business at the low figures lately ruling. The following are the principal alterations of the week, including those recorded at the drug-auctions:—

Higher	Firmer	Easier	Lower
Acid, carbolic	Cardamom-seed	Acid, citric	Assafetida
Antimony	Quinine	Buchu	Cardamoms
Benzoin (Sumatra, fine)		Ipecac. (Cartag. and Rio)	Chillies
Juniper-berries		Menthol	Sarsaparilla (Jamaica)
Oil, cod-liver		Pepper (black)	
Shellac			
Wax, bees', Jamaica			
Wax, bees', Madagascar			

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from February 13 to 19, inclusive:—Acid, oxalic, 26; acid, tartaric (@ Bari) 77 pkgs., (@ Rotterdam) 12 kgs., (@ Bordeaux) 18; argol (@ Naples) 125 cks., (@ Cape) 34; arrowroot (@ Natal) 55 cs., (St. V.) 229; arsenic (@ Oporto) 103 brls., (@ Hamburg) 10; "balsams" (@ Hamburg), 6: bleaching-powder, 25; buchu, 40; camphor (@ Hamburg), 60 tubs; caraway-seed, 100; castor oil (E.I.) 20, (Belg.) 100, (Ital.) 44; cinchona (Ceylon) 37 bls., (African) 50; citronella oil (@ Galle), 35; cloves (@ Hamburg), 1,353; cocaine, crude (@ Callao), 13; cod-liver oil (@ Bergen), 95; coriander-seed, 22; cream of tartar (@ Bordeaux) 164, (@ Rotterdam) 53, (@ Tarragona) 10; drugs (@ Trieste) 99, (@ Fiume), 76; essential oils (@ Messina) 78 pkgs., (@ Palermo), 9; eucalyptus oil (Aust.), 10: fenugreek-seed, 19; ginger (@ Jamaica) 176 pkgs., (@ W.C.A.) 219, (@ Bombay) 99 cs. 981 bgs. 423 bls.; gum arabic (@ Aden) 64 cs.; (@ Alexandria) 117 bgs. 173 pkgs.; gum thus, 200; gum tragacanth, 15; honey (Jam.), 11; juniper-berries, 377; lime-juice (W.I.), 18 brls.; mustard oil, 20; nux vomica (@ Madras) 270, (@ Bombay) 40; olive oil (@ Messina) 73 brls., (@ Bari) 21 bxs., (@ Zante) 168 pkgs. 67 cks., (@ Leghorn) 1,729 pkgs.; opium (@ Genoa) 50, (@ Bombay) 23; orris (Ital), 14; palm oil (@ Hamburg) 184 cks.; pepper (@ Havre), 200; pimento, 164 bgs.; potash chlorate (@ Antwerp) 40 kegs, (@ Gothenburg) 100; quicksilver (Ital.), 100; rose oil (@ Madras) 11, (@ Bombay) 3; saccharin, 7; sandalwood, 185 bls.; sarsaparilla (@ New York) 30 pkgs., (@ Hamburg) 6 bales; senna (@ Madras) 13 bls. Commercial Sale-rooms Benevolent Fund.

The annual meeting of the London Commercial Sale-rooms' Benevolent Fund was held on February 17 in No. 3 Sale-room, Mr. W. Murray Guthrie, M.P., presiding. The report for 1901, which was taken as read, stated that 163 new annual subscriptions, amounting to 208*l.* 19*s.* had been received. There was also an increase of 28*l.* 7*s.* in the subscriptions of previous subscribers, and the donations amounted to 380*l.* There was also a recovery of overdue subscriptions to the extent of 21*l.* During the year one of the recipients had died, while four fresh applicants had been accepted, the number on the books at present being twenty-two. The total amount granted had exceeded 880*l.*, against annual subscriptions amounting to 873*l.* The Chairman, in moving the adoption of the report and balance-sheet, referred to the long connection of his firm with Mincing Lane—over one hundred years—during which time their relations with the brokers had always been of a most cordial nature. It was the duty of the merchants and brokers to support the Benevolent Fund, and he asked those who were already subscribers to convince others of the necessity of also becoming subscribers. The report was unanimously adopted, after which the following auditors were elected:—Mr. Coventry A. Woodhouse (in place of Mr. H. Gülich), Mr. W. Swanborough, and Mr. Stephen S. Duval. The following members were re-elected to serve on the committee:—Messrs. J. A. Browne, Henry Devitt, W. W. Green, and F. G. Naumann. Mr. Samuel Figgis proposed a vote of thanks to the committee, and Mr. H. W. Price replied, alluding to the success and encouragement they had met with, and their endeavours to administer the fund with economy and justice. Mr. R. N. Dalton proposed a hearty vote of thanks to the Chairman, who, he said, in addition to becoming an annual subscriber, had presented the Fund with a handsome donation, which he hoped would bear fruit in other directions. Mr. Price, in seconding, said the fund was now larger than at any time during its twenty years' existence, but in order to prevent any undue elation he regretted to say that, owing to the natural and somewhat sad increase of annuitants, the payments were more than their annual subscriptions, so that he earnestly hoped others would come forward and assist.

Heavy Chemicals.

The general tone in the heavy chemical market is a steady one, and there is little of change or of special importance to be reported. Home trade demand keeps fairly good, and about an average one, but exports are only quiet. It is rather early on in the year, however, for much being done in shipments. Deliveries against existing contracts are being taken fairly well. Values for the most part are maintained.

Sulphate of Ammonia.—There is a fair continued demand, and good all-round business has been done, but in spite of this the tone is scarcely so firm as it was, although at the time of writing values are nominally unchanged. Beckton February-June delivery, 11*l.* 10*s.*; Beckton terms, 11*l.* 7*s.* 6*d.*; Hull, 11*l.* 7*s.* 6*d.*; London and Leith, 11*l.* 8*s.* 9*d.* Exports from Leith last week were heavy, amounting to 1,593 tons.

Alkali Produce.—Caustic soda is steadily maintained at unchanged rates, but demand is not very brisk: 76 to 77 per cent., 10*l.* 7*s.* 6*d.* to 10*l.* 15*s.*; 70 per cent., 9*l.* 15*s.* to 10*l.* per ton; 60 per cent., 8*l.* 15*s.* to 9*l.* per ton. Bleaching-powder is moving off better, and is also steady, at 6*l.* 15*s.* to 7*l.* per ton, f.o.b. Tyne or Liverpool, for hardwood, and 6*l.* 7*s.* 6*d.* to 6*l.* 12*s.* 6*d.* per ton, free on rails, for softwoods. Ammonia alkali continues to maintain a very firm tone and to move briskly, at 4*l.* 5*s.* to 4*l.* 15*s.* per ton for 58 per cent, free on rails, in bags. In chlorates, both potash and soda, there is not very much doing, but prices rule fairly firm, at 3*d.* and 3½*d.* to 3¼*d.* per lb. respectively. Soda crystals without change, at 67*s.* 6*d.* per ton, f.o.b. Liverpool, and 62*s.* 6*d.* per ton, f.o.b. Tyne. Yellow prussiate of potash, 5½*d.* to 5¼*d.* per lb. for best Lancashire makes. Saltcake still quiet, at 25*s.* to 26*s.* per ton, in bulk, free on rails. Bicarbonate of soda in fair request, at 6*l.* 7*s.* 6*d.* to 6*l.* 12*s.* 6*d.* per ton, in large casks, and 6*l.* 15*s.* to 7*l.* per ton, f.o.b. Liverpool, in 1-cwt. kegs. Sulphate of soda (Glauber's salts) steady, at 30*s.* to 32*s.* 6*d.* per ton, free on rails, in bags. Hyposulphite of soda in moderate request only, and values still rule low: 6–8-cwt. casks, 5*l.* 10*s.* to 5*l.* 17*s.* 6*d.* per ton, and 1-cwt. kegs, 6*l.* to 7*l.* 5*s.* per ton, according to quality. Silicates of soda in fair demand, both for home and export; 140° Tw., 4*l.* 2*s.* 6*d.* to 4*l.* 12*s.* 6*d.* per ton; 100° Tw., 3*l.* 12*s* 6*d.* to 4*l.* 2*s* 6*d.* per ton; 75° Tw., 3*l.* 5*s.* to 3*l.* 15*s.* per ton, f.o.b. Tyne or Liverpool, in usual casks.

Liverpool Drug Market.

Liverpool, February 19.

Castor Oil.—The market continues to exhibit few features of interest in consequence of the small demand from consumers. Good seconds Calcutta is obtainable at 3 1/16*d.* to 3⅛*d.* per lb. First-pressure French is still held for 2 15/16*d.* to 3*d.* per lb.

Beeswax.—At auction and by private treaty 12 bags of Peruvian have been sold at 7*l.* 2*s.* 6*d.* to 7*l.* 10*s.* per cwt., ranging in quality from grey to pale primrose.

Ginger (African).—101 bags of Sierra Leone of new crop have been sold at 32*s.* per cwt., in transit.

Gum, Acacia.—Twenty serons of hard amber sorts have been

Digitized by Google

reported sold at 33*s.* 6*d.* per cwt., and further arrivals are recorded this week, chiefly of hard amber and Ghezirah description.

TURPS is steady on the spot at 31*s.* per cwt., with very little business passing.

LINSEED OIL has established an advance, and 33*s.* to 33*s.* 6*d.* per cwt. is now quoted, according to quality.

COPPER SULPHATE.—Steady at 20*l.* per ton, with a fairly good inquiry.

ARSENIC.—White powdered is firmly held at 15*s.* per cwt.

TONKA-BEANS.—A recent arrival of 2 cases foxy to black Para is reported sold at 1*s.* 3½*d.* per lb.

GRAINS OF PARADISE.—The small remaining stock is held firmly at 70*s.* per cwt. Importers say that no more are likely to come forward.

German Drug Market.

Hamburg, February 18.

Our drug-market is quiet in general, only a few articles meeting with interest.

ALOES.—Cape is firm, at 76m. per 100 kilos.

AGAR-AGAR is quiet and lower, spot being quoted 360m. to 350m., and forward delivery, 330m. per 100 kilos.

BALSAM PERU remains very firm, at 13½m. per kilo.

CONDURANGO-BARK shows a strong advance, and 120m. to 125m. per 100 kilos. is now asked.

CAMPHOR (REFINED) is still unchanged, at 435m. from refiners, second-hands quoting a little less.

CUMIN-SEED (Maltese) is quoted 52m. per 100 kilos.

ELEMI.—Manilla is lower, at 225m. per 100 kilos.

LYCOPODIUM shows a strong market, at from 437½m. to 440m. per 100 kilos.

IPECACUANHA is quiet, Rio being quoted at 22½m. to 22m., and Cartagena, 11m. to 10¾m. per kilo.

MENTHOL is quiet and lower, at 30m. to 29½m. per kilo.

JALAP is quoted 110m. per 100 kilos.

QUININE is unchanged, at 39m. per kilo.

SENEGA is offering at 500m. to 490m. per 100 kilos., but the demand is only small.

JAPANESE WAX.—Forward delivery is quoted at 67m. per 100 kilos.

WORMSEED continues very firm, green seed being held at 80m. to 85m., and brown seed, 63m. to 65m. per 100 kilos.

VANILLA.—Tahiti is firmer, 11m. per kilo. having been paid.

OILS (FIXED).—Cod-liver is unchanged, at 70m. per barrel. Castor oil is advancing and shows a better demand, first-pressing in barrels spot is now 55m. per 100 kilos. Linseed has advanced considerably and a large business done for near delivery. Cotton-seed firm. Palm steady.

OILS (ESSENTIAL).—Star-anise is unchanged, at 10½m. per kilo. HGH Peppermint is quoted 8.60m. per lb., and Japanese, 8m. to 8¼m. per kilo.

American Drug-market.

New York, February 11.

The market is quiet, but business generally is good, and there is no pressure to realise. Demand is almost wholly for purposes of consumption.

BEESWAX.—Supplies are coming forward very slowly, and with an improving demand the market is strong, with an upward tendency. Ordinary pure yellow is offered at prices ranging from 29c. to 35c. per lb.

BALSAM COPAIBA.—Quotations are nominally unchanged, but only inferior goods are obtainable below 35c., while sales for export have been made up to 37c. Business is not brisk, as dealers will not sell at present prices.

CUBEBS are almost neglected, and whole berries are obtainable at 10c.

COCOA-BUTTER in bulk has declined to 31c., and the market is dull. In quantity less than this would buy.

COD-LIVER OIL is firmer, with the best brands held at $22·50.

ERGOT is dull at 39c. for Russian, and 40c. for Spanish.

JAPAN WAX.—Arrivals have eased the market, and 7½c. will buy.

JALAP.—Demand is very poor, but owing to the limited available supplies quotations remain firm at 12c. to 13c.

GOLDEN SEAL (Hydrastis).—Spot quotations are 50c. for good quality, but quotations for various grades are somewhat irregular.

IPECACUANHA is easy at $2.50 for Rio, and $1.40 for Cartagena.

BUCHU-LEAVES.—Prime green short leaves are selling at 18c., but the market is very quiet and depressed.

MANDRAKE-ROOT is firm under the influence of a good demand, and 4½c. is asked for good quality root.

SENEGA is in better demand, but sales are few, as holders are inclined to ask higher prices.

OPIUM continues weak, and cases are obtainable at $2.97½.

BENZOIN.—Sumatra is scarce and generally higher for all grades. Quotations range 30c. to 40c., according to quality.

TRAGACANTH.—Aleppo is in good demand, but values are unchanged at 70c. to 75c. for first quality, and 55c. to 65c. for seconds.

Cablegrams.

SMYRNA, February 19:—The sales for the week ending Wednesday amount to 40 cases, including current talequale at the equivalent of 7*s.* 7*d.* per lb., f.o.b., and Yerli at 8*s.* Market closes steady.

HAMBURG, February 20:—Business here is quiet. Castor oil is firmer; ergot of rye is steady, and higher prices have been paid for condurango bark.

BERGEN, February 20, 1.15 P.M.:—The prospects for the fishing are not very promising at present, and 75*s.* per barrel, f.o.b. Bergen, is now asked for new non-congealing Lofoten oil. The total catch of cod to date amounts to 2,240,000, against 2,867,000 last year. This is estimated to produce 1,302 barrels, against 2,771 barrels at the same time last year.

NEW YORK, February 20:—Business here is brisk. Opium is quiet at $2 95; balsam copaiba is advancing, and 36c. is now asked. Buchu-leaves are easy at 18c.; Damiana-leaves are higher, 15c. being to-day's price. Cubebs are easy at 9½c., and ergot is lower at 38c. Balsam tolu has declined to 26c. per lb., and cinchon idine is slow of sale at 25c. per lb.

London Markets.

ACID, CARBOLIC, is higher, 39° to 40° C. crystals being quoted 6¼*d.* to 6½*d.*, and 34° to 35° C. 6¼*d.* per lb. Crude 75 per cent. is 2*s.* 3*d.* to 2*s.* 3½*d.*, 60 per cent. 1*s.* 10½*d.*, and 50 per cent. 1*s.* 6½*d.* to 1*s.* 7*d.* per gal.

ACID, CITRIC.—Makers quote English crystals at 1*s.* 1*d.* per lb., nominally, and for foreign make 1*s.* 0½*d.*, c.i.f., is asked.

ACID, TARTARIC, is hardening. Foreign crystals or powder is quoted 10½*d.* per lb., and makers of English quote 11½*d.*

ANTIMONY is dearer, English now being quoted 32*l.* to 33*l.* per ton.

ARROWROOT.—At auction on Wednesday fine St. Vincents was bought in at 3*d.* per lb., and fair to good at 1½*d.* to 1¾*d.* Bermuda was bought in at 1*s.* 5*d.* per lb.

BALSAM PERU.—A report from Berlin states that the syndicate which was established in San Salvador a few months ago have advanced their prices 1m. per kilo., and the tendency is still upwards.

CAMPHOR.—In Japanese crude camphor a sale of 200 piculs is reported at 151*s.* 6*d.* per cwt., c.i.f., for February-March shipment. Pressed is quoted 177*s.* 6*d.*

CANNABIS INDICA.—The export duty has recently been raised by the Indian Government from 2*s.* to 2*s.* 8*d.* per lb. The stock on the spot is being slowly reduced, although there is still a fair amount available, and we understand there have been no imports since the duty was imposed. Values are unchanged at 2*s.* 3*d.* for tops and 2*s.* for siftings, and business has been done at these figures this week.

CINCHONA.—The shipments fram Java for the first half of the month amounted to 320,000 Amsterdam lbs., against 525,000 in 1901 and 180,000 in 1900. At the cinchona-auctions to be held at Amsterdam next week the equivalent of 36 901 kilos. quinine sulphate will be offered. The manufacturing bark contains an average percentage of 5·27 per cent. q.s. against 5·46 per cent. at the January auctions, and an average of 5·45 per cent. for the ten auctions of 1901. In the drug-auction 2 serons of small Huanoco quill realised 6¼*d.*, and 12 serons Loxa quill sold at 1*s.* 2*d.* to 1*s.* 5*d.* per lb.

COCOA-BUTTER.—The auctions to be held in Amsterdam on March 4 will consist of 80 tons Van Houten's, 13 tons de Jong, 4 tons Helm, 5 tons Mignon, and 5 tons of a foreign brand, while on the same date in London 90 tons Cadbury's brand will be offered.

ERGOT is neglected, at 1*s.* 5½*d.* per lb., c.i.f., for Spanish.

INSECT-FLOWERS.—The following are the latest quotations from Trieste:—For good half and three-quarter closed flowers, 115*s.* to 120*s.*; fair half-closed, 100*s.* to 105*s.*; good open flowers, 80*s.* to 90*s.*, c.i.f.; genuine powder from half-closed flowers, 1*s.* 3*d.* to 1*s.* 5*d.* per lb, according to quantity, and

Digitized by Google

9*d* to 1*s*. for lower grades. The Trieste market has again advanced during the past few days, and stocks are much smaller than at the same time last year.

JUNIPER-BERRIES are firmly held and comparatively scarce. For a parcel just landing 11*s*. 6*d*. per cwt. is quoted as the spot-price.

MASTICH is very quiet at from 1*s*. 4*d*. to 1*s*. 7*d*. per lb. for clean pale tear. An importer quotes 1*s* 1½*d*. per lb., c.i.f.

MENTHOL.—Very quiet, with small sales of case lots of Kobayashi crystals at 13*s*. 9*d*. per lb., spot. There is a quotation in the market of 12*s*. 9*d*., f.o.b. Hamburg, for a parcel near at hand. Another importer quotes 12*s*. 10½*d*., c.i.f., for January-February shipment.

MORPHINE is fairly steady at from 4*s* 4*d*. to 4*s*. 5*d*. per oz. for muriate powder, according to quantity.

MUSK.—The exports from Shanghai from January 1 to December 31 (in catties) have been :—

—	Paris	London	New York	Hamburg	Total
1901	599	154	314	105	1,172*
1900	790	43	219	52	1,104
1899	873	180	290	148	1,491
1898	1,105	231	103	308	1,747
1897	887	475	583	127	2,072
1896	729	555	393	125	1,802
1895	686	465	334	191	1,676
1894	884	648	255	130	1,917
1893	723	697	357	192	1,969

* About 90 per cent. Tonquin and 10 per cent. Sawko and Tampi.

A tin of Cabardine sold at 11*s*. 6*d*. per oz in auction.

NUX VOMICA.—A report from Calcutta dated January 30 states that no important sales have transpired during the fortnight; arrivals and stocks are very small, and a retail business has been passing at steady rates—viz, 2·12r. to 3·0r. per British maund, loose.

OIL, CASTOR.—Water-white Italian keeps firm at from 34*s*. to 35*s* per cwt., c.i.f. French medicinal in barrels is quoted 3½*d*. per lb., and first-pressing 3*d*., ex-wharf London. Cases are quoted 33*s*., c.i.f.

OIL, COD-LIVER.—Our Bergen correspondent writes on February 15 that the week has passed without any official information as to the catch of cod in the Lofoten district. The weather during the past few days has been stormy, and does not permit unrestricted fishing. The oil-market is consequently very firm at 71*s*. per barrel, f.o.b., for non-congealing oil (see our telegram). The exports from Bergen to date amount to 1,014 barrels, against 849 barrels at the same period of last year. Reports received in London appear to confirm the statement that the fishing is very poor, and agents have raised their prices in most cases and now quote 80*s*. to 85*s* per barrel, c.i.f. Newfoundland cod-liver oil is obtainable at 2*s*. 9*d*. per gal.

OIL, EUCALYPTUS, has been in good demand. B.P. quality is obtainable at from 1*s*. 1½*d*. to 1*s*. 2*d*. per lb., according to quantity. In auction, B.P. quality, containing 62 per cent. cineol, was held for 1*s*. 1*d*.

OIL, GERANIUM.—French is offered at 33*s*., Algerian at 18*s*. 6*d*., and Turkish 14*s* 6*d*. per lb., net.

OIL, LAVENDER.—French of best quality is quoted 7*s*. to 7*s*. 6*d*. per lb., and Mont Blanc 5*s*. 6*d*. to 6*s*. Spike oil is obtainable at 2*s*. 5*d*. for finest.

OIL, OLIVE.—Mr. Consul Neville Rolfe, in reporting on the trade of South Italy for 1901, states that probably never before has the stock of olive oil in Italy been at such a low ebb. As long ago as last June it seemed doubtful whether there was oil enough on the market to fulfil the engagements entered into by merchants, and the future of the article seemed to depend entirely upon the new crop. In normal circumstances the fruiting of the trees would have led to a decline in prices for spring shipment, but the effect this year, after so many disappointments, was scarcely perceptible. The crop promised well, and did well. The fruit is well nourished and perfectly sound, especially in the interior of the province of Bari, but more particularly so on the higher lands. Districts where the crop has been good will produce this season oils of such a high class as have not been placed on the market for many years past.

OIL PETITGRAIN is quoted 6*s* 2*d*. per lb. for Paraguayan.

OPIUM.—The market remains easy, although holders of Persian are inclined to higher rates, quotations on the spot ranging from 8*s* 6*d*. to 10*s*. per lb., according to quality. From Smyrna sales of about 200 cases are reported, principally for American account.

SMYRNA, February 7.—The sales this week amount to 33 cases, comprising 30 cases old and new choice talequale at 8*s*. 3*d*. to 8*s*. 4*d* per lb., c.i.f., and 3 cases inspected Karahissar at 8*s*. 9*d*. No material decline is expected while there are buyers at these prices, but in any case the market is bound to go lower as Persian opium is offered, comparatively speaking, cheaper in London, both for spot and to arrive. News from the sources of production continues of a favourable character. The arrivals to date amount to 3,049 cases, against 3,032 cases at the same time last year.

CONSTANTINOPLE, February 14.—Continued fine weather is having effect in this country, and holders generally are showing some anxiety to unload. The Smyrna market has declined to 7*s*. 7*d*., at which considerable quantity has been taken by U.S. buyers. This market has likewise receded, and a speculator was able to buy 30 cases good quality at 7*s*. 8*d*. Beyond this, the only other sale was 6 cases Balukissar at 8*s*. 3*d*. The extraordinary mild weather has had the effect of overforcing all vegetation, and severe cold weather would have most disastrous results.

POPPY HEADS.—Belgian are very scarce, and 30*s*. per 1,000 is reported to have been paid for large sizes, and 35*s*. is now wanted. English are practically unobtainable.

QUININE.—The small bark shipments from Java for the first half of the month has induced a firmer feeling here, and at the end of last week March delivery sold at 1*s* 1½*d*., and June at 1*s* 1⅞*d*. Since then a small business has been done at 1*s*. 1½*d*. to 1*s*. 1⅝*d*. for March and 1*s*. 2*d*. for June, but on Wednesday 1*s*. 1⅞*d*. was accepted for the latter position. The market has been very quiet.

SAFFRON.—The market in Spain remains very firm, and holders here are not anxious sellers, looking for higher values later; 23*s*. to 24*s*. per lb. net will buy genuine Valencia.

SHELLAC.—The market closed dearer last week, and prices have advanced further since then. On the spot moderate sales have been made, including fair TN orange on a basis of 121*s* to 122*s*. per cwt., cash terms. For February-April shipment several hundred cases have changed hands at 123*s*. to 124*s*., c.i.f. In the speculative market there was also a fair business early in the week at advancing prices, but the improvement has not been maintained, and the market closes dull and easier. The business done comprises March delivery at 123*s* to 125*s*., April 126*s*, May 126*s*. to 127*s*., and June 126*s*. to 128*s*. per cwt.

SPICES have been very dull during the past week, and little business has been done. At the auctions on Wednesday nearly everything was bought in. Only one lot of Cochin *Ginger* sold, washed rough mouldy at 40*s*.; fair to good being bought in at 45*s*. to 50*s*. per cwt.; and B cut at 67*s*. 6*d*. Japan was taken out at 42*s*. per cwt. Zanzibar *Cloves* were bought in at 4*d*. per lb. for fair. The quotation for March-May delivery is 3 13/16*d*.; and for June-August 3⅞*d*. per lb. A parcel of fine bright Penang sold at 10*d*. per lb. Good Amboyna mixed headless were held for 5¾*d*. *Pimento* neglected, and nothing sold; 2⅛*d*. per lb. was the price asked. *Chillies* lower; fine Japan sold at 37*s*. to 38*s*. per cwt. A small lot of *Capsicums* sold, long red off stalk at 27*s*. per cwt., the remainder being bought in at 25*s*. for red mixed faded, and at 30*s*. for East India on stalk and for cherries. *Cassia lignea* was bought in at 45*s*. per cwt. for false packed, and at 48*s*. for good broken. *China-cinnamon* was bought in at 35*s* per cwt. *Cinnamon* sold at 9*d*. per lb. for pieces, at 8*d*. for quillings, at 6*d* for cuttings, at 6½*d*. for featherings, at 2¾*d*. for small dusty chips, and at 1⅝*d*. for good bright bark. The usual quarterly sales will take place next Monday. *Pepper* is the turn easier; greyish to good Alleppy was bought in at 5⅞*d*. to 6*d*. per lb., Lampong at 6*d*., and Singapore at 6*d*.; but privately Singapore has been sold at 5 15/16*d* on the spot, and at the same price for March-May shipment. Singapore white was bought in at 10 1/16*d*. for good fair, and Penang at 9¼*d*., a bid of 9⅜*d*. being refused.

Digitized by Google

SYNTHETIC PERFUMES.—The following are some current quotations:—Geraniol, 1*s.* 2*d.* per oz., or 14*s.* per lb.; neroli, 3*s.* 9*d.* to 4*s.* 9*d.* per oz., and 55*s.* to 73*s.* per lb., according to quality; neroline, 15*s.* 6*d.* to 16*s.* per lb., and terpineol, 3*s.* 5*d.* per lb.

THYMOL.—The lowest spot price is now 7*s.* 9*d.* per lb., and business has been done at this figure.

London Drug-auctions.

AT the auctions of drugs in first hands to-day a very dull tone prevailed, the chief interest being centred in asafetida, which sold at irregular rates. Buchu-leaves were easier; Sumatra benzoin was dearer, and cardamoms were irregular but lower. Jamaica honey was steady, but ipecacuanha of both descriptions was a shade easier. Rhubarb sold at valuations; grey Jamaica sarsaparilla declined slightly and both Jamaica and Madagascar beeswax were dearer. The following table shows the quantities of goods offered and sold, those marked with an asterisk denoting private sales:—

	Offered	Sold
Albumen	1	0
Aloes—Cape	31	0
Socotrine	5	5

ALOES.—Socotrine, in kegs, sold at 72*s.* 6*d.* per cwt. for good, slightly softish. Cape was all bought in, 35*s.* being refused for fine bright hard, and 33*s* for good ditto.

ARECA.—Sound Ceylon sold at 27*s.* per cwt.

ASAFETIDA.—Altogether some 809 packages (weighing about 40 tons) from the Persian Gulf were offered, and as importers were willing to meet the market, about half the quantity was disposed of at irregular but mostly lower prices. For fair to good pinky loose block from 57*s.* 6*d.* up to 80*s.* was paid, and greyish and brown block much mixed with stone from 40*s.* to 55*s.*, and common stoney 20*s.* to 30*s.*, and very low drossy 9*s.* to 10*s.* per cwt.

BALSAM TOLU.—Ten cases of large tins realised 1*s.* per lb., being unchanged.

BENZOIN.—Sumatra description sold at from 2*s.* 6*d.* to 5*s.* per cwt. above valuations, 9*l.* to 9*l.* 5*s.* being paid for 19 cases of fine seconds, well packed with small to bold almonds of storax flavour. This grade is exceptionally scarce, both here and in the United States. Fair seconds were about steady, 5 cases selling at 6*l.* 10*s.*, and medium at 6*l.* Of Siam 16 cases were shown, of which 5 sold, comprising 1 case of very fine bold pale almonds of storax flavour, partly loose and in friable block, at 24*l.* per cwt.; 3 cases small to medium almonds at 15*l.* 10*s.* to 16*l.* 10*s.*, and a case of dusty siftings, in hard block, at 60*s.* per cwt. Palembang gum was neglected.

BUCHU.—In large supply, and neglected. Eight bales of fair to good round greenish leaf sold at 7½*d.* per lb. A bid of 6½*d.* is to be submitted for a pile of fair but very stalky leaves.

CALUMBA.—Five bags fair brownish to yellowish sorts with some small sold at 17*s.* 6*d.*, and pickings 5*s.* per cwt. Privately, business has been done in washed and picked at 25*s* per cwt.

CARDAMOMS sold at very irregular but generally lower prices. Seeds were firm to dearer. The following prices were paid:—Ceylon-Mysore, medium and bold pale round, 2*s* 6*d.* to 3*s.*; bold medium pale, 2*s.* 3*d.* to 2*s.* 5*d.*; small and medium pale, 1*s.* 9*d.* to 2*s.*; small pale, 1*s* 2*d.* to 1*s.* 6*d.*; bold splits, 1*s.* 6*d.* to 1*s.* 8*d.*; medium ditto 1*s.* 5*d.*, and small 1*s.* 2*d.*; brown and split, 1*s.* 1*d.* Seeds, 1*s.* 6*d.* to 1*s.* 10*d.* Ceylon-Malabar, small and medium brown, 1*s.* 6*d.* to 1*s.* 7*d.*; very shelly, 10*d.*; darkish seed, 1*s.* 9*d.*; for bold palish 2*s.* 1*d.* was wanted.

CASCARA SAGRADA.—Fifty bags of good quill (1899 crop) were limited at 25*s* 6*d.* per cwt.

COCA-LEAVES.—Five bags of common small brown Ceylon sold at 6*d.* per lb.

DRAGONS-BLOOD.—For 3 cases of partly reboiled, largely mixed with dull earthy lump, 9*l.* was refused.

ELEMI.—For fine pale gum a bid of 5*l.* 7*s.* 6*d.* was refused. From another catalogue 5 cases of fair palish sold at 95*s.*

HONEY.—Jamaica was the only description represented and values showed no change. Good set in cases fetched 22*s.*, and for pale thick and brown set in barrels and cases 16*s.* to 18*s.* was paid.

IPECACUANHA.—The stocks in the warehouse consist of 525 packages Rio, and 443 packages Cartagena root. Privately, both descriptions have been very quiet during the past week. In auction-prices Rio was about 1*d.* easier, 10*s.* to 10*s.* 1*d.* per lb. being paid for fairly good bright, and 9*s* 8*d.* to 9*s.* 10*d.* for sea-damaged. Cartagena was about steady, a few bags selling at 4*s.* 6*d.* per lb for fairly clean and bold root. Several bids of 4*s.* 3*d.* per lb. were refused.

MYRRH.—For a case of pale picked gum 6*l.* was wanted, and siftings were held at 60*s.*

ORANGE PEEL.—The limit for fine bright thin Maltese strip was 8*d.* per lb.; 6*d.* was paid for one lot and sea-damaged sold at 2*d.*

RHUBARB sold at firm prices. Of a parcel of 10 cases High-dried 4 sold at 9*d.* per lb. for small to bold flat with three-quarter pinky fracture. Twenty cases Canton were put up and 8 sold, comprising a case of medium round with mostly pinky fracture, but slightly darkish at 1*s.* 9*d.*; 2 cases bold but slightly stalky trimming root, with three-quarter pinky and one quarter grey fracture at 2*s.* 5*d.*; 3 cases good flat and round pickings at 1*s.* 5*d.*, and common pickings at 1*s.* per lb. Both Canton and Shensi are very scarce privately.

The exports from Shanghai from January 1 to December 31 have been (in piculs):—

—	London	Germany	France	New York	Total
1901	636	1,493	74	502	2,705*
1900	1,575	1,305	21	1,357	4,258
1899	1,219	1,613	167	1,012	4,011
1898	2,792	1,892	111	1,198	5,993
1897	2,790	805	60	952	4,607
		Europe			
1896	933	1,004		367	2,304
1895	1,675	902		421	2,998
1894	2,304	623		165	3,092
1893	2,282	462		726	3,470

* In addition to above shipments in 1901 about 103 piculs have gone forward to Hong Kong, part of which may have been re-shipped to European and American ports.

SARSAPARILLA.—Grey Jamaica was represented by 81 bales, but no higher bid than 1*s.* 3*d.* was obtainable for sound. For slight country-damaged 1*s* 1*d.* to 1*s.* 3*d.* was paid, and sea-damaged 11*d.* Sound Lima-Jamaica sold at 1*s.* 3*d.* and damaged at 1*s.* 1*d.* to 1*s.* 2*d.* per lb. Bright red native Jamaica brought 9½*d.*, and dull yellow 8½*d.*

Digitized by Google

SEEDLAC.—Fifty bags Madras sold at from 91*s.* to 97*s.* per cwt.

SENNA.—The meagre offerings of Tinnevelly leaf were all of common quality, for which from ¾*d.* up to 1¼*d.* per lb. was paid. Pods were not offered.

SENEGA.—Nine bales were held at 2*s.* 3*d.* per lb., and 7 bags had been sold privately.

TONKA-BEANS.—A box of fair Para sold at 1*s* 11*d.* per lb.

WAX, BEES'.—For the few packages of Jamaica offered there was keen competition, resulting in an advance of 5*s.* per cwt., from 8*l.* 5*s.* to 8*l.* 10*s.* being paid for good red and brown mixed. Madagascar wax was 2*s.* 6*d.* dearer, fine brown block selling at 7*l.* per cwt, and fair pale yellow to dark brown 6*l.* 15*s.*, with drossy and wormy block at 6*l.* 10*s* to 6*l.* 12*s.* 6*d.* Two bags Nyassaland sold at 5*l.* 12*s* 6*d.*, and 5 bags good grey and yellow Australian realised 6*l.* 17*s* 6*d.* per cwt.

The Salt-trade.

A correspondent of the *Liverpool Journal of Commerce*, in calling attention to the increased exports of salt last year (being 631,446 tons, as compared with 531,815 tons in 1900), says the coastwise trade of the year done by the salt shipping ports of the United Kingdom was 259,586 tons in 1901, against 289,085 tons in 1900, so that the actual increase for the year was not 99,631 tons, as shown by the Board of Trade returns, but 70,132 tons, the grand totals being: For 1901, 891,032 tons; for 1900, 820,900 tons. The returns show that Liverpool continues to hold the position of first salt-shipping port of the United Kingdom, nearly one-half of the entire salt-shipments of the kingdom. As regards markets for salt, the importance of studying the requirements of the East Indian trade, and of using every legitimate means of fostering trade with these markets, is evident when it is stated that practically the whole of the increase in the export salt-trade of the kingdom last year was due to the increased shipments to these markets; they are, in fact, the main support of the English salt-trade outside of the United Kingdom last year. The chance of British salt-makers securing a share of the American, Continental, and African trade appears to lie in their willingness to accept a fractional profit on salt sold on foreign account. Sales will have to be made on the narrowest margin of profit or not at all, unless they be made at a positive loss. Some recent business is said to have been done at a loss to prevent foreign competitors from obtaining orders, but such procedure cannot be commended.

Japanese Drug Market.

Yokohama, January 23.

The year opened with a quiet market, no important transactions having taken place. Values have a lower tendency.

In exports the new crop of dry ginger is now coming into the market and business has been done at the range of 12.50 yen to 12 yen per picul, chiefly for export to Europe. India is not a buyer now. The future of the market is towards lower rates, and 11 yen may buy early next month. Menthol crystals are firmly held, and holders generally ask 8 yen per catty without any important business. Dealers are now busy delivering their contracted cargoes. Peppermint oil is in light supply and price has advanced a little; sellers now quote 2.40 yen per catty. Aniseed can be had at 10.50 yen per picul. Camphor is unchanged, and present prices are 0.97½ yen per lb. for 1-lb. tablets, and 1.03 yen per lb. for oz. tablets. Iodine is unchanged, but demand both at home and from abroad is rather brisk owing to comparatively low quotations. Copper sulphate is lower, and 14.25 yen per picul may buy. Oil of kuromoji is quoted 1.60 to 2 yen per catty, according to quality.

In import stuffs Cape aloes is higher in face of exceedingly light supply. Calumba is held at 10 yen per picul, while green Tinnevelly senna is quoted 9 yen per picul. Saffron is steady at 18 yen per catty, without cheap sellers. Rio ipecacuanha is cheap at 7.50 yen per lb, while for powder 5.50 yen is asked. Condurango is very low, on account of arrivals, and holders are anxious sellers at 24 sen per lb. Senega is also low in price, owing to lack of demand; present quotation is 1.30 yen per lb. Ergot is cheap, on account of arrivals of some 25 cwt.; present quotation is 1.05 yen per lb. Carbolic acid is cheap, in anticipation of arrivals of cargoes; 37½ sen per lb. will buy. Cocaine is somewhat lower, and 11 yen per oz. is generally asked, which figure may cut to some extent. Caffeine is cheap at 52 sen per oz.-bottles. Copaiba is firm at 0.85 yen per lb., while for Peru balsam 2.90 yen per lb. is asked without buyers. Borax is low at 11.70 yen per picul. Bismuth sublimate is quoted 2.60 yen per lb. Stocks are heavy. Glycerin is low at 31 sen per lb, with buyers at 30 sen. Quinine is slow of sale, holders asking 57 to 58 sen per oz., in 100-oz. tins. Sulphonal is cheap, on account of lower advice from Europe, and holders now ask 3 yen per lb., with still lower tendency. Thymol is lower, owing to lack of demand. Santonin is firmly held at 9 yen per lb.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Friday, February 21.

Hastings and St Leonards Pharmaceutical Association, Castle Hotel. General meeting. Mr. W. S. Glyn-Jones will give an address.

Tuesday, February 25.

Bradford Chemists' Association. Mr. J. Harrison (Sunderland) will give an address on "Pharmacy."

Wednesday, February 26.

Huddersfield Chemists' Association, Queen's Hotel, Huddersfield, at 6 P.M. Inaugural dinner. Tickets can be had from Mr. R. C. Walsham, 4 Market Place, Huddersfield.

Chemists' Managers' and Assistants' Society, Horseshoe Hotel, Tottenham Court Road, W., at 8 P.M. Paper by Mr. R. E. Wright on the "General Positions of Chemists' Managers and Assistants."

Thursday, February 27.

Reading Chemists' Association. Mr. F. F. A. Tunbridge will read a paper on "The Chemist as a Mechanic."

Chemists' and Druggists' Society (Ireland, Whitehall Buildings, Union Street, Belfast, at 7.30 P.M. Annual social re-union. Tickets, 1*s.* each, can be had from the Secretary, Mr, W. J. Rankin, 10 Garfield Chambers, Royal Avenue, Belfast.

Optical Society, 7 Crane Court, Fleet Street, E.C. at 8 P.M. Annual meeting.

Chemists' Assistants' Association, 73 Newman Street, W, at 9 P.M. Discussion on "The Best Systematic Methods for the Pharmacist."

North-East Lancashire Chemists' Association, White Bull Hotel, Blackburn, at 6.45 P.M. Annual dinner. The President and Vice-President of the Pharmaceutical Society of Great Britain will be present. Tickets, 3*s.* 6*d.* each, can be had from Mr. G. B. Pickworth, 72 Victoria Street, Blackburn.

Barnsley Chemists' Association, Royal Hotel, Barnsley, at 6.30 P.M. Discussion on "The Social Status of the Chemist."

Friday, February 28

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Professor H. A. Miers on "Gold-mining in Klondyke."

THE dinner of past and present students of the West of Scotland College of Pharmacy, 157 St. Vincent Street, Glasgow, will be held in the Alexandra Hotel, Bath Street, on March 10, at 9 P.M. Tickets 3*s.* each, may be had at the College.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.—There will be a social evening meeting on Wednesday, March 5, in the lecture theatre at 17 Bloomsbury Square (by permission of the Pharmaceutical Society), when Professor J. Norman Collie, F.R.S., will give an address on "The Lofoden Islands," illustrated with lantern-slides. The chair will be taken by Professor Green, F.R.S., D.Sc, at 8 P.M. Early application for visitors' tickets, which will be issued free of charge, should be made to the Hon. Secretaries of the Students' Association, 17 Bloomsbury Square, W.C.

A LATE POST on press-day brought us a *Glasgow Evening Times*, containing an article on the grievances of chemists' assistants and a report of a visit paid by the students of the West of Scotland College of Pharmacy to the People's Palace in Glasgow and an inspection of the exhibits.

SULPHONAL-POISONING.—At an inquest held at Bournemouth on February 18, on the death of a doctor's wife who was suffering from melancholia, it transpired that deceased was in the habit of taking sulphonal-tablets for insomnia. The doctor who was called in surmised that deceased had taken eighty of the tablets at one dose, and attributed death to sulphonal-poisoning. The Coroner (Dr. A. Kinsey Morgan) thought it a great pity that there should be freedom of access for self treatment by such a drug, and doubtless the occurrence would be a lesson to all those who regarded sulphonal as a harmless remedy. There was no blame attached to the chemist who supplied the tablets, and if there was any fault it lay with the Pharmaceutical Society, who might now think it necessary to get sulphonal (and some other remedies that were on the market) put on the poisons schedule.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices
- Melbourne, Vic .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

Prix de l'abonnement: The Chemist and Druggist une fois par semaine, et l'agenda du Chemist and Druggist une fois par an, 12.50 francs par an, franco.

Abonnementspreis: The Chemist and Druggist einmal wöchentlich, und Notizkalender des Chemist and Druggist einmal im Jahre, 10 Mark jährlich, frei in's Haus geliefert.

Precio de suscricion: The Chemist and Druggist una vez por semana, y el Agenda del Chemist and Druggist una vez al año, 12.50 pesetas anuales, franco.

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

INDENTS.

NEXT week's issue of the *C. & D.* affords business-houses the one chance of the year for getting into touch with the merchant shippers of the United Kingdom who have indents to fill for chemicals, drugs, druggists' sundries, perfumery, soaps, and all other goods handled by druggists abroad. The number will be circulated to the merchant shippers, and it will help to secure business, so that all who wish to get a share of the indents that are going should advertise their specialities or classes of goods in the issue. The Publisher will close his pages for press on Tuesday, March 4. Instructions should, therefore, be sent to him by an early post. Advertisements for the Supplement will be received up to Thursday as usual.

Summary.

SOME BOOKS that are of therapeutic value are mentioned on p. 347.

THERE is a lively correspondence about doctors' shops in Glasgow at present (p. 345).

THE ANNUAL MEETING of the Chemists and Druggists' Society of Ireland is reported on p. 339.

OLIVE OIL which got over-heated in the voyage from Bari is the subject of litigation (p. 351).

BRISTOL welcomes the British Pharmaceutical Conference to that ancient city in 1903 (p. 337).

MR. J. F. LIVERSEEGE is proposed as the successor of Dr. Hill, public analyst for Birmingham (p. 329).

FURTHER correspondence on the leak in the Glasgow price-protection arrangement is printed on p. 355.

ITALIAN PHARMACISTS are alarmed about Government proposals which raise the educational requirements (p. 347).

THE MIDWIVES BILL has passed the second reading (p. 342). The General Medical Council opposes it in its present form (p. 337).

HASTINGS CHEMISTS had a good time with Mr. Glyn-Jones last week, on the occasion of the first meeting of the local Association (p. 338).

BELFAST DRUGGISTS object to what the Pharmaceutical Council says about their consulting-rooms, and respond on the *tu quoque* line (p. 339).

THE EXECUTORS of the late Mr. W. B. Murray, Dublin, have established their claim for 1,000*l.* accident insurance in respect to his death (p. 350).

DAMAGES (200*l.*) have been paid by a Drogheda pharmacist to a customer who got from his assistant ext. belladon. in place of conf. sennæ (p. 350).

A NURSE is suing a doctor to recover damages for alleged negligence. Several chemists give evidence as to prescriptions dispensed—morphine, cocaine, &c. (p. 350).

MR. JESSE BOOT denies that companies like his are responsible for "cutting," and claims that such companies are a benefaction to many, including the shop-managers (p. 356).

THE CHEMICAL COMMITTEE of the Royal Agricultural Society has made recommendations regarding the sale of poisons which indicate an inacquaintance with the law (p. 328).

MR. BRAXTON HICKS made some startling remarks about Williams's Pink Pills, Bile Beans, and other nostrums at a Kingston inquest. They are given fully on p. 330.

OUR CAPE CORRESPONDENT cables the gist of a Government order, under which foreign dentists and doctors will not be registered there unless under reciprocity conditions (p. 332).

MR. J. F. TOCHER unfolded his scheme of University education and a degree for chemists and druggists at a meeting in Edinburgh. The gist of it is given on p. 335, and some remarks on p. 345.

THE DISPUTE between the General Medical Council and the English Royal Colleges came to a head this week, when the Council met and adopted resolutions which appear to provide a *modus vivendi* (p. 337).

THE ARGUMENT in the Scottish Justiciary Appeal Court in regard to the pharmaceutical Registrar's powers under Section 17 is fully reported on p. 348, and we comment on p. 314 upon the ruling that the Registrar is the proper person to prosecute.

THE EXECUTIVE of the British Pharmaceutical Conference met last week, and passed a resolution regarding the death of Mr. William Martindale (p. 336); so also did the Executive of the North British Branch of the Pharmaceutical Society (p. 334).

MEDICINE-STAMPS must be fixed so that they may be destroyed when the packages are opened. Some are not, and retailers are responsible. Mr. Leo. Atkinson has addressed the Board of Inland Revenue on the matter, and obtained an important concession. See p. 355.

THE more important changes of the week in drugs and chemicals include an advance in carbonate and citrate of lithia and a slight reduction in carbonate of bismuth. Quinine is very quiet pending the auctions. Foreign spermaceti is easier, and cinnamon was lower in auction (p. 359).

THE S. F. & D. ACT CASES this week include two High Court decisions: one ruling that action regarding false warranties cannot be taken after six months beyond the date of the warranty, the other that Pearks's milk-blended butter is sold with sufficient notice. The first stage in the appeal by Boots (Limited) *re* lin. sapon. meth. is also accomplished (p. 348).

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Sir H. Roscoe has offered a mace to the London University, of which he is Vice-Chancellor, and it has been accepted.

On February 21 the students of the Imperial College of Chemistry visited the drug warehouses at the London Docks. The Principal (Mr. Frederick Davis) accompanied them.

Dr. J. C. Thresh contributes to the *Lancet* a paper on his theory of air-borne small-pox, on the lines of his report to the Essex County Council (*C. & D.*, January 11, page 35).

A young soldier, named Ellicot, has been remanded on a charge of stealing bottles of perfume and other articles from the shop of Mr. Miles Coward, chemist and druggist, Devizes

The Colonial Exhibition at the Royal Exchange will be opened on March 10. The British Dominions, States, and colonies participating include Canada, Western Australia, South Africa, and North Borneo.

At the Axminster Petty Sessions on Tuesday, Mr. Skinner, chemist, Colyton, was one of the principal witnesses in an alleged assault case against Mr. W. Parkinson Stablefork, a veterinary surgeon. The case was dismissed.

At Lambeth on February 22, a laundryman named Turner was remanded on a charge of obtaining by false pretences 25*l.* from Mr. Charles Green, chemist and druggist, and 6*l.* from his daughter, Miss Henrietta Green, and various sums from other persons.

Mr. C. F. Welch, of Messrs. Hopwood & Co., manufacturing chemists, Jewry Street, E.C., who has been a prominent member of the Richmond Association Football Club for some time, received his cap for Middlesex County last week, playing against Herts.

The Board of Customs have issued an order directing that drawback be allowed upon castor and icing sugars made in the United Kingdom from duty-paid foreign refined sugar. Hitherto the drawback applied to such sugars made from the British refined article only.

Sir Edgar Vincent, M.P. for Exeter, speaking last week at a dinner of the Exeter Licensed Victuallers, said he did not see why because a man happened to hold a share in a theatre, held a licence to sell methylated spirits, or was a chemist holding a licence for medicated wines, he should be deprived from sitting on a Licensing Bench.

At Bromley on February 24, two errand-boys, named Evans and Brooker, were charged with being concerned in stealing a cash-box containing 12*s* 2*d*, and a cash-book, the property of Mr. Edwin Walter Routley, pharmaceutical chemist, 60 High Street, Beckenham. The lads admitted the theft, and were remanded in order that a ship might be found for them

At the annual meeting of Grantham Traders' Association on February 24, Mr. T. Rowle was elected President for the ensuing year. The report showed that the membership had increased to 74, and the balance in hand was 32*l.* 8*s.* 8*d.* In the last three years the Association has recovered from 800*l.* to 1,000*l.* worth of debts per annum for its members, and the inquiry department has prevented many members from making bad debts.

At the Liverpool Assizes on February 22, Thomas Crook and James Lancaster, artificial-teeth makers, of Clitheroe, and Blackburn, were charged with causing the death of a woman, named Hothersall, by alleged unskilled administration of chloroform (see *C. & D.*, February 1, page 183). After hearing evidence for the prosecution, Mr. Justice Bucknill said there was no evidence to prove that prisoners did not use ordinary care and skill in the administration of the chloroform, and they were discharged.

A letter signed by Mr. J. C. Bell, Mr. C. E. Cassal, Mr. J. K. Colwell, Mr. C. H. Cribb, and Mr. W. F. K. Stock, appeared in the daily press this week, stating that "the Society of Public Analysts does not and cannot properly represent the public analysts of the country, that it cannot justifiably be described as a Society of Public Analysts, and that it is in no sense a qualifying body." The statement appears to have been made in consequence of some after-dinner speeches at the Society's annual dinner.

Ping-pong balls are made of xylonite, and 6 tons per week are turned out at a factory at Brantham, Essex. As 300 weigh 1 lb., the weekly output is 4,320,000. When dented they come right by soaking in hot water, provided the seam is waterproof. If not, under this treatment they collapse.

Sale of Poisons.

The Chemical Committee of the Royal Agricultural Society has reported that it deems certain alterations are necessary in Schedule A of the Pharmacy Act of 1868. These are:—

(*a*) That Schedule A of the Act of 1868 should be more strictly defined than at present. For example, the first item, "Arsenic and its preparations," might be held at present to cover sheep-dips, weed-killers, Paris green (for fruit-trees), arsenical soaps, and other articles used in agricultural operations, which were totally unconnected with pharmacy, and were not required to be dispensed, being already prepared in the form in which they are used by the public. Such articles should either be excluded from Schedule A, or otherwise excepted from the provisions of Section 15 of the Act.

(*b*) That the power at present given under Section 2 of the Act to the Council of the Pharmaceutical Society to declare by resolution that "any article in such resolution named ought to be deemed a poison within the meaning of the Act of 1868," should as regards agricultural and horticultural articles be only exercised with the previous approval of the Board of Agriculture.

Wants Compulsory Metric System.

Mr. C. J. Sage, of Frome, at the last meeting of the Frome Chamber of Commerce brought up the subject of he compulsory adoption of the metric system of weights throughout the United Kingdom. The matter was of personal interest as it was included in the everyday work of the business and profession to which he belonged, no analysis being carried out accurately or preparations standardised without the aid of the metric system. The litre, gramme, and metre were as familiar to chemists as ounces, pounds, and hundredweights. Mr. Sage proceeded to explain the unit of the metric system, and said that as regards decimal coinage it would be simplicity itself. The Chamber subsequently passed a resolution asking the local M.P. to support any measure introduced into the House of Parliament on the subject.

Cancer Investigation.

A Joint Committee of the two Royal Colleges of Physicians and Surgeons has been appointed to draw up the lines along which a systematic investigation shall proceed. The delegates on the committee from the Royal College of Physicians consist of Sir William Church (president), Sir William Broadbent, Dr. Pye-Smith, Dr. Whipham, Dr. Payne, Dr. Rose Bradford, and Dr. J. F. W. Tatham. The delegates from the Royal College of Surgeons are Mr. H. G. Howse (president), Mr. J. Langton, Mr. H. Morris, Mr. H. T. Butlin, Mr. Watson Cheyne, C.B, and Mr. R J. Godlee.

Birmingham Notes.

Dudley Port is to be the scene of the production of Mond gas, a patch of 32 acres being monopolised. It is near Tipton, the Venice of the Midlands.

Elizabeth Crosby (16), a bottle filler at the works of Messrs. Southall Brothers & Barclay (Limited), Bull Street, was severely burnt by the bursting of a bottle of carbolic acid. She was taken to the hospital.

Sir B. Stone, the photographic enthusiast, is a member of the papermaking firm of Smith, Stone & Knight, Saltley. He shows 400 pictures at the photographic exhibition at the Society of Arts Rooms, New Street, this week.

It is suggested to rent the Moseley Botanical Gardens, with its 18 acres of grounds and pinetum, as a Coronation memorial sanatorium for Birmingham. At present there are 2,400 cases of phthisis in the city, and 20,000*l.* will be required.

Digitized by Google

Lady pupils at public dispensaries are much in demand, and advertisements appear constantly. One wonders what success attends their labours, for at the last examination four ladies went up from one institution and not one passed.

Mr. Charles Luckman, who for thirty-six years has been with Messrs. Alfred Bird & Sons, and has for many years been in charge of their chemist's and druggist's business in Worcester Street, is leaving Birmingham to take up his residence in Llandudno.

On behalf of the Health Committee of the City Council, Widal's test has been carried out in 243 instances under the arrangement made with the Birmingham University during the year 1901. Also 336 specimens from throats of patients were examined for the diphtheria bacillus, and 252 doses of antitoxin serum were issued.

It has been very noticeable in recent times that the display in chemists' shop-windows has undergone a happy change. Where formerly everybody else's preparations but their own formed a conspicuous part of the whole, now during an inspection of a dozen or more shop-windows less of the others and more of their own are observable.

One hears of the photographic chemist who votes this part as a good side-line, but, perhaps, photography itself would be better. In the Moseley Road there are a dozen followers of the art, including one (Mr. Saffield) who has relinquished pharmacy for it. All of them, judging by appearances, are doing better than the retail chemist.

The Ebenezer Provident Sick Society, which has a yearly income of nearly 18,000*l.*, and pays the greatest portion of it away in sick pay, surgeons' salaries, &c., have approached the consultants of the town, with the result that they have secured an undertaking from them that they will see the Society's members as patients at a reduced fee of half-a-guinea, and are willing to visit at their homes within two miles of the centre of the city for half the usual two-guinea fee.

The photographic exhibition is a marvellous collection of high art, and redounds with credit to the organisers and exhibitors, amongst whom are many pharmacists and other amateur experts. Mr. Baynton shows some excellent photo apparatus; so do Hurman (Limited), 3 Victoria Square. In the catalogue the local firms, Messrs. P. Harris & Co. and Southall Brothers & Barclay were in evidence, and Dr. Hall Edwards exhibited splendid radiograph slides. The programme is good, and the whole will without doubt give a fillip to an excellent pharmaceutical side line.

At last, what has been advocated in these notes for many months, is to take place in our city next week. The medical officership of health and the public analyst's office are to part company, and the former is to be retained by Dr. Hill at 1,000*l.* per annum. The latter is to be given without competition to Mr. John F. Liverseege, F.I.C., at a salary of 350*l.* per annum. This is the recommendation of the Health Committee. Mr. Liverseege, who is a pharmaceutical chemist, has been chief assistant under Dr. Hill in the analytical department at the Council House for the past sixteen years, and the committee have full confidence in recommending him for the appointment. He is well known to pharmacy of the Midlands, is a contributor to the *C. & D.* and the *Analyst*, and has done excellent work in the particular department with which he has been associated so long. He studied materia medica under Mr. Alcock, and pharmacists of the Midland Association will congratulate him on his appointment and well-merited success. He has often given lectures before the Association, the last being on the study of the celestial bodies. His researches on pharmaceutical preparations have been reflected in the several cases which have been recorded in our midst—notably camphorated oil, sal volatile, Friar's balsam, sweet nitre, and saffron. He has a predilection for drugs, and fair and just treatment may be expected should any of the local brotherhood fall foul of his official criticisms of their products and articles purchased under the Food and Drugs Acts.

MR. J. F. LIVERSEEGE.

Dr. Alfred Hill, medical officer of health and public analyst in his quarterly report states that two of fourteen samples of seidlitz-powders were condemned. One contained an excess of 29 per cent. of tartaric acid, and the other contained 23 per cent. of tartaric acid in excess. In the latter case the powder in the blue paper was of correct composition, but its quantity was 23 per cent. too much. The box was marked "extra." The B.P. only recognises one strength of seidlitz-powder, but an unofficial formula for "double" or "extra strong" requires the same amounts of tartaric acid and bicarbonate of soda as the B.P., with twice as much Rochelle salt The latter sample therefore agreed with neither the official nor the unofficial standard. Dr. Hill adds that the first-mentioned sample differed from any he had previously seen by having the alkaline powders wrapped in white paper, and the acid powders in blue papers. The whole of the samples (nine) of compound tincture of benzoin received were genuine, containing from 177 to 209 grammes of solid extract per litre. These figures, says Dr. Hill, afford additional evidence in supporting the opinion expressed in his last quarterly report that 180 grammes per litre is a reasonable standard, and that the Government chemists in passing a sample which contained 147 grammes made a mistake. Five samples of tincture of iodine were of satisfactory composition and strength, but a sixth contained 18·2 grammes of sodium iodide, and 7·8 grammes of potassium iodide per litre, instead of 25 grammes of potassium iodide. This was quite a novel substitution, and was probably unintentional, as sodium iodide is more expensive than potassium iodide.

Fires.

The pharmacy of Mr. John Parrott, in Friar Stile Road, Richmond, was the scene of an outbreak of fire on February 18, caused through the fusing of the electric-light cable igniting some woodwork in the basement. An assistant who had gone to see to the electric-light apparatus was badly burnt about the face and hands. The current was cut off as quickly as possible, and no further damage was done.

A fire occurred at the works of Messrs. Sadler & Co. (Limited), manufacturing chemists, Cargo Fleet Road, Middlesborough, last week. A workman saw a blaze issuing from a large shed in which anthracene, sulphate of ammonia, and various oils were stored. He gave the alarm, and within a few minutes the fire brigade was upon the scene. A plentiful supply of water was obtained, and within an hour the flames were extinguished. Considerable damage was done to the machinery, and a neighbouring benzol store had a narrow escape.

No Fraud.

The adjourned charges against Arthur Vickers for obtaining money by false pretences under circumstances already detailed (*C. & D.*, February 22, page 289), were further gone into before the Manchester City Justices on February 22. Mr. J. Brooks, managing director of Jas. Brooks & Co. (Limited), said he had known the prisoner several years, and that he had bought the best drugs he could get, and those for the chemical chimney-sweepers were of good commercial quality. James Cumberlidge, a furniture broker, said he bought headache-powders from the defendant, and found them satisfactory. He used three boxes per annum, each box containing three dozen powders. Other witnesses spoke in favour of the prisoner, and the Bench dismissed the case, believing that the defendant had carried on a legitimate business.

A Standing Article.

At a meeting of the Medway Board of Guardians on February 25, a discussion was held relative to an account for eucalyptus-wax polish. A member asked what the preparation was, and was told it was used for cleaning canvas in the hospital. Mr. Lamb, who is a chemist and druggist, asked what was the good of the eucalyptus in the polish. He suggested that beeswax and turpentine should be used instead, but it was explained that the polish was a standing article in the house, and had been sanctioned by the House Committee.

A Modern Apprentice.

Charles Wm. Burrowes was apprenticed to a Tottenham Court Road chemist, and afterwards held several situations as an assistant, also studying at medical classes. He then entered a theatre orchestra, next became an actor, and at the Brighton Empire secured great *éclat* for a bullet-proof coat which he invented. He then blossomed into an illusionist, with a lady and a tank of water, and in 1898 tried his hand at another form of illusion, getting a firm of solicitors to give him 80*l.*, and a syndicate 104*l.* and a salary of 4*l.* a week, to manage an electrical system of treatment which he professed to have invented. He was "Dr. Burrowes of St. Bart.'s and Guy's" then. He afterwards got the post of house-surgeon at a Salford hospital, was *locum tenens* to two Wigan medical men, and while in Wigan (1900) as James Joseph O'Donnell, bought the practice of Dr. Wilding, of Lindley. He might now have been a quiet country practitioner, in spite of the fact that he is not registered, but in 1894 he married Ada Garrett at Barking Parish Church, and in 1895 married bigamously Minnie Wilson at Hoxton, from whom he was divorced in 1899. Shortly after he married Violet Annie Nava at Liverpool, under the name of Charles Wm. James O'Donnell. He also appropriated 75*l.*, money that did not belong to him, and it has been considered advisable to give him the opportunity of mending his ways. Mr. Justice Bucknill, at the Liverpool Assizes on Monday, sentenced him to seven years' penal servitude. Burrowes is 38 years of age.

Mr. Braxton Hicks on Nostrums.

The wife of a cabdriver at Kingston-on-Thames died last week, and Mr. Braxton Hicks, the Coroner, held an inquest on February 20, at which Dr. Hyde, who made a *post-mortem* examination testified to death being due to pneumonia, and the jury returned a verdict accordingly. But before that point was reached the Coroner elicited from the husband that his wife had always refused to see a doctor, and was fond of taking patent medicines, Dr. Williams's "Pink Pills" and "Bile Beans" being mentioned. The Coroner asked the doctor if "Bile Beans" contain aloes. "I do not know," replied the doctor; "but the 'Pink Pills' contain sulphate of iron and aloes." Then came this remarkable exposition from the Coroner's chair:—

Mr. Hicks observed to the jury that he was speaking in the presence of some representatives of the Press, and he hoped they would take note of what he said. [Handling a budget of lengthy advertisements, and soliloquising]: Humph! Dr. Williams's Pink Pills. [To the jury.] There is no Dr. Williams, gentlemen. Dr. Williams is a fraud. We might just as well call him "Dr. Hicks." [Reading from the advertisements.] They give the names of people supposed to have been cured, but they may be right or wrong. [Quoting a number of the complaints the pills are claimed to cure.] "General muscular weakness." They do not know how to make Sandows out of Pink Pills. "Men who suffer from bloodlessness." I expect, gentlemen, if you went out and had a fight on a Saturday night you would suffer from bloodlessness, and perhaps it would do you a lot of good. "The only reliable cure." Fancy that! [Proceeding.] "Good for the complexion." [To the jury.] What is the matter with your complexion, gentlemen? If you are pale you know what to do. [Taking up the "Bile-bean" two-column advertisement, and reading.] "A plucky policeman's adventure." [To his officer.] What did the policeman do, Tooth? You read the story. Mr. Tooth: I do not know, sir, but it is said his conduct was generally good. (Laughter.) Coroner [to jury]: The advertisement is not only misleading, but an utter and emphatic fraud on poor people. (The Jury: "Hear, hear.") [Reading another advertisement.] "Bile Beans for bilious bounders." (Laughter.) They are just like the Pink Pills, because they are declared to cure all sorts of diseases. [Reading a list.] Well, if it does not cure the complaints, you ought to take action against them for not curing you. But it is hard lines if you are dead. I doubt whether many of their testimonials are genuine. To attempt to cure yourselves by means of an advertisement in the papers is one of the riskiest things you can do. Mrs. Gosling (the deceased woman) was content to treat herself by advertisements in the newspapers—a most deadly thing to do. I think it is a mistake not to call the attention of the public to these newspaper advertisements of quack medicines. I have nothing to do with newspapers myself. I have not even an interest in them, but I think they should use a little discretion in inserting these advertisements. [To his officer.] Where did you get these advertisements, Tooth? Mr. Tooth: From the *People* and the *Daily Mail*, sir. The Coroner [displaying a two-column advertisement of "Bile Beans"] Fancy! A respectable morning paper like the *Daily Mail* putting in all that. [Alluding to the case under inquiry.] The doctor finds the cause of death was purely natural causes. If a doctor had been called in to the deceased he might have discovered what was the matter with her, and saved her drugging herself with quack medicines. I thought it my duty to bring this matter before you, gentlemen, and I leave it to you to say anything more about the case.

The Foreman remarked that his colleagues wished to tender the Coroner their thanks "for the information he had given them concerning the two medicines"; and the Coroner, in reply, gave them some more about quack medicines, suggesting that they should be first approved by the Government or General Medical Council, and concluded by jocularly suggesting to the jury that they should subscribe sufficient money to present each of the three reporters present with a box of "Pink Pills" and "Bile Beans.' This, be it noted, happened at a death-inquest in the hearing of the bereaved husband.

The Week's Poisonings.

The whole of the seven poisoning-fatalities reported as having taken place since last week were caused by poisons on the schedule. Carbolic acid was taken by a London youth who had enlisted, but found that "he did not want to be a soldier" after all; by a Walthamstow widow suffering from melancholia; and by a railway-clerk at Winshill recovering from an attack of influenza. A lieutenant in Kitchener's Horse, invalided home, took an overdose of morphia; while a Walsall man drank, inadvertently, a fatal dose of laudanum to relieve neuralgic pains. In like manner a Windhill farmer took too much chlorodyne, for the purpose of inducing sleep; and a labourer at Portsmouth, who was a heavy drinker, poisoned himself with belladonna-liniment. A pilot at Hartlepool was troubled with insomnia, and obtained four sleeping-draughts from a local doctor. He drank them all at once, and died. A Hampstead labourer broke the skin on the back of his hand. He washed the wound with carbolic lotion, and afterwards rubbed it with a brush with which he had been cleaning a watch-chain. Blood-poisoning supervened, and he died—probably from carbolic-absorption.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Change.

Mr. D. McGregor Watson, L.P.S.I., late manager of the Clontarf branch of Messrs. Hayes, Conyngham & Robinson's (Limited) pharmacy has acquired the old-established pharmaceutical business of Messrs. Whitby, of South Great George Street, Dublin.

Contracts Open.

Supplies of drugs and surgical appliances are wanted by the undermentioned Unions. Contracts to be entered into on the dates specified:—Armagh and seven dispensaries (March 4), Ballymoney and six dispensaries (March 13), Cashel (March 6), Celbridge and several dispensaries (March 7), Downpatrick (March 1), Dungarvan and four dispensaries (March 4), Glenamaddy and three dispensaries (March 12), Kilkul (March 10), Naas and several dispensaries (March 5), Tuam and several dispensaries (March 8). The usual conditions of tender obtain in each case.

Demand for Linseed.

U.S. Consul Tonvelle reports that the demand for linseed-cake in Belfast is so large that the requirements of the trade can hardly be supplied by local dealers. One firm has expressed a wish to be put into communication with an American firm of manufacturers with a view to disposing of consignments of linseed-cake. There are two lines of steamers—the Lord line and the Head line—running direct from the United States to Belfast.

Want Good Instruments.

At the last meeting of the Ballina Board of Guardians the Local Government Board wrote pointing out to the medical

Digitized by Google

officer of the workhouse that the contractor for the supply of medical and surgical appliances was bound under contract to supply only instruments of the best quality. The Board at the same time stated that they would take very serious notice of the matter in the event of inferior instruments being again supplied. The Guardians decided to send copies of the letter to the doctor and the contractor.

Swinford Medicine-contract.

The Local Government Board have again written to the Swinford Board of Guardians that they will not allow any recoupment on articles ordered from the medicine-contractor to the Union. The Clerk said the contract would terminate on March 31, and all the Guardians could lose by continuing till then would be 3*l.* 10*s.*, and the contractor further promised that the Guardians should not suffer if there were any surcharges.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Laudanum-poisoning.

Mr. A. Lewis Ligertwood, of Kirkhean, who took an active part in the public life of the Stewartry of Kirkcudbright, died last week from an overdose of laudanum, which he had taken to induce sleep.

Imitation Tobacco.

In the Court of Session, Edinburgh, on February 21, David Wilson, Dundee, and Robert Simpson Baxter, Broughty Ferry, were fined 200*l.* each for having had in their possession (see *C. & D.*, February 8, page 221) ground wood stained to resemble tobacco.

Claim against "Camlachie."

Issues were ordered by the First Division of the Court of Session, Edinburgh, on February 19, in an action by Edward George, Glasgow, against Alexander Cross & Sons (Limited), seed-merchants and chemical-manufacturers, 19 Hope Street, Glasgow, for 1,000*l.* damages, or alternatively for 156*l.* in respect of the death of his son William, who, while engaged in cleaning part of the machinery in the defenders' works, fell into a large "kettle," and was crushed to death. The pursuer maintains that the machinery should have been fenced, and that it should not have been cleaned while in motion. The defence is that the deceased was killed while cleaning a part of the machinery which he had no right to clean.

The Sheriff and the Adulteration Acts.

At a recent municipal banquet in Dundee, Sheriff Campbell Smith, referring to the adulteration of food, milk, and such like, said it was not worth while to prosecute in cases of that kind. What was the use of prosecutions of that kind, especially when it was perfectly well known that it was impossible to say what the strength of a cow's milk might be? Such a thing depended upon the time of the milking. If at the beginning of the milking it was very thin, at the last it was much better and stronger, and it was impossible to say what genuine milk might be. He would recommend those who were in doubt about their milk to use their palates or their noses, or consult some friendly tom-cat, and in that way they would find out when milk was too old. In that way they would be able to tell whether the milk was good and fresh just as thoroughly, or perhaps more thoroughly, than by any chemical analysis. It was almost sickening to him that he should have to impose a penalty upon a poor woman for selling a pennyworth of pepper, and who got, perhaps a tenth part of that in profit, merely because she had been swindled by somebody who had put ground rice in the material.

Glasgow Notes.

The advent of milder weather is being marked by a rise in the sick-rate and a corresponding improvement in business. So far the depression has been almost unprecedented.

A large block of buildings now being erected in the centre of the city is to be occupied by a firm of "universal providers," and an extensive dispensing-department will be a leading feature of the establishment.

There is much satisfaction locally over the decision of the Court of Session Judges in the Steele Smith test-case, which establishes once for all the legal right of the Registrar of the Pharmaceutical Society to sue in Scotland under Section 17.

One of the newspapers has a paragraph on the somewhat stale subject of laudanum-drinking. The general experience is that the habit is less common than formerly, although cocainomania has replaced it to some extent. Indiscriminate prescribing has had much to do with the origin of these vices.

Two local vaccination stories are worth repeating. (1) Anxious Mother: "Be sure, doctor, that you use fresh calf-lymph for this wean. The stuff that you put into wee Jessie must have been taken from a warty calf, for her hands are all covered with warts." (2) Male Patient (aggressively): "I don't believe in vaccination." Physician (mildly): "Then why are you having yourself revaccinated?" M. P. (with a knowing leer): "Well, you see, if I am not revaccinated, and take smallpox, the hospital doctors will not care whether I die or not; but if I am revaccinated and take it, they'll fight like the devil to pull me through for the credit of their fetish."

Dundee Notes.

An effort is being made to get all shops closed earlier on Saturdays—at 10 P.M.—beginning March 1. Chemists are expected to do likewise.

Mr. D. H. Ferrier, chemist, 2 Hilltown, announces that he has assumed as partner his son, Mr. James P. Ferrier. The business will now be carried on under the firm-name of Ferrier & Son.

Mr. Charles O'Brien, jun., assistant with Mr. A. B. Anderson, chemist, has been presented by his fellow-employés and the Home of Peace Temperance Lodge with a handsome travelling-bag on the occasion of his leaving for a situation in Edinburgh.

The local papers will need some coaching before the B.P.C. visits the town. The following paragraph shows why:—

Scottish Chemists to Visit Dundee.—A deputation representative of the Pharmaceutical Society of Scotland waited on Lord Provost Hunter on Tuesday, and asked that some public notice should be taken of the visit of the Society to Dundee in August next. His Lordship stated that he would hold a reception of the delegates in the Art Galleries.

French News.

(From our Paris Correspondent.)

A Pharmacist Robbed.—M. Maupin, pharmacist, of the Rue de Saintorge, Paris, was robbed some time ago of about 240*l.* worth of jewellery and silverware. He suspected his servant-girl of the theft and dismissed her, at the same time placing the matter in the hands of the police. The girl protests that she is innocent, but has given information regarding a male friend of hers, whom she has denounced as the culprit.

Lille Exhibition.—An international exhibition will be held at Lille from May 1 to September 15 of this year. The usual products of industry, commerce, agriculture, and the fine arts will be admitted, the exhibitors being classed under two heads—(1) manufacturers or producers, and (2) merchants exhibiting products or commodities not of their own manufacture. Applications for space and further particulars may be obtained from Monsieur l'Administrateur, Délégué de l'Exposition Internationale, à Lille, France.

The Victor Hugo Centenary.—Wednesday, February 26, was the centenary of the birth of Victor Hugo, and Paris has been more or less *en fête*. There will be public illuminations until March 2. The attention of practically the whole of France has been turned to the place where the great French poet and patriot first saw the light, and pharmacists here

Digitized by Google

are much interested to learn that the basement of the house in which he was born at Besançon, is now occupied by a pharmacy.

Pharmacy Students and the Military Law.—On the initiative of a provisional committee a meeting of pharmacy and medical students was held last Monday night in Paris. The object of the gathering was to protest against the law which obliges student to complete three years' military service, if at the age of 27 years they have not secured the diploma of pharmacist or doctor of medicine. As the law stands they perform twelve months' army service, generally in the medical or ambulance corps at about the age of 21, and then have to serve two years more in the active army if they are still unqualified at 27. A motion was put to the meeting and adopted, calling the attention of the university authorities to the fact that it is difficult for a student to get his diploma at the age-limit if he has commenced his professional studies a little late. Also that non-success at examinations is not always the result of want of assiduity. The hope was expressed that the present state of the law may be changed.

A Fatal Prescribing Error at Alger is reported. A doctor was called in to attend a baby girl, 3½ years old, who was attacked with influenza. He wrote a recipe for four suppositories of 25 centigrammes of cocaine to be used at intervals of twenty-four hours. The prescription was dispensed by a local pharmacist, who did not notice anything abnormal in the dose. Soon after the first application the child was taken with convulsions, and died a few hours later after much suffering. The doctor was called in too late to be of service, and could only admit that he had written "cocaine" instead of "quinine." The pharmacist is, to some extent, in fault, the rule here being that he ought not to make up any dose containing more than 10 centigrammes of cocaine without consulting the doctor who wrote the prescription. It is probable that both the physician and the pharmacist will be summoned by the child's parents on the charge of homicide by imprudence, with a claim for damages.

Ancient Literature.—Dr. Dorveaux, librarian at the Paris School of Pharmacy, has sent me a copy of his latest publication—an annotated reprint of the celebrated "Declaration des Abuz et Tromperies que font les Apoticaires," a quaint old work published at Tours in 1553 and translated into English in 1669 by Dr. Merrett, F.R.C.P., F.R.S, under the title of "A short view of the frauds and abuses committed by apothecaries, as well in relation to patients as physicians and of the only remedy thereof by physicians making their own medicines." The author of the original work was Sebastian Colin, a doctor of Poitiers, but the name of the author was given as Liset Benancio, an anagram on Colin's real name just as Rabelais published his first book under the anagram Alcofribas Nasier. An interesting biography of Sebastian Colin forms the preface to Dr. Dorveaux's work. We learn, among other details, that he was one of the leaders of the Protestants, numerous, as everyone knows, in this part of France at the time. (La Rochelle and its siege will at once occur to the memory.) Colin wrote three other books—one on fevers, and two (translated from Trallian's Greek works) on "Gout" and "The Plague." His sweeping attacks on apothecaries did not remain unanswered, for in 1557 Pierre Braillier (apothecary of Lyons) published a counterblast, entitled "Declaration of Abuses and Frauds of Doctors," and the same year the twin works (Colin's attack on apothecaries and Braillier's reply) were published in two neat 16mo. volumes by Thos. Mallard at Rouen. Then Jean Surrelh, doctor at St. Galmier, published an answer to Braillier. But Apothecary Braillier had the last word in his "Articulations on the Apology of Jean Surrelh," published in 1558 And so ended the curious but violent discussion. The explanatory and biographical notes of Dr. Dorveaux (who is probably one of the best living authorities on ancient pharmaceutical literature) give a special interest to this edition of a very curious work.

The Sale of Quinine at post-offices in India during 1901 shows a very appreciable increase, the demand having risen from 2,500 lbs. in 1899-1900, to 3,400 lbs. in 1900-1901.

South African News.

Foreign Diplomas in Cape Colony.

(Cablegram from Our Correspondent.)

Capetown, February 26, 9 p.m.:—On Monday the Government issued a notice in regard to the recognition of medical and dental diplomas granted by foreign Governments, Universities, or other foreign bodies. This matter has been under consideration for some time, and the Government has now decided that no holder of a foreign diploma will be registered for the practice of medicine or dentistry in Cape Colony, unless the country of origin recognises the equivalent British diplomas or degrees for registration therein. The Board of Pharmacy has taken up the matter as regards chemists' diplomas, and a decision may be expected shortly.

The Number of Persons licensed to practise as chemists and druggists in the Cape Colony is just over 300.

Mr. Walter Flint, chemist and druggist (Great Brit.), of Johannesburg, has been admitted to practise in the Orange River Colony as a chemist and druggist.

Contract.—The *Natal Government Gazette* announces the acceptance of the tender of Messrs. Turner & Co. for the supply of medicines, drugs, &c, to the Natal Government Asylum during the year 1902.

Can't Make Up Their Minds.—The Cape Government has not yet confirmed or squashed the findings of the Colonial Medical Council in the matter of Dr. Scholtz, who attacked the local medical officer of health in the lay Press, and was charged with unprofessional conduct.

Plague-stricken Rats.—The medical officer of health for the Cape Colony has issued a memorandum in which he directs attention to the reappearance of plague in the peninsula. Numerous rats have been found in different parts of the capital dead from the scourge, and he warns the populace to be on their guard against the infection and a further outbreak

Cape Doctors.—The following persons have received licences to practise medicine in the Cape Colony:—William Wallace, M.B. (late of East Ham, London, England), Robert Ainslie Ross, M.B, M.R.C.S. (formerly of Edinburgh, Scotland), St. John Stanwell, M B, M R C.S. (late of Stamford, England), Lionel Virtue Tebbs, M.R C.S. (formerly of New Swindon, England).

Misappropriation Alleged.—Two prominent chemists' assistants gave evidence in the City Police Court, Cape Town, on February 4, against a clerk employed by the Yost Typewriter Agency, who, it is alleged, appropriated stock and sold it as his own. They had both purchased goods from the accused in the ordinary course of business, and had no reason to doubt the prisoner.

Resurrection Requested.—A Boer vrouw writes to a Malmesbury chemist as follows:—

Dear Mr. ——,—I write you the other day about my koks, and you send me a paper with something about poultry and horses. I can't read much engilish but some one said poultry is koks and hens I give my koks nothing but your power and now they is all dead what must I do now to make them live again you say your pouder make them lay much eggs and now they lay much dead please tell me what I must do and adres leter to Mrs. H. G——.

The Boer has evidently faith in the rooineke chemist.

Business Changes.—Mr. F. H. Carman has purchased the Mill Street Dispensary, Cape Town, and he will take over the business from Mr. J. G. Mocke on March 1.—Messrs. Hazell & Son, of Cape Town, are about to open a drug-store at Woodstock.—Mr. Armer, formerly of Wellington, Cape Colony, will open at Wynberg, Cape, presently.—Mr. S. C. Siverteen, Observatory, Cape, has acquired a corner site in that suburb near his old site, while other business changes are pending.—Messrs. K. James & Co. (the new Port Elizabeth firm of chemists, whose inception we noted in our issue of January 18, page 75) have removed from 19 Market Square to Castle Chambers, Market Square, Port Elizabeth.

Digitized by Google

PASS ON THE BLAME.—With reference to the diphtheria-case mentioned last week (page 292) as having occurred at Woodstock, and the lack of medical assistance in connection therewith, the latest explanation is that the Government is responsible, and that the Somerset Hospital authorities did quite right in refusing cases of contagious diseases. The medical men are very indignant at the local newspapers calling the case a "medical scandal." The doctors point out that they do more work for nothing than the average reader has any idea of. One medico asks how it is that, when a person is found dead from starvation, the newspapers do not call it "a bakers' scandal."

NATAL TRADE.—The *Natal Government Gazette* gives the following quantities and values of apothecaries' wares, &c., imported into the Colony during the year ended December 31, 1901, the details in parentheses being those for the corresponding period in 1900:—Apothecaries' wares, 62,565*l.*; acetic acid, 1,427 gals., 360*l.*; medicinal preparations, 55 240*l.*; drugs (free), 15 202*l.*; gunpowder, 36,565 lbs., 1,574*l.* (5,793 lbs., 239*l.*); dynamite and blasting-compounds, 212 500 lbs., 7,350*l.* (64,000 lbs., 2,490*l.*); chicory, 1,312,717 lbs., 11 144*l.* (381,492 lbs., 2,586*l.*); condiments, 276,200 lbs., 6,755*l.*; extracts and essences, 33,619*l.*; ochre, Kaffir, 41,197 lbs., 165*l.*; painters' colours and pigments, 19,331*l.*; turpentine, 2,648*l.*; varnish, 3,465*l.* (the foregoing combined, 17,201*l.*); perfumery, 11,126*l.* (9,526*l.*); photo-ware, 20,697*l*; quicksilver, 305*l.* (1,556*l.*); saccharin, 1,592*l.*; salt (rock), 405 tons, 385*l* (121 tons, 101*l.*); saltpetre, 222*l.* (96*l.*); sheep-dip. 9.120*l.* (2,979*l.*); soaps (other than toilet), 9,861,988 lbs., 82,650*l.*; toilet, 10,527*l.* (toilet and other kinds, 4,776 416 lbs., 35 086*l.*); spices, 86,487 lbs., 2,758*l.* (456,120 lbs., 9,045*l*); spirit of wine, 88 gals., 107*l.* (94 gals., 38*l*); glucose, 111,425 lbs., 429*l.*; saccharin and molasses, 876,457 lbs., 4,075*l.*; tar, pitch, and asphalt, 5,434*l.* (1,567*l.*); vinegar (concentrated), 2,180 gals., 586*l.*

American Notes.

A MUNICIPAL DRUG-STORE.—Holyoke (New England) is about to try the experiment of a municipal drug-store, to be conducted in connection with the office of the city physician.

NEW LINSEED-OIL FACTORY.—It is reported that Mr. J. D. Daniels, formerly a director of the American Linseed Company, and until recently general manager of its Buffalo works, is about to erect one of the most complete establishments for the manufacture of linseed oil in the country at Cleveland, Ohio.

POISON CORK BILL.—Opponents of the Poison Cork Bill, which was recently discussed before the Senate Health Committee, are of the opinion that the Bill will be killed. Many pharmacists oppose the Bill, which would enforce the use of a certain cork that druggists say would be patented as soon as the measure passes.

A RICE MEMORIAL.—A subscription-list has been opened by the *American Druggist* for the erection of a suitable memorial over the grave of the late Dr. Charles Rice, Chairman of the Committee on the revision of the United States Pharmacopœia. A similar movement has been started among the members of the U.S. Pharmacopœia Committee.

WINDOW-DISPLAY.—Large cardboard cases for window-use are becoming very popular for the advertisement of soaps and proprietaries. One of the neatest ideas in this line represents the back of a counter showing the shelves underneath well stocked with the remedy which is advertised. Across the top of the counter one sees a crowd of eager purchasers clamouring for the goods on the counter-shelves, which the drug-clerk (whose back is turned to the onlooker) is busily handing over to them.

BARRED FROM THE MAILS.—The Post Office Department at Washington, on January 28 issued a fraud order against the Empire Perfume Company of 330 Fulton Street, Brooklyn. The concern is denied the use of the mails because it advertised to give jewellery away with orders for perfumes, and did not give the valuables. The Department at New York, has issued a fraud order denying the use of the mails to the Herba-Cura Company, 100 Maiden Lane, New York. The company offered a sewing machine to everyone selling eight boxes of cure-all pills. When the eight boxes had been sold and the machine was demanded, the company answered that the offer required the sale of 12 packages, each containing eight boxes.

AGAINST THE WORCESTER PLAN.—What is known in the States as the "Worcester plan" to stop price-cutting of proprietaries has received a set-back by the decision of Judge Ralston in the Court of Common Pleas, Philadelphia, on January 31. The case was brought by Julius Garst, to recover $105 damages from a retail druggist, who sold five packages of pills made by Garst at 18c. each, when the price printed on the label was 25c. The plaintiff's claim was based on a notice pasted on each box to the effect that the pills should be sold at 25c. per box, or five boxes for $1. Judge Ralston held that the defendant never agreed to the terms of the notice. He merely took into his possession the boxes of pills, but had no contractural relations with the plaintiff. The case was dismissed.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1*l.*, obtainable through any money-order office.

(*From the "Trade-marks Journal," February* 19, 1902.)

"FOAMINE" (no claim for "Foam"); for soaps. By the Unique Soap and Chemical Company (Limited), 166 Manchester Road, Castleton. 242,400 and 242,401.

"HERMOSENE"; for a liquid cleaner. By H. Cox, 8 Richmond Mansions, Putney, S.W., and I. H. Isaacson, 33 South Audley Street, W. 242,510.

"BRI'BRON"; for perfumery and toilet-articles. By W. B. Hinde, 81 Great Queen Street, W.C. 243,205.

Device (the essential particular); for Eau de Cologne. By J. M. Farina, Gegenüber dem Jülichs Platz, Cologne. 242,352.

"MIRSAP"; for perfumed soap. By the Unique Soap and Chemical Company (Limited), 166 Manchester Road, Castleton. 242,402.

"CAPILLIPHOR" (no claim for "Capilli"); for a hair-preparation. By H. Schmid, c/o Mrs. Stark, 81 Talbot Road, W. 243,212.

Device of boar's head; for inks and stains in Class 50, polishes, blacking, &c. By D. G. Garner & Co., 1½ Gladstone Street, Leicester. 242,412.

"CAPSTAN"; for polishing-pastes. By H. I. L. Griffiths, 20 Mount Pleasant, Liverpool. 242,975.

(*From the "Trade Marks Journal," February* 26, 1902.)

Picture of paddle-steamer; for photographic goods. By Ilford Limited, Ilford, E. 240,679.

Device of an egg on end; for manufacturing-chemicals. By Dr. O. Knöfler & Co., Strasse 12 am Verbindungs Kanal, Plötzensee, near Berlin. 242,281.

Device (the essential particular), the word "Diamond" not being claimed exclusively; for sensitised papers. By Emil Van Bosch, Tannenzapfen Passage, Strasburg, Alsace. 242,311.

"IMPERVITE"; for water-paint. By E. Jones & Co. (Limited), Markeaton Street, Derby. 243,175.

"PHOTABS"; for compressed photographic chemicals. By G. Houghton & Son, 88 High Holborn, W.C. 243,328.

Combination of devices and the word "Parrot" (the essential particulars, but the right of any owner of the word "Parrot" to use it, or its foreign equivalent, shall not be affected); for eucalyptus oil. By J. Bosisto & Co., Proprietary (Limited), 342 Little Flinders Street, Melbourne. 233,567.

"LAXINOIDS"; for a medicine. By Rouse & Co., 12 Wigmore Street, W. 242,314.

"PEPSIKOLA"; for chemicals. By the Laxakola Company, 45 Vesey Street, New York, U.S.A. 242,627.

Pharmaceutical Society of Great Britain.

EXECUTIVE MEETING OF NORTH BRITISH BRANCH.

A MEETING was held at 36 York Place, Edinburgh, on Friday, February 21, Mr. Peter Boa (Chairman) presiding. After the minutes had been read, Mr. David Storrar referred to

The Death of Mr. W. Martindale,

and spoke of him as one of the most distinguished ornaments of their profession. Patient, persevering, thorough, and a master of detail, Mr. Martindale was, he said, an ideal pharmacist, who rendered unique service to prescriber and dispenser alike. His name was a household word wherever British pharmacy was practised. To public work of many kinds he brought the same conscientious thoroughness and devotion to duty. He moved:—

That the Executive resolves to express in its minutes its sense of the great loss which pharmacy and the Pharmaceutical Society have sustained by the death of Mr. Wm. Martindale, and its sincere and heartfelt sympathy with his widow and family in their bereavement. A distinguished student, as well as an earnest and successful worker in pharmacy, Mr. Martindale freely placed at the disposal of his professional brethren the results of his research and experience as an examiner, member of Council, and President of the Society, he gave to it much hard, conscientious, and valuable work, and as a friend and colleague he was looked up to and respected for his upright and honourable character. The Pharmaceutical Society has never lost a truer and more devoted friend, and no name will be held longer in affectionate remembrance by its members than that of William Martindale.

The Chairman, in seconding the resolution, said he had known Mr. Martindale for the past twelve years, and the longer he knew him the better opinion he had of him. He felt his death acutely as a personal loss.

The resolution was adopted by those present standing up.

The Assistant-Secretary read the

Report of the General Purposes Committee,

from which it appeared that the Committee had received a report from the Committee of the Board of Examiners, consisting of Professor Bower, Dr. Dobbin, and Mr. James F. Tocher, regarding the Carnegie Trust, and the question of a University training for students of pharmacy. Accompanying the report there was a draft of the scheme, and explanatory statement providing a systematic course of instruction for the Minor qualifying examination of the Society, and a further course on the lines of the Major syllabus, and including a science degree to be called "Bachelor of Science in Pharmacy."

The General Purposes Committee reported that they had considered

A Draft of Standing Orders

for the Executive, prepared by Mr. Anderson Russell. The Committee, while thanking Mr. Russell for the great pains he had taken in the matter, unanimously recommended that definite standing orders should not be enacted, but that Mr. Russell's object would be attained by the Chairman at the first meeting of the Executive after the annual election making a statement as to the general lines on which the business is conducted.

Mr. Russell moved, and Mr. Fisher seconded, that the report be remitted back to the Committee on the ground that there was no adequate time to discuss the matter at that meeting.

Mr. Spence moved, and Mr. Doig seconded, the adoption of the Committee's recommendation.

On a vote being taken Mr. Spence's amendment was carried by the casting vote of the Chairman.

Aberdeen Members and the Ballot.

The Committee's report next referred to a communication received from certain members of the Society in Aberdeen, who appeared to be under the impression that the voting in the election of the Executive in 1901 had been so conducted as to disclose the way in which Aberdeen members had cast their votes in that election.

The Chairman having explained the facts to the committee, it was agreed to recommend the transmission of a reply to the effect that the Executive felt satisfied that the members who had addressed them on this subject would accept their assurance that in view of facts that were not in doubt, there was no ground whatever for any complaint, and that no member need have the slightest fear that anyone could ever know how his vote was cast.

The Executive agreed to adopt the course proposed.

The Jubilee and Diamond Jubilee.

The Committee also reported the celebration by the Branch of its jubilee, and the diamond jubilee of the Society.

The Assistant Secretary gave in the report of the committee appointed to consider the question of

Preliminary Examination Certificates

so far as it affects Scotland. It was to the effect that the committee had agreed to recommend the adoption by the Executive of the following resolution:

The Committee suggest that candidates possessing leaving certificates should be allowed to complete the examination by passing the remainder of the subjects under any of the examining bodies recognised by the Society, always providing that the six subjects have been passed at no more than two examinations.

Mr. Maben, in moving the adoption of the committee's recommendation, said the committee felt that they could not go into the whole question of the registration of pharmaceutical students in Scotland. The question was too wide, and it would raise other points which were *ultra vires*. They therefore restricted themselves to the original proposal, which was that students having two or more leaving-certificates should be allowed to take the additional certificates required for registration under any of the examining boards recognised by the Society, instead of being compelled to take them at one time and being required to take the four subjects again. They thought that unnecessary, and they asked the Executive to pass a resolution that these certificates should be accepted provided they were taken at not more than two examinations.

Mr. Fisher seconded the motion, and the resolution was adopted, and it was agreed to forward it to the Council.

Date of Annual Election

was fixed for June 20. At this point the Executive adjourned to meet again in the afternoon, when the question of the Carnegie Trust and pharmaceutical education came up. The Executive unanimously agreed to forward the scheme submitted by Mr. Tocher, and the information collected by him, to the Council for their information and consideration. In the meantime the Executive requested the General Purposes Committee to co-operate with Mr. Tocher, Professor Bower, and Dr. Dobbin in any necessary steps in furtherance and elaboration of the scheme.

The Annual Report.

The annual report to the Council was considered and approved.

The Status of the Scotch Board of Examiners.

Mr. Henry called attention to a report by the Board of Examiners for England and Wales, which dealt with questions remitted to them by the Council, including the question of certificates of the Scottish Education Department. He also reminded the Executive of a statement made by counsel for the Society in the case of Strachan. It seemed to him that a distinction was being made between the Board of Examiners for England and Wales and the Board of Examiners for Scotland, while the Pharmacy Act provided that the two Boards were equal. He proposed that some inquiry should be made into the matter. He brought the matter forward in a friendly way.

After some consultation, the Executive agreed to ask Mr. Storrar to draw attention to the matter at the next Council-meeting in London.

The meeting then terminated.

Scottish Universities and Pharmceutical Education.

A DAY meeting of the North British Branch of the Pharmaceutical Society was held on Friday, February 21, at 36 York Place, Edinburgh, Mr. Peter Boa presiding, when Mr. JAMES F. TOCHER, F.I.C., Peterhead, read a paper on this subject. There was a large attendance, which included a number of assistants besides members.

After a brief introduction, in which he commended the Scottish Universities for their encouragement of education and their disposition to afford facilities for the instruction of those who desire to practice pharmacy, Mr. TOCHER spoke of the Pharmaceutical Society's past educational efforts, specially referring to the foundation of the School of Pharmacy in London in 1842. This school has given to pharmacy and the scientific world many distinguished men such as Schacht, Paul, Ince, Groves, P. W. Squire, Attfield, Holmes, Tilden, Carteighe, Martindale, Luff, and Greenish. Reference was next made to efforts since the forties to promote provincial pharmaceutical education, so far comparatively fruitless. In 1872 Professor Attfield advocated

MR. J. F. TOCHER.

A COMPULSORY CURRICULUM,

after which various attempts were made by the Council of the Pharmaceutical Society to establish such a curriculum, but without success. Meanwhile, Mr. Tocher pointed out, the increased stringency of the examinations has been the means of creating many schools of pharmacy where practically all students are equipped for examination—that, indeed, being the object of their foundation; and he was of opinion that there are abundant educational facilities for the student in the Metropolis and the chief cities in England and Scotland. Here arises the first issue. It may be very properly asked, said Mr. Tocher, whether there is any necessity for discussing a scheme of education like this when schools are so numerous, and when the proposed training is purely voluntary. Although compulsory education is no part of his scheme, it is a necessity. The schools do not exactly provide all that is contemplated in a curriculum of study, any more than the universities can at present. In the schools, the principals of which have not received anything like the credit they deserve, teachers have been doing their best to supply the demands of the student, and in that they have been conspicuously successful. These demands have arisen through the student being compelled by the State to undergo an examination, prior to registration, without the obvious concomitant. Mr. Tocher emphasised the fact that the teachers do not get a chance to do more than prepare the student for examination, the range they have to go over is too great, and he suggested that if chemistry and botany were taken at the universities so as to leave pharmaceutics to the teachers of pharmacy, it would be a great gain. These teachers should be recognised by the universities or appointed the university lecturers. Mr. Tocher proceeded to refer to

THE VALUE OF A UNIVERSITY TRAINING.

In the eyes of some this may be a Utopian dream, for the averred reasons that pharmaceutical students cannot afford to pay fees and spend the required time in a course of study, while the recompense to the pharmacists in after life, in the shape of position and means, is not worth it. He, therefore, considered the points bearing upon the proposal, and emphasised the fact that his object is to adapt the studies of men and women who go forward to, and pass the Minor examination, so that they may take advantage of the educational facilities of the Scottish universities, including the Carnegie Trust, with the view to proceeding to a degree in science in a department of pharmacy to be created. He pointed to Owens College, Manchester, as a notable example of what is being aimed at all over Great Britain, but which cannot, in his opinion, get full expression until the Pharmaceutical Council institutes, or has power to institute, one uniform system of education, in short, an adequate curriculum. The author then submitted the following

SYNOPSIS OF THE UNIVERSITY SCHEME.

(1) To afford facilities to pharmaceutical students working towards the Minor (qualifying) examination of the Pharmaceutical Society of Great Britain to attend courses of lectures in botany, chemistry, physics, pharmaceutical materia medica and pharmacy, by including in such lectures, demonstrations, and laboratory-work, the instruction necessary to pass the said examination for registration as chemists and druggists, the legal qualification to practice as pharmacists.

(2) To institute lectureships in pharmaceutics (pharmaceutical materia medica and pharmacy) in each of the Scottish universities, and to include the annual payments necessary for such lecturers with demonstrators, in their application to the Carnegie Trust.

(3) To provide, where required, the necessary accommodation and equipment for each lecturer on pharmaceutics, and for pharmaceutical students desiring to get instruction in the courses before-mentioned.

(4) To institute a degree in pharmacy on lines similar to the science-degree in agriculture, engineering, &c., to be called "Bachelor of Science in Pharmacy," to be open only to registered chemists and druggists.

(5) To recognise, where necessary, in such subjects as may be considered proper, and when applied for, schools and classes where proper instruction is given and competent teachers are employed, as qualifying or assisting to qualify for graduation in pharmacy, so that pharmaceutical students attending any such schools or classes, may be admitted to the privileges of the Carnegie Trust, Clause B, and so that such schools may participate in any benefits they may be entitled to under Clause A of said Trust.

The author then considered how the present university courses might be adapted to the requirements, and showed that there would be no difficulty in suiting the instruction in botany, chemistry, and physics to pharmaceutical requirements, while the practical chemistry would be divided between the present chemical department and the contemplated pharmaceutical one, the latter being better fitted to teach pharmaceutical assaying and the like. It is apparent that the whole scheme hinges on the second and third clauses, which are an invitation to the universities to institute lectureships in pharmaceutics, and to form a pharmaceutical department in each university under the wing of the professor of materia medica. The department would be a thoroughly equipped place where instruction could be given in—

1. The operations of galenical pharmacy, latest manufacturing processes, and general principles of pharmacy practically expounded.
2. Pharmaceutical assaying, in its widest sense.
3. Prescription-reading, posology, and dispensing, which would include the more modern forms of prescribing medicaments for public use.
4. Materia medica from the purely pharmaceutical side.
5. Pharmacy law, pharmaceutical bookkeeping, and the remaining branches.

Accommodation and equipment are also contemplated for scientific research. Mr. Tocher proceeded to quote from the conditions of the Carnegie Trust and from a letter he had received from the secretary of the Trust to show that students of pharmacy may receive the benefits of the trust if they accord with the conditions, viz :—

(1) Be over 16 years of age.

(2) Be of Scottish birth or extraction, or have given two years' attendance after the age of 14 at a school or institution under inspection of the Scotch Education Department.

(3) Be qualified by Preliminary examination under the ordinances of the Scottish Universities Commission and the regulations of the Joint Board of Examiners, to attend the classes for which payment of fees is claimed.

Digitized by Google

It follows that a pharmaceutical student working towards the Minor examination could simply matriculate in the medical faculty; and the medical Preliminary examination—recognised both by the Pharmaceutical Society for its object and the Carnegie Trust for its special purpose—is exactly the examination required and indicated by the Trust secretary. Mr. Tocher then gave reasons for his belief that if his scheme is ever carried out the course of instruction will preferably be taken after apprenticeship, as is the custom on the Continent. He also discussed the details for granting the degree "Bachelor of Science in Pharmacy," showing that the existing University regulations for degrees in medicine, science, and law give the basis of procedure. While the degree would doubtless affect the Major diploma, it would not interfere with the chartered rights or statutory powers of the Pharmaceutical Society, and the Society would have an influence in the Universities to the extent that practising pharmacists would be associated with University teachers in examining students for the degrees. He next outlined

A Minor and B.Sc. Pharm. Course.

First it should be noted the Pharmaceutical Society's examinations will go on just as though a university training and degree had never been heard of. An apprentice in Scotland, prior to entering or during his apprenticeship, will pass such an entrance examination as will entitle him to registration as an apprentice or student, and to the benefits of the Carnegie Trust—say the Medical or Science Preliminary. He attends his lectures in chemistry and botany, and takes the laboratory course. If the division of the Minor is accomplished, he can, at the end of his course, take the first division, consisting of the purely scientific subjects. During the first session he may, if he likes, also take physics and zoology, and complete his first Science examination, in which case he has taken his first step towards the degree. It should be mentioned that his physics will also include practical optics, so that he will be trained in the fundamental principles on which vision-testing is based. The Minor candidate, however, may elect instead to take the other subjects necessary for the Minor, in which case he will add materia medica and pharmacy to his previous subjects, but materia medica and pharmacy should preferably be taken in the second session. As a trial a year is tentatively proposed for the Minor course. Having passed the Minor examination the student may go on to the degree. If he does he must take four advanced courses in chemistry, botany, materia medica, and pharmacy, completing three years of study for the degree. In pharmacy he will have pharmaceutical assaying, preparation of galenicals, and general manufacturing processes; in materia medica, botany, and chemistry he will mainly cover the ground of the major syllabus. Having taken the seven necessary courses and fulfilled the other requirements, he is now eligible to enter for the final Science examination, and, if successful, is entitled to the degree of Bachelor of Science in Pharmacy. He has now the advantage of being skilled in special departments, besides being a trained and competent pharmacist. He can go straight to the manufacturing laboratory with confidence; he can undertake special analytical work; or, upon finding a suitable opening in a retail business, his equipment and management of his pharmacy will secure recognition, and, no doubt, success. There are numberless posts that a B.Sc. Pharm. can occupy. He need not return to retail pharmacy at all. He is in the position of the pharmacist of the present day who takes the pure science degree, and is found at the top.

The degree of Doctor of Science was next referred to, Mr. Tocher mentioning the names of several pharmacists who have obtained it or its equivalent, some of them remaining in pharmacy, and he proceeded to speak about the condition of pharmacy in this country, comparing it with pharmacy in Germany and France, where compulsory curricula are in force. These curricula he outlined, and did not omit to call attention to the privileges of pharmacists in these countries which do not obtain with us. But it was not merely with the object of getting level with our continental *confrères* that he put forward the scheme. The rapid strides of medical and pharmaceutical science make it of paramount importance that, in keeping abreast in knowledge of present remedies and of the ever-increasing new ones, we should also take a more prominent part in their discovery and introduction. While acknowledging the good work done in this direction by commercial firms and by individual pharmacists, he urged that we must not leave

Research in a Sporadic Condition.

A degree in pharmacy will provide a training that will fit the graduate to direct all the manufacturing operations of a pharmaceutical laboratory; to act as an analyst or chemist in the chemical industries generally; to expand his business, if a retail pharmacist, and give him a higher standing; and to conduct research in the Universities, commercial laboratories, and elsewhere. It is no new proposal It is an old one. Jacob Bell proposed it in substance. Soubacht directly advocated it for a generation. It was the leading feature of Professor T. R. Fraser's able inaugural address to the North British Branch in 1889, when he advocated a University curriculum and diploma for pharmacists and pointed out the disadvantages of an examination entirely conducted by persons who had taken no part in educating the candidates. It is a degree which has been in existence for many years in the United States of America, and the establishment of pharmaceutical departments and the creation of lectureships in pharmacy in this country are not only practical proposals capable of swift realisation because of a great benefaction, but also desirable objects in themselves, in view of the relationship of the Pharmaceutical Society and the Universities to the state and to the public.

After the paper was read the meeting was adjourned for luncheon, and thereafter a full discussion on the general principle of the scheme was held; in this several University lecturers besides teachers of pharmacy and chemists took part. Cordial support was expressed by all present without exception, and ultimately it was agreed to adopt the proposal and recommend the scheme to the consideration of the Executive.

A Correspondent writes:—It was thought that the academic men who are in touch with pharmacy and the extra-mural teachers of pharmacy would provide some sport, but beyond a dig or two at each other, given and taken with good humour, the meeting was most harmonious. The discussion lasted for two hours and fifteen minutes, and the time was apportioned as follows:—Mr. J. L. Ewing, 5 minutes; Dr. Dobbin, 10; Dr. Sellars (assistant to Professor T. R Fraser), 13; Messrs. David Storrar, 4; J. Anderson Russell, 5; J. Lothian, 10; C. Kerr, 4; D. Gilmour, 5; D. B. Dott, 2; Hugh Marshall, D Sc, 6; T. Maben, 6; T. S Barrie, 4; J. W. Sutherland, 9; "A Student," 6; George Coull, D.Sc., 4; W. B. Cowie, 11; J. H. Fisher, 2; C. F. Henry, 5; D. McLaren, 1; James Jack, 2; W. Duncan, 2; and J. Nesbit, 2½. Mr. Tocher took seven minutes to reply.

British Pharmaceutical Conference.

A MEETING of the Executive Committee was held at 17 Bloomsbury Square, W C., on February 20, Mr. G. Claridge Druce (President) in the chair. There were also present Dr. Attfield, Mr. G. D Beggs, Mr. E. M. Holmes, Mr. W. A. H. Naylor, Mr. J. C. Umney, Mr. L. Atkinson, Mr. E. White, Mr. F. Ransom, Mr. E. S. Peck, and Mr. Hearn (Assistant Secretary).

A letter was read from Mr. Cummings respecting the date of the Dundee meeting, and it was agreed that it should be held on August 11 and following days.

Death of Mr. Martindale.

Dr. Attfield proposed:—

That the Executive Committee of the British Pharmaceutical Conference offer their sincere sympathy with Mrs. Martindale and family on the occasion of the lamented death of Mr. Wm. Martindale. He was President of the Conference at Cardiff in 1891 and at Liverpool in 1896, a frequent attendant at other annual meetings, and Chairman of the Reception Committee when the Conference met in London in 1900. The Year-books of the Conference contain many original researches in pharmacy by him. He was Chairman of its Formulary Committee from the commencement until quite recently. In every one of these positions he showed his unrivalled experience and knowledge of every department of pharmacy. The Committee feel that pharmacy has lost in him a brilliant and particularly accurate and conscientious scholar, and

Digitized by Google

a loyal and active worker. Words fail the Committee in any attempt to convey to the widow and family their sense of William Martindale's all round worthiness, and to express adequately their deep sympathy.

Mr. G. D. Beggs, in seconding the resolution, stated that they in Ireland deeply deplored the death of Mr. Martindale, whose name was looked upon as a household word, and they felt that pharmacy as a body had sustained an irreparable loss.

Mr. W. A H. Naylor expressed the loss the Conference experienced in the death of Mr. Martindale. He felt that anyone who had had the privilege of working with him as he had during the last fifteen years, could not fail to be impressed with his extraordinary capacity for work. To be associated with him could not fail to act as a stimulus to younger men.

Mr. E. M. Holmes said that during the twenty-five years he had had the pleasure of his acquaintance Mr. Martindale had taken a sympathetic interest in the scientific work of the Museum, and had, whenever opportunity offered, contributed to its collections.

Mr. J. C. Umney wished to take the opportunity of recording his deep personal affection towards Mr. Martindale, dating from his apprenticeship at the New Cavendish Street Pharmacy.

The President also spoke very feelingly as to the esteem he always had for the late Mr. Martindale.

The Secretaries were instructed to convey this vote of condolence to Mrs. Martindale.

The following gentlemen were appointed as a sub-committee to revise

The Research List.

The President, the Hon. Treasurer, Mr. E. M. Holmes, Professor Greenish, and the Hon. General Secretaries. On the suggestion of Mr. Naylor it was decided that a footnote be added to the Research List, drawing attention to the fact that a considerable sum of money was available for the purposes of research, and that applications from suitable workers were cordially invited.

Letters.

The Hon. General Secretaries stated they had received letters acknowledging with thanks their election as honorary members from Mr. C. R. Blackett (Melbourne), Professor Ladenberg (Breslau), Mr. T. H. Maiden (Sydney), Dr. David Prain (Calcutta), Professor Prescott (Ann Arbor, U.S.A)

Bristol in 1903.

A letter was read from Mr. E. F. Young, President of the Bristol Pharmaceutical Association, stating that, at a large and enthusiastic meeting of the Bristol pharmacists, it was unanimously carried that he be authorised to convey a very hearty invitation to the Conference to visit "our ancient city in the year 1903." It was unanimously resolved that the Executive Committee should cordially recommend the annual meeting to accept the kind invitation of Bristol, and the Secretaries were instructed to acknowledge receipt of the letter in similar terms.

Fifteen gentlemen, having been duly nominated, were elected as members.

General Medical Council.

SPECIAL MEETING.

The members of the supreme medical body met at the offices of the Council in Oxford Street, London, on Tuesday afternoon, February 25, chiefly to consider a report of a special committee appointed on December 3, 1901, with reference to the curriculum of medical study, which has been jeopardised by the action of the Conjoint Board of England. Sir William Turner, K.C.B. (President) was in the chair, and the business began with the reception of new members—to wit, Professor D. W. Finlay, for the Aberdeen University; Principal J. Y. Mackay, Dundee, for the St. Andrews University; and Mr. George Jackson, a direct representative. Mr. George Brown and Dr. William Bruce were also received on their re-election. Then came

The Midwives Bill.

This was raised by a letter from the Privy Council, and a long debate ensued, in the main hostile to this Session's measure, and more or less on the old antagonistic lines, only relieved by the intervention of Sir John Williams, who has a soft side to certificated midwives, and who said that while the mortality in childbirth was shown by the Registrar-General's statistics to be 1 in 200, his own figures, for the certificated monthly nurses attached to certain institutions who attend lying-in out-patients, show that the mortality is only 1 in 1,000. There were calls, not loud but deep in scepticism, for some qualification of this statement, as it would never do to let it go abroad that the mortality when medical men attend is the higher, but Sir John merely repeated his statement with emphasis, and the other members reluctantly turned their attention to the motion proposed by Dr. Atthill disapproving of the Bill in its present form, and calling attention to the Council's resolutions of April, 1898. It was agreed to *nem. con.* On the motion of Mr. Victor Horsley, another resolution was passed to a similar effect, intended for Sir John Tuke to put in his pocket for the benefit of the Grand Committee on Law at St. Stephen's.

The Curriculum came next.

Dr. McVail was the chairman of the Committee, and he and the President had agreed upon a way to deal with the 60-page octavo report. So many pages were to be received and entered on the minutes—agreed after voluminous corrections. So many more were to be read and entered on the minutes—also agreed, Dr. McVail undertaking to do the reading in fifteen minutes, and taking twenty-five. Then a motion for the adoption of the report was to be discussed.

Two-thirds of the report was "narrative." Then came observations of the Committee which were directed to show that the Council has power to see that the qualifying bodies mentioned in Schedule A of the Medical Act, 1858, impose adequate curricula, as well as examinations. Sections 18 and 21 of the 1858 Act were specified. This is the crux of the dispute with the Conjoint Board of the Royal Colleges. The latter have dispensed with the requirement that their candidates shall be registered medical students, and defy the Council's right to approve of the schools where the candidates get instruction in biology, chemistry, and physics. As the candidates may be examined on these subjects before beginning the medical studies proper, it looks as if the curriculum were reduced from five years to four. So the whole question was considered by the Committee, and in a series of "conclusions" it was shown that besides the Conjoint Board in England other sinners are—

The Conjoint Board in Scotland, because it allows those who have passed the English Conjoint *first* to go on to the Scotch *second*. Unwittingly or otherwise the same offence is thus committed.

The Society of Apothecaries, of London, does the same thing.

The University of Oxford prescribes practically no medical curriculum, nor registration as medical students.

The University of London does not require registration as medical students, and its curriculum covers eleven subjects only.

The University of Durham has also fallen into the conjoint board trap.

The Committee made nine "recommendations." The first, second, and third were assertions that the regulations of the first three bodies named above do not secure that the persons pursuing the specified courses possess the requisite knowledge and skill for the efficient practice of their profession. The same was said in the fourth, fifth, and sixth recommendations about the Universities, and the seventh referred to communicating the resolutions to them with the view of improvement, while the eighth called upon the Scotch Universities to abrogate an ordinance which permits the curriculum to be taken in four years under certain circumstances. The ninth recommendation was to change the name of the Education Committee to Education and Curriculum Committee, and give it power to report annually.

A minority report of two clauses was appended. The second was "The Committee is of opinion that the powers claimed by the Council in this particular do not exist." Mr.

Digitized by Google

Thomas Bryant (Royal College of Surgeons), and Dr. Norman Moore (Royal College of Physicians) were the authors of this quip.

The discussion on the subject started after tea, and was continued on Wednesday, when the motion for the adoption of the report to the end of "Conclusions" was adopted. The "Recommendations" were then considered, but their adoption was not pushed, and Dr. McVail ultimately moved that the Council should begin an inspection of all the examinations of the licensing bodies in chemistry, physics, and biology. The Council unanimously approved of this course, and it was resolved that the Council, under the powers granted by section 18 of the Medical Act, 1858, should require the examining board in England to furnish information on a list of specified questions regarding the courses of study in chemistry, physics, and biology to be gone through by candidates for the qualifications L.R.C.P. London and M.R.C.S England, in respect of each of the teaching institutions recognised by the Royal Colleges, but not approved by the Council.

Dr. Payne was elected to a vacant seat on the Executive Committee, which act closed the session.

Festivities.

Huddersfield Dinner.

The first annual dinner of the newly-formed Huddersfield Chemists' Association took place at the Queen's Hotel on February 23. Mr. R. G. Walshaw occupied the chair, and was supported by Mr. G. T. W. Newsholme and Mr. W. S. Glyn-Jones. Mr. R. Cuthbert proposed the toast of "The Pharmaceutical Society," to which Mr. Newsholme replied. To Mr. Glyn-Jones fell the task of proposing "The Local Association."

Chemists' Assistants' Association.

The above Association held a "social evening" at 73 Newman Street on February 20, at which Mr. F. A. Rogers presided. Some excellent songs were rendered by Messrs. C. Morley, D. C. Jones, Victor Blin, A. Latreille, F. Pitt, Lewis, Easton and W. Garsed, and Mr. C. J. Strother gave a reading. Messrs. Britton and Parkin gave selections on the pianoforte, and acted as accompanists.

The president proposed a vote of thanks to the Chairman, which was seconded by Mr. R. E. Lownsbrough.

Mr. Rogers, in replying, expressed the great pleasure it gave him to be among his old friends once more. He was glad to find the Association in such a flourishing condition.

Three Towns' Junior Chemists' Association.

The members had their inaugural dinner at Day's Restaurant, Devonport, on Wednesday, February 19, Mr. A. Norman-Harris presiding. After the toast of "The King," Mr. Groombridge proposed "The Pharmaceutical Society," to which Mr. Ross replied. In a neat little speech Mr. E. Lovatt proposed the toast of "The Plymouth, Devonport, Stonehouse and District Chemists' Association, referring to the kind manner in which the senior members had received the revival of the junior section. Mr. Venn replied. The toast of "The Three Towns' Junior Chemists' Association" was proposed by Mr. Kilpatrick, and responded to by Mr. Lord. At this juncture several seniors, including the President (Mr. C. T. Weary), arrived. Mr. Weary was greeted with musical honours, and, in thanking the members for their hearty reception, said he considered it symbolic of the cordiality which exists between the members of the senior and junior sections. He briefly referred to the advantages to be obtained by reference to the library and museum at the rooms of the Association, and when the weather became milder invited the members to take tea with him and have a walk through Mount Edgcumbe Park, where they would find many plants of botanical interest. Mr. Groombridge proposed "The Visitors"; and Mr. Spear, in reply, said he trusted as great an interest would be taken in the educational meetings as had been shown in this their first dinner. Songs and recitations were given by Messrs. Weary, Spear, and other members.

Winter Session.

Chemists Meet at Hastings.

A meeting of the Hastings and St. Leonards Pharmaceutical Association was held at the Castle Hotel, Hastings, on Friday evening, February 21, under the chairmanship of Mr. Rossiter. There were also present: Messrs John Smith, Edwards, C. R. Stedman, Sidney Smith, Vint, Ripley, Ewbank, Smith, Dawes, North, and Kemp (Hastings); Brisley (Bexhill); Price, Marchant, and Harmer (Eastbourne); Glyn-Jones, Nash, and Hickey (London). Our reporter sends us exactly 139 folios about the meeting, his zeal thus exceeding the space that we have to spare for all meetings during the past week. The proceedings began by the Chairman explaining that after several preliminary meetings this one had been arranged, and he welcomed them all, at the same time intimating apologies from Mr. Jameson and Mr. G. Richards (Hastings), Mr. Howell (Rye), and Mr. Perrett (Bexhill). He also had a letter from Mr. Beck, solicitor, of London, who formerly belonged to Hastings. The Chairman proceeded to state that just eighteen years ago they formed an association in Hastings, but it had not been long formed when their Chairman left the place, and in a comparatively short time they lost their Secretary and the Association collapsed. He referred to the greater difficulties that exist in the trade now, and which make co-operation amongst chemists a greater necessity. The present resuscitation was due to the new men in the town, especially Mr. John Smith and Mr. Stedman. He then introduced Mr. Glyn-Jones, speaking of the services he has rendered to pharmacy as the originator of the P.A.T.A., and as a member of the Pharmaceutical Council.

Mr. Glyn-Jones then delivered a characteristic address. He told how he spent seven months as an assistant with Mr. Vint in Hastings; then spoke about

Organisation and Other Topics.

Before going to the meeting he was looking, he said, at the list published in The Chemists' and Druggists' Diary for 1895 of the number of local Chemists' Associations. He saw that they were then thirty-three, and, looking at the Diary for 1902, he found they were sixty-six. That showed that in seven years they had doubled the number of local Chemists' Associations throughout the country. He was told that he was the crank of organisation. He was rather proud of that. He thought they had suffered as chemists in time past from lack of organisation, and especially from lack of local organisation. He pointed out some of the advantages of local organisation, emphasising the fact that where there is no Association the chemists rarely speak to each other, and cannot be said to be on friendly terms; while those of Association towns are not only friendly, but help each other, manage to close earlier, and do many things for themselves and their craft which as separate units they would never dream of doing. He proved his statements by facts from his own experience in calling meetings in both kinds of towns; and so Mr. Glyn-Jones proceeded, amusing and interesting his audience to the extent of over 100 folios. Incidentally, he mentioned all the little Acts of Parliament that worry chemists (see The Chemists' and Druggists' Diary, 1902, pages 269 to 286). There were other tit-bits in the address: one, for example, that "struck home" was about the "curiosity cupboard," whose contents mark the rise and fall of proprietary medicines prescribed by medical men. Mr. Glyn-Jones told how local Associations can reduce the cupboard to the smallest dimensions. Again, the members of local Associations can serve each other well by giving a hint about undesirable customers. It undoubtedly would be libellous if the Secretary of the Association sent round and said that Mr. So-and-so owed Mr. So-and-so such and such a sum; but Mr. Beck had told them that there was no fear whatever if the member sent to the Secretary and said that Mr. So-and-so owed him a certain amount and he could not get it. That would be entered in the black-book, which was available to any member of the Association. Next Mr. Glyn-Jones dealt with price-fixing, telling his hearers to be careful as to how they went about that, instancing Glasgow; then he showed how the Pharmaceutical Society had benefited by local organisation,

Digitized by Google

and put in a little word for the P.A.T.A., deprecating the spirit which allows "the man down the street to pay the money and you to take the benefit." The audience were treated next to a pithy exposition of the Pharmacy Act, in the course of which the speaker said that they had not tried certain sections, but he hoped before long they would see the Act thoroughly tested in so far as it applied to company-pharmacy. He believed that fresh legislation was bound to come, whether from the drug-trade or from the Government he was not prepared to say—he did not know. He touched on the Poisons Committee, set going at the request of people who had a personal interest in free trade in poisons. If those gentlemen got what they wanted, a third part of the schedule, he thought they could say good-bye to any addition to the schedule of poisons confined to chemists. And so Mr. Glyn-Jones went on giving his opinion of men and things pharmaceutical, but mainly the latter, telling stories which made his listeners laugh. Here is one:—

A man has no right to mislead his customers. But if a man goes into his shop for an article like a little liver-pill, upon which he makes nothing, he is only doing his duty in putting before that customer another article which would suit him perhaps better, and certainly suit him (the seller) a great deal better. He was told by a proprietor that even that is dishonest. He said he had made the trade for little liver-pills, and every attempt to sell a bottle of any other little liver-pills was trading upon other people's advertisement. He (Mr. Glyn-Jones) said: "Let us go back a little more. When you came over the water and started to advertise, do you suggest that you gave the people livers?" "No." "Did you give them bad livers?" "No." "Do you know that they had livers before you came over, and we gave them blue pills and black draughts, which did them good?" There was no answer to that.

Gently Mr. Glyn-Jones slid on to the C.D.A. (in which part the Acts of Parliament came in), and we follow his example as far as folio 100, which we take up *verbatim* and *literatim*, for it says "perhaps they (his hearers) could take a little more charitable view of the matter if the men were not working under the same conditions as themselves. He hoped that from that Association, without calling upon anybody to sink his individuality, they would derive all the benefits which were possible from that friendship, toleration, and *esprit de corps* of those fortunate enough to be engaged in the same calling." (Loud applause.)

The vote of thanks to Mr. Glyn-Jones was proposed by Mr. JOHN SMITH [thirteen and a half folios chiefly on organisation], and concluding with the suggestion that the Pharmaceutical Society should hold its annual meeting when and where the British Pharmaceutical Conference meets [which, dear Mr. Smith, would violate the charter, line 130—ED.]. Mr. VINT seconded the motion, and spoke of the way that chemists are prosecuted. Mr. SIDNEY SMYTH followed him, twitting Mr. Glyn-Jones for his omission of a third-class of Pharmaceutical Society people. First, were those who belonged to it; second, those who did not—but Mr. Glyn-Jones did not mention those who had belonged to it, of whom he is one, for reasons which he stated.

The vote was carried by acclamation, and Mr. GLYN-JONES replied [eighteen folios], concluding by moving a vote of thanks to Mr. Rossiter, alluding in terms of praise to his services. He was sure the Association had been exceedingly fortunate in the selection of a chairman.

The vote was seconded and carried, and Mr. ROSSITER made the practical reply of inviting all present to have refreshments with him, and thus ended a red-letter day for Hastings chemists.

Wakefield Chemists' Association.

THE first annual general meeting of this Association was held on February 18 at the Victoria Temperance Hotel, Wakefield. Rules were adopted, and the following officials elected for the year. President, Mr. W. Pollard, Wakefield; Vice-President, Mr. W. R. Maud, Pontefract; Hon. Secretary and Treasurer, Mr. J. Judge, Wakefield; and committee, Messrs. J. H. Chaplin, T. C. Whaley, A. Green, and C. W. Duffin. The future meetings of the Association will be held on the first Tuesday evening in the month.

A resolution of sympathy was passed with the widow and family of the late Mr. Martindale.

Chemists' and Druggists' Society (Ireland).

THE annual meeting of this Society was held on February 19 at Belfast.

Mr. Robert Cambridge, J.P., presided. Mr. W. J. RANKIN (Hon. Secretary) read the report for the past year, which contained a summary of work done, and put forward the advantages of joining the Society.

The HON. TREASURER (Mr Samuel Gibson) then tendered his report, which showed a considerable balance in hand. Both reports were favourably received, and unanimously adopted.

The election of officers and committee was then proceeded with, the following being elected: President, Sir James Haslett, M.P.; Vice-Presidents, Mr. Thomas McMullan, Mr. William Jamison, Mr. John Watson, Mr. William Doig; Hon. Treasurer, Mr. Samuel Gibson,; Hon. Secretary, Mr. W. J. Rankin; committee, Messrs. Samuel Acheson, Henry Beckhouse, James Brown, James D. Carse, Robert Cambridge, John Frackelton, W. J. Gibson, James Gillespie, Alex. R. Hogg, Samuel Hill, Robt. A. Jamison, William Lyttle, John McClement, J.P., John McConkey, Samuel McDowell, Thos. W. Reynolds, James Richardson, John H. Shaw, Samuel Suffern, Jacob Walsh, John Tosh.

Mr. W. J. Rankin and Mr. Samuel Gibson were specially thanked for their services to the Society during the past year.

CONSULTING DRUGGISTS.

Mr. GIBSON called the attention of the meeting to the discussion on consulting druggists at the last meeting of the Pharmaceutical Council. It was then stated that druggists were turning their shops into consulting-rooms with the assistance of doctors, and that druggists were so improving their shops in appearances that they were imitating their pharmaceutical brother. He considered it was not illegal for a druggist to let a portion of his premises to a doctor; neither was it a crime to neatly fit up and arrange his business premises. If the Council desired work to be done that would benefit the trade as a whole, the Poisons Act might be more efficiently administered. At present the law was very carelessly looked after: only the other day a hawker called at his establishment offering for sale a packet of poison to kill rats which he found on analysis contained oatmeal, sugar, and arsenic. The compound was being vended openly.

The CHAIRMAN considered the remarks made at the Council reflected credit on the druggists. It looked well if they were fitting up their shops in better style.

Mr. MCCONKEY asked if it was not a fact that doctors have complained that the pharmaceutical chemists prescribe largely and have consulting-rooms also.

Mr. W. J. GIBSON stated that some time back he had got prescriptions made up in a large number of the leading medical halls in the city by assistants and apprentices who were unqualified, and that although he had reported these to the Pharmaceutical Council and had sent them full proofs, they refused to prosecute.

PROPRIETARIES AND PRICES.

A long discussion took place on these matters, and it was reported that the committee were co-operating with a committee of the Grocers' Association with a view to fix better prices for many of the articles kept by both.

STATE OF THE REGISTER.

Mr. S. GIBSON stated that he had recently received the Pharmaceutical Calendar for 1902, and was surprised at the many incorrect addresses given in it, especially in the druggists' section. For instance, he had gone over this with the Hon. Secretary (Mr. Rankin), and had found that the addresses of some ninety of the registered druggists in the North alone were incorrect, and several of the men were dead, while the register of chemists and druggists contained the names of over twenty who to their knowledge were now deceased. The register of pharmaceutical chemists also contained a large number of incorrect addresses, but not so many as the others. It seemed to him that there was neglect somewhere. He intended to write to the Council on the subject.

The CHAIRMAN said that no doubt they could help the Pharmaceutical Society with some of the addresses of those

Digitized by Google

in the North, but he believed that if a notice was published in The Chemist and Druggist with a list of names, it would have a good effect.

The Hon. Secretary said he had recently sent to the trade a programme of the Society's annual concert, and a large number were undelivered.

Bradford Chemists' Association.

A meeting of this Association was held at the Royal Hotel, Bradford, on February 25, to hear an address by Dr. Symes, who, at short notice, took the place of Mr. J. Harrison, of Sunderland. The President of the Society (Mr. Arthur Hanson) occupied the chair.

The Apprentices' Progress.

Dr. Symes said he proposed to deal with some of the features of the progress of a youth through his apprenticeship and assistantship. He felt there was some ground for complaint against the character of that general education which was a necessary preliminary to the pharmaceutical education. Whilst the richer classes and the poor were well provided for, there was great need of a better middle-class education at a reasonable charge. This should give the youth opportunity to produce a certificate of a reasonable general education before he entered upon his apprenticeship. If he produced this certificate and entered on his apprenticeship at the age of 16, he would come to his work with the habit of study unbroken, and that would be of great advantage to him. After that stage he thought it was a great misfortune that the Qualifying examination was not divided. (Hear, hear.) It was important to a youth that he should have something definite to look forward to at a reasonable time in advance, and for this reason it would be a great advantage if the student could take the first part of the Qualifying examination at the age of 19. If a youth knew he would not be examined until he was 21, there was a liability to break the continuity of the study, and that told against his chances of successful and complete work. His own opinion was that it did not need a new authority for them to divide the examination, but that it could be divided under the present by-laws. The Act directed the Pharmaceutical Society to conduct an examination, but did not state how that examination was to be conducted. In fact, at present the examination was in many cases divided by a few days. Although he knew of notable cases in which men had accomplished much without the assistance of a school of pharmacy, he recommended all to go to such a school, as he attached great value to systematic forms of study. In regard to the question of a curriculum, he thought that there were now a great number of good schools up and down the country which could be utilised if the time came when they were in a position to enforce such a measure. There was a tendency, however, in present discussions to mix up the questions of the division of the examination and the establishment of a curriculum, and he thought that this ought to be corrected, because whilst they were mixed their was danger of their being told that both were impossible under the present powers. He hoped in the future to see more students going in for the Major examination than one had been accustomed to see in the past. Proceeding to speak of the commencement in business, he regretted the modern tendency to go in for some experience at a store before a man commenced on his own account. That was simply feeding the enemy, and, though it might not appear to the young man in that light before he opened for himself, he would find afterwards that that was just the sort of thing which kept the shops of his most dangerous competitors going. Prices, like hours of labour, were largely influenced by the sort of neighbourhood in which chemists were placed, and, speaking generally, he thought that chemists did not attach all the value that they might to their time and experience and individuality. There were ways of treating these as legitimate reasons for extra charges, such as for the supply of articles in the night. A joiner using a shilling's-worth of wood and threepennyworth of nails at a job, was much better remunerated for his time than the qualified chemist was. His experience was that people were always willing to pay reasonably for any service when they understood the nature of the service. The appointment of the Poisons Committee he looked upon as a sign of degeneration on the part of the Government, who had appointed this committee at the instigation of a small number of persons who sought their own selfish benefit, only to see whether it was not possible to break down the barrier which prevented any huckster from selling poisons. There was no need for such a measure, because there were plenty of chemists within the reach of everybody. It might be, however, that they would yet be called upon to exert themselves in opposition to movements of that kind, and he trusted the Pharmaceutical Society would have the support of the Bradford Association.

A vote of thanks was awarded to Dr. Symes.

Plymouth Chemists' Association.

The members of the Trade Section met on February 25 to discuss the recent raid made by the Inland Revenue authorities upon unstamped preparations retailed by chemists in the Three Towns. A committee was formed to discuss what steps should be taken to prevent the persecution to which members had been subjected. The committee were asked to communicate with all members whose labels had been considered liable to stamp duty, and the hon. solicitor is to be requested to express an opinion upon labels which are of a doubtful nature. The matter is to be carefully discussed before any action is taken.

Cardiff Pharmaceutical Society.

A meeting was held at the Park Hotel, on Wednesday, February 26, Mr. Robert Drane presiding. The principal business was the consideration of the communication from the federated local pharmaceutical associations.

Mr. A. Hagon proposed the adoption of a compulsory curriculum, which Mr. W. R. Hopkins, of Barry, seconded, and the resolution was carried. The division of the Minor did not prove so keen a subject for no matured opinions on it were expressed, and the former resolution was rescinded, it being decided to defer consideration of the whole matter.

The President said a proposition had been made to them by the authorities of the South Wales University College with reference to the commencement of

Pharmacy Classes,

but he did not think it was workable. They were required to find twenty pupils desiring to study pharmacy in classes originated and conducted by the College, which of course meant real education, and not cramming. These classes would extend over a considerable period, and a fee would be charged of 15*l.* per annum, payable in advance. If they could not find twenty students, they would have to guarantee a sum equivalent to the fees received from that number. The question was, Could they do this? At Owens College, Manchester, they had only twelve students, and was it at all likely that they would be able to do better than this in South Wales? Already there were certain technical classes held in connection with the College, at which subjects were taught in which their assistants were concerned, and for his own part he thought that a very slight modification of them would render them sufficient for their purposes.

After some discussion, Mr. A. Hagon proposed that the matter be referred to the Educational Sub-Committee, which was seconded by Mr. R. Mumford, and carried.

Mr. R. Mumford was nominated for the office of Divisional Secretary of the Pharmaceutical Society.

Public and Poor Law Dispensers' Association.

A general meeting of the Association was held at the St. Bride's Institute, Ludgate Circus, E.C., on February 26, at which Mr. W. Duff presided. The Chairman referred to the obligation the Association owed to the trade Press generally; and a vote was passed of condolence with the widow and family of the late Mr. Wm. Martindale. The President further stated that, at a meeting of the Executive Council, it had been decided, as a means of widening the scope of the Association, to compile a register of all dispensers working at public or poor-law institutions in the United Kingdom. He also intimated that it was intended

Digitized by Google

to hold a smoking-concert on March 12, and that Mr. A. C. Wootton had consented to take the chair.

Mr. Welford then read a paper on

The Preparation and Preservation of Dispensing Solutions.

Normal solutions, said Mr. Welford, should be so prepared that, while containing a definite quantity of the salt, they admit of ready calculation, uniformity being better than mere concentration. He deprecated the practice of labelling these solutions "1 in 4," &c., and suggested that they should be designated as containing 5, 10, or 15 gr. of salt in each fluid drachm. Referring to the necessity of having a plentiful supply of distilled water, the speaker said he had been unable to find a small but efficient still that would deliver a constant supply at a reasonable cost, without occupying too much space. An important factor in making dispensing-solutions is, said Mr. Welford, to ascertain the temperature at which the greatest solubility can be obtained. The desired temperature is that which results in a normal temperature when all the salt is in solution. For instance, 20 oz. potassium bromide dissolved in 80 oz. distilled water causes a fall of temperature of at least 20° F. If the water is, say, 56° F., and the temperature of the laboratory 65°—the temperature falling 20° on the salt going into solution—a simple calculation will show that 4 oz. of cold water and 20 oz of boiling water, in which the bromide is dissolved, when filtered and made up to the required bulk will be practically a normal solution. It is not advisable to make these solutions in very large quantities, as decomposition and fungoid growths may appear. He had found this method satisfactory in all cases of soluble salts, and even in the case of sodium and potassium bicarbonate it may be safely used. In the case of volatile and sparingly soluble salts he had found the method advocated by Mr. Miller, that of tying up the salt in a muslin bag at the top of a drying bottle full of water, to give more satisfactory results. In the case of salts that do not cause any great fall in temperature during solution Mr. Welford recommended a temperature for the solvent of not more than 20° F. above normal Referring to the difficulty—when using large quantities of the salt—of converting ounces of avoirdupois into ounces apothecaries' weight, the speaker pointed out that it was far easier to correct the error in the solvent than in the salt, and urged the necessity of occasionally testing the solutions volumetrically. For solutions of scale-preparations Mr. Welford advocated the addition of 5 per cent. of glycerin, for metallic salts a few minims of the corresponding acid, and for organic salts chloroform-water as a preservative. Mr. Welford showed an ingenious method of measuring quickly the required quantity of solution. Suppose, he said, the solution be 10 gr. to the dr., and 72 gr. were required, the nearest even measure would be 8 fl. dr., which would be 8 gr. too much. To the measure add, with a Hick's pipette, the equivalent, in distilled water, of 8 gr. of salt—viz, 48 m., and make up to 8 dr. with the solution. Dealing with centesimal solutions, the speaker pointed out that when, say liq. arsenicalis or liq. strych., is ordered it is generally in 3, 5, or 7m. doses. To measure accurately in an ordinary minim measure 18 or 36m. is impossible, and again the pipette comes in useful. If, however, 2 oz. of liq. arsenicalis is diluted with distilled water to measure 20 fl. oz, the doses would in every case be an even measure. Mr. Welford urged upon his hearers the great importance of working systematically and accurately in their dispensing.

An interesting discussion followed, some of Mr. Welford's methods being thought not practicable for general dispensing, and the meeting terminated with a vote of thanks to the reader of the paper.

Chemists' Managers' and Assistants' Society.

A meeting of this Society was held in the Horshoe Hotel, Tottenham Court Road, on February 26, the President (Mr. C. E. Pickering) in the chair. The Chairman announced that owing to the inability of Mr. R. E. Wright to be present to deliver his address as announced, Mr. Cullwick had stepped into the gap, and at very short notice had prepared a paper on "Apprentices and Apprenticeship," which he read. Mr. Cullwick said the inducement held out to parents for their sons to be chemists is so small that it is most difficult to get an apprentice that will be any good. Discussing the question of how to improve the position of an apprentice, he thought the Pharmaceutical Society had made a great mistake in giving up the conduct of the Preliminary examination, because it gave the apprentice and the parents the idea that the successful candidate was enrolled on the books of the Pharmaceutical Society as a future chemist. The Preliminary examination should be altered, for at the present time the apprentice is taught no business methods, such as bookkeeping, &c. He is therefore handicapped in competition, and is not in a position to take his stand as a first-class trader. Mr. Cullwick's suggestions were that the Preliminary examination should be so altered to include bookkeeping and accounts, that modern languages should be omitted, and that the Minor examination should be divided so that the apprentice could pass some of the subjects during his apprenticeship and the remaining subjects after he had turned 21 years of age. He was likewise of opinion that it should be made compulsory for an apprentice to pass the Preliminary before being indentured.

Mr. Cullwick's views were unanimously endorsed, and a resolution was passed that he place those views before the Council of the Pharmaceutical Society as a recommendation from the Chemists' Managers' and Assistants' Society.

The Chairman afterwards announced that Mr. Gordon had resigned the secretaryship of the Society, and it appeared to be the feeling of the meeting that Mr. T. Patterson Holt, who acted as Assistant-Secretary of the Chemists' Assistants' Union, should be appointed in his stead.

Medical Gleanings.

Ethyl Chloride

is recommended by Dr. J. Mackie as an anæsthetic (by inhalation) in nasal surgery. The local action of ethyl chloride causes anæmia of the nasal passages, and so a practically bloodless operation results. The operator, however, needs to beware of violent hæmorrhage which may ensue when the anæm'a passes off.

Sweating Hands.

Dr. W. H. Brazil writes to the *British Medical Journal* that the following treatment for sweating hands yields gratifying results:—

Formalin.	...	...	...	...	℥ss.
Aq. rosæ ad	...	...	...	...	℥viij.

M. Ft. lotio.

Sig.: To be applied once or twice a day with a piece of lint and allowed to dry

A New Aid to Diagnosis.

Dr. Alexander Ogston describes in the *Lancet* a method he had devised of taking the freezing-point of the blood and secretions so that the data may be used as an aid to diagnosis. So long as the blood is healthy and has its effete constituents adequately eliminated it retains its normal freezing-point, −0·56° C., or within $\frac{1}{100}$° of that figure, varying from −0·55° to −0·57°, but if elimination becomes defective the freezing-point sinks to −0·58°, −0·60°, or even to −0·71°. Cryoscopy, it is thought, will be of service in indicating otherwise undetectable disease of the liver.

Carbolic Antidote.

Reasoning from the fact that caffeine is added to phenacetin to prevent respiratory and circulatory depression, Dr. G. A. Ferraby tried hypodermic injections of caffeine in a case of carbolic-acid poisoning. The patient, a young man, was deeply comatose and markedly cyanotic, but a hypodermic injection of 2½ gr. of caffeine dissolved in water with the aid of sodium salicylate improved his condition in about an hour. After another injection the patient recovered consciousness and was able to speak. The stomach had previously been washed out, but Dr. Ferraby thinks the caffeine had a considerable influence in combating the tonic effects of the phenol and cresols absorbed.

Westminster Wisdom.

(By our Parliamentary Representative.)

Tuberculosis Inquiry.

I understand that the Government intend to ask Parliament to vote about 14,000*l.* for the work of the Tuberculosis Commission.

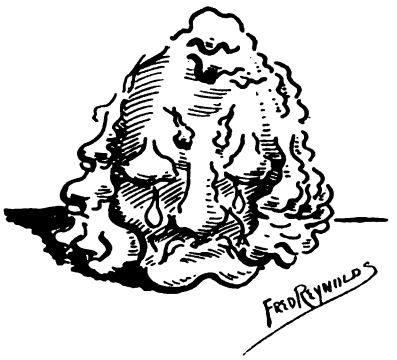
The Medical Bill.

The Medical Acts (Extension) Bill was down for second reading on Friday, February 21, but supply occupied the whole time. The Bill now stands for March 11.

Cost of Preparing Government Lymph.

Some interesting particulars in regard to the National Vaccine Department of the Local Government Board are given in the Civil Service estimates, which have just been circulated amongst members. The cost of the establishment for the forthcoming year is put at 5,536*l.*, an increase of 1,046*l.*, but, in addition, there are incidental expenses which are estimated at 5,540*l.*, against 4,625*l.* for the year now ending. In connection with the laboratory for the supply of glycerinated lymph, the chief bacteriologist receives 600*l.* and two assistants receive 614*l.* between them. Two hundred pounds is put down as allowances for the vaccination of calves; 269*l.* for a clerk; 246*l.* for his assistants; 520*l.* for laboratory assistants; 117*l.* for laboratory boys; 16*l.* for cleaning; and 1,000*l.* for contingencies The incidental expenses contained in the estimate are made up as follows: purchase of tubes and other apparatus, 650*l.*; supply of calves, 1,600*l.*; keep of calves, 650*l.*; veterinary fees, 240*l.*; sundries, 400*l.*; and other contingencies, 2,000*l.*

Arsenical Poisoning Commission.



During the next financial year the Commission on Arsenical Poisoning will spend 600*l.* on scientific investigation. Since the Commission was appointed in February of last year, it has held eighteen public sittings, and examined fifty-one witnesses. *Ad interim* recommendations were made in July for action in respect of risk arising from poisoning by arsenic in beer, but in regard to other matters, chemical, medical, technical, and administrative, the Commission has found it necessary to seek for further evidence, and to institute chemical and other inquiries. The analysis of foods is one of the subjects that will be specially dealt with.

The Midwives Bill.

The measure to secure better training for midwives was the subject of a full-dress debate in the House of Commons on Wednesday, February 26. One curious feature was the cleavage of opinion on the subject amongst the medical members. Sir Michael Foster and Dr. Farquharson cordially supported the Bill, while Sir Walter Foster, Sir John Batty Tuke, and others offered strenuous opposition; but those who raised objections readily admitted that something required to be done to check the evil arising from the practice of unqualified and ignorant women. In the end the second reading of the Bill was agreed to without a division, and the Bill was sent to the Grand Committee on Law, where the details will be threshed out.

The Income-tax Adjustment Agency (Limited), 9 Poultry, London, E.C., wishes to remind chemists and druggists that many persons fail to recover income-tax overcharges through not lodging their claims in time. No claim for repayment of tax deducted from rents, dividends, annuities, &c., in respect of the year ended April 5, 1899, will be allowed unless they be lodged before April 5 next. Where the income has been received and tax paid, a claim can now be made for four years. The agency will advise any readers gratuitously whether they can make a claim for repayment of income-tax, on their sending full particulars of their incomes and a stamped addressed envelope.

Things that Happen—Sometimes.

Asafetida Lachrymosa.

As on the wharf I lie,
Distilling fragrance round,
Those cruel drug-men try
My probity to sound.

With murderous-looking blade
They cut, and hack, and hew;
They bang me with a spade,
And scan my fracture through.

Then Umney with his "ash"
Corroborates their fears;
Oh! why left I my "Bunder Abash"?
No wonder I'm in tears!

A NEW SHAVING-PASTE.

Mr. Edmund White recently published in the *St. Thomas's Hospital Gazette* an outline of a proposed scheme for applying aseptic principles to the barber's duties in the hospital. The scheme has proved very satisfactory in practice, but a shaving-brush capable of sterilisation was wanted to make the scheme complete. In the February number of the *St. Thomas's Hospital Gazette* Mr. White returns to the subject. He says: "A little consideration will show that in shaving it is necessary to support the hairs, so that the razor may cut through them transversely, and at the same time to moisten or lubricate the surface of the skin so that the outer layers of the epidermis may not be too freely removed. . . . Numerous trials were necessary in order to arrive at satisfactory results . . . and, finally, an emulsion of paraffin wax, melting at 55° C., was adopted. This was prepared with 25 per cent. of wax and 2 per cent. of tragacanth, the wax being melted and mixed with the tragacanth previously made into a mucilage with some of the water. The addition of a little stearin or lard renders the emulsification of the wax easier, for some reason which cannot readily be explained, while about 10 per cent. of alcohol makes the preparation more agreeable to use. The fatty odour of the preparation may be covered by the addition of a half to 1 per cent. of lavender oil, and the finished product then appears as a thick white cream. In use a small quantity is rubbed over the area to be shaved and the razor immediately applied. As the water in the emulsion evaporates, the particles of wax previously distributed in the emulsion become coherent and fill up the depressions in the surface of the skin from which the hairs arise, thus forming a mechanical support during the passage of the razor. The quantity required is very small, one ounce being sufficient for shaving the face about six times."—*The Lancet.*

Germany's Foreign Commerce in 1901.—According to the Imperial Bureau of Statistics the total bulk of German exports last year was 32,363,000 metric tons, a decrease of 318,252 tons as compared with 1900, but 1,960,000 tons more than the exports of 1899. But the important fact is that, notwithstanding the low prices at which some German merchandise was supposed to have been sold for export last year, the total value was 4,759,407,000m., a net increase of 6,806,600m. over the exports of 1900, and 390,998,000m. over those of 1899. This means simply that the proportion of valuable articles exported last year had increased rather than diminished. The increase lay principally in iron, machinery, chemicals, and colours.

Observations and Reflections.

By Xrayser.

We get what we deserve,

at all events in the way of legislation. It cannot be said that as a body tradesmen or their assistants have shown any desert worth mentioning of the early closing legislation which Lord Avebury has so patiently and persistently advocated for them. An immense majority of them are in favour of his measure. They would like to see it enacted. They do not mind signing a petition in support of it. That is all. When it is thrown out by a majority of noble lords, they are sorry, and pass on. Is that the way to get anything from Parliament? Ask the Irishmen, the dockers, the match-girls, the teetotalers, the anti-Church-rate, the anti-vaccination, and the anti-vivisection people. These classes have all been in desperate earnest, and Lord Hardwicke would not propound his banalities in reply to their arguments. He would be thinking of his windows.

Lord Avebury

would certainly have cornered the opposition and the Government more effectively if he had adopted the scheme of provisional orders which Lord Salisbury suggested, and which the Committee last year recommended. The Prime Minister was not perhaps actuated by a passionate desire to help forward Lord Avebury's proposals, but he formally agreed with the report of the Committee intimating that legislation was necessary, and indicated what he thought was the best method of procedure. Probably he honestly believed it would be wise to make the way of the early-closers difficult. That this would be the effect of his plan was no doubt the opinion of Lord Avebury; and at first I was glad that the author of the Bill had revolted. But it is wise to hold a candle to great men sometimes.

Sir Charles Dilke's Bill

has been referred to as the only present hope for legislative action in regard to shop hours now left. That we need not concern ourselves about. Sir C. Dilke's Bill is absurdly impracticable, and might have been introduced as a burlesque of Sir John Lubbock's. It applies to all trades, and all localities throughout the United Kingdom; fixes 10 P.M. as the latest hour at which any shop can ever be kept open, and that extent is only allowed once a week; 1 P.M., 7 P.M., and 9 P.M, are to be the latest closing hours on other days. The intelligence displayed in drafting the Bill may be gathered from the way in which the exemption in regard to the sale of medicines and medical or surgical appliances out of hours is provided for. They may only be thus sold in shops "kept open solely for the sale of such articles." This would bar nine-tenths of the drug shops of the country.

Analysts, Inspectors, and Magistrates

enjoy the sweet simplicity of the B.P. standard theory, and it is an expensive process to dislodge it from their minds. The burden of this duty is falling largely on the Chemists' Defence Association. The difficulty of maintaining the theory intact was well illustrated by the cases reported last week. "Not according to B.P." is an easy formula when the defendant submits without a word, and in such cases the Bench is duly shocked and administers the usual lecture. But the prosecution scratches its head when asked if starch, sugar, soft soap, turpentine, beeswax, sherry, lard, cotton wool, figs, prunes, india-rubber, and brandy must always be in strict accordance with the Pharmacopœia description. The knot is generally cut by the reply that this must be so when the articles are sold by chemists; but the simplest minded magistrate is disposed to buck against this contention.

In the Matter of Beeswax

the Kent County Council adopted that method of construction in all its nakedness. They instructed their inspectors to buy beeswax from chemists only, because the article did not become a drug until the druggist had handled it. Then it was a drug, no matter what purpose it might be sold for, and must consequently satisfy the B.P. tests. The judgment of Mr. Justice Phillimore in the mercury-ointment case a year ago has encouraged this view, but even he did not commit himself to any sweeping assertion that the Pharmacopœia was an invariable standard. He only said it was at least *prima facie* evidence. In the equally authoritative White *v.* Bywater case the High Court insisted that even when such a preparation as tincture of opium is asked for evidence should be given that it is reasonable that the purchaser should expect to get the B.P. tincture. No pharmacist would deny the weight of the Pharmacopœia as evidence, but, if it is to be accepted as an invariable standard, he is justified in demanding that a new one shall be compiled as soon as possible, and that he shall have a voice in its compilation.

The Bradford Charms,

which Mr. C. C. Bell deciphered and wrote about in the Winter Number, consisted, according to him, of a good deal of gibberish. Tetragrammaton and hora and fiat were about the only intelligible words they contained. Now Mr. John Hobson Matthews, of the Town Hall, Cardiff, writes to *Notes and Queries* to say that two of the most hopeless looking words are fairly good Welsh. "Naadgras Dyradgras," if spelt "Na ad gras, Dyro dy ras,' would mean "Prevent not grace, give thy grace." The Romans called everybody outside their empire a barbarian; our classical scholars go one worse than that by ticketing words from the language nearest to their own, gibberish.

Lapis Infernalis

is a designation which ought to be cleared up. When Mr. Bell wrote about it on February 8 I was surprised that there was any doubt about its meaning. I always thought lapis infernalis was lunar caustic, nitrate of silver. Why I always thought so I cannot say. Most of our so-called knowledge has probably got into us, and is held in this vague manner. Mr. Bell gives evidence that the name has been frequently applied to caustic potash in this country, but I have found no foreign dictionary or reference-book which shows any doubt about its meaning nitrate of silver. In German "Höllenstein," which is an exact translation of lapis infernalis, is a common name for nitrate of silver. Both lunar caustic and lapis infernalis are alchemic terms, as Mr. J. P. Gilmour has pointed out; we know how the former acquired its designation, but I am not aware if any explanation of the origin of the latter has been given. The alchemists used the term lapis very lavishly. Blood they called lapis animalis. Then they had a lapis divinus, which was a fused compound of sulphate of copper, nitrate of potash, and alum, with a little camphor. Why that was called divine and the lunar caustic infernal is a pretty puzzle. But it is not difficult to guess how caustic potash usurped the reputation of the original owner of the title. A lapis infernalis mitigatus was introduced into medicine, some of the silver salt being supplanted by nitrate of potash. The apothecaries in the times of the Stuarts probably found it as advisable as it was economical to mitigate the lapis more and more, until at last they mitigated all the silver and nitrate out of the stick.

Editorial Comments.

Section 17.

The Council of the Pharmaceutical Society of Great Britain has never been eager to institute proceedings against anybody under Section 17 of the 1868 Pharmacy Act; indeed, the official list of important cases in superior Courts contains two decisions under the section, and the proceedings in both instances were instituted by individuals unconnected with the Society. In the case decided in the Edinburgh High Court last week, and now reported fully on page 348 the Society felt it necessary to contest the Glasgow Sheriff's ruling that the Registrar of the Society has no title to sue under the section, and three law Lords have decided that the Registrar has as much right as anybody else to take proceedings in Scotland, with the sanction of the Procurator-fiscal (Public Prosecutor), who has a sort of lien on actions of this kind in Scotland. The case has special interest in several directions, and we submit the points for the consideration of the trade generally. First it may be noted that during the past two years or so the Council of the Society has somewhat relaxed the ancient reserve in which Section 17 was regarded as a mere police affair. Prosecutions have been instituted in England and Scotland against chemists and druggists and medical practitioners for their failure to comply with the provisions of the section either as regards labelling or entering sales of Part 1 poisons in the poisons-book. The labelling-cases have chiefly been against chemists and druggists, and mainly for neglecting to put a specific address or the name of the seller upon the labels, while medical practitioners have neglected, as in Dr. Steele Smith's case (assuming the charge against him to

Digitized by Google

be proved, which has yet to be done), to enter sales. The Council has apparently in all the cases endeavoured to establish a principle and, perhaps, to give a general warning, rather than to bring evildoers to justice. But now arises the second point, so forcibly emphasised by the Scotch court. Any individual has power to prosecute for offences of Section 17, but "the Registrar of the Pharmaceutical Society is the prosecutor in such cases intended by the Legislature [and] . . . the prosecutor according to the tone, meaning, and only legitimate reading of the Act is the Registrar of the Pharmaceutical Society." These are Lord Young's words, and although Lord Pearson would not go so far, nor, apparently the Lord Justice Clerk, it transpired in the course of the hearing that the Lord Advocate of Scotland is of the same opinion, Procurators-fiscal having been instructed to leave the enforcement of Section 17 to the Pharmaceutical Society. That being so, a considerable responsibility rests upon the Society, and it is difficult to see how it can, as at present constituted, properly carry it out. It may prosecute a member, such as Mr. Reece, here, or a doctor, like Dr. Steele Smith, there, but if it were to attempt to extend its energies to cover the ground of possible infringement it would soon find its organisation inadequate and its interests conflicting. Since the 1868 Act was entrusted to it, and especially during the past twenty years, the work of the Council of the Society has been steadily increasing on the public side, so that now the greater part of the work done by the Council is not directly connected with the Society as a private and voluntary body, but relates to the public safety and the statutory interests of registered chemists and druggists. The present condition of the Council, and the somewhat involved system of committee-working under which its business is done, leads, in view of the Section 17 responsibilities, to the suggestion, Has the time now arrived when the statutory functions of the Society, as represented by examinations, registration, and infringement of the Pharmacy Act, should be entrusted to a Board of Pharmacy distinct from the Pharmaceutical Society? That Board would not necessarily be a new name for the old article, for although representatives of the Pharmaceutical Society would be upon it, and the Pharmaceutical Society's organisation and premises might be utilised for its purposes, it should consist chiefly of direct representatives of chemists and druggists elected on the territorial basis, members nominated by the Pharmaceutical Society and others appointed by the Privy Council. Such an independent and official body, with no other interests to regard than the law which the members are called upon to administer, would have far greater influence in affairs of State than the Council of the Society, which so often has to meet the charge that it works in the interest of its members.

A Pharmacy Degree.

Mr. J. F. Tocher's scheme, for providing pharmaceutical students in Scotland with the opportunity of studying at the Universities under the benefits of the Carnegie Trust, demonstrates once more the superior position of Scotland in educational matters. The scheme has not been formulated without reference to the University authorities, who, indeed, seem desirous of providing pharmaceutical instruction. In that regard a distinct advance has been gained, such, indeed, as the late Mr. G. F. Schacht spent many years in striving to obtain, but never quite reached in actuality. Hitherto all efforts to secure University recognition for pharmacy have been, in the main, on paper, and although the University of London has established a department of pharmaceutics, the most sanguine pharmaceutical educationalist has not deceived himself into the belief that the University desired to give a helping hand to pharmacy. Owens College, an integral part of the Victoria University, has provided a pharmaceutical course, but no University degree or even University encouragement. These facts throw the significance of Mr. Tocher's successful efforts into relief. The material advantage which the Carnegie Trust gives to students resident in Scotland is of secondary importance elsewhere; in fact, the parts of Mr. Tocher's contribution of general incidence are the curriculum of study and the degree of science in pharmacy. Both are worthy of careful and favourable consideration. The curriculum is well thought out, and workable. Under it, existing schools of pharmacy and their teachers would be recognised, subject to their satisfying reasonable requirements. The degree would be a post-Minor one, open only to registered chemists and druggists, and it would in all likelihood supplant the Major. There is no reason that we can think of why chemists and druggists should not get a degree if they want it. Many have obtained degrees in the past, some of them remaining in pharmacy to its advantage. Others, having specialised along other than pharmaceutical lines in the graduating process, have gone elsewhere. If the specialising were confined to pharmacy there would be a better chance of keeping these superior men amongst us to do the higher class of work outlined by Mr. Tocher. Some zealous educationalists may fall into the mistake of urging that the scheme, or something like it, inclusive of a compulsory curriculum, should be applied to all who wish to qualify under the 1868 Act. Therein lies error. The object of the 1868 Act was not to provide highly-educated pharmacists (which was done by the 1852 Act) but men of a lower grade, and there are many reasons for saying that if the Pharmacy Acts qualifications are levelled up to a uniform grade, the natural force of circumstances will create a lower one, and probably not a Pharmaceutical Society qualification at all. Those who advocate higher education with its concomitants are apt to forget the public's requirements, and so far as the retail drug-trade is concerned the greater proportion of it does not call for a University education or degree, but for "a certificate of competent skill and knowledge and qualification" (to quote the words of the 1868 Act) granted on "examination such as is provided under the Pharmacy Act [1852] for the purposes of a qualification to be registered as an assistant." The Major examination provides ample scope for exercise upon it of compulsory curriculum ideas and the like, which are out of place in regard to the Minor certificate.

Glasgow Doctors' Shops.

Under a sensational heading "a special correspondent contributed an article to the *Glasgow Evening Times* of February 18, which has given rise to a lengthy correspondence. The article was superficial and misleading, and appears to have been based largely on statements made by medical men "who have large connections in working-class districts." It contained such misstatements as these:—"The Pharmaceutical Society are prosecuting every doctor who has not a qualified assistant in charge of his shop during his absence"; and "If the unqualified dispenser employed by a medical man is fined for selling a scheduled poison, the Medical Council strikes his name off the Register." One of the practitioners interviewed was quite a magazine of misinformation. For example, he said accidental poisonings are not more frequent where unqualified dispensers are employed, because qualified men are as liable to blunder. Again, "unqualified doctors' unqualified dispensers are more experienced than chemists' assistants, for they have usually served five years with a chemist, or are medical students

Digitized by Google

who have had much more systematic and effective instruction in materia medica and therapeutics than qualified chemists.' It is "pure cant" this man continues, for the Pharmaceutical Society to pretend that in insisting upon the qualification of the assistant it is seeking the protection of the public. The doctor keeps open shop, not because it is a source of income, but rather to supply the public with cheap advice and medicine. Another obliging medico "practically corroborated these views," but went off at a tangent to denounce the abuse of the free-dispensary system, and the loss it inflicts on struggling practitioners. The concluding part of the article dealt with assistants' grievances, which are represented as consisting chiefly in the increased stringency of the examinations, and the expense of class and examination fees. The article has provoked a brisk but not very instructive discussion. "Chemist" advises those who imagine that there are still fabulous trade-profits, to study the wills of deceased chemists in The Chemist and Druggist. "Only a Pharmaceutical Chemist" disproves the assertion about the superior efficiency of doctors' dispensers, and pricks the bubble of the doctor's shop as a benevolent institution, as does "Doctor and Chemist Too," who points out that although a patient gets advice and medicine for 2*s*. 6*d*. the first time, he may go on indefinitely paying that amount for repeats of the medicine alone. "Non Patent" makes capital of the fact that few chemists employ qualified assistants, but gets out of his depth in the reckless untruth that "the Pharmaceutical Society makes no effort to capture any of its members whose unregistered assistants or apprentices sell poisons." Other correspondents, including Mr. J. P. Gilmour, are continuing the discussion, and after all is over, we daresay, the doctors' shops will still be there and each side will be convinced of its right.

DRUGGING RACERS.

In the course of a lecture delivered at Newcastle last week, Professor Oliver, M.D., stated that not only is the intemperate use of alcohol one of the social vices of to-day, but the tendency to the self-administration of drugs in excess is increasing. People are resorting more and more to taking, on their own initiative, antipyrin to relieve headache, chloral and sulphonal to induce sleep, bitters to whet the appetite, pills to stimulate the liver, and other drugs to give staying power and temporary strength to the individual. This practice he condemns, but he says further that the administration of stimulants and pick-me-ups is not confined to the human race alone. Dogs and horses are frequently dosed with brandy and champagne before racing, and it is rumoured that cocaine also is employed. The deleterious effect of these things upon the constitution of man is eventually as marked in the decay of the animal, and he urged the racing public to so express its opinion as to put an end to what is not only a disgraceful trick, but a practice alike ruinous to the constitution of the horses and destructive of much that is best in horse-racing.

CELLULOID DANGER.

It should not be forgotten that celluloid articles are liable to take fire when exposed to a high temperature. This refers especially to badly-manufactured celluloid, and considering the almost universal employment of celluloid it is surprising that accidents do not more frequently happen. In the *Lancet* of February 22, Mr. C. V. Boys is mentioned by Professor Ogston as advising that smouldering celluloid should be sharply blown upon, and not squeezed in the hand as instinct at first suggests. Inventors have for some time been trying to discover something which, added to celluloid during manufacture, would render it incombustible, but with little success so far. This problem is one which chemists might usefully experiment to solve.

"SCIENCE AND EDUCATION."

This is the title of M. Berthelot's latest book, in which he has gathered together speeches and articles prepared by him for special audiences and readers. The author gives his views on the direction of human societies by science, also concerning the part at once conservative and evolutionist it plays in things moral, political, and economical. He especially insists on science being regarded as the base of morality and devotion. Its *rôle* as a necessity for popular education is also shown, which he considers extends to the material and spiritual order of things, the sole regulators of all activity. M. Bertholot also gives interesting summaries of the work of J. Bertrand, the mathematician, and Milne Edwards, the zoologist; of J. Decaisne and Naudin, the botanists; Brown-Séquard, the physiologist; and Mallard the mineralogist—all treating of problems relative to the origin and stability of animal and vegetable species and other questions of high scientific philosophy.

ULTRA-VIOLET LIGHT APPARATUS.

The cure of cutaneous affections by means of ultra-violet light is becoming popular, and doctors are exercising their ingenuity as to the production of the light in a convenient way. At a recent meeting of the Edinburgh Medico-chirurgical Society Dr. Turner exhibited an apparatus of the kind. Acting on a suggestion of Mr. Leslie Miller he had been comparing the ultra-violet radiation of a Tesla spark-gap with that of an arc light. His apparatus resembled that used by Dr. Hugh Walsham of London and Dr. Görl of Nuremburg, and consisted essentially of an induction-coil, a condenser, and a spark-gap of two or three electrodes. The ultra-violet radiation of this spark, as tested in his laboratory, was found to be of a higher order than that of an arc lamp, while the heat radiation is almost negligible. Owing to this latter property the light can be brought within an inch or within two inches of the skin with very greatly increased effect. After a number of experiments as to relative transparency and convenience Dr. Turner preferred to use pure rock salt as a compressing agent. The clinical results obtained had been remarkable, an exposure of only two and a half minutes being sufficient to produce a marked beneficial effect.

BUNKUM'S LATEST.

The facetious references which Mr. Drane made to the Cardiff Chemists' Association (*C. & D.*, February 8, page 227) were probably not taken seriously by our readers, but the substratum of truth is thicker than we thought at the time. Our attention has been drawn to an advertisement of "Elixir of Life" in a weekly publication, in which announcement is made of a "marvellous elixir of life discovered by a famous doctor-scientist that cures every known ailment." The next headline states that "wonderful cures are effected that seem like miracles performed—the secret of long life of olden times revived." The remedy was discovered "after years of patient study and delving into the dusty record of the past, as well as following modern experiments in the realms of medical science." The catalogue of complaints which "are easily overcome in a space of time that is simply marvellous" includes rheumatism, neuralgia, stomach, heart, liver, kidney, blood and skin diseases and bladder-troubles (these all disappear "as by magic"), and such simple things as partial paralysis, locomotor ataxia, dropsy, consumption, gout, scrofula, and piles are quickly and permanently removed. It is only fair to add that the remedy is not a British one; the free samples are to be sent from America. It may be that some cute Yankee has hit upon this dodge for compiling a directory of the most ignorant and simple people in Great Britain.

ITALIAN PHARMACEUTICAL EDUCATION.

The Italian Minister of Public Instruction has submitted to the Superior Council a new regulation for the schools of pharmacy. The suggestions are that the course of instruction will last four years. During the first two years general chemistry, botany, experimental physics, mineralogy, analyses, and microscopical analysis of drugs will be taught. In the last two years pharmaceutical chemistry, toxicology, and materia medica must be undertaken, while one year of practical pharmacy must be followed in an authorised hospital. Before going up for the examination for diploma in pharmacy, the candidate must pass in six subjects, general chemistry, physics, toxicology, materia medica botany, and pharmaceutical chemistry. The professional examination includes qualitative analysis and an oral discussion. To obtain the Laureate of chemistry and pharmacy another year's study is required, with zoology and geology as additional subjects. The Laureate examination comprises chemical analysis, the analysis or preparation of two pharmaceutical products, recognition of medicinal plants and drugs, an original Laureate essay, and an oral discussion of at least one hour. This regulation is meeting with great opposition in Italy, and it is said to be likely to hasten the ruin of pharmacy, instead of bettering its condition.

THERAPEUTIC LITERATURE.

Mr. J. D. Brown, librarian of the Finsbury Public Libraries, contributes an amusing paper to the *Library World* on the therapeutic uses of books. He divides therapeutic books into four classes:—

1. Books which may be used as agents for the specific mental disturbances, such as, for example, those which induce the condition known as the "Hump," or by such fanciful and pet names as the "Pip," the "Blues," or the "Sulks."
2. Books which have a curative value in cases of general physical debility, sometimes aptly indicated by such expressive phrases as "Out of sorts," "Run down," "Seedy," the "Horrors," &c.
3. Books which possess valuable therapeutic properties in cases of specific maladies like toothache, corns, water-brash, or flatulence.
4. Books which can be used as anodynes or stimulants for particular mental or psychological conditions.

Some of the best narcotics are furnished in the lists of "Best Books" drawn up by Lord Avebury and other professional "tasters," whose lists include such books as Plutarch's Lives, Gibbon's "Decline and Fall," Browning's "Poetical Works," and Bunyan's "Pilgrim's Progress." The Encyclopædia Britannica is also recommended, but it is important to use the ninth edition, as some of the earlier editions are really interesting. "Obiter Dicta" is an excellent cure for a cold in the head; although Hansard's "Parliamentary Debates" from 1870 to 1901, read in bed, is even more effective. Smallpox is an awkward disease to treat successfully by means of therapeutic literature, but it is quite certain that if a patient succeeds in reading through Baring-Gould's "Lives of the Saints" he will be out of danger before he reaches December 31 in the calendar.

For toothache there is only one effective cure. This is a dose of "Pickwick," taken as follows:—Procure a small-type edition of the "Pickwick Papers," a large tumbler of hot and strong whisky and water, a comfortable armchair, and carefully assimilate these ingredients before a bright fire. The patient will probably be quite oblivious of his toothache before Mr. Pickwick gets as far as Rochester.

This is a certain cure.

A Good Gift.—It was announced at a meeting of the United Breweries Company, Copenhagen, last week, that the Queen of England has accepted 1,000 bottles of the Crown malt-extract for distribution among the invalid soldiers in South Africa. Each bottle is inscribed "A gift from her Majesty, with best wishes for speedy recovery."

Trade Notes.

St. Jacob's Oil.—In the announcement in our advertising pages last week referring to St. Jacob's Oil, the price of the 1*s.* 1½*d.* size was wrongly given; it should be 10*s.* 9*d.* per dozen. The correct prices are given this week.

The executors of late Mr. William Martindale intimate that the business at 10 New Cavendish Street, W., in all its branches, will be conducted by his son, Mr. W. Harrison Martindale, Ph.D., pharmaceutical chemist, who for seven years has taken part in the management.

Daisy (Limited) have organised a series of competitions for prizes of 100*l*, in which "the chemist" will share to the extent of 25*l*. We have seen proofs of the scheme as it is graphically described in our advertisement section, and advise our subscribers not to miss the pages. Daisy painting-books are to be the basis of the awards.

Beecham's Pills.—An article on the leading "proprietary" in *Science Siftings* attracted our attention, and the following is the part of it that most interests our readers:—

We have examined this special medicament, and find it contains carefully selected carminative, bitter, and purgative principles of vegetable origin. We have also perused some of the advertising literature associated with it, and even in view of the advertisement-writer's usual illustrative method we find nothing which cannot be substantiated.

Advertising Manualettes for Chemists.—Messrs. James Townsend & Sons, label and general printers, London and Exeter, are bringing out a series of manualettes (16 pages and a cover) for distribution by chemists to their customers. The first one is entitled "Hints on Chemical Cleaning," and has been compiled for Messrs. Townsend by Mr. A. C. Wootton. It deals with cleaning furniture, plate, ornaments and clothes, disinfection and notes on the chemicals employed. This is a particularly seasonable pamphlet and the publishers will send a copy to any of our subscribers who may apply to them at Little Queen Street, Exeter. Particulars as to the terms will be supplied, but we may state that the manualettes are sold in quantities from 250 upwards.

The Risk of Smallpox is forcibly illustrated by Messrs Charles Letts & Co., 3 Royal Exchange, London, E C, who issue a vest-pocket note-book, railway-ticket case, and card-case at 1*s.*, and letter-wallet at 2*s.*, all made of leather and each containing a General Accident Assurance Corporation's coupon for 100*l* to anyone who dies of smallpox, or a weekly allowance during illness of five weeks. As the articles are good value at the selling-price, one is almost forced to the conclusion that the risk of taking smallpox is trifling, but Messrs. Letts tell us that they have contracted with the Company for a million coupons, and they take the greatest risk, for doctors may take advantage of the offer, in fact, there is no limitation as to individuals. The idea has caught on, for two City stationers between them are selling nearly 4,000 a week.

The managing directors of Messrs. Parke, Davis & Co. of Detroit and London, have, with the approval of the stock-holders, just carried out a project under which four thousand $25 shares of the stock in the company, the market price of which is $70 per share, have been offered to branch managers, superintendents, foremen, and other departmental chiefs, who have been fifteen or more years in the service of the house, at $55 per share. This price is based on inventory valuation, on actual inventoried assets, such as manufactured stock, buildings, real estate, machinery, fixtures, and the like; it does not embrace any consideration for reputation, goodwill, established business relations, future prospects, or present profit-earning power. Provision is made for such veterans as have not the necessary funds available, whereby the house offers to arrange with one of the financial institutions of Detroit for loans at 5 per cent. Much satisfaction has been expressed by the participators, who consider that it means copartnership purchased on extremely generous terms, while the management reasons that a great house is simply the sum of its executive units and that its managers, with a stake in the house, will work their best for its good.

Legal Reports.

Pharmacy Act (1868).

Prosecution under Section 17.

We briefly reported last week that the Justiciary Appeal Court of Scotland had decided that the Registrar of the Pharmaceutical Society has power to prosecute offences under Section 17. The case arose through Dr. Steele Smith, of Glasgow, objecting before Sheriff Fyfe there to the Registrar's title to sue him under the section for selling Fellows's syrup without entering the sale in the poison-book. The Sheriff sustained the objection because he had ruled to that effect in 1895. (See *C. & D.*, December 21, 1901, page 1004.) The High Court has now sent the case back to the Sheriff for proof, but we give below the gist of the legal argument, which is of special interest because it shows Lord Young in the guise of what we may for briefness call "the chemist's friend." On an occasion several years ago (now historic) he appeared to be quite the opposite of that. The Judges on the Bench on February 20 were the Lord Chief Justice Clerk (Sir John H. A. Macdonald, P.C., K.C.B., F.R.S., &c.), Lord Young, and Lord Pearson. The counsel were Mr. Edward T. Salveson, K.C., and Mr. T. B. Morison (for the Society), and Mr. McRobert for Dr. Steele Smith.

Mr. Morison opened the case, arguing that the Registrar is entitled to prosecute under Section 17 on two grounds—first, that the statute authorises him, and, second, he has an interest to recover penalties apart from express statutory title, and if he do so, as here, with the concurrence of the Procurator-fiscal, that of itself is sufficient to give him a title to prosecute. He referred to the penal provisions of Section 15, in that connection explaining that regulations regarding keeping and selling poisons are (1) those made by the Pharmaceutical Society, and (2) those provided by the Act in Section 17. He held that the way in which the words "made in pursuance of this Act" in Section 15 ought to be construed as giving right to recover all penalties for offences, either for breaches of the regulations made by the statute itself, or for breaches of the regulations made by the Society under the Act. And the reason why the penalty was repeated in Section 17 was in order that there might be an additional penalty of 10*l.* provided for a second offence.

In answer to Lord Young, Mr. Morison said the Registrar was a statutory officer of a statutory body, and he had not only an interest but a public duty to prosecute.

Mr. McRobert submitted that the Sheriff was right in dismissing the complaint under Section 4 of the Summary Jurisdiction Act, where no special provision is made for the recovery of penalties they may be sued for by the Procurator-fiscal of the jurisdiction.

Lord Young said the question here was not whether the Procurator-fiscal might have sued, but whether this other official might.

Mr. McRobert replied that the Registrar had neither an interest nor a title to sue. The Registrar's power as to the first fifteen sections was defined by reference to the 1852 Act, and offence under them was that of an outsider, infringing the privileges and rights of the Pharmaceutical Society.

The Lord Justice Clerk pointed out that in Section 15 it is declared an offence to fail "to conform with any regulations as to the keeping or selling of poisons made in pursuance of this Act," and Section 17 was one of them.

Mr. McRobert said that was not a provision made in pursuance of the Act.

The Lord Justice Clerk said it was a provision made in pursuance of the Act, of which Section 15 was a part.

Mr. McRobert said it must be some regulation made in pursuance of the Act, and not part of the Act itself.

Lord Young: A regulation made in pursuance of the Act is to be more favourably received than a regulation made by the Act?

Mr. McRobert replied that the Society could not make such regulations as those in Section 17.

Lord Young: You do not regard the provision as made in the public interest. It is just a provision, is it, for offences against the Society?

Mr. McRobert replied that Section 15 was partly in the public interest and partly in the interest of the Society, but Section 17 was wholly in the public interest.

Lord Young asked how a contravention of Section 17 was prosecuted in England.

Mr. McRobert said he did not know. He understood this was the first of the kind in Scotland. This was a case against a duly qualified medical practitioner, not against a chemist, and he understood there had not been such a thing heard of as a prosecution against a doctor.

Lord Young said that was not his question. Such a thing as a contravention of the 17th section must have been heard of in England, and if the person making the contravention was liable, by whom was such prosecution made in England?

Mr. McRobert said the law of prosecution was different in England from that of Scotland.

Lord Young: Very likely; but who is bound to act as prosecutor?

Mr. McRobert said he did not know the statutory law of England.

Lord Young: You don't know it. There is a private prosecutor, probably?

The Lord Justice Clerk: Lord Young is not asking as to the statutory law, but as to a matter of fact. In prosecutions under this Act, who has been the prosecutor in England?

Mr McRobert said he did not know, but the law on the point was different from the law in Scotland. There was a provision for prosecuting in Scotland.

Lord Young: I think you will find that was made for England too.

Mr. McRobert said that under Section 17 there were many cases with which the Phamaceutical Society had nothing to do at all, and that was the reason why their Registrar had not been given the power to prosecute.

Lord Young said if his question could have been answered that the Registrar was the prosecutor for contraventions of this Act in England, that would indicate that the Pharmaceutical Society had to do with it in the discharge of their duty to the public.

Mr. McRobert: I say the prosecutor in England is not the Registrar.

Lord Young: You do not know.

Mr. McRobert: And if the duty be upon any person at all it would be upon a person having an interest, and that would be the Society and not the Registrar. He read the preamble of the Act, and pointed out that that referred to the first fifteen sections, and that Section 17 had nothing to do with the Registrar.

Lord Young: But it has something to do with the public interest and the public safety, for which alone this statute exists.

The Lord Justice Clerk said he did not follow counsel when he said Section 17 had nothing to with it. Section 17 was an elaborate statement in regard to the matter referred to in Section 15, namely, sale of poisons.

Mr. McRobert said it included all chemists, and they were under the Pharmacy Act.

The Lord Justice Clerk said if he looked at Section 15 it referred to anybody, whether a licensed chemist or not, "who shall fail to conform with any regulation as to the keeping or selling of poisons."

Mr. McRobert pointed out that Section 16 made the first fifteen sections inapplicable to apothecaries, and Section 1 of the 1869 Act does the same for medical practitioners. This case was against a legally qualified practitioner who has passed an examination in pharmacy.

Lord Young: He is not subject to Section 17.

Mr. McRobert: No.

Lord Young: Then if he transgresses it he is subject to a penalty?

Mr. McRobert: I admit that.

Lord Young: Can you suggest anybody who is more suited as prosecutor in such a charge than the Registrar?

Mr. McRobert: I think he is a most unfit person.

Lord Young: Can you suggest anybody more fit?

Mr. McRobert: The Procurator-fiscal.

Lord Young: Of the Police Court?

Mr. McRobert: Of the Sheriff Court. What had the Registrar to do with cases like the present? Why he more than the Registrar of any other society? Why not the Registrar of the medical profession?

Lord Young: Or an officer of the Royal Academy. He has just as much to do with prosecutions for selling poisons to members of the public as the Registrar of the Pharmaceutical Society.

Lord Pearson: The Registrar of the General Medical Council.

Mr. McRobert: And there are the officers under the Food and Drugs Act. Why not one of these?

Lord Young asked if it would make it better in the interest of the party prosecuting, that the prosecutor should be the Registrar of the General Medical Council rather than of the Pharmaceutical Society.

Mr. McRoberts said he could not say, for it would cut both ways. His argument was that it would not be appropriate for the officer of a medical society to prosecute its own members for doing a wrongous act, and in the same way it would not be proper that an officer of the Pharmaceutical Society should prosecute one of its members for selling poisons. He submitted that the Sheriff-substitute was right and that the proper person to prosecute was the Procurator-fiscal in the Sheriff Court.

Mr. Salvesen replied on behalf of the appellant. He said this

Digitized by Google

was a question of some importance. He understood the Public Prosecutor of Scotland declined to take up cases of this kind.

Lord Young: I am not surprised.

Mr. Salvesen: Holding that it is the duty of the Registrar of the Pharmaceutical Society to prosecute. Of course, if their Lordships decided that he had no title to prosecute, it would be the duty of the Procurator-fiscal to do so.

Lord Young: All the Procurators-fiscal in Scotland, I understand, take that sensible view.

Mr. Salvesen: They have been instructed to take that view.

Lord Young: By the head authorities?

Mr. Salvesen: By the Lord Advocate until it has been decided that no other can do so.

The Lord Justice Clerk pointed out that all that was not part of the stated case. The question was whether the Act applied on the facts stated in this case.

Lord Young (to counsel): You merely made the observation to show that the question here is one of some importance?

Mr. Salvesen: That is the only reason why I made that remark. Counsel went on to give his interpretations of the sections of the statute and to cite cases bearing out his view.

Lord Young: If any one not a chemist sells poison he is liable to the penalty. However experienced the chemist may be, if he violates the provisions in Clause 17 by selling to a person he does not know without inquiring and without making a register of what he has sold, he is equally open to prosecution, and the question is whether there is one prosecutor for the one and another prosecutor for the other. There are ridiculous statutes, no doubt, but you could not imagine one more ridiculous than that.

Mr. Salvesen said it was just what he was going to point out, and he submitted it was not a conclusion the Court would readily reach, there being no express exclusion of the Registrar to prosecute under Section 17. He thought the words in Section 15 might be quite well read literally and technically, and construed so as to apply to the regulations made in pursuance of the Act. He then referred to the power of a private prosecutor to prosecute, and he stated that he had inquired into the practice in England. He was told that only a fortnight or three weeks ago there was a case in Portsmouth in which a Mr. White, of the Timothy White Drug Company, was convicted of an offence under Section 17 at the instance of the Registrar, and no objection was raised. There had been a number of such cases in England. On the other hand he found a prosecution under Section 17 in England by the Inspector of Police, who went in and bought a packet containing poison, the regulations not having been complied with in connection with that sale; so that there were both ways of doing it in England.

Mr. McRobert having replied to Mr. Salvesen's argument,

The Court unanimously sustained the appeal, recalled the Sheriff-Substitute's judgment, and remitted to him to proceed with the case. Lord Young, who gave the leading opinion, said that when he read the case cursorily before coming to Court it appeared to him to be one in which the learned Sheriff-Substitute had fallen into error on the legal question. He could not for a moment imagine that it occurred to the Sheriff that in any interest he had to consider the Procurator-fiscal, who had been prohibited from prosecuting in this case, would be a safer prosecutor in the public interest and in the interest of the party accused than the Registrar of the Pharmaceutical Society. But he (the Sheriff) was of opinion, upon such consideration as he could give the case in a summary trial, that the argument, which was addressed to them as being addressed to him, was technically sustainable, and that the proper legal course was to hold that the Crown authorities had misdirected the Procurator-fiscal not to prosecute in this case because the legitimate prosecutor and the prosecutor plainly intended by the statute without any reference to any very critical examination of words was the Registrar of the Pharmaceutical Society. It struck him that that conclusion—not in reason and good sense and the legitimate public interest, but upon such technical considerations as were put before them—was erroneous. Having heard the argument upon both sides distinctly enough stated, he was very clearly of opinion that his impression was right. In short, his impression had been hardened into an opinion and judgment that the Registrar of the Pharmaceutical Society was the prosecutor in such cases intended by the Legislature and recognised, as they were told, as such, so far as the information on the other side went, by the Courts in England. Persons who committed a breach of Section 17 as well as of Section 15 of the Pharmacy Act were liable to be prosecuted and subjected to the penalties under the respective sections, and the proper prosecutor, although he was not named as the prosecutor under Section 17, but the prosecutor according to the true meaning and only legitimate reading of the Act, was the Registrar of the Pharmaceutical Society; and no better prosecutor in the interests of the party accused and of the public to have such contravention repressed could be taken. There was no objection there. He had no doubt they would find on inquiry in England that the practice soon after the Act came into operation was in accordance with what was done at Portsmouth the other day without any objection. That was in accordance with the English view of the Procurator-fiscal in such a case. He thought the Registrar was the proper prosecutor in such cases, and that the judgment of the Sheriff to the contrary should be reversed, answering the question in the stated case accordingly, and remitting to the Sheriff to proceed on that view.

Lord Pearson assumed in this case that the Procurator-fiscal would have had a perfectly good title to prosecute because the statute in its preamble made it perfectly clear that it was dealing with a matter of public interest—the sale of poisons. But it was quite another question whether he alone had authority, and that was the question raised by this stated case. He thought that if the question depended on Section 15 of the Act it would be very doubtful whether the procedure there set out had any application to prosecutions of this nature, because he thought Mr. McRobert had made good his point that the procedure under Section 17 with which they were now engaged was different, and he rather thought exclusive of the procedure contemplated under the first fifteen sections of the Act. But under Section 17 itself there was no express suggestion, and, as he thought, no implication in the statute that the Procurator-fiscal was to be the only prosecutor, and, therefore, without considering the question upon the general principle whether this was not a case where anyone interested or representing a recognised body which was interested in the matter on hand was not entitled to prosecute if he got the concurrence of the Procurator-fiscal, as had been done here, and, assuming that to be so, that view resulted in this, that, while other persons than the Registrar of the Pharmaceutical Society would have a title to prosecute under Section 17 an officer of any recognised Society having interest in the matter on hand would have an interest and title to complain of a contravention of that section. On that ground he thought the question put must be answered in the affirmative.

The Lord Justice Clerk said if their Lordships were agreed he had no vote, but he might state that he concurred in the result at which their Lordships had arrived. He did not think this Act was very happily expressed in regard to Section 17, and that was probably what had led to that discussion. But he concurred in what had fallen from their Lordships as to the question of interest. One observation he would like to make was that it was mentioned, if he caught properly what was said, that the Crown's instructions to Procurators-fiscal were not to institute these prosecutions because the officer representing the Crown thought they were the work of the Registrar. He did not suppose for a moment that that meant any suggestion that the Procurators-fiscal of Scotland could not prosecute for this offence. He was quite clear that they could prosecute for this offence if it was thought proper to do so. If there was any neglect or any special reason in any particular case for not initiating a prosecution it would be perfectly open for the Procurator-fiscal to institute a case as representing the public interest in his own name.

Mr. Salvesen intimated that he had been instructed not to ask for expenses.

High Court Cases.

Incandescent Mantles.

In the King's Bench Division of the High Court of Justice on Friday (February 21), the case of Welsbach Incandescent Gas-light Company (Limited) *v* the United Chemical-works and the Voelker Company were mentioned to the Lord Chief Justice. Mr. Astbury, K.C., for the defendants in both cases, stated that the actions were two years old, and he asked his Lordship to direct that the two actions should be tried together. The Lord Chief Justice said he could not do that. Mr. Astbury continued to address the Court on the merits of

Digitized by Google

the case; and Mr. A. J. Walter followed for the Welsbach Company. The Lord Chief Justice said he had his own view about these cases, and thought that both parties had been trying to delay the other, decided that the Voelker case would be put on the list the same day as the Chemical-works case. If it could be tried then, well and good; it would be for the Judge before whom the cases came to decide that.

Golden Remedies.

In the Chancery Division on February 20, the action of Tyrrell *v.* the Golden Remedies & Gems of Health Company (Limited) came before Mr. Justice Swinfen Eady. Counsel, on behalf of the debenture-holders, asked the Court to appoint a receiver and manager of the company, which consented to the application. The plaintiff was holder of three debentures of 50*l.* each, and default had been made in payment of interest. The total amount of debentures issued was seven of 50*l.* each issued July, 1900, and no interest had been paid since January, 1901. It was in evidence that the company was still carrying on business, and the plaintiff desired a receiver and manager because the property charged by his debentures included the goodwill of the business. The Judge declined to appoint a manager on the evidence before him, but consented to appoint a receiver.

Ext. Belladon. for Conf. Sennæ.

On February 21, in the Dublin High Court of Justice, before Master Courtenay and a jury of six, a case was heard in which Mary Jane Crinion sued F. W. Brittain, pharmaceutical chemist, Drogheda, for damages for negligence in supplying her with extract of belladonna for confection of senna, in consequence of which, she alleged, her health had been permanently injured. Mr. O'Shaughnessy, K.C., for the plaintiff, said that on July 11 Miss Crinion, who was in the habit of taking confection of senna, sent to one of the defendant's establishments in Drogheda for twopennyworth, and was supplied by an assistant with extract of beladonna. Plaintiff took about 120 gr. of the extract. The most appalling results followed. Her eyes began to swim, she lost consciousness, and became practically blind. The box had been sent back to the defendant, and he sent down an emetic and two doctors, who worked with a stomach-pump all night. The plaintiff's life was saved; but, as the result, the plaintiff now suffered from heart-disease. The plaintiff was called to prove this statement, and while under examination counsel conferred. Mr. O'Shaughnessy then announced that, as a result, the jury would not be further troubled with the case. It was admitted that this was an accident, and the conduct of the defendant in getting two doctors to sit up all night (as the result of which the plaintiff's life was saved) was highly creditable to him. What counsel had agreed on was that damages should be fixed at 200*l.*, with 60*l.* costs. The jury accordingly returned a verdict for the above amount.

Accident-insurance Claim.

Before the Master of the Rolls, Dublin, on February 19, the action to recover 1,000*l.* from the Ocean Accident Insurance Company, on account of an accident policy which the late Mr. W. B. Murray, chemist, Stephen's Green, Dublin, had effected with the company, was brought to a finish. Mr. Murray fell downstairs in his shop on the night of July 18 last, and died on July 20. It appeared that Mr. Murray was able to ride a bicycle after the accident, and the defendant company contended that death was not attributable to the accident. Conflicting medical evidence was given on the matter; but the Master of the Rolls held that the death arose from the accident, and the plaintiffs—who were the representatives of the deceased—were entitled to succeed. He also allowed the plaintiffs their costs.

Olive Oil from Bari.

At the Nisi Prius Court, Liverpool Assizes, on February 24, before Mr. Justice Wills and a special jury, Messrs. Evans, Sons & Co., wholesale druggists, Liverpool, sued the Cunard Steamship Company to recover damages in respect to a parcel of olive oil shipped on the defendant company's ship *Veria*, carried from Bari, near Brindisi, to Liverpool. The defendant company admitted the damage, but relied on the terms of the bill of lading as protecting them from liability. Plaintiffs were represented by Mr. Pickford, K.C., and Mr. Leslie Scott, the defendant company's counsel being Mr. Horridge, K.C., and Mr. Hyslop Maxwell.

Mr. Pickford explained that the oil had been shipped at Bari, and was stowed in the 'tween-decks in a position where it would be liable to feel any heat in the atmosphere. After taking in the oil at Bari the vessel proceeded up the Adriatic, calling at a variety of ports, and then went to Constantinople. The length of the voyage was thus enormously increased, and unless it were found that they were entitled to do that under the deviation clause of the bill of lading the defendants were responsible for the damage to the oil by heat. According to the bill of lading the vessel was to proceed to her port of destination, just going to any port or ports in the Black Sea, the Levant, Adriatic, Mediterranean, Egypt, Africa, Portugal, Spain, Belgium, Germany, France, Ireland, or Great Britain, for the purpose of trading, in any order or rotation, without the same being deemed a deviation. Here there was no suggestion that the vessel was going to Constantinople before returning to England.

A member of the plaintiff firm gave evidence corroborative of Mr. Pickford's statement, and, in cross-examination, was asked whether he could name a single instance of a vessel proceeding straight from Bari to Liverpool, but said he had not gone into that.

Mr. John Barr, assistant general manager of the defendant company, in his thirty years' experience did not know of the Cunard boats sailing direct between Bari and Liverpool. Out of more than seventy Mediterranean voyages by the ships during the past three years, upwards of half were by Constantinople, Alexandria, or Odessa.

The jury, on this information, found it was customary to deviate in this way.

Mr. Pickford submitted that this was a finding which could not stand.

His Lordship said he certainly expected to hear "No" as the answer as to whether it was customary. Having heard counsel at some length on the disputed point of law, his Lordship reserved judgment.

Claim against a Doctor.

On February 25 in the King's Bench Division, before Mr. Justice Grantham, an action was heard in which a nurse, Miss Charlotte Francis Forsythe, sought to recover damages from Dr. William Thomas Law, her medical attendant, for negligence. Sir Edward Clarke, for the plaintiff, alleged that Dr. Law had for a number of years administered or negligently given her the opportunity of administering to herself morphine, cocaine, and chloral until, at the beginning of the year, she lost her reason, and had suffered considerable pecuniary loss in consequence. He (Sir E. Clarke) used the term "administered, or gave her opportunity to administer to herself," for the reason that these drugs could only be obtained upon a medical man's prescription, and they had these prescriptions under which large quantities were obtained.

Mr. Justice Grantham asked if it was assumed that if a doctor prescribed morphine in the first instance, and a patient day after day got the prescription made up again, that the doctor was responsible.

Sir E. Clarke said he should say so with this reservation—that it could not have been unknown to him, for he saw the plaintiff every day, and must have seen the condition she was in.

The plaintiff's evidence was to the effect that she had more than once appealed to defendant to stop the morphine treatment as it would make a drivelling idiot of her, but defendant said nothing could be done.

Mr. F. Rogers, chemist, 327 Oxford Street, said that during the years 1898, 1899, and 1900 he had supplied medicines to Miss Forsythe and Miss Ward (plaintiff's partner). He had made up prescriptions signed by Dr. Law for the plaintiff which contained drugs of various kinds, including chloroform, cocaine, bromidia, and morphine, and pills containing arsenic, belladonna, and opium. In cross-examination witness said that from the prescriptions it was obvious that Dr. Law was varying his treatment. He knew the disease known as spasmodic asthma, but could not say whether morphine was a recognised treatment.

The mere fact of a standard dose for certain drugs appearing in the British Pharmacopœia was no indication

Digitized by Google

for particular patients. When plaintiff was at Bath witness received a prescription relating to a hypodermic injection, which he made up and sent to Miss Forsythe. Subsequently plaintiff wrote asking for a further supply of morphine, and stated that she had been very ill, and that it was indeed wonderful that a person who had gone through such fearful agony could possibly live.

His Lordship: I find an item in the account called "cigarettes." Which of the ladies smoked? (Laughter.)

Witness: There is no indication, but they were asthma cigarettes, my lord.

Mr. Frederick William Gamble, representing Messrs. Allen & Hanburys, chemists, produced prescriptions of Dr. Law's which referred to solutions of cocaine, belladonna, &c. Dr. Law called for some of the medicines and took them away with him. Others were sent to the plaintiff's address. The strength of the cocaine solution was 7 per cent, which was quite an ordinary strength. Cocaine solution is used as a spray for asthma. Syrup of chloral was supplied seventeen times in three months. It was probably used as a sleeping-draught.

Mr. Middleton Hughes, chemist, Fulham Road, said he had supplied a quantity of morphine to Miss Forsythe and Dr. Law. Plaintiff obtained the morphine without the intervention of Dr. Law. There would be little difficulty in Miss Forsythe obtaining morphine, seeing she was connected with a nursing-home. The strength of the morphine sent to Dr. Law was gradually reduced.

Mr. William George Burge, chemist, Paddington, said he made up prescriptions of Dr. Law's, which consisted of chloral and bromide. A servant always came for the mixture and paid cash. He was under the impression that it was for Dr. Law.

Mr. Bourdas, of the firm of Bradley & Bourdas, said that in January, 1901, they supplied chloroform, chloral, cocaine solution, bromide, and morphine to Dr. Law at 119 Warwick Street.

Dr. Savage, a specialist in mental diseases, said when he was called in to plaintiff he saw she was suffering from some form of poisoning, and she said she had taken morphine. Her condition had improved since the morphine had been stopped. It was a dangerous practice to give morphine in spasmodic asthma. The hearing was then adjourned.

Wednesday's proceedings consisted of the examination of more witnesses on behalf of plaintiff, most of whom spoke of the frequent administration of morphine. One of the medical witnesses spoke of a 1-in-10 injection as double the strength of the Pharmacopœia, and worked out a quantity of 4 oz. a month as sufficient for twenty strong injections a day. The case was again adjourned.

Sale of Food and Drugs Act.

SALE OF METHYLATED LINIMENT.

IN the Lord Chief Justice's Court on Friday morning, February 21, the Lord Chief Justice and Mr. Justice Walton heard an application by Mr. MacMorran, K.C., on behalf of Boots Cash Chemists (Southern) (Limited) for a rule *nisi* to show why Mr. D'Eyncourt, the Clerkenwell Magistrate, should not state a case to enable the company to appeal against the Magistrate's conviction for selling methylated liniment of soap. (See *C. & D.*, December 14, 1901, page 954.) Mr. MacMorran handed in an affidavit of Mr. F. W. Beck, solicitor, in which the facts of the case were stated, and the magistrate's certificate stating the grounds upon which he had refused to state a case for the appeal as the points raised were frivolous namely, (1) that Boots Cash Chemists (Southern) (Limited) were not responsible for the sale of the liniment because at the time the sale was effected, although the company were taking the profits, the business had not legally been transferred to the company, and therefore that the Day Company (from whom the business was bought) were legally the sellers of the liniment; and (2) that the solicitor for the defence had tried to get the magistrate to hear evidence as to prejudice, and that there was a standard apart from the British Pharmacopœia, but the magistrate declined to hear it.

The Lord Chief Justice: We had that question of the standard raised before us in a marmalade case, had we not?

Mr. MacMorran: Yes, my Lord. Afterwards the magistrate on hearing a similar case decided to admit part of the evidence.

The Lord Chief Justice: Showing that he had a doubt about it.

Mr. MacMorran: Apparently, but the solicitor was not prepared to reopen it then, more than a month having elapsed since the magistrate had given his decision in the case of the present appellants.

The Lord Chief Justice: Way was there such a delay?

Mr. MacMorran did not know.

The Lord Chief Justice: You may have your rule Mr. MacMorran.

As the matter now stands, Mr. D'Eyncourt will have the opportunity of submitting his affidavit to the Court to show why the rule should not be made absolute, in other words that the case should not be reopened.

FALSE WARRANTY.

IN the same court on February 25 the Lord Chief Justice, Mr. Justice Darling, and Mr. Justice Channell gave their decision in the case of Whitaker *v.* Pomfret Brothers, which was stated by the Magistrates of Haslingden, Lancashire, raising the question whether a prosecution for false warranty under the 1899 Act, Section 20, Subsection 6, had been brought within the time specified by the Summary Jurisdiction Act, 1848, Section 11 (11 and 12 Vic., c. 43). It appeared that the respondents were charged with giving a false warranty in respect of pepper sold by them as genuine white pepper, whereas the same contained not less than 10 per cent. of pepper-husks. The pepper had been sold by a retail grocer in Haslingden on May 16, 1901, who purchased from the respondents with a written warranty. The grocer was summoned, and the action was dismissed under the provisions of Section 25 of the 1875 Act. Upon the hearing of the information against the respondents it was contended that the offence (if any) was committed on November 20, 1900, when the warranty was given, and that the information, having been laid on July 6, 1901 (more than six months after November 20, 1900), was not within the time specified in Section 11 of 11 and 12 Vict., c. 43. This was the point which their Lordships now decided in the affirmative, the Lord Chief Justice saying that he could not help feeling regret that these proceedings must fail, and it seemed to him that it must be put right by the Legislature. He contrasted the provisions of the Summary Jurisdiction Act, 1848, Section 11, with the Sale of Food and Drugs Acts, 1899, Section 19, and 1875, Section 20, and said if proceedings were to be taken more than six months after the written warranty there must be an amending Act. The other learned Judges concurred, and the appeal was dismissed, with costs.

MILK-BLENDED BUTTER.

THE same Court on Wednesday decided a case stated, *re* the action Pearks, Gunston & Tee (Limited) *v.* Houghton, by the Justices of Richmond, Surrey, raising a question as to the sufficiency of certain notices in reference to milk-blended butter within the meaning of Section 8 of the 1875 Act. Mr. Asquith, K.C., for the plaintiff company, showed that the butter was sold in a shop solely devoted to the sale of milk-blended butter; that a notice to the effect that the butter contained water above the legal limit was exposed in the shop; and that the butter was wrapped in paper having a notice to the same effect. The respondent deposed that he did not see the notice until the purchase was completed, and the questions for the Court were (1) whether the inside wrapper was a sufficient notice by label within Section 8; (2) whether there was sufficient notice otherwise than by label; and (3) whether there was any evidence of fraud. The Lord Chief Justice gave judgment in favour of the company, but, he said, if it should turn out that there were various classes of butter in the establishment, and that this was merely butter at a certain price, a different effect had to be given to the notice put up in the shop. He was not satisfied that if the case had been made out as an offence under Section 6 the inner label would have protected the appellants. As to the question of prejudice, he remarked that it was good law and good sense that, when a man was told that what he was buying was butter blended with something else, he was not entitled to say that he was prejudiced because he thought he was buying butter not blended. He could see no evidence of fraud.

The other Judges concurred.

SPIRIT OF NITROUS ETHER.

At Bishop Auckland Police Court last week, Bridget Buck, grocer, Coundon, was fined 8*s.* 6*d.*, including costs, for selling 6 oz. of spirit of nitrous ether which was 52 per cent. deficient in ethyl nitrite. Defendant said she had only been in business twelve months, and the spirit was part of the stock and trade purchased from her predecessor. It was the first time she had handled the bottle when she sold to the inspector.

CAMPHORATED OIL.

At Worship Street Police Court on February 21, Thomas Brown, chemist, of 80 Bath Street, City Road, was summoned for selling camphorated oil which on analysis was found to be deficient 55·5 per cent. in camphor. Mr. F. W. Beck, for the defence, said the article was sold as received from the manufacturers, who invoiced it as "B.P.," but it was also explained that owing to the oil having to be heated to dissolve the camphor evaporation had taken place. A fine of 20*s.* and 33*s.* 6*d.* costs was imposed.

SELF-RAISING FLOUR.

At Dudley Police Court on February 19 the adjourned summons against Alfred Edward Hughes and Daniel Birchall, charging them with selling adulterated self-raising flour (see *C. & D.*, February 1, page 203) was concluded. The certificate of the Somerset House analysis stated that in 1 lb. of the mixture there was contained 45 gr. of cream of tartar (equivalent to 36 gr. of tartaric acid, *sic*) and 24 gr. of sodium bicarbonate. Mixed in water and freed from carbonic acid the sample had only a slight acidity, less in amount than was shown in ordinary flour. They were, therefore, of opinion that the sample did not contain tartaric acid or cream of tartar in greater quantity than was necessary for neutralising the sodium bicarbonate, but that, on the contrary, the sodium bicarbonate was slightly in excess. The Bench thereupon dismissed the case, but disallowed costs to the defendants.

Companies Act, 1900.

REGISTRATION OF DIRECTORS.

At Huddersfield on February 25, the Colne Vale Dryealtery Manufacturing Company, Golcar, were summoned for having failed to send a register of the directors of the company to the Registrar of Joint-stock Companies. On behalf of the Board of Trade it was stated that the defendant company only sent their annual summary, which was not a register according to the Act, and they had rendered themselves liable to penalties amounting to at least 700*l.* A fine of 10*l.* was imposed.

Trade Law.

Assistant Breaking Engagement.—A wholesale and retail grocer sued an assistant at Chesterfield County Court, on February 14, for 2*l.* damages sustained through defendant leaving work without notice. Defendant had been sued before the Magistrates, but they had no jurisdiction, as a grocer's assistant is not included in the Employers and Workmen Acts, and the case was dismissed. The facts were that defendant wished to leave just before Christmas, without notice, but his employer would not allow him to go, so defendant tendered him (the employer) a week's wages in lieu of notice and left. The question before Judge Smyly, K.C., was whether defendant was entitled, by tendering a week's wages, to give up his work at a moment's notice. The contract with regard to notice—a week to be given on either side—was admitted; but Judge Smyly considered the case one of the most important he had ever had, and adjourned it to look up authorities on the subject.

Bankruptcies and Failures.

Re HERBERT HENRY PRESBURY, 73 Church Street, Camberwell, S.E., Pharmaceutical Chemist, trading as Moody & Catterns.—This debtor has petitioned the London Bankruptcy Court, and on the application of his solicitor the usual receiving-order, together with an order of adjudication, was made against his estate by Mr. Registrar Brougham. The liabilities and assets are roughly estimated at 250*l.* and 100*l.* respectively.

Re REGINALD BETTS, Chemist and Druggist, lately trading at the Market Hill, Framlingham, but whose present address is unknown.—The following are creditors in this failure:—Moore & Sons, London, 99*l.*; Kodak (Limited), London, 10*l.*; Consolidated Petroleum Company, London, 19*l.*; Baron & Co., London, 11*l.*

Re GEORGE SAMUEL WRIGHT (lately trading as Wright & Co.), 1A Bentley Road, Kingsland, late Merchant and Drysalter.

THE receiving order in this case was made upon the petition of a creditor, and the statutory first meeting was held on February 26, at the London Bankruptcy Court, before Mr. E. S. Grey, Official Receiver. Debtor has filed a statement of his affairs, showing liabilities 374*l.* 12*s.* 3*d.*, and assets *nil*. The only creditor was the petitioner, Mr. A. J. Hutton, of Lordship Road, N.W., for 374*l.* 12*s.* 3*d.* The debtor submitted no proposal to the creditor, and the matter remained in the hands of the Official Receiver for administration.

Gazette.

Partnerships Dissolved.

Treatt, R. C., and **Samuelson, P.,** under the style of R. C. Treatt & Co., Dunster House, Mincing Lane, E.C., essential-oil merchants.

The Bankruptcy Acts, 1883 and 1890.

ADJUDICATIONS.

Jones, John Edward, Llanrng, Carnarvonshire, drug-dealer and grocer.

Presbury, Herbert Henry (carrying on business as Moody & Catterns), Grove Lane, Camberwell, S.E., and Church Street, Camberwell, S.E., pharmaceutical chemist.

ADJUDICATION ANNULLED.

Loten, William Lowson, Kingston-upon-Hull, chemist.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Balchin, Edward Samuel, Gosport, Hants, chemist—bankrupt before the signing of this order, to consent to judgment being entered against him by the Official Receiver for the sum of 45*l.* (see *C. & D.*, December 21, page 1005), being part of the balance of his debts provable in the bankruptcy, which is not satisfied at the date of this order. Bankrupt's discharge to be suspended until the said sum of 45*l.* has been paid to the Official Receiver, such payment to be made within a year. (The said sum of 45*l.* was paid to the Official Receiver on December 14, 1901.)

New Companies & Company News.

EBBERZINE AND PASS-COBA COMPANY (LIMITED).—Capital 3,500*l.*, in 1*l.* shares. Objects: To acquire the proprietary medicines or preparations known as "Ebberzine" and "Pass-Cora," and to carry on the business of chemists, druggists, drysalters, oil and colour men, importers and manufacturers of pharmaceutical, medicinal, chemical, industrial, and other preparations, manufacturers of photographic, surgical, and scientific apparatus and materials, &c. The first subscribers are:—Mrs. E. C. Smith, Midhurst, Sussex; Miss C. M. Smith, Midhurst, Sussex; Miss B. M. Smith, Midhurst, Sussex; Miss E. W. Smith, Midhurst, Sussex; E. C. Smith, Midhurst, Sussex, M.R.C.V.S.; R. Borland, 10 Dudley Place, Maida Hill West, clerk; and W. Bulport, 89 Blendel Street, Battersea, S.W., clerk. No initial public issue. Registered without articles of association.

ABERDEEN COMB WORKS (LIMITED).—The directors recommend a dividend at the rate of 4 per cent. per annum on the ordinary shares for 1901.

UNITED ALKALI COMPANY (LIMITED).—The directors recommend the payment of the preference dividend in full, carrying forward 35,000*l.* The sum of 50,000*l.* will be placed to reserve. This includes 60,166*l.* brought forward from last year.

PARIS MEDICINE-COMPANY (INCORPORATED).—At the annual meeting of stockholders held at Paris, Tenn., recently, the reports showed the largest year's business on record by $70,000. A quarterly dividend of 45 per cent.

Digitized by Google

was declared. The following officers were elected:—Directors, Messrs. E. W. Grove, A. H. Duncan, O. C. Barton, A. H. Lankford, and F. L. Seely. Mr. Grove is president, Mr. Duncan, vice-president, and Mr. Seely, secretary. Mr. Grove was a druggist of Paris at a time the company was organised. A citizen of Paris recently sold shares that cost him £2,500 for £5,000.

LEVER BROTHERS (LIMITED).—The report for the past year shows a balance standing to the credit of profit and loss account of 297,770*l.*, which includes 18,784*l.* brought forward. A dividend on the ordinary shares at the rate of 15 per cent. per annum requires 178,590*l.*, and the balance carried forward to next account is 19,180*l.*

A. MILLAR & CO. (LIMITED).—At the ordinary general meeting of this company, held in Dublin on February 20, Mr. William Millar presiding, the report and statement of accounts for the year ended November 30, 1901, showing net profits (including balance brought forward) amounting to 12,812*l.*, were received and adopted. Dividends at the rate of 5 per cent. per annum on the preference, and 9 per cent. per annum on the ordinary shares were passed, 750*l.* added to the reserve fund, and 2,873*l.* carried forward. The Chairman reported increased business in the face of adverse conditions, and the erection of a new store costing 2,000*l.* Mr. R. C. Millar, C.E., has been elected a director in place of Lord Kinsale, retired.

KEMBALL, BISHOP & CO. (LIMITED).—The report of the directors for 1901 states that the trading account, for the year, shows a profit of 16,069*l.* From this amount the directors have placed 230*l.* to leaseholds depreciation account, 500*l.* to plant and machinery depreciation account and 1,534*l.* to reserve account. The balance remaining amounts to 13,804*l.*, and in accordance with the terms of purchase, 12,632*l* is due to the vendors, being the proportion of profits from January 1 to December 1, 1901, leaving 1,172*l.* From this latter amount has to be deducted income-tax, interest on purchase money from December 1 to date of completion, directors' fees, &c. After providing for these items, 755*l.* is carried forward. The directors are pleased to say they are commencing the new year under favourable conditions, and the volume of business, so far as the company is concerned, is being fully maintained.

SANITAS COMPANY (LIMITED).—The fourth ordinary general meeting of shareholders was held on February 25 at the Company's works, Limehouse, E. There was a numerous attendance, including several ladies, and after a short inspection of a section of the extensive premises, the meeting was held in the principal warehouse. Mr. C. T. Kingsett, chairman of the Company, who presided, in moving the adoption of the report and accounts (see *C. & D.*, February 15, page 272), said the past year had not been a good one commercially; they had had to pay higher prices for the materials and articles required in their processes. Tins and bottles had been extremely expensive, and they had had such adverse conditions as the death of the late Queen, the war in South Africa, and an increased income-tax to contend against. The health of the country had been exceptionally good and much against their trade, and every man who had a small quantity of creosote or a barrel of tar, thought himself competent to set up as a manufacturer of disinfectants, with the result that they had very severe competition to cope with. Notwithstanding all these untoward cries he was able to congratulate them on the fact that their trade had been maintained quite up to previous years. The profits from the American branch had been larger than in any preceding year. During the year there had been expended on works and the purchase of grounds, 12,578*l.* 5*s.* 5*d.* Last year the sum expended to the time of the annual meeting was 11,805*l.* 1*s.*, so that during the year they had charged themselves with a further expenditure of 773*l.* They had now acquired the freehold of their premises in which their principal works were carried on in Limehouse, and fine works they were. It was in contemplation to purchase further premises and land adjoining these works with a front on the Limehouse canal, and gradually to transfer the whole of the works from Bethnal Green to Limehouse. The Chairman then dealt at some length with the fact that the market-price of the shares was not what they should stand at. The past year had been a very prejudicial one for industrial concerns of all kinds, and owing to the deaths of two or three shareholders their holdings had been sent to enforced sale on an unwilling market, and this had tended to depreciate the price of the shares. However that might be he advised shareholders to stick to their holdings and to increase them, as he had done, whenever they had the chance. Mr. R. M. Cunningham seconded the motion for the adoption of the report and accounts, and alluding to the depreciated market-price of the Company's shares, said that even Consols had fallen. The motion was carried and the dividends declared. Mr. Zingler was re-elected a director, and the auditors were re-appointed.

Business Changes.

MR. J. LEE JONES, chemist and druggist, has bought the branch-business of Mr. J. A. Jones, chemist and druggist, Albany Road, Cardiff.

MR. A. COLLENETTE, F.C.S., of 11 Commercial Arcade, Guernsey, has sold his business to Mr. W. H. Davies, chemist and druggist, Mill Street, Guernsey.

MR. A. RHEAD, pharmaceutical chemist, has recently acquired the business of the late Mr. J. E. Plumb, at 2 Hamstead Road, Soho Hill, Handsworth, Birmingham.

OWING to the rebuilding of their premises Messrs. Gregory & Sons, chemists, have removed from 76 St. Thomas Street, Weymouth, to temporary premises on the other side of the street.

MESSRS. L. W. INGHAM & CO. (the principal being from Messrs. S. F. Goss (Limited), Regent Street, London, W.), announce that they are about to open a high-class drug business at Ormonde Buildings, High Street, Epsom.

MESSRS. W. BUTCHER & SONS, photographic apparatus makers, Blackheath, S.E., have moved into their new premises, Camera House, St. Bride Street, E.C., where communications should be addressed in future.

THE business at 23 Bayswater Terrace, Bayswater Road, W., which has been acquired by Messrs. Cadrones (Limited), and transferred to 4 Queens Road, Bayswater, is the old established and well-known concern carried on for many years by Messrs. W. C. Jones & Co., chemists and druggists.

MESSRS. JOHN HEPWORTH & CO., horticultural chemists, Loughborough, have purchased the business formerly carried on at Loughborough, by Messrs. W. F. Charles & Co. Mr. W. F. Charles will in future confine his attention to the manufacture of the perfumery specialities with which his name is associated.

Recent Wills.

ANGIOR.—The will of Mr. John Angior, pharmaceutical chemist, 39 Oriel Road, Bootle, who died on August 5 at Standishgate House, Wigan, has been proved by his executors, Thomas Matthews Angior, surgeon and son of the testator, and Mary Elizabeth Angior, spinster, the daughter. The gross estate is valued at 1,778*l.* 10*s.* 6*d.*, and the net personalty 168*l.* 14*s.*

CROSFIELD. — Mr. John Crosfield, of Waltonlea, Walton Superior, Chester, chairman of Joseph Crosfield & Sons (Limited), of Bank Quay, Warrington, who died on December 26 last, left personal estate of the net value of 127,682*l.* 4*s.* 3*d.*, and the gross value of the whole of the estate is 155,490*l.* 13*s.* 3*d.* The executors are his sons, Arthur Henry Crosfield, of Barroaman, Hoylake, and Joseph John Crosfield, of Netherdale, Frodsham, directors of Joseph Crosfield & Sons (Limited), and Mr. Thomas Joseph Ridgway, of Warrington, solicitor. After making several bequests to relatives, the late Mr. Crosfield bequeathed to his wife the use and enjoyment of Waltonlea and its furniture, and the income of his residuary estate, which, subject to her interest, is to be in trust for his son, George Rowlandson Crosfield, and his daughters, Constance Eleanor and Aileen Harriet, and Gertrude Hudson Crosfield.

GILBERT.—The will of the late Sir Joseph Henry Gilbert, F.R.S., Harpenden, Herts, has been proved, the gross amount of the estate being 4,781*l.* 19*s*

Personalities.

Mr. William Soulby Nurse, chemist and druggist, Eye, Suffolk, has been elected one of the borough elective auditors.

Mr. E. G. R Watson, chemist and druggist, has been elected a member of the Beccles School Board for the third time.

Mr. James Woodhead, manufacturing chemist, Slaithwaite, has been elected a member of the Slaithwaite School Board.

The ninety-first annual meeting of the Falmouth Misericordia Society, held on February 24, was presided over by Mr. F. J. Wilmer, chemist and druggist.

Mr. Abraham Taylor, chemist and druggist, Morley, has been elected to fill a vacancy in the representation of the north ward in the Morley Town Council.

Mr. W. T. Owbridge, chemist and druggist, Hull, manufacturer of Owbridge's Lung Tonic, has been nominated to fill a vacancy on the East Riding County Council.

It is stated that the Unionist Candidate for Parliamentary honours at Wakefield, will be Mr. E. Allen Brotherton of Messrs. Brotherton & Co., chemical manufacturers, Wakefield.

Mr. G. A. Wilson (of Messrs. C. E. Gardner & Co., wholesale druggists, Port Elizabeth, Cape Colony), returned by the s.s. *Kinfauns* last Saturday after a pleasant two months' holiday at home.

Mr. G. J. Cutcliffe, chemist and druggist, presided over a meeting at Dawlish, on February 20, for the purpose of forming an East Devon Branch of the Anti-vivisection Society He was supported by Dr. Walter Hadwin, of Gloucester, who was formerly a chemist at Highbridge, Som.

Dr. Bertram Prentice, chief of the Salford Royal Technical Institute, has obtained the degree of D Sc. of Edinburgh University for his thesis on the constitution of some antipyrin derivatives, and also for previous research in organic chemistry. Dr. Prentice is a son of Mr. John Prentice, chemist and druggist, Edinburgh.

Mr. Henry Pechey, chemist and druggist, Camperdown, Yarmouth, was on February 21 returned as one of the borough elective auditors for the ensuing year. Mr. Pechey has held this office for several years, and it is a testimony to the manner in which he has performed his responsible public duties that his return is never challenged.

Mr. E. W. Pollard, B.Sc. Lond, pharmaceutical chemist, having been appointed by the Ryde Science and Art Council teacher of electricity and magnetism subject to the approval of the Board of Education, the Board has registered him as qualified to teach the following subjects:—Mathematics (stages 1 and 2); sound, light, and heat; magnetism and electricity; theoretical and practical organic chemistry; theoretical and practical inorganic chemistry; human physiology; biology; zoology; botany and hygiene. Mr. E. W. Pollard is younger brother of Mr. A. F. Pollard, M.A. Oxon, F.R.Hist.Soc., late assistant-editor of the "Dictionary of National Biography," the author of a monograph on Henry VIII., of which the prospectus has just been issued by Messrs. Goupil & Co. They are the sons of Alderman Henry H. Pollard, J.P., of Ryde, Divisional Secretary to the Pharmaceutical Society for the Isle of Wight.

Dr. John Rutherford Gilmour, F.R.C.P. Edin., has been appointed by the West Riding County Council Medical Superintendent of the new private asylum erected in the beautiful grounds of Scabbor Park at a cost of over 100,000*l*. The appointment carries with it a salary of 500*l*., with house. Dr. Gilmour had some experience in his father's pharmacy at 11 Elm Road, Edinburgh, while he was studying medicine at the University there. He graduated M.B., C.M. in 1894 with honours, and later took his M.D., also with honours. He for some time was assistant to Professor T. R. Fraser in the Edinburgh Infirmary, and latterly has been acting as senior assistant-surgeon at the Crichton Royal Institute, Dumfries, one of the most advanced and rational asylums for the insane in the world. The *Yorkshire Post* remarks of the appointment:—"In Dr. Gilmour the General Asylums Committee have secured a man who will not only bring to his new duties a ripe experience, but the highest qualifications, combined with a sympathetic nature."

Marriage.

Rhead—Topham.—On February 20, at Christ Church, Fenton, Staffs, Alfred Rhead, Ph.C., Soho Hill, Birmingham, to Emmie, only daughter of Mr. James Topham, engineer, Albert Road, Fenton.

Deaths.

Adams.—At Weston-super-Mare, on February 14, Mr. Hugh Adams, chemist and druggist. Aged 76.

Buck.—At Middlesborough, on February 20, Mr. Thomas Buck, chemist and druggist. Aged 63. The deceased went to Middlesborough from London twenty-seven years ago, and took over the business of his uncle, Mr. L. C. S. Smith, who was a chemist and druggist in East Street. He leaves a widow and two children.

Eagle-Trescot.—On February 21, at 39 High Street, Gosport, Mr. James Robert Eagle-Trescot, chemist and dentist. Aged 56.

Eccles.—The death took place last week of Mr. Henry Eccles, chemist and druggist, of 9 Westborough, Scarborough, at the age of 70. He had not been well for some time, but attended to business till the day before he died. Mr. Eccles was unmarried, and it is stated that he has left property worth 10,000*l*. He was a bachelor, and succeeded to the business of his father, Mr. Samuel Eccles. After his death two bags of gold, weighing about eight stone, were found in his house, while the copper coins amounted in value to about 50*l*. His brother, John Eccles, a Liverpool dock-labourer, inherits the fortune, as no will has been found.

Green.—On February 23, at Henley-on-Thames, Mary Elizabeth, dearly beloved wife of George Turton Green. Aged 30.

Harvey.—At Penzance, on February 20, Mr. Joseph Smith Harvey, chemist and druggist, of Market Jew Street. Aged 71. The Harvey family has carried on business as chemist in Penzance since 1777. Mr. Harvey did not take active part in public affairs, but was for thirty-six years treasurer of the Queen of the West Court of Foresters, of which he was one of the founders. He had also been an Oddfellow for many years.

Harwood.—On February 15, at 92 Clarence Street, Bolton, Mr. Ebenezer Green Harwood, chemist and druggist. Aged 70. Mr. Harwood was a native of Little Lever, and served his apprenticeship with the late Mr. G. La French, chemist and druggist, Cheapside, Bolton. After acting as assistant at Worcester and Aigburth, he returned to Bolton, and started business on his own account in Cheapside. Since 1871 he had been actively associated with the public life of the town. In that year he entered the Town Council, and in 1874 he was elevated to the aldermanic Bench. He was twice Mayor (in 1882 and 1883), and in 1885 he was placed on the Commission of the Peace for the Borough.

Mackenzie.—On February 8, Mr. Alexander Mackenzie, chemist and druggist, Edinburgh. Aged 40.

Radam.—At New York, on February 3, Mr. William Radam, manufacturer and inventor of Radam's microbe-killer. He was a native of Germany, and went to America at the age of 22, settling in Austin, Tex. Death was due to heart-disease.

Taylor.—At Leeds, very suddenly, on February 23, Mr. George Taylor, chemist and druggist, and for many years dispenser at the Leeds Hospital for Women and Children.

Voelcker.—On February 24, at Laregan, Penzance, Emil Frederick, youngest son of the late Dr. Augustus Voelcker, F.R.S. Aged 37. Funeral at Kensal Green Cemetery on Saturday, March 1, at 3 P.M.

Wilding.—On February 25, at Liverpool Road, Birkdale Southport, Mr. Geo. Jas. Wilding, chemist and druggist. Mr. Wilding died very suddenly from heart-disease, after cycling. His wife predeceased him only a few months ago, and two children are left orphans.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Fixing Medicine stamps.

SIR,—Since December 6, 1901, I have been engaged in endeavouring to get a definite pronouncement in regard to the Inland Revenue authorities' expressed intention of enforcing that clause of the Stamp Act relating to the manner in which the stamp is required to be affixed on dutiable medicines so that the contents of box, bottle, package, &c, cannot be withdrawn without destroying the stamp. Obviously, if this intention were to be rigorously enforced it would be a very serious source of trouble to every retailer of proprietary medicines. After a prolonged correspondence with the Board, adducing every available argument to show that the revenue could scarcely be prejudiced by the existing methods, I received on January 18 what I had to assume was the Board's ultimatum, as follows:—

SIR,—I have to refer you to the letter addressed to you from this department on the 6th ult., on the subject of the requirement of the law with regard to the affixing medicine-labels, and to state that the Board can only add that the regulations in this matter must be complied with in future. Yours, &c.,
THE SECRETARY.

My reply will practically explain the situation:—

January 20, 1902.

SIR,—In regard to the very important decision you convey to me as to affixing medicine-labels, I find myself in a dilemma it is impossible to escape. I fully recognise the difficulty the Board must necessarily have in administering an Act which came into existence when the number of proprietary medicines was very small, and foreign ones unknown. The gigantic proportions the sale of dutiable medicines has in recent years attained could not possibly have been contemplated; the whole conditions are revolutionised, both in regard to the articles themselves and the elaborate and varied methods of packing in cartons, &c. Hence, although it may be quite possible for me to stamp my own preparations in accordance with the requirements of the law, I nevertheless can have no control over a very large percentage of goods (not my own) which are carelessly and improperly stamped, yet for the sale of which I must logically be responsible. May I suggest, as a means of arriving at some *modus vivendi*, that an opportunity be granted of submitting for the inspection of the Board examples demonstrating the difficulty. I beg to assure you I am anxious to comply with every legal requirement, if it can be shown I can do so. Yours, &c.,

The Board consenting to my request, I, in company with Mr. Carteighe, as representing the Pharmaceutical Society, had an opportunity of submitting for inspection a varied selection of proprietaries stamped in various manners, and also of demonstrating that in some methods specifically approved by the Board the stamp was more readily detached than in other examples condemned. My colleague (Mr. Carteighe) very forcibly suggested that the prominence of the stamp was, in his opinion, a decided advantage to the revenue, on the ground that the public generally were disposed to consider it implied some guarantee. After a long interview the question was deferred for further consideration, and on February 18 the following letter was received:—

February 18, 1902.

Sir,—Adverting to your letter of the 20th ult., and to your recent attendance at this office, I am directed by the Board of Inland Revenue to state that they have given the question of the mode of affixing the duty-label to medicines their most careful consideration, with the result that, in view of the facts adduced by you and your colleague, they feel that they are justified in not rigidly enforcing a literal compliance with the provisions of the Act 52 Geo. III., c. 150.

It must, of course, be understood that if this concession be found dangerous to the revenue, it will be withdrawn.

Yours, &c.,
THE SECRETARY.

I should like to add that the greatest courtesy and consideration was extended to our representations, and it was made clear that the Board exercise great discrimination and moderation in administering an extremely difficult Act. As the Act of George III. is in itself an amending Act, one might consider it a not inappropriate time to get it further amended in one or two particulars which press severely on a vast number of pharmacists who find themselves to their cost unconsciously transgressing.

Yours faithfully.
LEO ATKINSON.

285 Brockley Road, S E., February 25.

A Cascara Label.

SIR,—For the benefit of my brother chemists I shall be glad if you will be good enough to insert in your next issue a copy of the enclosed label "as being liable to stamp-duty." The liability arises from "It is largely prescribed for chronic constipation." Being a simple preparation of the B.P., and not claiming it as a special preparation, or prepared only by myself, I was ignorant that I was within the law, and had to pay a small penalty. I am of the impression that it is a stock label of one of our best medical printers, hence my asking your assistance to make it known.

Yours faithfully,
Plymouth, February 25. JAMES MAURICE.

The label is as follows:—

Fluid Extract of Cascara Sagrada (*Rhamnus purshianus*).—Medicinal properties: Laxative and aperient; it is largely prescribed for chronic constipation. Dose: From fifteen drops up to one teaspoonful, in water, before breakfast.—James Maurice (late Vicary), family and dispensing chemist, 34 Bedford Street, Plymouth.

Glasgow "Patent" Prices.

SIR,—I am glad Mr. J. D. Sutherland has denied the note by a Glasgow correspondent which appeared in your issue of February 15, and am equally glad that the chemists of the second city in the kingdom have stood so nobly and honourably together on this most important question. The chemists here agreed a year ago to raise the price of patents, &c., and anyone breaking through their obligation was liable to a penalty of 10*l*. The signing-form was legally drawn up, and, as far as I know, no one has transgressed. Other towns round about are following on the same lines, and he must be a very stupid chemist indeed if he objects to a good few pounds being added to his pocket every year. If all the chemists in a town are agreeable, it hurts no one. Trusting chemists in all towns will follow,

I am, yours faithfully,
ANDREW NAYSMITH,
Arbroath, February 25. Local Secretary.

P.S.—In Arbroath we observe the Wednesday half-holiday, closing from 2 till 6, and some give their assistants and apprentices a whole day once a month. This, I think, is a good arrangement, and makes the young men look after their masters' interests all the more.—A. N.

SIR,—With reference to above I send herewith three typewritten sheets of advanced "Patent" Prices left at my shop last autumn by a representative from the most prominent cutters in town. The price-list of this firm is scattered broadcast, and contains the usual exaggerated statements whereby the druggist is held up, by inference, to be a most exorbitant trader borne out by the usual comparative scale of charges exhibited. So far as I am aware no meeting of the trade was called, and this was in most cases the only overture made upon the question. Considering the source of this movement can it be wondered at if the whole affair is regarded with suspicion and the supporters of it as probable dupes? The case is more difficult where a family business is transacted, and where the usual idea of cut prices (fostered by the stores), operates against the local dealer, however, keen he may make his charges. There is an old saw: "When the devil was ill, the devil a saint would be," but the probability of the remainder of the rhyme coming true must always be borne in mind.

Yours very truly,
Ibrox, Glasgow, February 24. ARTHUR MCKELLAR.

Previous to the receipt of Mr. Sutherland's letter, printed on page 317 of our last issue, we had received a similar denial from another retailer interested in the promotion of

Digitized by Google

the protective scheme. We therefore instituted inquiries, and the appended is the report received:—

The 112 firms who are said to have signed the agreement may represent the total of 180 druggists' shops in Glasgow and its suburbs; but there seems to be a discrepancy here. In any case, only a few of the 170 doctors' shops are covered by the agreement, and in the bulk of non-adhering surgeries patents are being sold at the old cutting-prices. Mr. Sutherland's statement that there were only three refusals to sign does not tally with my personal knowledge of the facts. In the Govanhill district alone there were two refusals, so that the agreement has never run there at all. In Ibrox there was one refusal, and consequently the agreement was aborted. In the Gorbals district there were two refusals, with similar consequences, and originally there were refusals in the east-end and N.W. districts of the city, but some of these have been "negotiated" by the use of threats of prosecution to certain of the recusants who have their branch shops managed by unqualified assistants. As to the agreement being loyally carried out by the signatories to it, I may state that in my own district every signatory has broken it, and the same holds good for Ibrox and the greater part of the south side. In the centre of the city the big firms who set up the movement in their own interest are making an effort to enforce list-prices, but already there are signs of wavering. The list does not contain the staple saleable patents—*e.g.*, Beecham's pills.

X-ray Dermatitis.

Sir,—Notwithstanding the high authority quoted on page 309 of your last issue, I am quite certain that *x*-ray dermatitis is not caused by violet light, neither is violet light a constituent of *x*-rays. It is necessary in the treatment of rodent ulcer, lupus, superfluous hair, &c., to cautiously, and at distant intervals of time, to work up to the development of dermatitis. I have often thus intentionally produced this effect with tubes which do not give out violet light. In fact, a spectroscopic examination of a modern *x*-ray tube when working, fails to show any violet light. I find I can produce dermatitis about as easily through bandages as without any covering, also through thick black hair which would stop violet light from reaching the skin, if such existed. Moreover, Professor Elihu Thompson years ago produced dermatitis after passing the *x* rays through two thicknesses of aluminium foil. The fact is, wherever you can send *x*-rays at all, there you can produce this effect; all users of *x*-rays should bear this in mind, and not rely on the use of any so-called protective covering. In all my private and public practice of radiography, I have only had two cases of unintentional dermatitis—these were both in the early days, when we all had to teach ourselves by experience. One case was produced during the extraction of a bullet from the hand, by operating directly with the fluorescent screen—this, which, I think, was the first operation of its kind, was successfully performed in my laboratory—the operation lasted about twenty minutes, during which the patient was under chloroform. The patient's hand developed dermatitis about a week after the operation. A curious point in this case is that both sides of the hand peeled, although only the back of the hand was subjected to *x*-rays. Although the operating surgeon's hands were exposed all the time, he did not suffer at all. My other case was dermatitis of my own hand, the result of showing my bones to about 300 people at the conclusion of my lecture. My trouble became evident eight days after exposure, and lasted about three weeks. I found zinc-ointment and goulard-water useful applications. Since that occasion I have always invited people to see their own bones, which, I find, pleases them much better, and causes no inconvenience to anyone. I am now trying to produce dermatitis on my own skin by the *x*-light from radium. The rays given off by this new element have, relatively, more penetrative power for metals than the ordinary *x*-rays. If I succeed I will communicate the result.

156 Clapham Road, S.W. F. H. Glew.

"W. H. B." Wax.

Sir,—We notice the report in your last issue of a beeswax prosecution case at Deal in which some beeswax branded "W. H. B." was stated to contain 30 per cent. of paraffin wax. As this brand, "W. H. B.," is usually taken to apply to the wax of Messrs. W. H. Bowdlear & Co., of Boston, U.S.A., which we ourselves supply amongst other waxes, and which we buy under a strict guarantee of purity, we tested our stock this morning for paraffin wax and found it contains no trace. We were led to do this in consequence of several letters received from our customers in reference to the case in question. We are also in correspondence with Messrs. Bowdlear on the subject, and some communication from them will probably be received within the next few weeks. We send this letter in fairness to Messrs. Bowdlear, and in order to allay any mistrust in the minds of a large number of retailers who handle the "W. H. B." wax of Messrs. Bowdlear & Co. Your faithfully,

York, February 25. Raimes & Co.

About Actinomycosis.

Sir,—When you stated in your review of "Quain's Dictionary of Medicine" that it contained the only account of actinomycosis in English I was reminded that even Homer sometimes nods, for even amongst my own books I find fairly full accounts of the subject in the "Encyclopædia Medica," in Allbutt's "Dictionary of Medicine," and in the "Twentieth Century Practice."

Yours faithfully,

F.F.P.S. (159/40.)

Mr. Boot on Company-trading.

Sir,—"Xrayser" (in your issue of February 22, page 305) does not do justice to shareholders, or at least to our shareholders. Incidentally we might say that the dividends our shareholders draw do not give 12 per cent. on the amount they invested, for the shares were all allotted at such substantial premiums that about 7 per cent. would fully represent the return on their investment. But "Xrayser" lends support to the expression of opinion that they are never satisfied, and if they got 20 per cent. they would complain that with more economical management they should have thirty. The inference would naturally be that our shareholders are quite indifferent to my projects respecting the managers. I have stated them over and over again at open shareholders' meetings of Boots' Cash Chemists (Eastern, Limited), and far from any expression of dissatisfaction the shareholders themselves have from time to time placed sums to the credit of a Branch Managers Provident Fund, amounting to about 6,000*l*. As to the wide question of half-a-dozen capitalists, including Lipton, Boot, Lilley & Skinner, and others, monopolising retail-trading, does not "Xrayser" forget that these names only stand for tens of thousands of small capitalists, and, far from monopolising the retail, spread a more general financial interest in it, in our own company's case amounting to nearly 5,000 shareholders? "Xrayser" speaks as though if it had not been for the action of ours and similar companies, every one of our managers might be in business for himself. Surely this is not a fair argument, seeing that Hodders, of Bristol, and other qualified chemists in Leicester, Portsmouth, and other towns, cut prices to the last farthing against their brother-chemists, altogether apart from any company-trading. They, chemists as they were themselves, gave very little chance for young chemists in these towns to start in business and gain a comfortable independency. Yours faithfully.

Nottingham, February 26 Jesse Boot.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

139/73. *R. H.* (*C. & D.*, February 8, page 276).—We are indebted to several correspondents for calling our attention to the fact that many limited companies issue to their shareholders duplicate dividend warrants to the following effect:—

This duplicate will be accepted by the Board of Inland Revenue as evidence that the tax has been paid by the company, and shareholders not liable to pay income-tax may claim to have the amount paid refunded.

It is customary (but not necessary) to hold the warrants for three years, when the Board refund the money on application.

155/35. *M. P. S.*—Dropping your subscription to the Pharmaceutical Society does not affect your name on the

Digitized by Google

register of chemists and druggists or your rights under the Pharmacy Act. The Society has never taken proceedings against non-members who use the letters "M.P.S.," but it has in respect to the description "Member of the Pharmaceutical Society."

156/9. *Ajax.*—Carbolic jelly, not being a liquid preparation of carbolic acid, is not a poison within the meaning of the Pharmacy Act.

155/71. *Ping Pong.*—An unqualified retailer who uses the description "manufacturing chemist and photographic dealer" infringes the Pharmacy Act in respect to the illegal use of the word chemist.

148/31. *A. Cheater.*—The payment which you receive for the dispenser is the rate for a qualified man, and the governors have good ground for complaint. You have not however, infringed the Pharmacy Act.

152/19. *Ixia* (Glasgow) asks: What restrictions (if any) are there on assistants holding the Minor qualification of the Pharmaceutical Society, starting business in Cape Colony and Natal? [None. Such persons are registered in either colony on production of their certificate and proof of identity.]

152/39. *Equity.*—Strike the average remuneration per week received by the assistant while with you (allowing 15s. per week for board and lodging), and pay him four weeks, inclusive of part of the time he has served.

154/63. *Jelly.*—The whole label is registered, but the exclusive right to the use of the title has not been, and cannot be, claimed.

154/16. *F. T. G.*—The law as to saccharin so far as this country is concerned is sufficiently explained in the High Court case of infringement reported last week. Please read it, and if you want more advice give us particulars, and do not write in a cryptic style.

149/19. *J. T. A.*—If A, an unqualified man, and B, a registered chemist and druggist, trade as A & B, chemists and druggists, A infringes the Pharmacy Act by assuming the title "chemist and druggist." The fact that he has no interest in the business does not alter the question. You will find "Pharmaceutical Formulas" all that you require for pharmaceutical specialities.

58/7. *A Subscriber* sent us a few weeks ago several labels, amongst which were three which we suggested should be submitted to Somerset House. They have now been returned marked "not liable." They are as follows:—

Cold and Chill Mixture.—Treatment: First take a dose of the mixture, then put the feet in hot water just before going to bed; at the same time cover the body with a blanket. Take a basinful of hot gruel, and continue the mixture every four hours. Dose: For adults, two tablespoonfuls, to be taken every three or four hours, in half a wine-glass of water.

Red-cross Embrocation.—It may be safely used as a general liniment where the skin is not broken. Directions: The part affected to be bathed with warm water, and rubbed with the embrocation night and morning.

Blood Purifier.—Clears the skin, eradicates all impurities from the blood, is an excellent spring and autumn medicine. Dose: For an adult, one tablespoonful in a little warm water, three times a day; for children, one or two teaspoonfuls.

The second label has in addition the figure of a cross in red ink. The decision in regard to this label is peculiar, because some time ago the Board of Inland Revenue declared the word "Diamond" as a prefix and a figure thereof rendered a cough-tablet liable to duty. Why a cross should not be liable we cannot explain.

160/28. *J. H. W.*—Your skin-and-blood purifier label does not make the preparation liable to duty.

159/44. *Legatee.*—If the solicitors have overpaid the legatees, and can produce reasonable proof that they have done so, the legatees must refund the money.

160/36. *Antifebrin.*—Assuming that the conditions of your employment were as stated, your employer was not justified in dismissing you without notice, and you can claim salary in lieu of a week's notice, and probably compensation for the incidental expenses to which you were put owing to your summary ejection; but there would perhaps be a counterclaim by your employer in respect to the missing money, for which you were personally responsible.

160/30. *X. Y. Z.*—Your label for the skin preparation is liable on account of it being recommended "for chilblains." Chapped hands, chapped lips, and roughness of the skin are not considered to be maladies. You should remove the references to chilblains and "redness of the skin," as well as "sore hands." Observe, however, that as the preparation has hitherto been sold stamped, the Board of Inland Revenue may prevent you from removing the stamp. See particulars under Class 4, *C. & D.* Diary, page 281.

160/12. *D. L.*—(1) This label is on the border-line, because "the Manchester" is in the nature of a trade-mark name. Submit the label to the Board of Inland Revenue for opinion. (2) Submit the tonic-elixir label also. The expression "nerve restorer" is doubtful. (3) The fever-mixture label is not liable. (4 and 5) The cough-mixture labels are liable because the directions state that they are to be taken "when the cough is troublesome." (6) The cough lozenges are liable for the same reason. (7) The corn plasters have a trade-mark name, and are said to be "solvent." They must therefore be stamped. (8) This is said to be "for toothache," therefore it is liable.

160/34. *Sauve qui peut.*—(1) Your labels are all free from liability. Dandruff is not considered to be an ailment. We have not received a copy of the handbill referred to in your letter. (2) Sales of compound syrup of hypophosphites containing strychnine must be entered in the poison-book and labelled "Poison," or you may treat each sale as a dispensing transaction under Section 17, and enter it in the prescription-book with the name of the person to whom it is sold or delivered, and the ingredients of the syrup.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

154/19. *Omega.*—(1) Electroplating-solutions:—

Copper.—

Copper sulphate	2 lbs.
Sulphuric acid	4 oz.
Water	1 gal.

Silver.—

Silver nitrate...	21 oz.
Potassium cyanide	4 oz.
Water	q.s.

Dissolve the silver nitrate in 2 pints of distilled water, and the potassium cyanide in 2 pints, and add the cyanide solution to the silver solution until the precipitate at first formed is re-dissolved. Make up to a gallon. Half an ounce of carbon bisulphide is added if bright plating is desired. The strength of silver may vary from two to four ounces.

Gold.—Proceed as in making the silver-bath, but employ gold chloride. The strength of the finished bath may vary from a ½ to 1 oz. of gold.

(2) Leclanché and bichromate batteries are useless for electroplating except it is desired to use them for a few moments at a time. The Bunsen and Daniell cells are very suitable, or accumulators may be used. Dynamos are used by professional electroplaters.

154/45. *A. L. W.*—Blue Cohosh, or caulophyllum, is the rhizome and roots of *Caulophyllum thalictroides*, N.O. *Berberidaceæ*. The resinoid caulophyllin is considered to represent the active principle of the drug, but a glucoside called leontin is also mentioned by Lloyd. Mr. Lewis Ough's paper on caulophyllin appeared in the *C. & D.*, July 30, 1898, page 183. The dose of caulophyllin is 2 to 4 gr.

59/38. *W. R. H.*—The article on the spectacle-trade in THE CHEMISTS' AND DRUGGISTS' DIARY, 1900, is the best

Digitized by Google

guide to a chemist taking up the business. Particulars of the Spectacle Makers' examinations can be had from Colonel Davies Sewell, 11 Temple House, Temple Avenue, E.C.

154/48. *Chess.*—**Glycerin for Laundries**—The glycerin of starch to which you refer is a medicinal product used for making ointments, and is not used for laundry-purposes. The proportion of glycerin employed in starching is 1 to 2 oz. for each pound of dry starch, the same quantity of borax going with it. It is the borax that gives the polish, but the glycerin seems to prevent the linen from acquiring that board-like stiffness which is so objectionable, while in the case of curtains and napery the same advantage is secured. Laundresses imagine that glycerin is a starch-glaze, and it would be futile to endeavour to persuade them to the contrary.

149/36. *C. P. B.*—**The Neuralgia Powder** consists of 10 gr. of ammonium chloride. As a pure drug no medicine stamp is required when it is sold by chemists.

138/58. *Medicine.*—**The Liniment** can be imitated by mixing camphorated oil (1) liquid ammonia (1) laudanum (½).

152/25. *Cocain.*—The analysis you wish us to do cannot possibly be of any general interest.

152/43. *E. R.*—We cannot undertake to pass an opinion as to the merits of the American quack medicines you send.

136/29. *P. B.*—**Baking-powder.**—This is a mixture of cream of tartar, sodium bicarbonate, and rice flour. You will see from "Pharmaceutical Formulas" the proper proportion of the ingredients.

145/50. *Mizpah.*—**Plate Powder.**—The basis of the samples you send is a natural earth of the nature of kieselguhr mixed with calcium carbonate and rouge. Kieselguhr specially levigated to free it from grit must be used in making this preparation.

137/49 (*A. L.*) and 113/67 (*P. E. P.*)—Your inquiries are not of general interest, as you give insufficient particulars.

149/39. *W. N.*—The special **Headache Powder** consists of phenacetin, 8 gr.

111/13. *A. M.*—(1) **The Eye Ointment** consists of boric acid and yellow vaseline in the proportion of about 20 gr. to the ounce. (2) The brass-cleaning liquid we cannot identify.

151/63. *Surgeon.*—You should advertise your want in the coloured supplement. There are several mechanical dentists who give lessons in dentistry.

148/37. *Reg.* **Ext. Croci fluid.** is made with 60 per cent. alcohol on the model of ext. cocæ liq. B.P.

149/69. *Salol.*—(1) Oil of anise is said to be attractive to rats if added to the bait. (2) **Treatment of Constipation.** Read the article on this subject in "Disease and Remedies."

149/54. *Dulcified.*—(1) **Dulcified Spirit of Vitriol** is spirit of ether. (2) The directions for using Bull's optometer are not contained in any book to which we have access. The optician from whom you obtained the instrument would doubtless give you the necessary instructions.

140/33. *Hibernia.*—(1) It is some years since we published a method of making soap so we repeat it in an abbreviated form the directions given in the *C. & D.* 1880. **Hard Soap.** Take 10 lb. 98 per cent. caustic soda (in powder), and put in a jar with 4½ gallons of water, stir once or twice, and let it get cold. Weigh out 75 lb. of clean grease, tallow or oil, and if a solid fat is used melt at a temp. not exceeding 100° F. Pour the lye (the caustic soda solution) slowly into the melted fat or oil in a small stream, stirring with a flat wooden stirrer, and continue stirring gently until the lye and fat are combined, and of a honey-like appearance. The time taken for combination varies from fifteen to twenty minutes, but be careful not to stir too long. When the mixing is completed pour the liquid soap into a mould, which may be any square box, previously wetting the sides to prevent the soap sticking. Wrap the box up in old blankets or put in a warm place until next day, when the box will contain a block of 130 lb. of soap, which can afterwards be cut up into bars with a wire. **Soft Soap.**—Take 20 lb. of pure caustic potash, and put it into a jar with 3½ gal. of water, stir once or twice, and allow it to become quite cold. Place in any convenient vessel 8¾ gal. of olive or cotton-seed oil, pour the potash lye into the oil, and leave the mixture for a day as in making hard soap, but stir after a day and leave for a few more days. The product, which improves on keeping, may turn out to be alkaline in which case the quantity of oil needs increasing. (2) **Enamel Collodion.** For this the official flexile collodion answers well if care be taken that it is not too thick.

107/53. *J. P. P.*—You could put up powders containing a small dose of potassium chlorate as a fever powder, but it is most inadvisable for a chemist to profess to sell "a safe and simple remedy for scarlet fever, measles, and other eruptive maladies."

131/7. *Emulsion* (Budapest).—**Emulsion of Cod-liver Oil.**—You do not mention whether amongst the numerous formulas you have tried has been the egg emulsion in "Pharmaceutical Formulas" page 481, which is excellent. When making in an emulsifier observe the directions given of replacing part of the water by lime water to start the process.

118/71. *A. A. S.* (*N. S. W.*).—The paste black and tan Boot Polishes are, as you surmise, composed of ceresine and turpentine perfumed with oil of mirbane. The proportions appear to be two of ceresine to four of turpentine, but this can be ascertained by experiment, for which you have greater facilities than we have. The colour of the black paste is apparently aniline black.

136/15. *S. W. B.*—**Worm Powder** for dog, without santonin or calomel. This is composed of sodium acetate, sodium hydrate, ammonium carbonate, and salt, but the compound is a patent.

116/45. *J. W.*—We do not know of any method of making skins transparent.

118/31. *P. M.* (Bombay).—The following is the composition of the Condition-powders for Horses you send:—

	(1)
Potassium nitrate	8 oz.
Powdered gentian	8 oz.
Black antimony	8 oz.
Powdered liquorice	8 oz.
Powdered anise	4 oz.
Powdered fennel	4 oz.
Powdered caraway	2 oz.

Mix.

	(2)
Sodium chloride	4 oz.
Ground linseed	4 oz.
Powdered resin	2 oz.
Powdered fœnugreek	1 oz.
Powdered ginger	½ oz.
Powdered anise	1 oz.
Iron sesquioxide	2 oz.

Mix.

The dose of either powder is one tablespoonful night and morning.

135/43. *Oxon.*—**Application for Ringworm in Horses**—This is a mixture of oil of turpentine (2), dark heavy petroleum oil (1), and oil of origanum (½). The quantities are indicated by the bracketed figures.

*** *We are again compelled to hold over many letters and replies to correspondents.*

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

161/71. Maker of the "Challenge" tincture-press.

161/40. Makers of felt (for chest-protectors) and Turkey towelling (for bath gloves).

161/45. What is "inflammation-drops" (a West Country remedy for cold), or, if proprietary, where obtainable?

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: February 27.

THE business tone remains much as previously reported, there being little animation in drugs and chemicals, and few alterations. The German makers of lithia carbonate and citrate have advanced their quotations slightly, and in carbonate of bismuth there has been a drop of 1*d.* owing to "outside" competition. Practically no business has been done in quinine pending the cinchona-auctions, but prices are steady. In auction fair supplies of Seychelles and Mauritius vanilla sold at irregular prices, with a good demand, and at the quarterly cinnamon-sales there was a decline. Essential oils of lemon, bergamot, and orange are all tending easier; and peppermint is very dull. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Camphor, crude	Cumin-seed	Arsenic	Bismuth carb.
Condurango	Wax (Jap., c.i.f)	Oil, bergamot	Cinnamon
Lithia carb.		Oil, cocoanut	Ginger (Cochin)
Lithia citrate		Oil, linseed	
		Oil, orange	
		Pimento	
		Spermaceti	

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from February 20 to 26, inclusive:—Acetate of lime, 1,628 bags; acid, citric, 24; acid, tartaric (@ Rotterdam) 53, (@ Bordeaux) 9; antimony (@ Smyrna) 801 bags, (@ Hamburg) 280; argol (Span.), 34; "balsams" (@ Hamburg), 4; balsam copaiba (@ Maranham), 6; bismuth ore (@ Antofagasta), 32 sks.; bleaching-powder (@ Hamburg) 142 cks., (@ Antwerp) 50; buchu, 15; cardamoms, 13; caraway-seed, 275; cascarilla, 4; castor oil (@ Antwerp) 230 brls., (Fr.) 50 cks.; chamomiles, 8; chillies (Jap.) 339, (@ Hamburg) 85; cinchona (@ Calicut) 137 bales, (@ Mollendo) 135; citrate of lime (@ Messina), 494 cks.; citronella oil, 20 cs. 29 pps.; coca-leaves (@ Ceylon), 13; cod-liver oil (@ Aalesund) 122, and 100 *in tr.* (@ Bergen) 84; coriander-seed, 342 bgs.; cream of tartar, 78; drugs (@ Hamburg), 13 bls.; essential oils (@ Messina) 38, (@ Smyrna) 30 cs.; fenugreek-seed, 1,505; galls (@ Kobe) 24, (Chin.) 19; ginger (@ Hong-Kong) 300, (@ Jamaica) 53, (Jap.) 200; gum arabic (E.I.), 25; honey (Jam.), 6; jaborandi, 32; lemongrass oil (@ Cochin) 5, (@ Galle) 6; lemon-juice (@ Messina), 10 pps.; lime-juice (@ Halifax) 7 hhds, (W.I.) 12 cks. 11 pns.; mastich, 5; matico (@ W.C. America), 43; musk (@ Colombo), 1 box; mustard oil (@ Calcutta), 10; myrrh (@ Hamburg), 46; nux vomica (@ Calicut), 5; olive oil (@ Malaga), 60; opium (@ Smyrna) 147, (@ Salonica) 20; pepper (@ Havre) 37, (@ Singapore) 519; peppermint oil (Jap.), 20; phosphorus, 10; pimento (@ Havre), 70; pot. bicarb., 13; pot. bichrom., 13; pot. carb., 12; pot. cyanide, 300 cs.; pot. permang., 40; quinine (@ Amst.), 5; saffron, 1 cs.; sal ammoniac, 49; sandalwood, 295; shellac (@ Calcutta) 205, button lac 100; soda ash (@ New York), 504 brls.; soda crystals (@ Antwerp), 100 bgs. 34 kgs.; tamarinds (E.I.), 150 brls.; tartar (Span.) 11, (@ Rotterdam) 14; turmeric (@ Cochin), 110 bgs.; vanilla (@ Port Louis) 24 cs., (@ Auckland) 8 pkgs.; wax, bees' (Span.), 11; wax, Carnauba, 503; wax, Japanese, 25; wine-lees (@ Spain) 523 bgs., (@ Palermo) 400 bgs., (@ Messina) 376, (@ Alicante) 289, (@ Bordeaux) 26, (Ital.) 10.

Heavy Chemicals.

The volume of business passing in the heavy-chemical market does not show any great variation. For the most part the general tone is certainly rather quiet, but, nevertheless, there is a fairly steady and constant demand on home account, and matters are scarcely so bad as might be supposed from various reports. Export business is looking up a bit, and very shortly this department ought to be much busier. Values, generally speaking, show very little fluctuation.

ALKALI-PRODUCE.—Bleaching-powder and caustic soda are, perhaps, a shade quieter, and not moving so briskly. Other main products, however, are in fairly good request, and steady.

SULPHATE OF AMMONIA is dull, but prices are maintained, and do not appreciably differ from the figures last quoted.

LINSEED AND COTTON-SEED CAKES in good all-round demand, with prices very firm. Linseed cakes, 95-per cent. pure, 8*l.* 15*s.* to 9*l.* per ton. Oil cakes, 7*l.* 5*s.* to 7*l.* 10*s.* per ton. Cotton cakes, firsts, 4*l.* 12*s.* 6*d.* to 4*l.* 17*s.* 6*d.* per ton; and seconds, 4*l.* 7*s.* 6*d.* to 4*l.* 12*s.* 6*d.* per ton.

BENZOLS are quiet, and have declined in value: 90-per-cent, 9½*d.*; and 50-per-cent., 8¼*d.* to 8½*d.* per gal.

SULPHOCYANIDES.—Dull, at unchanged rates. Potassium, 7¼*d.* to 7½*d.* per lb. Barium, 95-per-cent., 4*d.* per lb.; and potassium, 6*d.* per lb.

ZINC SALTS.—In about average request, and without change in value. Zinc-sulphate crystals, 6*l.* to 6*l.* 2*s.* 6*d.* per ton. Zinc-chloride solution, 100° Tw., 6*l.* to 6*l.* 5*s.* per ton.

RECOVERED SULPHUR continues to move well, and maintains a very firm tone at 5*l.* 5*s.* to 5*l.* 10*s.* per ton, free on rails, in bags.

SOUTH DURHAM SALT.—In steady request, at 11*s.* per ton, f.o.b. Tees.

MAGNESIUM SALTS are in better request, and steady at late rates. Magnesium chloride, 62*s.* 6*d.* to 67*s.* 6*d.* per ton. Magnesium sulphate (Epsoms), 62*s.* 6*d.* to 67*s.* 6*d.* per ton, free on rails, in bags. Carbonate of magnesia, 37*s.* 6*d.* to 40*s.* per cwt.

SAL AMMONIAC.—Unchanged, at 39*s.* and 37*s.* per cwt. for firsts and seconds respectively.

Liverpool Drug-market.

Liverpool, February 26.

CASTOR OIL.—There is almost an entire absence of fresh features in the castor-oil market. Good seconds Calcutta is still quoted at 3 1/16*d.* to 3¼*d.* per lb., and first-pressure French can still be bought at 2 15/16*d.* to 3*d.*; second-pressure, 2⅞*d.* per lb. In the forward positions the Calcutta market has taken a slightly firmer tone, and French is still maintained at the higher figures recently quoted.

ARSENIC.—Powdered white is somewhat easier, some holders being willing to accept 14*l.* to 14*l.* 10*s.* per ton, net.

AFRICAN GINGER has become decidedly firmer, and 35*s.* is now asked for new crop, and to arrive 32*s.* per cwt.

GUM ACACIA.—There is no quotable change in the value of Soudan descriptions, which have been selling in small parcels at prices ranging from 35*s.* to 42*s.* per cwt. A small sale of Ghezirah is reported at 27*s.* 6*d.* per cwt.

SULPHATE OF COPPER remains in a normal condition, the value hovering round 20*l.* per ton.

QUILLAIA-BARK is firmly held by importers at 12*l.* 10*s.* to 13*l.* per ton.

GRAINS OF PARADISE.—Holders are firm in their views at 65*s.* per cwt. for the small remaining stock, and say that no more can come forward this season.

BEESWAX.—A sale of Peruvian, 20 sacks yellow to grey, is reported at 7*l.* 3*s.* 9*d.* per cwt. A parcel of Chilian realised 7*l.* 15*s.* per cwt.

GALLS.—Fine Persian blues are held for 65*s.* per cwt.

CHILLIES (Sierra Leone).—Forty bags new crop at auction realised 45*s.* per cwt.

SPERMACETI.—For Chilian refined 1*s.* 1*d.* per lb. has been paid in small lots, and 41 bags crude have changed hands at 71*s.* per cwt.

JABORANDI.—About 30 bales have arrived, and will be offered at auction.

CARNAUBA-WAX has a downward tendency owing to arrivals. Fair to good yellow is scarce, and wanted.

German Drug-market.

Hamburg, February 25.

Business in general is quiet here, and our drug-market shows very little business.

AGAR-AGAR is quiet, and lower; spot is quoted 350m. to 340m., and forward 330m. to 325m. per 100 kilos.

BALSAM PERU is more freely offered, and lower at 12½m. per kilo.

CAMPHOR (REFINED) is quiet; makers are asking 435m. per 100 kilos., and second-hand holders will take 10m. less. A good spring demand will probably improve the position of this article.

CONDURANGO, for spot delivery, is firmly held at 110m. per 100 kilos., and 107½m. to arrive.

ERGOT is firm, at 330m. for good Spanish, and 325m. per 100 kilos. for Russian.

D

Digitized by Google

Ipecacuanha is quiet, and slow of sale, at 22m. for Rio and 11m. to 10½m. per kilo. for Cartagena.

Menthol is quiet, at 30m. per kilo., and new arrivals rather depress the market.

Quinine is firm, at 39m. per kilo.

Star Aniseed is firmer, on account of higher prices from China; spot value is 130m. per 100 kilos.

Spermaceti comes very firm from America at 240m., but spot delivery can be had at 235m. per 100 kilos.

Wormseed is stronger again, owing to scarcity; green is quoted 90m., and brown 65m. per 100 kilos.

Shellac shows only small stocks here. The value of TN is 25m. per 100 kilos.

Oils (Fixed).—Castor oil is advancing, and shows an improved demand, while stocks are very small here; first pressing is quoted 55½m. per 100 kilos. for barrels on the spot. Cod-liver is very firm, with non-congealing oil quoted 75m. per barrel. Linseed is also firm, but quiet.

Oils (Essential) show no material change in values.

American Drug-market.

New York, February 18.

Business continues good, and there is little to disturb market values.

Balsams.—Copaiba is active. Supplies of inferior crude are obtainable at 34c. per lb., but 36c. to 39c. is asked for the better grades of Central American. Tolu has declined, and is offering at 26c. to 29c.

Buchu-leaves.—Short are plentiful, and the market is easy with quotations nominal. The spot market is almost bare of the long variety, small parcels of which are held at $1 upwards.

Cubebs are dull; 9½c. will buy.

Damiana-leaves are higher at 15c., and the Western market is reported still higher. Supplies are scarce.

Ergot.—Russian is easy and quotations a little lower at 38c. to 40c. Spanish is obtainable at the same figures.

Ipecacuanha is almost neglected, and values are easy. Rio is nominally unchanged at $2.50, and Cartagena at $1.42½, but these figures could doubtless be shaded.

Jalap is fairly steady at 12c. to 13c., and considerable sales are reported for export.

Opium is quiet at $2.95 to $3 for case lots.

Quinine is in good demand, and a firmer feeling is evident, but prices remain unchanged.

Sarsaparilla.—Mexican is quiet at 7c. to 7½c. per lb., and Honduras at 28c. to 32c.

London Markets.

Acid, Tartaric.—English is firm at from 11½*d.* to 11⅝*d.* per lb., and foreign (crystals or powder) is obtainable at 10½*d.*

Aloes.—For Socotrine aloes in kegs 72*s.* 6*d.* per cwt. has been paid for stiff pasty for export. Curaçao aloes in gourds is scarce, there being nothing in the warehouse, and for good liver in boxes 30*s.* is wanted.

Arrowroot.—It is reported that a syndicate has been formed in St. Vincent among the growers of arrowroot, with the idea of obtaining more remunerative prices than those prevailing for some years past. At auction fine St. Vincent was bought in at 2½*d.* per lb, Queensland at 1⅝*d.*, and Bermuda at 1*s.* 6*d.* per lb.

Benzoin.—There has been a fair demand for Sumatra benzoin at from 6*l.* per cwt. and upwards. A quantity of Palembang ex auctions has also been sold at from 41*s.* to 42*s.* 6*d.* for good seconds.

The exports from Singapore from January 1 to December 31 (in piculs) have been:—

——	Great Britain	Continent	U.S.A.
1901	1,799	2,756	233
1900	1,295	2,793	41
1899	1,779	1,616	51
1898	918	1,133	—
1897	909	1,620	—
1896	3,619	897	—

Bismuth.—The official price of carbonate has been reduced 1*d.* per lb. owing to "outside" competition.

Buchu.—After the auction last week, further business was done, including good green round leaf at 8*d.*, and slightly yellow and stalky at 7½*d.*

Camphor.—Refined has been in steady demand this week, at unchanged rates. Higher prices are asked for crude Japanese—viz., 157*s.* 6*d.*, c.i.f.—and pressed is quoted 177*s.* 6*d.*

Cinnamon.—The usual quarterly public sales were held last Monday, and consisted of 1,311 bales. There was good competition, and 1,100 bales sold, but at a decline of 1*d.* per lb. on fine and ½*d.* to 1*d.* per lb. on good and ordinary qualities, as compared with the prices obtained last November. The following are the results:—

——	I.	II.	III.	IV.
	Per lb.	Per lb.	Per lb.	Per lb.
Superior	1*s.* 5*d.* to 1*s.* 7*d.*	1*s.* 3*d.* to 1*s.* 6*d.*	1*s.* 2*d.* to 1*s.* 5*d.*	10*d.* to 11*d.*
Good ...	10½*d.* to 11*d.*	9½*d.* to 10*d.*	9*d.*	8*d.*
Fair ...	9½*d.* to 10*d.*	8½*d.* to 9*d.*	8*d.* to 8½*d.*	7½*d.*

Bold clean chips sold at 3⅛*d.* to 3⅝*d.* per lb., being rather dearer; but ordinary small dusty were bought in at 2¾*d.* per lb.

Condurango is scarce and higher, at 65*s.* per cwt., c.i.f.

Elemi.—Ten cases are due to arrive shortly. Fine white is obtainable at 5*l.* 10*s.* per cwt.

Ergot.—There is a fair spot inquiry, but little business. Russian has sold at 1*s.* 5⅝*d.* per lb. c.i.f. The spot price for Spanish is 1*s.* 7⅝*d.* to 1*s.* 8*d.*, and to arrive 1*s.* 5*d.* to 1*s.* 5½*d.* is quoted, the inside figure being for ton lots.

Guarana.—A little is obtainable at 3*s.* per lb., the article remaining scarce.

Ipecacuanha.—After the auction last week further business was done in Cartagena description, including grey root at 4*s* 4*d.* per lb., and fair at 4*s.* 6*d.* Several holders of Cartagena root are now asking higher prices, as there has been a better demand for the United States of late. Rio is moving off slowly, and for selected bales 10*s.* 5*d.* to 10*s.* 6*d.* is asked.

Lithia Salts.—The German makers have advanced carbonate and citrate 4*d.* and 3*d.* per lb. respectively, and now quote carbonate at 6*s.* 8*d.* for small wholesale quantities, and 6*s.* 3*d.* for 2-cwt. lots. Citrate in crystals is 4*s.* 9*d.* for 2-cwt lots up to 5*s.*, according to quantity. Powder is 6*d.* extra, but makers are not offering.

Oil, Bergamot, is easier, agents quoting from 7*s.* to 7*s.* 2*d.* per lb., c.i.f., in quantity.

Oil, Camphor.—For light white oil, which is scarce, 34*s.* per cwt. was paid last week.

Oil, Cod-liver.—The London market is still tending upwards in sympathy with Norway, and although 90*s.* per barrel, c.i.f., is now talked of as the nominal figure for new oil, business has been done at 80*s.* to 81*s.*, c.i.f., but most agents ask from 85*s* upwards. Old oil is reported to have sold at 72*s.* 6*d* per barrel. Our Bergen correspondent writes on February 22 that the weather has been very stormy this week, and the fishing has been considerably hindered, so that the prospects are not encouraging at present The supplies of new oil so far are strictly limited, and practically nothing is obtainable at his last quotation of 75*s* per barrel, f.o.b. The exports from Bergen up to date amount to 1,111 barrels, against 978½ barrels at the same time last year.

Oil, Lemon.—Quotations keep on the easy side, well-known makes offering at from 2*s.* 7*d.* to 2*s.* 7½*d.* per lb., c.i.f., in quantity.

Oil, Orange.—Prices is about 4*d.* to 6*d.* lower, agents quoting from 5*s.* 5*d.* to 5*s.* 6*d.* per lb., c.i.f.

Oil, Peppermint, of all descriptions is quiet. American HGH is quoted 8*s.* 10½*d.* to 9*s.* according to holder, H & P 8*s.* to 8*s.* 3*d.*, JBH "First Premium" 7*s.* 3*d.*, and "Pure" 7*s.* 9*d.* per lb. spot.

Oils, Fixed.—*Linseed* quiet and easier, 31*s.* 6*d.* being quoted for barrels, spot. *Rape* steady, at 28*s.* 3*d* for refined on the spot, and Ravison 25*s.* *Cocoanut* is easier, at 33*s.* 6*d.* spot, and 37*s.* for Cochin. *Cottonseed* quiet, at 24*s.* 3*d.* to 25*s.*

Digitized by Google

per cwt. for refined. Lagos *Palm* is unchanged, at 27*s.* per cwt.

OPIUM is unchanged.

SMYRNA, February 14.—Some of the large holders having made slight concessions, owing to want of money, a good business has been done, amounting to about 220 cases of mostly new and old current talequale, at from 7*s.* 9*d.* to 8*s* 3*d.* per lb., c.i.f About 170 cases were for American account, 30 for England, and 15 for the Continent. Of the above quantity, 15 per cent. consisted of old crop, which obtained a higher price. The market closed firm with buyers. The arrivals in Smyrna to date amount to 3,067 cases, against 3,869 cases at the same time last year.

CONSTANTINOPLE, February 21.—Only 8 cases have changed hands this week at 7*s.* 8*d.* to 7*s.* 9*d.* per lb., and the market closes quiet with sellers, but no buyers. The crop-prospects continue favourable, and the last months of winter look like passing away without any change in the weather, and thus help to establish a record mild winter.

QUICKSILVER is steady at 8*l* 15*s* per bottle from importers, and the same figure in second hands.

The *Revista Minera*, of Madrid, reports that the production of quicksilver from the Almaden Mines in Spain for the year 1901 was 22,775 flasks. In 1900 the output was 30,612 flasks, so that there was a decrease of 7,837 flasks, or 25·6 per cent., last year.

QUININE.—Another very quiet week has passed, and little or no interest has been shown in the speculative market, probably owing to the Amsterdam auctions to-day. Prices have been barely steady, and the small business done includes March delivery at 1*s.* 1⅛*d.*, and August at 1*s.* 2*d.* per oz.

SARSAPARILLA.—The arrivals this week comprise 23 bales grey Jamaica, and 6 native red. After the auction last week 1*s.* 4*d.* was paid for sound grey Jamaica.

SEEDS.—Russian *Anise* very slow at 20*s.* 6*d.* per cwt. *Coriander* quiet at 9*s.* 6*d.* per cwt. for Morocco. *Cumin* firm and rather dearer for Morocco at 23*s.* per cwt., but Malta sells slowly at 33*s.* per cwt. *Canary* steady at 37*s.* to 37*s* 6*d.* per quarter for Turkish on the spot, and at 35*s.* c.i.f. terms. *Linseed* maintains its price at 59*s.* to 60*s.* per quarter. *Fenugreek* neglected; 7*s.* 6*d.* per cwt. is the quotation. *Caraways* quiet at 21*s.* 6*d.* per cwt. for fair Dutch.

SENEGA is firmly held at 2*s.* 3*d.* to 2*s.* 4*d.* per lb., net.

SHELLAC.—The spot demand has been slow, and quotations are practically unchanged, consumers buying sparingly. The value of fine second orange TN is 121*s.* to 122*s.* per cwt. In the speculative market, prices are easier, the sales including March delivery at 120*s.* 6*d.*, May at 123*s.*, and June 123*s.* to 123*s.* 6*d.* In auction 227 cases were offered, of which about 100 sold at steady prices, including 90 cases good reddish second orange, rather cakey, at 121*s.*; fair red cakey to blocky, at 118*s.*; and 6 cases broken AC Garnet at 117*s.*, cash.

SPERMACETI.—Foreign is rather easier at 1*s.* 1*d.* per lb. or 1*s.* 0½*d.* for fifty-case lots.

SPICES.—The dull tone of this market still continues, buyers showing little disposition to purchase. At auction on Wednesday Cochin *Ginger* was lower, a parcel of new-crop washed rough being sold at 39*s.* to 41*s.* per cwt.; good bright boldish Calicut was bought in at 48*s.* per cwt. Jamaica, in good supply, met with no demand, only a few unimportant lots, dull lean at 37*s.*, middling dull at 41*s.* 6*d.*, and middling washed at 45*s.* per cwt. Zanzibar *Cloves* rather firmer; barely fair quality was bought in at 4*d.* per lb. The quotation for March–May delivery is 3⅞*d.*, and for June–August 4*d.* per lb. Fair Penang sold at 7*d.*, and good at 8½*d.* per lb. Ordinary stalky Zanzibar *Chillies* were bought in at 35*s* per cwt. Fine long red picked Japan were also withdrawn, no bid being made. *Pimento* easier; a fair proportion sold at 2⅝*d.* per lb. for common, and at 2¾*d.* for ordinary, fair quality being bought in at 2⅞*d.* per lb. *Mace* was bought in at 1*s* 8*d.* per lb. for middling red Penang. *Pepper* very quiet, but unchanged. Penang black was bought in at 5¾*d.* to 6*d.* per lb., and greyish Alleppy at 5¼*d.* Singapore is quoted at 5 1/16*d.* per lb. for spot and arrival. Singapore white was bought in at 10⅛*d.* per lb. for good fair.

VANILLA.—At auction on Wednesday 560 tins mostly Seychelles were offered, of which the bulk sold at irregular prices, fine long beans being about 1*s.* per lb. dearer, good long being full up, and very long 1*s.* easier, while foxy and brown were unchanged. The following were some of the prices paid: Fair to good chocolate Seychelles and Mauritius 7½ to 8½ inch, 20*s.* to 20*s.* 6*d.*; 7 to 8 inch, 17*s.* to 19*s.* 6*d.*; 6½ to 7 inch, 13*s.* to 15*s.*; 5 to 6 inch, 8*s.* to 12*s.*; and common brown and foxy 2*s.* to 9*s.* per lb.

WAX, BEES'.—The exports from St. Domingo during 1900 amounted to 317,000 lbs. against 268,000 lbs. in 1899, 409,000 lbs. in 1898, and 379,000 lbs. in 1897.

WAX, JAPANESE.—For good pale squares 34*s.* 6*d.* to 35*s.* per cwt. is asked on the spot, and for arrival 33*s.* c.i.f. is quoted, which is firmer.

WAX, PARAFFIN.—Refined is quoted 3½*d.* to 3¾*d.*, and crude 1¾*d.* to 2*d.* per lb.

Cablegrams.

AMSTERDAM, February 26:—At the auctions of cinchona-bark held here to-day 8,467 packages were offered, weighing 755,959 kilos., and containing 36,901 kilos. (1,290,000 oz.) quinine sulphate. Of the above quantity, 8,046 packages were sold at an average unit of 7.95c. per ½ kilo., against 7.45c. paid at the auction on January 23. The following were the approximate quantities of quinine purchased by the principal buyers:—English and American factories, who purchased the equivalent of 9,053 kilos.; the Brunswick factory, 5,650 kilos.; the Mannheim and Amsterdam factories, 9,146 kilos.; the Frankfort-on-Main and Stuttgart factories, 5,639 kilos., and various buyers, 4,917 kilos. The prices paid for the manufacturing bark ranged from 3¾c. to 74½c. per ½ kilo.; and druggists' bark from 8¼c. to 61¼c. per ½ kilo.

* * * *

NEW YORK, February 27:—Business here is fairly good. Opium is dull of sale at $2.95 per lb. Senega is higher at 54c. per lb. Golden seal (hydrastis canadensis) is easier at 48c. per lb. American bleached beeswax is strong at 30c. per lb. Cod-liver oil is advancing, and $23 per barrel is now asked. Cartagena ipecacuanha is lower at $1 35 per lb., and lithia has declined to $1.35.

* * * *

HAMBURG:—Business here is quiet. Lycopodium and castor oil are both firm. Condurango is higher at 110m. per 100 kilos.

* * * *

BERGEN, February 27, 11 A.M.:—The fishing so far shows poor results, and the general quotation is now 76*s.* per barrel, f.o.b. Bergen. The total catch of cod up to date amounts to 3,164,000, against 3,851,000 at the corresponding date of last year. This is expected to yield 2,038 barrels, against 3,910 barrels last year.

New Works for Cheshire.

Negotiations for the sale of a site at Broken Cross, Northwich, to Messrs. Gossage & Sons, of Widnes, and other Lancashire manufacturers, was finally completed on February 19. As previously mentioned, the land, which contains brine and has a frontage to the railway and the Shropshire Union Canal, is intended for manufacturing-purposes. It has been reported that a large chemical-works will be built, but in some quarters it is stated that glycerin and soap manufacture is intended.

American Sulphate of Copper for Greece.

In confirming his recent telegram to the American Government announcing that a United States firm had been awarded the contract to supply 500 tons of sulphate of copper to the Currant Bank of Greece, Consul Jackson, of Patras, says that in all seven bids were received, representing British, American, German, and Belgian firms. The bid of the successful American company ($45,015 for the 500 tons, c.i.f. Patras) was $5.84 per ton lower than that of the nearest competitor. When the results of the bids were made public the following day, negotiations for 300 additional tons were begun by private firms, and in the opinion of the Consul the United States will capture this year a larger percentage of the Greek market for this product—a market worth, at a low estimate, 90,000*l.* The Consul adds that the success of the American offer was wholly unexpected by the European companies, several of which were of the belief that their prices had been cut so close as to render competition improbable. In fact, the American product was not considered at all, on account of the exacting conditions governing the contract, and the high transatlantic freight rates.

			1,804	26,000
	Total		7,188	292,000

Chinese Cassia Lignea.

A warning to German traders has recently come from China The export-houses at Canton, both Chinese and European, have complained a good deal with regard to two principal articles of export—viz., cassia lignea and bristles. The sales in both these articles are on condition that good average of the season is shipped from China. Now it has been said that during the last two years, for example, at Hamburg, nearly every shipment of the said articles has been found unsatisfactory, and has been arbitrated on. This has, of course, given great trouble to the agents of Chinese exporters, and if there is not found a remedy it is expected that the German markets will lose the business altogether in favour of Trieste.

Junior Pharmacy ball.—The twenty-first annual ball was held at the Portman Rooms on February 26, and in spite of the bad weather the attendance proved a record one, some 360 being present. Mr. W. Warren presided over the supper, and proposed "Success to the Ball" and "The Ladies" in his own inimitable way. Mr. Percival Trick replied, thanking those who had seconded his efforts in making the affair a success. The arrangements, which were perfect in every way, were in the hands of Mr. C. W. Martin and Mr. R. T. Cassie. Messrs. Allen & Hanburys (Limited) provided the ladies with perfumes, sprays, and cachous, and Mortlake Mann's band supplied the music.

Swindon Sweet-nitre Case.—At Swindon Police Court on Thursday, February 27, Mr. Daniels, chemist, was charged under the Sale of Food and Drugs Act with selling sweet spirit of nitre containing only 0·85 per cent. of ethyl nitrite. Mr. Withy defended on behalf of the Chemists' Defence Association. Dr. Dyer gave evidence that he received the sample in a well-fitting stoppered bottle properly secured. He said the oftener a bottle was opened the less ethyl nitrite would remain. He admitted that slight decomposition would occur even when sweet spirit of nitre was kept stoppered up in full bottles. Chemists should store it in small bottles, but even in those some change in the ethyl nitrite would go on. The 10 per cent. of water in the spirit would in course of time change the ethyl nitrite if improperly stored. He agreed with Professor Dunstan and Mr. Allen that it was prone to decompose. Mr. Withy asked that the case be dismissed on the ground that the analyst had omitted to state in his certificate that the article was liable to decomposition. The Magistrates declined. Mr. Martin Priest and Mr. Johnston were then examined, and gave details of experiments they had conducted, proving the extreme rapidity with which sweet spirit of nitre decomposes. They stated they knew of no substance in the B.P. more liable to decomposition, and drew an analogy between it and milk in that respect. Mr. Johnston, in reply to Mr. Bevir (for the prosecution), said he would not sell a spirit of that strength if ordered in a prescription, but would if the order was an ordinary commercial one. The Magistrates imposed a fine of 1*l.* and costs, saying they were satisfied no fraud was intended.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Tuesday, March 4

Meeting of pharmacists at 17 Bloomsbury Square, W.C., at 3 P.M., to consider the form of a memorial to the late William Martindale.

Wednesday, March 5.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W.C., at 11 A.M. Council meeting.

Pharmaceutical Society of Ireland, 67 Lower Mount Street, Dublin, at 3 P.M. Council meeting.

School of Pharmacy Students' Association, 17 Bloomsbury Square, W.C., at 8 P.M. Social evening, when Prof. Collie will give a lantern lecture on the "Lofoden Islands."

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. Mr. E. P. Edwards on "Sound Signals."

Young Chemists' Association (Working-men's Club), Gallowgate, Newcastle-on-Tyne, at 8 P.M. Mr. F. R. Dudderidge will read a paper on "The Pharmacist as a Professional Man."

Thursday, March 6.

Röntgen Society, 20 Hanover Square, W., at 8.30 P.M. Exhibition evening and a short paper by Dr. B. Blacker on "Localisation."

Midland Pharmaceutical Association, Birmingham. Papers will be read.

Chemists' Assistants' Association, 73 Newman Street, W., at 9 P.M. Paper by Prof. J. Norman Collie on "Phosphorescence."

Chemical Society, Burlington House, W., at 8 P.M. The following papers will be communicated:—"The Slow Oxidation of Methane at Low Temperatures," by W. A. Bone and R. V. Wheeler; 'Isomeric Additive Compounds of Dibenzylketone and Deoxybenzoin with Benzal-p-toluidine, m-Nitrobenzalaniline and Benzal-m-nitraniline," Part III., by F. E. Francis; "Mesoxalic semi-aldehyde," by H. J. H. Fenton and J. H. Ryffel; "m-Nitrobenzoylcamphor," by M. O. Forster and F. M. G. Micklethwait; "Picrimidothiocarbonic esters," by J. C. Crocker.

Friday, March 7.

Royal Institution of Great Britain, Albemarle Street, W., at 9 P.M. Prof. H. Becquerel on "Radio-active Bodies."

Chemists' Managers' and Assistants' Society.—The first annual dinner will be held at the Horseshoe Hotel, Tottenham Court Road, W., on March 12. Tickets—Gentlemen, 5*s.* each, ladies, 4*s.*, or double, 8*s.* 6*d.*, may be had from Mr. C. E. Pickering, 97 High Street, Marylebone; Mr. G. Cullwick, 13 Mysore Road, Lavender Hill; and Y. R. Patterson Holt, 2 Belgrave Street, Argyle Square, S.W.

The dinner of past and present students of the West of Scotland College of Pharmacy, 157 St. Vincent Street, Glasgow, will be held in the Alexandra Hotel, Bath Street, on March 10, at 9 P.M. Tickets 3*s.* each, may be had at the College.

Public and Poor Law Dispensers' Association.—Second annual smoking-concert at Stone's Restaurant, Broadway, Ludgate Circus, E.C., on March 12, at 8 P.M. Tickets, 1*s.* each, may be had from Mr. H. T. Samuel, 7A Grand Parade, Archway Road, N.

The Bradford Charms.

Mr. John Hobson Matthews, Cardiff, writes to *Notes and Queries* in reference to the old charms which Mr. C. C. Bell commented on in the Winter Number of the *C. & D.* as follows:—

"Naadgrass Dyradgrass" seems to be Welsh. If I am correct in this surmise, the proper spelling would be "Na ad gras, Dyro dy ras," and the meaning, "Prevent not grace, give Thy grace." Unless "C. C. B." is quite sure of his reading, I would suggest as more probable "Na ad dy rass, Dyw dy rass" for "Na ad dy ras, Duw dy ras" (Prevent not Thy grace; God Thy grace). Both these supplications, but especially the latter, are well known as bardic metres. Mediæval charms of this kind, made up of phrases from Latin and Greek liturgies, interspersed with Welsh words, were common in the Principality right down to the early part of the nineteenth century. The most usual form had its origin in an ancient prayer attributed to St. Augustine of Hippo, which appears in a MS. French Book of Hours of the early fifteenth century in my possession.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

LINES FOR ADVERTISERS.

The Colonial Issue of "The Chemist and Druggist"
Falls this year on Saturday, April 19.
It will go to the best buyers of druggists' goods
In the Britains beyond the sea.
Besides, it will be specially circulated in Japan:
Japanese trade is worth looking after.
The Anglo-Japanese alliance will influence trade.
The C. & D. is in touch with buyers in Japan.
We have correspondents there who look after our interests.
Business men should make the most of the alliance.
So far as chemicals, drugs and sundries are concerned
The C. & D. of April 19 will be the medium for business.

Summary.

THE latest store-prices are quoted on p. 365.

A LARGE NUMBER OF NOVELTIES are described (p. 399).

B.Sc. PHARM. has made a Scotch rhymster break into song. It is on p. 367.

FURTHER notes on the treatment of diseases of poultry are printed on p. 392.

VINEGAR OF SQUILLS is the latest analytical fad, but it is likely to be dropped (p. 381).

OUR CAPE CORRESPONDENT reports on the condition of trade in South Africa (p. 368).

USEFUL HINTS to retail chemists as to advertising in local newspapers are given on p. 402.

A DELIGHTFUL burlesque of recent newspaper articles on drugging will be found on p. 393.

MR. GLYN-JONES seems to be shaping as the antagonist of Mr. Tocher's university education scheme for pharmacists (p. 372).

THE SACCHARIN CORPORATION has failed in an action at Dundee, where the Sheriff made some quite caustic remarks (p. 380).

QUACK MEDICINES are vexing the President of the Pharmaceutical Society, if we may judge from his speech at Blackburn last week (p. 377).

SOME CORRESPONDENCE in regard to the use of the Royal Arms by unprivileged tradesmen, and remarks on the law of the matter, are printed on p. 387.

THE DISPENSARIES COMMITTEE of the Pharmaceutical Council has submitted an interim report, which shows that matters are in a fairly satisfactory condition (p. 371).

MR. E. J. PARRY communicates some exceptionally interesting analytical details, which show that pure otto of rose is not so rare a commercial article as some people suppose (p. 390).

THE LONDON COUNTY COUNCIL has employed experts to report on the activity of disinfectants in killing pathogenic micro-organisms. An abstract of their report is given on p. 365.

COMPANY-PHARMACY LEGISLATION would be welcomed by a section of the House of Commons this Session. Our Parliamentary representative has gathered some information about the matter (p. 404).

AT A MEETING OF PHARMACISTS in Bloomsbury Square on Tuesday, it was resolved to institute a memorial to the late Mr. W. Martindale. We report the meeting on p. 373, and make some suggestions on p. 387.

OUR OBITUARY COLUMNS are heavy this week, and include the names of Messrs. J. Booth (Tiverton), E. Brown (Leeds), T. Cochrane (Falkirk), R. Cresswell and E. A. Kirby, M.D. (London). See p. 404.

THE manufacturers of vaseline have appealed against the Lower Court decision to remove the word "Vaseline" from the Trade-marks Register. Other important cases are reported in our Legal section, beginning p. 378.

THE PHOTOGRAPHIC SEASON, so far as resumed business is concerned, is now commencing. "Photographic Camerist" contributes useful notes (p. 395), and some novelties are described by "Our Town Traveller" (p. 397).

MR. R. A. ROBINSON, J.P., L.C.C., has been co-opted a member of the Pharmaceutical Council, in succession to the late Mr. Martindale (p. 370). A timely sketch portrait by Mr. Reynolds, with appropriate verses, appears on p. 384.

CORONER BRAXTON HICKS declares that he will speak out in regard to the use of proprietary medicines. Winslow's syrup is the last subject of attack. He has also succeeded in persuading a jury to change a verdict of death from misadventure to suicide (p. 365).

MR. DOBBS has had a liberal hearing before the Newcastle Magistrates, but his forensic entanglements did not prevent them fining a firm of florists, under Section 17 of the Pharmacy Act, for the sale of a nicotine insecticide. The Registrar of the Pharmaceutical Society was the prosecutor (p. 381).

THE DRUG AND CHEMICAL MARKETS have again been dull and uninteresting, with few changes in value. The reported completion of the monopoly in Japanese camphor has led to an advance in crude, and refined will probably follow. Quinine has slightly improved. Higher prices are asked for liquorice-root, ergot, and gamboge. Sulphate of ammonia and benzols are tending downwards. The drug auctions are reported on p. 412.

D—E

Digitized by Google

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

The Guardians of Poplar Union invite tenders by March 14 for the annual supply of drugs.

The Deal authorities are not to appeal in the beeswax-case, reported in the *C. & D.* of February 22.

The Inland Revenue authorities have been very active in Bristol and district, and many cases of liable labels have been dropped upon.

The East Ham School Board has accepted the tender of Mr. Knights Dack, chemist, 93 Plashet Grove, East Ham, for the supply of disinfectants.

Messrs. Sturton Brothers, chemists, Cambridge, have received the contract of the Chesterton Board of Guardians for the supply of quinine and cod-liver oil.

Mr. Otto Hehner, the public analyst for the Isle of Wight, reports that of twenty-five samples submitted to him in the last quarter of 1901, all but one (milk) were genuine.

At the jubilee celebrations at Owens College, Manchester, on March 12, Dr. Oliver Lodge, Professor Lapworth, and Dr. W. A. Tilden are to receive the honorary degree of D Sc.

The Drouet Institute is the subject of a special article in this week's *Truth* which chemists and druggists, who are asked regarding the Drouet treatment for deafness should refer to.

Mr. Seyler, the Glamorgan county analyst, examined last quarter samples of Friar's balsam, camphorated oil, spirit of nitre, paregoric, cream of tartar, and Gregory's powder, all of which were genuine.

At the welcome given to Dr. Gore, the new Bishop of Worcester, at the Council House on February 27, there were observed many pharmacists, amongst them Mr. J. Freeman, of Birmingham.

All persons having claims against the estate of the late Mr. William Owen Jones, chemist and druggist, Much Wenlock (Salop) should send them into Messrs. Lawton Warnes & Sons, solicitors, Eye, Suffolk, by March 25.

On Friday, February 28, the students of the Imperial College of Pharmacy, accompanied by Mr. Frederick Davis, visited the Mint, and saw not only the process of "making money" from its inception, but the striking of the African and Coronation medals in silver.

A public meeting was held at Birkenhead on February 25 to protest against the action of the Birkenhead Coroner in refusing to accept a death-certificate from Mr. Arthur Pleavin, M.D., U.S.A., who has practised in Birkenhead for eighteen years.

On March 1, Mr. W. Daybell, an assistant in the shop of Mr. William Fletcher, chemist and druggist, Bath Street, Ilkeston, was opening a bottle of acid when a quantity flew in his face. Oil was immediately applied, and it is believed that this prompt action prevented any serious results.

To commemorate the acquisition of the Coliseum, Leeds, for business-purposes, Taylors' Drug Company (Limited) on March 1 entertained a large number of their customers to a musical evening. During the proceedings a collection was made on behalf of the medical charities of the city, 7*l.* being realised.

A large store of honey has been discovered in the roof of Strawberry Hall, at Tydd St. Mary. Two swarms of bees had hived there for sixteen years, and the proprietor several times offered the honey to anyone who would shift the bees and make the roof good again. This task has been accomplished by a builder, who removed 280 lbs. of honey.

Football.

Metros *v.* Square.—This match, the last of the competition for the inter-pharmacy cup, was played on March 1 at Shepherd's Bush, and aroused keen interest. The first half closed without either side scoring, but in the second half the Metros made a spurt, and won by four goals to nil.

The New Broom's Sweepings.

The public analyst for the City of London (Dr. F. Teed) in his latest report states that during the last three months 518 samples of food and drugs were purchased under the Sale of Food and Drugs Acts, and 39 cases were reported against. Milk continues to be one of the chief articles of food adulterated, while in several cases so-called butter has been found to be pure margarine. In one sample of almond oil there was 100 per cent. of oil other than almond. Two samples of mercury-ointment were discovered to be adulterated to the extent of 70 and 60 per cent. respectively. The public analyst recommends a continuance of energetic measures against offenders, with a view to a further reduction of the percentage of adulteration in the City.

Disinfecting-experiments by the London County Council.

At the weekly meeting of the L.C.C. on Tuesday, Drs. Klein, Houston, and Gordon reported that, with a view to ascertaining the value of various disinfectants under the ordinary conditions of their use in dwelling-houses, they had experimented with carbolic acid, permanganate of soda, bleaching-powder, corrosive sublimate, formalin, and sulphurous-acid gas. Seven kinds of microbes were experimented with, organisms representative of enteric fever, diphtheria, cholera, and tuberculosis being included. Four different sorts of material, in ordinary practice requiring to be disinfected—namely, cloth, unvarnished or unpainted wood, linen, and wall-paper—were chosen. To them, microbes, distributed in broth, in milk, or in melted gelatin, were liberally applied, and the charged materials were then exposed to the various disinfectants. It was found that both the gaseous disinfectants, formalin and sulphurous acid, failed in the case of wood and cloth charged with spores. In one experiment even the little-resistent bacillus typhosus, exposed on wood or cloth, was not destroyed by formalin, but the reporters raise the question as to whether the result was due to some fault in the experiment. This organism was, however, destroyed under like circumstances by sulphurous acid. Formalin vapour, on the other hand, showed to greater advantage than sulphurous acid in the case of tubercular sputum dried on linen and paper. As regards fluid disinfectants, corrosive sublimate, 1 in 1,000, with twenty-four hours' exposure, destroyed all microbes, including the spores of anthrax and the tubercle bacilli; carbolic acid in 5-per-cent. solution, with twenty-four hours' exposure, failed to destroy anthrax-spores, but was efficacious for all others. In the case of Condy's fluid, one teaspoonful to a pint with twenty-four hours' exposure gave a negative result; when used in five times that strength it was still practically of negative value; bleaching-powder, generally speaking, only destroyed the less-resistant forms of microbes, though in the case of anthrax-spores on paper and on linen this material proved more effective than carbolic acid. The bacillus diphtheriæ was killed by formalin and sulphur dioxide. The vibrio of cholera was in each experiment destroyed by all the disinfectants except Condy's fluid and bleaching-powder. The bacilli pyocyaneus and staphylococcus aureus were acted upon in much the same way. Anthrax-spores were only destroyed with certainty by perchloride of mercury. For tubercle bacilli, carbolic acid and perchloride of mercury were the only disinfectants efficacious on each occasion.

Birmingham Notes.

The Birmingham General Dispensary report records a deficit, for the first time, on the year's accounts of 203*l.*

A largely growing district with no chemist is a novelty in this age of competition and overcrowding. Such, however, may be seen in the healthy residential district of Northfield.

The Birmingham Skin Hospital authorities have purchased an expensive electrical apparatus for the treatment of skin-diseases, and have equipped the hospital for the treatment of lupus, cancer of the skin, and kindred complaints. The

Digitized by Google

x-rays and the Finsen apparatus have been worked with gratifying effect.

A lady friend, in response to a knock at the front door, found a young well-dressed lady offering boxes of "So-and-So's" tooth-powder, 1*s.* per box, and 2*s.* 6*d.* for three. In order to get rid of her visitor the housewife said she would purchase some when her stock was finished, but was promptly told that it could not be obtained at the shops, but only through the caller.

A Stirchley resident complains in the local press that, in answer to an advertisement promising large gains in one's spare time, his stamped envelope came back with a demand for 1*s.* In reply to the sum sent he received three recipes—one for a "whisker stimulant," the second for an "infallible cure of corns and warts," and the third for a laundry-glaze secret. He was to advertise them in the local press and sell the recipes.

Under the title of "Eau de Birmingham," an inspired article appeared in the *Mail* of Monday, in which it was shown to complete satisfaction that perfume is a disease-preventative. Mr. Barnett (of the firm of Barnett & Co., Bristol Street), in an interview stated that the greater part of eau de Cologne is made in this country from spirit produced in Norway, and the bottles are of French origin, the public being satisfied if the label has a foreign appearance.

The Birmingham General Dispensary Committee announce that they are prepared to receive a limited number of pupils at their various establishments (Union Street, Highgate, and Ladywood, &c.) for instruction in dispensing. Candidates must have passed a preliminary examination acceptable by the Pharmaceutical Society, before entering upon their three-years' term of service. Premium 30*l.* Small salary after the first year's service. This is not an advertisement, but is printed to show the tendency of the times.

At the last Chemical Club meeting, Dr. Price, of the Chemical Department, University, discoursed upon some new facts about peroxide of hydrogen. He had some of great purity, strength 30 per cent., from Merck, which cost 2*l.* 10*s.* per kilo., by weight or 100 volumes. With it he had determined the action of colloidal solutions of metals in the presence of acids and alkalies. A solution of colloidal-platinum iodide was shown containing 3 milligrammes of of metal to 30 c.c. of water. It has a dark-brown colour, and is produced by the action of the electric arc under water containing platinum chloride. It seems to possess bactericidal power in the presence of hydrogen peroxide.

Store-prices.

Amongst the alterations in the price-circular of the Civil Service Supply Association (Limited) for March we note that invalid bovril (2 oz. 1*s.* 3*d.*, 4 oz. 2*s.*) and 3-gr. quinine-tabloids (1*s.* 8*d.* per bottle of 100) have been added to stock. The prices advanced include:—

Bynin, from 1*s.* 5½*d.* to 1*s.* 6*d.*; Byno-hypophosphites, from 2*s.* 2*d.* to 2*s.* 3*d.*; A. & H. cod-liver oil, from 1*s.*, 1*s.* 11*d.*, and 3*s.* 8*d.* to 1*s.* 1*d.*, 2*s.*, and 3*s.* 10*d.*; eucalyptus oil (Kangaroo brand), from 11*d.* to 1*s.* per bottle; Coleby's expectorant balsam, from 11*d.* to 1*s.* per bottle; Allenbury feeders, from 11*d.* to 1*s.* each; A. & H. malted food (No. 3), from 9½*d.* and 1*s.* 7*d* to 10*d.* and 1*s.* 8*d.* per tin; gutta-percha tissue, from 11*d.* to 1*s.* per oz.; tabellæ saccharinæ (A & H), from 2*s.* to 2*s.* 1*d.* per bottle; St. Jacobs oil, from 2*s.* to 2*s.* 1*d.* per bottle; Boehm's soaps, from 1*s.* 8*d.* to 1*s.* 9*d.* per box; tonga, from 2*s.* 2*d.* to 2*s.* 5*d.* per bottle; vapo-cresoline, from 1*s.* 9*d.* to 1*s.* 10*d.* per bottle; vinolia Premier dentifrice, from 3½*d.* and 6*d.* to 4*d.* and 8*d.* per box.

The Army and Navy Stores' Circular for this month does not show any alterations in prices that have not already been noted. Fell's patent automatic disinfector (2*s.* 3*d.*) and the Stormont Murphy curative chest-protectors (single 2*s.* 1*d.*, double 3*s.* 6*d*, and large 5*s.* 3*d.* each) are among the recent additions.

The Crown Colonies at the Imperial Institute.

Professor Wyndham R. Dunstan, F.R.S., Director of the Scientific Department of the Imperial Institute, presided on Tuesday afternoon at the first of a series of six lectures and demonstrations which are being given at the Institute by Mr. R. Hedger Wallace, formerly of the Victorian Agricultural Department, on "The Commercial Products and Agricultural Resources of the Crown Colonies." In his introductory remarks the Chairman stated that the Institute contains magnificent collections of products, illustrative of the natural resources of the colonies, and it is hoped that by lectures and demonstrations such as these the interest and utility of the collections to the general public will be much increased. Following each lecture Mr. Wallace intends to give a demonstration in the particular court containing the products of the colony described.

A Pencil Through a Boy's Head.

An extraordinary affair is reported from Carmarthen. About three and a half years ago a lad named Philip Reynold Daniel whilst at school commenced to tickle his right ear with a small bit of lead pencil, which slipped from his fingers and entered the organ. The boy became alarmed, and in endeavouring to extract the pencil pushed it completely out of sight. He was sent first to one doctor and then another, both of whom pooh-poohed the idea of a lead pencil being lodged in the boy's cranium. Serious developments ensued, the boy became quite deaf in the right ear, and twelve months afterwards one side of his nose became choked. Then the right ear seemed to improve, and irritation commenced in the left ear. Six weeks ago the pain became so excruciating that the boy consulted his uncle, Mr. P. R. Lewis, chemist, who advised the mother to poultice the ear two or three times a day. Last Friday the boy felt something near the orifice of his left ear, and immediately went to his uncle, who, with the aid of a small electric lamp, extracted the two halves of a bit of lead pencil ⅜ inch long. There was, however, no sign of the lead itself. Another poultice was applied, with the result that the lead also came into sight and was extracted.

Hicks on Winslow.

Coroner Braxton Hicks held an inquest last week regarding the death of Alice Thurley, aged 19 months, the daughter of a licensed victualler. The little one had been ailing, and her mother gave her Mrs. Winslow's soothing-syrup and Steedman's powders. By the time Dr. Yeo was called in the baby had died in a fit, and the doctor stated in evidence that death was due to heart failure, brought on by acute pneumonia. He considered morphine a bad thing to give a child in that condition. Before this the mother gave evidence, and while doing so the Coroner (who had sent his officer to a chemist to borrow a bottle of Winslow's syrup) made a running and very free commentary upon the label and circular, and told the jury that the syrup contained morphine, and had to be labelled "Poison," but this was done in small letters which could hardly be seen. The Coroner then read the directions for administering the medicine, and said if anyone ever took the trouble to read all this through they would see it was "all rot." Turning to the witness, the Coroner said he did not blame her, but the people who advised her to use the syrup. The jury returned a verdict of death from natural causes, and added that they thought these medicines which contained poison should be marked in red ink. The Coroner said he would keep pegging away about medicines of that sort till something was done. He saw a member of the Press present, and he hoped he would have pluck enough to put it in the paper, and that the paper would have pluck enough to insert it.

The Unfeeling Coroner.

At Lambeth on March 3, Mr. A. Braxton Hicks held an inquiry with reference to the death of Isabella Swinton Guthrie, who died in St. Thomas's Hospital from the effects of poison. Mrs. Lena Spurgeon, wife of the Rev. Thomas Spurgeon, pastor of the Metropolitan Tabernacle, said Miss Guthrie was her cousin. She lived with witness, who on February 26 found her lying across her bed dressed and quite unconscious. She observed a bottle of vapo-cresoline freshly uncorked, with a corkscrew beside it. The bottle was labelled "Vapo-cresoline. Caution: Poison if taken internally." The substance was intended for use as vapour in cases of whooping-cough and other infectious complaints and was prepared in New York. The witness was not aware that her cousin possessed such a thing, and she certainly had

Digitized by Google

no use for it. She was removed to St. Thomas's Hospital, where she died the next day. Mr. T. W. Paterson, house physician at St. Thomas's Hospital, said that the *post-mortem* examination revealed considerable recent irritation of the trachea, which was compatible with the inhalation of vapocresoline. The jury returned a verdict of death from misadventure. The Coroner: Is that the verdict of you all, gentlemen? Do you think anybody could have taken so much of this by mistake? It is not a question of sentiment; you must restrain your sympathy with the relatives, for you are in a Court of law. The jury then returned a verdict of suicide during temporary insanity.

Wants Rousing.

A Leeds chemist complains of the lack of energy on the part of the Leeds Chemists' Association. "They appear," he says, "to be in a chronic state of somnolence." With the exception of "high tea" on one occasion last autumn, he declares that the members have never foregathered on any single occasion. It cannot be, he thinks, that they are so absorbed in amassing fortunes that they are unable to give an occasional evening to social indulgence. Rather, he suggests, is it "a morbid and recluse-like condition" which has seized upon them. He points out that Dewsbury, Halifax, Bradford, and Huddersfield have all done something in the direction of social intercourse, and asks why Leeds, by far the most important centre of them all, should be so lackadaisical in the matter.

A Chemist's Death.

An inquest was held on March 4, at Halifax, on the body of Mr. Thos. Topham chemist and druggist. The widow said he had been in the habit of taking chloral for sleeplessness. On the day preceding his death he made up some prescriptions, but seemed easily excited and fainted, and witness gave him some quinine. He retired to rest as usual that night, and dosed off eventually to sleep. She was awakened by his stertorous breathing, and sent for Dr. Oakley, but her husband died before the doctor arrived. Dr. Oakley said he was first called in to the deceased on January 16. He was then suffering from poisoning by morphia and chloralhydrate. It took him ten hours to bring deceased round, and he attended him from that time until his death. His vitality had got very low. When witness reached deceased's house on March 2 he found that deceased had been dead a few minutes. His hands were clenched, his head thrown back, and the body quite rigid. He had made a *post-mortem* examination, and found a quantity of bitter fluid in the stomach. The appearances all pointed to strychnine-poisoning, but he could find no distinct traces of the strychnine in the stomach. He thought strychnine was taken in solution. The jury found that the deceased died from strychnine-poisoning, but as to how or by whom it was administered there was no evidence to show.

The Week's Poisonings.

Since our last report nine fatalities from poisoning have been recorded. Carbolic acid was taken by a Merthyr girl, and also by a Preston woman, with fatal results. A Manchester woman died from an overdose of chlorodyne—a sedative she had been in the habit of taking regularly. Dr. Nield Cooper, of Accrington, died from an overdose of laudanum, following a drinking-bout; while a "medical assistant," named Davies, poisoned himself at Somers Town by an overdose of morphine. The strychnine poisoning of Mr. Topham is alluded to above. Inquests have been held at Preston and at Cramlington on children who have died after eating sweets. In each case the *post-mortems* revealed considerable irritation of the stomach and the absence of ptomaines. At Preston the jury recommended the abolition of the sale of tin-ware in confectionery. A Liverpool report reaches us announcing the death of the Rev. Alexander McKinney, formerly vicar of St. Mary Magdalene, Liverpool, who destroyed himself by an overdose of cream of tartar (!), of which he was particularly fond.

Colour Tests.—"That white cow," said the waggish farmer, "is the one that gives milk." "Ah!" exclaimed the city girl, "and those brown ones, I suppose, give Bovril!"

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Change.

Mr. J. Corcoran, registered druggist, has opened a retail drug-store at Aungier Street, Dublin.

Why should Ireland Wait?

Dr. J. C. McWalter, M.P.S.I., Dublin, has written to the *Irish Times* an urgent appeal for a consumptive sanatorium in the city. In England, he says, every enlightened municipality is dealing with the phthisis problem, and it is the plain duty of the Dublin Corporation to erect such a sanatorium now that there is ground to be had practically free of charge.

Doctor's Downfall.

At the Longford Assizes on March 5, Judge Fitzgibbon sentenced Dr. John Flanagan, late dispensary doctor of Ballinalee, to twelve months' imprisonment for throwing nitric acid on his servant-boy in November last. The four months the prisoner had spent in gaol are to be deducted, and the judge held out hopes that if the injured boy were compensated the sentence would be substantially reduced.

Herbal Medicines.

A case against three members of the "Lillian American Herbal Association," who are charged with obtaining money under false pretences, occupied the Magistrate of the Ennis Petty Sessions Court for several days last week. Witnesses gave evidence of having been supplied with medicine by either George, Emily, or Mabel Lillian, and a police-witness said he found quite a dispensary at the rooms occupied by the prisoners at the Imperial Hotel, Galway. A fee-book was also found, showing that money had flowed freely into the Lillian coffers. Dr. George Harris, surgeon of the County Infirmary, Ennis, said he sold a number of the bottles found among the Lillian effects, and they all contained poisons, and should only be dispensed by properly licensed persons. One of the cough-mixtures contained poison in small quantity. Some of the bottles bore the label of Messrs. John Clarke & Co., Belfast; and one that of Kiloh & Co., Cork. The Magistrate returned the prisoners for trial to the Assizes.

Contracts Open.

The following Boards of Guardians invite tenders for medicines and medicinal and surgical appliances:—North Dublin (workhouse, auxiliaries, and dispensaries), March 19; Dunshaughlin (workhouse and several dispensaries) March 11; Kilkeel (workhouse and several dispensaries), March 10.

Laudanum in Ireland.

At the meeting of the Lurgan Board of Guardians on March 1, Dr. Moore said that he was never in any community in which the people used laudanum and poisoned children as they did there. He had endeavoured to discourage the practice, which he regarded as a curse to the district. Mrs. Greer (Guardian) asked why laudanum was not sold as a poison in this country, as it was in Scotland? She was standing at a chemist's counter when a child of tender years came in to purchase the drug. She asked the chemist why he sold laudanum to a child, and his reply was that if he refused to do so he would turn away four hundred customers a year. Dr. Moore said that the children of Lurgan district were starved by laudanum-druggirg in two ways. It starved children by keeping them sleepy, when they required less food, and it starved them by preventing digestion. This chronic evil contributed to the smallness of stature which they saw around them every day, and he had always felt strongly on the subject. The Guardians took no action in the matter.

Faith.—Towne: "Do I understand you to say that Spencer's case was really a faith cure?" Browne: "Yes; you see the doctor and the druggist both trusted him."

Scotch News.

Glasgow Notes.

The correspondence on "The Doctor's Shop" article continues somewhat languidly.

An English traveller who is new to Scotland complains that the medicos North of the Tweed are much smarter business men than their English brethren. He is surprised to find that the Scotch men higgle about prices, and ascribes this to so many of them being shopkeepers.

Mr. Tocher's scheme for the university training of students of pharmacy, if not received with any great enthusiasm in local circles, has not excited active opposition. Those who are hunting in vain for apprentices fear that the adoption of the scheme would make that species of game even scarcer than it is now. But the prevailing disposition is to give Mr. Tocher's weighty proposals the careful and critical consideration which they undoubtedly deserve.

At a meeting of licentiates of the Faculty of Physicians and Surgeons of Glasgow held on February 27, to discuss the action of the General Medical Council in issuing the recent edict regarding the sale of scheduled poisons, Dr. L. Burgess, who presided, said it was the kind of thing that was done by trades-unions and American trusts. It practically made it so dangerous for them that a few had got rid of their shops, and more would be very glad to do so. Chemists were by no means inclined to stop prescribing; they said they had a right to do so. Equally the licentiates at present had the right to dispense. Why should they be interfered with by the chemists trying to get a law to prevent their prescribing? He affirmed that all that is required in the ordinary doctor's dispensing could be learned in a fortnight. It was resolved that the action of the Council was a serious infringement of the rights in pharmacy held by licentiates under their diploma, and that steps be taken to represent to the General Medical Council the effects of the edict upon the medical practice of the Glasgow district, and to defend the system of open surgeries. Some very unkindly things were said at the meeting regarding the Pharmaceutical Society.

Turpentine in Veterinary Practice.

At a meeting of the Scottish Metropolitan Veterinary Medical Society held in Edinburgh on February 23, Mr. Andrew Boyd, Melrose, read a paper on "Turpentine as an Antiseptic," in the course of which he stated that turpentine was one of the best antiseptics, especially in cases of parturition. Turpentine was not only a splendid antiseptic, but was stimulating and healing. He recommended a mixture of 5 oz. of turpentine, 1½ oz. of chloroform, and 1 quart of olive or salad oil for general use. Professor Duff-Dunbar, of New Veterinary College, then read some notes on the administration of styptics and medicines for the arrestment of bleeding.

Not Enamoured.

Mr. Tocher's suggestion for a pharmaceutical degree does not seem to have been universally accepted. "One who was present at the meeting" thus poetically warbles:—

We're all keen on education
  Pharmaceutical, you know,
And but for procrastination
  We'd have had it long ago;
It's been mooted (and hooted) for many a year,
  But at last it has come to stay.
With a triennial 'varsity course, so I hear,
  Ev'ry chemist who goes for it may
    Take a B.Sc.

Chorus:

Now, boys! less of that noise!
  We're in dead earnest, I tell you, now.
People there are who'll be sure to scoff; sneer and cough; say it's "off."
  My word! won't we be heard
When we're profess'nal men.
  B.Sc.—you and me,
Life will be worth living then.

We turned up on Friday morning.
  (What an era-marking day!)
We all thought the day was dawning
  For good trade and better pay.
'Twas a well-thought-out, well-brought-out, sober scheme.
  Our hearts in our breasts beat high.
Things may not just be what they oftentimes seem,
  So we might in the sweet by the bye
    All be B.Sc.

Chorus.

After lunch we talked it over,
  But the point most speaker's missed.
There are some who live in clover,
  And forget the pharmacist.
Whatever we please (high degrees), can't quite thrive
  By *Science* and *Culture*, I say?
Nine-tenths must be *tradesmen*, to keep them alive,
  And will be for many a day
    E'en though B.Sc.

Chorus:

Well meant, very well meant,
  Jolly good thing for the few who win.
All very fine for the men with tin—
  Three years in, takes some tin.
Why, now, make such a row?
  Minor's enough for me.
I, for one (and not I alone)
  Am not struck with that B.Sc.

Our contributor's sentiments are more pertinent than his rhythm. It is stated that the whole number of men and women who could possibly take up the curriculum would not give the four Universities sixty more students per annum.

French News.

(From our Paris Correspondent.)

A GALA BENEFIT PERFORMANCE is announced for Friday March 7, at the Chatelet Theatre, Paris, organised by the Association of Pharmacy Students in aid of the Society's funds. The names of Sarah Bernhardt, Réjane, Paul Mounet, and a number of other leading artists are down on the attractive programme.

THE PATENT-MEDICINE TRADE.—The Pharmacie Centrale de France, which is one of the leading firms of French wholesale chemists, announces that from March 15 next it will debit all specialities (patent medicines) at net prices. The reason for this is, that of late years so many makers of specialities here have modified their prices and conditions of sale by introducing combinations for refunding premiums or by system of tickets. The Pharmacie Centrale undertakes to collect the premiums for their customers.

THE CARNOT AND CHIRIS FAMILIES will (as reported in the *C. & D.* some weeks ago) shortly become more closely united, as M. Chiris, jun., is to wed Mdlle. Cunisset Carnot. M. Chiris is the brother of Mme. Ernest and François Carnot, so that the future Mme. Chiris will become her uncle's sister-in-law, and her husband will become his brother-in-law's nephew. His sisters will also become their brother's aunts. The Chiris family are largely connected with the essential-oil and perfumery industry at Grasse.

FORK-SWALLOWING.—An interesting operation was performed at Limoges on Tuesday of last week, when a fork was removed from the stomach of a travelling pedlar. According to the *Temps*, the patient, who suffered from a disease of the larynx, was recommended to scratch the interior of the throat for it. He used a fork for the purpose, and inadvertently swallowed it. He at once went to the hospital, where it was ascertained by the radioscope that the fork was in his stomach point upwards. Dr. Chenieux, Director of the School of Medicine at Limoges, performed the operation, which only took a few minutes, and the patient is going on well.

RESPONSIBILITY OF REGISTRY OFFICES.—A case of some public interest has just been decided in Paris in connection with the engagement of servants. A dentist engaged a housemaid through the intermediary of a registry office. The girl was supplied with what is known as excellent

Digitized by Google

references, and entered on her duties in due course, but only to disappear two days later, after having "annexed" everything she could lay hands on, including a certain amount of gold used for dental purposes. The dentist thereupon sued the proprietor of the registry office for the loss sustained, and has been accorded 5,000f. (200*l*.) as damages. The judgment sets forth that as registry offices enjoy a privilege or monopoly in France, they ought to make some investigation regarding the servants for whom they seek situations. Had this precaution been taken in the present instance, the fraudulent nature of the certificates would have been at once apparent.

AN INTERNATIONAL EXHIBITION AT LILLE is announced to open in May next, and to last five months. It is under the patronage of the Municipality of the town, and will be divided into four principal sections—*i.e.*, commerce, industry, science, and fine arts. These will be divided into eighteen groups. Industrial chemistry is No. 14, and comprises "Materials and processes of the Chemical Arts"; "Chemical, pharmaceutical, and veterinary products"; "Perfumery, essences, soaps, and dentifrices"; also other less direct branches of the chemical trade. The usual awards of medals and diplomas will be made. The Committee of Honour of the Exhibition includes Dr. Calmette, Director of the Pasteur Institute at Lille; M. Duclaux, Director of the Pasteur Institute at Paris; M. Combemale, Doyen of the Faculty of Medicine and Pharmacy, Lille, and the President of the Syndicat of Pharmacists of the North of France. Lille has a claim to being the largest industrial centre of France.

VICTOR HUGO EMBROCATION.—The celebration of the centenary of the birth of Victor Hugo has led to the publication of a number of anecdotes in connection with the great poet, and the following has its origin in Marseilles. A chemist of that town obtained from Victor Hugo permission to make use of his name for an embrocation, and the labels and bottles were already ordered when he found that a competitor was preparing a similar preparation under the poet's name. Legal proceedings were commenced, but things came to a deadlock as the competitor had also in his possession a letter authorising him to use Hugo's name. As they could not arrive at an understanding the two chemists decided to go to Paris in order to get him to act the *rôle* of Solomon. The poet received them courteously, and questioned the rival chemists narrowly. Finally he turned to one and said, "You must make an embrocation for human beings"; and then to the other, "You must make one for animals." It is only fair to add that neither preparation appears to be known at the present day.

South African News.

BUSINESS CHANGE.—Messrs. Heynes, Mathews & Co., of Cape Town, have acquired the business at Claremont lately carried on by Mr. F. W. C. Thomas.

MR. D. H. DAVIES has landed at the Cape to take up his duties as representative of Messrs. Evans, Lescher & Webb, in succession to Mr. R. A. Richardson, who has retired.

MESSRS. CRESSWELL, SONS & CO., of Cape Town, have given up their business in that city. Messrs. W. H. Lear & Co., of Cape Town, will in future act as that firm's indent agents in South Africa.

STORE THEFTS.—The pharmacists and wholesale houses at the Cape are martyrs to shop-lifters and thieves, and while it is very rarely that the shop-lifter is caught, now and again the store-thief finds himself in charge for robbing his employer or inciting others to do so. On February 9 a European named Felix Bean was before Mr. W. D. Lotter, A.R.M., Cape Town, on a charge of stealing razors, which he sold to one Samuel Hermann, a second-hand dealer, for 2*s*. each. The wholesale price of the razors proved to be 5*s*. 6*d*. The accused pleaded guilty, and told the Magistrate that they were the property of Messrs. P. J. Petersen & Co., in whose employ he had been as a mill-assistant. Mr. D. K. Petersen said the prisoner was a very good man, and he felt very sorry for him. His firm carried razors like those produced in stock, but of course he could not identify them A fine of 2*l*., with the alternative of fourteen days with hard labour, was imposed.

A WATER-FAMINE.—The question of water-supply is now serious in Cape Town, writes our correspondent, under date February 12, and there seems to be no prospect of rain. In the city itself sea-water is being supplied to the populace for culinary purposes from the street hydrants, while the manufacturing and photographic departments of the wholesale drug-houses and pharmacies are at a standstill for want of water. Messrs. Heynes, Mathew & Co., with characteristic energy, have commenced boring operations underneath their headquarters in Adderley Street, and will overcome the difficulty that way. The contract is 2*l*. 10*s*. per foot till water is found. The breweries in Cape Town are not so fortunate as their neighbours in the more immediate suburbs, who own springs and other sources of supply of their own and are inconvenienced in consequence. Unless rain falls shortly they will require to take drastic measures to find the necessary liquid to keep their businesses going.

TRANSVAAL BUSINESS.—The return of the refugees to the Rand will give an impetus to trade there, but the benefit to be derived therefrom goes at present mainly to Natal, as it is through Durban that importations are taking place in the first instance, while the more immediate needs of Johannesburg druggists are filled either by the local wholesale houses or those in Natal. Bloemfontein demands, which pass through the Cape Colony, have been heavy of late, and some good shipments of druggists' supplies have been made from both Cape Town and Port Elizabeth, but large consignments are still stored at the coast waiting the necessary permit to forward. The additional calls on coast houses, coupled with increased facilities of transport with other colonial centres, are all very welcome, since they show that events are now moving in the right direction, however slowly, and that a continued improvement may reasonably be looked for.

TRANSVAAL CUSTOMS RETURNS.—The Director of Customs, Pretoria, has favoured us with statistics showing the value of the following goods imported into the Transvaal for the quarter ending December 31, 1901:—

	£		£
Acetic acid and vinegar	1,035	Oil:—	
Apothecaryware:—		Castor...	632
Chemicals	26,274	Cocoanut	169
Cyanide potassium ...	3,659	Lard	368
Quicksilver	840	Lamp	6,358
Sulphuric acid ...	104	Linseed	838
Acids (other kinds) ...	583	Machine	4,184
Confectionery	12,869	Sweet	1,410
Glass:—		Other kinds	594
Bottles	2,412	Sheep dip	252
Other kinds	3,471	Soap:—.	
Honey	498	Common	9,224
Hops	3,361	Perfumed and toilet	3,843
Mineral waters	474	Spirit (perfumed) ...	2,907
		Turpentine	572

The above returns do ot include Government or other free importations known as "public stores." [Compare with statistics in our issue of January 25, p. 160.]

THE PROGRESS OF EVENTS.—Whatever opinion the drug and allied export trades at home entertain as a whole regarding the situation in general and the immediate possibilities of trade in South Africa, there can be little doubt, says our correspondent, that the year opens with increased business facilities, and that a considerable improvement has taken place all round. Preparations go to show that a gradual resumption of trade relations between the five states comprising British South Africa may be looked forward to with confidence. The best indications of this fact is the slow but sure up-grade of wholesale trade at coast centres, those connected with the drug-trade having no cause to complain as to the volume of business coming their way, but the perplexity of forwarding arrangements both by sea and land continues, despite the efforts of the transport companies and merchants. It should not be understood from this that the whole country is rapidly approaching normal conditions, for such is not by any means the case. Those who should know declare that the war may go on for an indefinite period yet. From past experience it would be better, perhaps, to keep such a possibility well in mind, as hitherto the disregard of hard facts, together with the

Digitized by Google

raising of false hopes, brought retribution in the shape of bitter disappointments to the home exporter and South African importer alike. The change for the better in the Cape Colony has been in evidence since the Cape Government took the defence of its borders and the administration of martial law into its own hands. The Colonial Government is at least practical, and some impossible personages who held equally impossible appointments have had to find other means of occupying their time since the new order of things. I do not suppose that there is a merchant of any standing in Cape Town—certainly not in the drug-trade—who is not anxiously awaiting the time, war finished or not, when the Cape Government will again take full charge of colonial affairs, as it has been very evident that the average British officer fails signally to appreciate the business man and the position in which he is placed, and what the business man thinks of the lack of consideration extended would not look well in print.

Colonial and Foreign News.

Danish Pharmacopœia.—A new edition of this work is now being prepared.

The German Apotheker Verein (Pharmaceutical Society) has now 3,334 ordinary, 21 extraordinary, 15 honorary, and 3 corresponding members.

New Botanical Gardens at Dahlen, near Berlin, are to be opened in June, 1904. The Curator (Privy Councillor Engler) is taking up his residence there in April of this year.

Dutch Women in Pharmacy.—A meeting of women pharmaceutical assistants was recently held at Amsterdam for the purpose of discussing the formation of a union of their own, but the Dutch Pharmaceutical Assistants' Association want the ladies to throw in their lot with them—naturally.

Appreciation.—The pharmacists of the province of Barcelona have placed in the new meeting-room of the College of Pharmacists of that town a commemorative plate in honour of Dr. Angelo Pulido y Fernandez, the Director-general of the Board of Health, who has done much towards bettering the condition of pharmacy in Spain.

Imitation of British Trade-marks.—Instances have been brought to the notice of the Board of Trade of effective assistance recently rendered by British consuls to importers of British goods into Turkey and China, the trade-marks on which were being imitated. As the imitation of British trade-marks is a common practice, the Board call the attention of manufacturers to the desirability of bringing cases of this kind to the notice of the consuls, who are always prepared to help with their advice, backed by action, if necessary.

Pumice-stone Industry in Italy.—There are about 200 pumice-stone quarries in the north-west part of the island of Lipari, but most of them are worked only from May to October, quite two-thirds being idle during the winter months. At the time of the greatest activity 800 workmen are employed, including 100 women. The pumice stone is sold to merchants who sort it, according to colour, weight and size, and then send it to Lipari, where it is cleaned and polished for market. There are fifteen grades of pumice stone recognised in the market.

Belgian Tariff Alterations.—A Belgian decree has been issued exempting certain essences and essential oils from customs duty on importation into Belgium. The following are included in the list:—Vegetable essences of the natural essential oils of bitter almonds, bergamot, cananga (ylang-ylang), lemons and their varieties, geranium, orris, jasmine, lemongrass, orange and its varieties, marjoram, sandalwood, sassafras, tuberose, and saffron, and perfumed unguents imported in receptacles of at least 10 kilos.

Brazil Imports Analysed.—The Board of Trade are informed that under a clause in the Brazilian Budget Law for the present year, all imported beverages and foodstuffs, without exception, must before clearance through the Customs be officially analysed. All such goods found to contain ingredients likely to be injurious to health—*e.g.*, boric or salicylic acid, alcohol of inferior quality, and sulphuric and other free mineral acids, &c.—in whatever quantity, will be condemned, the consignees being required to re-export the goods or submit to their destruction by the authorities. In addition, when re-exportation is not effected, the consignee will be fined. The operation of this enactment has already led to the condemnation of consignments of spirits and aërated waters, as well as foodstuffs.

A Commercial Bureau Wanted.—East Indian journals are taking up the cry for the establishment of a Commercial Department in connection with the Government. A writer in *Capital* states that "Even Russia is getting ahead of us in this matter. At St. Petersburg an Information Bureau of Trade and Commerce with Eastern Asia has been called into existence, and its branch establishments will be in Calcutta, Bombay, and other Indian ports immediately. The Russian Government are determined to give every assistance in their power to their own import and export merchants to extend their foreign trade on larger and more concerted lines than has hitherto been possible.

Wholesale Perfumers Meet.—The Manufacturing Perfumers' Association of the United States held its annual meeting in New York this month, when Mr. James E. Davis, of Detroit (President), furnished a report on the progress of the last year and the present conditions of business. Reports were also made by various standing committees, among them being the committee on legislation, of which Mr. Henry Dalley, of New York, is chairman. The proposed reciprocity treaty with France proved to be one of the main subjects discussed, since it contains a provision reducing the duty on manufactured perfumes 10 per cent. Mr. R. A. Hudnut, of New York, is chairman of the committee on importations and under-valuations. To this committee was referred a report from Mr. Dalley in which he called attention to the total valuation of perfumes and toilet imports in 1899, the figures being £500,000, mostly merchandise from France. He said one New York house representing a Parisian concern sold £400,000 worth of goods, and there were several other selling agents, known to do about an equal business. While these prices include the duty and profit of selling agents, he believed that, allowing every reasonable margin, there is clear proof of under-valuation in the Customs.

INSTITUTE OF CHEMISTRY.

The Annual General Meeting was held at 30 Bloomsbury Square, London, W.C., on Monday, March 3. Professor J. Millar Thomson, LL.D., F.R.S. the President, delivered an address, dealing with the work of the year. He said the roll of members had been increased by thirty-six, making a total of 1,040 Fellows and Associates at present on the register, while there are 130 students recognised by the Council of the Institute. He remarked on the higher percentage of passes in the recent examinations, which he considered pointed to the fact that the thoroughness of the examinations is more fully realised by those preparing for them. He also mentioned the establishment of an examination in biological chemistry, by means of which the Council hope to encourage analytical chemists to pursue the study of bacteriology, and thus be able to deal with chemical work involving bacteriological knowledge. He called attention to the fact that the Institute held an examination in Ireland in July last, and that the Council hope in future to arrange for a regular examining centre in Dublin. During the past year the Council have ceased to recognise the junior, second class, and lower grade professional Preliminary examinations of various examining bodies, and they have now under reconsideration the subjects which shall be compulsory to persons intending to proceed to the examinations of the Institute. The Council also reported to the members that during the past year they had addressed to the Local Government Board, and to various county and borough authorities, communications with reference to the combination of the two appointments of medical officer of health and public analyst. The Council hold the opinion that under the provisions of the Sale of Food and Drugs Act, 1875, it is intended that the M.O.H. and P.A. should be two distinct persons, inasmuch as the medical officer is one of those officers empowered by the Act to submit suspected samples for analysis.

Pharmaceutical Society of Great Britain.

COUNCIL-MEETING.

THE first business of the Council, which met on Wednesday was to elect Mr. R. A Robinson a councillor, to fill the vacancy caused by the death of Mr. Martindale Grants amounting to 43*l.* were made from the Benevolent Fund, and it was announced that the executors of the late Mr. E. M. Burden have sent a legacy of 100*l.* to the Fund. The Library Committee's report was presented in the usual skeleton form, and Mr. Gifford and Mr. Wootton again complained of the lack of information contained in the report. The President and other councillors explained that it is not advisable to make everything that transpires at the committee-meeting public, and Mr. Glyn-Jones reminded his fellow-councillors that the minute-books are open for their inspection. An interim report of the Dispensers' Committee was presented, showing that in the 716 institutions reviewed resident qualified dispensers, local chemists and druggists or medical men conduct the dispensing in 527 cases, a result which is much better than was anticipated when the committee was appointed. Mr. Wootton asked what had been done in the Army-compounder question, that being one of the principal reasons for appointing the committee. He was informed that the matter has not been overlooked, and that the committee are ready to hear evidence from dispensers who have returned from South Africa. The scheme formulated in Scotland for a university degree in pharmacy in connection with grants from the Carnegie Trust for poorer students was briefly explained by Mr. Storrar, and referred to the Library Committee. Mr. Glyn-Jones took exception to some reports he had received about the scheme, as certain passages implied that the universities had been approached officially. An assurance was given that the Society has not been compromised in any way.

The monthly meeting of the Council was held on March 5, at 16 Bloomsbury Square, W.C. The meeting, called for 11 o'clock, began at 11.30. There were present the President (Mr. G. W. T. Newsholme), Vice-President (Mr. C. B. Allen), Treasurer (Mr. S. R. Atkins), and Messrs. Carteighe, Cooper, Corder, Cross, Gifford, Glyn-Jones, Harrington, Hills, Savory, Southall, Storrar, Symes, Taylor, Wootton, and Young.

The minutes of the previous meeting having been read, the President announced that he had received letters of apology for absence from Mr. Harrison and Mr. Park.

The Late Mr. Martindale.

A letter had also been received from Mrs. Martindale thanking the Council for the vote of sympathy passed at the previous meeting. The Wakefield Chemists' Association also sent to the Council a copy of a vote of sympathy the Association had passed on the death of Mr. Martindale.

Co-opting a Councillor.

Mr. Walter Hills moved a resolution that Mr. Richard Atkinson Robinson, 195 Brompton Road, S.W., be elected to fill the vacancy caused by the death of Mr. Martindale. It was quite unnecessary for him (the speaker) to introduce Mr. Robinson, who was so well known in pharmacy. He was exceedingly loyal to the Society, had exceptional powers of debate, and an intimate personal acquaintance with many official persons. The inclusion of Mr. Robinson's name would add considerable weight to the Council.

Mr. Corder seconded the motion, and as no other name was brought forward the President put the motion, which was carried unanimously.

Elections.

An unstated number of members and student-associates were elected to the Society, and nine persons were restored to their former position in the Society.

Money Matters.

The report of the Finance Committee was read. It shows balances on the

	£	s.	d.
General Fund account	1,739	3	11
Benevolent Fund account	483	9	2
Donation account	217	15	0
Orphan Fund account	321	7	3

and submitted for payment 2,568*l.* 9*s.* 4*d*, made up of the following items:—

	£	s.	d.
Journal	756	16	8
Salaries and annuities	715	8	4
Current expenses	600	0	0
Register and calendar	318	11	0
Taxes	184	4	6
Sundries	65	8	10

The President, in proposing the adoption of the report, mentioned that the executors of the late Mr. E. M. Burden, Duke Street, Grosvenor Square, W., had sent the Benevolent Fund a legacy of 100*l.* Mr. Burden had contributed liberally to the Benevolent Fund during his life, and the legacy was characteristic of his life-long loyalty to the Society.

The report was adopted.

The Treasurer was authorised to pay the Bell scholars the second moiety of their scholarships.

Charity.

The report of the Benevolent Fund Committee was taken in committee, after which,

The Vice-President said the applications for assistance had been smaller than usual, but grants of 20*l.*, 13*l.*, and 10*l.* were made to deserving cases.

The report was adopted.

Meagre Reports.

The report of the Library, Museum and House Committee was read. It mentioned that the attendances at the Society's libraries and museums had been published. One student was permitted to postpone his course of study in the Society's school till next term. The proposals of the Cardiff Association that the Society guarantee the University College of South Wales against loss in case it conducts a pharmacy course, were not recommended. A letter from Mr. Gifford, complaining of the inadequacy of the Library Committee's reports, was received, and a reply given that the work is chiefly administrative, consisting of conferences with the staff and other matters which it was not advisable to make public. The Editor, Advertising-agent, and Secretary conferred together in accordance with a scheme for conducting the *Journal*.

The committee, sitting afterwards as a Research Committee, received reports from Professors Collie and Greenish.

Dr. Symes said, in reference to the special number of the *Journal* published at the latter part of February, that it was originally designed with a view of helping the Benevolent Fund, and used to contain a list of subscribers under the various towns. That method, he believed, stimulated subscriptions, and besides, at present a chemist has no means of knowing, except he buys the Calendar, who are the subscribers in his own district. The *Journal* might have failed in that purpose, but he would like to know why the original intention had been departed from.

Mr. Gifford was sorry he could not express his satisfaction at the reply of the Library Committee to his letter. Surely the resources of the Committee were not so exhausted that they could not give some information in the report. He was quite unable to gather anything from it. Either the report said too much or too little; for instance, there was a meeting to consider some scheme in connection with the *Journal*, but no idea given of what the scheme was. It was also stated that Professors Collie and Greenish reported; surely the report could go a little further and give some information.

Mr. Carteighe: The reports are verbal; perhaps Mr. Gifford is under some misapprehension about them.

The President said it was many years since the special

Digitized by Google

number of the *Journal* gave the list of subscribers to the Benevolent Fund. It was before his presidency.

Mr. CARTEIGHE said the idea was dropped because it was found that the cost of the paper and printing was very considerable. There were also postage difficulties, which made the number a failure, and loss of money. It must be remembered also that another purpose of the number was the rectification of the register, which part of the scheme still went on.

Dr. SYMES was sorry to hear that the scheme was a failure, as he was largely responsible for the special number. He accepted Mr. Carteighe's explanation, but he could not help thinking that the subscriptions had very much increased; they had double the amount of money now to what they had.

Mr. CARTEIGHE: They have increased since we discontinued the number.

Dr. SYMES: Well, we get money from somewhere. I have no wish to force the matter on the Committee if they are satisfied that there is no useful purpose in publishing the names of the subscribers.

Mr. WALTER HILLS was sorry Mr. Gifford was not satisfied with the paragraph dealing with his complaint. If there is anything of importance involving any departure from precedence it is always stated.

Mr. WOOTTON said he could not help supporting in some respects what Mr. Gifford had said. There must be many matters of great importance which could be made public, but it seemed that the Committee had decided not to give the members any information. In the Welsh case, for instance, he should think the Cardiff chemists would like to know the reasons why the application was refused, and he saw no reason why they should not be given. Was there nothing worth telling the members after the interview with Professors Collie and Greenish? He thought the members who were paying for the research work had a right to know.

Mr. GLYN-JONES said he was responsible for the report being circulated amongst the members. There were, however, many things it was not advisable to make public. He had every sympathy with those Councillors who required more information, but less now than he had before the President's statement at the last meeting that any member was at liberty at any time to see the minute-book of any committee.

Mr. GIFFORD looked at it from the point of view of the members of the Society, who had a right to information as to the conduct of the Society.

The TREASURER said the committee sat for five or six hours, and the report would be a long one, even if boiled down to the most concentrated form. He thought the Council should show confidence in the committee, which often dealt with the most delicate matters. The report seemed to him a very fair one, but to give the reasons for refusing the guarantee in the Cardiff case would be unwise, and not to the interest of the Society.

Mr. COOPER said the committee kept nothing back which they thought should be made public.

Mr. TAYLOR was surprised that any member should have had any doubt as to his right to inspect the minute-books. The Council acted as the safeguard of the Society, and if any question arose on which he could not get information he should not hesitate to bring it before the Council.

The PRESIDENT, replying to the remarks of the critics, reminded Dr. Symes that the publication of the subscribers' names to the Benevolent Fund cut both ways. A man, seeing his fellow-chemists subscribing one or two guineas, and not being able to give a like amount, probably did not give at all. The fund had increased owing to the greater personal interest of the Society's officers throughout the country. In reply to Mr. Gifford, he would like to ask him if he would carry out his principle of making public the work of the General Purposes Committee? He would like also to remind Mr. Wootton that the work of the research laboratory was published periodically, and it would be useless and taking up a deal of time to give it in the committee's reports. The special number of the *Journal* would, he thought, be a success.

PUBLIC DISPENSING.

The PRESIDENT then announced that the Committee appointed to consider the conditions upon which dispensing is carried out in the public institutions of Great Britain had presented an interim report. The report had been delayed through no fault of the Committee.

The SECRETARY then read the report, which showed that the Committee had reviewed the dispensing-arrangements of 716 institutions. These were divided into two classes: (1) those cases where dispensers are appointed, and (2) cases in which dispensers are not appointed. In the first class there were 381 institutions, employing 214 dispensers with the Pharmacy Act qualification, 37 with the Apothecaries' Hall certificate, 20 Army compounders, and in 110 cases the dispenser had no qualification. The Pharmacy Act qualified dispensers were thus 59·16 per cent. Of the institutions where dispensers were not appointed, in 211 cases the dispensing was done under the superintendence of the medical man, and in 102 cases by local chemists and druggists. In 22 cases the information received was insufficient to include in the statistics. The result of the inquiries show that in 527 cases the dispensing is done either by qualified dispensers, local chemists and druggists, or medical men, which leads to the impression that public authorities are fully aware of the responsibility of the position of the dispensers in the institutions under their control. There is a class of institution, however, in which the safety of the public in the matter of qualified dispensing is not apparently of much importance.

The PRESIDENT, in moving the adoption of the report, said the Council would be pleased to hear that the dispensing at public institutions was done in rather a better way than was anticipated. The dispensing in 75 per cent. of the public institutions was controlled by qualified men. There was no doubt the inquiry would do good by setting some of the public bodies to consider the question of qualified dispensers in the same way that the circular sent out by the Local Government Board to local authorities on the supply of carbolic acid had called attention to the poisons regulations. The inquiry was responsible for some good already, and he had no doubt it would result in putting public dispensing on a better basis.

Mr. SOUTHALL: There may be many institutions which have not reported.

Mr. GLYN-JONES explained that the list was compiled from information received from the divisional secretaries. He had been struck by the large amount of efficient help the Society had received from the divisional secretaries in this inquiry. He had thought that public dispensing was not so well done as it had turned out to be. Mr. Glyn-Jones also mentioned that the 110 institutions where unqualified dispensers were employed were not what some people would call public institutions. He hoped the report would show those responsible for public institutions that it was advisable to employ qualified dispensers.

Mr. WOOTTON said when the inquiry was instituted one of the reasons was the unsatisfactory state of dispensing in the Army. No mention was made in the report of anything connected with the Army. He did not know whether it had been thought advisable to get evidence from the Army compounders who have returned from the war.

The PRESIDENT: The matter has not been lost sight of. Perhaps Mr. Carteighe will explain what he did in the matter.

Mr. CARTEIGHE explained that it was found that the committee of the War Office which was sitting to inquire into the medical organisation of the Army was only a temporary one, and dealt with surgical and medical matters solely. A complete committee would be sitting later, and it was probable that with a proper amount of courtesy and argument the Dispensing Committee might be able to impress it with the importance of having dispensing done by qualified persons. He was afraid the committee would not sit till the conclusion of the Boer war, but hoped the Society would be able to impress upon it that Army compounders are not the safest persons to intrust with the dispensing for the Army.

Mr. WOOTTON: There are many young men in the country who have returned from South Africa who could give the committee information.

Mr. CARTEIGHE: We are prepared to see them and put ourselves in touch with them, but I do not think it advisable to do it in a public manner.

Mr. CROSS said it was hardly the time to debate the subject, as the report was only an interim one. He was

Digitized by Google

glad things were not so bad as they thought they were at the time the committee was appointed. It would be easier to correct the little there was to correct.

The Vice-President thanked the Council for looking over the delay in producing the report, and also the divisional secretaries for sending in the necessary information. Amongst the unqualified dispensers were some good old servants of Boards of Guardians who could not be dismissed. That class of person would in course of time die out, and so the number of unqualified dispensers would be lessened.

Mr. Walter Hills informally thanked the Vice-President and Mr. Glyn-Jones for the amount of work they had done.

The Treasurer said it was not possible to forecast what the action of the Council would be when the final report was presented; but in the meantime the members could bring their personal influence to bear when an election of a dispenser took place in their district. A little gentle pressure could do a good deal in influencing the appointment of a qualified dispenser.

The President, in putting the report, mentioned that there are more than 716 institutions in the country where medicines are dispensed, but that number only had been investigated.

Mr. R. Mumford was appointed Divisional Secretary for Cardiff.

Annual Meeting.

The annual meeting of the members of the Society was fixed for Wednesday, May 28, at noon, and the Library Committee was charged with the duty of preparing the annual report.

The Poisons Committee.

Mr. Harrison, the deputy clerk of the Privy Council, notified to the Council of the Pharmaceutical Society that Mr. Walter Hills had been appointed a member of the Poisons Committee in place of the late Mr. Martindale.

Education in Scotland.

Mr. Rutherford Hill, the Assistant-Secretary in Scotland, sent a communication from the Executive of the North British Branch in reference to the Preliminary examination certificates, in which it was suggested that candidates possessing Leaving certificates should be allowed to complete the examination by passing the remainder of the subjects under any of the examining bodies recognised by the Society. The letter went on to say that the resolution was agreed to by the Executive, and ordered to be sent to the Council.

Mr. Storrar: I do not think it should be said it was agreed to.

[The reply was not made public, as the Council at this stage went into committee.]

The communication was referred to the Library Committee.

Another letter from the same source referred to the discussion on pharmaceutical education and the Carnegie trust, which took place on February 21 in Edinburgh. The meeting at which the discussion took place approved of Mr. Tocher's idea, and submitted it to the Council. A General Purposes Committee had been in the meantime empowered to take further steps to elaborate the scheme.

This was also referred to the Library Committee.

Mr. Storrar said he would like to see the question discussed by the Council as soon as possible, but recognised the wisdom of remitting it first to a committee. He would like, however, to say a word or two in explanation of the scheme. Last year a large sum of money was put at the disposal of the Scottish Universities by Mr. Carnegie, and the question came before the North British Branch as to whether pharmaceutical students could not obtain some of the advantages of the scheme. It was found that the fund would not benefit students who were not connected with one of the universities A committee then considered how pharmacy students could be brought under the scheme, and reported that if such a scheme as the one laid before the Council could be carried out, many of the universities were willing to give every assistance. That report was submitted to the Council last year. The next stage was the meeting of a fortnight ago, when Mr. Tocher made an elaborate statement on the subject, and, without expressing any opinion on the matter it was placed before the Society. Nothing had been done to commit the Society. The chief points they had considered were (1) to provide for the teaching of pharmacy in the universities, or extra-mural schools under the control of the universities; (2) to institute a degree in pharmacy; (3) to secure the benefits of the Carnegie trust for the poorer students. The discussion to obtain these objects had been conducted with perfect loyalty to the Council, and he had not heard any objections to them from that source. Outside the Council there had been several objections. It was stated that the Executive had taken upon itself a little more power than it ought to do in making such an inquiry. Now, he thought it was a distinct advantage to have such a body as the Executive, which could discuss questions without in any way committing the Council. Another objection was that the degree would interfere with the position of Major men. There was a good deal in that, but he would like to point out that the Society did not exist for the Major men. If a degree was an advantage to the Society and to pharmacy, that was sufficient reason for bringing it forward. Strong objection had also been taken that it would bring about an emigration of Scotch bachelors of pharmacy to the South. Well, perhaps that would not altogether be a disadvantage. (Laughter.) If Scotchmen could cross the Tweed from their side he would remind the Council that it could be crossed from the other side as well. He had read a report of a meeting at Manchester, in which a wish was expressed to have a curriculum and degree at the English Universities, as well as in Scotland. Mr. Storrar hoped the discussion would be first on the general question as to whether it was advisable to arrange for pharmaceutical education to be given in Universities, and then on the details. The details would have to be fixed by the Universities, and he took it that as they paid the piper they had a right to call the tune. The thanks of the Society were due to the gentlemen who had taken so much trouble to draw up the scheme, and for his own part he thought it was exceedingly desirable that the Society should be connected with the Universities.

Mr. Glyn-Jones was glad the scheme was to be sent to a committee, as it would then be thoroughly discussed. He did not see that giving assistance to the poorer students was sufficient reason for setting up a degree in pharmacy. His mind was relieved to hear Mr. Storrar say that nothing had been done to commit the Society. He would point out, however, that one of the pamphlets which had been sent to the Council, and which bore no mark of its origin, certainly implied official sanction of the scheme. It seemed a serious thing to imply that a suggestion to allow an outside body to set up pharmacy examinations had been officially approved of. He noticed a remark that it had been desired that universities should be asked to conduct the examinations in botany and chemistry for the Qualifying examination. He (the speaker) had never heard such an expression of opinion by the Council, and would like to know where it emanated from. He had an open mind as to the desirability of obtaining assistance for the poorer students, but when asked to set up a degree in pharmacy to attain that end it was a weighty matter. He had no hesitation in saying that no such degree was desirable in pharmacy. He was perfectly satisfied with the hall-mark the Society gave as the result of the Minor or Major examination. Another statement made in the pamphlet was that pharmacy should be learnt from the principal whilst the young man was an apprentice, and that then a curriculum of botany and chemistry would be taken. He always understood the Society had contended that botany and chemistry were the groundwork upon which a knowledge of pharmacy was to be built. He trusted the scheme would not, in the meantime, be further elaborated, as was suggested; it seemed at present perfect. As far as he could make out, the scheme had already been placed before the universities, whereas the Council had been assured that it was quite in an embryonic stage.

Mr. Storrar: I think it is quite clear that nothing can be done officially without the consent of the Society.

The President: As the matter is to go to a committee, I really ought not to have allowed it to be discussed; but perhaps Mr. Glyn-Jones will make another speech to the committee. (Laughter.)

Mr. Storrar's name was added to the Library Committee.

Digitized by Google

as it was thought advisable to have his views placed before the committee.

This terminated the public business.

MARTINDALE MEMORIAL.

A MEETING of pharmacists was held in the Council Chamber, 16 Bloomsbury Square, W.C., on March 4, for the purpose of considering what form the proposed memorial to the late William Martindale should take. There were present the President (G. W. T. Newsholme), Vice-President (C. B. Allen), Treasurer (S. R. Atkins), Secretary (R. Bremridge), and Messrs. I. Bourdas, E. N. Butt, M. Carteighe, A. Cooper, O. Corder, A. C. Flack, S. Frost, R. L. Gifford, A. E. Goodall, W. F. Gulliver, W. L. Howie, J. Humphrey, T. Maben, Peter MacEwan, A. E. Marsh, W. A. H. Naylor, W. J. I. Philp, D. Storrar, C. Symes, G. S. Taylor, J. C. Umney, W. P. Want, W. Warren, S. J. Weston, S. W. Woolley, and A. C Wootton.

The PRESIDENT explained the object of the meeting, and invited suggestions as to the form the memorial should take, mentioning at the same time that it was desirable that the money required should be contributed in small amounts from a large number of subscribers rather than that large sums should be given by few individuals.

Mr. PETER MACEWAN suggested that a replica of the very fine bust of Mr. Martindale which was exhibited in the Royal Academy be obtained. He knew that Mr. Martindale had a high opinion of the bust as a portrait, and, moreover, the sculptor, Mr. Taubman, was on the register of chemists and druggists. He suggested this as the basis of a memorial.

Mr. G. S TAYLOR said, from conversation he had recently had, Mrs Martindale would, he knew, be glad to lend the bust for reproduction. Personally he would like to see both a portrait and a bust, and Mr. Taubman had named a portrait-painter in a neighbouring studio with whom he would be pleased to collaborate.

Mr. CARTEIGHE thought the suggestion for a bust was good. There would be a great difficulty for an artist who did not know Mr. Martindale to convey the life and geniality which were so characteristic of him, and moreover a portrait from a photograph is not a work of art.

Mr. G. S. TAYLOR mentioned that the cost of a replica of the Taubman bust would be about 150*l.*

Mr. CARTEIGHE then moved a resolution that it was desirable that steps be taken to procure a bust in marble of the late Mr. William Martindale, to be placed in the Society's house, which motion Mr. MACEWAN seconded.

Mr. J. C. UMNEY next made the suggestion that the second Council medal be renamed the Martindale pharmacy medal, and that a fund to provide a gift of books on pharmacy to the winner of the medal be started.

Mr. CARTEIGHE said it would require 200*l.* to provide for 5*l.* gift of books yearly, and the die of a medal would run to 40*l.* or 50*l.* It rather depended on the amount received in subscriptions as to what supplementary form the memorial could take. It was desirable that the subscriptions be quite voluntary.

Mr. G. S. TAYLOR asked if Mr. Carteighe would consent to be treasurer to the fund if an appeal were issued, and Mr. CARTEIGHE replied that he would.

The PRESIDENT thought they should put away any thought of a scholarship, as that involved too much money. (Mr. CARTEIGHE, interposing, put the amount at 3,000*l.*) They might, however, supplement an existing scholarship, such as the Redwood, but there were objections to coupling two names in a scholarship.

Mr. CARTEIGHE took it that there would be a large number of subscribers, but the amounts realised might not be large.

The VICE-PRESIDENT did not think the resolution bound them to the bust alone; he rather liked the suggestion put forward by Mr. Umney. He thought a sum of 500*l.* would be raised, which would enable them to do something beside providing a bust.

Mr. CARTEIGHE said the resolution did not fetter them to do nothing else than provide a bust.

Mr. UMNEY gave his reason for preferring a medal, as being presented annually it would keep the memory of Mr. Martindale green.

Mr. MARSH asked if medical men could contribute to the fund as well as chemists.

The PRESIDENT replied that he saw no objection to asking medical men to subscribe.

Mr. HOWIE thought they should first provide the bust, and after that something such as a scholarship to hand down to posterity.

Mr. MACEWAN reminded the meeting that all the present scholarships except the Jacob Bell were practically failures.

Mr. ATKINS thought the memorial depended largely on the amount of money raised. He would suggest that a bust be first obtained, and after that, if funds permitted, books could be provided for successful students. These books, with Mr. Martindale's name upon them, would be an excellent method of perpetuating his memory.

Mr. BOURDAS raised the question of the limit to be put on subscriptions, and suggested that the amount from each person do not exceed 2*l.* 2*s.*

The motion was then supplemented in accordance with these expressed wishes so that it read as follows:—

With the view of perpetuating the memory of the late Mr. Martindale, a past-President of this Society, it is desirable that steps be taken to procure a bust of our late deceased friend, to be placed in the House of this Society, and, in the event of the response being satisfactory, a medal or some other encouragement for the advancement of pharmacy be provided, the exact nature of which shall be determined at a subsequent meeting of subscribers.

Mr. WOOTTON thought they ought not to limit the material of the bust to marble; it might perhaps be desirable to have it in bronze.

Mr. BUTT thought a bronze bust would not cost so much as a marble one, and proceeded to speak of the way metal busts are made. The resolution in its amended form was put and carried unanimously.

It was next decided that subscriptions should not exceed 2*l.* 2*s.* from each person.

The following were then appointed the committee:—

President, Mr. G. T. W. Newsholme.
Vice-President, Mr. C. B. Allen.

Atkins, S. R.	Howie, W. L.
Boa, Peter	Naylor, W. A. H.
Bremridge, R.	Philp, W. J. I.
Carteighe, M.	Storrar, D.
Cooper, A.	Taylor, G. S.
Gulliver, W. F.	Umney, J. C.

Mr. Carteighe was appointed Treasurer, and Mr. Taylor Secretary.

A subscription-list was then opened as follows:—

	£	s.	d.		£	s.	d.
G. T. W. Newsholme	2	2	0	W. L. Howie	2	2	0
S. R. Atkins	2	2	0	Albert Cooper ...	1	1	0
Chas. B Allen ...	2	2	0	A. J. Bullen Cooper...	1	1	0
W. J. Ignatius Philp	2	2	0	H. Creemer Cooper ...	1	1	0
W. Fred. Gulliver ...	2	2	0	E. R. Marsh	1	1	0
Charles Umney ...	2	2	0	I. Bourdas	2	2	0
John C. Umney ...	2	2	0	I. Bourdas, jun. ...	2	2	0
H. C. Wright... ...	2	2	0	M. Carteighe	2	2	0
Ernest A. Umney ...	1	1	0	E. N. Butt	2	2	0
W. A. H. Naylor ...	2	2	0	A. C. Wootton ...	1	1	0
John Humphrey ...	1	1	0	George S. Taylor ...	1	1	0
Peter MacEwan ...	1	1	0	Dr. C. Symes	1	1	0
Thos. Maben	1	1	0	W. S. Glyn-Jones ...	1	1	0
W. Philip Want ...	2	2	0	R. Bremridge... ...	2	2	0
S. J. Weston	1	1	0	Proprietors of THE CHEMIST AND DRUGGIST	2	2	0
Wm. Warren	2	2	0				
D. Storrar	1	1	0				

Further subscriptions will be announced weekly or as often as is necessary. They may be sent to

Mr. GEORGE S. TAYLOR,
Hampden House, London, N.W.

Cheques and postal-orders should be made payable to "Michael Carteighe."

THE NATIONAL ANTI-VIVISECTION SOCIETY, 92 Victoria Street, W., has published an English translation of the catalogue of apparatus and appliances for experiments with animals issued by F. and M. Lautenschlager, Berlin. It is a gruesome business which makes one's flesh creep, and its publication is intended, as the Hon. Stephen Coleridge says, to show "that anything is better than that such things should be."

Winter Session.

Society of Chemical Industry.

NOTTINGHAM SECTION.

A MEETING was held on February 26 at University College, Nottingham, Dr. Stanley Kipping, F.R.S., being in the chair, when Mr. WILTON P. RIX, late manager of Doulton's Lambeth Art Pottery, read a paper on

INSOLUBLE LEAD FRITS AND GLAZES.

The author dealt at the outset with the action of the Home Office in regard to its efforts to stamp out plumbism from the pottery industry. The amount of lead-poisoning, although decreasing, is still considered to be more than is warranted in the interests of the operatives. Dr. T. E. Thorpe was instructed by the Home Office to take up the research, with the result that he recommended that all lead should be used in the fritted form, and enunciated the principle to be observed in compounding such frits in the following terms:—

Providing the ratio obtained by dividing the sum of equivalent percentages of acidic oxides, calculated as SiO_2, into the sum of equivalent percentages of basic oxides, calculated as PbO, does not exceed two, the amount of lead dissolved by 0·25 per cent. of HCl seldom exceeds 2 per cent. calculated on 100 parts of the frit.

This test was intended to represent the action of the gastric-juice upon the lead particles inhaled by the workers.

Bearing in mind that lead is introduced in the glaze chiefly on account of its great fusibility, high refractive power, great fluidity, ready combination in compound silicate, as well as the beauty of its effect in coloured glazes, the importance that the lead contents in insoluble frits should be kept as high as possible will be understood. Now the lead content of soft Majolica and some other glazes often exceeds 65 per cent., but the highest content of lead present in any frit with solubility below 2 per cent. is 64 per cent. On the other hand, the lead content of earthenware glazes ranges only from 10 per cent. to about 22 per cent., and in china glazes from 2 per cent. to 21 per cent. In these cases, therefore, the use of insoluble frits, so far as lead contents are concerned, is an easy matter. Discussing the properties that demand attention, the author pointed out that the increase of certain bases added to the viscous character of a frit, the most important being alumina and lime.

In the preparation of frits from lead monoxide, as both monosilicates and bisilicates are extremely fluid and exercise a corrosive action on the brickwork, special precautions have to be taken in the construction of the furnaces. Mr. Rix said that in no case in which the formulæ in use can be converted from raw to fritted lead has he found any difficulty in producing ware equal to that made with the raw glazes. The paper was illustrated by an extensive exhibit, amongst which were specimens of Derby china prepared with the new glazes, and which lacked none of the excellence for which this ware is noted.

A discussion followed, in which Messrs. P. H. MELLOR, G. J. WARD, R. M. CAVEN, J. GOLDING, and the CHAIRMAN took part. Mr. RIX, in his reply, said the cause of glaze shelling off was just the opposite of the cracking of the glaze which he had explained. It was in both cases a question of the difference in the coefficient of expansion between the material of the ware and the glaze. In regard to alumina, it generally played the part of a base; but there were certain mixtures containing aluminate of cobalt forming a light blue, where it took the place of an acid. He regarded alumina as occupying a midway or neutral position, and so considered it in his calculations. There is no doubt, however, that alumina increases the fusion-point. At the same time, two glazes may have an identical fusion-point, and yet the one may be fluid and the other viscous, the two properties not being necessarily related. The CHAIRMAN said that, after listening to Mr. Rix's reply, the importance of the subject was made even clearer than when listening to the facts in detail. A hearty vote of thanks to the author terminated the proceedings.

Edinburgh Chemists', Assistants', and Apprentices' Association.

AT the meeting held on February 26, Mr. J. G. Sclater (President) in the chair, Mr. PETER BOA delivered a lecture on "Fishes and Flowers in Liddlesdale," which was illustrated by a fine series of lantern-slides. Mr. J. W. PLENDERLEITH then told the meeting "How the Minor Examination is conducted" at 36 York Place, Edinburgh.

Optical Society.

THE annual general meeting of the Society was held at Crane Court, Fleet Street, E.C., on February 27. The report of the Council, which was presented at the meeting by Mr. W. Salt (Hon. Secretary), showed that at the end of 1901 there were 227 members, a slight decrease on the preceding year. Reference was made to the optical standards, and educational committees appointed by the Society, and whose reports are expected soon. An information bureau has been established for the benefit of members, and it is intended to publish extracts from the bureau record-book under the title of "Notes and Queries." The accounts of the Society were also presented, showing a balance of 19*l.* 11*s.* 8*d.* to carry forward to the accumulated fund. The subscription-income for 1901 was 175*l.* 7*s.*

The report was adopted by the meeting, after which the election of officers and councillors took place. Mr. Chas. Hyatt-Woolf was elected President, and Mr. James Aitchison Honorary Treasurer, the office of Honorary Secretary being vacant. The retiring President (Mr. W. A. Dixey) and other officers were thanked for their services during the past year, and the new President took the vacant chair for the rest of the meeting. Mr. D. MARKS called attention to the accommodation provided at the meetings of the Society, and after an interesting discussion it was referred to the Council to consider whether it is adequate for the requirements of the Society. The PRESIDENT expressed the opinion that the time has arrived when the Society might have rooms of its own.

Barnsley Chemists' Association.

THE monthly meeting of the above Association was held on February 27. Mr. NORWOOD opened a discussion on

THE SOCIAL STATUS OF THE CHEMIST.

That the chemist is classed socially as a tradesman and not as a professional man is, he thought, beyond dispute, but his education entitles him to be the social equal of the clergyman, lawyer, doctor, or veterinary surgeon. This raised the question, What is the difference between a profession and a trade? which Mr. Norwood could not answer. The mere buying and selling of goods, whether across a counter or elsewhere, does not define a trade any more than the exercise of skill and knowledge constitutes a profession. Self-advertisement, he thought, has an inverse ratio influence on the social status of the individual. The speaker then went on to ask, How is it that the chemist of to-day is not regarded with the same respect as his predecessors? Can it be possible that his position in the social scale becomes lower as his term of apprenticeship shortens? Originally of seven years' duration, each decade sees a tendency to shorten the years of apprenticeship, and the youth of to-day also expects to draw a salary, and generally to place himself on the same level as the grocer's boy. For this unhappy state of affairs the master is to blame, as he looks upon his apprentice as a source of cheap labour. Drug companies also, Mr. Norwood thought, contribute to the social detriment of the chemist. Messrs. TOMBLIN, WOOD, BILLINGTON, MATHEW, NASH, and WALKER joined in the discussion.

Liverpool Chemists' Association.

A MEETING of the Association was held at the Royal Institution on February 27, Mr. T. F. Abraham (Vice-President) in the chair.

A vote of sympathy was passed with Mrs. Martindale and family in the recent sad bereavement they had suffered by the death of Mr. Wm. Martindale, all the speakers referring

Digitized by Google

in the highest terms to Mr. Martindale's valuable contributions to pharmacy, his considerate attitude towards the junior members of the profession, and his unfailing courtesy and kindness of heart.

EXHIBITS.

Mr. THEO. H. WARDLEWORTH exhibited a new resin, extracted from indiarubber in one of the processes of purification. He said that he had little or no information to give concerning the article, as the individuals who had given it to him were very reticent with regard to its method of production. He simply showed it as a matter of curiosity and of probable future interest.

A sample of *Cassia auriculata* was also shown by Mr. Wardleworth. It evidently used to be of some commercial interest, as it was referred to by Bentley in one of the earliest editions of his book. It was there stated that it was used as a dyeing material, and sometimes in medicine for producing the same effect as jiquirity seeds in ophthalmic practice. This specimen attracted considerable attention, and Mr. P. H. MARSDEN said that he had, from an old sample of Alexandrian senna-leaves in the collection of the University College, picked out some seeds which were in every way identical with the sample shown. Mr. Wardleworth said that he was not aware that cassia auriculata was used to any extent as an adulterant nowadays.

A specimen which attracted general attention was the *Piper ribisioides*—a spurious cubeb which had come under the attention of the exhibitor during the past few months. It was a most subtle adulterant of the genuine article, and might very easily be accepted as the true description, from which, however, it differed in many respects.

Mr. A. C. ABRAHAM wished to know if the sample shown had given a different reaction from the genuine description according to the B.P. test, because he was under the impression that cubebs of differing ages gave different reactions when the acid test was applied. He believed that a sample of cubebs about which he was doubtful some years ago, and which gave an unsatisfactory acid reaction, would afterwards test correctly in consequence of the changes which had taken place owing to the maturing of the fruit.

Mr. WARDLEWORTH stated that the result of the acid test in connection with the spurious cubebs had given a very distinct brown reaction instead of the crimson indicated by the B.P., and, furthermore, that when Mr. J. H. E. Evans had distilled a small parcel of the spurious kind the resulting oil had been entirely different in every respect from the true oil of cubebs.

Mr. R. C. COWLEY said it might interest Mr. Abraham to know that he had in his possession cubebs of widely-differing ages which all gave the correct acid test, and he therefore thought that very little reliance was to be placed upon the theory of differing ages.

Mr. WARDLEWORTH promised to give further particulars of the spurious fruit at an early date, as he was now engaged upon fuller microscopic examination of the true and spurious berries.

Mr. PROSPER H. MARSDEN then read his paper on

X-RAY WORK IN A GENERAL HOSPITAL,

in which particulars were given of some of the many interesting cases which he had radiographed in the Liverpool Royal Infirmary. Reference was made to the great value of the *x*-rays in diagnosing the position and extent of fractures, it being the practice at the Liverpool Infirmary to radiograph the limb if swelling or inflammation exist, so as to minimise the pain of examination to the patient. The *x*-rays are also useful in diagnosing diseases of the bones. The most difficult cases to radiograph are those in which the pelvis is concerned, but there is reason to hope that soon it will be possible to get satisfactory negatives of the most deeply-seated organs of the body.

The lecture was illustrated by a full series of lantern-slides, and at the conclusion a hearty vote of thanks was accorded to Mr. Marsden.

Leeds and District Chemists' Association.

A MEETING of this Association was held on February 28 at the Church Institute, Leeds, when a lecture on "Wireless Telegraphy, Radiography, and Tesla's High-tension Currents" was delivered by the PRESIDENT (Mr. F. W. Branson, F.I.C.). The chair was occupied by Mr. G. Worfolk, of Ilkley, and there was a large attendance, including a number of ladies. After explaining at some length, with lantern illustrations, the difference between the waves of sound and light in the ether of space, the lecturer went on to describe the Hertzian waves, and their use in wireless telegraphy. Each phase of the subject was demonstrated by experiments with electrical and other apparatus. The lecture was listened to with keen attention throughout, and at its close a hearty vote of thanks was accorded to Mr. Branson.

Reading Chemists' Association.

THE Association met on February 27 at Reading College, to listen to an interesting paper by Mr. F. F. A. Tunbridge on

THE CHEMIST AS A MECHANIC,

With the inclusion in a chemist's business of side-lines, it is becoming, he said, more a necessity that the chemist should possess mechanical skill. He had come across a statement that a chemist should be able to do anything from driving a nail to building a boat, but without going so far as the latter there is a good deal of truth underlying the idea. The chemical laboratory affords a certain amount of mechanical training: fitting-up tubes with corks, and mastering the art of glass-blowing, take up much of the student's time. The fitting-up of the elaborate apparatus required in the complicated operations included in the Major syllabus forms a splendid means of training one's mechanical ingenuity and constructive ability. When the examination-period has passed, there are many opportunities of exercising mechanical skill. In the photographic department, for instance, it is needful to understand the working and adjustment of cameras so as to be able to reload or repair them when brought in. In the repairing department it is really wonderful what can be accomplished with the aid of a glue-pot, a few small screws, and a fair amount of patience. It is a distinct advantage to a photographic chemist to be able to adjust a camera-shutter; shutters often jamb, and usually at most inconvenient times. If enlarging and printing work is undertaken, it comes much cheaper to make the many conveniences and improvements than if they were purchased. A friend of his at Canterbury who makes meteorological observations has constructed his own sunshine-recorder, anemometer, and rain-gauge. The apparatus is very simple in design, but extremely accurate. With a supply of valves and washers and a pair of small-nosed pliers a leaky seltzogene can be repaired much quicker than if it has to be sent to London. If the thread on the head or collar of the seltzogene is worn so that the screw does not bite it cannot be repaired at home, and if sent to Town the cost of repairing and the carriage would cost nearly as much as a new seltzogene. Hot-water bottles with leaky stoppers, enemas with the valves gone wrong, spray-producers and chloride-of-ammonium inhalers out of order, and electrical-apparatus are other things which a chemist should be able to repair—all these examples are apart from the many cases in which the working-appliances of the chemist need doctoring up, which are numerous. Mr. Tunbridge finished by exhorting his hearers not to be afraid to charge for their services in repairing apparatus for customers. Some chemists are much too diffident about the matter; it is not good business to charge simply the cost of the material.

Chemists' Assistants' Association.

THE usual weekly meeting of the above Association was held on February 27, the President (Mr. J. W. Peck) being in the chair. The subject was the best

SYSTEMATIC METHODS FOR THE PHARMACIST.

Mr. PECK thought in order to succeed it was necessary to be conscientious, and that the man who used common-sense methods succeeded best. He deprecated the practice of making the front-counter a gossiping-place, and said chemists should be careful about their personal appearance. Accuracy was an essential to success, and another point put forward by Mr. Peck was that there should be one price for

Digitized by Google

everything, and that every prescription should bear a private mark indicating the price paid.

Mr. Tweedy made similar remarks, and added that the pharmacist should be patriarchal-looking, and assume, at any rate, the appearance of knowledge.

Mr. Matthews divided the subject into two divisions—methods used behind the scenes and methods of treating customers—and urged that a pharmacist should make as many pharmaceutical preparations as possible.

Mr. Franklin advocated more reciprocity amongst chemists in buying, so that they might get better terms.

Mr. Ffoulkes pointed out that practical methods of business must be adapted to suit the requirements of different environments.

Mr. Frost remarked that where local Associations existed combined buying could often be practised.

Mr. Lownsbrough referred to dispensing methods, and asked what was the best plan to adopt to ensure that the patient got the correct dose? Bottles, he pointed out, varied very much in size, and, as a rule, the patient got no two doses alike.

Mr. Latreille also spoke, and the President, replying, said the best system to employ in dispensing was to use an unmarked bottle, and make up the medicine in a stoppered measure. If the bottle was not of the right capacity it would be discovered at once when filling from the stoppered measure.

Northampton Chemists' Association.

The monthly meeting of this Association was held on February 28, Mr. W. McKinnell in the chair.

The Secretary (Mr F. Cowdery) reported that he invited the ten or twelve chemists who signified their approval of the proposal to unite with the Federation at a special meeting, but only three of them replied to his invitation.

Mr. Ashford hoped that the Association would not give the matter up, as it was very important that the chemists of Northamptonshire should be federated. It was resolved to hold the annual dinner on March 20, and the annual meeting on April 4.

Mr. Flinton Harris asked whether the Association could not take steps in promoting early-closing among the chemists of Northampton, so that they would have the opportunity of obtaining a little recreation.

The Chairman suggested that the subject be discussed at the next meeting.

Wolverhampton Chemists' Association.

A meeting of the above Association was held on March 3. Mr. Phillips (President) presided over a good number of members. It was decided that the Association become affiliated with the Federation of Local Pharmaceutical Associations; after which Mr. Gibson opened a discussion on

The Apprenticeship question,

which, he said, is very much in evidence at the present time. He knew it is difficult to get hold of the right sort of youths as apprentices, and this he put down to the present system of education, where too much or too little is taught in their schools, and there is a want of groundwork or foundation on which to build by hard work and energy a superstructure that will do credit to the apprentice and his instructors. The Minor presents difficulties to some assistants which appear to be insurmountable; but Mr. Gibson believed that the dread of the Minor would be done away with if the examination were divided and a compulsory curriculum were imposed. The curriculum would not do everything, but would do as much as anything to raise the status of the chemist.

Mr. Phillips agreed with Mr. Gibson's remarks, especially that the raising of the Minor should have been taken with a curriculum. The students could attend local technical schools, as a large amount of the work required for the Minor is taken there.

Several other members supported Mr. Gibson's remarks.

Festivities.

Huddersfield Diners.

As briefly mentioned last week, the inaugural dinner of the Huddersfield and District Chemists' Association was held on February 26 at the Queen's Hotel, Huddersfield. Mr. R C. Walshaw (the President of the Association) presided, and was supported by Mr. G. T. W. Newsholme (President of the Pharmaceutical Society), Messrs. W. S. Glyn-Jones, F. W. Branson (Leeds), Silson (Bradford), Dixon (Halifax), Rhodes (Dewsbury), Fox (Sheffield), Judge (Wakefield), and about thirty members of the Huddersfield Society.

The loyal toasts having been honoured, Mr. R. Cuthbert (Huddersfield), the oldest member of the craft in Huddersfield, proposed "The Pharmaceutical Society of Great Britain." Speaking as one who took over a business at the age of 19½, two years before the passing of the Pharmacy Act in 1868, he urged upon the young men of to-day the importance of undergoing a much more systematic course of study than was possible under the circumstances of his day. Mr. Cuthbert also referred to the late Mr. Wm. Martindale as an exceptional example of the great capacity which the pharmacist might bring to bear upon affairs.

Mr. Newsholme, in his reply, spoke of the death of Mr. Martindale. A kinder-hearted man, he said, never lived, and his services to pharmacists would be remembered by members of the craft all over the world. Mr. Newsholme then referred to his connection with Huddersfield, where he served his apprenticeship, observing that he passed his Preliminary examination in Mr. Fell's back shop—(laughter)—and worked very hard in that town for seven years. The work of those days for the apprentice was not very nice for one who had left a good school with the idea that he intended to be a gentleman; but he did not think, after all, that the young men of to-day would be any worse off for a little of the hard work of those times. He agreed with Mr. Cuthbert in putting emphasis on the true professional side of pharmacy, and to that end hoped that a better spirit would be cultivated than there was at the present time. They were bound to put education in the front rank, and the chemists of the country ought to be thankful to the Council of the Society for giving prominence to that matter. It was the whole basis of the various Pharmacy Acts, and the only basis possible for the increased prosperity of the craft. Referring to the Poisons Committee, he said it was unreasonable to ask that poisons should be sold by any grocer or seedsman, for then an uneducated man could sell a packet of weed-killer which contained enough poison to kill a thousand men. It might be necessary presently to ask for the assistance of the chemists of the country in resisting such absurd proposals.

Mr. Glyn-Jones, in proposing "The Huddersfield Chemists Association," said the President had told them that night of what might become an imminent danger. The Poisons Committee was the outcome of a desire on the part of certain people to have a freer sale of poisons. He was glad to say that he did not fear the committee, because he would like to see the whole question of pharmacy fought out in the House of Commons, and believed that the result would be a distinct gain for pharmacists. Anything in the way of legislation that could be done for pharmacists in this country must necessarily be done through the Pharmaceutical Society, and he was glad that the number of local associations had doubled during the last ten years, because he regarded them as valuable auxiliaries to the Society. Mr. S. Stephens responded. "Kindred Associations" was honoured on the proposition of Mr. J. W. B. Johnston, of Huddersfield, and responded to by Mr. F. W. Branson, of Leeds, and Mr. Rhodes, of Mirfield. "The Visitors" were honoured on the proposition of the President, and Mr. Silson responded.

North-East Lancashire Chemists' Association.

The annual dinner of this Association took place at the White Bull, Blackburn, on Thursday, February 27, and was largely attended. After the tables had been cleared, the President (Mr. T. Critchley) occupied the chair, and he was supported by Mr. G. T. W. Newsholme, President, and Mr. C. B. Allen, Vice-President of the Pharmaceutical

Digitized by Google

Society, Mr. G. S. Woolley (Manchester), Mr. Edward Evans, jun. (Liverpool), Mr. R. Lord Gifford (Blackburn), Councillor R. Shorrock (Darwen), Mr. G. F. Merson (Newcastle), Dr. Ballantyne (Darwen), Dr. Aitken (Blackburn), and others. Apologies were read by Mr. G. B. Pickworth (Hon. Secretary) from Alderman Gibson (Manchester), Mr. G. Rymer Young, Mr. T. Stanley (Accrington), and others.

The loyal toasts having been given with musical honours, Mr. G. S. Woolley submitted "The Pharmaceutical Society" in an appreciative speech, in which he dealt with the progress of the Society, and especially with the progress of pharmacy through the influence of the educational methods promulgated by the founders of the Society and their successors He attributed the adverse conditions following upon the Companies Act to circumstances which could not be foreseen by the framers of the Pharmacy Act, and said they looked to the Council of the Pharmaceutical Society to do their utmost to improve their position. He was quite certain that every member of that Council, being engaged in business, just as they were, was quite alive to the unsatisfactory state of things and was doing his best to alleviate their position. But they could not leave everything to the Council, which should receive all possible support from the trade. Mr. Woolley also paid a tribute to Mr. Newsholme for his work as President, saying they were all very proud to see the way he had conducted the business of the Council.

Mr. Newsholme, in the course of his reply, referred in good spirit to the critics of the Council, of whom he had once been one himself, like Mr. Lord Gifford, who, now that he had got inside the tabernacle, had not said as much as before he joined the Council, but he was doing his duty. Speaking of the condition of the craft, Mr. Newsholme considered a good deal of the retrogression is due to the manner in which chemists and druggists lend themselves to the distribution of quack medicines (Hear, hear.) They had a good, an excellent name, and they should keep it, but he could not forget that the pharmacist's good name was lent to the distribution of many of those wretched things advertised for the cure of all female complaints. If they were to make any progress they must have pure pharmacy. They could not all exist on that, but there were other ways in which they could get a living than by the lending of their names to some of those wretched things. He briefly alluded to members of Parliament saying that the Society does not represent the whole trade, and is a trade union, and spoke of the Poisons Committee, remarking that he did not think it desirable there should be a third schedule. He was satisfied that it was sufficiently easy for the public to obtain poisons. Out of the 16,000 chemists in the country they could get sufficient people to sell those acids and poisons without the slightest public inconvenience. Great pressure had been brought to bear upon the Privy Council to say whether it was not desirable that many dangerous acids and poisons, such as arsenic, should not also be put upon that third schedule, and, if contained in packages properly labelled, sold by anybody. That was a very absurd proposal, and he did not think the committee would recommend it, for if such a thing became law the Pharmacy Act would be useless altogether. He believed the Legislature had found out that for the public safety all those things must be sold by chemists. (Cheers.)

Mr. C. B Allen also responded, his remarks being upon the Benevolent Fund chiefly; and as to the cloud through which the craft is now passing he said it would emerge out of the shadows, although the business might be differentiated.

Mr. R. Lord Gifford gave the toast of "Our Guests," Mr. Edwd. Evans, jun., responding in the briefest speech of the evening. Messrs. Aspinall and Turver submitted the toast of "The Medical Profession." Dr. Ballantyne, in replying, expressed the hope that dispensing might be handed over to chemists, and wished that the Legislature before long would enable doctors to send their prescriptions to the chemists, who should exercise the right which undoubtedly was theirs. But, on the other hand, he believed it would be desirable to take away from chemists minor surgery, teeth drawing, and treatment of wounds, and send such cases to the medical men. Dr. Aitken also briefly replied.

Mr. G. F. Merson, Secretary to the Federation of Local Pharmaceutical Associations, proposed the toast of "The N.E. Lancashire Chemists' Association." He said the Association had left the Federation on the ground that the latter was not justifying its existence. It was only an act of courtesy that the Association should tell the Federation where it erred, what were its shortcomings, and give some indication of the lines upon which they thought it should go. Councillor Shorrock (Darwen) briefly replied, as also did Mr. Pickworth, the Hon. Secretary.

During the evening quartettes were given by Messrs. J. Berry, G. Butterworth, W. E. Beckett, and A. Higham; and songs by Mr. J. Isherwood Shorrock and Mr. W. E. Beckett. Mr. J. Hindle was the accompanist.

IRISH REUNION.

The annual social reunion of the Chemists' and Druggists' Society of Ireland took place on February 27, at the Whitehall Buildings, Belfast. Tea took place first, the tables being presided over by Mrs. McConkey, Mrs. Gibson, Miss S. Gibson, Mrs. Walsh, Mrs. Frackleton, Mrs. McDowell, Miss Hogg, and Mrs. Rankin. An adjournment was then made to the large hall, where a capital programme of music was gone through. Mr. Gibson acted as chairman in the absence of Sir James Haslett, who was unable to leave his parliamentary duties in London. Messrs. W. J. Gibson, J. Frackelton, R. A. Jameson, and W. J. Rankin were responsible for the arrangements and success of the evening.

Trade-Marks Applied For.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1d., obtainable through any money-order office.

(*From the "Trade Marks Journal," February* 26, 1902.)

"PASTERINE"; for medicines. By P. F. Richmond, 150 Westbourne Grove, Bayswater, W. 243,996.

Sketch of St. Olaf; for raw and boiled linseed oil and varnishes, &c. By Tolhurst & Sons, Tooley Street, Southwark, S.E. 239,309 and 239,312.

Device (the essential particular) of a fireman's helmet; for scientific and optical instruments and apparatus. By the May-Oatway Fire Appliances (Limited), 53 New Broad Street, E.C. 242,143.

"FEDERATION"; for scientific instruments. By A. K. Forman & Co., 93 Hope Street, Glasgow. 243,649.

"HEAROPHONE"; for an electrical ear-trumpet. By P. Holmes, Kynance Woodvale, Forest Hill, S.E. 242,562.

"HA-MA"; for poultry food. By Nina Mayer, 1 Shaftesbury Street, Fordingbridge, Salisbury. 241,802.

"VERBONA"; for confectionery. By E. Bone & Co., West Street, Gateshead-on-Tyne. 242,397.

"FRUITOSE" (no claim for "Fruit"); for goods in Class 42. By S. M. Freeman, 7 Victoria Street, Liverpool. 242,855.

"MILKLIM" (no claim for "Milk"); for food-substances. By J. C. Freud, 19 St. Dunstan's Hill, E.C. 243,051.

"ICENE" (no claim for "Ice"); for sugar. By the Bakers' Supply (Limited), St. Phillip's Bridge, Bristol. 243,088.

Combination of devices and the word "Geisha" (the essential particulars), for a perfume; device (the essential particular), for a toilet-soap; and "IODORIS"; for perfumery and toilet-articles. By Breidenbach & Co., 48 Greek Street, Soho Square, W. 239,733; 242,181; and 243,505.

"EONIA"; for perfumery and toilet-articles. By J. and E. Atkinson (Limited), 24 Old Bond Street, W. 243,504.

"SOROSIS"; for a leather dressing. By A. E. Little & Co., 70 Blake Street, Lynn, Mass., U.S.A. 241,888.

"BRITEALINE" (no claim for "Bright"); for plate-powder. By the "Strebore" Manufacturing Company, 28 New Road, Brighton. 243,022.

"JUPITER"; for floor and metal polishes. By H. Heydon & Co., 118 Weston Street, Bermondsey, S.E. 243,530.

Legal Reports.

Trade Law.

Incandescent Mantles.—In the King's Bench Division on March 1, Mr. Justice Darling had before him sixty motions for judgment by the Welsbach Incandescent Gaslight Company (Limited), claiming injunctions against traders in various parts of the United Kingdom for infringement of the 1893 patent. His Lordship granted in each case a perpetual injunction, with damages and costs.

Carriage of Olive Oil.—Mr. Justice Wills has now given his decision in the case Evans *v.* Cunard Steamship Company, fully reported last week. He said that after the most careful consideration, and giving the fullest effect to the House of Lords' decision, Glynn *v.* Margetson, the defendants were entitled to have judgment. Taking the bill of lading in a business sense, with the knowledge that the voyage was a coasting one, and that there was no such thing as a direct homeward voyage, it was the only route without making perfectly exceptional arrangements. His Lordship accordingly gave judgment for defendants, with costs.

Cases in the City Court.—Judge Lumley Smith, K.C., is introducing a new practice at the City of London Court, which will be very far-reaching and affect many business-houses in the Metropolis and the country. When disputes arise in connection with country orders to London firms actions are generally brought in the above court. This prevents many small tradesmen in the country coming to town because of the expense, and the wholesale houses frequently get a "walk-over." The Judge thinks such cases ought to go to the tribunal in the tradesman's own district, and is talking of disallowing the costs where plaintiffs bring actions in London which ought to be brought in the provinces.

Liability for Goods on Approval.—In the King's Bench Division of the High Court of Justice on March 1, Mr. Justice Kennedy heard the case of Bevington and Morris *v.* J. R. Dale & Co. (Limited), which raised the point whether a person who accepts goods on approval, in the event of their being "burgled" whilst in his possession, is liable to the consigner for the invoice price. The goods in question were valuable furs, and it was contended for the plaintiffs that there is a well-known custom in the trade that the party ordering goods to be delivered on approval is liable to the party of whom he ordered them for any loss or injury occurring to them whilst in his hands, before he has signified his approval of them; while for the defence it was argued that negligence had to be proved before liability could be established. Mr. Justice Kennedy upheld the former view, giving judgment for 180*l.*, with costs.

"Dangerous Purposes."—A rent case (Stevenson *v.* Rochlitz) was decided by Mr. Justice Walton and a jury in the King's Bench Division on March 1. It was an action to recover rent of premises in Glasshouse Street, Regent Street. Defendant admitted that the rent was due, but claimed damages for breach of covenant, alleging that plaintiff let the basement to Dr. Arzt, who there prepared samples of dyes, which he was sending out for the purpose of advertising "Sunset Dye." On February 8, 1901, complaints were made by the defendant about bad smells coming from the basement. This was traced, said defendant, to naphtha. On February 12 a fire broke out in the basement, completely destroying the premises occupied by the defendant's tenants. The defendant counterclaimed for 85*l.*, loss of sub-letting rentals caused by the fire, and also damages for the expenses she had been put to in taking new premises. Dr. Arzt's version was that the fire was caused by an accident in lighting a heating-stove, and was not due to any of his experiments. He denied that he kept benzine or naphtha. The jury found that the premises were not used for dangerous purposes, and judgment was entered for the plaintiff on the claim and counterclaim.

High Court Cases.

Sale of a Business.

The case of Messrs. J. McLaughlin and R. Allen against Dr. Henry Taaffe came before the Vice-Chancellor, in the Dublin Chancery Division, on March 1. It was an action to enforce performance of an agreement entered into between the plaintiffs and Dr. Henry Taaffe, pharmaceutical chemist, Waterloo Place, Londonderry, for the purchase of the defendant's premises, goodwill, and stock-in-trade.

Mr. Matheson, K.C., for the plaintiffs, said the agreement was dated October 22, 1901, by which the defendant's interest was to be purchased for 825*l.*, and the stock was to be taken at a valuation, but the defendant had declined to carry out the agreement. He had, however, since signed a consent for judgment to be entered against him, so that his Lordship would not be troubled with the hearing of the action. Counsel now asked that a decree be granted for specific performance, with costs. His clients had agreed to take over the stock and fittings at the wholesale market price of the day when plaintiffs took possession, and to pay 400*l.* down. The Vice-Chancellor made the order, and directed an inquiry as to the value of the stock in-trade.

Mr. Todd, for defendant, said his client had been told by two friends that he had sold the premises too cheap, which caused him to tear up the agreement, but it was still in such a condition that it could be read.

The Claim against a Doctor.

In the King's Bench Division of the High Court on February 28, before Mr. Justice Grantham and a special jury, the hearing was concluded, after occupying four days, of the action brought by Miss C. Forsythe, a nurse, to recover damages from Dr. W. T. Law, of Weymouth Street, for alleged negligent treatment, consisting in administering to her, or negligently allowing her to administer to herself, excessive doses of morphine, cocaine, and chloral. The defence was a denial of negligence, and Sir Douglas Powell and other medical specialists on behalf of the defendant testified that plaintiff had an exceptional asthma and the treatment was not unreasonable. It transpired that defendant had not charged the plaintiff for his services, and after hearing the defendant's own evidence the jury intimated that their minds were made up. Counsel for the plaintiff having addressed the Court, the jury found for the defendant, for whom judgment was entered, with costs. Mr. Justice Grantham added that there was not the slightest justification for a charge made by counsel for the plaintiff against the defendant, that he had got up a mock consultation with another doctor.

The "Vaseline" Trade-mark.

The Court of Appeal (Lords Justices Vaughan Williams, Stirling, and Cozens-Hardy) was on Friday (February 28), Saturday (March 1), and Monday (March 3) occupied with the arguments in the case of the Chesebrough Manufacturing Company Consolidated, of New York, an appeal by the company from an order of Mr. Justice Buckley directing the trade-mark "Vaseline" to be struck off the register. Mr. Astbury, K.C., with whom was Mr. Walker, appeared in support of the appeal, and said the position was a somewhat curious one. The trade-mark "Vaseline" was probably one of the best known in Europe, and it had been on the register for very many years in several countries. A short time ago a Mr. E. T. Pearson applied to register the word "Vasogen," but the Comptroller would not register it without the consent of the Chesebrough Company, and, of course, they would not consent. Then Mr. Pearson applied to Mr. Justice Buckley by way of appeal from the Comptroller, and moved to rectify the register by having removed therefrom the trade-mark "Vaseline," his contention being that the mark was not, within the meaning of Section 10 of the 1875 Act, a special and distinctive word used as a trade-mark before the passing of the Act. Mr. Justice Buckley held that the word "Vaseline" could not be registered as a trade-mark, the authorities showing that in order to make an old mark a distinctive word within the section, it must be distinctive in the sense that it referred to the manufacture of the article, and not to the article itself. In the present case he held that the word "Vaseline" applied to the article, and was not a distinctive word. He therefore directed the register to be rectified by the removal of the word "Vaseline," but at the same time he held that "Vasogen" was also not a word which could be registered as a trade-mark. Mr. Pearson did not appeal from that part of the order by which the learned Judge held that "Vasogen" could not be registered, so that he had now no *locus standi*, and the question was one simply between the Chesebrough Company and the law officers. Pearson having failed to obtain registration of "Vasogen," he was now interested in the question whether "Vaseline" should be retained on the register only as a member of the public. Their Lordships, he was sure, would appreciate that the matter was of very great importance to his clients, and the question they would have to decide, so far as the

Digitized by Google

question of law was concerned, was one which had been discussed in a number of cases, but with respect of which there had been no actual decision. The learned judge in the Court below based his judgment in a great measure upon the point that Mr. Chesebrough, who was the originator of this particular method of making petroleum jelly, took out a number of patents, one in 1865 in this country, one in America in 1872, and another subsequently in this country; and that in the American patent Chesebrough stated that the substance he made by the operation described he called "Vaseline." Mr. Justice Buckley therefore came to the conclusion that that was the name of a patented article, and that the patentee could not use it as a trade-mark after the expiration of his patent. "Vaseline" was one of the best known trade-marks in the world. It had been on the register for thirty years, and no one could be hurt by his clients telling the trade that vaseline was their preparation. He felt sure their Lordships would not, unless driven to it, deprive the appellants of a valuable property acquired by years of industry.

Mr. Moulton, K.C., for the respondent Pearson, argued that a man could not claim the monopoly in the name of a thing if he had once made the word the name of the substance which he prepared. He submitted that "Vaseline" as a trade-mark could not stand, and that it ought never to have got on to the register.

Mr. Astbury replied on the whole case, and in the result their Lordships reserved judgment.

DR. LEONARD'S WILL.

IN the Chancery Division, Dublin, on March 3, before the Master of the Rolls, the case of the will of the late Dr. John Leonard, apothecary, North Earl Street, Dublin, came on for hearing. The late Dr. Leonard left assets valued at over 21,000*l.* He had four sisters, of two of whom he had heard nothing for years, and he left legacies to all four, and also to his brother in London. Two sisters predeceased him. One sister went to Sydney, Australia, and another to Buenos Ayres, South America. It was believed these two were alive, but there was no certain knowledge as to where they now were. The Master of the Rolls made an order for the administration of the estate, limited to an inquiry as to who were the legatees under the will. He directed the plaintiff to lodge 20,000*l.* in Court, and to first pay an admitted claim of 2,000*l.*

County Court Cases.

A NEW TRIAL.

AT the Romford County Court on February 22, before Judge Tindal Atkinson, Mr. Gowen, solicitor, Romford, applied for a new trial in the case of Ryan *v.* Whitelock, which was an action by the plaintiff, Dr. Ryan, to recover the sum of 50*l.*, paid by the plaintiff to the defendant, Mr. H. W. Whitelock, chemist and druggist, Romford (see *C. & D.*, February 1, page 204), for the purposes of a chemist's business opened by them at Chadwell Heath. Mr. Gowen contended that the weight of evidence as well as the Judge's summing-up were in favour of the defendant, whilst some of the plaintiff's evidence was uncorroborated, but that of the defendant was supported up to the hilt. Mr. Ellis, barrister, opposed the application, but Judge Atkinson granted a new trial, reserving the whole question of costs.

A COD-LIVER OIL DISPUTE.

IN the Lord Mayor's Court on Friday, February 28, before Mr. Bosanquet, K.C., the Common Serjeant, and a jury, Mr. Hans Borregaard, trading as H. Borregaard & Co., importers, 16 Water Lane, E.C., sued Mr. H. Rubeck, essential-oil merchant, of Mark Lane, to recover the sum of 19*l.* 19*s.*, being the price of seven barrels of cod-liver oil sold and delivered. Mr. Barrett was counsel for the plaintiff and Mr. Read for the defendant. It appeared from counsel's statement that in October last year the plaintiff had eight barrels of cod-liver oil lying at Brewer's Quay, which he wished to sell to defendant. He said the parcel was one manufacture—J.R.H. brand, and it was agreed to draw only one sample. This was done by Joseph Barber & Co., Brewer's Quay, and the sample was forwarded to the defendants, who agreed to buy at 57*s.* per barrel cash, less 2½ per cent. discount. On October 24 the defendant sent an order for one barrel of the oil. This was delivered, together with a statement requesting payment to be made in fourteen days. There was also a note to the effect that all claims in respect of the goods were to be made within three days from the date of invoice, otherwise they would not be allowed. The defendant appeared quite satisfied with the barrel of cod-liver oil, and a further order was given for the remaining seven barrels at the same price. The sale was effected upon the same terms and conditions, and an invoice was made out for 19*l.* 19*s.* The defendant afterwards inquired whether the plaintiff had any more of the cod-liver oil, and was told that he had not and did not expect to have any. On October 29 a cheque was sent by the defendant for 2*l.* 17*s.*, the price of the first barrel of oil. On November 18 the plaintiff wrote requesting a remittance for the seven barrels of oil. After the defendant, however, had kept the oil for twenty-one days, the question was first raised that the bulk of the oil was not according to sample (the contract stipulating three days).

The plaintiff gave evidence corroborative of counsel's statement. In cross-examination he said he had obtained the cod-liver oil from a friend who had received it from Norway. It was of Holmboe's manufacture.

For the defence Mr. Thomas J. Wise, manager to the defendant, said he remembered the plaintiff calling and saying he had a parcel of cod-liver oil which he wished to dispose of. Upon asking what oil it was, the plaintiff said it was of Messrs. J. R. Holmboe's manufacture. He (witness) said they were agents for Messrs. Holmboe, and therefore they could not handle the plaintiff's oil for their own account. The plaintiff said he did not wish Messrs. Holmboe to know that he was selling their oil, that he knew nothing about cod-liver oil, and that the parcel had come into his hands as he wished to close up an account. He asked witness what the value of the article was, and he replied if the oil was of Holmboe's manufacture, and was his finest oil, which was what they dealt in for medicinal purposes, the value was about 60*s* London terms, which was fourteen days prompt, 2½ per cent. discount. The plaintiff asked them to sell the oil, and witness replied that they had that morning received two inquiries for cod liver oil from two wholesale druggists, who wanted the oil on the spot. In order to sell he told the plaintiff he must have samples to send to customers. The plaintiff agreed to send a sample, and one afterwards came. He had said that if the barrels of cod-liver oil differed a sample would be required from each, but if it was one parcel of Holmboe's oil one sample would be sufficient. He got the sample, and after dividing into two bottles he despatched them to Messrs. Johnson, druggists, of Liverpool, and to Messrs. Hodder, of Bristol. Messrs. Johnson ordered one barrel of the oil, and that was the first barrel cleared on October 25. Over that there was no complaint and no dispute. That was the barrel from which the sample was evidently drawn. Messrs. Hodder got the other seven barrels, and when they received them they wrote complaining of the oil. Within half an hour of the complaint reaching Mr. Rubeck the plaintiff was informed by telephone of it. He replied that he had sold the defendant the oil, and he must pay for it. To this he (witness) replied that the oil had been sold by sample, and if the bulk was not in accordance with the sample they could not leave their customer in the lurch. It was not true, as alleged by the plaintiff, that the complaint was made only after payment was asked for. The oil was not fit for human consumption, being too strong. It was a low-grade oil, value from 25*s.* to 30*s.* per barrel. Not one of the samples taken by the Free Trade Wharf people was identical with the sample upon which he had bought. In cross-examination the witness said the plaintiff was informed that the oil would be sent to Free Trade Wharf and lie there at his disposal, as it was of no use for medicinal purposes. The plaintiff said he should decline to take delivery of the oil. Mr. Thomas Johnson, delivery foreman, Free Trade Wharf, proved the receipt of the oil there — the only consignment which they had. The barrels were dirty, and the marks on some could not be discerned. Four, he believed, were marked J.R.H. Mr. Otto Rubeck said he had compared samples drawn from the seven barrels with the sample upon which the oil was bought and they were not identical. Had they carried out the contract with Messrs. Hodder they would have made

Digitized by Google

1*l.* 1*s.* profit. They now counterclaimed for loss of profit and for cost of carriage to and from Bristol amounting to 1*l.* 17*s.* 2*d.* Mr. Edmund Carpenter, managing director of Henry Hodder & Co., Bristol, stated in evidence that the oil was not fit for human consumption. Mr. Walter Stanley Phillips (Jenkin & Phillips, 14 Mincing Lane) said he had compared the samples of the bulk of the oil with the original sample, and none of them were equal to the original.

The jury, in answer to questions put to them by Mr. Bosanquet, found that there was a sale by sample; that the bulk of the oil was substantially inferior to the sample; and that the defendant rejected the oil in due time. Upon those findings a verdict was entered for the defendant upon the claim and counterclaim for the sum of 2*l.* 18*s.* 2*d.* The Common Serjeant said of course the oil now belonged to the plaintiff.

Chemists' Labels.

In the Lord Mayor's Court on March 5, before the Recorder (Sir Forrest Fulton, K.C.) and a jury, an action was brought by Fell & Briant, colour-printers, Glasshouse Yard, Aldersgate Street, against Marion, James & Ker (Limited), manufacturing chemists, Hackney, to recover 23*l.* 5*s.* (subsequently reduced to 19*s.* 15*s* 6*d.*) for printing coloured labels. The defendants pleaded that the labels were inferior to sample, were worthless, and that they refused to accept and returned the same. Mr. Israel Davies was counsel for the plaintiffs, and Mr. Lewis Thomas for the defendants. It appeared that for some two years past the plaintiffs had been executing colour-printing for the defendants. In November a question arose about a credit, and the plaintiffs not having received payments for certain accounts, instructed their solicitors to apply for payment. That, according to the plaintiffs' case, gave rise to ill-feeling, which, it was said, culminated on November 27 or 28 in the rejection of certain labels, which were the subject of the present action. The evidence of Mr. John Mundy, manager to the plaintiffs, and other witnesses showed that estimates for printing perfume-labels, neck-labels, and hair-dye labels were given by the plaintiffs in October. The hair-dye labels were sent in on November 21, and on November 27 the perfume-labels with the neck-labels were sent in. On that day the defendants wrote stating that they would not think of accepting the perfume-labels with neck-bands, as they were not up to the sketch, "that they were most common, and a disgrace for any firm to send out." Plaintiffs contended that they were a full and proper compliance with the order, and brought this action to recover the price. Mr. Mundy, in cross-examination, denied that he had to submit a proof; no proof was mentioned. Mr. T. Grimsdall, lithographer, stated that the hair-dye labels were quite up to sample, and the perfume-labels were good. Mr. Thomas Johnson, a lithographic printer, gave evidence to the same effect. Mr. James, a director of the defendant company, stated that it was material to the trade in introducing the line to a new customer, that the labels should be perfectly attractive. After the first sale the contents of the bottle would sell on its merits. Mr. J. G. Ker, director of the defendant company, said he gave the order for the perfume-labels and asked for a proof, emphasising the need of good quality, because the goods were a Christmas line. The labels delivered were not up to sample. The Recorder told the jury that if the labels were not up to sample, they should return a verdict for the defendants. The jury found a verdict for the plaintiffs for 19*l* 15*s.* 6*d.* The Recorder, on the application of Mr. Davies, certified for costs between 20*l.* and 50*l.*, on the ground that the case was of importance to a particular class of persons.

The Saccharin Patents.

On March 5, Sheriff Campbell Smith, of Dundee, issued an interlocutor in an action at the instance of the Saccharin Corporation (Limited), Queen Victoria Street, London, against Max Paulsen, merchant, Commercial Street, Dundee, to interdict the defender from selling, or dealing, or using in any way saccharin or any compound having the properties of saccharin, or which is manufactured and produced by the processes used in its manufacture and production, and from selling, using, or dealing in the same. They also sought an interim interdict, and sued for 500*l.* as damages sustained by them. His Lordship dismissed the action with expenses to defender, stating that if the article sold by defender was real and true saccharin, how could it be proved that it was not produced by the pursuers themselves? They produced it to sell, and could they be sure where every pound they produced went to? He did not think freedom of sale, still less freedom of chemical experiment, could be stopped by such an interdict, still less could the use of saccharin be so stopped. If the defender at a tea-party in his own or a friend's house were to put a tabloid or pill of saccharin in his tea to give him an excuse for making wry faces and sneering at it, he would violate the interdict sought, and perhaps require to go to prison for breaking it. He (the Sheriff) could not grant an interdict of such vagueness and involving the possibility of such extravagant consequences.

A Bedstead Transaction.

At the Clerkenwell County Court on March 4, Robert Thompson Randell, furniture dealer, 523 Holloway Road, sued Max Schliephak, stated to be a chemist, 44 Charlotte Street, Fitzroy Square, to recover the sum of 7*l.* 1*s.* 6*d.*, in respect of two bedsteads supplied. Defendant had paid 3*l.* 18*s.* 6*d.* into court. Plaintiff's case was that the bedsteads were of the latest design, and the price agreed upon 3*l.* 3*s.* each bedstead. After hearing both sides and examining a bedstead, the judge took the plaintiff's view of the transaction; verdict accordingly.

Sale of Food and Drugs Act.

Liniment of Soap.

At Bow Street Police Court on February 28, Arthur B. Spinks, trading as a chemist at Theobald's Road, W.C., appeared before Mr. Marsham to an adjourned summons charging him with selling liniment of soap containing 40 per cent. of methylated spirit.

Mr. F. W. Beck (who defended on behalf of the C.D.A.) said the point he wished to raise was whether it was right to set up the British Pharmacopœia as the sole standard for articles of this kind. The essence of the offence with which the defendant was charged was that he had sold to the prejudice of the purchaser. He proposed to show that the same kind of article had been sold without question for the past fifty years. He contended that there had been no sale to the prejudice of the purchaser. It was well known that methylated spirit was used in liniment of soap. And he proposed to show that the article sold in this case was as good as liniment in which rectified spirit was used. To that end he called Dr. Arthur Mickle, late of Commercial Road, E., who was of opinion that soap-liniment made with methylated spirit was as good as that in which rectified spirit was used.

In cross-examination by Mr. Walford (for the prosecution) the witness said that when a doctor wrote a prescription he expected it to be made up in accordance with the British Pharmacopœia. He did not think that in this case there had been any offence. He had no idea why methylated spirit was objected to.

Mr. Walford: Do you think a chemist should be prosecuted for selling beeswax which does not come up to the standard of the British Pharmacopœia? Do they think it is wrong?

Witness: They may know they are liable to be brought before the Court, but they cannot think they are doing wrong.

Other evidence of a similar character having been given, the case was adjourned until Monday. On that day the solicitors and witnesses were in attendance, but owing to the pressure of other business the case was again adjourned.

The hearing of the case was resumed on March 5, when Mr. Glyn-Jones, called for the defence, said methylated soap-liniment was a domestic remedy, and was sold freely. It was a well recognised practice to use methylated spirit in soap-liniment. In this case 2*d.* an oz. had been charged for the liniment, and that would be sufficient to indicate the nature of the article. There would be more profit on liniment made with rectified spirit at 4*d.* an oz. than on liniment made with methylated spirit at 2*d.* an oz. Cross-examined by Mr Walford, witness said in the majority of instances the British Pharmacopœia was the standard for domestic remedies, but there were many exceptions, and soap-liniment

Digitized by Google

was one of them. His experience taught him that when an article was wanted in accordance with the British Pharmacopœia it was asked for, or the letters "B.P." were used. Methylated liniment cost 9*d.* a lb., and the rectified 2*s.* 8*d.* a lb. If a doctor ordered liniment of soap he usually supplied that made with rectified spirit. Mr. George Peter Pond, chemist and druggist, 68 Fleet Street, E.C.; Mr. John Butterworth, pharmaceutical chemist, 21 Walworth Road, S.E.; Mr. F. W Truman, chemist, 71 Old Kent Road, S.E., Mr. W. Johnston, pharmaceutical chemist, and Mr. David Whyte, chemist, Borough High Street, gave evidence to the same effect. The combined trade experience of these witnesses was 180 years, Messrs. Pond, Butterworth, and Truman alone having each about forty years' experience in pharmacy. Mr. Marsham said he would like time to consider his decision, and adjourned the summons *sine die*.

Camphorated Oil.

At the Kettering Police Court on March 5, Wm. Collyer, grocer, Geddington, was fined 10*s.* and 6*s.* costs for selling, to the prejudice of the purchaser, camphorated oil which did not contain sufficient camphor, and was made with cotton-seed oil.

Sweet Spirit of Nitre.

At Swindon, on February 27, John Povey, trading as a chemist at Bishopstone, was fined 1*l.*, and 1*l.* 18*s.* 6*d.* costs, for selling sweet spirit of nitre which, according to the analysis of Dr. Bernard Dyer, was deficient in ethyl nitrite.

Vinegar of Squills.

At the Highgate Petty Sessions, on March 5, Joseph Reed, chemist and druggist, 27 Turnpike Lane, Hornsey, was summoned by Mr. A. L. Bridge under the Food and Drugs Act, for selling to his prejudice vinegar of squills which was deficient in quality by being 38 per cent. deficient in acetic acid. Mr. F. W. Beck represented the defendant, but owing to the illness of Mr. Edward Bevan, the county analyst, the case was adjourned *sine die*.

At Tottenham Police Court on Thursday (6th inst.), Eugene McSweeney, chemist, of 433 Green Lanes, Tottenham, was summoned by Arthur Siddall Bridge, inspector of the Middlesex County Council, for selling vinegar of squills which was deficient to the extent of 60 per cent. in acetic acid. The certificate of the county analyst read as follows:—

> I am of opinion that it is deficient in acetic acid to the extent of 60 per cent. This opinion is based on the fact that the sample contained only 1·56 per cent. of acetic acid, whereas it should have contained at least 4·2 per cent.

Mr. Bridge applied for the adjournment of the case owing to the illness of the analyst (Mr. Bevan). He mentioned that a similar summons was adjourned last week for the same reason, and said that possibly owing to the lapse of time the sample left with the defendant would undergo such a change that it might result in the proceedings having to be withdrawn. The case was adjourned *sine die*.

Pharmacy Act, 1868.

Xl-All Insecticide.

At the Newcastle-under-Lyme Borough Police Court on March 3, Ernest and Moses Jenkinson, trading as M. Jenkinson & Sons, florists, Newcastle, were summoned at the instance of the Pharmaceutical Society for selling a poisonous vegetable alkaloid—viz., nicotine, without labelling it as poison as required by Section 17 of the Pharmacy Act, 1868. Mr. J. E. Moxon (Stoke) prosecuted on behalf of the Society, and the defendants were represented by Mr. T. G. Dobbs (Worcester), and Mr. T. B. Sproston (Newcastle).

For the prosecutors John Morgan, gardener to Mr. A. Bullock, The Cedars, Quarry Avenue, Stoke-on-Trent, proved the purchase of Xl-All insecticide from defendants, which was supplied in a brandy-bottle without any label (except that of the brandy). On January 23 a man, named Thomas Bullock, was working in the garden, and he, by mistake, drank some of the insecticide, and was taken to the infirmary.

Frank Mann, Albert Street, Newcastle, in the employ of the defendants, gave evidence of the sale of the compound, but said he did not know it was poison.

Mr. Dobbs read a label which the witness said was received with each tin of this preparation. The label set forth that there was some danger of injury to the operator unless the hands were covered, and recommended rubber gloves if the fluid was used for dipping. Spraying was, however, recommended as not affecting the operator. Re-examined, he thought the dilution should be in the proportion of about four spoonfuls to a gallon of water, but he was not sure.

Mr. G. H. H. Mansfield, acting house-physician at the Infirmary at the time of the occurrence, stated that when brought there on January 23 Bullock was in a dying state, and expired in two or three minutes. A *post-mortem* examination showed that death was due to heart failure, caused by the taking of some poison. He ascertained that the poison was nicotine. He tested the insecticide. It gave the tests characteristic of nicotine so pronouncedly that he judged there was a considerable percentage of nicotine in the compound. Nicotine was a poisonous vegetable alkaloid. Two drops had been known to kill, but he made only a qualitative and not a quantitative test of the preparation, and could not give the percentage of the nicotine which it contained. He thought, however, that less than 1 oz. of the preparation would cause death. This closed the case for the prosecution.

Mr. Dobbs then addressed the Bench at length for the defence. He first raised technical objection to the competency of Mr. Harry Moon to prosecute in the case. According to a decision of the Judiciary Appeal Court of Scotland the proper person to prosecute under the Pharmacy Act, 1858, was the Registrar of the Pharmaceutical Society. He contended that the prosecution was not valid because the Registrar himself was not the prosecutor.

In reply to the Magistrates' Clerk, Mr. Moon, who was instructing Mr. Moxon, said he was a clerk in the office of the Registrar.

The Chairman (Mr. Hardeman): You prosecute on behalf of the Registrar?

Mr. Moon: Yes, sir.

Mr. Dobbs said the question was not raised now for the first time, for there had been a good deal of doubt and difficulty about it. He did not desire to press this objection unduly, but he wished the Bench to note it, and then, in view of the very contradictory character of the Act, after hearing other points which he should bring before them, he should ask the Bench whether they ought not to give the defendants the benefit of any doubt which there might be in their mind.

The Chairman: If we are asked to give a decision on the point raised, we can decide that the prosecution is represented properly.

Mr. Dobbs, proceeding, said the Bench had to decide a question of a very technical character, and they had to decide it under a penal Act, which must be strictly construed. To show that the Act of 1868 was one which had been many times adversely commented on in rather adverse criticism, especially he called their attention to the words of Lord Watson, in the well-known case of the Pharmaceutical Society *v.* London and Provincial Supply Association. Lord Watson said: "It is impossible to disguise the fact that this statute is characterised by great ambiguity, and I would almost go to the length of saying confusion, of language." The House of Lords did not consider this Act well drawn, and they had a great difficulty over it In that particular case they had to decide who was the seller within the meaning of Section 15. That section was one under which a person could be sued to recover a penalty for selling a poison within the meaning of the Act, and it was a very strange thing, but under Section 15 it had been held in many cases that the seller was the person who actually controlled the sale, and if the prosecution had been brought under that section the defendants could not have been held liable for the acts of their servant. He quoted in support of his contention the case of Pharmaceutical Society *v.* Wheeldon. Dealing with Clause 17 he quoted the case of Templeman *v.* Trafford, and was inclined to think that possibly the defendants in the present case might similarly be held liable for the acts of their servant. Mr. Dobbs then discussed what the words of Section 17 mean. He called special attention to the preamble of the Act, saying

Digitized by Google

that the intention of the Act was to make chemists and druggists the only persons who should handle poisons when they were required for medicinal or therapeutic use, as distinct from articles for trade-purposes. If they found that this insecticide was a poison within the meaning of the Act it would be equivalent to saying that paint which contained arsenic was a poison within the meaning of the Act, and therefore could not be sold by an oil and colour man or an ironmonger. In tobacco there was from 5 to 6 per cent. of nicotine. Nicotine being a vegetable alkaloid, they must prohibit the sale of tobacco by any but chemists and druggists, as being a poison within the Act, if they held that to be the case in regard to insecticide. He contended that this was not a poison which should only be sold by chemists and druggists, and if they found that chemists were not the only persons who could sell it there was no need for it to be labelled poison, or with the name of the article, or the name and address of the seller. If they had to put the name of the article on, what were they to put in this case? Which was the ingredient, the actual poison, to be mentioned on the label? What were they to label paint? Arsenic, lead, or what? If the Act meant that, the whole condition of trade would be upset. No person could sell soap, or flypapers, or cosmetics, or innumerable other things, because each one of them contained a certain amount of poison, and if dissolved and taken in sufficient quantity would cause, possibly, death to the individual.

The Chairman (Mr. C. H. Hardeman): You may on that principle include green tea. It is a poison; but as people have drunk it for seventy or eighty years it is a slow one. (Laughter.)

Mr. Dobbs, continuing, said the whole of the tradesmen in some form or other would be hit by this Act so interpreted. He asked them to consider very seriously the position. He said that a poison within the Act should be an article that is sold in a pure and simple form. If nicotine had been sold as nicotine in pure form, then it would have been poison within the meaning of the Act. But as it was sold it was for a trade-purpose, and was of the most practical utility to horticulturists. If he had to go and buy insecticide from a chemist, the chemist would not be able to advise him as to the most advantageous way to use it, because he was not a horticulturist. He contended that the Legislature never contemplated that a thing of this kind would come within the Act.

Mr. Trigger (a Magistrate) mentioned vermin-killer, which contained strychnine, but

Mr. Dobbs said that was specially mentioned and provided for in the Act. He admitted that there was utter carelessness on the part of the salesman in putting such a fluid into a brandy-bottle. But even supposing that the French found that it was a poison within the meaning of the Act, he argued that the quantity of nicotine was so infinitesimal that it should not be mentioned as a poison. He quoted the case of the Pharmaceutical Society *v.* Delve, which, he claimed, showed that the prosecution were bound to prove the relative quantity of poison. The manufacturer of the insecticide was one of the largest manufacturers of poisons in the world, and he should call him to state what the percentage of nicotine was. If the Bench found against him it would place traders in a most difficult position.

Mr. Sproston said that in the last case referred to by Mr. Dobbs, Mr. Findlay, for the prosecution, agreed that it did not matter in what quantity the poison was present in the compound, and that the fact that there was one of the scheduled poisons in it was sufficient The Judges held that it was not sufficient, and that the quantity must be proved, and the prosecution failed on that ground. That was precisely the case in this instance. The quantity of nicotine in the insecticide had not been proved, and he contended the prosecution must fail on that ground.

William George Griffin, F.I.C., manufacturing chemist, Battersea, called for the defence, said he was the manufacturer of the insecticide, which was known as "Xl-All." It contained exactly 4 per cent. of nicotine, and it was due to that nicotine that it was so useful in destroying insect life. In a strong tobacco there was about 5 to 6 per cent. of nicotine. It was sold by florists and horticulturists all over the kingdom and on the Continent, and had never been labelled poison. Chemists sold it in the same way. He had never known of an accident arising from it.

Mr. Moxon: Were you a witness in a case of Wrench's?—Yes.

And there was a compound of the same kind mentioned there. What was the percentage of nicotine in that?—More like 40 or 50 than 4.

How much tobacco was used in the manufacture of that?—I cannot answer that.

How much tobacco is used in this "Xl-All"?—Ten pounds per gallon.

Do you advertise 20 lbs. of the strongest tobacco?—I am not aware of that.

In further cross-examination the witness admitted that a label produced was used on tins of "Xl-All" by the person for whom he manufactured it.

Mr. Moxon quoted from the label: "Many times stronger in pure nicotine than the strongest tobacco-juice made. Each gallon contains the pure extract of about 20-lbs. weight of strong tobacco." Mr Moxon added: I am putting it to you that this label is either a fraud on the public or it is true. If it is true, what percentage of nicotine does it contain?—I have said 4 per cent.

If this gallon contains the extract of 20 lbs. of strong tobacco, how much nicotine does it contain?—I can tell you no more than that it contains 4 per cent. of nicotine.

The Chairman said the Bench were unanimous that the offence had been proved, and had decided to fine the defendants 2*l.* and costs, not to exceed 3*l.* 3*s.* They were quite aware of the importance of the case, and it would, to some extent, produce a revolution in the trade in these poisons. But it was very important that poisons should not be sold without proper precautions for the protection of the public.

Mr. Dobbs asked the Bench to state a case for a higher Court, and the Bench agreed to do so.

Bankruptcies and Failures.

Notice is issued by the Court of Bankruptcy, Dublin, that on March 18 a public sitting of the Court will be held to investigate the affairs of Mr. Edward P. Murray, druggist, Arran Quay Dublin, who on February 20 was adjudged a bankrupt.

Re Rogers Brothers, Mincing Lane, E.C., Colonial Brokers.—At the London Bankruptcy Court on March 5, Mr. E B. Rogers and Mr. H. N. E. Rogers were further examined publicly in bankruptcy, and the examination was ordered to be concluded.

Deeds of Arrangement.

Priestley, Joshua Stogdell, 1188 Latimer Street, Leeds Road, Bradford, drug vendor. Trustee, Walter Lund, 55 Tyrrel Street, Bradford, accountant. Dated, February 21; filed, February 25. Liabilities unsecured, 95*l.* 14*s.* 1*d.*; estimated net assets, 100*l.* The following are scheduled as creditors:—

	£	s.	d.
Hirst, Brook & Hirst, Leeds	24	0	0
Savage, J. & Co., Bradford	24	0	0

Waddington, John William, Hungerford, chemist and dentist. Trustee, Arthur W. Neate, Speenhamland, Newbury, auctioneer. Dated, February 26; filed, March 3. Secured creditors, 2*l.*; liabilities unsecured, 357*l.* 14*s.* 1*d.*; estimated net assets, 157*l.* The following are scheduled as creditors:—

	£	s.	d.
Astley, H., D'O., W., Hungerford ...	150	0	0
Baiss Brothers & Co. (Limited), London	11	0	0
Barker, R. H., Hungerford	14	0	0
Evans, Lescher & Webb, London (estd.)	15	0	0

Maw, Sons & Sons, London	13	0	0
Schweppes (Limited), Bristol	14	0	0
Bankers' Claims	19	0	0

The British Consul at Ssumao (China) wishes to draw the attention of all British manufacturers having dealings with the Far East to the exhibition that is to be held at Hanoi during 1902. Every facility will be offered by the promoters to intending exhibitors, and it is hoped to make the exhibition thoroughly representative of the Far East.

Lewis, L. A., Noyes A. J., and **Monnickendam, F. C.,** under the style of Ducant & Co, Rosebery Avenue, London, E.C., and Mount Pleasant, Clerkenwell, W.C., wholesale perfumers and manufacturers of toilet preparations.

Metcalfe, T. E., and **Smith E.,** under the style of Metcalfe & Smith, Halifax, Yorkshire, wholesale druggists.

Wilson, H. C., and **Meagher, W. T.,** West Ferry Road, Millwall, London, E., medical practitioners.

New Companies & Company News.

INDESTRUCTIBLE PAINT COMPANY (LIMITED).—Capital 10,000*l.* in 1*l.* shares. Objects: To take over the business of a company of the same name (incorporated in 1875 and now in liquidation), and to carry on the business of paint, enamel, distemper, and varnish manufacturers, dealers in drugs, chemicals, &c.

W. FURSE & Co. (LIMITED).—Capital 1,000, in 1*l.* shares. To acquire the business of oil, grease, and tallow merchants, &c, carried on by Thomas Ball and William F. Ball, both of Dudley Street, Cardiff, and to carry on that business, as well as that of manufacturing and general chemists and druggists, &c.

INTERNATIONAL OIL AND STORAGE COMPANY (LIMITED).—Capital 120,000*l.*, in 1*l.* shares. Objects: To acquire any petroleum or oil-bearing lands, and to carry on the business of winning, dealing in, and refining, petroleum and other oils. The first directors are W. Peterson, D. Davies, W. J. Stephens, and F. W. G. Snook.

ENGLISH PETROLEUM TRUST OF GALICIA (LIMITED).—Capital 100,000*l.* in 1*l* shares. Objects: To acquire any petroleum or oil-bearing lands in Austria or elsewhere, to sink wells for petroleum, and to carry on the business of dealers in and refiners of petroleum and mineral oils, &c. Registered office, Blomfield House, London Wall, E.C.

STELFOX (LIMITED).—Capital 2,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with W. Stelfox, and to carry on the business of manufacturers of and dealers in scientific and industrial apparatus, etc. No initial public issue. The first directors are W. J. Jones, J. C. Thresh, and E. J. Sidebotham. Registered office, 12 Coupland Street, Chorlton-on-Medlock, Manchester.

PIONEER MANUFACTURING COMPANY (LIMITED).—Capital 1,000*l.* in 5*l.* shares. Objects: To carry on the business of manufacturers of and contractors for the sale, purchase, and supply of electrical novelties, motors, photographic apparatus, manufacturers of elastic or web braces or suspenders, &c. The first directors are E. B. Koopman and W. T. Smedley. Registered office, 18–19 Great Windmill Street, W.

ARCHIBALD EADIE & Co. (LIMITED).—Registered in Edinburgh. Capital 40,000*l.*, in 10*l.* shares. Objects: To acquire the business of Archibald Eadie & Co., paint and colour manufacturers, of Glasgow, and to carry on the business of manufacturers of white lead, paints, colours, cements, varnishes, tallow, grease, and other similar substances, oil boilers and refiners, resin distillers, manufacturing chemists, general merchants, &c. Registered office, 54 Cook Street, Glasgow.

ALLIANCE ROLL-FILM CAMERA COMPANY (LIMITED).—Capital 10,000*l.* in 1*l.* shares. Objects: To carry on the business of manufacturers of and dealers in roll or continuous films for photography, cameras adapted for such films, and all kinds of papers, chemicals, apparatus and appliances for use in connection therewith. No initial public issue. Every member for the time being shall be a director unless he refuse within six months of becoming a member. A corporation, being a member of the company, may nominate not more than three directors, but only one such may vote at any meeting. In case of joint holders, only first on list who is present at meeting may vote. Registered office, Gwydir Chambers, 104 High Holborn, W.C.

W. SMITH & Co. (LIMITED).—Capital 1,000*l.* in 1*l.* shares. Objects: To acquire the business of a chemist and druggist carried on by W. F. Smith at 24 High Street, Abingdon, Berks, and elsewhere, and to carry on the business of wholesale and retail chemists, druggists, patent-medicine vendors, herbalists, perfumers, oil and colour men, Italian warehousemen, storekeepers, manufacturers of photographic, optical, surgical, dental, and scientific apparatus and materials, &c. The first subscribers are:—W. F. Smith, Bedwell Place, Abingdon, chemist; A. W. Franklin, 23 High Street, Abingdon, chemist's manager; Mrs. E. M. Franklin, 23 High Street, Abingdon; W. T. B. Arnold, 40 Bath Street, Abingdon, chemist and druggist; Mrs. Z. Mulcock, 44 Bath Street, Abingdon; G. F. Ivey, 44 Bath Street, Abingdon, accountant; and C. F. Franklin, 80 St. Anne's Road, Rotherham, grocer's assistant. No initial public issue. Registered without articles of association. Registered office, 23 High Street, Abingdon, Berks.

JOSEPH CROSFIELD & SONS (LIMITED).—Mr. Arthur H. Crosfield has been appointed chairman of this company, and Mr. Joseph John Crosfield deputy-chairman.

ANGLO-FRENCH QUICKSILVER AND MINING CONCESSION (Kwei-Chau Province) of China (Limited).—The report for the year ended August 31, 1901, states that political troubles being now ended considerable progress has been made, and the reports of the Company's general manager in China continue to be most encouraging. Operations have been in progress at the Dah Siao Tung, Siao Gao Tung, and Dah Gwa Chun, three of the Company's principal mines at Wen Shan Chiang. In order to meet the expenditure for current charges and further development the directors made a call of 5*s.* per share on the preference shares.

W. B. FORDHAM & SONS (LIMITED).—The sixteenth annual meeting of shareholders in this Company was held at the Midland Grand Hotel, St. Pancras, N.W., on February 25, Mr. W. B. Fordham, in the chair. In moving the adoption of the report and accounts for the year 1901, the Chairman said that (comparing the previous accounts) the stock is less by over 4,000*l.*, and the Company has fewer creditors and more debtors. There is more available cash, and during the past year 1,000*l.* had been paid off on mortgage account. The report and accounts were unanimously adopted; a final dividend of 6 per cent. for the second half of 1901 was declared (making, with the interim dividend, 6 per cent. for the year), and 1,500*l.* was voted to the directors for their services. Mr. W. B. Fordham was re-elected a director, and the auditor was re-appointed.

ALFRED BIRD & SONS (LIMITED).—Mr. Alfred F. Bird presided at the annual meeting of this company, held at Birmingham on February 27. The Chairman, in moving the adoption of the report (see *C. & D.*, February 22, page 300), reviewed the progress of the business since its establishment in 1837. During all that time it had held a leading position in the trade, and possessed valuable freehold properties in Birmingham and London free from encumbrance. The enormous development of the business was shown by the fact that while the year 1899 gave an increase of 166 per cent. over 1892, the increase in 1901 over 1892 was 275 per cent. Before declaring the amount of profits in the balance-sheet, the directors had taken advantage of their powers to establish an internal reserve of a very substantial amount. The continued expansion of the business necessitated a considerable extension of the works. It was intended to pull down four of the least important of the sixteen retail-shops in Dritend, together with certain obsolete buildings in the rear, and build offices and additions to the works.

THE LOCAL GOVERNMENT BOARD have at last relented in favour of giving adequate remuneration to Mr. Colbeck, one of the dispensers to the Holborn Board of Guardians. But it is only half-hearted. Instead of assenting to a permanent increase of salary, they have given sanction to a gratuity of 10*l.*

AN INNOCENT SPECIMEN of the medical-student tribe walked into a druggist's shop a few days ago and signified a desire for "2 oz. of syrup of Virginian prunes." The druggist was totally lost until the student remembered that prescriptions were usually written in Latin, and so he said "syrupus pruni Virginianæ."

WHICH BOND STREET CHEMIST?—According to the recent report of the Ladies' Commission on the Concentration Camps:—"The organisation of the hospitals and the provision of 'medical comforts' are the features which reflect the greatest credit on the administrations which are responsible, and on the medical and nursing staffs as a whole. The dispensaries are well stocked, and the supply of all kinds of invalid food and stimulants is practically unlimited. In one camp, which was in no way exceptional in this respect, the dispenser said: 'I have been for many years an assistant in one of the leading chemists in Bond Street, and I should not be ashamed to compare my stock with his.'" "The dispenser" may stand for Mr. W. H. Kerr, who has a position of that kind in South Africa.

Scientific Progress.

Genuine Liquorice-juice.—Van Rijn has examined a number of samples of genuine liquorice-juice (*Pharm. Weekblad*, 1902, 64), and gives the following as the limits for eight selected samples:—Water = 15·3 to 20·8; ash = 4·0 to 6·3; glycyrrhizin in the dried juice = 6 to 15 per cent.; soluble in water = 21 to 31 per cent.

A New Vanillin Compound.—By condensing vanillin with benzaldehyde in the presence of zinc chloride, Rogoro (*Chem. Zeit.*, 1902, 3) has obtained a new body which he terms benzo divanillin. This compound has the formula $C_6H_5.CH.(C_8H_7O_2)_2(OH)_2$, and forms microscopic crystals melting at 222°. It has the usual characteristics of an aldehyde.

A New Celluloid Patent.—According to Zuhl and Eisemann (*Chem. Central.*, 1902, 115) the employment of camphor as a solvent for nitrocellulose, which has never yet been satisfactorily substituted by anything else, is obviated by the employment of the phosphoric acid esters of phenols and naphthols. Those specially recommended are the phosphoric esters of ordinary phenol, cresol, and naphthol. The resulting celluloid is free from odour, and any oils such as castor oil to improve the plasticity may be worked in in the usual manner.

Cytisine.—Freund (*Chem. Zeit.*, 1901, 1154) publishes his latest results dealing with the constitution of the alkaloid cytisine. By heating it with hydriodic acid he obtains a new alkaloid of the formula $C_{11}H_{14}N_2O$, and a compound of the formula $C_{11}H_{11}NO$. This body on oxidation yields an acid melting at over 350°. It also yields a nitro-derivative melting at 275°. A series of compounds of both decomposition products has been prepared, which on further investigation are expected to throw great light on the ultimate constitution of the original alkaloid.

A New Reaction for Aldehydes.—Rimini (*Chem. Central.*, 1902, 79) gives the details of a very delicate new reaction for aldehydes, by which even the smallest traces may be detected. A solution of the aldehyde in alcoholic potash is heated with Piloty's hydroxylamin-phenyl sulphonic acid. This results in the formation of benzyl-sulphonic acid and a hydroxamic acid containing the aldehyde residue. The latter compound can easily be separated, and yields an intense red-violet colour with traces of iron chloride. This reaction is claimed to be of great use in the detection of aldehydes.

Ibogine.—This compound has recently been fully investigated by Haler and Heckel (*Chem. Central.*, 1902, 55). It is the active principle of a plant indigenous to the Congo. The alkaloid exists in the root-bark, the leaves and the stem-bark. It has the formula $C_{26}H_{32}N_2O_2$. It forms white crystals melting at 152° sharply, and is insoluble in water, but easily soluble in most organic solvents. It is slightly lævorotatory, to the extent of −12·9°. The bark of the twigs contains another crystalline compound, melting at 206°, which has not been further investigated.

New Essential Oils.—Haensel, in the current issue of his *Berichte*, gives the following details of three new essential oils:—The flowers of *Althæa officinalis* gave on distillation 0·024 per cent. of an oil of a dark colour melting at 36°, of a bitter taste and acid reaction. Small white crystals were separated from the oil but have not been examined. *Marrubium album* and *M. nigrum* both yield essential oils, the former having a sp. gr. of 0·9414, the latter, 0·934. They are both concrete, melting at 16° to 17°. A crystalline compound melting at 190° to 195° was isolated from each of them. The dried flowers of *Achilla millefolium* gave 0·485 per cent. of essential oil. It is an oil of sp. gr. 0·9165, slightly lævorotatory in dilute alcoholic solution, and solidifying to a fatty consistence by cooling to −20°. It appears to resemble chamomile oil in properties, and to contain the characteristic blue compound present in that oil.

Iodine Value of Oils.—Of the modifications of that already very satisfactory analytical process, the determination of the iodine value of fatty oils by Hübl's method, there have been many which show no advantage over the original, whilst most are of considerably less value. The latest is that of a writer in the *Pharm. Central.*, who proposes to employ iodine bromide in acetic acid solution. It is claimed that the results can be obtained by an absorption of fifteen minutes, with as great accuracy as by the long absorption of Hübl's process. No experimental results of value are quoted, and there appears no reason to expect that this modification will prove more satisfactory than the many others which have been proposed.

Decomposition of Hydrogen Peroxide by Light.—At a recent meeting of the Cambridge Philosophical Society, Mr. R. F. D'Arcy gave an account of experiment showing that dilute solutions of hydrogen peroxide are rapidly affected by exposure to sunshine. Experiments were chiefly made with aqueous solutions containing 4 per cent. of "20 vol." H_2O_2. Exposure of such a solution in a flask to the sunshine of five days in June resulted in the decomposition of about three-quarters of the hydrogen peroxide. In open dishes it is more rapidly decomposed, and the effect in this case is not dependent (at any rate, to any considerable extent) on the evaporation taking place simultaneously. It is not a temperature effect and the author is of opinion that the decomposition by light is a possible source of production of positive and negative ions in the atmosphere. A detailed account is to be found in the *Phil. Mag.*, January, 1902.

Things that Happen—Sometimes.

Co-opted.

"You are new, Brother Richard," the Registrar said,
"And you're slightly outspoken and bold;
So if you are honoured do *not* lose your head,
But remember to do as you're told."

"Your very kind words I will never forget,"
The J.P. replied, overcome;
"And if by perplexity I should be met,
I'll come for advice—or be dumb."

"You are new," spoke the Oracle, biting his quill,
"But you follow in orthodox ways,
And if you but promise to utter no ill,
I'll give you a column of praise."

"Your kindness is touching," the Alderman sobbed,
"Of its worth I am cognisant quite;
And of your good will I shall never be robbed,
For your wisdom will keep me all right."

"You are new," said the Ancient One, crossing his hands,
"And your deeds have ne'er given me pain;
So if you are good and obey my commands,
You'll perhaps get a badge and a chain."

"I was reared where the sprats and the mackerels skip,"
The Spring Gardens Magnate replied,
"And to be the Commander of Pharmacy's ship,
Would fill me with feverish pride."

The Story is told that a rather fascinating young lady went into a drug-store to purchase a bath sponge. When the young clerk pranced up to inquire her wants she became "rattled," and asked for a sponge bath. The clerk immediately fainted, and has not yet entirely recovered from the shock.—*N. W. Druggist.*

Observations and Reflections.

By Xrayser.

The Carnegie Trust

provides a vast sum for the benefit of Scottish students. The interest on two millions sterling is to be spent annually in improving the facilities of the Universities of Scotland, and in aiding their graduates by the payment of their fees so far as the trustees may deem the cases suitable. Whether this gorgeous endowment will realise the intentions of the giver is very doubtful. Mr. Carnegie's idea was, I fancy, a grand one. He wanted his nation to get the benefits of those great education foundations. He wanted especially those who were to be engaged in commercial pursuits to taste the banquet of culture, and he thought two millions would suffice to open the doors of these institutions to multitudes of men and women who would otherwise merely toil through a dreary life. But the money will have to be handled by examinationmongers, who think education can be measured by percentages of marks. They have resolved that no one is to get the benefit of Mr. Carnegie's munificence without passing one of the higher entrance examinations. The result will be that a certain lot of doctors, lawyers, and clergymen will get cheap teaching, and that is about all.

Scotch Pharmacists

could hardly look on unconcerned while the interest on these two millions was being distributed. They would have been culpably negligent if they had not sought to secure some advantage from it for those who are to come after them. This I suppose was the genesis of the scheme which Mr. Tocher unfolded to the chemists of the North British Branch last week. It is a most carefully thought out plan, and was very ably presented. It is impossible to be sanguine in regard to its adoption by the Scotch universities, and though it looks pretty on paper I am not sure that anybody would be much the better for if it came into operation. There is already excellent provision elsewhere for those who want to learn what is necessary for their Qualifying examination. For the few who want higher education in pharmacy there are abundant opportunities for study, and for those who would like a degree the B.Sc. is available, and it is a distinct advantage that the studies necessary for that examination are a little outside the trade groove. We all know that there is not a field in pharmacy for many of Mr. Tocher's B.Sc. Pharms. To the vast majority of chemists and druggists the title and the training for it would prove rather an encumbrance than a help. There remains the one advantage of a free curriculum. I suppose that must be regarded as an advantage, but it is not quite certain that Mr. Carnegie's millions would be wisely employed in giving young Scotchmen something to lean against, while young Englishmen are learning to stand upright in their own strength; but this at any rate is a Scotch question exclusively, and it would be worse than mean for English authorities to grudge the benefit merely because they have not a similar opportunity.

Mr. Boot's View of Pharmacy

is so imperial that I am not surprised to find that he has failed to appreciate my parochial objection to the development of the system, for which his and other companies are responsible, of controlling hundreds of retail businesses in various parts of the country. That he misapprehends the point is evident from the irrelevancy of his reply Put in other words it is this: Messrs. Boot's companies are said to own some 250 chemists' businesses; Lipton (Limited) run perhaps twice as many provision-shops; the same method is followed by a dozen other companies; gradually the independent tradesmen of our towns are being displaced by these company-shopkeepers, who figure in our towns as mere names without personalities, and are represented by a continually changing personality practically without a name. In times past the unpaid but honourable municipal work of the locality was largely done by the tradesmen I have referred to; they became churchwardens, overseers, guardians, councillors, mayors. They also did a large part of the religious and philanthropic work of their respective towns. I want to know whether these towns are going to be as well off when for these workers a drilled army of dependent employés is substituted; when for men striving to secure a position we have managers on fixed wages, and whose duty it is to remit their surplus profit weekly to headquarters a hundred miles away. Mr. Boot says I forget that his company has some 5,000 shareholders. How that fact concerns the discussion I do not know, and it is Mr. Boot's allusion to it that convinces me that he does not see the point.

Recent Cases

under the Sale of Food and Drugs Act have frequently shown how unwise it is to submit to conviction without making a vigorous fight. But the application in the High Court in the methylated soap-liniment case last week suggests that for ordinary pockets there are limits to the obstinacy with which defences can be conducted. In this instance the Magistrate refused to hear certain evidence and convicted, refusing to state a case. Counsel asked for a rule to compel him to state one, and this was granted. The Magistrate may now obey, but most likely he will appear by other counsel in support of his refusal. The Court may then agree with him, or may remit the case, instructing him to hear the evidence. He may then convict again, and this may be followed by another appeal. I think I would prefer a slight stain on my character to all this costly procedure.

Dr. Symes at Bradford

"regretted the modern tendency to go in for some experience at a store before a man commenced on his own account. That was simply feeding the enemy." It is not long ago since conscientious employers thought it policy to decline the services of assistants who had been in "stores." I know some of the same men who now ask eagerly of applicants, "Have you had any store experience?" and look on an affirmative reply as a recommendation. Store methods are pretty well understood by this time, and experience of them may not be so useful now as it was. But it cannot be denied that "the enemy" has taught us things which were not to be learned at the historic houses, and the old Latin proverb, "Fas est ab hoste docere," will justify itself once more. It is by the aid of chemists who have studied at the stores as well as at the Square that we shall win back our inheritance.

A Certain Union

had invited tenders for drugs and sundries, and it was stipulated that the drugs should be obtained from the Apothecaries' Hall. A chemist who had received the invitation pointed out to the Clerk that a condition that drugs should be of Pharmacopœia quality would be as satisfactory for the Union, and would facilitate tendering. Thereupon the Clerk sent out the following note:—"With reference to the form of contract for the supply of drugs, &c., to the ——— Union posted to you yesterday, I have to inform you that the qualities of goods and materials to be supplied under the contract are those specified in the current price-list of the British Pharmacopœia, and not as stated in Clause 3 of the form." This was from a lawyer, who, I daresay, would quite confidently assure a court of justice that the law required all beeswax and carbonate of soda sold by chemists to be in accordance with the B.P. standard, just as if he knew all about it.

Editorial Comments.

The Photographic Season.

THE session period in the photographic world will soon give place to season trade, and if the mild weather of the last few days continue photographic chemists will be busy before Easter. In expectation we have recommenced our photographic notes, and we also describe some leading novelties that are now to be had. The increase in the number of photographic chemists within the last few years has been phenomenal, and there is as yet no sign that photography is decreasing in popularity. A recent census of the drug-trade has shown us that the number of chemists who sell photographic goods has more than doubled since 1893. This is particularly gratifying to us, who have long advocated the adoption of scientific side-lines by chemists, our contention being that the chemist and druggist is by his education and training the best tradesman to sell scientific apparatus. From several quarters we learn that there is some anxiety to know what the effect of the recent restrictive policy of the Kodak Company will be on the photographic business. So far it appears to have exercised a beneficial effect on the wholesale trade, and the competition to supply "free" cameras and films is resulting in some really good articles

Digitized by Google

being put on the market. New developing agents are still being introduced, coal-tar being the *alma mater* of the latest—edinol—as it has been of so many predecessors. The manufacture of these developers is mostly covered by patents, their constitution being disclosed in the published specifications. There is a tendency, however, to run developers of secret composition, which the trade should not encourage. Experience of the proprietary-medicine trade is sufficient to remind chemists of the length to which such business can be pushed, but apart altogether from the ethics of the question, the fact should be borne in mind that a developer of secret composition may lead to as much worry as a reagent whose identity is unknown. We see no reason why such old stagers amongst developers as quinol or catechol should be mixed with sodium sulphite or similar chemicals, and offered under fancy names as something new. However excellent these secret developers may be they are not favourable to photographic progress, and to chemists and druggists they are inimical in so far as they ignore their ability to advise customers and degrade them to the position of mere handlers of sealed packages. Our observations during the past few weeks in endeavouring to ascertain what may be the chief features of the 1902 season lead us to the conclusion that the proprietary tendency in developers is a thing to be reckoned with; we do not mean developing solutions, but the serving up of old things in a new dress gorgeously described. "Fakes" Americans call them, and these are the object of this warning note.

A Martindale Memorial.

AT a meeting in the Pharmaceutical Society's house on Tuesday it was resolved, in the most cordial manner, to perpetuate the memory of the late William Martindale by placing in the Society's house a replica of the bust of Mr. Martindale which was exhibited in the Royal Academy last year. It is hoped that the funds received will permit the replica to be made of marble, and may also suffice to institute an annual award of a medal or prize of books to be given as a recognition of work done for the advancement of pharmacy. Mr. Martindale was a man who not only worked well himself for the advancement of pharmacy, but he was always urging others to do the same, and nothing could be more appropriate, therefore, than that the tribute by his friends in all parts of the British Empire should perpetuate this characteristic of his—encouragement of pharmaceutical progress. It is also fitting that his portrait should be placed in the house which was the nidus of his pharmaceutical life, where he spent the best years of his service to pharmacy, and where so many of his predecessors in the presidential chair of the Pharmaceutical Society live still in portraiture. For the combined memorial of bust and prize it is estimated that a sum of about 600*l.* will be required, and it is hoped that chemists and druggists in all parts of the Empire will contribute sums from two shillings to two guineas—the latter being the maximum. We believe there will not be two opinions as to the appropriateness of this memorial, especially that a periodical prize to be awarded to young pharmacists should be an integral part of it. Mr. Martindale was ever young in his pharmaceutical work, and it is fitting that his memorial should be made an incentive to those entering upon their larger career in pharmacy. We have in the Hanbury medal an international recognition for those who have distinguished themselves in pharmacological research, and in the Pereira medal an award to students of all-round merit, but nothing to bestow upon those who are exceptionally proficient in pharmacy pure and simple. The Martindale prize might be reserved for this, but there may be some difficulty in finding a basis for the award. It was suggested at the meeting that the Council's silver medal might be supplemented annually by a selection of books to form the Martindale prize. This is an eminently simple plan, but it would confine the prize to Major men, who nowadays are not required to show greater knowledge of theoretical and practical pharmacy than Minor men. We think some encouragement of the latter is called for, and that the Martindale prize might start the recognition. A plan of selection could be found in the Minor examination results which group the successful men, we understand, into at least two classes, first and second. All who pass in the first class with the highest possibles in dispensing and pharmacy might be made eligible to compete for the prize, the examination to be a written one in dispensing and pharmacy. The whole question of the form that the memorial, supplementary to the bust, should take was not discussed fully at Tuesday's meeting, it being felt that it must be left open until the extent of the subscription-list is known. As this journal is received by an exceptionally large number of chemists in the British colonies and India we may state that subscriptions from all are specially invited, and no doubt there are pharmacists in India, Australasia, Canada, South Africa, and the West Indies who will take steps to ensure that their *confrères* participate in the memorial. At home the Presidents of local Associations will doubtless do the same, so that the memorial may be in the widest sense a tribute by British pharmacists, as it should be.

Use of the Royal Arms.

CHEMISTS and druggists, like other tradesmen, occasionally use the Royal Arms, chiefly on their stationery, especially prescription-envelopes, and, as far as we are aware, such use has never been challenged. Indeed, as was pointed out in our Winter Issue, the use of the Arms without the sanction of the King or any member of the Royal Family, is not expressly prohibited, but the Patents, Designs, and Trade-marks Act, Section 103, provides as follows:—

> Any person who, without the authority of his Majesty, or any of the Royal Family, or of any Government Department, assumes or uses in connection with any trade, business, calling, or profession, the Royal Arms, or arms so nearly resembling the same as to be calculated to deceive, *in such a manner as to be calculated to lead other persons to believe that he is carrying on his trade*, business, calling, or profession *by or under such authority as aforesaid*, shall be liable on summary conviction to a fine not exceeding 20*l.*

In our issue of January 18 we informed a correspondent that anyone may use the Royal Arms for purposes of trade, but not the words "by appointment" in association therewith, unless the appointment has actually been received. This has been taken exception to by the "Incorporated Association of her Majesty's and other Royal Warrant Holders (Limited)," from which, on February 7, we received the following letter:—

> DEAR SIR,—I am desired by one of your subscribers to ask you to correct an error which appeared in your issue of January 18 last, page 91, Legal Queries 116/89 *re* Royal Arms. I beg to inform you that no one may use the Royal Arms for trade or other purposes without a warrant or written permission from one of the Royal Departments, under a penalty of 20*l.* Copy of Act enclosed. Yours faithfully,
>
> S. K. HOLMAN
> (Secretary of the Association).

The "Act enclosed" was the section above referred to, and we pointed out in reply that the section does not expressly prohibit the use of the Royal Arms, except when used in such a manner as to lead persons to believe that the user is carrying on business by or under the authority of the King

Digitized by Google

or any of the Royal Family, and we asked for a more precise statement for publication in regard to the Association's claim. To this the Secretary replied on February 19 as follows:—

Dear Sir,—I handed your letter of the 8th inst. (*re* use of Royal Arms) to the Lord Chamberlain, and am desired by his Lordship to inform you "that only those firms holding warrants of appointment to his Majesty (or other members of the Royal Family) have the right to this privilege." I can only repeat what I stated in my former letter, that the "opinion" you have obtained is absolutely incorrect. I can quote you numerous cases in the police courts and an appeal case, in which the users of the Royal Arms, for trade purposes, without appointments, have been fined.

Yours faithfully,
S. K. Holman.

Since then we have received a full copy of the Lord Chamberlain's letter, which we subjoin:—

Lord Chamberlain's Office,
St. James's Palace, S.W.,
February 15, 1902.

Dear Sir,—In answer to your inquiry concerning the right to use the Royal Arms, I am desired by the Lord Chamberlain to inform you that only those firms holding warrants of appointment to his Majesty have the right to this privilege. These warrants are now only granted to tradesmen who actually and habitually supply the King.

His Lordship desires me to add that the only exception which has been made to this rule is in the case of firms who held warrants of appointment to her late Majesty, and who have not been re-appointed to the King, his Majesty having commanded that they may be permitted to style themselves "By Appointment to the late Queen Victoria," retaining the right to the use of the Royal Arms.

Yours faithfully,
(Signed) Arthur Ellis.
M. Genl.

The Secretary, Warrant-holders' Association.

It appears from this that the Lord Chamberlain goes further than the Patents, &c., Act, above quoted, and it is but fair to say that the cases which have been decided by the Courts (one on appeal) support the Lord Chamberlain's view. A number of tradesmen have, at the instance of the Association, been fined for exhibiting the Royal Arms on their business premises, and the appeal case was in respect to a coaldealer who used the Arms on his letter-heading, with words signifying that he had been a contractor to the Government. In all these cases it was held that the Arms were used in contravention of the Act, and it is here that we cannot get a satisfactory statement from the Association. It will be generally conceded that when a tradesmen exhibits the Royal Arms on his premises, especially in a neighbourhood where Royal tradesmen are fairly numerous, he violates the Act; but there are many trading conditions in which the Arms are used for decorative purposes, as in the case cited, or on the cover of the British Pharmacopœia, and we notice that the incorporated Association itself uses the Royal Arms on its letter-paper—though not a Royal tradesman. Such conditions appear to be legitimate use of the Arms. While, therefore, we are bound to admit as a fact that only persons holding Royal Warrants have the royal privilege of using the Royal Arms for the purposes of trade, we must point out that the Patents, &c., Act, indicates the lines along which those who have not this privilege may use the Arms.

Oil of Ylang-Ylang.

The acquisition of the Philippine Islands by the United States of America has naturally led the Government to investigate the condition of various industries carried on in the Archipelago, with the idea of ultimately concentrating the trade into American channels. The distillation of essential oils, which has flourished from time immemorial in the Philippines, was one of the first to attract attention, and at the instance of several American houses, an official report on the ylang-ylang oil industry has been compiled. Hitherto supplies for the United States have come through Germany and France, those countries having had practically a monopoly of the trade, but no doubt the Americans will now make an effort to obtain supplies direct. It may be a difficult matter, as the distillation of the oil is principally done by Germans, and the bulk of the output is contracted for by German houses. Indeed, the industry was first conducted by Germans in the island of Luzon in the early sixties of last century, but it was not until 1878, when it was first exhibited at Paris, that the oil became widely known. The ylang-ylang tree (*Cananga odorata*, Hooker, or *Unonia odoratissima*), common to many localities south of Manila, is found chiefly in the well-populated provinces, where it thrives best. It is propagated by planting seedlings or cuttings about twenty feet apart each way, when they grow rapidly in almost any soil. The first flowers appear in the third year and in the eighth year. A tree yields as high as 100 lbs. The blossom grows in every month of the year, but the greatest yield is from July to December. The petals are subjected to the simplest form of distillation, and the best quality of oil is as clear as distilled water and fragrant, while the second quality is yellowish and somewhat empyrumatic. About 75 lbs. of flowers yield 1 lb. of oil; flowers are worth from 8*s.* to 15*s.* gold per lb., and the cost of manufacturing is about $4 per lb. There are flowering groves in many parts of South Luzon and the Visayan Islands, but the vicinity of Manila is also well adapted to the growth of this tree. Naturally the Spanish-American war greatly interfered with the industry, but as affairs have been practically settled for some months past, we understand that distillation has been taken up on the same scale as before. Last year there was a great scarcity of fine ylang-ylang oil on the European markets, with an abundance of medium and cheaper qualities. There is little sale for the oil on this market, but occasionally direct shipments of small quantities from Manila are sent to London and offered in public auction. Although Java produces ylang-ylang oil in small quantities, it has not the commercial importance of Manila oil, which is much sought after by soap-makers and perfumers.

TRADE INFORMATION.

The Board of Trade desire to suggest to our readers that British manufacturers and traders who wish to obtain any special information relating to trade in foreign countries should, before addressing his Majesty's Consular officers, make inquiry at the Commercial Intelligence Branch of the Board of Trade, 50 Parliament Street, S.W. By taking this course much delay is avoided in cases in which the Intelligence Branch is already in possession of the required information, while in other cases steps are at once taken to forward the questions to the proper quarter.

THE INFLUENZA EPIDEMIC.

An influenza epidemic has been raging for the past few weeks, as doubtless many pharmacists are aware to their advantage—and some, perhaps, to their cost. The number of deaths in London directly attributed to influenza rose in the week ending February 22 to 107, the three preceding weeks showing an increase of 26, 40, and 51 respectively. The disease appears to be prevalent in a mild form; a brief febrile stage being followed by a subnormal temperature and a slow and depressed pulse. These symptoms are often accompanied or followed by pneumonia of a rapidly fatal type, bronchitis and broncho-pneumonia, heart or brain affections, and gastric and hepatic disturbances. The mortality-rate is not yet excessive, and shows considerable signs of diminution. The usual crop of specifics and pre-

Digitized by Google

ventives are forthcoming, and amongst them we note a letter to the lay Press from Mr. W. W. Green (of Messrs. Brookes & Green, drug and produce brokers, of Mincing Lane, E.C.), who suggests that not only should the merits of quinine be more insisted upon as an antidote and preventive in this malady, but that its employment would materially assist in checking the progress of the smallpox epidemic. Commenting on this letter the *Financial Times* unkindly suggests that the writer may be more interested in a rise in the price of quinine than in its value as a remedy.

AFRIDI WAX-CLOTH.

Dr. Geo. Watt, Reporter on Economic Products in India, contributes an interesting article on "Afridi wax-cloth and the chief oil-ingredient in its manufacture" to the *Agricultural Ledger* No. 12. The Afridi wax-cloth, a kind of raised colour-painting on cotton fabrics, has been from time immemorial a well-known product of certain workshops n Peshawur, Lahore, Calcutta, and Bombay. The manufacture of the wax had all along been a trade-secret, but, as Dr. Watt relates, during a visit to one of the manufacturer's shops, "I picked up a few seeds, and recognising them as the seeds of *Carthamus oxylcantha*, I affirmed that the *roghan* (wax) of which they spoke was mysteriously made from these seeds. This seemed to so startle the manufacturers that they resolved to show me the entire process." From this incident Dr. Watt was able to affirm that the wax was made from wild-safflower oil. The method of preparation is to boil the oil—expressed from the seeds by cold pressure—for twelve hours, and then throw the heated fluid into shallow pans of cold water. Under this treatment it swells up into a thick, jelly-like substance, which is the *roghan* of commerce. Before being applied to the cloth, it is mixed with some mineral colour and drawn out into fine threads on a pointed style with which the pattern is traced.

THE ITALIAN PHARMACOPŒIA.

The second edition of the Italian Pharmacopœia is in contemplation, and the compilers have decided to make some important modifications. In the new book the method of preparing such chemicals as citric acid, iodoform, &c., which no pharmacist himself prepares, will be omitted, but the analytical standard of purity will be raised. The preparation of such substances as benzoate and salicylate of bismuth, caffeine, &c., which are difficult to obtain pure and stable, will be given, and, following the example of the British Pharmacopœia, the number of galenical formulas will be increased. Thus a uniform dispensing of prescriptions will be ensured, and specialities will be barred. A table of poison-antidotes will be added, and a table of incompatibles and dangerous mixtures. The new edition will contain a general method for the preparation and titration of fluid extracts, and will make obligatory the use of a model pill-excipient in cases where none is mentioned in the prescription. The maximum doses for hypodermic injections will be given, as well as a method for the sterilisation of solutions for hypodermic use Formulas for veterinary use are to be added, and an official method for the analysis of surgical dressings. The Pharmacopœia will give the exact chemical composition of the official essential oils, from which the aromatic waters will be distilled, in a fixed percentage. The preparation and methods of analysing various modern remedies will be indicated, and several formulas, such as that for Fowler's solution, will be modified and perfected in view of modern scientific research.

DEAR SUGAR.

The Sugar Conference which has just concluded its sittings in Brussels was initiated by our Government for the purpose of securing the abolition of sugar-bounties. Success has so far attended this effort that the representatives of the bounty-paying countries have agreed to the no-bounty principle, and should any country break this agreement our Government will impose a duty on importation into this country equivalent to the bounty granted by the exporting country. Thus our Government has in effect left no stone unturned to ensure that we at home shall pay more for our sugar. Of course, this is to give the West Indian sugar-planters and home refiners a better chance to compete with their foreign rivals, but it is just as well to know what we may pay for our patriotism. Last year we imported 21½ million cwt. of refined sugar, all from the Continent, at a value of over 13,000,000*l.*, and 13½ million cwt. of unrefined sugar, of which about one-thirteenth was from British possessions. Of the total value of sugar-imports (almost twenty millions sterling) not 1,000,000*l.* worth was from our colonies and India. A 5-per-cent. increase in the price means a million a year to us, but the increase will be far more than that, while the scheme re-introduces the protective principle into our national finances. Continental countries who enjoy the protective system pay 50 per cent. more for their sugar than we do, and if the difference is merely divided we shall have to pay 5,000,000*l.* a year more for what we use. Happily, Parliament and the foreign Legislatures have to ratify the Convention before it is signed; and by all appearances that will not be so easily accomplished.

PHARMACEUTICAL LANDMARKS.

Dr. Fraenkel, writing to the *Apoth. Zeit.*, says that of the 630 remedies contained in the new German Pharmacopœia only seven are designated by proper names. These are Blaud, Dover, Fowler, Haller, Hoffmann, Koch, and Riverius. Robert Koch, the only one of these living, a Privy Councillor of Berlin, was born on December 11, 1843, in Clausthal. Twenty years ago he discovered the tuberculosis bacillus, and in 1890 he published his now famous treatise on tuberculine. The preparation which is described as Tuberculinum Kochi in the Pharmacopœia has not, however, fulfilled the anticipations which were expected of it. Blaud, who has given his name to the famous iron pill, was a French doctor. He was born in 1744, at Nîmes, and died at Beaucaire in 1858, at the age of 84. It is not known whether the attainment of this age was due to the use of his pills. Thomas Dover, after whom the Dover's powder is named, was a London doctor, and died in 1741, whilst Thomas Fowler was born in York on January 22, 1736, and died on July 22, 1801. He, like so many doctors and pharmacologists who have become famous, began life as a pharmacist. The use of arsenic in medicine in the form of the well-known Fowler's solution is due to him. Albrecht von Haller was born on October 16, 1708, at Berne, and died December 12, 1777. He gave his name to the Haller's acid elixir. He was famous as anatomist, physiologist, botanist, and poet. He took special interest in botany, and laid out the Botanical Gardens, Göttingen, after having accepted the professorship at the Göttingen University in 1776. Friedrich Hoffmann, after whom Hoffmann's elixir is named, was born on February 19, 1630, at Halle. At the age of 18 he went to Jena to study medicine, and in 1685 settled as a doctor in Minden, Westphalia. He became popular, and rose to be one of the most celebrated doctors of his time. When the Halle University was founded in 1693 he was appointed professor of medicine, and was afterwards appointed Physician-in-Ordinary to Friedrich I. He died at his birthplace on November 12, 1742. In regard to Riverius, it is not known for certain who the discoverer of Riverius's draught was, but according to Hager it was Riverius, who died at Montpellier in 1655.

MEDICINES to the value of 3,692*l.* were exported from Foochow in 1900 against 3,186*l.* in 1899.

Otto of Rose.

By E. J. Parry, B.Sc., F.I.C.

OTTO OF ROSE, like most expensive oriental products, has always been and still is liable to gross adulteration, but too frequently statements are made, innocently or from interested motives, that this adulteration is universal. The most recent utterance on the point is by one whose *bonâ fides* is above suspicion, and whose authority as an expert in materia medica gives anything that he says great weight—I mean Mr. E. M. Holmes. In a paper read at an evening meeting of the Pharmaceutical Society on December 10, 1901, Mr. Holmes appears to consider that otto of rose cannot, for practical purposes be got pure. As I was not present at the meeting, I do not wish to read into the paper more than the author intended to imply; but it seems clear that he considers adulteration of otto to be practically universal, and that the Bulgarians are alone responsible for it. That adulteration is extensively practised has been acknowledged by all, and I have emphasised the difficulties in the way of investigation of the oil on account of this fact in my book on "The Chemistry of Essential oils" (page 288–290). Since those pages were written, however, I have had repeated opportunities of examining a very large number of samples obtained from various districts in the Balkans, and from different sources (many being from those who had no interest in the industry), and from the information obtained I have come deliberately to the conclusion that adulteration is considerably less than has usually been considered. The fact should not be lost sight of, that, as in the case of adulteration of oil of lemon (which practice is carried on to an enormous extent in *this* country, and which we always credit the Sicilians with) a considerable amount of "reducing" of otto of rose is done in England. Formerly, when the exportation of otto was almost entirely in the hands of the Turkish merchants, they were the chief if not the only sinners, and the less honest amongst the producers followed their example; but as the trade got more and more into the hands of the producers, the quality of the otto improved generally, so that to-day one can obtain pure otto of rose in quantity if one cares to pay a fair price for it, or one can obtain adulterated otto, just as one obtains adulterated or pure lavender, spike and thyme oils from the South of France. In both cases it is a matter of the firm one buys from and the price one pays.

Mr. Holmes quoted Mr. Daniel Hanbury in support of his contention. I shall not comment on this, except by quoting that other great authority Dr. Pereira, who (Vol. II., part II., page 294 published in 1839) says, "as far as my observation extends, the attar (of rose) found in the shops of London is very pure." I merely quote this to show that archaic references need not necessarily refer to modern conditions.

I notice that Mr. Holmes does not consider that otto from the white rose can be odorous. I have taken particular care to verify the source of the sample which I examined and reported on in this journal (July 28, 1900), and have no reason to alter the opinion I then expressed. Indeed it is difficult to see how an odourless otto can be obtained, or any stearoptene at all without an odorous "elæoptene" along with it. Mr. Holmes considers that the white rose is used because it yields more stearoptene for adulteration purposes. I take exception to this inference, because the white rose flourishes far better than the red in some districts, and is systematically distilled with the red rose in variable quantity. Why should the white rose product be regarded as an adulteration because it yields a few per cent. more stearoptene? Is all the German otto adulterated because it contains twice as great an amount of valueless and odourless constituents as the Bulgarian?

I need not refer to the numerous statements which have been made from time to time regarding the purity of Bulgarian otto, many of them being from obviously interested sources, but one statement which has been made with authority is sufficiently remarkable to require either very substantial justification or very stringent criticism. On page 434 of the English translation of that most valuable work by Gildemeister and Hoffmann, we find the following:—

> The enormous difference between the Bulgarian and German distillates is very striking, and not to be explained by mere reference to climatic differences. Rather startling is also the fact that Bulgarian manufacturers have repeatedly exhibited as especially fine products oils that agreed closely with the German distillate in odour, congealing-point, and stearoptene-content. On the other hand, the oil which is obtained by distilling 2,500 kilos. of roses with 1 kilo. of geraniol cannot be distinguished from the Bulgarian oil of commerce.

To this paragraph I think two very strong criticisms may be applied. The first deals with the effect of climate on the product, and here Messrs. Schimmel & Co. are entirely at variance with the statements quoted. According to Gildemeister and Hoffmann, an oil distilled in Leipzig had a sp. gr. of 0·8727, and optical rotation +0° 49′. This oil was distilled from *Rosa centifolia*. The same authorities then mention two French oils examined by so well-known a chemist as Dupont, and undoubtedly pure. Although these oils were distilled from *R. centifolia*, their sp. gr. were 0·8825 and 0·8407, and their optical rotations −6° 45′ and −8° 3′. Now Schimmel & Co., in the April-May, 1901, issue of their semi-annual report, give the figures for a number of samples examined in their own laboratory, of which two were Miltitz distilled oils, one being distilled in the presence of their own expert in Bulgaria, and another was obtained by him from a reliable merchant in his neighbourhood—and two were commercial samples. The latter two I omit and compare the others. The two German oils had sp. gr. 0·8372 and 0·8304 at 30°; the admittedly pure Bulgarian samples had sp. gr. at 25° of 0·8331, and 0·8314; the optical rotation of the German samples was in both cases under −1°, but in the Bulgarian samples was over −2° 30′; and the stearoptene content was 28·5 per cent. and 39·9 per cent. in the German, and 18·5 per cent. and 20·5 per cent. in the Bulgarian samples. I think these figures published by Messrs. Schimmel & Co. are in direct contradiction to the inference drawn by Gildemeister and Hoffmann.

The second point to which I would draw attention, is the statement that Bulgarian manufacturers have repeatedly exhibited oils closely resembling German otto as especially fine products. Apart from the fact that the figures published by Messrs. Schimmel & Co. are against the likelihood that Bulgarian manufacturers would add 10 to 20 per cent. of stearoptene to the natural product to *improve* it for exhibition purposes, it would be necessary (according to Messrs. Schimmel & Co.'s own showing) to do this in order to bring the Bulgarian otto into line with the German, and I question whether any such exhibition sample could be produced. I have had the opportunity of examining the pick of the samples exhibited at the Paris Exposition of 1900, and never found one of the nature suggested, nor have I ever seen or heard of a Bulgarian sample with such characters. Now if there were any foundation in fact for this hypothesis, what would necessarily follow? To reduce the amount of stearoptene, *i.e.* to reduce the melting point of the otto, from the supposititious values to those which we have reason to believe are quite normal, it would be necessary to add about 30 per cent. or more of a foreign oil.

Digitized by Google

This, I think must be admitted to be the so-called "Turkish geranium oil," which is the only practical adulterant in common use. The sp. gr. of the geranium oil is from about 0·885 to 0·895, and its ester value lies between 20 and 40 per cent. The sp. gr. of otto of rose distilled in Bulgaria is much lower, and decreases with an increase in the stearoptene content. The ester value of pure otto of rose from all sources is admittedly under 10, usually from 6 to 9. Hence anything like 30 per cent. of geranium oil would raise the sp. gr. and the ester value. The figures which I give below are entirely in the opposite direction, and cannot be explained by the assumption that geranium oil is present. Indeed, to explain the figures one obtains regularly for the highest grades of otto of rose, except on the supposition that we are dealing with a pure product, will require the discovery or invention of a hitherto unrecognised adulterant, so scientific in its nature that the skill of the East has entirely baffled the knowledge of the West.

The samples upon which I have worked and now report upon were obtained from several different sources. A number of them were obtained at the Paris Exhibition from from various districts, obtained from the actual neighbourhoods by Mr. Theodore Shipkoff and forwarded to me. The remaining four samples represent recent shipments, samples of which have been sent to me for analysis in the ordinary way.

In no case could any spermaceti or so-called guaiacum wood oil be detected in the stearoptene. Indeed, the characteristic crystalline form of the natural stearoptene of otto of rose is such that any material addition of these bodies alter it so much that one easily recognises that the otto has been tampered with. The ottos of the present season are, generally speaking, of a rather lower sp. gr. and slightly higher congealing-point than has been the case for the past two years.

Samples Nos. 9 and 10 were distilled at Kezanlik and Maglish respectively. No. 9 was from a mixture of seven-eighths red and one-eighth white roses; No. 10 from five-sixths red and one-sixth white. Nos. 11 and 12 were specially distilled from red roses without the admixture of any white roses at all.

A sample of the otto from white roses only (of which I

the bulk forming the exhibits (see *C. & D.*, 1900, ii., 123). Some were drawn by myself from bulk coppers imported by users, and represented true commercial samples as placed on the market. Others have been sent to me from time to time by several distinct distillers in Bulgaria, and were collected from various places to illustrate the difference in otto from different districts. Lastly, very liberal supplies were obtained from certain widely-situated villages in Bulgaria by Mr. Theodore Shipkoff, who was good enough to obtain large samples for me from several representative villages, and in one case to distil personally a parcel of flowers for me. I have, however, varied the sources from which I have obtained these samples as much as possible, so as to be entirely free from individual bias. It is to be understood that these samples are only those which I have obtained from the very best and most reputable sources, as many had to be rejected as grossly adulterated.

The above table of figures gives the results of the examination of the samples. For Nos. 1, 2, 3, and 4 I am indebted to the kindness of Messrs. A. & F. Pears (Limited), who inform me that they are samples of stock purchased from Messrs. Shipkoff & Co. in the following years:—No. 1, 1897; No. 2, 1898; No. 3, 1899; No. 4, 1900. Nos. 5 and 6 were samples taken by myself from sealed packages directly imported by Messrs. W. W. Flood & Co. Nos. 7 to 16 are typical samples have previously published the results) had a sp. gr. of 0·8482 at 30°, and congealing-point 23·5-24°; optical rotation, −2° 21′, and saponification value, 0·9.

The whole question of adulteration of otto of rose must necessarily resolve itself largely into one of price, and an examination of nearly any supplier's price-list will show that the English dealer is fully alive to this point, as in this case, as with many other essential oils, one can usually find listed such qualities as "finest virgin," "good super," and "commercial." But I think all large consumers who use otto of rose and understand its value can (and most of them do) get genuine otto which has not been tampered with; and the fact that the four seasons' supplies which Messrs. Pears were good enough to send me are practically identical both in odour and in chemical characters quite negatives Mr. Holmes's belief that large supplies of a constant nature cannot be obtained.

The valuable work of Von Soden and Rojahn, who were the first to publish the recent discoveries in connection with this oil, will no doubt materially assist in eventually placing our knowledge of the oil in such a position as to make adulteration an easy matter to detect; but the opinion I have previously expressed—that the limits given by the British Pharmacopœia are totally inadequate—I still adhere to, and I should be glad to know the opinions of others.

Diseases of Poultry—II.

ATTENTION was called in the first article on this subject (*C. & D.*, December 28, 1901, page 1050) to those peculiar extensions of the respiratory apparatus known as air-sacs, and through which a bird may breathe when a large bone is broken and the contained sac ruptured.

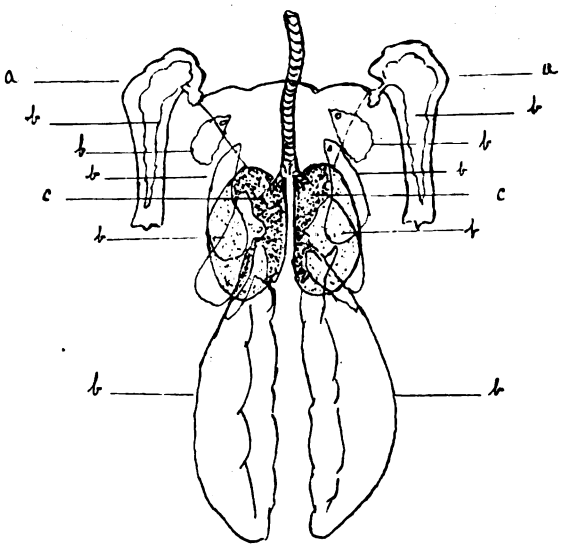

FIG. 1. *a*, *a*, Arm-bones (humerus); *b*, *b*, *b*, *b*, *b*, *b*, *b*, *b*, *b*, Air Sacs; *c*, *c*, Lungs.

These appendages are of peculiar interest to the student of evolution, in their relation to reptiles and fish, and for the conformation of the parasite which makes them its habitat. Several parasites are met with under different conditions of infestation, but

THE AIR-SAC MITE

is so commonly found as to suggest its invariable presence in small numbers; the effect of their presence only attracts our attention when they are unusually numerous. This remark applies to parasitism generally, and as long as internal or external dwellers in or upon other creatures are not assigned their proper place in the great scheme of nature. If the sketch of the *Cytodites nudus* (fig. 2) is first examined, and then a comparison made with the external mange-mite *Sarcoptes levis gallinæ* (fig. 3), there will be found a decided structural resemblance. *Cytodites nudus* is so called because of the absence of those immense hirsute adornments, so conspicuous on mites of the same great family when living upon a rough epidermis, and among feathers or hair, in lieu of the smooth mucous surface over which the air-sac mite travels. *Cytodites nudus* is not provided with a penetrating beak or a saw-like apparatus, to gather soft mucus, but its mouth is little more than a sucker. A few short appendages upon the front legs serve only to suggest evolution from the sarcoptes or other external mange-mites. The interesting question arises as to whether the acarus of the skin developed or was evolved from the air-sac mite and acquired spines and hairy processes, or did wandering acari gain access to the inside of the fowl, and, in process of time, shed their hairs and "lose their teeth," so to speak? That parasites enter the oviduct of the hen from the outside, and become enmeshed in the forming egg, we shall presently show, and in view of that fact and others not less wonderful, no great strain is put upon our powers of imagination when we suppose that the air-sac mite is a degenerate member of the acarus whose immediate ancestors, not many millions of years ago, displayed a desire to become inside passengers,

FIG. 2. — CITODYTES NUDUS (AIR-SAC MITE).

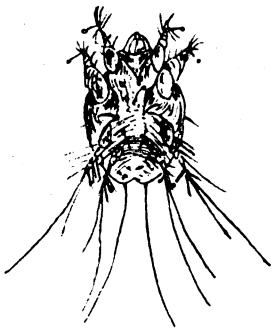

FIG. 3.—SARCOPTES LEVIS GALLINÆ (Male).

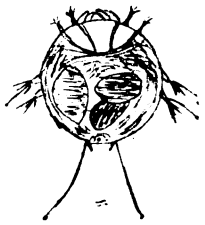

FIG. 4.—SARCOPTES LEVIS GALLINÆ (Female).

and to a great extent lost their capacity for the hardier existence which is led in the outer world. That they *can* live outside for an undetermined period is known, but they certainly succumb after a while.

The original discoverer (Gerlach, to whom we are indebted for so much of our knowledge of minute parasites) deemed the air-sac mite to be a mange-insect, and the author of an internal mange; and this, roughly speaking, is the case. The difference can, perhaps, best be stated (and read without the aid of a dictionary of pathological terms) by reference to the structure of the mouth or sucker by which the parasite in the air-sacs is enabled to gather as much of his natural food (mucus) as he needs, and without puncturing the membrane in the manner of the acari upon the skin. Whether the air-sac mite follows the example of his outside representative, and injects a poisonous saliva upon or into abrasions, is not yet ascertained; but it is known that the mange-mites of animals do so, and this excites a greater flow of serum, to supply a rapidly increasing colony with food. It is also inferred that the comparatively mild attacks of mange which animals often endure without attracting much attention is owing to the abundance of serum exuded and the satisfaction of the guests without having recourse to injection of their peculiar secretion.

The feather-mites of fowls, which correspond to acari in animals, behave in the same indolent or torpid manner in winter as do mange-mites upon horses and cattle and scab upon sheep. They are simply dormant, not dead, and when spring-time arrives they respond as freely as the rest of creation to "the sweet influence of the Pleiades." It may be pretty safely assumed that the air-sac mites, like those living upon the skin, do but little damage so long as they find abundant food and conceal their weapons but as soon as they become overcrowded they resort to the methods above indicated. The disease is an infectious one, and the introduction of a new member into the flock from an infected one is the means by which it is spread.

SYMPTOMS.

The irritation of the air sacs and passages generally, and of the bronchi in particular, gives rise to the usual symptoms of bronchitis—namely, fits of coughing and wheezing, and all the signs of accumulated mucus which the creature cannot expectorate, and in some cases causes sudden death by suffocation. As a rule the affected bird is found to be dull, and not feeding with the flock. The neck, if it could be seen without the feathers, would be in the shape of a figure of S (from the point of the bill to the chest). The head therefore appears to be sunk in the upper and forward part of the body; a more or less crouching attitude makes the legs appear shorter than usual. The comb is pallid, or has a blueish to purple hue instead of the bright red of health; the eyes and mouth, if examined, are found to exhibit the same symptoms of anæmia or defective nutrition. The laboured breathing and distressing cough are the most prominent symptoms, as pointing to respiratory trouble, those previously mentioned being common, with slight variations, to so many disorders of birds that a posi-

Digitized by Google

tive diagnosis is scarcely possible without a *post-mortem* examination, and it is decidedly worth while to kill a diseased bird in order to get at the cause and arrest its spread in a brood.

The malady is sometimes acute, at others chronic. The former cases are often mistaken for apoplexy or other disease which causes sudden death; and a lowering of the diet is adopted when the fowls are in need of a more liberal ration. It will be seen, then, that a correct diagnosis is of the utmost importance, and that one member of the flock should be sacrificed that the cause may be definitely ascertained.

The air-sac mite is $\frac{1}{50}$ inch in length, and can be recognised without the aid of a magnifier. The latter will, however, set at rest all doubt as to the nature of the yellow or whitish dust which appears upon the lining of the air-sacs and bronchi. Exudation is found in patches on the membrane, and is caused by the irritation of the mites, possibly by the poison previously alluded to. The smaller bronchi are blocked with thickened mucus and the surface of the membrane congested; the lungs in some instances exhibiting patches of pneumonia.

TREATMENT.

The destruction of parasites in the respiratory tract is never so difficult, as it is dangerous, to the host. Fumigations of carbolic acid, of terebene, of sulphur, and of tar have all proved successful, when carefully conducted. The birds should be got together in a small apartment made nearly air-tight, and the apparatus set to work while the attendant watches through a pane of glass, to see if the fowls are so overcome as to reel and need removal. It is impossible to lay down any absolute rule as to how much of any of these gases a given number of birds may be allowed to inhale: the effect must be watched, and one soon realises how tolerant they are of poisons inhaled, and how rapidly they recover from their effects.

We might here suggest, for the benefit of the student without previous experience of fowls, that he should put a fowl under chloroform, and observe how easily total anæsthesia is produced, and how soon birds recover from intoxication. All the apparatus required is a wide-mouthed bottle and some chloroform sprinkled on wool at the bottom of it. The bird's head is partly inserted, so that it is compelled to inhale while held by the neck. With but a few inspirations the voluntary muscles are found to relax in one's grip, and the head falls aside. If then placed upon its breast, it will flop over, but with half-a-dozen inspirations of fresh air it staggers to its feet, and after walking rather tipsily for a few yards, commences to feed, apparently wholly unconscious of what has happened.

If the prescriber is unable to superintend treatment by inhalation, and distrusts the capacity of his client to carry out instructions, he may have to content himself with prescribing sulphur, to be given internally, in bold doses—say, ½ dr. daily—as there is reason to suppose that this substance is volatilised inside the patient, and so compasses the death of the enemy. Whether this is the correct explanation or no, certain it is that a marked improvement takes place if the remedy is persevered with. With a malady rapidly inducing anæmia and atrophy, the reader will doubtless agree as to the advisability of adding iron and bitter vegetable tonics and carminatives, to sustain the strength of the patients while the more active agents are combating the cause. The following is a good tonic:—

Ferri carb. sacch.	...	...	gr. v.
Quininæ salicy.	...	...	gr. j.
Pulv. gentianæ	...	...	gr. v.
Pulv. capsici	...	...	gr. j.

Ft. pulvis.

This powder to be given daily to each bird. It may be mixed with damped meal, or chopped up with a little meat. Pills are very easy to give, but few people can be relied on to continue this form of medication, as it necessitates catching the birds or else visiting their houses after dark; whereas the food has always to be given, and a little more trouble at such times will be taken if the prescriber has inspired respect for himself and charged a decent fee for his medicines.

The next article will deal with the other principal parasites of the respiratory organs.

Fictional Pharmacy.

Self-drugging.

. . . . the ultimate result in the case of *morphine*, the brain softens, and the man or woman becomes imbecile.

In the case of *cocaine* it deteriorates the moral system, and the regular cocaine-taker becomes incapable of telling the truth. —*Daily Paper.*

I RECENTLY was a customer at a leading West-end pharmacy, writes a correspondent, and the insight into this burning question of the hour which I obtained by a concatenation of circumstances should, I think, be trumpeted forth to the four corners of the earth.

The proprietor of this shop is a most well-meaning sort of man, who amuses me somewhat by talking of "his craft" and professional status, just as if it requires any particular training to make up a bottle of physic; why my brother's coachman always dispenses his medicine, and not only that, he is a man that can act in an emergency also, as this case will show. In my brother's absence a coppersmith was brought to the surgery, who had poisoned himself with spirits of salts; coachman promptly administered an emetic, sulphate of zinc, and although the man died, the jury commended John (the coachman) for his promptitude. Well, as I was saying, I was in his shop, he had just handed me my 2 oz. of senna-leaves, when a young and fashionably attired lady came in and asked for something in a low tone. The chemist silently abstracted from a tall polished case a bottle containing some large white balls, four of which he carefully wrapped and sealed, as is the custom of his class, handed to the customer, who hastened away.

After her departure, the chemist seemed strangely moved, which caused me to rally him upon his lack of spirits, suggesting that the lady had impressed her image upon a too susceptible heart. At our club, you know, my friends all consider me a jolly dog, don't you know, except Sir Contradaley, who once was rude enough to call me a prosy old beggar, who interfered with subjects that I did not understand. I don't pretend to know what he meant, something unkind I'm sure, but it wouldn't do to quarrel with the only baronet in the club, would it? Why, do you know, he once told me that my sleeping-draught at night fuddled me for the best part of the next day, but I refused to take offence; why, that draught is made up from a prescription which has been in our family for years. "Ah," said my chemist, solemnly shaking his head, "you must excuse my temporary abstraction, but the fact of the matter is, the knowledge of the vast responsibility which rests upon my shoulders whilst practising my craft is so acute, that I find it necessary sometimes to inject cocaine, and . . . ."

Now when he starts the professional business, I get bored, so I hastily rejoined, "Ah, of course, yes. By-the-bye, what were those white balls which that lady appeared to be so anxious to possess." "Well," he replied, "I think that I may without violating any law of pharmaceutical ethics inform you that they are composed partly of *Kali nitricum*, which is a drug largely used by the devotees of the Hindoo goddess of that name." "Oh, yes," I replied, "it is the active principle of that Ganja or Bang isn't it? I have heard my missionary friends speak of its devastating effect. Dear me, what a terrible thing that one so fair should be enslaved in the meshes of so dreadful a habit!" "I am," said my druggist ponderously, "profoundly impressed with your knowledge of such a potent alkaloid. I had no idea that you possessed such an intimate knowledge of drugs; just step into my retiring-room for one moment whilst I finish off this ointment, and I will give you a glimpse behind the scenes."

I entered and seated myself in a most luxurious armchair, and whilst waiting my attention was attracted to a nickel instrument fitted with a stirrup, which bore some resemblance to a pump such as my youngest nephew uses when inflating the tyres of his velocipede. The chemist entering shortly after, found me examining it. "Ah, that's the general hypodermic syringe which I use for my clients who drop in in the morning for their daily pick-me-up. The needle is screwed into the end of this indiarubber tube, the solution, which is kept in that 50-gal. drum in the corner labelled Theriaca, is then drawn in. The foot is then placed in the

Digitized by Google

stirrup, and after thrusting the needle deeply into any fleshy part of the body, the piston is pressed, and the whole system is sweetened, but of course the effect is only transitory. I am often called upon to give hypodermic injections of morphine to members of the staff at the War Office, it was a solution which was in great demand just before they decided the rank and pay for capable dispensers for the front. Journalists, especially those on cheap newspapers, and anglers, are usually slaves to the cocaine habit. The ordinary hypodermic syringe is useless to the former class; this instrument," here he produced a shining glass syringe, not unlike a garden syringe, graduated in fluid ounces, "is termed the *male* journalist's special, and is in use in many of the offices in Fleet Street, the solution I supply concentrated in barrels at newspaper rates. To many of their readers I supply another solution, morphine being the principal ingredient. As a matter of fact I keep a staff of six skilled chemists who do nothing else but make these two solutions. Army men on active service are precluded from using morphine, at least so a young officer in the Guards informs me, on account of the effect it has on steel. He had been using morphine solution for about a month in the Soudan, and in the first engagement his sword bent like lead in the combat. He substituted cocaine for his morphine, and he informed me that the temper returned to the blade in a few days."

"It is remarkable what powerful effects drugs produce," I said, as I sought for my hat and gloves. "By the way, have you got my usual draught put up?" "Certainly," he replied, "here it is." "What is the principal constituent in this draught?" "Tr. thebaici" was the prompt reply. "I have never noticed any particular effect upon my system," I said. "Oh, dear, no: you need not be afraid that *you* ever will" was the final remark as my chemist closed the door; and as I wended my way home through the dark streets I pondered over his words. Henry John. (153/32)

Business Changes.

The Cash Drug-stores are about to be opened at 6 Imperial Terrace, Barking Road, East Ham, E.

Messrs. Stein Brothers have removed their city offices from Eastcheap House to 39A King William Street, E.C.

Mr. J. E. Turner, chemist and druggist, 16 London Street, Basingstoke, is having the interior of his pharmacy refitted.

Dr. James Lang, 2 Bellgrove Street, Glasgow, has acquired the business of Mr. A. Miller, chemist and druggist, 567 Duke Street.

Mr. J. S. Jenkin (late manager to Messrs. Boor & Co., Wood Street, E.C.), is about to open premises at 9 High Street, Palmer's Green, N.

Mr. T. H. Dewey, chemist and druggist, late of Wimbledon, has acquired the business in High Street, Lutterworth, formerly carried on by Mr. William Holland.

Messrs. Barrett and Harding, who for some time have been with Messrs. S. F. Goss (Limited), Regent Street, W., have been appointed managers of the retail shops of Messrs. Lamplough (Limited).

Mr. E. Browning, chemist and druggist, Amity Place, Tavistock Road, Plymouth, will shortly remove to more convenient and centrally-situated premises in North Hill, Tavistock Road, Plymouth.

Mr. H. G. Dutton, chemist and druggist, lately manager for Mr. R. Hayton-Davis, 23 James Street, Harrogate, has purchased the business at 26 Tyrrel Street, Bradford, formerly belonging to Mr. Louis J. Wells.

Messrs. Marshall Brothers, chemists, Mcseley, Birmingham, owing to the ill-health of Mr. H. H. Marshall, have disposed of their Sparkhill branch to Mr. W. J. Moylan-Jones, chemist and druggist, late of Hendon London.

Mr. J. T. Robinson has purchased from Mr. T. Tame the business which for the past ten years he has carried on under the style of Tame & Co. at the Roumelia Pharmacy, 149 Christchurch Road, Boscombe. Mr. Tame is retiring from business to "Wyecliffe," Parkwood Road, Boscombe Park.

Personalities.

Mr. J. Dawes White, chemist, 174 Kingsland Road, N., has been elected a member of the Shoreditch Board of Guardians.

Mr. Jas. Y. Fairweather, chemist and druggist, has been appointed a representative of Mellin's Food Company (Limited), and will travel chiefly for Scotland.

Mr. W. T. Owbridge, chemist and druggist, Hull, has been elected a member of the East Riding County Council, with a majority of 155 votes over his opponent.

Mr. J. A. Steward, chemist and druggist, has been presented with a service of silver by the citizens of Worcester in recognition of his hospitalities and public service during the period of his mayoralty.

Mr. A. Bellairs, peppermint-distiller, Crowland, has received news that his eldest son, Corporal Walter Bellairs, of the Imperial Yeomanry, has died in South Africa from wounds received in the engagement at Lichtenburg on January 20.

Messrs. T. F. Bristow & Co. (Limited), soap and perfumery manufacturers, London, have engaged Mr. J. Rand (son of Mr. Fred Rand, of Doncaster), to represent them in the Newcastle district, Yorkshire midlands, and Eastern Counties.

Mr Joseph de Carle Smith, head of the firm of Messrs. Smith & Sons, wholesale and retail chemists and druggists, of Magdalen Street, Norwich, on March 3 celebrated his 90th birthday, and received many congratulations on attaining so great an age. Mr. Smith has long been one of the city magistrates, and may be said to be the "father" of the Norwich Bench. In his younger days he took a full share in municipal responsibilities, and is one of the most highly-esteemed citizens.

London Mineral-water Trade.

On Thursday afternoon, at the Hotel Cecil, Strand, the sixteenth annual meeting of the London Mineral-water Bottle Exchange and Trade Protection Society was held. Mr. Adpar Jones (Idris & Co.) was in the chair, and there were present manufacturers from all parts of London, as well as from affiliated branches. The report and balance-sheet showed a good year's business in collecting the bottles of members and seeing them distributed among their rightful owners. People who had wrongfully dealt with members' bottles, boxes, syphons, and casks had been prosecuted; and, taken as a whole (the Chairman said), the Society had fully justified its existence. The details showed that 329,198 dozen bottles had been recovered, as well as 46,210 boxes, 31,853 syphons, and 537 casks. There was an interesting discussion, in which it was generally admitted that the year had not been a good one for the trade, and there was a fear of matters being worse in the event of the Chancellor of the Exchequer adding to the sugar-tax. It was regretted that a scheme for increasing the price of mineral waters had fallen through because of some members breaking faith; but the meeting declared that until there was an increase in the price matters would not be flourishing. With regard to bottle-charging, it was conceded that 3*d*. per dozen deposit had proved very useful in bringing back bottles; but some of the speakers thought that if a 1*s*. deposit were charged it would be better. No definite decision as to bottle charging or increase of price was arrived at; but it was understood from Mr. Walter Davenport (Secretary) that another endeavour would be made to formulate a scheme which would be acceptable to the whole of the trade. The executive were re-elected, and the usual votes of thanks closed the proceedings.

This is how the current issue of the Handbook of Sierra Leone gossips about leading lights of Free Town:—

Labor, J. W., merchant, was born at Charlotte, Sierra Leone, about fifty years ago; knows something of everything, has a smart knowledge of law and a little of medicine; can dye clothes, trade, manufacture articles for domestic use, print, edit a newspaper, and has a good deal of the cacocthes sinbendi (*sic*). Address, Kissy Street, Free Town. Like his brother Joseph, the well-known druggist, who has sat in the City Council for many years, from the commencement of the Corporation, he is one of the most popular and influential men in the southern end of the city. Brown, Nicholas, Esquire, is another equally well-known druggist in Free Town, and who recently in England made himself a familiar figure in circles of druggists and chemists.

Photographic Notes.

By a Pharmaceutical Camerist.

New Developers.

Edinol is the name of a developer just placed on the market by Bayer & Co., Elberfeld, for which inquiry will doubtless be made by amateurs at photographic chemists'. Edinol is described as meta-amino-orthohydroxybenzylic alcohol, and is akin to metol, both chemically and in the rapid way the image is developed under its influence. The developer is made up with either sodium carbonate, potassium carbonate, or lithia, and although bromide is not necessary as a restrainer it is of service in preventing fog. The following is a good formula for a one-solution developer:—

Edinol	1 part
Potassium metasulphite	1 part
Potassium carbonate	6 parts
Water	100 parts

This is ready for use.

Synthol, which was invented by Mr. Barralet, of Messrs. Burton & Sons, Bethnal Green, N.E., is stated to be of vegetable origin, and not to be a coal-tar product. The only information I have been able to glean of its composition is that it is prepared from "a plant gathered on the Californian coast," which is not very explicit. It was intended to patent it, but I understand the provisional patent has been abandoned. The latest formulæ for making up synthol developer were given in The Chemists' and Druggists' Diary for 1902.

Spool Films.

Now that a demand is arising for daylight-loading films which can be sold without restrictions, the following list of sizes will be handy for reference:—

Sizes.	*To fit*	*Sizes.*	*To fit*
2½ × 2½ ...	No. 1 Brownie	3¼ × 4¼ ...	No. 3 F. P. Kodak
2½ × 3¼ ...	No. 2 Brownie	4¼ × 3¼ ...	No. 3 Cartridge Kodak
1⅝ × 2 ...	Pocket Kodak	4 × 5 ...	No. 4 Bull's-eye and No. 4 Panoram
2¼ × 3¼ ...	No. 1 Folding Pocket Kodak and No. 1 Panoram	5 × 4 ...	No. 4 Cartridge Kodak
2⅛ × 4¼ ...	No. 1A F. P. Kodak	7 × 5 ...	No. 5 ditto
3½ × 3½ ...	No. 2 Bull's-eye and No. 2 F. P. Kodak		

Already Sandell's cristoid, Blair's, Planchon's, and the Serikon roll films are on the market, and I hear that another film will be announced in a few days. The Planchon film has the black-paper backing gelatin-enamelled so that the sensitive film cannot be affected by impurities in the paper. The backing of Blair's films is also receiving some attention, the object being to ensure that only chemically-pure paper comes in contact with the film. The cristoid film was mentioned in the *C. & D.* a week or two ago, but I do not think the point of using a developer with caustic alkali in preference to a carbonate was noted. The effect of the caustic alkali is to do away with the troublesome finger-marks which show on many film surfaces after development.

Toning and Fixing Salt.

I have had an opportunity of testing the "Agfa" neutral toning and fixing salt, and am able to report favourably as to its qualities. The contents of a tin are dissolved in 25 oz of water and allowed to stand till clear, or filtered bright before use. The made-up bath requires to be kept in the dark, or the gold has a tendency to deposit. It is a pity some improvement cannot be introduced to do away with the necessity of filtering out the chalk. The calcium carbonate is added to ensure the bath being neutral, but it would be better if a soluble carbonate could be used, or other means devised to make a clear solution. It is possible to get very nice tones with the use of the Agfa salt.

Intensifier and Reducer.

A modification of the usual mercurial intensification is announced, which if not altogether novel is stated to give excellent results. The negative is first bleached in the usual mercuric-chloride solution, and after washing immersed in a blacking solution composed of

Sodium hydrate	gr. xviij.
Formalin	℥j.
Water to make	℥vj.

An advantage of this method is that the process can be repeated if sufficient density is not obtained by the first operation.

The new reducer included in the title of this note is the Baskett method—a mechanical one. A cream is made of olive oil 2 oz., painters' terebene 2 oz., and Globe polish a 2*d.* tin (not an elegant formula, but the inventor's), and this is rubbed on the face of a dense negative with a pad of cotton wool. It answers capitally, but the grease should be cleaned off afterwards with benzin.

"Tyma" Developer.

The following is the developer used in the "Tyma" developing-trough, which is likely to be in demand amongst amateurs:—

Methol	gr. l.
Quinol	gr. xl.
Sodium sulphite	℥j. ℈j.
Potassium bromide	gr. xxv.
Sodium carbonate	℥j. ℈j.
Water to	℥xx.

The quantity needed for development is for the Brownie "Tyma," 12 oz., and for either No. 1 or No. 2 F.P.K. "Tyma," 16 oz The solution is used a number of times, but as it gets exhausted it takes longer to act.

Photographic Chemists.

The following are either corrected announcements or additions to the list of chemists who sell photographic chemicals and apparatus and have dark-rooms available for amateurs, published in the *C. & D.* Diary for 1902:—

Accrington.—T. Stanley & Co., 61 Blackburn Road.
Alderley Edge,—E. Orlando Tims, London Road.
Alexandria (Egypt).—J. MacGregor, 6 Rue Chérif Pacha.
Arbroath.—Jas. Ruxton, Keptie Street.
Ayr (N.B.)—A. B. Burns, 134 High Street.
Birmingham.—Morris Banks & Co. (Limited), 2 and 3 High Street, Bull Ring.
Bridgend.—J. Jones, 25 and 27 Caroline Street.
Bridport.—Beach, East Street.
Bristol.—Peacock & Co., 82 Stoke's Croft.
Broadstairs.—Horrell & Co., The Pharmacy.
Cahirciveen.—D. S. Bennett.
Cupar-Fife.—A. Whitelaw, 3 Cross.
Epsom.—F. W. Harsant, High Street.
Heckington.—M. C. Sumners.
Highbridge.—H. Longman, 3 Market Place.
Holyhead.—R. Henry Williams, Medical Hall.
Ivybridge.—F. Rutherford, 37 Fore Street.
Kirkdale (Liverpool).—W. Budden & Co, 399 Stanley Road.
London, W.—W. G Burge, 123 Shirland Road and 2 Fernhead Road, Paddington.
Macclesfield.—Sidney Wild, 76 Mill Street.
Malvern (Great).—A. E. Baylis, Barnard's Green Pharmacy; J. Need, Lygon Pharmacy.
Markinch (Fife).—J. C. McCorquodale, High Street.
Milford Haven.—T. D. Meyler.
Norwich.—Robinson & Co., 13 Orford Hill.
Plymouth.—J. Barge, Belgrave Pharmacy, Mutley.
Pontefract.—T. P. Ramsden.
Ramsey (Isle of Man).—J. Pallister, 17 Parliament Street.
Redhill.—J. Padwick.
St. Margarets-on-Thames.—J. W. Simpson, 44 Crown Road.
Stonehaven.—James Cumming, 21 Market Square.
Strathpeffer, N.B.—T. Wellwood Maxwell, Spa Pharmacy.
Torquay.—J. W. Cocks, 1 Madeira Place.
Welshpool—H. Payne, 16 Broad Street.
Whitehaven.—F. B. Bennett, 37 King Street.
Wigan.—Bensons' (Limited), 5 Darlington Street and 6 King Street, and Winstanley and Fairhurst, 9 Market Street.
Workington.—W. H. Hubble & Co., Harrington Road, and Victoria Pharmacy, South William Street.

Our Town Traveller.

THE prevailing business-tone is optimistic. My recent researches have been the means of discovering a decided improvement in trade-conditions since the present year began, and a more hopeful tone regarding the future. In some places "Very busy indeed!" is the formula, and preparations and new articles are all more or less adapted (as far as they are capable of adoption) to the coming Coronation festivities. One of my earliest visits was paid to the works of

MESSRS. W. J. BUSH & CO. (LIMITED),

at Ash Grove, Hackney. I was conducted over the extensive premises, and rendered footsore but enthusiastic as a consequence, by Mr. William S. Gill, a brother chemist, who has charge of the firm's perfumery-department. After I had wandered amongst gigantic stills and retorts in full operation, under the guidance of Mr. J. O. Braithwaite, the works manager (another pharmaceutical chemist of renown), I was passed over to Dr. Isherwood, who initiated me into the manufacture of synthetic perfumes. Dr. Isherwood is a synthetical-expert, and the machinery he has contrived, and the results he has obtained, will tend to make this firm a formidable rival to the German manufacturers of synthetics. In the laboratory I encountered yet another brother craftsman (not unknown at Bloomsbury) in Mr. F. W. Short, who has charge of this department. My main object, however, was to inspect the perfumery-department, and there we eventually landed. Mr. Gill is pushing this section forward with characteristic energy. His latest productions betray a good nose for fragrance, a refined taste, and a keen eye for effect, as shown in the labels and showcards. The newest perfume is "Potter & Moore's Old English Lavender-water" in odd-shaped bottles with sprinklers, tied with lavender ribbon. These are in three sizes, to sell at 1*s.* 6*d.*, 2*s.* 6*d.*, and 3*s.* 6*d.* retail. The series includes, besides the perfume, a smelling-salts and a tooth-powder, the latter being appropriately sent out in lavender-coloured enamelled tins, retailing at 6*d.* The showcard (which was not quite finished at the time of my visit) is the reproduction of a painting by Mr. W. H. Caffyn of a dainty lady of the olden times seated in an Old English garden. The colouring is excellent, and there will doubtless be a rush for the pictures when reproductions have been effected. They will be given away to any retailer of P. & M.'s lavender-water who desires them. Some chemists seem to think the lavender-water a good seller, even without the picture, for I saw orders for 100*l.* lots from more than one firm of retailers. "Pyrola" (the style of putting up is illustrated herewith) is a line which the Japs and the Chinese have "frozen on to," as the Americans say. It sells at 2*s.* and 3*s.* 6*d.* retail, and its appearance ought to sell it anywhere—without taking its intrinsic merit into account. Another striking series (and all we have space to mention at present) is the "Dulcenia" perfume, powder, dentifrice, and sachet. These are extremely dainty, and the fact that the sachet-envelope is printed in seventeen colours with embossed gold edges, will give some idea of the lavish manner in which Messrs. Bush & Co. are catering for their *clientèle*. The label selection is too large and diversified for me to do more than merely mention at present.

At 32 Snow Hill, E.C., the most striking novelty I could discover was the new series of "Saratoga" suspensory bandages which

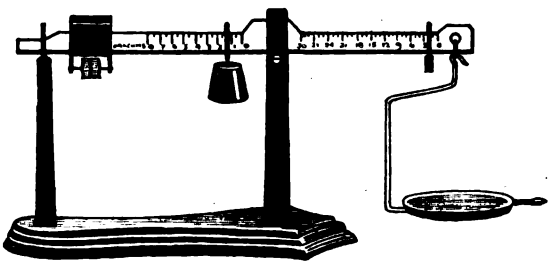
MESSRS. FASSETT & JOHNSON

have just put on the English market. The "Saratoga" suspensories are in various styles, each number having three sizes. They may be had either with or without understraps, one variety—"Saratoga Drawstring"—being washable. The prices range from 6*s.* 6*d* to 48*s.* per doz. wholesale. Rawson's U.S. Army Suspensory, which has been in use in the American army for upwards of forty years, is, however, a more expensive article. The wholesale prices are from 3*s.* to 9*s.* each according to the quality of the material used in their manufacture.

NO. 117 OXFORD STREET, LONDON, W.,

is one of several shops in that locality which manufacturers are using for advertising their products. This one is next door to Warings, the furnishers, and the Erasmic Soap Company are the occupiers. It is notable for its elegantly-dressed window, all that artistic drapery and floral decorations can do being done to show off perfumes, soaps, and toilet-preparations. Inside the shop is equally artistic, as may be judged from the accompanying photograph. The furniture

is all in milk-white enamel, and the walls are illuminated with sprays of flowers. The electric lights are tulip-like bulbs, which rival in beauty the floral-sprays on the walls. The shop is well worth a visit, and while there the visitor can see the company's latest products. I saw, for instance, a new coal-tar soap (three cakes in a box to retail at 10*d.*, or 3½*d.* a cake), and a shaving-stick in vermilion-leatherette case which retails at 1*s.* The company has a Coronation soap almost ready.



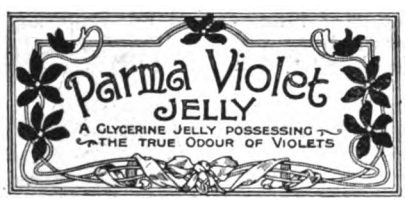
I also looked in at 357 Oxford Street, W., and had a look round the interesting establishment of

MR. T. HAWKESLEY,

the otacoustical-instrument expert. Mr. Hawkesley's *metier* is to cater for the deaf, but the Hawkesley sterilisers and chloride-of-ammonium inhaler are well known to the trade and there are many interesting instruments to be inspected in the shop. One of Mr. Hawkesley's latest pieces of apparatus, and one which will commend itself to the busy chemist, is the patent beam-scales for powders, illustrated herewith. These, as will be seen at a glance, are very suitable for rapid work, and have the inestimable advantage of requiring no loose weights. The nickel-plated beam, which is 9 inches long, is graduated by ½ gr. up to 30 gr. on one side of the beam, and by ½ dr. to 8 dr. on the other. The pans may be had either glass or nickel-plated, and the uprights are japanned. The little wheel to the left regulates the balance. For the rapid weighing of seidlitz-powders, Gregory's powder, or prescription-powders, these scales will suit admirably, and their accuracy is guaranteed by the familiar verification stamp. The price is one guinea. Mr. Hawkesley has also a combined weighing and height-measuring machine, which is elegant in appearance and

Digitized by Google

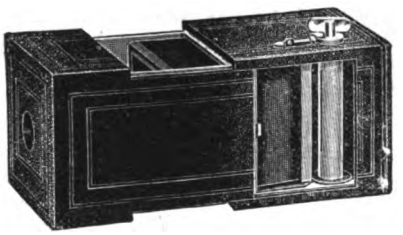
takes up the minimum of space. It may be had in either pale blue or black and gold, it weighs up to 20 stone, and the stadiometer attached measures up to 7 feet. Pond's patent toe-spring is an ingenious contrivance for the relief



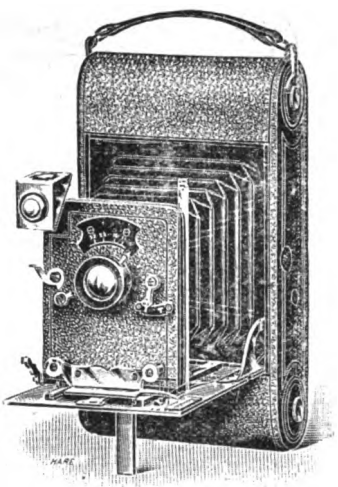
of bunions. It consists of a spring splint which runs along the outer edge of the great toe—the latter being encircled by a chamois-leather covered metal band attached to the splint. The adjoining toe is encircled by an elastic band attached to a side-projection from the metal loop which goes under the toe. The idea is to gradually pull the big toe back to its normal position, the spring being worn at night. The springs retail at 3*s.* 9*d.* each.

The facilities which the extensive premises at 4, 10, and 12 Old Swan Lane, Upper Thames Street, E.C, have afforded

MESSRS. THOMAS CHRISTY & CO.



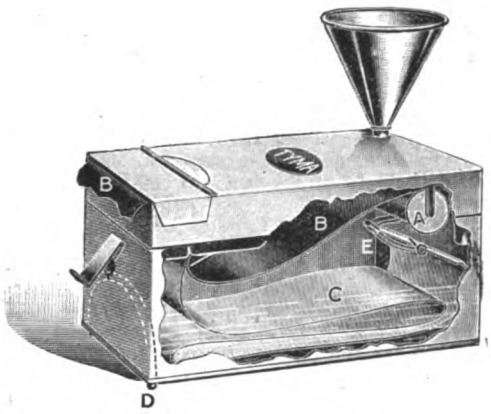
for developing their variegated business, is reflected in the multitude of specialities in collapsible tubes they have recently produced. An elegant new series of toilet-dainties was shown me the other day filled in tubes of varied designs, but all magnetic as counter attractions. Some idea of the designs are given in the two illustrations herewith, but the colour-effect, of course, is lost in black-and-white reproduction. The colour means a good deal to the customer, and no two customers have like tastes, so Messrs. Christy have endeavoured to cater for all. The series includes benzoin cream, glycerin and honey jelly, Parma-violet jelly, lavender jelly; glycerin, honey, and cucumber jelly, and toilet-lanoline (in various styles of tubes). There is also a line of tooth-pastes, comprising areca-nut, cherry, thymo-eucalyptus, carbolic, and white rose. Each of these is contained in an appropriate coloured tube; for instance, lavender paste, lavender tube; cherry paste, red tube, and so on. The tubes are filled to retail at 6*d.* and 1*s.* each, with a good margin of profit for the retailer. The 1*s.* size of Parma-violet jelly, thymo-eucalyptus tooth-paste, and several others are packed in neat carton with artistic gold-blocked labels. These are the designs shown in the illustrations. But outward show is not alone trusted to sell these articles. The pastes and jellies are now entirely compounded and filled on the premises, and their genuineness is guaranteed. That they have been compounded with pharmaceutic skill is demonstrated by ocular vision and casual application. For orders of 7-gross quantities Messrs. Christy are now prepared to supply special tubes to chemists with printed matter or as required. For 3-dozen quantities of the afore-mentioned series the name and address of the purchaser is printed on free.



NEW CAMERAS.

Calling on Messrs. G. Houghton & Sons, 88 and 89 High Holborn, W.C., I found much evidence that the photographic season is beginning early this year. I always like to walk through Houghton's premises, as their business is a model of organisation. The departmental system is adopted, each class of goods being stored in a particular store-room in charge of a responsible person. The recently-constructed premises have given an opportunity for perfecting the system, which has been taken advantage of to the full. Improvements and enlargements are being carried out at the present time, larger packing and despatching departments have been devised, and I was interested to note that a show-room for trade-customers has been provided where the various manufactures of the firm will be shown and can be examined at leisure. A new and larger plate and paper store has been fitted up, and I noticed the care that is taken to ensure the rotation of stock. Packages of plates are put in the racks on one side, but are sold from the opposite side, thus ensuring rotation and freshness. After a perambulation of the premises, which are 90 feet wide by 180 feet deep and four or five storeys high, I was glad to sit down and examine the new lines for the coming season. In cameras I was shown "No. 1 Scout," a new daylight-loading film hand-camera to sell at 5*s.* It is a well-constructed little

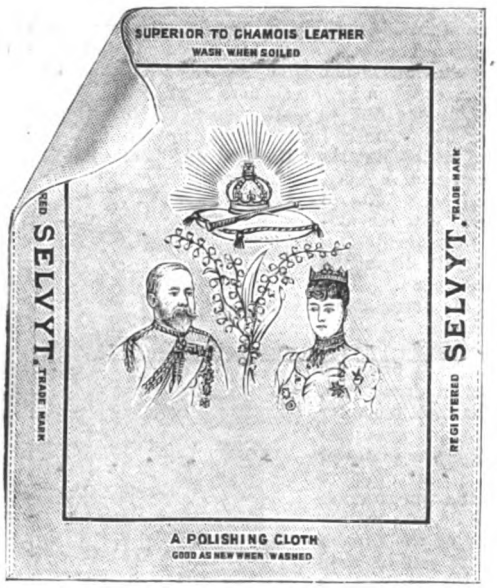
"No. 1 SCOUT."



instrument, made entirely of wood and covered in leather-like cloth. The fittings are nickel-plated, and the shutter is adapted for either time or instantaneous exposures. The pictures taken by this camera are $2\frac{1}{4} \times 2\frac{1}{4}$. The illustration shows the camera partly open for inserting a spool. Another hand-camera for roll-films or plates is the "No. 3 Ensign," which, like the "No. 1 Scout," is excellent value for the money. A good idea of the No. 3 "Ensign" can be obtained from the illustration, which shows the camera open. One special feature about the camera is an infinity catch which automatically fixes the front when drawn out, at the correct focus for distance, and is adjustable for either plates or films. The picture which the camera takes is $4\frac{1}{4} \times 3\frac{1}{4}$, and an advantage of the camera is that it can be used for plates as well as rollable films The dark slides and plate attachment are extras. The lens is a R.R. one, and the shutter is of the "everset" type, working between the lenses, giving either time or instantaneous exposures. The interest which is being taken in rollable films must be my excuse for mentioning an ingenious contrivance for developing rollable films which should still further help to popularise film-photography. The apparatus called the "Tyma" developing-trough is a metal box with a tight-fitting lid. In the lid portion there is a holder, A, for the spool of film, the black paper backing is threaded through a slot, B, in the lid, and the film engaged in a spring clip, E. The whole length of film is wound off and lowered into the water in the body of the trough, then by means of a funnel and syphon the developer is run in

"No. 3 ENSIGN."

Digitized by Google



allowed to act from eight to twelve minutes, after which fixing solution replaces the developer, and washing is done

by allowing water to circulate through the apparatus for five minutes. There are three sizes of "Tyma" troughs at present made, for Brownie, No. 1, and No. 2 F.P.K. size films, and each sells at 10*s.* 6*d.*

For the Coronation.

As at other places of business which I have inspected recently, preparations for the Coronation festivities are the predominant feature at Messrs. W. B. Fordham & Sons (Limited). In the showroom at York Road, King's Cross, I was shown a new Coronation "Selvyt" cloth, an illustration

of which is given. It is a duplex cloth—pile on both sides—and the portraits of the King and Queen are reproduced in indelible colours. The size is 21 by 17¼ inches, and the price has been reduced to 9*s.* 6*d.* per dozen in order to bring the article within the range of the slenderest loyal purse. Messrs. Fordham are also strong on Coronation buttons. These have brass representations of the King and Queen, each having a movable pin, and sell at 1*d* each. In anticipation of the demand which will be made for gay colours in the coming season, the wholesale prices of "Diamond" dyes have also been reduced. These now show an exceedingly good profit to the retailer. The spring-cleaning season is the time when Newth's furniture-polish is exhibited. Newth's polish was first produced in 1838; the formula was purchased and the bottle enlarged in 1883 by Messrs. Fordham & Sons, and it now remains one of the easiest and most perfect furniture-polishes to be found in the trade.

Optical Changes.

When in the neighbourhood of Clerkenwell I called on Messrs. J. Raphael & Co., 51 Clerkenwell Road, E C., to hear how business is in the optical trade. Mr. J. Raphael received me in his well-known affable manner, and explained that to cope with constantly increasing business he has just concluded an amalgamation with Messrs. Wheway, Son & Redfern, Birmingham. The firm of Messrs. Wheway was established in 1823, and is known in the wholesale trade for its gold and steel spectacle frames and lenses. I ventured to suggest that the tendency now is to go to America for good things in spectacle-frames. "My dear sir," replied Mr. Raphael, "the demand for English-made frames is larger than ever." Chemist-opticians who mostly cultivate the better-class trade nearly always specify English-made goods, and up to now it has often been difficult to ensure them having what they want promptly. There are two factories in Birmingham belonging to the new house, one in Vyse Street, where gold and steel goods are made, and the other in Dudley Road, where spectacle lenses are ground. The headquarters of the new firm—to be known in the future as Messrs. Raphael, Wheway & Redfern (Limited)—will be in London, but prescription-work will be executed either there or in Birmingham, as the customer desires. Mr. Raphael then explained the financial arrangements of the firm, and in answer to my inquiries assured me that he will continue to direct the business as he has hitherto done, which is sufficient to ensure the future success of the amalgamation. Enlargements of premises are to be put in hand at once. Mr. F. H. Wheway continues the management of the Birmingham works.

More Photo Novelties.

Stepping out of the Chancery Lane Station on the "Central," I crossed over to Messrs. W. Watson & Sons (313 High Holborn, W.C.), to see what preparations were in progress for the coming season. The patent enlargers are, I was told, selling by thousands, which is not wonderful when one considers the simplicity to which enlarging is reduced by the use of this apparatus. The enlargers are made in sixteen sizes, for use with "Little Nippers," Kodaks, and Frenas. The illustration shows the apparatus being used with a folding Kodak, all that is necessary being to push the Kodak into the enlarger, place the negative and bromide-paper in position, expose, develop, and fix (the whole operation being complete in five minutes). The result is a sharp picture many times larger than the negative. The electric dark-room lamp in which solution of potassium bichromate is the colour-medium has been described before in the *C. & D.*, but a hanging lamp of the same kind is a new pattern. I saw also the "Holostigmat" lens, recently introduced, which, according to no less an authority, than the President of the Royal Society, is equal to any of the high-class lenses on the market. The half-plate lens working at *f.* 6·1 gives excellent definition all over a whole plate, and on a 10 × 8 plate only the extreme corners are dark. The special feature of the lens is the flat field, whilst achromatism is practically non-existent.

A Spring Song.

Green is flowery tamarack;
The aspen's ghost leaves quiver;
In the right hypochondriac
Still sleeps the torpid liver.

The wind is light, the world is young;
High leaps the rutting goat;
Upon the back part of the tongue
Appears a furry coat.

Beneath the ground are bursting seed,
In trees the birds are billin',
While men and women seem to need
A dose of podophyllin.—*Atlanta Journal-Record.*

Notes of Novelties.

"TABLOID" MERCUROUS IODIDE.

MESSRS. BURROUGHS WELLCOME & Co., Snow Hill Buildings, E.C., are now putting on the market ⅛-gr. compressions of yellow mercurous iodide, prepared by precipitation instead of mixing mercury and iodine. In this form the salt is much more permanent than the green iodide and the makers inform us that they have had therapeutic trials made with the yellow salt during the past few years, the results demonstrating its efficiency and reliability.

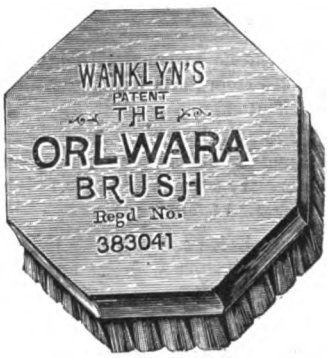
MERCK'S VACCINE LYMPH.

MR. FREDERICK BOEHM, 16 Jewry Street, E.C., London manager of E. Merck (Darmstadt), sends us a copy of a circular which he has recently issued to medical men in this country regarding Merck's pure glycerinated calf-vaccine lymph. We observe from this circular that the lymph is made at the Darmstadt Works under the supervision of Dr. Landmann (Director of the Bacteriological Laboratory) the conditions being such as to ensure the purity of the lymph, and its freedom from pathogenic products other than vaccine. It is supplied from the London office in tubes which have been filled not longer than a month, the date being placed on the outside of each package so that the physician and pharmacist can immediately see when each tube was despatched. Three sizes of tubes are sent out, the smallest for one or two inoculations, the medium for five, and the large for ten. Mr. Boehm emphasises the fact that supplies may be obtained from most leading pharmacists.

NEW THINGS FROM NEWBERYS'.

THE acme of artistic display appears to have been reached by Messrs. F. Newbery & Sons, Charterhouse Square, London, E.C., in a series of cards which they have got up for displaying toilet-requisites and cachous. With three dozen 1*d.* St. Paul's brand lano-cream, they give a show-card printed in gold and colours of rich design, and diamond-shaped with embossed and cut-out edges. Most of the card is occupied by a pretty girl, who stands barefooted on the green sward—marguerites, forget-me-nots, and other flowers grow all around her. Under her feet a single box of the lano-cream is inserted in the card; it is, by the way, an astonishingly good pennyworth. The card is suspended by a silk ribbon. A similar card is used for 1*d.* cold cream. The same cream is put-up in 6*d.* earthenware pots. The cachou-card has a scroll-and-pansy border, and within are 3 dozen tubes of silvered, coloured, and sweet-violet cachous, the corks being finished with tin-foil. This is a most attractive lot. Other novelties which the firm have on show at the Square establishment just now are the white-ribbon remedy for intemperance, which is being well advertised, and Charterhouse heliotrope shampoo-powder (2*d.*) put-up in boxes of seven packets to retail at 1*s.*

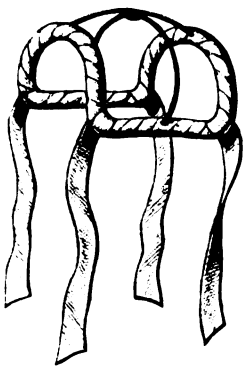
SOME TOILET-REQUISITES.



THERE is a keen appreciation at present in medical circles and amongst the well-to-do of the advantages of the Japanese paper-handkerchief. For consumptive patients and for anyone suffering from a malady which gives an infectious sputum, the handkerchief is more convenient than the sputum-bottle and more economical and safer than the linen handkerchief, because it can be burnt when done with. Chemists should sell these handkerchiefs. The trouble is where to get them. We have been on the look-out for a good source of supply for some time, and now find that the Toilet Novelties Company, Bristol, can do the thing well. They put up "Silky-fibre" aseptic handkerchiefs, 3 doz. in a pocket-book, to retail at 1*s.*, or three times that quantity for 2*s.* 6*d.* The company make a lot of saleable lines in toilet pocket-books (chemically pure toilet-paper) to retail at 1*d.*, 2*d.*, 3*d.*, 4*d.*, and 6*d.* They are neat, and only require to be shown in order to sell. Crêpe-texture paper serviettes are another of the company's products, perhaps not so much in the chemist's way of business, still worth mentioning. The goods can be obtained through the leading sundries' houses.

FOR THE BEVERAGE SEASON.

MESSRS. STEVENSON & HOWELL (LIMITED), 95A Southwark Street, S.E., are again early in the field with new essences for making aërated beverages for the coming home season. One of the most elegant of these is "Emerald Ginger-ale Essence," in which they have happily hit the correct Irish flavour, as a sampling of the ale testifies, the drink being also quite refreshing. We have also had the opportunity of trying aërated ginger-beer (in glass and stone bottles), and lemonade made with the excellent soluble essences to which we referred last year, and we find that the quality of these products is well maintained. The soluble lemon-essence is exceptionally rich in flavour, and is compounded with due regard to the chemistry of lemon-oil constituents—in fact, it is the result of careful research by their chemists. A soluble essence, somewhat akin to this, is "Lime-juice and soda," which produces a good beverage, and 1 gal. of the syrup requires only 1 oz. of the essence. An attractive showcard is given to buyers of the essence, as well as supplies of hand-bills and labels, this offer also applying to the soluble essence of lemon. We note that the firm are now making a series of "fluid fruits" for the production of syrups. We have tried the raspberry, strawberry, and black currant, and find the flavours quite natural, and that the syrups are refreshing either in plain or aërated water. Two ounces of "fluid fruit" go to 1 gal. of syrup, and we should think that aërated-water makers could turn these to excellent advantage, for a simple natural flavour is restful to the palate—so satiated nowadays with compound drinks.



THE ORLWARA BRUSH.

MR. H. A. WANKLYN, brush-manufacturer, 17 Manchester Avenue, E.C., has introduced under this name a series of nail-brushes, which are ingeniously designed to overcome the tendency that other nail-brushes have of wearing in the centre before the fibres at the edge appear to be touched. "Science applied to brushware" is the maker's version of the improvement, which is accomplished by arranging the tufts of fibre irregularly, with a denser portion in the centre. This increases the durability of the brush, and we find it is much more effective and pleasant to use. The brushes are made square, circular, and octagonal, the last-named in two sizes, and the prices range from 34*s.* to 42*s.* per gross. They are also made in half hair and bristle at slightly higher rates. The brushes are supplied plain or polished, and should sell well. Mr. Wanklyn is the inventor of the Royal Sceptre show cases and stands for tooth-brushes, which enable retailers to display a variety of styles either on or in the ordinary showcases, in a most effective manner.

THIS VACCINATION SHIELD

is made by Messrs. Ayrton & Saunders, of Liverpool, who sent a sample to us a week or two ago, with the suggestion that the office-boy, or somebody equally vaccinated, should try it. He did; and his pustules (thanks to the protection) are now in a convalescent condition. The shield is a strong affair. By including the illustration in this section we do not mean to say that the idea is perfectly novel, but it is a light and airy improvement.

IRON-MILK.

Some months ago we had the opportunity of examining and trying a preparation new to the English market called iron-milk. Pharmaceutically it differs from the popular forms of iron in exhibiting iron phosphate in a finely-divided state suspended in a perfectly neutral, unfermentable, and pleasant-tasting medium. Consequently, children take it with avidity, and it neither blackens the teeth nor constipates the bowels. Clinical experience with iron-milk on the Continent shows it to be a reliable hæmatinic, and during the past six months corroborative trials have been made by London physicians, with the result that the British Iron-milk Syndicate, 115 and 116 Strand, London, W.C., are now putting it on the market in 1*s.* 9*d.*, 2*s.* 9*d.*, and 4*s.* 6*d.* bottles. They are to push it energetically by local advertising, and they will send to chemists and druggists who ask for it a sample bottle with full particulars.

NOTES.

Jersey's reputation for eau-de-Cologne is still growing. The latest one we have to note is De Faye's "Gold Medal" Jersey eau-de-Cologne, which has Mrs. Langtry's approval, and is manufactured by Mr. F. G. de Faye, chemist, Jersey.

Mr. James Walker, chemist, Saltcoats, Ayrshire, has perfected arrangements for meeting more fully an export demand which has arisen for his perfume "Mountain Glory." A new and chastely-designed label has a strong flavour of the Gaelic and pourtrays a group of fairies culling perfume from the Ozarina's favourite flowers—white and purple heather.

The latest testimony to the value of the Berkefeld filter comes from Sir James Willcocks, of West African fame. In his "Reminiscences of Sport in West Africa," he says:—"One word more regarding camp-equipment and I have done. Whatever may or may not be taken, it is absolutely necessary to have a couple of good portable filters, and the Berkefeld is the best."

Messrs. Kay Brothers (Limited), of Stockport, have so perfected their Vampire fly-catcher, that it can be shipped across the Equator without fear of spoiling. The hardest test for sticky fly-catchers is to make them so that they keep good in tropical climates. A doctor in Morocco has sent the makers an appreciative letter, in which he says "I cannot speak too highly of the fly-catchers."

The new catalogue of soap-making machinery issued by Mr Max Hilbert, Hamm, near Hamburg, is just out, milling machinery being the special feature of the 1902 issue. We note some entirely new lines, such as a rotary steam-press with three moulds, in which both plates of the mould are brushed and oiled before each blow. Chemists who are thinking of making their own fancy and medicated soaps should procure a copy of this list.

Practical Notes and Formulæ.

IODIDE-OF-IRON PILLS.

M. Seigneury recommends a mass made with carbonate of magnesia for iodide of iron as follows: Make a solution of iodide of iron from 40 grammes of iodine, 12 grammes of iron filings, and 48 grammes of distilled water. To the filtered liquid, weighing about 90 grammes, are added 45 grammes of powdered acacia, and 2 grammes of finely divided iron with sufficient (about 65 grammes) of carbonate of magnesia to make a mass (weighing about 200 grammes) of pilular consistence. Roll into 900 pills. The pills preserve their activity indefinitely.—*Répertoire de Pharmacie.*

ELIXIR OF HYPOPHOSPHITES.

Calcium hypophosphite	384 gr.
Sodium hypophosphite	128 gr.
Potassium hypophosphite	128 gr.
Dilute hypophosphorous acid ...	2 dr.
Simple elixir	6 oz.
Water	16 oz.

Triturate the salts with 8 fl. oz. of water, added in several portions, pouring off each portion as it becomes saturated. Finally, to the remainder of the salts, add the acid, triturate until dissolved, and add to the aqueous solution. Now add the elixir, filter, and make up to 16 fl. oz. with water passed through the filter.

Is useful for exhibiting the hypophosphites where sugar is counter-indicated. The

SIMPLE ELIXIR

is made from the following formula:—

Tincture of sweet orange	20 c.c.
Alcohol	80 c.c.
Glycerin	100 c.c.
Precipitated calcium phosphate ...	6 gm.
Water to make	400 c.c.

—*Western Druggist.*

LIQUID SOAP.

Professor Terrier finds the following medicated liquid soap, the formula for which was devised by M. Bayard, of great utility in the treatment of skin-maladies:—

White Castile soap	1 oz.
Soft soap	1 oz.
Olive oil	1 oz.
Water	2½ pints
Naphthol	10 gr.
Oil of lemon	a sufficiency

Dissolve the soaps in the water, add the oil and naphthol; perfume and strain.

—*Gazette des Hôpitaux.*

ESBACH'S REAGENT

for detecting albumen in urine is thus modified by Gavalowski:—

Picric acid	10 grammes
Citric acid	20 grammes
Dissolve in—	
Water	500 c.c.
And add—	
Alcohol (95-per-cent.)	350 c.c.
And sufficient	
Water to make	1,000 c.c.

Reviews.

Practical Retouching, including directions for the after treatment of the negative generally. By DRINKWATER BUTT, F.R.P.S. 7 × 4¾. Pp. 78. Price 1*s.* net. (Iliffe & Sons Limited.)

A GOOD deal of sound practical advice is compressed in the seven chapters of this book which cannot fail to be of service to the learner in retouching. The volume forms No. 10 of *Photography* "Bookshelf Series."

The Selection of Subject in Pictorial Photography. By W. E. TINDALL, R.B.A. Illustrated from paintings, drawings, and photographs. 9½ × 6. Pp. 84. 3*s.* 6*d.* net. (Iliffe & Sons Limited).

THE book deals entirely with the pictorial side of photography on somewhat novel lines. It is written by a well-known artist who thinks that many photographs seen at the exhibitions could be considerably improved if more attention were paid to the point of view, the value of lines and tone values. The work is divided into the various classes of subjects which the photographer is likely to encounter and the advice is imparted in an interesting manner. The illustrations are good, and make the author's views readily understood. The chapters deal with (1) influence of clouds, (2) arrangement and point of view, (3) tone values, (4) lines, (5) birch and bracken, (6) coast scenery, (7) seascapes, (8) cattle subjects, (9) figure introduction, (10) portraits, (11) single figures, (12) figure groups.

Finishing the Negative, a handbook of all the processes between fixing and printing: with a special chapter on films. Edited by GEORGE E. BROWN, F.I.C. 8¾ × 5½. Pp. 160. Illustrated. Price 2*s.* 6*d.* net. (Dawbarn & Ward, Limited.)

THIS book which aims at being an encyclopædia of the section of photographic technique comprised in the title is a compilation of the methods of drying, hardening, clearing, intensifying, reducing, varnishing, retouching, and spotting negatives. Considerable care seems to have been used in making the selection, but we are afraid many amateurs will be deterred by the large choice of, for instance, intensification methods. The illustrations are a distinct gain in making the effects of the processes evident, whilst the chapter on retouching is one of the best in the book. The "special chapter on films" is hardly worth its title, as it consists of a dozen lines about the Wellington film, and a couple of pages about the Thornton film, the manufacture of which has, since the publication of the book, been discontinued. The book is one photographic chemists can read with profit to themselves, and to their customers.

The Imperial Health Manual, being the authorised English edition of the official health manual issued by the Imperial Health Department of Germany. Edited by ANTONY ROCHE, M.R.C.P.I., &c. 2nd edition. 7⅞ × 4¾. Pp. 304. 54 Illust. 3*s.* net. (Bailliére, Tindall & Cox.)

THE idea of this book is to impart to the public the rudiments of preventive medicine, and so lead them to appreciate the requirements of hygiene. The information is necessarily somewhat elementary, but none the worse for that fact. The structure of the human body and the functions and uses of its organs are first dealt with, this section being followed by others on the necessaries of life (air, water, food, clothing, dwelling houses and exercise); man in his social relations (settlements, commerce, child rearing, employment and wages); dangers to health from external influences (diseases and accidents); and supplements on nursing, and German health laws.

A Practical Treatise on the Manufacture of Vinegar and Acetates, Cider and Fruit Wines, and the Preservation of Fruits and Vegetables, Meat, Fish and Eggs. By WILLIAM T. BRAUNT. 2nd Ed. 9½ × 5¾. Pp. 555. 104 illustrations. 25*s.* net. (Sampson Low, Marston & Co., Limited.)

THIS book is enlarged and revised from the first edition published in 1890. It is divided into three parts, the first two being taken up with the manufacture of vinegar, cider, and fruit wines, the remaining part being devoted to the canning and evaporation of fruits, and a new section dealing with the preservation of meat, fish and eggs. The treatise on vinegar-making occupies the greater part of the book and deals with the subject in an historical and practical method. Wine-making and the preservation of foods are subjects which pharmacists are often asked to advise upon, and we know of no other book that gives the information in such a concise form as it is presented here. The use of water glass for the preservation of eggs is not new, but judging by the frequency with which we are asked about it, is imperfectly understood by chemists. The process as given in this book is to place the eggs in a 10-per-cent. solution of water glass, and put the eggs in an airtight container, renewing the solution once during the preserving time of six months. Methods which do not yield quite so good results involve the use of (1) 6 lb. of water glass to 30 quarts of water, and (2) ¾ lb. to 5 quarts of water—the quart of 32 oz. is apparently meant.

A Systematic Treatise on Materia Medica and Therapeutics with Reference to the most Direct Action of Drugs. By FINLEY ELLINGWOOD, M.D. With a condensed consideration of Pharmacy and Pharmacognosy, by Dr. JOHN URI LLOYD. Pp. 706. 6 × 9¼ × 2. Price 21*s.*, cloth. Chicago: Chicago Medical Press Company. London: Potter & Clarke.

THAT the practice of medicine has been built upon empiricism is a taunt which is often launched at the medical profession. A new drug or a remedy is discovered, say the scoffers, which the entire profession sets up as a fetish while it hunts eagerly for a new disease (or an old one for the matter of that) to fit it. Instead of first determining what the particular disease really is, and getting to its origin by a systematic scientific investigation, a cure or a remedy is immediately forthcoming and the fundamentals of the malady are left for discovery to some fortuitous concurrence of events. This allegation is less true now perhaps than it was some years ago, but still there is a lamentable want of certainty in the application of therapeutics by medical men. It is to remedy this want of system that the eclectic school of medicine professes to exist, and the increasing absorption of so-called eclectic remedies into orthodox practice seems to show that eclecticism is not without its merits. Dr. Ellingwood's book is an up-to-date revision of the literature of the subject, and is a fit companion to King's Dispensatory and the works of Scudder and others. The classification adopted is arranged with the idea of assisting the student in a comprehension of the therapeutic action of the individual remedies. Thus the treatise is divided into eleven groups, comprising agents acting on the nervous system; heart and circulating system; respiratory system; stomach, gastric and intestinal digestion; intestinal canal; nutrition and the blood; excretion, generative apparatus; cutaneous surface; micro-organisms and parasities, and a miscellaneous group including antidotes and antagonists. The remedies enumerated under each group are thoroughly treated. Thus Group 1 is subdivided into sedatives, depressants, excitants, stimulants, and analeptics, while these in turn are further classified, as in depressants, under analgesics, antispasmodics, hypnotics, narcotics, and anæsthetics. The individual remedies are then separately described, as to synonym, part used, natural order, habitat, with special attention to the botanical description (if a plant) physiological action, specific symptomatology and therapy. In glancing through this portion of the book the thoroughness with which the work is done is apparent, and its usefulness to the physician and the pharmacist is undeniable. The twenty-four pages devoted to Pharmacy and Pharmacognosy which Dr. John Uri Lloyd has contributed, contain a concise description of pharmaceutical preparations and their relationships—practically confined to medicinal preparations prepared from plants. Towards the end of the book eighteen pages are given over to "Medical Electricity and Electrotherapy," and there are two indices—one for the remedies contained in the book and the other an index of diseases with the remedies detailed beneath. The author has borrowed freely from the U.S. and National Dispensatories, from King, Scudder, Ringer, Hale, and others, and he specially mentions his obligation to Messrs. Parke, Davis & Co., Detroit, for a contribution of nearly 60 monographs on various remedies. The book is excellently printed on surface paper.

Advertising's Artful Aid.

By Adeps Adeptis.

A GOOD many provincial chemists find it necessary, for one reason or another, to advertise a little in the local paper or papers, especially in small towns, and some of them make very good use of the space thus occupied. Others, on the principle that if you have to do a thing that you would on the whole rather get along without doing it is advisable to do it as badly as circumstance will permit, waste the space which they occupy. Stated thus crudely, the absurdity is obvious. Wrapped up in the sort of excuses which we are all apt to make for ourselves when we do a thing apathetically it passes muster, somehow, with people who ought to know better.

* * * *

It is not necessary to say anything about the reasons, not directly advertising reasons in a majority of cases, which cause some men to patronise the local paper, and then make a merely perfunctory use of the space they buy. The important consideration is, that something *can* be got out of advertising in the newspapers of even the smallest country town, if these newspapers are used intelligently and with a little advertising acuteness. It is self-evident that if I am one of the three or four chemists in a town of, say, eight or ten thousand inhabitants, the facts that "Prescriptions are Dispensed, Teeth Drawn, and a Large Assortment of Superior Toilet Preparations Kept in Stock at my Medical Hall in the Market Place (N.B.—Medicines can be obtained when the Shop is closed by ringing the side bell)" will probably have penetrated the intelligence of most of my fellow-townsmen before local patriotism, politics or my acquaintance with the Editor moves me to procure (and pay for) the insertion of these interesting and creditable facts in the local *Argus*.

* * * *

But the resources of civilisation are not exhausted by this kind of announcement; and since the newspaper is paid for the space (and paid a good deal more, *pro rata*, than would be disbursed for the same amount of it by largely advertising patent-medicine people in London—take my word for that) there is no particular reason why the newspaper should not be made to do a little for the money, by inserting something really likely to create trade and changing the announcement as often as the advertiser may see fit to demand. It is also, by the way, a good thing to put a clause in the advertisement order, requiring that the advertisement shall appear in some good position, near the most interesting reading matter. I speak as a child.

* * * *

As a parenthetic note of warning let it be set down that there are some advertisements which are quite able to do the advertiser harm instead of good—particularly in our business, which is not quite on par with that of our excellent neighbour, and perhaps fellow-churchwarden, the grocer. Few things could be much worse for a chemist's business than would-be smart writing, unsuccessfully modelled on the least admirable work of "big" American advertisers, many of whom are funny dogs enough, in their way. Also it is a thing desirable to be remembered that there is nothing intrinsically vulgar in advertisement: everything depends upon the way one goes about it. One would not open conversation with a client by remarking, as an excellent tradesman did at the head of a recent newspaper advertisement, "What Ho, She Bumps!" or "Don't Botha about De Wet;" and it is equally undignified to print these and similar vulgarities. On the other hand, most people who come into the shop rather enjoy a little chat over what they are buying; and it is not impossible to lure them in, by giving them a little of this chat for nothing in the newspaper.

* * * *

No kind of advertisement attracts and retains attention so well as one that really explains something; and a series of such advertisements, changed at each insertion, is soon noticed and looked for by the townspeople as a regular feature of the local paper. The advertiser must possess a sort of native intuition of the art of how not to do things if this attention does not bring money into the shop. "Position" (that is, the insertion of the matter in a readily accessible place in the paper, preferably always the same place, where it is not built in by the bricks and mortar of other advertising) is, of course, an especial necessity of this class of publicity.

* * * *

But the usefulness of newspaper-advertising does not end there. No advertisement ever written that was worth the ink used to write it with and the paper used to write it upon, ever omitted one important point, either stated or implied—namely, "Codlin's the friend." It is not enough to describe something: we must also take care to make the point that it is *our* preparation, *our* shop, *our* toothbrushes, *our* dispensing, *our* method of coaxing from its seat the redundant molar, that is being talked about, and no other; if the reader wants his heart's desire in modern pharmaceuticals, *we* alone can show him how to attain it; he will require to pay just *us* a visit. To take a concrete instance, it is no use advertising the general merits of seidlitz-powders if we leave the reader to conclude that all seidlitz-powders are alike, or he may (and possibly will) get them at the grocer's across the street, or the linendraper's, or the stationer's, or the boot-shop—goodness knows where, nowadays. No. We must give a sensible reason why it is with *our* seidlitz-powders that he must stimulate his morning stomach, and no others; and it ought not to be difficult to find perfectly and obviously truthful reasons for the support of that opinion.

* * * *

There are, either for legal or other reasons, so many things which a chemist alone can make that it is a surprising thing to look through the provincial newspapers of Great Britain and notice how little advertising the pharmaceutical profession indulges in, and how extremely bad most of that advertising is. Either a bare announcement of self-evident fact that a pharmacy exists in the town, or a clumsy adaptation of one or other of the advertised notorieties of the day, constitutes the subject-matter of seven-tenths of it. Now, any experienced advertiser will bear me out in saying that originality, more than any other qualification except intrinsic merit, is desirable in any new thing that is to be extensively advertised. Time was when one could advertise soap, eggs, cough-mixture, corn-plasters, or any other simple object—just as Brown's soap, Leno's eggs, Jones's cough-mixture, Someone Else's corn-plasters. But there are too many soaps, eggs, cough-mixtures, and corn-plasters in the market for anyone (unless he should possess an exceptional reputation, like that which seems to serve the Mazawattee Tea Company as a sufficient excuse for introducing Mazawattee cocoa) to begin advertising a proprietary brand and asking the public to accept it simply as his. There must be something to differentiate it from the soap, &c., of general commerce, and from the proprietary soaps, &c., of Messrs. Brown, Leno, Jones, and the rest. In other words, it must be original. And mark this—that even an unimportant original discovery—a notion, a method of preparation or putting up—may be the foundation of a fortune. It may catch the public taste, and prove itself worthy of backing up with capital and gradually increasing advertisement, until it ranks with first the minor, and then the predominant, advertised articles of the country. But it is merely silly to expect to create even a widespread local vogue for what is merely an article of merchandise obtainable everywhere.

* * * *

Let me not be misunderstood, however. It is only outsiders, amateurs, and those beginners who are at the very outside outset of their experience who believe that, given an original idea, a good—even an exceptionally good—formula, or one or two even extraordinary testimonials, there is a fortune to be had for the asking. Each of these things is desirable, and the combination of them all would not be too much to ask, in order to furnish a good foundation for an advertising business. But neither these things nor anything else is of the slightest use without two other things—advertising capacity at the disposal of the inventor or discoverer, and money wherewith to back the advertising. Fortunes do not grow on trees even for the most ingenious compounders, and the art of advertising on a large scale is an immensely difficult and hazardous one, though the judicious

Digitized by Google

expenditure of a little money in purely local publicity requires little more than ordinary common sense, given a good thing to advertise.

* * * *

Failing a good speciality, suited to the time of year and the climatic conditions of the neighbourhood, it is usually possible to work up local interest in some of the regular rank-and-file of a chemist's stock; and on this it is less difficult to set down a few hints based on general principles than it is to lay down rules for the propagation of the sales in the specialities aforesaid. I am quite clear on one point: that if newspaper advertising is going to do any good at all on this particular line, it must be changed at frequent intervals. Never to repeat any advertisement at all is the ideal principle; and a great deal more good will be done by advertising one thing at a time, than by enumerating the whole collection of things which you would like to sell. Deal with sponges this week—your sponges; and hair-brushes next week—your hair-brushes: to-day reason convincingly on the importance of replenishing the family stock of cod-liver oil—from yours; to-morrow indicate persuasively the usefulness of flannel chest-protectors—your own. By concentrating attention upon one thing at a time, it is not at all difficult to do a very pretty little trade week after week all through the sundries department. Remember what a well-known advertising critic has said: that if advertisers only sold goods to people who wanted them, they would starve. The art of advertising is to *make* people want things.

* * * *

Properly used, the front window is the most important accessory imaginable to local newsaper advertising. If you are advertising sponges in the paper, fill nearly all the window with sponges. Let sponges, too, be in evidence all over the shop. Let all the sponges in stock be in full view somewhere, and let the newspaper announcement contain all that wit can devise or eloquence set forth in favour of getting a new sponge—one of *yours*—without further delay. Next week, when hair-brushes are the theme, show hair-brushes. If it be possible to work up some sort of interesting window-display connected with the manufacture of hair-brushes, or the exciting capture of sponges, on these occasions, so much the better. Manufacturers and wholesale dealers will generally lend their aid if invited to do so; and it is not only sponges and hair-brushes that will sell. A goodly amount of increased general business is certain to accrue, if the chemist is worth his salt—and most chemists are—as a salesman.

Recent Wills.

Chance.—Sir James Timmins Chance, of Hove and Princes Gate, and for fifty years of Messrs. Chance Brothers & Co., of Birmingham, who died on January 6, has left a gross estate of 252,629*l.* 19*s.* 5*d.*

Evans.—The estate of Mr. Edward Wallace Evans, of Alfrick Court, near Worcester, and formerly of Hill, Evans & Co., Worcester, British wine and vinegar manufacturers, who died at Exmouth on December 28 last, has been valued at 22,030*l.* gross, including 10,876*l.* net personalty.

Maggs.—Probate of the will of Mr. Samuel Blount Maggs, pharmaceutical chemist, 36 Marina, St. Leonards-on-Sea, who died on July 24, has been granted to his son, Mr. Frederic William Maggs, 36 Marina, St. Leonards-on-Sea, chemist and druggist, and to Mr. Charles Hodgkinson, 101 Whitecross Street, London, E.C., wholesale druggist. The gross estate is valued at 5,317*l.* 17*s.* 8*d.*, and the net personalty at 5,168*l.* 1*s.* 5*d.*

Tolson.—The will of the late Mr. Thos. Marshall Tolson, of the firm of Messrs. Robinson & Co., chemical manufacturers, Huddersfield, has been proved at 3,012*l.* 11*s.* 2*d.*, including 2,853*l.* 1*s.* 10*d.* net personalty.

The use of pearls as a cure for corns is engaging the folk-lore experts who write to *Notes and Queries*. The pearls are pearl-buttons, and to use them they are dissolved in lemon-juice or vinegar. One writer tried the cure for three weeks and found it was "quite useless," another tried it with advantage to himself.

Elementary Dispensing-practice.

By Joseph Ince.

Emulsions—(*continued*).

Camphor-emulsions are not often ordered nowadays The following is the simplest formula:—

(1)

℞	Camphoræ	gr. iij.
	Aq. destillat. ad	ʒj.
	Pulv. acaciæ	℈ij.

Make a thick mucilage, to which add the camphor, the remaining water to be very gradually added.

The camphor must be in the finest state of division. A very careful touch is required in these emulsions.

(2)

℞	Camphoræ	gr. v.
	Myrrhæ	gr. x.
	Tinct. aurant.,	
	Glycerin., aa	♏40
	Aq. destillat. ad	ʒj.

Myrrh made into a thick emulsion with water, to which add camphor; water added gradually, reserving sufficient to dilute the previously mixed tincture and glycerin.

(3)

℞	Liq. ammon. fort.	ʒj.
	Ol. amygdal.	ʒij.
	Camphoræ	gr. v.
	Chloroformi	♏v.
	Tinct. opii	♏x.
	Aq. destillat. ad	ʒj.

Mix oil, camphor, and chloroform in a phial; to the mixture add liq. ammon. fort. in three portions, and shake, each time adding afterwards 1 dr. of water. When thoroughly emulsified add remaining water; tincture of opium to be added last.

(4)

℞	Gum. camphoræ	gr. iv.
	Pulv. acaciæ	℈ij.
	Syr. rhœados	ʒss.
	Aq. destillat. ad	ʒj.

Acacia in mortar; camphor; syrup; water very slowly added. Careful manipulation wanted.

Guaiacum.

The use of diluted mucilage is the secret of success in making an emulsion of the ammoniated tincture of guaiacum; the result is otherwise unsightly.

For want of this precaution the following emulsion has caused trouble:—

℞	Tr. guaiaci ammon.,	
	Mucilag. acaciæ, aa...	ʒj.
	Iodid. potass.	gr. v.
	Tinct. aurant.	♏40
	Aq. destillat. ad	ʒij.

Dilute the mucilage (aq. ʒij., mucilag. ʒj.), add guaiacum, to which add KI + aq. dest. ʒj. + tinct. aurant. previously mixed. Aquæ ad ʒij.

Ammoniacum.

℞	Gum. ammoniac.	gr. xxx.
	Spt. chloroform.	♏xx.
	Tinct. conii	♏v.
	Aq. destillat. ad	ʒj.

If time allows, soak the gum in cold water till it becomes a hydrated mass, easy to manipulate. If wanted immediately, well powder the gum (meanwhile covering the mortar), and work into a thin, perfectly smooth paste with water.

Add then gradually aquæ ad ℥ss, spirit and tincture, diluted with remaining water, added last, and strain.

Patience is wanted to get the ammoniacum quite smooth. The mistura ammoniaci of the B.P. (page 214) is an emulsion with syrup of tolu to disguise the taste, in which it is not altogether successful. Ammoniacum is one of the most permanently nauseous remedies in medicine.

Westminster Wisdom.

(By our Parliamentary Representative.)

Company-pharmacy

I have had a conversation with a well-informed and influential member in regard to pharmacy-law amendment, and he expressed the opinion that a large section of the House of Commons would be disposed to support a proposal to legitimise company-pharmacy, especially if the directors or managing director were required to have pharmaceutical qualifications, and were given the privileges which any qualified person may exercise under the Acts. The latter proviso applies especially to Ireland where companies, although composed exclusively of qualified persons, have certain disadvantages. The greatest of these is probably that which virtually prohibits the apprentices of companies, though trained under the supervision of licentiates of the Pharmaceutical Society of Ireland, from entering for the Qualifying examination until they have had four years' additional service in a shop belonging to a person. I gather that the time is ripe for dealing with this anomaly, and that if the Pharmaceutical Society does not take the initiative an amending Bill of one or two simple clauses may be independently introduced. It will be recollected that the Companies Bill contained a clause enacting that a company should not carry on the business of a chemist and druggist unless the business were *bonâ-fide* conducted by a manager or assistant, being a duly-qualified chemist. In the course of the proceedings on the measure that clause was withdrawn. There is now an impression that one of these days the Lord Chancellor will bring the proposal forward again, but the delay in taking action is arousing some curiosity.

Colouring with Copper Salts.

The recent prosecution of certain traders for selling preserved goods stated to be coloured by the use of copper salts, is to be brought to the notice of Mr. Long by Mr. J. H. Whitley. It will be suggested by the hon. member that, in accordance with the recommendation of the Departmental Committee of 1899, a schedule of such colouring-matters as may be considered inimical to the public health should be issued for the information of traders.

Suggested Amendment of Fertilisers Act.

For weeks Mr. Ffrench has had a notice of question on the paper relating to an amendment of the Fertilisers and Feeding-stuffs Act, but only the other day was Mr. Hanbury able to come down to the House with a reply. Mr. Ffrench desired that there should be such an amendment as would provide that the seller of artificial manure should be bound to supply the purchaser with an invoice stating the quantity of nitrogen, soluble and insoluble phosphates, and potash which the manure contains. It appears from the official reply that the proposal was considered by Lord Medway's Departmental Committee on the adulteration of artificial manures and feeding-stuffs which reported in 1892, and was found to be impracticable.

Suggested Registration of Nurses.

Some attention is being directed to a suggestion that the Government should bring in a Bill for the registration of nurses. During recent years the number of nursing associations has grown in an extraordinary way, and there has been a still greater increase of "private practitioners." There is practically no control, and the idea is that some such registration-scheme as has been proposed for midwives should be drafted for the kindred class. I believe, however, that the Government will not touch the matter on their own account, and that, if anything is done, the initiative will have to proceed from a body of private members.

Arsenical Poisoning.

I understand that the Commission on Arsenical Poisoning will meet on Friday for evidence. Various investigations have been going on since the last public meeting, and it is stated that experiments in reference to foods are now about to be made.

Deaths.

Abel.—On February 21, Mr. Frank George Abel, chemist and druggist, of High Street, Tonbridge (Kent). Aged 37. Mr. Abel, who died after a long and painful illness, had carried on a high-class pharmacy at Tonbridge for a number of years, but ill-health had prevented him from taking an active part in his business for the past nine months.

Booth.—At Turton, on February 21, Mr. James Booth, pharmaceutical chemist. Aged 73. Mr. Booth was born at Bank Top, Blackburn, and served his apprenticeship with Mr. T. Moscrop, chemist and druggist. In 1852 he took the business of the late Mr. H. A. Wraith, at 5 Darwen Street, Blackburn, which he retained until June, 1901, when he retired. Mr. Booth then turned cotton spinner, and took the Wellington Mills, at Turton, which eventually became a gigantic concern. Mr. Booth was an overseer and Poor Law guardian in the township of Edgworth, where he lived, and for several years represented Turton on the Bolton Board of Guardians. He was a member of the old Turton Local Board from its commencement, and had also been a member of the Rural District Council, for several years acting as chairman on both bodies.

Brown.—At Morecambe, on March 4, Mr. Edward Brown, chemist and druggist, late of Leeds. Aged 74. Mr. Brown had carried on business in Leeds for nearly fifty years. He was at one time President of the Leeds Chemists' Association. Prior to going to Leeds he was the manager of a chemist's business at Derby. Mr. Brown was a very interesting personality, and it was his great pride to have been intimately acquainted with Thomas Carlyle. Up to quite recently he was unusually hale and hearty, and it is not so long ago that he could walk thirty miles a day.

Bulley.—On February 19, at Johannesburg, Roland Henry Bulley, Civil Clerk Imperial Military Railways, youngest son of the late Mr. W. H. Bulley, chemist and druggist, Exeter. Aged 24.

Charlesworth.—At 780 Fulham Road, S.W., on February 24, Harriet Jane, wife of Mr. H. H. Charlesworth, chemist and druggist. Aged 29.

Clapham.—On February 25, at Oak House, Meanwood Road, Leeds, Mr. John Clapham, chemist and druggist. Aged 74. Mr. Clapham had carried on business at Wade Lane, Leeds, for half a century.

Cresswell.—At 21 Connaught Road, N., on March 1, Mr. Randal Cresswell. Aged 76. Mr. Cresswell was probably the first Englishman to develop the Mediterranean sponge-trade. He established in 1850 the business of R. Cresswell & Co. in Paris and in London, and his brig, the *Cresswell*, traded between this country and Mediterranean ports direct, thus giving an impetus to the sponge-business which has increased it so enormously in recent years. He also had considerable influence in opening out and developing sponge-fisheries in the West Indies, where he established agencies under the superintendence of several of his relatives. The business of R. Cresswell & Co. was finally merged into that of Messrs. Cresswell Brothers & Schmitz, of Red Lion Square, W.C. Two of Mr. Cresswell's sons are still in the business, while another is in South Africa. Mr. Cresswell had retired from active participation in the business for some years, but until the last took keen interest in the modern developments of the sponge-trade. The deceased was buried in the family vault at Brompton Cemetery on March 4.

Dowling.—At Reading, on February 18, Mr. Robert Dowling, chemist and druggist. Aged 36.

Haslam.—On February 20, Mr. Charles Junius Haslam, formerly a chemist in business at 19 Clayton Street, Newcastle-on-Tyne. Aged 91.

Digitized by Google

COCHRANE.—On March 4, Mr. Thomas Cochrane, chemist and druggist, of Rosehall, Falkirk, N.B. Aged 83. Mr. Cochrane was a native of Paisley, and succeeded his father in business as a chemist in that town in 1835. In 1843 he opened a business in Falkirk, and three years later he gave up his Paisley shop, and devoted all his energies to the Falkirk business, which under his care and tactful management became one of the best in the town. About fourteen years ago Mr. Cochrane retired, but the name Cochrane & Co. is still associated with the business. In the year 1882 Mr. Cochrance purchased the estate of Rosehall—a quiet retreat on the outskirts of the town of Falkirk—and he generously gave the town a large portion of his ground, with a beautiful range of trees to widen an adjoining thoroughfare called, in honour of the benefactor, "Cochrane Avenue." Mr. Cochrance had a large circle of friends, and was universally respected. He is survived by a widow and one son.

HORNIBLOW.—At Watchet, on February 21, Mr. William Martin Horniblow, of Messrs. Horniblow & Co. (Limited), chemists, Watchet. Aged 52.

JONES.—On February 18, Mr. William Jones, chemist and druggist, formerly of Corwen.

KIRBY.—On March 4, at his residence, Cerne Abbas, Bournemouth, Edmund Adolphus Kirby, M.D. In his 78th year. The deceased gentleman studied medicine at the University College, London, and took his M.R.C.S in 1852; afterwards, in 1857, proceeding to the M.D. degree of the Aberdeen University. He started practice in Gordon Square, London, and was physician to the City Dispensary. In the course of his practice he became much interested in the preparation of medicines in a compact form, and his improvements in the production of coated pills became known to his fellow-practitioners, so that he was asked to supply them. This eventually led to the foundation in 1866 of the business of H. & T. Kirby & Co. (Limited), Newman Street, W. One of Dr. Kirby's most successful efforts was the production of phosphorus pills, and he wrote a monograph on the "Remedial Value of Phosphorus," which ran through many editions. He had taken an active part in the business up to within a few days of his death, which was due to pneumonia.

ROBBINS.—At Leamington, on February 20, Mr. William Liptrot Robbins, chemist and druggist. Aged 76.

TOPHAM.—At Halifax, on March 4, Mr. Thos. Topham, chemist and druggist. Aged 42 Mr. Topham on January 16 took an overdose of morphine (*C. & D.*, January 25, page 103). He was attended by Dr. G. Oakley, and recovered. Dr. Oakley saw him on Saturday noon; he then appeared in good spirits and was taking his dinner heartily. Next morning Dr. Oakley was sent for, and when he arrived Mr. Topham was dead. The doctor refused to give a certificate, not being satisfied with the cause of death, and an inquest was held.

WOCKE.—At Kloof Street, Cape Town, on January 31, Mr. Albert Georg Julius Wocke. Aged 66. Mr. Wocke was one of the oldest chemists at the Cape, having landed at Cape Town, from Germany, in 1858. What he did on landing is not quite clear, but he probably served as an assistant in the business which became his property in 1860. In that year he received permission to open shop from the then Governor, Sir George Grey, his authority being as follows:—

Colonial Office, Cape Town, Cape of Good Hope, November 24, 1860. I hereby authorise Mr. Georg Julius Wocke to practise as a chemist and druggist in this Colony.

This licence is in the form of a letter, and is signed by the Governor, and countersigned by the Acting Colonial Secretary. The scene of Mr. Wocke's labours was at 89 Church Street, where he remained till 1897, when he retired from business, and the shop then became an oil-and-colour store. Mr. Wocke remembered the famous military doctor, who was very much in evidence at the Castle and among the garrisons stationed there, and who, after passing many years as a man, was ultimately at death found to be a woman. He used to dispense this doctor's prescriptions frequently, and it was one of the regrets of his life that he lost these when giving up business. From the time of his arrival until his death Mr. Wocke never left the Cape peninsula.

WRIGHT.—At Allison Lodge, Chester, on February 24, John Thomas, eldest son of the late Mr. John Wright, chemist and druggist, of Hammersmith. Aged 72.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

That Pharmaceutical Degree.

SIR,—Touching Mr. Tocher's suggestion about a degree in pharmacy, it is evident that we shall have a hegira of students to Scotland unless greater advantages can be shown them than at present prevail in other parts of the kingdom. May I therefore suggest to the authorities of our Irish Society that the time is now ripe for them to appear before the Irish University Commission, which will resume sittings after Easter, and lay before it a claim that a degree of B.Sc. should be open to pharmaceutical chemists? Agriculturists, architects, and technologists of all types have been expounding their claims *more Hibernico*, and it would be lamentable if pharmacy failed to secure recognition through either inertia or modesty. I need scarcely warn Messrs. Beggs and Bernard that we do not seek such a monstrosity as a B.Sc. Pharm., but the *scientiæ baccalaureus simpliciter* in the department of pharmacy. Then the brighter Irish students will have some chance of success in Britain as scientific men. At present the Irish pharmacist on the other side is in a most humiliating position.

Yours faithfully,

Dublin, March 2. J. C. MCWALTER.

Lapis Infernalis.

SIR,—"Xrayser's" conjectural history of caustic potash is, I think, scarcely borne out by the facts. He will probably find, if he goes a little deeper into the subject, that lunar caustic had no place in our Pharmacopœias for some considerable time after caustic potash was there under the name of *Lapis infernalis*. I, at least, cannot find it in Culpepper, who seems to have collated the older editions of the "Pharmacopœia Londinensis" with the most recent one before he made his translation. Silver, indeed, does not appear to have been included in the materia medica of the older books at all, except in the shape of litharge of silver. For *Lapis infernalis* Culpepper gives two formulas: one of them is simply caustic potash; the other contains also lime and other ingredients, I suppose to retard deliquescence. To these two a milder preparation was added in some of the later dispensatories, but this was after lunar caustic had become official. Since I wrote to you last on this subject I have found the name *Lapis infernalis* given to caustic potash in a book I had overlooked—Brookes's "General Dispensatory" (1773)—where it is given as from the Edinburgh Pharmacopœia. This, however, is the only work I have in which the name is so applied. In the "Alphita" glossary there are twenty-six medicinal *lapides*, though many of those which appear in later works are not found there.

May I say, with reference to the Bradford charm, that the fact of several of the words in it having been identified as Welsh does not affect the fact that most of it is gibberish. I learn from the Editress of *Folk-Lore* that Professor Skeat confirms my opinion that most of it is gibberish.

Yours, &c.,

Epworth, March 1. C. C. BELL.

The Letters "M.P.S."

SIR,—Some of your readers will recollect that in December, 1897, my name was erased from the list of members of the Pharmaceutical Society for having advertised a testimonial in a Bradford paper, entitled "A Case from Batley," and this notwithstanding that I immediately withdrew the advertisement to which the Council of the Society objected. On December 3 of the year mentioned the Secretary wrote me as to the Council's decision, saying, *inter alia*, "You will forthwith discontinue to use or assume any title implying

Digitized by Google

that you are a member of this Society." I "did as I was told" (like a good little boy instead of a septuagenarian pharmacist!), and destroyed some thousands of labels and handbills—in fact, took every precaution to avoid future annoyances; but some six months after this I received a letter from the Society's solicitors requesting me to send them my cheque for 5*l.* for having used the letters "M.P.S." when I was not a member of the Pharmaceutical Society. I denied having done so, and asked them for their proofs, when I was at once told that they had in their possession a bill advertising Congreve's elixir, which was obtained at my shop on a certain date mentioned. I discovered that I was wrong, and the Society right, and consequently paid the 5*l.* applied for, one of my assistants having given one of my old slip-labels to Mr. Congreve's representative unknown to myself. I may say that a well-known advertiser has for years used the letters "M.P.S." when he was not entitled so to do, and without any action being taken by the Pharmaceutical Society. In fact, he is using these letters still, though it is quite possible he has rejoined the Society. Is there any record of a person being reinstated a member after having had his name erased from the list of members in the same manner as myself and others?

Faithfully yours,

Bradford, March 5. T. Garratt Forshaw.

Propiol as a Trade-mark.

Sir,—Referring to a notice in your issue of February 8 with reference to the introduction of the nitro-propiol test by Messrs. Burroughs Wellcome & Co., we beg to point out that the designation "Propiol" has been protected by us under the Trade-marks Registration Act, and that any person applying this trade-mark, alone or in combination with other marks or words, to goods not supplied by us renders himself liable. Upon the strength of this registration the nitro-propiol test has been introduced by us in this country at considerable expense and trouble. We therefore do not intend to see our rights infringed by any other firm. If Messrs. B. & W. intended to bring out a similar test, nobody could prevent them from doing so, provided they used a distinctive name, and thus spent their own labour and money on its introduction. We have published the formula without reserve to enable any chemist to make the tablets, but we must insist upon our trade-mark rights being respected. The word "Propiol" for "orthonitrophenylpropionate of soda" is no more descriptive than the word "tabloid" for tablets, and if the one be contested the whole question should be threshed out in the interests of trade generally.

Yours faithfully,

F. Williams & Co.

83 Upper Thames Street, E.C., March 3.

[Messrs. Williams's solicitors also write to the same effect, and, in reply to our request, inform us that the trade-mark was registered on January 11, 1900, No. 228,196, Class 1. The application was advertised in the *Trade-marks Journal*, March 14, 1900. The use of nitro-propiol tablets was described under that name in the *C. & D.*, January 6, 1900, in an abstract of a paper published in Germany some time before. The word registered by Messrs. Williams is "Propiol." The propiolic-acid series of compounds was known for many years before the advent of sodium ortho-nitrophenylpropionate as a urine reagent. Still, the facts remain that "Propiol" is a registered trade-mark and that "nitro-propiol" is a different word in use before "Propiol" was applied for, so we leave those commercially interested to thresh the matter out.—Editor.]

Glasgow "Patent" Prices.

Sir,—In reference to the remarks made in reply to your inquiries regarding "patent" prices in Glasgow, one or two statements are so unfair that they call for further reply. As one of the originators of this movement, I should surely know more about it than any correspondent you may have in Glasgow; and my previous statement regarding the firms called upon and the signatures obtained, still holds good, with three exceptions. This movement was initiated in the interests of the trade, and it was quite spontaneous on the part of all the larger firms. There was no intention of calling upon every individual shop to enable the arrangement for better prices to be set on foot. Your correspondent states that threats of prosecution regarding unqualified assistants in branch shops, &c., were used to coerce unwilling chemists. This was never done, and there was no necessity for compulsion being used to adopt better prices. The Pharmaceutical Society is prepared to look after such matters, and I now ask you to substantiate this statement on the part of your correspondent, either by giving his name and address, or else by withdrawing a statement which is so unlikely and absolutely untrue. There is no sign of wavering on the part of the firms who have originated the scheme and agreed to it, but if there should be any serious attempt to cut prices, it will be met at once by all the principal firms in Glasgow. In reference to the inclusion of "Beecham's pills," there was no need for this, as the prices obtained in Glasgow for "Beecham's pills" are higher than in most towns; and to show that the trade has the sympathy of Beecham in maintaining prices, their representative visits Glasgow regularly (and was here last week) to see that the prices agreed upon over two years ago are being maintained. Mr. McKellar's letter makes out that he is the only wise man of all those called upon, when he states that the supporters of the movement are "dupes," and his insinuation is entirely wrong in this instance. I remain, yours faithfully,

Glasgow, March 3. J. W. Sutherland.

[Mr. Sutherland must know that his demand for names and all that sort of thing cannot be complied with. Our correspondent has submitted to us substantiation of his statements, and we have independent corroboration of the fact that the agreement is being violated. Our report of this was originally in dispute, but it is now getting unnecessarily entangled in extraneous matter.—Editor.]

"A New Shaving-paste."

Sir,—The extract from the *Lancet* which you publish in the current issue of the *C. & D.* was brought to me by a medical man to dispense. I should be greatly obliged if you could give me the details of manipulation necessary to produce the "thick white cream." I endeavoured to make 2 oz., taking the proportions as ½ oz. of paraff. dur., 18 grs. pulv. tragac., 1½ oz. water, and about 90 minims S.V.R. Low melting-point, hot mortar, and constant stirring completely failed in my hands to produce a satisfactory emulsion. I also tried shaking in warm bottle, but without success. If you, or any of your readers have been successful in producing a homogeneous cream from the formula given, I should be glad to know the method pursued, and if there is any agent (not given in the formula) which is necessary to complete emulsification. I am,

Yours faithfully,

Batley, March 3. R. Broadhead.

We appealed to Mr. White, but he cannot, at the present stage, add to the information. We append two recipes from "Pharmaceutical Formulas" for similar preparations, in the hope that the *rationale* may give points, and suggest some experiment by subscribers:—

I

Cocoa-butter	℥ss.
Almond oil	℥ss.
Glycerin	℥j.
Primrose soap ...	℥ss.
Otto of rose	♏iv.
Oil of neroli	♏iv.
Oil of bitter almonds	♏v.
Distilled water ...	q.s.

Melt the cocoa-butter and almond oil and pour into a warm mortar containing the soap previously rubbed down with 3 oz. of boiling water; stir briskly to make a uniform cream, slowly adding 4 oz. of warm water previously mixed with the glycerin; finally the perfumes.

II

Pulv. tragacanth ...	℥ss.
Spt. rectificat. ...	℥iv.

Put together in a dry corbyn quart and shake, then add the following in their order:—

Crem. amygdal. ...	℥j.
Ol. amygdal.	℥ij.
Glycerini	℥v.
Aquæ	℥xlv.

Mix well and perfume with

Ol. ros. geranii ...	℥j.
Ol. bergamottæ ...	℥ij.
Ol. neroli	℥ss.
Ol. citronellæ	♏xx
Spt. rectificat. .	℥j.

M.

Mr. Boot and Cutting Prices.

Sir,—In his letter in your issue for March 1, Mr. Jesse Boot says several qualified chemists trading in Leicester and other large towns "Cut prices to the last farthing against their brother chemists, although apart from any company trading, &c." At the present time we have a mutual agreement for better prices for patents and many proprietary articles in Leicester, and I have every reason to believe it is faithfully kept. As Mr. Boot's Company is

Digitized by Google

about to open in Leicester, we shall anxiously look forward to his practising that virtue he now professes to admire.

Yours faithfully,
A LEICESTER CHEMIST. (188/40.)

The Wrong Button.

SIR,—I quite agree with those of your correspondents who have condemned the tactics of the Kodak Company. I have received the Kodak trade-circular informing me that "times and conditions are changed, and that the middleman is an obsolete piece of machinery." This circular is on a par with previous ones, which I have never seen matched for their overbearing impudence in the way they choose to dictate to us what we shall or shall not sell, or from whom we shall or shall not buy. Times and conditions are indeed changed if photographic dealers will allow a firm to step in to their business and say "You shall not sell any other roll-films or roll-film cameras but ours, or we will cut your profits down half." I for one shall refuse to sell another pennyworth of their goods under those conditions. The Kodak Company also pretend they are doing this in our interest to prevent cutting. My experience is that nearly all other manufacturers adopt the non-cutting system. I hope every photo-dealer will use his best efforts to boycott such terms. We are promised in the near future other films and cameras equal to those in use at the present time, and I believe their advent will be welcomed with open arms by the trade generally. At the present time films are on the market which are second to none, and I shall have no hesitation in asking my customers to take them, and also give them the reason why.

Yours, &c.,
PHOTOGRAPHIC CHEMIST. (146/72)

Abbreviated Advertisements.

SIR,—The following advertisement is culled from a recent number of the *Guardian*:—

Work, Living or gd. Cur., of a soul-satisfying activity, REQD. by Pr. (35, M.A.) aft. East. Of val. expr. (ld. and naval). Str. with males. Vy. mus. Strictly P. Bk. doct. and rit. No subsequent cavil. Able pr. Ed. cong. Bracing sphere. Abt. marry. —"EXPLICIT," Torquay.

Perhaps we may soon see the following in the advertising columns of the *C. & D.*:—

Unqualified Ass. or as imp. (23), not strictly T.T. Of Val. E-end store expr. ids or ods. Gd. b-keeper. 5 ft. 0 in. Recently engaged (now brkn. off). Of gd. address.

MISOGYNIST. (248/96.)

The Volunteer Compounder's Hard Case.

SIR,—I am one of those unfortunate specially-enlisted compounders who early in 1900 signed on for twelve months or until the end of the war. I have served at present nineteen months in the country, and from appearances now it looks as if another nineteen months will still see me in H.M. service. We are classed as Volunteers, but I think I may safely assert that no Volunteers have seen nearly the amount of active service that we compounders have The "C.I.V.'s," "Imp. Yeoy.," "St. John's A.B.," "I.H.C.," "I.B.C.," and the host of Volunteers of the line, artillery, "R.E.s," and the Colonial irregular forces, all have been sent home on the completion of their six or twelve months' service. We experience the utmost difficulty in getting the sanction of the P.M.O. for our discharge. Many are the applications put in by us. Whether each individual application is treated on its merits, I do not know, but certain it is that some few compounders with barely twelve months' service have been sent home, while the bulk with eighteen months and upwards are informed by the autocrat unapproachable that their "services cannot be spared, but as soon as they can be replaced they will be sent home," all of which I know from a trifling experience of what goes on behind the scenes to be pure moonshine. Some of the general hospitals out here seem to be swarming with compounders doing orderly work; they are probably some of those specially-enlisted men, who will be paid the extra 6*d.* per day if engaged in compounding-duties. I heard from a reliable source a few days ago that no more transfers from compounders will be entertained until the R.A.M.C. people out here can qualify sufficient of their own men to replace us, and heaven knows, Mr. Editor, when that may be! It is useless for us attempting to individually air our grievances, for absolutely no notice is taken of it, so I ask the publicity of your columns. I think we have grave cause for complaint.

Faithfully yours,
COMPOUNDER. (153/34.)

Dispensing Notes.

Shake the Bottle.

128/96 *Inquirer.*—Yes, not only on account of the hydrocyanic acid present, but also a possibility of the morphia depositing, due to liq. bismuthi being alkaline.

Portmadoc. T. JENKINS.

For Experiment.

SIR,—Would any of your readers kindly tell me how to make a presentable mixture from the following prescription:—

Quin. sulph.	gr. xxiv.
Sodæ salicylat.	℥iiss.
Tr. ferri perchlor.	℥iij.
Mag. sulph.	℥j.
Acid. hydrobrom. dil.	℥ss.
Syr. aurantii	℥ij.
Aq. menth. pip. ad	℥viij.

Ft. mist.

Sig.: ℥ss. ter die p.c. ex aq. s.

What compounds are contained in the finished mixture? Also, can they account for the change of colour in the following:—

Acid. carbol. pur.	gr. xij.
Sodæ biborat.	℈ij.
Glycer. boracis	℥ij.
Gly. acid. tannic.	℥iss.
Aq. ad	℥vj.

Ft. lot.

Sig.: The liquid for the nasal douche to be used three times a day.

Usually this remains the colour of diluted glycerin acid tannic, but very often assumes (sometimes in a few minutes, sometimes in a few hours) a jet-black colour. I have made up this liquid twice a week for the last six months. Great care has been taken to have everything perfectly clean, and free from any substance likely to darken the tannin. Different methods of mixing and different makes of chemicals have been tried, yet with the same result. About one out of every four bottles has to be thrown away.

G. H. A. (155/4.)

Skin Application.

162/29. *G. W. D.*—The prescription orders gelatin in error for jelly. You may use the following formula:—

Gelatin.	℥j.
Aq. destill.	℥iiss.
Glycerin.	℥v.
Zinci oxidi	℥j.
Ichthyol.	℥j.

Soak the gelatin in the water until soft, add glycerin ℥iij., and melt by the heat of a water-bath. Triturate the zinc oxide and ichthyol with the rest of the glycerin in a warm mortar, add it to the jelly, and mix well.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

160/60. *Veritas.*—If you have bought goods on sale or return you may return them within the stipulated period. The seller can only alter the contract with your approval.

161/63. *Melrose.*—If a customer asks for an influenza remedy, and a chemist supplies ammoniated tincture of quinine without written directions as to the manner of administration, he is to some extent responsible if the customer takes it "neat." The liability depends, however, upon the evidence that the chemist can bring regarding the verbal directions to the customer.

Digitized by Google

156/18. *C. D. A.*—The United States case in regard to the liability of the retailer of proprietary medicines was decided by the Supreme Court of Pennsylvania last year. The following is the record in the State Law Reports:—

In the sales of patent or proprietary medicines furnished by the compounder of the ingredients which compose them, the druggist is not required to analyse the contents of each bottle or package he receives. If he delivers to the consumer the article called for, with the label of the proprietary or patentee upon it, he cannot be justly charged with negligence in so doing, and will not be liable for an injury caused by the preparation.

At the trial it appeared that Edna West, a girl 20 years old, a daughter of plaintiff, on November 27, 1898, purchased from the defendant a "Kohler's headache powder," and, five hours after taking the powder, died, apparently from the effects of it. It appeared from the evidence that Kohler's headache-powder was a proprietary medicine sold in packages to drug-stores. The Court entered a nonsuit which it subsequently refused to take off.

The decision was given on appeal to the Supreme Court of the State.

Opinion of the Court *per curiam*, January 7, 1901.

At the close of the plaintiff's case, and on the motion of the defendant, the Court entered a compulsory nonsuit, which on application of the plaintiff it refused to take off. As the evidence introduced by the plaintiff failed to establish or disclose a cause of action against the defendant, the nonsuit was properly entered. The Kohler headache-powders were in demand at least twelve or fifteen years ago, and from that time on they were found for sale in most, if not all, of the principal drug stores. They were recognised and regarded as an efficient and proper remedy for headaches, and were mainly used to relieve them. They were a patent or proprietary medicine manufactured by Kohler, and sold by him to the drug-stores which sold them to their customers. In the sale of patent or proprietary medicines furnished by the compounder of the ingredients which compose them, the druggist is not required to analyse the contents of each bottle or package he receives. If he delivers to the consumer the article called for, with the label of the proprietary or patentee upon it, he cannot be justly charged with negligence in so doing. Judgment affirmed.

128/25. *R. B. J. N.*—The Brompton Hospital Pharmacopœia orders ½ minim of oil of aniseed in each lozenge. Lozenges called "Brompton Hospital" are being sold at very low prices by wholesale confectioners and others. These do not contain ½ minim oil of aniseed in each—some very little indeed. Is a retailer liable to be fined under the Sale of Food and Drugs Act if he sell these cheap lozenges as Brompton Hospital lozenges? [That largely depends upon the common-sense of inspectors and analysts, for they might find it difficult to prove their standard. With the aid of the hospital authorities a case under the Merchandise-marks Act might be established.]

75/5. *C. H.* (1) informs us that the Inland Revenue authorities have declared a "corn-paint" label to be liable on which the only other wording besides name and address is:—

Directions.—Apply the liquid upon and around the corn by means of a camel-hair brush or thin piece of wood every night for three or four nights, then steep the corn in warm water and scrape away any dead tissue with the nail or a dull knife.

The words objected to are probably "scrape away any dead tissue." We do not think a Court would uphold the liability. (2) The word "reliable" is a dutiable recommendation for a medicine.

162/51. *Lithium.*—In conducting the business of a deceased chemist and druggist it is not necessary to put the name of the qualified assistant on the poison-labels. It is customary to retain the old labels.

168/25. *W. D.*—"Until the pain is relieved" is a dutiable recommendation. It occurs on your neuralgia-mixture label. We note that your indigestion-mixture label directs the preparation to "be continued once or twice a day after the unpleasant symptoms have disappeared." This is clearly equivalent to saying "it cures." Ask the Board of Inland Revenue what they think of it.

165/7. *Chemist and Druggist.*—Proprietary medicines sold in Ireland do not require to be stamped. Unstamped medicines may be *consigned* from English makers to their agents in Ireland, but they cannot be sent wholesale to firms in Ireland for retail-sale. See the article in The Chemists' and Druggists' Diary on Medicine-stamp Law.

160/10. *Surrender* asks "What is the scale-fee for preparing the surrender of lease, the annual ground-rent being 8*l.* 2*s.*?" There is no scale-fee for preparing a surrender of a lease, and the charges are made in accordance with Part 2 of the Schedule to the order under the Solicitors' Remuneration Act. The amount usually charged is about 3*l.* 3*s.*

167/22. *Santonin.*—The publication of Mr. Braxton Hicks's remarks in a newspaper is privileged, but republication by means of handbills for trade purposes is not. If you do this you must face the risk of an action for libel on the part of the proprietors of the medicines which he mentioned. Such an action would probably begin by application to the High Court for an injunction to restrain you from circulating a libel. The mere fact that a public officer says a thing does not entitle everybody to repeat it.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

Information Supplied.

NOTE.—Subjoined are replies to queries printed in previous issues as indicated by the numbers. It is requested that any writing to the firms named will mention "The Chemist and Druggist" as the source of their information.

Collecting Empty Syphons.—Mr. T. Hulme, pharmaceutical chemist, Rochdale Road, Bury, sends us a sample of a small ticket he sends out to customers for syphons at the end of each month. The ticket measures 3½ inches by 2 inches, and is sent out in a small envelope such as is used for powders. The wording of the ticket is as follows:—

Date

Dear Sir,

If syphon No. is empty, you might please return by bearer. No hurry if not empty.

Yours truly,

T. BLANK.

Mr. Hulme tells us he has found the system to answer well and that the wording of the ticket is such as never to cause umbrage.

Sal Nixeral (inquired for in *C. & D.*, January 4).—Several subscribers suggest that sal enixum (potassium bisulphate) is intended. This had occurred to us, but our inquirer attributed to the salt properties which we do not think potass. bisulph. possesses, such as cleaning oil and dirt from the works of a watch dipped into a solution.

Copying Printed Matter.

P. O. J. (127/52) writes: In a recent issue of the *C. & D.* I saw an inquiry regarding a solution for copying printed matter. I have found both the following very satisfactory provided the paper is not glazed:—

(1)

Sapo. mollis ...	...	...	...	ʒj.
Liq. ammoniæ	...	...	...	℥ss.
Ol. terebinth.	...	...	...	℥ss.

(2)

Liq. potassæ,				
Liq. ammoniæ aa q.s. ad	...	...		℥j.
Spt. camphor.	...	...	...	ʒj.

Paint either solution over the printed matter with a camel-hair pencil, and reproduce on unglazed paper.

Agricultural Treacle.

15/2. *G. F. F.* writes:—I note in Miscellaneous Inquiries (141/38) agricultural treacle. Feeding treacle is largely used here (Kent). Mr. W. Earles, a large farmer in this district, informs me that the cost is about 6*l.* 10*s.* per ton in London, according to Messrs. O. Brun & Co.'s list, 16 Mark Lane; and I think Messrs. R. Dickes & Co. (Limited), Mansell Street, Aldgate, also supply.

To Make Labels Stick indefinitely to tin, it is only necessary to rub the tin all over where the label has to go with emery-cloth, not to wipe the tin, but to wet the label and fix it. We have done this with ointment-tins for some time now. (140/39.)

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

164/24. Who makes metal vagina-pipes for enemas?

19/19. Who makes Cockburn's hot-water bottles?

167/47. What is meant by soluble essence of charcona?

168/19. What is Pyneazone, and who manufactures it?

166/70. Actual maker of insect-powder tins with perforated tops.

164/24. Maker's name and address of "Spongioline" wanted.

167/56. Makers of, or agents for, Sharp Smith's Universal H. R syringe.

164/26. Where can Baynard's massage-cream and Newton's chemic roach-powder be obtained?

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication: if later, by telegram to "Chemicus London."

Monday, March 10.

Society of Chemical Industry (London Section), Burlington House, Piccadilly, W., at 8 P.M. Mr. F. R. O'Shaugnessy on "Birmingham Sewage and its Treatment," and Mr. E. G. Clayton on "The Technical Examination of Glue."

West of Scotland College of Pharmacy, Glasgow. Annual dinner in the Alexandra Hotel, Bath Street, Glasgow, at 9 P.M. Tickets, 3*s.* each, may be had at the College.

Dewsbury Chemists' Association, Church House, at 8.30 P.M. Annual meeting.

Tuesday, March 11.

Bradford Chemists' Association. Conversational evening on trade topics.

Huddersfield Chemists' Association. Meeting at 8 P.M.

Pharmaceutical Society of Great Britain, evening meeting, 17 Bloomsbury Square, W.C., at 8 o'clock. The following papers will be read:—Communications from the Research Laboratory: "Liquid Extract of Coca," by Mr. W. Garsed (Salter's Company Research Fellow); "Solution of Mercuric Chloride," by Professor Greenish and Mr. F. A. Upsher Smith; "Extract of Gentian," by Professor Greenish and Mr. W. H. Lenton (E. Northway Butt Scholar).

Wednesday, March 12.

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. Mr. John Hughes on "The Utility of Alkaline Phosphatic Manures."

Sheffield Pharmaceutical and Chemical Society. At 8.30 P.M. Students' night.

Manchester Pharmaceutical Association. Mr. J. C. Kidd on "Methods of Sight-testing."

Newcastle Chemists' Association, Hôtel Métropole, West Clayton Street, at 8.30 P.M. The evening will be devoted to microscopic work.

Chemists' Managers' and Assistants' Society. Annual dinner at the Horseshoe Hotel, Tottenham Court Road, W. Tickets (5*s.* each; ladies, 4*s.*; or double, 8*s.* 6*d.*) may be had from Mr. C. E. Pickering, 97 High Street, Marylebone; Mr. G. Cullwick, 13 Mysore Road, Lavender Hill, and T. R. Patterson Holt, 2 Belgrave Street, Argyle Square, S.W.

Public and Poor-law Dispensers' Association. Annual smoking-concert at Stone's Restaurant, Broadway, Ludgate Circus, E.C., at 9 P.M. Tickets, 1*s.* each, may be had from Mr. H. T. Samuel, 7A Grand Parade, Archway Road, N.

Thursday, March 13.

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. Paper by Mr. F. C. Shrubsall.

Chemists' Managers' and Assistants' Association, Horse Shoe Hotel, Tottenham Court Road, at 9.30 P.M. Special meeting to consider whether a candidate should be chosen as a Council of the Pharmaceutical Society of Great Britain.

Friday, March 14.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Professor Silvanus P. Thompson on "Magnetism in Transitu."

Cambridge Chemists' Association. Professor Reynolds Green on "Botany."

Produce Notes.

Margosa Oil.

Five cases of this oil shipped from Colombo were included in the drug-auctions of February 6 The oil is obtained from the seeds of the Indian lilac or neem tree, which is cultivated very generally in the East on account of its medicinal properties. Margosa oil has a very unpleasant odour, and is stated to contain a marked amount of sulphur. It is employed in the treatment of a variety of diseases, such as for suppurating scrofulous glands, in leprosy and rheumatism, as a vermifuge, and also as a remedy for mange in dogs. The residual cake after the extraction of the oil forms a useful manure, and is also stated to make a useful luting in chemical and physical laboratories, and is not liable to the attacks af insects. The wood is valued for furniture and ship-building.

Gum Arabic Produced by Ants.

Mr. Walter Busse, who has been investigating the gum production of German East Africa, states in *Le Journal d'Agriculture Tropicale* that practically all secretion of gum in that country is provoked by ants. The ants perforate the bark of the acacia to gain admittance into the wood, where they lay their eggs in the excavations, which are sometimes of considerable extent. The acacias with soft wood generally show few wounds of this kind; the hardwood acacias are riddled with them, each perforation being marked with a globule of gum. The ant that produces the gum makes no use of it; it is only an obstruction to her work, since it stops up the galleries she hollows out. Another species of ant, however, sometimes attacks the exuded gum before it has become completely hardened, and gives it the peculiar appearance well-known to collectors.

Castor-seeds.

Five bags or these seeds were included in a recent drug-sale, and though they resemble somewhat closely true castor-seeds (*Ricinus communis*) it may be well to point out that they are produced by another plant—namely, *Jatropha curcas*—a soft-wooded evergreen shrub or small tree found in the tropics. Both of these plants belong to the natural order *Euphorbiaceæ*. The seeds of *Jatropha* are known as physic-nuts or mocassit-seeds. Hindu physicians occasionally employ them as a purgative and alterative, but owing to their uncertain action they are not much esteemed. An oil obtained from them is considered to be a valuable external application in some forms of skin-disease and chronic rheumatism; it is also used for burning and for soap-making. Formerly it was employed as a purgative by European physicians under the names of *Oleum ricini majoris* and *Oleum infernale*. The leaves are applied as a rubefacient and discutient, and warmed and rubbed with castor oil as a suppurative.

Chicle Gum in Mexico.

Mr. E. H. Thompson, American Consul at Progreso, has written an interesting report on the gum-chicle industry in Mexico. The *Achras Sapota*, known to the Maya Indians of Yutacan as "Ya," is the tree that yields the milky sap that exudes from wounds made in the rough bark. It is found growing all over Yucatan, especially in the rich north-eastern and southern section of the peninsula. From May to June bands of men under experienced leaders get together their outfits, and go into the deep forests of Yucatan as "chicleros." A chiclero is one who extracts the gum from the tree, and after several months of work in the tropical forest, emerges with the brick-like blocks of the hardened gum. The gum is obtained by cutting canals in the bark, down which the sap flows into receptacles below. These canals, if cut by unskilful hands, may not only fail to extract the sap, but may ruin the tree as well. A healthy well-grown tree may be tapped once every three years, but even then, and under expert handling, at least 15 per cent. of the trees die. Large tracts of sapota forests near Tuxpan, the original base of supply, have become of late years practically unavailable from this cause. The average tree will yield about 6 lbs. of gum, but often tree after tree will be tapped and not yield enough to pay for the work. When the sap is collected, it is brought in pails and buckets to the central camp for boiling and moulding. The boiling is done by practised hands, closely watched by vigilant inspectors. This vigilance is necessary to prevent the chicleros introducing foreign materials during the cooking. Stones of various sizes, and often dirt, are found in the centre of the blocks, despite all care. The men are paid by the pound for the finished product, and naturally wish to increase the weight. First-class well-cooked chicle is nearly white when fresh and clean. Red gum is produced when the gum is overcooked, though some trees yield a gum which has a distinctly red colour, even when well baked. The perfect chicle gum is tenacious, firm, aromatic, and very elastic. It is estimated that there are at the present time (July, 1901) 700 chicleros in the woods, and that the product this season may reach 1,000,000 lbs. During 1900, 900,000 lbs. of chicle were exported from Mexican ports. Ninety-eight per cent. went to the United States; the remainder to France, England, and Germany.

London Drug Statistics.

The following statistics are compiled from information supplied by public warehouses. They relate to the receipts and deliveries of some of the leading drugs from and into the London public warehouses for the month of February, 1902, and to the stocks on February 28.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: March 6.

BUSINESS in drugs has again been distinctly quiet during the past week, though the fact that an auction of old and new drugs has been held may possibly induce more business towards the end of the week. The demand for heavy chemicals also shows no improvement, but values keep remarkably steady. Japanese crude camphor has again advanced, it being reported that the Japanese Government have now assumed control of the production in that country. Refined will probably follow this advance. Makers report a good business in quinine to "consumers" only, consequent on the rise in the Amsterdam unit. The "outside" market has remained passive, however, as the anticipated advance in "official" quinine has not come about. Higher prices are now asked for gamboge, as good pipe is scarce and stock is well held. Ergot shows a firmer tone, with more inquiry, and it is being talked up in Hamburg. Russian liquorice-root of fine quality is scarce and tending dearer. Cod-liver oil appears to be hardening, as reports from Norway all point to continued poor fishing. A combination has been effected in carbonate of lithia in the United States, with the result that the "war" has ceased, and higher prices are now asked from there. Cream of tartar, tartaric and citric acids are all quiet. The following are the principal changes of the week, including those recorded at the drug-auctions:—

Higher	Firmer	Easier	Lower
Camphor, crude	Ergot	Jalap	Areca
Chillies (Jap.)	Oil, cod-liver	Oil, castor (E.I.)	Arsenic
Gamboge	Senega	Ammonia sulphate	Benzoin (Palem.)
Liquorice-root			Benzols
Pimento			Croton-seed
Quinine			Ginger (Cochin)
Rhubarb			Ipecac. (Rio)
			Oil, buchu
			Oil, croton
			Orange-peel
			Sarsaparilla (Jam.)
			Wax, bees' (Jam.)

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from February 27 to March 4, inclusive:—Acid, acetic, 10; acid, oxalic, 13; acid, tartaric (@ Rotterdam) 80, (@ Bordeaux) 4; annatto (W.I.), 200; antimony (@ Shanghai) 519, (@ Hamburg) 225 argols (@ Bordeaux), 57 cks.; arrowroot (@ Demerara) 17, (@ St. V.) 3, (@ Montserrat) 100; benzoin (@ Copenhagen) 12; bleaching-powder (@ Antwerp), 81; bromine, 167; camphor (@ Hamburg), 361 pkgs.; canary-seed (@ Cadiz) 215, (@ Constantinople) 200, (@ Rodosto) 350; cardamoms, 291; caraway oil, 7 cs.; caraway-seed, 85; castor oil (Belg.) 56, (Ital.) 20, (Fr.) 622 brls. 7 cs., (E.I.) 1,050 cs.; ceresin wax (@ Rotterdam) 74, (@ Hamburg) 45, (@ Stettin) 77; chamomiles, 13; cinchona (@ Mollendo) 334, (@ Amst.) 501, (@ Ceylon) 163; cloves (@ Hamburg), 755; coca-leaves (@ Ceylon), 8; cocaine (crude, @ Callao), 9 oz.; cocoa-butter, 117; colocynth (Span.), 5 cs.; cream of tartar (@ Bordeaux) 206, (@ Rotterdam) 26, (@ Marseilles) 10; dill-seed, 45; drugs (@ Cartagena) 18 bls., (@ N. York) 137 pkgs, 70 pkgs. barks, roots, &c.: essential oils (@ Hong-Kong) 20, (@ Messina) 103, (@ Palermo) 57; galangal, 67; gentian (@ Bordeaux) 30, (@ Marseilles), 10; ginger (E.I.) 428, (@ Hong-Kong) 250 *in tr.*, (@ Jamaica) 189, (@ Dominica) 6, (@ Bombay) 41; gum arabic (@ Trieste) 15 cs., (@ Bombay) 115; gum olibanum, 613 gum, unenumerated (@ Bombay) 25 cs., (@ Hamburg) 20; honey (@ Jamaica) 45, (Chil.) 52; kola (W.I.), 8; lemon-juice (@ Syracuse) 14 pps, (@ Messina) 85 pps.; lime-juice (@ Dominica), 16 pkgs.; lime oil (@ Dominica), 10; mirbane oil, 16; pepper (@ Hamburg) 25, (@ Havre) 80, (@ Bombay) 160; pimento (W.I.), 33; poppy-heads, 2; potash caustic (@ Hamburg), 30 drms.; potash chlorate (Swed.), 20; quicksilver (Span.), 5,000; quinine (@ Amst.), 5 pkgs.; rose oil (E.I.), 6 pots; rhatany (@ Eten), 19 bls.; rhubarb, 2; sal ammoniac (@ Rotterdam), 36; sandalwood (E.I.), 172; saffron, 4; sal ammoniac, 26; saltpetre (@ Antwerp), 135; shellac, 15; soda ash (@ Boston), 105 brls.; spermaceti (Amer.), 24; sulphur (@ Catania), 630 cks.; tartar (@ Rotterdam) 91, (@ Naples) 65 cks.; turmeric (E.I.), 248; vanilla (@ Guadeloupe), 9 cs.; wax, bees' (@ Hamburg) 114, (Chil.) 8; wax, Carnauba (@ Ceara), 177; wax, Japanese, 53; wine-lees (@ Messina), 785.

Cablegrams.

NEW YORK, March 6:—Market is fairly active here. Domestic quinine has been advanced to 28c. per oz. Golden-seal is easier at 46c. per lb. Ergot is in more demand at 37c. per lb. Mandrake-root (podophyllum) is scarce at 4½c. per lb. Citronella oil is easy at 20c. Mexican sarsaparilla is quiet at 6½c. per lb., and serpentary-root is scarce at 38c. per lb.

* * * *

HAMBURG, March 6:—Refined camphor is much firmer. Lycopodium is also better at 455m. per 100 kilos. Ergot of rye has improved, and 320m. per 100 kilos. has been paid.

* * * *

BERGEN, March 6:—The weather is now considerably calmer than it was, and the fishery has improved in consequence. The market here is quiet at 76*s.* per barrel, f.o.b., for new non-congealing medicinal oil. The total catch of cod to date amounts to 3,674,000, against 5,534,000 at the same time last year. This quantity is expected to yield 5,864 barrels, compared with 6,039 last year.

* * * *

SMYRNA, March 5:—Since February 27 (Thursday) the sales of opium amount to 200 cases, including manufacturing qualities at 7*s.* 6*d.* and Yerli at 7*s.* 8*d.* per lb, these prices showing a rather firmer tone.

ARROWROOT.—At auction on Wednesday, fine St. Vincents was bought in at 2½*d.* per lb., and good manufacturing was held for 1¾*d*, the auctioneer announcing that if unsold on the 20th inst. the price would be raised to 2*d.* per lb.

BALSAM CANADA in cases is firm at 2*s.* 6*d.* per lb. net.

BELLADONNA ROOT.—Good dry foreign root has been sold at 38*s.* per cwt., c.i.f. Values range from 35*s.* to 42*s.*, according to quality.

BLEACHING POWDER has been in limited request; but values are steady at 7*l.* per ton for English on the spot. In Liverpool, hardwood is quoted 6*l.* 10*s.* to 6*l.* 17*s.* 6*d.*, and softwood 6*l.* to 6*l.* 15*s.* f.o.b.

CALABAR BEANS are obtainable at 1*s.* 2*d.* per lb.

CAMPHOR (CRUDE).—It is stated that the Japanese Diet has passed the measure which will give that Government the control of the production of camphor in Japan, as is the case with the Formosan output. It is also reported that the market in Japan is rising, and that considerable purchases have been made there, as the ultimate effect of this monopoly must be an advance in all markets. This announcement has, of course, led to an advance also on the London market, and sellers now ask 162*s.* 6*d.* per cwt., c.i.f., for crude Japanese for March-April shipment; but business is reported at slightly under this figure, and market here is quiet.

CAMPHOR (REFINED).—English refined is so far unchanged, at 2*s.* 1½*d.* for ton lots of bells and flowers, but, market is firm in view of advance in crude, and should the German refiners raise prices, the English will in all probability do so.

G

Digitized by Google

Cascara Sagrada.—For a parcel of old bark (1899) 27*s.* 6*d.* per cwt. spot is quoted, and 24*s.* for 1900 crop.

Cinchona.—The shipments from Java to Europe during February amounted to—

—	1902	1901	1900	1899
Feb. (Amst. lbs.)	524,000	748,000	641,000	539,000
Jan. to Feb. „	1,464,000	1,748,000	1,256,000	1,048,800

Cocoa-butter.—In auction 90 tons Cadbury's A brand sold at from 1*s.* to 1*s.* 0½*d.*, the average being 1*s.* 0¼*d.* per lb. At the Amsterdam auctions on March 4, 80 tons Van Houten's brand sold at 65½c. to 63¾c., the average price being 64⅛c. against 68·70c. at the previous auction; 14 tons De Jong sold also at 61½c. to 61¼c.; 3½ tons Helm at the same figures, and 5 tons Mignon at 61c.

Coca-leaves.—Green Truxillo leaves are quoted at 10½*d.* per lb. spot. In auction 8 bales of thin green Truxillo sold at 10*d.* per lb.

Cream of Tartar is quiet, 98 per cent. powder being quoted 73*s.* 6*d.* per cwt., 95 per cent. 72*s.*, and first white crystals 70*s.*

Ergot.—It is reported from Hamburg that an important business has been done on that market for the United States, and holders there are firmer in their views, now asking 1*s.* 6¼*d.* to 1*s.* 6½*d.* per lb. c.i.f. for either Spanish or Russian. Privately 1*s.* 6*d.* has been refused on this market for Spanish, and there is more inquiry.

Galls.—Chinese are quiet, with sales at 51*s.* 6*d.* per cwt., c.i.f. continental port.

Gambier.—Good cubes have been sold at 38*s.* per cwt.

Gentian is firmly held at 17*s.* to 18*s.* per cwt., spot, according to quantity.

Guaiacum continues scarce, there having been no arrivals of late.

Gum Arabic.—Fair sales of Turkey sorts are reported, comprising half-hard ambery at 32*s.* to 33*s.* per cwt. East India gums have also been in fair demand at steady rates, including darkish Oomra at 18*s.*, small and medium amber and pale Cawnpore at 22*s.* 6*d.*, fair pale Ghatti at 20*s.*, and ordinary sorts at 14*s.* 6*d.* per cwt.

Insect-flowers.—Prices are well sustained in Trieste, and the demand is good. The stocks there amount to only about half the quantity available at the same time last year. The following are the current quotations, f.o.b. Trieste:—"Wild," 131*s.* to 148*s.* per cwt.; "closed," 116*s.* to 127*s.*; "half-open," 88*s.* to 110*s.*; and "open," 68*s.* to 74*s.* The stock in Trieste at the end of February amounted to 147,500 kilos.

Lime-juice is comparatively scarce, and higher prices are asked for choice pale raw—viz., 1*s.* 4*d.* to 1*s.* 5*d.* per gal. down to 1*s.* 2*d.* for commoner.

Lithia Carbonate.—It is reported from New York that the "war" of price-cutting between the makers has now come to an end, and that a combination has been formed, the result being that prices have advanced there. Orders for quantity from the London market have been sent out, but the lowest price cabled in reply was 6*s.* 6*d.* per lb., c.i.f.

Liquorice-root.—Prices are tending dearer, one holder asking 40*s.* per cwt., spot, for fine Russian decorticated, while another holder quotes 36*s.* for fine cut ditto. Good rough decorticated is offered at 20*s.*, c.i.f.

Musk.—The recent arrival of about 250 oz. was sold to France at the importers' limits, and prices privately are understood to be very firm.

Oil, Buchu.—The list price has been reduced to 4*s.* per oz.

Oil, Castor.—Calcutta seconds are quoted 3*d.* to 3¼*d.* per lb., spot, but little business is reported. Hull make is quoted unchanged at 26*l.* per ton for firsts, and 25*l.* for seconds, in barrels, *ex* wharf London. In auction 30 cases of Calcutta seconds sold at 2 15/16*d.* per lb.

Oil, Citronella.—Small sales on the spot have been made at 10¾*d.* per lb.

Oil, Cod Liver.—Further business has been done at from 80*s.* to 85*s.* per barrel, c.i.f., for good brands of new oil, but there is no general demand, buyers mostly purchasing for immediate requirements, and preferring to wait developments. Our Bergen correspondent writes, on March 3, that the news from the fishing districts is still discouraging, although the weather has been rather more favourable this week. The market is very firm, but small lots of new non-congealing oil can be had at 76*s.* per barrel, f.o.b. Bergen. The exports from Bergen to date amount to 1,530 barrels, against 1,181⅓ barrels at the same time last year. In auction 27 barrels of Devold's brand of last season's oil were held at 75*s.* per barrel, the highest bid obtainable being 70*s.*

Oil, Croton, is lower, B.P. quality being now quoted 2*s.* 6*d.* per lb.

Oil, Lemongrass, is quiet, at 7*d.* to 7¼*d.* per oz. on the spot. A case of Hardouin's brand from Penang sold at 4*d.* per oz., subject to approval.

Opium.—Our Smyrna correspondent writes on February 21 that the market has been fairly active, some 90 cases having been sold for England, the Continent and America, at a slight decline, the equivalent of 8*s.* 2*d.* to 8*s.* 4*d.* per lb., c.i.f., being paid for various parcels of old and new tale quale. The arrivals in Smyrna amount to 3,086 cases, against 3,907 cases at the same time last year. The weather in some districts has turned colder, but as yet no damage to the growing crop is reported.

Quinine.—The advance in the unit at the Amsterdam cinchona-auctions last week, and the small shipments from Java during February, has created more interest in this article. The feature is that makers report a large business to "consumers" only at the unchanged official quotation of 1*s.* 2*d.* per oz. for new German sulphate in bulk, for delivery within the usual sixty days, and with "falling clause." An advance on the part of makers was thought probable among speculators, and as the spot-price in second-hands was practically the same as makers the latter appeared to have done most of the business. During the week business has been done in second-hands at 1*s.* 1⅛*d.* spot, and on Wednesday there were buyers at this figure, but the nearest spot-price is 1*s.* 1¼*d.* To-day 20,000 oz. for August delivery have been sold at 1*s.* 2¼*d.* The result of the auction held on March 5 at Batavia is as follows:—

The whole quantity offered—viz., 2,500 kg. Ed. II., has been sold at an average of 21½fl. per kilo. (about equal to 8½c. Amsterdam unit), as against 20½fl. per kg. at last sale. The next auction to be held at Batavia will take place on April 9.

The exports from Java from January 1 to December 31, 1901, amounted to

	1901	1900	1899	1898
Cases of 4 × 100 oz. ...	2,255	1,921	1,600	1,172

During December 217 cases were exported, comprising 37 to U.K. and 180 to New York.

Senega is firmly held, at 2*s.* 4*d.*, net, for a parcel just landed.

Shellac.—The spot-market is quiet but steady, with small sales of fair second orange TN at 120*s.* to 121*s.* per cwt. "Futures" have also been quiet and easier, the business done including June delivery at 124*s.* to 123*s.* down to 121*s.*, and March at 120*s.* and 116*s.* The Calcutta price of TN orange is lower at 61r.

Spices continued depressed, especially Cochin *Ginger* which was 2*s.* to 3*s.* per cwt. cheaper at the auctions on Wednesday. Washed rough sold at 38*s.* to 38*s.* 6*d.* per cwt. for fair, at 40*s.* for good boldish in cases, at 36*s.* 6*d.* to 37*s.* for dull, and at 35*s.* 6*d.* for hard brown. The cut descriptions were bought in, bold native cut at 90*s.*, medium at 70*s*, and small at 50*s.* per cwt. Good cuttings were bought in at 37*s.* Japan was also withdrawn, as were the few lots of Jamaica offered. Zanzibar *Cloves* are lower, business having been done in March–May delivery down to 3¾*d.* per lb., but the market is rather firmer since. Fair quality at auction was bought in at 3 7/16*d.*, good Amboyna at 5¾*d.*, and good Penang at 9*d.* per lb. Japan *Chillies* were 1*s.* dearer, good quality selling at 38*s.* per cwt.; long red were bought in at 32*s.* 6*d.* *Capsicums* were bought in at 27*s.* per cwt. for long red Japan; a small lot of medium on stalk sold at 22*s.* *Pimento* about ½*d.* per lb. dearer; common to fair ordinary sold at 2¾*d.* per lb. Penang *Mace* was bought in at 1*s.* 5*d.* per lb. for middling red, little mouldy. Dark wild, rather perished, sold at 5½*d.* per lb. *Pepper* easy; Singapore black was bought in at 6*d.*, Alleppy and Penang at 5¾*d.*

Digitized by Google

per lb. Privately Singapore is selling at 5⅞*d.* on the spot, and to arrive. White Singapore was bought in at 10*d.* per lb. for fair, and at 11½*d.* for fine coriander kind. Penang was bought in at 9¾*d.* per lb.

STICKLAC.—For sifted Siam for arrival 70*s.* per cwt., c.i.f. is quoted.

SUGAR OF MILK.—American powder is offered at from 37*s.* 6*d.* to 40*s.* per cwt., according to quality.

London Drug-auctions.

THE auctions to-day consisted of "new and old" goods, for which there was very little demand, and most articles showed a tendency towards easier prices, the following being the principal fluctuations:—Areca-nuts were lower; Sumatra benzoin was slow of sale, and Palembang description was lower; cardamoms sold at very irregular prices: dragon's-blood was held for firm rates; Rio ipecacuanha was easier, and Cartagena description was quite neglected; orange-peel sold at lower prices; jalap was perhaps a shade easier; rhubarb was dearer, and grey Jamaica sarsaparilla was cheaper; Jamaica and Zanzibar wax was in good demand at firm prices. The following table shows the goods offered and sold, those marked with an asterisk denoting private sale:—

	Offered	Sold
Aconite (Jap.)	10	0

ALOES.—The stock of Socotrine, in kegs, is gradually being worked off, and sales privately have been made at 72*s.* 6*d.* for stiff pasty, but nothing was sold in auction. Fine bright hard Cape aloes was held at 36*s.*, 5 cases of fair seconds sold at 33*s.*, and slightly drossy and dull seconds at 26*s.* to 28*s.* per cwt.; 27 cases so-called East African description were bought in at 25*s.* Nine boxes of black capey and livery mixed Curaçoa were also bought in.

ANISEED, STAR.—A parcel of 6 cases fair Chinese of old import, for which bidding started at 2*s.* 6*d.*, eventually sold at 55*s.* per cwt., without reserve.

ARECA.—Pretensions of holders were considerably lower to-day, a parcel of palish clean sound being held at 20*s.*, a bid of 19*s.* refused for 36 bags. Six bags of slightly wormy seed, however, sold at 20*s.* Privately business has been done at this figure.

BALSAM COPAIBA.—For B.P. quality 1*s.* 9*d.* per lb., spot is quoted, which price was asked in auction.

BENZOIN.—Slow of sale in auction and unchanged, the demand being principally for medium Sumatra seconds, of which about 15 cases sold at from 6*l.* 7*s.* 6*d.* to 6*l.* 10*s.* per cwt. Twenty cases low barky Palembang of old import in cases sold at 21*s.* to 22*s.*, "without reserve," and 19 cases fair seconds, but with woody ends, sold at 31*s.*, subject. Siam was quite neglected.

BUCHU.—In auction there was no demand whatever, 7*d.* per lb. being asked for good green round leaf. We understand that business has been done privately at this figure.

CALUMBA.—Lean and stemmy sorts partly in long slices sold at 8*s.* 6*d.* to 9*s.*, and ordinary brown, sea-damaged at 7*s.* per cwt.

CANELLA ALBA.—Small to bold palish quill was held at 50*s* per cwt., a bid of 47*s.* 6*d.* being refused.

CANNABIS INDICA.—Fair tops sold at 2*s.* 3*d.* per lb., and siftings were held at 2*s.*

CARDAMOMS sold at very irregular rates, although the prices paid towards the end of the sale showed an advance of 2*d.* to 3*d.* on those paid earlier in the day. Fine selected Mysores (Duckwari), of which 1 case only offered were bought in, but afterwards sold privately at 4*s.* per lb. Decorticated seed sold at firm rates. The following prices were paid:—Ceylon Mysores: Medium and bold pale, 3*s.* 2*d.*; extra bold but dullish, 2*s.* 11*d.*; bold medium pale, 2*s.* 2*d.* to 2*s.* 6*d.*; small and medium pale, 1*s.* 9*d.* to 2*s.* 1*d.*; small pale, 1*s.* 2*d.* to 1*s.* 5*d.*; small split, 1*s.* 8*d.*; very small splits, 1*s.* 2*d.*; brown splits and pickings, 10*d.* to 1*s.* 3*d.*, and seed 1*s.* 3*d.* to 1*s.* 10*d.* per lb. Ceylon Malabar: Lean brown, 1*s.* 2*d.* to 1*s.* 3*d.*

CASCARILLA.—Small and broken greenish quill was limited at 65*s.* per cwt., small and twiggy 45*s.*, and siftings at 35*s.*

COLOCYNTH.—A case of fair pale Turkey apple sold at 1*s.* 6*d.* per lb., at which figure the broker intimated he was selling privately.

COWHAGE.—No shipments of this article have been made for many months, as present prices are quite unremunerative. In auction 2 cases, weighing about 540 ozs., sold at 1*d.* per oz., without reserve, for very good quality. Privately 3*d.* per oz. is asked.

CROTON-SEED sold at lower prices, 25*s.* 6*d.* per cwt. being paid for fairly bright seed, but about half mixed with dark.

DRAGON'S-BLOOD was held at very high prices, but the business done was confined to 1 case only of medium lump, which sold at 10*l.* 12*s.* 6*d.* per cwt., subject. For fine bright seedy lump 12*l.* was refused, and for thin bright finger, in reeds, 9*l.* 7*s.* 6*d.* was also refused.

FENNEL-SEED.—Sound Turkish was held at 15*s.* per cwt.

FENUGREEK-SEED was limited at 7*s.* 3*d.* per cwt., gross, for net.

GAMBOGE.—This article continues very scarce, and considerably higher prices are now asked. Privately 15*l.* per cwt. is said to have been paid for good pipe, and 18*l.* is talked of in the near future. Singapore is practically without stock, and in the drug-warehouses there are 77 packages,

Digitized by Google

some small, but they are principally in the hands of one or two holders. In auction, however, no great desire was shown to secure a parcel of unsorted Siam pipe of good orange fracture, slightly blocky, for which a bid of 14*l.* 5*s.* was refused.

The exports from Singapore from January 1 to December 31 (in piculs) have been :—

—	Great Britain	U.S.A.
1901	36	66
1900	50	119
1899	192	124
1898	232	95
1897	226	110
1896	118	15

Honey.—Jamaica sold at steady rates, 16*s.* to 17*s.* per cwt. being paid for dark to bright pale amber in casks. Dark amber liquid Jamaica in barrels sold at 16*s* 6*d.* per cwt.; candied brown at from 14*s.* to 14*s.* 6*d.* For 80 packages of palish white and yellow, partly set and partly thick, 16*s.* to 19*s.* was paid, and 15*s.* for brown. Thirty cases of fair liquid Californian sold at 30*s.*, subject to approval.

Ipecacuanha.—Rio was in fair demand at 1*d.* to 2*d.* easier rates, from 9*s.* 10*d.* to 10*s.* 1*d.* being paid for lean to fair root, and 9*s.* 1*d.* to 9*s.* 3*d*, for "cultivated." Cartagena was quite neglected, and 4*s.* 6*d.* would have been readily accepted for the bulk of the offerings. The stock in the warehouse on Wednesday consisted of 517 packages of Rio and 447 packages of Cartagena.

Jalap was about steady, 5 bales of small to medium size selling at 5½*d.* per lb. Privately 6*d.* is quoted by one holder.

Kino.—Neglected. Fine black Cochin gum is obtainable at 1*s.* per lb.

Kola.—For African quarters a bid of 1½*d.* is to be submitted.

Menthol.—The market remains very quiet, holders asking 13*s.* 6*d.* to 13*s.* 9*d.* per lb., spot. In auction 5 cases of unworked Kobayashi crystals were bought in at the nominal price of 14*s.* 6*d.* per lb.

Musk.—In auction 1 caddy of old Pile 1 pod, very dry, sold at 43*s.* per oz. subject, and a tin of mixed musk skins was bought in at 2*s.* 6*d.* per oz.

Musk-seed.—One case of good flavour sold at 1*s.* 2*d.* per lb.

Myrrh.—Small to bold Aden sorts, rather dusty, sold at 70*s.* per cwt., being cheaper.

Oil, Cajuput, was held at 2*s.* 4*d.* per bottle.

Oil, Peppermint.—Dementholised Kobayashi brand was limited at 4*s.* 3*d.* per lb.

Oil, Rose.—Bombay settlings sold at 1*d.* per oz.

Orange-peel.—A few cases were forced off at lower prices, 4*d.* per lb., subject, being paid for fair thin Tripoli strip.

Orchella-weed.—A lot of 62 bales realised 13*s.* per cwt.

Rhubarb sold at rather dearer prices, especially for Canton, 3 cases of which sold at from 1*s.* 9*d.* to 2*s.* per lb., for medium round with two-thirds pinky and grey fracture and one-third dark. Of High-dried, 3 cases of fine bold flat with seven-eighths pinky fracture sold at 10*d.* per lb., and for a string of 23 cases of old import, offered "without reserve," from 3¾*d.* to 5*d.* was paid, the parcel being slightly to very wormy.

Sarsaparilla.—Grey Jamaica root was about 3*d.* lower in one instance, a string of 21 bales of rather coarse and chumpy quality selling at 11*d.* to 1*s.* per lb. for slightly country damaged. From another catalogue 44 bales were shown, of which the sound was held for 1*s.* 4*d.*, a bid of 1*s.* 3*d.* being refused, and for slightly damaged 1*s.* 2*d.* was paid. Only 3 bales of Lima-Jamaica sarsaparilla were shown, of which 1 sold at 1*s.* for sea-camaged, and 4 packages of fair bright red native Jamaica, all that offered, sold at 9*d.* to 9½*d.* per lb.

Senna.—The lower qualities of Tinnevelly leaf, of which the bulk consisted, sold at firm to rather dearer prices. Bold medium greenish leaf (9 bales) sold at 4¾*d.* to 5*d.*, and medium ditto (5 bales) at 3¾*d.*, ordinary common and yellowish leaf to medium 1*d.* to 1¾*d.*, and low speoky, mostly sea-damaged ½*d.* to ¾*d.* per lb. Pods sold at from 1*d.* to 2¼*d.* For pale Alexandrian pods 5*d.* was refused, the limit being 7½*d.*; a little broken leaf sold at 2¾*d.* per lb.

Squills.—Small white from Messina sold at 2*d.* per lb.

Tonka Beans.—Fair black Para had been sold privately at 2*s.* 3*d.* per lb.

Turmeric.—Cochin is quiet at 17*s.* 6*d.* to 18*s.* per cwt. for finger, and 11*s.* 6*d.* to 12*s.* for split bulbs. Bengal is also quiet at unchanged prices, and Madras finger has sold at 21*s.* for fair bright. A bag of wormy whole Madras bulbs sold at 17*s.* 6*d.* per cwt. in auction.

Vanillin.—French "chemically pure" was held at 1*s.* 5¾*d.* per oz.

Wax, Bees'.—Jamaica was scarce but sold at lower prices, 8*l.* to 8*l.* 5*s.* per cwt. being paid for good hard, red, and brown; 28 packages Mozambique sold at 6*l.* 17*s.* 6*d.* to 7*l.* for fair to good block, and slightly mixed at 6*l.* 12*s.* 6*d.*; 26 packages Zanzibar pipe realised from 6*l.* 5*s.*, subject up to 7*l.* per cwt.; fair even block sold at 6*l.* 10*s.* per cwt., and for good, but slightly foul, ditto 6*l.* 12*s.* 6*d.* subject, was paid. No Madagascar was offered.

Wax, Japanese sold at firm rates, 35*s.* being paid for good pale squares.

German Drug-market.

Hamburg, March 4.

Business in general is quiet here, and our drug-market shows no exception to the rule.

Agar-Agar is quiet at 340m. spot, and forward delivery 325m. per 100 kilos.

Balsam Peru is unchanged at 12½m. per kilo.

Camphor.—Refined is decidedly stronger, as rumours are afloat that the Japanese monopoly is now a fact. Crude camphor has advanced 5*s.* There are at present only a few sellers of refined below refiners' price, as an advance may be expected ere long.

Condurango is unchanged at 110m. per 100 kilos.

Ergot is steady, at 325m. for Spanish, and 320m. for Russian.

Menthol is dull and lower, at 29m. per kilo.

Quinine shows a firmer tone, partly owing to the good result of the Amsterdam bark-sales and the small shipments from Java. Makers do not care to sell further at 39m. per kilo.

Quillaia is quiet, at 26m. per 100 kilos.

Wax, Japanese, is firmer, at 68m per 100 kilos. on the spot.

Spermaceti is firm, at 230m. per 100 kilos. Quotations from America come higher.

Oils, Fixed.—Castor has shown more demand, first pressing for spot delivery being scarce at 56m. per 100 kilos. Cod-liver is very firm and dearer; 80m. per barrel is now asked for non-congealing oil. Chinese wood oil is firm at 50½m. per 100 kilos., c.i.f. Linseed oil declining.

Oils, Essential.—Star-anise is quoted 10½m. per kilo., peppermint oil (HGH) 8.60m. per lb., and Japanese oil 8½m. per kilo.

Liverpool Drug-market.

Liverpool, March 5.

Castor Oil.—The arrival of the *Statesman* with 300 cases has slightly disturbed the market, and a few sales have been made from the quay at 2 15/16*d* per lb. for good seconds Calcutta, but store-parcels are still held for 3*d.* to 3 1/16*d.* First-pressure French is still selling at 2 13/16*d.* to 3*d.*, and second-pressure 2⅞*d.* per lb.

Carnauba-wax.—Fair yellow is held at 72*s.* 6*d.* to 75*s.* per cwt., and sales of good yellow have been made at 80*s.* per cwt.

Jaborandi.—The recent arrival turns out to be principally the small leaf, and will be offered at auction next week.

African Ginger is still held for 35*s.* per cwt. on the spot, but for forward arrival 30*s.* to 31*s* per cwt. has been accepted.

Chillies (S.L.).—There are further arrivals of the new crop, which will be offered at auction in due course.

Beeswax.—A sale of Peruvian is reported at 7*l.* 10*s.* per cwt. for good pile 2, and also a sale of good pile 4, at 7*l.* 5*s.*

Balsam Copaiba.—At auction 4 barrels of cloudy Maranham just imported were sold at 2*s.* per lb. from the quay.

Quillaia.—There is a fair demand, and prices range from 12*l.* 7*s.* 6*d.* to 13*s.* per ton, according to quantity and quality

Honey (Chilian).—Sales of fine Pile 2 are reported at 21*s.* per cwt. All descriptions are steady at late values.

Arsenic.—This seems to be easing down slightly, and some importers are willing to accept 13*l.* 15*s.* per ton net.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

LINES FOR ADVERTISERS.

The Colonial Issue of "The Chemist and Druggist"
Falls this year on Saturday, April 19.
It will go to the best buyers of druggists' goods
In the Britains beyond the sea.
Besides, it will be specially circulated in Japan:
Japanese trade is worth looking after.
The Anglo-Japanese alliance will influence trade.
The C. & D. is in touch with buyers in Japan.
We have correspondents there who look after our interests.
Business men should make the most of the alliance.
So far as chemicals, drugs and sundries are concerned
The C. & D. of April 19 will be the medium for business.

British Firms in Foreign Countries.

The Board of Trade has issued a memorandum containing particulars respecting the position of industrial and commercial establishments owned or managed by British subjects or companies in foreign countries, bringing up to date the information collected and published in 1898–9. Messrs. Eyre & Spottiswoode publish the memorandum at 2½*d.*, and to merchants and others having branches abroad, the information will be found useful.

Summary.

THE methods for testing glue are described in a note on p. 431.

BRITISH TRADE in February was fairly good. A note about it is on p. 430.

BOOTS (LIMITED) have secured premises in Sauchiehall Street Glasgow (p. 418).

MR. JAMES REID imparts some advice to Glasgow chemists in a letter on p. 440.

THOMPSON'S method of titrating alkali carbonates is shown to be inaccurate (p. 432).

FOREIGN QUININE is imported at 10*d.* and exported at 4*d.* How is it done? (p. 430).

MISCIBLE liquid extract of coca is generally very weak in alkaloid. See paper on p. 421.

MORE FACTS about the keeping of spt. æther. nit., this time by Mr. G. E. Perry, on p. 431.

THIS week's Pharmaceutical evening meeting in London was good. It is reported on p. 421.

GOOD INFORMATION regarding "Hebenon" comes from a New Zealand correspondent (p. 440).

A FULL BUDGET of Australian news will be found on p. 420. It includes the latest tariff decisions.

ARSENIC exists in fertilisers, but not in the fruits of plants grown by aid of the fertilisers (p. 430).

THE EXHIBITION in the Royal Exchange (London) of colonial produce was opened this week (p. 437).

THE Northway Butt scholar has commenced his record with an interesting paper on extract of gentian (p. 422).

THE SPIRIT-DUTY recently charged on imports of butyl and propyl alcohols has now been withdrawn (p. 440).

ANNUAL MEETINGS of provincial chemists' Associations indicate the approaching end of the Winter Session (p. 431).

"XRAYSER" makes an excursion this week into ancient history, Thomas Dover and his powder being the subject (p. 327).

LIQ. HYDRARG. PERCHLOR. should be kept in the dark or in amber-coloured bottles. Otherwise it decomposes (p. 421).

COMPANY DIRECTORS' REPORTS on p. 425 include those of Barclay & Sons, Spratt's Patent, and Southall Brothers & Barclay.

THE doctor-druggists' representative has had an innings before the Poisons Committee. His evidence is given on p. 426, and comments upon it on p. 429.

HOW many chemists realise that the Poisons Committee threatens to wreck the status of their calling? This question is suggested by the article on p. 428.

PROFESSOR HENRI BECQUEREL delivered the Royal Institution Friday evening lecture last week. It was on radio-active bodies, and was illustrated by experiments (p. 431).

THE DEWSBURY ASSOCIATION members have been indulging in some plain speaking about the way other West Riding Associations have received their Federation proposal (p. 435).

BUSINESS in first hands is quiet this week, cod-liver oil being the principal topic. The oil is dearer, so are camphor and cinchona, otherwise the changes are unimportant (p. 444).

IT is shown by Messrs. J. Barclay and E. W. Mann that Sumatra benzoin is better than the Siam kind for making tr. benzoin. co. They also deal with the analysis of the tincture (p. 432).

A GLYCERIN-PATENT CASE is reported from the High Court in which Messrs. Crossfield lost the day. The Royal Baking-powder Company applied to compel the Comptroller of trade-marks to register their label under their own conditions, but the Judge was against them (p. 424).

Books to Buy.

For all about prescriptions: "The Art of Dispensing." 5*s.* 6*d.*; by post 5*s.* 10*d.*
For compounding specialities: "Pharmaceutical Formulas." 7*s.* 6*d.*; by post 7*s.* 10*d.*
For apprentices: "Preliminary Examination Guide." 2*s.* 6*d.*; by post 2*s.* 9*d.*
For treatment of horses, cows, &c.: "Veterinary Counter-practice." 3*s.* 6*d.*; by post 3*s.* 9*d.*
For testing stock: Proctor's "Pharmaceutical Testing." 2*s.* 6*d.* by post 2*s.* 9*d.*

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Two boys at Newhaven were bound over for stealing 2*s.* worth of pills from a general dealer's shop in Newhaven.

A Southport woman was fined 5*l.* at Ormskirk on March 7 for selling shrimps containing boric acid as a preservative.

The Brigg Board of Guardians has decided to repay to the medical officers the cost of any expensive drugs, such as cocaine, necessary for treating the poor.

Among those invited by the Mayor of Plymouth to be present at the reception of the King and Queen last Friday was Mr. C. T. Weary, President of the Plymouth, Devonport, Stonehouse, and District Chemists' Association.

At Kingston-on-Thames Licensing Sessions on March 6 off wine-licences were granted to Mr. H. S. Durbur, pharmaceutical chemist, Victoria Road, Surbiton, and to Mr. W. Longtoft, pharmaceutical chemist, East Molesey.

Edith Mawson has been fined 5*l.* or one month's hard labour in default for obtaining a situation as a housekeeper to Mr. Ernest Savege, chemist and druggist, of Tooting Bec Road, S.W., by means of a false certificate of character.

Newcastle-on-Tyne citizens want a botanical garden, and the Corporation has been asked to utilise a portion of Leazes Park for the purpose. Amongst those moving in the matter we notice the names of Mr. T. M. Clague and Mr. N. H. Martin.

On March 7 the students of the Imperial College of Chemistry, with Mr. Frederick Davis, their principal, were conducted through the works of the South Metropolitan Gas Company and initiated into the technicalities of gas-making, and shown the methods of gas-analysis.

At Pontypridd County Court on March 10, Mr. Burke, managing director of the firm of Messrs. Burke & Co, chemical-manufacturers, Cardiff, recovered 5*l.* 5*s.* damages, with costs, from a haulier named Baker, for injuries and loss sustained by a collision with defendant's horse.

The Inland Revenue officers have been busy in Torquay lately, and in the great drive have made several captures of medicines that should have been stamped. Mr. Young, Secretary of the Torquay Chemists' Association, is calling a meeting of members next week to discuss the question.

The dress of a young lady travelling on a Brixton 'bus last week was suddenly discovered to be on fire. The flames were promptly extinguished, and it was then found that the cause of the conflagration was the juxtaposition of a box of safety matches to a few chlorate-of-potash lozenges in the lady's pocket.

At the Halifax Police Court on March 7, two brothers, Henry and William Cartman, aged 11 and 9 respectively, were ordered to be birched for breaking into the premises of Mr. Chas. A. Higgins, pharmaceutical chemist, 7 Bull Green, Halifax, and stealing 26*s* 1*d.* Henry Cartman had been occasionally employed as errand-boy by Mr. Higgins.

Mr. S. Daniel, pharmaceutical chemist, is appealing against the Swindon Magistrates' decision in the sweet spirit of nitre case reported in our issue of March 1, on the ground that the analyst did not state on his certificate whether the article, being liable to decomposition, was decomposed or not. A further point is that some of the magistrates were members of the prosecuting body.

In the course of a burglary tour amongst Leeds warehouses last week a gang entered the premises of Messrs. John Bromley & Sons, herb-extract and coffee-essence manufacturers, in Belinda Street, Hunslet. The visitors tried to break open the safe, but failed. Finding no valuables, they mixed coffee, gum, and various other things together, and smeared nearly all the office-books, practically ruining them.

At the Nottingham Guildhall on Wednesday, March 13, a summons taken out by James Lord, chemist, of Parliament Street, against a barman at the Three Crowns Hotel, named Walter Goodall, for threats and abusive language, was heard. The complainant alleged that his dentist had been in the hotel all the afternoon, and when he sent a messenger the barman came to complainant and abused him, and threatened to throttle him. The defendant was bound over to keep the peace.

At the meeting of the East Suffolk County Council on March 11, the analyst reported that in the past three months he had examined 108 samples, including sal volatile, tincture of iodine, camphorated oil, sweet spirit of nitre, milk of sulphur, &c., of which he found four to be adulterated. In only one case was a prosecution thought necessary, and a conviction was obtained. Several members expressed an opinion that a different class of articles should be obtained for analysis, and this was left to the Standing Joint Committee to arrange.

Chemists are too frequently the victims of juvenile pilferers, who take the opportunity while waiting at a druggist's counter to appropriate anything within reach. Such a case was brought on Tuesday before the Harwich Magistrates by Mr. W. Bevan, chemist. Two girls came into his shop for a pennyworth of cough-mixture, and after they had gone he found a box of cough-lozenges had been taken from the counter. He went into the street and saw the box in the hands of one of the youngsters. When he remonstrated with them, both audaciously denied the theft, threw the lozenges down in the street, and ran off. The Magistrates bound them over under the First Offenders Act.

Supplying Vaccine.

At the Finance Committee meeting of the Swansea Board of Guardians last week accounts were presented from Messrs. J. T. Davis, D. L. Evans, and N. M. Grose, chemists, for lymph supplied for revaccination-cases to the medical men. There had been a great demand, owing to the smallpox outbreak, but the Guardians appeared to have cherished the impression that the medical fee of 2*s.* 6*d.* for revaccination would include the cost of lymph. The present sheaf of bills disillusioned them, the total charges coming to 90*l.* 7*s.* 2*d.*, of which over three-fourths went to Mr. Davis, chemist, Walter Road, who happened to have a large stock of vaccine when the revaccination "boom" set in. The Local Government Board had intimated that they would sanction any "reasonable expenses" in procuring lymph beyond what the Board itself was in a position to supply, and the accounts were passed.

Discussing the Disinfectant.

At a meeting of the Finsbury Borough Council on March 6, Dr. Evan Jones (Chairman of the Public Health Committee) brought up a recommendation with regard to the tender sent in for the supply of disinfectants for the next twelve months. The firms in question included: R. Young & Co., 38 Elliott Street, Glasgow; Adcock, Easton & Co., Finsbury Park, N.; W. Cawood & Sons (Limited), 38 Wilson Street, E.C.; Middleton Brothers, St. George Street, E.; James Boulton & Co. (Limited), Stratford, E; Lawes Chemical Company (Limited), 59 Mark Lane, E.C.; the Killgerm Company (Limited), Cleckheaton, Yorks; Red Cross Chemical Company, Hull; Sanitas Company (Limited), Bethnal Green, E.; George Armstrong & Co. (Limited), Cubitt Town, E.; A. Andoire & Co., Battersea, S.W.; and Burt, Boulton & Haywood (Limited), 64 Cannon Street, E.C. The recommendation was that Messrs. Burt, Boulton & Haywood (Limited) supply the carbolic acid and powder, and that Messrs. Armstrong & Co. (Limited) supply the sulphur. Mr. Millward asked what the Medical Officer (Dr. George Newman) said regarding the efficacy of carbolic acid in destroying germs. The late Dr. John Glaister (Dr. Newman's predecessor in office) said it was practically of no value. Dr. Jones answered that Dr. Newman had not departed from Dr. Glaister's system of distributing the carbolic acid and powder. Mr. Millward: Dr. Glaister said that carbolic did not stop fever. He said it was only killing one stink with another stink, and luring the people into false security. Mr. Millward next wanted to know the prices set forth in the various tenders, and the Town Clerk answered that all the figures could be had in the office. The prices on the tenders now before the Council were:—Carbolic-acid liquid, 8½*d.* per gal.; powder, 2*s.* 8½*d.* per cwt.; sulphur, 6*s.* 6*d.* per cwt. These were the lowest tenders. In answer to a further query, Dr. Jones said the

Digitized by Google

Borough analyst took samples of all deliveries, and if any were found below the standard of percentage stated in the tender the bulk is returned to the contractor. The tenders proposed were accepted, and it was also decided that the Medical Officer of Health be authorised to obtained supplies of formic aldehyde when required.

Contracts.

The High Wycombe Board of Guardians has appointed Messrs. Young & Co., chemists, High Wycombe, to supply disinfectants to the Workhouse for the next half-year.

Messrs. Stonham & Son, chemists and druggists, Maidstone, have been appointed by the Cranbrook Board of Guardians to supply medical appliances to the Workhouse during the next half-year.

The Liverpool Town Council has accepted the tender of Messrs. Evans, Son & Co., of 56 Hanover Street, Liverpool, for the supply during the ensuing year of drugs and druggists' sundries, and that of the United Alkali Company (Limited), for disinfectants.

Notes from the Midlands.

Alderman Mander, of the firm of Mander & Co, chemical-manufacturers, Wolverhampton, has met with a serious accident in the hunting-field.

The assistants in pharmacy have secured a champion in the new rector of Birmingham (the Rev. J. W. Diggle), who takes the chair at an early-closing meeting to be held next Wednesday at the Temperance Hall at 8 o'clock.

At the Aston Police Court on Friday last a haulier, who had worked a horse in an unfit state, gave evidence that he had put blacking on the animal's sores, which caused the hair to grow. The Superintendent asked if it was a recognised competitor to the other advertised hair-restorers.

What is the difficulty one hears so much about just now amongst the medical undergrads. of our newborn university? A candidate for registration asks for advice from the Apothecaries' Hall, and is advised to apply to the Medical Council; and again he seeks advice from the Conjoint Board, and is told that their sanction is sufficient *per se*.

The M.O.H. of King's Norton has resigned office. As this is an instance of the M.O.H. and public analyst kind, there appears an opportunity for the pharmacist who practises analysis. Hitherto Dr. Hollinshead has done this work, but particular cases have been sent to a member of a well-known Birmingham firm of pharmacists (near Moor Street).

Mr. J. E. Southall, whose thrilling experience on the ill-fated ship *Waesland* has been given in all the newspapers, is a son of one of the members of the well-known firm of Messrs. Southall Brothers & Barclay, Bull Street, Birmingham. He appears to have displayed true British pluck. He said, "Everybody assumed a perfectly calm demeanour. The sailors were soon hard at work getting out the boats, and this was done admirably."

Northwich, the centre of the Cheshire salt-industry, has suffered much from subsidence of buildings through the draining of brine from the salt-springs underneath the town. In consequence, the place presents a curious assortment of houses reclining at all angles, and some of the lower storeys have disappeared. It is now stated that the Brunner Free Library and Museum is in danger. The building, which is a substantially erected one, presents cracks and crevices in all parts of the walls.

"Sulphuric Acid—Ancient and Modern" was the title of Professor Frankland's Presidential address to the 'Varsity Chemical Society, on Monday evening last, before an audience which nearly filled the large chemical lecture-theatre. He traced the history of this "hydrogen ion" from Geber, in the eighth century, who prepared it from alum, to the condition of the industry to-day. The experiments were brilliant and most successful, the lecturer according well-merited praise to the lecture-assistant (Mr. Proctor), whose name is not unknown to the members of the Midland Pharmacists' Association.

Branch Manager and Shop Keys.

Frank Taylor, a chemist's assistant, 30 Bourne Street, Croydon, obtained a situation with Mr. Frederick E. White, chemist and druggist, 4 Mitre Terrace, Tooting, as manager of a branch shop, the understanding being that he (Taylor) was qualified. Mr. White failed to get evidence of any Minor certificate, and ultimately Mr. Bremridge informed him that Taylor's name was not on the register. Mr. White then demanded the keys of the shop from Taylor, and there was a little tussle, in the course of which Mr. White forcibly took the keys. As a result Taylor summoned Mr. White before the local magistrates last week for assault, and Mr. White had to pay 40*s*. and 2*s*. costs. In the course of the evidence Taylor admitted that he is not a qualified chemist, and that he had been in Tooting Home.

Owens College.

On Wednesday, March 12, the Prince of Wales opened Whitworth Hall, the latest addition to Owens College, which is likely in the near future to become the University of Manchester. The *Manchester Guardian* of that day had an excellent illustrated account of the jubilee of the College, which concluded with this sonnet by Mr. H. D. Rawnsley:—

To-day, with loyal hearts to King and Throne,
Proud of our Prince and glad for festival,
We bring fair Knowledge to her perfect Hall,
And crown the fifty years of work well done
With grace of builder's glory. Stone on stone
As heart on heart have heard an Orphic call,
Love laid foundation, Love has roofed the wall
Where Use and Beauty now are shrined as one.

Here, while the organ-trumpets sound her name
Who dowered the city with that Palace store
Of books and golden scrolls and palimpsests,
This stately hall shall Whitworth's deed proclaim,
Owens, Faulkner, Beyer, Christie—spirit-guests
Here shall find welcome, honoured evermore.

The Week's Poisonings.

Seven of the fourteen poisoning fatalities reported as having taken place during the past week, were caused by laudanum. These occurred at Manchester, Handsworth, Bristol, Leeds, Sunderland, Swanage, and Kensington. In the last-named case the inquest was held by Mr. Drew on March 10, the victim being a woman named Maria Mathews. It was stated that under her pillow was found an empty bottle which had contained laudanum, and which bore the label of "J. Widgery, A.P.S., dispensing chemist, 65 Golborne Road, North Kensington." Dr. Eason was giving her medicine containing a small amount of morphia, but deceased used to buy laudanum, a pennyworth at a time, and take a few drops to relieve her cough. She obtained a pennyworth (about 1 drachm) on the day before her death, and the *post-mortem* examination showed that deceased must have taken the whole quantity, and falling forward on to her face on the bed clothes, had been suffocated.—At Swanage on March 5, the Coroner (Dr. H. W. C. Parkinson) held an inquest as to the death of Miss Sarah Elizabeth Kitching, who had killed herself with excessive doses of laudanum. The deceased, whilst on a visit to Swanage, varied her alcoholic excesses with doses of laudanum, and was found dead in her room. Mr. R. Randall, chemist, High Street, Swanage, informed the Coroner that deceased had visited his shop and had asked for 1 oz. of laudanum for injection. She seemed perfectly right, and he asked her how much she was accustomed to use for injection, and she replied, "a tablespoonful." He said half a teaspoonful would have been sufficient, but as she appeared to know all about it he had no scruples in giving her 1 oz. Mr. G. Wilkes, chemist, Institute Road, said deceased asked for 1 oz. of laudanum, which, after inquiry, he supplied. The Coroner said the chemists were quite within their rights. It seemed to him that the Poison Act did not, as a matter of fact, apply at all.—Carbolic acid was used in three cases at Wycombe—where Mr. E. T. King, chemist and druggist, of Amersham supplied the poison to a groom for disinfecting purposes—at Cardiff and at Liverpool.—A Hull man poisoned himself with prussic acid, and a nurse at Bath, who had been in the habit of taking chloroform for insomnia, took a fatal overdose. She also, as in the laudanum case mentioned above, was found dead in bed with her head buried in the bedclothes.—A widow at Burgess Hill drank a quantity of hydrochloric acid and died.—At Hagley, on March 11, an inquest was held, before Mr. A Hebbert, concern-

Digitized by Google

ing the death of a stable-boy at Pedmore Hall. It was stated that the coachman had sold him 2½*d.* worth of honey, and he had eaten it. This was denied by the reputed seller and a cowman. Dr. Lowe said a teaspoonful of honey would knock up some people. Cases had happened where the bees had gathered the honey from poisonous plants, and it had caused toxin poisoning. The *post mortem* examination showed that deceased had appendicitis. This had been latent and intensified by diarrhœa, and had caused death. The jury exonerated the coachman and cowman.—Several narrow escapes from poisoning are reported. A Burton fitter drank a quantity of poisonous liniment, but recovered. A Southport gardener took carbolic acid, but promptitude and the stomach-pump saved him. A fisherman's son (19) at Sidmouth, who was charged with stealing jewellery, took a dose of an eye-lotion containing atropine and cocaine, but was pulled round. A Lambeth woman, deserted by her husband, tried sugar of lead, and a woman appeared at Thames Police Court charged with attempting to kill her baby and herself by drinking a carbolic disinfectant. A Ross widow is in custody on a charge of attempting to murder her daughter (17) by putting "phospherine" in her tea.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Pharmaceutical Council-meeting.

The monthly meeting of the Council was convened for Wednesday, March 5, at 67 Lower Mount Street, Dublin; but a sufficient number of members to form a quorum did not attend. The members who attended were the President (Mr. Beggs), the Vice-President (Mr. Bernard), and Messrs. Smith and Brown. A special meeting was summoned for Wednesday, March 12.

Pharmaceutical Examinations.

All applications for the undermentioned examinations of the Pharmaceutical Society of Ireland must be lodged with the Registrar by 11 o'clock A.M. on the following dates:—Tuesday, March 18, for the Preliminary examination; Tuesday, March 25, for the Registered Druggists' examination; Wednesday, March 23, for the Pharmaceutical License examination; Tuesday, April 1, for the Pharmaceutical Assistant examination.

Business Changes.

Messrs. May, Roberts & Co., wholesale druggists' sundriesmen, Clerkenwell Road, London, have opened an Irish branch at Westmoreland Street, Dublin.

Mr. James B. Bolger, L.P.S.I., Maryborough, has purchased from the representatives of the late Dr. Neale the Medical Hall, Drogheda Square, Mountmellick, and will carry on the concern as a branch establishment.

Herbal Medicines.

The case against the Lillians, reported last week (page 366), came on at the County Clare Assizes on March 6, but the jury, after hearing the evidence, were unable to agree as to their verdict. The prisoners were allowed out on bail on entering into personal recognisances for various amounts.

Medicine Contract.

At the meeting of the Cookstown Board of Guardians on March 8, Mr. Nethery, of Dungannon, was declared contractor for medicines at 25 per cent. off the standard price of the Local Government Board. Messrs. John Clarke & Sons, Belfast, were declared contractors for medical and surgical appliances at a reduction of 10 per cent.

Down on Quack Medicines.

In connection with a case of the illegal use of a drug of unknown composition in which the prisoner was discharged, the Co. Armagh Grand Jury passed a resolution on the subject of the sale of quack medicines. The Foreman (Sir Jas. H. Stronge) informed the Judge that the Grand Jury had done so, condemning the manner in which quack medicines were being advertised throughout the county, to the great danger of the inhabitants, and the jury asked his Lordship to call the attention of the proper authorities to the practice.

Harrying the Contractors.

At the last meeting of the Ballymoney (co Antrim) Board of Guardian a letter was read from Messrs. Boileau & Boyd, Dublin, stating that they could not find anything wrong with the drugs supplied to the Castlequarter Dispensary, but rather than have any further correspondence on the subject they had replaced them by equal quantities sent direct to Dr. Wallace. They stated that they would not in future send in a tender, and mentioned that they had twenty-five to thirty Union contracts, in scarcely one of which had they received a complaint in regard to the goods. At the same meeting a report was received from Mr. Robert H. Blake, the Board's analyst, stating that he had analysed three samples of drugs from the Dervock Dispensary, all of which were of good quality. This, the Board said, was satisfactory.

Contracts Open.

The following Boards of Guardians invite tenders for the supply of medicines and medical and surgical appliances:—Ballinrobe, workhouse and dispensaries (March 24); Ballymahon, workhouse and several dispensaries (March 20) Ballina, workhouse and two dispensaries (March 24); Balrothey, workhouse and six dispensaries (March 19); Bawnboy, workhouse and four dispensaries (March 24); Castlecomer, workhouse and several dispensaries (March 25); Cavan, workhouse and eight dispensaries (March 18); Clones, workhouse and several dispensaries (March 28); Clogheen, workhouse (March 18); Cookhill, workhouse and several dispensaries (March 21); Croom, workhouse and six dispensaries (March 20); Ennis, workhouse and several dispensaries (March 19); Enniskillen, workhouse and several dispensaries (March 18); Kilmacthomas, workhouse and several dispensaries (March 18); Kelly, workhouse and dispensaries (March 22); Limerick, workhouse and seven dispensaries (March 19); Longford, workhouse and several dispensaries (March 22); Mount Bellew, workhouse and three dispensaries (March 18); Rathdown, workhouse (March 26); Roscrea, workhouse and several dispensaries (March 20); Tulla, workhouse and eight dispensaries (April 1); Youghal, workhouse and several dispensaries (March 20); Wallow, workhouse and dispensaries (March 21).

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Boots Invade Scotland.

The windows of the Louvre, a large and at present unoccupied warehouse in Sauchiehall Street, Glasgow, are covered with bills announcing that it will be opened shortly by Boots (Limited).

Business Change.

Mr. J. Anderson Russell, New City Road, Glasgow, has acquired the business of Mr. J. A. Baine, chemist and druggist, Greenock.

Edinburgh Pharmacy Athletic Club.

The eleventh annual general meeting will be held at 36 York Place on March 17, at 9.15 P.M., when the Secretary's and Treasurer's reports will be submitted and the election of office-bearers for the new season will take place.

Edinburgh Chem'sts' Golf Club.

The annual general meeting of this club was held at 36 York Place on March 4. The treasurer's and secretary's reports were highly satisfactory. A guinea was voted to the Benevolent Fund, and the following office-bearers were elected for the year:—Hon. President, Mr. J. Rutherford Hill; captain, Mr. C. F. Henry; secretary, Mr. Jas. Stott; assistant secretary, Mr. J. G. Robb; treasurer, Mr. W. B.

Digitized by Google

Cowie; committee, Messrs. H. D. Alexander, W. C. Baker, A. J. Dey, Jas. Finlay, J. C. Laird, Wm. Lyon, and Geo. Robertson.

Aberdeenshire Items.

Mr. Gordon Smart, chemist and druggist, Aboyne, is enlarging and extending his premises on the fine business corner he occupies opposite the entrance to Aboyne Castle.

Andrew Allan and Mary Angus were each sent to prison for seven days for stealing two cakes of soap from the shop of Mr. A. P. Wallace, chemist and druggist, Victoria Road, Aberdeen.

On March 8 a bullock which was being driven to Belmont Auction-mart, in Aberdeen, dashed into the plate-glass doorway of the shop of Mr. A. W. Shirras, chemist and druggist, Powis Terrace, and smashed the glass. He backed out again, however, without doing further damage.

Glasgow Notes.

During 1901, of 3,048 shops open in the city and suburbs on Sunday, 251 are described as drug-shops.

The ravages of *la grippe* are visible on every hand, and Rubini's solution of camphor and tr. quininæ ammon. are in great demand.

The Pacific Slope must be played out. A new nostrum, now being boomed by door-to-door delivery of circulars, claims to have its origin in the "Never Never Land," better known as the great desert of Australia.

Chemists have still much to learn in the art of window-dressing. A study of local shop-windows reveals a disappointing poverty of ideas. Either the goods are thrown in hugger-mugger, or with a bilateral symmetry, which is geometrical rather than æsthetic. There is an opening here for a professional window-dresser, preferably of the "female sect."

The Governors of the Technical College have arranged for a course of four lectures by Dr. J. Shields, F.I.C., F.C.S., on "The Electro-chemical Industries." The titles of the lectures are: (1) "Evolution of the Electro-chemical Industries"; (2) "Electro-thermal Processes"; (3) "Electrolytic Processes as Applied to Metallurgy"; (4) "Electrolytic Processes for the Manufacture of Alkali, Chlorine, and their Products."

Mr. T. S. Barrie, of the West of Scotland College of Pharmacy, scored at Kilmarnock last week in a milk case. Dr. Aikman, the county analyst, gave 2·75 per cent. of fat as the amount in the milk, and the seller was prosecuted. Mr. Barrie found 3·13 per cent. of fat in the milk, and the Government chemists have since certified to 3·12 per cent. The milk-seller got off, but the Sheriff would not give him expenses.

The Consumption Sanatorium at Bridge of Weir, near Glasgow, is the only institution of the kind open free to phthisical female patients. According to the last quarterly medical report, of the patients discharged during the quarter 5 were cured, 15 relatively cured, 19 very much improved, 4 condition unchanged, and 1 died a few days after admission. Of the patients only 9 were in the early stage of the disease on admission.

The herbalist, who has never been so popular in Scotland as he seems to be even yet in England, will soon be extinct here. Twenty years ago there were double the number of herbalists' shops in Glasgow that there are now. Some of the herbalists of those days were passable field-botanists, and one universal genius, long since dead, united in himself the triple offices of herbalist, druggist, and dentist, his prowess in the latter respect being advertised by a windowful of extracted teeth in all stages of caries and decomposition.

A Students' Dinner.

On March 10 about sixty past and present students of the West of Scotland College of Pharmacy dined at the Alexandra Hotel, Glasgow. The chair was occupied by Mr. Thos. S. Barrie, the Principal, who was supported by Mr. Peter Boa (Chairman of the N.B. Executive), Mr. J. P. Gilmour, Mr. John Walker, and others. The evening was enlivened by songs contributed by Mr. D. Dow and Mr. Flockhart, while Mr. Gilmour gave a recitation. In proposing the toast of the "Pharmaceutical Society," Mr. Walker referred to the subject of the sale of poisons in quantity. Mr. Boa, in his reply, was of opinion that the sale should be confined to chemists and druggists entirely. Mr. Barrie, in reply to the toast of the College, said the Educational Institute of Scotland was considering the advisability of re-arranging their fees for Preliminary examination in view of the fact that pharmaceutical students were taking all the subjects in two sittings instead of in one sitting, as other students do. Mr. Barrie afterwards distributed prizes for excellence in home work to the successful Preliminary students.

South African News.

ISOLATED CASES OF PLAGUE continue to make their appearance in different parts of the western provinces. Fears are entertained that a further outbreak will occur when the rainy season sets in.

MR. F. W. C. THOMAS, of Claremont, having sold his business to Messrs. Heynes, Mathew & Co. (as stated last week), is at present at the seaside enjoying a well-earned holiday.

THE CHEMISTS OF PIETERMARITZBURG, NATAL, have formed a tennis club with a membership of fifty. The following are the officers:—President, Mr. R. Fuller; Vice-President, Mr. R. Allanson; Hon. Sec. and Treasurer, Mr. P. Levy; Assistant Sec., Mr. J. K. Murray; Committee, Messrs. H. Allanson, J. Murray, G. Heald, W. Cook, J. R. Titley, A. Murray, and P. Levy. Ping-pong will also be included in the sport.

CONTRACTS.—It is notified in the *Natal Government Gazette* that the tenders of the undermentioned firms have been accepted for supplies, &c., during the present year:—Central Gaol, Maritzburg, Messrs. Turner & Co., medicines, drugs, and surgical materials; Central Gaol, Durban, Lennon Limited, ditto; Central Gaol, Eshowe, O. Bertelsen, medicines and drugs; and Central Gaol, Maritzburg, Messrs. Merrick & Co., beeswax, sheep-dip, soap, washing soda, &c.

BY PARCELS POST.—It having been found that parcels mailed to the Cape from England are often notoriously undervalued, the authorities at Cape Town warn the public that parcels found on examination to be undervalued are liable to seizure, in addition to other penalties which may be imposed under the Customs Laws and Regulations. Those forwarding private parcels should exercise care in declaring the value, while the declarations on business-packets must agree with the invoice for the goods it contains.

A UNIFORM TONNAGE.—The Table Bay Harbour Board wants a uniform tonnage at all Cape ports, and to that end held a conference. The result was that while East London was quite willing, Port Elizabeth declared itself averse to discussing the matter until the country became more settled. In reply to a question, the Assistant Colonial Treasurer said they could not compel Port Elizabeth to attend a conference. This refers, of course, to the shipping tonnage, as 2,000 lbs. is the standard ton weight in South Africa.

ARSENIC OR THE ACT OF THE GOD?—In Sambalpur, a villager while worshipping at a shrine found a ball of sweetmeats before the idol. He carried it off and shared it with his grandson. The villager died soon after, and the grandson was in a critical condition. The villagers attribute this to the wrath of the god; but the police are treating it as a case of murder.

RABIES.—There has been a rather serious outbreak of rabies in Simla. The disease was probably introduced by a mad jackal, as dogs have been found infected and destroyed in several parts of the station. A native child who was badly bitten, and a European child slightly bitten, were both sent off to the Pasteur Institute at Kasauli, and the dog was sent to Colonel Lukis, I.M.S., to extract the brain for analysis and inspection. While engaged in the operation some of the brain-matter flew up into Colonel Lukis's face, and it is feared he may thereby have become infected. He also has gone off to Kasauli.

Australasian News.

Chiefly from "The Chemist and Druggist of Australasia," February 1, 1902. 6d. per copy, post free.

Mr John Grant Wilson, Calcutta, who passed the Minor in 1837, has been registered in Victoria.

The members of the Pharmaceutical Society of Western Australia have forwarded through the Registrar the sum of 2*l.* 2*s.* to the W. A. H. Naylor Testimonial Fund.

Mr. F. W. Simmonds was elected President of the Pharmacy Board of Queensland at the January meeting, and is the first chemist of Queensland training to attain that position. Mr. Simmonds is in business in Toowong, a suburb three miles out of Brisbane, and was elected a member of the Board in 1898.

The Queensland Pharmacy Bill was included in the "Slaughter of the Innocents" at the end of the session. It is thought, however, that the discussion has cleared away some of the obstacles, and when the Bill comes again before the Council it is scarcely likely that the medical members of that assembly will again attempt to take up a position in regard to the Bill which has prejudiced them in the eyes of many.

N.S.W. Statistics.—From the annual report of the Pharmacy Board of New South Wales presented at the January meeting it appears that there were 795 names on the register on December 31, 1901, an increase of 16 over the previous year. The Board also granted 180 annual poisons licences to storekeepers. It is interesting to note that Parliament granted a subsidy of 400*l.* for the current year's expenses of the Board.

Unofficial Formulary.—The Council of the Pharmaceutical Society of New South Wales have ratified the proposal to bring out an unofficial formulary in connection with the Victorian Council. Mr. Loney, who had been in England, did not think it advisable to needlessly multiply formula-books; there were already the National Formulary (U.S) and "B.P.C." Formulary. The Council, however, had gone too far with the matter to turn back.

Mr. F. K Fairthorne has been re-elected Mayor of Launceston, Tasmania. Mr. Fairthorne is the proprietor of the pharmacy of L. Fairthorne & Son, which has many branches in Northern Tasmania. It is interesting to note that Mr. Fairthorne's father—Mr. Landon Fairthorne, founder of the business—also filled the office of Mayor of Launceston in 1884. It is believed to be an unique occurrence in Australia that father and son, both chemists, have both occupied the honourable position of Mayor of the same city.

The Late Mr. Bonnington.—The memory of the late Mr. Geo. Bonnington, who died at Christchurch, N.Z, on December 18, 1901, is to be kept green by a portrait in the Board room of the Pharmacy Board of N.Z. Mr. Mee, the President, at the last meeting, in moving that a vote of sympathy be passed to Mrs. Bonnington and family, announced his intention of obtaining a commemorative portrait. Mr. Bonnington was born in Derbyshire in 1836, and went to New Zealand with his parents in 1848. He was connected with the Pharmacy Board from its inception, and had filled the office of President.

Registration Requirements.—The wife of a pharmacist has applied to the Pharmacy Board of New South Wales for registration. The applicant's papers state that she has been the necessary three years as assistant to a registered man, and that statement was practically countersigned by two registered doctors who certified to her efficiency. The application caused some discussion among the members of the Board who wished to ask the lady to come before them to be questioned as to her training and knowledge. The application was made under sub-section D of the Pharmacy Act, and it is a question whether the necessary declaration being put in the Board has any choice but to register.

Dividing the Examination was instituted by the Pharmaceutical Society of Tasmania in 1899 to afford apprentices the option of taking materia medica and botany during their first two years. It has, said the President at the annual meeting, been appreciated by students, who show better work in these subjects. It has been the means of raising the standard and percentage of passes. There have been failures, the President frankly confessed. Candidates sometimes present themselves after only a short course of study, thinking by chance to scrape through. Such unpreparedness, however, is easily discernible to an examiner, resulting in a recommendation for another six months' study.

Disinfectants in Queensland.—As mentioned in the *C & D.*, November 16, 1901, page 795, the Commissioner of Public Health of Queensland is desirous of putting into force the provisions of the Health Act as to labelling disinfectants with the proportion of the active principles. The Pharmaceutical Society of Queensland have been in communication with several disinfectant manufacturers. F. C. Calvert & Co. reply that they have always stated the percentage on their preparations, and are glad to hear of the action taken. Condy & Mitchell will lay the Society's communication before their directors. Newton, Chambers & Co. (Limited) sent printed matter, and Morris, Little & Son, through their local agents, desired to know in what way they could comply with the Act.

Tariff Decisions.—The fourth series of decisions issued by the Commonwealth Customs Department bears the following:—

Australian Products.—Casks, bottles, corks, straws, &c., used in packing to be admitted free to all States excepting Western Australia.
Barry's Tricopherous.—Dutiable as spirituous compounds.
Carbonate of Soda.—If soda crystals, 1*s.* per cwt.
Creosote (crude), in bulk.—Fifteen per cent., as disinfectants n.e.i.
Envelopes (straw) for Bottles.—Free.
Magnesium Ribbon.—Twenty-five per cent.
Otto de Rose (virgin).—Free, as essential oils.
Roentgen-ray Apparatus.—Free, as surgical appliances.
Wool (absorbent).—Free.

A Homeland View.—Mr. Alexander Brown, Narandera, N.S.W., who lately returned from a visit to England, contributes his experiences to the *C.D.A.* He speaks well of pharmacy in the United Kingdom, but the climate has too much rain, cold, and fog to suit one used to the dry sunny Antipodes. One or two points are worth extracting from Mr. Brown's notes:—

I was often at home charmed with the elegant manner in which many establishments put up their own special lines. The neatness of the wrapping and the wrapper, and the artistic labels all bespoke a care and taste that reflected highly and creditably on the establishment. Thereby sales are made and profits increased. . . . In the Old Country window-dressing is more general than here, and the displays made are more effective and more calculated to "touch the spot" than ours. Of course we must allow that at home they have advantages in many ways whereby they can fit up and make more effective displays than we. Still I am of the opinion that the example set us can here be profitably copied. The counter cases, as a rule, are well covered with a display of specialties. There seem to be more life and push put into business than we, on the average, attempt, and less back-shop life than we are guilty of. In nearly every pharmacy I visited I saw something to admire, the majority of them being splendidly fitted up shops, well-conducted businesses, and evidently prosperous. Speaking of prosperity, in intercourse with many friends in the business, chums of my young days, I was pleased, very pleased indeed, to notice that in every instance they were all in comfortable circumstances. . . . In one or two special cases I marvelled at the success achieved. A former employer of mine during my visit home did me the honour to invite me to his house to a special party. It was an evening with his head hands and the young ladies from the counting-house. There were twenty-five couples present. The employés, numbering I don't know how many, have an annual spread, but it takes place in a large hotel with rooms big enough to accommodate. The private house party was, I have said, only the confidential employés. Now, twenty years ago, when this particular chemist started business, he only employed myself and a boy. Through close application, superior ability, and entirely by his own efforts he does the largest retail business in the country, and has a wholesale business of some considerable extent.

Digitized by Google

Pharmaceutical Society of Great Britain.

EVENING MEETING.

THE third evening meeting of the Session took place on March 11 at 17 Bloomsbury Square, W.C. Mr. C. B. Allen (Vice-President) occupied the chair, and among those present were Professor Norman Collie and Messrs. Walter Hills, Rutherford Hill, E. Northway Butt, W. A. H. Naylor, Langford Moore, E. T. Brewis, and J. W. Bowen.

The VICE-PRESIDENT opened the proceedings at 8.10 P.M., by announcing that the President, who had hoped to be present, had not arrived, and referred to the fact that the papers to be presented were prepared in the Society's laboratories. He then called on Mr. W. Garsed to read his paper on

LIQUID EXTRACT OF COCA.

Last year the author called attention to the varying percentage of alkaloid in liquid extract of coca, which he found to be from 0·15 to 0·25. Fourteen samples were obtained from various sources—seven B.P. and seven the "miscible" kind, and subjected to assay. The B.P. extracts were all acid to litmus, had a deep brown-green colour, and all had a similar odour except one sample, which was of superior fragrance. All the extracts deposited on standing, but the precipitate was not found to contain alkaloid. The assay-process used for the B.P. liquid extract of coca was as follows:—

100 c.c. of the extract was evaporated to half the bulk in a shallow dish on a water-bath at a temperature never exceeding 80° C., with constant stirring, to get rid of the alcohol (this never took more than fifteen minutes). When cold the concentrated extract was made alkaline by the addition of 5 c.c. of 10-per-cent. ammonia and transferred to a separating funnel. The dish was washed out first with 45 c.c. of distilled water, then with 100 c.c. of ether. The water and ether washings were added to the rest in the separator, the whole well shaken, and allowed to stand until the ether separated, when the alkaline liquid was drawn off. The extraction with ether was three times repeated. Four ether solutions are thus obtained. The first three were mixed together, washed with a few c.c. of water containing a little ammonia, and shaken out first with 5 c.c. of 5-per-cent. sulphuric acid, then twice with 5 c.c. of 1-per-cent. acid. This was generally found sufficient to completely exhaust the ether solution, the test being the addition of a few drops of Mayer's reagent to the last few drops of the third quantity of acid, when, as a rule, no precipitate or opalescence was produced.

The three acid solutions were mixed together, made alkaline by the addition of 10-per-cent. ammonia, and three times shaken out with 10 c.c. of petroleum ether, then once with 10 c.c. of ordinary ether. The three petroleum-ether solutions were mixed together and evaporated to dryness on a water-bath in a tared dish, which was then placed in a desiccator for some hours and afterwards weighed. The weight of alkaloid thus obtained is the weight given in the table. The ether liquid contained little or no alkaloid.

The miscible extracts, said the author, were probably made by percolation with acid water and alcohol added as a preservative. The assay process used was similar to the above, except that no evaporation was necessary, the extract being at once made alkaline with ammonia, and then four times shaken out with an equal volume of ether.

The following table shows the results of the various assays:

	Grammes of total alkaloid in 100 c.c. of B.P. liquid—	
	Extract	Miscible extract
1	0·816	0·014
2	0·386	0·154
3	0·368	0·026
4	0·252	0·018
5	0·200	0·294
6	0·400	0·048
7	0·210	0·054
Average	0·380	0·091

The alkaloid was not pure cocaine, but probably contained small quantities of truxilline and cinnamyl cocaine in addition, but no ecgonine or benzoyl ecgonine

The VICE-PRESIDENT said the difference between the alkaloidal content of the miscible and B.P. extracts was a point which pharmacists should bear in mind.

Mr. WALTER HILLS asked if Mr. Garsed had made an extract in the Society's laboratory with leaves of known alkaloidal strength, so as to see how much alkaloid the B.P. process extracts.

Mr. NAYLOR emphasised the remarks of Mr. Hills, and asked how the liquid extracts had been stored, because it was not surprising that deposits formed if the samples had been subjected to the recent cold weather. It was satisfactory to know, however, that the deposit contained no alkaloid. He was surprised to see the difference between the alkaloidal content of the B.P. and miscible extracts, but he would not be disposed to visit the loss too severely on the manufacturers until the quantity of alkaloid in the leaves used was determined, and the loss in making such an extract known. The increased knowledge of cocaine had shown that there was a probability that the cocaine may have suffered decomposition. It was not, he added, customary to use water as a menstruum for miscible extract of coca, and add alcohol afterwards to keep it.

Mr. UPSHER SMITH said it would be useful if some one would inform them as to how miscible extracts are made.

Mr. MACEWAN said that should not be difficult to find out from wholesale houses. Was it possible, he asked, that the ether soluble alkaloids became insoluble on keeping? A large proportion of the leaves in the market contain ether insoluble alkaloids. It ought to be noted, however, that at least one miscible extract was as potent in alkaloid as the B.P. extract.

Professor GREENISH said Mr. Hills' question was a most important one. The B.P. methods of making alkaloidal galenicals do not always extract the whole of the alkaloids and that may be the case with extract of coca. A great many of the processes of the B.P. are in need of emendation; in many the most elementary principles of pharmacy are sinned against.

Mr. GAMBLE said miscible extract of coca, on account of its well known variability of strength, had long been a source of considerable difficulty to pharmacists. The author might devise a process free from objections. The wax in the B.P. extract was, he took it, the source of the trouble, as was the fat in the present tincture of nux vomica.

Mr. GARSED, in reply, said he had not made any experiments to show how much alkaloid the B.P. process extracted from the leaves. The deficiency in strength of some of the samples may be due to incomplete extraction. Coca-leaves contain percentages of alkaloid which varied up to 1 per cent. There was not, he thought, any possibility of the cocaine changing into benzoyl ecgonine, as the alkaloid was present as a salt and not in the free state, and the salts were very permanent in acid solution. The samples were kept in the dark in the laboratory cupboard, where the temperature varied from 50° to 60° F.

The VICE PRESIDENT then called on Mr. UPSHER SMITH to read a paper by himself and Professor Greenish on

SOLUTION OF MERCURIC CHLORIDE.

The authors first gave an historical *résumé* of the official solutions of mercuric chloride from the time of the first inclusion of that solution in the P.L. 1809, and referred to the work of the late William Martindale, who showed that ammonium chloride was objectionable in the solution. The questions considered by the authors were

(1) Does the solution of mercuric chloride of the B.P. undergo any change when kept? (2) To what extent is such change, if any, influenced (*a*) by the nature of the bottle in which the solution is kept; (*b*) by the nature of the light to which it is exposed; (*c*) by the nature of the solvent? (3) What is the nature of the change, if any?

The experiments to test the action of light on the solution were next detailed, varying conditions of light and various coloured bottles—blue, white, actinic green, and amber—being used. Deposits formed when the solution, made with distilled water, was exposed to direct sunlight, which was found to be mercurous chloride. With tap-water a deposit consisting of dark ruby or garnet red crystals was obtained, containing mercury in the mercuric condition but no mercuric carbonate. Millon attributes the composition of

Digitized by Google

$4HgO\,HgCl_2$ to this deposit. The effect of organic matter on the solution was incidentally tried. Infusion of hay was not found to have any effect on the composition, a check infusion of hay having a larger quantity of green organic deposit than the mercuric-chloride solution containing the same proportion of infusion.

The following is the authors' summary of the work:—

(1) That solution of mercuric chloride in distilled water will keep satisfactorily in white, green, or blue bottles, for a reasonable length of time, if not exposed to direct sunlight. (2) That even in direct sunlight it will keep if protected by the use of amber glass; we therefore recommend the use of bottles made of such glass. (3) That the ordinary white glass bottles, whether of English, German, or French manufacture, as sold to pharmacists, do not appreciably differ in their action. (4) That the minute deposit gradually formed is partly or wholly mercurous chloride. (5) That mercuric chloride with tap-water gives a copious precipitate in blue, green, or white glass bottles; the precipitate will not form, however, in amber bottles or in darkness. (6) That in diffused light amber bottles preserve the solution better than blue, green, or white bottles. (7) That in strong light the amber glass alone is satisfactory. (8) That strong light effects more decomposition than diffused light, especially if tap-water has been used in making up the solution.

The Vice-President said it seemed that the more sunlight they had in the pharmacy the worse it was for their preparations. The point about the use of tap-water was a somewhat small matter, as pharmacists always use distilled water for solutions. Liq. hydrarg. perchlor. was, he thought, always stored carefully in the pharmacy, but there was a possibility of the stock bottle in the warehouse not being excluded from light.

Professor Greenish explained that the investigation was undertaken at the suggestion of the Council, as an impression was about that the solution did not keep well, and that the glass had a distinct effect on the keeping properties. The point that tap-water only gave a precipitate in the light was of great interest.

Mr. Wilson said at the University College Hospital tap-water is used for mercuric chloride solution, and he had found that the solution changes only after a time. The jars which are used for the solution in the wards become coated with a yellow deposit, which he had been unable to remove.

Mr. Finnemore asked for further information as to the deposit of mercurous chloride; he would like to know if a quantitative test was made to determine whether it was chloride or an oxychloride.

Professor Greenish explained that the coloured precipitate was a mixture of mercuric oxide and chloride.

Mr. MacEwan asked for a definition of tap-water, as the composition of the water supplied in London varied according to the district. Mr. Collier, of Guy's Hospital, demonstrated to him some years ago that South London water was the best solvent for mercuric chloride. The Glasgow tap-water is better, some consider, than distilled water.

Mr. Upsher Smith, in reply, again explained the nature of the two precipitates obtained, and said he would be pleased to show the effect of the various coloured bottles on the spectrum after the meeting.

The Vice-President then called on Mr. W. H. Lenton, the Northway Butt scholar, to read a paper prepared by himself and Professor Greenish on

Extract of Gentian.

In selecting extract of gentian on which to work Mr. Lenton was guided by the fact that recent researches on the constituents of the root indicate that the official method of preparing the extract is not the best that could be devised. The process differs moreover in principle from that official in many other countries, notably, the United States, Germany, Austria, and Switzerland. Recent investigations have been directed to the isolation and examination of the constituents of gentian-root rather than to a study of the methods by which official galenical preparations are made. Mr. Lenton then proceeded to give a summary of the literature of the subject dividing it under two heads—(1) papers dealing with the constituents of gentian, and (2) papers dealing with the pharmacy of the root. The constituents of gentian are gentiopicrin, the bitter principle which hydrolyses into gentiogenin, and a sugar. Several sugars have been isolated, the most important being gentianose, which is dextrorotatory and does not reduce Fehling's solution. Other constituents are gentisin or gentianic acid and a gelatinous substance. To the latter is due the gelatinisation sometimes observed in infusion of gentian. Most Pharmacopœias, as pointed out by Bourquelot and Hérissey, order cold water for extracting gentian, by which is obtained 3·25 per cent. of pectose (the gelatinous substance). Cross and Bevan's summary of the work on the enzymic hydrolysis of pectose was next referred to, after which Mr. Lenton spoke of the pharmacy of gentian.

Geissler in 1836 recommended the whole root to be used for making the extract, so as to obtain an extract which forms a clear solution with water. Mohr in 1851 recommended cold extraction, and noted that the clear liquid turned cloudy when being evaporated to extract. Squibb in 1858, in a paper before the American Pharmaceutical Association, said the infusion should be boiled down to three-fourths before straining so as to separate "albuminous matter," whilst Feldhaus in 1861 added alcohol to the concentrated infusion to throw down the pectose. Alcock noted later that it would be better to pour off the infusion from the root before boiling. Mr. Lenton next reviewed the processes in various Pharmacopœias, and gave particulars of experiments made in the Research Laboratory with the object of showing whether the official method exhausts the root sufficiently for practical purposes, whether the boiling is advantageous or prejudicial, whether cold extraction is preferable to the method with heat, and whether an alcoholic menstruum is better than water. The conclusions arrived at were—

(1) That the official method of treatment does not sufficiently exhaust the gentian-root of its bitter principle. (2) That the boiling to which the root is subjected is disadvantageous in that a larger amount of pectin is dissolved than when cold extraction is used. (3) That extraction with cold water is preferable, two successive infusions being necessary. The method official in the German Pharmacopœia possesses certain advantages over that of the B.P., inasmuch as the drug is exhausted by cold infusion; by this process the bitter principle is more effectually extracted, whilst less pectin is dissolved and a better extract is obtained. At the same time the relatively small advantage gained by the addition of alcohol to the concentrated infusions does not appear to justify the adoption of this part of the P.G. process. (4) That although 45-per-cent. alcohol thoroughly exhausts the bitter principle, the extract obtained on evaporation of the tincture has the disadvantage of being hygroscopic. (5) That the exhaustion of the root with cold water proceeds slowly. (6) That the infusions obtained from the whole root by the cold-extraction process filter less readily than when the sliced root is used. (7) That gentian-root is not well adapted for percolation with water.

Mr. Lenton submitted the following monograph for insertion in the next Pharmacopœia:—

Infuse gentian-root (whole) in five times its weight of distilled water for forty-eight hours; pour off the infusion, press the marc, strain the expressed liquid, mix the liquids, and concentrate to one-third the original volume of the mixed liquids; filter when cold. Infuse the marc for twenty-four hours with a further quantity of distilled water equivalent to three times the weight of gentian root taken; repeat the processes of decantation, expression, concentration, &c. Mix the two concentrated liquids and evaporate to the consistence of a firm extract.

The Vice-President remarked that the work had been done on a comparatively humble root, and worked to a definite conclusion. He congratulated Mr. Lenton on the results of his work as a Northway Butt scholar.

Mr. Butt said he was well satisfied with the work done. The object he had in view in instituting the scholarship was to have the Pharmacopœia preparations tested so as to improve them. Mr. Lenton showed that in the case of extract of gentian the official process is not the best. It was at his (the speaker's) suggestion that the research scholar commenced with gentian, a simple subject, perhaps, but one requiring a vast amount of skill and patience.

Mr. Naylor, as a member of the B.P.C. Formulary Committee, was glad to see that Mr. Lenton's very laborious experiments were quite in accord with those made by the Formulary Committee when the subject of concentrated infusion of gentian was under discussion.

Mr. MacEwan hoped Mr. Lenton would complete the investigation, and ascertain if the new extract is as effectual as the old as a pill-excipient, which is what it is chiefly used for.

Mr. Wilson referred to the question of fermentation in making gentian preparations. Whether the root be extracted in the cold or by boiling might influence the bitterness.

Digitized by Google

Mr. HILLS was glad that Mr. Butt had heard a paper after his own heart, but Mr. MacEwan's remarks made one feel rather humble that such an amount of work had been done for a pill-excipient. It would be interesting to know how far the extract is used as a medicinal agent.

Mr. FINNEMORE objected to gentian being called a humble root, his experience being that there is more of it used than any other root in the B.P. Extract of gentian is not largely used, but to his mind the knowledge that cold water perfectly extracts gentian was the most important point in the paper.

Mr. HOLMES said extract of gentian is largely used as a pill excipient, for which purpose it is necessary that it be not hygroscopic.

Mr. BREWIS asked whether the gentian used was absolutely dry, and what proportion of moisture was present in the finished extract. These factors were important in considering the proportion of extract yielded by the drug.

Mr. UPSHER SMITH said extract of gentian is used on account of its medicinal properties as an ingredient of pills, and not as an excipient.

Mr. MACEWAN: I have frequently seen extract of gentian ordered in quinine-pills.

Mr. GAMBLE: The finest pill-excipient I know is equal parts of extract of gentian and glucose.

Mr. LENTON, replying, said the use of extract of gentian as a pill-excipient had not been lost sight of. The new extract had been tried and found to answer well. The question of the influence of enzymes on the bitterness was rather a difficult one to answer, as although the absolute-alcohol extract is only slightly bitter, if the marc is extracted with 50 per cent. alcohol an intensely bitter product is obtained.

The VICE-PRESIDENT moved votes of thanks to the readers of the papers, and mentioned that the next meeting would be on April 15, when Dr. Augustine Smith would read a paper on "Chinese Drugs."

Professor GREENISH pointed out that the Society's officials and scholars had contributed all the days during the past session, and said he would be glad if some other contributors would come forward.

Coffee was afterwards served in the examination-hall.

ANNUAL DINNER.

A meeting was held in the Society's House on Wednesday, March 12, to make arrangements for the twenty-ninth annual dinner on May 27 next.

Bankruptcies and Failures.

Re THOMAS PHILIP GARRETT (trading as Garrett Brothers), 33 Commercial Road, Newport, Mon., Chemist and Druggist.—The adjourned examination of this debtor was resumed at Newport on March 6. Particulars of the failure were given in our issue of January 25 (page 174), and after further questioning the examination was closed.

Re EDWARD DAVIES, 25 High Street, Abergwyni, Herbalist.—At Neath on March 4 this debtor, a coal-miner, came up for his public examination. Debtor had got into difficulties through launching into a partnership with a man named Evans as herbalists. He commenced the partnership in 1899, and it was determined on the terms that debtor should pay his partner's share in the stock, 3*l.* 11*s.*; that amount had not been paid. He had borrowed 7*l.* 6*s.*, and paid 4*l.* 6*s.* 11*d.* for herbs and medicines and 3*l.* 6*s.* for books. The deficiency was 70*l.* 17*s.* Cross examined by the Registrar debtor said, "Oh, I don't know; Evans was the doctor in the herb business." They bought about 3*l.* worth of herbs from a London firm. That was their stock. The examination was closed.

Re HERBERT HENRY PRESBURG, 73 Church Street, Camberwell, trading as Moody & Catterns, Pharmaceutical Chemist.

THE first meeting of creditors in this case was held on March 10 at the London Bankruptcy Court before Mr. E. S. Grey, Official Receiver. The debtor purchased the business three years ago for 620*l.* He had previously entered into partnership with two others for the manufacture of "Vitalia," a chemical food. That business was taken over in May, 1900, by Vitalia (Limited), and since October last the debtor has acted as manager, leaving the chemist's business to the care of his brother. The accounts filed by the debtor show liabilities 206*l.* 18*s.* 4*d.*, against assets 99*l.* 3*s.* 4*d.*, and the failure is ascribed to bad debts and keen competition of the stores. No offer was submitted, and the case was left in the hands of the Official Receiver to be wound up in bankruptcy. The public examination of the debtor was fixed for April 11. Appended is a list of the principal creditors, viz.:—

Re PETER CAMPBELL FORBES, formerly carrying on business as a Chemist at Morley.

DEBTOR was examined at the Dewsbury County Court on Tuesday, March 11. The history of his business venture was related in the *C. & D.*, November 23, 1901, page 843. He now repeated the leading facts. He had not kept books, and never taken stock, except in 1897, when he believed a balance-sheet which was prepared showed a surplus of 1,800*l.* He did not dispose of his book debts. He first became aware of his insolvency in November, 1900, before he sold his business. He distributed the purchase-money among the creditors who were pressing him most. From the middle of 1900 to the date of the receiving order (October 4, 1901) he was proceeded against eighty times, and had a sheriff's officer in possession from May last year to his failure. At that time he expected to have a partner in the bill-posting business he was carrying on, who would introduce 1,000*l.* capital. He gave 400*l.* for the bill-posting business in 1894. The Official Receiver (Dr. E. E. Deane) stated that the trustee was not present, nor legally represented, because the accounts filed by debtor were absolutely worthless, and it was impossible to investigate his affairs in the absence of books. The trustee pointed out that debtor's accounts showed payments to exceed receipts by 1,488*l.* No vouchers had been produced by debtor, who had not filed a proper deficiency account, as he had explained a deficiency of 3,401*l.*, while the real deficiency was 830*l.* One of the items in this account was, "Money lent to worthless friends, 228*l.*" Further examined, debtor stated that two months before filing his petition he gave a deed of assignment to a gentleman named Brown to cover payment under a sheriff's execution of 125*l.* The Official Receiver commented strongly on the absence of books, remarking that when a man with three chemists' businesses, and a mineral-water business, besides a bill posting business, did not keep proper books he was placing the money of his creditors in jeopardy. The Bankruptcy Act had been in force since 1883, and its requirements were well known. He asked that the examination should be adjourned *sine die*. Debtor appealed to the Registrar to close the examination. He said that he wished to get into business again, in order that he might pay his creditors in full. The Official Receiver pointed out that debtor had tried to get the bill-posting business transferred to his wife, which was not helping the creditors, but putting a difficulty in the way of selling the business. A Mr. C. S. Brown was present in court, and alleged that debtor had obtained money from him by improper means—by assigning to him property which did not exist, also that he had got from his friends 1,000*l.* in this way. The examination was adjourned *sine die*.

High Court Cases.

How Glycerin is Purified.

In the Chancery Division on March 7, Mr. Justice Buckley had before him a petition by Joseph Crossfield & Sons, of Quay Bank Soap and Chemical Works, Warrington, and Simon Joseph Studer, of Stockton Heath, for the revocation of letters patent granted to Ernest George Scott in 1897. Mr. Lewis Edmunds, K.C., and Mr. David Fulton appeared for the petitioners; and Mr. Walter and Mr. Gray for the respondents.

Mr. Walter, in opening the case in support of the patent, said that it was an invention of Mr. E. G. Scott, and had been assigned by him to Mr. Frank W. Scott, the second respondent. It was sought to set aside the patent on the grounds that the invention had been publicly used by the petitioners prior to the date of the patent at the Quay Bank Works, that it was in accordance with an invention of the second petitioner, Mr. Studer, that Mr. E. G. Scott was not the true and first inventor, that it was in accordance with drawings of a design by Studer in 1895 which had been commercially operated by Crossfield & Co., and they alleged that Scott had obtained the invention from them. The petition alleged that Mr. E. G. Scott had access to the works of the petitioning company at Warrington, and had every opportunity of making himself acquainted with the working of their plant and the results obtained. Petitioner also alleged inefficiency of Mr. Scott's invention, which relates to an improvement in connection with the concentration and distillation of glycerin. From 1885 to 1890 Mr. Scott had control of the glycerin and caustic-soda department of Messrs. Lever Brothers (Limited). Mr. Scott invented long before the date of the patent in question a process now used by 90 per cent. of glycerin-manufacturers of this country for the distillation and refining of glycerin. It consists of introducing into the vessel containing the crude glycerin superheated steam. The steam carries the glycerin into an apparatus called an air-battery, in which the steam is partially cooled and the glycerin deposited mixed with water. The air-battery is so arranged and of such a size that, whilst the superheated steam, in passing out of the battery, is cooled, it should still leave the battery as steam. As the superheat comes out of the steam the glycerin separates, and is mechanically deposited in the chamber. A certain proportion, however, always escapes with the steam, that proportion varying, but never less than 3 per cent. of the glycerin is carried out of the air-battery and passes into the condenser, where the steam is condensed into water. That minimum of 3 per cent. of the glycerin becomes mixed with the water and other impurities, and is for all practical purposes lost, so that there is a loss of 1*l.* on every ton of glycerin distilled. Mr. Scott, in the invention in question, places a condenser between the air-battery and the water-condenser, and by that means succeeds in getting practically the whole of the glycerin.

Mr. Scott, who was called in support of his patent, said that in 1893 he erected glycerin-plant for the petitioners. At that time they were making only crude glycerin, and that by the old system of heating over an open fire. From the autumn of 1894 until 1898 he did not see any of the petitioners' refining or concentrating plant. He first saw the drawings of Studer's in 1898. He had never seen any plant in the petitioning company's works made in accordance with these drawings.

Mr. Lewis Edmunds, K.C., in opening his case, said he would call witnesses to show that this additional condenser had been working in the petitioners' premises for some years before the patent was taken out in 1895, and it is working up to the present day. That condenser extracts all the respondent claimed in his specification.

Dr. Karl Markel, managing director of the petitioning firm, Joseph Crossfield (Limited), and also a trustee of that firm, was then examined. He said that in 1894, when Mr. Scott fitted up his apparatus in the works of the petitioning firm, he (witness) was not perfectly satisfied with the results of Mr. Scott's arrangements. One disadvantage was that a considerable loss of glycerin was entailed. Tests showed that by that particular method of condensation 3 or 4 per cent. of glycerin evaporated at the still. Witness afterwards devised a practical condenser, which condensed part of the steam and all the glycerin.

After further evidence had been heard, Mr. Edmunds summed up the petitioners' case.

Mr. Justice Buckley, in giving judgment, said he was satisfied that what the petitioners had done was not what was claimed by the patentee, and they had not reached the result that he had acquired; they had not grasped the patentee's idea. The whole point was how to deal with the vapour so as to get the maximum of glycerin and the minimum of water. The petitioners had not reached the valuable result which the patentee had attained. The operation of the patentee's cooler was that he cooled the bulk of the vapour in detail; the petitioners' apparatus failed for the reason that it tried to take the vapour too much in bulk. He found that there had been no prior user, that the invention was a good one, and that the patentee was the first and true inventor. For these reasons the petition failed, and must be dismissed with costs.

On a petition to revoke a patent of Scott's dated 1900 the respondent did not oppose, but submitted that the petitioners should pay the costs occasioned by charges which they could not sustain. His Lordship directed revocation of the patent, but ordered the petitioners to pay such costs as were occasioned by the charges referred to.

Royal Baking Powder Trade-mark.

Mr. Justice Farwell has this week given judgment in the application of the Royal Baking-powder Company, of New York, for the registration of a trade-mark, consisting of a wrapper, one half of which contained the words "Royal Baking Powder" in white letters on a red ground, with the representation of a tin (with the same words on it) printed in the centre of it, and with the name of the firm on a scroll at the four corners. The other half had a description of the powder, directions for use in English and German, and the name and address of the makers printed on a yellow ground. When the application came on for hearing the Comptroller directed that the following statement should be inserted:—"The essential particular of the trade-mark is the combination of devices, and the applicants disclaim any right to the exclusive use of the added matter except in so far as it consists of their own name." The applicants thereupon inserted the words:—"The essential particular of the trade-mark is that it is a distinctive label," but did not insert any disclaimer. The Comptroller refused to register the mark, and the applicants thereupon appealed. Mr. Justice Farwell held that what was contained in the yellow portion of the label was "added matter" within the meaning of Sub-section 2 of Section 64 of the Act, and that the applicants should have disclaimed in their application any right to the exclusive use of it. He therefore dismissed the application, with costs.

County Court Cases.

The Wife not the Principal.

At the York County Court on March 4, Messrs. Bleasdale (Limited), wholesale druggists, York, sued Mrs. Fewster, of Dewsbury, for 27*l.* 9*s* 2*d*., for goods supplied. Mr. Crombie, for the plaintiffs, said the defendant was the wife of Mr. W. L. Fewster, who, before becoming bankrupt in the latter part of last year, carried on business as a chemist at two shops in Dewsbury. When a writ was issued by the plaintiffs for the amount, he found out that one of the businesses when Mr. Fewster filed his petition was claimed by his wife. To that shop they had sent goods ordered by Mr. Fewster. Mr. Arthur Humphreys, secretary to the plaintiffs, gave evidence in support of the statement of Mr. Crombie, but under cross-examination it was shown that a representative of the plaintiffs had received certain payments, and had receipted invoices for some of the items. Mr. Fewster was called, and, in the course of his evidence, said the shop in question belonged to his wife. If any goods had been sent there by the plaintiffs they were for him, and for his convenience they were sent to that address. His wife got her goods from him. Judge Templer said he did not think the plaintiffs had any case, unless they could show agency, and

Digitized by Google

also that Mrs. Fewster was principal. A verdict for the defendant, with costs, was accordingly given.

FOR A SODA-FOUNTAIN CATALOGUE.

AT the Clerkenwell County Court on March 10, before Judge Edge, E. R. Alexander & Sons, lithographic printers, Leyton, sued N. W. Stiles & Son, 72 and 74 Gray's Inn Road, W.C., to recover 10*l.* 10*s.* for a sketch for a three-colour process block to be used on a catalogue cover. It appeared from the evidence that the sketch first submitted showed a young lady, and defendants wanted a counter added and one of their soda fountains on it. The finished sketch did not please them, and plaintiffs stated that another would cost 8*l.* The price for 10,000 copies of the catalogue was to be 110*l.* Defendants repudiated the whole transaction.

Mr. Stiles, jun., said he told plaintiffs' representative that they were negotiating with four other firms. They were all to submit sketches at their own expense, and they would not be paid unless their particular sketch was accepted for the catalogue cover. Other evidence was given, and after hearing it the Judge said he thought the weight of evidence was in favour of plaintiffs, and gave a verdict for plaintiffs for the amount claimed, with costs.

New Companies & Company News

ROLLS AND LINOMS (LIMITED).—Capital 10,000*l.*, in 1*l.* shares Objects: To adopt an agreement with G. W. Miller and E. F. Briggs (as executors of the late H. J. Rolls), and to carry on the business of manufacturers and sellers of varnishes, paints, &c.

CROCKETTS (LIMITED).—Capital 3 000*l.*, in 1*l.* shares. Objects: To acquire and carry on the business of mineral-water manufacturers, bottlers of ale and stout, and other similar businesses and agencies carried on by J. J. Lewis at Bowling Green Terrace, Worcester, as "Crockett, Sheppard & Co." Registered office, Bowling Green Terrace, Worcester.

JAMES JOHNSTONE & Co. (GLASGOW) (LIMITED).—Registered in Edinburgh. Capital 20,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on by James Johnstone and J. Steel as "Johnstone & Co," at 12 and 14 George Street, Mile End, Bridgeton, Glasgow, and to carry on the business of manufacturers of and dealers in paints, oils, colours, varnish, enamels, stains, white and other leads, and drysalteries of every kind. Registered office, 121 W. Regent Street, Glasgow.

CAPE GLASS COMPANY (LIMITED).—Capital 100,000*l.* in 1*l.* shares. Objects: To carry on the business of glass manufacturers, makers of glass bottles, jars, tubes, table-ware, electric goods, and rolled, sheet, plate, and other glass goods for any purpose. Minimum cash subscription 20 per cent. of any shares first offered to the public. The first directors are A. L. Elwes, J. H. Brodie, J. W. Bailey, and J. Forster. Qualification 500*l.* Remuneration 100*l.* to 250*l.* each per annum, according to profits. Registered office, 110 Cannon Street, E.C.

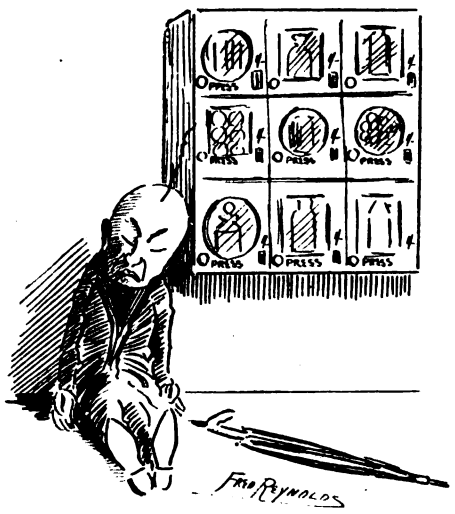
"OOWANA" (LIMITED).—Capital 20,000*l.* in 1*l.* shares. Objects: To acquire the business carried on at 205 Victoria Street, S.W., by the "Oowana Soap Company (Limited)," and to carry on the business of soap-manufacturers and merchants, dealers in oils, oleaginous and saponaceous substances and all kinds of unguents and ingredients, wholesale, retail, and manufacturing chemists, druggists, perfumers, &c. Minimum cash subscription, 10 per cent. of the shares first offered to the public. The subscribers are to appoint the first directors. Qualification (except first directors), 500 shares.

BAYARD FILS ET BAYARD (LIMITED).—Capital 25,000*l.*, in 10,270 Seven per cent. cumulative first preference shares of 1*l.* each, 1,300 Ten per cent. cumulative ordinary shares of 10*l.* each, and 173 deferred shares of 10*l.* each. Objects: To take over the business of soap and perfumery manufacturers carried on by the Standard Soap and Perfumery Company (Limited), at Scrubbs Lane, Willesden, and the business of manufacturing chemists carried on by Bayard, Sons & Bayard (Limited), and to carry on the business of soap and perfumery manufacturers, agents, and mixers, chemists, druggists, drysalters, oil and colourmen, &c. No initial public issue. The first directors are R. G. Orr, F. C. Van Duzer, and W. Hall. Qualification, £0 ordinary shares. Remuneration, 2*l.* 2*s.* each per board meeting attended (maximum 105*l.* each per annum).

WILKINSON'S TEETH EXTRACTING AND ADAPTING COMPANY (LIMITED).—Registered in Edinburgh. Capital 1,000*l.*, in 1*l.* shares. Objects: To acquire and carry on the business carried on by James Wilkinson, at 67 High Street Dunfermline, and Ivy Cottage, Leven, Fife, as an extractor of teeth and maker and fitter of artificial teeth in all branches. The first subscribers are:—H. Wilkinson, 67 Bank Street, Coatbridge, teeth-extractor; C. Wilkinson, 67 Bank Street, Coatbridge, housekeeper; C. Edwards, 67 Bank Street, Coatbridge, tooth-manufacturer; J. Corrance, 50 Main Street, Coatbridge, accountant; Joseph Lambert, 52 Blairgrove Place, Coatbridge, draper; James Lambert, 52 Blairgrove Place, Coatbridge, clerk; and E. Edwards, 124 Pleasance, Edinburgh, sculptor. James Wilkinson is permanent director. Registered office, 67 Bank Street, Coatbridge.

T. G. HUGHES (LIMITED).—Capital 1,000*l.*, in 1*l.* shares. Objects: To acquire the business of a chemist, druggist, drysalter, and wine and spirit merchant carried on by T. G Hughes at Bradley Green, Biddulph, Staffs, and to carry on the business of wholesale and retail druggists, chemists, drysalters, wine and spirit merchants, oil and colourmen, tobacconists, manufacturers of and dealers in proprietary articles, opticians, makers of photographic, surgical, and scientific apparatus and materials, &c. The first subscribers are:—T. G. Hughes, High Street, Bradley Green, Staffs, wine and spirit merchant; Mrs. B. M. Hughes, High Street, Bradley Green, Staffs; J. W. Deakin, Ingledene, Northwich, Ches., chemist; Miss J. Deakin, Lyndhurst, Northwich, Ches.; Miss S. Deakin, Lyndhurst, Northwich, Ches.; Mrs. S. Deakin, Lyndhurst, Northwich, Ches; and W. H. Poole, 15 The Crescent, Northwich, Ches., decorator. No initial public issue. Thomas G. Hughes is managing director. Qualification, 1 share. Registered office, High Street, Bradley Green, Biddulph, Staffs.

HILL, EVANS & CO., WORCESTER.—The report of the directors of this Company records a balance of 8 530*l.* From this has to be deducted 2,000*l.*, the dividend on the preference shares, leaving 6 530*l.* to be dealt with. The directors recommend that 850*l.* be placed to reserve, 150*l.* reserve for premium on first mortgage debenture stock, dividend on the ordinary shares, and making 9 per cent for the year, 3.500*l.*; carry forward, 2 030*l.* The profit on the trading, 17,522*l.*, is above the average for the past five years. The directors have acquired the business of Messrs. Waters & Son, and the sole proprietorship of Robert Waters' Quinine-wine and Waters' Coca-wine.



BARCLAY & SONS (LIMITED).—The directors have issued their report and accounts to the shareholders, showing a gross profit on last year's trading of 11 305*l.*, the net profit after writing off bad debts, making ample allowance for doubtful ones, and adding a balance of 239*l.* from 1900, being 3,780*l.* Of this 2,050*l.* is set aside as interest on debentures and full dividends on the preference shares, and of the balance 958*l.* is apportioned to pay 5 per cent. dividend on the ordinary shares. The directors propose to write 400*l.* off the capital account, to place 100*l.* to reserve, and to carry forward the balance of 272*l.* Mr. Horace Davenport, Chairman of the Board of Directors, is the retiring director, but offers himself for re-election at the meeting to be held at 95 Farringdon Street on Wednesday, March 19.

SPRATT'S PATENT (LIMITED).—At the annual meeting of the shareholders of this company, held in the Cannon Street Hotel on March 11 under the presidency of Mr G. B. Batchelor, an account was given by the Chairman of the building operations that have gone on during the past year, upon which a sum of 33 000*l.* has been expended. It was also stated that the Fenchurch Street showrooms had been rearranged, and that the capital assets of the business amount to over 500.000*l.*, although the nominal share-capital is only 200,000*l.* Business during 1901 was eminently satisfactory, as may be gathered from the fact that a dividend of 10*s.* on the ordinary shares, making, with the interim distribution, 16 per cent. for the year, was declared, besides a bonus of 5*s.* per share.

SOUTHALL BROTHERS & BARCLAY (LIMITED).—The directors' report and balance-sheet for the year ended December 31, 1901, states that having purchased the good-will of a manufacturing business last year out of revenue, the directors have set aside, out of the year's profits, a sum for creating an inner reserve fund. This has been done after placing 1 000*l* to the published reserve fund, and carrying forward 1,394*l.* to next year's account. The accounts show that, after providing for bad debts, depreciation, directors' remuneration, and the creation of an inner reserve, there is a balance of profit of 11.604*l* for the year, which, with the balance brought forward (1,346*l.*), makes a total of 12 951*l.* Out of this 756*l* has been paid for interest on loans, and an interim dividend on the preference shares of 1 750*l*, leaving a balance of 10,444*l.*, which the directors recommend should be appropriated in paying a second half-year's dividend on preference shares at the rate of 5 per cent. per annum, and (1.750*l*) a year's dividend on ordinary shares at 10 per cent. per annum, in carrying 1,000*l.* to reserve, and 1,394*l* forward

Things that Happen—Sometimes.

The Last Straw.

He has fought with competition and has struggled with adversity,
And many times has wondered at the ever-growing scarcity
Of customers, and 'prentices who rushed from University
To flutter in the pharmaceutic fold.
And so he goes a-travelling, the reason to investigate,
And finds each fertile pasture-field is keenly guarded, lest a gate
Be open for encroachment, and the stranger wish to rest a gait;
And these things make him shiver, hot and cold.

He sees palatial buildings, and is struck with curiosity;
So calls on many brethren, who regale him with verbosity,
And sanguinary statements of the Cutter's animosity,
And methods of accumulating wealth.
He sails the troubled waters and he yearns but for a calmer sea,
But stubborn Fate keeps track of him; and, while he flies from harm, you see,
Encounters that abortion called an automatic pharmacy,
Where you simply press the button for your health.

The Poisons Committee.

THE Poisons Committee sat at Whitehall on Monday, Tuesday, and Wednesday of this week, Sir Herbert Maxwell, M.P., in the chair. There were also present Mr. A. Cross, M.P., Professor T. E. Thorpe, Professor W. A. Tilden, Dr. Stevenson, Mr. W. Hills, Mr. J. H. Harrison, and Mr. E. B. Masham (Secretary). The following witnesses were examined:—Mr. R. Bremridge (Registrar of the Pharmaceutical Society), Mr. J. Rutherford Hill (Assistant Secretary of the Pharmaceutical Society in Edinburgh), Dr. W. L. Muir, of Glasgow, Mr. C. Beck (of Messrs. R. and J. Beck, Limited), Mr. R. Le Neve Foster (manager of Messrs. Calvert & Co.), Dr. R. B. Selby, of Wigtownshire, Mr. H. Cannell, horticulturist, Mr. J. Bowen-Jones and Dr. Voelcker, of the Royal Agricultural Society, and Mr. W. J. Leggett and Mr. A. W. Lobb, representing patent-medicine interests.

The foregoing is an official report. Sir Herbert Maxwell was not present on Monday, and Dr. Thorpe took his place in the chair. Mr. Cross was also absent. Amongst the witnesses on Monday afternoon was Mr. William Limont Muir, L.R.C.P.E. and L.F.P.S.G., of Dennistown, Glasgow, formerly a chemist and druggist, who appeared as the representative of the Scottish Poor Law Medical Officers' Association and the Eastern Medical Society of Glasgow. His evidence, in view of the doctors' shops controversy, is rather interesting. He said: When the Pharmacy Act, 1868, was passed it was the intention of the Legislature that the ordinary statute law of the land would be followed—namely, that the master would be responsible for his servants. This was the reading of the Act for over twenty years, when, by a decision in the High Court of England (ultimately acquiesced in by the High Court in Scotland), it was held that in the Pharmacy Act it was the person who actually handed the poison who was the responsible party, thus overturning the law of master and servant. It followed that any person legally qualified to sell scheduled poisons (medical practitioners or druggists) was at the mercy of the unqualified assistants or apprentices, who might, contrary to distinct instructions, during the temporary and necessary absence of their principal, sell a scheduled poison, and thus break the law. In the case of druggists, the assistant was prosecuted, but the principal escaped Scot-free, and no penalty was exacted, whereas in the case of a medical practitioner the assistant was prosecuted, but the principal was hauled before the Medical Council and found guilty of infamous conduct, which to him meant professional ruin. He further pointed out that for 300 years in Scotland medical men had been in the habit of keeping open surgeries, and selling to the public drugs of all kinds; at one time in the West of Scotland the Licentiate of the Faculty of Physicians and Surgeons of Glasgow had the exclusive right under their diplomas to be sellers of drugs. Taking the city of Glasgow, north of the Clyde and east of High Street, there were only at present about fifteen shops owned by druggists, while at least 100 medical men kept open surgeries, and the number of medical men who did not keep open surgeries was only about six or seven, thus showing the almost universal custom in that part of Scotland. From his personal knowledge and to the best of his belief this was the position which was more or less universal throughout the whole of Scotland. In the cities and large towns it was only possible for medical men to comply with the present reading of the law at considerable pecuniary loss to themselves, as well as great inconvenience to the general public. In the country districts of Scotland it was absolutely impossible for medical men to act otherwise than sellers of drugs, including poisons frequently required as drugs, to the general public, because practically in the great majority of outlying districts there was no druggist within many miles, and, in fact, no druggist could make a living in those districts. He went on to contend that the carrying out of the present reading of the Pharmacy Act would be impossible in the public interest, and, if carried, or attempted to be carried out, would mean the conviction by the Medical Council of not less than three-fourths of the medical practitioners in Scotland of infamous conduct, a state of things which, in his opinion, would be intolerable, and was never intended by Parliament. It was, he submitted, in the public interest that facilities should be given to the public for procuring necessary drugs. In the case of those poisons in the schedule of the Pharmacy Act it could make no difference to the public safety whether the poison was personally handled by the principal (medical man or druggist) or by his assistant or apprentice, so long as the required safeguards were carried out in regard to Schedule A, Part 1, by requiring the purchaser to be known to the seller, or by bringing a witness, and the transaction being duly entered in the poison-book, or, in the case of Part 2, the name of the principal the name of the drug, &c., appearing on the label. A strict reading of the Act as at present carried out meant, in his opinion, that in large establishments, where one or more qualified assistants were employed, each assistant would require a distinct and separate poison-book and set of labels, with his name and not that of his principal. He then went on to allege that it would be a public danger were the dispensing of scheduled poisons and other drugs taken out of the hands of medical men and put solely into the hands of druggists, because many drugs, particularly narcotics, were only of use in a temporary way, and the medical man could stop the supply any time, whereas in the case of the druggist he went on supplying the narcotic as often as the prescription was handed to him, quite irrespective of whether it was required or not. In conclusion he expressed the opinion that it was undesirable, in the interest of fair play and justice, that the Pharmaceutical Society should be the prosecuting authority under the Act, as it was an interested party.

On the same day (Monday) the evidence of Mr. Rutherford Hill was taken, and Mr. Bremridge was called on Tuesday.

Observations and Reflections.

By Xrayser.

Dover's Powder,

which secured the tiniest reference among the seven personally named remedies of the German Pharmacopœia quoted from the *Apotheker Zeitung* last week, had been famous 150 years when tuberculinum Kochi came into the physic-market, and few there are who would not back the old compound against the young one as a stayer yet. "Thomas Dover," says the German journalist, "was a London doctor, and died in 1741." That is all he tells of him; what a generous record! Old Dover was no *savant*; he discovered no bacillus; he was a good way on the road towards quackery; and yet I fancy his life is better worth narrating than are those of half of the famous men of medicine stamped with the hall-mark of any university whatsoever.

"The Ancient Physician's Legacy

to his Country—Being what he has collected himself in Forty-nine Years' Practice. Or an Account of the Several Diseases incident to Mankind, described in so plain a Manner that any Person may know the Nature of his own Disease. Together with the several Remedies for each Distemper faithfully set down. Designed for the Use of all Private Families." That was Thomas Dover's sole contribution to literature, and therein his famous formula is contained. It was published in 1732, when he was past 70, and he lived nine years longer. But Thomas felt he had a message to deliver, and he had but little faith in the "clan of prejudiced gentlemen," as he termed the Royal College of Physicians. They returned his contempt; or more probably they began the squabble, for Dover tells in his book that they had referred to him in derision as "the quicksilver doctor." But it was a title in which he gloried. He had immense faith in quicksilver, "this precious jelly of mettals as it may be called." It makes a pure balsam of the blood, he says; that is why it cures venereal complaints. You all give it, he adds, but you disguise it. I give it in an honest, open manner. You give it combined with sulphur, the worst excipient you could find, in the form of Ethiop's mineral. That is like striking a man with a sword in a scabbard. They (the clan of prejudiced gentlemen) say it is a poison. "Their opinion is a sign they have travelled far at home." He advises them to "take a trip to Hungary and visit the mines where the quicksilver is dug. They may there see slaves working entirely naked to prevent them stealing the mettal." But these slaves, it appears, dodged their taskmasters "by swallowing every day so much that they buy a choppin of drink with it at night."

Dover was Born

somewhere in Warwickshire in 1660. How he got his medical training is not known, but sometime in his youth he lived in the house of the famous physician Sydenham. There he had smallpox, and his treatment is worth recording. First he was bled to the extent of 22 oz.; then he had an emetic. It was January; he had no fire in his room, the windows were always kept open, and the bedclothes were only allowed up to his waist. The medicine he took was twelve bottles of small beer, acidulated with spirit of vitriol, every twenty-four hours. Having resisted both the disease and the treatment he is first heard of in practice at Bristol in 1684. He plodded on there till 1708, when at the age of 48 he set out with a privateering party on a voyage round the world. They had two ships, the *Duke* and the *Duchess*. Captain Woodes-Rogers, who has left an account of the expedition, was in chief command, and Dover, who had charge of the *Duke*, was his second. He must have been on the sea in his early life, or he would hardly have been chosen to command a vessel. The buccaneers were away from England three years, and they came back with a Spanish frigate of twenty-one guns and lots of loot. Among the other events of the voyage was one of world-famous importance. On February 2, 1709, Dover touched at the island of Juan Fernandez, and brought away from it Alexander Selkirk, who had been there alone four years and four months, and who was to be the prototype of the immortal Robinson Crusoe.

A Few Months Later

the expedition landed at Guayaquil, in Peru. Having sacked the city and stored their plunder in the ships, the sailors slept in the churches, and Dover records quaintly how they were annoyed by the smell of the corpses. For plague was raging in the place at the time, and the victims were laid just below the floor with only a plank or two to cover them. Forty-eight hours later, after they had again put to sea, a large number of the sailors were attacked by the disease. One hundred and eighty of them altogether had it. Dover, who had four surgeons under him, ordered them to be bled freely, and he says about 100 oz. of blood was taken from each man. The surgeons went round and started the bleeding, and only stopped it when they had made their rounds. Then he gave them spirit of vitriol, and only seven or eight died. Returning to England Dover practised in Cecil Street till 1728, when he is again missed for two or three years. From 1731 to 1736 he lived in Arundel Street, Strand. There he wrote his book, in the preface of which he quotes Dr. Radcliffe's opinion that it is expedient that young gentlemen entering our profession should travel. "If travelling be necessary to make an accomplished physician," Dover remarks, "I am very sure that I have travelled more than all the physicians in Great Britain put together."

His Diaphoretic Powder

is prescribed in his book in a chapter on gout. The formula differs, but the resulting compound is practically the same thing that we call Dover's powder. The original formula was as follows:—

> Take opium 1 oz., saltpetre and tartar vitriolated each 4 oz., liquorish 1 oz., ipecacuanha 1 oz. Put the saltpetre and tartar into a red-hot mortar, stirring till they have done flaming. Then powder them very fine; after that slice in your opium; grind these to a powder, and then mix the other powders with these. Dose: from 40 to 60 or 70 gr., in a glass of white-wine posset going to bed, covering up warm, and drinking a quart or three pints of the posset-drink while sweating.
>
> In two or three hours at furthest the patient will be free from pain; and, though before not able to put his foot to the ground, 'tis very much if he cannot walk next day. The remedy may be taken once a week or once a month.

A Side-light

on the relations between doctors and apothecaries in the early years of the eighteenth century is thrown by Thomas Dover's treatise. In a chapter on ague (for which he says bark is the best medicine known to mankind, though he wishes he could have the resinous quality of it separated from the earthy part) he remarks that he cannot prescribe to please the apothecaries. He cannot bring a fever case to 3*l.*, though he has known apothecaries who have run up their bills in such cases to 40*l.*, 50*l.*, or 60*l.* Every time a physician writes, he says, it is supposed to put 10*s.* or 12*s.* in the apothecary's way. Then, as a postcript, he prints the following on the last page:—

> N.B.—Having taken notice of some errors in the practice of other physicians, I shall frankly own one in my own; I have hitherto been too zealous in recommending one particular apothecary, but am resolved, for the future, to let all my patients make use of any apothecary they like best, which I think is but doing justice to the gentlemen of that profession.

Whether this was a really honest repentance, or whether the one particular apothecary had offended Master Dover, doth not appear.

Editorial Comments.

The Threatening Danger.

Sir Herbert Maxwell presented a petition to the House of Commons on Tuesday in favour of "the Trade in Poisons and Poisonous Compounds Bill" from upwards of 1,000 horticulturists, &c. I had never heard of the introduction of a Bill bearing that title, and called the right hon. gentleman's attention to the fact that it did not appear on the papers of either house. After some inquiry he found that I was right, and with amusement he confessed that the petition had been sent to him and that he had simply presented it. I learned, however, that if the Bill ever comes before Parliament its object will be to protect agriculturists and horticulturists from being proceeded against under the Pharmacy Act for the use of various poisons, such as insecticides, &c.

So writes our parliamentary representative. We know the Bill—Mr. Dobbs's baby—and we give emphasis to the paragraph because it is timely, and especially because Sir Herbert Maxwell is chairman of the Committee on Poisons. His reputation for level-headedness had led us to hope that Sir Herbert would conduct the inquiry to the end in a thoroughly impartial manner, for upon him as chairman must rest to a great extent the responsibility of reducing the report of the committee to fair and practicable recommendations based upon all the evidence. But the untimely mishap of Tuesday evening shows that the chairman of the Poisons Committee is an ally of Mr. Dobbs, therefore antagonistic to the existing statutory provisions which Mr. Dobbs and the manufacturers, who back him well, are so desirous of emasculating. This is by no means the solitary incident since the inquiry commenced which demonstrates to those who are qualified under the Pharmacy Act, 1868, that they have a stiff fight before them, and we must repeat, what we have said so often, that the majority of pharmacy leaders in town and country have failed to recognise how dangerous this inquiry is to the craft. The terms of the instructions to the committee were to consider the poison-schedule of the 1868 Act, and ascertain whether circumstances that have occurred since then make the parts of the Schedule A as they now stand suitable for the present time. The committee were also asked to report what addition or

Digitized by Google

other changes should be made, and chiefly they were asked to say whether, in their opinion, another part should be added to the schedule, and what should be placed in that part. These instructions are definite enough, but the inquiry has really wandered over a very wide field, and, as may be judged from the evidence of Mr. Muir given in this issue, it has been quite discursive in character, not to say abusive of the Pharmaceutical Society. The evidence has been overwhelmingly against the existing state of things—that is to say, the witnesses have been more numerously drawn from anti-pharmaceutical sources. We may group them as follows:—

Pharmaceutical	*Anti-pharmaceutical*	*Neutral*
Mr. C. B. Allen	Mr. Jas. Cockburn	Mr. C. Beck
Mr. Bremridge	Mr. H. Connell	Mr. R. G. Crawford (for Board of Agriculture)
Mr. Carteighe	Mr. Isaac Connell	Mr. W. J. Leggett
Mr. W. G. Cross	Mr. W. Darlington	Mr. A. W. Lobb
Mr. J. R. Hill	Mr. Dobbs	Dr. Selby
Mr. Newsholme	Mr. Le Neve Foster	Dr. Wynn Westcott
Mr. J. W. Sutherland	Mr. A. F. Giles	
	Mr. J. B. Jones	
	Mr. J. L. Major	
	Dr. W. L. Muir	
	Mr. T. V. Pettifer	
	Mr. R. H. Smith	
	Dr. Voelcker	
	Mr. W. G. Whiffen	

The most peculiar feature of the inquiry has been that the pharmaceutical witnesses were called first, and the whole tide of evidence thereafter was directed to throw up a big bank of support for the Dobbs proposal. The late Mr. Martindale, handicapped as he was, felt keenly—too keenly, alas! the danger, and insisted that other pharmaceutical witnesses should be heard. Accordingly the Secretary and Assistant Secretary of the Society were heard this week. By "anti-pharmaceutical" we do not mean that all the witnesses grouped in the second column are antagonistic to pharmacy and pharmacists as such. Some of the witnesses testified to the efficiency of the provisions for ensuring adequate education of dispensers of medicines, but the object of the evidence by this class as a whole was to prove that a trade in poisons for agricultural and industrial purposes, apart from the drug-trade, exists, and should be legalised. The fact was not emphasised that this trade has grown because of the safeguards that chemists and druggists, as the registered retailers of poisons, insist upon in selling poisons. The middle-column witnesses could hardly be expected to dwell unduly upon that feature. It suits their purpose better to speak about the chemist's profits, and that he is not so enterprising as the ironmonger or general storekeeper, who doubtless give no more thought to the destination of any poison they sell than they would to a keg of nails or a bag of sugar. When the fact is also taken into account that the pharmaceutical witnesses in the first instance appeared comparatively unprepared, and without instructions from the Pharmaceutical Council, it may be realised that things are in a pretty mess—from our point of view. We have every confidence in the diplomacy and force of Mr. Walter Hills, but he should have pharmaceutical support on the committee as well as outside it. One of the purposes of this note is to encourage the growth of the latter in all ranks of pharmacy, especially unofficial ranks. We have stated certain facts as to the anti-pharmaceutical character of the inquiry, and from these (without dwelling upon the pitiful tragedy associated with it) our readers will be able to judge whether or not the Pharmaceutical Council is justified in continuing on its placid way. This is no hysterical utterance. Our views are shared by other pharmacists who are intimate with the Committee's work, and they know that the principle of the Pharmacy Act is not only assailed, but is practically given away.

The Doctor-druggist.

MR. A. L. MUIR, the Glasgow physician and surgeon who gave evidence before the Poisons Committee on Monday, is supposed to have come off with flying colours, and there was a mild wave of excitement in Parliamentary circles that evening respecting him and his views. This is difficult to understand when anyone having a general acquaintance with pharmacy law and the condition of the drug-trade in Scotland reads the digest of Mr. Muir's evidence which is printed on page 436. The evidence practically resolves itself into three parts—first, that the Legislature intended that employers of assistants who sell poisons should be on the ordinary footing of master and servant; second, that a very large proportion of medical practitioners in Scotland keep open shop; third, that the name of the assistant who sells poisons should be on the label, &c. Mr. Muir's first statement is based upon the fact that the Pharmaceutical Society did not until 1869 take proceedings under Section 15 of the Pharmacy Act against the unqualified assistant of a qualified employer. The practice had grown of regarding the employer as the responsible individual in every sense, the phrase in Section 17—"the person on whose behalf the sale is made by any apprentice or servant shall be deemed to be the seller"—lending colour to that view. It broke down completely whenever the courts were asked to say who under Section 15 is the person that sells, and the result has been of immense benefit to the public. Mr. Muir put this matter before the committee in such a way as to indicate that it has been a great hardship to medical men, and he drew a horrifying picture of how such gentlemen are hauled before the General Medical Council and found guilty of infamous conduct because some unqualified assistant or apprentice has, contrary to instructions, sold poisons. No such case has yet occurred. In every instance where medical practitioners have been before the General Medical Council the charge of habitually employing unqualified persons (who had been fined under the Pharmacy Act) has been admitted and the promise made not to do it again. It appears to be considered a hardship that chemists and druggists have not a similar ordeal to go through, but as a matter of fact there is no case yet recorded in which a chemist and druggist has been shown to habitually employ an unqualified person who has been fined for selling poisons. Nor is there much chance of such cases arising, for chemists and druggists attend to their business—the open shop—while medical practitioners, by attending to theirs (visiting patients), neglect their open shops. Here we come in contact with the second part of Mr. Muir's evidence. He said that 100 medical men keep open shops in a certain part of Glasgow, and only six or seven do not, this position being "more or less universal throughout the whole of Scotland." Mr. Muir's figures, as far as they go, are open to correction, and his statement as to the rest of Scotland is wildly inaccurate. Taking the eight largest towns of Scotland—Glasgow, Edinburgh, Dundee, Leith, Aberdeen, Greenock, Paisley, and Perth—we would venture on personal knowledge to say that there are not in them and outside Glasgow, Greenock, and Paisley ten drug-shops kept by doctors. There is no doctor's open shop, as far as we know, in Inverness, Montrose, Arbroath, St. Andrews (or any Fife village or town), Hawick, Galashiels, and dozens of other towns that might be named. The doctor's shop is indigenous to the country south of the Forth and west of Falkirk, and even in remote Highland and country districts the doctor-druggist is a rare inhabitant. These facts show what value may be attached to Mr. Muir's evidence, but he breaks down so badly in the third part that it really sets the standard for the whole. He is of opinion

Digitized by Google

that each qualified assistant should have a poison-book and set of labels with his own name. This is contrary to Section 17 of the Act, which specifies the conditions to be observed in selling poisons, and ensures that the provision of Section 15 shall not in this case apply by stating that "for the purposes of this section the person on whose behalf any sale is made . . . shall be deemed to be the seller." Nothing could be clearer. In view of the publicity which has been given in Scotland to Mr. Muir's evidence, we have thought it right to turn the reverse of the shield to the light and it is not our fault that the brilliant metallic lustre of the front conceals a pasteboard composition.

THE MARTINDALE MEMORIAL.

We understand that the subscriptions are coming in fairly well. In reply to numerous inquiries from wholesalers and others we may state that the subscriptions are not confined to members of the Pharmaceutical Society. The resolution expressly mentioned the "friends of Mr. Martindale" as being contributors to the memorial, and the opinion was expressed that all connected with pharmacy and the medical profession might participate. Subscriptions should be sent to the Secretary, Mr. George S. Taylor, 17 Bloomsbury Square, London, W.C.

ARSENIC IN CROPS.

Mr. Arthur Angell, public analyst, Southampton, and Mr. A. F. Angell have made a series of experiments to determine whether or not plants are capable of taking up arsenic from soil manured with arsenical phosphates, and the results have been communicated to the Commission which is inquiring into the subject of arsenical poisoning. Several samples of the ordinary superphosphate manures of commerce were obtained and tested, and arsenic was found in every instance, the quantity (reckoned as As_2O_3) being generally about 0·03 per cent. by weight on the whole manure. An ordinary superphosphate of lime was mixed with ½ per cent. of arsenic, this being a proportion of arsenic about seventeen times greater than the quantity usually present in commercial phosphates. Half the manure was applied at time of sowing and half when the young plants were well above ground, and it was determined by experiment that the arsenic when mixed with superphosphates was readily soluble in cold water. The method adopted for the testing and estimation of arsenic was Hehner's modification of Marsh's process, which is, in Messrs. Angell's opinion, the most delicate and reliable process for the determination of minute traces of arsenic, and which yields very close approximations of the actual quantity present in dilutions of one part arsenic in ten millions. Samples of the land on which the crops were grown were taken after the crops were harvested; arsenic was traceable in the mixed samples, and therefore the plants had been subjected to the influence of arsenic all through their life history. The results go to show that the roots of plants are capable of taking up arsenic from soils manured with arsenical phosphates. From the roots the arsenic can rise in the fibro-vascular bundles by a process of suction and capillarity, and may be present in measurable quantities in the early stages of succulent growths. Arsenic was found in rhubarb-petioles and leaf-blades, and in the young leaves or grass of rye and buckwheat, and in the stems and leaves and green pods of broad beans; but in no instance was the faintest trace of arsenic present in the fruit or seed of any plant. It thus appears that in those parts of the plants which are remote from the influences of mere mechanical forces, and where vital or physiological energies predominate, a selective power is brought to bear, and arsenic, even if present, is rejected.

TRADE IN FEBRUARY.

Great Britain and Ireland have little to grumble at as regards the inward and outward trade of February. The total imports were valued at 41,691,591*l.*, or nearly two millions more than in February, 1901, and over four millions more than in February, 1900. Fully half of the month's increase was in raw materials for textile manufacturers. Chemical items showed a decrease of 32,429*l.*, but only 975*l.* less than in February, 1900. Our exports were better by 274,821*l.*, the total being 21,312,455*l.*; but in February, 1900, the trade done was 23,219,849*l.* The export business in chemicals and medicinal preparations increased by 101,218*l.* over February last year, the only higher item being ships. Still, the total (750,227*l.*) is behind that of February, 1900, when 869,278*l.* worth of British-made chemicals, &c., were exported. Pharmaceutical products are responsible for a good deal of last month's increase, medicines being put down at 104 867*l.* (of which 2,995*l* was for quinine), against 98,773*l.* in February, 1901, and 94,713*l.* in February, 1900. Soda compounds were also better by about 20,000*l.*, and bleaching-powder has improved, but is still behind on the year to the extent of 20,000 cwt. and 7,000*l.* U.S.A. is responsible for that. Chemical manures were better than in February, 1901, the total being 30,337 tons, valued at 232 845*l.*; and copper sulphate is recovering slightly, but the exports this year so far are less than half those of 1900. The quinine account for the month is as follows:—

Imports	*Exports*
29,116 oz., value 1,280*l.*	British, 45,272 oz., value 2,995*l.* Foreign, 16,200 oz., value 283*l.*

It will be seen from this that foreign quinine is imported at a little over 10*d.* an oz., but it is exported at about 4*d.* an oz., while British-made quinine goes into the export-market at almost four times that value!

THE CHEMIST'S BUMPS.

The February issue of the *Popular Phrenologist* contains an article by Mr. J. Millott Severn on "The Pharmaceutical Chemist." Much information is given about the examinations and conditions of pharmacy, but the most interesting portion of the article is that which sets forth the perfect phrenological requirements of the pharmacist. According to Mr. Severn—

> Phrenologically, a pharmaceutical chemist should possess a fair-sized head—circumference 22 inches or more. It should be well proportioned, rather high, moderately wide, well developed in the front, and fairly so at the back. Quality of organisation should be superior. He should possess well-developed perceptiveness—Individuality and Locality especially—so that he may be observant of details, have a good memory of the location of things, and be scientific in his tastes. A good degree of Colour will assist him in distinguishing ingredients in mixtures, compounds, &c. The reasoning organs, Causality, Comparison, and Human Nature, should be large, also Ideality, that he may possess good reasoning powers, critical acumen, intuition of mind, analytical, classifying and comparing abilities, a thoughtful, studious disposition, and sense of refinement. He should possess well-developed moral organs, especially Conscientiousness, to give him a just sense of duty and make him feel the seriousness and responsibility of his calling; and he should have well-developed Hope and Benevolence, Firmness and Approbativeness, and fair Self-Esteem, that he may be firm, stable, reliable, hopeful, and sympathetic, yet dignified; and well-marked domestic organs would help to give staidness to his character.

The article is illustrated with a portrait of Mr. H. J. Barker, chemist and druggist, for several years Treasurer of the Brighton Phrenological Society, in whom, the writer asserts, are to be found many of the typical mental qualities required in a pharmacist.

An International Exhibition is to be opened in Vienna from May to October next year.

Winter Session.

Royal Institution.

THE Friday evening discourse on March 7 was in French, Professor Henri Becquerel being the lecturer. Sir Wm. Crookes was in the chair, and the audience was exceptionally large. The subject,

RADIO-ACTIVE BODIES,

was illustrated by a series of excellent lantern-slides. It was six years ago, said the Professor, since the discovery of Professor Roentgen led him to the study of the radiations of matter. The salts of uranium were investigated owing to their exceptional properties, it being shown that they emit a phosphorescence which is capable of impressing a photographic plate. The lecturer showed some slides of the impressions made by uranium salts on sensitive plates, and produced a small piece of metallic uranium given him by M. Moissan, which had a beautiful steel-blue phosphorescence in the dark. The occurrence of radiant bodies in other substances beside uranium, such as barium and bismuth, led M. and Mme. Curie to endeavour to isolate a general radio-active body from the several sources. They succeeded in extracting from a variety of pitch-blende containing barium a body called radium, and from another kind containing bismuth a body which they named polonium. A pretty experiment was then shown of the property possessed by these bodies of discharging electricity from a gold-leaf electroscope. The electroscope was charged, and radium brought within a few feet, when the leaves at once fell together. Another brilliant experiment showed the strong electrical properties possessed by radium. A coil was set in action, and on placing a piece of radium at one pole the sparking at once stopped. Photographically polonium is more active than radium; and later, speaking of the relative penetrability of radiant bodies through metals, the Professor remarked that probably all bodies would affect the photographic plate in time, but it might take a thousand years in some cases. Platinum stops the radiations reaching the photographic plate. Aluminium is easily penetrated, but with lead it takes a few days before the radiations affect a sensitive surface. Mention was made of Sir Wm. Crookes's work on the spectrum and atomic weight of radium, and to the fact that a solution of radium is radiantly active.

Chemical Society.

LAST week's meeting at Burlington House was held on Thursday evening, when, owing to the absence of the President, the chair was taken by Dr. E. Divers. The first paper was by Dr. Bone and Mr. Wheeler on

THE COMBUSTION OF METHANE.

Dr. BONE communicated the substance of it at tedious length. Many experiments have been made and much controversial matter published on the subject, the point in dispute being as to which of the two elements undergo oxidation first when marsh gas is burned in an insufficient supply of oxygen. The authors find that when mixtures of methane and oxygen in the proportion 2 : 1 are heated at temperatures ranging from 300° to 400° C., both carbon and hydrogen are burned together, the former to the monoxide, the latter to water, a small amount of carbon dioxide being also formed probably as the result of a secondary reaction between the main products of combustion. In brief, the following equation expresses the result:—

$$2CH_4 + 3O_2 = 2CO + 4H_2O.$$

Dr. F. G. FRANCIS next described some additive compounds obtained by the interaction of

AROMATIC KETONES AND AROMATIC AMINES.

The substances in question exhibit tautomerism of the keto and enol type, but, unlike most of the bodies of this character previously described, can exist in three or even four forms, readily separable from each other by fractional crystallisation, and mutually convertible by the influence of piperidine and sodium ethylate in solvents, from which they have been crystallised.

THE OXIDATION OF TARTARIC ACID

was the subject of the next paper, contributed by Messrs. FENTON and RYFFEL, in continuation of Mr. Fenton's researches on the oxidation of the acid by hydrogen peroxide in presence of ferrous salts. In the present communication the authors showed that chlorine is slowly absorbed by solution of tartaric acid containing iron in the ferrous state, tartaric acid being readily oxidised to the semi-aldehyde of mesoxalic acid. This substance it was found impossible to isolate as such in the crystalline state, but its presence in the reaction mixture was demonstrated by the preparation of the corresponding osazone and dioxime.

THE OXIDATION OF SUGARS.

Messrs. MORELL and CROFT then described the application of Fenton's reaction to the carbohydrates. These chemists have already shown that when the various sugars are oxidised by hydrogen peroxide in presence of ferrous salts the corresponding osones are formed. In the case of complex sugars such as maltose and sucrose they now find that inversion first occurs, and the dextrose and levulose so formed are oxidised to osones. The latter have been identified by the preparation of phenyl-glucosones from them, and by their oxidation-products with potassium permanganate, glucosone, with the latter reagent, furnishing trihydroxybutyric acid. It is rather remarkable that galactose, one of the hydrolytic products of milk-sugar, is not attacked by hydrogen peroxide even in presence of ferrous salts.

These authors were succeeded by Dr. M. O. FORSTER, who gave the gist of a paper by Miss F. M. G. Micklethwait and himself on

m-NITRO-BENZOYL CAMPHORS.

An account of Dr. Forster's attempts to prepare the "enolic" tautomer of ordinary camphor has already been given in this journal, and these having failed the authors have prepared and examined this new camphor derivative in order to ascertain whether, like similar derivatives of other tautomeric substances of this class, it shows a tendency to persist in the enolic form. They find that this is the case, and so the tautomerism of camphor and its derivatives may be represented by the following scheme:—

Camphor. Ketonic form only known. ——→ *a* Benzoyl-camphor. Ketonic and enolic forms known.

——→ *a m*-Nitro-benzol Camphor. Enolic forms only known.

The last paper was contributed by Dr. CHATTAWAY, and dealt at considerable length with the evidence for and against the imino formula of cyanogen compounds. On this subject a *résumé* of the new experimental work has already been given in the account of Dr. Chattaway's and Mr. Wadmore's recent paper on cyanogen compounds (*C. & D.*, February 8, 1902).

Society of Chemical Industry.

LONDON SECTION.

AT this meeting held in Burlington House on Monday, March 10, Mr. Otto Hehner in the chair, a long paper on "Birmingham Sewage and its Treatment" was read by Mr. F. R. O'SHAUGHNESSY. The method adopted in some of its details was somewhat adversely criticised by Dr. Rideal, who thought that if chemical and bacterial experts were more employed in such cases so much money would not be required by engineers. Mr. E. G. CLAYTON, F.I.C, F.C.S, then read an interesting paper on

THE TECHNICAL EXAMINATION OF GLUE.

He commenced by saying that his investigations had been mainly directed to certain specific points, so that the absence of any reference to certain well-known tests must not be taken to indicate that he did not appreciate their value. Dealing first with obvious features, he said colour should be attended to, though too much attention is sometimes paid to it; other things being equal, a pale-coloured sample is to be preferred, but sometimes a darker sample is found to be superior to a lighter. Lustre and translucency should also be noted; air-bubbles should be few, or absent, odour

Digitized by Google

should be absent or inoffensive, and glue should not quickly deteriorate on exposure to the air. With regard to chemical decomposition, the conclusions derived from analysis are generally less definite than those based on physical tests. The proportion of water should be between 10½ and 18½ per cent.; mineral matter is variable, and by itself is no criterion of quality, but should not exceed 3½ per cent. The proportion of soluble to insoluble, and the presence or absence of chlorides or phosphates, sometimes give an indication of the source or method of manufacture. If present in more than a minute amount they are held to indicate bone-glue rather than hide-glue. It should be tested for sulphites and for preservatives, such as zinc or other metallic salts. Perhaps the best single comparative test is Stelling's, which depends on the estimation of non-gelatinous matter by precipitation by alcohol, filtering and evaporating fractionally, and weighing the dry residue. By this test he found two samples, which were also of low quality, as tested in other ways, had 9·9 and 8·4 per cent. respectively of non-gelatinous components, whilst other samples yielded from 1 up to 4 per cent. The matter insoluble in boiling water was in one case ½ per cent., in the others none; mineral matter varied from 1·3 to 7·25 per cent. The ash was infusible in all cases but one. The physical tests were next dealt with, and comprise the amount of water absorbed by immersion of the glue in water; the hygrometric test, as shown by the amount of moisture absorbed by exposure to moist air in a closed vessel; the rate of drying of glue-jelly, and the influence of temperature thereon; the viscosity, as determined by Fell's test; the setting and hardening of glue solutions. In all these tests it is of the utmost importance that the exact conditions as to temperature, &c, should be the same in dealing with each sample, otherwise any comparison between them is impossible. In the case of the hygrometric test the size of the containing vessel had an important influence on the quantity of moisture absorbed.

A short discussion ensued, in which several speakers remarked on the absence of any test for adhesiveness.

In his reply, Mr. Clayton pointed out that he had professed to give a complete examination of the subject, and, as a matter of fact, the question of adhesiveness was not very important in connection with the samples submitted to him.

Manchester Section.

A meeting of this Section was held on March 7, Dr. Bailey in the chair. Dr. Gerland reported that he was continuing his experiments as to the best methods of estimating arsenic in beer. Mr. Craven called attention to the Corporation Bill to be placed before Parliament, in which there is a clause to prevent chemical-manufacturers from turning any effluent except pure water into the sewers. The matter is to be discussed at a future meeting.

Yorkshire Section.

At a meeting held at Leeds on February 24, Messrs. P. North and W. C. Lee gave some

analytical notes.

The first was a paper on estimation of alkaline hydrate or bicarbonate in the presence of mono-carbonate. The authors said it had been stated that in Thompson's method—titrating half the carbonate and the whole of the hydrate with standard acid, using phenol-phthalein as indicator, and then titrating the remaining half of the carbonate with acid, using methyl orange as indicator—a constant error is introduced. If the method is conducted, however, with carefully purified materials, correct results could be obtained. When titrating the tip of the burette must be well immersed in the solution to be titrated. The authors make the standard solution of sodium carbonate by washing sodium bicarbonate free from chloride, igniting until constant in weight, and then dissolving a known quantity in a certain volume of water so as to be exactly normal. The standard sodium hydrate used is prepared by dissolving metallic sodium in distilled water and diluting until exactly decinormal.

The following method was recommended by the authors for the analysis of bicarbonate in the presence of mono-carbonate:—Five grains of the sample is dissolved in distilled water made up to 250 c.c. and 50 c.c., after adding phenol-phthalein, titrated with N/1 acid, with the point of the burette immersed in the solution; then add one or two drops of methyl orange, and continue the titration. In the analysis of a "soda ash" the authors pointed out that should the amount of N/1 acid be greater with phenol-phthalein than with methyl orange, then sodium hydrate is present, but if greater with methyl orange, then bicarbonate is present, and the calculations for carbonate and hydrate or carbonate and bicarbonate are made in the usual way.

School of Pharmacy Students' Association.

Under the auspices of the above Association a social evening was held at 17 Bloomsbury Square, W.C., on March 5. An audience consisting of past and present students and visitors assembled in the Lecture Theatre to hear Professor Collie's lecture on the "Lofoten Islands." Professor J. Reynolds Green, President of the Association, occupied the chair. For more than an hour the Professor held his audience with a delightful account of the tour he made with a small party round the islands last summer, his remarks being illustrated by a number of splendid lantern-slides from photographs taken by himself. At the conclusion the Chairman, in a few remarks, said he did not know whom he ought to congratulate the more, Dr. Collie on having spent such a pleasant vacation, or the audience on being made so familiar with the Lofoten Islands and their lovely scenery without the dangers of mountaineering or the discomforts of rain-storms which last three days. Mr. Walter Hills then rose to propose a hearty vote of thanks to Professor Collie, saying how thoroughly he had enjoyed the lecture, and evidently voicing the opinion of everyone present; whilst, on behalf of the students, Mr. R. A. Robinson, jun., seconded the resolution, observing that no evening in the session had been so looked forward to as the present one. The vote was carried unanimously, and a most enjoyable meeting was shortly afterwards brought to a close.

Young Chemists' Association.

A meeting of this Association was held at Newcastle on March 5, Mr. Barry Noble in the chair. Mr. Dudderidge read a paper on "The Pharmacist as a Professional Man." He said that pharmacy is undoubtedly a profession, but if the chemist is unable to obtain a living at it, it is no disgrace to add side-lines as long as they are in the scientific direction. It is possible, Mr. Dudderidge said, to cultivate a dispensing business to a certain extent by giving attention to details. General untidiness is greatly responsible for failures in the examination-room, and factory-made preparations are neither cheaper nor better than home-made ones urged by the speaker. The Major examination, he continued, is often decried from two opposite standpoints: first, it is said to be of no use in an ordinary business; the second, it is not so scientific as the B.Sc. examination. He admitted that the value of the examination is not always evident in everyday business, but there are cases when a Major man could make a little more out of his more extended knowledge than a Minor man. Then, again, although the Major is not a B.Sc. degree, it requires a knowledge in subjects such as materia medica, which are far more useful to the ordinary pharmacist than the B Sc. subjects are. Its requirements in physics would do well to prepare the way for a diploma in optics—a side-line both professional and profitable to the pharmacist.

Midland Pharmaceutical Association.

A meeting was held at Birmingham University on March 6, under the presidency of Mr. John Barclay, who read the first paper on the standardisation of the official

Compound Tincture of Benzoin.

By John Barclay, B.Sc. (Lond.), F.C.S., and E W. Mann.

After reviewing the published statements dealing with the constitution of the tincture ingredients, the authors stated that these ingredients are used in the proportions of benzoin 10, storax 7·5, balsam tolu 2·5, and aloes 1·83 grammes per 100 c.c., or a total of 21·83 grammes. As all

Digitized by Google

the ingredients, except the aloes, are required by the Pharmacopœia to be "almost entirely soluble in alcohol," it is obvious that 20 per cent. by volume of soluble balsamic ingredients are present, and, after allowing for a possible 10 per cent. of insolubility for each drug, there remains 18 per cent. of dissolved matter below which, in their opinion, the percentage of extractive should not fall. In all cases allowance for insoluble matter in benzoin would, as Dr. Attfield had stated, have to be made where necessary, such allowance in the case of Siam benzoin being considerably less than in that of the Sumatra product. The high price of the Siam drug would, however, render its use as inadvisable as it is unnecessary.

In order to ascertain to what extent commercial samples of the tincture correspond with the 18-per-cent. standard, the authors had examined seven, with the following results :—

	1	2	3	4	5	6	7
Sp. gr.	0·8885	0·897	0·8995	0·897	0·896	0·9045	0·905
Solid ...	14·99	17·62	17·22	15·85	17·47	18·03	19·25

Nos. 2, 3, 5 and 6 were properly prepared, Nos. 1 and 4 were weak, and No. 7 abnormally strong, and was peculiar in other respects. The figures show that the 18-per-cent. standard is just. "Solid" figures are grammes in 100 c.c.

The second part of the paper dealt with a suggested standard independent of percentage of extractive matter. A preparation which owes its medicinal value to compounds capable of chemical estimation, should be required to contain some definite percentage of these constituents approximately estimated. The authors, therefore, experimented with a view of obtaining a simple process for estimating free and combined benzoic and cinnamic acids. Their experiments were first made with the tincture ingredients, and the process followed in the case of benzoin may be taken as an example of what was done in the other cases :—

From 1-2 grammes of the drug was treated with 25 c.c. of chloroform, the solution filtered, the filter washed with chloroform, and 50 c.c. of distilled water added to the solution. The liquid so obtained was titrated with decinormal soda solution, phenol-phthalein being used as indicator, and the results calculated into benzoic acid (1 c.c. N/10 NaOH = 0·0121 C_6H_5COOH). To estimate the combined acid the chloroformic solution from the above-mentioned titration was separated from the water (containing benzoates and cinnamates of soda in solution) and the chloroform removed by distillation over the water-bath. To the residue 50 c.c. of 2½ per cent. soda solution was added, and the mixture boiled for an hour under a reflux condenser. It was then transferred to a separator, and shaken with 10 c.c. of chloroform, excess of dilute hydrochloric acid was then added, and the mixture agitated with 5 c.c. of chloroform four times. The chloroformic solution of the acids was next washed with several successive portions of water until the washings ceased to affect litmus-paper. To the washed chloroformic solution now remaining, 50 c.c. of water was added, and titration conducted as before, the figure obtained being taken to represent combined acids, and being calculated as before into terms of benzoic acid. In dealing with the tincture, 10 c.c. was taken and evaporated at a low temperature to a syrupy consistency, 25 c.c. of chloroform was added to the residue, the chloroformic solution filtered, the filter washed, and after the addition of 50 c.c. of water titration was proceeded with as above. The estimation of combined acid in the tincture residue was performed exactly as described.

Saponification of the esters was at first performed with alcoholic soda, but as aqueous alkali gave exactly the same results it was adopted. In dealing with benzoin and tolu, an estimation of alcohol-soluble matter was first made, and the results for free and combined acids calculated to a basis of 90-per-cent. solubility. The following table shows the mean results (grammes per 100 c.c.) obtained from an examination of several specimens of each drug :—

——	Free Acid	Combined Acid
Benzoin (Siam)	5·29	29·51
Benzoin (Sumatra)	11·58	16·86
Storax	5·29	18·82
Tolu balsam	18·20	22·47

The figures obtained accorded fairly well with those generally accepted as giving the proportions of balsamic acid present in the drugs. A calculation was next made to ascertain the theoretical percentage of free and combined acids yielded to the tincture by drugs having the mean acid values given in the table. The results obtained were for free acid in tincture (theoretical), 1·98 grammes per 100 c.c. ; for combined acid tincture (theoretical), 3·70 grammes per 100 c.c.

The next table shows the results (grammes per 100 c.c.) of the assay for balsamic acids of the seven samples of commercial tinctures :—

——	1	2	3	4	5	6	7
Free acid ...	1·69	2·00	1·88	1·96	1·91	2·09	2·38
Combined acid	2·71	3·34	3·51	2·37	3·25	3·20	2·58

The mean percentages of all samples were, for free acid 1·99, for combined acid 3·7, but as tinctures Nos. 1 and 4 have already been shown to be weak in extractive, and the proportions of free and combined acids in No. 7 were peculiar, these three samples were best left out of consideration, and the mean percentages for the remaining four tinctures noted. These were

Mean percentage (grammes per 100 c.c.) of free acid in tinctures, 1·97.

Mean percentage (grammes per 100 c.c.) combined acid in tinctures, 3·32.

The calculated and actual percentages of free acid are almost identical, whilst the calculated percentage of combined acid is about 10 per cent. higher than the actual. The authors concluded by suggesting as a standard for the tincture that it should, when assayed by their process, "yield not less than about 5 per cent. of balsamic acids calculated as benzoic, out of which neither more nor less than about two-fifths should be present in an uncombined condition."

DISCUSSION.

Mr. A. W. GERRARD pointed out that standardisation of compound tincture of benzoin was eminently a local subject, Mr. Barclay and others having made it a particular study. He had noticed during the whole of his practical experience that storax varies considerably in consistency and odour, and he has detected a distinct smell of methyl. Of course he would not say that methylated spirit had been used in its preparation, because that was scarcely allowable. He agreed that the minimum standard of total solid matter should be 18 per cent., and he had been sorry to find that the standard had often been below that. He thought chemists who had tincture on their shelves below this standard were not very wise. He was rather surprised to find the combined acids rather low, for he found that in Sumatra benzoin the free acid was rather high, and consequently was a better preparation to make in using this tincture than the Siam product. The tincture owed its value largely to its antiseptic qualities, which would be enhanced by a larger percentage of free acid.

Mr. F. H. ALCOCK said he was inclined to think that this idea of percentage had been misunderstood. Was it possible that the Somerset House authorities had based their's on weight in weight? Mr. Alcock proceeded to speak of the process of assay now suggested, then stated that methylated ether is far more efficacious than spirit for purifying storax. There was a great temptation to use methylated spirit, and if evaporation was conducted properly there was very little odour of methyl left behind. But he did not think it was legitimate to use it for such a purpose, and consequently it could not be recommended. The authors had made no mention of the presence of water in storax. It was there to the extent, say, of 8 per cent., and it seemed possible that the solid matter at present in the tincture would thereby be reduced. He was inclined to think that this question of compound tincture of benzoin had settled itself somewhat in Birmingham, because of the very flagrant mistakes which had been made from time to time in the making of the article. Some samples he had examined had evidently been made by an amateur. He had found glycerin in them and a low percentage of solids, and the excuse offered was that two kinds

Digitized by Google

of tincture was kept—one used in veterinary pharmacy, the other in ordinary pharmacy. That, he was inclined to think, was the reason the authorities were so strict in the matter of tincture of benzoin.

Mr. J. Poole suggested that 17 per cent. of solid matter would be a safe figure to depend upon in the samples.

Mr. Gerrard thought a useful work was being done in trying to fix a fair standard for total acids. They knew how easy it was after using tolu in making syrup to apply the residue for making the tincture.

Mr. Alcock mentioned that the temperature at which the tinctures are evaporated is important, as if too high free acids are volatised.

Mr. Perry also emphasised this point, and agreed as to the importance of trying to fix a standard for the acids.

Mr. Barclay, in the course of his reply, referred first to Mr. Gerrard's allusion to the odour of methylated spirit being left in storax, and suggested that pharmacists should buy crude storax, and use an equivalent quantity of this to standardise the final product. By standardising it himself he made certain of the absolute percentage of storax present, and so avoided any odour of methyl. If he relied on the wholesaler to purify the storax, there was always the possibility of methylated spirit being used. It was a great temptation to a pharmacist to use syrup of tolu residues in making tincture of benzoin. They wanted to prevent this, and it was for that reason, among others, that the paper was written. Mr. Alcock, he continued, seemed a bit unwilling to allow an 18 per-cent. standard for this tincture, and he mentioned Somerset House as being an authority. Mr. Barclay did not think Somerset House was any authority at all. They had the B.P. and they had their own information on these matters. Somerset House took very curious stands. If Somerset House thought compound tincture of benzoin should contain 14 per cent. of total solids, whether by volume or weight, then Somerset House was absolutely wrong. After touching on other points in the discussion, Mr. Barclay reminded Mr. Poole that the figures had to be taken in conjunction with the fact that at least 20 per cent. solids could be obtained by the official processes. If the substances were quite pure, and if they allowed 10 per cent. for the insoluble matter, then they had a theoretical yield which was fairly borne out by this tincture. These figures, from the examination of commercial samples, show evidence that the majority of manufacturers aimed at an 18 per-cent. standard, and it would be a retrograde step to attempt to lower the standard. With reference to Siam benzoin, he mentioned that it was about three times the price of Sumatra benzoin, and if sufficient of the latter were used to allow for insoluble matter, then a better tincture would result. He gave this as his opinion, because of the larger percentage of free balsamic acids contained in the Sumatra product, and so far as he could judge, a preparation containing plenty of free acid would be superior for medicinal purposes to one containing the acids in their combined condition. The next paper was on

The Estimation of Fat in Milk.

By Geo. E. Perry.

This dealt with A. A. Bonnema's method (*Jour. Chem. Soc.* 1899), which is as follows:—

One hundred cubic centimetres of the milk are put into a 100-c.c. cylindrical glass, and mixed with 1·5 c.c. of aqueous caustic potash (20 grammes per 100 c.c.). After shaking for a moment 25 c.c. of ether are added, and the whole thoroughly shaken for five minutes, the glass being held in the warm hand. The glass is placed in cold water, the stopper removed for a moment, 2 grammes of tragacanth are added, and the whole is again thoroughly shaken. The tragacanth absorbs all the water and forms a clot, whilst the ether becomes quite clear. Ten cubic centimetres of the ethereal solution are now pipetted off and evaporated in a weighed dish.

Mr. Perry tried this method against Adams's, and compared the results thus:—

Adams's Process.		*Tragacanth Process.*	
	Per Cent.		Per Cent.
(1)	2·72	(*a*)	2·64
		(*b*)	2·67
(2)	1·08	(*a*)	0·930
		(*b*)	0·925
(3)	2·08	(*a*)	2·02
		(*b*)	1·99
(4)	3·8	(*a*)	3·78
		(*b*)	3·77
(5)	2·25	(*a*)	2·21
		(*b*)	2·30
(6)	2·74	(*a*)	2·71
		(*b*)	2·73
(7)	5·5	(*a*)	5·57
		(*b*)	5·51

In the last experiment some extra cream was purposely added to the milk. The process is easily and expeditiously carried out. The operator should take care that the stopper is not removed from the bottle before the ethereal solution is thoroughly cooled, or discrepancies from this cause may arise.

Mr. Barclay and Mr. Alcock spoke briefly on the paper, and Mr. Perry proceeded to read another on

Sweet Spirit of Nitre.

This dealt solely with keeping the spirit in an inverted bottle. Five oz. of sp. æther. nit. (5 c.c. yielding 34·5 c.c. of gas) was placed in each of two 6-oz. stoppered bottles, one bottle was capped with sheet-rubber and inverted, and the other placed upright on the shelf. Portions were taken daily from each during twenty-six days, the quantity at the end being less than 1 fl.-oz. The results of testing were as follows:—

5 c.c.	Upright Bottle	Inverted Bottle
First tested ...	= 31·5 c.c.	34·5 c.c.
18th day	= 28·5 c.c.	31·5 c.c.
26th day	= 24·0 c.c.	27·0 c.c.

Thus an inverted bottle has some advantage over an upright one, but the contents should not be allowed to run too low.

In the course of the discussion Mr. Barclay said oxidation was the cause of the falling of.

Mr. Southall inquired whether experiments had been made to determine what influence light had upon the sample, and Mr. Alcock asked if the bottles were amber coloured, but white-flint bottles were used by Mr. Perry, and light was not excluded. [Compare *C. & D.*, May 25, 1901, page 833, and July 20, page 108, as well as August 3, page 241]

Aberdeen Pharmaceutical Association.

The sixty-fourth annual meeting of this Association was held in the Board-room, Gordon's College, on Wednesday evening, March 5, Mr. A. Craig (President) in the chair.

The annual

Reports

were submitted and adopted. The Secretary's report mentioned that the membership—fifty-four—was the same as the previous year. The drug-exchange established during the year had not been taken advantage of to any great extent, and members were requested to send in lists of any surplus stocks to Mr. W. F. Hay, who has charge of the register. The Treasurer's report showed a substantial balance to the good. The Education Committee's report referred to the satisfactory state of the Evening School of Pharmacy, which was thought to be due in a great measure to the two scholarships offered by the Association of a free term to the Day School of Pharmacy, as also to the interesting lectures of the teacher, Mr. G. Simpson. The Association then took up consideration of the

Federation Questions.

The answers were to the effect that the Association is (*a*) opposed to a compulsory curriculum under present conditions; (*b*) in favour of dividing the Minor examination into two or more parts; (*c*) as to the apprentice difficulty: the relationship between master and pupil should be that of teacher and scholar, whether the pupil pay a premium or not. On this the Association added the following remarks:—

In an ordinary pharmacy it is impossible for a master to give his pupil all the necessary training to pass the Qualifying

Digitized by Google

examination, and all that can be expected of him in the pharmacy is to train his pupil to orderly and methodical habits, to give him an opportunity of becoming practically conversant with the processes employed in making ordinary pharmaceutical preparations and a thorough training in dispensing. Having done these things to the best of his ability, it is his duty to see that wherever practicable he should have an opportunity of attending classes where he may attain the scientific and technical instruction necessary to pass the Qualifying examination. This may be most usefully done by chemists combining in getting such classes established, and personally taking an interest in them and their success. Until the master has done this, we do not think he has done his duty by his pupil. Many persons are deterred from thinking of entering the ranks of pharmacy when they consider the very long hours the shops are kept open, consequently the limited time for study to meet the requirements of the examiners, which are gradually being raised. To the majority of those likely to enter the business the high examination fee which must be met at the end of the apprenticeship, is no light matter. Such considerations, coupled with the poor financial prospects visible after having gone through apprenticeship, have much to do with the paucity of applicants, and we may look for the scarcity to continue until there is some combined action among pharmacists to bring about a better and healthier condition than presently exists, which are felt to be a grievous burden not only by the pupils, but by the masters as well.

Mr. James Paterson took the opportunity to reply to the critics of his scheme, pointing out to begin with that the questions in the Federation circular went beyond what was in his paper. He then took up and replied to the objections urged against his scheme of provincial schools of pharmacy and State-aid for them, taking the Glasgow objections as typical. The sum and substance of Mr. Paterson's reply was that at present the professions and some trades (*e.g.*, plumbing) get Government aid through Universities and technical colleges in the acquirement of the knowledge necessary to carry on their business, and pharmacy should get the same.

The Office-bearers

appointed for 1902–3 were:—President, Mr. Andrew Craig Vice-President, Mr. Wm. Giles; Treasurer, Mr. James Paterson; and Secretary, Mr. John Cruickshank, 42 George Street, Aberdeen.

Chemists' Assistants' Association.

At the meeting held at the Association's Rooms on March 6 presided over by Mr. J. Wicliffe Peck, a lecture was delivered by Professor J. Norman Collie on

Phosphorescence.

The lecturer illustrated his subject with several very beautiful examples of phosphorescence. Phosphorescence is light without heat, the best-known example being, perhaps, the luminous acid-vapours due to the slow oxidation of phosphorus, from which the term phosphorescence is derived. Many organic substances are phosphorescent, also certain plants—the flower of the calendula which, after sundown, gives out a faint light in the dusk. It is very brilliantly seen in dead wood, due to oxidation as it decomposes. The firefly and glow-worm are also phosphorescent, as also many animal substances and animalculæ which occasion the phosphorescence seen on the surface of the sea. Some substances become phosphorescent when slightly heated, and others when cooled down. A feather, when plunged into liquid air, becomes luminous, and its outline can be clearly seen in a darkened room.

Professor Collie then referred to the phosphorescence of such substances as barium sulphide and strontium sulphide, and proceeded to speak of what has been done in the subject through the utilisation of Röntgen rays and Hertzian rays, which set up in solids and gases subtle forms of energy which give out light and phosphorescence. He then demonstrated the effect of electric-vibrations on a tube of nitrogen. Next he placed in a large glass beaker of water acidulated with sulphuric acid a vacuum-bulb connected to an induction-coil. A minute quantity of quinine sulphate was added to the water and the electric-current switched on. As it dissolved the quinine became iridescent and diffused itself through the solvent. The quantity was so minute that, said the lecturer, the phosphorescence is probably due to quinine in a gaseous state.

Experiments were also made with various limestones. Lime, he said, is supposed to be always represented by the formula CaO, but the action of electricity has shown that there must be many kinds of lime having different physical structures. A limestone picked up in Belfast gave a deep orange phosphorescence; another a brilliant blue and it also imparted to a piece of uranium glass, held some distance away, a green phosphorescence. The introduction of impurities such as bismuth and copper into the lime produce still more striking colours. Shells and coral converted into lime by calcination also gave variegated colours of a beautiful hue. Silicate of lithium, a barium salt, tungstate of calcium, and oxide of alumina were subjected to electrical energy, and produced some remarkable colours. The lecturer pointed out that nothing in nature equals in depth and purity of colour the hues disclosed by the experiments. Professor Collie closed his lecture with a reference to the commercial applications of phosphorescence, stating in the course of his remarks that the light produced by incandescent mantles is due partly to phosphorescence, and the problem is to get a substance which gives the best light. Perhaps the light of the future may be generated at some central station on the Marconi system, and all that would be necessary to get light would be to hang up a suitable substance to attract the light rays; or a room might be covered with a paint which became luminous in the same way.

A cordial vote of thanks was passed to Professor Collie.

Dewsbury Chemists' Association.

The annual meeting was held on Monday evening, March 10, at the Church House, Dewsbury, Mr. W. Stead, of Heckmondwike, in the chair.

Annual Reports.

In his report, the Secretary (Mr. G. Walker) noted that two of the members had joined the Wakefield Association, and regretted that the attendances had not been kept up. Reference was also made to the recent attempt to amalgamate the West Riding Associations, and to a legacy from the late Mr. E. H. Matterson of bound volumes of trade-journals.

The President congratulated the Secretary on his report, and, alluding to the proposed West Riding Federation of Associations, said that neither himself as President, nor the Association, had been treated in this matter with the courtesy to which they were entitled. The reply from Sheffield was remarkable and significant, bearing in mind the Association from which it came. The only logical conclusion he was able to draw from it, was that local organisation as an abstract idea is all right and very proper to talk about and to read about, but it is possible to have too much of it, especially should it assume a concrete form, and not always be in complete accord with a certain select coterie having its habitat at 17 Bloomsbury Square.

Mr. Broadhead supported the President's references to the Secretary.

Mr. Pickard spoke in similar strain, and expressed the the hope that the federation proposal was not dead. If it had been propounded by an association of longer standing, such as Leeds or Sheffield, it would have been supported by all without demur.

The report was unanimously adopted.

Mr. Gledhill, the Treasurer, reported a balance in hand of 2*l.* 2*s.* 5½*d.*

The Election of Officers

was by ballot, and resulted as follows: President, Mr. R. Gledhill; Vice-Presidents, Mr. W. Stead and Mr Joseph Rhodes; Secretary, Mr. G. Walker; and Treasurer, Mr. Gutteridge. Mr. Stead pressed to be relieved from office, and Mr. Broadhead was elected Vice-President in his place. Mr. Gledhill returned thanks for his election.

At the conclusion of the business on the agenda, Mr. Broadhead re-introduced

The Federation Proposal.

He said that from Mr. Stead had emanated one of the most brilliant ideas ever put forward for the benefit of Yorkshire pharmacy. The scheme, if carried out, would have been of boundless good, and would have helped to consolidate them in their work, and as an educational medium. He expected that Bradford would have supported the proposal,

Digitized by Google

and had noticed that one of the leading members of that Association wrote in a trade-paper criticising the Pharmaceutical Council for not fostering local organisation as it ought to do. Could inconsistency be carried further? He referred to the objections urged against federation, and moved

That the Dewsbury and District Chemists' Association not sharing that desire for the disintegration of pharmacy which permeates all ranks of our trade, calling or profession, declines to further subscribe to the so called National Federation of Local Associations, the only use for which seems to be that its misleading title may be quoted as a bar to progressive organisation.

The 10*s.* 6*d.* they paid was a charitable 10*s.* 6*d.* It went somewhere, and they did not know what they got for it. He was not going to leave the local-federation idea alone until he had worried every Association that had refused to answer, or had given such contemptible answers, which they could not have given in anything but a conglomeration of miserable, narrow-minded pettifogginess which went under the name of pharmacy. (Laughter.)

Mr. S. N. Pickard seconded the resolution, which was unanimously adopted.

Finally Mr. Stead was thanked for his services as President.

Oxford Chemists' Association.

The annual meeting was held on Tuesday, March 11, at the Golden Cross Hotel, Mr. C. Clayton (President) in the chair. The Hon. Secretary presented the annual report and balance-sheet, showing a balance in hand of 7*l.* 18*s.* 11*d.*, the adoption of which was moved by Mr. Palmer, seconded by Mr. Squire, and carried unanimously. The following members were elected officers for the ensuing year:—President, Mr. J. A. R. Burbank; Vice-Presidents, Mr. C. Clayton and Mr. Jessop; Hon. Secretary and Treasurer, Mr. John Dolbear; Committee, Messrs. Squire, Druce, Prior and Mathews.

Manchester Pharmaceutical Association.

A meeting was announced to be held at the Victoria Hotel, on Wednesday evening to hear a paper on testing sights, by the Secretary. Our representative waited twenty minutes and nobody else put in an appearance.

Halifax Chemists' Association.

A meeting was held at the Old Cock Hotel on March 11, Mr. Gibson Dixon in the chair. Mr. C. Fielding read a paper on "A Pharmacist's Continental Holiday," which detailed a tour through Holland, Belgium, and Germany. He showed photographs of the various places of interest seen *en route*, and gave an account of a visit to Messrs. Bayer's works at Elberfeld, where the visitors were shown round by the inventor of somatose. It was noted that certain machines used there for dehydrating wool were made by a Yorkshire firm. A vote of thanks was accorded to Mr. Fielding. Mr. J. Russell (Wilkinson's) and Mr. Davies (Evans's) were elected members of the Association.

Sheffield Pharmaceutical and Chemical Society.

A meeting was held on Wednesday evening, March 13, for the reading of papers by students on "Starch" and on "Suitable Hobbies for Young Pharmacists," two prizes for the best essays having been offered by Mr. Pater and Mr. C. F. Carr. Mr. John Austin presided, and seven members were present besides the essayists. The competitors were Messrs. W. M. Cooper, N. Goodyear, R. Tildesley, and A. A. Walls. The awards will be made known later.

London Chemists' Association.

A meeting of the General Purposes Committee of this Association was held on Wednesday, March 12, at Anderton's Hotel, Fleet Street. Messrs. Bunker, Burton, Bustard, Campbell, A. Cooper, Cracknell, S. Dawson, Goodall, Gulliver, Glyn-Jones, R. H. Jones, Pentney, Philp, Pickering, Pond, Truman, and Willson were present. Mr. Albert Ccoper (South Kensington) was elected Chairman of the Committee, Mr. Glyn-Jones Vice-Chairman, Mr. Pond Treasurer, and Mr. R. H. Jones Hon. Secretary.

A Sub-Committee was appointed to take steps to form a local committee in South London.

Huddersfield Chemists' Association.

A meeting was held on March 11, the President in the chair. After routine business there was a discussion on several subjects touched upon in the speeches at the recent dinner. The methods adopted in the advertising of some patent medicines were discussed, and a strong feeling existed that united action should be taken to repudiate the charges against the honesty of retailers which some advertisements imply. A proposal was made to wind up the session with a "smoker." A vote of condolence was passed and ordered to be sent to the widow and family of the late William Martindale.

Festivities.

Now and then your men of wit
Will condescend to take a bit.—*Swift.*

At a postal charge of 10*d.* we had the pleasure of receiving on Monday particulars regarding a dinner given on the eve of his 80th birthday to Dr. Enno Sander by his pharmaceutical friends at Faust's Cabin. There is nothing on the missive to show where Faust's Cabin is or who Dr. Enno Sander is, but we judge from the names that appear on the programme that St. Louis, Mis., was the scene of the revels. At any rate, the menu commenced with the lines which head this paragraph, and the first thing that followed was blue points—"left naked to mine enemies"; there was also "planked shad" and other items which one has to travel to U.S.A. to get. Also there was a toastmaster—"Albert E. Ebert, President and Historian Chicago Druggists' Association"—and the first speech was by Professor H. M. Whelpley, President of the American Pharmaceutical Association, who, amongst other things, said:—

Dr. Enno Sander was one of the first residents of Missouri to join the A. Ph. A., was the very first Missourian to be elected President, and is to day the oldest Missouri member both in point of age and in the service of the national society. The association has now honoured forty-nine members with the presidency; of this number four were from the city of St. Louis, and three of them, accompanied by a fellow ex-president from Illinois are present at this little gathering to-night. Mr. Toastmaster, I might continue, "like the river which flows on for ever," and not exhaust the Trojan attributes and the worthy records of him who links the present with the past. I introduce our guest to you, and, through you, to the members of this party. He is a man so popular with the fair sex that his kind nature never permitted him to break the hearts of many ladies for the sake of making a single one glad.

From which it will be seen that they do these things quite nicely out there. This was on "February 26, 6 P.M., 1902." Besides Swift and Shakespeare, the shades who did honour to the grand old man of St. Louis were Beaumont & Fletcher, Pope, T. B. Aldrich, Douglas Jerrold, Browning, Milton, Akenside, South, Wordsworth, Rowe, La Rochefoucauld, and Joanna Baillie. Had Rowland Hill been there we might have been 10*d.* in pocket.

Dispensers Smoke.

The Public and Poor Law Dispensers' Association held its second annual smoking-concert at Stone's Restaurant, Ludgate Circus, E.C., on March 12. Mr. A. C. Wootton presided, and upon his leaving, before the close of the programme, Mr. Chas. Spencer took his place. There was a large attendance of members and friends. An excellent entertainment was provided, in which Messrs. A. Kelly, R Dorrell, F. E. Stollard, P. Capps, H. Bourne, F. Vernon, W. Lamberts, C. J. New, H. V. Lewis, and G. Crawford participated. Mr. Geo. Flaxman also sang exceedingly well. Mr. Duff (the President), in proposing a vote of thanks to the Chairman, said Mr. Wootton, as a member of the Council of the Pharmaceutical Society, had shown himself particularly interested

Digitized by Google

in the well-being of public dispensers. Mr. Wootton, who was accorded musical honours, briefly replied. The evening terminated with a vote of thanks to Mr. Spencer, who organised the concert.

C.M.A.S. DINNER.

The first annual dinner of the Chemists' Managers' and Assistants' Society of Great Britain took place at the Horseshoe Hotel, Tottenham Court Road, W., on March 12. Mr. C. E. Pickering was in the chair. There were twenty-five present, and the dinner was not attacked until an hour after the advertised time, saving which it was an enjoyable function. After dinner a series of toasts were given, interspersed with musical items. Mr. Cullwick proposed "The Pharmaceutical Society," and said that, although the Society had had many opportunities of righting the company wrong, they had been neglected. He hoped they would, however, henceforth "clean the slate" and write thereon the words "co-operation and efficiency." Mr. Webb replied. Mr. Fitzgerald proposed the toast of "The Chemists' Managers' and Assistants' Society," and Mr. Pickering (the President) replying, explained the objects and benefits of the Society, and said that Lord Avebury was that evening engaged on Empire work at Oxford, or he would have been present at the dinner. Other toasts followed. The musical programme was supplied by Mrs. Cullwick, Miss Aitken, Miss Harper, Miss Druce, and Messrs. J. Jones, Mawdesley, and Fuller.

Royal Exchange Colonial Exhibition.

THIS Exhibition, which consists of colonial products was opened on March 10 by the Lord Mayor and Sheriffs of London. As previously explained, the exhibits are the same that were shown at the Glasgow Exhibition last year, the idea of showing them in London being to bring the various colonial products to the direct notice of the merchants and buyers of the City. The exhibits are arranged in the ambulatory, the goods of each colony being placed together. There is not much of pharmaceutical interest, however, in the exhibition. The Canadian section contains some good exhibits of mica (dark coloured), also talc and kieselguhr. We noticed also tins of condensed milk, "Ovo" (dried eggs), and "Radnor," a mineral water. The statue of Queen Elizabeth, in the corner, has its stony gaze fixed on a fine exhibit of colonial fruits. In the Buluwayo section some samples of rubber are shown, and in a case of curios there is a ticket bearing the inscription, "Medicine-horn," but it is not apparent to which article it refers. Messrs. Johnson & Johnson have a show of chloride of gold, nitrate of silver, and precious metals, and we should mention that masses of gold (mostly made of wood) figure very largely throughout the exhibition. Admission to the Exhibition is free, but it is closed at certain times in the day, so as not to interfere with the hours of "'Change."

Business Changes.

THE TIMOTHY WHITE COMPANY have opened a branch at Horsham, Sussex.

MR. E. HEMMING has opened the Trelyn Drug-stores at Briton Ferry Road, Neath.

MR B. R. COWGILL, chemist and druggist, has bought the business of Mrs. Cossens, 12 Church Street, Monmouth.

MR. W. E. HUMPHREY, chemist and druggist, has bought the business lately carried on by Mr. T. G. Dickson at Sutton, Camb.

MR. ARTHUR F. CONRAD has purchased the branch business lately carried on by Messrs. Black & Co. at 7 Islingwood Road, Brighton.

MR. F. H. JOHNSON, chemist and druggist, late of 231 High Street, Lewisham, S.E., has purchased the business of the late Mr. A. B. Passmore at 78 Upper Tulse Hill, S.W.

THE business of the late Mr. E. P. Guest, chemist, Brentwood, is being carried on by the widow, Mrs. J. Guest.

MR. H. S. PEARMUND, pharmaceutical chemist, High Street, Tunbridge Wells, is opening a branch pharmacy at Calverley Road, Tunbridge Wells.

MR. E. R. JONES, pharmaceutical chemist, has bought the branch business of the late Mr. Slack, at 7 St. Helen's Terrace, St. Quintin's Park, N. Kensington, W.

MR. E. A. HOLLOWAY has disposed of his Dulwich business to Mr. Liddle, late of Middlesborough. Mr. Holloway has also sold the Royal Standard Wine Company to Mr. Fred Tall, Plymouth.

MESSRS. BOOTS (LIMITED) have opened a new branch at Carfax, Oxford, and have also taken premises in High Street, Merthyr-Tydfil, Dartford, Brighton, and Worthing, which they will fit up and open in due course.

MR. CHARLES HARE, chemist and druggist, has purchased the old-established dispensing business of the late Mr. G. J. Wilding, at 29 Liverpool Road, Birkdale. Mr. Hare will personally supervise the new business, his other establishment at 10 Liverpool Road being carried on as a branch under qualified managership.

Marriages.

MICHIE—WELLS.—On March 6, at Glasgow, by the Rev R. Armstrong, M.A., Alexander Michie, chemist and druggist to Mary, second daughter of the late Mr. Andrew Wells Edinburgh.

WYLLIE—BUNCH.—At Edinburgh on March 8, by the Rev. Dr. Stewart, New Greyfriars', Harry Boak Wyllie, chemist and druggist, to Colina Forsyth, second daughter of Mr. J. A. Bunch, late bandmaster 2nd Seaforth Highlanders, bandmaster Q R V.B R.S.

Deaths.

ECKERSLEY.—On March 8, Mr. Joseph Eckersley, who formerly traded as a chemist at Grimshaw Lane, Middleton Junction, near Manchester. Aged 55. Mr. Eckersley died suddenly from an overdose of opium, which had been prescribed for him in small doses by his medical adviser.

GIBSON.—At Battle Hill, Hexham, on March 1, Elizabeth Judith Frances, wife of Mr. John Pattison Gibson, chemist and druggist, and mother of Mr. John Gibson, F.C.S., of Hexham. The late Mrs. Gibson took a deep and active interest in Church work in Hexham, and sympathetic public allusion was made to her death by the rector.

JONES —On February 24, Mr. Charles Henry Jones' chemist, late of 189 Breck Road, Liverpool.

MARSH —On March 10, at 6 Milsom Street, Bath, Mr. John Hoskins Marsh, of Steele & Marsh, chemists, Bath. Aged 67. Mr. Marsh had carried on business in Bath for nearly forty-five years.

SIMPSON. — On February 26, at West Kensington, W., Professor Maxwell Simpson, M.D, F.R.S. Aged 87. Professor Simpson was born at Beech Hall, co. Armagh, and educated at Trinity College, Dublin. It was a meeting with the chemist Dumas in Paris, that caused him to devote himself to chemistry, and associate himself with Kolbe at Marberg, Bunsen at Heidelberg, and Wurtz at Paris for several years. From 1870 to 1890 he was Professor of Chemistry at Queen's College, Cork, retiring on a pension. Besides being a Fellow of the Royal Society, Professor Simpson was a Fellow of the Chemical Society since 1857. He served for two periods on the Council, and was a Vice-President from 1872 to 1874. When the British Association met in Dublin in 1878, Professor Simpson was President of the Chemistry section.

TAYLOR.—On March 8, at Leytonstone, Mr. Thomas Willfra Taylor, aged 76, for forty-seven years with Messrs. E. Cook & Co., soap-manufacturers, Bow, E.

Digitized by Google

Westminster Wisdom.

(By our Parliamentary Representative.)

Disinfecting the House.

The promise which the Chancellor of the Exchequer made to the House of Commons to see whether "something could be done" towards making the House influenza-proof has been fulfilled. Last week a large number of lamps, over which were placed tin dishes containing eucalyptus oil, were seen burning in all the corridors and in the Chamber itself. From the dishes such a strong and unmistakable odour went up that even the most nervous members felt secure.

Amendment of the Midwives Bill.

The Midwives Bill is undergoing a somewhat severe handling in the Grand Committee on Law, and an amendment has been carried to the effect that no woman who is not certificated shall be entitled to sue in a court of law for her fees for professional attendance. Sir Michael Foster is one of the midwives' champions, and Sir W. B. Foster and Sir J. B. Tuke lead on the medical side.

Another Vaccination Bill.

Mr. Channing has introduced a Bill to provide that no prosecution under the Vaccination Acts shall be commenced without the authority of the Guardians.

Lymph and Blood-poisoning.

A point of some interest arises in a question put to Mr. Grant Lawson by Mr. Corrie Grant. A Mr. Essex died of blood-poisoning eleven days after vaccination, and what the hon. member desired to learn was how far back the lymph used, No. 1,538, could be traced. From the official answer it appears that some lymph was obtained by the Local Government Board from Cologne in December, 1900, and it has passed through a series of five calves in succession. The resulting lymph was that used in the case of Mr. Essex. The original lymph and that derived from it have been used in the vaccination of 264 calves, and no complaints have been received of ill effects from the use of the resulting lymph in any other case, although it has been used for the vaccination of a large number of persons. The Department cannot give precise information as to the derivation of the particular lymph obtained from Cologne, but as a rule the stock there is renewed by inoculation of the calf with human vaccine lymph.

Is Saccharin Smuggled?

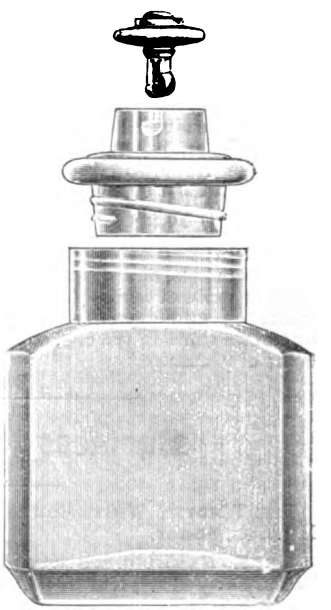
In reply to a suggestion that bags of flour have been used extensively at Havre for the purpose of smuggling saccharin into the United Kingdom, the Treasury have stated that the Board of Customs have no knowledge of such alleged extensive misdoings at the continental port. Every precaution is being taken to prevent such a practice.

Colouring with Copper Salts.

I mentioned last week the recent prosecution in Halifax of certain traders for selling preserved goods stated to be coloured by the use of copper salts, and said that the attention of Mr. Long was to be called to it. The right hon. gentleman has now acknowledged receipt of the communication. As for the suggestion that a schedule of such colouring-matters as may be considered inimical to the public health should be issued for the information of traders, and another suggestion that a Bill should be introduced to give effect to the recommendations of the Departmental Committee on the use of preservatives and colouring-matter in food, it is stated that the report is under consideration, and that no announcement can be made on the subject at present. It transpires that only one or two sanitary authorities have communicated with the Local Government Board on the subject.

Dysentery and Enteric.

I understand that the report of the commission of experts appointed to inquire into the causation, pathology, and modes of prevention of dysentery, and its connection, if any, with enteric fever, is now completed, and will be placed in the hands of the printers forthwith.



Trade Notes.

The Chemists' Exhibition is to be held in Manchester from June 3 to 6. Full particulars regarding it may be obtained from the Manager, 44 Bishopsgate Without, London, E.C.

The Tubor Filter, introduced by the Berkefeld Filter Company (Limited), 121 Oxford Street, W., at the beginning of the year, has been purchased by the Government for the use of the troops in South Africa.

Brompton Hospital Cough Lozenges.—We answered a legal query last week which gets an annotation this week from Messrs. John Richardson & Co. (Limited), Leicester, who state in our advertisement pages that they are the only authorised makers of the lozenges referred to, and that the formula has never been published.

This Tooth-powder Bottle is unique amongst things of its kind in being made entirely of glass under a patent which Messrs. H. P. Thompson & Co., 93 Aldersgate Street, London, E.C., have recently acquired. The bottle is made of sparkling white flint glass, and the stopper screws into it. In the stopper itself is an orifice which is closed by means of a subsidiary stopper, also made of glass, and fixing with a bayonet-catch. The shape illustrated is one of several styles that Messrs. H. P. Thompson & Co. offer, and they inform us that they also make special patterns to order, reserving any special pattern exclusively for the individual firm who order it. This is an important consideration to those who adopt this bottle for tooth-powders of their own. The bottles cost 30*s.* a gross, and there should be no difficulty in getting 6*d.* for them minus the tooth-powder. Messrs. H. P. Thompson & Co. have now a full stock of B. & B. cotton-wool. There was such a demand for this when they brought it to the notice of the trade a few weeks ago that they ran quite out of stock, chemists having appreciated the package as well as the fine quality and low price of the wool. It is put up in 1-oz., 2 oz., ¼-lb., ½-lb., and 1-lb. cartons, and is as thin as lint in layer, but swells out greatly when held to the fire.

The Prescot Year-book.—Mr. G. G. Hemingway, chemist and druggist, who commenced business in Prescot a year ago, has got out a very interesting "Year-book" for local distribution. A feature is made of local information and

Digitized by Google

history, many illustrations of the noted men and conspicuous features of the landscape being introduced. The business side is not neglected, a price-list being prefaced by a vigorously-worded protest against the use of quack medicines and the ways of unqualified drug-stores. The year-book has made an excellent start.

Eucalyptus Oil.—Messrs. Stevenson & Howell (Limited), 95A Southwark Street, S.E, send us a sample of eucalyptus oil, B.P., which analysis shows to be of high quality. The oil contains, according to an average analysis of five cases, 64 per cent. of eucalyptol, has a sp. gr. of 0 920, an optical rotation of −5'22, and is free from phellandrene. We have no particulars of the price of the oil, but this can be obtained by applying to the firm.

The Illustrated Price-list published this week by Messrs. Wright, Layman & Umney (Limited), Southwark, S.E., contains a large number of new items amongst their packed pharmaceuticals for retail sale by chemists. The list includes anti-obesity pills, ball-floor polish, balsam of horehound, camphor ice, carbolic disinfecting powder, carbolic liquid dentifrice, chilblain ointment, comp. syrups of prunes and figs (new design), ext. malt (new design), ext. malt and cod-liver oil, eau de Cologne dentifrice, fullers' earth, hair-dye, hæmorrhoid ointment, pig powder, malted glycerophosphates, musk-scented oatmeal, quinine and iron tonic, quinine wine (new design), rennet powder and essence, saline (new design), seidlitz powder (new design), sylvozone, toilet lanoline, toilet paraffin, and toilet soaps (new designs). Examination of the illustrations shows that the articles are put up in tasteful and appropriate styles. Thus, the anti-obesity pills are in a little phial that goes in the vest-pocket; the extract of malt and malt with cod-liver oil are obtainable in four distinct styles of labels and cartons, all being artistic and original in design. Chilblain ointment is put up in boxes, and the hæmorrhoid ointment in collapsible tubes with anal pipe. Besides the medicinal and household specialities the list contains numerous examples of toilet preparations and perfumery, most of them being beautifully illustrated with half-tone blocks, and it concludes with a concise list of toilet soaps, with photographic reproductions. A copy of the list will be sent post free to any *C. & D.* subscriber who sends for it.

Trade-Marks Applied For.

(*From the "Trade-marks Journal," March* 5, 1902.)

Device (the essential particular); for an embrocation. By Susannah Marian Helmore, 47 Munster Road, S.W. 237,127 and 236,299.

"Beetawline" (no claim for "Beatall"); for vermin-destroyers. By R. L. Snow, 1 Fell Street, Wood Street, E.C. 243,072.

"Yam-Ga"; for a vermin-killer. By Lorimer & Co. (Limited), Britannia Row, Islington, N. 243,316.

"Resa"; for medicines in Class 3. By W. F. Reid, Fieldside, Addlestone, Surrey. 243,009.

"Neurilla"; for a medicine. By the Dad Chemical Company (Incorporated), 105 Chambers Street, New York City, U.S.A. 242,801.

"St. Edmund's Oil" ("St. Edmund's" the essential particular); for an oil. By E. Tennant & Co., 183 Wollaton Street, Nottingham. 243,063.

"Gaduol"; for chemicals. By Merck & Co., University Place, New York City, U.S.A. 243,265.

Pyramid device and the word "Pyramid"; for glycerin. By J. Crosfield & Sons (Limited), Warrington. 243,276.

"Varatos"; for an ointment. By the Varatos Company, 23 College Hill, E.C. 243,589.

"Palmos"; for photographic apparatus. By Carl Zeiss, 29 Margaret Street, Regent Street, W. 243,262.

"St. Bruno," "Tabs," "Beeswing," "Midnight," and "St. Ino"; for indiarubber and guttapercha goods. By Ogdens (Limited), Boundary Lane, Liverpool. 243,858, 243,861, 243,864, 243,870, and 243,873.

"Marapi"; for foodstuffs. By J. Travers & Sons (Limited), 119 Cannon Street, E.C. 243,306.

"Tasric"; for baking-powder. By the Liverpool Chemical Company (Limited), 51 Stanley Street, Liverpool. 243,942.

"Volka"; for mineral and aërated waters. By R. White & Sons (Limited), Camberwell, S.E. 243,159.

Device (the essential particular) of a flame, and the word "Ignis"; for solidified oils for heating. By Jacob Widmer-Ackermann, 16 Haldenbachstrasse, Zurich, Switzerland. 242,913.

"Erimus"; for goods in Class 47 and perfumery and toilet-articles. By A. Hinton & Sons, South Street, Middlesborough. 242,292 and 242,293.

"Pop Corn"; for perfumery and toilet articles. By the Vinolia Company (Limited), Malden Crescent, N.W. 242,488.

Personalities.

Mr. James Horlick, of Cowley Manor, Cheltenham, and the inventor of Horlick's malted milk, has been appointed High Sheriff of the county of Gloucestershire.

Mr. W. W. Robinson has taken up the London representation of Messrs. Barrett & Elers (Limited), of the Carbonic-acid Gas Works, Dace Road, Old Ford, E.

Mr. F. Heap has been appointed resident representative in Scotland to Messrs. S. Claber & Co. (Limited), manufacturers of specialities for soap makers and perfumers, Manchester.

Mr. John C. McDougall, who has been appointed Chairman of the London County Council, was formerly an active member of the well-known firm of disinfectant and sheep-dip manufacturers, Messrs. McDougall Brothers (Limited), Mark Lane, E C.

Mr. G. Claridge Druce, M.A., F.L.S., has just been unanimously elected President of the Natural History Society of Northamptonshire, a Society which he founded when resident in that county. His predecessors in the chair include Lord Lilford, the well-known ornithologist, the Rev. Canon Saunders, and Sir Herewald Wake, Bart. Mr. Druce has just completed the "Flora of Northamptonshire" for the Victoria County History, and is to take a holiday in Sicily.

In connection with the death of Mr. Wm. Rathbone, Liverpool, Sir John Brunner gives the *Times* an interesting bit of reminiscence. It had been stated that Mr. Rathbone was first the pupil of the Rev. John Brunner, and later of Mr. Charles Voelcker, of San Domingo House. Sir John Brunner's father, who, like Mr. Voelcker, was a pupil of Pestalozzi, came to England in 1832, to enter into partnership with Mr. Voelcker at San Domingo House, remaining there till his marriage in 1835, when he established another school at St. George's House, also at Everton, then the fashionable suburb of Liverpool, retiring in 1863. The friendship between Mr. Rathbone and Sir John's father remained close and warm until the latter's death; and Sir John recalls with pleasure and gratitude how, in 1888, he became in turn, in political matters, Mr. Rathbone's pupil. In that year he met in the House of Commons, besides his late friend, Mr. Mitchell Henry, Sir Charles Tennant, Sir Bernhard Samuelson, and Sir James Stansfeld, all of them old pupils of his father.

Mr. Roberts, chemist and druggist, has purchased the business of Mr. Guy (late Brisley) at Station Road, Bexhill-on-Sea.

The oldest-established business in Camberwell—that of Mr. Presbury (Messrs. Moody & Catterns) at 93 Church Street, Camberwell, S.E.—has been closed.

According to the first Glasgow directory, published privately by a certain enterprising Mr. Jones in 1787, "laboratory shop" and "laboratory" were already euphemisms for "druggists' shop" and the genteel "chymist" was beginning to oust the plebeian "druggist."

The Light Side of Shop Life.—Extract from a letter received by a chemist from a country customer: "The air is very embrasing here, but my hasma is very bad. I think my lights (lungs) must be water-logged, and my heart off the plumb (perpendicular). Please send me some of the stuf to burn, the same as the house next door got to smoke out the tubes."

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Importation of Butyl Alcohol.

Sir,—I am directed by the Commissioners of His Majesty's Customs to inform you, with reference to the inquiry in your letter of January 10 last, that the subject of the position of Butyl and Propyl Alcohols with reference to the spirit duty has been under their consideration, and that, subject to test in the laboratory of the Department, it has been decided not to treat these articles as liable to duty upon importation into the United Kingdom.

I am, Sir, your obedient Servant,

Custom House, London, R. Henderson.
March 10.

Glasgow.

Sir,—I do not quite understand why Mr. Sutherland, for whose opinions I have always had great respect, is publishing all this information regarding the inner workings of the Glasgow pharmaceutical community. Various hints have been dropped in the "Glasgow Notes" of the *C. & D.* recently regarding the probability of an English Cutting Company making an attack on Glasgow, and the most recent rumour would indicate that this matter has gone beyond the proportions of mere menace. If recent rumours are true it is possible that Mr. Sutherland's letters are not altogether unconnected with this rapid development of matters. I think it not unlikely, however, that the English company which tackles Glasgow will find its Moscow. Pharmacy in Glasgow differs very greatly from pharmacy in the midlands, and I imagine it will not be easy for a harassed Drug Company to eke out precarious dividends by dealing in fancy goods, stationery, and carpet bags. This sort of thing may do well enough in districts where chemists deal mostly in paints and oils, but it would hardly work in Glasgow. Meanwhile I would counsel Mr. Sutherland, and those associated with him, to thoroughly organise the chemists of Glasgow, hold regular meetings, shorten hours, and beyond everything else make no effort to stiffen the prices of patents. These cutting firms rely almost entirely on patent cutting, and have always done so. Chemists everywhere must be prepared to sell patents without profit. The loss to pharmacy which is bound sooner or later to follow a stiffening of patents prices can never be made up by the gain of a penny here and twopence there. Of course if prices are stiffened by such an institution as the P.A.T.A., that is a different matter, but no community of chemists can afford to come to private arrangements. In this matter, also, the Glasgow chemists must act as a united body. No firm is so large, nor is any business so small, as to be able to stand alone without damaging the whole community. Let chemists always remember that one great foothold these stores have always taken every advantage of has been disunion and apathy amongst chemists. The main plank of the stores platform, however, has always been the price-list. Now I think this can be met by chemists. A price-list might be published by the Glasgow Association, and each chemist might be supplied with as many copies as he is willing to pay for, with his name outside. Chemists outside Glasgow would, I am sure, take advantage of this by also supplying themselves with price-lists. Patents would have to be put in at the lowest stores prices, and other articles quoted as in stores lists. I hope this idea will not be allowed to drop, as I am quite certain of the advantage which would be reaped by chemists were Glasgow and district flooded with these price-lists. It will serve no good purpose for one or two firms to publish price-lists. To be effective they must be issued by every chemist in Glasgow and strictly adhered to. Chemists must not think that because this company is little known in Glasgow it can do little harm. If chemists take vigorous action now it can do little harm, but if they wait for the pinch they cannot recover lost ground. Let chemists remember that the people who snivel about giving a fair living wage to chemists will have no compunction at all about turning them, their wives and children, on the street penniless, if it is possible The only hope chemists have, so far as I can see, for final emancipation from this kind of injustice rests in the power of the Pharmaceutical Society to hold its ground for five or six years more. There are practically no lads entering pharmacy now, and if the Society holds its own, qualified assistants will be in a position to ask not only a fair wage, but a wage which will break the backs of all these unqualified pirates whose presence in the field of pharmacy constitutes one of the grossest injustices of the present day. James Reid.

Dumfries, March 10.

"Hebenon" = Eibenbaum.

Sir,—In the summary of Mr. J. G. Sclater's interesting address, "The Pharmacist in Literature," in the *C. & D.*, November 9, 1901 (page 785), I find the curious suggestion—entirely new to me—that "the poison poured into the ear of Hamlet's father is supposed to be the juice of the tobacco-plant, which was held in great disrepute in Shakspere's time." Now, though Shakspere was not specially punctilious in the matter of the unities, he could scarcely have been guilty of the anachronism of representing tobacco—first introduced into Europe within his own memory—as known in ancient Denmark. Moreover, "hebenon" is a specific term which I do not think can be shown to have ever been applied to tobacco. In Mr. Leo Grindon's "Shakspere Flora" (1883) the subject is considered. Mr. Grindon has high qualifications both as botanist and philologist, and his explanation seems to be the true one. He identifies "hebenon" with the yew (*Taxus baccata*), which is well known to toxicologists as containing a specific poison (*vide* Taylor). Mr. Grindon says: "Though the juice of the sweet and viscid berries is not harmful, the seeds of the yew and the leaves are deadly poison." After reminding us that "slips of yew" form one of the ingredients of the witches' hell-broth in *Macbeth*, he writes: "What kind of liquid poison Shakspere intended by 'hebenon' has been a subject of much conjecture, opinions oscillating chiefly between 'henbane,' and poisons in general, those who hold the latter view overlooking the minute description of the symptoms and pathological results. The word in question is a varied form, not of 'henbane,' or, as some suppose, of 'ebony,' but of the name by which the yew is known in at least five of the Gothic languages; the name which appears in Marlowe, Spenser, and other writers of the Elizabethan era as 'hebon'—

> In few, the blood of Hydra Herne's bane,
> The juice of hebon, and Cocytus' breath,
> And all the poisons of the Stygian pool.
> —*Jew of Malta*, iii. 4—

and which in the First Quarto itself is spelt hebona. 'The yew,' says Lyte, translating Dodoens, 'is called in high Dutch ibenbaum, and accordingly, in base Almaigne, ibenboom. . . . This tree,' he goes on to say, 'is altogether venomous, and against man's nature. . . . Such as do but only sleepe under the shadowe thereof become sicke, and sometimes they die' (*Herbal*, 1578). The extract is used, he says further on, 'by ignorant apothecaries, to the great perile and danger of the poor diseased people' (p. 768). From the latter sentence we may gather how the murderer was enabled to possess himself of the deadly juice, which he is not to be supposed as preparing with his own hands, but as procuring from one of the herb-doctors who kept it for sale. Why Shakspere should say 'hebenon' instead of 'yew' does not appear, nor does it signify. The scene being laid at Elsinore, perhaps he was careful to employ a word believed or known to be Danish." The author adds the following footnote: "The above teaching as to the true sense of 'hebenon' has been before my pupils for at least twenty-five years. It was with great pleasure that I saw my views confirmed in the report if a paper read by the Rev. W. A. Harrison before the London Shakspere Society, May 12, 1882."

Yours, &c.,

Wellington, N.Z., Jan. 25. R. Coupland Harding.

Lapis Infernalis.

SIR,—I appear to have written in my letter of last week that Brookes gives the name *Lapis infernalis* to caustic potash. I should have said—as the context shows—to lunar caustic. Yours, &c.,

C. C. BELL.

The Saccharin Patents.

SIR,—Referring to our interlocutory motion before Sheriff Campbell Smith, at Dundee, mentioned in your last issue, which was dismissed on the ground of want of specification, we immediately gave notice of appeal. Since then the defendant has, through his solicitors, offered to give an undertaking not to infringe again our patents during their existence, and to pay an agreed amount for expenses, &c. This offer we have accepted.

Yours faithfully,

THE SACCHARIN CORPORATION (LIMITED).

165 Queen Victoria Street, E.C., E. COLLARD.

March 11.

Solubility of Liquorice-juice.

SIR,—I notice in the last issue of your journal that you give the results of a number of analyses of selected samples of liquorice-juice. These are fairly in accord with my own experience, with the exception of the last figure, which is stated as follows:—Soluble in water, 21 to 31 per cent. I have found commercial samples to contain soluble matter from 50 to 70 per cent., and at present have a sample before me which yields 73 per cent.

Yours faithfully,

Exeter, March 11. H. WIPPELL GADD.

"Propiol as a Trade-mark."

SIR,—With reference to your editorial note on above subject in your issue of March 8, we beg to point out that we acquired proprietary rights to the term "propiol" before any reference appeared in the trade or professional papers in this country. "Propiol," being the essential particular of the term "nitro-propiol," we can and will prohibit any firm or firms from damaging our trade by illegally describing their goods as "propiol" or "nitro-propiol."

Yours faithfully,

83 Upper Thames Street, E.C., F. WILLIAMS & Co.

March 11.

B.Sc. Pharm.

SIR,—With reference to the proposed Scotch degree in pharmacy, I take it that Mr. Tocher's scheme consists in simply getting the University authorities to include materia medica and pharmacy in the choice of subjects at the final B.Sc., the other examinations being unchanged. The scheme, therefore, is worthy of all support, excepting the suggestion to call the degree "B.Sc. Pharm." Why the "Pharm." I am at a loss to understand. In fact, such an appendage would lower the value of the degree, although the examination in the new subjects would be probably more difficult. I am sorry that one or two of the pharmaceutical councillors are inclined to discourage the scheme, apparently for the reason that it might place the English students at a disadvantage, but this could easily be counteracted by getting the English Universities to follow suit. It is manifestly unfair for a pharmacist not to be able to turn his knowledge of pharmacy and materia medica to account in working for a degree. There need be little fear of this change affecting the Major examination, as those men who went in for their degree would certainly take their Major at the same time, the work being then practically identical.

Yours faithfully,

J. A. HUGHES, Int. B.Sc. Lond., Ph.C.

Bristol, March 11.

The "Volunteer Compounder's Hard Case."

SIR,—This matter was very well put by a correspondent in your issue of March 8, and his letter should arouse more than passing interest, especially amongst those civil men who not long ago might have told the same tale. The difficulty of obtaining one's discharge from the R.A.M.C. can only be understood by those who were, or are, Volunteers in the ranks of that corps. Civil compounders seemed to have all along a greater amount of trouble than the ordinary Volunteer in this respect. "Regimental" orderlies could always be obtained from the various convalescent camps, and I may say in passing that these regimental orderlies did their work in a satisfactory manner, and must have been a very good addition to the R.A.M.C., as many of the hospitals would not have got along at all without such assistance. Compounders, of course, could not be thus recruited, and details had to be sent from Cape Town or other base up to such hospitals as required them. The terms of enlistment read so glibly that hardly any of us anticipated any difficulty in getting away at the end of the year. The conditions read, as well as I can remember, short service, "for twelve months, or the duration of the war." It is surely a grievance that the latter clause should have been so much pressed into service, and the twelve months allowed to extend into eighteen months, and in some cases almost two years. I am sure there was not one among us but served the first year with pleasure, and felt that we owed our country so much for patriotism's sake, but when the second year began to drag along wearily, wearily, everyone got fed-up, and began to wonder what species of madness it was that made us volunteer. If any arrangement had been made by which men might have been sent home for a short furlough, very few of us would have objected, if asked, to do a few months extra. One or two Volunteer companies seemed to have been allowed home shortly after having twelve months in the country, but compounders were at a disadvantage in this that they had not any representative unit to look to, seeing that they hail from everywhere in the Empire. It would have been a kindness that would be reciprocated, when the assistant of to-day becomes the master of to-morrow, if the Pharmaceutical Society had made some attempt to get the R.A.M.C. to recognise us in some way. No doubt we would have been much better treated, and would have had a proper rank accorded us, instead of seeming like an excrescence on the R.A.M.C. Perhaps matters will be improved when compounders are required for another campaign.

Yours faithfully,

LATE COMPOUNDER R.A.M.C. (174/14.)

Is Ragweed in Requisition?

SIR,—One of the *British Medical Journal* young men, commenting on some works on rhinology, speaks airily of the "injection of extract of ragweed."

Certain varieties of *Ambrosia* are used in America, I believe, to check mucous fluxes, but I am not aware that the remedy is known to British pharmacy. Should it be in general use, perhaps some of your correspondents will enlighten my ignorance, as one should know something about a substance so glibly described. Yours truly,

Dublin, February 22. L.P.S.I (159/38)

Dispensing Notes.

Why is This?

SIR,—The following formula has been dispensed by me for a local doctor. He says it produces frequent diarrhœa. Can you account for this effect? Individually the ingredients are not purgative. Perhaps the mixture produces a compound that is so:—

Phenazoni	gr. v.
Sodii salicyl.	gr. x.
Sodii bromid....	gr. xx.

M. Ft. pulv.

ULSTER. (157/60)

[The phenazone salicyate which is formed may irritate the intestines and thus cause diarrhœa, especially if the powder is taken frequently and the patient is weak.]

Replies.

SIR,—The formation of deep-purple iron salicylate in R. H. A.'s first mixture seems impossible. I have made an otherwise presentable and homogeneous mixture by adding the tinct. ferri last, having previously thoroughly suspended the salicylic acid (thrown out on mixing soda salicylate with the quinine dissolved in HBr.) with pulv. trag. comp. It is

Digitized by Google

evidently a case in which the prescriber should be consulted if possible.

I have been unable to obtain the dark product G. H. A. speaks of in dispensing the lotion, but find that the slightest trace of iron brought in contact with it has the effect complained of. The experience of others would be interesting.

CHAS. FLINT.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

153/25. *P. F.*—(1) There is no more comprehensive receipt-book published than "Pharmaceutical Formulas." (2) A 1-per-cent. veratrine-ointment contains a poisonous vegetable-alkaloid, and falls into the Poisons Schedule. (3) Tonic Hair-cream:—

(*a*)	Crem. smygd.	...	...	℥j.
	Glycerin	...	...	♏j.
(*b*)	Ol. amygd.	...	...	♏vj.
	Lanolin.	...	...	ʒss.
	Otto rosæ	...	...	♏vj.
(*c*)	Tinct. canthar.	...	...	♏ij.
	Aquæ	...	...	℥iij. ♏vj.

Make *a* and *b* in separate mortars and gradually add *b* to *a*, then stir in *c* little by little.

(4) Soothing Skin-cream for infants' skin:—

Lanoline	...	...	...	℥ij.
White vaseline	...	...	...	℥ij.
Boric acid	...	...	...	♏j.
Oil of sweet almonds		...	...	ʒss.
Otto of roses	...	...	...	♏v.

Mix.

153/36.—*Radix* is a Birmingham man, living there too, and he writes to us as follows:—

Kindly inform me *per* your valuable paper, the *C. & D.*, whether the Birmingham University accepts the Durham matric. in lieu of its own matric.? I have written to the Birmingham University myself, and they reply that they believe they do; this is vague and indefinite, hence I am writing to you for a definite answer, as, no doubt, they would give you one in virtue of the high scientific character of your journal.

A letter like this is one of the little pleasures which fall to pharmacists who edit journals of pharmacy. They imagine that if they were in Birmingham they would step round to the 'Varsity (the proper word, we believe) and have the matter settled in five minutes or less, but since we are not in Birmingham and "Radix" is, we leave it to him to interview the 'Varsity authorities. He may, at least, ascertain what are the foundations of their belief.

113/31. *R. W.*—Children's Powders.—The doses of your formula (pulv. antimonialis 2, hydrarg. subchlor. 2, pulv. sacch. alb. 12) would be adjusted as follows:—

Two to four months...	gr. iij.
Four to six months	gr. ivss.
Six to ten months	gr. vj.
Ten months and upwards	gr. x.

150/53. *Crumpsall.* — Liquid Coffee.—See *C. & D.*, January 4, page 29.

152/46. *Gardner.*—(1) The Lighting-cleanser is an excellent article for cleaning cloth. It is made as follows:—

Castile soap	...	...	...	℥iv.
Boiling water	...	...	...	Oij.

Dissolve and add when cold—

Strong solution of ammonia			...	℥viij.
Ether	...	...	...	℥ij.
Rectified spirit	...	...	...	℥iv.
Oil of citronella	...	...	...	♏ss.
Water to	...	...	...	Cong. j.

Mix.

(2) Ringworm-lotion for Cattle. A solution of sodium hyposulphite, 4 oz. to the pint, is the best general lotion for this purpose.

146/37. *E. E. S.*—Blue-black Ink:—

Blue Aleppo galls	...	...	...	℥ivss.
Bruised cloves	...	...	...	℥j.
Water	...	...	...	Oij.
Iron sulphate	...	...	...	℥iss.
Methyl blue	...	...	...	♏j. ♑j.

Exhaust the galls and cloves with the water, filter the product, add the iron sulphate previously dissolved, and lastly, the aniline dye

146/13. *Zeta.*—(1) Combined Toning and Fixing Bath.—You do not say which of the half-dozen formulæ in the DIARY you have tried. Our experience is chiefly with No. 2 (page 529), and we find it keeps a reasonable time. (2) Metol-quinol Developer (one solution):—

Metol	50 gr.
Quinol...	40 gr.
Sodium sulphite	1 oz.
Sodium carbonate	1 oz.
Potassium bromide	25 gr.
Water to	20 oz.

Dissolve.

150/45. *B. & Co.*—(1) Horse-colic and Inflammation Draught:—

Ether rect.	...	...	...	℥ss.
Tr. opii	...	...	...	♏vj.
Spt. ammon. arom.	...	...	...	♏j.
Tr. asafetidæ...		...	...	℥ss.
Ol lini ad	...	...	...	Oss.

M. Ft. haust.

Give at one dose, and repeat in an hour if necessary.

(2) Horse Cough-powders:—

Pulv. camphoræ	...	...	...	ʒiij.
Potass. chlorat.	...	...	...	ʒiss.
Pulv. fol. belladon.	...	...	...	℥iss.
Pulv. anisi	...	...	...	℥ij.

Divide into twelve powders. Give one twice a day in the food.

12/2. *Setay.*—Violet Hectograph Ink as your sample:—

Methyl-violet...	...	...	...	℥ij.
Spirit	...	...	...	℥ij.
Water	...	...	...	♏vj.

Mix.

159/11. *A. H. B.*—Ol. menth. pip. ang. improves with age.

63/35. *R. P. S.*—What do you mean by ordinary wool-fat? If the commercial suint, it is not suitable for making adeps lanæ. The principle of the lanolin patent was to separate the natural wool-fat from the soapy wool-washings by centrifugal action. The fat was thus obtained free from the soap-fat, and was put through an elaborate process of solution and purification which cannot be carried out economically on the small scale.

156/23. *Bernardo.*—Hindoo Hair-dye.—Add the ammonia solution until the precipitate dissolves. The copper sulphate is chiefly colouring.

157/5. *S. G.*—Commercial Citrate of Lime contains, in addition to the true salt, a certain amount of magnesium, with excess of lime and often other salts of lime. The estimation of the citric acid and the excess of lime usually suffices for the examination of this substance. For this purpose 5 grammes is dissolved in a known quantity of standard HCl, kept gently boiling for a short time, cooled, and titrated with standard alkali. Further, the excess of lime (or chalk) can be calculated. To determine the amount of citric acid, a known weight of the sample is ignited, the ash boiled with standard acid, and the liquid titrated with alkali. The acid used corresponds with the chalk as free calcium carbonate, and that produced by ignition of the organic salts. By retitrating the result found for free chalk the equivalent of the organic acids is found. This, however, returns all the organic acids as citric acid; if greater accuracy is needed, the citric acid must be first precipitated from hydrochloric-acid solution, but this is seldom necessary.

99/74. *A. G. L.*—Your sample of Rheumatism-powder appears to be a deteriorated specimen of powdered cinchona.

Digitized by Google

130/31. *Lex.*—**Distemper Mass for Dogs.**—The following contains the chief ingredients of the sample you send:—

Powdered soap	15 parts
Powdered jalap	10 parts
Powdered aloes	5 parts
Tartar emetic	1 part
Powdered liquorice	15 parts
Glycerin to make a mass	

A piece weighing from 40 to 60 gr to be given for a dose once a week.

7/58. *Sefton.*—A village with 340 houses and 1,300 inhabitants will give a chemist a rather poor living, as 2,435 persons to the chemist is the normal condition at present, but that does not reckon the stores. The venture should, however, be a good waiting one, and with smart business methods the 1,300 may do wonders. We have seen a good business in a smaller place.

153/18. *Devoniensis.*—The sample of Tooth-powder made in Paris has the following composition:—

Pulv. saponis alb.	ʒj.
Pulv. iridis	ʒss.
Magnes. carb. pond....	ʒj.

Misce bene.

155/19. *J. C. R.*—**Books on the Management of Babies.**—Mrs. Langton Hewer's "Our Baby" (Wright & Co., 1*s.* 6*d.* and 2*s.* 6*d*); Chavasse (P. H.). "The Management of Children" (J. & A. Churchill, 2*s.* 6*d*).

159/19. *E. S. B.*—**(1) Books on Botany.**—Either Bower's "Practical Botany for Beginners" (Macmillan, 3*s.* 6*d.*) or Scott's "Introduction to Structural Botany" (Black, 3*s.* 6*d.*) will suit you. (2) We have heard Pelman's memory system well spoken of.

152/19. *Vis* has a customer suffering from a recurring swelling on the ear which discharges about once a month, and he asks what treatment should be used. [It is evident that the customer of "Vis" is suffering from an inflammatory condition of one of the sebaceous glands of the auricle. Treatment by cauterisation to be effectual would require to be sufficiently deep as would leave a permanent scar. An ointment with vaseline basis containing a drachm of precipitated sulphur to the ounce should be applied every evening before going to bed by means of a fine hair brush (camel's), and will probably in time favourably influence the part.]

22/2. *E. H. O.*—Your inquiry does not come within the scope of this column.

161/6. *Rani* has a customer whose finger-nails turn black and rot away, and who is afraid the affection is spreading to the toe-nails. The customer is not syphilitic, and is otherwise in good health. "Rani" asks if we can account for it. [Affections of the nails are most frequently of a constitutional nature, as in those suffering from or having a tendency to be the subjects of pulmonary or rheumatic diseases, eczema, psoriasis, &c., less commonly a merely local disease as in ringworm of the nails. Most cases require long, careful, and skilled treatment, and even then the results are not always satisfactory. In this particular case we presume that the by no means rare condition "ringworm of the nails" can be excluded as similar conditions are present in the nails of the toes. The customer should try unguentum acid. salicylic. for a time, and if that fail unguentum sulphuris, keeping in either case the nails short and applying the ointment under the nail at the tip and under the skin at the root. If after two or three weeks' trial no improvement takes place, then a specialist on skin-diseases had better be consulted, as the probability is that some constitutional disease exists in which the affection of the nails is merely a concomitant sign.]

160/89. *Sapiens.*—**Cider preservative.**—This is, as you surmise, a mixture of sodium salicylate and saccharin (the latter in the proportion of about 1 in 20). We have not come across this mixture for cider-preservation before, but suggest that it be used in the proportion of half to a teaspoonful to the gallon of cider.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

174/34. **Address of makers of vulcanite-combs.**

169/59. **Makers of any special filter for castor oil?**

172/4. **Who makes fluid extract kyomiko (? koromiko)?**

173/70. **Name of a Bath chemist who bottles Bath water.**

174/38. **Where can lettuce shaving-cream, prepared by a New York firm, be obtained?**

Coming Events.

Monday, March 17.

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. Mr. J. D Geddes on "Photography Applied to Illustration and Printing."

Wednesday, March 19.

Chemical Society, Burlington House, W., at 5.30 P.M. The following Papers will be communicated:—"The Absorption Spectra of Metallic Nitrates." Part I. By Mr. W. N. Hartley. "A Method of Determining the Ratio of Distribution of a Base between two Acids." By Messrs. H. M. Dawson and F. E. Grant. On "The Molecular Complexity of Acetic Acid in Chloroform-solution." By Mr. H. M. Dawson. On "The Existence of Polyiodides in Nitrobenzene-solution." By Messrs. H. M. Dawson and R. Gawler. "Nitrogen Chlorides containing the Propionyl Groups." By Mr. F. D. Chattaway. "Derivatives of *a*-aminocamphoroxime." By Messrs. A. Lapworth and A. W. Harvey. "Preparation of Sulphamide from Ammonium Amidosulphite." By Messrs. E. Divers and M. Ogawa. "Hypoiodous Acid." By Mr. R. L. Taylor.

Pharmaceutical Society of Great Britain (North British Branch), 36 York Place, Edinburgh. Evening meeting, at 8.30 P.M. Mr. G. F. Merson will read laboratory notes on "Collodion of Belladonna B.P.C."; "Extract and Tincture of Indian Hemp"; and "Tincture and Syrup of Tolu." Dr. Gordon Sharp, on "Is Tincture of Digitalis a Stable Preparation?" Mr. D. B. Dott, on "Extract of Liquorice."

Young Chemists' Association (Working-men's Club), Gallowgate, Newcastle-on-Tyne, at 8 P.M. Impromptu discussion.

Royal Microscopical Society, 20 Hanover Square, W., at 7.30 P.M. Exhibition of Foraminifera, by Mr. A. Earland.

Forfarshire Chemists' Association, Mather's Hotel, Dundee, at 4.30 P.M. Mr. J. F. Tocher will explain his scheme of University Education for Pharmacists. (Tea at 4 P.M.)

Glasgow Chemists' and Druggists' Assistants' and Apprentices' Association. A "Smoker" will be held in the Co-operative Rooms, Glasgow Cross, at 9 P.M. Light refreshments, &c., will be served. Tickets (2*s.* each) may be had from Mr. F. Bewglas, 733 Dumbarton Road, at the local Schools of Pharmacy, or from any of the town-travellers.

Society of Arts, John Street, Adelphi, W.C, at 8 P.M. Professor Silvanus P. Thompson on "Opto-technics."

Western Chemists' Association, Westbourne Restaurant, Craven Road, W., at 9 P.M. Discussion on "The Stamp Act and its Difficulties," opened by Mr. Leo Atkinson.

Thursday, March 20.

Optical Society, Crown Room, Holborn Restaurant, at 8 P.M. Conversazione.

Barnsley Chemists' Association. General meeting.

Chemists' Assistants' Association. Annual dinner at the Holborn Restaurant.

Glasgow Pharmaceutical Association., at 11 A.M. Mr. J. F. Tocher on "The Scotch Universities and Pharmaceutical Education."

Friday, March 21.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Geheimrath Professor Otto N. Witt on "Recent Developments in Colouring matters."

Edinburgh Chemists', Assistants', and Apprentices' Association. Annual dinner in the Imperial Hotel, Edinburgh, at 9 P.M. Tickets (4*s.* each) to be had from Mr. Peter K. Brown (Secretary), 105 Broughton Street, and members of the committee.

The dinner of the Bradford Chemists' Association, which was arranged for April 8, has been postponed to April 22.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: March 13.

ROYAL Exchange merchants have been considerably upset this week by the advent of petticoats to the cobble-stones, hitherto sacred to the silk-hatted fraternity. The Colonial Products Exhibition, elsewhere referred to, is responsible for the diversion. But business is so dull that the novelty is not regrettable. Cod-liver oil is the next of the important topics. The new medicinal oil is not so good as it should be, and this, combined with the short ante-Easter fishing-season, makes the speculation as to price rather keen. Cinchona sold at better prices on Tuesday. The crude-camphor market is hesitating between rise and fall, while the refined is 1*d.* per lb. dearer. The principal changes of the week are as undernoted:—

Higher	Firmer	Easier	Lower
Camphor, Cinchona Cod-liver oil (in London) Condurango Ergot Lycopodium Oil, lemon Pimento Thymol (in N.Y.)	Cocaine Japan wax Oil, bergamot Senega	Copper sulphate Gentian	Bismuth carb. Shellac (2nds) Sod. hyposulph.

Arrivals.

The following packages of drugs, chemicals, &c., arrived at the ports of the United Kingdom from March 5 to March 11, inclusive:—Aloes, 78 (@ Bombay); annatto-seeds, 18 (@ Colombo); asafetida, 178 (@ Aden); buchu, 13 (@ Natal); chamomiles, 10 (@ Ghent); caraway, 140 (@ Amsterdam); carbolic acid, 5 (@ Amsterdam); cardamoms, 13 (@ Bombay), 163 (@ Colombo), 16 (@ Rangoon); cassia, 130 (@ Aden); castor oil, 212 (@ Coconada), 25 (@ Leghorn), 10 (@ Antwerp); cinchona, 143 (@ Colombo), 40 (@ Valparaiso); cinnamon, 106 (@ Colombo); citronella, 13 (@ Amsterdam); cloves, 107 (@ Singapore), 30 (@ Penang), 18 (@ Colombo); cod-liver oil, 40 (@ Dromtheim), 128 (@ Aalesund), 130 (@ Bergen), 25 (@ Hambro'); copal, 1,031 (@ Hong-Kong); coriander, 220 (@ Tangier); divi-divi, 156 (@ Madras); dragon's-blood, 4 (@ Penang); essential oils, 97 (@ Messina), 7 (@ Ostend), 3 (@ Hambro), 18 (@ Catania); gambier, in cubes, 1,165 (@ Singapore); gamboge, 2 (@ Aden); gentian powder, 10 (@ Marseilles); ginger, 1,303 (@ Bombay), 167 (@ Yokohama), 1,250 (@ Hong-Kong), 81 (@ Jamaica); gum acacia, 65 (@ Suez), 23 (@ Bordeaux), 51 (@ Valparaiso), 62 (@ Grand Popo), 42 (@ Mogador), 13 (@ Singapore), 145 (@ Hambro), 517 (@ Bussorah), 284 (@ Bushire), 315 (@ Bunder Abbas), 328 (@ Lingah), 272 (@ Aden), 510 (@ Mahomerah); gum benzoin, 116 (@ Hong-Kong); gum olibanum, 47 (@ Bombay); honey, 5 (@ Malta, 44 (@ Kingston); isinglass, 4 (@ Para), 3 (@ Aden), 29 (@ Hambro); kino, 12 (@ Bombay); lemongrass oil, 100 (@ Madras); lemon-juice, 30 (@ Catania); lime-juice, 374 (@ Dominica), 12 (@ Calcutta); lime oil, 57 (@ Dominica); liquorice, 30 (@ New York), 153 (@ Catania), 53 (@ Palermo); mace, 45 (@ Bombay), 4 (@ Aden), 5 (@ Colombo); magnesia, 50 (@ Philadelphia); musk-seeds, 1 (@ Colon); olive oil, 51 (@ Leghorn), 760 (@ Malaga); 706 (@ Bordeaux), 198 (@ Marseilles); opium, 110 (@ Bushire), 23 (@ Bussorah), 3 (@ Singapore), 36 (@ Ahwaz), 10 (@ Constantinople), 55 (@ Calcutta); orange-peel, 2 (@ Singapore); pistachios, 11 (@ Marseilles); potassium cyanide, 65 (@ Paris); rose oil, 14 (@ Bombay); saccharin, 10 (@ Boulogne), 7 (@ Antwerp); saffron, 3 (@ Valentia); sandarac, 213 (@ Mogador); sarsaparilla, 3 (@ Hambro'), 5 (@ Colon); senna, 50 (@ Suez), 67 (@ Bombay), 100 (@ Alexandria); shellac, 345 (@ Calcutta); tamarinds, 10 (@ Valparaiso), 2 (@ Hambro'), 39 (@ Calcutta); turmeric, 149 (@ Bombay); vanilla, 9 (@ Colombo), 9 (@ Rouen); wax, bees', 9 (@ Grand Popo), 71 (@ Dusseldorf), 3 (@ Hambro'), 5 (@ Genoa), 13 (@ Mogador, 200 (@ Aden), 12 (@ Natal), 50 (@ Para).

Heavy Chemicals.

There is really no material change in the condition of the heavy-chemical market, either as regards general business or ruling values. Demand keeps quiet, both on home and export account, but both branches appear likely to take a turn for the better very shortly. In the home consuming trades, calico-printers, dyers, and bleachers, are all fairly busy. Paper-makers, although not overstocked with orders, are still getting through good supplies of raw materials. Soap-manufacturers find trade brisk, there being a good demand for manufacturing as well as household soaps. Potters are steadily employed, as are also carpet-manufacturers. The paint-trade is busier, and will soon be very brisk.

Sulphate of Ammonia is rather quieter, and shows a slight decline in values. Nominal quotations: Beckton, 11*l.* 10*s.*; Beckton, April–June, 11*l.* 7*s.* 6*d.*; Beckton terms, 11*l.* 5*s.* to 11*l.* 7*s.* 6*d.*; Hull and London, 11*l.* 5*s.*; and Leith, 11*l.* 6*s.* 3*d.* Exports from Leith last week amounted to 698 tons.

Brown Acetate of Lime moving well, and firm tone is steadily maintained. Value is a shade higher at 5*l.* 5*s.* to 5*l.* 10*s.* per ton.

Benzols are lower again; 90-per-cent. at 9*d.*, and 50-per-cent. at 8¼*d.* per gal.

Lead Products continue to move off steadily. White sugar of lead 21*l.* per ton, less 2½ per cent. Glasgow. Brown sugar of lead 17*l.* per ton, less 2½ per cent. Glasgow. Nitrate of lead 22*l.* 10*s.* per ton, less 2½ per cent. Glasgow.

Barium Products.—A very firm tone is still the prevailing feature in this branch, and any decline in values is improbable. The mineral carbonate of barytes (witherite), over and above the already booked contract deliveries, is very difficult to obtain for either prompt or early delivery. Quotations are, therefore, still only nominal, and vary in accordance with the strength, quality, and package, &c. Blanc fixe, pure precipitated sulphate of barium in paste form, 7*l.* 5*s.* to 7*l.* 15*s.* per ton, in usual casks. Chloride of barium, best ordinary refined crystals, 7*l.* to 7*l.* 10*s.* per ton, in ordinary casks, or 5*s.* per ton less in bags. Nitrate of baryta firm, with advancing tendency, 16*l.* 10*s.* to 17*l.* 10*s.* per ton for crystals in casks, free on rails, and 5*s.* per ton extra for powdered. Hydrate of baryta, purest crystals, 14*l.* to 14*l.* 10*s.* per ton, in 6 to 7 cwt. casks. Sulphide of barium, crude calcined 70 to 75 per cent., 5*l.* 10*s.* to 6*l.* per ton, in casks. Mineral sulphate of barytes in steady request at late rates of 40*s.* to 100*s.* per ton for ground, according to quantity, quality, and package.

Liverpool Drug-market.

Liverpool, March 12.

Castor Oil.—Quay parcels of good seconds Calcutta have been selling at 2 13/16*d.* per lb. during the week, but for store parcels 3*d.* to 3 1/16*d.* is still asked. First-pressure French is held for 2 15/16*d.* to 3*d.*, second-pressure 2⅞*d.* per lb.

African Ginger.—Sales of the new crop have been made at 31*s.* per cwt. from the quay in quantity.

Chillies (Sierra Leone).—Fifty bags new crop realised 45*s.* per cwt. at auction, and 5 bags of somewhat inferior quality sold at 35*s.*, and 10 bags fine bright red 47*s.* per cwt. A further parcel of 12 bags good quality was held for 46*s.* per cwt.

Quillaia-bark.—There is still a steady demand, and values range from 12*l.* 7*s.* 6*d.* to 13*l.* per ton, actual business being done at 12*l.* 10*s.* for about 5 tons.

Sulphate of Copper is easier, and sales are reported at 19*l.* 10*s.* per ton.

Arsenic.—The decline in this is maintained, and importers are still willing to sell at 13*l.* 15*s.* per ton.

Grains of Paradise.—For the small stocks remaining here importers talk of 60*s.* per cwt., but there is no evidence of further arrivals being forthcoming.

Cochin Ginger.—Forty-one bags of new crop were offered at auction and limited at 44*s.* per cwt., but no bid was elicited. The parcel was afterwards sold on private terms.

Galls.—Ten bags of Smyrna blue at auction were limited at 60*s.* per cwt, but no buyers put in an appearance.

Carnauba Wax.—The sale of 20 bags fine yellow is reported at 73*s.* per cwt.

Canary-seed.—For fine bright Turkish owners would now accept 35*s.* to 36*s.* per quarter.

Rhatany-root.—Eighteen bales of good Peruvian were offered at auction, and were ultimately disposed of at 3½*d.* per lb.

Beeswax.—The position is practically unchanged for the week, the amount of business passing being very limited.

Digitized by Google

American Drug-market.

New York, March 4.

The market is more active, and transactions are of larger volume. Some speculative movements are in evidence.

ALOES.—Curaçoa is in demand, but buyers are not inclined to pay the prices asked. Quotations are more or less nominal, at 3½c. to 4c.

BEESWAX is tending upward owing to light arrivals from producing points. Ordinary pure yellow is quoted from 30c. to 35c.

COD LIVER OIL is advancing, and $24 to 28$ is quoted for leading brands.

BALSAM COPAIBA is firm, at 36c. to 39c. for prime Central American, and 48c. to 50c. for Para.

CITRONELLA OIL has declined to 20c. in drums owing to active competition.

ERGOT is nominally unchanged, but the market has a firmer tendency. Heavy sales have been made at 37c., presumably for speculative purposes.

GOLDEN-SEAL (Hydrastis) is easy. Spot quotations are 43c, and supplies are offered at primary centres for 46c.

IPECAC. is quiet and values nominal, at $2.50 for Rio and $1.35 for ipecac. Less than this would buy.

MANDRAKE (*Podophyllum*) is scarce on the spot, and 4½c. is an inside quotation.

MANNA is firmer in sympathy with advices from primary markets. Large flake is held at 45c., and small at 35c.

QUININE.—Domestic makers have advanced quotations to 28c., and foreign brands are expected to advance similarly. Supplies from second-hands are offered sparingly.

SARSAPARILLA (Mexican) has sold at 6½c., and more is to be had at this figure.

SENEGA is firm at the recent advance to 54c.

SERPENTARY.—Texas root is scarce, and 38c. has been paid for small lots.

THYMOL is unsettled, with quotations varying from $2.40 to $2.75.

German Drug-market.

Hamburg, March 11.

The drug-business in general is quiet, only a very few articles meeting with interest.

AGAR-AGAR is lower, spot quotes 335m. to 331m.; forward, 310m. to 305m. per 100 kilos.

BALSAM PERU is a little easier, at 12½m. to 12¼m. per kilo.

CAMPHOR (REFINED) is very firm, and very little is offered by second-hand holders at 435m. per 100 kilos. It seems very probable that the makers will advance their prices ere long.

CONDURANGO-BARK is firm, at 112m. to 115m. per 100 kilos.

CANTHARIDES quote 480m. to 475m. per 100 kilos.

ERGOT OF RYE is tending firmer, and shows a strong market with a fair demand. America has sent large orders and our stocks here are getting very small. Russia is not offering much, and the stocks in Spain seem to be very small. The present quotations vary from 330m. to 350m. per 100 kilos.

LYCOPODIUM is very firm and dearer, spot-delivery, at 460m. per 100 kilos., while Russia quotes already 470m. to 475m.

MENTHOL shows only little business, present quotation is 29m. per kilo.

IPECACUANHA is dull and lower, Rio at 21½m., Cartagena at 9¾m. per kilo.

WAX, JAPANESE, is very firm and Carnauba unchanged.

OILS.—Castor oil is in better demand, first-pressing in barrels spot being held at 56m. per 100 kilos. Cod-liver oil is firm, non-congealing oil at 78m. per barrel. Linseed is firm but quiet.

OILS (ESSENTIAL).—Star-anise oil is unchanged, at 10½m. per kilo. Peppermint, HGH is 8.60m. per lb.; Japanese do., 8¼m. to 8m. per kilo.; Carvol is quoted at 15m. to 16m. per kilo.; and Caraway-seed oil, 8½m. to 9½m. per kilo.

Cablegrams.

NEW YORK, March 13, 2.56 P.M.:—Business is fair with us. Opium is easy at $2.93; quinine, strong, at 27c. to 28c.; aconite-root, tending lower, present price 10c.; lithia, in an unsettled state at $1.25; hydrastis, firmer (48c.); Japan wax, firm at 8c.; condurango, higher (15c.); thymol has declined to $2.50; senega advanced to 58c, and ergot is firmer at 38c.

* * * *

BERGEN, March 13, 12.20 P.M.:—The official reports put the catch of cod to date at 11,023,000, against 10,379,000 same date last year, which will yield 6,317 barrels of oil, as compared with 9,831 in 1901. The market in non-congealing oil is firm at 78s. per barrel, and is rising, although the fishing is improving.

* * * *

HAMBURG, March 13, 1.15 P.M.:—Agar-agar dull, camphor still expectant, cevadilla dearer at 100m. Ergot and oil of peppermint are firm.

ACID, CARBOLIC.—Crystals, 39-40°, 6¼*d.* per lb., 34-35°, 6⅛*d.*; crude, 50°, 1*s.* 6*d.* to 1*s.* 6½*d.*, 60°, 1*s.* 10½*d.* to 1*s* 11*d.*, 75°, 2*s.* 3*d.* to 2*s.* 3½*d.*

ACID, CITRIC.—The price is 1*s* 0½*d.* for crystals, and a fair business for this season is passing.

ACID, TARTARIC.—Foreign crystals, 10½*d.* per lb. on the spot, English 1*d.* more.

ARROWROOT.—At auction on Wednesday common St. Vincent sold at 1¼*d.* per lb.

BALSAM, PERU.—The report that the San Salvador Syndicate had advanced their price by 1m. per kilo. has not affected this market, where the balsam is offered at 6*s.* 3*d.* to 6*s* 6*d.* per lb., according to quantity.

BISMUTH CARBONATE again cheaper. For contract quantities of 5 cwt., the manufacturers are accepting 1*d.* per lb. less—viz., 5*s* 8*d.* per lb.

BORAX.—Crystals, 13*s.*, and powder, 14*s.* Boracic acid, crystals, 22*s*, and powder, 24*s.* per cwt.

CAMPHOR, CRUDE.—Following upon the rumours that the monopoly referred to in our last report had been secured by the Japanese Government, the market has this week been weaker, and there have been offers of 7*s.* 6*d.* per cwt. below last week's closing price. On Friday 100 piculs of Japanese (March-April) sold at 162*s.* 6*d.* per cwt, c.i.f., but the price rose to 168*s.* before the close, and on Tuesday of this week sellers were offering April-May at 160*s.* c.i.f. now 157*s.* 6*d.*

CAMPHOR, REFINED.—English refiners have advanced their prices by 1*d.* per lb., the present quotations for 1-ton lots being 2*s.* 2½*d.* per lb. for bells and flowers. German refined camphor has not been advanced, but a rise is expected daily. The market is strong, and a further advance will not be a surprise.

CARDAMOMS.—Firm; the prices for better qualities being well maintained. Lower grades slightly easier.

CASCARILLA.—New York advices state that this is becoming an exceedingly scarce article. Fine quill is selling there at 70*s.* per cwt.; second qualities at 65*s*, and stringy varieties at 50*s.* per cwt.

CINCHONA.—At the auctions on Tuesday 1,797 packages were offered, the most of them being sold at prices slightly higher than formerly. The unit is now 1 3/16*d* to 1⅝*d.*, as against 1½*d.* last sale. The kinds and quantities of bark offered and sold are shown as under:—

	Packages offered.		Packages sold.
South American cinchona	779	of which	779
East Indian cinchona	713	„	681
Ceylon cinchona	151	„	108
African cinchona	123	„	123
Java cinchona	41	„	41
	1,797		1,732

The following approximate quantities of bark purchased by the principal buyers does not include 391 packages of old import (1879, 1881, and 1882) South American bark sold without reserve, the weights not being stated:—

	Lbs.
Agents for the Brunswick factory	60,040
Agents for the Frankfort and Stuttgart factories	50,040
Messrs. Howards & Sons	50,009
Agents for the American factories	41,607
Agents for the Imperial factory	38,109
Agents for the Mannheim and Amsterdam factories	8,905
Druggists, &c.	8,650
Total quantity sold	257,360
Bought in	8,310
Total quantity offered	265,670

The prices obtained were as follows:—

SOUTH AMERICAN.—Bolivian cultivated Calisaya, medium quill and chips, 6¼*d.* to 9⅝*d.* per lb. Old import: Pitaya, at 1¾*d.* to 2*d.*; New Grenada, 1⅝*d.* to 2¾*d.*; and Cuprea, 1⅝*d.* to 2*d.*

AFRICAN.—Fair quill, 6¾*d.* per lb.; broken and chippy, 5¾*d.* to 6⅛*d.*

EAST INDIAN.—Officinalis, stem chips and shavings, good to fine, 5*d.* to 9*d.* per lb.; fair, 3½*d.* to 4¼*d.*; renewed good to fine, 5⅜*d.* to 10⅛*d.*; root, 4*d.* to 7⅛*d.*; branch, 2¼*d.* to 4½*d.* Ledgerianas,

Digitized by Google

stem chips, 7*d.* to 8½*d.* per lb.; root, 8½*d.* to 8¾*d.*; branch, 5½*d.* to 6*d.*; hybrid, renewed stem, 3½*d.* per lb.; branch, 2½*d.* Succirubra, stem chips and shavings, fair to good, 3½*d.* to 4¾*d.* per lb.; renewed, 3⅜*d.*; branch, 3*d.*; root, 3¾*d.* to 3½*d.*; mixings, 4¾*d.*

Java.—Succirubra root, 4⅜*d.* per lb.; quill, 4½*d.* to 4¾*d.*

Ceylon.—Officinalis, stem chips, 1⅜*d.* to 3⅜*d.* per lb.; branch, 2¾*d.* Ledgeriana, fine rich stem chips, 8*d.* to 11½*d.* per lb.; branch, 6½*d.* to 7*d.*

Cocaine.—The market is firm. The heavy stocks of crude alkaloid in Hamburg are well held, and as they are the chief factor indicative of a decline there is no prospect of slackening at present.

Cream of Tartar is steady at 73*s.* to 73*s.* 6*d.* per cwt. for 98 per cent.

Damiana-leaves.—It is reported from the other side that American stock is exhausted. Here there is little, and the price asked is 7½*d.* to 7⅝*d.* per lb. on the spot.

Ergot is in an unsettled state, but a tendency to higher prices prevails, although sales of Spanish at 1*s.* 6*d.* per lb. were reported on Tuesday. We cannot trace any more at that price, and the principal holders now ask 1*s.* 7*d.* Russian is 1*s.* 5*d.* to 1*s.* 5½*d.*, and the Hamburg price is 1*s.* 6½*d.*, c.i.f.

Gentian.—Easier; sales have been made at 15*s.* 6*d.* to 16*s.* per cwt., c.i.f., for good sorts.

Henbane.—The condition of the English farms so far indicate that this year's crop will again be short. Higher rates for both annual and biennial leaf are already spoken of.

Hydrastis Canadensis.—Rather firmer in tone and a rise seems inevitable. The ruling price is 2*s.* 1*d.*, c.i.f.

Insect Flowers.—Stocks here are not large, and for open flowers one holder wants 10*s.* per cwt. more that we quoted last week.

Ipecacuanha.—Business in Rio has been done since the sales at up to 10*s.* for good root, and Cartagena at 4*s.* 6*d.*

Lobelia.—Stocks are becoming restricted. The latest quotations are 6¼*d.* to 6½*d.* per lb. for loose sorts.

Menthol.—Little doing at 13*s.* 6*d.* per lb. for ordinary Japanese, and for Kobayashi 13*s.* 9*d.* per lb.

Morphine.—Good business is being done just now at 4*s.* 3*d.* per oz. for hydrochloride in powder, and 4*s.* 5*d.* in Cubes. Buyers think it a good time to fill up their requirements.

Nux Vomica.—Calcutta advices, dated February 20, state that there have been inquiries from the U.S.A., but no important sales. Stocks are light. Small parcels have been sold loose at 2·11r. to 2·13r. per British maund.

Oil, Anise (Star).—The market is in a very sickening condition, forced sales of new arrivals keeping the price down to 4*s.* 4½*d.* per lb. in cases.

Oil, Bergamot.—The market is very firm, the latest price asked being 7*s.* per lb., net.

Oil, Castor.—The market is quiet. Hull made castor oils is quoted 25*l.* 10*s.* per ton for firsts in barrels, and 24*l.* 10*s.* for seconds.

Oil, Cod-liver.—At the end of last week a small parcel of new season's oil was picked up for 75*s.* per barrel, spot, but no more can be got at that figure. At the beginning of this week rumours of scarcity were freely talked about, and prices have been raised to the range of 85*s.* to 95*s.* per barrel, c.i.f., London. Business has been done at 85*s.* The statements as to unproductive fishing are exactly what usually prevail at this season, but it has to be noted that there is a cessation of fishing in Lofoten at Easter, and this will naturally affect the supplies of new oil temporarily at least. The demand this week for oil on the spot, with the scarcity of old oil and the poorish quality of most of the new, has given a justifiably firm tone to the market, but there is a tendency to exaggerate a mere temporary hesitation on the part of Norway holders into a permanent advance towards a three-figure price. Our correspondent in Bergen, who is well informed and unbiassed, writing on March 8, says:—

The cod-fisheries have this week been favoured with calm weather, and have, especially in East Lofoten, been most satisfactory. I shall therefore next week most likely be able to write you a fair progress of the statistics. The livers are, however, constantly poor, but as a continued good fishery should be able to counterbalance the deficit, the tendency of the market is decidedly calmer, if not a shade weaker. The exports of cod-liver oil from here up to date are 1,643 barrels, against 1,696½ barrels at the same time last year.

Oil, Lemon.—Dearer; for fine quality from 2*s.* 7*d.* to 2*s.* 9*d.* per lb. is now being asked.

Oil, Olive.—Firmer prices are being got for the better qualities of Lucca—viz., from 52*l.* 10*s.* to 68*l.* per tun.

Oil, Turpentine.—Unchanged, at 31*s.* per cwt.

Opium.—Good demand for all descriptions of soft. Good Karahissar sorts are selling at 8*s.* 3*d.* per lb. For Persian the demand is small on the spot, but large to arrive at recent prices.

Constantinople, March 7.—The only sales during the past fortnight are 5 cases "soft" at 9*s.* 3*d.*, and the market again closes very quiet, with absolutely nothing doing. Owing to continuation of the extreme mild weather—unprecedented at this period of the year—the young plants are progressing most favourably, and crop prospects are excellent at present.

Otto of Rose.—London dealers report a fair business at unchanged rates.

Podophyllum-root is strong in tone, and a fair quantity has recently been sold at 23*s.* per cwt., c.i.f. Stocks are getting rather thin.

Potassium Chlorate is quiet at 3*d.* to 3⅛*d.* per lb.

Quinine.—This has been a quiet week, but after the bark sales on Tuesday there was a firmer tendency, and rumours that there will be an advance of 1*d.* per oz. These are groundless so far. The second-hand market prices for German are 1*s.* 1¾*d.* spot, and 1*s.* 2*d.* June. Sales include 10,000 oz. August delivery at 1*s.* 2¼*d.*

Seeds.—Russian *Anise* dull, at 20*s.* per cwt. Dutch *Caraway* slow, at 21*s.* to 21*s.* 6*d.* per cwt. Turkish *Canary* steady, at 38*s.* per quarter. *Coriander* sells slowly at 9*s.* 6*d.* per cwt. for Morocco, and at 16*s.* 6*d.* for English Morocco *Fenugreek* quiet, at 7*s.* to 7*s.* 6*d.* per cwt. *Linseed* firm, at 58*s.* to 61*s.* per quarter for good clean seed. Morocco *Cumin* firm, at 26*s.* per cwt., and Malta 33*s.* to 35*s.* per cwt.

Senega.—Still very firm, with imminent indications of a rise. Considerable business has been done at 2*s.* 4*d.* per lb., net terms. There is a talk about 2*s.* 6*d.* being an early figure, American advices still being strong.

Serpentary remains unchanged, the prevailing price being 1*s.* 9*d.* per lb. for good root.

Shellac.—This week's auctions contained small supplies, the total being 390 cases. Of 220 cases second orange, 35 cases sold privately at a 2*r.* decline, and the remainder were bought in at 116*s.* to 120*s.* per cwt. for livery to fair reddish TN. The Garnet was bought in, and the Button taken out. Privately the market remains steady, although quiet, with a moderate business doing on the spot, fair TN orange selling at 117*s.* to 118*s.*, cash terms.

Sodium Hyposulphite.—Cheaper. Small crystals are offered in ton lots at 7*l.* 10*s.*, net—*i.e.*, 10*s.* down.

Spices.—The market has been quiet, but steady, the only article showing any change being *Pimento*, which is rather dearer. At auction on Wednesday Cochin *Ginger* partly sold at previous quotations, dull to good washed rough at 36*s.* 6*d.* to 38*s.* per cwt., and bright boldish Calicut rough at 43*s.*; bold and medium native cut was bought in at 80*s.*, and medium and small at 65*s.* per cwt. Japan was bought in at 40*s.* per cwt. for rough very slightly limed. Jamaica in slack demand, and only a few lots sold; lean dark at 36*s.* to 36*s.* 6*d.*, and dull washed at 38*s.* to 39*s.* per cwt. Zanzibar *Cloves* were bought in at 3⅞*d.* per lb. for fair quality, a bid of 3 11/16*d.* being made. The quotations for future delivery show no change from last week. Stems sold at 1½*d.* per lb. Fair unpicked Penang realised 6½*d.* per lb. *Pimento* in good request, and the bulk sold at 2¼*d.* per lb. for common, and at 3*d.* for ordinary to fair. Ordinary East India *Capsicums* on stalk were bought in at 15*s.* per cwt. New selected *Cassia-lignea* was bought in at 60*s.* per cwt., chips at 48*s.*, and *China-cinnamon* at 25*s.* per cwt. Dusty *Cinnamon-chips* were bought in at 3*d.* per lb., and good Japan *Chillies* at 40*s.* per cwt. *Pepper* steady, grey Alleppy was bought in at 6*d.* per lb. The quotation for Singapore black is 5⅞*d.*, both for spot and shipment. Tellicherry is selling privately at 6 1/16*d.* to 6½*d.* Good fair Singapore white was bought in at 10 5/16*d.* per lb.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1s.; DIARY, 3s. 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

LINES FOR ADVERTISERS.

The Colonial Issue of "The Chemist and Druggist"
Falls this year on Saturday, April 19.
It will go to the best buyers of druggists' goods
in the Britains beyond the sea.
Besides, it will be specially circulated in Japan:
Japanese trade is worth looking after.
The Anglo-Japanese alliance will influence trade.
The C. & D. is in touch with buyers in Japan.
We have correspondents there who look after our interests.
Business men should make the most of the alliance.
So far as chemicals, drugs and sundries are concerned
The C. & D. of April 19 will be the medium for business.

Summary.

SOME NOTICES on p. 449 interest wholesalers.

FIFTEEN PER CENT. profit is what grocers aim to get (p. 448).

ANOTHER MIXTURE OF SALTS for analysis is offered to students (p. 448).

SOME COMMENTS on the Traders in Poisons Bill will be found on p. 464.

THE latest particulars in regard to pilocarpine derivatives will be found on p. 457.

A LARGE NUMBER OF CONTRACTS are reported in our English News section (p. 449).

THE SALE OF COCAINE in Bengal is now restricted to chemists and druggists (p. 454).

THE LYONS SCHOOL OF PHARMACY is described by our Paris correspondent (p. 452).

AN ORDINARY RETAILER gives wholesalers a hint as to rendering monthly accounts (p. 475).

MR. INCE'S series of articles on dispensing for young pharmacists concludes on p. 458.

PARTICULARS regarding the trade in German potato-spirit are given in an article on p. 465.

A NEW FORMULA for collodion of belladonna has been devised by Mr. G. F. Merson (p. 455).

SIR HERBERT MAXWELL does not know Mr. Dobbs, has never seen him, and is not his ally (p. 474).

WE print as many replies to legal and pharmaceutical queries as we can find room for this week (p. 476).

THE IRISH PHARMACEUTICAL COUNCIL is considering the advisability of meeting at a different hour (p. 457).

A FIRM has been restrained by the High Court from using "Red Drench" as the name of a preparation (p. 472).

THE MIDWIVES BILL has passed through the Committee stage, and awaits a second reading in the House of Commons (p. 478).

EXTRACT OF INDIAN HEMP is a variable preparation. Mr. G. F. Merson suggests that the tincture should be ethereal (p. 455).

THE latest report of the bankruptcy of the Charles A. Vogeler Company is given on p. 471. The creditors get 55 per cent. of their claims.

MR. GEORGE DARROLL, a Shropshire pharmacist, has been elected President of the Cape Pharmaceutical Society. His portrait is given on p. 453.

MR. CHAS. UMNEY comments upon tr. benzoin. co., and deplores that there is no reference committee of experts to fix standards for such articles (p. 475).

TWO PHARMACEUTICAL VETERANS have died since our last issue—viz., Messrs. W. B. Randall, of Southampton, and J. de Carle Smith, of Norwich (p. 459).

MR. J. F. TOCHER has read a supplementary paper on pharmaceutical education at Dundee and Glasgow this week. The gist of it will be found on p. 470.

THE most interesting subject at Wednesday's meeting of the Chemical Society was the nitriles to which hydrocyanic acid belongs both chemically and physiologically (p. 469).

THE BROMPTON HOSPITAL AUTHORITIES write explaining the position of the B. H. Cough-lozenge maker, and we point out that the title "Brompton Cough-lozenge" is trade-marked (p. 476).

AN ACTION by Mr. Allison, of Hull, against his former co-director, Mr. Foster, has been the means of eliciting some remarkable facts regarding the business with which they were connected (p. 472).

STAMPED-MEDICINE QUESTIONS were discussed by the Western Chemists' Association (of London) on Wednesday evening, Mr. Leo Atkinson leading off with an informative paper, and Mr. Glyn-Jones contributing good points (p. 467).

BUSINESS is better this week. German quinine is ½*d.* dearer "officially." Crude camphor has dropped owing to the fact that the Japanese monopoly is not complete. Lemongrass oil is lower. Pará tonka beans are dearer, and shellac is lower (p. 479).

NEXT WEEK

THE CHEMIST AND DRUGGIST will be published a day earlier than usual, owing to Eastertide. Advertisements for the Coloured Supplement should therefore be delivered at the office, 42 Cannon Street, London, E.C., not later than Wednesday, March 26, at 4 P.M. Correspondents will also please note this.

B

Digitized by Google

Corner for Students.

Conducted by Leonard Dobbin, Ph.D.

Students, please note. All communications should be addressed to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

All communications and reports must bear the names and addresses of the writers, not necessarily for publication. The reports of those who ignore this rule are liable not to be dealt with.

Qualitative Analysis.

A MIXTURE of not more than three salts will form the subject of the next exercise in qualitative analysis. The mixture is to be submitted to a thorough systematic examination, all its constituents are to be detected, and proof is to be given that the substances detected are the only constituents of the mixture.

Students' applications for portions of the mixture of salts (accompanied by a *stamped and addressed envelope*, not a stamp merely) will be received up to Tuesday, March 25, and the samples will be posted on the following day.

Students' reports will be received up to Saturday, April 5. Each report should contain a concise account of the work done, and should include a list of the constituents detected. In this list any substance regarded as an accidental impurity should be distinguished from the essential constituents of the salts composing the mixture.

The report on this month's analysis will be published next week.

The Tournament Marks.

Owing to an accident in the course of printing, the final figures of the marks obtained by "Westminster" and "Cymene" were transposed in the *C. & D.* for February 22 The correct numbers are: "Westminster," 325; "Cymene," 301.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

A young soldier, named Lawrence, has been remanded at Derby on a charge of embezzling 5*l.* 12*s* 6*d.* belonging to his former employer, Mr. W. W. Harvey, chemist and druggist, 3 Ford Street, Derby.

Mr. Otto Hehner, F.I.C., has been re-appointed public analyst for the Isle of Wight, and Mr. F. V. Dutton has been re-appointed analyst for Carnarvonshire under the Fertilisers and Feeding-stuffs Act.

A tailor named Edward Blossom has been sent to penal servitude for six years for "ringing the changes" on various shopkeepers in Manchester, amongst the victims being the lady cashier at Messrs. Boots (Limited).

At a meeting of the Finance Committee of the Tenby Town Council, on March 14, the tender of Mr. Alfred Livesey, chemist and druggist, Tenby, for the supply of disinfectants for the ensuing twelve months was accepted.

Messrs. Joseph Crosfield & Sons (Limited), Warrington, point out to us in reference to the glycerin-patent case reported last week that there were two actions, and that a decision in their favour was given in one of them.

John Turner, a Southwark laundryman, has been sentenced to twenty-one months' hard labour for obtaining by false pretences various sums of money from, amongst others, Mr. Charles Green, chemist and druggist, of Bermondsey.

A site for an open-air sanatorium has been purchased on the southern slope of Saddleback, about two miles by road from Threlkeld Station, near Keswick, by the Cumberland branch of the National Association for the Prevention of Consumption.

A soldier named Ellicott was sentenced to six months' hard labour at Devizes on March 14 for stealing some bottles of lavender-water and other articles from the shop of Mr. Miles Coward, chemist and druggist, Devizes.

This week's meeting of the Liverpool Chemists' Association was held at 8 P.M. instead of the former early hour. The papers read were on "Pharmacopœia-revision," by Mr. A. C. Abraham, and on "The Refractive Index of Cod-liver Oil," by Mr. Edwin Dowzard.

Notice of appeal was given on March 12 against the recent conviction of Messrs. M. & E. Jenkinson, florists, Newcastle-under-Lyme, for selling XL-All insecticide, a compound containing nicotine, without labelling it "Poison" in accordance with Section 17 of the Pharmacy Act.

The students of the Imperial College of Chemistry and Pharmacy, by special order of the Postmaster-General, were permitted to inspect the batteries and other electrical apparatus in connection with and contained in the basement of the General Post Office, London, on Friday, March 14.

A young man named Evans, who had been four times previously convicted of similar offences, was sent to prison for a month by the Manchester Magistrates on March 19, for stealing a box of Krüschen salt, a preparation for rheumatism, from the shop of Mr. W. B. Capper, chemist, 21 Oxford Street, Manchester.

At the Southampton Borough Police Court last week, Walter Knowlton (26), a laboratory-porter in the employ of Messrs. Randall & Son, chemists, High Street, Southampton, was charged with stealing a number of photographic utensils and a quantity of medicines and disinfectants from his employers. When arrested (at his work) he had in his pocket a dictionary of technical terms, the property of Mr. Wilson, and he had other articles in his possession similar to those made by prosecutors. On his behalf it was contended that the fact of articles being found in his possession was not larceny, and Knowlton was discharged.

Store-prices.

In quoting the new prices of the Civil Service Supply Association (page 365) that of the "Allenburys" feeding-bottle was given wrongly. The price has been advanced from 1*s.* 1*d.* to 1*s.* 2*d.*, according to the minimum retail price scheme recently revised by the makers, Messrs. Allen & Hanburys (Limited). Will retailers please note this correction?

Grocers and Proprietaries.

A special meeting of the Federation of Grocers' Associations was held at the Cannon Street Hotel, E.C., last week to consider the question of proprietary articles, and was attended by eighty-one delegates, who, under the presidency of Mr. Councillor Holder (Federation President), devoted some six and a half hours to an animated discussion of the subject. The crucial vote took place upon the first resolution:

That in the opinion of this Federation it is important in the best interests of the trade that mutual arrangements should be made between manufacturers and retailers to ensure proprietary articles being sold by retailers at a profit of not less than 15 per cent. on sales.

This was strongly opposed by various speakers, but was eventually carried by fifty-five votes to thirteen. Other resolutions were passed, and a new committee was appointed to carry the terms of the resolution into effect.

National Physical Laboratory.

The Prince and Princess of Wales on Wednesday afternoon, March 19, visited Bushy Park, Teddington, where the Prince opened the National Physical Laboratory which has been erected partly at the cost of the nation and partly by public subscription. The opening ceremony took place in the engineering building of the laboratory, under the presidency of Sir W. Huggins, President of the Royal Society; and Lord Rayleigh, Mr. Gerald Balfour (President of the Board of Trade), the Lord Chancellor, Lord Kelvin, and the

Digitized by Google

Lord Mayor of London also took part in the proceedings. In the course of an excellent and commonsense speech, the Prince of Wales said "the nation is beginning to recognise that if her commercial supremacy is to be maintained greater facilities must be given for furthering the application of science to commerce and manufacture."

Fire.

The second of three destructive fires which have occurred in Wandsworth Road within the past three weeks took place on March 12, the premises involved being those of Messrs. Jackson & Gwynn, manufacturing chemists, 289 and 291 Wandsworth Road, S.E. The factory, offices, and stores, with an adjoining bootmaker's establishment were completely gutted before the outbreak was subdued.

Birmingham Notes.

"Who works the longest hours?" is the *Mail's* absorbing correspondence of the hour, and it is regrettable to know that the pharmacist comes very near the top.

At an inquest held recently on a child, six months old, who died after vaccination in four places, Dr. Robinson, said that the cold-cream which had been applied had produced violent inflammation!

The saltpetre-prosecution at Aston (see Legal Reports) should act as a timely warning to pharmacists, for there is said to be a considerable quantity of sodium nitrate being sold in the city under the name of saltpetre.

Alderman Clayton's proposal for housing the workingmen citizens was described at the Council-meeting on March 11 as "erotic, neurotic, and tommyrotic!" Notwithstanding this learned denunciation the Council passed the vote.

At Walsall a runaway horse broke the window of the shop of Mr. J. O. Morris, chemist and druggist, and did much damage to the stock and goods displayed in the window. It eventually extricated itself, and renewed its flight, but was stopped before it had committed any further mischief.

The grocers, like the pharmacists, are enduring a period of great tribulation. They have formed a Midland Council of Grocers' Associations, with the object of focussing the opinions of the various Associations on trade questions, and of rendering assistance to the Federation in regard to the proprietary-article question.

Miss Rosamond Southall, daughter of Mr. A. Southall pharmaceutical chemist, takes a deep interest in girls' clubs and in a paper on the subject, which was read on March 15 she explained how difficult it is to deal with some of the members. One girl, when told about the text "Wash me, and I shall be whiter than snow," suggested that she should use Sunlight soap.

The shop and premises of Messrs. MacIsaac & Co., chemists, Hagley Road, were offered for sale by auction on March 13, when with difficulty a few bids were squeezed from the small audience, and the lot was eventually withdrawn at 1,750*l*, the reserve not having been touched. Pharmacy had three representatives—Mr. McLanachan, the tenant, and two others.

Regret will be felt by many pharmacists at the death, at the early age of 33 years, of Mr. Edward A. Warmington, Ph.D., F.I.C., public analyst of Dudley, and formerly Dr. Tilden's assistant when he was in the Chair of Chemistry at the 'Varsity. It occurred on March 11 at 21 Church Road, Moseley. Dr. Warmington was in partnership with Mr. Vaughan Hughes, and had only recently been married.

Mr. George Hull, a well-known drysalter and colour and varnish maker, died on March 15. A Londoner by birth, he came to Birmingham in 1835, and a few years later purchased the now well-known oil and colour business in Smallbrook Street, with which he was identified for sixty years. He was formerly churchwarden of St. Martin's Church, member of the Board of Guardians, overseer, and prominent member of the Birmingham Book Club.

In a racy book by a Birmingham quando citizen, just issued, one of the best stories relates how Palmer, the Rugeley poisoner, met at the village inn a burly navvy, who was very quarrelsome. He treated the navvy to a quart of ale, and gave him his quietus by introducing into it something from a small paper parcel he took from his waistcoat-pocket. The body was removed to an outhouse at closing-time, and at 3 o'clock was spirited away. This is stated to be the beginning of the suspicion which was the means of hanging Palmer.

Public Notices.

Mr. G. B. Wilson, solicitor, Mirfield, intimates that all claims against the estate of the late Mr. Thomas Topham, chemist and druggist, of 149 Pellon Lane, Halifax, must reach him by March 27.

All persons having claims against the estate of the late Mr. John Hurst, pharmaceutical chemist, Louth, should send them in by April 14 to Messrs. Bell & Ingoldby, solicitors, Corn Market, Louth.

All claims or demands against the estate of the late Mr. John William Clapham, chemist, Bentley Lodge, Meanwood Road, and Kelsall Street, Wade Lane, Leeds, should be sent to Mr. John C. Malcolm, solicitor, 8 South Parade, Leeds, forthwith.

Contracts.

Mr. G. E. Knights has been appointed to supply drugs and disinfectants to Swaffham workhouse for the ensuing half-year.

Mr. H. Flanders, chemist and druggist, Mill Road, Cambridge, has been appointed chemist to the Board of Guardians.

Mr. F. Thomas, chemist and druggist, Boston, has been appointed druggist to the workhouse by the local Board of Guardians.

The Retford Board of Guardians has appointed Mr. E. R. Pater as chemist and druggist to the workhouse for the current half-year.

The Malling (Kent) Rural District Council has accepted the tender of Mr. Oliver, chemist and druggist, West Malling, for the supply of disinfectants.

Newport (I.O.W.) Town Council has accepted the tender of Mr. E. H. Morris, chemist and druggist, Newport, for the supply of 4 tons of protosulphate of iron at 3*l*. 3*s*. per ton.

The Beckenham Urban District Council has accepted the following tenders: Messrs. E. Porter & Co., for disinfectants and carbolic soap; Jeyes' Disinfectant Company, for carbolic acid.

The Dartford Board of Guardians has appointed Messrs. Corbyn, Stacey & Co. (Limited), of 300 High Holborn, London, to supply drugs, &c., to the workhouse for the next half-year, and Mr. W. T. Tucker, of Dartford, will supply disinfectants.

The Liverpool Select Vestry has accepted the following contracts for supplies to the workhouse: Messrs. Evans, Sons & Co., Liverpool, for druggists' sundries; Messrs. Sumner & Co., Liverpool, for drugs; Mr. C. S. Bullen, for surgical appliances, and Messrs. J. Mellor & Sons for methylated spirit.

Unabsorbed.

An attempt has been made on the part of the Manchester Corporation to absorb the division of Stretford into its municipality, but the decision of the Local Government Board is that Stretford is not to be amalgamated with Manchester. Mr. F. W. Bates, chemist and druggist, is the Chairman of the Urban District Council of Stretford, and has been widely complimented on the victory that has been achieved. The Council has petitioned the Privy Council for a charter of incorporation, which is likely to be granted, so that there is a prospect of Mr. Bates being Stretford's first Mayor.

Sportive Chemists.

Amongst the athletic clubs that entered the competition for the cross-country championship of the London Business-houses Athletic Association was that of Messrs. Burgoyne, Burbidges & Co. The drug-men were so far successful as to secure third-place honours out of the thirteen teams that competed, the order of scoring of teams being as follows: Messrs. Vickers, Son & Maxim, 43 points; the Great Eastern Railway Company, 55; Messrs. Burgoyne, Burbidges & Co., 64. The individual scoring for Burgoyne's was: Mr.

Digitized by Google

T. W. F. Clark, 3rd; Mr. A. Coles, 14th; Mr. H W. Keen, 16th; and Mr. W. H. Attwood, 31st. Mr. T. W. F. Clark (Burgoyne's) took three prizes—3rd in the scratch race, second in the handicap, and a medal for being one of a placed team. He lost the first prize in the handicap by the narrow margin of one-fifth second.

Selling Poison to Children.

At a meeting of the Cardiff Union Dispensary Committee on March 13, Mr. Taylor, who has charge of the Charles Street Dispensary, stated that he dispensed 2,930 prescriptions during twenty-four days, or an average of 122 per day. There is much sickness among the poor, and Mr. Taylor called the attention of the committee to the fact that patients frequently send their little children for liniments and the like which often contain poison. He asked the committee if it is advisable to allow children to be given anything containing poison to take home. Last week he gave a child some liniment containing poison, and when the child left the dispensary he noticed it put the liniment to to its mouth—a most dangerous proceeding. Had the child died by taking poison he wanted to know his position. Mr. Ames considered that no child under 13 years of age should be supplied with medicines or liniments containing poison. He moved a resolution accordingly. Mrs. Cantillon contended that parents oftentimes had no one but their children to send for medicines, and it would be very hard upon them if they could not send their children to the dispensary. Bottles containing ingredients of a dangerous character could be packed and sealed. Most chemists and doctors serve children with medicines. It was ultimately agreed to bring the matter to the notice of the Board of Guardians.

The Week's Poisonings.

Only one of the eleven fatalities from poisons which have occurred during the past week was due to an unscheduled poison—hydrochloric acid. Frederick Lowe, a Birmingham pearl-button maker, went, on March 5, to the pantry in his house for a medicine-bottle. By mistake he lifted one containing hydrochloric acid (which he used in his business) and drank a quantity of the contents. He tried to spit out the poison, but subsequently collapsed, and died eleven days after. At the inquest on March 18 the Coroner observed that it would be difficult to do anything by means of legislation to prevent such mistakes.—The scheduled poisons employed were carbolic acid (4), oxalic acid (2), morphine, cyanide of potassium, laudanum, and strychnine.—A well-known Coventry lady died after an injection of strychnine as a remedy for neuralgia from which she suffered greatly.—At Nottingham an inquest was held on the body of Mr. Leonard William Turney, son of Alderman Sir John Turney, who was found dead in the laboratory of the Trent Bridge Leather-works on March 16, having taken cyanide of potassium.

Irish News.

Dispenser Wanted.

The Board of Management of the Galway Hospital announce their intention of appointing on April 5 a resident compounder of medicine at a salary of 75*l.* per annum.

Personal.

Mr. John I. Bernard, Vice-President of the Pharmaceutical Society of Ireland, has been elected a member of the committee of the Dublin Mercantile Association.

First Aid in a Pharmacy.

On the evening of March 15, while Mr. Frettrell, solicitor, Dublin, was driving an outside car across the O'Connell Bridge, the horse fell and Mr. Frettrell was thrown to the ground. He was carried in an unconscious state to the establishment of Messrs. Hamilton, Long & Co., close by, where Dr. Lennon and Dr. Mitchell were in attendance. Later on the Corporation ambulance conveyed the patient to his house at Sydney Parade.

Burning Accident.

On March 14, Denis Carroll, of Carrigataher, co. Tipperary, who was suffering from rheumatism, was engaged bandaging his legs and feet with flannels saturated with turpentine, when the turpentine caught fire. Carroll is so severely burned that his life is despaired of.

Drug-tenders.

The following tenders for medicines and medical appliances are invited: Ballyshannon Union and Dispensary (March 22), Ballinasloe Union (March 29), Bantry Union (March 25), Boyle Union (March 29), Castlecomer Union (March 25), Clone Union (March 28), Dromore West Union (March 25), Irvinestown Union (March 26), Kilrush Union (March 29), Kilmalloch Union (March 28), Killadysert Union (March 22), Kenmare Union (March 29), Manorhamilton Union (March 27), Midleton Union (March 29), Oughterard Union (March 27), Strabane Union (March 25), Tipperary Union (March 29).

At a meeting of the Guardians of the Killarney (co. Kerry) Union on March 18, the following tenders were accepted: The Apothecaries' Hall, Dublin, for medicine, less an abatement of 17½ per cent.; and the Medical Requisite Company, Cork, for medical and surgical appliances, less an abatement of 10 per cent.

Instead of Whisky.

An inquest was held by Coroner Cleary at Chancellorsland, co. Tipperary, last week, on the body of a woman who died from carbolic-acid poisoning. Maurice Hurley, a farmer, said deceased came to his house to wash some clothes, and before she began work he offered her a drink of whisky. He took a bottle out of a drawer and gave her half a glass of the contents, which she drank. Witness took the same amount himself afterwards. His own mouth was burned by the acid, but he did not feel any other injurious effects. Dr. Condon said the woman died from carbolic-acid poisoning, and the jury returned a verdict to the effect that the deceased died from poisoning by carbolic acid inadvertently given her by Maurice Hurley in mistake for whisky.

Dispensing Drugs.

The Local Government Board has received two letters from a clergyman named Corr, Enniskillen, accusing Dr. Tate, dispensary officer at Holywell, of irregularities in the discharge of his duty. The reverend gentleman asserts that a written notice was posted up in the dispensary waiting-room stating that the doctor had good medicine for sale. There had been no medicines for the poor in the dispensary for a long time, as the doctor told the poor repeatedly that the medicines were rotten, and that the good medicines were locked up and he had not got the key of the press. The Guardians have inquired into the charges, and find that during Dr. Tate's absence on sick-leave his deputy had informed private patients that he could not give them medicines as he had not the key of the private medicine-chest. He never said the dispensary drugs were worthless, as there was always an ample supply of good medicines in stock. He had given some of the patients a paper containing the name of some article not on the official list of drugs. The Guardians have accepted as satisfactory the explanations of the dispensary officer, and have so informed the L.G.B.

Scotch News.

Carbolic-poisoning.

A boy named William Syme died in the Edinburgh Royal Infirmary on March 12 from the effects of his having, by mistake, taken a quantity of carbolic acid.

Business Changes.

Mr. Alexr. Stephen and Mr. Alfred Duffus have purchased the business of Messrs. W. Sinclair & Co., wholesale druggists, Aberdeen.

The business at 567 Duke Street, Glasgow, formerly belonging to Mr. A. Miller, chemist and druggist, has been

Digitized by Google

purchased by Mr. David McCutcheon, chemist and druggist, and not by Dr. Lang, as stated in a recent issue.

Slander Action Settled.

The First Division of the Court of Session, Edinburgh, was informed on March 13 of the settlement of an action in which Mrs. Mary Miller, wife of John Miller, chemist, Langside, Glasgow, sued her brother, an engineer, for 250*l.* damages for alleged slander. The defender has retracted the statements complained of, apologised, and tendered 5*l.* in name of damages and expenses, which the pursuer has accepted.

Bottle Exchange.

The members of the Edinburgh and District Aërated-water Manufacturers' Defence Association have recently held their fourth annual dinner, and in the course of it various things that cannot be bottled were discussed, such as Mr. Stead's views on the arm and the notification of measles. Mr. John Chalmers (the Chairman) got to business, however, when he had to respond to the toast of the Association's prosperity. Amongst the things he said were these:—

They had now a bottle-exchange in Edinburgh which is second to none in the Kingdom, and thus manufacturers are enabled to get the use of their own property.

Under the Merchandise-marks Act it is an offence to fill a bottle or syphon bearing another maker's name, and they intend to enforce their legal rights. It is not an advertisement to the best makers to have their bottles used by makers of inferior standing whose waters may not be fit to drink.

Plain bottles, however, should be allowed to circulate as freely as in the past till they work themselves out. If there is any difficulty about getting bottles returned, he counselled traders rather to keep back the big makers' bottles than those of the small makers.

It appears from the annual report that the Association membership is thirty-eight. The directors anticipate that the proposed bottle-exchange will soon be opened. In the clearing-house there was received during the year from the exchanges in Glasgow, Aberdeen, Kirkcaldy, and London, and from members, a total of 2,628·2 dozen bottles, of which 2,191·7 dozen were sent out.

Glasgow Notes.

The Oakbank Oil Company have arranged for a complete installation of electric machinery at their works for the manufacture of shale oil.

Damage to the extent of 200*l.* was caused by fire on March 15 at the chemical-works occupied by Robert Smith's Executors (Limited), at 182 West Street, South Side, Glasgow.

Some chemists, in order to make an invidious distinction between themselves and their neighbours, are assuming the unwarrantable title of M.Ph.Sc. A court of pharmaceutical equity and ethics would be useful in such cases.

The Glasgow University Court has decided to erect new and fully equipped physical, physiology, materia medica, forensic medicine, and public health laboratories. This is the "psychological moment" for pressing home Mr. Tocher's "dainty bit plan."

The chemical-works of Mr. R. Smith, 200 West Street, Tradeston, were set on fire by a leakage of sulphur from a tank on the morning of March 15. The damage to the building and stock is estimated at 200*l.*

In several police-cases reported lately it has transpired that the victims of robbery had first been "hocussed" with "knock-down" drops. And the symptoms described were those of chloral combined with alcohol narcosis. Where do the thieves get the chloral?

The entries for the spring Preliminary examination at Glasgow University show an extraordinary increase. The entries for medicine are nearly double the number for March, 1901, while the entries for arts have also increased more than 50 per cent. This sudden rise is ascribed to the influence of the Carnegie Trust.

In a pamphlet just issued by Principal Wright, of the Agricultural College, on "The Influence of Phosphates on Farm-crops," he gives the results of experiments conducte, in the Agricultural Hall of the recent Exhibition. Turnips potatoes, and cereals were operated on, and in every case manuring with phosphates improved the strength and quality of the crops.

A "letter-to-the-editor" philanthropist gives the following recipe as a specific for smallpox:—"Sulphate of zinc, gr. j.; foxglove (digitale, *sic*), gr. j., half-a-teaspoonful of sugar. Mix with two teaspoonfuls of water. When thoroughly mixed add 4 oz. of water. Take a teaspoonful every hour. For a child, smaller doses according to age." Note the subtle *secundum artem* touches, and the homœopathic dosage.

In local pharmaceutical circles there is as much amusement as surprise at the "impression" produced by Dr. W. L. Muir's evidence before the Poisons Committee. The Eastern Medical Society, an obscure body, appointed him as its representative. The strong and active Southern Medical Society, which has played so strenuous a part in the campaign, did not appoint Dr. Muir. Mr. Alex. Cross, the M.P. for Camlachie, and manufacturer of various agricultural and horticultural products, pulled the wires.

In the first two lectures of his course on "The Electrochemical Industries," at the Technical College, Dr. Shields traced the evolution of electro-chemistry in the nineteenth century to its origin in the work of Davy and Faraday, and remarked that although the fundamental laws and principles had been discovered nearly a hundred years, the industrial applications on the large scale were not much more than ten years old, and during this period from a quarter to one-third of a million horse-power had been installed. The backwardness of this country was due in part to the scarcity of water-power, but cheap power was not a *sine quâ non* in some of the electro chemical industries, and these could be conducted quite well in the United Kingdom. Discussing the cost of one electrical horse-power working for one year, the lecturer stated that at Niagara Falls the charge to large consumers is 4*l.*, while in other localities it has been offered at less than 1*l.* With coal at 8*s.* per ton, and a well-appointed modern installation of 2,000 or 3 000 horse-power, the cost of an electrical horse-power should not exceed 10*l.*, or, under favourable conditions, 7*l.* By the utilisation of Mond gas and gas-engines the cost ought to be reduced to 5*l.* In the latter part of his second lecture Dr. Shields explained the principles of heating in the electric furnace, and its uses in the manufacture of calcium carbide, carborundum, artificial graphite, and metallic alloys.

The Chemist's Cellar.

Judgment in an action brought by Mr. Robert Speedie, chemist and druggist, Crieff, against a Crieff ironmonger was given at Perth Sheriff Court on March 14. Mr. Speedie claimed the right to use the whole of the cellar under his shop let to him by defender. The ironmonger contended that his tenant was only entitled to a part of the cellar which he had marked off by a partition. The Sheriff finds for Mr. Speedie, with expenses.

The Latest Style.

The intimate relations which exist between some Edinburgh West-end physicians and pharmacists is well illustrated by the fact that envelopes with the name and address of a firm typewritten upon them are used by at least one specialist to put his prescriptions in. He not only hands the addressed envelopes to patients in this way, but takes care that they go to the right shop by verbal directions. The patients, of course, pay for the medicine in the usual way.

Chemists' Wills.

The will of the late Mr. James Dickie, chemist, 491 Victoria Road, Glasgow, has been lodged in the books of the Sheriff of Lanarkshire. The estate is returned at 1,381*l.* 1*s.*

The personalty of the late Mr. Alexander McIntosh, chemist and druggist, of Messrs. Gibson & Co., Edinburgh, who resided at Feargan, Liberton, has been proved at 449*l.* net; that of Mr. Alexander Mackenzie, chemist, Morrison Street, Edinburgh, at 133*l.*; and that of Mr. Alexander Crichton, chemist, Leith, at 267*l.*

Edinburgh Pharmacy Athletic Club.

The eleventh annual general meeting was held at 36 York Place, Edinburgh, on March 17, Mr. G. H. C. Rowland in

Digitized by Google

the chair. There was a good attendance, and the Secretary's report stated that members during the past season had shown great enthusiasm in the various sections, and now number 115. The Treasurer's report showed an income for the year of over 140*l*, while the expenditure worked out at considerably under that. After a discussion on the doings of the Club, it was intimated that Mr. Thos. McIlverick was desirous of presenting the Club with a cup for the "Tug-of-War" competition. The following officers were elected for the coming season: Hon. President, Dr. W. Inglis Clark; President, Mr. J. P. Gibb; Vice-President, Mr. A. G. Paterson; Secretary, Mr. D. S. Napier; Treasurer, Mr. W. C. Taylor; Assistant Secretary, Mr. Harry Smith; Committee, Messrs. Aitken, Aikman, Anderson, Harley, Rowland, Somerville, and Mackay. A donation of 1*l*. 1*s*. was voted to the Benevolent Fund.

French News.

(From our Paris Correspondent.)

Another Boulevard Tragedy.—A young Russian woman, named Maria Jakowska, committed suicide on March 14 outside a café in the Boulevard Montmartre. She had been abandoned by her lover some months before, and on that day she met him on the boulevard. While they were sitting talking outside the café she asked him to return to her, and on his refusal she produced a packet of strychnine, dropped the poison into the coffee she was drinking, and swallowed it. She was carried to the nearest pharmacy, but soon expired in great agony.

The Diagnosis of Maladies.—A Paris pharmacist appeared as defendant on March 10 in an action brought against him by the Paris Doctor's Syndicate for illegal practice of medicine. He was ordered to pay a fine of 50*l*., and a similar sum to the Syndicate as damages. It was a simple case of counter-prescribing. The pharmacist had analysed a client's urine, and suggested he should take a tonic medicine. The Judge found that the diagnosis of maladies is a privilege reserved exclusively to physicians, and that they alone are qualified to draw therapeutic conclusions from the results of analyses. As a matter of fact, the pharmacist's offence was that he recommended a tonic.

The Confetti-craze.—During the past six or seven years Paris has given itself over on the afternoon and evening of Shrove Tuesday and the Thursday of Mid-Lent to a carnival of confetti made of small round pieces of paper of variegated colours. People assemble by thousands on the Grands Boulevards, and throw handfuls of this apparently harmless ammunition at each other. But this year there has been something of an outcry against the practice. The newspapers have published caricatures of St. Bernard dogs rescuing people from avalanches of the paper missiles, and now the medical profession, always on the scent for possible modes of contagion, denounce the practice of paper-confetti throwing as eminently dangerous to the public health. Inquiries at the Paris hospitals show that as a matter of fact quite a number of maladies have been traced directly to pernicious confetti. These maladies take the form principally of diseases of the eye and the throat, the latter being attributed to accidentally swallowing dirty confetti, for some persons think it the greatest joke, in rough horseplay, to throw a handful of stuff into a lady's mouth when occasion offers.

The Pharmacy Students' Gala.—The gala benefit performance organised by the Paris Pharmacy-students' Association duly took place on Friday, March 7, at the Chatelet Theatre. There was a full audience, and the treasurer of the Association has secured a very satisfactory sum. This Society of Pharmacy Students came into existence six years ago, previous to which it formed part of the General Association of Paris Students. M. Hubarc, took the initiative of forming a small separate federation, feeling that pharmacy students would be the gainers by coming into closer contact. They have rooms and a library of their own, and amongst other things organise lectures and conferences on subjects pertaining to pharmacy. But their ambition soars beyond this. They have formed a fund with the object of lending money to students, who may be in temporary financial embarrassment in order to enable them to continue their studies, and thus not abandon their career. They are called loans of honour and the borrowers engage themselves to reimburse the money at the earliest opportunity. They are never pressed for repayment, and that formality rests entirely at their own discretion The students appear to appreciate very much this mode of mutual help in time of need. About 800 young men now belong to the Association, and participate in its meetings. They publish a periodical called "La Pharmacie Française" for the purpose of defending their interests, and make a periodical distribution of twelve hundred copies to pharmacists throughout France. The students are encouraged by a number of the past or present leaders of pharmacy in France, and their patrons include MM. Berthelot, Moissan, and Guignard, the Director of the Paris School of Pharmacy.

Pharmacy in the Second City of France.—I took the opportunity when at Lyons recently to visit the Mixed Faculty of Medicine and Pharmacy. As is usual in establishments of this kind medicine is very much to the fore and pharmacy rather inconspicuous, still it is interesting as an establishment which turns out the greatest number of pharmacists per annum of any of the mixed schools with the single exception of Paris. Lyons University consists of two huge "blocks" situated by the side of the Rhone. Law and literature occupy the one building, the other block is shared by the Faculty of Sciences and the Mixed Faculty of Medicine and Pharmacy. They have a common library and a large hall for public meetings, both very handsome and spacious, as well as the usual amphitheatres for lectures, class rooms, &c. The chemical laboratories where the practical work is done have, however, been transferred to the new Institute of Chemistry, which is a few blocks further on, so that the youthful pharmacists can no longer see the seagulls hover over the blue Rhone as they handle their blowpipes and test tubes. This, the Latin quarter of Lyons, is built on the Philadelphian or American plan of "blocks." The excellent practice of adorning the Board Room with portraits of eminent professors in their robes of office has been copied from the Paris School of Pharmacy. At Lyons I was told the practice is for the professor desirous of immortality to pay 10*l*. and the State the other 10*l*. for the portraits—they cost 20*l*. a piece. What made me doubt the absolute accuracy of this assertion was the varied merit of the portraits. A particularly fine piece of work is Dr. Gailleton's portrait. The ex-Mayor of Lyons (who was in the carriage with Carnot when the President was assassinated) is Professor of Skin Diseases and Syphilis at the Faculty, and curiously enough his successor M. Augagnein the present Mayor is also a Professor at the Faculty (Pathologie Externe is his chair) But your average pharmacist's modesty is as that of the violet and his purse is rarely full to overflowing. So I was not surprised to find but few pharmaceutical portraits. A very interesting one was that of M. Cazaneuve, professsor of organic chemistry and toxicology, who is the Director of the Institute of Chemistry already mentioned, and there were one or two deceased pharmaceutical professors. Claude Bernard's statue adorns the forecourt of the building (he was a native of Villefranche near Lyons), and the *quai* or embankment on which the faculty stands is called after the great savant. Architecturally the general plan of the faculty is what an Irishman would call a "three-sided quadrangle" like the Paris School of Pharmacy, while the general style of the building is not unlike that of the sister establishment at Lille. There is a Bacteriological Institute hard by, and, I believe, a Pasteur hospital is to be built at the back on the waste ground opposite the garden devoted to medicinal plants. A little further on is a handsome building where surgeons are trained for the French Army, the Ecole de Service de Santé Militaire, a sort of military counterpart to the Naval Health School at Bordeaux. The young fellows are dressed as Army officers and their uniforms brighten up this students' quarter. There are streets named after Jussieu, Chevreuil Parmentier and Pasteur at Lyons, mostly around the Latin Quarter. A new bridge to be called the Pont de Facultés or Pont de l'Université will shortly link this quarter with the busy railway quarter of Perrache.

South African News.

BUSINESS CHANGE.—Messrs. Hopkins & Cherry have taken over the business of Messrs. Carman & Workman, Woodstock, Cape Colony.

LICENCES TO PRACTICE as medical practitioners in the Cape Colony have been issued to Andrew Craig Hunter, L R.C.P. & S. Edin., formerly of Greenock, and Reginald Williams, L R C.P. & S. Edin , formerly of Stamford.

FOREIGN DIPLOMAS.—In our issue of March 1 (page 333) we published a cablegram from our Cape correspondent announcing that a new regulation had been added to the Medical and Pharmacy Act, dealing with the question of the recognition of the medical and dental diplomas granted by foreign Governments. The announcement is published in the *Cape Government Gazette* of February 25, and it states that the exact terms of the regulation which is approved by the Governor and Executive Council, and which was framed and adopted by the Colonial Medical Council under the provisions of Section 20 of the Medical and Pharmacy Act, 1891, are as follows :—

No diploma granted by the Government or any University or other body of a foreign country shall entitle the holder thereof to registration as a medical practitioner or dentist in this colony, unless equal rights and advantages are given in such country to the holders of any British registrable degree.

Section 20 of the Act states that the Council shall from time to time prescribe and define what diplomas or certificates shall be entertained by the Council on any application by any person to obtain a licence as a medical practitioner or dentist under the Act, and that no diploma or certificate shall be included by the Council in such regulations which does not furnish in the opinion of the Council a sufficient guarantee of the possession by the holder of the requisite knowledge and skill for efficient practice as a medical practitioner or dentist.

Pharmaceutical Society of Cape Colony.

THE annual general meeting of the Society was held in the Pharmacy Board-rooms, Cape Town, on February 20, the President (Mr. J. A. Mathew) in the chair. The Chairman expressed his appreciation at seeing such a representative gathering. Among those present were the Vice-Presidents (Messrs. F. W. C. Thomas and George Darroll, members of the Colonial Pharmacy Board), Mr. A. J. Rivitt (resident director of Messrs. Lennon, Limited), Mr. Alf. H. Mathew (Messrs. Heynes, Mathew & Co.). Messrs. Geo. Hamilton, A. Cameron, W. A. Sleggs (Messrs. Hazell & Son), J. H. Cooper, J. D. Buckle, J. S. North, S. Johnson, and the Hon. Secretary. The minutes having been read and confirmed, and the question of filling vacancies in the Council settled, Mr. Darroll proposed that all

SUBSCRIPTIONS DUE TO THE SOCIETY

for the current year, if not paid by July, should be collected by the Secretary by postal draft. He explained that at first sight this might appear to be a somewhat unusual step to take, as they, the chemists, generally collected their accounts that way when other methods failed, but he felt that the members would prefer the postal-draft method to the professional collector. The Secretary had not the time to go round and make collections—a fact which was generally recognised ; and he would ask the *C. & D.* reporter to note his remarks in the proceedings, so that absent members might understand the departure in its right light.

Mr. J. S. North seconded, and the proposal was carried.

Mr. W. Fick's motion "that the Society take such action as may be deemed necessary regarding the acceptance of foreign diplomas by the colonial authorities," was allowed to stand over *sine die*, the President explaining that the Pharmacy Board already had the matter in hand.

The following gentlemen handed in donations of a guinea each to

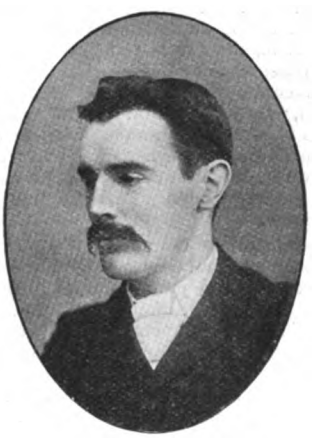
THE BENEVOLENT FUND :—

Messrs. Rivitt, J. A. Mathew, A. H. Mathew, Darroll, Cameron, Hamilton, Thomas, Cooper, Buckle, Cope, North, Sleggs, Heating, and S. Johnson. A half-guinea donation from Mr. J. Dell was also recorded, while the Society paid in a cheque for 10*l.* The fund now stands at 26*l.* 5*s* 6*d.*

In his report the Secretary said that the total membership was ninety-six, but some of the subscriptions for the past year had not yet been paid, notwithstanding that repeated applications had been made through the mail. The financial status of the Society was satisfactory, the bank-book showing a balance of 43*l.* 16*s.* 11*d.*, and there were no outstanding liabilities.

PRESIDENT'S ADDRESS.

The President said : Gentlemen, at an annual meeting of the Society I am well aware that a speech is expected from the retiring President. Now, a well-known proverb runs "Brevity is the soul of wit," and on this occasion I intend to try and lay claim to being your witty President, by being as brief as possible. After listening to the Secretary's somewhat pessimistic report for the past year, it is incumbent upon us to try by all the means in our power to induce the members to take a greater interest in our Society, and I would like to suggest that a circular be drawn up by the Council, appealing to all members to manifest a greater zeal in promoting the objects for which we exist, inviting them to send in written proposals as to what they consider the best means of obtaining a more healthy state of affairs. In this way we might get some valuable hints tending to make our meetings more attractive.



The unsettled state of affairs throughout the colony during the past year has, perhaps, hampered efficiency, but with a return of more normal conditions better results should attend our efforts. There is quite sufficient dormant talent among our members to produce both interesting and instructive papers upon subjects connected with the profession, if only an appreciative audience is assured. In future I trust this opinion will be justified. With the vista of a United South Africa opening before us, we may reasonably expect newcomers and an increased membership. Let us be prepared to extend a hearty welcome to them worthy of our name. The President then thanked the Society for the kind recognition of his efforts, and wished them all a prosperous year. (Applause.)

OFFICERS FOR THE ENSUING YEAR

were then elected. Mr. Rivitt refused nomination as President, and Mr. George Darroll was appointed to that post; Messrs. F. W. C. Thomas and Rivitt Vice-Presidents; Messrs. J. H. Cooper, S. Johnson, W. Fick, A. H. Mathew, Geo. Hamilton, E. L. Rolling, and J. S. North on the Council, with Mr. James Dell as Secretary. Some half-dozen new members having joined, the proceedings terminated.

THE NEW PRESIDENT.

Mr. George Darroll, the newly-elected President, is a son of Mr. William Darroll, chemist and druggist, Clun, Shropshire, and he passed the Minor examination on October 16, 1890. Shortly thereafter he went out to South Africa to act as senior assistant to his uncle, the late Mr. R. G. Darroll, of Wynberg. There he remained for four years, then took up a similar position with the late Mr. Alexr. Cleghorn, of Cape Town; and since he died Mr. Darroll has been manager of the Cleghorn Pharmacy. He is the Government member of the Cape Board of Pharmacy, and is well respected by his *confrères*.

MR. GEORGE DARROLL.

THE BEST CORKS come from Algeria. There are 2,500,000 acres of cork-forest in that country

Colonial and Foreign News.

Lead Hair-dyes are not allowed in Austria. A hair-dresser in Vienna has been sentenced to three days' imprisonment and 500kr. fine for selling such a hair-dye.

CO_2 Syndicate.—A syndicate of Austrian-Hungarian carbonic-acid manufacturers has been definitely arranged. It came into force on March 1, and will last for five years.

Dearer Nitrate.—As a result of the Nitrate Combination, the Chilian Government propose to increase the export duty on nitrate by sixpence per quintal. This will produce £50,000,000 per annum extra revenue.

Dr. Moriz Koposi, Professor of Dermatology in the University of Vienna, died on March 6. He was a pupil of Hebra, and wrote many works on skin-diseases. Several of his special ointments are well known to dispensing chemists.

Natural *v.* Synthetic Indigo.—The report referred to in *C. & D.*, January 18, that the Prussian War Office had ordered that all military cloth should in future be dyed with synthetic indigo has since been contradicted. It appears that the manufacturers will be permitted to use either the one or the other.

To Regulate German Trusts.—The Central Association of German Merchants and Industrials, at Berlin, has petitioned the Bundesrath and the several German State Governments to prepare a draft of a law, to be presented to the German Parliament, providing that all commercial associations of a monopolistic character, in the form of "cartels," syndicates, rings, trusts, &c., must be registered by law and have their articles of association approved by the respective authorities.

Pharmacy's Ideal Place.—According to statistics published in the *Farmaceutisk Revy*, the total number of pharmacies in Sweden at present is 333; 247 being head-establishments, 35 branches, and 51 drug-stores. The number of persons to the pharmacy varies between 8,600 and 26,600; in Stockholm the number is 15,500, whereas the average for the whole of Sweden is 15,100. This means that each Swedish pharmacist has about eight times more people to care for than the average British pharmacist.

Consular Advice from Chili.—American Consul R E. Mansfield, of Valparaiso, in a report on the condition of trade in Chili, regrets that many American firms who write to merchants in foreign countries do not attach sufficient importance to their letters. In some instances, these communications are mimeograph copies, or are circular letters printed upon a poor quality of paper; in others, the signature of the writer is impressed with a rubber stamp. As a rule, little attention is paid to such letters, the majority of which are promptly thrown into the waste-paper basket.

Annamese Medicines.—A writer in the *Archives de Médecine Navale* states that the Annamese Pharmacopœia is made up of an immense number of exceedingly complex formulæ, and before the simplest of the medicaments can be prepared the compounder has to perform the most perplexing ceremonies in order to insure its efficacy. Among metals gold, silver, and iron are in high repute as remedies, and iron is used for wounds. Zinc is employed for combating colic as well as for assisting parturition. In the latter case, however, the attendant nails the metal to the threshold of the patient's room. Earth is freely administered in many diseases.

Alcohol in German Pharmacy.—The spirit-duty Commission of the German Diet has accepted a proposal to discontinue the permission for pharmacists to use spirit free from duty for medicinal purposes. Some of the arguments put forward in favour of the proposal have aroused much indignation in German pharmaceutical circles. One member maintained that the permission is abused, and that the spirit is used to make apothekerschnaps for the consumption by pharmacists and their assistants, and that this is the reason why so many pharmacists became silly. He is also reported to have said that the practice has led to worse evils than this. Dr. Mueller (Sayan), a member of the Diet, has acknowledged that he wrote the report of the debate, and vouches for its accuracy, but this is controverted by others.

Preservatives Prohibited in Brazil.—The Board of Trade have received a despatch from Rio de Janeiro with reference to the requirements of the Brazilian law respecting articles of food or beverages which, on analysis, are found to contain ingredients likely to be injurious to health, such as boric or salicylic acid, alcohol of inferior quality, and sulphuric and other free mineral acids. Until recently the application of this law has chiefly affected spirits, aërated waters, &c., but by a clause in the last Budget Law its action appears to have been extended, as the clause in question provides that all imported beverages and foodstuffs, without exception, must now be tested by the Analytical Department before clearance through the Customs. Such goods as are found to contain deleterious ingredients in whatever quantity must be destroyed by the authorities or re-exported. In addition, in cases where re-exportation is not effected, the consignees will be fined. Merchants and others should be on their guard against shipping on consignment to Brazil any articles which may be liable to be challenged by the Analytical Department.

Insuring Students against Accident.—An innovation has been started among the students attending the University Laboratory of Professor Emil Fischer in Berlin. For many years each student has paid a small premium per term to the Students' Hospital Fund, and is thus entitled in case of illness to six weeks' free treatment in the "Students Ward" of the University Hospital. Professor Fischer thought this provision insufficient, and after several years unsuccessful attempts has succeeded in obtaining the sanction of the University authorities to the insurance of the students working in the laboratory against accidents happening during laboratory work, the insurance even covering accidents due to carelessness provided they do not arise from larking. Only 1*s.* 6*d.* per term is contributed by each student and 6*d.* by the University, and in case of death by accident 400*l.* is is paid, whilst for permanent disablement corresponding amounts are provided. For temporary disablement, whether due to accident or to the action of chemicals, a weekly allowance up to 5*s.* per day for a maximum period of 400 days is provided. Professor Fischer before finally deciding on the scheme convened a meeting of the students who all approved of it.

East Indian News.

Municipal Disinfectants.—Messrs. Thomson & Taylor, of Bombay, have again secured the contract for the supply of sanitary disinfecting-fluid to the Municipality of Bombay for the ensuing year.

Plague.—Bombay was in the grip of an unusually severe visitation of bubonic plague when the mail left (March 1), several Europeans having fallen victims to the malady in the last two weeks of February.

Masonic.—At a convocation of the members of Chapter Bombay Rose Croix, held in the Freemasons' Hall, Bombay, on February 28, Brother C. B. Robinson (Messrs. Thomson & Taylor, wholesale druggists, Bombay) was installed as M.W.S. for the ensuing year.

Cocaine in Bengal.—The following notification of the Board of Revenue has been published:—

Cocaine having been declared an intoxicating drug under Bengal Government Notification of October 23, 1900, and having thereby become an exciseable article, the sale of it without a licence has become illegal under Section 11, Act VII. (B C) of 1878, and punishable under Section 53 of the said Act. It is now hereby notified for general information that the sale of cocaine will not be allowed at all except for *bonâ fide* medicinal purposes, and that no licences for the sale of it will be given to any persons other than approved druggists and chemists. Druggists and chemists desiring to take out licences should apply to the Collector, who will grant the licences, under certain specified conditions, to duly approved persons and firms. Druggists and chemists will be allowed up to March 1, 1902, to obtain their licences. After that date the law will be put into operation against druggists and chemists, as well as against any other persons, who may be found selling cocaine without a licence.

The West-end of London is evidently not the only place where the cocaine-habit predominates.

Pharmaceutical Society of Great Britain.

NORTH BRITISH BRANCH.

AN evening meeting was held in Edinburgh on Wednesday evening, March 19, Mr. Peter Boa (Chairman of the Executive) presiding.

Mr. MERSON explained, with regard to his intimated note on tincture and syrup of tolu, that Messrs. Barclay and Mann had recently read papers in his district on somewhat similar lines to those on which he was working; and as he had not been able to complete his investigations, he had decided to leave his paper over for the time being, at any rate. Mr. Merson then read the other papers he had promised.

COLLODION OF BELLADONNA, B.P.C.

The author referred to the value of the B.P.C. Formulary, and gave reasons for considering the formula for collodion of belladonna to be capable of improvement, especially by utilising the B.P. fluid extract in the following manner, so as to give a preparation equal in strength to the liniment (0·375 per cent. alkaloid) rather than that of the plaster (0·5 per cent.):—

Fluid extract of belladonna	...	10 oz.
Purified ether (sp. gr. 0·720)	...	10 oz.
Liquid chlorophyll of commerce	...	½ oz.

Mix and shake well; stand for twelve hours; decant; filter the "foots," and in the mixture dissolve—

Camphor	...	130 gr.
Pyroxylin	...	½ oz.

The product should measure 1 pint. A brilliant and elegant fluid plaster is obtained, equal in every respect to that made by the B.P.C. process. The strength suggested is quite as efficient therapeutically as a spread plaster of 0·5 per cent. alkaloidal content.

GREEN BELLADONNA-PLASTER, B.P.C.

Mr. Merson suggested the following formula, instead of the complicated assay process:—

Liquid extract of belladonna	...	4 oz.

Evaporate to 1 oz., and add—

Liquid chlorophyll	...	½ oz.
Resin plaster to produce	...	12 oz.

Mix.

The popular demand for a green belladonna plaster renders it advisable that such a plaster of standard potency should be obtainable, but no such reason exists in the case of the collodion.

Mr. Merson's next communication was in regard to

EXTRACT AND TINCTURE OF INDIAN HEMP.

He alluded to the unsatisfactory results obtained in making tinctures from resinous substances, such as benzoin, tolu, and cannabis indica, and said the last-named is notoriously an unsatisfactory therapeutic agent. Its value resides, he said, in the resin or resins present, therefore for the preparation of the tincture an extract of purified resin is to be preferred to one containing a doubtful and variable amount of extractive insoluble in alcohol. Theoretically the yield of dry extract from the tincture should be 6 per cent. (weight in volume), but in practice that is not obtainable. Not two samples are alike. This depends partly upon the age of the extract, but in greater part upon the varying amount of water-soluble extractive admixed with the resinous or alcohol-soluble portion. Observation of the want of uniformity in these tincture-residues indicates a possible explanation as to why some commercial extracts are more easily soluble than others in making the tincture. The present Pharmacopœia directs the extract to be made by exhausting the powdered hemp by percolation with 90-per-cent. alcohol. That is not readily done. A relatively large quantity of alcohol is required before the percolate passes free from green colour, and the water in the spirit continues to extract some of the brown water-soluble matter. On evaporating the percolate, after the bulk of the spirit has been removed, a brown watery liquid with clots of resin suspended in it and adhering to the sides of the dish, results. Continued evaporation with stirring converts this into a fairly uniform green extract, which again separates on heating without stirring. Mr. Merson gave examples of variation in eight commercial samples, ascertained by experiments which he conducted, as to solubility and as to yield of dry extract. He attributed the varying solubility to the presence of an aqueous extract. The difference in colour observed in these tinctures was very marked, varying from bright green to dull olive or almost brown. This was no doubt due in part to the age of the herb used in making the extract. Bright extracts do not invariably yield most resin to ether. As a result of his experiments he was inclined to suggest in place of the present official extract an ethereal one like male fern, or, better still, one made by extraction with absolute alcohol. The solubility of experimental lots made in these menstrua was tried, and that made with absolute alcohol was the more satisfactory of the two. It, however, was not entirely soluble in 90-per-cent. alcohol, but readily and completely dissolved in spiritus ætheris, B.P. A more uniform tincture of cannabis indica would be obtainable from an extract made by exhaustion with absolute alcohol, using spiritus ætheris, B.P., as a menstruum. As much as 9 per cent. of the residue left after making the tincture with 90-per-cent. alcohol is soluble in ether.

Mr. DOTT concurred in what Mr. Merson had said about collodion. The only doubtful point was as to colouring with liquid chlorophyll; there were various kinds of chlorophyll, and some of them were not pure but artificial, such as aniline, which it was a pity to use at all, as it was liable to oxidation and lost its colouring very readily. With regard to Indian hemp, it was a fault of the Pharmacopœia that it simply says "prepare the extract with 90-per-cent. alcohol," without giving sufficient directions as to what the finished product was to be. That was really the important point: it did not matter how it was prepared. He attributed the brown colouring to the presence of water.

Mr. DUNCAN suggested an atropine instead of a belladonna collodion. The varying solubility of the commercial extracts of Indian hemp was due to the temperature at which they were prepared: the higher the temperature the greater the portion that became insoluble. The same occurred in podophyllin and extract of aloes. There was great doubt as to what was the active principle of Indian hemp, and until that was determined he did not think it would be advisable to alter the B.P. process. He believed if the official process were carefully carried out, an active preparation would result.

Mr. MCDIARMID said his experience was not in agreement with Mr. Merson's. It puzzled him to account for the insoluble matter in some commercial samples of Indian hemp. He thought something was added to the extract—some form of chlorophyll.

Mr. NESBIT did not think there was such an urgent demand for a green-coloured belladonna-plaster as Mr. Merson represented; at least, he had not heard of it. He asked Mr. Merson if he was quite sure he got all the alkaloids into his collodion. He did not think the alkaloids of belladonna were soluble in ether. Would not ether precipitate some of the alkaloids? His fear had always been that Indian-hemp preparations were too strong.

Mr. RUTHERFORD HILL said it was possible that while Mr. Merson had discovered much, he had not found all that Mr. McDiarmid had, who seemed to have got something else which required investigation. He had noticed that some of the insoluble extracts had been sent out by firms of the highest reputation, and he could hardly imagine they were doctored in the way suggested by Mr. McDiarmid.

The CHAIRMAN thought the object of the collodion of the B.P.C. formula is to provide a preparation containing an extract of the leaves without the irritating action on the skin attributed to the brown root-extract, and not to give way to the popular cry for something green. In his opinion, the colouring-matter of Indian hemp is not due to the age of the leaf, but to the method of harvesting or collecting it. The process of making the tincture in the Pharmacopœia is a roundabout process. He thought the tincture should be made direct from the herb.

Mr. MERSON briefly replied.

Digitized by Google

In a note by Mr. D. B. Dott, F.I.C., F.R.S.E., on

Extract of Liquorice,

he criticised a statement in Attfield's "Chemistry" (thirteenth edition) that "glycyrrhizin is only slightly soluble in cold water, hence is almost wholly excluded from the official evaporated infusion (extractum glycyrrhizæ, B.P., or extractum glycyrrhizæ liquidum, B.P.), but is present in considerable quantity in the evaporated decoction." Coming from such an authority, it was not surprising that the statement should be very generally accepted. From inquiry he found that published statements are of no value for their purpose, as they do not state that the root has been extracted exactly by the official process or indicate that hot water has been used. In practice the extract is probably always prepared by percolation with cold water till nearly exhausted, as was recommended by Mr. Boa. Not only should the process of preparation be taken into account, but the method of estimating the glycyrrhizin, as the percentage varied considerably according to the purity of the product. There is also a certain amount of indefiniteness as to what the expression "glycyrrhizin" really means. After giving references on these points, Mr. Dott described an experiment for determining the percentage of glycyrrhizin in root, and another for determining the amount of glycyrrhizin in the extract made by the Pharmacopœia process. So far from glycyrrhizin being almost wholly excluded from the official extracts, it may, perhaps, be desirable to have a minimum standard of glycyrrhizic acid which the respective extracts ought to contain.

After some remarks on the paper by Mr. Hill and the Chairman, a vote of thanks was given Mr. Merson and Mr. Dott for their papers.

Mr. Rutherford Hill then read Dr. Gordon Sharp's paper on

The Stability of Tincture of Digitalis.

He pointed out that the tradition among pharmacists and medical men of the unreliability of tincture of digitalis as a preparation had almost become an article of faith, the result being that some recommended the fresh infusion, others the employment of the active principle of the drug, while others preferred the dried leaf in pill-form. Judged by solubility of active bodies, the tincture should be a better preparation than the infusion, for the infusion must contain chiefly digitalein and digitonin, and only traces of digitalin and digitoxin. The belief in the instability of tincture seemed to have arisen from the supposition that alcohol splits up glucosides, but it is now known that glucosides and other active principles of digitalis have to be boiled in presence of strong alcohol and a mineral acid before they are really split up. Dr. Sharp described experiments with the preparation which he had conducted during the last four years, from which he ascertained that the tincture keeps active as long as any tincture in such frequent request is expected to be kept. His latest experiment was with a supply of tincture the age of which he did not know when he purchased it, but at the end of fourteen months after purchase, being in the interval frequently exposed to the air, he proved it to be pharmacologically active in medium doses in a case of cardiac dropsy which had resisted every other line of treatment. His contention, therefore, was that tincture of digitalis is a stable preparation The working pharmacist cannot employ pharmacological or physiological tests. The author suggested the fermentation-test to prove the activity of digitalis-leaves, founded on the fact that every living tissue, animal and vegetable, contains a ferment, or enzyme. The test is as follows:—

Dissolve 20 gr. of amygdalin in 1 fl. oz. of water at 98° F. (30° C.); place in a wide-mouthed bottle in a moderate temperature, and set aside as a control specimen. In another bottle dissolve a similar quantity of amygdalin under similar conditions, and add 60 gr. of powdered digitalis-leaves; shake up, and set aside at a moderate temperature. At the end of eight hours the plain amygdalin-solution should show no change, but the specimen to which the digitalis has been added should have a bitter-almond odour, and if a piece of glass has a drop of silver-nitrate solution smeared over it and is then laid over the mouth of the bottle, a white film of silver cyanide should appear in five minutes, showing the presence of hydrocyanic acid in the bottle, and the ferment in the plant would have split up the glucoside amygdalin.

Mr. Duncan said his experience was that medical men regard a fresh infusion of digitalis as one of the most active preparations they had. A medical practitioner told him he could at once tell from the results whether his prescription had been dispensed with a fresh infusion or with concentrated infusion diluted, and on testing the mixture he found that the medical man was correct.

Mr. Merson said that apart from the question which of the preparations is the more active, he thought the point established by the note was that it gave a useful method of valuing the quality of the leaves. In this connection he noticed that the B.P.C. states that the concentrated infusion is eight times the strength of the B.P. infusion. That he thought a very loose statement to make.

Mr. Hill thought there was something requiring to be cleared up about the infusion. His experience of the tincture was that it is a reliable preparation.

The Chairman said medical men in Edinburgh believed in the fresh infusion. It was mainly used when a diuretic action was required without some of the other physiological conditions which the tincture would produce.

Dr. Sharp was accorded a vote of thanks.

Personalities.

Mr. John Lorimer has returned from his tour in the East.

Dr. Arthur P. Luff has removed from 31 Weymouth Street, W., to 9 Queen Anne Street, Cavendish Square, W.

Mr. C. Andrews, chemist and druggist, has been elected first President of the newly formed Tradesmen's Association at Hunstanton.

Mr. Thos. Miller, chemist and druggist, Vicarage Road, Wednesfield, has been re-elected unopposed a member of the local School Board.

Mr. Walter Wray Hopkinson, manufacturing chemist, Doncaster, sustained concussion of the brain through a cycling accident on March 13.

The post of demonstrator of botany and chemistry at the Albert Memorial College, Exeter, has been filled by the appointment of Mr. J. L. Sagar, B.A., Cantab.

Mr W. Lister, who has been an assistant for the past five years with Mr. H. W. Herd, chemist and druggist, Ambleside, was presented with a travelling-trunk, a sovereign-purse and 5*l.* by a few of his Ambleside friends on March 12.

Mr. E. Saville Peck, M.A., pharmaceutical chemist, Cambridge, has been appointed second lieutenant in the 3rd (Cambridgeshire) Battalion of the Suffolk Regiment, and is posted to A Company, attached to headquarters at Cambridge. His commission is dated March 12, 1902.

Mr. Joseph E. Wright, B.A., Scholar of Trinity College, Cambridge, and son of Mr. J. Wright, chemist, 174 Park Road, Liverpool, has been awarded the Smiths Prize for Mathematics. He was Senior Wrangler in 1900, and was placed in Class I. Division I. Part II. of the Tripos in 1901. We published a portrait and short sketch of this brilliant student's career in our issue of June 23, 1900, page 1031.

Mr. Geo. J. Seabury, we learn from our New York representative, is living in Washington. He is watching all Bills that interest pharmacy, especially the raising of the rank and pay of army and navy pharmacists. His main strength, however, is being employed in the interest of national legislation, what he calls the three missing links in U.S.A. national, commercial, and trade interests — an American-built Merchant Marine, a Department of Commerce, and an Isthmian Canal: these three Bills bid fair to be enacted this season. Mr. Seabury has written a very able pamphlet on all three subjects, which he dedicated to the President and the Congress of 1902.

The International Union for Sugar Statistics has just published the results of its investigations as to this year's beet-sugar crop in European countries. The figures show an over-production of 1,000,000 tons in excess of the normal consumption.

Pharmaceutical Society of Ireland.

COUNCIL-MEETING.

ON Wednesday, March 12, a special meeting of the Council was held at 67 Lower Mount Street, Dublin, at 3 P.M. The President (Mr. George D. Beggs) took the chair, and there were also present the Vice-President (Mr. Barnard), and Messrs. Kelly, Batt, White (Sligo), Smith, Simpson, Brown, and Goldon (Birr).

THE HOUR OF MEETING.

An informal discussion took place as to the expediency of changing the hour of meeting in order to secure the better attendance of members. The Registrar was directed to write to the members of the Council asking them whether 11 30 A.M. would suit, one of the objects being to enable members who came from the country to return home the same day.

The PRESIDENT stated that he had received letters of apology for non-attendance from Messrs. Johnston and Jameson, who were ill; from Professor Tichborne, who had to attend a trial at the High Court; and from Mr. Moffat.

CORRESPONDENCE.

A letter was received from Miss Grindley, daughter of Mr. George Grindley, the Hon. Treasurer, thanking the Council for the resolution of sympathy with her father which they had passed on the occasion of his severe illness. Mr. Grindley's recovery is far advanced.

A letter was received from Mrs. William Martindale, expressing her sincere gratitude, and that of the members of her family, for the letter of condolence which the Council had transmitted to her on the occasion of the death of her husband.

Letters were received from officials of the National Library, the Irish Colleges of Physicians and Surgeons, the Birmingham University, and the British Pharmaceutical Conference, acknowledging the receipt of copies of the Society's Calendar.

EDUCATION IN BELFAST.

A letter from Mr. Francis C. Forth, Principal of the Municipal Technical Institute, Belfast, asked the Council to extend the recognition which they had already granted to the Institute's school of chemistry to its instruction in materia medica for druggists, and in botany, materia medica, and pharmacy for pharmaceutical students, which, it was stated, were in the hands of thoroughly competent teachers.

On the motion of the VICE-PRESIDENT it was decided to hold over the consideration of this application until some of the Northern members of the Council should be present; and the Registrar was directed to write to Messrs. Moffat and Tate, apprising them of this decision.

Thanks were voted to the Council of the Pharmaceutical Society of Great Britain for a copy of the Calendar.

NEED OF QUALIFIED COMPOUNDERS.

The following circular was approved of and ordered to be issued:—

The Council of the Pharmaceutical Society, being responsible for the proper carrying-out of the Pharmacy Acts and the safeguarding of the public in the dispensing of medicines in this country, beg to draw the attention of the Boards of all hospitals to the importance of having all compounding and dispensing of medicines carried on by duly qualified pharmaceutical chemists or licentiates of the Apothecaries' Hall. The Council regret to know that the practice exists in many hospitals of having medicines compounded by students, nurses, or other unqualified persons, and that regrettable accidents have been the result. The Council also point out the extreme danger which attends the practice of supplying poisonous liniments and other medicines for external use, containing virulent poisons, in whisky, porter, mineral-water and other beverage bottles, by hospitals or public dispensaries; and as such a practice is dangerous to the public health, the Council trust that steps may be taken to arrange for the use of special poison-bottles.

DRUGGISTS AND JURY-SERVICE.

A letter from Messrs. Casey & Clay, solicitors to the Council, informed the latter that qualified sellers of poisons, chemists and druggists, and registered druggists cannot claim exemption from service on juries until the existing law is altered. Such an alteration could only be obtained by a Parliamentary Bill, the prosecution of which by the Council the writers did not advise on account of the cost; or they might be able to enlist the sympathy of some member of Parliament who might introduce a Bill to deal with the matter. Should any amendment of the Jurors Acts come to be dealt with by Parliament, that would be the time to seek for the exemptions in question.

The VICE-PRESIDENT: The promotion of a Bill by us would cost too much. Our only chance is to watch when legislation next takes place on the subject.

ELECTIONS.

On the motion of the VICE-PRESIDENT, seconded by the PRESIDENT, Dr. R. Watt, M.P.S.I., was elected examiner for the Registered Druggist examinations in Dublin and Belfast.

The following gentlemen were elected members of the Society: Mr. R. E. Levis (Kiloh & Co., Limited), Cork; Mr. J. Glendenning, Londonderry; and Mr. R. Andrew, Belfast.

Other business having been disposed of, the Council adjourned.

Pilocarpine Chemistry.

IN a recent number of the *Berichte* appears a further communication from Herr Pinner (in conjunction with R. Schwarz) on pilocarpine. In previous papers he showed that when pilocarpine was oxidised with permanganate under certain conditions a dibasic acid was formed, having the formula $C_8H_{12}O_5$, which was named piluvic acid. On the other hand, Jowett showed that when isopilocarpine was oxidised with permanganate under slightly different conditions from those employed by Pinner, two lactonic acids were formed, having the formulæ $C_7H_{10}O_4$ and $C_8H_{12}O_4$. Messrs. Pinner and Schwarz have repeated the experiments of Pinner and Kohlhammer, as well as those of Jowett, with confirmatory results. By the oxidation of pilocarpine they obtained, in addition to oxalic acid, an acid yielding a crystalline amide, which does not appear to have been obtained in the pure condition, as a product melting at 164° C., and which on analysis gave results differing 1·5 per cent. from theory in the carbon-determination, and on further recrystallisation melted at 182° C.; but it is not stated whether this last melting-point remained constant on further recrystallisation. By the oxidation of isopilocarpine, homopilopic acid was obtained, as the amide melted at almost precisely the point previously given by Jowett (found 206° C., Jowett's m.p. 208° C.). For the acid obtained by the oxidation of pilocarpine they now propose the formula $C_8H_{14}O_5$, and the name homopilomalic acid. An acid obtained by Pinner and Kohlhammer by the oxidation of the product formed by the action of chromic acid on pilocarpine has been further examined. It was previously named isohydrochelidonic acid, $C_7H_{10}O_5$, but they now propose the formula $C_7H_{12}O_5$, and call it pilomalic acid. This acid does not yield the lactonic acid $C_7H_{10}O_4$ (Jowett's pilopic acid) on heating. The new formula assigned to these two acids is therefore that of the hydroxy-dibasic acids derived from the lactonic acids pilopic and homopilopic acids. The properties of isopilocarpine previously described by Petit and Polonowski, and by Jowett, are confirmed, and crystalline compounds of both pilocarpine and isopilocarpine with mercuric chloride are described. The hydroxy-acid corresponding to isopilocarpine—viz., isopilocarpic acid—has been examined, and the acid character of isopilocarpine confirmed. The rest of the paper deals with the confirmation of results previously published by Pinner and Kohlhammer and by Jowett chiefly on the bromo-derivatives of the two isomeric alkaloids. A neutral substance isolated from the oxidation of pilocarpine was examined, and indications were obtained that the substance might be methyl urea, but this requires further investigation. Finally, pilocarpine has been obtained in crystalline form; the syrup, after removal of the last traces of chloroform, crystallising in long needles melting at 34° C.

Elementary Dispensing-practice.

By Joseph Ince.

Emulsions—(*continued*).

Chloroform-emulsions give the student good opportunity for practice, *e.g.*:—

(1)

℞	Chloroformi	♏x.
	Ol. amygdal.	ʒss.
	Pulv. acaciæ,	
	Pulv. sacchari, aa	℈ss.
	Aq. destillat. ad	ʒj.

In this excellent formula from Paris, the chloroform and oil are mixed together to prevent or materially to diminish volatilisation. The mixture is added to the gum and sugar previously put in the mortar, and the water is added by degrees.

(2)

℞	Chloroformi	♏x.
	Ol. amygdal.	ʒss.
	Tinct. quillaiæ	ʒss.
	Aq. destillat. ad	ʒj.

In phial. Mix chloroform with oil first.

(3)

℞	Chloroformi	♏iij.
	Quininæ sulph.	gr. iij.
	Pulv. tragac.	gr. iv.
	Spt. myrist.	ʒss.
	Aq. destillat. ad	ʒj.

In phial. Spt. myrist. on tragacanth; aquæ, ʒij.; quinine in powder; aquæ, ad ʒj.; chloroform being added last.

(4)

℞	Chloroformi	♏x.
	Spt. vin. rect....	ʒss.
	Tinct. tolutanæ	♏xx.
	Aq. destillat. ad	ʒj.

In phial. Dissolve chloroform in spirit; water, ʒvij., tolu to be added last, and shake.

Simple resinous liquids are poured in a thin stream into a bottle containing the rest of the ingredients, a gentle shake being sufficient to complete the emulsion.

The advantage of utilising the protective agency of simple syrup is seen in this otherwise impossible emulsion:—

℞	Gum. myrrhæ	gr. xv.
	Tinct. cannabis ind....	♏x.
	Tinct. camphor. comp.	♏xv.
	Syrupi...	ʒiss.
	Aq. destillat. ad	ʒiss.

Made thus:

1. Myrrh made into a thick emulsion with water + syrup. ʒss. Aq. ad ʒss.
2. Cannabis ind. + syrup. ʒss. Aq. ad ʒss.
3. Camphor. comp. + syrup. ʒss. Aq. ad ʒss.

Combine 1, 2, 3 separate solutions to form an emulsion.

℞	Mist. amygdal.	ʒx.
	Mucil. acaciæ...	ʒss.
	Syrupi	ʒj.
	Tinct. benzoini comp.	ʒss.

Make mist. amygd. B.P. 1898, and add the mucilage Mix the benzoin and syrup, and add last.

There can be no better practice in elementary dispensing than in endeavouring to present the mistura ferri composita of the British Pharmacopœia in a perfect form. Two things are essential: to choose only rich oily-like pieces of myrrh, unctuous to the touch, and to beat them thoroughly into a paste before adding potassium carbonate and refined sugar and triturating with rose-water. Powdered myrrh is impossible in this mixture, and will not make an emulsion.

A concentrated form double or four times the strength may be used with advantage—the more myrrh to act upon, the better the emulsion. It should appear as a cream-coloured preparation, with a slight tinge of amber, and if entirely successful it will keep the year round without alteration. Omit the ferrous sulphate, which is added when dispensed.

Quisquiliæ.

1. A mortar should not be used to dissolve a readily soluble salt or substance.
2. Pills less than half a dozen should be made on a pill-tile, not in a mortar.
3. Crush strychnine in a fold of paper or with a palette-knife to facilitate its solution.
4. No metallic substance should come in contact with unguentum hydrargyri nitratis.
5. Weigh powders one by one; never guess the weight on the tip of a spatula.
6. A new label must on no account be pasted over an old one; former directions and labels must be removed.
7. Hydrochloric acid is a safe expedient for removing stains from the hands.
8. The art of keeping tinctures of a uniform colour is to reserve an eighth part of the old make and add it to the fresh preparation. Tincture of orange-peel may be taken as an example.
9. Tabulate doses of potent remedies; the rest may be learned by constant reference.
10. Hesitate before giving an opinion as to whether a preparation is used or not. This is an affair of locality; if in your district there is no demand for a certain article it may be extensively used elsewhere.
11. The Latin directions in a prescription are not governed by ℞. They are an independent sentence. "The pills to be taken at bedtime" should be translated "Pilulæ horâ somni sumendæ," not "Pilulas h.s. sumendas."
12. It is against all the rules of pharmacy to substitute one substance for another in case of being out of a particular drug.

The writer hopes that a beginner in the art of dispensing will patiently work through the whole of the simple forms of prescribing that have been given, before attempting complex and more difficult combinations.

[Note.—It is desirable to increase the quantity of pulv. acaciæ in the turpentine emulsion No. 3, *C. & D.*, page 303.]

Hints.

Contributed on C. & D. Diary Coupon Postcard A by Subscribers or their Employés.

Give your customers what they want, laying your knowledge at their service, whether it pays financially or not.—N. W. Robson (Hexham).

Enemas ought to be kept hung up in the shop (preferably in a glass case), and not left in the boxes. This helps the sale and avoids cracking.—A. J. Douglas (Ripon).

Dress Well, with taste, suitably. Dispense, with care and neatness, accurately. Public confidence is the best stock-in-trade a chemist can possess.—John Barge (Mutley).

Do Everything with the best desire to please your customer and give satisfaction; let accuracy and neatness be your motto—as *nil sine labore*.—E. H. Hasselby (St. Leonards-on-Sea).

Photographic Article "most" helpful, instructive, and referential for student, assistant, and master and merchant alike. All interested should glean through and through this article, and especially the "most useful formulæ."—T. E. Ranson (Bristol).

Shop Hints.—(1) Make shop mucilage with aq. chloroform.—keeps much longer. (2) To remove labels from bottles damp a piece of paper and wrap round bottle. By the time you have written prescription-label the old one will peel off.—H. Townson (Ely).

The Diary of 1902 fulfils more than the prophecy of the trade. It is instructive, entertaining, and useful without a limit in business. In my humble opinion the article "Style," if carefully read and meditated upon, should prove the best and farthest reaching of anything within the book for the young and old chemist, and either inside or outside the "shop."—Hy. Carter (Clapham, S.W.).

Birth.

SAUNDERS.—On March 5, at 285 Victoria Dock Road, E, the wife of Mr. W. J. Saunders, chemist and druggist, of a daughter.

Marriage.

DOUGAN—SERVICE.—On March 5, at Whiteabbey Presbyterian Church, by the Rev. James Maconachie, B.A., assisted by the Rev. Joseph Northey, Alfred Moore Dougan, registered druggist, the Mountview Drug-stores, 121 Oldpark Road, Belfast, to Jeanie, only daughter of the late Mr. James Service, Oldpark Road, Belfast.

Deaths.

GOSS.—On March 14, at Rock Park, Barnstaple, Mary J. Goss, widow of the late Mr. Samuel Goss, J.P., pharmaceutical chemist. Aged 83.

RANDALL.—At his residence, in Southampton, on March 14, Mr. W. B. Randall, J.P., F.C.S., pharmaceutical chemist. Aged 81. The death of William Brodribb Randall robs English pharmacy of one of the few who remain of the old school who received their early training as apothecaries, and who, on the formation of the Pharmaceutical Society, threw in their lot with that body. Besides, Mr. Randall was a scion of an historic provincial pharmacy, which has its counterpart in London in such houses as Allen & Hanburys and John Bell & Co., and in which hundreds of apprentices and assistants have obtained that thorough experience of pharmaceutical practice which is nowadays so difficult to get. The business of W. Randall & Son was started in 1783 by William Randall, an apothecary, and the son of a professor of music at Oxford. In those days Southampton was even more than now the centre of a district favoured by the leisured classes, and with them William Randall had much business—George IV. was one of his customers. In due course William Randall's son, Edward Mayor Randall, became his partner, and had been in business for some years when the Pharmaceutical Society was founded. He joined the Society on June 1, 1841, as a founder. At that time his son William Brodribb was in the fourth year of his apprenticeship with him, and at the end of the fifth year the young man came to London as a private pupil of Mr. Robert Warington at the Apothecaries' Hall. While there Mr. Randall attended University College, studying chemistry under Professor Thomas Graham, botany under Lindley, anatomy and physiology with Sharpey, and the practice of medicine with Williams. This was the correct training of young apothecaries in those days, but Mr. Randall's predilections were all to the pharmaceutical side, and in the 1843 session he took Graham's first silver medal for chemistry. Redwood was a student at the college that session—"preparing himself," as Mr. Randall once told us, "for the Bloomsbury lectureship that the new Society was to give him ere long." Mr. Randall had entrancing recollections of the men he met at University College—Miller, Brande, Faraday, and Grove being amongst them. It was natural that Mr. Randall should become connected with the Chemical Society, then but recently founded, for his preceptor, Mr. Warington, was its Secretary, and accordingly he was elected an associate on April 18, 1843. Returning to Southampton, Mr. Randall joined his father in business, and in May, 1845, received his diploma as pharmaceutical chemist. At that time the firm always had five apprentices, the term of pupilage being five years, and the premium 300*l*. This practice continued until about the time (1865) that Mr. Randall joined the Pharmaceutical Council as a member, when his strong sense of duty did not permit him to continue it, as he felt that he could not give the lads that close attention and scientific instruction which he believed to be necessary for their proper training. Moreover, the business required intimate supervision; it was large and was conducted in the most methodical manner, so that the records of all transactions can be traced through the books for many years—Mr. Randall being the essence of painstaking thoroughness in these matters. He remained on the Pharmaceutical Council five years, and was asked to be an examiner, but declined. From 1859 to 1863 he was on the Southampton Borough Council, and from 1871 to 1883 was Chairman of the School Board, only giving up the position (for he took the keenest interest in educational work) by the order of the late Sir Andrew Clark. As none of his sons had entered pharmacy, Mr. Randall in 1894 assumed as partner Mr. H. Wilson, F.I.C., F.C.S., who at that time was in the laboratory of Messrs. James Woolley, Sons & Co., Manchester, and after Mr. Wilson joined him Mr. Randall handed the reins to him, finally retiring from active participation in the management on December 31, 1898. Since then he had been living in retirement, and latterly had been in feeble health. We had a note from him—a brief, pathetic note dealing with apprenticeship—a few weeks ago. He had outlived the span of life which Sir Andrew Clark prophesied twenty years ago, yet the end was as the great physician predicted, and the last few weeks were those of a man of will and devotion, to whom the end was not unwelcome. He died on Friday evening at half past 10. Mr. Randall was a singularly courteous man, warm-hearted too, and of a deeply religious nature. As a pharmacist he was attached to the methods which prevailed before modern commercialism came in to rob the craft of much of its charm. Many English pharmacists who have been on his staff can speak of the invaluable lessons they learnt from him, not only in practice but in business methods. He is survived by Mrs. Randall and a family of four sons. References to Mr. Randall's death were made from the Southampton Bench on Saturday, he being senior Magistrate of the borough. As a tribute of respect to his memory the flag at the Bargate was placed at half-mast.

SMITH.—At Norwich, on March 19, Mr. Joseph de Carle Smith, chemist and druggist. In his 90th year. The deceased gentleman was born in 1812, in Magdalen Street, Norwich, where his father, Joseph Smith, founded the well-known business still carried on there as Smith & Sons. After completing his education, he was apprenticed to his mother, who had been left a widow early in life, and enlarged his experience by spending a year or two in London. He then returned to Magdalen Street, and took charge of the business, which throve rapidly. Up till that time it was merely a retail, but Mr. Smith, with the strong commercial instincts which always characterised him, soon expanded it in wholesale and manufacturing directions. Mr. Smith was married three times before he was 30. His first wife was his cousin, Miss de Carle, a lady of Huguenot ancestry, by whom he had one son, Mr. Frank de Carle Smith, who died in 1873, and whose son, Mr. Joseph de Carle Smith, has for many years been managing partner of the firm of Smith & Sons, assisted by his brother, Mr. Richard Silcock Smith. In 1877 the late Mr. Smith was Mayor of Norwich, and in 1879 he was appointed one of the city Magistrates. He was one of the most regular attendants on the magisterial bench, and even after his 89th birthday he had put in an appearance in court. In 1848 he was first returned to the Town Council, and sat continuously till 1855, when he became an Alderman. He was for six years a member of the city School Board, and he had filled other public offices. He was an extremely religious man, and a Puritan in many respects. He would not wear the mayoral robes, and refused to attend the Cathedral in state, or even to sanction a state visit to his own Nonconformist place of worship. The funeral will take place on Monday at the Rosary Cemetery.

Trade Notes.

The style of the firm of Johnson & Sons, 23 Cross Street, Finsbury, E.C, was incorrectly quoted last week (p. 437).

Messrs. Henry P. Thompson & Co, 93 Aldersgate Street, E.C., have engaged Mr. James E Strachan, formerly of Messrs. Sinclair & Co., Aberdeen, as a representative in the West of London.

Antiseptic Ammonia as produced by the Ellis Antiseptic Ammonia Syndicate (Limited), 8 Temple Yard, Hackney Road, N.E., is a good article neatly packed, which is quite distinctive especially in respect to the fact that it has been before the public for a generation.

Messrs. P. Doumin & Co., distillers and importers of essential oils, &c., 13 St. Mary Axe, E.C., announce that they have succeeded to the business of Messrs. Jeancard, Gazan & Doumin. The firm will remain sole agents and consignees of the Cannes Distillery, now trading as Jeancard Fils, and the business will be carried on precisely as heretofore.

The third Photographic and Optical Trades' Exhibition will be held at the Portman Rooms, Baker Street, London, W. The Exhibition opens on April 11, and remains open for a week. A good many firms have already had space allotted them, and arrangements have been made for a series of entertainments to take place at intervals during the day.

"Printing Art."—This is the title of a sample-book of half-tone work which we have received from the Catalogue and Advertising Department of Messrs. Spottiswoode & Co. (Limited), 8 New Street Square, London, E.C. It shows a quality of engraving and printing that rivals the productions of American and continental houses, who are erroneously supposed to lead in this line of printing.

Testing Sewage Effluents. — The testing-cabinet which Professor Wm. Ramsay, F.R.S, recently described to the Society of Chemical Industry, was, he considered, the most compact; but he is beaten now by Messrs. Burroughs Wellcome & Co., who supply "soloid" sodium peroxide (gr. ij.) and pyrogallic acid (gr. ss.) which go into the waistcoat-pocket, and, with a 4-oz bottle, are all that is necessary to test the oxygenation of the effluent. One each of the "soloid" tablets added to 4 oz. of sufficiently oxygenated effluent should give a rich red-brown solution. So it happens that the "soloid" way is this and the Ramsay way is **THAT**, as far as comparative portability is concerned.

For Young Pets.—It is almost as well for one nowadays to be born a domestic animal as a human infant. Should the latter be our fate we have myriads of foods and delicacies invented specially for us to aid us towards a virile maturity, and if the former our guardians merely call in Dr. Spratt, who helps the animal world to the same end. The latest evolutions of Spratt's Patent (Limited) are a Malted Puppy-food and a Malted Kitten-food. These are agreeable enough in flavour and composition for the taste of any human being, and their get-up (in airtight tins) does not differ materially in appearance from the packed infantile foods for the human atom. The malted foods are retailed in 1*s.* and 3*s.* tins, and full directions for use are printed on each tin. They are not intended for puppies and kittens solely, but are also useful for full-grown dogs or cats whose digestive powers may have become impaired.

Eau de Botot.—The manufacturers of this French speciality, which was established in 1755, opened a little over six months ago a wholesale depot at 26 Maddox Street, London, W., for the purpose of energetically promoting business in this country. One of the first things they did was to arrange minimum retail prices; thus in the case of 1*s.* 8*d.* Eau de Botot the fixed minimum price is 1*s.* 4*d*, the 3*s.* tooth-paste is 2*s.* 6*d*, and other articles and sizes are priced in proportion. The manufacturers have now secured general recognition of the minimum prices, all those who at first stood out having given their approval of the arrangement; but we are glad to learn that many retailers find it unnecessary to cut prices at all, as their customers have sufficient appreciation of Eau de Botot as a dentifrice to pay face-value. In addition to Eau de Botot, the firm make quinquina or coral powders, tooth-paste, and toilet-vinegar, and they provide for retail an attractive case containing one bottle each of Eau de Botot, toilet-vinegar and Eau de Cologne with miniature packets of tooth-powder and tooth-paste. Besides fixing the minimum prices, the firm have a bonus scheme, of which particulars can be obtained on application to 26 Maddox Street.

Southall's Specialities.—Messrs. Southall Brothers & Barclay (Limited), Birmingham, have introduced, under the name "Sanichief," a small and highly absorbent handkerchief for use by consumptive patients or others who have infectious sputum The handkerchief consists of a layer of fine absorbent cotton-wool enclosed in gauze, and as fourteen of the handkerchiefs are put up in a packet to retail at 6*d.*, it is apparent that there should be a ready sale for them. The firm are also meeting the very extensive demand for vaccination-pads, with an aseptic and absorbent one made of delightfully soft tissue, with tapes at each corner to tie round the arm and tapes to suspend the pad from the shoulder. Pads can also be obtained which are made from antiseptic material, and they retail at 2*d.* for the infants' size, 3*d.* for adults' style, the aseptic ones being 3*d.* and 4*d.* The pads are put up singly in securely sealed envelopes, which again are enclosed in boxes of one dozen, the whole being sterilised before they are sent out. They are amongst the best that we have yet seen, and can be worn from the day that inoculation is performed.

Photographic Notes.

By a Pharmaceutical Camerist

Where "Primus" Reigns.

For some months past I have watched the growth of Camera House, St. Bride Street, E C, the new City premises of Messrs. W. Butcher & Sons, Blackheath, but it was not till this week—being assured everything was finished and in

working order—that I made acquaintance with the interior. It is not necessary to describe in detail the arrangement of the premises. I need only say that the fitting-up has been done with a view to facilitating the execution of orders. The ground floor is devoted to offices and to a showroom,

Digitized by Google

where photographic chemists can see samples of the goods which Messrs. Butcher make. Orders are executed on the first floor, and packed in the basement, while the three top floors are devoted to the storing of the various classes of goods. Mr. W. F. Butcher, who chaperoned me over the premises, is a pharmaceutical chemist, and it is easy to see the influence of his pharmacy training on the style of putting-up adopted for the firm's goods. The boxes used for hand-cameras are so labelled that they can be used for display-purposes, whilst the labels used are all in excellent taste.

The illustration shows the way the small cameras are put-up in half-dozens. The search for novelties was one of the objects of my visit to Camera House, and I was not disappointed. New sizes of existing cameras have been introduced, extending the number of hand-cameras to over twenty. The chief novelty is a roll-film "Little Nipper," which takes pictures 2¼ by 2¼, and sells at 10*s.* 6*d.* Roll-films of special manufacture for use in this camera are introduced under the name of "Waverley" Daylight Cartridges. I also saw the first consignment of the "Waverley" dry-plates which are being placed on the market. Other patterns of roll-film cameras are to follow the roll-film "Little Nipper," a two-guinea line—"No. 2 Carbine"—being the next. The samples of the cameras I have seen convince me that they are good value for money. Another new introduction is a 30*s.* panoramic hand-camera. All cameras are being sent out this year with a book of instructions on taking photographs, and in addition to this Messrs. Butcher are shortly publishing a 1*s.* guide to photography which will be sold through photographic chemists. I have not touched on the more expensive camera-sets made by this firm, but those who know the variety of well-made goods offered will appreciate my difficulty in picking out any particular set for praise. The new season's price-list, of which I saw proofs, will be issued soon and contains illustrations and specifications of every kind of camera.

DARK-ROOMS.

Coleshill.—F. D. Spencer, The Drug-stores.

Harlesden, N.W.—A. C. Goodchild, 12 High Street.

Patricroft (Manchester).—H. Sanderson, 394 Liverpool Road.

Prescot.—G. G. Hemingway, 34 Eccleston Street.

Trade-Marks Applied For.

(*From the "Trade-marks Journal," March* 5, 1902)

"LEATHERINE" (no claim for "Leather"); for leather preservatives and polishes; furniture and metal polishes, &c. By Lane Brothers, 77 Tradescant Road, South Lambeth, S.W. 243,090.

"LOXO"; for perfumery and toilet articles. By E. H. Tibbetts, 67 Bull Street, Birmingham. 243,182

(*From the "Trade-marks Journal," March* 12, 1902.)

"PRESERVITE" and device; for a fluid or liquid to prevent metals from oxidising or rusting. By W. Morton Walker, 16 Sidney Street, City Road, E.C. 243,692.

"ROLDA"; for sensitive photographic films. By G. Houghton & Son, 88 and 89 High Holborn, W.C. 243,991.

Device (the essential particular) for a medicinal powder. By the Renson Manufacturing Company, 11 Woodbridge Street, Clerkenwell, E.C. 242,822.

"SEAPONGS"; for patent medicines and embrocations By G. Pearson, 17 Angel Row, Market Place, Nottingham. 243,894.

"ALDA"; for food-stuffs. By J. K. Collen, 14 King Street, Leeds. 243,941.

"ROSOX"; for meat-extracts. By Umberto Ciantar and F. W. Forbes Ross, M.D., 9 and 10 Great Tower Street, E.C. 244,041.

"ALBOLINE"; for a bleaching-fluid. By H. Heydon & Co., 118 Weston Street, S.E. 243,581.

"NORLA"; for bleaching-powders. By F. J. Howe & Son, 58 Bedminster Parade, Bristol. 243,750.

"SAPONOLINE" (no claim for "Sapo" for lubricating-oils). By Stern Brothers, 57 Gracechurch Street, E.C. 243,877.

"LANTERN"; for extract of soap and other soap-powders. By R. S. Hudson, Bank Hall, Liverpool. 243,984.

"TRESSETTA" (no claim for "Tress"); for a hair-preparation. By Parke's Drug-stores (Limited), 173 High Street, Camden Town, N.W. 242,461.

"SOHOPARLENE" (no claim for "Soho"); for a toilet soap-powder. By W. H. Warman, 159 Shrewsbury Road, Forest Gate, Essex. 243,309.

"KYMOLINE"; for toilet-articles. By S. F. Goss (Limited), 460 Oxford Street, W. 243,854.

"EBONOID" (no claim for "Ebon"); for brushes, powder, and other similar toilet boxes and trays made of enamelled wood. By J. C. Dowd & Co., 475 Broadway, New York, U.S.A. 237,671.

Picture of Peacock; for celluloid powder-boxes, soapboxes, toothbrush-boxes, toilet-trays, and similar toilet-requisites; celluloid manicure requisites; celluloid dressing-combs; also brushes. By Lenel, Bensinger & Co., Fabrik Wesserdichter Walsche, Neckerau, Mannheim, Germany. 242,358.

Device of skull and crossbones (the essential particular) with letters "G. B."; for polishing-substances. By J. Gilman & Son (Limited), 1 Stafford Street, Birmingham. 243,749.

Device (the essential particular) for "OSOBRITE"; a furniture-polish. By H. Reading, trading as W. K. Rolfe & Co., 52 Chapel Road, Worthing. 243,943.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

Bonney, G. E. *Induction Coils: Pract. Manual for Amateur Coil-makers.* 2nd ed. 135 Illus. 7×4½. Pp. 248. 3*s.* (Whittaker.)

Brewer, —. *Property in Trade-marks.* A manual, written without the use of legal phraseology, on trade-marks and their protection. 8¾×5½. Pp. 78. (Brewer & Son, 33 Chancery Lane, E.C.)

Eccles, W. McAdam. *Hernia: Etiology, Symptoms, Treatment.* 8½×5⅝. Pp. 250. 7*s.* 6*d.* net. (Ballière.)

Scientific Progress.

The Atomic Weights.—The annual table of atomic weights has just been published by the German Commission. The principal alterations from the previous table are iron from 56 to 55·9, calcium from 40 to 40·1, and tellurium from 127 to 127·6.

High-gravity Eucalyptus Oils.—According to H. G. Smith, a large number of eucalyptus oils contain a considerable quantity of a sesquiterpene of sp. gr. 0·925 (optical rotation not given). It boils at 255° C. The oil from *E. hæmastoma* is stated to contain as much as 50 per cent. of this compound. No compounds of the new body have been prepared, but the name aromadendrene has been assigned to it.

Copper in Powdered Drugs.—Mr. E. H. Gane (*Journal Soc. Chem. Ind.*) has traced a source of copper-contamination in powdered drugs to the copper rivets of the driving-belt of the powdering-machinery. The various sections of a driving belt are riveted together with copper rivets or stitched with copper wire, and as the leather wears down from constant passing over the pulleys, the rivet-heads are gradually raised flush with the surface of the belt and are slowly ground down by passage over the pulleys, fragments of copper being thrown off from time to time. Replacing the leather belt by one made of rubber obviated further trouble in a case in point.

Estimation of Methyl Anthranilate.—Only one method has hitherto been suggested for estimating methyl anthranilate—viz., precipitation with sulphuric acid in ethereal solution, as suggested by Hesse and Zeitechel. Erdmann (*Berichte*, 1902, 24) gives details of a process which he has worked out, and in which advantage is taken of the fact that primary aromatic bases form azo dyes when diazotised in the presence of aromatic phenols. The details of an experiment which fully explains the theory are as follows: 0·7473 gramme of pure methyl anthranilate was dissolved in 20 c.c. of 15 per cent. hydrochloric acid, and diazotised by 7·5 c.c. of a 5-per cent. solution of sodium nitrite. After ten minutes the reaction was complete and the solution was made up to 100 c.c. Half a gramme of pure beta-naphthol was then dissolved in 150 c.c. of water and 0·5 c.c. of strong caustic-soda solution, and titrated with the diazotised solution. The red-yellow colouring-matter formed is insoluble in water, and was filtered off in a small tube, and the filtrate tested. The end-point is when no diazo reaction is obtained. In this case, after the addition to 60·9 c.c. a reaction was obtained by the addition of more diazo solution; after 70·4 c.c. had been added no reaction was obtained either with diazo or with the naphthol solutions; after 70·9 c.c. had been added the further addition of naphthol solution gave a decided reaction; 70·4 c.c. was therefore the reading. This gave a result equivalent to 99·7 per cent. of the actual amount used. A series of experiments when the ester was added to other odorous bodies gave equally satisfactory results.

Business Changes.

Mr. W. Chas. Sayers, chemist, 93 High Street, Lewisham, S.E., is having his pharmacy entirely refitted.

Homocea (Limited) have removed from 98 Strand, London, W.C., to 33 King William Street, E.C.

Messrs. S. M. Frankenstein & Co., of Dashwood House, 9 New Broad Street, E.C., have removed to larger premises in Ropemaker Street, Finsbury, E.C.

Mr C. E. F. Vallet, pharmaceutical chemist, has bought the business of Mr. W. A. Sinclair, chemist and druggist, at 8 Belsize Park Terrace, Hampstead, N.W.

Mr. James Chalmers, chemist and druggist, late of Kelty, N.B., has purchased the business at 27 Turnpike Lane, Hornsey, N., formerly belonging to Mr. Joseph Reed.

Messrs. Lewis & Burrows (Limited) are opening a new branch at 126A High Street, Clapham, with fittings supplied by Messrs. Parkinson & Co., of 25 Southampton Row, W.C.

The old established business, which was carried on at High Street, Tenby, for many years by Mr. J. Prosser Danes, chemist and druggist, and latterly by Messrs. W. Joseph & Co. (Limited), has been acquired by Mr. J. B. Francis, chemist and druggist, who has acted as manager to Messrs. Joseph for some time.

Things that Happen—Sometimes.

A Perfect Cure.

(*The Lament of a Layman.*)

Mr. Editor, dear Sir, will your readers please bestir
  Themselves to note a tribute I would render
To the workings of a trade which is surely Heaven-made,
  Or, what is better still, a Heaven-mender?

You must know, some fears I had; I was feeling "mortal bad";
  And, of course, forgot what Shakespeare said of physic;
So I deemed it wise to pop into a certain shop
  Which is somewhere on the road from Leeds to Chiswick!

Disbelieve me if you will, but I swear the kinds of pill
  And the mixtures that they showed me were so various,
That I got bewildered quite with the names and smell and sight,
  And it struck me that my health was most precarious.

There were cunning little sweets for the man who over-eats,
  And stronger sorts for folk that I call "worse 'uns,"
And powders in a stack, and stuff to rub your back,
  And Peter's patent peas for pallid persons!

Electricity, no doubt, all diseases soon will rout,
  And I know I ought to be revaccinated;
Formic aldehyde, I hear, is the latest panacea
  For those the tubercle has penetrated.

Such things I understand, but, on the other hand,
  I've tried and tasted every drug I care to,
And till wise-heads can ensure me a "one and only cure,"
  I mean to bear the ills that flesh is heir to.

W. H. Scott.

A Scientific Jubilee.—On Sunday, March 9, the Paris Museum of Natural History celebrated the fiftieth anniversary of the scientific career of M. Albert Gaudry, a distinguished member of its staff, whose speciality is paleontology.

This is said to have happened last week. Mistress (to Maid): "Why did you stop talking to the boy so long at the door?" Maid replies: "Please, mum, it was the chemist's boy, who brought the syphon of soda-water; and as he wanted to take the other back, I had to empty it in a jug."

The Wrong Envelope.—A curio was seen this week: the well-known slate-blue sample-envelope of a wholesale drug-house, containing a fine specimen of rad. gent. and labelled "Rad. Belladonnæ." One would scarcely think such a thing possible in this age of pharmaceutical accuracy. It makes one shudder to think what would happen if the converse had to be recorded.

Observations and Reflections.

By XRAYSER.

A 5-per-cent. Import-duty

on all goods, which Mr. Vincent Wood wrote about recently and hopes to see adopted, would mean a rather stiff tax on the drug-trade. It would mean 5 per cent. and more (because every dealer in the article would want his profit on the 5 per cent. as well as on the original cost), on almost all the drugs we sell, for there are very few of them which are not imported. That would be a tax which it would be difficult to pass on to the public. To the extent that it could be passed on we druggists would suffer in regard to other commodities as consumers. We are drifting towards import-duties, and if we are going to abandon the free-trade system which has added so many hundreds of millions to the nation's funds, the proposal of a uniform tax on everything has much to recommend it; but it would mean the overthrow of this nation's position as the market-place of the world.

The Pharmacopœia as a Standard

has been discussed often enough, but a northern correspondent writes to remark that he believes he has read some time in the *C. & D.* that when the Sale of Food and Drugs Bill was under discussion a proposal to actually make the B.P. a legal standard was rejected. If that was so, he thinks—and I agree with him—that enough has not been made of the circumstance in the arguments directed against the popular claim. He asks if I can give what occurred exactly. It was this:—

An Adulteration Act

was passed in 1872. Very soon after it came into operation loud and bitter complaints of the incompetence and absurdities of the analysts appointed under it were made. In 1873 a Select Committee of the House of Commons was appointed, with Mr. Sclater Booth as Chairman, to investigate the subject. That Committee took a deal of evidence and reported in 1874. In the Chairman's draft report (par. 30) the following words were proposed:—

> With regard to drugs your Committee are of opinion that the formularies of the British Pharmacopœia should be the guide for the purity of drugs and medicines.

This was discussed, but the only record of the discussion is "Amendments made and paragraph passed." In the report actually issued the words quoted above did not appear.

In the House of Commons

in 1875, when the Bill which is now the Sale of Food and Drugs Act was being discussed in Committee, Lord Francis Hervey proposed a lengthy addition to what is now Section 6, the object of which seems to have been to arrive at the same result conversely. One of the clauses of this proposed addition ran thus:—

> Provided that no person shall be liable to prosecution under this Act for selling any compounded drug prepared in accordance with the written prescription of a registered medical practitioner submitted for that purpose to the seller, or with the regulations prescribed by the British Pharmacopœia issued by the General Medical Council, or with a basis to be laid down by the Pharmaceutical Society or the Privy Council, or with the provisions of the Pharmacy Act.

This proposal was withdrawn by its author at the request of Mr. Sclater Booth. These facts are on official record, and should certainly be of some weight whenever the question of the B.P. as a legal standard comes to be discussed in the High Court. Dr. James Bell, Principal of the Somerset House Laboratories, stated to another Committee which was taking the evidence upon which the 1879 Act was based that it is unnecessary to make the Pharmacopœia a formal standard.

The Municipal Danger

of multiple shops owned by absentee companies was lately alluded to in these columns. It was suggested that to the extent that independent tradesmen are supplanted by the employés of such companies, the municipal and corporate and philanthropic work of our towns must seriously suffer. Boards of directors will not care for their managers to be serving on School Boards or Town Councils, and even if they did not object the ratepayers would not elect such men. A chemist in one of our pleasant southern towns has kindly sent me a little history which incidentally offers a striking illustration of the justice of this view. In that town, he tells me, it was agreed to raise money for a local educational purpose by a voluntary rate in proportion to the assessment. This tax has been paid by all the ratepayers in the parish except four, and these four are all company shopkeepers represented in the place by managers, who remit the profits of their shops to London boards. The same indifference to local efforts has been shown by these four companies when other subscriptions have been organised. I should have thought that, apart from a decent sense of duty, the directors of these concerns would have had more business shrewdness than thus to isolate themselves; but that consideration is evidently outweighed by the terrors of the annual meeting, and the all-engrossing necessity of maintaining the dividend.

"Minor Ailments"

is the title of a rather startling leading article in last week's *Lancet*. The young practitioner, according to this authority, when he has finished his education and secured his licence to mutilate, and inoculate, and generally maltreat our bodies at his good pleasure, "*realises to his surprise* (*!*) that now *for the first time* (*!*) he is called upon to deal with some common ailment of which he has often heard—from which, indeed, he may have suffered—but to which *he has never had his attention directed* during his pupilage." The italics are mine, and surely it is right that such an astonishing confession should be emphasised. The minor ailments specifically instanced in the article are colds, bilious attacks, warts, headaches, and rheumatism, and these are only named as examples.

Such Complaints

are of course "not seen, or thought of little account in hospital-work." What the young practitioner has learned all about during his curriculum has been, as the *Lancet* indicates, "the etiology of pernicious anæmia, Friedrich's hereditary ataxia" and the like. This is in addition to the algebra, Greek, botany, geography, and a modern language, which are among the subjects insisted on by the Medical Council. The moral is obvious, though the *Lancet* man misses it. It is that when you have got pernicious anæmia or locomotor ataxy you had better go to the certified young practitioner, but that for colds, rheumatism, bilious headaches, warts, rheumatism, and the many minor disorders of this harp of a thousand strings, the prescribing chemist who has studied these things, and can meet with them without surprise, is a better person to appeal to.

The Juice of Cursed Hebenon

was almost certainly a distillation or other kind of extract from the yew, as stated by Mr. R. Coupland Harding last week. That the poisonous character of yew leaves and berries has been disputed since Shakespeare's time is not to the point. From the most ancient times, and by all the old medical writers, the yew was implicitly believed to be most poisonous. Julius Cæsar tells of a Gallic chief who committed suicide with it. Bacon, at all events, would have known that fact very well. There is a line in Spenser, "Lay now thy deadly heben bow apart," which conclusively establishes the association between the yew and the heben.

PATENTS AND TRADE MARKS.

There are many worrying difficulties to be overcome in connection with the Registration of Trade Marks and the grant of Letters Patent, which members of the Retail and Wholesale Drug Trade can avoid by consulting an efficient agent, who would undertake all the trouble for an inclusive fee and obtain protection in the United Kingdom and abroad. Advice in the first instance free. Pamphlets gratis.

Editorial Comments.

Traders and Poisons.

It will be seen from a letter communicated by Sir Herbert Maxwell, Chairman of the Poisons Committee (page 474), that it is wrong to say, as we did last week, that he is "an ally of Mr. Dobbs." Although he took charge of a petition in favour of Mr. Dobbs's Bill, this appears to have been merely an act of good nature on his part; for it will be seen that while a horticulturist was giving evidence before the Committee, he asked the Chairman to take charge of the petition referred to. We willingly accept Sir Herbert Maxwell's statement that he must not be assumed by this action to take up one way or other the Bill drafted by Mr. Dobbs, and which has yet to be presented to Parliament, but it will be admitted that even the casual and nominal identification of the Chairman of the Poisons Committee with a measure relating to the subject of inquiry was a proper matter for comment. We think the promoters of the petition cannot have been innocent of the interpretation likely to be placed upon the Chairman taking charge of the petition. As Mr. Alex. Cross, a member of the Committee, is their acknowledged champion, it is difficult to understand why they passed him and asked Sir Herbert Maxwell to present the petition, unless they wished to make it appear that he was favourably disposed to them. It is perfectly plain from the way in which the Traders in Poisons and Poisonous Substances Protection Society are working that they are determined to use all available means to further their ends—which are to knock the bottom out of the Sale of Poisons Act, 1868. The appeal in the Newcastle-under-Lyme case is another example of it. There, after Mr. Dobbs, in the cleverest manner, enveloped his case in a tangle of forensic argument, the Magistrates extracted themselves from the tangle by sticking fast to the point proved and admitted—viz., that the preparation sold contained 4 per cent. of nicotine (a poisonous vegetable alkaloid)—and convicting on that ground because the defendants had sold the article without labelling it "Poison." Now an appeal has been entered, although the T.P. & P.S.P. Society's aim is to

Digitized by Google

secure the very thing for which the defendants were fined. The ground of the appeal has not transpired; maybe, as Mr. Mr. Dobbs hinted in his defence, it is that the insecticide is a preparation of tobacco and not of nicotine. Whether "XL-All" insecticide is so or not we cannot discuss, as the evidence was not clear on the point, and the High Court Judges may have to settle it. Apart from that case altogether, the fact has to be noted that the imports of relatively pure nicotine into this country are large. During the last fiscal year no fewer than 792 samples were examined by the Government chemists, who are required to pass none containing less than 90 per cent. of pure nicotine. This nicotine ultimately gets into the hands of the public through retailers (the seller to the public must be a qualified person), and if any of it is sold in any other manner than as a preparation of a poisonous vegetable alkaloid, the law is undoubtedly broken.

German Potato Spirit.

A SHORT time ago we recorded the fact that 390 000 proof gals. of German potato spirit was imported into this country last year for methylation-purposes, the bulk being an increase of 329,000 gals. over the 1899-1900 imports. The increase is said to be due to the superior quality of the German product, and to the fact that it suits the purpose of the methylator better, while it is at the present time 2*d.* a gal. cheaper than British grain spirit. It is hardly necessary to point out that the production of German spirit is in the hands of a ring which is known as the "Verwerthungsverband Deutscher Spiritusfabrikanten," which was founded in 1899, and appears to have met with a fair amount of success. The organisation consists of three bodies—distillers, rectifiers, and those who combine both industries. The department which transacts all the necessary business regarding the sales and the monetary accounts of all the participators is known as the "Centrale für Spiritusverwendung." The large capital necessary for such an enterprise has been provided by making use of all moneys and plant existing in the trade. For this reason the retailers are not shut out, but are allowed to participate on condition of paying a certain commission to the distillers. In the same way the refiners buy the raw spirit from the distilleries on payment of the commission, and deliver according to the dictation of the "Centrale," chiefly to their former clients. The undertaking differs from a trust principally in the respect that the spirit ring does not limit the production in order to maintain a remunerative selling-price. The ring is, moreover, actively employed in extending the trade by making spirit available for various trade-purposes, particularly heating and lighting. The "Centrale" has a separate department in which arrangements are made with railway and other authorities for the introduction of novelties in spirit-lamps and cooking and heating apparatus. One great means by which these aims are furthered is the cheapening of denatured spirit by the "Centrale." Another means of combating a possible overproduction is the encouragement and extension of the export trade. The ring is to have an estimated duration of nine years, but a certain number of distillers who were unwilling to sacrifice their independence so long were allowed to join for a period of one, two, or three years. As showing the extent of its operations, we find that from October 1, 1900, to September 30, 1901, the total production of pure alcohol in Germany amounted to 406,000,000 litres, of which the ring produced 340,000 000 litres, or 77 3 per cent., the remainder being produced by "outsiders." Of the total quantity the "Centrale" sold 279,000 000 litres in 1900-1901, as against 285,000 000 litres in 1899-1900. The quantity exported amounted to 16,000 000 litres, included in the foregoing. This was sold at low prices, as the encouragement of the export branch of the "Centrale" is very necessary, and provides a safety-valve in case of over-production. As already mentioned, the chief aim of the ring is to increase the utilisation of methylated spirit at no matter what cost, and with that object it allows the retailer a profit of 25 per cent. to 30 per cent. The spirit is bottled, and the labels bear the retail selling-price, with a guarantee that the contents represent 80 per cent. (by weight) spirit. The retail selling-price in Germany last year (in which there was practically no variation) was 25pf. to 28pf. per litre equal to 3½*d.* per litre or 1¾*d.* to 2*d.* per pint. This low price means, of course, a large consumption, and it may be regarded as an indication that we have by no means reached the lowest price in this country.

THE SMALL SHOPKEEPER AGAIN.

The Chief Constable of Merioneth told the County Council the other day that he has great difficulty in carrying out the provisions of the Sale of Food and Drugs Acts, because the small shopkeepers put up notices in small print in their shops stating that all goods sold are adulterated! Nevertheless, the Chief Constable succeeded last year in purchasing thirty-six samples which, according to the county analyst, were pure. The two statements do not fit in with each other very well. In any case there should be little difficulty in making the small print effective in getting the shopkeepers brought to justice.

VETERAN CHEMICAL FELLOWS.

Mr. Randall, of Southampton, whose death is recorded in this issue, was one of the few Fellows of the Chemical Society who were elected before its incorporation. The oldest Fellows now remaining are Mr. Lloyd Bullock (one of the few surviving founders of the Pharmaceutical Society), Dr. William Francis, F.L.S., and Dr. Schunck, all elected in 1842, and a Mr. James Millar, elected in 1843, whose address is unknown, and who is a life member of the Society. Perhaps Mr. Millar is no longer with us, for a life-membership fee sometimes keeps a name on a society's list for many years beyond the allotted span.

NON-INFLAMMABLE FLANNELETTE.

Dr. W. H. Perkin, F.R.S., Owens College, Manchester, has succeeded in discovering a process of overcoming the tendency of flannelette to take fire when brought in contact with flame. The experiments were undertaken at the suggestion of a firm of Lancashire manufacturers, and last May were so far successful as to lead to an application for a patent. The fireproofing chemical was, however, difficult to fix permanently in the fabric, but the inventor has succeeded in making a flannelette which remains fireproof even after seven washings. It is hoped to perfect the process so that the fabric will be permanently fireproof. Flannelette notwithstanding the warnings of coroners and juries, still remains a favourite with many people, so that the manufacturers should find a ready sale for the new product.

PHOSPHORUS PILLS.

Dr. Harrison Martindale recently undertook some experiments at the suggestion of Sir William R. Gowers to ascertain if phosphorus has any action on organic substances when prepared in pills. The tests were made with the official phosphorus pill and the phosphoretted-suet basis of the Extra Pharmacopœia. In the case of alkaloids—strychnine, morphine, and quinine sulphate—made into pills with phosphorus mass no considerable interaction or decomposition takes place. In the case of zinc valerianate, however, there is evidence of some combination, but Dr. Martindale is of opinion that this takes place in the process of extraction

Digitized by Google

Pills composed of reduced iron, in various combinations with strychnine and quinine and with phosphoretted suet, are found to show a luminous surface on cutting even twelve months after they have been prepared. A paper in the *British Medical Journal* gives the results of the various experiments *in extenso*, but the general conclusion is that no interaction or decomposition takes place of substances usually prescribed with free phosphorus.

CACODYLIC THERAPEUTICS.

Professor T. R. Fraser, of Edinburgh, has no faith in the cacodylates as arsenical therapeutic agents. He has tried them in the Edinburgh Infirmary, and his conclusions are as follows:—

Clinical observations and chemical analyses agreed in showing that when a salt of cacodylic acid was administered to a patient it was absorbed and was eliminated, but with the arsenic which it contained so firmly combined with the other constituents that it did not become dissociated, and was therefore incapable of forming any compound in the body which could produce the well-known pharmacological activities of the compounds of arsenic usually employed for therapeutic purposes. While, however, cacodylates were to be regarded as useless therapeutic agents in so far as they were compounds of arsenic, it might finally be observed that they were likewise inconvenient substances to administer to patients. In all the cases in which they were given by the mouth disorders of the alimentary canal—such as nausea, vomiting, and diarrhœa—were induced by them long before the maximal doses were attained, and in some cases these disagreeable effects required the administration to be suspended. Only when the administration was by subcutaneous injection did these disorders fail to be produced, but even by subcutaneous injection, as by oral administration, the less important, though highly obnoxious, garlic-like odour of cacodylic oxide was always early produced, and it constituted an additional obstacle to the prolonged use of cacodylate.

In this connection we observe that Dr. Armand Gautier, at a recent meeting of the Academy of Sciences, Paris, referring to the same subject, recommends the use of arrhenal or sodium methylarseniate, because, unlike the cacodylate or dimethylarseniate of sodium, it does not require to be administered subcutaneously. The dose of arrhenal prescribed by M. Gautier is 5 to 10 centigrammes a day in solution. It is well supported, and in tuberculosis and asthma good results have been obtained.

Recent Will.

Martindale.—Probate of the will of the late Mr. William Martindale, pharmaceutical chemist, who died on February 2, 1902, at his residence, Devonshire Street, Portland Place, W., was granted on March 13 to the executors, Mrs. M. H. Martindale (widow), Dr. W. Harrison Martindale (son), and Miss Mary Martindale (daughter). Mr. J. C. Umney is also mentioned as an executor under the will, the gross value of the estate being entered at 15,665*l.* 12*s.* 10*d.* The will, which was executed in 1897, has three codicils, relating mainly to the disposal of various properties of the testator at Winchelsea amongst his family. The personal effects, jewellery, plate, &c., both at Devonshire Street and at Glebe Cottage, Winchelsea, are left to Mrs. Martindale. The business at 10 Cavendish Street, W. (including the compilation and publication of the "Extra Pharmacopœia"), is to be carried on, under the managership of Dr. Harrison Martindale, by the trustees for the benefit of the family, until testator's son, Leonard, is 25 years of age, when, providing he is qualified, he is to be admitted into partnership with his brother. A clause in the will authorises the conversion of the business, if necessary, into a limited-liability company. In the compilation and preparation of further editions of the "Extra Pharmacopœia" Dr. Harrison Martindale is authorised to continue the services of Mr. W. J. I. Philp or other competent pharmacist to assist him in the work. Testator leaves 50*l.* to each of his three sisters and 50*l.* to a nephew. He also bequeaths 19*l.* 19*s.* to the library of the Pharmaceutical Society, 19*l.* 19*s.* to the public library at Winchelsea, and a month's salary to those of his assistants, servants, or porters, who had been in his employment for twelve months or over. The Elms Farm at Winchelsea is left to Mrs. Martindale and at her decease to Dr. Harrison Martindale; while testator's daughters, Mrs. Elsie Hueffer and Mary, and his son Leonard, have the other Winchelsea properties divided among them.

Recent Patents.

The following are abstracts of complete specifications recently published, of inventions for which letters patent have been granted. Money order offices sell postcards, price 8*d.* each, which, on filling up with the number and year of the patent and posting, secure a copy of any complete specification.

Lotion.—D. K. Schuttyser, Ranelagh Road, Paddington, W., has patented a lotion for scalds, burns, varicose veins, hydrophobia, &c., composed of 2 oz. of concentrated solution of subacetate of lead in 2 gals. of alum-water. The alum-water is made by dissolving 2 lbs. of alum in 2 gals. of water. (13,454, 1901.)

Cleaning Kid Gloves.—P. Baum and F. Hoffmann, Saarbrücken, Germany, have patented a process of cleaning gloves, in which the gloves are first washed in benzene, and then put on stretchers, after which stains are removed by rubbing with a mixture of milk (1 litre) and sulphuric acid (160 drops). (13,593, 1901.)

Swallowing Pills.—Dr. Beno Koppenhagen, Unterneubrunn, Saxe-Meiningen, has patented a device for facilitating the swallowing of pills, which consists substantially of a phial with a long neck. The pill is retained at the shoulder of the phial by a grating, and in use the mouth of the apparatus is put far back in the mouth. (13,043, 1901.)

Extracting Guttapercha.—G. Mitchell, 39 Victoria Street, Westminster, S.W., obtains protection for a process of extracting guttapercha from leaves and twigs by macerating the powdered substances with carbon bisulphide. The bisulphide solution of guttapercha is filtered through charcoal and distilled to separate the solvent. (13,204, 1901.)

Numbering Films.—J. B. Haddow and S. N. Turner of the European Blair Camera Company (Limited), Foots Cray, Kent, have been granted a patent for the use of a strip of white paper as a backing for the usual black paper used behind roller films. The numbering of the films and perforation marks are put on the white paper, and so are kept from affecting the film. (11,622, 1901.)

Making Oxygen.—G. F. Jaubert, Paris, patents a method of making oxygen in which compressed pastilles or cartridges are used made from a mixture of chloride of lime (well dried over sulphuric acid and evolving, when analysed, 35·5 per cent. of chlorine) 200 kilos. with sodium dioxide 78 kilos. The pellets are used in an acetylene generator, the oxygen being evolved on contact with water. (11,466, 1901.)

Lactic-acid Purification.—C. N. Waite, Cranford, New Jersey, has obtained protection for a process of purifying crude lactic acid in which amyl alcohol is used. The amyl alcohol is mixed with the crude acid in watery solution, and then left to separate. The amyl alcohol, which is a solvent for lactic acid, rises to the top and is separated. The alcohol is separated by subsequent distillation. (13,403, 1901.)

Glass Cement.—Leo Stein and W. Storr, Berlin, are the joint patentees of a process of uniting glass and porcelain for mosaic work. The cement preferred is made of—

Flux (borax, for instance)	10 parts
Chalk	10 parts
Any suitable oxide	30 parts
Precious metal, in powder ...	40 parts
Soluble glass	10 parts

A fusion temperature is used for uniting the parts, glass or porcelain, when this cement is used. (12,017, 1901.)

Artificial Sponges.—C. Paulitschky, Vienna, prepares a substitute for sponges and loofahs by saturating 30 to 80 parts of fine-leather fibres, free from fat, with "sulphur milk," and, after drying, soaking in 70 parts of liquid caoutchouc containing 3 to 7 per cent. of ammonium carbonate. The tough mass thus produced is heated gradually, preferably *in vacuo*, from 125° up to 140° C., whereby pores or channels are formed in the mass by the escape of the gas resulting from the decomposition of the ammonium carbonate, and the caoutchouc is vulcanised by the sulphur. The product may be dyed. (18,608, 1901.)

Winter Session.

Stamped and Stamping Medicines.

On Wednesday evening, March 19, Mr. Leo Atkinson read before the Western Chemists' Association, by invitation, a paper entitled "The Stamp Act and its Difficulties." Mr. W. F. Gulliver presided over a goodly gathering in the Westbourne Restaurant, Craven Road, W.

Mr. Atkinson, after a few introductory remarks, said: The most cursory examination of the correspondence in our journals reveals the existence throughout the trade of a very elementary acquaintance with the provisions of the Stamp Act, and, mo eover, considerable misapprehension in regard to the action of the authorities. So far back as 1860 the method of procedure on the part of the authorities was precisely on the same lines as at present. At that date there were few, if any, chemists' associations. Trade-journals were practically non-existent then, and the Pharmaceutical Society was a voluntary and limited institution. In these circumstances the Inland Revenue inspectors could raid county after county with impunity. In our own time what really happens is this: if the inspectors do not periodically rouse chemists to a sense of their duty, the revenue suffers. Apathy on the part of the Department begets a corresponding apathy on the part of those who, either through carelessness or wilfulness, do not stamp dutiable medicines. After the trade is made thoroughly alive to its obligations, matters quieten down until the next rude awakening.

There is a prevailing idea that recent troubles have their origin in departmental changes of the chief officials, whose opinions are not in agreement with their predecessors'. No doubt there is a certain amount of truth in this; indeed, it could not be otherwise. Consider the rapid evolution of the trade in packed pharmaceuticals. This innovation has necessarily taxed the ingenuity of the label-writer to differentiate his labels from those of his competitors. As a consequence, the border-line is frequently overstepped, and penalties frequently follow.

The object of the meeting is to ascertain if in the present administration of the Act we have any legitimate ground for complaint, whether the Act itself might be beneficially amended, and, if so, what steps should be taken for amelioration.

For the guidance of their own officials the Board issue the following concise summary of the Act:—

A medicinal preparation cannot be sold unstamped, without involving liability to penalty, unless care has been taken to avoid any expression or phraseology which can be construed as representing:—

(1) That the preparation of the medicine is a secret, or that the medicine is the speciality of any person, or that it is made in conformity with any special recipe.

(2) That it is the preparation of any particular person, or that anyone has a proprietary right in its manufacture or sale—for example, "Smith's Liver-pill," "Neuralgic Tincture, prepared only by Jones."

(3) That it will prevent, cure, or give relief in any disorder.

All such expressions must not only have been avoided on the label itself, but also in all references to the medicine, whether on the label, wrapper, or cover, or in any printed or manuscript matter whatever, including newspapers, handbills, posters, showcards, advertisements, almanacs, lists, &c., inasmuch as although the labels by themselves may not render the preparations to which they relate liable to duty, the preparations may be made so liable by the publication of other printed or written matter.

Classifying the complainants from my own correspondents, and from the correspondence in the journals, I do not find a single example of a penalty being demanded except for a distinct breach of one or more of the preceding requirements. I will briefly refer to and comment on some of the examples.

Using More than Two Words Descriptively.

In 1895 a label, "Bronchial lozenges for throat and voice," was passed as not liable. In 1897 this opinion was rescinded, and only two descriptive words allowed—bronchial and voice lozenges, throat and voice, &c. The growing tendency to use an unlimited number of words suggesting a number of complaints made it necessary to draw the line, so that "Headache, stomach, and liver pills" is now liable "Headache and liver pills" and "Stomach and liver pills" are not liable.

Using the Definite Article.

Obviously "*the* liver-mixture" suggests this to be the only curative mixture, and superior to similar preparations—a claim of superiority incurs liability.

Qualifying Adjectives,

implying speciality—inimitable, effective, reliable, celebrated, magic, &c.—"celebrated" has been a general rock of offence, yet I find in correspondence with the Board in 1885 all labels in which the word "celebrated" appeared were marked "liable." It has been suggested that a good defence might be raised in some of these cases. This does not commend itself to my judgment. There could be no finality in any decision in regard to the particular adjective. The contest could and would be renewed over other qualifying adjectives, resulting in a mere legal squabble over discrepant definitions of British lexicographers. As a matter of fact, it is a concession on the part of the authorities to permit the use of some designation or name which shall distinguish one medicine from another, such as liver-mixture, influenza-mixture, &c.

Wording Implying Manufacture According to some Special Formulas.

Some years back a label passed by the Board was at a later date altered in accordance with their suggestion. This was, two years afterwards, condemned. I endeavoured to ascertain at the time whether the wording "recommended," "advised," "ordered by eminent physicians," "the faculty," &c., constituted liability. The opinion of the authorities was definite that such wording did not. This opinion now appears to have undergone modification. The attitude of the Board, and their alteration of opinion, probably arise in this way: that very frequently when a label is just on the border-line they have refrained from taking action; owing to their leniency they find someone almost invariably improves the occasion by additions to the original, until they are compelled to vindicate their position.

Pharmacopœia Preparations with a Recommendation.

The most general complaint relates to these, "Sal volatile: useful for flatulence," "Ipecac. wine: a teaspoonful in cases of croup," &c. There is a popular idea that Pharmacopœia preparations should be exempt from stamp-duty. At first sight this is extremely plausible. On more critical examination any attempt to obtain such a concession seems to be fraught with danger, if not positively inimical to the interests of the legitimate pharmacist—at all events, until we can get statutory powers restricting the sale of Pharmacopœia preparations to registered chemists and druggists. Assume Pharmacopœia preparations to be exempt: would it not inevitably follow that packers of cheap pharmaceuticals would immediately supply every petty grocer, oilman, and huckster with this class of goods labelled with flaming recommendations for every ailment curable by magenta pills or hepatic haricots? The lack of description appeals to me as a positive advantage. In the absence of descriptive labels the purchaser is more likely to seek information, and, by being brought into verbal communication with the vendor, appreciate his knowledge, intelligence, and care. As a steadfast believer in the personal element this is an advantage not to be lightly bartered away.

Counter-bills, Almanacks, &c., are Responsible for many Penalties.

Liability by association is often difficult to determine; a chemists' literary matter requires careful revision to see that he is not raising claim to speciality or proprietary right indirectly.

The Method of Stamping Medicines

must ensure defacement or destruction of the stamp. The Act is perfectly clear and distinct in regard to this, but this section of the statute never seems to have been seriously entertained until recently (see *C. & D.*, March 1, page 354). It is evident the insistence of a literal compliance, if actually practicable, would necessarily disorganise the entire whole-

Digitized by Google

sale and retail trade for many months. It seemed improbable the Board could be acquainted with many trade details which might influence their opinion if properly explained. The very essence of the law I believe to be common sense. Recognising this and altered conditions we have to thank the Board for a most useful concession.

Reviewing our position impartially, I suggest

The Following Concessions

as desirable and suitable for discussion. According to the statute verbal expression of opinion or recommendation of a medicine or Pharmacopœia preparation incurs liability. This has never been clearly defined. What latitude is the Board prepared to allow?

The dispensing of physicians' prescriptions wholly consisting of some proprietary medicine is attended with extreme difficulty—the physician does not wish his patient to know he is prescribing some popular nostrum, yet his patient's attention is directed thereto by the presence of the stamp. The dispenser is referred to: what is his duty? If reasonably represented, the Board might be prepared to meet this difficulty. As an example, ung. resinol is a trap for the unwary. It is unquestionable that whenever prescribed *per se* the container should bear duty-stamp proportionate to value, yet the proprietors quite omit to note this important fact either to the profession or the trade.

The sale of entire drugs (with recommendation) by traders not holding a patent-medicine licence is very extensive: the authorities might usefully employ surplus energy in that direction.

Could the Board be induced to only license registered chemists and druggists? To make up for any loss of revenue raise the licence to 1*l*., and, furthermore, make foreign proprietaries chargeable with double duty by bearing a distinctive stamp indicating foreign origin.

The difficulty in regard to conflicting opinions from the authorities on the same label is unsatisfactory, and might reasonably be brought under notice. We must remember there is no obligation on the part of the authorities to give any opinion. If I remember rightly, this was conceded some twenty years ago, following one of the general bi- or triennial awakenings. It is scarcely possible that each label submitted could come under the same official's notice, hence uniformity of opinion is not to be expected. We might perhaps ask that in all such cases no penalty should be exacted. I am by no means sure that this is not already the practice. In my experience it certainly has been so.

Personally, I have come to regard the much-anathematised Stamp Act as to some extent a blessing in disguise. If it can be satisfactorily demonstrated that there are difficulties in practice which might be obviated by certain concessions, I have every reason to believe judicious representation would receive careful consideration.

The Discussion

threatened at the outset to be rough riding for those who had to report it, as it was conversational in style, and that kind of conversation in which two or more persons speak at once, and all have different opinions. The stamping of proprietary medicines dispensed was the more exciting topic, as Mr. Atkinson's clear exposition of the law as to that came as a bombshell to sedate family chemists, but there was none to controvert from personal knowledge the correctness of Mr. Atkinson's view. His idea as to verbal recommendation was also a surprise, but it ultimately transpired that a verbal claim to any art for, or exclusive right to, the making of a medicine was what he had in view. After half-an-hour's rather merry talk, Mr. W. S. Glyn-Jones steered the meeting into a course of plain-sailing debate. He said it had come to his knowledge that the manufacturer of a proprietary article had been dropped on by the Revenue authorities for supplying his preparation to doctors unstamped, and this emphasised the fact that the supply of unstamped proprietaries for dispensing is a concession to chemists only. He proceeded to say that during the past six months he had examined about 200 labels in connection with which Somerset House claimed penalties, and not more than ten of these could be questioned. The majority were distinctly liable. The greatest number of those who transgressed appeared to have the idea that their label must come under more than one of the liability clauses to make it necessary for stamping to be done. He pointed out, however, that if any one of the clauses set forth in the Act be offended against, the label becomes liable. He had very little fault to find with the method in which Somerset House administers the Acts, but it would be much the better way if, instead of calmly submitting to Somerset House interpretations, they were to endeavour to have disputed matters in connection with labels settled by the Law Courts. He considered that the question should be settled as to the right of chemists to sell a B P. article with a recommendation without incurring liability. He thought it might be one of the best antidotes against quackery if it were the custom for chemists to put on their labels the ailments for which the particular B P. article is good. The advice of the solicitor of the Chemists' Defence Association is that a case of this kind would be a good one for the chemist if it were raised, contested and decided. With that object, he (the speaker) had drawn up a label, worded in a certain way, told Somerset House that he was selling with that label, and invited them to make a purchase and take proceedings against him. He was clearly of opinion that chemists should not raise the question of stamping proprietary articles dispensed. Better to let sleeping dogs lie.

Mr. J. F. Harrington next gave the meeting the benefit of his experience in the subject, especially emphasising the fact that those who hold a wine-licence need not stamp such articles as coca-wine, seeing that, though recommended as medicines, they are sold as wines.

Mr. C. B. Allen followed in a temperate speech, in the course of which he deprecated any movement to confine the licences to chemists. That point is now past history (which he narrated), and better let it remain at that. He felt much indebted to Mr. Atkinson for bringing the subject forward in so clear a manner, and hoped that nothing would be done rashly as regards approaching the authorities, because this required deliberate and careful consideration.

Mr. R. A. Robinson was of the same opinion, and added from personal acquaintance with Sir Frederick Robinson, Deputy-Chairman of the Board of Inland Revenue, that he felt every consideration would be given to their representations, but they should first be well matured.

Mr. R. H. Parker spoke about the dispensing-of-proprietaries concession, and, referring to a query by Mr. MacEwan as to whether "part of a prescription" may mean one of two articles (*e.g.* Fellows's syrup and red-precipitate ointment) constituting a physician's prescription, said this should be settled. He also referred to verbal recommendation.

Messrs. Campbell, Albert Cooper, Cracknell, Hick, MacEwan, and others also spoke; and Mr. Atkinson, in the course of his reply, explained that a few years ago the Edinburgh Chemists' Association had gone thoroughly into the question of stamping proprietaries dispensed, and had correspondence with Somerset House, as a result of which it was clearly brought out that it is only when a proprietary is one of the ingredients in a mixture that it can be dispensed unstamped. He had put the matter to the authorities the other week, and they were decisive about the necessity for stamping any proprietary dispensed unmixed. His own recommendation was that proprietaries should only be dispensed from stamped packages, so that the bottle or pot in which they are dispensed need not be stamped, as at present required whether taken from a stamped or unstamped original.

Mr. Atkinson was then cordially thanked.

The President intimated that subscriptions would be received at the meeting for the Martindale memorial, and several were promised.

Royal Institution.

Professor Silvanus P. Thompson discoursed on March 14 on

Magnetism in Transitu,

and despite the wet weather there was a large attendance. The lecture dealt with the transference of magnetism from one body to another. What the physical nature of the passage of magnetism is is a question which has been under consideration for hundreds of years. Lucretius mentions the fact, but clearer reference is given in Gilbert's "De Magnete," published in 1600, where the passing of magnetism from a lodestone to iron is compared to the perception of

Digitized by Google

light, in that light to be perceived must have something to act upon. It was Gilbert who discovered that if a magnet is capped its carrying-power is increased; and Professor Thompson, after showing a lantern-slide of an old capped magnet from Gilbert's book, performed an experiment which Gilbert devised to demonstrate this. Attention was called to a spherical lodestone on the table, presented to the Royal Society by Charles II. Faraday's experiments of the action of magnetism on a layer of iron filings, illustrating the lines of magnetic force, were repeated, and a further experiment made to show that the filings (suitably fixed with varnish) in turn act as a magnet. Ewing's theory that the action of a magnet consists in bringing into alignment every particle of the magnet, each particle being magnetic, was illustrated by projecting on the screen a large number of toy magnets, which arranged themselves to point in one particular direction under the influence of another magnet. Ampere's theory of perpetual rotation round the magnetic particles resembles the modern theory of ions, whilst Faraday's conjecture was that the ether of space is subjected to certain stresses of the nature of rotation round the magnetic force. The lecturer then passed on to consider induced currents. An iron ring, cut in half, was linked, but not touching, with a coil of copper wire, round which a current of electricity was passed. The induced electricity in the iron ring was so strong that the two halves could not be pulled apart. "This," said the Professor, "is one of the familiar commonplaces of science, but I say it is an absolute miracle There has been nothing like it since the walls of Jericho fell down, but because it is so common we think nothing of it." The force of magnetism was illustrated by a magnet capable of holding attached to its keeper a couple of hundredweight, and it was shown how, by following certain curves, a knot could be tied in magnetism. At the finish a series of animatograph pictures were shown to illustrate the growth of the magnetic field when, for instance, putting the keeper on a horseshoe magnet.

Chemical Society.

THE second "afternoon" meeting of the session was held on Wednesday, March 19, Professor Emerson Reynolds, F.R.S., presiding. After the despatch of preliminary business, the address presented on the occasion of the Jubilee celebrations at Owens College, Manchester, was read by Professor DUNSTAN. The long list of papers down for reading presented few features of pharmaceutical interest. The first contribution taken was by Dr. CHATTAWAY on halogen derivatives of

PROPIONANILIDE.

This work is connected with the author's investigation into the constitution of nitrogen compounds, and practically repeats the results already obtained with the corresponding acetanilide compounds. In again presenting in minute detail the reactions of compounds containing halogens joined to nitrogen the author took the opportunity of illustrating experimentally the more important points of his argument.

The next paper also dealt with the constitution of nitrogen compounds—viz.,

THE NITRILES AND ISONITRILES.

This was read by Mr. WADE, and as it covered a great deal of ground, had to be given in a very condensed form, since the PRESIDENT, dismayed apparently by the length of Dr. Chattaway's communication, had imposed a fifteen-minute limit for the remaining papers. The author rapidly surveyed the history of the various theories concerning the constitutions of metallic and alkyl cyanides (nitriles), then gave a short account of his re-investigation of the various methods of preparing nitriles and isonitriles; contrary to the general impression, the latter substances seem to be difficult to obtain. The author prefers Nef's view of the constitution of cyanides, which states that the constitution of any one of these salts depends upon the positive or negative character of the metal or group with which the cyanogen is combined, thus the following cyanides may be supposed to be constituted as shown:—

K.C:N Ag.N:C C_2H_5 or N:C

The groups K, Ag, C_2H_5 being regarded as positive, negative, and indifferent, respectively.

Dr. TILDEN took exception to the author's remark that he considered prussic acid as a nitrile, and pointed out that this substance, like the isonitriles, is very poisonous, whilst the nitriles are comparatively innocuous. Mr. WADE, in reply, stated that recent physiological investigations show that prussic acid and the nitriles exert the same physiological effects, whilst the isonitriles have a totally different action, causing, in fact, bilious attacks, and in larger quantities a kind of jaundice, of which the author and his assistants have on several occasions had unpleasant experience.

The third contribution was that of Professor TILDEN and Dr. BURROWS on

LIMETTIN,

in which the constitutions of this substance and certain of its derivatives were discussed, and its close relationship to coumarin shown.

The last paper read was that by Professor HARTLEY on

THE ABSORPTION-SPECTRA OF NITRIC ACID IN ITS SALTS.

The success which has attended Professor Hartley's work on the spectra of alkaloids and other complex carbon compounds has apparently led him to prosecute this method of investigation into the constitution of simpler substances, such as the salts and esters. He finds that in dilute solutions of nitrates a well-marked characteristic—short absorptive spectrum—is shown, which extends as the solution is diluted, until eventually the maximum and clearest spectrum of nitric acid is obtained, this spectrum being identical for all the nitrates examined.

Professor DUNSTAN inquired whether the author had been able to establish any connection between ionic dissociation and the spectra of different strength solutions of the nitrates examined, but Professor HARTLEY declined to be "drawn" into giving any of his deductions until his fuller paper comes on.

The meeting was then adjourned.

Cambridge Pharmaceutical Association.

PROFESSOR J. REYNOLDS GREEN, Sc.D., F.R.S., lectured on

FLESH-EATING PLANTS

before the members of the Association at the New Museums Lecture-theatre, Cambridge, on Friday evening, March 14. Mr. A. Sidney Campkin, J.P., presided, and there was a good attendance, including many ladies. The lecture was illustrated by a series of remarkably fine limelight projections. Professor Green said his acquaintance with pharmaceutical students in the past had been of a varied character, and certain clouds had occasionally come over the scene. He had heard of one town where the picture of his reception, if he should ever visit it, was tinctured by a fear that there would be gentlemen behind dead walls armed with shotguns. (Laughter.) Of course that was a phase of pharmaceutical life which made him rather nervous in addressing an audience in which he was told there were students whose acquaintance he had made in the past. Those acquaintances might not be agreeable. (Laughter.) He trusted that on the present occasion he would not meet anyone who had a serious reason for cherishing a grudge against him on account of bygones. Turning to the subject of his lecture, Professor Green said one of the old problems which used to be presented to the natural-history student was an almost insoluble one—it was the difference between an animal and a plant. Driven from corner to corner, the student usually fell back upon the question of the feeding of plants. A plant never seemed to have any appetite of any kind, nor any relish for things gastronomic; they seemed to think of it as feeding upon constituents of the earth, and of the air, as living upon inorganic matter. That for many years was held to be the essential peculiarity of the plant. It was very clear that they would not appreciate flesh-eating plants at all if they entertained still the idea that inorganic material was essentially the proper thing for a plant to live upon. Such a departure from its ordinary course would mark it out as a monstrosity. The fact was that both animals and plants lived upon essentially the same food-

Digitized by Google

materials. Professor Green proceeded to illustrate this, and showed the mechanism of a large number of flowers, growing at home and in distant countries.

The President expressed the indebtedness of the members of the Association to Professor Green for his lecture, to Professor Ward for the loan of the lecture-room, and to Mr. Shrubbs for exhibiting the views. The meeting concluded with a vote of thanks to these gentlemen, moved by Mr. White, and seconded by Mr. Parsons.

Three Towns Junior Chemists' Association.

Mr. E. Ernest Lowe, Curator of Plymouth Municipal Museum, gave a lantern lecture on "Mosquitoes and Malaria" to the members of this Association on March 12, Mr. C. T. Weary (President of the Senior Association) in the chair. The Chairman congratulated the Junior Executive on having obtained Mr. Lowe's services for their first lecture. In the course of a short address to the Juniors he impressed upon them the old adage that "knowledge is power," both from an educational and a financial point of view. After the lecture, which proved very interesting, a discussion took place, in which the Chairman and Messrs. G. Breeze, W. H. Woods, G. Fairweather, E. J. Groombridge (Junior Vice-Chairman), and E. Lovatt (Junior Hon. Secretary) took part. Mr. Lowe was heartily thanked, and assured the members that he should be glad to see them at the Museum at any time. There was a good attendance, and gratification was expressed at the excellent educational start which the Junior branch had made.

Newcastle Chemists' Association.

A meeting of this Association took place in the Hotel Metropole, Clayton Street, Newcastle, on March 12. Mr. John Gibson, F.C.S., being unable to fulfil his appointment to read a paper, owing to bereavement, a microscope evening was decided upon, members being invited to contribute slides. Mr. Herd brought a collection numbering 120, and other slides were contributed by Professor Potter, Mr. L. Williamson, Mr. Geo. F. Merson, Mr. J. F. Wooton, Mr. R. Cubey, Mr. T. M. Clague, and Mr. Dudderidge.

Botanical Study.

Mr. Clague having announced that he had been appointed on the committee to endeavour to provide a botanical garden in one of the city parks, the Association passed the following resolution:—

That this Association learns with great pleasure that a movement is on foot to secure a botanical garden in one of the city parks, and desires to assure the Parks Committee of the great utility which such a garden would have for those who, in their study of pharmacy, find botanical knowledge a paramount necessity.

The resolution is to be transmitted to the committee and to Principal Gurney (Durham College of Science), the originator of the scheme.

Cardiff Chemists' Assistants' Association.

At the meeting in Maskell's Café on Thursday, March 13, under the presidency of Mr. A. Barrington Sparrow, a paper on "The Outlook of Pharmacy" was read by Mr. H. J. Jones, who enlarged upon the part that proprietary articles hold in physicians' prescriptions, spoke of pharmaceutical training (comparing British with German), and indicated a few lines along which chemists and druggists might carry business. A short discussion followed, in the course of which Mr. Evans, who has recently returned from South Africa, related some of his experiences as a compounder.

Forfarshire Chemists' Association.

A Conference on Pharmaceutical Education

was held in Mather's Hotel, Dundee, on Wednesday, March 19, when Mr. J. F. Tocher, of Peterhead, addressed the members on similar lines to those outlined in our report of the Edinburgh Conference (see *C. & D.*, March 1, page 335). He, however, took the opportunity of replying to some objections which have been urged against his scheme of University education and a degree for pharmacists. He said, for example, that it is a mistake to suppose that a University training is desired on behalf of Scottish students alone, or that any special advantage is being aimed at for Scotchmen. Circumstances have arisen which render the matter urgent in Scotland, but English Universities and Colleges should also be invited to consider the matter. He dealt with the integral parts of the Victoria University, saying it should not be a difficult matter to satisfy pharmaceutical aspirations in Manchester, Liverpool, Leeds, and Bradford. So also with other Universities or affiliated colleges, and, he added, the various University authorities should recognise each other's certificates, and the way would be paved for the Society to require from each Minor candidate evidence of having attended definite courses of instruction at recognised institutions prior to entering for the examination. The period of study need not be longer than the average period required by candidates at the present time. An academical year, or about nine months, would be sufficient. In the course of his remarks Mr. Tocher referred to the French and German requirements for pharmaceutical education and examination:—

French Pharmaceutical Qualification.

The following is an outline of the course to be taken in order to become a pharmacist in France. Until recently one could enter for two qualifications—namely, pharmacists of the first and second class respectively. Now, however, only a University qualification equal in standard to that of a pharmacist of the first class is granted. As a condition of entry into apprenticeship or pupilage one must possess the diploma of bachelor of letters or of science, acquired by taking a complete course of the classical school. The entrant, on presenting his diploma of bachelor, is entitled to registration as an apprentice and must serve three years, not necessarily in the same pharmacy. He must register annually, and also when he changes his pharmacy. After three years' apprenticeship or pupilage, he must pass his first pharmaceutical examination, which is held at any one of the twenty-three pharmacy colleges of France and Algeria, and is conducted by a professor and two pharmacists. The examination is oral and practical, and is as follows: (1) Preparation of a Codex galenical or chemical compound; (2) dispensing; (3) plant recognition; and (4) oral pharmacy. The student now enters a three years' curriculum. At the end of the first and second years and during the third year he is examined on the many subjects constituting his course, and at the end of his three-years' curriculum he stands for the Final examination. This, like the German one, is a very searching test, and is divided into three parts. The first is a written examination in chemistry and physics and their application to pharmacy, and an oral one in those subjects and toxicology. The second is a written examination in the natural sciences and their application to pharmacy, and an oral test in botany, zoology, and mineralogy. The third, and final, is subdivided into two parts, as follows: (1) Pharmacy and pharmaceutical assaying, recognition of simple and compound medicaments, oral materia medica and pharmacy in various branches; (2) a four days' practical examination, during which period eight galenical or chemical compounds have to be prepared.

German Pharmaceutical Qualification.

The following are the particulars respecting the German qualifications: In Germany no special examination is imposed on an apprentice prior to entering his apprenticeship, but a school certificate somewhat similar in its standard to the Higher Leaving Certificate of the Scotch Education Department is required. Anyone having been in a gymnasium or real-gymnasium (which includes the study of Latin) and has passed in such a school, the standard entitling the examinee to a certain degree of exemption in military service—one, instead of two or three years' service—receives a certificate to that effect. This certificate is the educational requirement for apprenticeship in a German apotheke. The elementary education of an Apotheker therefore includes a knowledge of German, Latin, French, mathematics, history, geography, and natural science, such as natural history, botany, physics, and chemistry, and (in a gymnasium) also Greek. The duration of the apprenticeship is three years, after which the apprentice is called upon to pass the examination to qualify as an assistant. The assistant has to serve three years in that capacity, after which he must pass through an eighteen months' course of study at one of the Universities or at the special Technical Schools at Karlsruhe and Stuttgart. These regulations are "Imperial," and therefore the same in all German States. The qualification is the same and recognised all over the Empire. The student can now present himself for examination to qualify as an apotheker. The examination is divided into five parts, and may take as long as five weeks. The first is a written examination in organic and inorganic chemistry and botany. The second

Digitized by Google

is a practical examination on the preparation of galenicals and pharmaceutical chemicals. The third is an examination in qualitative and quantitative analysis and toxicology. The fourth is an oral examination in botany, including the recognition of medicinal and other plants, materia medica, and pharmacy. The fifth and final is also an oral examination on all subjects, only four candidates being admitted at a time. The Board of Examiners consists of a professor of chemistry, a professor of physics, a professor of botany, and two apotheker or a professor of pharmacy.

THE B.SC. STANDARD.

Comparing these compulsory conditions with the proposed regulations for the voluntary degree sought to be instituted, we find that the British student would pass the Preliminary examination in science, which is slightly higher than the medical Preliminary, but not even equivalent to the conditions imposed on the French and German entrants to pharmacy. He would pass through a three-years' curriculum and be a registered chemist. He would pass a First science examination at the end of the first year, the subjects being botany, chemistry, physics, and zoology, and a Final examination in botany, chemistry, materia medica, and pharmacy at the end of the third academical year. The standard in these subjects, although high, would not be so high as the continental one, neither would it include all the subjects. Mr. Tocher then referred to the need there is for the best possible qualification on the part of those who compound physicians' prescriptions and manufacture galenicals, and emphasised the fact that the object in establishing a University pharmaceutical department is to provide to the full facilities for acquiring a practical knowledge of pharmacy in all its departments. He also dealt with the dearth of apprentices, remarking that the public know as well as chemists do that there are too many chemists for all the demands, and in one sense chemists ought to be thankful that they are not inundated with apprentices.

At the conclusion of the paper, Mr. JAS. RUSSELL, in proposing the vote of thanks to Mr. Tocher, complimented him on his able and lucid statement, and he for one would rejoice if Mr. Tocher's anticipations of better times and more dignified status for the drug-trade were speedily realised. Mr. J. M. HARDIE seconded.

A general conversation which followed showed that Mr. Tocher had evoked a moderate amount of enthusiasm amongst his hearers, and the PRESIDENT (Mr. Kermath) thereafter thanked Mr. Tocher. Some local and general affairs were then discussed, and this concluded the business.

Chemists' Assistants' Association.

A MEETING of the above Association was held at 73 Newman Street, W., on March 13, the President (Mr. J. W. Peck) being in the chair. In the absence of Dr. F. C Shrubsall through ill-health, Mr. S. C. G. TWEEDY read a short and interesting paper on

SALT.

The author introduced his subject with the statement that he was indebted to Mr. Thomas Ward, of Northwich, an expert on salt, for most of his facts. In England by far the largest rock-salt beds are found at Northwich, Winsford, and Lawton, in Cheshire. At Lawton the bed is 290 feet above, and at Winsford 90 feet below, the sea-level. The greatest quantity of salt is obtained from the Northwich district. In 1893 the total output of the United Kingdom was 1,924,029 tons, of which Cheshire contributed 1,213,362 tons. The process of manufacture consists in sinking a shaft into the salt-bed, pumping the brine up, and conveying it through iron pipes to the "wich" or salt-houses. It is then put into huge iron pans, which are placed over furnaces. As the water evaporates the salt is deposited, and men draw it up the sloping sides of the pans with long rakes, after which it is dug out and placed on hurdles to drain, or into moulds, drained, and taken to the "hot-house," which has a temperature of about 140° F. It may then undergo the "milling" process or be sent out as it is. Salt crystallises in true cubes or pyramids of cubes, with lines of cleavage. The mother-liquor (the salt-pan is never allowed to boil dry) contains most of the magnesium chloride, and the calcium sulphate is precipitated and forms a scale at the bottom of the pan. In this way the two common impurities found in brine are eliminated.

Bankruptcies and Failures.

Re W. J. TRYTHALL, Truro, Chemical-merchant.—This debtor, in the course of his public examination at the Truro Bankruptcy Court on March 15, stated that he commenced business in 1877 with a cash capital of 500*l.* and stock worth about 300*l.* The statement of affairs showed assets 1,681*l.*, and a deficiency of 2,317*l.* The examination was adjourned in order that debtor might be able to file a cash and goods account for the last three years.

Re GEORGE WRIGHT, late of Bay Street, Dalston, and Haggerston Road, Haggerston, Drysalter and Sauce-manufacturer.—This debtor attended on March 18 at the London Bankruptcy Court, and was allowed to pass his public examination upon accounts showing a deficiency of 374*l.* 12*s.* 3*d.* In the course of his evidence the debtor stated that he started in 1884 at 12 Castle Street, Kingsland, with another person as drysalters, under the style of Grundy & Wright. In 1894 they opened a wholesale warehouse at Holly Street, Dalston, removing three years later to Bay Street, and in 1898 they opened a sauce-manufactory at Haggerston Road. They traded at those places until December, 1900, when they executed a deed of assignment, under which 7*s.* 4*d.* in the pound was paid on liabilities amounting to 3,766*l.* In January, 1901, witness commenced business by himself at 1A Bentley Road, Kingsland, and traded thereat until last October, when, owing to pressure of the landlord of the Bay Street premises, he executed a second deed of assignment.

Re ARTHUR CLAUDE HOWARD NEWTON-MASON, trading as a Chemist at High Street, West Bromwich—The public examination of this debtor was held at West Bromwich County Court on March 14. The statement of affairs showed total liabilities 473*l.* 16*s.*, and assets 300*l.* 14*s.* 2*d.* Bankrupt stated that he was not a qualified chemist, and was until June, 1898, an assistant to his father. In that month the stock and fixtures were transferred to the bankrupt in consideration of the payment of 1*l.* per week to his father during his life. The estimated value of the stock and fixtures was 500*l.* as a going concern. He attributed his failure to falling-off in trade and severe competition. He admitted that, although he was not qualified, and had not a qualified assistant in the shop, he deliberately and continuously sold scheduled poisons, adding that he was placed in a rather awkward position. He knew it was contrary to the law, and that he was running the risk of a heavy penalty. Mr. Woollett, who represented the Official Receiver, suggested that it was a good thing for the people of West Bromwich that the shop had been closed. The examination was closed.

Re CHARLES A. VOGELER COMPANY, Baltimore.

THE affairs of this company are still in the Baltimore Courts. The last report states that the auditor has filed his accounts, showing 664 claims, aggregating $355,955.09, or, with interest, $408,347, had been allowed, and that a dividend of 55 per cent. has been declared, amounting to $224,536.85. The difference between the two sums had been set aside to cover receivership charges, among which were commissions to trustees, $29,829.19; court costs, including auditor's fee of $936, $1,392.50; trustees' expenses, $130,629.55; expenses of the London branch, $47,865 52; fee to Francis T. Homer for professional services by order of the court, $25,000; fee to Colonel Charles Marshall, for professional services by order of the court, $12,500. The building in Baltimore sold for $59,200, and the business trade-marks and patent rights were sold to Mr. W. E. Ueddes for $194,847.92. Some of the creditors regard the expenses as too high, and have appealed.

Gazette.

Partnerships Dissolved.

Doumin, P., Jeancard, P., and **Gazan, J.,** under the style of Jeancard, Gazan & Doumin, 13 St. Mary Axe, London, E.C., and Cannes, France, essential-oil distillers.

Plowright, C. D., and **Henderson, J. H.,** under the style of Plowright & Henderson, King's Lynn, Norfolk, medical practitioners.

The Bankruptcy Acts, 1883 and 1890.

ADJUDICATIONS.

Hasselby, Edward Howdall, St. Leonards-on-Sea, Sussex, lately a chemist and a cycle and perambulator maker and dealer, now of no occupation.

O'Donnell, James Joseph, Hindley, Lancashire, surgeon.

Legal Reports.

High Court Cases.

Allison *v.* Foster.

In the Chancery Division on Monday, March 17, Mr. Justice Buckley heard the case of Allison *v.* Foster. It was an action brought by Mr. William Alfred Allison, a director of Allison, Johnson & Foster (Limited), wholesale drysalters and druggists, Hull, against Mr. Haslewood J. Foster, another director, to obtain specific performance of an agreement to purchase certain shares in the company, which is now in liquidation. Mr. H. Terrell, K.C., and Mr. A. H. Jessel (instructed by Messrs. McDiarmid & Hill, of 5 Newmans Court, Cornhill, E.C., agents for Mr. Richard Davis, Hull) appeared for the plaintiff; while Mr. J. M Astbury, K.C., and Mr. D. Stewart-Smith (instructed by Messrs. Rollit & Sons, of Mincing Lane, E.C., agents for Messrs. Shackles & Dunkerly, of Hull) represented the defendant.

It appeared by the statement of claim that E. & H. Allison (Limited) was incorporated under the Companies Acts in September, 1893, with a nominal capital of 10,000*l.*, divided into 1,000 shares of 10*l.*; and in July, 1898, the name of the company was changed to Allison, Johnson & Foster (Limited). The plaintiff and one Mr. F. E. Johnson were directors prior to the change of name. On the change, defendant joined the board, and he and the plaintiff and Johnson were directors at all times material to the action. At the beginning of 1901 the bankers of the company required the overdraft of the company to be reduced, or guaranteed to the extent of 2,400*l.* over and above the sum of 2,000*l.* for which the company was alone to remain liable. Defendant agreed to give that guarantee on condition that the plaintiff would transfer to him 240 shares in the company which belonged to him, and would enter into a covenant with the defendant that in the event of the latter being called upon to make a payment to the bankers in respect of such guarantee, plaintiff would repay to him one equal moiety of such sum, with interest at 5 per cent. In pursuance of this agreement the defendant entered into the guarantee with the bank; the plaintiff on January 9, 1901, transferred to the defendant 240 shares in the company, and plaintiff by an indenture dated January 9, 1901, made between him and the defendant entered into that covenant; and it was provided that in the event of the said guarantee being in any way vacated or discharged to the extent of one-half, the shares should forthwith be re-transferred to the plaintiff. In October, 1901, plaintiff and Johnson entered into negotiations for the sale of all their interest in the company to defendant, and by letter dated October 23, 1901, Messrs. Shackles & Dunkerly, defendant's solicitors, made a definite offer to Mr. Davis, plaintiff's and Johnson's solicitor, to purchase all their shares in the company. On October 28, 1901, Messrs. Shackles & Dunkerly wrote to Mr. Davis explaining and modifying the offer, and the modified offer was accepted by Mr. Davis in a letter to Messrs. Shackles on November 6, 1901. The terms of the contract thus entered into between the plaintiff and Johnson and the defendant were that defendant should purchase from the plaintiff and Johnson all the shares owned by them at 2*l.* 10*s.* per share; that the plaintiff and Johnson should be at liberty to carry on a similar business in Hull or neighbourhood, and that plaintiff should be released from any personal obligation he might be under to the defendant in respect of the bank guarantee. At the time of such agreement plaintiff owned 291 shares and Johnson fifty-one. Plaintiff and Johnson made repeated requests to defendant to carry out the agreement; but he neglected to do so. And while so neglecting, plaintiff became entitled to transfer to defendant all the shares of Johnson; and on January 11, 1902, plaintiff's solicitor wrote to defendant's solicitors giving them notice that plaintiff was in a position to complete the contract in its entirety, but defendant refused to complete. By an indenture of January 13, 1902, made between Johnson and the plaintiff, Johnson assigned to plaintiff all his interest in the agreement with the defendant, together with full power to the plaintiff on Johnson's behalf to execute such assurances as were necessary for carrying the agreement into effect. Plaintiff subsequently tendered to the defendant's solicitors the share-certificates and transfers of the shares standing in his and Johnson's names, but the defendant refused to accept them or complete the contract. The defence was, shortly, one of denial of the allegations contained in the statement of claim. The business of the company was not a good one, and for years it had been losing money regularly. There was an overdraft at the bank of 4,394*l.*, for which the bank recovered judgment. Finally the shareholders resolved to wind up, and appointed a liquidator.

There was no evidence called for the plaintiff, and after hearing Mr. Shackles and Mr. Foster the (defendant),

His Lordship gave judgment for the plaintiff for specific performance, with costs. He characterised the defence as an attempt to get out of what was certainly a binding contract.

"Red Drench" Trade-mark.

Before Mr. Justice Byrne, on March 14, Mr. L. B. Sebastian, on behalf of Messrs. Day, Son & Hewitt, 22 Dorset Street, W., moved for an injunction to restrain Messrs. Owen & Sons, Newcastle-on-Tyne, and their servants and agents from using the plaintiffs' trade-mark, No. 6,347, "Red Drench," in connection with a medicine for horses, cattle, sheep, &c. It appeared from Mr. Sebastian's statement that defendants had been selling a preparation which they called "Newmarket Red Drench," and it was in respect to this that action was taken. Mr. S. O. Buckmaster, who appeared for defendants, agreed that the motion should be treated as the trial of the action. His Lordship accordingly made an order granting a perpetual injunction in terms of the motion, the defendant to pay costs.

County Court Cases.

The Dispensing-doctor's Method.

At Plymouth County Court on March 12, before Judge Lush Wilson, William Annesley, medical practitioner, sued H. C. Lambart, also a medical practitioner, for 5*l.*, balance of fees due for acting as *locum tenens* in April, May, and June, 1900, during which time plaintiff took charge of defendant's surgery in Whimple Street, at 2*l.* 2*s.* a week. During the hearing of the case letters were read which had passed between the parties. In one, defendant wrote to plaintiff:—

I am sorry you have had such a bad week. But Easter or holiday-time is invariably bad at Plymouth. People are so fond of spending their money on amusements. The surgery, to pay expenses, must make at least 4*l.* a week, so charge them more, and put in second bottles, and plasters, ointments, and lotions whenever you get the least chance.

In another letter defendant wrote:—

I thought I would give you another hint *re* the practice. When visiting at 170 Union Street to-day I saw you give a big 6-oz. bottle to a child 5 years old, and the dose marked on it was one teaspoonful three times a day. Now, you will see at once that we should never make a fortune at that rate. There would be forty-eight teaspoonful-doses in that bottle, and, taking three every day, and the bottle costing 1*s.*, these would last for sixteen days. Kindly remedy this. Give to a child of that age a 1½-oz. bottle, charge 1*s*, and order a teaspoonful every two or three hours, so that they may come back the next day or the day after. The 6-oz. bottles are for adults, and order one tablespoonful dose at least four times daily. You see what I mean.

Plaintiff stated that when he left in the middle of the month he did so at defendant's request.

For the defence it was submitted that plaintiff did not discharge his duties satisfactorily, and that he left the surgery before his time was up, and failed to visit patients.

Judgment was given for plaintiff for 2*l.* 18*s.* 11*d.* and costs.

Local Advertising.

At the Manchester County Court on Tuesday, March 11 before Judge Parry, Decimus Loly, trading as the Review Publishing Company, 12 Piccadilly, Manchester, sued Walter Brindle, a Darwen bootmaker, for 2*l.* 5*s.*, the agreed price, for fifty copies of the Darwen number of the Review in which the defendant had an advertisement. It was urged on behalf of the defendant that the Review was not of equal value to the samples submitted when the order was given, that there had been a verbal guarantee that 3 000 copies should be published, that less than 1,000 had been subscribed,

Digitized by Google

and that a condition printed lengthways in the margin of the order that the publisher would not be responsible for any representations about circulation, &c., unless endorsed on the order-form, not having been brought to the notice of the defendant, and not being referred to in the order-form, should not be deemed to be part of the contract. The defendant confirmed this in his evidence, and there were present in Court half-a-dozen other tradesmen—one a chemist—prepared to give evidence to the same effect. The Judge held that such evidence was irrelevant, and gave judgment for the plaintiff, remarking that this was one of the common cases where a tradesman gave an order for an advertisement and then, not getting what he expected, tried to escape payment.

Money and Medicine.

Mr. William Londesborough Towers, chemist and druggist, Chatham, on March 19, sued Mr. Francis J. V. Arbuckle, lately a lieutenant of the Royal Marine Light Infantry, in the Rochester County Court, for 16*l.* 10*s.* 6*d.* on account of medicine supplied and money lent. The solicitor for the plaintiff stated that the money was lent to defendant upon a promissory note. The defendant was then an officer in the Royal Marines at Chatham. A certain part of the claim was for interest. The note of hand was for 15*l.* Defendant did not appear, but wrote from Devonport and admitted part of the sum claimed.

Judge Sir William Lucien Selfe ordered defendant to pay 16*l.* 7*s.* 6*d.* in fourteen days, with the costs of plaintiff's solicitor added.

Sale of Food and Drugs Act.

Saltpetre.

At Aston Police Court on February 12, Adeliza Murby was summoned for having sold saltpetre adulterated with 80 per cent. of sodium nitrate. Mr. Philip Baker, for the defence, urged that although the defendant herself had not a written warranty within the meaning of the Act, the firm from whom she bought it had a warranty. The Bench ruled that this was not a warranty to exonerate the defendant. The person from whom defendant purchased the saltpetre was called and gave evidence that he believed the substance sold to be saltpetre, and that he had forwarded a sample to be analysed. The Magistrates expressed the opinion that the defendant had acted with honest intentions, but as there had been a technical offence they felt bound to impose a fine of 20*s.* and costs.

"One Cow's Milk."

In the King's Bench Division of the High Court on March 13, the Lord Chief Justice of England, Mr Justice Darling, and Mr. Justice Channell decided an appeal (Morgan *v.* Auger) in which a milkman appealed against a conviction, under Section 9 of the 1875 Act, by the Clerkenwell Magistrate for selling milk deficient in 17 per cent. of cream. The appellant proved that he had eleven cows, three of which were kept apart for nursery-milk. The produce of the rest was sold mixed but perfectly natural, and the Magistrate was of opinion that the appellant by separating the milk into two portions abstracted from the milk so as injuriously to affect its quality. This view the Court now upset. The Lord Chief Justice said as the case was stated the Court had no alternative but to quash the conviction. There must have been some misunderstanding, as the Magistrate never could have intended to say that keeping the milk of three cows separate was abstracting some milk from the whole. The appellant was entitled to keep the milk of each cow separate if he thought fit to do so.

Cream of Tartar.

At Haddington Sheriff Court on Monday, March 17, Mr. Alexander Harkes, grocer, Cockenzie, was fined 10*s.* or two days' imprisonment, for selling cream of tartar containing 7 per cent of "added impurity." The public analyst stated that cream of tartar should not contain more than 2½ per cent. of impurity. The defendant stated that what he sold is the article commonly sold throughout the country. The Sheriff would not, however, accept that plea.

New Companies & Company News.

W. Dove & Co. (Limited).—Capital 6,000*l.*, in 1*l.* shares. Objects: To acquire the business of a mineral and aërated water manufacturer carried on by W. S. Dove, at 277 High Street, Rochester. First directors W. S. Dove (permanent), W. J. V. Dove, and A. West.

Armitage, Barnard & Co. (Limited).—Capital 5,000*l.*, in 1*l.* shares. Objects: To carry on the business of oil boilers and refiners, paint, colour and varnish manufacturers, &c. First directors G. Chadwick, W. S. Mellon, and G. L. Tucker. Registered office, 183 Great Portland Street, W.

Rapid Bottle-drying Machine Company (Limited).—Capital 4,000*l.*, in 1*l.* shares. Objects: To acquire the interest of C. Garrett, W. Evans and W. H. Halden in Patent No. 4,945, dated February 24, 1897, for improvements in apparatus for rinsing and drying bottles, &c. First directors W. Evans, C. Garrett and W. H. Halden.

Plaissetty Mantle Syndicate (Limited).—Capital 10,000*l.*, in 1*l.* shares. Objects: To acquire from J. de L. Cohen and W. K. L. Dickson an option granted to them by A. M. Plaissetty and E. Sepulchre for the purchase of an invention and a provisional protection (No. 20,747 of 1901) for improvements in the manufacture of incandescent filaments and mantles.

Bone Phosphate and Chemical Company (Limited).—Capital 6,000*l.*, in 1*l.* shares (3,000 preference). Objects: To carry on the business of manufacturers of, dealers in, and contractors for bone and other phosphates and superphosphates, nitrates, &c. The first directors are H. Aynsley, S. Mear, B. Moore, and C. F. Goodfellow. Registered office, Crown Buildings, Stafford Street, Longton, Staffs.

Air-tight Sealing Development Syndicate (Limited).—Capital 25,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with E. B. Koopman, to manufacture and deal in mineral waters, wines, cordials, liqueurs, liquors, foods, and provisions, and to carry on the business of chemists, druggists, drysalters, oil and colour men, manufacturers of and dealers in bottles, jars, cases, receptacles, stoppers, caps and covers, &c. No initial public issue. The subscribers are to appoint the first directors. Registered office, 49 Pall Mall, S.W.

J. W. Vernon & Co. (Limited).—Capital 11,500*l.*, in 1*l.* shares. Objects: To acquire the business of manufacturers and weavers of surgical dressings, sanitary towels, medicated and antiseptic goods, bleachers, dyers, manufacturers of ring travellers, ring flyers, sundry parts and change pieces accessory for cotton, woollen and silk spinning and weaving machinery, now carried on at Penwortham Mill, Walton-le-Dale, Lancs, by J. W. Vernon, as "J. W. Vernon & Co.," and to carry on the same and any kindred business. The first subscribers are: J. W. Vernon, Sunny Bank, Walton-le-Dale, near Preston; W. Bentley, 47 Oldham Road, Royton, ironmonger; R. J. Bentley, Sunny Bank, Walton-le-Dale, near Preston, cashier; T. K. Bentley, 192 Middleton Road, Royton, ironmonger; G. Hurst, Prospect House, Ashton-on-Ribble, Preston, cotton-mill manager; J. J. Rawsthorn, 65 Garden Walk, Ashton-on-Ribble, Preston, solicitor; and J. Dewhurst, Cadley Terrace, Cadley, near Preston, cotton-spinner. No initial public issue. The number of directors is not to be less than four nor more than six; the first are J. W. Vernon, W. Bentley, T. K. Bentley, G. Hurst, J. Dewhurst, and F. J. Orrell. Qualification 250*l.* Remuneration as fixed by the company. Registered office, Penwortham Mill, near Preston.

Central London Drug-stores (Limited).—Capital 2,000*l.*, in 1*l.* shares (1,000 preference and 1,000 deferred). Objects: To acquire the business carried on at 55 Commercial Road, E., as "The Central Drug-stores," to adopt an agreement with M. M. Bernstein, and to carry on the business of chemists, druggists, drysalters, oil and colour men, manufacturers of and dealers in photographic, scientific, and other apparatus, preparations and materials, &c. The first subscribers are: D. Wildee, 168 Stroud Green Road, N., clerk; J. H. Reed, The Oaks, Pattison Road, Child's Hill, N.W., solicitor; D. Sidi, 69 Mark Lane, E.C., merchant; A. T. Madger, 4 Hauberk Road, Battersea Rise, S.W., clerk; N. Bernstein, 22 Golden Lane, E.C., manufacturer; F. Bernstein, 22 Golden Lane, E.C., manufacturer; and E. M. Saunders, M.D., King's College Hospital, W.C. No initial public issue. M. M. Bernstein is permanent sole director. Qualification 25 shares. Remuneration as fixed by the company.

Oowana Soap Company (Limited).—It was resolved on February 7, and confirmed on February 28, that, having regard to the agreement for sale of its undertaking, this company be wound up.

Digitized by Google

Essential-oil Importers and Exporters (Limited).—A meeting of the shareholders of this company will be held at Mr. R. Raphael's, 59 Moorgate Street, E.C., on March 24, at 4 P.M., for an account of the winding-up.

Brandram Brothers & Co.—The report for 1901, to be presented to the meeting on April 2, states that the accounts show for the year, after charging directors' fees, but including the balance of 313*l.* carried over from last year, a loss of 2,918*l.*, in addition to a sum of 1,000*l.* written off stocks. Dividends on the preference shares have been overpaid to the amount of 2,650*l.* As the losses incurred have been due almost entirely to extreme market fluctuations, the directors anticipate a much more satisfactory result for the current year's working.

Maypole Company (1899) (Limited).—The report for the twelve months ended December 31, 1901, shows that the gross profits on trading amounted to 9,741*l.* After deducting all charges, there remains a net profit of 2,138*l.*, which the directors regard as highly satisfactory. About 200*l.* has been written off for depreciation of leases, &c., whilst a further sum of 27*l.* is appropriated to cost of alterations and additions. There remains, after payment of fees and income-tax, 1,586*l.*, which the directors propose to carry forward. The meeting of the shareholders held at the Holborn Hotel on Wednesday passed off quietly, the most interesting point raised being that during a large part of the past year only black dyes were in demand. This year is to be a gayer one, said Mr. A. C. Burnley, and the shareholders smiled. Mr. Burnley was re-elected a director.

United Alkali Company (Limited).—The report of the directors for 1901 states that the net profit is 230,346*l.*, and adding the amount brought forward (60,167*l.*), less claims and law-costs in connection with the explosion at St. Helens, May, 1899 (15,764*l.*), there is a total of 274,749*l.* This the directors propose shall be apportioned as follows: Interim dividend on preference shares at 7*s.* per share for six months to June 30, 93,527*l.*; final dividend on preference shares at 7*s.* per share for six months to December 31, 93,115*l.*; transfer to "depreciation portion of reserve fund," 50,000*l.*; leaving an amount to be carried forward of 38,105*l.* The directors consider that the year's profit of 230,346*l.*, which exceeds that of 1900 by upwards of 18,000*l.*, is satisfactory in view of the high prices which have prevailed for fuel. No dividend is declared on the ordinary shares. The directors report that the cyanide-plant was completely destroyed by fire in June last. The loss has been recovered from the insurance companies. The plant has been rebuilt, and the manufacture is now proceeding as usual. During the year carbide of calcium has been added to the products manufactured by the company.

Southall Brothers & Barclay (Limited).—The annual meeting of this company was held on Tuesday, March 18, at the company's offices, Lower Priory, Birmingham. Mr. Thomas Barclay presided, and in moving the adoption of the report (see *C. & D.* of March 15) stated that the volume of business done during the year showed a steady increase. The directors had recently purchased some leasehold premises in Dalton Street, which as an investment will return about 6 per cent. on the outlay until they are required for business-purposes. It will be necessary very shortly, Mr. Barclay continued, to issue a further number of 5 per cent. preference shares. In allotting these, preference will be given to customers and present shareholders. He also mentioned that the directors hold all the ordinary shares of the company, and they have recently subscribed for an additional 9,000 shares, thus making the number 72,000. The company now has about 450 employés, including fourteen travellers, at home and abroad. Referring to the company's cod-liver-oil factory in the Lofotens, he said the season so far has been very difficult, but from a telegram received that day there is a slight improvement, and the ultimate yield of oil for the year will be satisfactory. In connection with the smallpox epidemic, he mentioned that during the past eight or nine days the company had supplied some 30,000 half-tubes of lymph. In conclusion Mr. Barclay made a sympathetic reference to the death of Mrs. Thomas Southall, widow of the founder of the business. Mr. Alfred Southall, seconded, and the report was approved. Mr. Thomas Barclay, jun., was re-elected a director.

Correspondence

To Correspondents.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Sir Herbert Maxwell not Mr. Dobbs's Ally.

Sir,—My attention has been called to an article under the heading of "Editorial Comments" in The Chemist and Druggist for this day, in which the unwarrantable assertion is made that "the Chairman of the Poisons Committee is an ally of Mr. Dobbs."

I must request that you absolutely withdraw this statement, which, I imagine, you will be the more ready to do when I inform you that I have never seen Mr. Dobbs nor held any communication with him whatever. At the beginning of the inquiry of which I have had the charge, he wrote offering to give evidence. I directed the Secretary to make due inquiries into his position and the nature of the Association which he claimed to represent. Having ascertained that his representation was perfectly genuine, the Committee decided to summon him, but as I was absent in Scotland on the day he appeared, I did not hear his evidence, nor has the proof thereof yet come to me from the printers.

As to the petition which I presented to Parliament from a large number of horticulturists and others, that was handed to me across the table by another witness—a horticulturist—and, as I was about to go to the House of Commons, I undertook to present it. But I should have supposed that it was generally understood that in no case is a member of Parliament committed in the slightest degree by presenting a petition, nor can he be held thereby to be supporting the prayer thereof. I never heard of the Bill in favour of which this petition was made, but that I considered to be no affair of mine.

I am, Sir, your obedient servant,

Herbert Maxwell.

49 Lennox Gardens, S.W., March 15.

Chemists and the Poisons Committee.

Sir,—Many of your readers, no doubt, like myself, were greatly interested in your Editorial note and report of the proceedings of the Committee on Poisons. As a member of the committee of the London Chemists' Association, I may say that this particular inquiry has come under our notice, and should we succeed in inducing the majority of London chemists to join this Association, it is our intention, after consulting with our members, to do our utmost (as, no doubt, the provincial Associations will also) to make the voice and opinion of chemists heard when the Poisons Committee issue their report. It is our opinion that, with a respectable majority of London chemists at our back, we may be in a position to influence at least the London M.P.'s in our favour, by getting each member of the London Association to put the facts clearly before his individual M.P., which would be received as not only a constituent's opinion but the voice of the whole trade. If the Council of the Pharmaceutical Society should act in the matter, it would strengthen their hands, should they deign to accept the backing of so young an association, though I hope our youth will be in a position to command respect by our numbers. The London Chemists' Association is essentially constituted to study and protect trade-interests, leaving scientific and social affairs for the chemists of London to be catered for by the Society, as at present. When the various local committees of the Association are formed, as that which is now being formed in the South London district, we hope, with the local knowledge at our disposal, to fulfil one of our purposes, by helping the Pharmaceutical Council, by bringing before them definite facts, to more efficiently

Digitized by Google

look after our interests, which, it is generally considered, they do not do at present.

Yours faithfully,
P. H. BURTON.

397 Cambridge Road, London, N.E., March 17.

A Hint to Wholesale Houses.

SIR,—Considerable trouble and inconvenience must be caused to many retailers through the dilatory and unsystematic manner in which monthly statements of accounts are rendered by the wholesale firms with whom they transact business. It ought to be possible for every retail buyer, without troublesome reference and account-keeping on his ownpart, to know what payments he will be required to meet during the current month, not later than the 4th or 5th inst., so that he may be able to make his arrangements for payment, as well as to afford him the opportunity of easily complying with the terms for discount usually set forth upon each statement. According to the present practice of our wholesale firms it is quite impossible, early in the month, to arrive at the correct total of what may be owing, because statements keep dropping in at all times till well over the middle of the month, so that, in my experience, in no time during the month is it practicable to draw the line with the certain assurance that no more demands will be forthcoming. Surely there can be no other trade in which such general laxity prevails! With a single exception, no firm with whom I do business sends me in a statement of account on the first of the month, but the fact that one firm can do so with unbroken regularity proves the practicability to others. As it is now, many accounts arrive only a day or two before the date stipulated for discount—much too late, in fact, to examine and pass in time to conform with the discount regulations; and although I believe that wholesale firms rarely refuse discount, provided payments are made before the end of the month, it would be better if some attempt were made by all firms to render their monthly statements with business-like promptitude and regularity, and certainly not later than the first week in each month.

I am faithfully yours,
AN ORDINARY RETAILER. (179/31.)

Compound Tincture of Benzoin.

SIR,—It is gratifying to find that there has been a striving amongst pharmacists for the last few months in reference to the determination of a desirable standard for compound tincture of benzoin as made by the official process. The communication of Messrs. John Barclay and Mann made to the Midland Pharmaceutical Association at the meeting of March 6, held at the Birmingham University, covered almost the whole area of research. The statements furnished ample opportunity for discussion. (See THE CHEMIST AND DRUGGIST, page 432, March 15, 1902) The outcome of the communications that have been made to the trade-journals during the last few months unmistakably is:—

1. That the tincture as met with in trade contains a variable amount of extractive.
2. That a tincture, notwithstanding the official process has been followed, will yield variable amounts of extractive on account of the absence of uniformity in the drugs employed.
3. That it is necessary to take special precautions concerning some (at least) of the ingredients in the official formula so that a tincture not below a certain standard may be produced.

My observation, gained during an experience of upwards of thirty years on the London drug-market, warrants me in saying that tolu balsam of very variable quality is met with, and while some tolu balsam contains a very high percentage of cinnamic and benzoic acids and their esters there is much tolu of an inferior character containing very low percentages.

This, I am aware, is not a new experience, for attention has been called to the variability of tolu in the various journals of pharmacy (*Year-book of Pharmacy*, 1895, page 393, and 1897, page 185), and that which existed some years since, I regret to say, is not absent to-day. Another point which seems to have been taken cognisance of in the discussion that followed the reading of the paper before the Midland Pharmaceutical Association referred to is the odour of methylated spirit left in storax after it has been strained. One would have fancied that every pharmacist knew that the straining of storax by the aid of methylated spirit, and especially mineralised methylated spirit, is absolutely inadmissible for the official compound tincture of benzoin. The test that is used for the detection of minute quantities of methylated spirit (Riche and Bardy's test) would, in my opinion, be sufficiently delicate to detect methyl alcohol in prepared storax, no matter how carefully the storax has been prepared and how effectually the last traces of the spirit have been chased away either in the evaporating-dish or by steam-heat. Storax can be obtained in the wholesale drug-trade purified in accordance with the pharmacopœial requirements by the aid of pure ethylic alcohol, and this is the form of storax that the Pharmacopœia in its monograph contemplates shall be used. I cannot leave this particular subject without repeating what I recommended when giving evidence before the Committee of the House of Commons which was considering the Sale of Food and Drugs Act: that it would have been very much better if a joint committee of medical men, public analysts, pharmacists, and others specially qualified had been appointed by the Government to settle all knotty points of standards in connection with drugs, instead of leaving matters as they now are in an absolutely chaotic condition. It is to be regretted that the Pharmaceutical Society lost an opportunity that may never occur again in not pressing the desirability of this reference committee home more forcibly than was done at the time of the passing of the last Sale of Food and Drugs Act.

Yours faithfully,
Southwark, London, S.E., March 19. CHAS. UMNEY.

A Veteran's Notes.

SIR,—Several items in the last issue of THE CHEMIST AND DRUGGIST particularly interested me. I was pleased especially to note that a correspondent has brought your readers into touch with one of the oldest and best scientists of the day, Mr. Leo Grindon, who, though now 84 years of age, is in full vigour. It is very gratifying to know that THE CHEMIST AND DRUGGIST has been the medium of rescuing from obscurity Mr. Grindon's valuable information in respect to "deadly Hebenon" and that a subscriber in so remote a quarter as New Zealand has brought it to light. I know Mr. Grindon well. The process for making extract of gentian suggested by Mr. Lenton, page 422, is not altogether novel. I prepared the extract by maceration and percolation many years ago.

"The Last Straw," on page 426, is inimitable.

Yours very truly,
Deal, March 17. R. GOODWIN MUMBRAY.

Dewsbury and Federation.

SIR,—I am instructed by the Executive Committee of the Federation of Local Pharmaceutical Associations to refer to a report of the annual meeting of the Dewsbury and District Chemists' Association appearing in your last issue. That the Dewsbury and District Chemists' Association has a perfect right, if so disposed, to sever its connection with the Federation no one, I take it, will be disposed to question. I must take exception, however, to the manner in which that Association has effected its severance. The text of Mr. Broadhead's resolution, which was unanimously adopted by the meeting, reads to me as if the Federation was being made a scapegoat for those affiliated Yorkshire Associations which refused to join in with Dewsbury in forming a Yorkshire Federation. It is rather hard that because several Associations are members of the Federation of Local Pharmaceutical Associations, and refuse to participate in a local scheme of decentralisation, the Federation should be dubbed "so-called," and be denounced as "a bar to progressive organisations." Mr. Broadhead in his resolution stultifies his own arguments in favour of a local federation. He poohpoohs Mr. Waddington's opinions, and emphasises the fact that the larger and more comprehensive the combination the greater the capacity for useful work which will be obtained. This advantage, to most sensible men, would appear to be a special reason why Dewsbury should continue to accord its support to a "National" Federation. I may be permitted to quote a paragraph from the annual report adopted at the Federation meeting in Dublin last July:—

In conclusion your committee would wish to emphasise the fact that the "Federation" is not an association, but simply an organised medium through whose agency current topics of interest

Digitized by Google

may be submitted simultaneously to local associations throughout the country for their discussion and decision upon, such associations being individually responsible for the usefulness or otherwise of work done in the name of the "Federation."

This report was endorsed by delegates representative of the various affiliated local Associations, and the meeting, which was duly advertised, was open to Dewsbury representatives, had they cared to be present. Mr. Broadhead says he only hears of this "phantom" and "ghostly" organisation twice a year—not the least of which occasions, according to him, being when the annual subscription is applied for. If this is correct, then Mr. Broadhead does not read his trade journals, nor does the Hon. Secretary of the Dewsbury and District Association perform the duties of his office. I decline to admit the latter. I pass with contempt the insinuation made as to the disposal of subscriptions paid to me on account of the Federation. The balance-sheet is in print, and can be consulted. I have in public, again and again, emphasised the importance of the paragraph from the annual report quoted above, and in conclusion beg to insist that Mr. Broadhead and Dewsbury are individually and collectively responsible for the shortcomings of the Federation of Local Pharmaceutical Associations which they allege.

Yours very truly,

GEO F. MERSON, Hon. Secretary,
Federation of Local Pharmaceutical Associations

[Is it not possible to look upon the Dewsbury resolution as a delightful piece of sarcasm?—EDITOR.]

"Brompton Hospital Lozenges."

SIR,—The attention of the Committee of Management having been called to the correspondence on page 408 of THE CHEMIST AND DRUGGIST," I am directed to send the copy of a minute passed by them on March 6:—

That Messrs. Richardson be informed that they are the only recognised manufacturers of cough-lozenges supplied to the hospital, and are at liberty to represent themselves as such, any restrictions hitherto placed upon them as to the sale of these lozenges being withdrawn.

That formal notice be given to —— —— and any other vendors of medical compounds that the committee protest against the use of the description "Brompton Hospital" in connection with the sale of these compounds, as they are in no way authorised or recognised by the hospital.

Yours faithfully,

WM. HY. THEOBALD, Secretary.
Hospital for Consumption and Diseases
of the Chest, Brompton, London, S.W.,
March 15.

[In this connection the fact is worth recalling that in 1900 the title "The Brompton Cough-lozenges" was registered as a trade-mark, No. 226,960, by Messrs. G. Hardy, No. 18 Gray's Inn Road, London, W.C.—EDITOR.]

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

172/48. *Revenue.*—Your Indian cerate handbill makes the article liable to duty because it is recommended for the cure of various ailments.

169/53. *W. L. B.*—You will find on reference to THE CHEMISTS' AND DRUGGISTS' DIARY, page 280, that Dalby's carminative and Godfrey's cordial are mentioned in the Act as dutiable. They have never been exempt.

168/43. *Nucis Vom.*—Under the circumstances which you describe the landlord has the first claim on the contents of the shop, and the moneylender can be prevented from removing the contents until he has paid the rent.

168/45. *Horehound.*—The public vaccinator is required, if so desired by the parents of a child under four months old, to visit the house of the parents, there to vaccinate the child free of charge. This does not apply to older persons, and the public vaccinator only vaccinates adults free of charge when authorised by the local authorities.

173/57. *Cortex.*—Reference to THE CHEMISTS' AND DRUGGISTS' DIARY will show you to what extent methylated spirit may be used in manufacturing. You may sell your customer methylated spirit, but you may not sell the preparation of which you send us the formula.

123/37. *Proprietary.*—If you put up "Dr. Roberts's Stomach-beans," and do not make them a colourable imitation of anything else of a similar nature in the market, you run no risk.

174/21. *Smith.*—It appears from what you say that A is to continue the management of the business until B, the purchaser, is qualified. In that case all that has to be done is to delay completion of the purchase also until then. A solicitor can arrange that.

175/66. *M. P. S.*—Notice to a chemist's assistant may be given at any time. The termination of the engagement in your case was four weeks after the Saturday, an additional day's pay being given.

170/16. *Manager.*—It is well settled under the Bankruptcy Act that when goods are under the order or disposition of a testator, with the consent of the true owner, such goods pass to the trustee in bankruptcy, except under special circumstances. To rebut this presumption in regard to the goods which you sent to the bankrupt on sale or return you would have to prove that it was a notorious custom of the trade that the goods were on sale or return. The proper way to decide the matter is by motion in the bankruptcy proceedings, asking for the return of the goods.

174/22. *Windows* asks if he or his landlord is responsible for breakage of the plate-glass window. The terms of the lease as to repairs are that the tenant shall "at his own cost keep the interior of said premises in good repair." The landlord shall "keep the roofs, main walls, timbers, drains, sewers, and watercourses in good repair." Are windows considered as part of the main walls? [We hesitate to give an opinion on this point. We doubt very much, however, whether our correspondent will be able to recover the costs of replacing the window from the landlord as being part of the main wall. A window is generally regarded in the legal sense as being an opening in the main wall. Apparently neither party is liable under the lease, but it is not an uncommon custom for the tenant to pay for breakages made from the inside and for landlords to pay for those from the outside.]

178/42. *Omega.*—If an unregistered dentist uses the title "Dental Depôt" he will infringe the Dentists Act, but not so by using the title "Depôt for Artificial Teeth."

178/40. *Embrocation.*—The "Premier" embrocation for household use is liable for stamp-duty, because it is recommended for the cure of specified ailments; but not so the one for horses and cattle, as the duty is chargeable only upon medicines for human use.

174/9. *Country* sends us a sketch plan of the ground occupied by three houses, thus:—

A B C

A, B, and C being the houses. There is a boundary-wall between the gardens of B and C, as indicated, but none between A and B. Can B compel A to put a boundary-wall between the gardens similar to that between B and C? [In the absence of agreement the adjoining owner cannot compel his neighbour to erect a fence, but can only bring an action for damages against him in case he keeps cattle or animals which stray on to his ground through his default. Probably the conveyances to A and B contain some provision, as is usually the case, as to the dividing fence. In the absence of such provision B will have to put up his own fence or leave his ground open. The Borough Surveyor has nothing to do with the matter.]

Digitized by Google

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

180/21. *G. C.*—If you would be good enough to support your views with statistics of past and present sugar-supplies and write on one side of the paper, we should be glad to publish them. Also note the statement by supporters of the Sugar Convention that one of the chief results of it, should it be adopted, would be to promote the beet-growing industry in this country. We do not see how that will benefit the West Indies, and we should like to know how it will affect the hay-crops, which are said to be worth half the value of our total annual imports of goods.

72/53. *Alec.*—If you pass the Major examination, and intend to stick to pharmacy, you will do better by expending your spare time in extending your knowledge of pharmaceutical substances by quiet research and observation rather than by going in for more examinations. The B.Sc. is the only thing in the latter worth proceeding with, but you should rather study bacteriology, physiology, and analysis of water and the like.

171/9. *Timon.*—If you advertise in the *C. & D.* Supplement or the *Sheffield Daily Telegraph* you may hit upon a dentist in Sheffield who will give you lessons.

159/61. *Urgent.*—Refer to DIARY for 1902, where formulæ for combined toning and fixing baths are given.

169/30. *F. L.'s* communication, being anonymous, does not come within the scope of this column.

168/24. *Marking.*—We are unable to suggest any means of intensifying the faint marks of aniline marking-ink.

161/17. *Pulvis.*—**Egg-powder:**—

Tartaric acid	16 oz.
Sodium bicarbonate	20 oz.
Powdered turmeric	6 dr.
Ground rice	3 lbs.

Mix well.

Azo-orange is sometimes used in place of turmeric.

72/71. *P. C.* (Palermo).—**Making Hydrogen Peroxide.**—You will find a good practical paper on this subject in the issue of the *Journal of the Society of Chemical Industry* for February 28.

161/56. *M. P. S.*—**The Oil for Feeding Pheasants** is crude vaseline oil flavoured with orange. Perhaps it does good by keeping the birds "regular."

170/72. *W. J.* — **Quinine-and-iron Tonic** (water-white):—

Quininæ sulph.	℥iss.
Ac. nitric. dil.	♏ij.
Tr. ferri perchlor.	♏iss.
Glycerini	♏j.
Aq. chloroformi ad	♏xx.

M.

Dose: ♏ij. in a wineglassful of water thrice daily.

If you prefer a tablespoonful as a dose dilute the mixture accordingly with aq. chloroformi.

164/61. *Equisetum* asks whether injections of tetanin render a horse permanently immune from tetanus. If only temporary, what is the duration of the immunity, and do the injections cause any *malaise* at the time sufficient to stop the horse from working? [The horse is not rendered permanently immune; the protection is a matter of weeks or months at the outside. The dose is according to severity, injury, and likelihood of infection. According to the 'Extra Pharmacopœia" "Behring's antitoxin is supplied both in powder and liquid; the standard contains 100 units per gramme; it is supplied in bottles containing 5 grammes, that is 500 units, which, dissolved and injected, is a single dose for a man or horse. The antitoxin fluid is for prophylactic use, and has a standard of 5 units. The British Institute of Preventive Medicine also supplies a tetanus antitoxin, dose 10 to 20 c.c. every six or twelve hours, according to severity of symptoms." Injections would probably cause some *malaise*, and it would be inadvisable to work the horse for a day or two.]

168/44. *C. B.*—There is no book published on the manufacture of antiseptic dressings. A good paper on the subject appeared in the *C. & D.*, May 27, 1893, page 735.

155/16. *J. H.* (New York).—(1) The other Formula-books published in England besides "Pharmaceutical Formulas" are Cooley's "Cyclopædia of Practical Receipts," 42*s.*, and Beasley's "Druggists' General Receipt-book," 6*s.* 6*d.*; (2) Pocock's book on non-excisable beers is published by W. J. Bush & Co. (Limited), Ash Grove, Hackney, E. (3) You will gather the names of the chief publishers of pharmaceutical books in this country from THE CHEMISTS' AND DRUGGISTS' DIARY and the weekly "New Books" section of THE CHEMIST AND DRUGGIST

159/24. *G. T.*—**Ear-specialists in Manchester.**—Dr. F. J. W. Cox, 38 Deansgate, and Dr. L. Larmuth, 96 Mosley Street.

169/14. *Asphodel.*—(1) We do not know of any periodical auction-sales of scientific instruments in the City. (2) The binding-cases for the *C. & D.* are constructed for thirteen numbers. They are now fitted with strong cords in place of elastic.

167/9. *Alpha.*—**Yellow-paste Sheep-dip:**—

Yellow arsenious sulphide	3 parts
Dried sodium carbonate	3 parts
Sulphur	1 part
Soft soap	3 parts

Make into a paste. From 2 to 3 lbs. of the paste is first dissolved in a few gallons of boiling water, and then more water added to make 30 gals.—a quantity which suffices to dip twenty-five to thirty sheep.

159/8. *A. E. B.*—We do not know exactly how the iridescence is produced on the glass pin-heads. A gelatin-basis is used, and the iridescent film applied in the form of a varnish. See a note on the subject in the *C. & D.*, January 11, page 59.

156/67. *J. H. S.*—(1) You will need to experiment with the recipes for soluble essences given in "Pharmaceutical Formulas" to get those you think will suit your trade. The essence-trade is not learned in a day, and for this reason it is best to buy the essences ready made. (2) Brewed Ginger-beer.—See THE CHEMISTS' AND DRUGGISTS' DIARY, 1900, page 524. (3) Sodium silicate (water-glass) is diluted with seven or eight parts of water for Preserving Eggs.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

179/1. Makers of quillaline.

178/47. Name of the proprietors of St. Patrick's pills.

180/23. Makers of Henley's beef, celery, and iron wine.

178/47. Tathum's eye-pipette with disc: where obtainable?

179/25. Name of a firm which supplies cameras on sale or return.

179/58. Name and address of maker of Cabey's green-gum corn-plasters.

179/21. Address of the Lungill Company, late of 21 Herald Chambers, Birmingham.

180/53. Agent in England for Skinner's turtle-soup, made by B. Skinner, Brisbane, Queensland.

180/51. Makers of poisonous fly-paper (either arsenic or quassia impregnated), but without any printing on.

176/72. Address of manufacturers or agents who stock "Caramel Cereals" (or similar name), a compound used in place of tea.

Westminster Wisdom.

(By our Parliamentary Representative.)

Society of Apothecaries and the Midwives Bill.

I stated last week that the Midwives Bill had reached the stage of consideration by the Grand Committee on Law, and that some amendments have been made. Since then the Bill has been further amended and reported to the House. One of the proposals is to set up a Central Midwives Board, which shall consist of four registered medical practitioners—one to be appointed by the Royal College of Physicians of London, one by the Royal College of Surgeons of England, one by the Society of Apothecaries, and one by the Incorporated Midwives Institute; two persons to be appointed by the Lord President of the Council, and one person to be appointed by the Association of County Councils. When this clause came up on Friday various changes were proposed. Mr. T. P. O'Connor moved to strike out the nomination by the Society of Apothecaries, in order to put in its place a nomination by the Royal British Nurses' Association. This was strenuously resisted by Mr. Heywood Johnstone, one of the promoters, who explained that the Society of Apothecaries had always had a position in the Bill, and that that position had never before been challenged. It was further stated by Sir John Batty Tuke that the Apothecaries' Society was not a mere pharmaceutical society engaged in trade, but one of the largest medical qualifying bodies in the country; and Mr. John Burns pointed out that as long ago as 1813 the Society endeavoured to get legislation on the subject of midwives, thus giving early proof of interest in the matter. When a division was taken Mr. O'Connor's amendment was rejected by 23 votes to 5. To meet certain criticisms it was decided to charge a guinea fee for registration instead of 10*s.*, to make the rules framed by the Central Midwives Board subject to the approval of the Privy Council, but requiring the Privy Council to submit the rules to and to take into consideration any representations made to them by the General Medical Council; and, with the object of meeting the claim for an annual system of registration, to provide that the midwife should give notice each year to the supervising local authority that she intended practising within the area of that body during the ensuing twelve months.

The Bill as amended was reported to the House on March 14, and was down for consideration on March 20.

Mr. Butcher's Trade-Marks Bill.

Mr. Butcher has introduced a Bill to amend and consolidate the law relating to trade-marks. He informs me that it has been prepared on behalf of and approved by the London Chamber of Commerce, and that "the object is to put the law of trade-marks on a more intelligible and practical commercial basis than it stands on at present. The changes are mainly questions of detail as to what marks can be registered and how they should be registered." It seems, therefore, to be the same Bill that was before the House last Session.

Foreign Chocolate.

In reference to a suggestion that foreign chocolate is receiving exceptionally favourable treatment in connection with the sugar-duty, the Chancellor of the Exchequer has explained that chocolate - which is a mixture of cocoa, sugar, and flavouring-matter—has for long been liable to a specific duty independent of the proportions in which its several constituents may be present. Since 1853 the rate of that duty has been 2*d.* per lb. The sugar-duty of 4*s.* 2*d.* per cwt. on the proportion of sugar in the mixture is held to be merged in the higher specific rate on chocolate; and if chocolate were treated like other confectionery, it would be admitted at a much lower duty than that at present levied.

Compulsory Sheep-dipping.

In view of the periodical outbreaks of sheep-scab, Mr. Laurence Hardy has asked Mr. Hanbury to consider the expediency of promptly introducing a measure to secure compulsory dipping of sheep at least once a year either by general legislation or by giving powers to County Councils to order compulsory dipping within their own areas. The President of the Board of Agriculture sees obstacles. He points out that one dipping a year would not meet the difficulty, as the ova would not be destroyed, and a second dipping very soon afterwards would be necessary to destroy the produce of the ova. The difficulties in the way of enforcing the dipping of some fifty millions of sheep twice a year, with a definite interval between the dippings, are to his mind obvious; and he submits that local authorities have already such large powers for regulating the movement of sheep into and in their own districts that they practically can do what Mr. Hardy suggests by making dipping a condition precedent to movement. In regard to the continued prevalence of

Glanders,

especially in and around the metropolitan area, Mr. Hardy thinks that Mr. Hanbury should now promote legislation on the lines suggested by the Departmental Committee which reported in 1899. To this Mr. Hanbury replies that the Committee reported that further investigation of the nature of the disease, even of some of the most elementary facts in connection with it, was necessary before its recommendations could be adopted with any certainty of success. Such an inquiry was instituted in January of last year, and its report is expected within the next few weeks.

Supply for Science.

The Vote on Account (1902–3) for Civil Service and Revenue Departments passed on Friday, March 14, included Art and Science Buildings (G B). 16 000*l.*; Scientific Investigation, &c. (U K.), 31,000*l.*; Universities and Colleges (G.B.) and Intermediate Education (Wales), 43,000*l.*; and Queen's College (Irel.), 2,500*l.*

The Cure of Cancer.

In response to various suggestions that the Government should render some help—financial or otherwise—in the search for a cure for cancer, Mr. Balfour has reiterated his opinion that this is a subject which can be best dealt with by private enterprise aided by the liberality of the public. The Royal College of Physicians and the Royal College of Surgeons have, as was noted in the *C. & D.* some time since, appointed a joint committee to consider the matter, and he has reason to believe that their efforts will be successful. From another source I learn that the two Colleges are taking up the matter in a most thorough way, and that an interesting and important result may be expected.

Medical Acts (Extension) Bill.

This Bill is now practically doomed. On Monday it was down for second reading, but had not the smallest chance of being reached, and on April 14 the same fate will overtake it unless something most unexpected happens.

Coming Events.

Tuesday, March 25

Royal Photographic Society, 66 Russell Square, W.C., at 8 P.M. Mr. C. P. Butler on "The Photographic Investigation of Modern Astro-physical Problems." An exhibition of photographs by Mr C. Y. Abbott, Philadelphia, will also be opened.

Bradford Chemists' Association. Mr. A. Hanson will open a debate on "Prescribing and Dispensing."

Wednesday, March 26

Public and Poor-law Dispensers' Association, St. Bride's Institute, Bride Lane, Ludgate Circus, E.C., at 8 P.M. General meeting.

Newcastle-on-Tyne Chemists' Association, Hôtel Métropole, at 8.30 P.M. Special meeting to discuss Mr. Paterson's scheme of provincial pharmacy schools.

Chemists' Assistants' and Managers' Society, Horseshoe Hotel, Tottenham Court Road, W., at 9 P.M. Mr. George Cullwick on "Chemists' Prices, Old and New."

Chemical Society, Burlington House, W., at 4.30 P.M. Annual general meeting. At 9 P.M., in the Royal Institution, the Raoult Memorial Lecture by Professor van 't Hoff.

Imperial College of Chemistry and Pharmacy. A Bohemian concert at 7.30 P.M. in the large hall of the Albion Hotel, Ludgate Circus. Ladies and old students are heartily invited by Mr. Frederick Davis to be present.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted

42 Cannon Street, London, E.C.: March 20.

BUSINESS shows a slight improvement on that of last week, but price-fluctuations are few. The chief interest is centred in cod-liver oil, and the market is rising. The feature is that stocks of old oil are very low, so there is every prospect of dearer prices this season. A tardy advance of ½*d.* per oz. in quinine is announced by makers, but there is little doing in the article. Crude Japanese camphor is again lower, as the Japanese monopoly is not yet completed. Pará tonka-beans have advanced owing to scarcity. Almond oil is very firm, but peach-kernel is a trifle weaker. Lemon-grass oil is considerably lower to arrive, and some quantity is near at hand. Shellac has been dull of sale, and prices have given way. The following are the principal alterations of the week, including those recorded at the auction-sales of new drugs:—

Higher	Firmer	Easier	Lower
Colchicine	Buchu	Ipecac. (Rio)	Agar-agar
Oil, cod-liver	Senega	Oil, castor (Belg.)	Camphor (crude)
Quillaia		Oil, peach-kernel	Cardamoms
Quinine, "official"			Galls (Chinese)
Tonka-beans			Ipecac. (Cart.)
Wax, bees', Mozambique (rolls)			Oil, lemon-grass
			Pepper, black
			Shellac
			Strophanthus

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from March 12 to 19, inclusive:—Acid, carbolic (@ Amsterdam), 12 cks; acid, tartaric (@ Rotterdam) 10, (@ Bari) 37, (@ Bordeaux) 20; annatto (@ Bordeaux), 10; areca (@ Colombo, 31; argol (@ Oporto), 4; arrowroot (@ St. V.), 1,036 pkgs; arsenic (@ Melbourne) 50, (@ Oporto) 473 brls., (@ Stettin) 60; benzoin (@ Singapore), 50; buchu, 23; camphor (@ Havre) 61, (@ Hamburg) 260 cs.; canary-seed (@ Rodosto), 1,400; capsicums (@ Suez, 121; cardamoms, 31; caraway oil, 1 cs.; caraway-seed, 77; cascara sagrada (@ Hamburg), 182; castor oil (@ Antwerp) 90 cs. 200 brls., (@ Calcutta) 450 cs; chamomiles (@ Ghent), 10; chillies (@ Japan), 778 bgs.; cinchona (@ Colombo) 308, (@ W.C S A) 52 serons 322 bls.; cocaine, crude (@ Callao), 7; cod-liver oil (@ Aalesund) 191, (@ Christiansund) 10, (@ Bergen) 75, (@ Hamburg) 20; cream of tartar (@ Tarragona), 10; cumin-seed (@ Malta), 44; dragon's-blood, 2; drugs (@ Trieste) 37, (@ Cartagena) 50, (@ Montserrat) 3; essential oils (@ Messina) 43 pkgs., (@ Naples) 30; galls (@ Smyrna), 14; gentian 19, powder 20; ginger (@ Japan) 615, (@ Hong-Kong) 2,550 cs. 250 cks., (@ Cochin) 145 bgs. 43 cs., (@ Jamaica) 307; gum arabic (@ Aden), 55; gum thus (@ New York), 300; gum olibanum (@ Bombay), 510 cs.; hemlock fluid essence (@ Halifax, 185 cs.; honey (@ N. ACID, CITRIC.—The market is flat, at 1*s.* 0½*d.* to 1*s.* 0¾*d.* per lb. for English.

ACID, TARTARIC, in fair demand at 11½*d.* per lb. for English powder or crystals. Foreign is quoted 10¾*d.*, c.i.f.

AGAR-AGAR is lower at from 1*s.* 4*d.* to 1*s.* 5½*d.* per lb. for threads.

ANISEED STAR.—A report from Hong Kong dated February 14 states that the market is firm at 62*s.* 6*d.* per cwt., with sales of about 300 piculs by natives. Stock is about 300 to 400 piculs.

ANTIMONY.—On Hamburg market Chinese crude is offered cheaply at 14*s.* per cwt.

ARROWROOT.—On Wednesday at auction only a few barrels of good St. Vincents sold at 1½*d.* and half-barrels at 1¾*d.*, the remainder being bought in.

CAMPHOR.—Crude is again lower, Japanese offering at 150*s.* per cwt., but little business is reported. English refined remains firm at last week's prices, and German, which is unchanged, is offered from Hamburg from second-hand holders at 2*s.* per lb. c.i.f. in casks.

CINCHONA.—The auction to be held in Amsterdam on April 3 will consist of 6,401 bales, and 379 cases of Java bark weighing 620,159 kilos. The shipments of bark from Java for the first half of March are again small, viz. 365,000 Amsterdam lbs. against 623,000 Amst. lbs. last year.

COCOA BUTTER.—The auction to be held at Amsterdam on April 1 will consist of 70 tons Van Houten's, 3½ tons Helm, 13 tons de Jong, 5 tons Mignon, and 4½ tons of a foreign brand. The quantity of Cadbury's brand to be offered in London on April 8, has not yet been published.

COLCHICINE.—There has been a considerable advance in this article, the price of which is now 66*s.* per oz., about double the price of a month ago.

GALLS.—Chinese are lower, sales having been made at 50*s.* per cwt., c.i.f., for March-May shipment, but higher prices are now wanted.

GAMBIER.—*Cubes* are quiet, with small sales at 36*s.* for good; and sellers to arrive at 32*s.* to 32*s.* 6*d.* per cwt.

JALAP is quoted 5½*d.* per lb., but this quotation would probably be shaded ½*d.*

LYCOPODIUM is very scarce at 2*s.* 2*d.* per lb., c.i.f. Russia is practically without stock.

MASTICH is very quiet at from 1*s.* 4*d.* to 1*s.* 7*d.* per lb. spot, according to quality. Stocks are large.

OIL, ALMOND.—B.P. quality is a strong market at unchanged prices. *Peach-kernel oil* is rather weaker at 7½*d.* per lb., perhaps ½*d.* less for ton lots.

OIL, ANISE-STAR.—It is reported that there has been "a large fire in China," and that prices are firmer there. Here the market is unchanged, with sellers at 4*s.* 4½*d.* per lb. spot.

A report from Hong-Kong, dated February 14, states that the market has advanced to 4*s.* 7*d.* per lb., with sales of 25 piculs; stock is 100 piculs.

OIL, CASSIA, remains extremely dull, quotations ranging from 2*s.* 6*d* to 2*s.* 10*d.* per lb., according to analysis.

OIL, CASTOR, is quiet at 36*s.* per cwt. for medicinal Italian. Belgian is rather easier at 27*l.* per ton for firsts, and 26*l.* for seconds, on the spot. Medicinal French is 32*l.* per ton; and first pressings 29*l.* 5*s.* spot. Calcutta oil is dull at from 2 15/16*d.* to 3*d.* per lb. for seconds on the spot.

OIL, CITRONELLA, is quiet at 10½*d.* per lb. in cases on the spot.

OIL, COD-LIVER.—Oil on the spot continues scarce and wanted, buyers hesitating to pay the higher c.i.f. prices which are now asked. The business done this week includes

Digitized by Google

a small quantity of old oil at from 80*s.* to 85*s.* per barrel, which is an advance of 5*s.* on last prices. Finest new non-freezing Lofoten oil was quoted early in the week by one Bergen firm at 85*s.* to 90*s.*, free on rails, Hull. The quotations on this market range from 90*s.* to 100*s.* per barrel, c.i.f., according to brand, and there is every prospect of dearer prices, owing to the short stocks of old oil, which is the principal feature of the situation. Our Bergen correspondent writes on March 15 that the last reports from Lofoten (dated March 12) gave pretty good figures regarding the catch. Since then the weather has partly been unfavourable, and rising prices have been paid for the cod. The livers are getting leaner, and in general they are very poor. The price of non-congealing Lofoten oil has been rising rapidly (see our cablegram). The exports from Bergen to date amount to 1,838 barrels, against 1,813½ barrels at the same time last year.

Under date of March 11, Mr. Joh. Rye Holmboe, of Tromsoe, reports that the catch of cod and production of cod-liver oil up to March 8 was as follows:—

Year	No. of Fish	Oil (hectolitres)
1902	9,750,000	6,243
1901	9,250,000	10,739
1900	6,250,000	8,153
1899	8,000,000	9,762
1898	6,750,000	5,027
1897	9,250,000	8,015
1896	4,500,000	1,630

From the above it will be seen that livers are very much leaner than during the last five years. Even if the remaining fishing should give a very rich catch of fish, the quantity of oil will fall materially below the average. Last week the fishing on the eastern Lofoten banks was quite abundant, but during the last few days the catch has again been poor. The market is unsettled, and prices are varying, according to the personal opinion of the different holders of crude oil. Some exporters are holding off, expecting prices to come very much higher.

Oil, Lemongrass.—An arrival of about 100 cases is shortly expected, so that prices are likely to be lower. For March-April shipment 4½*d.* per lb., c.i.f., has been accepted, and there are sellers at 6*d.* on the spot.

Oil, Orange.—Sweet is quoted 5*s.* 5*d.* per lb., c.i.f.

Oil, Peppermint.—There has been more activity in Japanese oil this week, and for 40-per-cent. oil 7*s* 6*d.*, spot, has been paid, 7*s* 9*d.* now being asked. Dementholised is quoted 4*s*, spot. Pure Wayne County oil is quoted 7*s.* 9*d.* per lb, c.i.f. HGH is unchanged at 9*s.* per lb., spot, perhaps 8*s.* 10½*d.*

Opium.—The London market is quiet, little fresh business being reported in Persian to arrive or on the spot, holders quoting 9*s.* per lb. Turkey descriptions are also quiet, but prices are steady.

Smyrna, March 7.—The market maintains a firm tone, although the sales amount to 18 cases only, consisting of 14 cases Yerli talequale at the equivalent of 7*s.* 9*d.* per lb., f.o.b. for America, and 4 cases Bogaditz at 8*s.* 3*d.* for the Continent. For the moment weak needy holders are cleared out, and as large interested holders maintain their position a lower market is not expected until the monetary needs of the weak dealers begin to be felt again. The weather continues favourable, and from all parts of the country the crop-news is very good. The arrivals to-day amount to 3,132 cases, against 3,939 cases at the same time last year.

Constantinople, March 14.—The weather has taken a sudden wintry turn, the first of the season, and snow is falling heavily. So long as it does not lie too long, and provided no frost follows, the young plants will derive benefit rather than harm. The market is firmer in sympathy with Smyrna, and the bout of cold may tend to harden values further. Sales for the week amount to 3 cases "Druggists," at 7*s.* 9*d.* per lb.

Pilocarpine is very firm at makers' prices. Some of what is offered from second-hands at lower prices is said to be of doubtful quality.

Quinine.—With the announcement of the small-bark shipments at the end of last week there was a better demand, and a fair business was done, including good German sulphate in bulk on the spot, at 1*s.* 1¾*d.* per oz., and August at 1*s.* 2½*d.* to 1*s* 2¾*d* This week, however, business has been very quiet in second-hands, with small sales of August delivery at 1*s.* 2½*d.*, the market closing with spot buyers at 1*s.* 2*d.*, and sellers 1*s.* 2¼*d.* On Wednesday an advance of ¼*d.* per oz. was announced in German quinine, now 1*s.* 2¼*d.* per oz. for 1,000-oz. lots in bulk.

Salicin remains very firm at 15*s.* per lb. from makers.

Scammony-root.—A fair business has recently been done at from 25*s.* to 27*s.* 6*d.* per cwt., spot, and stocks are considerably less than what they were.

Senega.—There is a good inquiry, but not much business 2*s.* 4*d.* per lb. net, spot, will still buy. In auction 5 bales were held at 2*s.* 4*d.* per lb. net.

Spices.—Black pepper is lower, and Zanzibar cloves are easier, but otherwise there is little alteration to note. At auction on Wednesday Cochin *Ginger* was steady, but nothing sold. Fair washed rough was bought in at 40*s.* per cwt., but was offered at 37*s.*; bold and medium native cut was bought in at 80*s.*, medium and small at 60*s.*; Calicut A cut at 95*s.*, B at 70*s.*, C at 60*s.*, D rough at 42*s.*, and cuttings at 40*s*, per cwt. Rough Japan was bought in at 39*s.* per cwt. Zanzibar *Cloves* partly sold at 3¾*d.* per lb. for good fair. The delivery-market is lower, June-August having been sold at $3\frac{25}{32}$*d.* per lb. Stems sold at ⅞*d* to 1*d.* per lb. Good Penang was bought in at 9*d.* per lb. Good Ceylon sold at 5¾*d.* per lb. Ordinary dark Zanzibar *Chillies* were bought in at 34*s.* per cwt. *Pimento* sold at 2¾*d.* per lb. for ordinary. *Cassia-lignea* was bought in at 50*s.* per cwt. for false packed. *Mace* was bought in at 1*s.* 6*d.* per lb. for small red Penang; good wild Bombay sold at 5*d.* per lb. Lampong black *Pepper* was bought in at 6*d.* per lb., and Singapore at 5½*d.*, but privately business has been done at 5¾*d.* on the spot, and at $5\frac{15}{16}$*d.* to arrive, being lower. Fine Singapore white was bought in at 11*d.* to 11¼*d.*, and Penang at 9¾*d.* per lb.

Sugar of Milk.—From Hamburg B P. powder is quoted in 2-cwt cases at 38*s.* 6*d.* per cwt., c.i.f.

Sulphonal remains weak, at 5*s.* per lb. for crystals or powder.

Tonka-beans.—Para are dearer, several sales having been made, it is said, up to 2*s.* 6*d* per lb for good crystallised. Angostura can be had at 2*s.* 9*d.* to 3*s.* per lb.

Turmeric.—Bengal has been sold on the spot at 16*s.*, and for arrival sellers quote 13*s*, c.i.f.

Wax, Ceresin.—This "syndicated" article is very firm, prime white being quoted by one dealer at 54*s*, and natural at 49*s.* to 50*s.* per cwt.

Wax, Japanese, is steady at 35*s.* per cwt. for good pale squares.

Cablegrams.

Hamburg, March 20:—Condurango-bark is dearer, at 125m. per 100 kilos. Japanese wax, peppermint oil, and menthol are all firmer. Quinine has been raised to 41m. per kilo.

* * * *

Bergen, March 20, 1.10 p.m.:—The market here is very firm and rising; 90*s* per barrel, f.o.b., is now the lowest quotation for best Lofoten non-freezing medicinal oil. Up to date the catch of cod amounts to 16,317,000, against 13,219,000 at the same time last year. This will yield 9,615 barrels, against 12 985 barrels. News from the fishing-district is very unfavourable as regards yield.

* * * *

New York, March 20:—Business here is quiet. Ergot is higher, at 40c. per lb. Balsam copaiba, at from 36c. to 40c. per lb., is strong. Senega is quiet, at 53c. per lb. Gamboge is dearer, at 75c. per lb.; and Cartagena ipecacuanha is lower, at $130 per lb. Domestic quinine is strong, at 27c. per oz.

* * * *

Smyrna, March 20:—The sales of opium since last Wednesday amount to 40 cases, at from 7*s.* 6*d.* to 7*s.* 8*d.* per lb., principally for American account.

Digitized by Google

London Drug-auctions.

OWING to the intervention of the Easter holidays the next drug-auctions will be held four weeks hence—viz., April 17, when new and old goods will be offered. The auctions of first-hand goods to-day were of small extent, the principal drug on offer as regards quantity, being cardamoms, which sold at irregular but lower prices. Aloes was neglected, Sumatra benzoin steady to firm, and Palembang easy. Cascarilla unchanged, as was also dragons-blood. Buchu perhaps a shade firmer. Jamaica honey fairly steady, and in demand. Ipecacuanha of both descriptions was a shade lower. Rhubarb neglected in auction, but fair business privately. Tinnevelly senna sparsely represented. Madagascar beeswax full up, and Mozambique roll firm to 5s. dearer; Jamaica scarce. The following table shows the quantity of goods offered and sold, the figures referring to original packages:—

	Offered	Sold
Ajowan-seed	25	0
Aloes—		
Cape	28	0

Witch hazel (ext.)	1	0

ALOES.—A parcel of 78 tin-lined cases of stiff pasty Socotrine aloes was offered and bought in at 80*s.* per cwt.; 70*s.* was the selling-price. The offerings included 28 cases catalogued as Cape aloes from Mossel Bay, but only 1 case was genuine Cape description, the remainder being apparently a mixture of the so-called East African with Cape aloes. They were bought in at 30*s.*

ASAFETIDA.—There was little competition for the new arrival from Bunder Abbas, but we understand further business was afterwards done privately. For two cases free almonds 77*s.* 6*d.* was paid, and 15 cases of darkish block, consisting of good gum in tears, but mixed with vegetable matter, brought 30*s.* A parcel of 150 packages, per *Koordistan* from the Persian Gulf, has just arrived, but were not ready for auction to-day.

BENZOIN.—Sumatra was in fair demand at from steady to firm rates, 28 cases of good seconds, well packed, with small and medium white almonds, finding buyers at from 7*l.* 5*s.* to 7*l.* 7*s.* 6*d.* per cwt. Of 40 cases from another ship, 28 sold rather cheaply at from 5*l.* 7*s.* 6*d.* to 5*l.* 12*s.* 6*d.* for fair seconds, rather false packed, but partly of good storax flavour. Palembang was neglected, only 5 cases good glassy seconds in small tins selling at 37*s.* 6*d.* per cwt.; 35*s.* was refused for similar quality in another instance.

BUCHU sold at steady to firmer rates, 8*d.* per lb. being paid for 2 bales good round bright green leaf. Seven bales from another catalogue, but rather mixed, realised 7*d.* per lb.

CARDAMOMS.—There was a good demand at very irregular but lower rates, the following being the prices paid:—Ceylon-Mysores: Fine bold pale picked, 3*s* 1*d.* per lb, subject; extra-bold pale, 2*s.* 9*d.* to 2*s.* 11*d.*; bold pale open, 2*s* 8*d*; bold pale long, 2*s* 2*d*; bold medium pale, 1*s* 8*d.* to 2*s* 1*d.*; small pale, 1*s* 4*d.* to 1*s.* 7*d.*; very small pale, 1*s.* 2*d.*; brown and split, 1*s.* 1*d.* to 1*s* 3*d.*; seed, 1*s.* to 1*s.* 9*d.*; Ceylon-Malabar, bold pale, 2*s.* 1*d.*; pickings, 8*d*; Malabar seed, 1*s* 8*d.*

CASCARILLA partly sold at 65*s.* per cwt. for good bold quill, and more is to be had at this price; ordinary lean and twiggy quill was held at 45*s.*, and siftings at 35*s.* per cwt.

COCA-LEAVES.—Good greenish Ceylon leaf sold at 11¼*d.*, and brown and damaged at 2¾*d.* to 3*d.* per lb.

COLOCYNTH.—A parcel of 8 cases small to bold nice pale Spanish apple was bought in at 1*s.* 5*d.* per lb., a bid of 9*d.* being refused. For good pulp 5*s.* 6*d.* per lb. was wanted.

COWHAGE.—Fair quality with beans sold at 1*d.* perοz·

DRAGONS-BLOOD.—Three cases of fair bright balls and lump, partly reboiled, sold at 10*l.* 7*s.* 6*d.* per cwt., and 2 cases bag-shaped lump of dull colour brought 8*l.* Two cases good bright seedy lump were held at 13*l.*, a bid of 12*l.* 10*s.* being refused.

ELEMI.—Fine white Manilla was limited at 95*s.* per cwt.

ERGOT.—It is again reported that stocks have been considerably reduced in Hamburg, and that prices will go dearer. For new sound Russian 1*s.* 6*d* per lb, c.i.f., is reported to have been paid, and 1*s.* 6½*d.*, c.i.f., for new Spanish, for delivery within three weeks. On the spot a parcel of small Russian has been sold at 1*s.* 6*d* per lb., and Spanish also at the same figure. In auction to-day a lot of 20 bags good sound Spanish ergot was held at 1*s.* 8*d.* per lb., a bid of 1*s* 6½*d.* being refused for the pile.

GUM ARABIC.—A string of 135 bales small to bold pale and ambery Aden sorts was held at 30*s.* per cwt.

IPECACUANHA.—There was a fair demand for Rio description at and after the sale, from 9*s.* 9*d.* to 10*s.* per lb. being paid for slightly sea-damaged to good bright root. Two bags of rather lean Rio of smoky flavour sold at 9*s.* 6*d.* Cartagena was a shade lower, 7 bales of rather dull and dusty root selling at 4*s.* 3*d.*, and sea-damaged at 4*s.* per lb. About 50 packages Cartagena have arrived this week.

LIME-JUICE.—Two casks unracked Montserrat sold at 1*s.* per gal.

NUX VOMICA.—Small and medium rather dull seed from Calcutta was held at 8*s.* 6*d.* per cwt.

OIL, LIME.—West Indian distilled sold at 1*s.* 5*d.* per lb., and a case of hand-pressed at 4*s.* 4*d.*

ORANGE-PEEL sold at about unchanged prices, 3⅓*d.* to 4*d.* per lb. being paid for thin partly bright Tripoli strip.

QUINCE-SEED.—Good Cape sold at 1*s.* 3*d.* per lb.

RHUBARB.—Neglected in auction, but privately a fair business is reported for export to the United States. The only sale consisted of 3 cases of small to medium flat High-dried, with good pinky break, for which 9*d.* was paid. For 2 cases of Shensi trimming root, with three-quarters pinky and greyish fracture, but slightly stalky, a bid of 2*s.* 3*d.* was refused.

SARSAPARILLA.—No grey Jamaica was offered. Of 16 bales Lima Jamaica offered 7 sold at from 1*s.* 1*d.* to 1*s.* 2*d.* per lb. for sound, and 1*s.* for sea-damaged.

SENNA.—The small quantity of Tinnevelly leaf offered represented low quality only, which sold at from ¾*d.* up to 1¼*d.* per lb. Tinnevelly pods brought 2*d.* per lb. Alexandrian was neglected; for good greenish leaf of nice flavour 5½*d.* was wanted, a bid of 5¼*d.* being refused. Broken leaf was bought in at 3*d.* and siftings at the same figure. Three bales of pale pods sold at 7*d.* per lb., and a bale of Mecca pods realised 3¼*d.*, subject.

STROPHANTHUS.—Lower. Three bags of greenish sold at 2*s.* per lb., and brownish and rather dusty at 1*s.* 6*d.*

WAX, BEES'.—Jamaica was in small supply. Good bright red and yellow sold at from 7*l.* 10*s.*, subject, to 8*l.* Good yellow Mozambique rolls (19 bags) were firm to 5*s.* dearer,

Digitized by Google

selling at 7*l.* 5*s.*; and fair Zanzibar block (8 bags) realised 6*l.* 15*s.* A bag of Nyassaland sold at 5*l.* 15*s.* Madagascar wax was full up, 50 mats selling at from 6*l.* 7*s.* 6*d.* to 6*l.* 17*s.* 6*d.* per cwt. Eleven bags of good grey Australian sold at the valuations—viz., 7*l.* 5*s.* per cwt.

Heavy Chemicals.

There is not much of special importance or change to be recorded regarding the general condition of the heavy-chemical market. A steady, although perhaps rather quiet, business is being done, and the general home trade demand keeps up particularly well. Shipments on export account are also getting heavier. Values are fairly steadily maintained, and show little fluctuation.

Alkali Produce.—Caustic soda still keeps to the quiet tone lately referred to, with quotations ruling unchanged. Bleaching-powder in fairly steady request at late rates. Ammonia alkali shows no signs of declining from its late position; it is in particularly good demand, and price is firm. Soda crystals are moving well, especially for home consumption. Chlorates of potash and soda and yellow prussiates very quiet, and without any improvement in tone. Saltcake dull.

Sulphate of Ammonia, with heavier demand, has advanced slightly. Present figures: Beckton, 11*l.* 10*s.*; London, 11*l.* 10*s.*; Leith, 11*l.* 10*s.* to 11*l.* 12*s.* 6*d.*; and Hull, 11*l.* 10*s.* to 11*l.* 11*s.* 3*d.* per ton.

Bichromates of Potash and Soda still keep very low in value, and demand is not very brisk. Potash (English and Scotch deliveries), 3*d.* per lb., less 4 per cent. Glasgow; for export, 2¾*d.* per lb., and net. Soda (English and Scotch deliveries), 2¼*d.* per lb., less 4 per cent. Glasgow; for export, ¼*d.* per lb. less, and net.

Alumina Products.—There is a good consumptive demand in this branch, and values rule firm and unchanged. Sulphate of alumina, best qualities and pure white, practically free of iron, 87*s.* 6*d.* to 95*s.* per ton, in usual casks, with customary allowances for bags and loose slabs. Crystal alum in fair request: loose lump, 5*l.* to 5*l.* 5*s.* per ton; lump, in tierces, 5*l.* 5*s.* to 5*l.* 10*s.* per ton; ground, in bags, 5*l.* 12*s.* 6*d.* to 5*l.* 17*s.* 6*d.* per ton. Aluminoferric, 55*s.* to 65*s.* per ton, according to condition and package, &c. Aluminous cake, 52*s.* 6*d.* to 60*s.* per ton. Hydrate of alumina, purest and highest strength Al_2O_3, 11*l.* 15*s.* to 12*l.* 5*s.* per ton, in usual casks. Hydrate of alumina, special pulp, 1?*s.* 6*d.* to 15*s.* per cwt Hydrate of alumina, special pulp, dried, 37*s.* 6*d.* to 38*s.* 6*d.* per cwt., in usual casks; ground, 38*s.* to 39*s.* per cwt. Aluminate of soda and carbonate of alumina, 35*s.* to 37*s.* 6*d.* per cwt., according to quantity, &c.

Liverpool Drug-market.

Liverpool, March 19.

Castor Oil.—For good seconds 2½*d.* per lb. would still be taken from the quay for any parcels remaining, but 3*d.* is still quoted for warehouse lots. First-pressure French is held for 2¾*d.* to 3*d.*, with very little business passing. Second-pressure 2⅝*d.* per lb.

Jaborandi-leaves.—There has been considerable competition for the recent arrivals, 1*s.* 6¾*d.* per lb. being paid for 28 bales of small leaf. Four bales of small leaf rather brownish realised 1*s.* 2*d.*, and 1 bale good green small fetched 1*s.* 3*d.* per lb. Four bales doubtful quality also offered at auction at the same time failed to bring forth a bid.

Calabar-beans.—Five bags just landed realised 1*s.* 1*d.* per lb. at auction.

African Ginger.—Slightly easier, sales of the new crop being reported at 30*s.* to 31*s.* per cwt. in quantity.

Quillaia.—Considerable business has transpired during the past week, and holders have raised their values now to 12*l.* 15*s.* to 12*l.* 17*s.* 6*d.* per ton, with every prospect of asking yet higher figures in the near future.

Arsenic.—Prices are tending in buyers' favour, but importers say that the bottom has been touched.

Grains of Paradise.—Small sales are reported at 60*s.* per cwt. The quantity available is not large.

Beeswax.—At auction 10 packages Peruvian were offered and held for 7*l.* 12*s.* 6*d.* per cwt., but no buyers were forthcoming at the price. Stocks now available on this market are reduced to very narrow proportions.

Canary-seed.—The interest in this for the moment is flagging, and 35*s.* to 36*s.* per quarter is nominally asked for good bright Turkish.

Irish Moss.—Getting scarcer, and common has been selling in fair quantity at 8*l.* per ton. Higher prices are expected before the new comes in.

Gum Arabic.—A sale of 23 serons of hard amber description Soudan is reported at 32*s.* 6*d.* per cwt.; soft whitish Soudan is held for 42*s.* 6*d.* per cwt.

American Drug-market.

From our New York letter, dated March 11, we quote the following more interesting items: American makers of *Codeine* have reduced prices to $3.60 in bulk. Foreign brands are still quoted at $4. *Ergot* is dull, but stocks are more concentrated, and the market is firmer with Russian steady at 38c. Spanish has sold to arrive at 37c. Demand for *Golden Seal* is poor, but values are fairly steady at 48c. to 50c. per lb. *Lithium carbonate* is still unsettled, and while quotations are nominally unchanged at $1.35, sales have been made at $1.25. *Menthol* has sold down to $3.87½. The anticipated advance in *Quinine* by German makers has not yet taken place, and the market is somewhat unsettled. Dealers offer sparingly. Java has sold at 26½c., but 27c. is generally asked. German is firm at 27c., and domestic at 28c. *Sarsaparilla* is selling in a small way at 6½ to 6¾c. *Senega* is slow of sale: 54c. to 56c. is asked. *Wild cherry* is scarce and business much restricted. The market is bare of the finer grades. From 9c. to 15c. is asked, according to quality and holder.

German Drug-market.

Hamburg, March 18.

Our drug-market in general is quiet, and shows only little business.

Aloes.—Cape is unchanged at 76m. per 100 kilos.

Camphor (Refined) is in an unsettled position, as there are reports that the monopoly is refused by the Japanese Government, and in consequence nobody knows what the real state of this article will be in future. Makers ask 435m. per 100 kilos., while second hands will take a few marks less.

Condurango is unchanged at 110m. per 100 kilos.

Cevadilla-seed has shown a sudden rise up to 100m. per 100 kilos.

Cumin-seed is quoted 52m. to 51m. per 100 kilos.

Caraway-seed of good quality is held at 42m. per 100 kilos.

Ergot is firm, and offers are scarce. Russian is held at 335m. and Spanish at 340m. per 100 kilos

Ipecacuanha is quiet; 35 bales Cartagena have arrived. Rio is quoted 21¾m. and Cartagena 9½m. per kilo.

Lycopodium is very firm at 460m. per 100 kilos.

Menthol is unchanged at 28½m. to 29m. per kilo.

Quinine is firm at 39m. to 40m. per kilo.

Japanese Wax is firm at 67½m. to 68m. per 100 kilos.

Oils (Fixed).—Cod-liver oil is very firm, non-congealing oil being quoted 80m. to 82m. per barrel, and new oil 87m. Castor oil is slow of sale at 55m. for first pressings, in barrels, and July-December delivery 51m. per 100 kilos. Linseed oil is dull and lower.

Oils (Essential).—Star anise is steady at 10½m. per kilo. HGH peppermint is also steady at 8.60m. per lb, and Japanese is firmer at 8½m. per kilo. Caraway-seed oil, crude (0·910 to 0·912) is 8.35m. per kilo., and refined (0·903) 8.30m. per kilo.

A Proposed Witch-hazel Combine.

It has been reported in New York that a large combine is about to be formed in the witch-hazel trade. Fifteen concerns are said to be interested in the movement among manufacturers in Connecticut. E. A. Dickinson, of Essex, Conn.; Gould & Co., of Malden, Conn.; and the Hughes Distilling Company, of Chester, Conn., are among those said to be interested in the combine, which will have a capital of $3,00 ',000. It is said that the true motive of the proposed combine is to drive inferior goods from the market. During recent years many so-called manufacturers have been placing "witch-hazel" on the market which is nothing more or less than scented water. The proposed combine is said to have for one of its objects the driving of those spurious goods from the market.

"Uneeda," as a trade-mark for biscuits, has been refused registration by the Court of Appeal.

Messrs. Gignek & Co., chemists, are shortly removing from 131 to 160 King's Road, Chelsea, S.W.

Messrs. Corbyn, Stacey & Co.'s tender (1,044*l.* 7*s.* 4½*d.*) for the supply of drugs has been accepted by the East London Board of Guardians.

This Comes from Ireland.—"Wanted, a gentleman to undertake the sale of a patent medicine; the advertiser guarantees it will be profitable to the undertaker."

This Problem is worrying a lot of schoolchildren (and some older persons) at present:—A man had 14*s.* 6*d.* in silver, and could not give 10*s.* change. What coins had he?

A Nicely Perfumed Japanese paper handkerchief came to us by post the other day, telling all about the Anglo-Japanese Treaty, but before we got to the base of the square of type in the centre we found we were reading about the Welsh Mountain essence made by Mr. Percy J. Ashfield, Rhyl.

"Pharmaceutical Formulas."—We are now binding this work entirely in black buckram, which experienced librarians find is more lasting than le ather. The price of the work remains the same—7*s.* 6*d.*, by post 8*s.*, from our offices, or for the published price from any wholesale house.

The Colonial Issue of "The Chemist and Druggist"
Falls this year on Saturday, April 19.
It will go to the best buyers of druggists' goods
in the Britains beyond the sea.
Besides, it will be specially circulated in Japan:
Japanese trade is worth looking after.
The Anglo-Japanese alliance will influence trade.
The C. & D. is in touch with buyers in Japan.
We have correspondents there who look after our interests.
Business men should make the most of the alliance.
So far as chemicals, drugs and sundries are concerned
The C. & D. of April 19 will be the medium for business.

Summary.

DUNDEE CHEMISTS want to close earlier (p. 489).

JUAR ROOT has been substituted for ganja in India (p. 489).

A COLUMN and more of paragraphs about drug-contracts begins on p. 486.

TRANSVAAL PHARMACY is waking up, but assistants seem too scarce (p. 490).

GLASGOW CHEMISTS approve of Mr. Tocher's educational scheme (p. 504).

SEVERAL articles have been added to the Ceylon Poisons schedule (p. 489).

MR. W. LYON'S views on research work in pharmacy are epitomised on p. 506.

NOMINATIONS and elections of chemists to various public bodies are mentioned on p. 487.

A CANADIAN section of the Society of Chemical Industry has been established (p. 500).

THE present position and prospects of the cod-liver oil market are referred to in a note on p. 500.

A MAN is not liable for his wife's debts if he prove that he allows her enough pin-money (p. 493).

LAST month's mixture of salts contained lead nitrate, cadmium bromide, and potassium chloride (p. 484).

THAT monkey-lymph is still causing trouble. Our parliamentary representative sends a note about it (p. 506).

MR. A. C. ABRAHAM makes some useful remarks on the British Pharmacopœia and criticisms thereof (p. 503).

MR. LEO ATKINSON will have to look after his Stamp Act laurels. "Xrayser" is tramping on them (p. 497).

"XRAYSER" comments stringently on Sir Herbert Maxwell's explanation about the Poisons Bill petition (p. 497).

DR. OTTO N. WITT lectured to the Royal Institution last week on recent developments in colouring-matters (p. 502).

WE PRINT a number of doubtful labels which the Commissioners of Inland Revenue have marked "Not liable" (p. 499).

THE activity of cannabis indica and digitalis is commented upon by Dr. J. C. McWalter and Mr. T. Maben (p. 508).

THE refractive index of cod-liver oil has proved a useful analytical factor in the hands of Mr. E. Dowzard (p. 504).

A PORTRAIT of Dr. A. Henry, who is to lecture before the Pharmaceutical Society next month, is printed on p. 495.

THE "Square" School football team have won the Challenge Cup this season, and have emptied it once at least (p. 487).

FESTIVITY is rather prevalent in pharmaceutical circles at present. We report half a dozen dinners and the like (p. 505).

TWO INJUNCTIONS have been granted by the High Court restraining persons from infringing the saccharin patents (p. 492).

M. THIBAULT has made a study of the effect of alcohol on pepsin. We give the gist of his remarks in an article on p. 499.

THE equipment of Boer hospitals appears to have been exceptionally fine. See note from a dispenser in one of them on p. 490.

MR. THOMPSON, SEN., the founder of the Crown Perfumery Company, has been caught in a characteristic position by Mr. Reynolds (p. 496).

A DISPUTE (Barker *v.* Brown) in connection with the purchase of a chemist's business at Earlestown has been decided in favour of defendant (p. 493).

THE COURT OF APPEAL has decided by a majority that the word "Vaseline" is a good trade-mark, and the property of the Chesebrough Manufacturing Company (p. 492).

JUNE 26 AND 27 are to be public holidays (p. 494). Some members of Parliament wish to create an Empire day—the Saturday before the first Monday in August (p. 511).

THE monthly-accounts question raised by "An Ordinary Retailer" gets support from "Xrayser" (p. 497), and Mr. C. Umney also writes on the subject (p. 508).

THE CHEMISTS' DEFENCE ASSOCIATION have beaten the Inland Revenue in a medicine-stamp case, arising from the sale of influenza pastilles unstamped (p. 491 and p. 499).

THE FEATURES in the markets this week are a considerable advance in glycerin and cod-liver oil. Gamboge is dearer also. Ammonia sulphate has advanced, and copper sulphate is lower. Quinine very quiet (p. 512).

Corner for Students.

Conducted by Leonard Dobbin, Ph.D.

Reports.

THE powder distributed to students on February 19 consisted of equal parts by weight of lead nitrate, cadmium bromide, and potassium chloride.

The calculated composition of such a mixture is—

Pb	20·8
Cd	13·8
K	17·5
NO_3	12·5
Br	19·6
Cl	15·8
	100·0

The powder also contained a small quantity of calcium as impurity, but was substantially free from other impurities.

Samples of the powder were distributed to ninety-three students, and fifty-three reports were sent in for examination.

The failures in the detection of the several constituents of the powder were:—(*a*) Metallic radicals: Lead, 1; cadmium, 18; potassium, 1. (*b*) Acid radicals: Nitric, 7; hydrobromic, 18; hydrochloric, 4.

While not exactly a beginners' mixture, it is so far evident, from the relatively high scoring, that the present exercise did not present any features of special analytical difficulty, and yet some of the individual failures have been of rather a remarkable kind. The large proportion of failures to detect cadmium and bromine cannot be ascribed to the small quantity of the elements present, and some other cause must be sought for. As regards cadmium, more than one cause of failure is forthcoming. Some students omitted to apply any test for it, ignoring its possible presence altogether; while others clearly failed to detect it through adding hydrogen sulphide to solutions containing too much free acid when testing for it in the course of their systematic analysis. We are unable, however, to explain the failure in the cases of quite a number who tested for it in ammoniacal solutions (in which it ought to have been present) by means of ammonium hydrosulphide. The failures to detect bromine were very largely due to entirely omitting to test for it. In the minds of a fair proportion of our correspondents the formation of a white (or nearly white) precipitate on the addition of silver nitrate to a solution which contains free nitric acid appears to be associated only with the presence of a choride, if the precipitate is found to dissolve in excess of ammonia; and the several other possibilities suggested by such indications are consequently passed by unheeded.

The fact that the failures to detect chloride in presence of bromide are not nearly so numerous this month as they were on the last occasion when we submitted the same analytical complexity to our correspondents is no doubt due to the chloride being present in considerably larger proportion in the present mixture. At any rate, this result is certainly not owing to the general adoption of a trustworthy method, as the majority adhere to the treatment of the mixed silver chloride and bromide with 1-in-20 ammonia solution as a mode of separation. It is probably only on account of the unfortunate fact that this most unsatisfactory method can be made to yield tolerably reliable results in cases like the present, where chloride in relatively large quantity is associated with bromide, that it is not entirely discarded by all who aim at analytical accuracy. Students who try to use the method when much bromide is present along with only a small quantity of chloride (or none at all), are quite certain to be landed in doubt, and very probably in disaster. Not more than one-third of our correspondents applied any test for chloride which was quite sure to succeed even if only a small quantity of the latter were present.

As on many previous occasions, the reported impurities are numerous, and the impurities actually present in the powder exceedingly few. Iron and magnesium, for example, were commonly reported as impurities. Operating upon 15 gr. of the powder, it was only with some difficulty that we were able to show that recognisable traces of iron really were present, while no indication of the presence of magnesium could be obtained at all. Those correspondents who have reported traces of these metals in the powder should look to the minute details of the purity of their reagents, and to the refinements of careful manipulation. Traces of lead and cadmium present in the hydrogen-sulphide filtrate (owing to the presence of too much free acid, in which lead and cadmium sulphides are both distinctly soluble) appear to have been mistaken for some of the impurities reported. The last traces of lead were not easily separated by means of hydrogen sulphide, and the slight darkening observed on adding ammonium hydrosulphide, and attributed to iron, was mainly due to the presence of lead.

Prizes.

The First Prize for the best analysis has been awarded to

H. Longstaff, 223 Saltwell Road, Bensham, Gateshead-on-Tyne.

The Second Prize has been awarded to

Flora McDonald, 90 Roker Avenue, Sunderland.

First Prize.—Any scientific book that is published at a price not greatly exceeding half-a-guinea may be taken as a first prize.

Second Prize.—Any scientific book which is sold for about five shillings may be taken as a second prize.

The students to whom prizes are awarded are requested to write at once to the Publisher naming the book or books they select.

Marks Awarded for Analyses.

H. Longstaff (1st prize) ...	99	Westminster	83
Flora McDonald (2nd prize)	98	Alex. T. Hope	82
W. H. Hurn	97	J. E. Jeffrey	82

Jessop	84		

To Correspondents.

Special Memoranda, suggested by this month's reports:—

1. Do not describe any experiment which has not actually been tried. The reverse is very plainly noticeable in several cases this month.

2. For all delicate analytical work, filter-papers which

Digitized by Google

have been extracted with hydrochloric and hydrofluoric acids should alone be employed, despite the somewhat greater cost. Common filter-papers often contain impurities, such as iron and calcium, in considerable quantities, and these may be dissolved by acid liquids during filtration.

3. Refer to the method for detecting chloride, even in small quantity, in presence of bromide (or of bromide and iodide) given in the *C. & D.* for June, 1901 (vol. lviii., page 1010).

4. Do not assume that the acetic radical is necessarily present because lead has been detected with certainty. There are other lead salts besides lead acetate.

W. H. HURN.—Before testing for cadmium in the solution obtained by dissolving the hydrogen-sulphide precipitate in nitric acid, the small quantity of lead still present in solution should have been removed by precipitation as sulphate. Cadmium, unless present in large quantity, is very liable to be overlooked altogether when this step is omitted.

EXCELSIOR.—Your account of the examination for halogen acid radicals does not make it clear that you did not add black manganese oxide and sulphuric acid to a solution of the powder which had previously been treated with chlorine-water, although it seems scarcely likely that you would fail to recognise that such a proceeding would be inadmissible.

FILIX MAS.—You do not exclude the possible presence of borate in the powder. Kindly send your name with your next report.

W. H., A.-IN-M.—We repeat our reply to yourself and others regarding the exercise of last December: "The hydrogen-sulphide precipitate must have contained some lead sulphide, although you failed to obtain any lead sulphate when examining it. The precipitation of lead as chloride by the addition of hydrochloric acid is not complete."

XYLEM.—It is unfortunate that your discovery of the presence of calcium in your filter-papers rendered the presence of traces of that metal in the powder doubtful. You will find it worth your while to use nothing but high-class filter-papers, which have been extracted with hydrochloric and hydrofluoric acids, in examining "Corner" exercises, and possibly also for the whole of your analytical work.

JEGOW, WEARY WILL, and IPSE.—We made several experiments with a view to obtain evidence of the presence of traces of ammonium salts, but without success. Care must be taken to avoid action on the test-papers used by ammonia present in the air—an admixture very common in most laboratories.

J. I. A. and WEARY WILL.—We believe, although we are not prepared to assert, that it is not possible to recognise the smell of chlorine in presence of much bromine.

KRYPTON.—Boiling the powder with concentrated sulphuric acid would drive off nitric and hydrochloric acids as well as bromine and hydrobromic acid, so that tests for the nitric and hydrochloric radicals after such treatment might easily fail, even when nitrate and chloride had been present originally.

BRASSICA.—On adding silver nitrate to a solution containing chloride and bromide, silver bromide will be precipitated first—not silver chloride. The formation of the latter salt begins when the bromide present has been completely precipitated.

MALTONIAN.—When vapour of chromyl chloride is led into ammonia solution, ammonium chloride and chromate are formed. A green precipitate of chromic hydroxide is never produced, however.

RICHARDUS.—See reply to "W. H., A.-in-M." The picric-acid test for potassium falls far behind Carnot's test in point of delicacy.

WESTMINSTER.—Thanks for pointing out error in tournament totals. You would observe the correction last week.

A. T. HOPE.—You omitted to apply any distinctive test for bromide. Why did you not treat a solution of the original powder with chlorine-water and chloroform, or carbon bisulphide? The faintly yellowish tinge of silver bromide is very liable to be overlooked, especially by gas-light.

NEMO (Coventry).—The silver-coin reaction for sulphide, which you obtained from the residue after heating on charcoal, was almost certainly due to sulphur compounds present in the charcoal. All wood contains some sulphates and other compounds containing sulphur, and these are not entirely eliminated during the preparation of charcoal.

H. JOHNSON.—You say that the sodium-carbonate solution for acid radicals when exactly neutralised with acetic acid gave no precipitate with silver nitrate, and yet you report the presence of chloride. There is a discrepancy in this which needs explanation.

J. E. JEFFREY.—Please send your address with your next report.

H. WILLSON.—It was intended that about 15 gr. of the powder should reach each correspondent. The necessity of economising the powder during the analysis and the discipline of making accurate observations with small quantities are essential and valuable features of the exercise.

ALOES.—The fact that you observed a yellow precipitate at first on passing hydrogen sulphide should have led you to make special search for an explanation. As a matter of fact you left the observation unexplained, and missed cadmium.

J. J. B. M.—How do you reconcile the statements that silver nitrate, when added to a portion of the sodium-carbonate extract for acid radicals (which had been neutralised with nitric acid), gave a white curdy precipitate (which you attribute to the presence of chloride), and that silver nitrate when added to another portion of the same solution gives no precipitate (which you regard as indicating the absence of bromide)? We find it impossible to unrave problems of this description.

CYMENE.—If, as you report, you dissolved some of the original powder in dilute nitric acid, added silver nitrate, and then ammonia in excess, you would not obtain a clear solution, because while the ammonia would dissolve the silver chloride and bromide, it would produce a new white precipitate of lead hydroxide, which is insoluble in excess of ammonia.

AMYLUM.—Note (1) that the grey deposit you obtained upon copper in applying Reinsch's test to the solution produced by dissolving the hydrogen sulphide precipitate in hydrochloric acid was most likely due to your omitting to completely remove the hydrogen sulphide from the solution; (2) that cadmium sulphide is not soluble in ammonium hydrosulphide; (3) that chloroplatinic acid as a test for potassium is not applicable to solutions containing lead and metallic radicals generally; and (4) that solution of sodium zincate does not give any precipitate when mixed with potassium ferrocyanide. See the reply immediately following.

KUON and CUPID.—We would strongly recommend you to prepare mixtures having the composition of the present exercise, and to practise upon them until you thoroughly understand their behaviour in the course of systematic analysis.

ANGUS SCOTT.—The fact that the hydrogen sulphide precipitate was black did not preclude the possible presence in it of cadmium sulphide. The yellowish precipitate you obtained on boiling the filtrate from hydrogen sulphide (after removal of the latter) with ammonium molybdate consisted of molybdic anhydride: the mixture should not be boiled. The pungent-smelling gas evolved on heating the powder with hydrochloric acid was simply hydrochloric acid gas. See the reply immediately preceding.

THE ANALYTICAL TOURNAMENT.

This month's exercise has led to some changes in position on the list. The six leaders, amongst whom it seems reasonable to suppose that the winners will be found, are now:—

Jegow	491	Edinburgum	444
Tungsten	471	W. H., A.-in-M. ...	437
Algol	451	Westminster	408

By the time this list appears our correspondents will be engaged upon the final exercise of the Tournament, and we look for a spirited finish.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

The chemists of Bridgend have decided to close at 8 o'clock each night, except Saturday night, from April 1.

At Lambeth Police Court on March 24, a chemist's assistant, who gave the name of Lionel Raymond, was fined 5*s.* for being drunk and disorderly.

A meeting of the Newcastle Young Chemists' Association was held on March 19, when the members spent most of the time examining materia medica specimens lent by Mr. John Clark.

The annual congress of the Royal Institute of Public Health will be held at Exeter, under the presidency of the Right Hon. the Earl of Iddesleigh, from August 21 to August 26.

The Grimsby and District Chemists' and Druggists' Association have arranged to hold their annual meeting on Thursday, April 10, followed by the annual dinner, at 7 P.M., at the Oberon Hotel.

At the Camberwell Coroner's Court on March 24, an inquest was held touching the death of a chemist's assistant named Sydney Champion, who was found dead in bed. The jury found that death was due to heart-disease.

At the examinations held at the Manchester College of Pharmacy this month, Mr. Richard McMyn secured the first place for theoretical work, and was awarded a copy of "Pharmacopœdia." Mr. H. H. Graves won the medal given for the best analytical work.

The materia medica museum of the London College of Chemistry and Pharmacy has just been enriched by a collection of about fifty Indian drugs presented by Mr. G. S. Drayton, a former student of the College, now of Bombay. The specimens are in bottles, named and described.

At Stratford Police-court on March 22, Evan C. Hughes, a doctor's dispenser, Leytonstone, was ordered to pay 3*s.* a week and 1*l.* 1*s.* costs, under an affiliation order made at the request of a domestic servant, who had been cook to the medical man with whom defendant was employed as dispenser.

An order was made at the Westminster County Court on March 21 against a skin-specialist named Fleming, lately in business in Oxford Street, W., for payment of a judgment-debt (for chemicals supplied by a trader named Francis) in a month, subject, in default, to committal to Holloway for twelve days.

Two errand-boys in the employ of Mr. F. Blackmore, pharmaceutical chemist, Weston-super-Mare, pleaded guilty at the police-court, on March 18, to stealing and receiving 4*l.* 18*s.* 6*d.* belonging to their employer. The thief was ordered to be birched, while the receiver (who is over age) was fined 1*l.*

At the Clerkenwell Sessions on March 20, William John Willis was acquitted of a charge against him of having stolen a packet of tobacco and cigarettes, value 3*s.*, during his employment as manager to the foreign-perfumery department at the premises of Messrs. Hovenden & Sons (Limited), 89–91 City Road, E.C.

At a meeting of the Yorkshire Section of the Society of Chemical Industry at the Queen's Hall, Leeds, on Monday evening, Mr. Fairley stated that the Society desire to visit Yorks in 1903, and it was decided to consult the Bradford members, the Chairman stating that the matter would be formally brought before the committee.

In the Westminster County Court on March 21 the case of Raynor *v.* Giles came up, being an application to commit the defendant to prison for non-payment of a judgment-debt in respect of bottles supplied to the defendant at a time when he was a chemist in Harrow Road. The defendant said he had no means, and the Judge refused to make any order.

Contracts.

Mr. T. E. Barrass, pharmaceutical chemist, Chard, has secured the half-yearly contract for drugs to Chard Workhouse.

Mr. W. Lean, chemist and druggist, Eversham, has been appointed chemist to Evesham Workhouse for the next six months.

Mr. A. Dyson, chemist and druggist, Grays, has been appointed to supply drugs to Orsett Workhouse for the next half-year.

Ulverston Rural District Council have accepted the tender of Mr. R. Willan, pharmaceutical chemist, for the supply of disinfectants.

Mr. J. Griffith Isaac, chemist, Neath, has obtained the contract for the supply of disinfectants to the Neath Rural District Council.

Mr. H. S. Martin chemist and druggist, has been appointed to supply drugs to East Grinstead Workhouse for the ensuing half-year.

Lewisham Board of Guardians have accepted the tender of Messrs. S. Maw, Son & Sons, Aldersgate Street, London, for surgical appliances.

Mr. T. P. Jary, chemist, Lowestoft, has received the contract for the supply of drugs to the Mutford and Lothingland Board of Guardians.

Kington Board of Guardians have appointed Mr. T. H. V. Morris, chemist and druggist, Hereford, to supply cod-liver oil to the workhouse for the next half-year.

Nantwich Board of Guardians have appointed Mr. Benjamin Woolstencroft, chemist and druggist, to supply drugs to the workhouse for the ensuing half-year.

Ellesmere Board of Guardians have accepted the tender of Mr. J. J. Clayton, chemist and druggist, for the half-yearly supply of disinfectants to the workhouse.

The Medway (Kent) Board of Guardians have appointed Messrs. Goldthorpe & Cook, chemists, Chatham, to supply drugs to the workhouse for the next half-year.

At a meeting of Boston Board of Guardians the tender of Gilliatt (Limited) was accepted for Howards' quinine at 1*s.* 8½*d.* per oz., and soft soap at 8*s.* per 60-lb. keg.

High Wycombe Board of Guardians have accepted the tender of Messrs. Young & Coley, chemists, High Wycombe, for the supply of cod-liver oil and quinine to the workhouse for the next half-year.

Strood Board of Guardians have accepted the tender of the Jeyes' Sanitary Compounds Company (Limited) for the supply of carbolic soap at 16*s.* 6*d.* per cwt., and that of the Sanitas Company (Limited) for disinfecting-fluid at 9*s.* per doz. pints.

Mr. W. H. Hill, chemist and druggist, High Street, Cheltenham, will supply to the local workhouse Sanitas, crude, at 4*s.* 3*d.* per gal., and Savory & Moore's food at 8*s.* 6*d.* per dozen for 1*s.* size tins; Mr. C. H. James, chemist and druggist, Promenade, will supply drugs for twelve months, at 20 per cent. off Messrs. Burgoyne, Burbidges & Co.'s price-list; and Mr. W. Hands, pharmaceutical chemist, High Street, will supply the sundries required during the same period.

The Marylebone Board of Guardians have accepted the tender of Messrs. Thos. Hodgkinson, Prestons & King, of 81 Bishopsgate Street Without, E.C., to supply the infirmary and the North and South Dispensaries with drugs as per detailed tender in the sum of 292*l.* 2*s.* 3*d.*; they also accept the tender of Messrs. S. Maw, Son & Sons, 7–12 Aldersgate Street, E.C., to supply the infirmary and North and South Dispensaries with druggists' sundries as per detailed tender in the sum of 240*l.* 14*s.* 9*d.*

The Yarmouth Board of Guardians have appointed Mr. J. Shearman, of 156 King Street, in that town, chemist to the workhouse for the ensuing half-year. Mr. Shearman's tender was at 12½ per cent. off list-prices for drugs. His tender, which was also accepted for other articles, quoted cod-liver oil at 4*s.* 6*d.* per gal., and at 8*d.* per pint for the outdoor poor, quinine at 1*s.* 9*d.* per oz., crushed linseed meal at 17*s.* 6*d.* per cwt., olive oil at 5*s.* per gal., sweet oil at 3*s.* per gal., single trusses at 1*s.* 6*d.*, and double trusses at 2*s.* each.

Digitized by Google

The Basingstoke Board of Guardians have accepted the following tender of Mr. J. E. Turner, chemist and druggist: iodoform, 8*d.* per oz.; absorbent wool, 8*d* per lb.; flax lint, 1*s.* 2*d.* per lb.; tow, 1*d.*; Condy's fluid, 1*s.* per pint; methylated spirit, 3*d.*; pure glycerin, 4*d.* per lb.; eucalyptus oil (globulus), 1*s.* 8*d.* per lb.; castor oil, 2*d.*; double trusses, 1*s.* 4*d.*, single, 10*d.*; cod-liver oil, 4*s* 3*d.* per dozen pints; carbolic acid, 11*d.* per gal.; McDougall's purifier, 2*s.* 10*d.* and 3*s.* 10*d.* per gal.; McDougall's solution powder, 17*s.* 6*d.* per cwt.; Sanitas, 9*s.* 6*d.* per dozen pints.

At a meeting of the Portsmouth Guardians on March 19, a discussion took place on the question of the contracts for drugs, which cost the Board 600*l.* a year, and which had been relegated to an expert committee. Tenders from six firms were received, and it was stated that the list-prices were practically the same, and the question resolved itself into one of the amount of discount allowed. Messrs. Walker, Troke & Co., who have supplied the Board with drugs for many years, offered a discount of 21¼ per cent., and their contract was accepted. Messrs. Thos. Hodgkinson, Prestons & King offered 28 per cent., but the Board decided, by the casting vote of the Chairman, to give the contract to the firm who have previously given the Board satisfaction in supplying the drugs.

Drug-traveller's Fatal Accident.

Mr. Thos. William Walker, a traveller in the employ of Mr. W. C. Hebden, wholesale chemist, Winding Road, Halifax, was the victim of a fatal tram accident on March 22. Mr. Walker stood talking to a friend, Mr. J. W. Kershaw, in King Cross Lane, near the West Parade Junction, when a tramcar approached, and the two young men, turning mechanically round, as they thought, to let the car pass, stepped right in front of the car, which was close on them. Kershaw was hurled across the road, while Walker fell in front, and one of the wheels passed over him. He was conveyed to the infirmary in an unconscious state, and died a couple of hours after admission. The deceased, who was 28 years of age, was well known in the northern counties.

Elections and Nominations.

The following gentlemen have been elected to public bodies:—

Bolton Board of Guardians.—Mr. J. W. Watkinson, chemist and druggist, Kearsley, Farnworth.

Bowness Urban District Council.—Mr. T. M. Holmes, chemist and druggist, Bowness.

Depwade Board of Guardians.—Mr. A. H. E. Jeffery, chemist and druggist, Diss.

Keswick Urban District Council.—Mr. Thomas W. Townley, pharmaceutical chemist, Keswick.

Ledbury Urban District Council.—Mr. V. W. Meacham, chemist and druggist, Ledbury.

Towcester Rural District Council.—Mr. Thomas Oldham, chemist and druggist, Towcester.

The following nominations have been made:—

Auckland District Council.—Mr. H. W. Thorburn, chemist and druggist, Bishop Auckland.

Bognor Urban District Council.—Mr. Jas. Hughes, chemist and druggist, Bognor.

Broadstairs Urban District Council.—Mr. J. Horrell, pharmaceutical chemist, Broadstairs.

Doncaster Rural District Council.—Mr. W. W. Hopkinson, manufacturing chemist, Doncaster.

Garston Urban District Council.—Mr. W. Hall Jowett, chemist and druggist, Grassendale.

Horsham District Council.—Mr. E. Smith, chemist and druggist, Horsham.

Keswick Board of Guardians.—Mr. T. W. Townley, pharmaceutical chemist, Keswick.

Leyland Urban District Council.—Mr. F. Hackforth, chemist and druggist, Leyland.

Medway Board of Guardians.—Mr. T. C. Lamb, chemist and druggist, Chatham; and Mrs. T. C. Lamb.

Portsmouth Board of Guardians.—Mr. T. Brewis, chemist and druggist, Portsmouth.

Ramsbottom District Council.—Mr. J. C. Hazlehurst, chemical-manufacturer, Ramsbottom.

Ripley Urban District Council.—Mr. W. S. Wain, chemist and druggist, Ripley.

Ross (Hereford) Urban District Council.—Mr. T. Matthews, chemist and druggist, Ross.

Stonehouse District Council.—Mr. F. Maitland, chemist and druggist, Stonehouse, Devon.

Uttoxeter Urban District Council.—Mr. A. Parker, chemist and druggist; and Mr. G. R. Hankinson, chemist and druggist, both of Uttoxeter.

Walmer Urban District Council.—Mr. Henry Wood, chemist and druggist, Walmer.

West Derby (Liverpool) Board of Guardians.—Mr. J. H. Allan, pharmaceutical chemist, Aintree; Mr. W. S. Yates, chemists' shopfitter, Everton.

Wilmslow District Council.—Mr. John Sumner, chemist and druggist, Manchester.

Football.

London College of Pharmacy *v.* South London School of Pharmacy.—On March 15, a match under the Rugby Union rules was played between these two schools. The game which, owing to the slippery state of the ground, was carried on under difficulties, ended in a draw.

The "Square" Football Club completed their season's fixtures on Saturday last, March 22, with the annual Old Boys' match. Mr. W. B. Nelson captained the Old Boys, and he was able to include in his team Mr. R. Warren and Mr. W. Owen—both old "Square" captains. A rather one-sided game terminated in a victory for the present team by 7 to *nil*. The match was followed up by a smoking-concert at the Bush Hotel in the evening. This was a decided success, and an excellent programme had been arranged by Mr. H. G. Mitchell, the captain of this year's eleven. The cup, which the team have won this year, was filled with champagne and handed round to all present. Towards the end of the evening toasts were proposed to "The Old Boys," "The Present Team," "The Captain," "The Vice-Captain," "The Secretary," and (by special request of the Minors) to "The Major Students" who are just terminating their session at the Square.

P.O. Points.

Writing from Brighton to a London morning paper, Mr. G. C. Dusart, managing director of the Sussex Drug Company (Limited), states that his company have lately received from the Secretary of the G.P.O. instructions governing the addition of the words "to follow," on invoices. It appears that one may not *write* the words "to follow" nor *write* the initials "t.f."; nor put a *manuscript* cross (X), referring to a printed note at foot of invoice—all these "render the invoices on which they are inscribed liable to letter-postage"; but "there would, however, be no objection if the words or initials were either printed or inserted by means of a hand-stamp."

A "Sparklet" Costume.

A Reuter message states that Sir Edmund and Lady Lechmere have been making a trip to Fashoda; Lady Lechmere being the second Englishwoman to visit there. Talking of the natives south of Fashoda, who wear no clothes, Sir Edward says old "sparklets" are in great demand for necklaces, and even a more valuable asset for barter than beads.

Birmingham Notes.

Syrup of tolu, "syrupus," syrup of squills, and camphor-liniment are the things the S. F. & D. Acts inspector is purchasing just now.

Mr. John Bellamy, chemist, Harborne, late of the firm Bellamy & Wakefield, Easy Row, has been appointed an overseer for the part of Harborne in Birmingham parish.

The death is announced, at the ripe old age of 83, of Mr. J. L. Ryland, Solihull Hall, who for many years had a large and successful drysaltery, varnish, lacquer, and paint works in our city.

Messrs. Boots Cash Chemists have one window devoted to sundries, including barbers' requisites, and jewellery, including rings from 7*s.* upwards. This department is attended to by lady helpers.

Digitized by Google

During last week's procession of the Theatrical Sports participants a very neat go-cart with the red-cross legend of a local surgical-dressings firm was very conspicuous. Did it contain splints, bandages, &c., for use at the grounds?

The inspector of weights and measures is on the war-path. A batch of convictions has been reported, and it may be desirable to offer a word of warning to our brethren in pharmacy that they may see that their weights and measures are in good order.

Are not hospitals a mixed blessing? Do they not take away much from the chemist and druggist? Of the 284 559 patients treated at the General Hospital alone annually, how many could have afforded to spend money with him for medicines for common ailments?

At the Assizes on Friday, Mr. Charles Herbert Thompson, expert chemist, Stourbridge, brought an action against the British Opal Wall-glazing Company, London, for 125*l*, balance of account for services rendered—viz, making experiments to produce a "backing" for tiles which had to be fixed to a wall. There was a counterclaim for 21*l*. for glass windows supplied, on which he was to work some of his designs. Judgment for plaintiff for 50*l*., and on counter-claim.

The Week's Poisonings.

The peculiarity of our poison-list this week is that four of the ten deaths from poisoning are attributed to ammonia. A woman and a child at Ashton-under-Lyne each drank, through inadvertence a quantity of liquid ammonia, while the same poison was taken with suicidal intentions and with fatal results by one woman at Pitminster and another at Blackburn. The only other unscheduled poison employed was hydrochloric acid, taken by a Nuneaton man. The scheduled poisons used were cyanide of potassium (which Mr. Hine, a Brixton analyst, took), carbolic acid, strychnine, chloroform, and morphine. The chlorodyne was taken by Lilian Leach, of Manchester, who had been troubled with influenza and sleeplessness. She sent to Mr. J. S. Breese, pharmaceutical chemist, Rusholme, for two bottles of chlorodyne, and took the lot at once, which ended in her death at the Royal Infirmary the same day.—At an inquest held on March 21 at Cardiff, touching the death of John Jenkins, assistant master of one of the Board schools, the widow said her husband had been complaining for weeks past of sleeplessness, for which he was in the habit of taking laudanum and other drugs. On March 15 he wrote to Messrs. Ferris & Co., wholesale druggists, Bristol, from whom he received a parcel a few days after. That night her husband went to bed early, but in the morning he appeared to be convulsed. She sent for a doctor, but deceased died a few hours later. The letter to Messrs. Ferris & Co. was read in court as follows: "Please forward catalogue by return of post, also 1 oz. of morphia.—Yours obliged, John Jenkins, M.R.C.S., L.R.C.P." The widow said she found a bottle containing a white powder under her husband's pillow just before the doctor was summoned. Dr. J. J. E. Biggs said deceased had been in the habit of taking various drugs, including sulphonal and phenacetin. Witness advised his removal to Bridgend Asylum with a view to restraining him from taking drugs. He seemed better after his return in October. Death was due to morphine-poisoning. Witness the same morning telephoned to the Bristol chemists asking what powder had been sent to deceased, and was informed that it was hydrochloride of morphine. In reply to the Coroner, witness said morphine was sold under the Poisons Act, and chemists had no right to sell it except to duly registered medical practitioners. The Medical Register is published every year, so that there would be no difficulty in finding out whether a person of the name of John Jenkins was duly registered or not; only there might be a good many of that name in Wales. The bottle produced contained 1 oz of morphine less 45 gr. The jury returned a verdict of suicide whilst temporarily insane. The case has excited great interest in Cardiff, and several local chemists, interviewed by our local correspondent as to the extent to which morphine is used, expressed the opinion that there is little demand for it, and that it would not be supplied except to a doctor or a chemist.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Theft.

The premises of Messrs. Dobbin & Co. (Limited), chemists and druggists, Belfast, were last week broken into and the private offices rifled. The thieves were disturbed at their work, and were pursued by several constables, but escaped for a time. At daybreak three men were discovered on the roof, and the chase recommenced. One of the burglars jumped some 20 feet to the ground and escaped; the other two were caught, and have been sent for trial.

Medicine contracts.

The following medicine-contracts have been declared:—Croom Union and Dispensaries—Cork Chemical and Drug Store, and the Medical Supply Company, Sligo (the latter for appliances). Castlebar Union—Mr. J. J. Cahill, Castlebar. Ballymahon Union—The Medical Supply Company, for appliances, at 10½ per cent. off the standard price; and Messrs. Leslie & Co., Dublin, for medicines, at 12½ per cent. off.—At the last meeting of the Strokestown Guardians a letter was read from Messrs. McMaster, Hodgson & Co., Dublin, withdrawing their tender for medicines. The other tenders for medicines were then gone into. Messrs. Leslie & Co., Dublin, tendered at 1½ per cent. under list-price; Messrs. Boileau & Boyd, Dublin, at 5 per cent. under; and Mr. White, Sligo, at 5 per cent. under. Mr. White got the contract, he had been the old contractor, and had given great satisfaction. The medical-appliance tenders were next considered. Messrs. Smith & Shepherd tendered at 7½ per cent. under list-price; the Medical Supply Company, Sligo, at 15½ under; Messrs. Fannin & Co., Dublin, at 16 per cent. under; Messrs. John Clarke & Co., Belfast, at 7½ per cent. under; and Mr. White, Sligo, at 15½ per cent. under. Mr. White amended his tender to 16 per cent. under the list-price, and the Board then declared him the contractor.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Carburetted-hydrogen Lighting.

At a meeting of the Edinburgh Association of Science and Art on March 17, Dr. Hugh Marshall read a paper "On the Use of Carburetted Hydrogen for Lighting." Dr. Marshall showed an experimental installation at work, designed specially for country houses, where water could be used to supply air under moderate pressure.

Chemist and Photographer.

On March 17 Mr. John Cummings, chemist and druggist, Alloa, delivered a lecture to a large audience in the Museum Hall, Alloa, on the exposure, development, and printing of photographs. Mr. Cummings showed a large number of lantern-slides, and, besides, gave a practical demonstration of various processes after his lecture.

A Veterinarian's Testimonial.

At a meeting of subscribers to the Principal Williams Memorial Fund, held at Edinburgh on March 19, it was stated that the free surplus of the fund was 420*l*., and the Executive Committee recommended that a portion of the fund should be devoted to the painting of a portrait of the late Principal, to be hung in the Council-room of the Royal College of Veterinary Surgeons, and that the balance, together with any additions to the fund, should be invested, and the revenue applied for bursary, scholarship, or research fund, or other prize for the encouragement of the study of veterinary science. The recommendations were agreed to.

Glasgow Notes.

Of the exceptionally heavy list of entries for the April Minor in Edinburgh, a large number are from the Glasgow schools.

There is a strong and growing feeling amongst senior unqualified chemists here who have been in the business for many years, and many of whom are being displaced by recent changes, that an effort should be made to institute an assistants' qualification, and admit to an assistants' register assistants who have been in the trade for a stated term of years previous to the passing of the enabling Act.

A newspaper-man, in working up "copy" on the practice of laudanum-drinking, relates the case of a Glasgow glazier who used to buy his laudanum two pints at a time, and drink it in wineglassfuls. It is said that he tried to cure himself of the habit by putting one piece of putty after another into his glass until its capacity was almost *nil*, but a severe attack of his old enemy, rheumatism, drove him back to the wineglassful, which he took regularly thenceforward until his death.

The West of Scotland tradition in favour of free public discussion was manifested characteristically by the unanimous decision at Mr. Tocher's meeting that the conference should be an open one. The practically unqualified approval of Mr. Tocher's scheme must have been a surprise even to that sanguine apostle of the new Academe. Most of the speakers took it for granted that the scheme is impregnable and impeccable, and Mr. Maben's dismal prediction that for years to come the university lecturer on pharmaceutics might not have a class of more than two or three, was stigmatised as a perniciously pessimistic utterance. Mr. Currie's vigorous animadversions upon a certain member of Council, who thinks the Scotchmen should have got permission from Bloomsbury Square before they set up their incubator, were enthusiastically acclaimed.

Early Closing in Dundee.

There have been some rather severe comments in the *Evening Telegraph* in regard to the backwardness of Dundee chemists and druggists as regards early closing, and, as a result, the matter was discussed at the meeting of the Forfarshire Chemists' Association last week, the Secretary reading a letter from the National Union of Shop-assistants asking chemists to close at 10 o'clock on Saturdays. Bailie Doig hoped they would have a weekly half-holiday also, and close at 8 o'clock on five days of the week. Mr. Charles Kerr said he would do the latter during the summer months, whether other chemists did it or not; and a committee, consisting of Messrs. John Gray, Jno. Wm. Russell, and William Cummings, was appointed to take further steps. The *Telegraph* went again into the matter, stating that the keeping open of chemists' shops at all hours can only be due to selfish reasons, adding:—

> The chemists and druggists, or at least some of them, are inclined to assume hoity-toity airs in claiming a monopoly of the trade in drugs, chemicals, &c. They even complain if doctors dare to dispense medicine. Nevertheless there is a disposition to exploit the monopoly by running establishments in which young assistants are entrusted with full charge, and in such cases the tendency is to keep the shops open night and day.

It has since transpired that there are very few chemists in Dundee who object to reasonable hours of closing, and, although the Wednesday half-holiday is by no means universal amongst Dundee shopkeepers, it is the fact that the more enlightened chemists of the town have always given their assistants and apprentices ample facilities for recreation and study. Now that the matter has again come to the front, and in view of the approaching meeting of the British Pharmaceutical Conference in Dundee, something definite is likely to be done.

French News.

(From our Paris Correspondent.)

EXHIBITION AT GRASSE.—An exhibition, organised by the local Agricultural Society, is to be opened at Grasse in April. The exhibits will comprise olive oil of all grades, essential oils, perfumery, &c. Inquirers should write to the Secretary of the Agricultural Society at Grasse.

SCIENCE IN THE FAR EAST.—Advices have been received at the Pasteur Institute, Paris, that Dr. Yersin, chief of the Bacteriological Laboratory at Nha-Trang, is now in Tonkin with a view to establishing a native School of Science and Medicine at Ton-Ap.

SUICIDE OF A PHARMACIST.—In a small hotel in the rue de Cléry, Paris, a man committed suicide last Saturday by shooting himself through the heart with a revolver. On a table was found a letter explaining that the deceased's name was Fabrice d'Ucra, formerly established as a pharmacist at Rio Janiero. He had been living in Paris for some time in good style, and had become compromised in an abortion affair.

"PAINLESS" DENTISTRY FOR 2½*d.*—It may always be noticed that in Paris, as in most other big cities, when a street is under repair, a knot of pedlars usually find a propitious spot for starting business. Joseph Lelong is a resourceful man of this class, though when following his legitimate trade he is a blacksmith. A few days ago he installed himself on a chair in the avenue de Clichy, where the road is under repair, and offered to extract teeth "painlessly" for five sous (2½*d.*). In addition to the chair, he had as stock-in-trade a small table, on which he placed a bottle of peppermint-water and a glass, while in his right hand he brandished a dubious-looking pair of forceps. In a space of time that seemed remarkably short he relieved over twenty customers, and business seemed quite flourishing, but profuse hæmorrhage followed the extraction of a molar of the twenty-fourth client, and he was taken to a neighbouring pharmacist for treatment, though not before there had been trouble between the amateur dentist and his victim. The police interfered when all the harm had been done, and Lelong was taken into custody.

East Indian News.

HUNYADI JÁNOS IN INDIA.—A circular letter from Mr. Andreas Saxlehner, Budapest, states that Mr. A. J. Pile is no longer a representative or in any way associated with the sale of Hunyadi János water, and that Mr. C. H. Allen, of Calcutta, has been appointed sole representative in India.

THE BEECHAM FAMINE.—We are still without a box of the far-famed pills, writes a Bombay correspondent. It is five weeks now since the supply suddenly stopped, and the loss through absence of stock must amount to something considerable. That such a state of affairs should continue is the more inexplicable seeing that Beecham has a representative in Calcutta.

A NEW INTOXICATING DRUG.—In the last Excise report of the Central Provinces of India, the Commissioner mentions the alleged substitution of juar-root for ganja in the Hoshangabad district. It appears that juar-root is used to enhance the intoxicating powers of bhang by the lower classes. This enables them to get the desired amount of intoxication a little more cheaply. Juar-root appears, however, to be very rarely used by itself, the reason alleged for this being that it is too potent a narcotic to be used alone by any except the most hardened drug-smokers; but, like datura and other substances, it is used to strengthen ganja for the *blasé* smoker.

CEYLON POISONS ORDINANCE.—The following articles are declared in the Ceylon *Government Gazette* of March 5 to be poisons within the meaning of the Ordinance:—

- All poisonous vegetable alkaloids and their salts
- Atropine and its preparations
- Preparations of cantharides
- Preparations of metallic cyanides
- Preparations of strychnine
- All vermin-killers containing any of the above preparations and those preparations mentioned in part I., clause 2, of the amended draft regulations
- Chloral hydrate and its preparations
- Corrosive sublimate preparations and all other mercury salts
- Nux vomica and its preparations

These are additions to the poisons-schedule mentioned in our issue of October 19, 1901, page 639. In THE CHEMIST AND DRUGGIST of August 31 (page 380) we detail the general effect of the Ordinance to which this is an appendix.

For Veterinary Chemists.—Veterinary-Lieut. J. D. E. Holmes, Assistant Bacteriologist at Muktesar, has compiled a "Veterinary Pharmacopœia of Bazaar Drugs," which is being published by Messrs. Higginbotham & Co., of Madras, at 2s. per copy. It deals with the description, uses, preparations, and doses of over two hundred drugs obtainable in most bazaars in India; gives a vocabulary in five vernaculars, a therapeutic classification, information on the preparation and administering of medicines, on weights and measures, and on poisons and antidotes; besides a list of the diseases common among animals in the country, with bazaar remedies, and many useful native prescriptions.

Returning Home.—The homeward steamer of March 8 took with it Mr. H. R. Hoyles, M.P.S., F.C.S., and family. Mr. Hoyles has been with Messrs. Treacher & Co. (Limited), of Bombay, for the past sixteen years, and has now severed his connection with the firm with a view to settling down in England. In business and Masonic circles Mr. Hoyle's departure is much regretted. He was very popular with the staff, the junior members of which found him always ready to assist them with his experience and advice. As a Mason, Mr. Hoyles was very well known, having held the post of District Grand Secretary of Bombay and its territories for the last three years, and only relinquished the office on the eve of his retirement. He was twice W.M. of his own Lodge "Concord," the members of which presented him with a handsome solid-silver tea-service at the last meeting he attended. He also received several pleasant souvenirs from the European members of Messrs. Treacher & Co. (Limited), as well as from his own subordinate native staff. A large number of friends gathered at the Ballard Pier, Bombay, to wish him *bon voyage* and to garland him with flowers, as is customary on such occasions.

South African News.

A Charge of Perjury has been brought against Dr. R. S. Anthony, an American practitioner, of Cradock, C.C. The proceedings are to be conducted at Graaff-Reinet.

"Foreigners."—The following foreign representatives were in Cape Town when the mail left (March 3). Dr. Raven, of Messrs. Burroughs Wellcome & Co., London; Mr. R. R. Martin, of Messrs. Frederick Stearns & Co., Detroit and New York, U.S.A.; Mr. R. L. Grayeroft, of Messrs. Armour & Co., Chicago; Mr. H. Collard, of Messrs. Newball & Mason, Nottingham; and Mr. Barlow, of Messrs. Burgoyne, Burbidges & Co., London.

A Doctor's Divorce.—In the Supreme Court, Cape Town, on February 27, Mrs. Grobbelaar brought an action against her husband, Dr Grobbelaar, of Cradock, for divorce on the ground of adultery. The parties were married at Carlisle, England, in January, 1884. After evidence had been heard a decree of divorce was granted, the Court ordering the plaintiff to receive half the joint estate, and the defendant to pay costs.

Want a Better-paid Consul.—The Americans at the Cape intend forwarding a petition to Mr. Mark Hanna to see if they cannot persuade the Government at Washington to increase the salary attached to the appointment of Consul-General at Cape Town. The Portuguese Consul at Cape Town draws 1,000*l.* a year, while the U.S. representative does not get nearly that sum. The Americans say they must have a good man as Consul-General—another Colonel Stowe—and the fact that one is not forthcoming at the salary offering is fully recognised.

Foreign Diplomas.—The Government notice, dated February 24, and gazetted the following day, dealing with foreign diplomas, medical and dental, has been received in drug-circles with hearty approval. No medical practitioner or dentist will, in future, be entitled to registration unless the country from which he hails recognises any British certificates. It is understood that the Colonial Pharmacy Board has the matter of foreign pharmaceutical diplomas in hand. The case of the foreign chemist is entirely different from that of the medical man or dentist, in so far as it would hardly be practicable to ask, say, Germany or France to recognise any British certificate of pharmacy; but a stand could be taken up and both those countries requested to recognise any British papers in their oversea possessions.

The Metric System.—At a meeting of the South African Philosophical Society, held in Cape Town on February 26, the report of the committee appointed some time ago to consider the "advisability of introducing decimal coinage and the metric system of weights and measures into South Africa, or of legalising these throughout the region," was discussed. The committee recommended the desirability of making the metric system legal throughout the South African colonies as it is in England. This was agreed to by the Society, and a motion recommending the compulsory introduction, at some definite date, of the metric system in South Africa was also adopted, as was a recommendation that a decimal system of coinage be adopted, the sovereign being taken as the fundamental unit. The recommendations are to be brought before the Governments and Administrations in South Africa, and the Cape Government is to be requested to forward the resolutions to the Home Government and all other Governments in the Empire.

Boer Hospital-equipment.—In a recent letter from Lance-Corporal W. O. Wilson, R.A.M.C., Waterval-Onder, he says:—

> We captured this hospital completely stocked from the Boers. I am still using their drugs, scales, &c., for dispensing, and have sufficient drugs and surgical dressings in stock, all of the finest quality, to last another ten years. Most of the drugs bear the label of Gehe & Co., Dresden, and are in huge quantities; for instance, pulv. tuber. saleb., 10 kilos.; lycopodium, 15 kilos.; antipyrin and antifebrin, about 20 kilos. of each; tannic acid, 10 kilos.; cotton-wool and bandages by the ton; thousands of pills and tablets; also a large quantity of patent drugs, such as sozoiodol, phenocoll mur., uricedin, &c. The dispensary is fitted with 2-kilo. cut-glass panel-labelled bottles; there are four very delicate balances and several other scales.

Lance-Corporal Wilson also sends two telegrams found in the hospital when it was captured. Both are on the familiar pink forms of the Dutch South African Railway Company, which controlled the telegraphic service, and are addressed to Dr. Ham, who had charge of the hospital. The first, dated 28/3/00, was sent by Dr. Engl[ander], and was headed "Urgent." It says: "Have you room for carpenter Van der Laan, who this morning has had a serious attack of malarial? In case you have place, I will send him up to you by train 601." We cannot decipher the name of the sender, of the second, but it reads: "Machinist Porroti ill; requests admission to hospital. Wire if he may come. If in the affirmative, also send free ticket." The telegrams are in Dutch.

Notes from the Transvaal.—The shop of Mr. R. Butters, chemist and druggist, President of the Pharmaceutical Society of the Transvaal, was closed for five or six weeks, owing to the illness of the proprietor and the difficulty of obtaining reliable assistants. Mr. Butters, who was suffering from typhoid, is back at work again.—Mr. J. C. Scruby, chemist and druggist, has sold his business in Johannesburg. He bought a business in Harrismith, O.R.C., some time ago, which belonged to the late Mr. Glaister, and he finds the Harrismith concern better than Johannesburg.—A letter has been sent to Lord Milner from the Transvaal Pharmaceutical Society offering all the information and assistance available "from a society representing 80 per cent. of the chemists of the Transvaal," in view of the inquiries now being instituted by the administration at Pretoria regarding the Pharmacy Laws.—Johannesburg is looking much more lively now, the majority of the old inhabitants having returned, and nearly all the shops having been re-opened. It is noticeable, however, writes our correspondent, that most folk have very little money, and until the mines are all started again and the miners get their big wages, traders will have to content themselves with doing half their usual business.—Nearly all the Johannesburg chemists get their supplies through Durban, the nearest seaport, but for the past three months the military authorities have used the whole of the railway-trucks for the conveyance of stores. Consequently there is a considerable block at Durban, and nothing has come to civilians from that port beyond a few groceries. Port Elizabeth and East London are clearer, but seeing the majority of the chemists import through the Natal port, stocks in Johannesburg are again at a very low ebb.

Legal Reports.

Stamp Act, 1812.

AT Brentford Town Hall on Monday, March 24, before a Bench of six Magistrates (Mr. Montague Sharpe presiding), the Commissioners of Inland Revenue summoned Mr. Francis Sanguinetti (Sanguinetti & Stevenson, chemists, 120 Uxbridge Road, West Ealing, W) for selling, contrary to the provisions of Section 2 of the Act, a medicine liable to stamp-duty which was not duly stamped. Mr. G. H. Denniss prosecuted on behalf of the Board, and Mr. Kirby (Neve, Beck & Kirby, solicitors for the Chemists' Defence Association, Limited) appeared for the defendant.

Mr. Denniss, in opening the case, explained that the offence involved a penalty of 10*l.*

Mr. Sharpe asked if the medicine was mentioned in the schedule of the Act.

Mr. Denniss, quoting from the general charge of duty (Alpe, page 53, and THE CHEMISTS' AND DRUGGISTS' DIARY, page 281), read the passage beginning "and also all other pills, powders, lozenges," &c.

Mr. Sharpe: A whole apothecary's shop, in short.

Mr. Denniss: Yes, your Worship. There is no question that the article sold is liable.

Mr. Sharpe: Narrow it down to the point at issue, please.

Mr. Kirby (interposing) said: The question is whether the article sold is labelled in a manner which holds it out as "beneficial to the prevention, cure, or relief" of influenza.

Mr. Denniss explained that the article sold was pure gum pastilles labelled:—

PURE GUM PASTILLES.

INFLUENZA.

Delightfully Soothing to Singers and Public Speakers.

The question is whether that is a recommendation or holding-out within the meaning of the Act. He proceeded to quote the grounds of liability according to the section, stating that the fourth ground—viz., "or which have at any time heretofore been, now are, or shall hereafter be by . . . any label . . . held out or recommended to the public by the makers, vendors, or proprietors thereof as . . . beneficial to the prevention, cure, or relief of any distemper," applied to the pastilles.

Mr. Sharpe: If every medicine advertised is liable to duty, why has the Inland Revenue not applied before? The income-tax is high enough.

Mr. Denniss replied that the charge had been going on for many years, and maintained that the wording of the Act is intended to cover everything medicinal.

Mr. Sharpe: Why does the Act not say so?

Mr. Denniss: It mentions exemptions, but this is not in them.

Mr. Kirby, interposing, said that the label was merely a description.

Mr. Denniss pointed out that apothecaries have a certain degree of exemption in regard to the sale of medicines, provided there is no label upon them recommending them for the cure or prevention of maladies, and he handed up the box of pastilles upon which the summons was taken.

At this point Mr. Sanguinetti was asked by the Chairman to leave the dock. He then sat beside the solicitors. The argument was then resumed, and consisted mainly of a conversation between the Chairman and Mr. Denniss as to the wording of the Act—Mr. Sharpe, for example, asking such questions as "Officinal is, I suppose, the same as official?" and Mr. Denniss replying, "No! Officinal refers to something pertaining to or made in a shop, while 'official' refers to preparations of the B.P." Ultimately Mr. Denniss said, "This section is so very inclusive that it might be said that if chemists sell cough-mixture they are holding the preparation out as beneficial for a cough, but the Commissioners of Inland Revenue do not demand the stamp-duty in such a case, as they recognise that some designation should be given to articles. If the defendant had stopped at 'influenza,' the Commissioners would not have taken proceedings."

Mr. Sharpe queried whether the label made any recommendation; it certainly specified "influenza," but then it went off into a side-issue, saying that the pastilles were "delightfully soothing to singers and public speakers." That did not say that they were good for influenza.

Mr. Denniss argued that the word "influenza" must be taken with "delightfully soothing to singers and public speakers," and together they meant to anyone who saw them lying on a chemist's counter that they would relieve influenza.

Mr. Sharpe: Supposing it had been smallpox instead of influenza. You would not say that "delightfully soothing to singers and public speakers" would mean a cure for smallpox?

Mr. Denniss: Yes, it would.

Mr. Jameson, who made the purchase on December 14, 1901, was then called to prove it. He paid 6*d.* for them. The stamp-duty was 1½*d.* Cross-examined by Mr. Kirby, he said he had bought the pastilles on his own initiative, and he could not say whether he expected them to prevent, cure, or relieve influenza; in fact, he had not influenza at all. Witness was then asked to look at six similar boxes of Pure Gum Pastilles with a similar label, but with such words as "Glycerin" and "Liquorice and Chlorodyne," in place of "Influenza." Mr. Denniss pointed out that no ailment was mentioned on these labels. Mr. Kirby replied, "They are all pure gum pastilles, and the word 'Influenza' is used solely to distinguish them from others." Witness further stated that he had no instructions to prosecute for such things as Cough-mixture, and agreed that the Inland Revenue circular of instructions states that such designations are allowed.

Mr. Kirby asked him if he knew Alpe's book, whereupon Mr. Denniss said, "It is no authority."

Mr. Kirby: It is, because it is a text-book. Mr. Alpe was a solicitor at Somerset House, and had charge of such matters as this. His book is the only text-book on the subject.

Mr. Sharpe asked if there were any cases decided.

Mr. Denniss replied, "Very few—only three." He quoted the case of Smith *v.* Mason (*Justice of the Peace*, vol. 38, page 432), in which Dr. Gregory's Stomachic Powder and certain homœopathic medicines were the subject of a summons.

Mr. Kirby remarked that the reason why there had been so few cases was that chemists had not thought it worth their while to fight, as the Board are generally prepared to compromise. As the Chairman had remarked, there is, he continued, no connection between the word "Influenza" and the phrase "delightfully soothing to singers and public speakers" immediately following it, which applied solely to the pastilles.

Mr. Sharpe, interposing, said, "Is this what is known as a patent medicine?"

Mr. Kirby: Not exactly.

Mr. Sharpe: I should like to hear you on this point. The Act says "wherein the person making, vending, &c., claims to have any occult secret or art, &c., or which have at any time heretofore been, now are, or shall hereafter be by any notice or advertisement, &c., held out, or recommend." Where is the claim here for art or secret?

Mr. Kirby: There is no claim; but if we come within any one of these grounds of liability, we are liable.

Mr. Sharpe: The article itself cannot create an offence and if an offence is not committed by the person who sells it, I cannot see how it comes in.

Mr. Kirby: The matter rests entirely upon this label, and if it does not recommend the article there is no case.

Mr. Sharpe: There may be a holding-out, but not to all the public.

Mr. Kirby: Is this a holding-out on this label? It does not hold the gum pastilles out to the public, but only to singers and public speakers. I submit that since 1812 a designation or description of the medicine has been allowed by the Revenue authorities, and no more is done here on this label, which the Magistrates can see by comparing the whole seven boxes. The label no more recommends the thing for influenza than it would if it said "Influenza Pastilles," and that is a permitted title. He quoted from Alpe's "Handy-book" examples in proof of this statement.

Mr. Denniss, in reply, said that in such cases as Cough-mixture the Board had recognised that it would be a danger to the public if medicines were sent out without any label at all, therefore they allow such designations as Cough-

Digitized by Google

mixture, but he claimed that there was something more than that here. He submitted that British Pharmacopœia preparations, if held out as beneficial, must pay the duty, and again went over the various claims and recommendations which involve liability.

Mr. Sharpe referred to Smith *v.* Mason, remarking, Surely there is a great difference between Dr. Gregory's Stomachic Powder recommended for the cure of flatulence, &c., and the single word "Influenza" on this label?

Mr. Denniss: By putting the word "Influenza" and stopping there, there would be no liability; but the words show that the pastilles are for influenza, and the label goes on to say that they are "delightfully soothing to singers and public speakers," which holds them out as beneficial for the irritation of the throat which singers or public speakers have when afflicted with influenza. What is it on the box for if not as a recommendation? As to holding out to a section of the public, it is not necessary to hold it out for all.

Mr. Sharpe: Thank you.

The Magistrates then consulted together, and after about a minute Mr. Sharpe said, "This case has taken a considerable time, but I feel that it has not been wasted, as the case is of public importance. My colleagues have carefully considered this matter, and they feel that if the words had been such as Dr. Gregory's Stomachic Powder there would have been some difficulty; but this word 'Influenza' by itself, and the words 'delightfully soothing to singers and public speakers' are distinctly different, and in a sense the latter counteracts the suggestion that the pastilles are recommended for the cure of influenza. We are clearly of opinion that the word 'Influenza' by itself is not a holding-out, and not sufficient to bring it within the section. The summons must therefore be dismissed."

High Court Cases.

The Saccharin Patents.

In the Chancery Division of the High Court of Justice on Saturday, the case of the Saccharin Corporation (Limited) *v.* Albert Knight came before Mr. Justice Byrne as a short cause on a motion for judgment. Mr. J. C. Graham appeared for the plaintiffs, who carry on business in Manchester, and asked for judgment in default of appearance. The statement of claim alleged infringement, and asked that the defendant, his servants, and agents should be restrained from selling or offering for sale saccharin in infringement of the plaintiffs' patents, and from otherwise infringing the same. Counsel said he had never known a case where the defendant was attacked on so many patents, but it was necessary to join the whole of them. His Lordship gave judgment for the plaintiffs as asked, with an inquiry as to damages, delivery up of any saccharin in defendant's possession, and taxed costs.

On Tuesday, March 25, Mr. Justice Kekewich heard the case of the Saccharin Corporation (Limited) *v.* Lancaster. Mr. J. C. Graham, for the plaintiffs, said it was a motion for judgment in default of defence, the defendant carrying on business at Sheffield. It was an action for infringement of the patents owned by the corporation in respect to the manufacture of saccharin. His Lordship granted the usual order for an injunction, as asked, with an inquiry as to damages, and delivery up of the infringing articles.

The Vaseline Trade-mark.

In the Court of Appeal on Monday, March 24, before Lords Justices Vaughan Williams, Stirling, and Cozens-Hardy, judgment was delivered in an appeal by the Chesebrough Manufacturing Company, of New York, from an order of Mr. Justice Buckley, directing the register of trade-marks to be rectified by the removal of the word "vaseline" which had been registered by the appellants as an old mark in 1877. The arguments in the appeal were reported in the *C. & D.*, March 8, and the reserved judgment now delivered in favour of the appellants was dissented from by Lord Justice Cozens-Hardy.

In the course of his judgment Lord Justice Stirling narrated the history of the case, which arose through the attempt o Mr. E. T. Pearson to register the word "vasogen" as a trade mark, the refusal of the Comptroller without the consent o the Chesebrough Company, and the subsequent motion of Pearson before Mr. Justice Buckley to have the word "vaseline" removed from the Trade-marks Register on the ground that the word "vaseline" was in 1877 used as indicating petroleum jelly manufactured by a particular process, and not the manufacture of a particular firm. Mr. Justice Buckley granted the motion (*C. & D.*, February 16, 1901, page 277). Lord Justice Stirling observed that Mr. Chesebrough took out his first patents in U.S.A. and the U.K. in 1865 for the purification of petroleum by filtration through charcoal, and in 1872 took out in U.S.A. (not in this country) another similar patent for a "new and useful product from petroleum" which he called "vaseline," and which was prepared from petroleum residuum also by filtration but, his Lordship pointed out, in the 1865 patent distillation was also essential, and as the 1872 patent was American only it was open to anyone in England to manufacture the new article as soon as the U.S. patent became known. In 1874 Mr. Chesebrough took out an English patent for the purification of the residuum obtained in petroleum-distillation, the invention being to so refine "vaseline" as to free it from the taste, odour, and colour of petroleum, and the specification recognised that the patentee had no monopoly in England for the manufacture of vaseline not so refined. In the course of the hearing it was established that such a substance had been manufactured in England by many persons, and sold or described under such designations as petroleum jelly, unguentum petrolei, and several fancy names, but not under the designation "vaseline." The name "vaseline" had always been understood in England to denote the manufacture of R. A. Chesebrough and his successors, the Chesebrough Company. In 1877 the word "vaseline" was registered in England in four classes—in Class 3 in respect of "ointments, cold-creams, and vaseline (being an essence prepared for use in medicine and pharmacy)." In 1878 Mr. Chesebrough registered as a trade-mark in America a label beginning, "Petroleum vaseline jelly," and the statement filed in the U.S. Patent Office contained the following:—

> Said trade-mark consists of the word "vaseline." This word has been generally arranged between the words "petroleum jelly," as shown in the accompanying facsimile (meaning the label), . . . but the words "petroleum jelly" and the corporate name and address may be wholly omitted, and the border may be changed at pleasure, or omitted altogether, without materially changing the character of said trade-mark, the essential feature of which is the arbitrarily selected word—vaseline. This trade-mark has been used in the business of said company and by R. A. Chesebrough, who was its predecessor in the same business, for more than seven years past. . . . Said company has been accustomed to print it upon labels, to be pasted or otherwise secured upon the bottles containing the product or the compound thereof, and upon the paper wrappers in which they put it for sale. It has also been accustomed to emboss it upon the bottles or packages in which the product or compound is enclosed, or, where the compound is of sufficient consistence, to form it directly upon the cakes or tablets thereof. It has also been accustomed to use it upon the bill-heads, letter-heads, envelopes, circulars, and other advertising devices employed in the business.

The question for the present Court was whether in these circumstances it ought to come to the conclusion that the word "vaseline" was, at the date of registration, improperly placed on the register as an old trade-mark under the Act of 1875. It was admitted by counsel for the appellants that the evidence did not establish that the word "vaseline" was used in England as a trade-mark before August 13, 1875; but it was contended that the burden of establishing this lay on the respondents. In his Lordship's opinion this was well founded. The law was so laid down by the Court of Appeal in "*In re* Leonard *v.* Ellis's Trade-mark" (Ch.D., 288), and ought to be firmly adhered to. It is manifestly unreasonable to expect that the owners of a registered trade-mark should preserve evidence of the way in which it was used at and prior to the time of registration for a period of twenty years and more subsequently. The respondents had said that the word "vaseline" was in use at the date of registration to indicate, not an article manufactured by the Chesebrough Company, but one manufactured according to the processes indicated in the American and English patents. If this were true, then there would arise the undecided question whether, when an inventor invents a new article, and at the same time invents a word to designate it, he can claim the exclusive use of that word to

Digitized by Google

denote his own manufacture. His Lordship thought it unnecessary to decide that question. The word "vaseline" was admittedly invented by R. A. Chesebrough, and was capable, previously to 1875, of being employed by him to denote an article of his manufacture. The language of both the American patent of 1872 (which I have named "vaseline"), and the English patent of 1874 (which I term "vaseline"), being ambiguous, the onus of proof lay on the respondents and was not discharged. As regards the entries in the *Trade-marks Journal* of 1877, he thought the word "vaseline" ought there to be read in the same sense throughout, and to be regarded as denoting the goods manufactured by the Chesebrough Company. Dealing with the further objection that the documents relating to the registration in America showed that the user had been in connection with other words, his Lordship pointed out that the filed statement, from which he quoted, indicates that the actual user was not entirely limited in this way, and the respondents had failed to show that the word "vaseline" was not used by itself as a trade-mark in England previously to August 13, 1875. "Linoleum Company *v.* Nairn," which had been relied upon by respondents, simply decided that—

> where the inventor of a new substance gives it a name, and having taken out a patent for the invention, has, during the continuance of the patent, alone made and sold the substance by that name, he is not entitled to the exclusive use of that name after the expiration of the patent.

In the present case no patent was taken out in England for the substance which (when manufactured by himself) the inventor named "vaseline." The inventor never at any time was alone the manufacturer and vendor of that substance in England. The substance invented by him was never in England known solely by the name of "vaseline"; on the contrary, it was known under many names, and the evidence being that the name "vaseline" had in England always been confined to the inventor's manufacture, his Lordship held, therefore, that the appeal should be allowed, and an order made refusing the application to rectify the register, but without costs of the appeal.

Lord Justice Vaughan Williams concurred.

Lord Justice Cozens-Hardy dissented, and also read his judgment, in the course of which he said there was no evidence that the word "vaseline" was used in England as a trade-mark before August 13, 1875, but the real question for decision was whether it could be or was used as a trade-mark before 1875, and not whether it has since been so used. He had reluctantly come to the conclusion that the word "vaseline" was an invented word to describe an invented thing; and, if so, it followed that anybody was at liberty to make the invented article, which was not protected by patent in England, and at liberty to call it by the name attributed to it by the inventor. In the case of "Linoleum Company *v.* Nairn" Mr. Justice Fry applied this principle to the case of a patented article after the expiration of the patent, and he also quoted this learned Judge's dictum in the Valvoline case. It is no doubt true, he added, that petroleum-jelly, which may or may not have been substantially the same in its chemical constituents as vaseline, has been sold in this country under various other names. But his Lordship was not satisfied that this was done before 1875, and, even if it had been done before 1875, he did not think it would have helped Mr. Chesebrough. It followed that, in his opinion, it had been established that "vaseline" was not and could not be an old mark in 1875, and though he did not base his judgment upon this, he had grave doubt whether before 1875 it was ever used alone as a trade-mark, even in America, still less in this country. For these reasons he thought the judgment of Mr. Justice Buckley was correct.

County Court Cases.

SELLING A BUSINESS.

AT the Warrington County Court on March 20, an action was heard in which Alfred Albert Barker, chemist and druggist, of 14 Market Street, Earlestown, Lancashire, claimed 50*l.* damages from Francis Arthur Brown, dentist, Warrington, for alleged fraudulent misrepresentation in the sale of a business. Plaintiff's solicitor said the defendant wrote to the plaintiff stating that he had seen his advertisement in THE CHEMIST AND DRUGGIST respecting the purchase of a business. He (defendant) was desirous of selling his business of chemist and dentist, which he had carried on at Market Street, Earlestown, for 20½ years. He estimated his net profits at 240*l.* per annum, and the price he asked for the business was 400*l.* The plaintiff went to see him, and defendant agreed to sell the chemist's business separately for 375*l.* provided plaintiff allowed him the use of a room for a few hours each week to carry on his dental business. The defendant estimated the value of the stock at 220*l.* and the fixtures at 125*l.* In addition he wanted 30*l.* for goodwill. Plaintiff suggested that there should be a valuation, but the defendant pointed out that it would be an expensive matter, and it was not necessary, as he (plaintiff) would be able to see him weekly. The plaintiff agreed to forego the valuation on the defendant giving his word that the stock and fixtures were worth what he had stated, and bought the business. A few weeks afterwards plaintiff found on investigation that the stock was worth less than 100*l.* Messrs. Tomlinson, of Manchester, were called in, and valued the stock at 68*l.* 8*s.* 2*d.* and the fittings at 114*l.* 16*s.* 9*d.*, the last-named item including articles valued at 23*l.* 6*s.* 3*d.* which the defendant scheduled as stock. It was argued that the business was bought on the strength of the representation of the defendant who must have known the true value of the stock. For the defence, it was contended that at the first interview the plaintiff suggested having a valuation but the defendant said distinctly he was not going to sell by valuation at all. He was selling the business as it stood for 400*l.*, and plaintiff bought on that understanding. Judge Bowen Rowlands said it was impossible to say exactly what did take place, and it seemed to to him that, there being such conflict between the evidence of plaintiff and defendant, he ought not to fix the defendant with the consequences of fraudulent misrepresentation; so he gave judgment for the defendant.

THE BALANCE THAT FAILED.

IN the City of London Court on March 21, before Judge Rentoul, K.C., an action was brought by Mr. Albert Halse, analytical chemist, 22 rue de Viarmes, Paris, to recover the sum of 15*l.* against Messrs. Otto Wolters & Sons, analytical-balance makers, 47 Fore Street, E.C. Mr. L. Horton-Smith, counsel for the plaintiff, said that his client paid the money sued for to the defendants for a short-beamed analytical balance which he wanted for use in his business as a chemist. He had waited for the instrument for many months, and had been unable to get it. Mr. Wolters, of the defendant firm, explained to the Court that he had made the instrument required for the plaintiff, and that he had packed it thoroughly well, and that it was all right when it left him. When it arrived in Paris, it seemed it would not work, but that had nothing to do with him

After hearing the evidence, the Judge decided for the plaintiff for the amount claimed, with costs.

A DENTIST'S LIABILITY FOR HIS WIFE.

IN the City of London Court on March 21, before Judge Rentoul, K.C., an action was brought by Mr. C. Kemp, trading as H. H. Sharland, optician, 7 Tnavies Inn, Holborn Circus, E.C., against Mr. Clifford, dentist, 20 Grosvenor Street, to recover the sum of 5*l.*, the price of two pairs of opera-glasses and a gold eyeglass supplied to his wife. Mr. Letts appeared for the plaintiff, and Mr. Walter Beard for the defendant. It appeared the supply of the goods was not disputed, but it was submitted that Mrs. Clifford had no authority to obtain them on her husband's credit. She had a separate income from her husband. The defendant stated that at first he allowed his wife 1,000*l.* a year, out of which to pay housekeeping and pin-money. That was subsequently altered, although all along 250*l.* a year had been given to her expressly for her own personal use. She should have paid for the goods sued for out of that allowance. He was now allowing his wife 520*l.* a year. The Judge said the plaintiff had a clear case against the wife, but no liability attached to the defendant for the amount. Judgment would be entered for the defendant, with costs.

Bankruptcy Report.

Re Reginald Betts, late Market Hill, Framlingham, Chemist and Druggist.—A second sitting for the public examination of this debtor was held on March 21 at the Shirehall, Ipswich; but the debtor was not in attendance. The Official Receiver stated that he had not been able to obtain any address of this debtor since December 27, 1901, though he had seen a letter from him dated December 28, 1901, bearing the Southampton postmark. The Registrar adjourned the examination *sine die*.

Gazette.

Coronation Holidays.

The King in Council has ordered Thursday and Friday, June 26 and 27, to be observed as public holidays.

Partnerships Dissolved.

Peak, C. P., Peak, J., and **Peak, H.,** under the style of John Peak & Co., Soho Street, Pemberton, Lancashire, manufacturing chemists, so far as regards Charles P. Peak.

Ward, A. O., M.D., and **Chappell, G.P., M.D.,** Lansdowne House, Tottenham, Middlesex, general medical practitioners.

The Bankruptcy Acts, 1883 and 1890.

ADJUDICATIONS

Metcalf, William, Middlesborough, Yorkshire, drysalter.

Rutherford, Cuthbert, South Shields, Durham, doctor of medicine.

TRUST-DEEDS GRANTED.

Jamieson, William Bannatyne, 61 Montague Street, Rothesay, chemist. Claims to Miller, Stuart & Miller, 53 Bothwell Street, Glasgow, by April 1.

The Executry Estate of the late **Mr. Robt. McCannon Kerr,** druggist, 30 Leith Street, and residing at 16 Wellington Street, Edinburgh, being insolvent, the executrix has granted a trust deed for behoof of creditors of the deceased. Claims to be lodged with Mr. R. A. Craig, C.A., 4 York Place, Edinburgh, by March 29.

CURES FOR WARTS.

(*From The "Lancet"*).

"Revaccinate the patient."

J. D. Staple, M.R.C.S., Bristol.

"Oleum terebinthinæ applied many (20) times a day and rapidly dried in before a fire. I know of a case where many remedies had been tried (by a specialist), even excision, unsuccessfully, and which yielded to the above treatment."

Heywood Smith, Harley Street, W.

"Make the patient wear gloves constantly, keeping the inside of the gloves well dusted with a mixture of equal parts of French chalk and calomel. I find it more useful than anything else."

"Simple Simon."

"If the warts belong to the papillomata a saturated watery solution of sodium hydroxide will remove them. With a glass rod apply and smear over each wart one drop of the caustic soda once a day or oftener for two or three days."

H. M. Singleton, M.R.C.V.S., Ealing, W.

"Apply the following to the warts twice daily:—Papain, 3ss.; acid. hydroch. fort., 3j. Care must be taken that the mixture is only applied to the warts.

Thomas Dutton, Manchester Square, W.

"I have found the liq. hydr. nitratis acidus a useful escharotic."

J. G. Carruthers.

The L.G.B. has assented to the proposal of the Guardians of the Strand Union to increase the salary of Mr. T. H. H. Hobbs, dispenser at Edmonton workhouse, to 160*l.* per annum.

Contracts.—At a meeting of the Holborn Borough Council on March 21 the tender of Messrs. Adcock & Co. for the supply of disinfectants was accepted.—The Guardians of the Strand Union have accepted the tender of Messrs. Corbyn, Stacey & Co. for the supply of drugs.

New Companies & Company News.

Wylie & Co. (Limited).—Capital 6,000*l.*, in 1*l.* shares. Objects: To acquire the business of a soap-boiler, soap-maker, and chemical-manufacturer, carried on by A. R. Wreford at Anerley, Surrey, as "Wylie & Co.," and to carry on the same and any similar business. No initial public issue.

County Mineral-water Company (Limited).—Capital 2,500*l.*, in 1*l.* shares (1,000 preference). Objects: To take over the businesses of mineral-water manufacturers, &c., carried on as "Hooper & Co.," at Ryecroft Street, Gloucester, and as "N. A. Lockstone & Co," at Swindon Road, Cheltenham, and to carry on the business of manufacturers of and dealers in mineral and aërated waters, bottlers, chemists, drug-merchants, &c. No initial public issue. The first directors are G. Seaman, W. Hooper, and A. Baker. Registered office, Ryecroft Street, Gloucester.

Star Mineral-water Company (Limited).—Capital 5,000*l.*, in 1*l.* shares (1,000 preference). Objects: To adopt agreements (1) with W. T. London & Co., (2) with S. Holden, and (3) with G. Arrowsmith & Co., to take over the businesses formerly carried on by them, and to carry on the business of aërated and mineral water manufacturers, bottle, glass, and case manufacturers, chemists, drysalters, bottlers, tobacconists, &c. No initial public issue. The first directors are S. Holden, G. H. Goldfinch, J. W. Gillies, G. W. T. Arrowsmith, and A. C. Child. Qualification 100*l.* Remuneration 10*s.* each per board-meeting attended. Registered office, 63 Oxford Street, Whitstable.

Sallyco Mineral water Syndicate (Limited).—Capital 30,000*l.*, in 1*l.* shares. Objects: To acquire the business of making and selling Sallyco mineral water carried on by K. J. Dougall at 110 Gloucester Road, Regent's Park, N.W., as the "Sallyco Mineral-water Company," and to carry on the business of manufacturers of and dealers in aërated and mineral waters, and other drinks, ice manufacturers and merchants, bottle and stopper makers, cork-merchants, &c. Minimum cash subscription 10 per cent. of the shares first offered to the public. The first directors are K. J. Dougall, J. P. Humphris, and S. W. Dixon. Qualification 100*l.* Remuneration 50*l.* each per annum. Registered office, 110 Gloucester Road, Regent's Park, N.W.

A. J. White (Limited).—The directors have declared a dividend on the preference shares for the quarter ending March 31 at the rate of 6 per cent. per annum.

Chemische Fabrik auf Actien, Berlin (late E Schering).—At the general meeting of this company last week a dividend of 10 per cent. was declared. The directors state that business suffered in January and February from the general depression, but revived in March.

Schweppes (Limited).—The directors recommend a final dividend on the preference shares of 2½ per cent., making 5 per cent. for the year, a final dividend of 3½ per cent., making 7 per cent. for the year, on the ordinary shares, and a dividend of 2 per cent. for the year on the deferred shares. A sum of 6,000*l.* is added to the reserve fund, and about 5,900*l.* is carried forward.

S. Claber & Co. (Limited).—The annual general meeting of the shareholders of this company was held at 34 Faulkner Street, Manchester, on March 17. The Chairman, in presenting the report, stated that, after allowing for directors' remuneration, depreciation, &c., the directors recommended that a dividend of 10 per cent. be declared. The new offices and works of the company are expected to be ready in May.

Aberdeen Comb Works (Limited).—At the annual general meeting on March 19, Mr. Douglas Stewart, in moving the adoption of the report, said the sum placed to the credit of profit and loss a/c was practically the same as in 1900. Owing to the sale of the York works the company propose to repay the preference shareholders 12,500*l.* at present invested in trust securities. The report was unanimously adopted.

United Alkali Company (Limited).—The eleventh annual meeting of the United Alkali Company (Limited) was held in Liverpool on March 21, Mr. John Brock (chairman of directors) presiding. The Chairman moved the payment of a dividend to the preferred shareholders of 7 per cent., and said, in view of the possibility of having to supply themselves with some raw materials, they had transferred 50,000*l.* of the balance to the reserve fund. Mr. E. K. Muspratt, in seconding the motion, regretted that the President of the

Digitized by Google

Board of Trade had not received with more favour suggestions for the improvement of the Government Bill to amend the patent laws, which favoured foreign competitors as against British manufacturers. The resolution was carried.

Bouillon Fleet (Limited). — On March 20, in the Chancery Division, Mr. Justice Buckley had before him the petition of Mr. S. G. Sheppard for winding-up this company. Mr. Herbert Reed, K.C. (with whom was Mr. Stewart Smith) for the petitioner, said the petition had been standing over from time to time pending certain negotiations and resolutions for voluntary winding-up. Mr. Stewart Smith subsequently asked, in view of the events which had happened, that the petition, which was one for a compulsory order, should be withdrawn. After further statements by counsel, Mr. Stewart Smith said there would be nothing for the shareholders, and with regard to the actions pending, the property will be insufficient to discharge the debenture debt. The business was stopped in consequence of the winding-up proceedings, but is now being carried on by the Receiver appointed on behalf of the debenture-holders. The Receiver is an officer of the Court, and judgment has been given in the action, so that the Court has perfect control over the business. His Lordship allowed the petition to be withdrawn.

Personalities.

The Mayor of Bethnal Green, Mr. C. E Fox, pharmaceutical chemist, has been presented with a mayoral chain and loving-cup.

Lieut.-Col. St. Clair Carruthers, I.M.S., is now home on a year's furlough, having completed his investigations in regard to the establishment of a new medical depôt and factory.

Mr. E. Allen Brotherton, of Messrs. Brotherton & Co., chemical-manufacturers, has been elected M.P. for Wakefield in the Unionist interest, polling a majority of 981 votes over his opponent.

The *Academy and "Literature"* states that under the title of "Terrors of the Law" Mr. John Lane is publishing three biographical and critical sketches by Mr. Francis Watt, son of the late Mr. James Watt, Haddington. The subjects are Lord Chancellor Jeffreys, the Lord Advocate Mackenzie, and Lord Braxfield, the original of Stevenson's "Weir of Hermiston."

Dr. Robert Henry Scanes Spicer is the subject of this week's *Vanity Fair* cartoon. "Jebu Junior" says:—

As house physician he served under Sieveking and Broadbent, and presently made himself known as a specialist in matters relating to ears and noses and throats. He learned what Sir Morrel Mackenzie and Vienna and Paris could teach him, and was made head of the throat department of St. Mary's Hospital; since when he has cleared many voices, opened many nostrils, and sensitised many tympana.

The ears of the guardians of professional etiquette must be tingling.

Professor Ernst O. Beckmann, director of the laboratory of applied chemistry at the Leipzig University, has been appointed director of the new Institute of Pharmaceutical Chemistry, which is being built at Dahlem, Berlin. Professor Beckmann studied at the chemical laboratory of R. Fresenius at Wiesbaden, and at the Leipzig University under R Kolbe, where he obtained his degree in 1878. He then occupied successive posts as assistant in the laboratories of H. Kolbe, J. Wislicenus, and W. Ostwald. The Beckmann method of determining molecular weights and the Beckmann thermometer are familiar in chemical laboratories.

Mr. Wilfred Wilson Gibson has to be reckoned amongst our minor poets. He is a son of Mr J. P. Gibson, chemist and druggist, Hexham. Mr. Elkin Mathew has just published in the Vigo Cabinet Series "Urlyn the Harper and Other Song," by W. W. G. It is a booklet of sixty-four pages. "Urlyn" is a trifle weird and immature—indeed, the poet attains his greatest success when he allows his fancy to touch subjects of observation rather than of imagination. Thus, "Faring South," a collection of a dozen characters, is ahead of "Urlyn," and "The Weaver" contains as nice an imaginative expression of aniline dyes as we have yet seen:—

Gathering imperishable colours of the sunless lands.

There is a chatty article in the March part of the *Girls' Own Paper* on Dr. Augustine Henry, M.A., L.R.C.P., F.L.S., who is to lecture to the Pharmaceutical Society next month. Miss D'Esterre-Keeling, who writes it, says Dr. Henry "in 1881 entered the Chinese Maritime Customs as medical officer, but Æsculapius seems to have had in him only a half-hearted disciple, for eventually we find him an ordinary assistant in the Customs, and in this service, which is so admirably conducted by Sir Robert Hart, he has now attained a very distinguished position. The Yangtse Kiang is one of the chief waterways of China, but so wild and uneven, in parts so narrow, is its bed that navigation upon it is attended by considerable difficulty. At either side, to a height varying between 2,000 and 6,000 feet, rise rocky cliffs, broken here and there by grassy ridges, on which countless flowers bloom luxuriantly. At the port beneath these mountains, where the great river begins its thousand-mile journey over a vast alluvial plain to the sea, Dr. Henry was stationed in 1883 at a place called I-chang. His favourite pursuit at this time was to haunt those lonely gorges, searching for rare and beautiful plants, and here it was that he discovered his golden lily. He sent it to Kew, where it was found to be a new species, and the name *Lilium Henryi* was given to it by Mr. Baker, then keeper of the herbarium at Kew. Dr. Henry soon afterwards sent over a box of bulbs collected by him on their native mountain-sides, and these bulbs have produced all the magnificent lilies of this kind now to be seen at Kew Gardens, both in the open and in the temperate house. *Lilium Henryi* is the tallest lily that grows; and the fairies, when they look up through the green leaves cloaking its stem, must think that the golden blossoms so far above their tiny heads are twinkling stars." Dr. Henry is a corresponding member of the Pharmaceutical Society.

Sir Thomas Lauder Brunton, LL.D., M.D, F.R.C.P., F.R.S., is appreciatively sketched in the current number of the *Border Magazine*. Borderers are proud of Sir Lauder, for he is one of them, having been born in the quiet little village of Bowden, on the south side of the Eildons. He is descended on his mother's side from the very old Border family of Stenhouse, who were established on the Borders more than 350 years ago. Sir Lauder's education began at the parish school in his native village. Subsequently he attended a school at Melrose, and from there he went *viâ* the Edinburgh Institution to the University. Sir Lauder's own inclinations, after his education was finished, were for engineering as a profession. His father intended him for law, and he actually took law classes for a year, but filled in his spare time in studying chemistry and physics. He came out first in examinations in these subjects, and that decided his profession. After a year's experience in Edinburgh Infirmary he graduated M.D. and B.Sc., obtaining honours and a gold medal for his thesis on "Digitalis," and the Baxter Scholarship in Natural Science. Before settling in London (which, by the way, he was persuaded to by his friend Professor Burdon Sanderson) he spent three years in foreign travel. His subsequent history is pretty well known to pharmacists. He is a great traveller, having visited every country in Europe except Portugal. Amongst the honours heaped upon him the *Border Magazine* states that "he has the coveted distinction of being an Honorary Member of the Pharmaceutical Society. There are only about fifty such members in all."

"C. & D." Nursery Rhymes.

A Perfume King.

"We have known him quite a long time," said the Sachet to the Spray;
"He has nurtured us and reared us, and we've prospered 'neath his sway;
And the splendid garb he gives us makes the world our praises sing;
So I really think he's just the proper man to be a King.
Don't you think so? I imagine that it's just the very thing,
So we'll have a Coronation, and we'll crown him Perfume King."

"They're my sentiments entirely," breathed the golden-mounted Spray;
"And I only was remarking to a friend the other day
That he always makes life pleasant, and he covers many faults,
And he wakes the sluggish conscience with a Whiff of Smelling Salts.
Oh, there's nothing that will rouse one from a dream of dismal vaults
Like a wholesome hearty snuffle of the fragrant C. L. salts."

So the Perfumes came from everywhere, and each one wore a crown,
And cut-glass facets sparkled till they dazzled all the town;
And regal Bathodora, in a chariot lined with moss,
Surveyed the sweet creations marshalled up by General Goss.
They to honour Mister Thompson come from Kirn and Charing Cross
To the Fore Street Coronation led by Major-General Goss.

Vaccination by Chemists.—A correspondent in a medical journal draws attention to the frequency with which chemists who sell vaccine also revaccinate people. This is only another form of unqualified medical practice, replies the editor, which, if done openly and without any pretence on the part of the operator that he is a registered practitioner, the law condemns only indirectly by refusing to assist the chemist in recovering his fees.

Westminster Wisdom.

(By our Parliamentary Representative.)

Lead-poisoning.

The draft rules as to relaxations in the case of potting firms complying with a Home Office standard as regards the use of lead will, I understand, be issued in a few days.

Welsbach Infringers.

The Home Secretary stated on March 21, in reply to Mr. Weir, that four persons were last year committed to Holloway Gaol in connection with the infringements of the 1893 Welsbach patent.

Celluloid Dangers.

After Easter Lord Saltoun is to ask H.M.'s Government to make some modification in the composition of the celluloid used in making combs and collars, and to place such regulations and restrictions upon its sale as will render impossible the recurrence of the many serious burning accidents which have already resulted from the spontaneous combustion of celluloid articles.

Monkey-lymph.

Several weeks ago a question was put to Mr. Long regarding Dr. Copeman's experimental inoculation of monkeys. Further interrogated on the subject, the President of the Local Government Board says he is aware that Dr. Copeman inoculated monkeys with smallpox material, and that he inoculated calves from the vesicles so produced. A considerable number of children were vaccinated with the lymph obtained from these calves, but none of the vaccinations were performed by Dr. Copeman. The right hon. gentleman has no information as to whether the experiments were conducted with the knowledge of the parents of the children vaccinated, but they were not performed with the knowledge or sanction or at the expense of the Local Government Board.

Questions.

Mr. Weir is indefatigable. He is to ask the Secretary of State for India on April 8 to supply military hospitals in India with modern surgical instruments, those with wooden handles being his abhorrence.

The use of diachylon plaster in the form of pills by *enceinte* women is exciting the indignation of Mr. Coghill, who, after the Easter recess, proposes to bring the matter under the notice of the Government in the form of a question as to why the stuff is so easily procured.

The Sugar Question.

Members of the House who are specially interested in the prospects of the home and colonial sugar industries are endeavouring to arrange for a deputation to the Chancellor of the Exchequer in regard to the difficulties that are feared in conection with the operation of the new convention, 1903.

First Part of Session Ended.

The adjournment of Parliament for the Easter recess marks the end of the first part of the Session. It cannot be claimed that the weeks of debate have been fruitful in legislation. Government business is not in a very promising condition, and with private members' Bills matters are much worse. The Midwives Bill is almost the only one of the latter which has made substantial progress in the Commons. It has been amended by the Standing Committee, and now stands on the order-paper for consideration. As I stated last week, there is very little chance of the Medical Act Extension Bill ever reaching a second reading. Other measures waiting for second reading are the Government's Patent Law Amendment Bill, the Trade-marks Bill, the False-marking Bill, and the Shops Bill. With the exception of the first-mentioned, which will of course have the advantage of special facilities, it is doubtful whether more will be heard of these bantlings until the day of the "massacre of the innocents." But from a pharmaceutical point of view the period has not been barren of interest. Considerable information has been elicited as to the doings of the Poisons Committee, and in various matters, some connected therewith, useful hints of influences at work have been obtained.

Observations and Reflections.

By XRAYSER.

Sir Herbert Maxwell

in his letter published last week tells us too much and too little. That he will conduct the inquiry and consider the evidence with a judicial mind, and that he himself is absolutely disinterested, need not be argued. Judging from his books and from his past career, I should say that he possesses an extremely sound critical faculty, and whatever conclusions he may ultimately come to about the legal conditions under which poisons should be sold, I, for one, will be confident that they are the result of careful thought. But the presentation of that petition "in favour of the Trade in Poisonous Compounds Bill" was a very bad error of judgment. It is quite true, as Sir Herbert says, that "a member of Parliament is not committed in the slightest degree by presenting a petition"; but for all that it is such a common custom for the public to submit their petitions through the hands of sympathetic members that an association has grown up in the public mind between the M.P. and the petitions he presents. Sir John Lubbock used to be the natural agent for petitions in favour of the Early Closing Bill, and Sir Wilfrid Lawson probably presented thousands in favour of the Local Option Bill. Sir Herbert Maxwell does not say that the horticulturist who asked him to present the petition was a constituent of his, and I suspect he would have said this if it had been the case; for that would have been his best excuse. But even then as Chairman of the Committee Sir Herbert would have been more than justified in asking petitioners on either side to choose some other representative.

Sir Herbert says, further,

"I never heard of the Bill in favour of which this petition was made, but that I considered to be no affair of mine." But it was an affair of his. Sir Erskine May says it is the duty of members to read petitions before they present them, and to return them if they are not in order. This petition was clearly not in order, as it was in support of a Bill which was not before Parliament. One House will not receive a petition in favour of a Bill which is before the other House; *a fortiori* a petition in favour of a Bill which is before neither cannot be legitimate. Moreover, I should have thought that in his capacity of Chairman of a Committee appointed to inquire into the law relating to the sale of poisons, and finding that "upwards of 1,000 horticulturists" were petitioning Parliament to pass a certain new Bill on that subject, it would have been only legitimate curiosity on Sir Herbert's part to ask to see a copy of that Bill of the existence of which he informs us he had "never heard."

The Medicine-stamp Acts

have been pretty thoroughly threshed out in the past, but their contemplation always reveals new beauties. Mr. Atkinson's contribution to the investigation read before the Western Chemists' Association was timely, and produced a good discussion; but it was apparently rather hastily put together, and it was marred by two or three inaccuracies to which it is right that attention should be directed. It may almost be assumed, too, that Mr. Atkinson wrote his paper without first studying Alpe's "Handy-book." At any rate, he made no allusion to that work, which still remains the most authoritative exposition of the laws in question in existence. As an illustration of the incomplete information with which Mr. Atkinson was furnished I quote his statement that "there is no record of any united effort having been made to approach the Board with a view to getting some of the difficulties of the Stamp Act more clearly defined." In the *C. & D.* of April 22, 1886, will be found a long report of an important conference at Somerset House between delegates from the old Chemists' and Druggists' Trade Association and representatives of the Board of Inland Revenue. One result of the discussion which then took place was the official Summary of the Acts which Mr. Atkinson quoted in his paper. Another was the exceedingly valuable agreement by the Board to give their opinion on labels which chemists might submit to them. Mr. Atkinson's statement that verbal recommendation of a medicine may incur liability is also misleading. Proclamation of the virtues of a medicinal compound from the top of a tub in a market-place might be construed as a "public notice" within the meaning of the Act. But verbal recommendation to a customer in a shop could never be so interpreted. The statement that such words as "recommended by physicians" did not in the opinion of Somerset House constitute liability is in direct conflict with what Mr. Alpe, who for many years at least spoke the views of the authorities, declared. Lastly I do not think the trade's acquaintance with the Acts is so elementary, or that the discussion of them in the trade journals has been so desultory, as Mr. Atkinson assumes. If the members of the W.C.A. really needed the information that they must stamp a portion of Fellows's syrup when they dispense it unmixed, it was well to give it them; but in that case they must have been strangely inattentive to their trade literature, and would deserve no pity if they were fined.

It is a Concession

on the part of the Board, says Mr. Atkinson, that we may describe a preparation as a liver-mixture without stamping it. This is at least doubtful. The Board must first establish that the words "liver-mixture" hold out or recommend the preparation for the prevention, relief, or cure of some disease; and we have a right to claim that this interpretation shall be in a legal sense "strict" To satisfy a High Court it will hardly be good enough to show how the man in the street uses and understands the expression The deduction must be justified by the grammar of the English language. Mr. Glyn-Jones, on the other hand, loftily scorns concession altogether. "A just law," he says, "should not admit of concessions." That sounds pretty, but it is fallacious. No statute has ever been so perfectly drafted as to provide against all possible contingencies. As cases of injustice arise Acts have to be amended; but there are certain laws, including those relating to the Revenue, which may only be enforced by a responsible authority. Thereby to an extent the inherent deficiency of language is remedied by the exercise of discretion, which is only another way of saying the granting of concessions.

The Hint to the Wholesale,

conveyed in the letter of "An Ordinary Retailer," will be endorsed by all those chemists who pay their accounts monthly; and these are the wholesale firms' best customers, whether they buy little or much. A clear week between the last statement and the day of payment would be a great convenience. We are familiar with the imperious condition that "unless this account be paid by the 15th inst. the discount cannot be allowed." Why should not we also make our stipulation that "unless the monthly account be rendered by the 7th of the month it will not be paid until the following month," retaining, however, the right to the best terms?

As an Appendix

to the facts about Thomas Dover which appeared recently, a serious mistake occurring in the sketch of that worthy in the "Dictionary of National Biography" may be mentioned. The writer of that sketch, Norman Moore, M.D., states that the diaphoretic powder known as Dover's powder is "composed of 10 gr. each of opium, ipecacuanha, and sulphate of potash." Fortunately the "D.N.B." is not a legal standard.

Fletchers' Concentrated Liquors

"Delightfully Soothing."

THE Chemists' Defence Association have done well in their first fight with the Commissioners of Inland Revenue, for they have won. It was in regard to the label reproduced in our issue of January 26, page 128, and in which the essential particulars were:—

PURE GUM PASTILLES.
INFLUENZA.
DELIGHTFULLY SOOTHING
TO SINGERS AND PUBLIC SPEAKERS.

We questioned, when we mentioned the matter before, if the Association would win, and the fact that they have is entirely due to the skilful manner in which the defence was worked up and presented to the Magistrates at Brentford. The Chairman, early in the proceedings, said to the Government counsel, "Narrow it down to the point at issue"; but it did not really reach that until the Association's solicitor submitted half-a-dozen boxes of pastilles of the same series as the influenza one, with "Glycerin," "Voice," "Liquorice and chlorodyne," and similar words in place of "Influenza," and explained to the Magistrates that the middle word was in each case simply a designation or description. As a matter of fact, the defendant had bought an assorted dozen of pastilles, labelled as they were by the makers, and retailed them at 6*d.* the box. There was no recommendation on his part, and the phrase "delightfully soothing to singers and public speakers" applied equally to the other kinds of pastilles The Magistrates recognised that the recommendation, if any, was not specific, and dismissed the summons. We do not wish to exaggerate the importance of the decision. It cannot be extended to labels bearing a specific recommendation, —*e.g.*,

COMPRESSED LOZENGETTES.
INFLUENZA.
A NEVER-FAILING REMEDY.

Digitized by Google

This would undoubtedly be liable. Far more important, to our thinking, is the demonstration that the case gives of the advantage to chemists and druggists of having an Association to which they may entrust matters of this kind and have them attended to by specialists. It does not pay the individual to fight the Revenue authorities, and for that reason nearly everybody submits to privately arranged penalties for alleged infringement of the Stamp Act. In the case of those who are members of the Chemists' Defence Association the question of compromise does not arise, but merely the law of the matter and its bearing upon the customs of the trade generally. It is the Association's business to look after these things, and the Association not only relieves the individual of the worry and expense attendant on legal proceedings, but helps to make the prosecuting authorities more cautious, as they are when they realise that they have to fight an Association, and not a chemist who has his own business to attend to. There is a moral in the result for those pharmaceutical enthusiasts who are continually wailing, "What can the Pharmaceutical Society do, with only 6,000 members? Give us the other 10,000 on the register, and you shall see what we will do." The Chemists' Defence Association, with a modest thousand or so, puts such theories to shame.

Medicine-label Decisions.

THE following are labels which subscribers of THE CHEMIST AND DRUGGIST have recently submitted to the Commissioners of Inland Revenue for opinion. We quote them as a guide to others, and because the labels have some peculiarity which raises doubt in each case:—

Children's cough-mixture.

Directions for use.—One or two teaspoonfuls, according to age.

N.B.—A cough or cold, however slight, should on no account be neglected, as it frequently leads on to troublesome and dangerous consequences, particularly with those who are delicate and have weak lungs.

Marked "Not liable as altered," the words "when the cough is troublesome" having been removed from the directions. Note the N.B. paragraph, which is neither a direct nor indirect recommendation of the mixture. The doubtful point about the next label was the words "The Manchester":—

Shake the bottle before use. | Mens sana in corpore sano. | Iodized | sarsaparilla, | or | the Manchester | blood cleanser.

Price 1s. Dose.—For an adult, one tablespoonful every three hours; above twelve years, a teaspoonful and a half, between meals.

This the Department have marked "Not liable," as also the following label:—

Health, strength, and energy.
Phosphorus, quinine, steel, and nux vomica tonic elixir.

This preparation enables the system rapidly and safely to benefit by the tonic, strengthening, nerve restoring, and brain-stimulating properties of these valuable medicines. It forms an agreeable and elegant compound, which can be safely taken by the most delicate persons.

Dose—For an adult, one tablespoonful, in a wineglass of water, two or three times a day, after meals.

This preparation according to the Act is labelled Poison, if taken according to prescribed doses is perfectly harmless.

A few weeks ago the printers of the last label intimated that it is "now liable"—apparently an erroneous impression. The next example is a handbill, which was declared by the Commissioners to be liable. It was worded as follows:—

Your Children will grow Healthy and Strong
if, when ailing, you give them [Jones's]

Extract of Malt and Cod-liver Oil.

A perfect combination of Malt Extract with Finest Norwegian Cod-liver Oil.

Easily Digested and Palatable.

Plain Cod-liver Oil cannot always be tolerated by the stomach; when this is so, it simply decomposes, forming hurtful acids, which excite nausea, vomiting, colic, and diarrhœa. When combined with Extract of Malt, this is not the case. The oil is assimilated with ease, and it seems almost impossible to have a better form of nutriment.

We suggested that the first two lines should be altered to make them read—

Healthy and Strong Children
by giving them.

This handbill (adapted to cod-liver oil emulsion) has now been marked "Not liable." The only additional matter on the second handbill was a footnote, thus:—

N.B.—W. Blank sells at lowest cash prices and maintains a high standard of quality.

Note.—His only address is at Blanktown. No branch establishments.

At the same time the following label was marked "Not liable":—

A Nutritive Chemical Food.

An Emulsion composed of the Finest A1 Cod-liver Oil, and the Hypophosphites of Lime, Soda, and Potash.

Cod-liver Oil Emulsion and Hypophosphites.

Highly palatable. No oily taste. Easily digested.

In this preparation Cod-liver Oil is presented in a pleasing and readily digested form, combined with valuable tonic and nutritive salts, which render it doubly efficacious.

Keep in a cool place, and shake well before using.

Directions.

Dose.—For adults, from a dessert to a table spoonful three times a day, after meals. For children, one teaspoonful, or more, according to age.

We would be glad if other subscribers would send us specimens marked officially "Liable" or "Not liable," so that the trade as a whole may compare their own labels with them.

Pepsin-preparations.

MANY years ago Dr. Charles Symes, of Liverpool, made investigations on the activity of pepsin-preparations containing alcohol, and more recently (*C. & D.*, November 6, 1897, page 723) he repeated some of his experiments, with the result that he modified his opinion, stating that as much as 14 per cent. of absolute alcohol may be contained in the pepsin solvent without interfering with the proteolytic power of the ferment. These observations are recalled by a thesis on the influence of alcohol upon pepsin, for which M. Eug. Thibault has obtained the Paris Phar. Doc. degree. The experiments are not exactly along the lines followed by Dr. Symes, but they are well worth referring to. M. Thibault used throughout a pepsin of verified potency. He prepared solutions with varying proportions of alcohol, keeping them for stated periods and trying the digestive power at the end thereof. The method of comparing the results of the digestive-power upon fresh and dried fibrin was to filter the digest and add nitric acid to the liquid, the degree of turbidity produced being noted in numbers as follows:—

		No.
The addition of 30 drops of nitric acid gives:	Turbidity *nil*	5
	„ slight	4
	„ fair	3
	„ almost a precipitate	2·5
	Light precipitate	2
	An abundant precipitate ...	1
The addition of 5 to 10 drops of nitric acid gives:	An abundant precipitate ...	0

In the first series of experiments he reduced a 1-per-cent. solution of pepsin to half strength by the addition of sufficient absolute alcohol and water to give mixtures containing 5, 7½,

Digitized by Google

10, 12½, 15, and 20 per cent. of alcohol. At the end of three days the 5 to 10 per cent. alcoholic solutions were reduced in proteolytic potency from 5 to 4·5; the 12½ to 4; the 15 to 3; and the 20-per-cent. to 2; after three months they were all reduced to 0. A much stronger solution of pepsin was then taken, so that the resulting alcoholic mixtures digested (when freshly prepared) their own weight of fresh fibrin, and a fourth of their weight of dried fibrin. A solution containing 11 per cent. of alcohol assayed 2·1 when prepared, 1·5 at the end of two months, and 0 at the end of four months; a 14·7 solution assayed 1 when prepared and at the end of two months, and 0 at the end of four months; while a solution containing 29·3 per cent. of alcohol had no digestive power at all. Certain pepsins offer a greater resistance than others to the action of alcohol, but all undergo a rapid weakening when the solutions which contain them are made in the proportions given by the Codex—that is to say, when 10 gr. of these solutions contain a quantity of pepsin capable of completely peptonising 10 gr. of fresh fibrin or 2·50 gr. of dried fibrin. It is to be noted that solutions stronger in pepsin than these do not become so rapidly valueless, and that is why the experiments of Chassaing, Bordet, and others are not altogether inconsistent with M. Thibault's results. The Codex formula is—

Pepsin in powder	5
Distilled water	45
Alcohol (80-per-cent.)	15
Syrup	15
Essential oil	to flavour

M. Thibault is clearly of opinion that in this elixir or any alcoholic solution of pepsin made in similar proportions the activity of the ferment is impaired by the alcohol. In wines the decrease is less prompt and complete than in solutions purely alcoholic, but it ultimately does take place. It may be remembered that Dr. Symes came to the conclusion that alcohol merely inhibits the action of the pepsin, for he found that when he carried on artificial digestion in a permeable membrane, so that the alcohol might diffuse, digestion was not impaired. This point has not been considered by M. Thibault, but it is immaterial, since he proved that active preparations of certain alcoholic strengths become inactive after keeping, and that is an observation which is valuable to pharmacists.

Cod-liver Oil.

The rising market for cod-liver oil is just now exercising the minds of buyers, as there are several signs favourable to the continued upward movement. Since the beginning of the year an advance of about 30*s.* per barrel has taken place in the price of medicinal oil, to-day's quotation for new oil being from 100*s.* and upwards, the price at the beginning of the season being about 71*s.* There were few, if any, buyers who contracted at this low figure for forward delivery, as there was little anticipation of a rise, and purchasers have been buying chiefly for immediate delivery, which fact has led to a scarcity of oil on the spot. There are two prominent features about the market this year, the first being that although three to four million more cod have so far been caught, the yield of oil up to date is 3,000 barrels less, this being attributed to "lean livers." This may be best illustrated by the fact that last year it took 500 to 700 livers to produce one hectolitre of oil, whereas this year it requires from 1,200 to 1,400 livers to produce the same quantity. The second feature is that the supply of medicinal oil from previous years, usually abundant, is practically non-existent on this occasion, either in Norway, London, or the United States, owing to the fact that the 1901 fishing was the smallest for a number of years. As the season for fishing is now pretty well advanced, March being usually the most critical month in the trade, there is little time left for a turn about before the Lofoten fishing ends. As noted a fortnight ago, the early Easter also has a detrimental effect on the market, because the fishermen take a good holiday at Easter, and thereafter follow the cod to the most northern fishing-ground—Finmarken. The Finmarken catch last year yielded only 6,500,000 cod, or 1,800 barrels of oil, and this year's is not likely to be more. Taking the above facts into consideration, there is every prospect, judging from the present outlook, that still higher prices will prevail, although the upward movement may be affected to some extent by the competition which always exists between holders in Norway and London. Newfoundland, which is the second largest producer of cod-liver oil, is not likely to affect the range of prices much, but Newfoundland oil is now offered comparatively cheap, "fine pale oil" being quoted 65*s.* per barrel on the spot.

CANNABIS INDICA.

In connection with the question of the activity of this most useful drug and its preparations, discussed before the North British Branch last week, and commented upon this week, it may not be out of place to mention that large quantities of the drug are shipped to the United States, where the physiologically active is retained, and much of the remainder that does not come up to the standard of the importers is re-exported to London. This fact has a material bearing upon the discussion here of what is active and what is not, and it rather discounts the value of chemical and physical data.

SPREADING ITS INFLUENCE.

The Society of Chemical Industry for some reason allowed Victorian chemists to found a little society of their own, but has been more successful in regard to Canada. There a local section has been formed, with headquarters at Toronto, while occasional meetings will be held at Montreal and elsewhere. Professor W. R. Lang, of the University of Toronto, has been elected Chairman, and Professor G. P. Girdwood (Montreal) and Mr. Harold van der Linde (Toronto) Vice-Chairmen. The committee has been chosen from all parts of the Dominion. Although Victoria has not come in, arrangements are now being made to form a colonial section of the Society, with Sydney, N.S.W., as its headquarters. We presume the Victorian Society will join in.

THE SPECTACLE-MAKERS.

Sir Wm. Hart Dyke, the Master of the Spectacle-makers Company, wrote to the *British Medical Journal* last week to explain that candidates for the Company's diploma are not examined in sight-testing, but in theoretical and applied optics, spectacle-making and frame-fitting, heat, and elementary mathematics, so as to ensure that the holder has an intelligent knowledge of his trade. This week Mr. Aitchison and Mr. Bullar (of Southampton) reply to Sir Wm. Hart Dyke. Mr. Aitchison says the original intention of the Optical Society is not being carried out, and that the present methods are calculated to do serious harm, because holders of the diploma advertise themselves as "qualified by examination," when, as the Master confesses, they are not examined in sight-testing. Mr. J. F. Bullar, a well-known South Coast oculist, also objects to the way some of the Fellows of the Company advertise to test sight "entirely free of charge." The public, Mr. Bullar writes, are misled; they do not know the wholesale price of spectacles, and they are unaware that the price they often pay for them amounts to a large fee for "testing the sight," in addition to a handsome profit on the glasses.

THE POWER OF THE RETAILER.

The tobacco-war appears to be giving retail tobacconists a good deal of anxiety, which is surprising in view of the

Digitized by Google

offers made by the two sides, one offering a bonus of 50,000*l.* a year, and the other 200,000*l.* a year if the retailers will do what they tell them. If the retailers sit tight and "say nuffin'," selling all the time as many as they can of their own cigarettes, they will reap more than they can from the bonuses. The matter of 8,000 telegrams to retailers will not divert support entirely to "Guinea Gold." There are 343,323 tobacco-dealers in the United Kingdom, besides 26,224 occasional dealers, and we do not believe there is a cigarette in the market which any one of them cannot afford to refuse to stock. When it comes to distribution of specialities to the public, the retailer has the key to the outlet, and the policy which he should follow is to seek a secured and fair profit, without restriction as to his trading, and no coddling.

A CURIOUS OBJECTION.

In an application which came before the Licensing Justices of Westminster on Monday afternoon, a point of considerable interest was raised by counsel which, if permitted to stand as precedent, is likely to considerably affect trade and also the liberty of the subject. Colonel Probyn, who is the chairman of Hooper, Struve & Co. (Limited), aërated-water manufacturers, was objected to as an adjudicating Magistrate in the licence under discussion because the company mentioned supplied the hotel asking the licence with aërated waters. Mr. Biron, who made the objection, and asked Colonel Probyn to retire from the Bench whilst the matter was being discussed, said that as Colonel Probyn had a personal interest in the hotel-keeper getting what he asked, it would render these proceedings null and void if he took part in the discussion and ultimate decision. Colonel Probyn admitted that he was chairman of Hooper, Struve & Co.; but the hotel-keeper, in reply to a question, said he also got his "minerals" from Schweppes and the Diamond Mineral-water Company. But Mr. Biron pressed his objection, and Colonel Probyn retired from the Bench during the hearing of the case. But if aërated-water manufacturers who happen to be J.P.'s have such objections as these to meet, they had better at once hand in their commissions. It is quite a new form of objection, and one which should not be allowed to drop.

DOSAGE.

Dr. John Kent Spender contributes a farewell retrospect of fifty years' practice to the *British Medical Journal*, in which he emphasises the useful results to be obtained by the administration of medicines in comparatively small and frequent doses. Nearly all great medicines are also great poisons, and the problem is to get the greatest amount of good from a medicine with the least amount of harm. The B.P., 1885, was the first Pharmacopœia to give a table of doses, but no instructions were given as to the number of doses, or the interval which should separate two doses:—

> Many people insist that, well or ill, they cannot take a particular medicine because it "upsets" them, or "disagrees" with them in a real or fancied way. The supposed disagreement may be caused partly by the medicine being taken in a bulk which disturbs a natural function. Break up that bulk (so I advise) into four, and administer each of those four exactly four times as often. In this manner we get the same therapeutic influence with the minimum of disturbed function; and the influence is not impeded or thwarted—possibly it is even favoured. If a quantity termed *X*, given to a patient every fourth hour, causes symptoms of more or less toxic gravity, then split *X* into *x*, *x*, *x*, *x*, and each of these petty factors may be administered every hour with no more evident effect than if they were so many rations of cold water.

Several examples are then given of the wonderful effects of minute doses of opium, morphine, and tartrated antimony. The therapeutic method outlined has not had, the doctor concludes, any recognition in authoritative books on the practice of medicine, but it has proved to him a trustworthy ally which seldom failed in great emergency.

Business Changes.

MESSRS. NEEDHAMS (LIMITED) have bought the business of Mr. W. E. Bambrough, at 48 High Street, Notting Hill, W.

NEW business-premises at the Crescent, Seascale, Carnforth, have been acquired by Mr. Fred. T. Patman, chemist and druggist, of Railway Terrace, Seascale.

MR. A. HALL, chemist and druggist, has purchased the business at 151 Marine Parade, Brighton, formerly carried on by Mr. E. B. Vizer, pharmaceutical chemist.

Marriage.

BATTLE—BOWER.—At St. Catherine's Wesleyan Church, Lincoln, on March 17, Ernest William Chatterton Battle, pharmaceutical chemist, Ripon, to Harriettee, eldest daughter of Mr. J. H. Bower, Lincoln.

Deaths.

BAKER.—On March 22, at 11 Eastgate Square, Chichester, Mr. Edward Baker (of the firm of Baker & Son), chemist and druggist. Aged 85.

CAPES.—At York, on March 14, Mr. John Henry Cooper Capes, chemist and druggist. Aged 44.

COTTERILL.—At "The Poplars," West Bromwich, on March 23, Mr. Thomas Cotterill. Aged 68. Mr. Cotterill had been employed as a chemist for many years at the Oldbury Alkali-works of Messrs. Chance Brothers. He had been for years a member of the West Bromwich School Board.

EVANS.—On March 20, at 17 Stuart Street, Aberdare, Mr. Thomas Waitty Evans, chemist and druggist. Aged 58.

HOWORTH.—On March 20, at his residence "Trebarwith," St. John's Avenue, Bridlington, Mr. James Howorth, pharmaceutical chemist, late of Doncaster. Aged 78.

IRVINE.—At Granton, N.B., on March 20, Mr. Robert Irvine, F.C.S., consulting chemist to Messrs. A. B. Fleming & Co. (Limited), of Granton. Aged 63. Mr. Irvine was in his younger days an assistant to the late Professor George Watson, professor of technology at Edinburgh University.

MANSON.—At Christmas Island recently, Patrick Thurburn Manson, M.B. Lond., eldest son of Dr. Patrick Manson, F.R.S. Dr. P. Thurburn Manson was engaged in studying the possible prophylaxis of beri-beri in the Malayan Archipelago, when he met with a fatal accident. It will be remembered that when his father conceived the notion of testing the transmission of malaria by mosquitos he wished to do so by allowing mosquitos infected in the Roman Campagna to bite healthy persons in Britain. His son, who has just died, at once offered himself as a subject for experiment, and was successfully infected with malaria.

MUDIE.—At Leeds, on March 15, Mr. Isaac Mudie, chemist and druggist. Aged 52.

SMITH.—The funeral of the late Mr. Joseph de Carle Smith, formerly head of the firm of Messrs. Smith & Sons, chemists, Norwich, whose death we reported last week, took place on March 24, at the Rosary Cemetery. In accordance with the deceased gentleman's simple tastes, there were no flowers or display, and the body was placed in an earth grave. Besides the family there were present the staff and *employés* of Messrs. Smith & Sons, Sir Harry Bullard (M.P. for Norwich), the Mayor and many members of the Corporation, with representatives of the Port and Haven Commission, magistracy, the School Board, Board of Guardians, and other local bodies.

SMITH.—On March 17, after a long illness, Mr. J. W. Smith, who traded as chemist and druggist at Centre House, Bridlington. Mr. Smith succeeded to the business established by his father.

WRAY.—At Lemington, on March 21, Elizabeth, wife of Mr. Thomas Wray, chemist and druggist. Aged 29.

Winter Session.

Royal Institution.

The Friday evening discourse on March 21 was by Professor Otto N. Witt, Berlin, on

Recent Developments in Colouring-matters.

Mr. George Matthey was in the chair, and there was a good attendance. Professor Witt first referred to the fact that love of colour is innate in the human race. The production of colours from coal-tar has grown to such proportions that it is viewed from the standpoint of national economy, whilst nations vie with each other in producing colouring-matters in friendly, but eager, competition. Professor Witt here mentioned that he was particularly flattered when asked by Sir Wm. Crookes to address a Royal Institution audience, because it was exactly twenty-five years since he, as a young chemist, read a speculative paper on colouring-matters before the Chemical Society. The theories advanced were so novel that the Publication Committee refused to publish the paper, and the President, in conveying his regrets, hoped he (Professor Witt) might in the future be able to place the matter before a Royal Institution audience. "The theories then advanced have been confirmed and accepted by chemists, and I am here to place them before a Royal Institution audience." (Applause.) The fundamental question naturally arises, What is a dye-stuff? The question is difficult to answer, but in order to become a dye-stuff a substance must not only be so intensely coloured that it can communicate its own shade to colourless substances holding it in solution, it must not only be soluble in water or other liquid suitable for preparing a dye-bath, but it must also be soluble, and even much more soluble in the colloid which forms the substance of the textile fibre than in water. Experiments were then shown in which ether extracted the colour from an aqueous dye-solution and *vice versâ*, and also a striking experiment in which, on shaking together a solution of magenta acetate in ether and a solution of trichloroindigo phenol in water, the dyes changed solvents. Similar experiments were also shown with fabrics, the point brought out being that a dyed fabric is nothing more or less than a solid solution of the dye-stuff in the substance of the fibre, unless there are secondary chemical influences, such as when mordants are used to precipitate the dye-stuff after its immigration into the fibre.

The necessary combination of solubilities for a dye-stuff is rare in coloured substances of an inorganic nature, and in the vast domain of organic substances of the aliphatic series few dye-stuffs are met with, but in the aromatic series, where the power of selective absorption of light is very frequent, it would be curious if they were not of common occurrence. Since the physical properties of every compound are direct functions of its molecular constitution, it is easy to believe that this peculiar combination of solubilities would be the result of certain general conditions fulfilled in many members of the aromatic group; and the theory he proposed twenty-five years ago was simply an attempt to discover those conditions by investigating the constitutional peculiarities of all those dye-stuffs whose constitution was known in those days. In the molecule of every colouring-matter whose constitution is known certain atomic constellations have been observed, which seem to be essential, and of which two must always be present—chromophores and auxochromic groups. Of the former some two dozen are known, all agreeing in the fact that they could not exert their influence except in the presence of the auxochromic groups, of which very few are known. There must exist a law that governed the formation of chromophoric groups, but so far it has not been definitely established. The knowledge of the chemical causes of the physical properties of colouring-matters is continuously developing, and quite lately some definite views have been formed about the connection of the chemical constitution of the aromatic bodies with that form of selective absorption of light known as fluorescence. Much work has been done on the constitution of the azo-colours, the introduction of which is the direct result of early efforts to conduct the search for new colouring-matters on definite scientific principles. The number of dye-stuffs of this class that might be prepared is extraordinary, and it has been computed that 3,159,000 different ones are at present easily accessible. Of these at least 25,000 form the subject of patents in Germany and other countries, while over 500 are manufactured on a large scale. Azo-dye-stuffs can be produced at will to dye wool or silk or cotton, to dye slowly or quickly, and to stand soap, or acid, or alkali; and this possibility of adjusting their properties with almost mechanical precision has been the cause of the greatest successes of the colour-industry. But while this field bears its rich harvest, others are by no means neglected, though perhaps the greatest and most brilliant success of the chemistry of dye-stuffs has been the industrial synthesis of indigo.

Professor Witt then proceeded to explain the steps which led to the production of artificial indigo by the Badische Anilin- und Soda-Fabrik, and which have already been told in The Chemist and Druggist. Incidentally it was mentioned that the idea that natural dyes are permanent and artificial dyes fugitive to light has no scientific foundation.

The lecturer finished a very brilliant discourse by remarking that in 1825, in the very house in which they were assembled, Faraday discovered benzin, the original specimen of which, prepared by his own hands, was on the table. That specimen they could only look upon with a reverential mind, for what a development has sprung from that first attempt to unravel the mysteries of the aromatic series! Science as well as industry has been revolutionised by the investigation of the derivatives of benzin, the world embellished by the gay and brilliant dyes of which it is the mother-substance, and an inexhaustible mine of subtle scientific thought opened up. The study of these dye-stuffs has become a domain of chemistry unsurpassed for variety and fascination; it teaches a lesson even to those who are apt to look upon science as a pastime for those who lack ability for practical life, for they could not help seeing that in this instance the most intricate science has led to something eminently practical and valuable.

Liverpool Chemists' Association.

The second general meeting of the present session was held at the Royal Institution on March 20, the President (Mr. Harold Wyatt, jun.) in the chair. The first subject mentioned was

Formic-acid Baths.

Mr. J. T. Hornblower asked if any of the members of the Association had ever heard of formic acid being used as a medicament in connection with vapour-baths, or had they heard of formaldehyde being used in the same way.

Mr. P. H. Marsden said he believed sulphur candles had quite gone out of use, but he had not heard that formic acid had replaced them, as the result of the acid when used in this way had not been satisfactory. He understood that the alformant tablets and lamp had been used with considerable success for the destruction of green fly.

Mr. H. Wyatt, jun., said that he had known formaldehyde to be used on the Italian frontier for the disinfection of individuals who were suspected of being in contact with fever patients, but he had not heard of formic acid being used in connection with vapour-baths.

Various Idiosyncrasies.

Mr. H. B. Morgan sent a note saying that in November he was called upon one night to destroy a dog which had been suffering from fits. In order to destroy the dog he used a box having an aperture in the top through which he inserted a funnel, and then poured hydrocyanic acid through the opening. After he had allowed sufficient time to elapse, he opened the box to see if the dog was dead, and in doing so inhaled such an amount of the fumes that he went staggering about the place crying for water and thinking he was done for. After considerable interval and the application of suitable stimulants he recovered and had quite forgotten the incident. Shortly after, however, he had need to handle cyanide gauze, and on unrolling the bundle he was seized with the same unpleasant feeling, and therefore he could not attribute his experience to imagination. He found that it was almost impossible for him now to handle

Digitized by Google

the cyanides without more or less being affected with the same symptoms.

Mr. A. S. BUCK said Mr. Morgan's experience was probably an unusual one. So far as he was concerned, he always found it better to employ a syringe when poisoning a dog.

Mr. R. C. COWLEY said he could fully sympathise with Mr. Morgan's experience, because some years ago he underwent an operation under ether, and now whenever he inhaled ether he had the most disagreeable sensations.

Mr. J. HOCKEN said he had met with somewhat similar manifestations, although not in connection with the cyanides.

The PRESIDENT stated that he had a strong aversion to vanilla, which he was unable to powder without experiencing a severe cold, accompanied by headache.

Mr. A. C. ABRAHAM knew of an assistant who was affected very seriously by powdered ipecac.

Mr. ABRAHAM then read his paper upon

"PHARMACOPŒIA REVISION."

The author first raised a protest against the method of deciding whether an article should or should not be included in the Pharmacopœia by calculating how much of it is used. He thought all preparations should be included in the Pharmacopœia that are of recognised therapeutic value, their inclusion being necessary to insure their being of the requisite standard of strength and quality. The Pharmacopœia is not primarily produced for the use of pharmaceutical students, nor is it very desirable to reduce its size by nominally omitting preparations which are really there. He had in mind the strong tincture of ginger, which although directed to be made for the preparation of the syrup, is not named in the index. Some of the criticisms of the Pharmacopœia are most extraordinary. One man blames the Pharmacopœia for want of uniformity in not measuring all liquids because it measures some. For his part, he thought the Pharmacopœia might facilitate the operations of the practical pharmacist by giving the weight instead of the measure of various liquids. At present the pharmacist has to find out these weights for himself. Who, for instance, in making 4 gals. of liniment of camphor would think of measuring the olive oil? To do so, even in making a small quantity, is a great waste of time, and involves the cleaning of at least one extra vessel; moreover, it would be more satisfactory that the camphor should be present in a fixed percentage by weight; it is now 8 to 29 by weight. The Pharmacopœia could also greatly facilitate operations by stating the exact proportion of water necessary to produce the required volume in such preparations as liquor morphinæ hydrochlor. and liq. strychninæ. In the absence of such directions it is necessary, if accuracy is desired, to wait until the mixture of spirit and water has cooled to the normal temperature before the preparation can be finished—a most unnecessary and troublesome proceeding. As the contraction caused by the mixture of spirit and water is well known, the requisite amount of water might easily be stated. If this practice were adopted, it would be a great convenience in many cases, but especially in the case of dilute hydrochloric and nitric acids, which have to be left for hours to cool.

Aquæ.—Glass (*P. J.*, 65, 16), points out that essential oils (or many of them) are perfectly soluble in distilled water, and do not require the addition of any objectionable impurities such as calcium phosphate. Nothing but a little agitation with water is required for dissolving essential oils in water—even warm water, as suggested by Glass, being unnecessary. Oil of aniseed is, however, quite insoluble in water, and a satisfactory product cannot be made, unless some spirit is used or something employed to suspend the oil.

Syrupus Calc. Lactophosph.—This preparation is said to be perfectly satisfactory, but Mr. Abraham has found it to decompose. He thought the proportion of sugar should be increased.

Syrupus Aurantii Flor.—It has been lately pointed out what an unsatisfactory process is adopted for this. It can be made in five minutes by rubbing 1 lb. of sugar with 8 fl. oz. of orange-flower water and adding 3 lbs. of simple syrup, mixing, and straining—a method he has used for years.

Syrupus Scillæ.—Merson recommends making this in the cold. The speaker used to do this, but gave it up, because he considers that the active principle of squill being a glucoside, it is considerably altered by heat, and although it may be that a preparation made in the cold would be more active than one made with heat, it must be remembered that the object of the Pharmacopœia is the attainment as far as possible of uniformity. It would therefore be undesirable that the syrup should be made in the cold unless such a process were officially recognised, and this should not be done until careful physiological experiments have shown that the unaltered glucoside is actually best for medicinal purposes. The evidence of experience points in the opposite direction, for not only has the syrup always been made with heat, but in making the oxymel acid is used as well as heat, which must greatly facilitate the change of the glucoside. Moreover, the tincture which is made in the cold is very little favoured, and it would therefore appear more than probable that it is the products of the decomposition of the glucoside which are actually wanted in the preparation.

Standardisation.—Lyon suggests that an alkaloidal standard should be fixed for powdered nux vomica, because the Pharmacopœia gives a dose for it. The speaker never remembered seeing it prescribed for human beings, and if they began to standardise crude drugs which are used for horses, the lot of the pharmacist will certainly not be a happy one. Would it not be better to standardise the horses, to discover their susceptibility to the drug?

Tinct. Camph. Co.—Why not use a given weight or measure of spirit of camphor? Then the preparation can be made in few minutes.

Tinct. Opii.—Lang criticises the process for making this. It is a very troublesome process.

Tinct. Valerianæ.—It seems a pity that this tincture has been omitted from the Pharmacopœia. It would have been much better to have omitted the ammoniated tincture, because any prescriber can add sal volatile to the simple tincture.

Unguenta.—Hallberg (*P. J.*, 68, 13), praises the ointments of the British Pharmacopœia unreservedly, but Mr. Abraham wonders whether he would do so if he had the experience of them that British pharmacists had. Some of the ointments are most unscientific and unsatisfactory. Carbolic-acid ointment is especially so, and capsicum ointment is a shocking mess. The paraffin ointment-basis, although a nice preparation can be made of it, is unnecessarily troublesome, and its composition is founded upon a misconception. The idea, he presumed, was that as the paraffins were not capable of becoming rancid they were peculiarly suitable for ointment-bases, but there are plenty of natural products from which a much better base could be prepared, and which are to all intents and purposes absolutely non-irritating.

There has been considerable discussion with reference to the stirring or otherwise of ointments during cooling, but he did not know of any ointment in the British Pharmacopœia that can be prepared in a state of perfection without stirring.

DISCUSSION.

The PRESIDENT said he quite agreed with the protest which had been made in reference to the exclusion of many things from the B.P. With regard to the tr zingib. fort., he thought it a great pity that it was not included in the index. The weighing of thick liquids, such as treacle, would commend itself to chemists when dealing with large quantities. With regard to water of aniseed he said he had found that, by mixing the oil with warm water at about 140° F. and shaking it, a very good product was got; and this had been his experience with aq. anethi as well. With reference to the preparation of the syrup of squills by the cold and by the hot method, he thought the point brought out by Mr. Abraham was most important. It had never struck him in that way before. As to the tr. valerian., he was quite in accord. As to the ointments of the B.P., he was strongly of opinion that, if one were to get three separate men to make three separate batches of ung. hyd. oxid. rub., each would turn out a different product.

Mr. T. S. WOKES said he was quite in accord with the preceding speaker and the writer of the paper with regard to the exclusion of preparations of drugs from the B.P. As to the insolubility of ol. anisi in water, he found a very satisfactory product could be made by agitating the oil with water. In reference to tr. valerian. ammon., his experience was that the compound tincture is the kind most ordered, but during the past week he had a prescription which simply read, "tr. valerian." He had his doubts

Digitized by Google

whether the old form or the new form was to be used, and he would like to know from the meeting whether he would be justified in sending out tr. valerian. simplex or tr. valerian. ammon. in such a case? As to the making of ointments, he was sure that the most lamentable results would follow if the ointments were not stirred.

Mr. J. T. Hornblower said he quite agreed with Mr. Abraham's remarks as to the retention of some of the preparations in the Pharmacopœia, especially tr. zingib. fort. and tr. valerian. He would like to know what had been the general experience in making tincture of opium, as it is now made with a less alcoholic menstruum than before, and without heat, and does not keep as well as previously.

Mr. R. C. Cowley said that soon after the introduction of the Pharmacopœia he had requested Mr. Catford to determine the quantity of water required to make up the acids that Mr. Abraham had spoken about, and in two or three weeks he had worked them out, and they were duly published. As to the waters of the Pharmacopœia, it was a question to his mind whether they were right in using the oils at all, as the flavour of the oil, as a rule, does not compare with the flavour of the drug operated on, and the products of distillation were not always soluble in water. As to the paraffin basis, he thought that possibly it might be an advantage to have a basis which was not absorbed by the skin. He had made the B.P. ointments successfully in porcelain basins, and he thought it would be undesirable to let them set without stirring, as there was a tendency on the part of many chemicals to separate out in patches.

Mr. A. S. Buck said the demand for tr. zingib. fort. was growing, and he thought that it was a mistake to omit it from the present B.P. He found that oil of peppermint readily mixed with water by agitation, and a satisfactory product resulted; but aniseed, dill, and cinnamon were much better when distilled from the drugs.

Mr. P. H. Marsden said he had made large batches of tr. opii for years by the B.P. method, and had never had any instance of a deposit.

A vote of thanks was accorded to Mr. Abraham for his paper.

The paper by Mr. Edwin Dowzard, F.C.S., upon

The Refractive Index of Cod-liver Oil

was then read by the Secretary. The author stated that probably the best test for the genuineness of cod-liver oil is the determination of the refractive index. It is a peculiar fact that Norwegian oil has a higher refractive index than Newfoundland oil. The following table illustrates this. The oleorefractometer was used for the determination of the refractive figure, and the standard oil was standardised against glycerin, as described in the *C. & D.* (vol. lvi., No. 1,044):—

Newfoundland Oil		Norwegian Oil	
Number of Samples	Refractive Figure, 22° C.	Number of Samples	Refractive Figure, 22° C.
3	+42·0	6	+44 0
2	+42·5	4	+44·5
4	+43·0	12	+45·0
4	+43·5	2	+45·5
1	+44 0	6	+46·0
1	+44·5	3	+47·0
		1	+48·0
Total 15		Total 34	

It will be seen that the refractive figure of Newfoundland oil varies between +42 and +44·5, while that of Norwegian oil varies between +44 and +48.

This difference may be of use to distinguish the two oils. For instance, a genuine cod-liver oil having a higher refractive-figure than +44 5 will probably be Norwegian, if it is over +45, the sample is almost certain to be Norwegian. If the figure be below +44, the probability is that the oil is Newfoundland; if below +43 5, it is almost certain to be Newfoundland.

A cordial vote of thanks was accorded to Mr. Dowzard.

Calcium Phosphates.

Mr. R. C. Cowley exhibited under the microscope the following specimens of calcium phosphate, in order to illustrate their easy identification by the use of that instrument.

1. Calcium phosphate from bone ashes which practically consist entirely of amorphous.

2. Tri-calcic phosphate, prepared by mixing solutions of calcium chloride and B.P. sodium phosphate, consisting of di-calcic phosphate ($CaH PO_4$), which is distinctly crystalline.

3. Tri-calcic phosphate prepared by mixing solutions of calcium chloride and tri-sodic phosphate, which is amorphous.

4. The commercial article, consisting of tri-calcic phosphate amorphous, di-calcic phosphate crystalline, and of calcium sulphate, also crystalline.

Glasgow Pharmaceutical Association.

Mr. J. F. Tocher, F.I.C., Peterhead, last week addressed the members of the Glasgow and West of Scotland Pharmaceutical Association on his University education scheme for chemists and druggists. The meeting was held in the Association's rooms on Thursday afternoon, March 20, Mr. W. L. Currie presiding. The address which Mr. Tocher gave differed in some respects from that which he had delivered in Dundee on the previous day, and it was chiefly explanatory of the scheme. After he had delivered the address, the Chairman questioned whether the discussion should be open or not, and to this Mr J. P. Gilmour quickly responded that the private discussion in Edinburgh had been a mistake, and there was no reason why they should not speak freely in public. This view was promptly adopted. Thereupon Mr. Anderson Russell initiated the discussion, and moved a resolution thanking Mr. Tocher, which was seconded by Mr. J. W. Sutherland. Mr. John Lothian followed, stating that although he was not so sanguine about the success of the proposal as Mr. Tocher, he approved of it generally. Mr. David Watson also approved the scheme, stating that the reasons for scarcity of young men entering the trade are long hours and lack of educational facilities. Mr. J. P. Gilmour followed on similar lines, and Mr. T. Maben almost said ditto, but he pointed out that the real drawback to the scheme would be the scarcity of students—his belief being that there would not be enough in pharmaceutical circles in Scotland to support a department in each of the Universities. They could not expect University lecturers to be appointed for two or three students; at any rate, 99 per cent. of students in Scotland would be unable to take advantage of the scheme. Mr. Abbott was of the same opinion, but Mr. Riddell severely criticised these pessimistic views. Mr. Dunlop also spoke in favour of the scheme. The Chairman wound up the discussion by stating that the apprenticeship question would be solved by making shorter hours, and the Pharmaceutical Society fixing a definite period of curriculum after passing the Preliminary examination. He strongly protested against Mr. Glyn-Jones's remarks at the Pharmaceutical Council meeting when Mr. Tocher's scheme was submitted. The resolution was unanimously agreed to, and Mr. Tocher briefly replied.

The foregoing is a telegraphic report received from our correspondent too late for last issue. We are also indebted to Mr. T. Dunlop, Secretary of the Association, for a report since received. The fact that it is not used should not be construed into an attempt on our part to burke discussion. We simply have no room for it.—Editor.

School of Pharmacy Students' Association.

The last meeting of the present session was held on Friday evening, March 21, at 17 Bloomsbury Square, W.C. The attendance was not so good as usual, owing to the absence of most of the Major students, whose examination is close at hand. However, those who were present tackled the "Impromptu Discussions" with the same characteristic vigour which served to bring back the Inter-Pharmacy Football Cup to the "Square." Mr. Harry Martin occupied the chair, and seemed very much at home in that position. The various topics chosen for discussion proved very interesting; several being old friends with new faces. The subject of apprenticeship was responsible for many personal reminis-

Digitized by Google

cences, whilst the division of the Minor, a compulsory curriculum, and a degree in pharmaceutics were items which brought out many varied opinions. "Domestic" affairs also had their turn and led to some amusing speeches. When the contents of the "hat" were exhausted, the CHAIRMAN, in a few remarks, said that he hoped everyone had enjoyed the evening, and, indeed, all the meetings that had been held during the winter. The proceedings were then brought to a close by a hearty vote of thanks to the Chairman.

Festivities.

A Dinner in the Holborn.

The Chemists' Assistants' Association brings together at its dinners as good a representation of metropolitan pharmacy as anything else in the *annus pharmaceuticus*. Seniors are not numerous in the companies; they reserve their strength for the more dignified assembly which gathers in May. The company in the Venetian Chamber of the Holborn Restaurant on Thursday evening of last week numbered about 200, and the President of the Association (Mr. J. W. Peck) had on his right the President of the Pharmaceutical Society, the Vice-President, and Mr. W. L. Howie; Dr. A. P. Luff, and two empty chairs, which Dr. Attfield and Mr. Naylor should have been in, were to his left. By the time the speaking and music commenced the company was as cheery a one as could be wished for; then the barometer steadily began to fall. And why? Because, we think, the Association's toast-proposers were under the impression that set speeches were expected of them. Not a single speech made in giving a toast had got a fourth its length before conversation had become general and reporters had laid down their pencils, the speeches being practically inaudible. The musical part of the programme also should, for such an occasion, be the best obtainable. Last week's "left something to be desired"—if we may use a time-encrusted reportorial phrase. In this annual function the Association has an opportunity that others would be glad to get, therefore we venture upon these criticisms. Already the Dispensers' Association can beat it in the smoking-concert line, and it would be a pity if the C.A.A. allowed some other body to provide the best unofficial pharmaceutical dinner of the year.

After the toast of "The King," Mr. H. S. Coupland proposed "The Medical Profession," with which he coupled the name of Dr. A. P. Luff—a past master in the art of pharmacy. Dr. Luff, in a short, bright speech, said that as a pharmaceutical chemist and a physician they might, perhaps, regard him as a devil's advocate; but he yielded to no one in the high opinion of the mutual interdependence which united pharmacy and medicine. He remembered that Mr. Newsholme had described pharmacy as the handmaid of medicine. It was a wicked thing, perhaps, to dissent from an opinion expressed by the President of the Pharmaceutical Society, but he ventured to think the relationship was not that of maid to mistress, but wife to husband, and, quoting Tennyson, he said that "in the long years liker must they grow." There was, he continued, a dangerous decline in the art of prescribing. He had drawn attention to the faults on the medical side, and he now asked pharmacists to do their best to prevent the growth of a terrible evil and injustice to the public, doctor, and chemist.

The toast of "The Pharmaceutical Society," by Mr. C. E. F. Vallet, was next, the speaker touching upon the Society's membership and the apprenticeship question. Mr. G. T. W. Newsholme, in replying, said he was somewhat troubled that he could not respond on behalf of more than 6,000 members of the Pharmaceutical Society. There were some 16,000 chemists on the register, and he was ambitious to get a much larger membership of the Society. As the President, he had often to interview Government Departments, and was frequently told that he represented only a section of the chemists of Great Britain. The Society were terribly handicapped by not having the entire chemists of the country at their back. If pharmacists generally were not satisfied with the work done, let them alter the Council and try to make them do more in the direction they desired. The Council were not afraid of criticism, and were honestly doing their best to improve the position at present occupied by pharmacists. Referring to the apprenticeship-question, he said that he had recently given his own experience in the pages of THE CHEMIST AND DRUGGIST, but he did not think he was any worse for the training he had then undergone. In order to train a man successfully as a pharmacist, a compulsory curriculum was necessary. Before long the Council might have to ask for their support to get a Bill through Parliament to impose this, and, while he believed in the division of the Minor, he thought it necessary to get some compulsory training previous to coming up for examination.

Mr. Frank A. Rogers proposed "The Chemists' Assistants' Association." He yielded to no one, he said, in kindly feeling towards the Association, which had set itself to do a certain work and had accomplished it. There was an element of danger in this, but the Association must remember that it could not lull itself into a position of false security. The President, in responding, said the C.A.A. had experienced a rise in interest—more, perhaps, on the social than the scientific side—during the present session. The attendances had improved, and they had gained twenty-five new members; but the impromptu discussions and debates were not so well supported as they should be.

The last toast—"The Visitors"—was given by Mr. W. Garsed, and Mr. W. L. Howie replied in a short, humorous speech, and commented on the difficulty of keeping an Englishman away from a good dinner.

The proceedings closed with "Auld Lang Syne."

The Chairmen of the spur-tables were Messrs. Strother, Ellis, Vallet, Coupland, Rogerson, Latreille, and Solomon.

Northampton Dinner.

The annual dinner of the Northampton Chemists' Association took place on March 20, at the Black Boy Hotel, Northampton. Mr. W. McKinnell (President of the Association) presided over a company numbering about thirty, which included Mr. W. D. Mayger (Vice-Chairman), the Mayor of Northampton (Councillor F. G. Adnitt, J.P.), Councillor James Barry, J.P., Dr. A. C. Clifton, and Mr. T. H. Woolston (the three last named of whom were formerly chemists in Northampton), Mr. T. Oldham (Towcester), Mr. C. Bond-Smith (Potton), Mr. Robinson (Wellingborough), and Mr. F. W. Ashton (Idris & Co.). After the royal toasts, Mr. Barry proposed "Success to the Pharmaceutical Society and the Local Association." The Pharmaceutical Society, he said, has accomplished a great work. It has raised the status of the chemist, and so far as its influence went it ensured that qualified persons only should be entrusted with the important duty of dispensing. Mr. Oldham, in supporting the toast, said they did not want to see the stores selling things which only chemists should sell. He hoped that the Pharmaceutical Society and the College of Surgeons could agree, and declare that no chemist should prescribe and no doctor dispense. Mr. North (Northampton) responded to the toast. The Vice-Chairman proposed "The Mayor," and the toast was accorded musical honours; after which his Worship proposed "The President," and paid a high tribute to the personal qualities and business-capacity of Mr. McKinnell, whom he had known for more than five-and-twenty years, to which the President replied. Other toasts followed.

Wakefield Chemists' Association.

The formation of the Wakefield and District Chemists' Association was celebrated by an inaugural dinner, held at the Strafford Arms Hotel, Wakefield, on Wednesday evening, March 19. The chair was taken by the President (Mr. W. Pollard), who was supported by Messrs. W. R. Maud, Vice-President (Pontefract), R. C. Walshaw (Huddersfield), A. H. Waddington (Bradford), J. Wood (Barnsley), S. N. Pickard (Ossett), and a good attendance of members, although, chiefly owing to illness, the number was not as large as it otherwise would have been. "The King and Royal Family" having been toasted, "The Pharmaceutical Society" was proposed by Mr. J. Judge, and responded to by Mr. J. H. Chaplin, the Divisional Secretary. Mr. A. H. Waddington, in proposing the toast of "The Wakefield and District Chemists' Association," congratulated the members on its successful inauguration. Speaking of the suggested formation of a federation of the local Associations in the West Riding, he referred to the misunderstanding which had arisen between the Dewsbury and Bradford Associations, and explained that the attitude of the Bradford Association was not taken out of antagonism to the proposal, but simply

Digitized by Google

from a desire to know more fully the aims and objects before committing themselves to any definite action in the matter. He was in favour of such a Federation, whose object, he thought, should be to influence and foster the work of the Pharmaceutical Council. Mr. W. R. Maud responded in a racy speech, in which he referred to the benefits to be derived from such associations, especially by chemists in small towns and outlying districts. Other toasts were "Kindred Associations" and "The Visitors." The speech-making was agreeably interspersed with songs by Messrs. S. N. Pickard and C. S. Fletcher, who were accompanied by Mr. C. W. Duffin.

An Edinburgh Supper.

The annual supper of the Edinburgh Chemists', Assistants', and Apprentices' Association took place in the Imperial Hotel, Edinburgh, on March 21, when about eighty members and friends sat down to supper. Mr. John Geo. Sclater (President) occupied the chair, and Messrs. William Duncan and William B. Cowie acted as croupiers. After an excellent supper, and the loyal toast, Mr. Donald McEwan proposed "The Pharmaceutical Society." He said the standard of knowledge in chemistry and pharmacy was immensely higher than it was sixty years ago, and for that the Society was in great measure entitled to credit. He mentioned other things that the Society has done, and gave a fresh interest to the vernal Society and Council question by comparing the former to the mass and the latter to the molecule, saying that the molecule might have conceivably different properties from the mass. Mr. Fox, in the course of his reply on behalf of the Society, said one sometimes heard a man denounce to all and sundry his business and everything belonging to it. The very next day that man would be heard complaining that he could not get an apprentice. Could they wonder that he should not? There were many good features connected with their calling, and anyone who took a proper interest in it would find much variety and many things to interest him. The returns might not be very extravagant, but were not to be despised. For one thing, it should be remembered that the qualification was now worth at least 30*l.* a year more than it was, say, thirteen or fourteen years ago. That was undoubtedly due to the way in which the Society had enforced the provisions of the Pharmacy Acts. Mr. D. B. Dott proposed "The Edinburgh Chemists', Assistants', and Apprentices' Association," and referred to the good work and excellent papers which had been read at their meetings. He understood that, like all similar Associations at the present time, they had had some difficulty in keeping the attendances up to the standard of former years. He thought this was rather due to the greater strenuousness of modern life, and to the greater amount of home-work and study for examination. But he thought it a great mistake to stay away from such meetings. The President, in replying, said the Association had been the nursery from which had come many of those who were to-day in the front rank, and carrying on the work of the Pharmaceutical Society and the Trade Association; and they had present the principals of three schools of pharmacy, who were all past-Presidents of their Association. Other toasts followed. Songs were contributed by Messrs. A. Murray, G. H. C. Rowland, R. Butchart, R. Henderson, J. Tait, J. A. Cardno, J. P. Gilmour, and J. P. Gibb; and Mr. J. A. Crighton acted as accompanist.

Glasgow Smoke.

The Glasgow Chemists' and Druggists' Assistants' and Apprentices' Association held a highly successful smoking-concert in the Co-operative Rooms, Glasgow Cross, on March 21. A bright and varied programme of songs and readings was capably carried through by Messrs. Dickson, Dobson, Fyffe, A. Lynn and J. Lynn, McKinnon, Pfeiffer, and Gilmour; and Mr. Mennie made an efficient accompanist. At the close of the fish-supper with which the proceedings began, the Chairman (Mr. J. P. Gilmour) gave a brief account of the past history and services of the Association.

The Following Advertisement appeared recently in a U.S.A. newspaper:—Dear Sirs,—My wife's mother lay at death's door for nearly three years. She took one bottle of your famous "elixir of life" and it pulled her through.

—A Grateful Son-in-law.

"Research-work and Pharmaceutical Advancement."

This was the title of a paper read by Mr. Wm. Lyon to the Chemists' Assistants' Association in Edinburgh on Wednesday evening of this week. It was a rather lengthy piece of writing, in which the author deprecated (to put his point concisely) the selfishness which makes chemists mind their businesses, and not only leave "research" alone, but discourage their assistants from the latter sphere of labour. There are certain "lacks" in the whole matter, however; first, lack of proper training, because apprentices are employed to "work." In this connection Mr. Lyon, who poses as a sort of local and universal critic, referred to what members of the Edinburgh and District Chemists' Association recently said about apprenticeship. After a passing remark on long hours, he suggested that the office-bearers of the Assistants' Association should, before next session, arrange with those of other associations for a concerted movement during the winter. The want of such co-operation, we gather, is the second lack; the third is the lack of facilities from employers to their assistants for the pursuit of shop-experiments—*e.g.*, in regard to the improvement of B.P. galenicals. He thought such work could very well go on with ordinary shop-routine. He also deplored that the laboratories in York Place are not open to researchers. Mr. Lyon proceeded to give his young hearers sound advice as to the necessity for method in their work, and suggested that the pharmaceutical Press should stimulate young workers by publishing lists of subjects for investigation. Chemists' Associations should do the same. The training of apprentices was next touched upon, and in this connection he asked, Why are those firms who manufacture such enormous quantities of medicinal specialities able to find in every other pharmacy an outlet for the produce of their factories? The answer is simple, he said. The pharmacist's neglect was their opportunity. Those manufacturers perceived the change that was taking place in every industry. They saw clearly that progress was the order of the day, and applied themselves assiduously to improving the methods of manufacture, investigating new drugs, and supplying medicinal preparations in a form that would find ready acceptance alike by prescriber and consumer. Had the majority of pharmacists been alive to their interests, they could have kept the production of many of those preparations to themselves. But instead of utilising the knowledge they gained during their student days as a basis for enabling them to find out the most suitable and acceptable forms of supplying drugs, they merely resigned themselves to the subordinate position of being retailers of the produce of those wideawake and energetic manufacturers, little reckoning that by doing so they were allowing a net to be woven mesh by mesh around them, from which they will ultimately find it impossible to free themselves, and thus, bereft of all claim to be considered skilled compounders of medicines, they will become but slaves in the world of industry, instead of being, as they ought to be, pioneers of progress and improvement. Finally, Mr. Lyon referred to the Pharmaceutical Council's encouragement of research, and to the present day rush for sufficient school-instruction to get through the Minor examination.

Recent Wills.

Davison.—The gross value of the estate of Mr. Richard Davison, formerly a chemist and druggist at Driffield, who died on December 4, has been sworn at 16,533*l.* 5*s.*, including net personalty 15,813*l.* 12*s.* 11*d.*

Matterson.—The gross value of the estate of the late Mr. Edward Hardwick Matterson, pharmaceutical chemist, Dewsbury, who died in January, is 8 046*l.*, and the net personalty 7,917*l.* Probate has been granted to his executrix, Mrs. Frances Stuhlmann, sister of the deceased, and the Rev. Charles Walsingham Hamilton, of Broughton, Skipton.

Bradford Chemists' Association.—At a meeting of this Association, held on Tuesday evening at the Royal Hotel, Bradford, the topic was a debate on "Dispensing and Prescribing," introduced by the President (Mr. Arthur Hanson). We hope to deal with it fully next week.

A Fellow sinner.—Not long ago a bishop of stately mien and sanctimonious expression went down to a small country town to lecture. He went to a chemist's shop, and, in a tone that froze said, "Young man, do you smoke?" "Y—yes, sir," replied the trembling youth. "I'm sorry, but I learnt the habit young and I haven't been able to get rid of it yet." "Then," said the great divine, without moving a muscle or abating the awful solemnity of his manner, "you can tell me where I can get a good cigar."

Trade-Marks Applied for.

(*From the "Trade-marks Journal," March* 19, 1902.)

"SAFETENE" (no claim for the word "Safe"); for a chemical for producing gas. By C. H. Worsnop, 5 Carlton Place, Halifax. 243,717.

Device of an egg on end; for nitrates of aluminium, ammonium, calcium, and magnesium, salts of hydroxylamine, and compounds of rare earth, &c. By Dr. O. Knöfler & Co., Strasse 12, am Verbindungs Kanal, Plötzensee, near Berlin. 242,281.

"OPOSOLEO" (no claim for "Opos"); for a medicine. By E. Ruskin, 11 Mount Villas, Lansdowne Hill, West Norwood. 243,782.

Star device with the letters "R A J"; for photographic goods. By G. A. Watson and A. A. Brooks, 81 Tower Buildings, Liverpool. 242,770.

"AREMAC" and "RAYLITE"; for cameras. By T. P. Bethell, 69A Pembroke Place, Liverpool. 243,687 and 243,690.

Device and the word "MIRELLA" (the essential particulars); for a gold paint. By A. E. Guttmann & Co., 102 Fore Street, E.C. 243,323.

"PAROZONE"; for chemicals. By the Parozone Company (Limited), 11 Bothwell Street, Glasgow. 244,149.

"TAMKURIN"; for a medicine. By Parke's Drug-stores (Limited), 173 High Street, N.W. 241,898.

"VINCA" (no claim for "Vin"); for a rheumatic liniment. By W. Morrison, 28 Main Street, Anderston, Glasgow. 243,381.

"VITALOS" (no claim for "Vital"); for foodstuffs. By F. A. Schouten, 102 Fenchurch Street, E.C. 242,962.

"SALVARO"; for foodstuffs. By the Mazawattee Tea Company (Limited), Tower Hill, E.C. 243,932.

"BANANINE" (no claim for "Banana"); for invalids' and infants' foods. By W. A. Jones & Co., 51 North John Street, Liverpool. 244,000.

Device (the essential particular); for a cleanser. By the Washing-made-Easy Cream Company, 128 Broughton Street, Cheetham, Manchester. 244,080.

"COAGULINE"; for a polish. By Kay Brothers (Limited), Stockport. 244,110.

Trade Notes.

THE LATEST NEWS is an attractive window-feature in Messrs. A. & F. Pears' house in Oxford Street, W., tape-telegrams being displayed on a notice-board.

A SPECIAL Easter offer of perfumes, salts, and sachets is made by Vinolia (Limited) this week. It means an extra 10 per cent. on 2*l.* orders, and the offer remains open until April 12.

"DAISY" announce this week a prize painting-scheme, in which 100*l.* is offered in prizes. A portion of the prize-money is reserved for chemists. The scheme is propounded in our advertising columns.

CROWNED TUBES.—The new caps in the form of a crown which Messrs. Marshall (Limited), of 27 Red Lion Square, W.C., have introduced as an appropriate Coronation novelty, enhance the appearance, and probably give the contents a more regal flavour.

MESSRS. PARKE, DAVIS & CO., 111 Queen Victoria Street, London, E.C., will close their offices, warehouses, and laboratories from Thursday evening, March 27, until Tuesday morning, April 1; but a few members of the staff will be in attendance each day to deal with urgent orders for serum, &c.

THE CHESEBROUGH MANUFACTURING COMPANY, Holborn Viaduct, E.C., call attention in our advertisement-pages this week to the decision by the Court of Appeal which sustains the company's contention that "Vaseline" is their property, and that the word may only be lawfully applied to vaseline manufactured by them. Those who put up their own vaseline should be careful on this point, otherwise it may get them into trouble.

"SUCCESSFUL ADVERTISING" is the title of a 2*s.* book of 775 pages, in which Smith's Advertising Agency, 100 Fleet Street, E.C., tell the secret of success. About a third of the book is devoted to articles on the reason why people should advertise; those on "A Voyage to Success" and "Human Nature" are cleverly written. The latter part of the book is occupied with particulars about the various newspapers and magazines published in the United Kingdom.

THE "PHOTOGRAPHIC DEALERS' ANNUAL" has just been published by Messrs. Marshall & Brookes, Harp Alley, Farringdon Street, E.C. It contains a good deal of photographic information, including an interesting article on "Modern Photographic Lenses," by Dr. C. V. Drysdale, and "Workshop Hints," by Mr. A. W. Marshall. An article on the outlook of the British photographic trade for 1902 is distinctly optimistic. The Annual is published at 1*s.*

MESSRS. BRATBY & HINCHLIFFE (LIMITED), of Ancoats, Manchester, are now making their "Orient" soda-water machine in three sizes, to meet all requirements. This machine is specially adapted for use with liquefied CO_2, and being fitted with turnover and syphon-fillers, thereby taking up very little space, it is most suitable for chemists. The cylinder is of strong hammered copper, tinned inside, and the pump is of best-quality gunmetal. The filling-machines can be supplied with or without syrup-pumps.

TREATMENT OF CONSUMPTION.—A new edition has been published of Mr. Congreve's book on consumption, revised by Mr. J. A. Brown. The first edition was published in 1881, and it is stated that 630,000 copies of the work were issued up to the end of 1901. Apart from the fact that the book is intended to tell of the virtues of the "Balsamic Elixir," there are much sound common sense and interesting particulars on the treatment of consumption contained in its pages. The book is obtainable from Coombe Lodge, Rye Lane, Peckham, S.E., and is priced at 6*d.*

CONCENTRATED SENSATIONS.

THE chemist is becoming more of a favourite with the devotees of ephemeral journalism, and the latest interpreter is the genial *Punch*. A New York journal having stated that a drug has been discovered "which induces a feeling of genial benevolence to all men, while having no permanent ill-effects," "Mr. Punch" steps into the nearest chemist's shop, and inquires whether he can be supplied with an ounce or two of "genial benevolence." The polite young man behind the counter said he could, and took the opportunity at the same time to recommend his celebrated Blue Pills for depression. The name conjured up unpleasant remembrances with the blue pill of the elder days, but the chemist hastened to disabuse his customer's mind:—

"Oh, but this is quite a new invention," urged the druggist. "It has nothing in common with the old-fashioned medicine which you name. It is, in fact, a pill for curing a fit of the blues. And it's most effectual. Only this morning a customer called in a state of morbid despair. He was only hesitating, he assured us, between the Thames and prussic acid. We administered a couple of blue pills, and a minute later he was turning somersaults in the street from sheer light-heartedness! Then, again, you might like a bottle of our Decisive Tonic? It's a sure remedy for indecision. People who can't make up their minds swallow a few doses, and their disease is cured. We are expecting large orders for this medicine from members of the Liberal Party. Here you have our Repletion Globules! One of these produces the precise sensations commonly experienced after an Aldermanic dinner. They were freely asked for about Christmas time. Yes, the next bottle contains our Imperial Mixture. The patient who takes it at once feels extraordinarily brave and breezy, and his next purchases, as a rule, are a Union Jack and a volume of Chamberlain's speeches."

For literary gentlemen the chemist recommended his Absolute-misery Tablets, as used by the best known and most prosperous and optimistic writers to reduce the proper environment for dismal Christmas tales. And he continues:—

"Our Remorse Lotion also is much liked. Rubbed in twice a day, it stimulates the most sluggish conscience. Customers use it a great deal in the first week or so of each year, and indigent young married couples give bottles of it to their rich relations. Those bottles? Oh, they contain a beautiful preparation—our Anti-jocular Cure. A sense of humour often is found fatal to success in public life, so——"

This was more than "Mr. Punch" could stand. His reputation for countless years, we assume, would suffer by the sale of this opposition article, so he smashed a whole row of anti-jocular bottles and withdrew.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Monthly Accounts.

Sir,—The correspondent writing in your last issue under the *nom de plume* of "An Ordinary Retailer" gives "a hint to wholesale houses" in reference to "the dilatory and unsystematic manner in which their monthly statements of account are rendered." It is to be regretted that there are wholesale houses who do not render their accounts until the middle of the month notwithstanding such accounts may be due for payment *by the 15th inst*, thereby causing their friends needless and unwarrantable annoyance. I trust, however, wholesale druggists are excluded. I would invite the writer to consider the system under which the despatch of accounts in a large wholesale house has to be carried on. The number of orders annually received may not be less than sixty thousand (in some houses considerably more), and these require a large amount of ledger-posting. As orders arrive up to the last day of the month, ledger-keepers find it impracticable to complete their posting by the last night of the month inasmuch as orders are not completed for one or two days subsequent to their receipt; so it is not possible to close the posting, say, until the second or third day of the month. The usual practice for a house carrying on a business of the size I have indicated is to divide the alphabetically arranged ledgers somewhat thus: A to F, G to O, and P to Z, a clerk being in charge of each ledger. Your correspondent will perceive that with such an arrangement customer "A" is likely to get his account much sooner than customer "F," who will be at the end of same ledger and also "G" earlier than "O" in the second ledger, and "P" prior to "Z." It is not improbable that the ledger-keeper who is fully alive to the desirability of avoiding censure selects a certain few of the firm's friends (who, he imagines, will complain if the account be not received early in the month) for priority in despatch of account. I do not defend an irregular rendering of accounts, for I hold that in all cases statements should be in the hands of the pharmacist, who has been considerate enough to order the goods from a particular house, at least seven days prior to the date named for payment—say, about the 8th of the month. May I hope with this explanation before your writer he will not condemn wholesale drug-houses, at any rate, as being "dilatory and unsystematic," but on the contrary desirous of acting in a businesslike manner in rendering their accounts so that a reasonable time may be given for the checking of same?

Southwark, London, March 25. Charles Umney.

Dewsbury and the Federation.

Sir,—In your issue of to-day you publish a letter from Mr. Merson in which occurs the sentence: "I pass with contempt the insinuation made as to the disposal of subscriptions paid to me on account of the Federation." Let me assure Mr. Merson that no such insinuation exists except in his own mind. My fellow-members are honourable, straightforward, and kind-hearted, and had the slightest shadow of such a malicious invention been apparent, they would have indignantly opposed my resolution. We have no use for innuendo and insinuation at Dewsbury. Those who belong to associations outside pharmacy would have another terror added to life if shallow sarcasms regarding subscriptions were construed into contemptible attacks on the integrity of officials. Such remarks are usually taken, as they are given, in a broad and general sense, and I credited even the Federation with a wider horizon. I am sorry it has been possible for Mr. Merson to pen such a paragraph, as it is clearly the offspring of imagination and personal pique, and is so unwarranted, so uncalled-for, that it puts the rest of his letter out of court. The concurrence of my fellow-members was sufficient proof that there was no personal reflection on Mr. Merson, and I am sure I deeply regret that any words of mine should unintentionally have given him cause to think so. I am, yours faithfully,

Batley, March 22. R. Broadhead.

Concerning Cannabis Indica.

Sir,—The activity of the Edinburgh Branch of the Pharmaceutical Society fills one with amazement, but we on this side of the water are sometimes tempted to silence the shame which we feel at being barren, though with equal opportunities, by detecting a certain tendency to "paper-making." Now, there is no more urgent need in pharmacy than to produce an active or uniform preparation of cannabis indica—a drug whose properties are *sui generis*, and for which there is no known substitute. Yet the able writer on the subject—unless your report does him injustice—did not make the slightest reference to the work which had been done by Marshall and Dixon at Aberdeen, or under Bradbury at Cambridge, to elucidate some active principle in the drug. These exponents seem to show that the extract, prepared according to the B.P., varies enormously in activity, and whilst this is so it is idle to expect that the tincture shall be more uniform. As Mr. Merson suggests, the foreign is apparently of more definite composition, and certainly I have found that the American extracts—largely resinoid, are far more potent than the British. This fact only leads to still more confusion, because I have seen acute poisoning to occur when the patient, for whom the physician had calculated on a B.P. extract, was supplied with about 1 gr. of an American preparation. At the same time, I regard Mr. Merson's suggestion to make an extract with absolute alcohol, and dissolve in spt. ætheris for the tincture, an admirable one. Yours truly,

Dublin, March 20. J. C. McWalter.

Cannabis Indica and Digitalis.

Sir,—My experience of Indian hemp is that medical men find its preparations extremely variable, and several have made up their minds to cease prescribing the drug. I therefore agree with Mr. Merson in saying that "cannabis indica is notoriously an unsatisfactory therapeutic agent," but I am not prepared to follow him when he says "it is generally conceded that its therapeutic value lies in the resin or resins present." If it be the case that the resin is the active principle, how is the fact to be accounted for that the drug deteriorates with age? In a paper on "Extract of Indian Hemp" (*Year-book of Pharmacy*, 1894, page 489) Mr. David Hooper says, "Ganjas always lose their strength when kept for some time, and many dealers in India obtain new supplies annually, and always consider the drug worthless after being kept three years." He also states that "an alkaloid is present in nearly all the fresh samples of ganja: it occurs only in traces in older specimens, and is altogether absent in extracts that have been kept for some years." Whether we have evidence for the belief that the active principle is a volatile alkaloid such as that isolated by Siebold and Bradbury (*Year-book of Pharmacy*, 1881, page 453) is doubtful, but there seem to be good reasons for coming to the conclusion that the active principle is volatile in character. If that be conceded, it appears to follow that the presence of a normal percentage of resin is by no means a guarantee of therapeutic activity. It would be interesting to know whether Mr. Merson has determined if his resins or dry extracts are in any case physiologically active. I ask this question, because it is a fact that while the dose of a reliable extract of Indian hemp is ⅛ gr. to 1 gr., it requires, in order to produce the typical effect, as much as 8 gr. to 16 gr. of so-called cannabine tannate, 1½ gr. to 4 gr. of so-called cannabine alkaloid, and 1 gr. to 2 gr. of cannabinon. It would be interesting to know how the resins compare in this respect. According to Hooper, "the resin contains the active principle," and I venture to think that he would not have used this phraseology if he intended us to believe that the resin is the active principle. The pharmacology and chemistry of cannabis indica are involved in so much obscurity that gravimetric tests are worthless, and absolute reliance can only be placed on a physiological test. A very large proportion—probably one-half—of the cannabis placed on the market is, when tested in this way, found to

Digitized by Google

be physiologically inert, or so weak as to be worthless, and yet this cannabis will doubtless show a normal percentage of resin. What becomes of all this inert drug? If it is manufactured into extract, it is easy to understand why so little reliance can be placed on the preparations of Indian hemp.

Dr. Gordon Sharp's opinion as to the stability of tincture of digitalis is, in my experience, quite correct. If the tincture is made from sound leaves, there is no reason why, with ordinary care, it should deteriorate. Dr. Gordon Sharp admits, apparently, that "our present knowledge of the chemistry and pharmacology of digitalis" is not satisfactory, but it is not clear why on that account he does not "attach any great importance to physiological tests." One would have expected a conclusion the very opposite, especially when we know that the physiological action of digitalis is more marked than that of almost any other drug. If we find that one parcel of leaves gives the characteristic physiological effect, and another fails to do so, there can be only one explanation of the facts. Dr. Sharp's proposed tests are ingenious, but inconclusive, since neither of them proves either the presence or the absence of digitoxin, while anyone having experience of Fehling estimations would hesitate before committing himself to a quantitative figure by means of the second test. Besides, in view of the fact that samples of crystallised digitalin, of the same brand, have been found to vary in physiological activity as one is to four, there is not much comfort in knowing that an indefinite quantity of some glucosidal body is present in any given sample of leaves. Yours, &c.,

Glasgow, March 22. THOMAS MABEN.

Estimation of Fat in Milk.

SIR,—An obvious error occurs in the report of my "Note on the Estimation of Fat in Milk" in your issue of to-day—an error for which I am responsible, and which I shall be glad if you will correct. For "100 c.c. of milk" read "10 c.c." Yours faithfully,

Birmingham, March 15. GEO. E. PERRY.

More Spade-work.

"I am informed," writes a far from ordinary correspondent, "that a distinguished member of the Upper House has in contemplation the introduction of a measure to make vaccination with Imperial matter compulsory. He has been taking lessons in the art of inoculation, and I send you a sketch which a Lobby artist made on the spot. I send you

the information for what it is worth." This must not be taken as a precedent. If all our subscribers were to foist their political views upon us in this taking fashion, we should be in perpetual hot water.

Volunteer Compounders.

SIR,—In reference to "Late Compounder R.A.M.C.'s" letter in your issue of March 15, permit me to say that if he had taken my advice as published in *C. & D.* at beginning of the present war he would not have been treated as he has been. I detailed my experience of the War Office and how I volunteered as compounder on condition that I obtained a commission, as I considered that I was as much entitled to the latter as the average doctor; but as the War Office obtained their compounders—good, bad and middling—in the same way as they obtained their private soldiers—by enlistment—I do not think, under the circumstances, "Late Compounder R.A.M.C." has any right at all to murmur at the treatment he received. Patriotism is all very well in its way, but what is sauce for the medical and surgical goose should also be sauce for the pharmaceutical gander; and if the War Office again want qualified men to do their compounding, I hope "Late Compounder R.A.M.C." and other patriotic enthusiasts will give them a wide berth.

Yours truly,

PHARMACEUTICAL CHEMIST. (179/50.)

English Assistants in Paris.

SIR,—The disappointing experiences of several of my comrades who are English assistants in the so-called English pharmacies in Paris has induced me to send you a few facts that should interest those who are anxious to obtain positions in that city. Forewarned is forearmed, and it is well to know the real state of affairs before throwing up a good situation in England for one that seems equally good, or even better, in Paris, with the object of learning French pharmacy and the language. The latter objects are frequently frustrated, as in the English pharmacies nothing but English is spoken and there is little foreign pharmacy practised. First, as to salary: one commences usually with 250f. a month outdoors (a little under 10*l*); but, as the cost of living is considerably higher than in England, it is hardly equal to 8*l*. Living at Cannes and Nice is less expensive. Again, living in hotels and dining at restaurants have none of the comforts to be found in English "digs.," and as *déjeuner* (or lunch) cannot be had in the restaurants until 11 A.M., or can only be had before that by paying double or treble the price in the smaller shops (such as the creameries), it is necessary to arrange that the meal-time allowed does not come before that hour. It must also be remembered that (especially in French pharmacies where "English" business is carried on as a side-line) Sunday is counted a working-day, so that "a half-day once a week" may mean Sunday afternoon. Assistants should also make arrangements for holidays, otherwise none are provided (except at assistant's expense), as well as for such public holidays as Easter, Christmas, or the corresponding ones in France (*Paques*, *Mi-Carême*, *Mardi Gras*, &c.). Arrangements should likewise be made to obviate the assistant doing more than his own share of night-duty without recompense, for it often happens that a fellow-assistant falling ill, or a new assistant not knowing the language or the shop, the one who is left finds himself saddled with all the night-work with no extra remuneration; and, as the sleeping-accommodation is abominable in nearly all French pharmacies, one gets very little rest. I hope these hints will prove of service to those looking for situations as assistants in Paris.

Yours truly,

QUITE ENOUGH. (183/8.)

Dispensing Notes.

Excipient Wanted.

Ferri arseniatis	...	...	...	gr. $\frac{1}{12}$
Alumini chloridi	...	...	...	gr. iij.
Ext. nucis vom.	...	...	...	gr. $\frac{1}{2}$

Ft. pil. j. Mitte xxxvj.

A medical practitioner submits the above to our readers for solution. The pills deliquesce.

Student (186/68) also sends the following:—

Ext. belladonnæ	...	...	...	gr. $\frac{1}{4}$
Alumini chloridi	...	...	...	gr. iv.

Ft. pil.

We have suggested kaolin-ointment as an excipient, but would like dispensers to experiment. Aluminium chloride is being used with success in the treatment of locomotor ataxy, and more will yet be heard of it.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

179/45. *Eau de Cologne.*—You may call a medicine blood-beans, if you like, and you will infringe no one's rights so long as you do not produce a colourable imitation of his goods.

179/28. *H. H.*—Your informant is wrong. The headache-powder, being an entire drug, is not liable to medicine-stamp duty. Reference to our DIARY settles such questions as this.

174/2. *Forma.*—Of your labels the following are liable:—Teething-powders, soothing-cordial, indigestion-mixture, quinine-and-pennyroyal mixture, cough-balsam, purifying mixture, tonic elixir (on account of the handbill, but submit the label to Somerset House). The handbill in which your celebrated mixtures are advertised makes them all liable.

174/51. *Venturesome.*—Eight ounces of rectified spirit may be sold at a time for medical or scientific purposes.

180/64. *Vix.*—As a Minor man you may use the letters L.P.S. after your name.

180/13. *Infans.*—Your cooling and fever powder is liable to duty because it is "guaranteed not only the best but the safest powder in the world." The wording on the wrapper makes the soothing-syrup and headache and neuralgia preparations also liable.

181/2. *North.*—(1) The non-liable wording on a label may be exactly repeated as a handbill or poster without involving liability. (2) The quinine-and-iron tonic label is one which has been considered to be not liable.

180/48. *Optics.*—(1) If your headache and neuralgia powders are a mixture, and not an entire drug, the words "if necessary," in the phrase "repeat in twenty minutes if necessary," make them liable to duty. (2) For the manufacture of orange-wine a "maker of sweets" licence is necessary. It costs 5*l.* 5*s.* a year. Refer to your local Inland Revenue supervisor for particulars as to application.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

156/4. *A. R.*—Clear Ginger-beer is made by the use of a soluble essence. If ginger-beer is brewed it is always more or less cloudy.

166/11. *Texlo.*—(1) Almond paste for the hands:—

Blanched almonds	1½ lb.
Rice-powder	4 oz.
Orris-powder	6 oz.
Spermaceti	½ oz.
Oil of almonds	2 oz.
White soft soap	2 oz.
Essential oil of almonds	1 dr.
Oil of bergamot	3 dr.
Otto of rose	½ dr.

Beat the almonds to a paste, add the spermaceti, oil of almonds and soap previously melted, then the powders and perfumes. The mass to be beaten till quite smooth, and the consistency adjusted by adding more powders or glycerin.

(2) Ammonium chloride alone is not much use as an addition to a freckle-lotion. (3) The address of Kelly's Directories (Limited) is 182 High Holborn, W.C. (4) Try the Kitson Lighting Syndicate, 1 Victoria Embankment, E.C., for gasoline-lighting system.

156/13. *W. A. S.*—Wine of Cod-liver Oil is prepared by dissolving "morrhuol" 6 oz. in 1 gallon of sherry. Chapoteaut, who discovered this so-called active principle of cod-liver oil, prepared it by treating the oil at a low temperature with 5 per-cent. aqueous solution of sodium carbonate, then shaking it with alcohol (90-per-cent.). The alcoholic solution, separated and evaporated, leaves "morrhuol," of which 0·02 gramme is equal to 5 grammes of oil. (See also *C. & D.*, December 9, 1899, page 962.)

153/4. *Delob.*—Spirit of Ammonia when last official in the P.L., 1836, was made by distilling a mixture of ammonium chloride, potassium carbonate, and spirit, and was an alcoholic solution of ammonia. The term is now applied to liq. ammoniæ B.P.

159/19. *Rusa.*—Horse-powders.—These do not contain arsenic, but are composed as follows:—

Ferri sulph. exsic.	j.
Pulv. nucis vom.	gr. xxx.
Pulv. glycyrrhizæ	ʒiij.

Ft. pulv. pro dosis.

172/21. *Graph.*—The only way of Mending Indiarubber Water-bottles is to patch with a piece of macintosh sheeting using rubber solution as the cement. The place where the patch is to be applied must be first cleaned with fine sand-paper after the manner of mending cycle-tyres.

172/52. *E. R. B.* finds there is a demand from lady customers who have used hydrogen peroxide for some years for something to restore the "rich auburn colour" when grey hairs begin to appear. Potassium permanganate does not answer very well. Perhaps some of our readers with experience in such matters can suggest something better.

168/42. *W. P.*—Nursing as a Profession for Girls.—The information you require is given in "The Nursing Profession: How and where to Train," 2*s.* (Scientific Press).

170/68. *J. M. N.*—To Bleach Feathers yellowed by age immerse them in a warm solution of peroxide of hydrogen.

159/5. *W. B. H.*—Black-line Ferric Process.—The sepia-tones of the paper you prepare could probably be changed to black by a bath of gallic acid. It may require a small proportion of ferric chloride to be used in the sensitising solution. Try a few experiments on these lines.

162/12. *Gas-burner.*—(1) As the burner used with an incandescent mantle is on the Bunsen principle, it burns less gas than the ordinary burner. It is necessary, however, to frequently renew the mantles if the maximum light is desired from a Welsbach mantle. (2) Mica lamp-chimneys are best cleaned with spirit.

163/69. *J. B. C.*—Books on Bacteriology.—Crookshank (E. M.) 'Text-book of Bacteriology," 21*s.*, and Curtis's "Essentials of Bacteriology." Read also the "Bacteriological Notes," by Dr. W. H. Martindale, in the *C. & D.*, March 30, 1901, page 511.

166/17. *Porcelain* (Shanghai).—There is no book published on the manufacture of malt-extract.

180/73. *D. & A.* (Milan).—The medicinal properties of *Hepatica triloba* (liverwort) are demulcent and astringent. It was formerly thought to possess diuretic properties, but is now valued on account of its mild mucilaginous astringency. The infusion is taken *ad libitum* in fevers, bleeding from the lungs, and coughs.

164/35. *R. S. G.*—(1) Pile ointment for collapsible-tube packing:—

Ext. hamamelidis liq.	ʒj.
Liq. hamamelidis	ʒj.
Adipis lanæ	ʒvj.
Ung. camphoræ	ʒiij.

M.

(2) The exact process of using liq. antim. chlor. for blueing gun-barrels is a trade secret.

178/13. *F. C.*—Powders to Make a Lotion for horses' swollen legs.—The three packets of powder which are added to 1 gal. of water to form a lotion consist of (1) alum, (2) lead acetate, (3) zinc sulphate. In each case the chemical is mixed with colouring-matter which responded to the tests for terra rosa.

Digitized by Google

174/8. *Tabules.*—The hire of a bed-pan for a month would be from 1*s.* to 2*s.* 6*d*, depending on the value of the article. Urinals, being less expensive, would be charged a minimum of 1*s.*

164/10. *Specific.*—Neuralgia mixture like your specimen:—

Tr. gelsemii	...	...	...	℥j.
Exalgin.	...	...	...	gr. vj.
Tr. perrionis	...	...	...	℥ij.
Pulv. tragac. co.	...	...	...	gr. x.
Syrupi	...	...	...	℥iss.
Ol. sassafras	...	...	...	♏iv.
Alcohol.	...	...	...	℥iij.
Aq. ad	...	...	...	℥iij.

Dose for an adult: One tablespoonful.

173/51. *W. & R. H.*—Your inquiry for recipes for "pastes and colours" is too laconic. Do you refer to the manufacture of lozenges or paints?

177/35. *V. C.*—The "aniline crystals" used for colouring white flowers are ordinary aniline dyes.

179/10. *Inquirer.*—There is no drug-mill obtainable at the price you mention. Probably a coffee-mill would meet your wants.

177/38. *W.*—Veterinary Embrocation.—This we find from analysis to be composed substantially as follows:—

Ol. terebinth.	...	...	...	℥j.
Liq. ammoniæ	...	...	...	℥ij.
Ol. origani	...	...	...	℥ij.
Gum. guaiaci	...	...	...	℥ij.
Alcohol.	...	...	...	℥iij.

M.

The play of colours is due to the action of the ammonia on the guaiacum.

177/45. *Diabetic.*—The "food" for making diabetic bread is gluten prepared from wheaten flour. There are two ways of making it—one, the "sour" process, in which the starch granules are freed by a process of fermentation, and another which consists in treating the material with dilute solution of caustic soda—but these cannot be profitably carried out on a small scale.

173/18. *London.*—Condition-powder for Horses as your sample:—

Pulv. potass. nitr.	...	...	...	℥ij.
Pulv. resin.	...	...	...	℥j.
Pulv. santali rub.	...	...	...	℥j.
Pulv. fenugræc.	...	...	...	℥j.
Pulv. glycyrrh.	...	...	...	℥ij.
Pulv. lini placent.	...	...	...	℥v.

The dose of the mixed powder is a tablespoonful.

176/54. *F. S. H.*—You must give some information about the "lotion" before we undertake to examine it.

173/62. *A. M.*—Boot-polishing Paste.—The basis of this is ceresine 2 parts, turpentine 3 to 4 parts. The black colour is due to ivory-black and aniline black.

165/38(*Velox*) and 176/55(*Polish*).—Metal-polishing Paste. The difficulty in matching your samples of metal-polish is to get the same basis, which is a natural product. The following represents the general composition of such polishes:—

Soft paraffin	...	...	...	℥ij.
Crude oleic acid	...	...	...	℥iv.
Kieselguhr or precipitated silica	...			℥viij.

Mix.

A mixture of paraffin-wax and heavy paraffin oil is sometimes employed in place of the first ingredient.

180/35. *Druncree.*—We do not know of any process of rendering paraffin-wax transparent.

177/69. *Mac.*—Spermaceti ointment is not a good basis for hydrarg. oxid. flav., as the latter is more easily reduced in presence of fatty acids than when mixed with petroleum jelly. If the oxide is triturated well with liquid paraffin instead of olive oil, it keeps the colour better.

173/58 *Rusticus.*—The electro-magnetic machine needs recharging.

180/53. *Senna.*—Ess. Sennæ Dulc.—See *C. & D.*, March 9, 1901, page 422.

179/2. *Viola.*—If a man holding a Minor certificate wants to become an engineer, he should start by working for about two years in a mechanic's shop, incidentally taking out a few evening-classes at some technical college. Electrical engineering is overdone at present, and is likely to be for some time.

168/45. *Horehound.*—(1) The dose of balsam of horehound ("Pharmaceutical Formulas," page 449) for children of 14 is 20 to 30 drops. It is not a suitable mixture for infants. (2) Cheap Harness oil is made by mixing 2 oz. of bone-black with a pint of linseed oil. (3) Drop-black is a variety of lamp-black. (4) The Dropsy-pills contain colocynth and rhubarb, but it is not possible to accurately analyse them.

173/24. *H. W. S.*—Some applications used for "nourishing and enlarging the female breast" are made with a basis of lanolin, others glycerin. The formula for toilet-lanolin given in the *C. & D.*, February 22, page 320, represents the kind of thing to compound, but needs selling under a fancy name.

92/30. *J. A. R. B.*—The composition of Higgins's mountant was explained in the *C. & D.*, February 23, page 338, where abstracts of the several patents under which it is prepared were given. THE CHEMISTS' AND DRUGGISTS' DIARY for 1902 contains two representative formulæ for mountants.

174/67. *Plumbago.*—Stove-polish.—Turpentine is used for mixing with blacklead to make a stove-polish, but you will find three modern formulæ in the *C. & D.*, January 11, page 68.

167/8. *S. L. R.*—Disinfecting-fluid to turn milky with water.—The following is a better formula than the one given January 18, page 95, the soap formed enabling more cresols and phenols to be worked in: Boil together 1 gal. crude carbolic acid (or coal-tar oil if cheapness is required), palm oil 1 lb., soda-ash 3 lbs., and water 2 gals., for two hours, replacing water so as to maintain a volume of at least 2½ gals. Set aside for several days, and decant the clear brown syrupy fluid. Further hints on this subject may be gleaned from "Pharmaceutical Formulas," pages 347 to 349.

168/23. *Boncs.*—Instruction in Radiography is given by the suppliers of the apparatus (H. W. Cox, Limited, Reynolds & Branson, Watson & Sons, and A. W. Isenthal). Purchasers of apparatus are instructed free.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

186/71. Maker of "Herno" brand of trusses.

185/63. Makers or agents for Lyroll's sheep-drench.

ELLEN KENWARD, of Much Birch, Ross, Herefordshire, has been committed for trial on a charge of attempting to poison her daughter with phosphorus.

SEVERAL M.P.s have brought in a Bill to make provision for an additional Bank Holiday, to be called "Empire Day," in commemoration of her late Majesty's reign. The Saturday preceding the first Monday in August has been chosen as an appropriate day, so as to give a clear holiday between the Friday preceding the first Monday in August and the following Tuesday. Mr. D. A. Thomas has, however, "blocked" the Bill by a sarcastic motion to the effect that, recognising the great and growing disposition of large masses of the people for larger opportunities of leisure in order to mark their sense of the magnitude of the British Empire, and the impossibility of their doing so adequately upon a single day, the House should decline to deal with the important question of further public holidays in a piecemeal fashion.

At the Counter.

Two Blackheath Recipes, sent to us by Mr. Wm. S Fulleylove, are too good to spoil by comment:—

1*d.* opperdoldock
1*d.* oile riggani
1*d.* kamferated oile
1*d.* armoniam

And will you please to put a corke because mother says we mussent drink it.

1*d.* of Oyan
1*d.* of Finigy
1*d.* of Ground Aniseed
1*d.* of Block Brimston

Pleas Put seperate.

Varieties of Ipecacuanha.—The following are some of the recent variations received in the popular orthography of this useful domestic remedy:—"Iipquanee," "ekyoupeckyouana," "impecunia," "epicaquany."

Miscellaneous "Posers."—The following require a little thinking out: "Phinegig," "tincty of aradin," "oile of gumerter," "pogroc, sup of popies, on delive for caught," "rush and tallows," "one penth of buf colen to pot in whitin to do a woll," "carstra," "cascrie," and "amalgated potash."

Variations, More or Less Familiar.—These are ingenious, but easily recognisable: "Canverated," otherwise "cafateomerite oil"; "okey-pokey," likewise "tripicia"; "bitter Holloways," also "bitteralerwase"; "spipity," or "sipity"; "barx," "queenen tonicked," "sweet manrer." Our old flame Miss "Sulpher McNeisia" is still to the fore, while "consecrated decoction of aloes" has been inquired for.

From Manxland.—A subscriber in the Isle of Man sends some curiosities. For instances: "Vigner," "sulvita," "coruk eulher," "kianpods," and "cremata." The following is interesting as showing the abnormal ages reached in the island: "4 worm Powders 1 20 years 1 for 30 2 for 40."

From Tyneside.—This locality is usually productive of something piquant in counter requests. Two varieties of guaiacum wanted were "gu acum" and "guckrum," respectively. A Hull man desired "chronic cether," while a Newcastle sufferer wanted "tinker ben oil, mair oil, actifort'—a mysterious mixture, whose composition we confess to being unable to solve. Another North Country man wanted "ointment for ringworm for a worm"—evidently a case of misplacement of words.

The following request, sent us by a Whitby Bay pharmacist, illustrates a Northumbrian's idea of high-class pharmacy:—

Aw want sum oh them things for ha hawfu heedake. Aw de no ken what ye call them exactly but its Fanny sumthink, just like twa soup plates klagged togither, ah get em in the Toon 1*d.* each.

Two Puzzlers.—The following are beyond us: "Please give him something to cure eirgelia in the head." Unless "eirgelia" is neuralgia in a totally new disguise, we give it up. The second is, "1 bottle fanen Arr spls drops." The recipient of this order sent Fenning's rheumatic and erysipelas drops, and doubtless he was right.

Aged Scotchman to English apprentice newly arrived: "I say, my mon, can you gie me onything for the pap o' ma hass? Its doon; and when ye're aboot it a'll tak' a penny's-worth o' caddis, and a boax of hog's laud." Collapse of E. A., who upon his recovery after a long convalescence learns that "pap o' the hass" = uvula, "caddis" = lint, and "hog's-laud" or "swine's-seam" = lard.

Royal Institution.—The lecture arrangements after Easter will include three lectures on "The Oxygen Group of Elements," by Professor Dewar. The Friday evening meetings will commence on April 11, when Professor Dewar will deliver a discourse on "Problems of the Atmosphere." Succeeding Friday evening discourses will be delivered by Sir John H. A. Macdonald, Dr. J. Mackenzie Davidson, Sir Robert Ball, Sir Benjamin Baker, Professor A. E. Tutton, and others.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: March 26.

Business has slackened down this week in view of the holidays, and there is little new to report. The chief alteration has been a substantial advance in glycerin, and should there be a speedy termination of the war in South Africa a further advance may be looked for. Cod-liver oil continues its upward movement, but no appreciable amount of buying has yet taken place. Quinine has ruled quiet, and no activity is expected until after the cinchona-sales at Amsterdam next week, when only a moderate quantity will be offered. Most of the cheap lots of Cartagena ipecacuanha have been bought for United States account, and of cannabis indica a fair quantity has changed hands at unaltered rates Gamboge has advanced as expected, and senega is very firm. In chemicals, sulphate of ammonia has advanced owing to short supplies. Sulphate of copper is lower, and both arsenic and borax are on the easy side. The following are the principal alterations of the week:—

Higher	Firmer	Easier	Lower
Ammonia sulphate	Cloves (Zan)	Oil, castor	Copper sulphate
Condurango			Pepper (white)
Glycerin			
Oil, cod-liver			
Pepper (black)			

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from March 20 to 25, inclusive:—Aniseed (Russ.), 31; areca, 10; argol (@ Venice), 204; balsam copaiba (@ Maranham), 11; benzoin (@ Singapore) 146, (@ Penang) 36; birdlime (Jap.) 73, and 44 *in tr.*; buchu, 52; cantharides (Russ.), 10; castor oil (@ Italy), 15; chillies (Jap.), 400; citrate of lime (@ Messina) 473, (@ Palermo) 21; citric acid (@ Messina), 14; cod-liver oil (@ Tromsoe) 50, (@ Aalesund) 110, (@ Bergen) 325, (@ Hamburg) 10; dragon's-blood, 14; drugs (@ Monte Video) 19, (@ Rio) 35; essential oils (@ Messina) 545, (@ Palermo) 40; ginger (Jap.) 334, (China) 1,656; gum, unenumerated (@ Mollendo), 93; gum arabic (@ Alexandretta), 30 cs.; insect-powder (@ Trieste), 50; lemon-juice (@ Messina), 20; nux vomica (@ Cochin) 800, (@ Calicut) 800, (@ Tellicherry) 200, (@ Mangalore) 933; opium (@ Colombo) 24, (@ Hong Kong) 20, (@ Constantinople) 8; poppyheads (@ Antwerp), 4; potashes (@ Portland), 26; quicksilver (Ital.), 500; sandalwood (E.I.), 800 packages; senna (@ Suez), 25 *in tr.*; shellac, 933; squills (@ Messina), 13; sulphur (@ Catania) 1,100 bags and 66 barrels 500 tons, (@ Girgenti) 400 tons; tartar (@ Rotterdam) 97, (@ Spain) 10; tartar emetic (@ Hamburg), 10; wax, bees' (E.I.) 23, (Mor.) 31; wax, ceresin (@ Amsterdam) 30, (@ Stettin) 35; wax, Japanese, 20; wine-lees (@ Palermo) 1,161 bags, (@ Messina) 125, (@ Catania) 214.

Aloes.—A few cases of the Socotrine offered last week have since been sold at 75*s.* per cwt. for good pale but soft hepatic in tin-lined cases.

Benzoin.—The arrivals this week include 66 cases and 80 cases from Singapore per ss. *Stentor* and *Shanghai* respectively, and 36 cases from Penang.

Digitized by Google

CARDAMOMS.—The exports from Ceylon from January 1 to March 3 were:—

	1902	1901	1900	1899
Lbs. ...	121,458	74,656	106,318	95,827

CINCHONA.—The auction to be held on April 3 will consist of 6,401 bales and 379 cases, weighing 620,158 kilos., and containing 30,294 kilos. quinine sulphate, or an average for the manufacturing bark of 5·39 per cent., against 5·27 per cent. for February, and an average of 5·45 per cent. for the ten auctions of 1901.

COCAINE is very firm but unchanged at makers' quotation of 17*s.* 9*d.* per oz. The stocks of crude at Hamburg and the factories continue to be well held, and makers have paid full to dearer prices.

CONDURANGO is dearer at 75*s* per cwt., c.i.f.

COPPER SULPHATE is lower, at from 18*l.* 15*s.* to 19*s.* 10*s.* per ton. spot, according to brand.

DRAGON'S-BLOOD.—The *ss. Stentor* and *Shanghai* have brought 9 and 5 cases respectively from Singapore.

GALLS.—Chinese are quiet with sellers at 51*s.* per cwt. near at hand, and 50*s.*, c.i.f., April-May shipment. For Persian, 62*s.* 6*d.* spot is asked.

GAMBOGE.—For good pipe 16*l.* 10*s.* per cwt. is now quoted.

GLYCERIN.—Crude glycerin having advanced several times of late, the refined article has also advanced, and in ½-ton lots is now quoted 68*s.* per cwt. up to 72*s.* for double-distilled English, sp. gr. 1·260. A further advance is expected owing to the trend of events in South Africa.

LIME-JUICE.—The paragraph which appeared in our market report last week in reference to a parcel of lime-juice described as "unracked Montserrat," ought to have read "two casks, *ex* Montserrat."

MENTHOL.—Quiet. A little is offered at 13*s* per lb., but for Kobayashi in case lots 13*s.* 6*d.*, spot, is asked.

OIL, CASTOR.—Small sales of Calcutta seconds have been made at 3*d.* per lb. Medicinal French is easier, being quoted 31*s.* 10*s.* per ton, and first-pressings 29*l.*, in barrels, ex wharf. Belgian is also easier at 26*l.* for first-pressings, ex wharf.

OIL, COD-LIVER.—Our Bergen correspondent writes on March 22 that the reports from the fishing districts this week are very unsatisfactory, partly owing to bad weather and to the decreasing quantities of cod on the fishing-grounds. As usual, the livers are growing poorer as the season advances. The market is very firm, and best non-congealing medicinal oil cannot be obtained under 90*s.* per barrel, f.o.b. Bergen, and in some instances holders are asking higher than this. The exports from Bergen to date amount to 2,189 barrels, against 2 669 barrels at the same time last year. In London prices have advanced in sympathy with Norway, but as yet there has been no general buying. From 96*s.* to 105*s.* per barrel, c.i.f., is quoted, according to brand.

OIL, LAVENDER.—Holders are now asking higher rates for best Mitcham oil, and 26*s.* per lb. is the price of one dealer.

OIL, LEMONGRASS.—Business has been done privately at 6*d.* per oz., spot.

OIL, OLIVE.—The olive-crop of Andalusia is unusually good this year (says American Consul Ridgely, of Malaga), and the output of oil in consequence will reach large figures, about 3,500,000 arrobas (87,500,000 lbs.), or some 37 per cent. more than in 1899, 1900, or 1901. The opening prices for Andalusian oil this season were from 8 to 9 pesetas per arroba of 11½ kilos. (25.3 lbs.); but, owing to the very short crop in Italy, these prices have slightly increased, being to-day from 10 to 10⅛ pesetas per arroba. These prices are 30 per cent. under those of last year, when there was a very small crop. Italian oil exporters, in order to supply their customers in the United States and elsewhere, have found it necessary to come to this market for oil, and some of them are even exporting direct from here to New York. Malaga is sending her olive oil this year principally to Italy, Russia, France, Germany, England, Holland, Norway and Sweden, and the United States. The oil now being pressed is of an excellent quality, both in colour and taste, and much superior to the product of the three previous years.

OIL, SPEARMINT.—HGH brand is quoted 7*s.* 6*d* per lb. spot.

OPIUM.—There is practically no business this week, and all descriptions are unchanged.

SMYRNA, March 14.—The sales this week amount to 12 cases of Yerli talequale, and 4 cases selected Karrahissar talequale, at the equivalent of 7*s.* 8*d.* per lb., f.o.b. The principal holders here are rather indifferent as to selling at recent rates, as the weather has turned colder again. This slightly firmer tone is not expected to last long, as it is quite anticipated that weak holders will shortly be in need of money. The arrivals to date amount to 3,149 cases, against 3,956 cases at the same time last year.

CONSTANTINOPLE, March 21.—The recent severe cold has passed away, and the country is once again enjoying spring-like weather. So far as we can gather some little damage was caused by frost, but nothing of any importance. The market is steady, and same applies to Smyrna, where United States buyers continue to operate. The week's sales amount to 3 cases "druggists'," at 7*s.* 8*d.* per lb.

ORRIS.—Values remain very low, Florentine offering at from 22*s.* to 28*s.* per cwt., c.i.f., according to quality. In another direction a sale is reported at 22*s.* 6*d.*, c.i.f., for sorts. According to importers the crop will be considerably less this year, as the recent low prices do not of course pay cultivators.

OTTO OF ROSE.—Reports emanating from two sources have been received in London this week stating that the recent frosts in Bulgaria have caused some injury to the growing rose-trees, but it is not expected to be irreparable. One London agent quotes finest pure at 18*s.* to 19*s.* per T. oz., according to quantity.

QUININE.—Practically no business is reported this week from second-hands, but prices are firm and show no change, German sulphate on the spot being quoted 1*s.* 2*d.* per oz. Howards' quotation remains unchanged, but Whiffen's was advanced ¼*d.* last week in conjunction with German. Quinine salts have also been advanced.

SEEDS.—Russian *Anise* is very slow of sale at 20*s.* to 21*s.* per cwt. Dutch *Caraways* are quoted 21*s.* per cwt. Turkish *Canary* is steady at 37*s.* to 37*s.* 6*d.* per quarter. Morocco *Coriander* maintains its value at 9*s.* 6*d.* per cwt. *Cumin* is firm at 26*s.* per cwt. for Morocco, and 31*s.* for Malta. *Fenugreek* is slow at 7*s.* 6*d.* per cwt. for Morocco. Fine *Linseed* is selling at 56*s.* per quarter for Dutch.

SPICES.—*Pepper* is dearer for Singapore black, owing to firmer advices from abroad. The spot quotation has been raised to 5 13/16*d.* per lb., and the same price is asked for March-May shipment. On the other hand, white is rather lower; business has been done at 9 5/16*d.* per lb. for Penang to arrive. The quotations on the spot are 9¼*d.* for Penang and 9¾*d.* for Singapore. *Zanzibar Cloves* are firmer at 3 1/16*d.* per lb. for March-May delivery, and 3 13/16*d.* for June-August.

Heavy Chemicals.

The general tone of the heavy-chemical market remains practically unchanged from that mentioned in recent reports, and this applies both as regards the volume of business passing and general ruling quotations. At all the main centres the feeling is much the same, whilst a steady but rather quiet demand is being experienced. Contract deliveries are for the most part being well taken up, and manufacturers' stocks are not allowed to become very heavy.

ALKALI-PRODUCE. — Bleaching-powder and caustic soda still keep on the quiet side. Other products of this branch remain unchanged in demand and value.

SULPHATE OF AMMONIA, with good demand and somewhat short supply, steadily maintains a very firm tone, and ruling quotations are now higher than last given. Beckton, 11*l.* 12*s.* 6*d.*; April-June delivery, 11*l.* 12*s.* 6*d.*; Beckton terms, 11*l.* 12*s.* 6*d.*; London, 11*l.* 15*s.* to 11*l.* 17*s.* 6*d.*; Leith, 11*l.* 17*s.* 6*d.*; and Hull, 11*l.* 12*s.* 6*d.* to 11*l.* 15*s.* Exports from Leith last week amounted to 985 tons.

GREEN COPPERAS shows no decline in demand, and the firm tone ruling for some time past is easily and steadily maintained. Best Lancashire makes, 42*s.* 6*d.* to 45*s.* per ton, f.o.b. Liverpool. Welsh, 13*s.* 6*d.* to 15*s.* per ton, in bulk, free on rails.

CALCIUM CHLORIDE.—Rather quieter at 60*s.* to 62*s.* 6*d.* per ton, f.o.b.

RECOVERED SULPHUR keeps in brisk request, and late higher figures are steadily maintained, 5*l.* 5*s.* to 5*l.* 10*s.* per ton, in bags, free on rails.

SATIN WHITE.—In fair consumptive demand at 5*l.* to 5*l.* 5*s.* per ton, in 6 to 7 cwt. casks.

SATINITE.—In brisk request at 60*s.* to 65*s.* per ton, f.o.r. or f.o.b. Liverpool.

Liverpool Drug-market.

Liverpool, March 25.

Castor Oil.—The quay has been cleared of recent arrivals of good seconds Calcutta, and 2⅛*d.* per lb. is nominally the price, though some holders are talking of 3*d.* in store. First-pressure French is featureless at 2⅞*d.* to 3*d.* per lb., and the business passing is limited. Second-pressure French is held for 2⅜*d.*, though probably a trifle less might be taken.

Calabar beans.—A further small arrival of 5 bags has been sold at 1*s.* 1¾*d.* per lb.

Quillaia.—Further important sales have been made during the week, and holders are very firm indeed at 12*l.* 15*s.* to 13*l.* per ton.

Beeswax.—Sales are reported of Chilian mixed grey to yellow at 7*l.* 10*s.* per cwt. Four cases Peruvian fine pale to grey sold at 7*l.* 7*s.* 6*d.* per cwt.

African Ginger.—Transactions of considerable importance are reported at 30*l.* per ton for arrival in transit, but the spot price for good root ranges from 31*s.* to 32*s.* per cwt.

Fenugreek-seed.—Ten tons of Mogadore description have been sold at 7*l.* per ton.

Gum Acacia.—The market for this article is sagging, but holders show little disposition to meet buyers, and consequently the proportion of business is considerably restricted.

Arsenic.—White powdered is held for 13*l.* 15*s.* per ton.

Linseed Oil is firmly held at 31*s.* to 32*s.* per cwt. for Liverpool makes.

Canary-seed.—Only a small business is passing in this article at 32*s.* to 33*s.* per quarter.

German Drug-market.

Hamburg, March 24.

Our drug-market is rather quiet at present, and shows only little business.

Condurango is in the hands of a combination, which is endeavouring to advance prices, but second-hand still sells below first-hands—viz., 135m. per 100 kilos.

Cevadilla-seed is also monopolised in the same way, and held at 100m. per 100 kilos., second-hands quoting 95m. per 100 kilos.

Camphor (Refined) shows the same unsettled position as last week, the refiners' prices being still unchanged; while second-hand holders will accept a few marks less.

Japanese Wax is firmer from abroad, while spot is quoted 69m. per 100 kilos.

Lycopodium shows a very firm position at 460m. per 100 kilos.

Menthol is also firm; spot is quoted 29½m. to 30m. per kilo., and is little offered, stocks being small.

Quinine is very firm; the makers raised their prices to 41m. per kilo. last week.

Cod-liver Oil is very firm and dearer; old crop is quoted 88m., and new 90m. per barrel for non-congealing oil.

Star-anise Oil is firmer at 10½m. per kilo.

Japanese Peppermint Oil is also firmer at 8½m. per kilo.

Japanese Drug Market.

Yokohama, February 21.

The declaration of the Anglo-Japanese alliance goes a long way to secure peace in the Orient during the next five years, and there is every sign of a general trade recovery. So far as our trade is concerned, prices seem to have reached to bottom, and some articles are now beginning to advance.

In export stuffs, dry ginger is a trifle lower on account of free arrivals from the producing-districts; transactions are now made at the range of 12 yen to 11½ yen per picul. Since the appearance of new crop in the market, some 5,000 piculs have been exported to Europe, and 2,000 piculs to India, U.S.A., and Australia, India taking lion's share in this case. The new crop is said to have reached 25,000 piculs, and if the demand from Europe and elsewhere be reduced, the quotation may naturally go lower; holders intend to sell as much as possible in anticipation of lower prices. Menthol crystals remain firm at 8 yen to 7.80 yen per catty, with buyers at 7.65 yen per catty; holders are not anxious sellers at present. The stock is estimated at some 30,000 lbs. altogether. As there was a considerable difference in price between peppermint oil and menthol, the bulk of the former has been bought up by export firms at the range of 1.90 yen to 2.15 yen per catty, and 40-per-cent. at 4.50 yen per catty. There are now no available stocks. Some export houses have bought for speculative account, and it is said that they still hold at least 12,000 to 15,000 catties unexported. The nominal quotations are 2.50 yen for demenholised, and 4.65 yen per catty for 40 per-cent. oil. The new harvest will not come to market until October or November, so that in the event of continued demand from abroad prices may still be higher. Last year demand was very brisk for menthol, and the bulk of oil remained unsold; consequently holders, anticipating the same result this year, have tried very hard to dispose of the oil and caused the present state of things. Refined camphor is weak at 97 sen per lb. for 1-oz. and ½-oz. tablets. Copper sulphate can be had at 14 yen per picul. Soda crystals are quoted 1.60 yen per 100 lbs.; bleaching-powder is wanted at 5.50 yen per case of 100 lbs. for 100 case lots; the export to China seems to have increased of late. Iodides are higher; this seems to be due to the dearer prices for raw material and brisk demand. The present quotations are 3.40 yen to 3.50 yen for potassium iodide; 5.40 yen to 5.50 yen for iodoform; and 4.80 yen to 4.90 yen per lb. for resublimed iodine. Japanese hyd. bichlor. can be had at 1.40 yen per lb. for P.J. quality.

In import articles, tartaric acid is lower at 58 sen per lb., with small demand. Citric acid is also weak at 65 sen. Carbolic-acid crystals (31° to 35° C.) are low in price, and 33 to 34 sen per lb. will buy. Bismuth subnitrate can be had at 2.55 yen to 2.60 yen per lb., according to holders. Cocaine has declined owing to lower advice, and holders are anxious sellers at 10 yen to 10.25 yen per oz, with no buyers. Caffeine also declined, and at present even 7 yen per lb. will buy. Balsam copaiba is firmer, holders quoting 98 sen to 1 yen per lb. Glycerin is lower now, on account of lack of demand, and 30 sen per lb. is quoted, although it costs 33 sen to import. Ergot can be had at 95 to 97½ sen per lb. though business was done at 90 sen per lb. some time ago. Lycopodium is quiet at 1.30 yen per lb. Ipecacuanha is lower, and holders ask 7 yen per lb. for Rio. Morphine is quiet at 42 yen. Quinine is weak at 86 sen for hydrochloride, and 56 sen for sulphate, without important transactions; Java sulphate can be had at 55 sen per oz. Sulphonal is going down by degrees, and at present 2.90 yen will buy; phenacetin also weak at 2.30 yen per lb. Pot. bromide is a little firmer, and present quotation is 90 to 91 sen per lb., according to quantity. Santonin is dearer at 9.20 yen per lb., in face of light supply. Of carbonate of ammonia practically nothing can be had at present; small sales are being made at 36 sen per lb., about 40 per cent. higher than import cost is, but arrivals are shortly expected. Potash-chlorate crystals are very low in price, and available at 14.25 yen per cwt. for 10-ton lots; this is due to lack of demand and the decline in the export of matches to China and India.

Cablegram.

Hamburg, March 26:—Condurango-root has advanced to 140m. per 100 kilos. Both lycopodium and ergot are firmly held.

Electrolytic Works in Italy.

A company with a capital of about 44,000*l.* has just been formed at Milan for the electrolytic manufacture of caustic soda and of calcium chloride. These two products have up to the present been imported into Italy. The works of the new company will be situated at Varallo, where some 600 horse-power will be obtained from the River Sesia. The company expect, with some 350 working-days of twenty-four hours, to produce some 2,359 tons calcium-chloride solution, and 2,880 tons of caustic-soda solution. The estimate of the income and cost show an annual profit of 14 per cent.

Planting in Zanzibar.

Mr. Theodore Burtt, of the Friends' Industrial Mission, Pemba, Zanzibar, writes to the *Tropical Agriculturist* that free paid labour among the natives on the clove-plantations is becoming more general, and is answering infinitely better than slave labour. So far as he can see, the system of contracting with freed slaves to work three days per week for the Arab or other planter in lieu of rent of such lands a he likes to cultivate on the other four days, is a failure. The clove crop both in Zanzibar and Pemba was a small one last year, but on the above Mission plantation it was one of the best on record.

Cardamoms in Ceylon.

In the course of the annual report of the Planters' Association of Ceylon, it is stated that the area under cultivation has been very largely increased during the past two years, both in Ceylon and in India. The exports for the year ending December 31, 1901, show the heaviest on record, being 559,704 lbs., against 537,455 lbs. in 1900. Prices, both in the London and local markets, have fallen considerably in the past year in consequence of the heavy exports. With a still further large increase in acreage, shortly coming into bearing from European estates, and from native gardens recently planted in almost every village in the Kandyan Province, the tendency must be to increase the exports to such an extent that the supply will probably exceed the demand, and the market will likely fall below remunerative prices. In this connection the *Ceylon Observer* is asked in a letter from a northern planting district to put in a strong word of warning about the danger of overproduction of cardamoms from the too rapid extension of clearings. "Wherever you turn new clearings are seen to be in progress—not in one district, but wherever there are trees to fell," says the writer.

COLONIAL TRADE.

The Colonial issue of "The Chemist and Druggist"
Falls this year on Saturday, April 19.
It will go to the best buyers of druggists' goods
In the Britains beyond the sea.
Besides, it will be specially circulated in Japan:
Japanese trade is worth looking after.
The Anglo-Japanese alliance will influence trade.
The C. & D. is in touch with buyers in Japan.
We have correspondents there who look after our interests.
Business men should make the most of the alliance.
So far as chemicals, drugs and sundries are concerned
The C. & D. of April 19 will be the medium for business.

Summary.

A BUDGET of settlements of Irish drug contracts is printed on p. 518.

SOME pharmaceutical news from the "Potteries" will be found on p. 516.

THE appeal in the "XL-All" insecticide case has been abandoned (p. 535).

MR. LEO ATKINSON replies to "Krayser's" criticism of his views on the Stamp Acts (p 538).

THE BRADFORD VIEWS on dispensing by doctors and prescribing by druggists will be found on p. 523.

AN ORDINARY RETAILER gives some further advice to wholesale houses as to monthly accounts (p. 538).

A FURTHER large number of drug and similar contracts which have been settled are notified on p. 517.

MR. EDWARD BAKER, of Chichester, whose death we reported last week, was a Crimean veteran (p. 550).

WE learn by cable that the Cape Pharmaceutical Society is to support the Martindale memorial (p. 521).

THE PUBLIC DISPENSERS' ASSOCIATION has dropped "Poor-law" out of its title, and is otherwise advancing (p. 523).

NEWCASTLE-ON-TYNE chemists have agreed to do something to further State-aid for pharmaceutical education (p. 527).

THE Society of Chemical Industry is moving to secure the use of duty-free alcohol for manufacturing purposes (p. 535).

MR. G. F. WILSON, F.R.S., the inventor of the process through which Price's glycerin was introduced, died last week (p. 528).

THE PRESENT CONDITION of the dental and medical professions as indicated by the official Registers is the subject of an article on p. 533.

USEFUL HINTS ON DOSAGE, by Dr. J. Gordon Sharp, are epitomised on p. 526. They are especially addressed to young druggists.

SOMERSET HOUSE is appealing against the Brentford Magistrates' decision in the "delightfully-soothing" label case (p. 535 and p. 536).

TWO SONS of Mr. J. T. Holmes, one of the founders of the Pharmaceutical Society of Ireland, were drowned at New Brighton last week (p. 518).

EDINBURGH CHEMISTS have discussed the chemist's duties in regard to the sale of poisons, and their views are worthy of consideration (p. 525).

TORQUAY CHEMISTS want the Pharmaceutical Council to pay more attention to Stamp Act questions and to defend chemists "dropped on" (p. 524)

CARDIFF CHEMISTS do not believe in a compulsory curriculum and they are divided in opinion as to "Bunkum & Co."—their President's title for proprietaries (p. 524).

THE French Senate has agreed to a measure restricting the use of saccharin to therapeutic purposes and its sale to pharmacists. The debate is fully reported on p. 520.

JAMAICA HONEY sells at so low prices that the bee-keepers of the island have sent a representative to England in order to try to make better terms. We discuss the matter on p. 532.

THE HOLIDAYS are reflected in the markets this week, business being tame. Cod-liver oil is dearer again, crude Japanese camphor is lower, cream of tartar is firmer, and shellac is higher (p. 544).

CHRISTMAS ISLAND PHOSPHATE SHARES of the value of 25,000*l.* have been bequeathed by the late Mr. Robert Irvine, F.C.S., to found a chair of bacteriology in Edinburgh University (p. 519 and p. 530).

CHEMISTS' ASSISTANTS are as scarce on the Continent as in Great Britain, and the demand for female assistants is increasing. See the article on women in pharmacy (p. 534), and the *apropos* sketch and rhyme on p. 530.

MR. MARSHAM, the Bow Street Magistrate, has decided that methylated soap-liniment is a domestic remedy and an article of commerce, the sale of which is not an infringement of the Sale of Food and Drugs Act (p. 536).

PROFESSOR VAN 'T HOFF, of Berlin, was entertained to dinner by the Council of the Chemical Society last week on the occasion of his delivering the Raoult Memorial lecture. These functions, and the anniversary meeting of the Society, are reported on p. 547, portraits of Professors Reynolds, van t' Hoff, and Raoult being included.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Mr. Thomas Miller, chemist and druggist, has been elected to the Wednesfield School Board.

An elderly man, on April 2, died suddenly from heart-failure in a chemist's shop at Weston-super-Mare.

Mr. John Cadge, chemist and druggist, Diss, has been elected a member of the Diss Board of Guardians.

Mr. Pooley, public analyst for Essex, has undertaken to analyse samples under the Sale of Food and Drugs Act for Urban District Councils at a reduced fee of 10*s.* 6*d.* for each sample.

A man named Arthur Harrison, described as an apothecary, has been sentenced to eighteen months' hard labour at the Chichester Sessions for obtaining goods and money by false pretences.

The Board of Trade Advisory Committee on Commercial Intelligence met at the offices, Whitehall Gardens, S.W., last week, Professor Wyndham Dunstan, F.R.S, being amongst those present.

The addition of 10 per cent. of maize flour to wheaten flour (sold as "Eiffel Tower Self-raising Flour") was considered by the Wolverhampton Magistrates last week to be an offence under the S. F. and D. Acts.

At Marlborough Street Police Court on March 31 Kenneth McDonald (35), described as a chemist (but who is not the "Kenneth McDonald" on the Register of Chemists and Druggists), was remanded on a charge of committing a breach of the peace in Hyde Park.

At the March meeting of the Manchester Dramatic Lodge of Freemasons, held at the Masonic Hall, No. 2,387, Bro. Charles Swinn, P.M., P.P.G.D., pharmaceutical chemist, St. Mary's Pharmacy, Hulme, was unanimously re-elected Treasurer of the Lodge, of which he was one of the founders.

The office staff of Messrs. Cadbury Brothers (Limited), Bournville, Birmingham, numbering about 120, recently moved into new offices, and the thoughtfulness of the firm for the comfort and convenience of their employés is shown by the provision of a smoke-room to which the employés can repair for a social smoke and chat after dinner.

Fire.

The premises of Messrs. Barnett & Foster (Limited), mineral-water engineers, at Eagle Wharf Road, New North Road, N., were the scene of a serious outbreak of fire on March 29. The flames originated in a workshop at the back of the main building, and soon obtained a good hold. In the course of an hour the fire was overcome, although not before a good deal of damage had been done.

Alterations and Improvements.

The premises of Messrs. Anderson & Virgo, The Foregate, Worcester, are being demolished to effect an important street improvement.

Messrs. Horniblow & Son, The Cathedral Pharmacy, Sidbury Worcester, have had their shop refitted by Messrs. Maw, Son & Sons, Aldersgate Street, London.

The Kettering Urban Council has purchased the premises of Mr. J. F. Thursfield, chemist, in order to effect an improvement by widening Sheep Street.

Liverpool University.
