The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from May 7 to 13, inclusive:—Acid, tartaric (@ Rotterdam) 10, (@ Hamburg) 8; arsenic (@ Hamburg), 10; arrowroot (@ St. Kitts), 5 brls.; balsam Peru (@ Amsterdam), 30; bay oil (W.I.), 6 cs.; Calabar beans, 2; camphor (@ Kobe), 57 tubs, 125 cs.; canary-seed (Span.), 43; cardamoms, 86; castor oil (@ Antwerp) 283, (@ Coconada) 89; chillies, 60; citrate of lime (@ Messina) 60, (@ Palermo) 20 cks.; citronella oil (@ Galle, 21 drms. 53 cks.; cocaine, crude (@ Mollendo), 2 cs.; cod-liver oil (@ Rotterdam) 30 cs., (@ Aalesund) 225 brls., (@ Bergen) 70; coriander, 145; cream of tartar (@ Rotterdam) 10, (@ Bordeaux) 262; essential oils (@ Palermo) 32, (@ Messina) 75; galls (Persian), 266; gentian, 11; ginger (@ W.C. Africa) 1,865, (@ Jamaica) 904, (@ Yokohama) 1,015 bgs.; glycerin, crude (@ San Sebastian) 50 drums, (@ Rouen) 20, (@ Amsterdam) 36; gum olibanum, 548; tragacanth, 117; gum, unenumerated (@ Persia), 335; honey (@ Jamaica) 222, (Chil.) 192; iodine, 31; kola (W.C.A.), 12; lemon-juice (@ Messina) 35 pps.; lime juice (@ Dominica) 7 brls., (@ Kingston) 18 pns.); lime oil (W.I.), 7; liquorice-root (@ Catania) 58, (@ Persia) 1,600 bls. *in tr.*; musk (@ Marseilles), 1 box; nux vomica (@ Calcutta), 580; opium (Persian) 60 and 30 *in tr.*, (@ Calcutta) 40; potash chlorate (@ Antwerp) 3, (@ Sweden) 75 kgs. 10 cs.; quicksilver (Ital.) 100, (Span.) 5,000; safrol (@ Japan), 50 cs. *in tr.*; scammony-root, 10; shellac (@ Calcutta), 1,371; saffron, sulphur (@ Girgenti) 175 tons, (@ Catania) 550 cks. 1,136 pkgs 150 tons, 101 brls. *roll*; tamarinds (W.I.), 43; tartar (@ Rotterdam), 13 tons; wax, bees' (@ Australia) 19, (Span.) 27; wax, ceresin (@ Dusseldorf), 24; wax, Japanese, 53.

London Markets.

ACID, CARBOLIC, is quiet and easy: 39° to 40° C., detached B.P. quality is quoted 8*d.* per lb.; and 39° to 40° C. ice crystals 6½*d.*, and 34° to 35° C. 6⅜*d.* per lb. Crude 50's 1*s.* 5*d.* to 1*s.* 5½*d.*, 60's 1*s.* 11*d.*, and 75's, 2*s.* 3*d.* per gallon.

ACID, OXALIC, is quoted 2½*d.* to 2⅝*d.* per lb., net, delivered London.

ALMONDS.—A report from Messina states that the crop, especially at Bari, will be small, but the good prospects in France and the large stocks prevent a rise.

ARROWROOT.—Owing to the disaster to the island of St. Vincent the market is disorganised. Holders as a rule abstain from offering, but a few second-hand parcels have changed hands at 2½*d.* to 2¾*d.* per lb., an advance of about 1*d.* per lb., but now 3½*d.* is the nearest quotation.

ARSENIC.—On the spot 14*l.* to 14*l.* 10*s.* per ton is quoted for best white English powdered.

BELLADONNA-ROOT.—Good quality is scarce, and nothing is obtainable at under 40*s.* per cwt., c.i.f. Common can be had at 26*s.*

CAMPHOR.—Formosan crude camphor has been advanced by the monopoly to 140*s.* to 145*s.* per cwt, c.i.f., and pressed is unchanged at 165*s.*, c.i.f. For May-June shipment Japanese crude has been sold at 150*s.*, c.i.f., and for more distant shipment 147*s.* 6*d.* is quoted. Refined camphor is very quiet.

CANARY-SEED.—The exports from Laraiche, Morocco, during 1901 amounted to 11,993 quarters (13,591*l.*), against 12,791 quarters (14,666*l.*) in 1900. Almost half of the total shipments last year went to Spain, and probably afterwards reshipped to the United Kingdom as Spanish seed.

CHAMOMILES still keep in fair demand, with fair flowers offering at from 50*s.* to 60*s.* per cwt., c.i.f.

CINCHONA.—The exports from Java during the first half of the month amounted to 465,000 Amsterdam lbs., against 228,000 Amsterdam lbs. last year.

COPPER SULPHATE.—Spot is easier, at from 18*l.* 2*s.* 6*d.* to 19*l.* per ton, according to brand. Liverpool is quoted 18*l.* 10*s.* to 18*l.* 15*s.* per ton.

CREAM OF TARTAR is firmer, at 71*s.* per cwt., spot, for first white crystals, and 73*s.* for powder; 98-per-cent. powder is 74*s.* 6*d.*

GAMBIER.—Good cubes have been sold on the spot at 37*s.* per cwt.

GENTIAN is tending dearer, at 17*s.* per cwt., c.i.f.

GUM ARABIC.—Good pale and reddish sifted olibanum-scented Aden has been sold at 35*s.*, and good chips at 25*s.* per cwt.

INSECT-FLOWERS are very firm, and for fine "wild" closed flowers it is reported that from 150*s.* to 160*s.* per cwt., c.i.f., has been paid. "Half-closed" are quoted 117*s.*, and "open" at 90*s.*, c.i.f.

JUNIPER-BERRIES are firmly held, at from 12*s.* to 13*s.* per cwt.

LIME-JUICE.—West Indian has advanced, good pale being quoted 1*s.* 4*d.* to 1*s.* 5*d.* per gal.

OIL, CASTOR.—Belgian is firmer, at 26*l.* per ton for firsts, and 23*l.* for seconds, on the spot, ex wharf. Calcutta seconds quiet at 2¾*d.* per lb.

OIL, COD-LIVER.—According to reports received here, the fishing in the Finmarken district continues very poor. The market is quiet, new Lofoten oil being offered at from 107*s.* 6*d.* to 113*s.* 6*d.* per barrel, ex wharf. Agents continue to quote previous prices. A fair quantity of yellow Japanese oil has been sold at 2*s.* 6*d.* per gal. In auction 25 casks Newfoundland oil were held at 4*s.* per gal.

OIL, LEMON, is quoted 2*s.* 4½*d.* to 2*s.* 5*d.* per lb., c.i.f., for Messina oil.

Digitized by Google

Oil, Olive.—Sellers in Messina are holding back in anticipation of higher prices. In the coast districts the blossoming of the trees has commenced, and is progressing favourably.

Oil, Spearmint, in 20-lb. packages, is quoted 5*s.* 6*d.* per lb.

Opium.—The market for Persian opium remains weak, but a considerable quantity has changed hands on the spot recently, at from 8*s.* 6*d.* to 9*s.* per lb.; for forward delivery little business is reported.

Constantinople, May 9.—The market is practically unchanged; a few cases of "ordinary druggists'" have changed hands at the parity of 6*s* 9*d.* to 7*s.* 3*d.* per lb., f.o.b. Rumours were afloat a few days ago that some slight damage had been done to the young plants owing to the hot winds, but they lack confirmation The weather has suddenly set in exceptionally hot and unseasonable, and rain is needed very much indeed, after a dry beginning of spring; and it is feared, without doubt, that damage will be done to the crop if copious rains do not fall in the near future.

Quinine is slow of sale, with a retail business at 1*s.* 1½*d.* per oz., spot, for good German brands of sulphate in bulk. For forward delivery no business is reported. On Wednesday there were further sellers at 1*s.* 1½*d.*, and buyers at 1*s.* 1¼*d.*, spot; the latter quotation has been refused for Amsterdam brand. A case of Brunswick containing 199 oz, sold at 1*s.* 1*d.* per oz. in auction.

The exports of quinine, quinine-preparations, &c., from Germany during the two months ended February amounted to:—

	1902	1901	1900
Kilos. ...	24,700	24,100	49,600

Rhatany.—There is practically none on offer; 3¾*d.* to 4*d.* per lb. is the nominal quotation.

Saffron remains firm, both here and in Spain. For good Valenica (B.P. quality) 24*s.* to 24*s.* 6*d.* per lb., net, ex warehouse, is quoted.

Shellac.—The Calcutta price of TN has been advanced to 57*r.* The market here has been steady, with a fair spot business at unchanged rates, TN Orange selling on a basis of 114*s.* per cwt. for fair.

Spermaceti.—American refined is ¼*d.* per lb. lower, at 11¾*d.*, or in lots of 50 boxes, 11½*d.* is quoted.

Spices are without alteration except Jamaica *Ginger* which was about 2*s.* per cwt. dearer for the better qualities at auction on Wednesday. Common sold at 36*s.* to 38*s.*, ordinary to middling dullish at 39*s.* to 47*s.* 6*d.*, and fair to good washed at 48*s* 6*d.* to 55*s.* per cwt. Cochin was steady, cuttings partly sold at 35*s.* per cwt., fair washed rough at 38*s.*, and C cut at 50*s.* 6*d.* per cwt. Bold cut was bought in at 75*s.* to 80*s.*, medium at 60*s.*; D rough, and Calicut brown rough were also bought in. Japan is selling privately at 32*s.* 6*d.* for limed rough, and Bengal is scarce at 42*s.* per cwt. Zanzibar *Cloves* are still very slow, and no business is reported for delivery; fair quality was bought in at 3⅞*d.* per lb. Fair Penang were bought in at 7½*d.*, and fine at 1*s.* per lb. *Pimento* quiet, one lot of good clean sold at 2⅞*d.* per lb., the remainder being bought in. *Pepper* slow of sale. Singapore black was bought in at 5¾*d.* per lb., but business is passing at 5 11/16*d.* privately, for arrival there are sellers at 5 11/16*d.* Fine Malabar was bought in at 6*d.* per lb. Tellicherry is selling privately at 5 15/16*d.* White Singapore was bought in at 10*d.*, Penang at 9¼*d.*, and Siam at 9½ per lb. For arrival Singapore is quoted 9¼*d.*, and Penang 9*d.* per lb.

Strychnine.—Both the British and German makers have reduced their prices as the result of competition, and now quote B.P. crystals in bulk at 1*s.* 8*d.* per oz., net, and powder at 1*s.* 7*d.*, net. Salts have also been reduced, and for hydrochloride (B.P.) 1*s.* 7*d.*, net, is quoted.

Sulphur.—From Messina it is reported that stocks are about some 75,000 tons in excess of last year, which fact gives a depressing tone to the market. Owing to the entire control exercised by the Anglo-Sicilian Sulphur Company, "bears" are very cautious in selling futures. Current thirds have improved in price, some tests showing only 4½ per cent. impurities. Best unmixed seconds are quoted 83*s.* 9*d.*, best thirds 74*s.* 9*d.*, current thirds 70*s.* 9*d.*, and refined block 87*s.* per ton of 13 Sicil. cantars, f.o.b. Refined roll sulphur in 3-cwt. casks 96*s.*, pure flowers in bags 102*s.* 9*d.*, and current ditto 97*s.* per ton of 20 cwt., f.o.b.

London Drug-auctions.

At the auctions of old and new drugs to-day a larger proportion of the goods than usual was offered "without reserve," which may be taken as some indication of the state of business. The tone throughout was dull, and the tendency of values lower. Curaçao aloes in gourds was dearer; boxes were neglected. No genuine Cape aloes was offered; asafetida was quite neglected; buchu-leaves were dearer; croton-seeds cheaper. Cardamoms sold at lower prices again. Calumba was slaughtered; dragon's blood firmly held. For gamboge easier prices were accepted owing to better supply. Jamaica honey was very quiet; Rio ipecacuanha firmly held and Cartagena inclined to be easier. Grey Jamaica sarsaparilla was unaltered, and native red was full up. The Tinnevelly senna offered comprised very little greenish leaf, and Alexandria leaf was in large supply, and neglected. Jamaica beeswax was flat, Madagascar and Zanzibar were steady. The following table shows the quantities of goods offered and sold:—

* Sold privately.

Digitized by Google

ALOES.—Curaçao aloes, in gourds of mostly small sizes was in demand at higher rates, and for those containing good liver, 43*s.* was paid; rough and coarse ditto brought 28*s.*, and common dull and mixed 13*s.* to 15*s.* 6*d.* per cwt. There was a good supply of Curaçao aloes in boxes on show, but mostly middling qualities: 30*s.* to 32*s.*, subject, was paid good to fine liver, and 25*s.* to 26*s.* for dull mixed to fair. Socotrine in kegs sold at unaltered prices, stiff pasty of good flavour bringing 72*s.* 6*d.* Good hard Zanzibar hepatics, in tins in cases, brought 70*s.* to 72*s.* 6*d.* per cwt.

ARECA sold at lower prices, 14*s.* per cwt. being paid for good sound. In another instance 18*s.* was wanted for small to bold sound.

BALSAM TOLU.—A new parcel of good hard balsam, in small tins, was sold at 1*s.* 4*d.* to 1*s.* 5*d.* per lb.

BENZOIN.—Sumatra was slow of sale; 6*l.* 15*s.* per cwt. was refused for good fair seconds, well flavoured, and packed with small to bold almonds; for 6 cases fair seconds, 6*l.* 15*s.* was paid. For good glassy Palembang seconds, in block, 42*s.* 6*d.* was wanted. For Siam gum, 6*l.* 5*s.* per cwt., subject, was paid for a case of partly blocky pea-size almonds, and 90*s.*, subject, for a case of very dusty siftings, slightly blocky.

BUCHU-LEAVES were from 4*d.* to 5*d.* per lb. dearer compared with the last public sales, and 2*d.* to 3*d.* dearer than the rates paid privately. Only 10 bales were offered and sold at from 1*s.* to 1*s.* 1*d.* per lb. for good green round to yellowish and slightly stalky leaf.

CALUMBA.—Irregular but lower. A parcel of 112 bags of small to bold yellowish sorts, slightly wormy, sold at about 4*s.* to 5*s.* below valuations, 9*s.* per cwt. being paid. In another instance 30 bags of small to bold but sound yellowish sorts sold at from 13*s.* to 15*s.*, which was nearer the value.

CANNABIS INDICA.—Tops were held at 2*s.* 6*d.* per lb. It is said that 2*s.* 9*d.* will shortly be wanted.

CARDAMOMS.—In slow demand, at irregular, but about 2*d.* to 4*d.* lower, prices. Decorticated seed sold at previous rates. The following prices were paid:—Ceylon-Mysores: Bold long pale, 2*s.* 4*d.*; bold medium pale, 1*s.* 7*d.* to 1*s.* 9*d.*; bold dullish, 1*s.* 9*d.*; small and medium pale, 1*s.* 2*d.* to 1*s.* 6*d.*; small lean, 1*s.* to 1*s.* 1*d.*; medium splits, 1*s.* 2*d.*; small ditto, 1*s.*; brown, split, and pickings, 11*d.* to 1*s.*; seed, 1*s.* 6*d.* to 1*s.* 7*d.* Native wild Ceylon, good, 2*s.* per lb.

CASCARA SAGRADA.—25*s.* per cwt. was the limit for a parcel of 1899 crop.

CASSIA FISTULA.—Good West Indian pod sold at from 33*s.* to 34*s.* per cwt., showing practically no alteration.

CHIRETTA sold at 1¾*d.* per lb., without reserve, for common quality.

CIVET.—The horn catalogued for sale, which was of impure quality, had been sold privately.

COCA-LEAVES.—Thirty cases of small Ceylon kiln-dried leaves, of doubtful quality, sold at from 6*d.* to 7*d.* per lb. Thirteen bales good green Truxillo were held at 10*d.* per lb.

COLOCYNTH.—Good pale Turkey apple brought 1*s.* 7*d.* per lb.

CROTON-SEED.—Fair, partly dark mixed sold cheaply, at 23*s.* per cwt., and very dark mixed and shelly, at from 11*s.* to 15*s.*

CUBEBS.—Fair, partly stalky berries sold at 30*s.* per cwt.

CUMIN-SEED.—Good clean Maltese sold at 31*s.* 6*d.* per cwt.

DILL-SEED.—Fair East Indian brought 10*s.* 6*d.* to 12*s.* per cwt.

DRAGON'S-BLOOD was very firmly held; 8*l.* to 8*l.* 15*s.* was paid for rather seedy lump, and for 3 cases of fair thin reed 9*l.* was wanted, at which figure sales have been made privately.

ELEMI.—Neglected; 75*s.* to 80*s.* is about the value of fair Manila gum.

GAMBOGE.—A new parcel of 48 cases, just arrived from Singapore, was offered, of which a small proportion sold at rather lower prices. For rough Siam pipe of good orange fracture 12*l.* per cwt. was paid, and good pickings sold at 10*l.* 2*s.* 6*d.* Saigon pipe of very bright fracture, somewhat unusual in this description, sold at 10*l.* 17*s.* 6*d.*, and bold dull pipe at 7*l.* 10*s.*

GUM AMMONIACUM.—A case of small to bold pale loose clean drop sold cheaply at 38*s.* per cwt.

HONEY.—The new crop of Jamaica was in slow support, and prices showed no material change. Fine bright amber liquid in casks sold at 16*s.* per cwt.; fairly good bright to darkish amber ditto, at from 17*s.* to 16*s.*; fine pale amber in cases, 16*s.*; and dark amber liquid in various packages, 15*s.* to 16*s.* 6*d.* per cwt. Forty cases of Californian honey were offered and sold without reserve at from 24*s.* 6*d.* to 25*s.* 6*d.* per cwt. for partly pale set and partly liquid. More can be had privately at about these figures.

IPECACUANHA.—Rio was firmly held and a few bales were disposed of at unchanged prices, from 9*s.* 7*d.* per lb. being paid for ordinary lean root to 9*s.* 9*d.* for fairly good bright. For the finest lots 9*s.* 10*d.* was wanted. No Cartagena was sold publicly, and possibly a shade under 4*s.* 3*d.* might soon buy.

JALAP.—The parcel catalogued for auction had not arrived in time; 5*d.* per lb. was understood to be the limit.

KAMALA.—Five cases offered without reserve, and sold at 2¾*d.* per lb.

KINO.—Further sales without reserve were made to-day. Small reddish grain from Madras, slightly blocky, sold at 7*d.* per lb.

KOLA.—Tending dearer. Good bold washed West Indian brought 3¼*d.* per lb.

MATICO.—No bid was made for a parcel of small broken leaf, although offered "without reserve."

MENTHOL.—Five cases of Kobayashi brand of unworked crystals were held at 13*s.* 6*d.* per lb.; privately, 13*s.* 3*d.* to 13*s.* 6*d.* is quoted, which is an advance of 6*d.* on last week's prices.

MUSK.—For 12 bottles of mixed Assam and Tonquin grain 65*s.* per oz., subject, was paid, and for 1 parcel of musk-skins 1*d.* per oz. is to be submitted.

MUSK-SEED.—A box from Grenada sold at 1*s.* per lb., and a bag from St. Lucia was held at 1*s.* 9*d.*

MYRRH.—Very dark sorts sold at 53*s.* per cwt., subject. For small to bold picked gum 6*l.* per cwt. is about the limit, at which sales have been made privately.

OIL, BAY.—The parcel of West Indian distilled was withdrawn, no price being mentioned.

OIL, CASSIA.—Lower. Three parcels were offered "without reserve," and sold as follows: Twelve cases (74 per cent. c.a.), at 2*s.* 1*d.* to 2*s.* 2*d.* per lb.; 2 cases (82 per cent. c.a), at 2*s.* 6*d.*; 20 cases (75 to 80 per cent. c.a.), at 2*s.* 3*d.*; and 10 cases (81 per cent. c.a.), at from 2*s.* 5*d.* to 2*s.* 6*d.* per lb.

OIL, CINNAMON.—For genuine bark oil, Kaderana brand, 11*d.* per oz. was paid. For leaf oil, 2½*d.* per oz. was asked.

OIL, EUCALYPTUS.—Four cases of guaranteed B.P. quality were sold without reserve at 10½*d.* per lb. Ten cases of "Magnet" brand (65 to 67 per cent. cineol) were held at 1*s.* 2*d.* per lb.

OIL, GERANIUM.—Bourbon was held at 18*s.* per lb., a bid of 17*s.* being refused.

OIL, LEMONGRASS, of good quality from Calicut sold at 5¼*d.* per oz., being easier. Privately the market is unchanged at 6*d.* per oz., spot, and 5 1/16*d.*, c.i.f.

OIL, LIME.—In auction only 1 case was offered and sold at 2*s.* per lb. for West Indian distilled. Privately sellers have practically withdrawn from the market in consequence of the disaster in the West Indies.

OIL, PEPPERMINT.—Yazawa brand of Japanese demen-tholised oil sold at 3*s.* 4*d.* per lb., "without reserve."

RHUBARB.—The sales to-day were mostly "without reserve" as follows: Canton, medium to bold flat, sound, three-quarters pinky, one-quarter grey and dark fracture, 1*s.* 8*d*; small to medium ditto, 1*s.* 6*d.*; High-dried (imported in 1898) bold flat, dull coat, slightly wormy, two-thirds pinky, one-third grey and dark fracture, 5½*d.* to 6*d.*; medium

Digitized by Google

and bold flat, slightly wormy, 6*d.* to 6½*d.* Six cases of small to medium high-dried, with good pinky fracture, had been sold privately at 8½*d.* Round medium to bold wormy Shensi, dull coat, mostly grey and dark fracture, 8½*d.* per lb.

SANDALWOOD.—For 27 packages from Madras offered without reserve, no bid was made. One of the buyers asked if the parcel in question was genuine sandalwood, as some time ago he bought a parcel of the same mark as that offered, and on investigation the interior of the wood proved to be white and not sandalwood at all. As he could get no redress from the brokers, his idea was now to call public attention to it.

SARSAPARILLA.—Red native Jamaica sold at unchanged rates, 10½*d.* to 11½*d.* per lb. being paid. Of grey Jamaica 16 bales were shown, of which 5 sold at 1*s.* 2*d.* for sound, and for the remaining 11 bales 1*s.* 4*d.* was wanted. Sound Lima-Jamaica was limited at 1*s.* 2*d.*, and slightly country-damaged sold at 1*s.* to 1*s.* 1*d.* per lb.

SCAMMONY-ROOT.—Part of the parcel catalogued had been sold privately. 27*s.* 6*d.* per cwt. was mentioned as the limit for the remainder.

SENNA.—The bulk of the Tinnevelly was of low quality, and brought from ½*d.* to 1*d.* per lb. for small common and yellowish leaf, partly sea-damaged. Tinnevelly pods sold at 1¾*d.* per lb. for fair, and dark and sea-damaged at ¼*d.*, subject, to 1*d.* Alexandrian siftings sold at 2*d.*, and good pale pods were held at 8*d.* per lb.

SEEDLAC sold with keen competition at from 95*s.* to 98*s.* per cwt.

TAMARINDS. — In auction 18 barrels of pale squashy Antigua sold at dearer rates, 13*s.* to 13*s.* 6*d.* being paid; and for 20 packages of Dominica and Antigua "in bond," 12*s.* was paid. East Indian tamarinds have been sold privately at 9*s.* It is anticipated that higher prices will be asked in consequence of the volcanic eruptions in the West Indies.

TURMERIC —Fair to good bright Madras finger has been sold at from 16*s.* to 18*s.* per cwt., and good split Cochin bulbs at 11*s.* In the drug-auctions 130 bags of fair bright Madras finger sold at from 12*s.* 6*d.* to 15*s.* per cwt.

WAX, BEES'.—Jamaica flat, and little sold. Good bright red was bought in at 8*l.* 2*s.* 6*d.*, and fair dark-brown sold at 7*l.* 15*s.* Madagascar sold at steady rates, 7*l.* being paid for pale yellow to dark, and 6*l.* 15*s.* for mixed and dark. Good pale to dark grey and yellow Australian brought 7*l.* 12*s.* 6*d.* A parcel of 25 cases fair bleached Calcutta sold "without reserve" at from 6*l.* 12*s.* 6*d.* to 6*l.* 15*s.* per cwt. Fair Zanzibar in block brought 6*l.* 17*s.* 6*d.* to 7*l.*, and pale yellow to dark rolls, 7*l.* 15*s.* per cwt. Privately, dull bleached Calcutta has been sold at 6*l.* 2*s.* 6*d.* per cwt.

The exports of beeswax from Tangier in 1901 show a great decrease, the figures being 741 cwt. (8,892*l.*), against 8,212 cwt. (46,193*l.*) in 1900.

WAX, JAPANESE.—The parcel catalogued had been sold previous to the auctions. Privately 38*s.* per cwt., spot, has been paid for good squares.

Cablegrams.

SMYRNA, May 15, 10.45 A.M.:—The opium market is unsettled, and prices have slightly advanced. Crop news is unfavourable consequent on the absence of rain.

BERGEN, May 14, 6.5 P.M.:—The market is firm on continued reports of bad fishing at Finmarken; 102*s.* per barrel, f.o.b., Bergen, is now quoted for best medicinal non-congealing Lofoten oil. The catch of cod to date amounts to 38,328,000, against 33,719,000 at the same time last year This has yielded 17,810 barrels, against 29,060 barrels in 1901

AMSTERDAM, May 15:—At the auctions of cinchona held here to-day 5,912 packages were offered, weighing 506,365 kilos., and containing 24,047 kilos. quinine sulphate. Of the above quantity 5,265 packages were sold at an average unit of 8.65c. per half kilo., against 8.60c. paid at the auctions on April 3. The following were the approximate quantities of quinine purchased by the principal buyers:—English and American factories, 8,669 kilos.; the Brunswick factory, 2,383 kilos.; the Mannheim and Amsterdam factories, 3,733 kilos.; the Frankfort-on-Main and Stuttgart factories, 2,827 kilos.; and various buyers, 3,840. The prices paid for the manufacturing-bark range from 10c. to 81½c. per half kilo., and druggists' bark from 8½c. to 66c. per half kilo.

HAMBURG, May 15:—Business here is dull. Japanese wax is firm at 72m. per 100 kilos. Turpentine is also firm, and HGH oil of peppermint is slow of sale.

NEW YORK, May 15:—The market here is quiet. Opium remains easy at $2.80 per lb. American bleached beeswax is advancing, 32c. being now asked. Buchu-leaves have advanced to 26c. for round. Wild-cherry bark is easier at 7c. per lb. Cannabis indica is higher at 65c. per lb. Jalap remains easy at 9c.; and American oil of peppermint has a firmer tendency at $1.95 per lb.

Heavy Chemicals.

The general demand in the heavy-chemical market continues on the whole to be of a fairly satisfactory character, seeing that the home trade demand is steadily maintained, whilst exports are increasing, if only but slowly. As regards values, there is little change to be reported; they are, however, as a rule maintained.

ALKALI PRODUCE.—Bleaching-powder has a tendency towards easier side. Caustic soda and ammonia alkali continue to move well. Yellow prussiates show no change, and are still very quiet. Chlorates are dull.

SULPHATE OF AMMONIA continues very firm, and prices are again higher, with tendency towards further advance. Beckton terms, 12*l.* 5*s.*; London, 12*l.* 10*s.*; Leith, 12*l.* 11*s.* 3*d.* to 12*l.* 12*s.* 6*d.*; Hull, 12*l.* 2*s.* 6*d.* to 12*l.* 5*s.* per ton.

BENZOLS are very dull, but stand nominally unchanged, from 8½*d.* per gal. for 90 per cent. and 7½*d.* per gal. for 50 per cent.

GREEN COPPERAS, owing to continued heavy demand, and consequent scarcity, easily maintains a strong tone. Best Lancashire makes, 42*s.* 6*d.* to 45*s.* per ton, f.o.b. Liverpool. Welsh, 13*s.* 6*d.* to 15*s.* per ton, free on rails, in bulk.

RECOVERED SULPHUR.—Firm, and still somewhat scarce, with brisk request: 5*l.* 5*s.* to 5*l.* 10*s.* per ton, free on rails, in bags.

SOUTH DURHAM SALT.—In moderate demand only, but without change in value, at 11*s.* per ton, f.o.b. Tees.

SATINITE.—In good all-round request, both for home and export, at 60*s.* to 65*s.* per ton, f.o.r. or f.o.b. Liverpool.

Liverpool Drug-market.

Liverpool, May 14.

CASTOR OIL.—There is a confident tone among holders and importers as to the better future for good seconds Calcutta; 2¾*d.* per lb. is still being quoted on the spot, and small transactions are taking place at this figure. French first-pressure is held at 2¾*d*, though from the quay this price might be shaded. Second-pressure French is quoted at 2¾*d.*

TURPENTINE has again advanced, and 35*s.* 6*d.* to 35*s.* 9*d.* per cwt. is now the figure quoted. There is every indication of a further upward rise.

HONEY.—Sales of Chilian are reported at 25*s.* per cwt. for Pile 1, and a large parcel of low-grade Peruvian (about 150 kegs) has changed hands at 15*s.* per cwt.

CALABAR-BEANS.—At auction 3 bags just arrived sold at 1*s.* per lb.

GRAINS OF PARADISE.—The small remaining stocks here have been cleared off at 65*s.* per cwt., and second-hand parcels are firmly held at 70*s.*

QUILLAIA-BARK.—Several sales of ton-lots are reported at about 13*l.* per ton.

SULPHATE OF COPPER is unchanged at 18*l.* 12*s.* 6*d.* to 19*l.* per ton.

AFRICAN GINGER.—Sales are reported from the quay at 34*s.* 6*d.* to 35*s.* per cwt. The latter figure may be considered the value to-day, 70 bags having been sold thereat.

CANARY-SEED.—Business has been transacted at 35*s.* to 35*s.* 6*d* per qr. for good bright Turkish.

ACACIA SORTS.—Considerable movement has been manifested in the market during the week, and considerable quantities have changed hands at prices ranging from 27*s.* 6*d.* to 37*s.* 6*d.* per cwt.

BEESWAX.—The recent advance is fully maintained, and for the small stocks available 7*l.* 5*s.* to 7*l.* 15*s.* per cwt. is asked for both Peruvian and Chilian.

BALSAM COPAIBA.—At auction 8 barrels were offered, and 2 barrels were sold at 1*s.* 11½*d.* per lb., the same price being demanded for the remainder of the parcel.

CARNAUBA-WAX.—The volume of business is not large, and yellow remains at 79*s.* to 80*s.* per cwt. Grey is changing hands at 49*s.*; 41 bags of Maranham grey realising 51*s.* per cwt.

LINSEED OIL.—There is again a firmer tone in the market, Liverpool-make in export-casks being now held for 33*s.* 3*d.* to 33*s.* 6*d.* per cwt.

KOLA (W.C.A.).—Fourteen bags at auction realised 1½*d.* per lb

Digitized by Google

Marriage.

NORMANSELL—LITTLER.—On May 1, at Prestatyn, John William Normansell, pharmaceutical chemist, Hazel Grove, Stockport, to Edith, only daughter of Mr. Joseph Littler, of Prestatyn.

Deaths.

ANDREWS.—At Forest View, Bell Common, Epping, on May 9, Mr. Frederick Andrews, pharmaceutical chemist, of Leinster Terrace, Bayswater. Aged 73. Mr. Andrews was one of the best-known and popular West End chemists, who was ever willing to give what help he could to any endeavour for the improvement of pharmacy, whether on the benevolent, commercial, or political side, and he was such a genuine man socially and so modest in respect to all he did, that he had hosts of friends who loved him. Mr. Andrews was a Londoner, and was born on Christmas Day, 1828. He was apprenticed to Mr. Rouse, of Clapham, when the Pharmaceutical Society was still young, and in due course passed the Minor and Major examinations, the latter amongst the first lot after the 1852 Act came into force. He was then with Messrs. Allen & Hanburys in their Plough Court pharmacy, where he remained for nine years, a very devoted servant, and his devotion was reciprocated, the firm ever regarding him as a friend, and one of the partners left him a small legacy. Mr. Andrews started in business for himself at Store Street, Bedford Square, but removed in 1857 to Leinster Terrace, Bayswater. He had been a member of the Pharmaceutical Society since he passed the Major, and always took an interest in its proceedings. After being an auditor, he was elected a member of the Council in 1880, and remained on it until December, 1884, when he retired, and Mr. C. B. Allen was appointed in his place. His last official connection with the Society was as a divisional secretary, an office which he but recently resigned. He was one of the founders of the Chemists' and Druggists' Trade Association of Great Britain, and a councillor all through its existence. Similarly he joined the Proprietary Articles Trade Association at the commencement and worked hard on its committees. One always saw Mr. Andrews at his best as a member of the Western Chemists' Association. He was one of the founders of that body and a past President. His passionate love of music made the social evenings of the Association the most memorable of the kind. He would bring with him a few friends with stringed instruments, and they played so well, he joining them on the 'cello, that one could scarcely realise how so quiet a man was capable of giving his colleagues so much real pleasure. The Association will miss him sadly—indeed, all who knew him will. He had been in failing health lately, and had gone to Epping for a little change. On Friday morning while he was in bed, Mrs. Andrews, who was in the room, heard a sound of distress, and turning round found him dead—a spasm of angina pectoris having brought the end. He leaves a family of four, including one son (Mr. C. Russell Andrews), an old "Square" student, who some years ago gave up pharmacy. The funeral took place at Epping Old Church on Tuesday, when representatives of the Western Chemists' Association, Proprietary Articles Trade Association, and the Chemists' Defence Association were present.

CHAMBERLAIN.—The death is announced of Mr. Edward Tracey Chamberlain, chemist, Newcastle, Natal, at the age of 35. Deceased formerly resided at Hull, England, and was in business in Port Elizabeth, Cape Colony, before proceeding to Newcastle in 1895. He was a member of the local Town Council and a Freemason. He was well known and much respected, and his sudden death (he was found dead in bed) is much regretted in the community.

COLGATE.—At Lakewood, N.J., on April 21, Mr. Bowles Colgate, for several years senior member of the firm of Messrs. Colgate & Co., perfumers, New York. Mr. Colgate, who was 56 years of age, was a native of New York City, and was a partner in the well-known perfumery business from 1867 until 1901, when he retired.

CRASSWELLER.—On May 6, at Inyoni, Bury St. Edmund's Minnie Eliza, wife of Mr. W. E. Crassweller, chemist and druggist. Aged 73.

MACKENZIE.—The death is reported at Wynberg Hospital, Cape Colony, of Lieutenant Stewart Murdoch Mackenzie, of Driscoll's Scouts. Lieutenant Mackenzie, who was a native of Musselburgh, N.B., was a qualified chemist and druggist. He went out to South Africa in 1889 through the instrumentality of Messrs. Lennon (Limited), who engaged him as an assistant to Mr. J. McJannet, of Beaufort West. When the war broke out Mr. Mackenzie was manager of the Fort Beaufort branch of Mr. McJannet's business. He volunteered for service as a dispenser, and attained the rank of sergeant in the base hospitals. Subsequently he transferred for active service in Driscoll's Scouts, and for his services at the siege of Wepener, where his work among the wounded proved invaluable, he received his commission as lieutenant. His death was due to a lung affection induced by the hardships of the South African campaign.

MORGAN.—On May 12, at 13 The Boltons, South Kensington, Katherine Anne, widow of Octavius Vaughan Morgan, in her 59th year.

WHITE.—On May 3, at Wigton, Mr. Tom McCall White chemist and druggist. Aged 54. Mr. White served his apprenticeship at Wigton, afterwards starting in business in the town on his own account, with the manufacture of sheep-dips, sauces, &c., as side-lines. Some five or six years ago he relinquished the pharmaceutical portion of the business, confining himself entirely, and with much success, to the manufacture of preserves and sauces.

WILLIS.—At New Brompton, Kent, on May 7, Mr. Alfred James Willis, eldest son of Mr. H. J. Willis, chemist and druggist, High Street, New Brompton. Aged 21. Mr. Willis served his apprenticeship with Mr. W. G. Gordelier, of Sittingbourne, but had recently been an assistant in a pharmacy at Dover.

Art of Two Nations.

British.

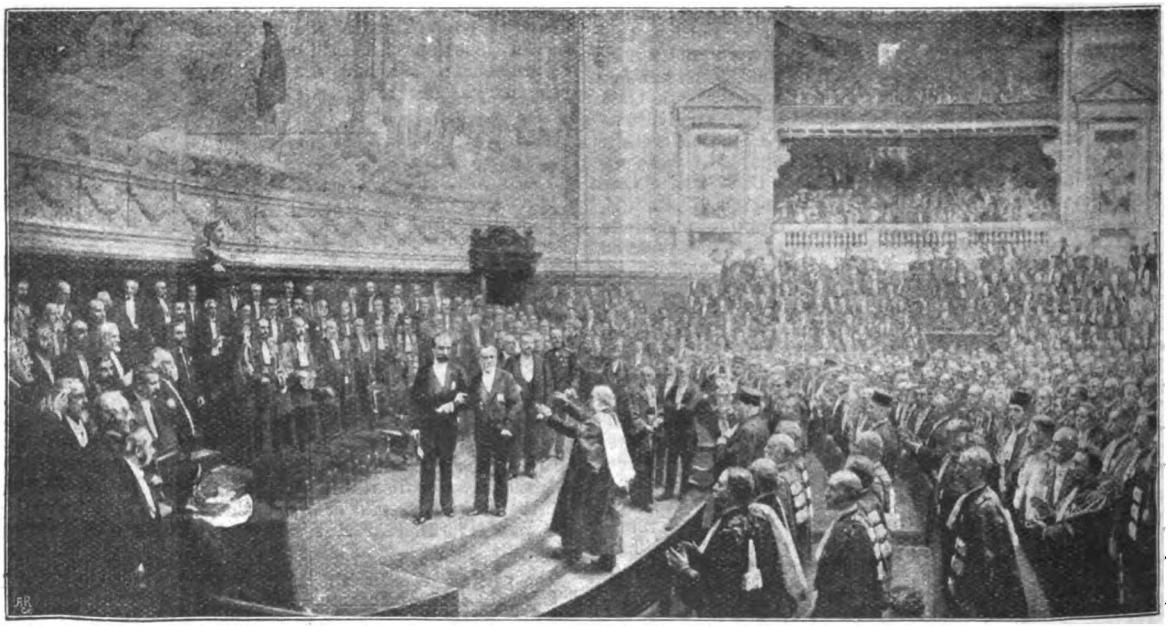
THIS year's Royal Academy Exhibition is deceptive. Most of us get our first impressions from the newspapers, and as many of those who write the "notices" therein are crazy about Mr. John S. Sargent, R.A., one is tempted to think he has done the whole 1,598 pictures instead of his ample eight. "All the more credit to Sargent," whispers a modest mentor. Our interest in Mr. Sargent lies in the portrait of Alfred Wertheimer, Esq. (No. 157), who is known to our readers as a contributor to the British Pharmaceutical Conference in association with Mr. C. T. Tyrer. The portrait helps one to realise Sargent's popularity, for it is Mr. Wertheimer, with a *plus* or *minus* something which the artist has put into it. An *Academy and Literature* critic says of it:—

The portrait of a Jewish youth remains in the memory and will remain a thing of beauty. Not that the sitter is beautiful, but because the quiet dignity of the figure, so exquisitely drawn, is so modest in its appeal, so suggestive of controlled and organised power in the painter without a hint of cleverness or

Digitized by Google

bravado. How charged with feeling is the faint light playing on the wall, caressing, not grabbing it, the glass retorts hanging there because they should be there, and not because, as in the portrait of the Duchess of Portland, a marble mantelpiece is a comely background to a comely figure. It is beautiful, and if you ask me to explain further why it is beautiful, I can only answer that Ruskin wrote twenty volumes to explain why things are beautiful and that the world is still unconvinced.

Barring the rapid change of the glass retorts to a marble mantelpiece, this is the sort of writing that is prevalent this season in respect to the Academy. The present writer is, therefore, extremely thankful that his commission was to pick out the pictures of men and things medical and pharmaceutical. Of the lot Mr. Wertheimer happens to be the most talked about, and it is certainly a persistently memorable picture, but it is not exactly Mr. Wertheimer. The next portrait in our department is the first in Gallery IV. (No. 205), that of Dr. H. Ronald Carter, of Leonard Place, Kensington, which only needs a passing glance; and in the same room is The Lord Kelvin, G.C.V.O., F.R.S., by Mr. Ouless, R.A.—a fine face beautifully rendered, but the emblems of rank which the old philosopher has chosen to be painted in are a trifle regrettable. No. 419, in Gallery VII., is a good piece of portraiture by Mr. Sholto J. Douglas, the subject being the Chairman of the Poisons Committee, Sir Herbert Maxwell, Bart., M.P. It is almost on a level with the presentation portrait of Sir Henry Trueman Wood, M.A., which Mr. von Herkomer has painted (No. 284), and which to our thinking is as good a portrait and picture as there is in the Academy. Compare it with the Sargent already referred to and with Professor Pettigrew, M.D., F.R.S. (No. 291), by Ouless, close beside it. There is in Gallery IX. a tiny oil-portrait (No. 657), by Mr. Edgar Anderson, of Mr. T. Morrison Porter, M.R.C.S. (Paris), which is a gem; and Mr. Hanson Walker's more ambitious portrait of Dr. C. D. F. Phillips, of Henrietta Street, is another success. Here (No. 753) the well-known pharmacologist is depicted in his LL.D. robes. In the same room is Mr. W. R. Symonds's portrait of Surgeon-General Jameson, C.B., which is pleasing and picturesque, albeit the face lacks animation. In the miniature cases is one of Dr. W. W. Shackleton, of Bushey, by Miss Kemp-Welch, and in the black-and-white room several chalk and pencil portraits by Mr. Seymour Lucas, R.A., which are worth dozens of portraits in oils. That of the Lord Chief Justice—an exquisite sketch—is well paired with No. 1296, Dr. Thomas Morton, of Kilburn, the treasurer of the British Medical Temperance Association. The last portrait in the same room is a pencil-sketch by Mr. E. B. Johnson of his friend, Dr. M. Anslow Alabone.



We mentioned a fortnight since that Mr. Horace Brocklesby (director of Lorimer & Co., Limited) has a picture in the Academy (No. 585). It has the peculiar honour of being placed alongside the President's "Vision of Endymion." It is a pleasing and breezy sea-view, as fresh as the morning, and although unambitious in composition, the artist has admirably rendered the subtle atmospheric depth seen "looking eastward o'er an ebb-tide." Amongst the sculpture the only piece which calls for mention here is Mr. Frank M. Taubman's pretty statuette "Fairy Tales." If Mr. Taubman does not take care he will find himself amongst the immortals.

French.

The Paris "Salons" that form the counterpart of the Royal Academy are now open. There are two exhibitions (writes our Paris correspondent), one representing the work and traditions of the older present-day French artists, while the other contains a display of the pictures of the younger school—another "New Gallery." This year the latter have the more interesting exhibition, and the two salons figure side by side in the Grand Palais of the Avenue des Champs Elysées. They remain open until June 30.

Pictures relating to science are never very numerous at these exhibitions, but this year there is one, of which we give an illustration, of special interest, as it records the crowning point of Pasteur's great scientific career. It is a large canvas entitled the "Jubilé de Pasteur," painted by M. Rixens, a well-known French artist, and is shown under the auspices of the Société Nationale des Beaux Arts (the younger school). The artist has devoted several years of patient work to the picture. The amount of detail given is enormous, and the picture may well be said to faithfully represent an official ceremony under the Third Republic.

The interesting event which the picture represents took place at the New Sorbonne, Paris, on December 27, 1892, to celebrate the seventieth birthday of the great chemist and scientist. The large amphitheatre of the Sorbonne is reproduced with great fidelity, and some four hundred portraits are given. In the front seats the leading professors of the Paris University in their handsome robes add a picturesque aspect to the scene, and behind is a packed audience composed of students and the minor lights of French science. On the platform are assembled the principal members of the Institute of France. Pasteur, the late President Carnot, and Lord Lister, form the central figures of the picture. Pasteur, already weak and undermined by illness, has just reached the middle of the platform and is

The Pasteur Jubilee in the Sorbonne.

Digitized by Google

leaning on Carnot's arm, and Lister, in academical robes, is in the act of acclaiming his great colleague, with arms outstretched.

M. Rixens has had the talent of giving to this picture, which might so easily have appeared rigid and official, a tone of dignity and simplicity which adds charm to it. Having been fortunate enough to be present a few months ago at a similar ceremony given in honour of Berthelot in the same amphitheatre, I can the more appreciate how well the artist has succeeded. I also well remember the Pasteur Jubilee. The audience on that occasion included the late Marquis of Dufferin and Ava, Sir Henry Roscoe, and Professor Ray Lankester. The proceedings were opened by M. Dupuy, the Minister of Public Instruction, who referred to the gathering as a scientific solemnity and a red-letter day alike for France and humanity. When M. Loubet, President of the French Republic, saw the picture a few days ago he remarked to M. Rixens that he was present at the ceremony in his capacity of Minister of the Interior. The artist replied that he was aware of the fact, but did not like to ask the President to sit for his portrait in the picture. The latter replied, with his usual urbanity, that he regretted this, as he would have sat with pleasure.

Pasteur reminiscences are also a prominent feature at the other salon (Société des Artistes Français), but they figure there in the section of sculpture. The handsome bronze monument of Pasteur by M. Antonin Carles to be erected at Dôle is shown, also a fine relief in plaster, surmounted by a bust by M. Paul Richer. It is a tribute to Pasteur's discovery for the *charbon* of sheep.

In the Salon of the Société Nationale there is a picture by M. Rosset of a Paris street showing the outside of a chemist's shop at night. The legend of the picture is simple enough. There has been an accident and the victim is inside the shop. A group of men and women outside are peering through the windows with anxious and sympathetic expressions of countenance and coloured lights are thrown on their faces from the carboys.

There is a small exhibition of English and French pictures, chiefly of eighteenth-century artists, in London Guildhall, and amongst the pictures is the sign of "Ed. Pinaud's Perfumery," Paris, which was painted by Jean Simeon Chardin. One side of the sign, 74 inches long by 26 deep, shows apparatus, consisting of glass alembic with an open book towards the left and a cactus. The other side shows distilling-apparatus, and in this case the process of destructive distillation is also depicted. The pictures are lent by M. Victor Klotz. Chardin was a pupil of Cazes and Coypel, and in the early years of the eighteenth century obtained quite a reputation as a sign-painter, but afterwards he gave up sign-painting for pictures of the French peasantry.

NEW HONORARY MEMBERS
OF THE
Pharmceutical Society of Great Britain.

BY its charter the Pharmaceutical Society has the power to elect honorary and corresponding members of the Society, "who shall have all the privileges thereof, except the right of being present at the general meetings." Until ten years ago there was only one class of such members; then corresponding members were created. The Council has the power to limit the number of each class; thus honorary members must not exceed fifty, but no limit has been placed on the number of corresponding members.

The oldest living honorary member in point of election is Sir Alfred B. Garrod, M.D., elected in 1856, and next to him comes Dr. Wm. Odling (1862), after whom follow Sir H. E. Roscoe (1870), and Professor Crum Brown (1872). Of the nine new honorary members elected last week, five have been corresponding members. We give this week portraits of as many of the new members as have been able to communicate with us in time to get engravings made.

Sir Dietrich Brandis, K.C.I.E., F.R.S., was elected a corresponding member of the Society in 1892. He is a son of Dr. C. A. Brandis, who was Professor of Philosophy in Bonn University. There he was born in 1824, and graduated in 1848. In the following year he was appointed lecturer on botany at the University, which post he held until 1855, when he was appointed by the Earl of Dalhousie, then Governor-General of India, to the charge of the teak forests in Pegu, to which charge, in 1858, that of the forests in the Tenasserim and Martalan provinces was added. In 1862 he was called to Calcutta to assist the Government of India in organising forest administration in the other provinces of

SIR DIETRICH BRANDIS

the British Indian Empire. In 1864 he was appointed as the first Inspector-General of Forests to the Government of India. In 1866 he organised the professional training of young Englishmen in the State Forests of France and Germany for the Indian Forest Service. In 1878 he established the Imperial Forest School for the professional training of natives of India for the Forest Service at Dehra Dun in north-west India. In 1881 and 1882 he re-organised forest administration in the Madras Presidency, and retired in 1883. In 1887 he was made a Knight Commander of the Order of the Indian Empire, and in 1898 the Edinburgh University conferred upon him the honorary degree of LL.D. Sir Dietrich lives at Capel House, Kew.

Dr. Leon Guignard, who now becomes associated with the Society, is, like Sir Dietrich Brandis, a botanist. Two years

DR. LEON GUIGNARD

ago he succeeded the late M. Planchon as director of the Paris School of Pharmacy. He was born at Mont-Sous-Vaudrey in 1853, and served his apprenticeship to pharmacy

Digitized by Google

in Paris. In 1876 he became a hospital pharmacist, and, studying at the Faculty of Medicine, distinguished himself, graduating as a doctor of natural sciences and first-class pharmacist in 1882. The following year he was appointed professor of botany at Lyons, and since then his progress in the French ranks of science has been rapid.

Sir George King.

Brigade-Surgeon Lieutenant-Colonel Sir George King, K.C.I.E., F.R.S., M.B., is an Aberdonian and a botanist. He was born in the granite city in 1840, and educated at the university there, where he graduated M.B. with highest honours in 1865. He entered Bengal Medical Department in that year, and became surg.-major in 1877 and brig.-surg. in 1889, retiring in 1898. For years he was superintendent of the Royal Botanic Gardens, Calcutta, and of cinchona-cultivation in India. Also Director of the Botanical Survey of India, and Professor of Botany in Calcutta University. He is the author of monographs of Ficus, Quercus, Sikkim orchids, &c., and of many papers to learned societies. He is an LL D. of his Alma Mater, and was one of the first corresponding members of the Society.

Professor Donald MacAlister, M.D., Chairman of the British Pharmacopœia Committee, is a son of the late Mr.

Dr. Donald MacAlister.

Donald MacAlister, of Tarbert, Cantyre, and, after laying the foundation of his wide knowledge at the Aberdeen University, went to St. John's, Cambridge, where, in 1877, he was Senior Wrangler and First Smith's prizeman—as high a distinction as any scholar can dream of. He turned to medicine, dividing his studies between Cambridge and St. Bart's., graduating as M.B. at the University in 1881. He taught mathematics at Harrow and natural philosophy at St. Barts'., while he was studying medicine. He is now Linacre lecturer of physic at Cambridge, where he has his home, having married Miss Edith Macalister, daughter of Dr. Alexander Macalister, Professor of Anatomy at the University there. He succeeded the late Professor Leech as Chairman of the Pharmacopœia Committee.

Mr. Henry Clifton Sorby, LL.D., F.R.S., was born at Woodbourne in 1826, and was educated at the Sheffield Collegiate

Dr. H. C. Sorby.

School and by private tutors. He has always taken an interest in scientific subjects, and has specialised on the microscopic structure of crystals and of iron and steel. He is an authority on minerals and rocks, and is Vice-President of the Sheffield University College. He has devoted much time to the development of science, literature, and art in Sheffield, and has come in contact with the President of the Pharmaceutical Society through the local Microscopical Society.

Professor Ralph Stockman, M.D., of Glasgow, has long been known to members of the Society. It was in 1883 that

Dr. Ralph Stockman.

the writer induced him to communicate a paper to the North British Branch of the Society on the chemistry of senna, a subject which the young doctor had been working up under Professor Schmiedeburg, at Strasburg. He was then an assistant to Professor T. R. Fraser in the Edinburgh University, and the paper was the beginning of much pharmacological work, some of which was done in association with Mr. D. B. Dott. He is an M.D. of Edinburgh, and succeeded the late Professor Charteris in the chair of materia medica and therapeutics at the Glasgow University. He is just turned 40.

The port of Tangier imported drugs and chemicals to the value of 2,706*l.* in 1901 against 3,547*l.* in 1900. With the exception of carbonate of soda, valued at 240*l.*, the bulk came from France.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4d.; Summer or Winter Number, 1s.; DIARY, 3s. 6d. Postal orders and cheques to be crossed "Martin's Bank (Limited)."

Prix de l'abonnement: The Chemist and Druggist une fois par semaine, et l'agenda du Chemist and Druggist une fois par an, 12.50 francs par an, franco.

Abonnementspreis: The Chemist and Druggist einmal wöchentlich, und Notizkalender des Chemist and Druggist einmal im Jahre, 10 Mark jährlich, frei in's Haus geliefert.

Precio de suscricion: The Chemist and Druggist una vez por semana, y el Agenda del Chemist and Druggist una vez al año, 12.50 pesetas anuales, franco.

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

NEXT WEEK'S ISSUE

OF THE CHEMIST AND DRUGGIST will be circulated on May 31 to buyers of all kinds of druggists' goods, in Canada, the United States, and the British West Indies. The object of it is to make these buyers as well acquainted as possible with the goods offered by our advertisers, and as this issue is practically the only journalistic means these important buyers have of getting into touch with manufacturers and merchants in this country, we cordially commend the issue to their attention. Advertisers should note that the Publisher cannot guarantee the insertion of any advertisements received after Wednesday next week. Advertisements for the Supplement will be taken up to the same time as usual. Address the Publisher of THE CHEMIST AND DRUGGIST, 42 Cannon Street, London, E.C., for full particulars.

Summary.

WE want a correct rendering of the prescription facsimiled on p. 822.

LAMPBLACK is the subject of new regulations as to shipment (p. 790).

A TALE OF A TRUSS has been told before a City of London Judge (p. 801).

AN announcement respecting the Naylor Testimonial Fund is made on p. 790.

"MARY MASTERS" is a lady about whom Mr. Bremridge sends us a warning note. See p. 811.

ANOTHER spurious Beecham-pill case has been settled in the High Court of Justice (p. 800).

NORMANDY PHARMACY provides a correspondent with an interesting subject, discussed on p. 793.

ACCORDING to our Council election postcard vote Messrs. Park and Campkin almost tie (p. 808).

AUSTRIAN CHEMISTS' ASSISTANTS are much troubled about their conditions of labour (p. 808).

THE NEW REGULATIONS in regard to the manufacture and sale of saccharin in France are epitomised on p. 792.

MR. GEORGE PECK has been elected an alderman of Cambridge, and we give some notes respecting him on p. 823.

AFTER JUNE Latin will be no longer an obligatory subject in the London University Matriculation examination (p. 790).

TWO WYCH STREET SHOPS (chemist's and "specialities") have been the subject of a High Bailiff and Jury action, reported on p. 801.

PHOTOGRAPHIC TABLETS are now prohibited in France, that and similar forms being reserved for medicinal purposes only (p. 792).

A MEDICAL AND HYGIENIC EXHIBITION has been held in London this week, and we have tried to gather novel ideas from it (p. 795).

MR. W. G. BAKER, of Messrs. May & Baker (Limited), died at Brighton on May 16. A portrait and notes of his career are given on p. 821.

WHAT may happen if the Minor examination is not divided is indicated on p. 807. "Xrayser" has also something to say on the subject (p. 805).

THE PUBLISHER of a New York drug paper has been arrested for criminal libel, alleged to be in an advertisement inserted in the paper (p. 791).

PORTRAITS of Sir Thomas Hanbury, K.C.V.O., and Professor Julius Wiesner, new honorary members of the Pharmaceutical Society, are given on pp. 823–4.

THE LONDON ESSENCE COMPANY reply, in a lengthy communication, to criticism by Messrs. Schimmel & Co. of work done on lemon oil in their laboratories (p. 812).

MR. GLYN-JONES'S Stamp Act case respecting the sale of recommended tr. quin. ammon. B.P. has got half-way on the preliminary stage, and proves to be interesting (p. 798).

A GLASGOW CHEMIST who sold camphorated oil containing 2½ per cent. less camphor than the B.P. required objected to the public analyst extending it to 11 per cent. (p. 801).

MR. BRAXTON HICKS, the Coroner who was the means of getting important decisions in regard to poisonous proprietary articles and sale of poisons by unqualified assistants, is dead (p. 821).

THE BOARD OF INLAND REVENUE has informed a correspondent that in dispensing proprietary medicines *per se* they may be taken from unstamped packets if the portion is stamped before sale (p. 807).

WE have received a number of communications in regard to acetum scillæ, which show that the extractive content lies between 7 and 8·5 per cent, and that the preparation deteriorates slightly by age (p. 811).

THE FLUCTUATIONS in the markets include a reduction in caffeine and codeine; morphine is also easier. On the other hand, St. Vincent arrowroot and Japanese wax are again dearer. Druggists' cream of tartar is firmer. Opium is easy (p. 817).

MR. T. E. MALINS, a Cardiff chemist, who has also a business in tooth drawing and fitting, has been fined 20*l.* under Section 3 of the Dentists Act for describing himself as specially qualified to practise dentistry (p. 800). Mr. Malins explains, in a brief note, that this gives opportunity for a High Court decision on the meaning of "specially qualified" (p. 813).

Corner for Students.

Conducted by Leonard Dobbin, Ph.D.

Students, please note. All communications should be addressed to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

All communications and reports must bear the names and addresses of the writers, not necessarily for publication. The reports of those who ignore this rule are liable not to be dealt with.

Qualitative Analysis.

A MIXTURE of not more than three salts will form the subject of the next exercise in qualitative analysis. The mixture is to be submitted to a thorough systematic examination, all its constituents are to be detected, and proof is to be given that the substances detected are the only constituents of the mixture.

Students' applications for portions of the mixture of salts (accompanied by a *stamped and addressed envelope*, not a stamp merely) will be received up to Tuesday, May 27, and the samples will be posted on the following day.

Students' reports will be received up to Saturday, June 7. Each report should contain a concise account of the work done, and should include a list of the constituents detected. In this list any substance regarded as an accidental impurity should be distinguished from the essential constituents of the salts composing the mixture.

The report on this month's analysis will be published next week.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Mr. J. E. Calkin, chemist and druggist, has been elected a member of the Salcombe Urban District Council.

Mr. H. E. Walden has been appointed chemist and druggist to Slough Urban District Council for the ensuing year.

John Woodhead (64), a "botanic chemist," at 103 Laisterdyke, Bradford, committed suicide on May 15 by cutting his throat.

Eastwood Urban District Council has decided that in future Izal shall be used for disinfecting purposes in place of chloride of lime.

At the Exchange Arcade at Lincoln last week, twenty 1*l.* shares in Boots Cash Chemists, Eastern (Limited), sold under the hammer at 45*s.* each.

The will of the late Mr. Stephen Augustus Ralli, of Ralli Brothers, East Indian merchants, London, shows personal estate of the net value of 1,067,431*l.*

The Mayor of Thetford, Mr. Walter Cornell Fison, chemical-manufacturer, has signalised the Coronation year by presenting to the Corporation a mayoral chain and badge.

Mr. W. Cook, chemist and druggist, of Hodnet, announces that he will close on Thursdays in future at 4 P.M.; and the chemists of North Walsham have agreed to close their establishments at 8 o'clock on Thursday evenings.

Several members of the Three Towns Chemists' Association joined the Plymouth Incorporated Mercantile Association in a visit to the works of the New Patent Candle Company (Limited), and subsequently to the gasworks on May 1.

Dr. Paul Peters, described as a chemist, appeared at North London Police Court on May 19 as prosecutor in an extraordinary charge of theft and assault preferred against a German engineer named Faller and his Swiss housekeeper.

At Southampton Police Court on May 16, a German named Sauer was sentenced to three months' hard labour for stealing an overcoat, value 1*l.* 19*s.*, belonging to Mr. Victor J. Hatfield, chemist and druggist, Bernard Street, Southampton.

The *conversazione* of the Westminster College of Chemistry and Pharmacy, Trinity Square, Borough, S.E., will be held in the King's Hall, Holborn Restaurant, on Friday, May 30. Any former student desirous of being present should apply to Mr. J. E. Walden, Secretary, for a double ticket.

The Early Closing Association, 21 New Bridge Street, E.C., has presented Lord Avebury (the President) and Mr. Cameron Corbett, M.P. (the Chairman), with copies on silk of the shopkeepers' Coronation window-bill, a handsomely designed and patriotic-looking poster, which will shortly be supplied on application.

The students and friends of the Leeds College of Pharmacy, accompanied by the principal, Mr. F. Pilkington Sargeant, F.C.S., took their annual botanical excursion to Windermere on Monday last. The party journeyed to the Lake District in a saloon, in which breakfast was served soon after starting. Arrived at the lake a cruise round it in a steam-launch was made. A contingent landed on the west bank and investigated the flora, the rest proceeding to Ambleside and from there by coach to Grasmere, where the first party was picked up. After visiting Lakeside a return was made to Bowness, thence to Windermere station, and so home.

The New Matric.

Particulars of the scope of the new Matriculation examination of the University of London have been published. The first examination under the new regulations will commence on September 15 next. An examination under the old regulations will be held in January, 1903, and under both sets of regulations in June, 1903. Matriculation candidates will be expected to show a competent knowledge in each of the following subjects: (1) English, one paper of three hours. (2) Elementary mathematics, two papers of three hours each. (3) Latin, or elementary mechanics, or elementary physics (heat, light, and sound), or elementary chemistry, or elementary botany, one paper of three hours in each subject. (4) Two of the following subjects, neither of which has already been taken under (3). One paper of three hours in each subject. If Latin be not taken, one of the other subjects selected must be another language from the list, either ancient or modern: Latin, Greek, French, German, Arabic, Sanskrit, Spanish, Portuguese, Italian, Hebrew, history (ancient or modern), logic, physical and general geography, geometrical and mechanical drawing, mathematics (more advanced), elementary mechanics, elementary chemistry, elementary physics—(*a*) heat, light, and sound, or (*b*) electricity and magnetism; elementary biology—(*a*) botany, or (*b*) zoology.

Lampblack on Shipboard.

The Board of Trade are advised that, although spontaneous ignition of lampblack is an extremely rare occurrence, the possibility of its taking place cannot be entirely dismissed from consideration. It is therefore suggested that special stowage in the vicinity of the hatchways, and where it is protected from the wet, should be provided. Printed paper should not be used in connection with the packing of lampblack, but when put up in paper parcels and packed in casks, or in casks simply lined with paper, or in cases or drums, it may be carried on board ship with comparative safety.

The Optical Society.

The meeting on May 15 was held in the Northampton Institute, when Dr. C. V. Drysdale read a paper on the testing of optical instruments. After dealing with the defects and aberrations of photographic lenses, telescopes, opera-glasses, and microscopes, Dr. Drysdale showed how to test the instruments for ordinary defects.

Naylor Testimonial Fund.

We understand that the testimonial to Mr. W. A. H. Naylor, F.I.C., F.C.S., by the members of the British Phar-

Digitized by Google

maceutical Conference, on his retirement from the honorary secretaryship, has been well supported, the amount subscribed up to the present time being 120*l*. We are asked to state that any others who desire to subscribe should send in their subscriptions to the Hon. Treasurer, Mr. J. C. Umney, 50 Southwark Street, London, S.E., in the course of the present month. It is proposed to present the testimonial to Mr. Naylor at the Conference-meeting to be held in Dundee on August 12–13, and it is desired to facilitate the arrangements for the presentation as soon as possible. Mr. Naylor has just returned from a trip to Morocco much benefited in health.

Birmingham Notes.

There seems to be an epidemic of illness amongst medical men of our city at the present time. Dr. Waldham Green, who was taken suddenly ill at the chemists' dinner, has had a sharp spell, and so had Dr. Ballance, of the Hagley Road. Overwork is the cause.

Dr. Conan Doyle, whose play of "Sherlock Holmes" has attracted many people to the theatre this week, was formerly an assistant to the late Dr. Hoare, of Aston-juxta-Birmingham. His Sherlock is named after the Gooch family, who are large property-owners, and his Baskerville was Birmingham's great printer.

The Homœopathic Hospital, Easy Row, was opened on Thursday last by Mr. A. M. Chance (Messrs. Chance & Hunt, Alkali Works, Oldbury), to whom was presented a handsome gold key. Mr. Chance said: "For 20,000*l*. they had one of the best hospitals in the country, and while they had all the modern improvements yet retained some of the old-fashioned comforts of being able to open a window and warm one's feet at a fire."

Teething-powders.

At an inquest held at Sunderland on May 15 on a four months' old baby, Dr. Todd attributed death to some irritant poison, but he could not say what it was. He had examined teething powders similar to some given to the child, and had found that one was composed of mercury and chalk, while in another opium was an ingredient. The powders given to the deceased child had been obtained from a general dealer, a woman, who stated that she had sold similar powders for three years. She got them from Leeds. The jury found that death was due to an irritant, but what this irritant was there was no evidence to show.

Fire.

A disastrous fire occurred on May 20 at the premises of the Welsbach Incandescent Mantle Company in Palmer Street, Westminster, damages estimated at about 20,000*l*. being done. The damage was confined to the London stores department, the factory escaping uninjured. Considerable trepidation was felt during the progress of the fire that the collodion-room would be set alight, but the room was soused with water, and the principal danger of spreading was averted.

Masonic.

At the annual meeting of the Provincial Grand Lodge of East Lancashire, held on May 14 at Accrington, Worshipful Bro. C. H. Griffiths, chemist and druggist, Droylsden, P.M. of the Faith Lodge, No. 581, and of the Duke of York, 1,449, P.Z. of the Union Chapter, 268, was appointed and invested as the Provincial Grand Director of Ceremonies by the Very Worshipful Bro. C. R. N. Beswick-Royds, Deputy Provincial Grand Master, in the presence of over 500 brethren, representing 115 lodges.

The Week's Poisonings.

During the past week oxalic acid and carbolic acid each caused four deaths, the only other scheduled poisons responsible being chloroform (taken in overdose by a habitual chloroform-taker at Finsbury Park) and arsenic, which a lime kiln-proprietor at Tiverton was given by his daughter in porridge. The oatmeal with which the porridge was made had been mixed with arsenic for poisoning beetles, and this the girl had inadvertently used. Besides the ten fatalities already mentioned, four others were caused by unscheduled poisons. A Bow painter died from drinking spirit of salt, the widow at the inquest stating that her first husband had died in the same manner. Dr. W. A. Stradling, of High Holborn, was found dead kneeling by his bedside. Numerous marks of the hypodermic needle were found on his body, and death was said to be due to an overdose of cocaine. Bottles of morphine and cocaine were found beside the body.—A Brighton compositor, who had had some family trouble, drank a quantity of sulphuric-acid solution with fatal results; and a young labourer at the South Metropolitan Gas Company's works was asphyxiated with sulphuretted hydrogen.—Sarah Trevithicks, who was stated to have attempted to commit suicide upon nine occasions, appeared before the Birmingham Stipendiary on May 21, charged with having attempted to take her life. She swallowed a quantity of oxalic acid, and her husband, who is on remand charged with assaulting her, struck her on the jaw with a bootmaker's last. He states that he struck the woman in order to make her throw the poison from her mouth. The woman was remanded.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Mr. Thackeray, L.P.S.I., Dublin, has been appointed manager of Maxwell's Medical Hall, Dalkey.

Mr. James E. O'Neill, Maghera, has also been returned without opposition to the board of Derry County Council.

Mr. John Baxter, Ballymoney, has been returned without opposition County Councillor for that district on the Antrim County Council.

Mr. Samuel Hill, 69 Castlereagh Road, Belfast, was returned unopposed to represent the Pottinger Ward on the Belfast Board of Guardians.

Mr. W. White, Belfast, purposes going abroad for his health, and is selling the goodwill and recipes of his proprietaries, which have had an extensive sale in the North of Ireland.

A meeting of the constituents in the North Belfast electoral division was held last week, when Sir James Haslett, M.P., gave an outline of the work done during this session. A vote of confidence was subsequently passed.

Charge of Stealing.

In the Dublin Police Courts on May 20 a man and woman named Ferns were remanded on a charge of stealing from outside the High-street pharmacy a bicycle belonging to Mr. Andrew Farrington, L.P.S.I.

Election of Analyst.

At the last meeting of the Kilrush Guardians, Mr. McMullen, of Belfast, was appointed analyst by thirteen votes to six, the latter being recorded for Mr. Walter Thorp, of Limerick.

A Lady Dispenser.

At the last meeting of the South Dublin Guardians a letter was read from the Local Government Board sanctioning the appointment of Miss Christina M. Jessop, pharmaceutical chemist, as compounder of medicines in the workhouse, at a salary of 80*l*. a year.

New Businesses.

At Newcastle, co. Down, a well-known northern health resort, a medical hall has been opened by Mr. Robt. Hastings, of Killyleagh, as a branch. Mr. Hastings will personally manage the new venture, his business at Killyleagh being in charge of Mr. Jos. Montgomery, R.D., late of Belfast.

A new medical hall has been opened at Lisburn, near Belfast, by Mr. J. Walsh, formerly of that town. The new hall is meant to take the place of Ward's Medical Hall, now closed through the death of Mr. Ward, the stock and fixtures of which were recently offered for sale.

Digitized by Google

Poison-bottles.

On May 16 an inquest was held in the library of the Belfast Royal Hospital on the body of Margaret Savage, who died through drinking sulphuric acid in mistake for paregoric, the bottles being similar in size and shape. Mr. Finnegan (Deputy-Coroner) said it was gross neglect on the part of any chemist to give out a bottle containing a poisonous acid and not to label it properly. He hoped the chemist in the case would be prosecuted.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

No Increase.

At a meeting of the Public Health Committee of Aberdeen Town Council on May 14, an application from the city analyst (Mr. Jamieson) for an increase of salary was refused.

No Drawback Here.

Recently two Dundee gentlemen were fined 200*l.* each for exposing for sale imitation tobacco. They have tried to get the Court of Session to reverse the judgment, but the Court has declined—with "modified expenses to the Crown."

Personal.

At this week's meeting of Leith Parish Council it was intimated that Mr. McCall (J. & W. G. McCall, chemists, Leith Walk), one of the representatives of the Second Ward, had retired on the ground of ill-health.

Where No Coroner is.

The Lord Advocate told a questioning member in the House of Commons last week that a medical certificate of death is not a necessary condition of burial in any part of Scotland.

Pharmacy Scholarships.

The Aberdeen Pharmaceutical Association offer two scholarships annually to the students attending the evening classes in pharmacy at Robert Gordon's College. The scholarships consist of a free term at the day school of pharmacy at Robert Gordon's College. Eight students entered their names for the competition this year, and at the examination held on May 2 and 3 by Mr. J. F. Tocher, F.I.C., Peterhead, who has now given his decision, the successful competitors were Mr. John Rioch (with Mr. W. Wallace, chemist and druggist, King Street, Aberdeen) and Mr. Adam Findlay (with Mr. A. L. Bruce, chemist and druggist, Crown Street, Aberdeen).

Edinburgh Chemists' Golf Club.

The "Gibson Handicap Medal" was played for during last week over the Braids, with the following results:—First, Mr. Duncan McLaren, 94−7=87; Mr. James Stott, 87+1=88; Mr. H. D. Alexander, 88 scratch; Mr. Geo. Robertson, 100−12=88. Tie for second, third, and fourth places. There was a large turn out.

All the ties in the first round of the hole-and-hole competition for the "Connell Smith Putter" have now been played. Undernoted is the draw for the second round:—

Mr. P. R. Beattie against Mr. W. G. McNab.
Mr. W. C. Baker against Mr. Geo. Robertson.
Mr. Jas. Stott against Mr. J. A. Forret.
Mr. Robt. McLaren against Mr. D. N. Wylie.
Mr. Wm. Lyon against Mr. A. J. Dey.
Mr. T. Miller against Mr. Jas. Finlay.
Mr. A. F. Dawson against Mr. W. B. Cowie.
Mr. Duncan McLaren against Mr. Jas. Anderson.
Messrs. C. F. Henry and Geo. Lunan receive byes.

Dundee Notes.

Chilblain-liniment is still in demand, owing to the continuance of very cold weather.

Water-glass for preserving eggs is being actively pushed by local chemists, a 7-lb tin selling at 9*d.*

A young married woman was admitted to Dundee Infirmary on Monday suffering from the effects of a dose of carbolic acid she had swallowed.

Lord Provost Hunter and Mrs. Hunter, who are to entertain the members of the British Pharmaceutical Conference on August 11, have received an invitation to attend the Coronation on June 26. The card is a beautiful work of art—representations of the thistle, the rose, and the shamrock being utilised for the border illumination.

There has been a good deal of talk about an advertisement of the Bile Bean Manufacturing Company's which appeared in a local paper. In it a local lady tells of a cheeky imposition played upon her by an unscrupulous storekeeper. It is difficult to see how such an advertisement can benefit the makers of bile beans; but as they are paying for it, they, no doubt, know best. [Correspondents in other parts of the country call our attention to this bit of un-English advertising.—Editor]

Glasgow Notes.

A local chemist who cons his *C. & D.* diligently is making a speciality of celandine ointment, and has just laid in a supply of the green herb, which he collects himself. The "Green Salve" is quite popular in his neighbourhood.

Mary Bonnor, or Boyle, and Catherine McGowan have been sent to prison for fourteen days and seven days respectively for creating a disturbance and doing wilful damage in the shop of ex-Bailie W. S. Galbraith, chemist, 52 Paisley Road, W. A gaselier was smashed in the course of the "row."

In a recent case of malignant diphtheria at the City Fever Hospital, Belvedere, 35,000 units of antitoxin, costing between 3*l.* and 4*l.*, were injected intravenously at one time, and this dose was repeated at intervals. Several desperate cases have already been pulled through by this heroic treatment. There was a fatal termination in the above case, but the large doses of antitoxin are said to have prolonged life for a day or so.

An impression is abroad that the new Trade Association has been formed to raise or lower prices, and in some unexpected quarters there is a disposition to anticipate the assumed policy of the Association by reducing rates. As a matter of fact, the Association's *raison-d'être* is the consolidation and development of retail trade interests, and the regulation of prices is an integral, but not a dominating, factor in its operations. Nevertheless, it is proposed to issue a price-list, and, as a result of committee-meetings, an informal canvass has been made of the constituency, with the view of arriving at a sound basis for action.

French News.

(From our Paris Correspondent.)

The Holy Shroud at Turin.—Dr. Paul Vignon, the Paris *savant*, whose announcement that he had found a photographic negative of the Christ on the Holy Shroud at Turin attracted so much attention recently, has published a statement in reply to the somewhat trenchant criticisms on his researches made by Dr. Andrew Wilson.

Photographic Tablets.—The Paris Prefect of Police has just issued a notice prohibiting the sale of poisonous substances in tablet or any other form, except for medicinal purposes. This measure is especially directed against chemicals put up in the form of tablets, &c., for photography. The Prefect draws attention to the fact that, since photography has become so popular, various firms have made a practice of selling the chemicals required by amateurs in compressed form; but as certain of the products are poisonous, and their possible confusion with inoffensive substances may cause very serious errors, their prohibition is imperative. The order reads as follows:—

The sale of all poisonous substances, of whatever nature they may be, is prohibited, except for medicinal purposes, in the form of tablets, pastils, pills, or any similar form.

A Taking Price list.—The dainty list containing particulars of the proprietaries and English and American specialities and patent medicines stocked at the Pharmacie

Digitized by Google

Swann, in the rue Castiglione, and issued broadcast over Paris, is what may be looked for from the historic English house in Paris. In his foreword M. Swann points out that the aim of the booklet is to let Britons and Americans know where their prescriptions may be dispensed with accuracy, and where their pharmaceutical requirements may be met with the knowledge and experience only attained to the full by their fellow-countrymen. As for the Pharmacie Swann itself, "the patronage of Royal Families and Embassies is a proof of its importance and a sufficient guarantee of its competence." The catalogue, with each page in an artistic broder, is divided into three parts—the first comprising the specialities of the house, the second dealing with "preparations of various houses which deserve a special recommendation," and the third consists of a list of hygienic and toilet articles and accessories and medical sundries. The list is well printed, and the covers, with their suggestion of beaten bronze, are unique.

SACCHARIN IN FRANCE.—The new law regulating the manufacture and sale of saccharin here has been duly put in force by a decree of the President of the French Republic. Manufacturers of saccharin or any other artificial sweetening substance have had to declare their industry to the local Excise authorities, and they are now practically bound hand and foot. Any manufacturer commencing to make saccharin must make a declaration a month before beginning work. Makers who cease, suspend, or re-commence manufacturing have also to officially announce the fact. The restrictions are also severe as to where the substances can be made, and as to keeping stock. The working days and hours have to be stated, while any deviation from the regulations render the unlucky culprits liable to heavy penalties and fines. Manufacturers are also obliged to set a room apart for the Excise officials to use as an office, the same being furnished, lighted, and heated at the makers' expense. As regards the distribution of saccharin, it can only be sent out in boxes or bottles numbered and sealed by the Excise, and accompanied by a declaration giving quantities and weights. Other detailed formalities are required of pharmacists who distribute the substance.

MUTUAL LIFE INSURANCE.—At the recent general meeting of the Confraternal Association of French Pharmacists it was decided to admit the wives of members to membership on the same terms as their husbands. The Association numbers 561 adherents at the present time, and exists for the purpose of providing a mutual insurance fund against death. Last year there were six deaths amongst members, and their heirs received an average of about 200*l.* each. The subscriptions, or premiums, are collected only according to the requirements of the fund (that is when a death occurs), and the amount payable is 10f. 60c., the odd sum being for expenses of management. Last year the members were thus called upon to pay 63*l.* 60*c.* each (2*l.* 10*s.* 6*d.*). A weak point about this organisation is that instead of new members being required to pass a medical examination, they are merely asked to sign a declaration stating that they are in good health at the time of joining. No insurance company would accept "lives" on such terms. The new regulation of the Association above mentioned, which provides that wives of members can be accepted on the same terms as their husbands, specifies that in the event of the latter's death the widow can continue her membership, but she has to resign if she afterwards marries a non-pharmacist. Divorce will also be a reason for a lady severing her connection with the Association. In both cases no money paid in is refunded. The limit of age for admission is fixed at 45, both for pharmacists and their wives. The President of the Society is M. Rabot, of Versailles, and its headquarters are in that town.

Normandy Pharmacy.

NORMANDY is divided—originally by the hand of Nature, but more recently by the Western of France Railway Company—into two regions. Upper Normandy, which is marked off by the Paris-Havre railway-line, is maritime and manufacturing, and its capital is the far-famed city of Rouen. Lower Normandy, parcelled off on the map by the railway-line from Paris to Cherbourg, is agricultural, or, more strictly speaking, pastoral, and its capital is the historical town of Caen—a quaint old city, which, thanks to the Southampton boats and its associations with the stirring times of bygone years, is largely frequented by English tourists. The *table-d'hôte* at the hotel where I stayed had a decidedly Anglo-Saxon aspect. "Let me," said I in a rash moment, "find the English pharmacist." I searched in vain. In the rue St.-Jean, one of the two chief business thoroughfares, where are to be found the hotels where the English cyclists and tourists are legion, I found a single pharmacy (M. Ferey's), a shop of characteristically French aspect. I therefore continued my promenade towards the rue St.-Pierre, the other business artery. Here at Mullois's Pharmacie Centrale du Nord-Ouest I noticed several English specialities, notably Maw's menthol cones, inhalers, and other sundries, Ingram's enemas, O'Connor's nipple-shields, and many other familiar articles. But my attention was soon diverted from the English specialities to the pharmacy itself, which is one of the most original and interesting I have found during my numerous journeys in France. The building itself is a very striking one and of considerable architectural pretentions. The entire building was erected for M. Mullois in 1897 by one of the leading architects of Caen, whose monogram (V.M.) appears on the top storey of the building, and it is a good example of how a handsome retail shop and manufacturing-premises can be combined under the same roof. That the architect should sign his name on an edifice that does him credit is a common enough practice in France, but this building bears the names of the stone-mason, the sculptor, and the roofer, in addition. A very handsome corner house it is, and a credit to them all. The window in the rue St.-Pierre, where English goods, showcards, and dummies, are shown, is one of four. The other three in a side-street (the rue Hamon) are respectively inscribed "Bandages, &c.," "Photo accessories," and "Chemical analysis (commercial and industrial)." The contents of the windows are in accordance with the inscriptions. The "Analysis" window, for instance, is full of retorts, test-tubes, and similar glasswork. The wholesale establishment (or, rather, the manufactory of chemicals and pharmaceuticals) is also in the rue Hamon, in a simple, but still handsome, style. A goods-lift was busy at work for loading vans, and inside the whirr of machinery, the glimmer and steam of immense coppers, and the smells (odorous and otherwise) of various drugs bespoke the fact that the manufacturing part of the business was genuine enough. A somewhat similar establishment may be seen at Caen at M. Demelle's, Place du Théâtre, on a smaller scale. Here a retail pharmacy and a manufacturing-laboratory are also side by side. The retail pharmacy is somewhat original, with its stained-glass windows and bemedalled frontage (M. Demelle is a laureate of the School of Pharmacy), the real show-window being in an outlying wing—a very curious arrangement—and I was sorry not to be able to snapshot the premises.

There are fourteen other pharmacies at Caen, but I need not describe them in detail. James's (a very English name) has showcards of Jeyes' disinfectant—"Cresil" they call it here. I saw "Charbonnier" over a shop in the rue Froide, and really, until I was close by, was not sure whether it was not really a coalman's (the name is as common here as Colman in England). However, it turned out to be a pharmacy. This is curious, because, as a rule, the pharmacien puts "Pharmacy" in bigger letters than his own name. Here there was not the slightest indication of what was sold, except one or two of the usual jars in the window. How curiously uncommercial some pharmacists are, to be sure. A great horse and cattle fair was in progress, and the town was full of peasants, but not a packet of veterinary medicine or rural specialities did I see in a pharmacy. There is competition, no doubt, though I saw no flagrant advertisement of cutting-prices. One little detail amused me. In the interior of the urinals the usual sandalwood and other preparations were advertised, and I noticed the names of half the pharmacies in the town. At Le Havre there is a big commercial (and, presumably, cutting) pharmacy, whose posters appear at all the railway-stations in a radius of some twenty miles, but I did not notice anything of this kind round Caen. One Caen pharmacist advertises "Very moderate prices, retail at wholesale prices," but this is mild nowadays. Perhaps Caen is still a "trifle rural." Normandy is delightfully primitive in some things. I have seen locomotives dated 1844 and 1847 still conveying passenger trains, but in some things they are quite up to date. I regretfully observed as I glanced at my hotel bills "Attendance and electricity, 1f. per night," and so on. In addition to the horse and cattle fair there was a pleasure fair. Here a young lady sold hair-regenerator. She was sitting with her hair down to her heels in front of a stall flanked by two photos, one of her before she used the regenerator, and the other afterwards—the latter I can answer for as accurate. As one of the "noble army of martyrs" to baldness, I was naturally interested, and I was informed this remarkable preparation acted on the male or female capillary nerves with equally efficient results. I thought I heard the young lady mutter a French equivalent of the Spanish proverb, "St. Thomas believes what he sees," as I turned away.

Lisieux is an old-fashioned place, more attractive to the artist and tourist than to the business man. At Lisieux three of the corners of the Place Thiers (the Grand Place) are occupied by

Digitized by Google

pharmacies. One (Pharmacie Bidet) is a delightfully half-timbered, low-pitched, old-fashioned type; the two others are quite modern. No undue cutting exists here, but a certain *bonne entente*, I fancy, for the pharmacists of the town close on Sunday.

Normandy is a great horse-breeding country. I made my first acquaintance with the French vet. recently. A quaint old court-yard behind a quaint old seventeenth-century inn, one of the *auberges* that have survived. A dogcart drives in, the neat bay cob and vehicle exactly matching. A portly gentleman descends—fresh-coloured, grey-haired, keen features, Cronstadt hat, grey clothes, gaiters—he might have sat for a portrait of John Bull. A manservant gets down from the dogcart, unharnesses the cob and leads him to stable. Several men hanging around the yard bring out horses. All leg wounds. No. 1 (a hock sore), "Yes, yes; getting along beautifully. Continue the treatment with a new lotion. Here is the prescription. Oh yes, you can work him a little." No. 2 much the same optimist style, and so on. Then to lunch. The vet. sits on the right hand of mine host of the Golden Lion, and is evidently himself the lion of the table. But his luncheon was, like a pharmacist's meal, much interrupted. Still he found time to lay down the law on tetanus, bacilli, and other absorbing subjects of interest in this horsey country, and his companions sat open-mouthed when a formidable Latin name of a microbe was rolled forth. I can only say that if he kept horses as healthy, vigorous, and cheerful as he was himself, he would be worth employing.

South African News.

Drug-contract.—Mr. J. H. Dinwoodie, chemist, Johannesburg, has received the contract for the supply of drugs to the Johannesburg Prison from May 1 to December 31, 1902. Mr. Dinwoodie was attached to the R.A.M.C. with the Natal Army.

Messrs. McVittie & Scruby, pharmaceutical and photographic chemists, Harrismith, O.R.C., writing in regard to a note in our issue of March 29, which stated that Mr. J. C. Scruby had bought the business of the late Mr. J. W. Glaister, inform us that they commenced a new business.

Pronounce with Care.—The following mellow taa, words may induce some reflections, if not observations amongst my home *confrères*: "Grootste Geneesmiddel Bekind. Veilig en Wonderbaar is 'Matalagia,' Het Groote Afrikaansche Geneesmiddel tegen Jicht, Rheumatiek en Rheumatieke Jicht." The paragraph (a common of its kind in South Africa) is only the ad. of a Cape Town chemist, who says it is the "greatest remedy known and is safe and marvellous."

The Chemist and the Coupons.—Mr. J. W. Couldridge, chemist, of 113 Princes Street, Port Elizabeth, has adopted a coupon-scheme in connection with his business. Every purchaser to the amount of sixpence will receive a discount ticket, and forty of such tickets will be exchanged for one shilling and a bicycle coupon. To the person receiving the greatest number of coupons by December 20, 1902, there will be presented a lady's or gentleman's Standard Rudge Whitworth bicycle, value 14*l.* 14*s.*

Trade-Marks.—Messrs. Peycke & Co., of Port Elizabeth, Johannesburg, and Cape Town, have applied to the authorities in Cape Town for registration of the trade-mark "Opus" in respect of chemical substances prepared for use in medicine and pharmacy in Class III.—Jeyes' Sanitary Compounds Company (Limited), 64 Cannon Street, London, E.C., have applied in Cape Town for the registration of the trade-mark "Jeyes' Fluid," in respect of chemical substances used for agricultural, horticultural, veterinary and sanitary purposes in Class II.—Mr. Samuel Henry Ward, of 48 Cranmer Street, Nottingham, patent-medicine vendor, has made application to the Maritzburg (Natal) authorities for the registration of the trade-mark "Febrisum," in Class III., in respect of chemical substances prepared for use in medicine and pharmacy.

The Blaney Fund.—The fund raised in aid of Dr. Thomas Blaney, C.I.E., Bombay, reached a total of 5,195r. 8a. In addition, Mr. D. S. Kemp (founder of Messrs. Kemp & Co., Limited, with which firm Dr. Blaney was for so many years associated) has come forward with an offer to pay 50r per month to the fund.

Colonial and Foreign News.

German Interests in Monazite.—The Brazilian Government has recently granted to a German for ten years the exclusive right to develop the monazite-sand deposits along the coasts of Brazil for the purpose of acquiring control of this privilege and exploiting similar deposits elsewhere.

A Dispensing Error of a peculiar kind is reported from Bezdan, in Hungary. A pharmacist read a badly written prescription for cascara-sagrada tablets as for corrosive-sublimate tablets, and dispensed the latter, labelling the package "poison." The patient died, and the unlucky pharmacist has been fined 400 crowns and two months' imprisonment. He has also to pay compensation to the relatives.

The Reinerz Pharmacy, in Silesia, was opened one hundred years ago—viz., on April 30, 1802. Since then, the *Phar. Zeit.* says, it has been sold at the following prices: In 1815 for 1 300 R. thalers; in 1820 for 13,000 R. thalers; in 1856 for 23,000 R. thalers; in 1860, for 24,000 R. thalers, the privilege on this occasion being valued at 10,000 R. thalers. Three years later it sold for the same price, and in 1868 at 28,500 R. thalers. The price dropped to 26,500 R. thalers in 1873, and in 1899 the price rose to 210,000m., or 70,000 R. thalers.

An Antikamnia Advertisement.—Last month the *Pharmaceutical Era*, of New York, printed an advertisement of the Antikamnia Chemical Company, in which it was asserted that Eimer & Amend, wholesale and retail druggists, New York, had substituted drugs and defrauded their customers. On the ground that the publication and charges contained in the advertisement were wilfully and maliciously false, Messrs. Eimer & Amend, on May 10, obtained a warrant for the arrest of Mr. D. O. Haynes, publisher of the *Era*, on a charge of criminal libel. Mr. Haynes was arrested and arraigned before Magistrate Mayo, and held for examination.

British Chamber of Commerce of Turkey.—The report of this Chamber, which was presented at the annual meeting in Constantinople on May 16, states that there has been an increase in the number of applications for recovery of bad debts, which shows the advisability of appointing British subjects as agents in Constantinople instead of dealing direct with natives or through native commission agents. The Chamber again repeats its warning to manufacturers and merchants to exercise more caution. The report also states that there has been no progress in connection with the new regulations which the Customs authorities framed with respect to analyses at the Custom-house.

From the East.—Mr. J. C. Carter (of Messrs. Voeckel & Schroeder) was dined by his pharmacist friends last month before leaving Shanghai for England. The dinner took place at the Astor House Hotel, Shanghai, and representatives of each of the foreign firms of chemists in Shanghai were present, including Messrs. Mennie, Kitchin, Hanson, Marshall, Harris, Melville, Mason, and Cleasby. Mr. Mennie presided, and, in proposing Mr. Carter's health, made an exceptionally interesting speech, pointing out that the "send-off" was quite unique in so far that the gathering was composed entirely of pharmacists. He eulogised the independence and self-reliance which had been the factors of Mr. Carter's success, as of every Britisher abroad, and expressed the hope that Mr. Carter would do his best to enlighten public opinion at home in respect to the great importance of affairs in the East, and especially with regard to Shanghai—a place that many seemed to think was a British colony of a few mud huts. Mr. Mennie's remarks were received with much enthusiasm, and, in reply, Mr. Carter spoke of his great gratification and pride in the reception given him, and asked all to remember that—

> When hearts unite, wide seas divide in vain,
> And hands may clasp across the spreading main.

Other toasts followed, including "The Pharmaceutical Society" and "The Chemist and Druggist," the latter receiving exceptional honour, we are told.

The Medical Exhibition.

THE annual exhibition of the Medical, Surgical, and Hygienic Exhibitors' Association (Limited) was opened at the Queen's Hall, Langham Place, W., on May 20, and remains open till May 23. Mr. Albert Cooper, pharmaceutical chemist, performed the opening ceremony, counselling the exhibitors to explain their exhibits in as concise terms as possible, so as not to waste the medical visitors' time.

The exhibition is a small one, but devoted almost entirely to those goods which chemists are interested in. The novelties, however, were not numerous. An alphabetical arrangement has been adopted for the following notes of the exhibits:—

The ANGLO-SWISS MILK COMPANY show the "Milkmaid" and the "Ideal" milk, the latter unsweetened. A leaflet for distribution by medical officers of health warns mothers not to let their children use dummy teats, the explanation given being that when the infant sucks the teat the stomach automatically pours out gastric juice, which, finding nothing else to act upon, "begins to digest the lining membrane of the stomach." Poor baby!

ARTHUR & CO. make a speciality of Bromaurum and Hydraurum—preparations of gold and mercury used in the treatment of nerve-affections. Among the other pharmaceuticals shown are Tannopumilio—a compound of tannin and pine oil, and mist. calcii chlor. cum ferro.

The AYLESBURY DAIRY COMPANY (LIMITED) have a pretty exhibit of humanised, peptonised, and sterilised milks; milk-sugar, Koumiss, and a sister product called Kephir.

The BERKEFELD FILTER COMPANY (LIMITED) are showing the "Berkefeld" filters. The company's representative informed ours that the arrangement with Dr. Nordtmeyer has been once more renewed. Business is still good, 2,500 Berkefeld filters having been sent out to South Africa during the past twelve months.

BILLON'S OVO LECITHIN (for which Mr. Joseph Flach is agent in this country) makes its maiden exhibition-appearance before the profession this year. The exhibit is small but neat and attractive, the Ovo Lecithin confection taking the fancy of the nurses who cluster round. It is an agreeable granular preparation for children, and contains 5 centigrammes of ovo lecithin in each teaspoonful. The pilular form is more suitable for adult use, and the pure substance in solution for intra-muscular injection comes particularly within the province of the doctor.

BOVRIL (LIMITED) are pushing Bovril essence of beef or beef-jelly, a light-coloured jelly for sick-room use. VIROL (LIMITED) occupy the next stall.

The BRITISH EMBALMERS' SOCIETY have on view a complete set of instruments and appliances used in the practice of the preservation of the dead body by arterial injection. The Society's representative professes to be able to render the body thoroughly innocuous and "sweet" in three hours, by simply injecting the "embalming fluid" into one of the arteries.

The BRITISH IRON MILK SYNDICATE (LIMITED) are pushing the merits of Dolle's aromatic iron milk. Many visitors are sipping the milky emulsion of iron to test the absence of iron hardness and flavour, and a little cow's milk added covers the taste entirely—a valuable medium when administration to children is desired. The preparation, which is nicely put up, is shown in 8-oz., 18-oz., and 36-oz. bottles, retailing at 1*s.* 9*d.*, 2*s.* 9*d.*, and 4*s.* 6*d.* respectively.

The BRITISH SOMATOSE COMPANY (LIMITED) are explaining the superiority of somatose preparations as real nutriment. The samples of liquid somatose which are being distributed should lead medical men to order that form of somatose more freely. A combination of somatose and chocolate is shortly to be introduced.

CADBURY BROTHERS (LIMITED) have a pretty little show of their cocoa and chocolate specialities. They are now making a milk-chocolate, which is as nutritious and stimulating as any of their products.

CALLARD & CO. show dietetic specialities, a new one being kalari-biscuits for obesity. Constipation-cakes are a tempting form of aperient, intended for adults as well as children.

The CELLULAR CLOTHING COMPANY (LIMITED) are displaying their wares assiduously to an interested gathering of fair nurses and stern medical men. The scientific principle on which the "Aertex cellular" underwear for both sexes are constructed is the attraction.

CEREBOS (LIMITED) demonstrate in a leaflet that many people are underfed in phosphates. Cerebos enables them to make up the deficiency in an unostentatious manner.

CHELTINE FOODS (LIMITED) are showing new styles in infants' and invalids' foods. Several attractive foods are put up in decorated tins, with the chemist's own name on. Special Cheltine foods are made for diabetics, anæmics, and dyspeptics. There is also a new well-flavoured milk-cocoa powder, put up in tins, which can be had with stock labels. A soluble food for infants is to be added in a few months.

COOPER & CO. have several of their pharmaceutical products on show, and back them up with oxygenated, oxycarbonated, and Globenaris waters. Globena is used as a brand name for a series of invalid meat essences. Liq. quiniæ salicylatis is said to be the best form for administering salicylate of quinine.

COSENZA & CO. are showing Maggi's Consommé and tonic Bouillon.

HARRY W. COX (LIMITED) exhibit *x*-ray and high-frequency apparatus.

COXETER & SON are showing various apparatuses for the administration of nitrous-oxide gas, either by itself or in conjunction with oxygen or ether. Oxygen-gas apparatus and ozone apparatus are also exhibited.

F. DAVIDSON & CO. are showing Davidson's patent portable dark-room for ophthalmoscopy, retinoscopy, and laryngoscopy, which is said to be an invention that has reduced the practice of these sciences to the essence of simplicity.

J. DEFRIES & SONS (LIMITED) are exhibiting the Pasteur-Chamberland filters in various designs, and several other disinfectant apparatuses.

DOULTON & CO. (LIMITED) show hospital pottery. A sink with jets for urinals and bed-pans seems a convenient arrangement for hospital use.

The DOWSING RADIANT HEAT COMPANY (LIMITED) are showing the latest improvements in their now well-known apparatus. This Company is the pioneer of the many concerns now engaged in propagating the heat and light-treatment for bodily diseases, but their speciality remains principally for local treatment. The patent heaters (electricity supplies the heat, of course) are so constructed and so portable that the heat may be projected on the particular part of the body affected, such as the neck, shoulder, or armpit, without affecting the other parts. They may also be arranged for a general bath if required.

EDGAR'S CROUP-LOTION (LIMITED) are pointing out to the medical profession that "Edgar's lotion" is not what is commonly known as a patent medicine, but a remedy originally prescribed by a well-known doctor, and it has seventy-five years of success behind it.

EUCRYL (LIMITED) have added Eucryl toilet-cream to their preparations. A pretty outline showcard in broad gold frame is shown in proof. Chemists should inquire for it, as it is out of the ordinary run of showcards, and good enough to show in the best pharmacy.

The "EXCELSIOR" ELECTRIC LIGHT BATH is one of several varieties of electric-baths on show in the Exhibition. It is a compact cabinet in which the patient sits surrounded by about fifty electric lights, according to the size of the bath, and two in a box on which the feet rest. The "Excelsior" bath is made entirely of steel plate, and coloured or frosted slips of glass may be used should coloured-light rays be required.

G. L. FOWLER is the inventor of an "invisible" respirator, inhaler, and voice-protector. It consists of two metal plates perforated and encased in a light frame-work, the whole being of such shape and size as to be introduced and retained in the mouth between the lips and the teeth. When thus worn it is said to warm the air as it is inhaled through the mouth, and, if desired, a thin layer of cotton or asbestos wool moistened with any medicament may be introduced between the perforated plates.

The GEM SUPPLIES COMPANY (LIMITED) exhibit the Gem folding bath-cabinet and the Gem water-still. The cabinet has been improved in regard to the way it is fastened when the bather is *in situ*.

Digitized by Google

The General Electric Company (Limited) are making a display of *x*-ray apparatus, which they are in a unique position for supplying. A new induction-coil arc-lamp is shown for producing violet and ultra violet light for treating skin-diseases. The apparatus consists of a condenser, which is charged from any source of high-tension electricity. The iron points of the lamp are about an eighth of an inch apart, and but little visible light is given off. A cap of ice or quartz is put on the end of the lamp-tube when in use, these substances being transparent to the violet rays, and aiding the cure by the coldness they produce on the skin. A rectifier for changing an alternating-current into a direct current, and useful in charging accumulators from the main, is also being demonstrated.

M. Hoff & Leopold Hoff are showing Hoff's malt-extract and Enoch's liqueur ironol.

The Holborn Surgical-instrument Company show a large variety of surgical instruments.

Thomas Holland, who is a surgical bootmaker, has on view an improved instep arch sock-patent, for the cure of flat-foot. The sock can be worn in any boot, and is raised on the inside of the foot with a steel support. Holland's bunion-splint, also shown, is a thin flexible sole of leather, divided at the toe end, and fitted with a glove-like pocket, into which the big toe is inserted. The sole to which the pocket is attached is then brought up to the sole of the foot, which it fits exactly, and the big toe is retained in its natural position.

Hovis Bread Flour Company are putting on the market two new foods for children—No. 1 for infants up to eight months, and No. 2 for older children or adults. Both foods are of the soluble variety, and are put up in square bottles.

Ingram & Royle (Limited) show mineral waters, of which the various Vichy Springs, Ober-seltzers, and Carlsbad waters are the chief.

International Plasmon (Limited) have recently added a line of Plasmon Diabetic biscuits to their increasing list of Plasmon preparations.

George Jennings (Limited), showing sanitary appliances, have a special glazed earthenware operating-table and bed-pan flusher.

Jeyes' Sanitary Compounds Company (Limited), besides Jeyes' fluid, are introducing Rideal's anti-typhoid tablets (acid sodium sulphate).

Henry Kimpton's book exhibit includes the new Caspari's "Pharmacy" and "Pharmacopedia."

Liebig's Extract of Meat Company (Limited) show "Lemco," "Oxo," and "Peptarnis," three meat-preparations familiar to chemists. To advertise these a distribution of Coronation pictures is taking place, about which the public is being made familiar in the daily press.

The "Manhu" Food Company (Limited) make a feature of "Manhu" diabetic foods, which restored the inventor to useful health.

Maple & Co. (Limited) have fitted up the balcony saloon as a hospital ward to show the style of the work they use in furnishing hospitals and asylums.

W. Martindale, in a representative display of pharmaceutical preparations, has several novelties. Liquid extract of fresh violet-leaves is in demand for treating cancer. Martindale's preparation is a fluorescent green-yellow liquid. Recent additions to the series of glyco-gelatin pastilles include menthol combined with cocaine and eucalyptus and one containing 2 minims of terebene. Sterilised dressings are now put up in convenient packages, and are so packed as to keep sterile ready for the surgeon's use. Sodio-magnesian aperient with caffeine is a new and useful combination of the original effervescent preparation. In test-cases, which are one of Mr. Martindale's special lines, a larger size of the urine test-case—the "Complete"—has been introduced for the surgery or hospital. It has a more complete range of tests than the well-known "Portable" case. Mention should also be made of the bacteriological test-case, containing reagents and apparatus for the examination of the commoner bacteria, and an incubator like a small lunch-case for carrying in the breast-pocket, the warmth of the body being utilised as the source of heat.

Marvis, the fish preparation of which the late Mr. E. C. C. Stanford was so appreciative, is displayed on a neat stall near the platform. Marvis soup as prepared in the South African hospitals, is being distributed, and there are many seekers.

S. Maw, Son & Sons (Limited) have several surgical-instrument novelties on view. The forceps-needle, invented by Dr. Carwardine, of Bristol, is a combined needle and forceps which can be used without the trouble and intricacy of threading. An improved Greig-Smith's pedicle forceps-needle, also invented by Dr. Carwardine, is on the same principle. The needle is first pushed through the pedicle, then unclasped by simply opening, and the thread caught, drawn back through the punctures, and then let go. A perinæum-needle which Messrs. Maw have made specially for use at Queen Charlotte's Hospital is also shown. It possesses the advantages over others of being lighter and neater without losing in strength. An adenoid currette is now made which is capable of taking in a larger growth without detracting from the "purchase." A glass-jar for sterilising gum-elastic catheters by means of formalin-vapour is also to be seen, and an improvement on the india-rubber bag usually employed with Clover's ether-inhaler. The indiarubber bag is replaced by one of brown holland, which, being porous, not only allows a certain admixture of air with the anæsthetic, and thus aids anæsthesia, but it can be sterilised by boiling, if necessary, after each operation, and it will wear indefinitely. In another part of the building is a display of aseptic hospital-furniture. A new idea in isolating-sheets is shown, the sheet for hanging outside the door of a sick-room being always damp and antiseptic. Billroth's cambric, a cheap substitute for jaconette, and a new way of sending out dressings sterile in sealed packages, are other exhibits.

The Muschik Vibratorium Apparatus is one that cannot be ignored: it makes its presence audibly known all over the building. It appears to be another variety of electric massage now getting to be fashionable. An electric motor is attached to a very complicated-looking apparatus, at the business-end of which is a tube to which two small metal hammers are fixed. When in action these hammers revolve at a high rate of speed, pulsating on a vulcanite fibre plaque, which is brought into direct contact with the body. The feeling produced is a gentle penetrating vibration, which is not unpleasant, and is claimed to produce wholesome physiological effects.

The Myosin Albumin Meat-extract Company exhibit "Mamesin," which is stated to be a preparation of myosin albumin. It tastes like meat extract, but is paler in colour, and gelatinous.

G. Nelson Dale & Co. (Limited) make a big show of "Hipi," and a good impression with tasting-samples. Hipi is pronounced "heapy," or should be, the name being New Zealand for sheep, and the preparation one of the best invalid diets obtainable.

Henri Nestlé is exhibiting his well-known infants' pabulum, and also condensed Swiss milk and "Viking" milk. His advertising literature for children is very entertaining.

F. Newbery & Sons have their usual fine show of the preparations of W. R. Warner & Co., of Philadelphia. The medical men appear to be more interested in the practical demonstrations being given of the solubility of the Warner pills in cold water than in anything else almost on the stand. The obesity-cure (Kissingen and Vichy tablets alternately) also excites considerable interest, and a series of chocolate-coated digestive-tablets are admired. Cascara elixir is prominent, and gallon-jar quantities are being specially quoted. The lentiforms, fluid extracts, and elixirs of this firm are still present, but never seem to pall.

Newton, Chambers & Co. (Limited) are showing amongst their "Izal" preparations the thirty-thousandth drum (5-gal. capacity) of Izal to be sent to South Africa for the use of the troops.

Nicolay & Co. have a small exhibit of Hommel's hæmatogen.

O'Connor Extension Company show the "Gunthorp" arch-support—a good appliance for flat foot. The support fits in the ordinary boot.

Oowana (Limited) have a very attractive display of their soaps at the top of the hall, just under the platform. A semi-rustic, attractively gold-painted, but wholly ideal representation of the *Ophir* is shown, and illustrates the style of window-display the company are prepared to give to chemists, with an order for "Oowana" soap. The display

Digitized by Google

is distinctly novel and very attractive, and the fact that the soap was supplied by special desire to the *Ophir* for the use of the Duke of York and his suite, and that a long list of nobility and celebrities speak well of it, seems to show that it is not without merit. It is distinctly pleasant to use, and its principal ingredient is said to be "the fluid extract of a plant having great healing and cleansing properties." A perfumed toilet-soap and a shaving-soap have recently been added.

The PEPTENZYME COMPANY have a neat exhibit in a front position, where their digestive product, in powder, tablet, and elixir, is shown with protonuclein preparations and zymocide—a nice-looking and pleasant non-poisonous antiseptic. "Trophonine"—a liquid food prepared by this company, for which a demand has arisen amongst doctors recently—is also to be seen.

The PROTENE COMPANY (LIMITED) appears to succeed in always obtaining attractive demonstrators. The stand is usually surrounded by full-fledged matrons and timid probationers, with a sprinkling of professional-looking gentlemen, to whom the properties of "Protene" are described in eloquent and convincing terms. The "Protene" dainties (in biscuit and confection) are not devoid of appetising allurements.

REBMAN (LIMITED) have an exhibit of books and serums. Among the former we noticed a new medical dictionary—Duane's—which includes chemical and pharmaceutical names. Rebman's calf-lymph has been in great demand for some months, and failures to successfully vaccinate with it have been practically unknown. The therapeutic sera include antidiphtheritic, antityphoid, antistreptococcus, Coley's fluid, tuberculin, malleine, and antiplague.

ROSBACH is forging ahead, and new advertising-matter is being shown.

The SANITAS ELECTRICAL COMPANY (LIMITED) are makers of light-cure apparatus and light-baths. The "Dermo" lamp and the "Dermo" reflector with cooled iron electrodes are specially adapted for the Finsen treatment of skin-diseases, while the electrical portable trough-shaped light-baths are marvels of ingenuity and gorgeousness. The "Tricolor" incandescent light-bath combines light of three different colours. Each colour may be turned on separately, red, white, or blue, as the case may be. There are many ingenious devices for applying light to the body to be seen at this stand, and special interest seems to be taken in the show, perhaps owing to the fact that the King has had several of the company's light-baths installed in Windsor Castle and Buckingham Palace for his private use.

The SANITARY WOOD-WOOL COMPANY (LIMITED) exhibit Hartmann's dressings, comforts for newly vaccinated people being prominent.

STEPHEN SMITH & CO. (LIMITED) make Keystone Burgundy the keystone of their exhibit, and Hall's wine is there too.

W. K. STACY shows chiefly nurses' wallets and instruments.

WELFORD & SONS (LIMITED) show bottled milks, humanised, sterilised, and peptonised. An illustrated booklet is being distributed to show the reality of the scientific control of the dairy.

WODDERSPOON & CO. are stationers and printers who make a speciality of medical charts. Specimens of various designs are being lavishly distributed, and include morning and evening, four-hour, two-hour, and one-hour charts, and many other kinds, apparently complicated but charmingly simple in reality. A combined clinical case-book is a clear and concise method of keeping records of private nursing-cases, and should commend itself to nurses.

Personalities.

DR. LUDWIG MOND has presented a portrait of Bunsen to the Hofmannhaus in Berlin.

MR. W. DAWN COPLEY, chemist, Bulawayo, arrived in Southampton by the *Briton* last Saturday.

MR. H. COLLARD returned last Saturday from his tour in South Africa on behalf of Messrs. Newball & Mason, Nottingham. Mr. Collard confined his operations to the seaboard towns, and he reports excellent business there, and a great future for British South Africa "after the war is over.'

Business Changes.

MESSRS. CADMAN & CO., have bought the business of Mr. F. J. J. Joy, in High Road, Lee, S.E.

MR. D. WHITE, chemist and druggist, has opened a business at 41 Clerkenwell Green, E.C.

MR. W. HAIGH, chemist and druggist, has purchased Mr. G. R. Harwood's business at 307 Stanstead Road, Forest Hill, S.E.

MR. W. LONGTHORNE, late of 172 High Street, Walthamstow, is opening a drug-store at Norbiton Pavement, Park Road, Norbiton.

MR. A. BARRITT, chemist and druggist, 164 Charing Cross Road, W.C., is extending his premises by the addition of 166, adjoining.

MR. A. E. PARKHOUSE, chemist and druggist, has purchased the business formerly carried on by Mr. F. C. Francis at Ladywell, Lewisham, S.E.

MESSRS SHAW & STRACHAN have purchased the business lately carried on by Mr. William Johnston, pharmaceutical chemist, at 69 Loughborough Road, Brixton, S.W.

MESSRS. DESMOND & CO., chemists, 55 Freemason Road, Custom House, E., have purchased Dr. J. Knight Hill's branch drug-business at Albert Road, North Woolwich, E.

MR. FRANK MOSS, chemist and druggist, of Kingswood and Staple Hill, has purchased the business, lately carried on, under the name of T. Grant, at 239 Cheltenham Road, Bristol.

MR. W. E. HAYWARD, pharmaceutical chemist, has purchased the business in Wednesday Market, Beverley, formerly carried on under the title of "Fields & Hayward," and will in future trade under his own name.

THE branch establishment of Mr. D. H. Oxen, chemist, 99 Broad Street, Shelton, Hanley, was closed last week, and the fixtures disposed of. Mr. Oxen's head establishment is at Newcastle-under-Lyme, and he has a branch at Stoke.

THE old-established business of chemist and druggist, with off-licence attached, carried on by Mr. Joseph Bennett Brierley for many years, at 2 Boothtown Road, Halifax, has been transferred to his son, Mr. Herbert Charles Brierley, chemist and druggist. Mr. J. B. Brierley is continuing his establishment in Haley Hill.

Trade Notes.

"THE BRITISH ADVERTISER" is the latest claimant for notoriety. It is monthly, bright, has some good ideas in it, and is published at 2 Queen Anne Buildings, Baldwin Street, Bristol, at 6s. a year.

THE VIBRONA ART SERIES is the subject of a booklet issued by Messrs. Fletcher, Fletcher & Co. (Limited), Holloway, N. It contains a selection (reduced facsimiles) from the twenty-four British pictures which the firm have published in monochrome, and a large number of most flattering testimonials respecting these excellent art productions.

BERKEFELD FILTERS.—A circular has been issued which shows that the Berkefeld Filter Gesellschaft, of Celle, Germany, manufacturers of the "Berkefeld" filter, have again given the sole right of selling this filter in all British territories and Egypt to the Berkefeld Filter Company (Limited), 121 Oxford Street, W. The manufacture and sale of "Tubor" filters has been discontinued.

EAU DES CARMES.—Mr. John Morgan Richards, 46 Holborn Viaduct, E.C., has been appointed by Messrs. Renouard-Lariviere & Cie's Successors, 17 rue de L'Abbaye, Paris, as sole agent in Great Britain and colonies for Eau de Carmes. This remedy for apoplexy and other ills dates back two centuries, and with such a record to go upon there is special interest in the announcement that a vigorous campaign of advertising is to make it better known in this country, particularly on account of the fact that Mr. Richards has in that manner successfully established several popular medicines which are not so ancient.

Legal Reports.

Stamp Act, 1812.

SALE OF B.P. PREPARATIONS BY CHEMISTS.

AT the Thames Police Court on May 16, before Mr. Dickinson, Mr. William S. Glyn-Jones, chemist and druggist, 159 East India Dock Road, was summoned by the Commissioners of the Inland Revenue for having sold ammoniated tincture of quinine, B.P., unstamped, contrary to the provisions of Section 2 of this Act. Mr. Denniss appeared to prosecute for the Inland Revenue authorities, and Mr. Kirby represented Mr. Glyn-Jones.

Mr. Denniss said: The whole question has been raised by the defendant himself, who desires to get a decision as to whether he can sell a preparation known as ammoniated tincture of quinine without a stamp when labelled. Under the Act of 1812 the defendant would be liable on conviction to a penalty of 10*l.*, but he has specially raised this test-case on behalf of the members of his profession, to whom a decision one way or the other is of very great importance. The schedule in the Act is a very long one, and enumerates a list of medicines liable to duty. The Act, never having been repealed, is still in force, and it is very strict as regards the sale, making it compulsory for a stamp if any label is attached to the bottle holding the contents out or recommending them as a remedy or cure. This particular bottle was labelled:—

Ammoniated tincture of quinine, B.P. A well-known and highly recommended remedy for colds. A teaspoonful in water every four hours until relieved.

This is clearly contrary to the Act, but the defendant claims the right to label the bottle free under the special exemption clause of the Act. [This Mr. Denniss read; see Alpe, page 105, and *C. & D.*, April 12, 1902, page 567.] The defendant claims to be within that clause, but ammoniated tincture of quinine, if served in a labelled bottle as a scientific preparation that would be beneficial for a cold or influenza, and so held out or recommended by the words on the label, is liable to duty, even though proprietary rights are not claimed.

Mr. Dickinson (the Magistrate): Then because it says the quinine has been highly recommended by the faculty the defendant has got to pay duty?

Mr. Denniss: That is the Act, your Worship.

Mr. Dickinson: It does not say he personally recommends it?

Mr. Denniss: Those are the only words, and the Act forbids such labels except with the stamp. By the label it is being held out, contrary to the Act, as being beneficial to the relief of an ailment of the human being.

Mr Dickinson: It simply repeats what is common knowledge. Every Englishman has taken quinine for colds.

Mr. Denniss: Yes, but this is ammoniated tincture of quinine, a specific preparation, and it is held out as a remedy for colds and highly recommended. If it had been sold merely as what it actually is—ammoniated tincture of quinine—and not held out or recommended as a cure or remedy for any particular ailment or disease, it would not have been liable to the duty at all, but being so held out or recommended it clearly becomes liable under the Act.

Mr. Dickinson: Are there any proprietary rights claimed for the article?

Mr. Denniss: They do not claim any.

Mr. Dickinson: Then other persons can sell the same article in exactly the same way?

Mr. Denniss: Oh, yes, subject to this matter of the duty if so labelled with a recommendation. The case has clearly been forced forward by the defendant himself. In April he wrote intimating his desire to sell ammoniated tincture of quinine in this fashion [letter read]. To this a reply was sent that if he sold the article in that way it would be liable to duty [letter read]. The defendant, however, did not agree with this view of the law, and wrote that he should sell it to test the legality [letter read]. On that the Commissioners of Inland Revenue had but one course to adopt, and the purchase was made of the bottle the subject of the present case. The defendant was quite right in the first part of his contention that he was a person specified in the Act as being allowed to sell the article, and had he stopped there he would have been all right, but the Act goes on, "that have not or shall hereafter by advertisement be held out or recommended to the public by the owners, proprietors, makers, compounders, or first vendors." The defendant was clearly the first vendor, if not the others, and by adding the label he has infringed the Act, and the question is therefore, Does the duty not distinctly apply?

Mr. Dickinson: He has not paid any duty I suppose?

Mr. Denniss: No, purposely to have the matter brought here. Counsel then referred to the Smith *v.* Mason case, and called Mr. Thomas Moyle to prove the purchase.

Mr. Kirby, after putting a question or two to witness, pointed out to the Magistrate that the summons was bad, as it said, "uttering, vending, and exposing for sale," whereas defendant did not utter or expose, and also labelled the bottle as a "prevention and cure."

Mr. Dickinson: I don't think we need waste time over that.

Mr. Kirby: The defence to this summons is that we do come within this very particular exemption. There are numerous Acts dealing with this subject besides that of 1812, but the objects of the Acts are clear on one point—that they were simply to apply to patent medicines, then greatly increasing in number and character. *Prima facie* we might say that all medicines are taxed, but these Acts take out all articles in which there are any proprietary rights, and there never were proprietary rights in ammoniated tincture of quinine. It has never been taxed, and if an article is once taxed it remains so for ever, and the label would not effect it. If that were not so other people would be getting the benefit of other persons' mixtures.

Mr. Dickinson: But with a ticles not proprietary you must be getting the benefit of other persons' mixtures, surely?

Mr. Kirby: Well, in a way, perhaps. Now, with regard to this Act that my friend relies upon, we come within the first part of it down to the words, "or in anywise affecting the human body." The rest of the Act in no way applies, and the words are different in the charge which says, "makers, vendors, or proprietors." "Owners or proprietors" in one sense we do not deny. Mr. Glyn-Jones certainly was the owner or proprietor of that particular bottle, but he was not the owner or compounder of ammoniated tincture of quinine.

Mr. Dickinson: Do you contend in this case you don't come in any of these characters?

Mr. Kirby: We say we don't come in any of those words. That is the object of the different wording of the exemption.

Mr. Dickinson: But how about these words, "any article held out or recommended to the public by the original or first vendors." Do you say you are neither?

Mr. Kirby: I certainly say so.

Mr. Dickinson: Where, then, can the Act apply?

Mr. Kirby: Well, it might concern drugs or proprietary articles. Take, say, Beecham's pills—clearly a proprietary article and coming within the Act, of course.

Mr. Dickinson: You suggest that any person could recommend any article not already proprietary?

Mr. Kirby: Oh, no; we say certain persons like the defendant could, but not the public generally. The object of all these Acts was to tax patents, for anybody can take out a licence to sell proprietary medicines, but dare not sell or recommend ammoniated tincture of quinine.

Mr. Dickinson: But any tinctures which shall hereafter be recommended. You distinctly have the wording "hereafter be recommended."

Mr. Kirby: Certainly I admit we come within the general charge, but we claim the exemption being a chemist.

Mr. Dickinson: Well, then, again, "which preparation has not been recommended by the owners, proprietors, compounders."

Mr. Kirby: That is just our case, we are not either If you closely read the Act you will see that certain people under certain circumstances are clearly taken out of the Act. If the article was not recommended by the first vendors any subsequent advertisement by other persons does not apply within the meaning of the Act. Now, we claim that ammoniated tincture of quinine has never been a proprietary article or held out or recommended by the original or first vendors, which my learned friend must first prove to show a case.

Digitized by Google

Mr. Dickinson: But this Act surely goes beyond proprietary articles?

Mr. Kirby: Oh, yes—lozenges, pills, or secret compounds; but when held out or recommended to force the sale.

Mr. Dickinson: But I take it if you add the advertisement to force the sale you must pay for it. That is the object of the Act apparently. The object was to prevent one person selling an article to the loss of his neighbours without having to pay for the advantage.

Mr. Kirby: Yes, that is certain persons. But, now, do we come within those first words, "owner or proprietor"? Clearly we are not the "maker or compounder," for that, of course, must be the first person, not us. Of the Acts dealing with "owner or proprietor" we have Statute 42 Geo. III., chap. 56, sec. 3. [Section read. Alpe, page 27.] That Act shows exactly who shall pay the duty—"owners, proprietors, makers, compounders, or original or first vendors." We are neither. Clearly it means the man who makes the compound, which would be the manufacturer, not the chemist—my client—who merely sells it. Then there is sec. 6 of the same Act. [Section read.] That distinctly says everybody that deals with proprietary articles. We say we are not dealing with a proprietary article in ammoniated tincture of quinine, so we clearly are not yet affected. Then we have sec. 10 of the same Act. [Section read.] Then sec. 19 of the same Act is practically the same words. [Section read.] Now we come to 42 Geo. III., chap 73, sec. 2. [Section read. Alpe, page 32.] These, again, I submit, all prove that the words must mean the manufacturer.

Mr. Dickinson: But it says "any packet, box, bottle, pot, or phial held out or recommended by any label or words written by the first vendors."

Mr. Kirby: But we are not the first vendors, I contend. I submit that those phrases, "owner, proprietors, makers, compounders, original or first vendors," clearly distinguish between the manufacturer and the seller, and if anybody should be taxed it must obviously be the manufacturer or wholesale firm my client received the article from. They must be the original or first vendors as well as the makers and compounders, if not also the owners and proprietors, which I submit they are also. I shall prove by evidence that ammoniated tincture of quinine was never a proprietary medicine, and though the dose is fixed now by the British Pharmacopœia it goes back long before the British Pharmacopœia. In 1853 ammoniated tincture of quinine was heard of and used and recommended by doctors, and no one has ever taken proprietary rights of the formula in the British Pharmacopœia.

Mr. Dickinson: Your contention is that there never has been any original owner that had proprietary rights.

Mr. Kirby: That is exactly so; anyone can sell it, whereas once a proprietary article always a proprietary article, and no one could sell it otherwise.

Mr. Dickinson: I follow you so far.

Mr. Kirby: The exemption-clause makes a difference over the Act itself. A man can be the vendor without being the first vendor, who must be found in the wholesale house where he bought it.

Mr. Dickinson: There is only a difference of the adding of two words—"owner and compounder."

Mr. Kirby: Mr. Glyn-Jones is not the compounder. He is charged with being the seller.

Mr. Dickinson: Is not a seller a vendor?

Mr. Kirby: The earlier Act clearly distinguishes between the seller and the person who makes it.

Mr. Dickinson: In a large wholesale house how do you decide the first vendor?

Mr. Kirby: The actual head proprietor of the wholesale house.

Mr. Dickinson: Why not the assistant?

Mr. Kirby: Because he is the actual maker and compounder.

Mr. Dickinson: Would not the assistant be the actual maker and compounder?

Mr. Kirby: He would be only the servant of the maker. In the present case, of course, we should be the owner and proprietor of that particular bottle but not first vendors of the contents.

Mr. Dickinson: But the Act is to prevent any recommendation at all.

Mr. Kirby: Oh, no, your Worship, only by the "owner, proprietor, maker, compounder, or the first vendor."

Mr. Dickinson: But the tax starts with the advertisement, and you are the first vendors with the advertisement. If sold without that recommendation it would have been all right, but you surely come within the meaning of the first vendor of any label affixed to the bottle recommending the contents.

Mr. Kirby: To make us liable we must come within all the Act, and we are clearly entitled to that exemption clause. Then again the word "compounder" could not apply to us at all. Mr. Glyn-Jones did not compound this ammoniated tincture of quinine.

Mr. Dickinson: Is there any distinction between "owners" and "proprietors"?

Mr. Kirby: Well, you see, in the Act it is "owners and proprietors," "makers and compounders," but elsewhere it is "owners or proprietors," "makers or compounders." The actual word "proprietary" is only used in the exemption clause, I believe. In 42 Geo. III. "owner" and "proprietor" have the same meaning, apparently, as do "vendor" and "first vendor," but the subsequent Acts leave the doubt.

Mr. Dickinson: In the third section of the Act [c. 73] I notice the useless words are dropped, and it specifies "the name of the maker, compounder, or original vendor."

Mr. Kirby: There should be some allowance, I should consider, to a person like the defendant—a registered chemist—who does know something of the contents of the mixture that he should recommend it.

Mr. Dickinson: Oh, I notice the Act is 1812.

Mr. Kirby then proceeded to state that he could not get evidence as to how the article was first sold in 1853, but it would shorten the case if Mr. Denniss would admit that there never had been any proprietary rights over ammoniated tincture of quinine.

Mr. Denniss: I do not see what I can admit, seeing that my friend has forced this case, and says he will prove he is right. My point, however, is different. We say that the correct and only reading of the Act, as applying to this case, is that the first vendor of this particular bottle is liable to pay the duty, through that label as an infringement of the Act, not the original compounder of 1853, or whenever it may have been. The vendor is the first seller, and the defendant was the first seller of this labelled bottle. If they can show that the manufacturers of the contents sold it with that label then our case as against the defendant would fail, but they do not say that at all. Mr. Glyn-Jones has taken the initiative, and admitted putting on the label. This tincture has always been included, though exceptions have been made in recent years with some articles—for instance, peppermint-lozenges; but all other lozenges are still included.

Mr. Dickinson: You start with the putting on of the label?

Mr. Denniss: The sale was perfectly in order before. The first person who sold it with that label is liable, and therefore we say Mr. Glyn-Jones was clearly the first vendor.

Mr. Dickinson: Ninety years ago these things were doubtless very different to what they are now. There were fewer articles.

Mr. Denniss: But you will see the Act not only included all the articles it could find except drugs, but the tax was made to meet coming preparations.

Mr. Dickinson: I see that.

Mr. Kirby: Our contention is we were not the original vendors.

Mr. Dickinson: And Mr. Denniss says you are. Now where are we?

Mr. Kirby: Well, section 3 of the 1803 Act clearly shows that it is the drug itself, not the particular packet or bottle. The words say distinctly, "the article," and "the article" in this case is ammoniated tincture of quinine. The position is clear. What is subject to the duty, "the article" or "the bottle"? Here they say the bottle, because otherwise they could not class us as the first vendors. But the Act is quite clear. Supposing it had said "bottles" the prosecution might succeed, but it does not; it says what is contained in the parcels or bottles. The receptacle could not possibly be liable to duty. The idea is absurd that any Act would be passed for such a purpose.

Mr. Dickinson: You say if the original compounder in 1853 had put a label on like this it would for ever have been liable to duty?

Digitized by Google

After some conversation between Bar and Bench as to a basis of understanding with a view to shorten the case, Mr. Dickinson suggested that Mr. Kirby should write a few questions: "Will you admit this, and this, and that?" and let the other side reply, "Yes, yes, yes, no, no," as the case may be, and he would reserve an afternoon specially to take the case. It was then agreed to adjourn the hearing until June 6, at 2 P.M.

High Court Cases.

Bovril *v.* Oxo.

In the Court of Session, Edinburgh, on May 14, before Lord Stormonth Darling, Bovril (Limited), London, asked decree of declarator against Thomas Jenkins & Co., restaurateurs, Glasgow, that the defenders were not entitled to sell, expose, or offer for sale as Bovril any meat-extract or essence of meat or other preparation or manufacture which was not manufactured by the pursuers. It was stated that the defendants had been supplying Oxo as Bovril, and they explained that at the close of the Glasgow Exhibition they had some bottles of Oxo left over, which were sent to their various branches to be sold as Oxo or used in making sauces, &c. They never intended it to be sold as Bovril. In the event they offered to pay Bovril (Limited) 52*l.* 10*s.* of damages, with expenses, and decree was granted accordingly.

A Beecham Case.

In the Chancery Division on Thursday, May 15, before Mr. Justice Joyce, Mr. Martelli applied for an injunction to restrain the Public Benefit Drug Company, trading at 41 Scotland Road, Liverpool, from passing off as Beecham's pills pills which were not of the plaintiff's manufacture. The plaintiff had received a letter from the defendants' solicitor, asking for an opportunity to answer affidavits, and under the circumstances he had no objection to the motion standing over until the first day of next sittings. His Lordship directed accordingly.

Dentists Act.

"Specially Qualified"

At Cardiff Police Court on Friday, May 16, before Mr. T. W. Lewis, the Stipendiary, Templar Malins, chemist and druggist, 107 Woodville Road, was summoned for that he, "on the 12th of May, not being a legally qualified medical practitioner, and not being registered under the Dentists Act, 1878, did unlawfully at certain premises, No. 29 Queen Street, use a description implying that he was a person specially qualified to practise dentistry, against the form of the statute in such case made and provided." Mr. George David prosecuted on behalf of the South Wales and Monmouthshire Dental Association, and Mr. St. John Francis-Williams (instructed by Mr. Pocock) defended.

Mr. George David quoted Section 3, upon which the summons was based, and explained that the main part of defendant's business was that of a dentist, carried on in Queen Street, and on the side of the premises was a large advertisement which said: "For artificial teeth of guaranteed purity and perfect fit.—Chemist Templar Malins." In the premises he occupied three rooms, in one of which he had an ordinary dentist's chair and a number of drugs, and people constantly came in to consult him. The defendant advertised very largely in other ways. An advertisement in the programme of the Theatre Royal stated that he carried on this business, and in it he described himself as "Cardiff's Merciful Tooth-extractor." From his place in Queen Street he issued three pamphlets, one of which was "a definite table of prices for artificial teeth supplied by Chemist Templar Malins, Cardiff's Merciful Tooth-extractor." It stated that "Templar Malins is now well-known for supplying perfect-fitting teeth, for honest, conscientious work, and for moderate charges. He charges no fancy fees, yet does the highest class of work, to which over 1 000 in and around Cardiff can bear witness." In the pamphlet the defendant gave his prices for "ordinary tooth-extractions, for extractions with cocaine or ethyl chloride (painless), and for extractions under the influence of nitrous-oxide gas (insensibility)." He constantly described himself as a tooth-extractor, and in face of that it seemed to him (Mr. David) difficult for the defendant to explain away a description of that kind and say he was not describing himself as a person qualified to carry on dentistry.

The Stipendiary: What does "specially qualified" mean?

Mr. David: A man who is able to do it. It does not mean legally qualified. If a man holds himself out as being able and qualified to do the work of a dentist, that brings him within the terms of the section. He then quoted a law report relating to a case in veterinary surgery in support of that contention.

The Stipendiary: The question is whether it refers to a man having a dentistry qualification, or whether he was highly expert and had some particular qualification.

Mr. George David said the defendant held himself out as being specially expert in dentistry. Whichever construction was placed upon the advertisements it came to the same thing in the long run.

Mr. Francis-Williams: If it means, as I shall contend, specially qualified by experience, my friend would have to prove that he is not.

Mr. George David: No, he would not. The defendant, by his advertisements, leads people to believe he is a person whom the law allows to practise.

Mr. Francis-Williams: Unless it means specially qualified by law he has not committed any offence.

The Stipendiary: I think it must mean specially qualified by law.

Mr. David: He leads people to believe that he is a person whom the law allows to practise.

The Stipendiary: That is the correct construction, subject to what Mr. Williams says.

Mr. David read more extracts from defendant's pamphlets, in which he stated that he supplied "perfectly fitting teeth." Mr. David also commented upon defendant administering anæsthetics.

Before evidence was given,

Mr. Francis-Williams admitted the documents Mr. David had put in, but he failed to understand how a man, calling himself a "tooth-extractor," or even "merciful tooth-extractor," could be said to hold himself out either as a dental practitioner, or that he could be said to be adopting any title, addition, or description, implying that he was registered under the Act. There was no indication of any registration in any of the documents referred to by Mr. David. Mr. David had endeavoured to prove that the Act prohibited any man, unless he was registered, carrying on the business of a dentist. It did nothing of the kind.

The Stipendiary: That is obvious, but he must not advertise himself as being specially qualified.

Mr. Francis-Williams then argued that the Court should differentiate between what referred to the man and what referred to the business he carried on. Defendant had never described himself as a dental practitioner, or pretended that he had any qualification whatever under the Act. He simply described what work he could do, and that he was entitled to do, so long as he did not claim to be a certificated practitioner.

The Stipendiary said the whole question was whether, looking at the tenour of the advertisements that had been read, and admittingly emanated from the defendant, he held himself out as a person specially qualified to practise as a dentist. It appeared to him that when a person advertised himself as a "merciful tooth-extractor," and capable of supplying "perfect-fitting teeth" and turning out high-class work, he put himself forward as possessing the highest qualifications of an expert. It was admitted that defendant was not legally qualified, and that being so there must be a conviction. He would like to know something about the defendant.

The police reported that he had been fined 5*l.* and costs for a similar offence in July, 1896.

The Stipendiary now imposed the full penalty of 20*l*, and allowed seven guineas costs.

Mr. Francis-Williams asked the Stipendiary to state a special case, but he refused, on the ground that no question of law was involved.

Sale of Food and Drugs Acts.

Compound Liquorice-powder.

At the Halifax (West Riding) Court on May 17, Robert Lamb Brook, Norwood Green, was summoned for selling 4 oz. of

Digitized by Google

compound liquorice-powder which, according to the analysis of Mr. A. H. Allen, of Sheffield, was entirely destitute of sulphur, its chief medicinal constituent. Defendant said he sold the powder in exactly the same condition as he bought it from a firm of wholesale druggists in Halifax. A penalty of 21*s.*, including costs, was imposed, the Chairman advising the defendant to procure a guarantee from the wholesale dealers when making future purchases.

CAMPHORATED OIL.

AT the Glasgow Sheriff Criminal Court on Monday, May 19, David Paterson Walker, chemist and druggist, 116 New City Road, Glasgow, was summoned for selling a gill of camphorated oil which was deficient in camphor to the extent of 11 per cent. Defendant's solicitor tendered a plea of not guilty, but remarked that the deficiency appeared to him to be about 2½ instead of 11 per cent., as the oil sold contained 18·88 per cent. of camphor and 21·45 per cent. was the requisite amount.

Sheriff Fyfe remarked that, on the face of it, the deficiency seemed to be represented by the smaller figure.

Mr. George Neilson, who prosecuted, explained that the percentage was calculated upon the quantity of camphor that the oil ought to contain, that being the usual method in such cases.

Thereupon there was a brisk dispute as to percentages, which defendant's solicitor summed up by asking, Is it worth while to fight for 2½ per cent.?

Mr. Neilson, addressing the Sheriff, said that there had been a good deal of complaint as to drugs not containing the necessary proportion of certain constituents. When such was the case there was nothing for it but the proper enforcement of the statute.

His Lordship remarked that the deficiency might easily have been accounted for without deliberate intention to defraud.

Defendant's solicitor explained that wholesale houses put in more camphor so as to allow for evaporation, but his client had only heard of that recently. For putting in a larger quantity of camphor, too, a person might run the risk of prosecution for having too little oil.

Sheriff Fyfe laughingly remarked that he did not think there was much chance of such a prosecution.

Counsel further explained that his client had made up the camphorated oil according to the standard, but, by being kept in the bottle and sold in pennyworths, a certain proportion of the camphor had disappeared by evaporation.

Sheriff Fyfe: The 11 per cent.?

Counsel: The 2½ per cent. It is ridiculous and preposterous to apply a percentage to a per cent. If the charge is to be in these terms, I cannot advise my client to plead guilty.

Mr. Neilson: Then I cannot accept a qualified plea.

The Sheriff adjourned the case to June 13, at 10 A.M.

AT the same time Dr. Robert D. Taylor, 74 Nelson Street, Tradeston, Glasgow, was charged with selling camphorated oil deficient in camphor to the extent of 21 per cent. Accused admitted the offence, and explained that the oil had been made up by a dispenser, who had over-heated the bottle and broke it, subsequently adding more olive oil to make up the bulk. The offence was simply the result of an accident. Sheriff Fyfe (to the prosecutor): Camphorated oil does not hurt anybody very much, does it? The charge really means that there was 5 per cent. too little camphor in the oil. The Clerk stated that the expenses amounted to 1*l.* 15*s.* 6*d.* His Lordship imposed a nominal fine of 5*s.*, with expenses, remarking that he had no doubt the offence arose from a mistake on the part of the assistant.

County Court Cases.

A TRUSS CASE.

IN the City of London Court on May 16, before Judge Rentoul, K.C., an action was brought by Messrs. S. Maw, Son & Sons, surgical-instrument makers, 7 Aldersgate Street, E.C., against Mr. J. B. Munton, chemist, employed at Boot's (Limited), Chester, to recover 17*s.* 8*d.* for a truss supplied.

The Judge said the defendant had written to the Court to say that he was unable to come to town to defend the action. He objected to pay for the truss because of the delay in making it (namely, twenty-eight days), and also said it was so roughly constructed that his doctor forbade its use. He had explained to the plaintiffs that it was for use on an infant a few weeks old, and had countermanded the order owing to the delay. The truss had been returned to the plaintiffs three times, and the third time the plaintiffs retained it. The defendant also said there had been no acceptance of the goods within the meaning of the Sale of Goods Act. As he was managing Boot's business at Chester, he could not get, without obtaining at his own expense, a qualified assistant to take his place. The plaintiffs' solicitor said they had never heard a word about the truss until now. It was supplied in January last year. The Judge said that if the defendant had attended, and if what he said was true, judgment would have been given in his favour, with costs of coming from Chester. If the defendant's letter were true—and it might all be false—it was very startling. The plaintiffs' solicitor said it was a "try on" on the defendant's part. He would have been compelled to pay before they put the order in hand, only he was the manager to one of their customers. The Judge entered judgment for the plaintiffs for 10*s.*

TELEPHONE ORDERS.

IN a case heard at Stonehouse County Court on May 14, wherein Mr. T. H. Harvey, chemical-merchant, Cattedown, Plymouth, claimed 15*l.* 4*s.* 8*d.* from the Valletort Laundry Company, Stonehouse, for ammonia supplied, it was stated that at the opening of the account the orders were received by telephone, but as the defendants gave up the telephone service written orders were received from July 25, 1899, to the close of the account. After hearing the evidence Judge Lush Wilson, K.C., held that legally there was no proof of delivery of the goods ordered by telephone, but gave judgment for 4*l.* 1*s* 8*d.*, the balance due on the goods supplied upon the written orders.

THE DISADVANTAGE OF BEING GUARANTOR.

AT Penzance County Court on May 13, Mr. Benjamin Shakerley, chemist and druggist, of Penzance, figured as one of the defendants in a claim made by the Pearl Life Assurance Society for 3*l.* 10*s.* 7*d.*, collected by an agent named Coomb, for whom Mr. Shakerley was one of the guarantors. The claim was admitted, and judgment was given against the three defendants.

A Compensation Case.

AT the Westminster High Bailiff's Court, before Mr. John Troutbeck and a special jury, on Friday, May 16, Herbert Constantine Judge claimed compensation from the London County Council in respect to the compulsory acquisition of a chemist's shop at 34 Wych Street, Strand, and of the premises, 38 Wych Street, in which the claimant traded as a dealer in surgical appliances and rubber goods. After the jury had returned from viewing the premises, Mr. Kemp, K.C., who appeared for the claimant, intimated that a settlement had been come to respecting 34 Wych Street, the L.C.C. having agreed to pay 451*l.* as ruled by the jury. The 38 Wych Street case proceeded, it being stated that the claim amounted to about 3,000*l.* The claimant having given evidence, he was severely cross-examined by Mr. Boyle, K.C., as to the class of business he carried on. He admitted that as a result of advertising he received hundreds of letters of a certain character, but affirmed that he never answered them. One of these letters was produced, and the High Bailiff said he was of opinion that it contained a direct invitation to assist the writer in the commission of a crime. Plaintiff stated that he had transferred his chemist's business to Chancery Lane, where he paid a rental of 138*l.* per annum, the thirteen years' lease costing him 360*l.* The shop had always been a chemist's, and the 360*l* included the goodwill, fixtures, and some stock. The High Bailiff said he was very curious to know whether Judge was a duly qualified chemist. Mr. Boyle said he did not know, and Mr. Kemp, when appealed to, did not supply the information. [The name is not in the register.—EDITOR] Evidence having been given that nearly every chemist dealt in the class of goods sold by the claimant, Mr. Kemp made an impassioned appeal to the jury to do justice to his client. Mr. Boyle followed on the other side, contending that 160*l.* would well compensate the claimant. The jury, after considering the matter for two minutes, awarded the claimant 365*l.*

Bankruptcy Report.

Re E. E. Burford, Canal Street, Camberwell, salt, oil, chemical, and vinegar merchant (trading as Burford Brothers).—The first meeting of creditors was held at the London Bankruptcy Court on Thursday, before Mr. E. L. Hough, Senior Official Receiver. The Chairman reported that the debtor and a brother took over their father's business in 1880, and had since greatly extended it. In 1893 another brother claimed a share in the concern, and ultimately in 1899 the debtor purchased the business for 7,500*l.*, borrowing 8,000*l.* from the Produce Brokers Company (Limited), with whom he agreed to deal solely for oil for a term of seven years. That company were now creditors for 13,800*l.*, and stopped his credit a month ago, with the result that he filed his petition. The statement of affairs had not yet been lodged, but proofs to the amount of 15,427*l.* had been lodged, and the assets were estimated to yield 18,541*l.* Mr. Carouth, on behalf of the debtor, submitted an offer of 10*s.* in the £, but the Chairman suggested that the most convenient course would be to appoint a trustee and committee of inspection, who would be empowered to deal with any offer for the business. This was agreed to.

Deeds of Arrangement.

Holland, Edwin, 238 Bolton Road, Irlams o' th' Height, near Manchester, Lancashire, chemist and druggist. Trustee, John T. Crossley, 8 St. Mary's Street, Manchester, accountant. Dated, May 9; filed, May 16. Liabilities unsecured, 126*l.* 7*s.* 7*d.*; estimated net assets, 43*l.* Among the creditors are:—

	£	s.	d.
Butterworth, Allcock & Co., Manchester	17	0	0
Hockin, Wilson & Co., Salford	14	0	0
Murray, Sons & Co., Glasgow	21	0	0
Oldfield, Pattinson & Co., Manchester ...	24	0	0
Woolley, J., Sons & Co., Manchester ...	26	0	0

Topham, Thomas (deceased, by administratrix), 149 Pellon Lane, Halifax, chemist and druggist. The following are scheduled as creditors:—

	£	s.	d.
Hirst, Brooke & Hirst (Limited), Leeds...	51	0	0
Netleton, Haigh, Halifax	96	0	0
Oakley, G. Gardiner, Halifax	11	0	0
Topham, Ellen, Mirfield	412	0	0
Topham, Mary, Halifax	353	0	0

Gazette.

Partnership Dissolved.

Coley, S. J., and **Gay, Sophia,** under the style of S. J. Coley, Stroud, and at Nailsworth, Gloucestershire, chemists and druggists.

The Bankruptcy Acts, 1883 and 1890.

Adjudications.

Bromfield, Frank Harold, Blaenavon, Monmouthshire, chemist and druggist.

Walker, Charles Henry, Liverpool, chemist and druggist.

From the "Scottish Law Courts Record."

Medicines (Limited), Glasgow.—Resolved April 16, confirmed May 7, that the company be wound up voluntarily. H. Ritchie, accountant, Greenock, liquidator.

Downing Street, May 17, 1902.

Sir William Turner Thiselton Dyer, K.C.M.G., C.I.E., F.R.S., Director of the Royal Botanic Gardens, Kew, has been appointed Botanical Adviser to the Secretary of State for the Colonies.—*London Gazette.*

The Glyn-Jones Case is of interest to members of the craft, writes a correspondent, but there were those in Thames Police Court on Friday with other points of view. One litigant, after waiting from 2 to near 4 o'clock for his case to be called, turned despairingly to a policeman and said, "What's it all about?" "Well," said the Bobby, "at one time I thought they were squabbling about three-ha'pence on a box of queenine pills, but blest if I place it now!" "Gad," said the first, "if I'd known it I'd 'ave paid the blarmed three-ha'pence myself."

New Companies & Company News.

Gleanite Company (Limited).—Capital 1,500*l.*, in 1*l.* shares. Objects: To acquire the business carried on at Boscombe Road, Shepherd's Bush, W., as the Gleanite Disinfectant Manufacturing Company, to adopt an agreement with W. J. Trimming and H. Allen, and to carry on the said business and any other auxiliary thereto. No initial public issue. The first directors are W. J. Trimming and H. Allen. Registered office, 29A Boscombe Road, Uxbridge Road, S.W.

Medical and Dental Defence Union of Scotland (Limited).—Registered in Edinburgh, with twenty members, each liable for 1*l.* Objects: To protect, support, and safeguard the character and interests of legally qualified medical and dental practitioners. The first subscribers are:—G. B. Marshall, 19 Sandyford Place, Glasgow, M.D.; R. Campbell, 16 Queen's Crescent, Glasgow, M.D.; J. A. Robertson, 6 St. James's Terrace, Glasgow, M.B., C.M.; A. McGregor, 121 Douglas Street, Glasgow, M.D.; J. Wright, 3 Victoria Place, Shawlands, Glasgow, M.D.; R. Wilson, 38 Monteith Place, Glasgow, M.D.; and R. Forrest, 114 Dixon Avenue, Glasgow, M.D. The management is vested in a Council. Registered office, 65 Jamaica Street, Glasgow.

Burmah Oil Company (Limited).—Registered in Edinburgh. Capital 1,500,000*l.*, in 1*l.* shares. Objects: To acquire and take over as a going concern the undertaking of the Burmah Oil Company (Limited) (incorporated 1886), and all or any of the assets and liabilities, including certain oil-works at Dunnielaw and Syriam, Rangoon, Burmah; to search for, purchase, work, deal in, and develop the resources of oil-wells and oil-yielding lands in Burmah, India, or elsewhere; to carry on all or any of the businesses of chemical manufacturers and dealers, etc. The first directors are D. S. Cargill, L. Gow, R. King, J. Jones, M. T. Fleming, and K. Finlay. Qualification, 1,000*l.* Remuneration, 200*l.* each per annum (chairman, 300*l.*). Registered office, 45 Renfield Street, Glasgow.

Salt Union (Limited).—The directors have recommended a dividend of 6*s.* per share on the 7 per cent. 10*l.* preference shares for the past year, besides placing 10,000*l.* to the new reserve fund and carrying forward 1,034*l.*

Colombo Apothecaries Company (Limited).—The annual general meeting was held at Colombo on April 29, when a dividend of 10 per cent. was declared, absorbing R.40,000, and leaving a balance of R.6,994 to be carried forward.

Brunner Mond & Co. (Limited).—The report for the year ended March 31 states that the profit-and-loss account shows a credit balance of 480,431*l.* which, with 36,931*l.* brought forward, makes a total of 517,362*l.* Besides the dividend on ordinary shares announced last week, a dividend is to be paid on the preference capital at 7 per cent. per annum. The company have decided to give all their foremen a fortnight's holiday with three weeks' pay, and all workmen a week's holiday with a fortnight's pay. Employés will receive a day's holiday and pay at the coronation, the company contributing 100*l.* to the festivities.

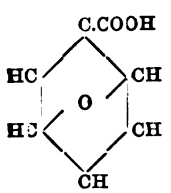
W. J. Bush & Co. (Limited).—The report of the directors for the year ended December 31 last shows gross profit for the year of 67,094*l.*, as against 65,050*l.* for the previous year, being an increase of 2,043*l.* The net profit for the year (9,844*l.*), together with the amount brought forward from the previous year, amounts to 10,440*l.* After deducting the dividends paid on the preference shares on April 1 and October 1, 1901, and allowing for that which had accrued from the latter date to the end of the year, there is a balance of 4,190*l.* The directors recommend the payment of a dividend on the ordinary shares at the rate of 2½ per cent. per annum for the year (which will absorb 3,125*l.*), carrying forward the balance of 1,035*l.*

Liebig's Extract of Meat Company (Limited).—The report for 1901 announces that the River Plate local committee held their annual meeting at Fray Bentos in last November, and the books have been certified as correct by the local auditor. Exchange in the River Plate having occasionally been high, gold shipments amounting in all to 235,000*l.* have been sent out during the season. The balance of the profit-and-loss account amounts to 141,715*l.*, and out of this have been paid an interim dividend of 5 per cent. on the ordinary shares (February 15, 1902), six months' interest at 5 per cent. per annum on the preference shares (October 1,

Digitized by Google

1901), a further six months' interest (April 1, 1902), and the directors now propose to pay a dividend on the ordinary shares of 15 per cent., equal to 3*l.* per share (75,000*l.*), making, with the interim dividend, 20 per cent. for the year; to carry to reserve fund 5,000*l.*, to employés' provident fund 2,000*l.*, and to deduct for directors' percentages, 9,661*l.*, leaving a sum of 12,553*l.* to carry forward.

EGYPTIAN SALT AND SODA COMPANY (LIMITED).—The report of the directors for 1901 states that there is a credit balance on the profit-and-loss account of 15,952*l.*, out of which the directors propose to declare a dividend at the rate of 4 per cent. per annum for the year, payable as soon as the repayment to profit-and-loss account can be made from the new capital which has been raised. The oilcake and soap factory at Kafr Zayat, which it was hoped would have been running by the end of July last, was barely completed by the end of the year. Regarding the soda industry at the Wadi Natroun, the directors report another series of delays, but they hope soon to meet the requirements of the market with regard to the quality of soda ash. The directors in February last obtained a temporary loan from the company's bankers of 50,000*l.* at 6 per cent. This has enabled them to lay in a stock of cottonseed which will keep the oilcake-factory working till the autumn, when seed will again become cheap. It is now proposed to issue 100,000*l.* of debentures. The money raised by these debentures will, in the first place, be devoted to the repayment to the Anglo-Egyptian Bank of the 50,000*l.* loan; and, secondly, to the repayment to the profit-and-loss account of the moneys borrowed therefrom.



Scientific Progress.

Methyl Anthranilate.—Erdmann has found that this compound, which exists in several of the oils of the Rutaceæ, forms a well-defined crystalline compound with benzoyl chloride, which serves for its characterisation with great ease. The body is formed by the action of benzoyl chloride on the ester, and re-crystallisation of the resulting mixture form cold alcohol. It then melts sharply at 99° C.

Properties of Gum Arabic.—Mannich has published the results of an examination of a series of samples of gum arabic from various well-authenticated sources. The ash figures give very little information, but the results of the polarimetric examination may be of use when other gums have been well examined. He finds in every case a 10-per-cent. solution of the gum in water is optically active. The figures vary from −0° 45′ to +7° 59′.—*Apotheker Zeit.*, 1902, 322.

Fractional-distillation Apparatus.—An exceedingly ingenious apparatus for fractional distillation under reduced pressure has been described by Max Kaehler and Martini. It consists of a bell-glass receiver on a well-ground plate, with a tubulure at the bottom to connect with the exhaust-pump, and one at the top for the adapter of the condenser. The tube of the adapter leads into a small funnel with a slanting side-tube. This funnel is lightly suspended on a revolving axis, and the tube thus revolves over a series of graduated tubes to receive the various fractions of the distillate. A magnetic needle is suspended horizontally with the funnel, and the latter is easily revolved over the graduated tubes by means of a small magnet from outside the bell-jar. It is thus easy to change the receiver six or eight times during the distillation without breaking the vacuum once.—*Chem. Zeit.*, 1902, 31.

Isosalicylic Acid.—At the last meeting of the Soc. Vaudoise des Sciences Naturelles, Brunner described a new acid he has prepared, and to which he ascribes a formula which represents a hitherto unknown isomer of salicylic acid. The recognised isomers are those which have the carboxyl and hydroxyl groups in the ortho, meta, and para positions respectively. The new acid is prepared by treating salicylic acid with dilute aqua regia, and forms prisms, melting at 154°, and subliming easily on the water-bath. It yields the same colour-reaction with ferric chloride as does salicylic acid, and yields a phenol on distillation with alkali. The annexed extraordinary formula is assigned to it, but the examination of the evidence on which the author bases it leaves one very unconvinced. On treatment with hydrobromic acid in weak aqua regia it leaves a dibromoisosalicylic acid in yellow needles.

A Few Formulæ.

HAIR-CURLERS.

1.

Resin	℥iij.
Alcohol (90-per-cent.)	Oiss.

Perfume with bergamot and musk.

2.

Potassium carbonate	℥ss.
Liquid ammonia	℥j.
Glycerin	℥j.
Rose water	℥xxiv.
Orange-flower water	℥vj.

3.

Potassium carbonate	℥ij.
Liquid ammonia	℥j.
Glycerin	℥ss.
Alcohol	℥j. ℥ij.
Rose-water q. s. ad	Oj.

FIXATEUR FOR THE MOUSTACHE.

Extract of malt	℥v.
Alcohol (90 per cent.)	℥j.
Water	℥x.
Salicylic acid	gr. xv.
Perfume	q. s.

LANOLINE CREAM.

Anhydrous lanoline	1½ lb.
Peach-kernel oil	6 oz.
Water	5 oz.
Ionone	15 drops.
Ylang-ylang oil	20 drops.

—*Pharm. Zeit.*

GINGER-WINE.

Essence of cayenne	3 dr.
Essence of ginger	½ oz.
Tartaric acid	¾ oz.
Burnt sugar	2 oz.
Lump sugar	4 lbs.

Mix with 11 pints of boiling water; bottle when cold.

EUCALYPTUS TOOTH-PASTE.

Prepared chalk	5 oz.
Powdered soap	1½ oz.
Arrowroot	1½ oz.
Oil of eucalyptus	30 drops
Oil of peppermint	15 drops
Oil of geranium	15 drops
Oil of cloves	4 drops
Oil of aniseed...	4 drops
Glycerin	1½ oz.
Carmine	q.s. to colour
Chloroform-water	q.s. to make a paste

STIMULATING POMADES FOR THE HAIR.

1.

Pilocarpine hydrochloride	℥ss.
Quinine hydrochloride	℥j.
Precipitated sulphur	℥iiss.
Balsam of Peru	℥v.
Beef marrow	℥ij.

2.

Precipitated sulphur	℥j.
Resorcin	℥ss
Salicylic acid	℈j.
Tincture of benzoin	℥ss.
Vaseline	℥iij.

(The quantity of the first three ingredients may be doubled if necessary).

3.

Lanolin	℥iss.
Almond oil	℥iij.
Precipitated sulphur	℥j.
Otto of rose	q.s.

Things that Happen—Sometimes.

Emplastrum Calefaciens.

There was an old chemist named Castor,
Who was a deuce of a hand at a plaister.

He used an iron red-hot,
And burnt up the lot,
Which astonished that chemist called Castor.

PHARMACIST *v.* PHARMACONOCLAST.

THIS is a little tale, told by John Smithson, of a visit paid to him by his friend MacBoron, a Southerner, of Greek descent.

Scene: Smithson's diggings, a recent bitterly cold evening. Enter MacBoron, disturbing Smithson's nicotinian reverie, with a huge and weighty bundle of books.

Plunging *in medias res*, MacBoron selected one from the load of books under which the little rickety table groaned, and, putting on his spectacles (although he is still quite young), opened the book. Regarding me for a moment intently, he said, "You are not a pharmacist, John!"

"Oh, nonsense, Mac," I replied cheerily. "You know very well that you and I passed the Minor almost the same week."

"Yes; but the word pharmacist does not mean what you think it does."

There was a gleam in his eye as he said this, which made me uncomfortable, but I answered cheerfully, "Never mind, old chap, don't worry! Have some more ginger-ale, for you must want something warming this bitterly cold night."

"No, John, you are not a pharmacist——"

"In that case," I interrupted, somewhat nettled, "perhaps you will be good enough to tell me what I am."

"I have come to you to-night with that specific object in view," he said very solemnly. "You are not a pharmacist; you are a pharmaconoclast."

"Really, old man, do you mean this? It's nothing bad or wicked, I hope? because my mother always told me, when I was a boy, that I was never to——"

"There is no evil in the name. I have searched minutely through all these dictionaries, and there is not a word in any of them that scientifically describes or defines our calling and ourselves, and so I have had to make a few words."

"Make a few?" I said, aghast; "but you don't mean to say that —that——"

"They were really necessary? Yes, I do. Somebody had to make them; and it would appear that a beneficent Providence has singled me out to do the work. So now our language is the richer for them."

"You have referred to other words. Might I venture——" (I was now weak and limp, and scarcely knew how to frame my question.)

"Oh, they are classical words, being all derived from the Greek. I have made—

"1. *Pharmaconoclast*, from Gr. *pharmakon klastes*, a breaker, a divider. Thus the pharmaconoclast smashes, say, rhubarb root, and divides it into powders. Pharmaconoclast is therefore one who prepares and dispenses medicines, lately known as pharmacist.

"2. *Pharmaconoclastics*, the scientific study of drugs and their preparations.

"3. *Pharmaconoclastic*, pertaining to the above.

"Aren't these beautifully expressive, Smithson?"

"Wait, old man, until I qualify this soda-water."

The rest is a haze.

—DICKY (230/25).

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

Observations and Reflections.

By XRAYSER.

Dividing the Minor

is now a fixed plank in every pharmaceutical politician's platform. I think the *C. & D.* has been largely responsible for the prominence of the notion, and that goes a long way towards justifying it. But, all the same, I wish some skilful expert would present the other side to us. There has been no regular debate on the subject anywhere. We seem to have drifted into an agreement that the present method of conducting the examination is wrong, and the only opposition to a reform in this matter is that some influential people say they will only consent to it on condition of getting their way in another allied matter. Mr. Shadforth's letter last week was mainly a protest against improved conditions, on the ground that amelioration would be unfair to those who had already qualified. It was the complaint of the nineteenth century against the twentieth, of the coaches against the railroads, of the candles against the electric light. Our misfortune in having been born in the bad old times must not be a pretext for rejecting improvements. That is, of course, on the assumption that the division would be an improvement.

Why is the Division Proposed?

Generally it is advocated in view of the large number of failures at every examination. It is suggested that it is unreasonable to expect a student to match himself against six experts on one training. So it is, on the assumption that the examination is a trial of skill, a sort of fencing-match between the examiners and the candidates. If it were what it should be, a true test of qualification, that argument ought not to apply. The really qualified man ought to be fit at all points all at once. To be competent in A, B, and C in 1902, and in D, E, and F in 1904, is not necessarily qualification. The advocates of division argue, of course, that by separating the preparation the qualification will be superior. That is the case with a student who studies to know, but it is likely to be quite otherwise in the case of one who only studies to pass. And, believing as I do, that the majority of the candidates—90 per cent. of them, I should say—belong to the latter section, I see a great deal of force in the contention of the front bench that a compulsory curriculum should be associated with division of the Minor. The other professions which divide their examinations do insist on this guarantee for something like a sound education.

The Issue Raised

in the legal contest now pending between the Board of Inland Revenue and Mr. Glyn-Jones involves a question of substantial privilege for qualified chemists and druggists. If Mr. Glyn-Jones establishes his claim to exemption from medicine-stamp duty in respect of a recommended B.P. preparation, chemists will have acquired an 8-per-cent. advantage over their non-qualified rivals in regard to the sale of medicines of known composition. Artificial persons who have made so much useful capital out of the circumstance that they cannot qualify in the way prescribed by the statute will have to accept the corresponding disadvantage of their position in this respect. An amusing incidental consequence of Mr. Glyn-Jones's success would be that there ought to be hundreds of applications from chemists against Somerset House for pounds or two pounds which they have paid as compromises in similar cases. I do not see how the Board could refuse to disgorge if it should be decided that they have extracted these pounds under a mistaken interpretation of the Act.

Jerome Fracastor,

who, as Mr. C. C. Bell reminded us lately, was the original compounder of diascordium, was a famous Italian physician, born at Verona in 1483. But he was more illustrious as a poet than as a physician. That, at least, is the verdict of the compilers of biographical dictionaries. But when it is added that the title of his great poem—the work on which his fame has rested for nearly four centuries—was, "Syphilidis, sive de morbo gallico, libri tres," it is difficult for the ordinary reader to accept the dictionary men's assurance that Fracastor could have been a poet at all. A true poem "On Syphilis" is surely not conceivable. My authority tells me that the work "contains passages of marvellous beauty," and gives a sample, from which I quote a line or two:—

> nam sæpius ipsi
> Carne sua exutos artus, squallentia ossa
> Vidimus, et fœdo rosa ora dehiscere hiatu
> Ora, atque exiles reddentia guttura voces.

Captain Kettle was a poet and a seamen, but he religiously kept his two occupations apart. He could not understand that the dirty sea could offer attractions for any muse. Fracastor might have avoided shop in his literary work with even better reason.

"There is Nothing so Cheap as Brains."

This was the maxim of one of the American millionaire merchants. He paid the highest of salaries to his staff, he said, but it was through his staff that he made his millions. What price, I wonder, would that merchant pay for a man with the diploma of Bachelor of Commerce (Birmingham)? He certainly would not accept the parchment as a guarantee of the brains. All the same, however, the new spirit in our educationalists is excellent. The provision of well-equipped laboratories, where the great industries and sciences can be practically expounded in the most thorough manner, is one of the most hopeful of signs for the future of this country; but why must the silly bauble of letters to print behind one's name be dangled at the end of it? London University is to abolish Latin as an essential subject for its matriculation. This, too, is a sign of sense. What is needed in technical education is that it should be fitted to the student, not that the student should be made to fit one of half-a-dozen cast-iron moulds, which are termed curricula. Let brains have every chance of getting training; but, at the same time, trust brains to choose the training they specially require.

The Trade Customs

which the London Chemists' Association desires to protect are still undefined. The committee, it appears, have amended the mere terms of their paragraph, but they still seem unwilling to say plainly what is the particular object they want our subscriptions for. This is a question of principle, or rather of five shillings, with some of us. If by a chemist's trade custom they mean the sale of carbonate of magnesia as magnesia, or of methylated soap liniment for soap liniment not specifically described, we, the high-principled ones, are not disposed to co-operate. Perhaps we are not numerous enough, or important enough, to be considered, especially as there is "over 10*l.* in hand." But if we are of any account, I suggest that the doubt should be cleared up before the invitation to the general meeting is sent out.

MR. W. WILSON, chemist, Rawal Pindi, is coming home to take part in the Coronation ceremonies as one of the contingent of the Punjab Light Horse. He will call at 42 Cannon Street occasionally.

Editorial Comments.

Urine-analysis.

A NEW edition of "Practical Methods of Urine-analysis," which we first published a few years ago, having been required, we have had the book rewritten and considerably enlarged, and it is now ready. The practical style of the first edition has been retained, for, as the preface states, "the book is primarily a guide to chemists and druggists in a branch of work which is becoming more necessary to medical diagnosis, more precise and refined in its execution, and which therefore calls for the skill and experience of specialists. No class of men is better fitted to fill this office than are pharmacists." The work is now divided into chapters, as follows:—

Urine in Health and Disease.
Chemical Analysis of Urine.
Analysis of Abnormal Constituents.
Microscopical Examination.
Optical Examination.
Miscellaneous Matters.

The last chapter contains a collection of formulæ for test-reagents, which have not previously been gathered together in a readily accessible form, for chemists and druggists, and an exhaustive index completes the work. The book is more than ever of real utility to retail chemists, and can be obtained from most wholesale houses, or direct from our offices, 42 Cannon Street, London, E.C., price 2*s.* 6*d.*, or by post 2*s.* 9*d.*

We have also published a new edition of "Pharmaceutical Formulas," and have taken advantage of the reprinting to make some corrections, and to add other formulas that were called for.

Digitized by Google

Dispensing Proprietary Medicines.

SOME time ago we expressed the opinion that chemists and druggists might dispense proprietary articles (such as Fellows's Syrup) *per se* from an unstamped bottle supplied for dispensing-purposes, provided a stamp according to the price charged be affixed to the bottle dispensed. Some doubt having originated in regard to the matter, Mr. G. W. West, of Stokesley, wrote the following letter to the Secretary of the Department at Somerset House:—

DEAR SIR,—The following is a copy of a prescription:—

℞ Tab. antikamnia.

Tales xij.

Sig.: j. when required to relieve pain; repeated in three hours if necessary.

℞ Quin. sulph. ... ... gr. j.
Ferri redact. ... ... gr. j.

Fiat pil. Tales xxiv.

Sig.: j. ter die post cibos.

April 26, 1902. A. B. L.

Translated it reads:—

12 tablets antikamnia.

Label, one when required to relieve pain (repeated in three hours, if necessary).

The remaining portion of the prescription is for twenty-four pills, one to be taken three times a day after meals.

I wish to know if I am complying with the law in dispensing from the enclosed unstamped packet, providing I stamp according to charge made. This is only a portion of the prescription, but, I take it, strictly it is not a component part of the prescription, but that the prescription must be treated as two, and as the antikamnia tablets are not bruised and mixed with something else, it cannot be regarded as a component part of a physician's prescription, and therefore must be dispensed from a stamped package, and re-stamped according to charge.

My question is, Can I dispense in such a case as the foregoing from an unstamped package supplied for dispensing purposes only providing I stamp each sale? Your reply will greatly oblige

Yours truly,
G. W. WEST.

To this letter Mr. West has received the following reply:—

23079 S.
1902.

Inland Revenue,
Somerset House,
London, W.C.
13th May, 1902.

SIR,—In reply to your letter of the 5th instant, I am directed by the Board of Inland Revenue to state that in the special circumstances they would not object to your dispensing the medicine in question in accordance with the prescription of a duly qualified physician from an unstamped package, provided that the medicine is stamped before sale with the duty applicable to the price at which it is sold.

I am, Sir,
Your obedient servant,
T. N. CRAFER,
Secretary.

We do not print this as proof of the correctness of our statement, but as an authoritative declaration by the Board of Inland Revenue which may henceforth be referred to. There is still a good deal of misunderstanding in regard to the dispensing of proprietary medicines liable to stamp-duty, and it is well that all authoritative declarations should be brought to the notice of the trade. It is now many years since the Board of Inland Revenue authorised manufacturers and first vendors (*i.e.*, agents or wholesale dealers) in this country to supply chemists and druggists in Great Britain with such preparations unstamped for dispensing-purposes only, and permitted chemists and druggists to dispense such preparations unstamped when they constitute part of a prescription. It has been explained that the privilege does not extend to other dispensers of medicines than chemists and druggists—for example, when wholesalers or manufacturers supply medical men with proprietary preparations they must stamp them. The question as to who the Board consider chemists and druggists to be has never been decided, but the fact that limited companies get the medicines unstamped may be regarded as evidence that they are not included in the same category as medical men. It will be seen that the letters quoted practically settle what is "part of a prescription"—viz., a constituent part of a compounded medicine prescribed by a physician. It is well to have this made clear. In this connection we may call attention to the not infrequent custom of retailers getting supplies of 4*s.* 6*d.* proprietary articles "for dispensing-purposes only," and making a "cut" line of them by stamping with a 3*d.* stamp and selling the articles for 2*s.* 9*d.* This is an unauthorised abuse of the concession which in the absence of a physician's prescription may bring such retailers into conflict with the revenue authorities; and if it could be proved that manufacturers or their agents supply unstamped medicines knowing that they are stamped and sold by the retailers they (manufacturers or agents) might be held to have committed an offence against the Act, as it is their duty to affix the stamps in such circumstances.

Dividing the Minor.

IN a previous page "Xrayser" expresses the wish that some skilful expert would present the other side of the Minor division to what we have so long advocated. Perhaps he does not consider the official organ of the Pharmaceutical Society to fill the requirement, especially as our contemporary has the knack of either veiling its opinions in a web of philosophic verbosity or sneering at reform in that super-excellent manner characteristic of the elect. Thus we learn from our brother of the pen that "The mere trader in proprietary articles and sundries, who desires to reap commercial advantage by getting through an examination in subjects which have no bearing on his regular business, cannot be expected to view" this question of dividing the Minor as one affecting the interests of British pharmacists. If this is a fair sample of the reasons which prevent the narrow majority of the Pharmaceutical Council from dividing the Minor examination before a compulsory curriculum is obtained, it is not surprising that the advocate whom "Xrayser" desires has not yet arisen. But we do not think the majority would dream of such a parade of opinion as that embodied in the quoted sentence, for it is equivalent to saying that the Minor is "an examination in subjects which have no bearing on the business of the retail druggist." That happens to be the business which the Pharmacy Act of 1868 took under its wing, and provided with an examination and registration; if this examination has wandered so far from the prescribed path as to have no bearing on the business, that amounts to a serious charge against the Council and Boards of Examiners. Were a bench of judges to inquire into the evolution of the present Minor examination and compare it with the "examination for assistants" which the framers of the Pharmacy Act contemplated, and Parliament decided, should be passed for registration as a chemist and druggist, they would not hesitate in declaring that the 1868 Act standard has been much exceeded. About that we are all agreed, but there has been too little regard for the other side. When the Minor examination was selected as the standard for chemists and druggists the Legislature knew that the Major examination of the time was on exactly the same subjects, but greater attention was given in the latter to the technics which bear upon the dispensing of physicians' prescriptions; so the care of "pharmacy" so-called was left in the hands of those who

Digitized by Google

should pass the Major examination, while the public requirements as regards chemist and druggist business were met by the registration of Modified and Minor men and those who were in business before the Act. The Minor examination, which is now so serious an ordeal that failures have been several times multiplied during the past thirty years, is really a test for pharmacists, and the comprehensive nature of the knowledge required in the six subjects has taken the examination past the point at which other professional bodies have divided their examinations. Such division has, in dentistry and medicine, been attended with the best results. It is not a question of making the examination easier to pass, but of enabling candidates to learn better. In advocating this rational division we recognise that the powers of the Pharmacy Act have been stretched to the utmost in order to ensure a class of qualified men to make up for the deficiency created by the depopularising of the Major examination. We are not out of sympathy with this motive, nor is the drug-trade as a whole, but we cannot be blind to the public interests in the matter. The Pharmacy Act was designed to give them a certain registered class of dealers, and the existence of unregistered dealers within and without the trade, besides the clamour for relaxation of the regulations respecting the sale of poisons, are evidence that we are approaching a point when the statute may be revised and a still lower class of registered dealers be created. Those who insist upon adding a collegiate training to the present Minor requirement surely do not realise that they are forcing on in another fashion the very thing which anti-pharmaceutical dealers are most anxious to bring about. To avert this, advocates of Minor division, *sine curriculo*, very properly say, "Let us adhere to the conditions of training and examination as they now are, but by dividing the examination into rational parts relieve the candidates from the congestion which prevents success and encourages the growth of the unregistered class within the ranks of the trade."

ACETUM SCILLÆ.

The further correspondence which we print on this subject to-day adds materially to our information in regard to the extractive-content of the vinegar. It will be remembered that Mr. Bevan stated in evidence that he took 9 per cent. of extractive matter as the proper amount that should be in the preparation, and this was questioned by the witnesses and ourselves. It now appears that although this percentage is sometimes reached, a fair average is 8 per cent., with 7 to 9 per cent. as the limits, the figures occasionally going outside these by a fraction. There is a slight diminution of the extractive in keeping, but on this point two of our correspondents are making special observations, intended to elucidate the nature of the change and its extent.

FOR THOSE WHO GO TO FRANCE.

A circular has recently been issued by the French Director-General of Customs for the guidance of Customs officers and others, which fixes for the first time the exact quantities of tobacco, cigars, and cigarettes which may be introduced into France by passengers for their own use free of duty. The quantities so allowed to be introduced are thirty cigars, or fifty cigarettes, or 1 hectogramme (3½ oz) of tobacco. If these quantities are exceeded, duty is, in future, to be levied on'y on the amount exceeding the quantity allowed to be introduced free. We are indebted to the Board of Trade for this information.

LONDON CHAMBER OF ARBITRATION.

Mr. Arthur Serena, Chairman of the Joint Committee of Management of the London Chamber of Commerce, writes to us in regard to the advantages which this Chamber presents to merchants and others for the settlement of commercial disputes. The rules of the Chamber have recently been revised in order to simplify and expedite its procedure. The President of the Court is a King's counsel, who sits either alone or with arbitrators selected by the litigants from a list of about 1,200 commercial men. The sittings are held in the Guildhall, the judgments having the validity of those of the High Court of Justice. The effect of the alterations recently made in the "Rules and Practice" will, it is expected, result in the differences of litigants being settled, in the majority of cases, in the course of a few days, and of course at a much smaller expense than a High Court action. Further information as to the Chamber may be obtained from the Registrar at the offices, 5 Church Passage, Guildhall, or at the offices of the London Chamber of Commerce, 10 Eastcheap, E.C.

COUNCIL-ELECTION COMPETITION.

We have received a fair response from subscribers to our invitation to give their ideas as to how the ten candidates for the seven vacancies on the Pharmaceutical Council will stand on polling-day, and the result may be of assistance to those who have not yet voted. As *all* the candidates had to be named on the cards, there are not those differences between the first seven that are actually seen in reality. In our case there is no plumping. Apart from that our vote shows pretty well how the wind blows. Up to Tuesday it was as follows:—

	Votes
1. W. S. Glyn-Jones	194
2. Michael Carteighe	189
3. Alfred Southall	185
4. John Harrison	179
5. John Harrington	178
6. J. Rymer Young	173
7. C. J. Park	129
8. A. S. Campkin	128
9. C. E. Pickering	68
10. J. W. T. Morrison	42

The votes show that the struggle is between Mr. Park, of Plymouth, and Mr. Campkin, of Cambridge, as we indicated at the outset of the contest. Our brief statement to that effect appears to have stimulated Mr. Park's friends in the West to work hard for him, and this is giving him a big pull over Mr. Campkin.

AN ASSISTANTS' STRIKE.

Whether the recent riots in Brussels are having an unsettling influence on Continental pharmacy or not we cannot determine, but the popular method by which labour seeks to enforce its demands upon capital is threatened amongst pharmacists in the capital of Austria. The unsatisfactory position in which Austrian pharmaceutical assistants have found themselves for some time past has at last induced definite action on their part. The assistants some time ago founded an organisation and established a journal devoted to their interests. By means of these they endeavoured to treat with the Government and with employers to effect some amelioration of their lot, but without result. The last Government edict, by which hospital pharmacists are placed on the same footing as regards concessions for a pharmacy, has led to the resolution of the assistants to go out on strike until their demands are gratified. A strike-committee has been elected, with full powers, which will fix the date, and by signature every assistant agrees to obey the committee's orders. The reforms demanded include the regulation of the hours of duty, so that upon two days' and one night's duty there will be two nights and one day free. Instead of food and lodging being provided, a sum to include these is to be allowed. Better quarters for those who have night-duty are asked for, and the fixing of a minimum salary according to the importance of the situation. A uniform hour of closing (for Vienna only) is also amongst the requests. The Assistants' Union has issued a circular to the public setting forth their position,

Digitized by Google

and explaining their reasons for asking the Government to accede to their demands. "We disclaim all responsibility," the pamphlet says, "should the sick perish through not getting their medicine. It is our desire to preserve the population of Vienna from a Pharmacists' strike, which would be a catastrophe." The Government has already ordered a systematic increase in the number of pharmacy concessions, and has changed the method by which applicants were adjudged, and has generally displayed a livelier interest in pharmaceutical affairs.

Reviews.

Anatomischer Atlas der Pharmakognosie und Nahrungsmittelkunde. By Dr. A. TSCHIRCH and Dr. O. OESTERLE. With 81 plates, containing about 2,000 original drawings. Leipzig, 1900: Chr. Herm. Tauchnitz.

DURING the past decade or more a number of excellent works by Vogl, Moeller, Schimper, Meyer, Hanausek, Braemer and Suis, and others, dealing with the anatomy of foods and drugs, have been published, amongst which no fewer than three anatomical atlases are included. It might at first sight appear that these works, of admirable accuracy and detail, would leave but little room for a fourth atlas treating of the same subjects, but even a superficial inspection of Tschirch and Oesterle's treatise shows how erroneous such a supposition would be, whilst a critical examination of it proves it to be at least equal to its contemporaries in accuracy, and beyond them in scope as well as in detail. The atlas forms a second volume to Tschirch's "Angewandte Pflanzenanatomie" which was published in 1889, and received everywhere as an invaluable contribution to general anatomical pharmacognosy. Whilst this work dealt with the various cells, cell-contents, tissues, &c., considered generally the atlas treats of the detailed anatomy of a number of important drugs and food-stuffs. It aims at presenting to the reader a full and minute account of the structure of these substances. It treats not only of the cells and tissues as they are there met with, but embraces a study of the development of these whenever that appears necessary for the proper interpretation of the structure observed. It deals as well with the development of the organ of which the drug consists, and does not fail to point out particular features that may assist in its identification either in the entire or powdered state. Generally an entire plate is devoted to each drug, and as the number of illustrations on the plate often amounts to twenty or thirty, and sometimes even to forty, it is evident that no pains have been spared to utilise to the utmost this method of conveying information. Each plate is accompanied by about three pages of text. To give the reader an idea of the arrangement of the matter for each drug the following (black pepper) may serve as an example:—

In the first place the inflorescence is somewhat fully described, together with the changes that are perceptible during the ripening of the fruit. Then follows the structure of the ovary and its walls, of the ovule and its integuments, the development of the ovule into the seed, &c. Next, the student is taken into the anatomy of the drug itself, which is rendered easily comprehensible from the preceding account of its development. To this part of the description the fullest attention is devoted. Cells, tissues, and cell-contents are discussed, the most minute details being entered into. The pericarp, integuments of the seed, perisperm, and endosperm are all dealt with; the localisation of the volatile-oil and of the piperine, and the means by which the latter may be detected are considered. Nor is the structure of the rachis, upon which the fruits are borne, neglected. A brief account of white pepper, the diagnostic characters of the powder, and an enumeration of possible adulterants concludes the text. The plate contains twenty figures; of these the most useful is perhaps one in which the various successive tissues from the epidermis of the pericarp to the perisperm are shown by successive illustrations of the surface-view of these tissues. This figure, taken in conjunction with the transverse section, gives the entire anatomy of the drug at a glance. It is a most useful method of presenting the illustrations, and one that has been adopted for most of the drugs dealt with.

The accuracy and detail of the plates are all that could be desired, and the price at which the volume is published places it within the reach of all who are interested in the subject. Its value consists not only in the mass of information that is conveyed, but also in the excellence of the models that it offers to students who are contemplating undertaking researches in this field of knowledge. The expert will detect an abundance of new observations, and the researches that have been carried out in the Pharmaceutical Institute in Bern during the publication of the atlas amply demonstrate how suggestive the atlas is of further investigation. The authors are to be congratulated upon having brought their labours to a successful termination. They have produced one of the most valuable and important works that have ever been published in anatomical pharmacognosy.

A Dictionary of Practical Materia Medica. By JOHN HENRY CLARK, M.D. In 2 vols. 10 × 6. Vol. I., Pp. 951. Vol. II. (in 2 parts), Pp. 1613. Buckram, 3*l.* 3*s.*; half-Morocco, 3*l.* 12*s.* 6*d.* London: Homœopathic Publishing Company, 12 Warwick Lane, E.C.

THE second volume of Dr. Clark's colossal work is divided into two books, as the matter occupied more space than was anticipated. The scope of the work was indicated in the *C. & D.*, November 2, 1901. The information given under the different heads is admirably condensed, and a simple system of abbreviations is used so as to save space. Apart from the value of the Dictionary for reference, the information given under the heading of "Characteristics" is of that practical nature that chemists can appreciate. The following notes taken from the P's illustrate our meaning:—

Pœonia.—The dreams experienced by the provers were of a terrifying nature, and it is interesting to note, as Geyer, one of the provers, does, that both Dioscorides and Plinius cured nightmare with Pœon—the former with the seeds, the latter with the root.

Pelargonium.—Kafir remedy for dysentery. The root is cut up very fine or bruised, then boiled in milk for a considerable time. Many British soldiers were cured of dysentery with it in the Boer War.

Petroleum.—Falling out of the hair is a characteristic symptom of petrol., and accounts for the popularity of petroleum hair-restorers. . . . The use of these hair-restorers has caused many violent headaches. So has the use of coal oil (a tablespoonful to a bucket of water) by washerwomen to improve the colour of linen.

Petroselinum.—Parsley-tea is a recognised remedy for gonorrhœa in domestic country practice. . . . Parsley is said to be poisonous to ferrets. Fresh butter and parsley applied warm is an old remedy for bruises. An infusion is given to all children recovering from scarlatina by the matron of a suburban infectious hospital.

Phellandrium.—Goullon, jun., calls attention to the value of phelland. as a cough remedy. He regards it as a "universal cough remedy," but particularly useful in phthising coughs.

Picric Acid.—A saturated solution (pic. ac. gr. xc. to alcohol ℥iij.), diluted with a quart of water, is used for burns. . . . The staining of the hands and linen caused by the dressing can be removed by boracic acid.

Pilocarpinum is an ingredient in many hair-restorers . . . has also been known to turn white hair black.

Piscidia.—The experiment recorded in Allen is by W. Hamilton, who took a drachm of the tincture in water for toothache, and went off to sleep with such suddenness that when he awoke twelve hours later he was still holding the glass and vial from which he had taken the dose.

The Dictionary is the finest work on materia medica from the homœopathic point of view which has been published in recent times.

THINGS WORTH KNOWING.

FLOUR will extinguish burning oil. This is useful to know where lamps are much used.

A HANOVERIAN CHEMIST, by means of the familiar laboratory fat-extracting apparatus, has succeeded in getting an excellent food, of pleasant taste and rich in albumin and starch, from the horse chestnut, by removing the bitter resin with alcohol, or, preferably, ether alcohol.

THE latest thing in gongs is an ancient pestle and mortar. Some of the older ones are of great beauty, and have evidently figured in some lady's stillroom in old days. They are made of gun-metal or copper, and finely engraved. The sound is an agreeable one, and answers its purpose excellently for a small-sized house.

Association Affairs.

Plymouth Chemists' Association.

At a meeting of this Association, held on May 13, with Mr. C. T. Weary (President) in the chair, a discussion arose with reference to the formation of day-classes in pharmacy and materia medica to be conducted at the Technical Schools, and a sub-committee was elected to confer with the Junior Section and ascertain the probable number of students who would attend. On the proposition of Mr. Maitland it was unanimously decided to elect a committee to make the necessary arrangements for the annual outing. A lengthy discussion then took place with reference to the modification of several rules of the Association, the chief alteration having for its object the admission of registered chemists and senior assistants to the Senior Section. Mr. Park thought the annual subscription of apprentices should be raised to 2*s.* 6*d.*, but Mr. Groombridge, on behalf of the Junior Section, was against increasing the subscription. Considerable difficulty existed at the present time, he said, in obtaining 1*s.*, but he promised to bring the matter before the Committee.

Mr. Park's Candidature.

The President, in referring to Mr. Park's retirement from the Council at the expiration of three years, said it was customary for the Association to move a vote of confidence in Mr. Park, and to ask for the support of all members of the Society, in order that his return may again be secured. Apart from any personal feeling, he thought chemists in the West of England should have a representative on the Council, and he was sure Mr. Park would further any policy they, as an Association, desired to bring before the Council.

Mr. Turney said Mr. Park had always shown the keenest interest in his work as a member of the Council He was in business, and realised the position of pharmacists, and had always supported measures for improving their position. He was not only thought highly of in the West of England, but his colleagues on the Council held him in the highest esteem.

Mr. Cocks thought some undercurrent was at work to replace Mr. Park on the Council, and mentioned that several associations had issued recommendations for voters to omit Mr. Park's name.

On the motion of Mr. Roper a committee was appointed to issue circulars asking for votes for Mr. Park.

Mr. Park said he was asked by the Association some years ago to allow himself to be nominated as a member of the Council. At that time he had no desire to be on the Council, as it entailed a certain amount of self-denial, but he had never regretted having been elected, and if he were again successful he would do his best to further their interests.

Mr. F. W. Hunt having resigned his office as Divisional Secretary for Plymouth, it was decided to call a meeting of Plymouth chemists to elect a successor.

Hastings and St. Leonards Pharmaceutical Association.

The adjourned annual meeting of this Association was held on May 15 at the Castle Hotel, Hastings, with Mr. H. C. Edwards in the chair, in the absence of the President. The annual report and Treasurer's statement were submitted and adopted. The membership and balance in hand proved to be satisfactory, and the summary of work done during the session was received with approval.

The following officers and committee were elected for next session: Mr. F. Rossiter (President), Mr. C. R. Stedman (Hon. Sec.), Mr. A. W. Dawes (Hon. Treasurer). Committee: Messrs. John Smith, H. C. Edwards, E. Ripley, F. Tree, and Sidney Smith.

A proposal to alter the name of the Association so as to include Bexhill and other districts was then considered. It was pointed out that all the chemists in Bexhill have already joined and promised their support for next session, and the opinion was expressed that the title of the Association should be more comprehensive. After a lengthy discussion it was agreed that the Association shall in future be known as the "East Sussex Pharmaceutical Association." This terminated the business.

Western Chemists' Association.

A meeting of this Association was held at the Westbourne Restaurant, Craven Road, W., on May 21, the President (Mr. W. F. Gulliver) in the chair, and about a dozen and a half members were present.

The Late Mr. Andrews.

The President first referred to the death of Mr. F. Andrews, who had been an active member of the Association since its inception. He said all the members knew him and loved him for the kindliness and sincerity, and for the great interest he took in the Association and in pharmacy. He read sympathetic letters from Mr. Alfred Baker and from Mr. J. W. Taplin, and moved—

That this Association learns with the greatest regret of the death of Mr. Frederick Andrews, who, as one of the founders of the Association, its first Secretary, then President, and up to the time of his death a member of its committee, had always taken an active part in its work. The Association wishes to express its appreciation of his services, and to offer to Mrs. Andrews and her family its deep sympathy to them on their bereavement.

The Vice-President (Mr. J. W. Bowen) seconded in a few words, and Mr. J. F. Harrington also added several sentences of heartfelt regret. Mr. H. Cracknell, as a past-President and co-Secretary with Mr. Andrews, spoke of his personal indebtedness to their dead friend for the positions he had held in the Association. He recalled as a singular coincidence the fact that the first three Presidents of the Association had all passed away in rotation—first, Mr. H. Long, then Mr. William Martindale, and, lastly, Mr. Andrews. Mr. A. Cooper, as a co-worker with Mr. Andrews in the affairs of the Chemists' Defence Association and the Proprietary Articles Trade Association, paid eloquent tribute to Mr. Andrews's memory. These Associations, he said, owed a great measure of their success to the able guidance given to their Councils by Mr. Andrews, whose name throughout the country ought to be revered as that of the true and faithful friend of every pharmacist. They had sometimes differed in their opinions, but he had never known Mr. Andrews to utter a single word to which the most sensitive opponent could take exception. Mr. H. Mathews, who with his brother carried on business for many years in the same district as Mr. Andrews, showed how their late friend had carried out in his business relations the principles of a high-minded gentleman. He had been an extremely kind, gracious, and helpful brother-craftsman, and an example of the way in which brother-craftsmen, although near opponents in a sense, should work together.

Mr. Donald Watson related the singular circumstances under which, thirty-five years ago, he had made the late Mr. Andrews's acquaintance. It was at Dundee, on the occasion of the meetings of the British Pharmaceutical Conference and the British Association in 1867. They both arrived late at the same hotel, strangers to each other. A mutual friend introduced them, and they then found there was only one bedroom vacant in the hotel. After chatting together they occupied the same bedroom for the night, and a lifelong friendship resulted. The motion was passed in silence, those present upstanding.

Future Arrangements

It was agreed that the annual dinner be held in the Café Royal on November 19, and the President, Vice-President, Mr H. Cracknell, and the Secretary were appointed as a committee to carry out the arrangements. A discussion was afterwards indulged in on the question of the annual summer outing, but it was ultimately resolved that the Coronation would absorb all the festive energies possible this year, and that the summer outing had better be abandoned. This was all the public business.

Soap in Jamaica.—By the Soap Excise Duty Law of 1900 an Excise-duty is imposed of 10*d.* per box of soap weighing 56 lbs., or less or more duty proportionately to the contents, and licence-duty of 1*l.* for each soap-manufactory. The law also provides for the giving of returns and the inspection of factories. The import-duty of 3*s.* 1*d.* per box of soap of 56 lbs., equal to about 50 per cent. of the cost of imported soap, acted as a high protective duty in favour of local manufacturers of soap, who paid only the usual *ad valorem* duty of 16½ per cent. on raw materials.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Beware of "Mary Masters."

SIR,—Will you allow me to warn your readers against a woman who is victimising benevolently disposed chemists? She represents herself to be Mary Masters, the widow of a member of the Society, and one of the unsuccessful candidates at the last election of annuitants, and her mode of procedure is to tearfully assert that she has nothing to carry her on till next December, when there is another election; that the horrible alternative of the workhouse is before her unless a little help is forthcoming; and that Mr. So-and-So has advised her to call. As she is respectably dressed and is very ready with well-known names, she frequently succeeds in extracting a donation. She is an impostor whom I should very much like to catch. The metropolitan pharmacist should be particularly on his guard, as the lady's last attempt was upon one of the Divisional Secretaries in the Western District.

I am, &c.,

Pharmaceutical Society, R. BREMRIDGE,
17 Bloomsbury Square, W.C., May 22. Secretary.

Acetum Scillæ.

Subjoined are a number of contributions in regard to the amount of extractive matter in this preparation. The figures are valuable, and we desire to thank the various contributors for their assistance.

SIR,—In response to the suggestion thrown out in THE CHEMIST AND DRUGGIST, May 10, *re* vinegar of squill, I append one or two notes of results I have by me. I think it is altogether impossible to fix an arbitrary standard for extractive, as it is bound to vary according to the degree of dryness of the commercial cut bulb. Some samples of squill are too tough to even bruise, whilst others may be reduced easily to a No. 20 powder. This may mean as much as 20 per cent. of moisture in the crude drug. I examined a sample of vinegar made three months ago (by percolation), and it yields when at constant weight in water-oven 7·83 per cent. of extractive. A small lot made yesterday by percolation, from roughly powdered bulb, gives 8·7 per cent., and no change in weight was noticed after further exposure in oven. The residue is pale yellow, but rapidly turns brown on continued heating; but no loss in weight accompanies the change in colour. It is better to work on 1 to 2 c.c. in a flat-bottomed capsule, as 10 c.c. is too much—it leaves too thick a layer of extract, which dries slowly, the last traces of moisture being difficult to get rid of. The sp. gr. of this lot was 1·040; that of the old B.P. was 1·038. The acidity of a freshly made sample (using 4·27 per cent. acid to exhaust) was 3·8 per cent. of real acetic acid. This weakening in the newly made vinegar may be due in part to dilution of the acid bythe moisture in the squill. The acidity decreases with age. Might this not also increase the extractive, the acetic radicle combining in some form with some of the constituents of the squill? The dried extractive, even after prolonged heating on the water-bath, gives a distinct acid reaction when dissolved in distilled water. The percolated product seems much more syrupy in consistence than that made by maceration. Made by percolation carefully and thoroughly, the drug is not exhausted by the quantity of acetic acid used. My experience points to the fact that about two-thirds of the squill is represented in the vinegar.

Yours sincerely,

Newcastle-on-Tyne, May 14. GEO. F. MERSON.

SIR,—As to vinegar of squills I find total solids from three batches when finished to be 8·1, 7·9, and 7·6 per cent. In all these the strength of acetic acid was checked by titration before maceration.

101 Whitecross Street, E.C., May 14. J. S. WARD.

SIR,—I have just examined a stock sample of this preparation, and the following figures were obtained:—

Sp. gr. at 15° C.	1·041
Extractive dried at 212° F. ...	8·53 per cent. by weight
Real acetic acid	3·77 „ „

The sample was made early in March. I find that when we examined this preparation previously the results we obtained were—

Sp. gr.	1·043
Extractive	9·11 per cent.
Acidity	3·71 per cent.

We keep our squill in a dry place, and it is usually sufficiently free from moisture to break. Probably some deterioration of the vinegar does take place on keeping, but how much has yet to be determined.

Yours sincerely,

225 Oxford Street, W., May 16. E. W. LUCAS.

SIR,—In making this preparation we work to a sp. gr. of 1·040, and an acid percentage of 4. The amount of extractive usually falls between 8 and 9 per cent., and in our experience age does not rapidly diminish the percentage of acid. The sample made by us in January last, and tested, gave us 3·95 per cent. of acid, and the same sample tested on May 11 yielded 3·90 per cent., showing a diminution of only 0·05 per cent. in a period of more than three months. We have in our possession a sample of the preparation which we know to be several years old. This was found to have a distinct adour of acetic ether, to be turbid, and to contain 6·93 per cent. of extractive and 4·60 per cent. of acetic acid. In this latter case acetic fermentation of the squill-sugar had evidently taken place, with the result that the solids were diminished and the acid increased. We are inclined to regard Mr. Bevan's standard for extractive as being more or less correct, and to agree with him if he stated that no serious diminution in acid should occur from keeping.

Yours faithfully,

Birmingham, May 16. JOHN BARCLAY.

SIR,—We find that 10 grammes of our acetum scillæ, B.P., dried to constant weight, yields 8·36 per cent. solid matter.

Yours faithfully,

JAS. WOOLLEY, SONS & CO. (LIMITED).

Manchester, May 17.

SIR,—We append some recent analyses of vinegar of squill which have been made in our laboratory. With the exception of the last two, these are all of our own manufacture, and represent different batches. The total solids were dried to constant weight at 100° C. in flat-bottomed glass dishes. The acidity was determined by titration with barium-hydroxide solution and phenolphthalein:—

Description of Sample	Sp. Gr. at 15·5° C.	Acidity as Acetic Acid (Grammes per 100 c.c.)	Total Solids at 100° C. (Grammes per 100 c.c.)
Taken from a cask—about one month old	1·034	3·73	—
Taken from a bottle—about two months old	1·035	3·89	7·17
Taken from a carboy—about three months old	1·035	3·86	6·95
One pint made specially—quite new ...	1·0365	4·03	8·13
Age doubtful	1·035	3·57	6·96
Age doubtful	1·040	3·67	8·58
Samples purchased	1·0445	3·63	9·64
	1·033	3·57	6·75

Yours, &c.,

Nottingham, May 20. BOOTS PURE DRUG COMPANY.

Digitized by Google

Mr. E Wightman Bell, F.C.S, Spalding, also sends the following notes:—

ACETUM SCILLÆ.

Solid Matter.—A sample of vinegar of squill, one month old, on evaporation, and after drying in water-oven for thirty hours, gave a residue equal to 8·64 per cent. Another sample yielded 6·60 per cent.

Acidity.—The acidity of the month-old sample was equal to 3·72 per cent. (W/v) $HC_2H_3O_2$.

Ash.—Two samples were evaporated to dryness and ashed, yielding 0·21 and 0·23 per cent. of ash respectively.

Copper-reducing Power.—A sample one month old was found to have much greater reducing action on Fehling's solution than a freshly made acetum.

SQUILL.

Estimation of Moisture and Matter Soluble in Diluted Acetic Acid.—A sample of sliced bulb of commerce was tested, with the following result:—

Moisture	12·00
Soluble in acid acetic dil.	68·80
Insoluble	19·20
	100·00

Squill then yields a large proportion of its solid matter to diluted acetic acid; as to whether this amount is materially changed on keeping will require experiments which the writer hopes to make.

On Some Sicilian Essences.

SIR,—Messrs Schimmel & Co., in their semi-annual report, dated April, 1902, review a paper of our chemists that was read before the Society of Chemical Industry in December last, and as there are many inferences made by Messrs. Schimmel that our chemists did not intend to convey, and also some points which at the time they could not be so dogmatic about as they would have liked, we take this opportunity of writing on their behalf.

In a list of the constituents that had been previously reported to be present by various workers on lemon oil, which include phellandrene and citronellal, they mention with reference to these that "Burgess and Child were unable to find the last two." We now feel perfectly certain that they are absent from normal lemon oil, although it is possible that citronellol or one of its esters may be present. Messrs. Schimmel go on to state:—

> The principal odoriferous agent of this oil is without doubt citral; but, according to Burgess and Child, a very important share in the production of the aroma belongs to the octyl and nonyl aldehydes, although these two compounds are only present in very small quantities.

What Burgess and Child actually stated was as follows:—

Citral Content.—The next determination, that of citral, is in some respects the most important, and at the same time the most difficult. The strength (not flavour) of lemon oil is in a large measure due to the amount of citral present; but the fineness of the aroma is due to the alcohols and esters present, and, as we have previously stated, to the other two aldehydes.

This, it will be seen, is a very different matter. We should like to point out that in the whole of our experience, now extending to over six years of systematic examination of lemon oil, we have always found a direct relation between the percentage of citral and the alcohols, esters, &c., as is easily shown by the relation of refractive index to the optical rotation in the concentrated oils, the citral having a high refractive index, and it is optically inactive as against the other flavouring constituents (classed together), which have a low refractive index and a minus rotation. It is on this fact that our method for the examination of lemon oil is based.

Messrs. Schimmel state that,

> according to the authors the citral-content amounts on the average to 4 to 7 per cent., and is only in very exceptional cases higher.

The authors' exact words were:—

> The percentage of citral in lemon oil is certainly not 7 to 8 per cent, but much nearer 4 per cent. We have shown elsewhere that 7 to 8 per cent is a highly improbable figure, and our latest investigations confirm our opinion. Still, if a genuine oil, having a gravity of 0·860, can be obtained, then 7 to 8 per cent. would be quite reasonable, but such oils are not easily obtainable, though a small quantity of such oil was recently submitted to us which did contain 7·4 per cent. of citral.

With regard to the latter determination in which they mention 7·4 per cent. of citral, the words should have been added, "by direct methods on the oil itself," as we have now definitely come to the conclusion that however accurate the direct methods may be on prepared terpenes to which known quantities of citral have been added, on lemon oil they are quite unreliable, and invariably give too high a result. This may be due to the solubility of constituents other than citral, which makes it impossible to determine the correction for solubility. We recommend, as was done by Mr. E. J. Parry some time back, that the oil should be concentrated to about $\frac{1}{20}$ of its volume and then steam-distilled. The citral is determined by either the sodium-bisulphite or sodium-sulphite method, of which full particulars are given in the paper referred to. By such a method 3 to 4 per cent. may be given as a normal percentage of citral in lemon oil, and for exceptional cases 4 to 4·5 or even 5 per cent., but certainly never more.

Although Messrs. Schimmel express surprise at the discovery of pinene by our chemists, especially after their own failure to detect it, we may say that we suspected its presence from the beginning of their investigations some six years ago, and that in their hands the distillation-test, as ordinarily accepted, would condemn every pure oil we have met with. Pinene is not a chance-constituent of lemon oil, its presence may be detected in all makes, at whatever time and wherever pressed, and its quantity is much too small to have been purposely added. We have no reason to suppose that the proportion of pinene to the other terpenes ever greatly varies in pure oils. Messrs. Schimmel state that, without a Young's pear-shaped distilling-head, they were able, after reading of Burgess and Child's discovery, to

> detect in the first runnings of each sample a small quantity of a lævogyre hydrocarbon, which yielded a nitrosochloride, and from that a nitrolbenzylamine which shows the same melting-point as pinene nitrolbenzylamine. This would, no doubt, point to pinene, and as the quantity of the nitrosochlorate obtained is but very small, one could not even conclude that turpentine oil had been added purposely.

With all due deference to Messrs. Schimmel's chemists, we are still of the opinion that the hydrochloride compound is by far the most conclusive and characteristic test for pinene. We should not care to have claimed to have discovered pinene on the data Messrs. Schimmel give as confirmatory. In our laboratory and works we have found it impossible to separate a terpene from lemon-terpenes having a minus rotation, except by using the dephlegmator in question, and should be extremely interested in a description of the apparatus and method used by Messrs. Schimmel. We note with great satisfaction that Messrs. Schimmel are to investigate the distillation process further and to report on it, but we feel confident that when they have done so they will come to our conclusion, and, if they do not recommend our actual method, will have to suggest a similar distillation-test.

We would further wish to correct an apparent misunderstanding of the paper in question, where they state the refractive index of oil of lemon fluctuates between 1·4733 and 1·4830. If they will carefully examine the paper again they will find these figures represent the extreme refractive indexes to be obtained on fractionating lemon oil, the limits for normal lemon oils may be given as 1·4750–1·4760 at 20° C.

In another part of their report they mention a paper by our Mr. Burgess on citron oil, or cedrat oil, where they compare it with an article in THE CHEMIST AND DRUGGIST by Dr. Gulli, and doubt the genuiness of our sample. We will refrain for the moment from replying to this, as we are preparing a paper on the subject.

THE LONDON ESSENCE COMPANY,
George Street, Camberwell Green, S.E., May 20.

Pharmacy in Norway.

SIR,—I notice in this week's issue a communication from Mr. H. Monrad-Krohn, of Bergen, in which he criticises my statement that there are only two pharmacies in the whole of Norway which can be sold absolutely by the proprietors. This information was given me by a Norwegian pharmacist, and I am surprised to hear it called in question, but Mr. Krohn is such an authority on matters of this kind that I cannot but think my informant must be in error, and that Mr. Krohn is correct. It is, however, only a question of

Digitized by Google

degree, for, as Mr. Krohn says, there are only thirty-six pharmacies in the whole of Norway which can be sold absolutely by the proprietors, and that in the case of the large majority the pharmacists are only life tenants.

Yours faithfully,

Birmingham, May 17. THOS. BARCLAY.

"Specially Qualified."

SIR,—In September last under Legal Queries you gave me your advice relative to a dental booklet I proposed distributing, and you then said: "If a narrative of one's ability is not 'a description,' you are safe." The Cardiff Stipendiary has just held that such is "a description," and implies that I am "specially qualified," or, in the sense he reads the words, "particularly able." This seems to be a peculiar interpretation of the term, and differs from the view taken by other magistrates in other towns. If by an appeal we could get the point definitely settled I think the trade would benefit.

Yours faithfully,

Cardiff, May 21. TEMPLAR E. MALINS.

Birmingham and Shop-hours.

We are indebted to *Mr. W. M Freeman*, Birmingham, for a reply to "Xrayser's" remarks regarding the Midland Pharmaceutical Association and early-closing. The letter is more than our space permits insertion of this week, but the essential part of it is as follows:—

Some weeks ago Birmingham was placarded by a local Early-closing Association, calling upon all and sundry to attend a meeting to protest against the action of the House of Lords in throwing out Lord Avebury's Bill. At our Pharmaceutical Association meeting a letter was read from the promoters of this demonstration asking leave to use the name of the M.P.A. in connection therewith. I suggested that, as we had never had a thorough discussion of the several Shop hours Bills before Parliament, and as there were grave objections to be urged against Lord Avebury's Bill, which the House of Commons has again and again rejected, and which the House of Lords has twice thrown out for similar reasons, it would be more dignified and more likely to help forward the settlement of the question on sound lines, if the Association declined to be captured by Lord Avebury until a representative meeting had been held at which the pharmacists of the Midlands could thoroughly debate the subject, and decide upon their attitude to the different Bills. The meeting agreed with me, and decided to put down the subject of shop-hours reform for discussion during next session, and a resolution was thereupon passed, a copy of which was sent to the promoters of the demonstration. It stated that, whilst the M.P.A. was fully in sympathy with all efforts to shorten the hours of labour in shops, we could not at present commit ourselves to unqualified approval of Lord Avebury's Bill. At the next meeting Lord Avebury's letter was read, and the Hon. Secretary was asked to write acquainting his Lordship with our intentions.

Note by Editor.—It may be remembered that last year the M.P.A. was one of the Chemists' Associations which, in reply to our circular, supported Lord Avebury's Bill, and upon this fact Lord Avebury no doubt recently acted. Mr. Freeman explains that the words quoted by "Xrayser" were, barring a slight inaccuracy, used by him, and not by the Hon. Secretary.

Dr. Symes' Cartoon.

SIR,—Your cartoon of Dr. Symes was very good in every respect, and most amusing. It reminded me of the fact that an opportunity occurs at the present election for those who believe in this division showing it by their votes. All the new men (particularly Mr. Campkin) are advocates of division, and some of the retiring members are strong on the point. Voters should act accordingly, and let there be less votes lost by carelessness in not voting.

Truly yours,

PHARMACEUTICAL CHEMIST. (230/43.)

[Of the retiring councillors there voted against division of the Minor *sine curriculo* Messrs. Carteighe and Park, and for division Messrs. Glyn-Jones, Harrington, and Young. Messrs. Harrison and Southall were absent.—EDITOR.]

SIR,—It is not often a man will ridicule his own proposal; but when, as your correspondent did last week, he proposes reducing the standard of the Minor, he is certainly justified in doing so. That he, however, should object to others acquiring his title without his difficulties can only be called consummate selfishness; for it is the highest and noblest duty of man after climbing to nobleness through adversity to warn his fellows, and as far as he can to lead them up to the same success without his misfortunes. I am strongly in favour of division of the Minor; for it is obvious that a higher standard could be reached with less difficulty when the subjects are detached. It is also of vital interest that men of all trades and professions requiring a college course owe their drunkenness, in the so many cases, to being sent to this Babylon at an age of temptation with no controlling power, in many cases too much money to spend, and always too many friends to spend it. Any course which would enable men to pass an efficient examination in their own town would be welcome, and surely for this the examination must be divided. Yours sincerely,

71 Lavender Hill, S.W. E. KINGSLEY MONKS.

The Council Election.

SIR—The publication of the sketch-map in your last issue is very opportune, and is both interesting and instructive. It shows that while Lancashire alone has four and London eight representatives, the whole of the very large and important district of the South and West of England (omitting Salisbury) has but one solitary member—namely, Mr. Park, of Plymouth. That fact alone is sufficient reason for asking for a vote in his favour, not only from our friends in London, Lancashire, Wales, &c., but especially from West of England chemists, who, by his rejection, looking at the matter from the point of view of territorial representation, would be totally disfranchised. We who have been intimately associated with him for many years know the large amount of time and attention he has given to his duties, how intimately he is in touch with our needs, and that, as a retail chemist in ordinary business, he fully realises the exigencies of the present position of our calling. I may add that at a recent very largely attended meeting of our Association a vote of thanks was accorded him for his past services, and it was decided to ask chemists generally to support him at the forthcoming election.

Yours faithfully,

C. T. WEARY (Div. Sec.),
President of the Plymouth, Devonport, Stonehouse, and District Chemists' Association.

[We have received copies of a circular issued by the Plymouth Chemists' Association to voters in the West of England, and asking support for Mr. Park. It reproduces the substance of the above letter.—EDITOR.]

Cheeryble Brothers.

Mr. John G. Sclater, replying to Mr. Mumbray about the prototype of Cheeryble brothers, refers to what Sir Richard Quain said at Bloomsbury Square on October 3, 1894. We quote it from the *C. & D.* as follows:—

It was said in the presence of Thackeray and some other that Mr. T. H. Hills was the prototype of the "Cheeryble brothers" of Dickens. Somebody said that was impossible, there being two Cheerybles; but, said Thackeray, "Two Cheerybles rolled into one make a Hills."

Mr. Sclater adds that Mr. Percy Fitzgerald, in "Bozland," accepts the story, but Mr. Sclater has doubts about it, and said so in his paper, which we condensed.

Dispensing Notes.

Oleate Strengths.

Oleat. hydrarg. c. morphinâ (5 per cent.) ... ... ʒj.

Applic. ut dictu.

Does the above 5 per cent. refer to percentage of morphine, or is it 5 per cent. of the official oleat. hydrarg. with 9 per cent. oleic acid, or should it be dispensed with 1 gr. morphine in each dr., and equal parts of B P. oleat. hydrarg. and oleic acid, thus taking the strength of B.P. oleat. hydrarg. as 10 per cent.? The last is how I dispensed it, but both of the other suggestions have been supported by others. The application was for a very young child for enlarged glands. I should like to know the opinion of others.

Yours faithfully,

E H. (182/23)

[The B.P. mercuric oleate now contains nearly 30 per cent. of oxide; the 1835 was a 10-per-cent. preparation. The percentage

Digitized by Google

does not refer to the morphine but to the mercuric oxide. What is the best diluent of the new B.P. oleate?]

Cinchona-and-salicylate Mixture.

Sir,—A point I desire to have cleared up with regard to the following prescription, is the general appearance of the medicine when dispensed. Our customer had had it made up in the Isle of Wight, and that mixture presented the usual reddish-brown decoction of cinchona appearance, which we are unable to obtain. Several methods of mixing were tried, the best giving a yellowish-white, muddy mixture, with a very perceptible sediment on standing, inclining to coagulate:—

Spt. chlorof.	♏xv.
Tr. cimicifugæ	♏xxx.
Sodii salicyl.	gr. x.
Strych. nit.	gr. ¾
Inf. cinchon. ad	℥j.

M.

The trouble seems to be between the sodii salicyl. and the cinchona.

Cepia. (173/57.)

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

232/29. *J. P.*—(1) Your label is liable because it specifies three ailments in the title; the Board allow two only. (2) Dutch drops is one of the medicines included in the Schedule to 52 Geo. III., c. 150, and is liable to duty under any circumstances—*i.e.*, if sold as Dutch drops.

23`/34. *Repairs.*—Your best course in regard to the subletting tenancy is to give the tenant six months' notice as from the June quarter, then make your own terms with him as to the future if he wishes to continue in the premises. You would find it advantageous to get a respectable solicitor to do the work, seeing that you are inexperienced in such matters.

233/34. *A. B.*—Lanoline is an "entire drug" and as such is free from medicine stamp duty though recommended for the cure of ailments. Witch hazel cream is not an entire drug, so that if it is recommended in the same manner as lanoline it must be stamped. We are not surprised that you have been fined for describing your cream as "a soothing application for cuts, scalds, burns, &c." If there are others doing the same thing perhaps they will take a warning from this note.

230/65. *Nemo.*—"Magnesia" of the public is magnesia calc. levis, although in some parts of the country magnesia carb. levis is sold and wanted. Actions in your district under the Sale of Food and Drugs Acts have failed to establish there that magnes. calc. levis must be given when "magnesia" is asked for. Nevertheless you are only safe by selling the calcined.

231/36. *Molar.*—The name given is not on the dentists' register, so that the person, by calling himself "dental mechanic" and D.D.S., lays himself open to prosecution under the Dentists Act.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

225/21. *Sarah Fecit.*—(1) The Copper-waterproofing Process is applicable to any fabric. The material is soaked for six hours in a solution of 1 lb. of soap in 16 gals. of water, and then for a like period in a solution of copper-sulphate (1 lb. in 16 gals. of water). The fabric is then hung up to dry without previous wringing. (2) Messrs. Houghton & Sons, High Holborn, W.C., will probably have in stock hand-cameras such as you specify.

218/70. *Veterinary.* — Colic Draught for Horses.—"Veterinary Counter-practice" gives many formulæ for this, the following being one of the best:—

Sol. chloral hydrat. (1 gr. in 1 minim)	℥j.
Spt. æther. nit.	℥iss.
Bals. copaibæ	℥iv.
Liq. potassæ	℥ss.
Ol. terebinth....	℥iv.
Ol. lini ad	℥viij.

A fourth part to be given in from ½ to 1½ pint of linseed oil.

219/30. *H. S. K.* (Bombay).—**Books on Consumption.** See *C. & D.*, August 10, 1901, page 294. **Books on Asthma** — Kingscote "Asthma: Recent Development in its Treatment," 5*s.* (Glaisher); Berkhart "Bronchial Asthma," 10*s.* 6*d.* (Churchill); Dobell "On Asthma," 4*s.* 6*d.* (Smith & Elder).

217/26. *Delta.*—**Liq. Papain. et Iridin.**:—

Papain.	℥ij ♉ij.
Iridin....	℥j.
Glycerini	℥ij.
Spt. rect.	℥j.
Tr. cinnamomi	℥j.
Tr. cardam. simp.	℥j.
Aquam ad	℥x.

Macerate for four days and filter.

Dose: ½ to 1 dr. in water.

219/48. *W. J. H.*—(1) The colouring-matter of carbolic tooth-powder which keeps its colour is eosin, which should be used in the proportion of 3 gr. (dissolved in spirit ℥ij) to the pound of basis. (2) There would be no advantage in adding pepsin to the indigestion-mixture, as it would be inactive in such an alkaline menstruum. (3) **One solution Developer.** Try the formula given in the *C & D.*, March 15, page 442, and let us know if you find it an improvement on the recipe you submit. (4) **Sal. Æratus** is bicarbonate of potash, but is sometimes interpreted as bicarbonate of soda or baking-powder.

215/31. *C. J. B.*—You do not say what the **Pigeon Composition** is for. It appears to be a coarse vegetable powder made into a paste with linseed oil.

220/50 *Pharmacist.*—The Toothache-liniment is natural camphor oil.

209/30. *A. J. W. R.*—(1) The powder used for colouring by confectioners is rosaniline. (2) The booklet "Opening a Pharmacy" is a reprint of the article in The Chemists' and Druggists' Diary, 1901. (3) There are no books published on drug-importing.

22/4. *C. M. B.*—You do not give any reason why we should analyse the "lotion for the face." Who makes it?

210/18. *Preserver.*—**Meat-preserving Powder.**—This is the usual mixture of boric acid and borax (in about equal quantities).

225/3. *Gipsy.*—Ammonia and burnt sugar are the only ingredients we can detect in the **Milk-fever Cure.**

226/5. *W. E W. R.*—**Green Ammonio-citrate of Iron,** for use in blue-printing process, is made as follows:—

Dissolve 32·5 parts of ferric chloride in a small quantity of water, and precipitate the hydroxide by adding ammonia in excess. Well wash the precipitate, and drain. Stir in 84 parts of powdered citric acid till solution is effected, adding, if necessary, a little more water. Cool the solution, and add 33·7 parts (by weight) of ammonia (830°), when a clear dark-green solution results, which is filtered and scaled on glass. If the solution is diluted to sp. gr. 1·18 at 15° C. it is a 50-per-cent. solution, and may be used for making the sensitising solution.

If you only require a little of the salt you will find citrate of iron and quinine answer the purpose.

22/4. *Radix.*—**The Lambing Oil** consists of terebene (2), olive oil (4), mixed with strong soap solution (4).

207/48. *A. & Co.*—You should experiment on the lines you mention.

Digitized by Google

228/48. *Turkey.*—The meal for **Preventing Abortion in Cattle** is bran medicated with carbolic acid. How is it used, and does it answer the purpose?

188/53. *F. S. H.*—**Skin-lotion.**—The following recipe will make a lotion like your sample:—

Calamin.	℥j.
Tr. benzoini	℥ss.
Ol. amygd. essent.	♏iv.
Glycerini	℥ij.
Aq. rosæ ad	℥xx.

Misce bene.

223/22. *Eczema.*—The ointment—"a sure cure for all skin-diseases"—is made as follows:—

Camphor	℥ss.
Sublimed sulphur	℥ij.
Yellow wax	℥j.
Vaseline	℥j.

Mix.

227/9. *Rusticus.*—The following formula for **Veterinary Chlorodyne** is from "Veterinary Counter Practice":—

Extract of Indian hemp	℥ij.
Capsicin	gr. v.
Oil of peppermint	♏ss.
Rectified spirit	℥ij.

Rub up the extract and capsicin with a little spirit, and gradually add the rest of the latter; then add the oil and the following:—

Methylated chloroform	℥j.
Methylated ether	℥j.

Mix.

Separately prepare the following mixture:—

Acetate of morphia	℥j.
Dilute acetic acid	♏ss.
Distilled water	℥iv.

Dissolve by heat, and add to

Comp. tragacanth powd.	℥iij.
Treacle	℥x.
Liquid ext. of liquorice	℥ij.

To this mixture gradually add the chloroformic solution, shaking well after each addition.

The dose for a horse is ℥ss. to ℥j. Ten minims of acid. hydrocyanic. dil., B.P., may be added to each ounce if desired.

227/14. *A. T. W.*—We do not publish the questions set at the Jacob Bell Scholarship examination every year. Last year's questions are published in the Society's *Calendar*, and the previous year's in the *C. & D.*, July 14, 1900, page 49.

227/23. *Teds.*—Electric-light bulbs are frosted by exposure to the vapour of hydrofluoric acid.

221/34. *J. E. C.*—The barrels of guns are black-browned by mixtures such as the following:—

Spirit of wine	♏ss.
Tincture of iron	♏iss.
Corrosive sublimate...	♏iss.
Spirit of nitrous ether	♏iss.
Copper sulphate	℥j.
Nitric acid	♏vj.
Water to	Oij.

Mix.

Directions for using this were given in the *C. & D.*, June 8, 1901, page 935.

230/34. *A. G.* (Salzburg). — **Syrup. Hypophosphit. Comp.**—The following is the formula you require:—

Calc. hypophosph.	35	grammes
Potass. hypophosph.	17·5	grammes
Sodii hypophosph....	17·5	grammes
Ferri hypophosph....	2·25	grammes
Mangan. hypophosph.	2·25	grammes
Potass. citr....	5	grammes
Ac. citric.	2	grammes
Quinin. hydrochlor	1·125	grammes
Tinct. nuc. vom.	22	c.c.
Sacchari	775	grammes
Aquæ destillatæ q.s. ad ...	1,000	c.c.

231/42. *Garden.*—**To Destroy Worms on Lawn.**—See *C. & D.*, January 4, page 28.

230/56. *Fluoric.*—To use fluoric acid with an indiarubber stamp it requires to be mixed with barium sulphate to a cream-like consistence.

230/50. *Wasp.*—**Superfluous Hair, to destroy.**—See *C. & D.*, December 28, 1901, page 1048, and July 15, 1899, page 97. Lanolin, by nourishing the hair, would tend to increase its growth.

228/29. *X. Y. Z.*—Your inquiry was replied to in the *C. & D.*, August 10, 1901, page 294.

221/2. *Meteor.*—If the four doses of nux vomica of 2 dr. each were given to the bull in one day, it is not unlikely that it may have expedited the death of the animal, but that greatly depends upon the strength of the nux vomica. Probably the four doses would not contain more than 3 gr. of strychnine, and that is not, under ordinary conditions, a fatal dose for a bull.

221/15. *Student.*—The salaries paid to assistants in manufacturing-laboratories depend upon the work done. For analysts, 80*l.* a year is a common salary to begin with, but in manufacturing 120*l.* is the likelier figure. Higher salaries depend upon the worth of the individual. You will find being Associate of the Institute of Chemistry of advantage for purely analytical work.

210,49. *Semper Eadem.*—To **Prevent Blistered Feet** your customer should harden the feet by baths of formalin or alum solution, and prevent friction by either soaping the inside of the socks or using a dusting-powder of French chalk and boric acid freely.

209/66. *Andreas.*—**Milk of Magnesia, Edinburgh formula:**—

Magnes. sulph.	℥xix.
Liq. potassæ	q.s.
Aq.	q.s.

Dissolve the mag. sulph. in water, precipitate with liq. potass., wash the hydrate thoroughly, and diffuse in a sufficiency of water to make 20 oz.

208/9. *C. & Co.* (Calcutta).—Stills for extracting essential oils from flowers are made by such firms as Messrs. Bennett, Sons & Shears. (See advertisement in THE CHEMISTS' AND DRUGGISTS' DIARY.)

207/50. *Mandelay.*—(1) **Warts on Cattle.**—The following lotion is effectual and safe:—

Zinci chlor.	℥j.
Spt. vini rect.	℥j.

Solve.

Soak the wart first with hot water, and apply the lotion daily.

(2) We do not know the remedy for **Red Water** you mention, but you will see from the *C. & D.*, May 18, 1901, page 812, that turpentine in doses of 2 oz. or 3 oz., following a brisk purgative, is a suitable treatment.

210/4. *G. M.* — **Compensating Simple Lenses.** — A weak convex spectacle-lens is required of such a strength that when added to the focal length of the lens to be corrected, it will have the power of reducing the focus 2 per cent. or any other proportion found to be the proper amount of adjustment for distant objects. The supplementary lens is used as a stop and removed after the picture has been focussed, but before the photograph is taken.

211/39. *Houseman.*—"Pharmaceutical Formulas" contains a chapter on Synthetic Perfumes, and Parry's "Essential Oils and Artificial Perfumes" (12*s.* 6*d.*) has a chapter on the subject in which the chemistry is more elaborately treated.

224/10. *Ben Nevis.*—**Spiritus Saponis (Hebra)** is a well-known preparation. The formula was last given in the *C. & D.*, November 16, 1901, page 816. It is also included in "Pharmaceutical Formulas."

222/59. *Velox.*—The yellowing of tr. quin. ammon. is not always due to the spirit used, sometimes the ammonia is the cause. We do not know of a way of removing the discoloration without affecting the tincture.

Digitized by Google

215/17. *E. B.*—There is considerable demand for male nurses. Your friend should apply to any of the following Associations:—Male Nurses' Co-operation (Limited), 15 Great Marylebone Street, W.; Male Nurses' Association, 23 York Place, W.; Male Nurses' Co-operation, 10 Thayer Street, Manchester Square, W.; and the Hamilton Association, 57 Park Street, Grosvenor Square, W.

216/9. *Pyro.*—The following Pyro-Soda Developer from The Chemists' and Druggists' Diary, 1900, is suited to your requirements:—

A.

Pyrogallol	80 gr.
Nitric acid	4 drops
Water to	20 oz.

Dissolve.

B.

Sodium carbonate	2 oz.
Sodium sulphite or potassium meta-sulphite	2 oz.
Potassium bromide	20 gr.
Water to	20 oz.

Dissolve.

For use mix equal parts.

220/15. *J. P. W.*—Diabetic Milk.—The only process for this we are acquainted with is that invented by Mr. E. W. Morris, pharmacist to the London Hospital. Mr. Morris's process, which is the subject of a patent (16,199 of 1900) consists of removing the milk-sugar from ordinary milk in the following manner:—

Take 5 gals. of good milk, containing at least 4 per cent. of fat. Separate cream in a centrifugal machine, and set aside. Heat the milk to 90° F., and add 200 c.c. of acid acetic glacial. Set aside for ten minutes. Transfer the precipitated casein to a muslin straining apparatus, and press out the whey. Collect the casein, and wash it with warm distilled water until the washings are free from lactose, as indicated by Fehling's solution. Squeeze the casein through fine muslin to thoroughly divide it. Transfer to a mortar, and add about 200 c.c. of a 25-per-cent. solution of potassium hydrate, diluted with a pint of distilled water, or as much as shall render the mixture faintly alkaline to phenol phthalein. Now add the cream previously removed, 12 gr. of soluble saccharine, 60 gr. of phosphate of soda, 20 oz. of lime-water, 150 minims of solution of formalin, and distilled water (at a temperature of 90° F.) sufficient to make 5 gals.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

232/51. What is antiphlogistine or where obtainable?

233/55. Where obtainable: Parisian rose-blush powder, Bayard's massage-cream, Bayard's face-soap.

223/50. Who are the makers of or agents for Howard's Santal Perles.

Coming Events.

Tuesday, May 27.

Pharmaceutical Society of Great Britain, Whitehall Rooms, Hôtel Métropole, at 7 P.M. Annual dinner.

Wednesday, May 28.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W.C., at 12 NOON. Annual meeting, followed by special meeting.

Nottingham Chemists' Association, Victoria Hotel, at 9 P.M. Annual meeting.

Chemical Society, Burlington House, Piccadilly, W., at 5.30 P.M. "Taxin," by Dr. T. E. Thorpe and Mr. G. Stubbs. "Soil Samples" and "Some Excessively Saline Indian Well-waters," by Mr. J. W. Leather.

Public Dispensers' Association, St. Bride's Institute, Ludgate Circus, E.C., at 8 P.M. Paper, by Mr. H. D. Kelf, on "Some Aspects of a Dispenser's Duties."

Friday, May 30.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Mr. G. Marconi on "The Progress of Electric Space Telegraphy."

At the Counter.

Customer: "That 'intment ye gie'd me for the exeema has made a perfick cure. I'll never forget ye for being so skilly as lang as I leeve. And, juist in case it comes back a bit, I'll tak' 'ither tippence-worth." Chemist is stricken dumb with emotion.

A "Rich" Variety.—A batch of counter orders presented to Mr. E. R. Cherrett, of Monkwearmouth includes some originals, as follows:—"Phulence earth," "Rowshell salts," "carpented soda," "rubbub and cain," "OO sal x accest," "paricacia," "isle of wilots," "wight napture," "floral etha," "pop in and axe," "joeackmen," "pomarde potass," "infant crimations for sleep."

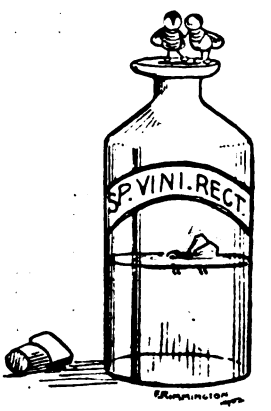
Varieties.—Out of a multitude of batches we cull varieties of the same words, thus:—"Belldior" or "bellondollen" plaster; "impecunia" or "eck pek Hannah" wine; "sulph. zing" or "sulpherated of sinc"; "horn an oil for sprand rist" or "a glass of horsehorn"; "redpiecaped," "sipterpounder," or "persiperdy"; "pillacha," "pillow goater," or "pil scrocia" pills.

A Midland paper publishes the following as having taken place at a Longton chemist's shop:—

Girl enters and asks for "A penn'orth of organ, please.' Chemist: "I beg your pardon, will you name it again?" Girl: "A penn'orth of organ." Chemist: "What is it for?" Girl: 'I don't know." Chemist explains he cannot understand, and the girl leaves the shop, returning in the afternoon and then asking for "a penn'orth of armonium to clean clothes with." Chemist: "Didn't you come this morning for something?" Girl: "Yes, sir. I was told to fetch what I've just said, and was told to remember what I was sent for by thinking of our 'armonium. But our 'armonium is an Esty organ, and I have made a mistake."

This shows the value of correct description to the youthful mind.

Written Requests.—The value of veterinary-counter practice is indicated in this case:—



Please give bearer a remedy for a pig that has a cold in her nose.

A Brighton chemist wrestled for some time with a request for "1*d.* of vaccination biscuits," but, as far as we know, the annexed is unique:—

Sir, will you give this man some save to rub on the abondam, as he thinks he as got some varment on him, as he as Come from Hollond in the stean ship?

Mr. Croft, of Crowle, to whom it was addressed, doubtless soon cleared the "varment."

In Classy Kilburn.—An order for "3*d.* oil you clipsus" was recently presented at a high-class pharmacy in Kilburn. As the proprietor has a reputation for more knowledge than is to be gained behind the dispensing-screen, needless to say it was accurately dispensed.

"Miss Fly still keeps in very good spirits doesn't she?

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: May 22.

THIS has been a broken week, and business in consequence is very poor in all branches of produce. In fine chemicals, caffeine has been reduced owing to continental competition, and for the same reason codeine was reduced previous to the holiday. Morphine is also a shade easier. St. Vincent arrowroot continues its advance, and Japanese wax is again dearer. In crude drugs there is little doing. Druggists' cream of tartar is firmer owing to scarcity of spot supplies. Sulphate of ammonia is strong and dearer, and nitrate of soda is easier. Quinine has been a "waiting" market in anticipation of the London bark-sale to-day. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Arrowroot (St. V.)	Ammonia sulphate	Morphine	Caffeine
Caraway-seed	Canary-seed	Soda nitrate	Codeia
Gentian	Cream of tartar		
Linseed Oil, lime (W.I.)	Ginger (Japan)		
Oil, palm			
Wax, Japanese			

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from May 14 to 21, inclusive:—Acid, carbolic (@ Cologne), 113 cks.; acid, tartaric (@ Rotterdam), 33 cks.; argol (Cape) 3, (@ Oporto) 20; arsenic (@ Hamburg), 10; birdlime (Jap.), 5; bromine (@ Hamburg), 167 cs.; buchu, 35; camphor oil (@ Kobe), 4; cardamoms (@ Ceylon) 67, (@ Seville) 36; caraway-seed, 95; cascara sagrada, 342; castor oil (E.I.) 250 cs., (Belg.) 204 brls. chillies (E.I.), 50; cinchona (@ Valparaiso) 10 bls., (@ Ceylon) 60, (@ Amsterdam 376 pkgs., (@ Paita) 270 serons; citronella oil (@ N.Y.) 28 drms., (@ Rotterdam) 20 cs.; cod liver oil (@ Rotterdam) 50 cs., (@ Aalesund) 50 brls., (@ Christiania) 110; colocynth (@ Hamburg), 18; cream of tartar (@ Bordeaux) 75, (Spanish) 37; cumin seed (Mor.), 60; drugs (@ Trieste) 15 cs. 281 pkgs., (@ Hamburg) 10 bls., (@ Fiume) 8 bls.; ergot (@ Hamburg), 6; essential oils (@ Messina), 27; fenugreek-seed (Mor.), 100; glycerin, crude (@ Melbourne) 102 drms., (@ Rotterdam) 24 cks., (@ Adelaide) 138 cs.; ginger (@ W.C.A.) 667 bgs., (@ Bombay) 42 cs. 65 bgs.; gum arabic (@ Aden), 104 pkgs.; honey (@ New Zealand) 52 cks., (Chil.) 21; insect-powder (@ Trieste), 83 pkgs.; iodine, 53 brls.; laurel oil, 5 cs.; magnesia (from U.S.A.), 50 brls.; nux vomica (@ Bombay), 322; opium (@ Smyrna), 29; orange peel (@ Malaga), 10 bls.; phosphorus (@ Montreal) 50 cases; potash chlorate (@ Sweden), 100 kgs.; quicksilver (@ Seville) 5,000, (@ Malaga) 10; saffron (@ Valencia), 2 cs.; sandalwood (@ Bombay), 422 bgs.; sarsaparilla (@ New York), 35; senna (Tiny.), 16; shellac 112, button lac 12; soy, 200; sugar of milk (@ Rotterdam), 10; tamarinds (@ Calcutta), 18; tartar (@ Amsterdam) 152 cks., (@ Bordeaux) 10 cks.; vanilla (@ Mauritius) 1 cs., (@ Marseilles) 30 cs.; wax, bees' (Span.) 13 bls., (Fr.) 9 cs., (Australian) 6, (Mor.) 8; wax, ceresin (@ Rotterdam) 32, (@ Hamburg) 29; wax, unenumerated (@ Hamburg) 58 cs. 70 brls. 122 pkgs., (@ Rotterdam) 8 cs.; wine-lees (@ Bordeaux) 66 bgs., (@ Alicante) 968; wool oil (@ W C A.), 18.

Heavy Chemicals.

At all the main centres there is a fairly satisfactory demand for both main and miscellaneous products, and that both on home and export account. From the Tyne particularly good shipments have lately been made both to Sweden and Finland. There is little to be said about values; for the most part they are steady and unchanged.

SULPHATE OF AMMONIA is considerably higher and the upward tendency is strongly maintained. Beckton, July-September, 12*l.* 5*s.*; Beckton terms, 12*l.* 7*s.* 6*d* ; London, 12*l.* 12*s.* 6*d.*; Leith, 12*l.* 15*s.*; and Hull, 12*l.* 7*s.* 6*d.*

BICHROMATES OF POTASH AND SODA are only in moderate demand, whilst the low figures for some considerable time quoted continue to rule. Potash, English and Scotch deliveries, 3*d.* per lb., less 4 per cent. Glasgow. For export ¼*d.* per lb. less and net thereat. Bichromate of soda, English and Scotch deliveries, 2½*d.* per lb., less 4 per cent. Glasgow. For export 2*d.* per lb. and net.

SULPHOCYANIDES continue very quiet and are practically without change. Barium, 95 per cent., 3¾*d* to 4*d.* per lb. Ammonium, 95 per cent., 6*d.* per lb. Potassium, 7¼*d.* to 7½*d.* per lb.

BARIUM PRODUCTS continue in steady consumptive demand and prices rule firm, seeing the mineral carbonate of barytes is not yet in any better supply. Quotations for the latter are only nominal and subject to arrangement of delivery. Blanc fixe, pure precipitated sulphate of barium in paste form, 7*l.* to 7*l.* 10*s.* per ton in ordinary 8–9 cwt. casks. Chloride of barium, best ordinary refined crystals moving well, at 7*l.* to 7*l.* 10*s.* per ton ex stock in original casks, and 6*l.* 10*s.* to 7*l.* per ton in bags. Nitrate of baryta continues to hold a very firm tone, and some makers are asking higher prices. Crystals, free on rails in casks, 17*l.* to 18*l.* per ton, and powdered, 17*l.* 5*s.* to 18*l.* 5*s.* per ton. Sulphide of barium crude calcined, 70 to 75 per cent., 5*l.* 10*s.* to 6*l.* per ton in usual casks, and demand moderate. Hydrate of baryta, purest crystals firm and fully maintained in value, 14*l.* to 14*l* 10*s.* per ton in 6–7 cwt. casks. Mineral sulphate of barium, ground, has lately been in increased demand, and this seems likely to continue. Quotations range from 40*s.* to 100*s.* per ton and vary according to quality, quantity, and package.

Liverpool Drug-market.

Liverpool, May 21.

CASTOR OIL.—The upward movement indicated in our last report has not yet begun on the spot, but for forward shipment an advance of fully $\frac{1}{16}$*d.* has been established. Good seconds Calcutta on the spot is still held for 2½*d.* per lb, and first pressure French is obtainable at the same price.

BEESWAX.—For a parcel of Chilian at auction there was good competition, and 2 bags pale yellow sold at 7*l.* 17*s.* 6*d.*, and 6 bags of ordinary yellow at 7*l.* 15*s.* per cwt.

AFRICAN GINGER.—Further sales are reported at 35*s.* per cwt., and there are indications that higher prices will shortly be demanded. A parcel of 125 bags Cochin offered at auction from the quay, 28*s.* cwt. was bid for 50 bags and refused, the parcel being afterwards sold on private terms; 45*s.* was asked for the remaining 75 bags.

TURPENTINE continues firm, and business is being done at 35*s.* 6*d.* to 35*s.* 9*d.* per cwt.

GRAINS OF PARADISE.—Holders of the small lots here still ask 70*s.* per cwt.

QUILLAIA.—The firmness in this article continues, and 13*l.* per ton is asked by holders, but the volume of business is small.

ACACIA SORTS.—The volume of business transacted during the past week has been important, and sellers now show a much more decidedly firm attitude; 103 serons were sold in one line at 32*s.* per cwt., and 58 serons fine white at 40*s.* These figures may be taken as representing the present value.

CANARY SEED.—Good bright Turkish is steady at 35*s.* to 35*s.* 6*d.* per qr.

ARSENIC is gradually firming up, and 13*l.* 15*s.* per ton net is being asked by some holders.

HONEY.—No transactions of importance have been recorded during the week. Values are not quotably changed.

German Drug-market.

Hamburg, May 20.

Business on our drug-market is very quiet at present.

ALOES.—Cape is dearer at 95m. per 100 kilos.

KOLA is firmer, with a fair demand at from 50m. to 60m. per 100 kilos.

CONDURANGO shows no business; nominally the quotation is 120m. per 100 kilos.

ERGOT is firm at 335m. for Russian, and 340m. to 350m. for Spanish.

CORIANDER-SEED is firm and in better demand at 19m. to 21m. per 100 kilos.

Digitized by Google

Elemi is quiet and lower at 180m. per 100 kilos.

Ipecacuanha.—Very quiet at 21½m. for Rio, and 9½m., 9¼m. for Cartagena.

Menthol.—In slow demand but firm; to-day's quotation is 30m. per kilo.

Japan Wax is very firm at 72m. per 100 kilos., spot.

Jalap is rather lower at 95m. per 100 kilos.

Senega is weaker; forward delivery is quoted 450m. per 100 kilos.

Star Aniseed is lower at 120m. to 119m. per 100 kilos.

Cod-liver Oil remains firm at 110m. per barrel for new non-congealing oil.

Castor Oil is steady, with first-pressing in barrels, on the spot, quoted 53m. per 100 kilos., forward delivery is lower.

Linseed Oil and Cotton Oil are advancing.

Palm-kernel Oil is very scarce and firm.

Star-anise Oil is quiet at 10m. per kilo.

Peppermint Oil is lower at 7¾m. per lb. for HGH.

American Drug-market.

New York, May 13.

The drug-market has a tame appearance, and little business of any importance is being transacted.

Aloes.—Cape is in limited supply, and dealers offer in a small way at 8c. per lb.

Beeswax is scarce, and values are advancing. From 31½c. to 33c. per lb. is quoted for yellow, but 34c. and 35c. has been paid for prime goods.

Buchu-leaves.—Prime green are held at 25c. to 26c., with little offering. Yellow leaves have sold at 23c., and the market seems bare of this variety below 24c.

Cannabis Indica is advancing, in sympathy with conditions abroad. Up to 65c. has been paid for prime green tops, and a higher market is anticipated.

Copaiba is selling freely at 36c. to 40c. per lb.

Jalap is quiet and easy at 9c. to 10c.

Oil of Peppermint is firmer, and $1.90 seems to be an inside quotation for bulk oil.

Opium is very dull, and $2.80 will buy in case lots.

Quinine is quiet, and second-hands quote German at 27c. and Java at 26½c. per oz.

Wild Cherry-bark.—New supplies are coming forward, and values are easier at 7c. to 7½c. per lb.

Cablegrams.

Hamburg, May 22:—Japanese wax is firmer at 73m. per 100 kilos.; kola is scarce. Cod-liver oil is firm at 108m. per barrel. Coriander-seed is improving.

Bergen, May 21, 7.50 p.m.:—The market here is firm, at 105*s.* per barrel, f.o.b., for best Lofoten non-congealing oil. The results of the catch at Finmarken are still very poor. Up to date the total catch of cod amounts to 40,400,000, against 24,500,000 at the same time last year. This has yielded 18,535 barrels, against 29,290 barrels in 1901.

New York, May 22:—Business is fair. Cannabis indica is higher at 70c. per lb. Buchu-leaves are easier at 26c. for round. Peppermint oil is lower; $1 65 per lb. will now buy in bulk. Wahoo bark of root has advanced to 18c. per lb. Higher prices are also asked for Norwegian cod-liver oil—viz., $29 per barrel. Balsam Peru is now offered at $1 25, being lower. American bleached beeswax is scarce at 32c. per lb., and golden-seal (hydrastis) is firmer at 52c. per lb.

London Markets.

Aloes.—Fine livery Curacao is very scarce and wanted; black capey is also scarce and worth 28*s.* For Socotrine in kegs 75*s.* has been obtained for fair hard, and 72*s.* 6*d.* for stiff liquid.

Argol.—Half-refined Greek is quoted 62*s.* per cwt., c.i.f.

Arrowroot is again dearer for St. Vincents, 4*d.* to 4½*d.* per lb. being the lowest quotation for fair manufacturing quality. Up to 6*d.* has been paid for some brands, and for finest, dealers are not inclined to name a price; for fine 1*s.* is asked, but not yet paid.

Asafetida.—There are several inquiries in the market, but buyers' ideas of values are considerably below those of sellers, and business is difficult to effect.

Balsam Copaiba.—Unfiltered Maranham is quoted 2*s.* 3*d.* per lb., spot.

Benzoin.—Sumatra is quiet, the inquiry being for fine gum at between 9*l.* and 11*l.*, which is non-existent. Practically all the Siam offered in the auction last week was sold at and after the sale. Fair to good glassy Palembang ex auction has also changed hands at from 37*s.* 6*d.* to 42*s.* 6*d.* per cwt.

Buchu.—The s.s. *Arundel Castle* has arrived with 35 bales in transit to U.S.A.

Caffeine.—Competition on the part of Swiss makers has led to a reduction here of 1*s.* per lb. on pure and 6*d.* on citrate, British and German makers now quoting pure crystals in small quantities at 11*s.* 6*d.*, 10 lbs. 11*s.* 3*d.*, and 100 lbs. 11*s.* per lb. B.P. citrate is now 8*s.* 3*d.*, 8*s.* for 10 lbs., and 7*s.* 9*d.* for not less than 100 lbs. The above prices are all net, and subject to falling clause.

Cascara Sagrada is selling slowly at 25*s.* spot for two-year-old bark. From the United States it is reported "firm and in good demand." A parcel of about 16 tons of two-year-old bark for shipment from San Francisco *vid* Hamburg, and due here next month, is offered at 22*s.* per cwt., c.i.f.

Chamomiles are a shade firmer, and it is reported that one continental dealer has declined to sell any more at present prices; for fair flowers 51*s.* per cwt. has been paid.

Cocoa Butter.—The auction to be held at Amsterdam on June 3 will consist of 70 tons Van Houten's, 13 tons de Jong, 13 tons Mignon, and 2 tons Helm brand; while in London, on the same day, 70 tons Cadbury's will be offered.

Codeia has been reduced 10*d.* per oz. owing to continued continental competition. Makers now quote the alkaloid at from 10*s.* 10*d.* to 10*s.* 5*d.* per oz., the latter figure for 100-oz. quantities. Salts have also been reduced in proportion.

Coriander Seed.—The exports from Dar-al-Baida during 1901 amounted to 15,541 cwts. (5,827*l.*), against 9,894 cwt. (4,490*l.*).

Cumin-seed.—The exports from Mogador during 1901 amounted to 19 tons (489*l.*), against 25 tons (495*l.*) in 1900.

Cream of Tartar is firmer, with a fair demand and continued scarcity of druggists' quality (98 per cent.), which is quoted 75*s.* 6*d.* per cwt. for powder, and 73*s.* for 95 per-cent. powder. Best white crystals are offered at 71*s.* 6*d.*

Fenugreek-seed.—The exports from Dar-al-Baida during 1901 amounted to 39,294 cwt. (11,227*l.*), against 48,328 cwt. (11,129*l.*) in 1900.

Gambier.—For good cubes, 38*s.* per cwt., spot, has been paid.

Gamboge.—Good bright Siam pipe, slightly blocky but very damp, was sold after the auction last week at 13*l.* 10*s.* per cwt.

Gum Arabic.—Good ordinary Ghatti has been sold at 12*s* per cwt.

Hellebore Powder of good quality is offered at 21*s.* to 22*s.* per cwt., c.i.f.

Jalap.—The offer of a parcel from Hamburg at 1*d.* per lb. below the London quotations is indicative of the waterlogged condition of this drug. On the spot 5*d.* per lb., net, is still said to be the price for good heavy Vera Cruz tuber.

Juniper-berries.—Very scarce on the spot, one holder asking 13*s.* 6*d.* per cwt. for 5 bag lots.

Lime-juice is rather scarce on the spot, and it is said there is little coming forward. For good pale West Indian 1*s.* 6*d.* per gallon is wanted, and for fair pale, 1*s.* 4*d.* An advance may be expected if a good demand should set in.

Menthol.—The market is firm at last week's advance, 13*s.* 6*d.* per lb., spot, having been paid for small parcels of Kobayashi, and in some instances 13*s.* 9*d.* is asked. To arrive, there is no quotation.

Morphine is weak at 3*s.* 10*d.* per oz. for hydrochloride in powder in quantity.

Musk.—The value of musk exported from Shanghai to the United States (as declared at the U.S. Consulate) in 1901 was $38,333, against $45,142 in 1900.

Digitized by Google

MUSK-SEED has been in fair demand recently, at from 1s. 3d. to 1s. 4d. per lb. for Martinique.

NUX VOMICA.—Good Cochin has been sold at 10s. 6d. per cwt.

OIL, ANISE STAR, is dull of sale at 4s. 3d. per lb., spot.

OIL, BAY.—West Indian is very scarce, holders asking 8s. per lb.

OIL, BERGAMOT.—Higher prices are asked from Sicily.

OIL, COD-LIVER.—Our Bergen correspondent writes on May 17 that the news from Finmarken is very bad. A large number of seals are coming in with the Polar ice now lying only about ten miles off the Murman coast, and they are driving the cod away, and destroying the fishermen's lines. Besides, the fish caught are lean and the liver poor. These facts have induced speculators to come forward, and the lowest price for best non-congealing Lofoten oil is now 105s. per barrel, f.o.b. Bergen. The exports from Bergen to date amount to 3,591 barrels, against 4,042 barrels at the same time last year. On the London market little business is reported, the nominal quotation being about 110s., c.i.f.

OIL, LIME.—For West Indian distilled 2s. per lb. has been paid, and there are further buyers at this figure, but 2s. 2d. and upwards is now asked.

OIL, PEPPERMINT.—All descriptions are quiet. American HGH is 8s. 9d., Japanese dementholised, 3s. 9d., spot, and English is quoted 23s. per lb.

OILS (FIXED).—Lagos palm has advanced to 29s. per cwt., spot. Linseed is also dearer at 33s. 3d. in barrels, landed terms. Rape firm at 27s. 6d. for refined. Cotton also firm at 27s. 6d. to 28s. 3d. per cwt. for refined. Ceylon cocoanut steady at 33s 6d. to 34s., and Cochin 37s., spot. Petroleum unchanged at 7¾d. to 8d. per gal. for water-white American, and 6¾d. to 7d. for ordinary; Russian is 6d. to 6½d. per gal.

OPIUM.—Practically no business is reported this week, the market remaining easy. Persian (10 per cent.) on the spot is quoted 8s. 6d. per lb.; and Smyrna druggists' 7s. 9d. Soft-shipping is very scarce and commands high prices. Under date of May 9 our Smyrna correspondent reports a fairly active week, with sales amounting to about 100 cases, various qualities, at from 7s. 4d. to 7s. 6d. per lb., c.i.f., 40 cases of which were for the United States, and the remainder for England and the Continent. The arrivals at Smyrna amount to 3,276 cases, against 4,038 cases at the same time last year. It is quite expected that the new crop will amount to between 10,000 and 11,000 cases, including Salonica and Malatia. The weather conditions continue favourable, and new opium is expected to arrive from the lower districts, where the juice is being collected, in two to three weeks.

QUININE.—Previous to the holiday there was a cash transaction amounting to about 20,000 oz., at ¾d. reduction—viz., 1s. 0¾d. to 1s. 0⅞d. per oz., spot. This was an exceptional sale, and since then there has been a recovery, but the desire to wait the result of the London bark-sale has prevented business, the spot price to-day for good German being 1s. 1d.

The result of the auction held at Batavia on Wednesday was as follows:—Of 2,750 kilos. Ed. II. only 100 kilos. were sold, at an average of 22½f. per kilo. (about equal to 8½c. Amsterdam unit), against 23½f. per kilo. at the previous auction. The next auction at Batavia will take place on June 25.

QUEBRACHO-WOOD.—The exports from Rosario during 1901 amounted to 29,077 tons, against 22,129 tons in 1900.

SARSAPARILLA.—Fair sales of Native-Jamaica have been made in second-hands at from 10½d. to 1s. per lb., the latter figure for bright red. Good Lima-Jamaica, which is scarce, has been sold at 1s. 3½d. Grey Jamaica is quiet.

SEEDS.—Russian *Anise* is still neglected. Dutch *Caraways* are dearer owing to bad crop prospects, and 23s. per cwt., f.o.b. Holland, is now asked. *Canary* rather dearer owing to want of rain in Turkey, a fair business has been done on the spot at 35s. to 36s. per quarter for ordinary Barbary, but 36s. 6d. to 37s. is now required. *Coriander* unchanged at 10s. per cwt. *Cumin* and *Fenugreek* quiet at last quotations. *Linseed* dearer at 59s. to 62s. per quarter for clean seed.

SENEGA is quoted 2s. 2½d. per lb. net.

SERPENTARY is rather scarce on the spot; for new crop to arrive 1s. 8d. per lb., c.i.f., is quoted.

SODA NITRATE is easier again, at 9s. 9d. per cwt. for refined, and 9s. 6d. for ordinary.

SPICES.—There were no public sales this week owing to the Whitsuntide holidays, and business privately has been on a small scale. Zanzibar *Cloves* have improved slightly in price, but transactions are few; August-October delivery is quoted 3 31/32d. per lb. Black *Pepper* is quiet with sellers of Singapore at 5 11/16d. per lb. on the spot, and to arrive. Cochin *Ginger* is unchanged at 38s. to 40s. per cwt. for washed rough. Japan is now quoted 34s. per cwt., being rather firmer. *Pimento* meets with more inquiry, and a few lots have been sold at 2⅞d. to 3d. per lb. for fair to good. The usual quarterly auctions of *Cinnamon* will be held on Monday next.

SPIGELIA-ROOT.—For new crop to arrive 1s. per lb., c.i.f., is asked.

SOY.—Fine thick has been sold at 1s. 9d. per gal.; fair is worth 1s. 5d.

STORAX is offering cheaply, liquid in cases being quoted 55s. to 60s. per cwt., c.i.f., and 50s. for casks.

TURMERIC.—Cochin finger is quoted 14s. 6d. per cwt., spot, and for good split bulbs 11s. has been paid. For Bengal 15s., spot, is asked, and 11s. 6d., c.i.f., to arrive.

WAX, BEES'.—The exports from the principal ports of Morocco during 1901 and 1900 were as follows:—

Port	1901		1900	
	Cwt.	Value	Cwt.	Value
Mogador	2,640	15,960	5,600	26,540
Saffi	592	3,625	710	4,260
Mazagan	430	2,338	662	3,310
Dar-al-Baida... ...	740	4,410	625	4,546
Rabat	236	1,724	505	2,964

WAX, JAPANESE, has again advanced, holders now asking 38s. per cwt., spot, for good squares, which price has been paid.

Steamship Line between Java. China, and Japan.

The Dutch Ministry proposes to grant a Government subsidy of 300,000fl. per year during the first five years to a steamship company which shall establish a monthly service (thirteen steamers per year) under the Dutch flag between Java, China, and Japan. The steamers shall call at the following ports: Soerabaya, Samarang, Batavia, Hong-Kong, Yokohama, Kobé, and Amoy.

German Tariff Bill.

The Customs Tariff Committee of the Reichstag have adopted, without amendment, Clauses 161 and 165, dealing with fat oils, and Clauses 167 to 173, relating to oil of mace, palm oil, starch, and starch products. The following clauses were also adopted: Nos. 176 and 177, dealing with spirits; 179, 181, 182, and 183, dealing with wine, must, sparkling wine in receptacles other than casks or tanks, essence wines, and fruit wines.

Russian Cotton-seed Oil.

Two Russian engineers have arrived in the United States to purchase American cotton-seed oil machinery and to study the latest methods of manufacturing the oil. The cotton-seed oil industry in Russian possessions in Central Asia is only in its infancy at present. Most of the seed is actually thrown away or used for feeding cattle. There are not more than two or three cotton-seed oil mills, and they are equipped with very inferior machinery, and the production of the plants is very small.

Argentine Linseed-crop.

According to the bulletin of the Bureau of the American Republics for March, reports from the Argentine Republic show that the linseed-crop of the River Plate region will be considerably in excess of early predictions. Moderate estimates pointed to a crop of 8,000,000 bushels, but, basing figures on the shipments of the first four weeks of 1902, the opinion is becoming general that the crop will be 10,000,000 and possibly 12,000,000 bushels.

London Cinchona-auction.

The usual monthly auction in London was held on May 22, when 3,333 packages were offered, consisting of 1,696 packages East Indian, 1,063 South American (principally Bolivian cultivated Calisaya), 426 packages Ceylon, and 148 packages Java cinchona. There was a fair demand, and the bulk of the catalogues were disposed of at firm but irregular prices, the average unit being 1½*d.* per lb.

Consular Counsel.

DALNY.

United States Consul Henry B. Miller at Niuchwang, has written a report on the new city and port of Dalny, which is situated on the Liao-tung Peninsula of Manchuria, about fifty miles north of Port Arthur. Dalny has been built by Russia, and it is one of the first outcomes of the occupation of Manchuria. The port is to be absolutely free, as no Custom-house is to be established. Tonnage-dues, dock-charges, &c., are to be maintained at the lowest point, with the view to encourage and develop commerce. The port is the coast terminus of the Chinese Eastern Railway, the Central Manchurian Railway, and the Great Siberian Railway, while it is to have connections with the Canadian Pacific Railway. Great things are expected of Dalny, and everything is to be done to foster trade. Eighteen million dollars is to be expended in purchasing the plant and constructing the harbour and city. The Consul notes that England has ten of her citizens in China to extol her manufactures to one who belongs to the United States. Germany is pushing her commerce with much success by establishing mercantile houses in charge of Germans.

SPAIN.

The important trade in heavy chemicals for industrial purposes, for her supply of which Spain is almost entirely dependent upon foreign countries, induced some German engineers resident in Barcelona to plan the construction of works for the manufacture of bleaching-powder and caustic soda by electrolysis. In 1898, at the town of Flix, about one hundred miles from Barcelona, the operations were commenced, and at the end of 1899 a company began to place its manufactures on the market; but, so far as can be ascertained, the Flix works have not fulfilled expectations, as the imports of bleaching-powder and caustic soda during the last two years have not shown any falling-off. Spain draws her supply of caustic soda mainly from Great Britain; a large quantity is also imported from Belgium and France. Barcelona takes the first place with from 50 to 60 per cent. of a total consumption of from 25,000 to 30,000 tons per annum, being followed by Seville. Bleaching-powder is supplied by the Flix works, France (Marseilles), Belgium, and the United Kingdom, but no reliable data respecting the consumption are obtainable. About 8,000 tons of soda-ash is imported yearly, the bulk of which is obtained from Belgium, although Germany is attempting to gain a footing. In the event of a poor olive-oil crop Spain again has to turn to foreign countries for silicate of soda, which is utilised as a substitute for oil in the manufacture of soap. The average imports in lump form are about 1,000 tons per annum, and the trade is limited to Great Britain, Germany, and Belgium. Among the lesser quantities of heavy chemicals imported are bicarbonate of soda, chlorates of soda and potash, acetic acid, sal ammoniac, and sulphate of copper. The last-named is purchased abroad in steadily diminishing quantities since the Rio Tinto Company began to manufacture it. Of late years Germany has made great progress in supplying fine chemicals, but in heavy chemicals the United Kingdom and Belgium show no sign of losing first place. In addition to the Flix chemical-works, there is another factory, situated at Badalona, and covering an area of 70 000 square yards, where sulphuric and acetic acids, pyrolignite, sulphate of iron, superphosphates, and other products are manufactured. The above remarks are the substance of a report by Mr. Julius G. Lay, American Consul-General at Barcelona.

SWITZERLAND.

Henry H. Morgan, United States Consul at Aarau, writes to the State Department that there is a market for American surgical instruments in Switzerland. Statistics show that these articles have never been imported into Switzerland, and local dealers say there is at present a good prospect for their introduction. The best plan, he says, would be for American manufacturers to send an agent with an extensive line of samples; failing that, then catalogues should be sent in the French or German language. In a recent conversation with the Consul, Dr. Egli-Sinclair, an eminent physician of Zurich, who resided for many years in the United States, expressed surprise that so far no attempt had been made by American manufacturers to introduce surgical instruments into Switzerland, as they were admittedly the best in the world. "Our dental instruments are largely imported, and, in fact, are used exclusively by Swiss practitioners," says the Consul.

Petitgrain in Paraguay.

A PARAGUAYAN correspondent has furnished us with the following information regarding oil of petitgrain:—The bitter orange, from the leaf of which the oil of petitgrain is distilled, grows wild in great abundance in Paraguay—indeed, in many parts it is the commonest tree to be found in the woods. In the more remote parts of the country, where the tree is most abundant, there are many distilleries on a small scale, nearly all operated by Frenchmen. These men generally work for a dealer, who finances them and buys their product. This dealer, who has his headquarters in one or other of the larger towns, acts as an agent for the collection of the oil, which is then sold to one of the principal export-houses in Asuncion, by whom it is shipped to Europe. The fruit of the bitter orange is worthless, but the wood is valuable from its hardness and toughness, being particularly suited for the manufacture of axe-handles and similar articles. The flowers also are capable of yielding a species of neroli, and the rind an inferior bergamot, as it abounds in a strong essential oil, but little has been done locally to develop the by-products of the plant, of which there are many.

The distillation of the oil is mainly confined to the districts of Yaguaron, Caraguatay, and Valenzuela (not Venezuela), and takes place practically all the year round, but mostly between October and May. It appears that, for want of better methods of collection, the trees are cut down indiscriminately, and this has led to the destruction of large areas, although, of course, there is no lack of material. The principal export-dealers in petitgrain oil in Asuncion are Messrs. Frederico Krauch & Co., Angulo & Co., Battilana & Co., Martin & Co., and Ruis & Jorba. There is steam communication (*vid* Montevideo and Buenos Ayres) between Asuncion and the principal European ports, but it is noticeable that none of the English steamship companies will give through bills of lading, though the German lines do so.

Messrs. Schimmel & Co., in their April report, refer to the market position of the article, from which we gather that during the past six months and more there has been a considerable fall in price, owing partly to over-production, and the fact that most of the exporters are compelled to draw bills for the greater portion of the value of their shipments, and the consignees in Europe are now anxious to realise the goods and thus recover the money advanced. Moreover, some independent producers in Asuncion have made the situation worse by shipping the oil under different brands and appointing agents in a great number of European towns to hawk the goods about. Last year, according to official statistics, the exports from Paraguay amounted to 334,075 oz.

RHEUMATINE.—This new remedy is the salicylate of salicylquinine. It forms white tasteless needles, almost insoluble in water, and melting at 179°. It is claimed to possess excellent anti-rheumatic properties, and is given in doses of 15 gr. three times per diem.

BAISS BROTHERS, STEVENSON & Co.—The third annual meeting was held at the offices of the company, Jewry Street, London, E.C., on May 22, when the directors' report was adopted, and the dividends of 5½ per cent. on the preference shares and of 9 per cent on the ordinary shares were approved of.

Birth.

COPLEY.—On April 17, at Sparkbrook, Birmingham, the wife of W. Dawn Copley, of Bulawayo, Rhodesia, of a daughter.

Marriage.

GRICE—BARTLETT.—At St. Andrew's Church, Darjeeling, on April 28, by the Rev. T. E. F. Cole, Chaplain, Walter Thomas Grice, F.C.S., pharmaceutical chemist, to Maggie Constance, youngest daughter of the late Mr. G. F. Bartlett, P.W.D., Darjeeling.

Deaths.

BAGSHAW.—At Roseneath, Edward Street, Werneth, on May 14, Mr. William Bagshaw, chemist and druggist. Aged 65. Mr. Bagshaw was formerly a partner in the old-established firm of Messrs. Braddock & Bagshaw, chemists, Yorkshire Street, Oldham, but owing to failing health he retired from active business two years ago. Mr. Bagshaw was born at Taddington Field, near Bakewell, and went to Oldham as an apprentice to Mr. William Braddock, who, seventy years ago, established the business in which Mr. Bagshaw subsequently became a partner.

BAKER.—At 9 Compton Avenue, Brighton, on May 16, Mr. William Garrad Baker, late of Clapham Common, and of Messrs. May & Baker (Limited), Garden Wharf, Battersea. Aged 87. Mr. Baker was a son of a chemist at Chelmsford,

and was apprenticed to his father in 1829—at the age of 15. After the regulation apprenticeship he managed a business in London for his father, "waiting for something to turn up," as he once put it to us. His opportunity came in 1839, when a partnership became available in the firm of Grimwade & May, chemical manufacturers, Battersea. That business had been started in 1834 by Mr. John May, one of the founders of the Pharmaceutical Society, Mr. Pickett, and Mr. Grimwade, all having been apprentices at Ipswich. Mr. Pickett died within a year, and Mr. Grimwade four years after took to farming. Mr. Baker, taking his place, carried with him a good connection with wholesale druggists, which he had through his father's influence. This was of eminent service to the young firm, who had to compete with several in the same line much older established. The manufacture of mercurials, bismuth salts, ammonia salts, ethers, and camphor were then, as now, leading articles with May & Baker. The inside work of manufacturing and dispatch of goods was looked after by Mr. Baker, his partner, Mr. May, doing the travelling. Mr. May retired in 1876, and Messrs. W. E. B. Blenkinsop, R. C. Heath, and Thomas Tyrer constituted, with Mr. Baker, the partnership until December 1, 1890, when Mr. Tyrer retired, and the business was converted into a limited company with Mr. Blenkinsop as the managing director. Mr. Baker was one of the directors, and took an active part in the business, going on 'Change until 1897. Since then the London drug and chemical trades had seen little of him, for he was living in retirement at Brighton. There he passed away in his sleep on Friday night. He had been in his usual health and strength when he retired. He was a typical Englishman in many respects, and though one of the old school of chemists, he was keen to realise the improvements that modern science has brought to chemical industry, and was not slow to take advantage of them.

BEAN.—At Inverie, Knoydart, on May 9, Catherine Ritchie, widow of Mr. John Bean, chemist, Edinburgh.

CASTLE.—Dr. Frederick A. Castle, well known to American pharmacists as Secretary of the Committee of Revision and Publication of the United States Pharmacopœia, and one of the editors of *New Remedies* and its successor the *American Druggist*, died on April 27 at the Roosevelt Hospital, New York, where he had undergone two surgical operations. He was born in 1842, graduated from Bellevue Hospital Medical College, and served as an assistant-surgeon in the Navy in the Civil War. After the war he became a general practitioner.

EDISBURY.—On May 9, at Liverpool, Mr. Lawton Edisbury, chemist and druggist. Aged 78.

HICKS.—At 20 Lupus Street, S.W., on May 17, Mr. Athelstan Braxton Hicks, Coroner of the South-west district of London. Aged 47. Mr. Braxton Hicks was the son of the late Dr. John Braxton Hicks, a well-known West-end medical practitioner. Mr. Hicks was called to the Bar in 1875, and in 1885 was appointed Coroner for the S.W. district; but prior to that he acted as Deputy-Coroner in four districts of London, and was Hon. Secretary of the Coroners' Society of England and Wales. It is to Mr. Hicks that we owe the enforcement of the late Mr. Alpe's idea that the "patent medicines" mentioned in Section 16 of the Pharmacy Act do not include proprietary medicines. That opinion was first published in the "Handy-book of Medicine-stamp Duty" in 1888, and when, in 1889, Mr. Hicks held an inquest, in the course of which a cough-mixture containing morphine was referred to, he pointed out that it should have been labelled "Poison." The 16th Section of the Pharmacy Act was quoted to the contrary, but, owing to Mr. Hicks's persistence, the Home Office took proceedings under that section of the Act against the chemist who sold the cough-mixture, and a conviction was obtained. This was of far-reaching importance, for up to that time the sale of poisonous proprietary articles by others than registered chemists and druggists had not been interfered with by the Pharmaceutical Council. The decision changed the whole aspect of the matter. It was Mr. Hicks, also, who forced the Pharmaceutical Council to take proceedings against

D

Digitized by Google

Wheeldon, a chemist's apprentice, for selling a poisonous vermin-killer, and this established the principle previously maintained in this journal—that the person who actually conducts sales of scheduled poisons must be qualified. The High Court decision on the point, obtained owing to an appeal fund inaugurated in our columns, has been of immense importance to pharmacy. As the Hon. Secretary of the Coroners' Society, Mr. Hicks had a great deal to do with bringing the fatalities from carbolic acid under the notice of the Government authorities, and some of the daily papers have given him credit of bringing about the scheduling of that poison. This is not altogether correct, but Mr. Hicks certainly never lost any opportunity of pushing along that necessary addition. Reports of the proceedings at his Court which have been recently published have indicated somewhat erratic judgment, and his untimely death from pneumonia indicates that this may have been due to impaired health, for he was a hard as well as a painstaking worker.

Guest.—At Stanley Lodge, Carrington, near Nottingham, on May 19, Mr. William Guest, chemist and druggist. Aged 73. Mr. Guest, who retired from commercial life about twenty years ago, had carried on business in Carlton Street, Nottingham.

Hubbard.—At Stoke Ferry, Norfolk, last week, Mr. George Hubbard, chemist and druggist. Mr. Hubbard, who retired from business in Downham Market at Michaelmas, 1899, was well known in West Norfolk and highly respected by a large circle with whom he had had business relations. His remains were interred in the old cemetery beside those of his wife, who had predeceased him by several years. There were many of his former fellow-traders present to show their respect.

Ombler.—At Market Weighton, Yorks, on May 12, Mr. William Henry Ombler, chemist and druggist. The funeral took place on May 15, in the presence of a large assembly, including many of Mr. Ombler's townsmen, who highly esteemed and respected him.

CAN YOU READ IT?

A correspondent in the South of Scotland (193/27) sends us a photograph of a prescription, which we subjoin :—

He asks if some one can give him the name of the patient, and tell him what are the ingredients. We have already told him what we think, and he has explained that the writer of the prescription was also the dispenser of the physic until the patient asked for the prescription.

Chemical Society.

A meeting was held at Burlington House, W., on Thursday, May 16, when the chair was taken by Dr. W. H. Perkin, F.R.S., sen. The first paper on the list was contributed by Mr. F. C. C. Baly and Dr. Donnan, of University College, and dealt with the influence of temperature on the physical properties of

Liquefied Gases.

The gases experimented with were oxygen, nitrogen, carbon-monoxide, and argon, and the change of their densities and surface-tensions with temperature were specially investigated, the method of Ramsay and Shields being employed, with certain necessary modifications for the observation of the latter property. The co-efficient of temperature change of the surface energy of each molecule of these gases is about two in the liquid state, which shows that these liquids must consist of simple molecules. By plotting out in curves the relation between molecular surface energy and temperature the authors have observed that the critical temperatures so deduced are in agreement with those experimentally determined for oxygen and nitrogen, but are not in the cases of the other two gases, which seems to indicate a necessity for re-determination of the critical constants of carbon-monoxide and argon. This paper was followed by two contributions on

Camphor,

by Dr. Martin O. Forster, and by the same author in collaboration with Mr. Jenkinson. The first of these gave the results of a comparison of the behaviour of bromo-nitro-camphor with bromo-nitro-camphane. The latter substance, by treatment with appropriate reagents, is convertible into derivatives containing substitutents in the "second" camphor ring, and so Dr. Forster has attempted to apply this method to its analogue bromo-nitro-camphor, with, however, only partial success.

The second paper dealt with the properties of $\alpha\alpha'$ nitro- and iodo-benzoyl camphors. The preparation of these α,α' camphor compounds was first accomplished by Dr. Lowry, who showed that they exhibited a peculiar kind of optical isomerism, in which the optical effect of the α group appeared to be balanced against or added to the effect of the α' group. A considerable number of these substances has been prepared, and these all agree with this law with the exception of the α benzoyl α' nitro-camphor now described, which has an unforeseen high rotation. To account for this Dr. Forster suggests that the law is not one of general applicability, whilst Dr. Lowry is of opinion that the new derivative is really a *pseudo* nitro-camphor, which would be expected to have a high rotation, as has already been shown by Dr. W. H. Perkin, sen., for the magnetic rotation of *pseudo* nitro compounds.

Mr. Davis read the next paper on the nitration of dibromotoluene, in which he showed that the influence of the bromine atoms already in the substance alters the usual orientation of the sutering group. This contribution was followed by one on the

Purification of Hydrochloric Acid,

by Dr. Thorne. The recent arsenic scare has led to the introduction of several methods of freeing this acid from arsenic in order to make it suitable for use in Marsh's test. The new method depends upon the principle on which Reinsch's test for arsenic is based, and is carried out by diluting the acid to sp. gr. 1·1, and macerating in it pieces of copper gauze so long as the latter becomes stained. The purified acid is then distilled, the first fraction being rejected. In the short discussion which followed Mr. J. Ling proclaimed his belief in the superiority of the purification process devised by the Arsenic Committee of the Society of Public Analysts and the Society of Chemical Industry, and stated that he had found traces of arsenic in acid purified by Dr. Thorne's process.

The remaining papers, which included two interesting communications on the cause and nature of the radio-activity of metals, by Professor Rutherford and Mr. Toddy, were taken as read.

Pharmaceutical Veterans.

A Cambridge Alderman.

Mr. George Peck, chemist and druggist, of Trumpington Street, Cambridge, has been elected an alderman of the borough of Cambridge, by nineteen votes, against sixteen votes recorded for Mr. A. Sidney Campkin, J.P., also a chemist, of Rose Crescent, Cambridge. Alderman Peck has been a

member of the Cambridge Board of Guardians a quarter of a century; he is a director of the Cambridgeshire Permanent Benefit Building Society, Hospital, and has done an enormous amount of parochial work. Referring to the election, the *Cambridge Express* says:—

A Liberal Councillor has been placed on the aldermanic bench who has an excellent public record. Mr. Peck is a man of independent mind, and, should occasion require it, is not ashamed (as recent events have shown) of siding with a small minority in a contention which he believes to be right. As a member of the Board of Guardians who has had more than a quarter of a century's experience in the administration of the Poor Law, as one of the oldest of the Directors of the Cambridge Permanent Benefit Building Society, and as one who has taken his full share of parochial work, Mr. Peck is entitled to the congratulations of all who think that disinterested public service is deserving of honourable recognition, and we are confident that he will discharge his new office with dignity and to the best interests of the town.

We may add that Mr. Peck is a native of Cambridge, having been born there in 1826. He was apprenticed to pharmacy at Coventry, and commenced business on his own account in Cambridge in 1851. During his long business career he has taken a keen interest in the public affairs of Cambridge, and especially in movements for the amelioration of the conditions of the poor. Thus, he is one of the select Governors of Addenbrooke's Hospital, Hon. Secretary of the Cambridge District Nursing Association, and Hon. Treasurer of the Provident Medical Aid Association. Pharmaceutically, he has off and on been connected with the Pharmaceutical Society since his apprenticeship days. He has seven sons, four of whom are M.A.'s of the University of Cambridge. The Church, the army, medicine, dentistry, and pharmacy claim the services of one or other of them. One of Mr. Peck's three daughters is the wife of the rector of Spitalfields.

The Formosan Government has decided to give strong encouragement to the cultivation of camphor. Since January this year the planting of young camphor-trees has been going on in various parts of the island, and 490,000 were expected to be planted by the end of March.

Camphor Notes.

The *North China Daily News* reports that a Japanese syndicate has recently wrested away the monopoly of the camphor trade in the Fukien province of China which for many years used to be the sole privilege of the celebrated Lin family of Formosa. The Lins used to pay 50,000 taels annually for the monopoly of the camphor trade to the Viceregal Government, but owing to the fact that Formosa, the principal source of the camphor supply, now belongs to Japan, enterprising merchants of that country are able to produce the commodity more cheaply, and therefore they can afford to pay a higher amount to the Fukien Viceroy for the monopoly—that is to say, at the rate of taels 100,000 per annum. Naturally Viceroy Hsü has been pleased to increase the provincial revenues in such a substantial manner, with the result that the present representative of the Lin family has received his *congé*, plus the loss of a revenue in that line variously estimated at from taels 150,000 to taels 250,000. High as the above sum appears to be, it is said to be but a fleabite to Mr. Lin, who is rumoured to be the possessor, by right of inheritance, of nearly one-third of the cultivated lands of Formosa.

The establishment of the Formosan monopoly, and the advance in values, has led some Ceylon planters to turn their attention to the production of camphor, and a timely pamphlet dealing exhaustively with the subject has been issued by Mr. J. C. Willis, director of the Royal Botanic Gardens. The conclusions he arrives at are that the cultivation will prove remunerative, and that camphor can be put on the market as cheaply as tea. There are about one thousand trees in the island, some of which are over five years old. Distillation experiments were commenced in June, 1900, details of which are fully given. The net results, however, show that more efficient methods than those prevailing must be discovered, as the yield of camphor was, in most instances, very small.

NEW HONORARY MEMBERS

OF THE

Pharmaceutical Society of Great Britain.

We are now able to give portraits of two other gentlemen who were elected honorary members of the Pharmaceutical Society at the last Council meeting.

Sir Thomas Hanbury, K.C.V.O., is a son of the late Mr. Daniel Bell Hanbury, of Clapham Common, the first of that name to be associated with the well-known house, Allen

Sir Thomas Hanbury.

& Hanburys. He was formerly a merchant in Shanghai, and it was while there that he greatly assisted his brother, Daniel Hanbury the younger, in those investigations on

Digitized by Google

Chinese drugs which practically founded his reputation as a pharmacognocist and scholar. In memory of his brother Sir Thomas has been accustomed to present a gift of books ("Science Papers" and "Pharmacographia") to the Silver Medallists of the Pharmaceutical Society, and he has otherwise assisted the Society in its educational work. He is the maker and owner of the far-famed gardens at La Mortola, Ventimiglia, Italy, which the late Queen Victoria loved so well, and which has other historic associations. Sir Thomas Hanbury commenced the gardens in 1867. They are now about 100 acres in extent, and contain over 5,000 species of plants cultivated in the open air. The house is supposed to be 400 or 500 years old, and belonged formerly to the noble family Lanteri, of Ventimiglia, who sold it, A.D. 1620, to the Orengo family. A mosaic by Salviati, emblematic of the travels of Marco Polo, the first European who visited China, adorns the porch. Machiavelli is supposed to have stayed in the house in 1511, when, in the company of Lanteri, then owner of the house, he travelled from Florence to Monaco. A marble tablet let into the wall records the fact that Queen Victoria sketched the view from the salon of the house on March 25, 1882. Sir Thomas is a Knight Commander of the Order of St. Maurice and St. Lazarus, and of the Cross of the Crown of Italy, and was created Knight Commander of the Victorian Order by King Edward VII. last year.

Professor Julius Wiesner, Ph.D., who was elected a corresponding member of the Society in 1892, is Professor of Plant Anatomy and Physiology, as well as Director of the Botanico-

Professor Wiesner.

Physiological Institute, Academy of Sciences, Vienna. Dr. Wiesner is an authority on the gummy exudations of plants, including resins and balsams, and many years ago published an important monograph in respect to them. In more recent years work on the organography and systematising of plants has occupied his attention, while as a teacher his reputation is well known outside his own country. Dr. Wiesner is well acquainted with English and English literature on the subject which he professes.

Trade-Marks Applied for.

(*From the "Trade-marks Journal," May* 7, 1902.)

"Pockam"; for photographic cameras. By H. F. Purser, 31 Hatton Garden, E.C. 245,209.

"Jennerites" (no claim for "Jenner"); for surgical instruments. By D. Leonardt & Co., 100 Charlotte Street, Birmingham. 244,712.

"Conservalose"; for an antiseptic salt. By A. Boake Roberts & Co. (Limited), 100 Carpenter's Road, Stratford, E. 244,761.

"Klonol"; for foodstuffs. By C. N. Irven, Love Lane, Liverpool. 245,170.

"Telma"; for foodstuffs. By A. C. Holzapfel, 57 Fenchurch Street, E.C. 245,183.

Device (the essential particular) of a nymph on a white rock gazing down into the water; for mineral waters. By the White Rock Mineral Spring Company (Incorporated), Waukesha, Wis., U.S.A. 240,106.

"Zuleika;" for goods in Class 48. By Johanna Bingel, 22 Trafalgar Road, Moseley, Birmingham. 242,743.

'Dentalbine" (no claim for "Dental"); for tooth-powder. By C. F. Webb and W. J. Crooke, 8 Beaufort Terrace, Seacombe, Cheshire. 243,150.

(*From the "Trade-marks Journal," May* 14, 1902.)

"Pearline" (no claim for "Pearl"); for paints and varnish. By R. Ingham Clark & Co. (Limited), 6 St. Helens Place, E.C. 243,811.

Device (the essential particular) of a turtle bearing a barrel of Hamrick hard-shell enamel; for a varnish-substitute. By the Hamrick Tank and Barrel Hard-shell Enamelling Company (Incorporated), 3,303 North 15th Street, Philadelphia, U.S.A. 244,071.

"Satinette"; for paints, varnishes, and enamels. By Pinchin, Johnson & Co. (Limited), Ratcliffe, E. 244,732.

"Magnite"; for a paint. By C. Faust & Co., 2 The Crescent, Tower Hill, E.C. 244,961.

"Petol," and circular device enclosing smoking-vessels with the word "Petol" four times; for disinfectant soaps, blocks, powder, fluid, dog-wash, veterinary ointment, &c., and for moss-litter and furniture-cream, and for perfumed soap. By A. C. Kennedy, Eustace Lodge, Robin Hood's Bay, Yorkshire. 245,044, 245,046, 245,050, and 245,220.

Label-device for "Kearney's powders"; for a rat-poison. By J. W. Sutherland, 127 Buchanan Street, Glasgow. 245,111. (Renewal.)

"Chocream"; for chemicals and foodstuffs. By B. J. Wildbor e, 38 Great Tower Street, E.C. 244,916 and 243,716.

Picture of an ox harnessed to a cart, with attendants; for chemicals. By the Iron-ox Remedy Company (Limited), Walkerville, Ontario, Canada. 245,040.

Facsimile signature of the firm; for chemicals. By Eugène Le Clerc, 43 Holford Square, W.C. 245,383.

"Harlene"; for chemicals. By the Edwards' Harlene Company, 96 High Holborn, W.C. 245,424.

Combination of devices (the essential particular) showing a crowing cock, a phonograph, and the words "Je chante haut et clair"; for philosophical and scientific instruments. By Pathé Frères, London (Limited), 4 Dean Street, Holborn. 244,983.

"AOC" (the essential particular); for philosophical and scientific instruments. By the American Optical Company, 14 Mechanic Street, Southbridge, Massachusetts, U.S.A. 245,270.

"Autox"; for photographic apparatus. By Adams & Co., 26 Charing Cross Road, W. 245,494.

"Leto"; for photographic paper. By A. & M. Zimmerman, 10 St. Mary-at-Hill, E.C. 245,421.

Picture of a chicken; for chicken-food. By Armitage Brothers (Limited), 27 Castle Gate, Nottingham. 244,141.

"Vivazone"; for an article used in food. By Stevenson & Howell (Limited), 95A Southwark Street, S.E. 245,003.

"Vibrona"; for food-substance. By Fletcher, Fletcher & Co. (Limited), 469 Holloway Road, N. 245,073.

"Cafessa" (no claim for "Cafe"); for food-stuffs. By M. F. O'Brien & Co., 57 Camden Street, Dublin. 245,134.

"Tissen"; for bird-food. By W. H. Hyson, Lynwood, Atherton, Lancashire. 245,139.

"Barcos"; for infants' and invalids' foods. By Moss, Rimmington & Co. (Limited), Selby, Yorkshire. 245,417.

"Vinrube" (no claim for "Vin"); for an aërated beverage. By Camwal (Limited), 112 Pembroke Street, Caledonian Road, N. 245,313.

Shield-device with crowned cherub blowing a trumpet; for mineral and aërated waters. By Kerswell & Co., 69 Okehampton Street, St. Thomas, Exeter. 245,321.

"Pervinco"; for perfume and perfumed soap. By E. Leach & Co., 89 Elsinore Road, Forest Hill, S.E. 244,688.

"Kisania" and "Cibernia"; for perfumery and toilet-articles. By R. Hovenden & Sons (Limited), Berners Street, W. 245,374 and 245,375.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4d.; Summer or Winter Number, 1s.; DIARY, 3s. 6d. Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

CIRCULARS AND PRICE-LISTS.

HOW TO DISTRIBUTE THEM TO THE DRUG-TRADE.

MANY of the best advertisers in the drug-trade have endorsed our view that it is more effective as well as cheaper to distribute circulars and price-lists stitched up in THE CHEMIST AND DRUGGIST than to send them singly by post. We make such insets in the *C. & D.* notable by the fact that we only receive them twice a year for distribution, and we ensure that they get into the hands of the right people. We would advise those who think of having an inset in our Summer number (July 26, 1902) to write to our Publisher for particulars. He will also give assistance, if required, in designing or arranging insets.

Summary.

THREE Beecham actions are reported on p. 860.

SEVERAL NOVELTIES are illustrated and described (p. 857).

OPIUM is to be cheaper, owing to the crop being exceptionally large (p. 849).

MR. JAMES REID discourses on the advantages of chemists' price lists (p. 867).

THE GENERAL MEDICAL COUNCIL is now in session, and we report what is taking place (p. 864).

THE names of several doctors and dentists have been removed from the registers this week (p. 864).

THREE DAYS' HOLIDAY appears to be the rule for London factories in Coronation week (p. 851).

THE PHARMACEUTICAL COUNCIL-ELECTION has resulted in the return of all the old members (p. 845).

"GERMAN THOROUGHNESS" is still quite so, we gather from the *Pharmaceutische Zeitung* (p. 850).

THE last salt given to students in our Corner was a good exercise to them. Particulars on p. 826.

WEAK LIME-WATER, sweet spirit of nitre, and Gregory's powder have brought retailers into court (p. 861).

OUR TOWN TRAVELLER has gathered a lot of interesting and useful information in his walks round town (p. 854).

WINE-LICENCE HOLDERS should note the proposed alteration of the law regarding the granting of such licences (p. 851).

THE ROGERS BROTHERS' FAILURE has brought several of the persons concerned into court on a criminal charge (p. 828).

JOSEPH MILNE, the manager accused by Lewis & Burrows (Limited) of misappropriating cash, has been acquitted (p. 846).

LIQUID DISINFECTANTS containing scheduled poisons should henceforth be put in bottles "distinguishable by touch" (p. 845).

SOME GOOD SPEECHES were made at the Pharmaceutical Society's dinner on Tuesday evening. We report them on p. 838 *et seq.*

CHINESE WOOD-OIL is the best and cheapest of natural varnishes. Dr. Augustine Henry contributes an article about it (p. 873).

THE PUBLIC DISPENSERS' ASSOCIATION proposes not to admit any more members who are not qualified under the Pharmacy Act (p. 857).

MR. E. J. PARRY protests against Schimmel's report claiming for its publishers originality which belongs to English workers (p. 866).

THE ANNUAL MEETING of the Pharmaceutical Society of Great Britain was uncommonly quiet, and was absolutely featureless (p. 841).

THE RESULTS of Messrs. Ayrton & Saunders's buying competition are mentioned on p. 859. Mr. E. J. Morris, of Handsworth, gets the first prize (100*l.*)

THREE MONTHS OF SCHEDULING sensibly diminished the number of fatalities from carbolic acid in 1900. So the Registrar-General's report shows (p. 849).

THE PEACE NEGOTIATIONS give emphasis to the illustrated article on the South African drug trade which a special representative contributes to this issue (p. 832).

A WATER-FOUNTAIN is one of the nicest things to have in one's pharmacy during the hot weather. Mr. G. Morrey tells how to make it, in an illustrated article on p. 874.

DR. THORPE and one of his assistants have isolated an alkaloid from yew, which they call taxine: whether it is the poisonous principle or not remains to be proved (p. 864).

THE Cardiff dental decision should not be difficult to upset on appeal, "Xrayser" thinks (p. 847), and correspondents of that opinion offer contributions to an appeal fund (p. 866).

ARTICLES showing an advance on the markets include cinnamon, cod-liver oil, menthol, phenacetin, and Japanese wax. Cocaine is lower, quinine is lifeless in second hands, and shellac is easier (p. 869).

LIQUOR BISMUTHI can be easily and quickly made by a new process, described by Mr. Wm. Duncan on p. 852. He also makes suggestive statements regarding the constitution of bismuth ammonio-citrate.

THE Dublin Magistrate has held (p. 860) that compounding *per se* by unqualified persons is not an infringement of the Pharmacy Act (Ireland), but the Pharmaceutical Council is to attack the matter in another way (p. 850).

Corner for Students.

CONDUCTED BY LEONARD DOBBIN, PH.D.

REPORTS.

The powder distributed to students on April 30 consisted of equal parts by weight of aluminium potassium sulphate (potash alum), zinc sulphate, and magnesium sulphate.

The calculated composition of such a mixture is—

Zn	7·6
Al	1·9
Mg	3·3
K	2·7
SO_4	37·6
H_2O	46·9
	100·0

The powder was free from any noteworthy traces of impurities.

Samples of the powder were distributed to seventy-one students, and forty-three reports were sent in for examination.

All our correspondents succeeded in detecting the sulphuric radical. The failures in the detection of the various metallic radicals were: Aluminium, 1; zinc, 2; magnesium, 9; potassium, 3. Six students failed to observe the abundant liberation of water when the powder was heated in a dry tube.

Although there were no analytical difficulties connected with this month's exercise, and although high marks have been attained by a large proportion of our correspondents, yet several subjects for general remark are suggested by some of the errors which are common to a number of the reports submitted for examination.

The somewhat large proportion of failures to detect magnesium is most probably due to the fact that the separation of ammonium magnesium phosphate from dilute solutions only takes place after some time. By the successive addition of the various group-reagents considerable dilution of the solution under examination is certain to take place, and the student should take care to concentrate it again by evaporation before proceeding to test for magnesium. The presence of any considerable quantity of certain ammonium salts (of which ammonium oxalate is a notable example) must be avoided if magnesium is to be tested for under the most favourable conditions. After the barium-group metals have been completely removed, or proved absent, it is advisable to evaporate the solution to dryness and ignite to drive out ammonium salts, then to dissolve the residue in a few drops of hot dilute hydrochloric acid, filter, and add ammonia in excess and then sodium or ammonium phosphate to a portion of the filtrate, and set the mixture aside for some hours if an immediate precipitate is not formed.

In testing for potassium, numerous correspondents rely for its detection on its being precipitated as potassium hydrogen tartrate. Apart from the fact that this precipitate is quite distinctly soluble in water, and that the test, in ordinary aqueous solution, is therefore not a very delicate one, it is a common usage to employ as the precipitating agent a concentrated solution of tartaric acid instead of a saturated solution of sodium hydrogen tartrate, although elaborate examination of the matter has shown that the latter reagent is by far the more suitable one to employ. The reason for the difference can be explained in a few words. Let us suppose that potassium chloride is the salt present in the solution under examination. The equations representing the interaction of this salt with tartaric acid and with sodium hydrogen tartrate are respectively—

$$KCl + H_2C_4H_4O_6 = KHC_4H_4O_6 + HCl \text{ and}$$
$$KCl + NaHC_4H_4O_6 = KHC_4H_4O_6 + NaCl$$

—*i.e.*, besides the potassium hydrogen tartrate, free hydrochloric acid is formed in the first case, while sodium chloride is formed in the second. But strong acids, such as hydrochloric, nitric, &c., even in dilute solution, seriously interfere with the precipitation of potassium hydrogen tartrate, and so greatly affect the delicacy of the test.

Several impurities which the powder did not really contain were each reported present by various students. The commonest are calcium and chloride. Iron was also reported as a noteworthy impurity, whereas in reality there were barely recognisable traces present. Those students who found chloride in the aqueous solution of the powder should attend carefully to the thorough cleansing of their test-tubes, &c., and should use distilled water for rinsing these and for the general purposes of their analyses; those who found it in the sodium-carbonate extract should, in addition, examine their sodium carbonate for traces of chloride. The presence of the calcium may be due to the use of ordinary instead of distilled water, or, more likely, to the employment of filter-papers which contain traces of calcium compounds (insoluble in water but soluble in acids) for the filtration of acid liquids. Iron-contamination may have been introduced in impure acids or ammonium chloride, or it also may have been derived from filter-papers.

The misconception seems to be prevalent in the minds of a section of our correspondents that special reagents for the detection of individual metallic and acid radicals can be safely applied to liquids which contain several salts in solution. Within certain limits it is, indeed, possible to employ such tests with safety, but the practice must be regulated by intimate knowledge of these limits, and of the possible interference of reactions due to radicals which may or may not have been detected. Side-by-side recognition of different radicals in complex mixtures, without carrying out separations, is a department of analysis which demands much all-round knowledge of the subject, and is one in which the skilled and circumspect analyst may excel. On the other hand, the indiscriminate application of special tests to such solutions as that obtained by dissolving the present mixture in water, is an analytical abuse more likely than almost any other to lead to confusion and error.

MARKS AWARDED FOR ANALYSES.

PRIZES.

The First Prize for the best analysis has been awarded to JOHN G. DUNCAN, c/o Mrs. Rowan, 7 Melgund Terrace, Edinburgh.

Digitized by Google

The Second Prize has been awarded to

J. MATTHEWS, c/o Mr. Maxton, Abbey Corner, Kelso.

First Prize.—Any scientific book that is published at a price not greatly exceeding half-a-guinea may be taken as a first prize.

Second Prize.—Any scientific book which is sold for about five shillings may be taken as a second prize.

The students to whom prizes are awarded are requested to write at once to the Publisher naming the book or books they select.

TO CORRESPONDENTS.

ERGOTÆ and FLORA MCDONALD.—It is not quite accurate to say that the addition of potassium hydroxide in excess to the hydrochloric-acid solution of the aluminium-hydroxide precipitate produced no precipitate. At a certain stage in the addition a precipitate of aluminium hydroxide was formed, but it dissolved when excess of the reagent was added.

IRON, ROSEMARY, NESTOR, IRISHMAN, and Others.—See the general remarks respecting the use of sodium hydrogen tartrate rather than tartaric acid as a test for potassium.

N. E. S. C.—You do not appear to have made any special examination for ammonium salts. Failure to observe the odour of ammonia on heating the original substance does not justify the omission, but rather indicates the need, of such special examination.

E. G. WATTS.—It is always advisable to apply some confirmatory test for zinc, after separation from the other metallic radicals has been effected. The ferrocyanide-test and Bunsen's film-tests are the most satisfactory. You do not describe any examination for potassium, sodium, and lithium in your systematic analysis.

LITHIUM.—The odour you observed on heating the powder with dilute hydrochloric acid was probably that of the hydrochloric acid alone. Your report, especially the account of the examination for acid radicals, is a little slender. See the general remarks about calcium as an impurity.

EPOC.—You prepared a solution, to be tested for acid radicals, by boiling the powder with sodium-carbonate solution, filtering, and then neutralising with acetic acid; yet you report that absence of any visible reaction with ferric chloride proved the absence of acetate from this solution. This requires explanation. Probably your solution of ferric chloride contains a great deal too much free hydrochloric acid. Testing for potassium by adding chloroplatinic acid to the original solution of such a mixture as the present one is not in accordance with refined analytical procedure, and should not be resorted to: the test is applicable to solutions free from ammonium salts and containing alkali metals only.

DELTA.—You should have sent a more detailed report. It does not appear that you proved the absence of ammonium salts, borates, or fluorides.

MEDICUS.—The trace of calcium that you found was probably derived from the filter-papers you used rather than from your porcelain dish. The glaze of porcelain is practically unattacked by boiling with most acid solutions.

OOMA.—The iodine and potassium-hydroxide test which you used in examining the original solution of the powder for magnesium is not applicable to mixtures generally (although it did not fail in the present instance). See also second sentence of reply to "Epoc."

SIDONAL.—The precipitate of potassium hydrogen tartrate is crystalline, not gelatinous. In adding tartaric acid to the original solution of the powder you do not appear to have considered the possible formation of insoluble zinc, aluminium, or magnesium tartrate. See also second sentence of reply to "Epoc."

ALEX. T. HOPE.—Test your hydrochloric acid for iron by means of a solution of potassium ferrocyanide freshly made for the purpose; and test the solution of potassium ferrocyanide you ordinarily employ, for decomposition-products (which yield a green solution on acidulation), by means of hydrochloric acid known to be free from iron.

ELLESMERE.—The magnesium present in the powder was more than a trace. You must have tested for magnesium in a very dilute solution. Note that warming retards the precipitation of ammonium magnesium phosphate.

H. T. H.—You must have failed to apply Carnot's test for potassium in the manner described in the "Corner." Follow the directions literally, noting that the presence of much water *must* be avoided.

TAD.—Potassium hydroxide should not be used instead of sodium carbonate in preparing the solution to be tested for acid radicals. The chloride you found was probably an impurity present in the potassium hydroxide you used for this purpose.

DANGLE.—Solutions of ferrous salts are oxidised, not reduced by boiling with nitric acid. There was no borate in the powder.

R. R. P. HAMBLEN.—The precipitate you obtained by adding ammonium acetate and sodium phosphate to the original solution of the powder contained ammonium magnesium phosphate, and probably some zinc phosphate, as well as aluminium phosphate.

NEMO.—The pungent odour you observed on heating the powder with sulphuric acid was simply due to the sulphuric acid. It is superfluous to add barium chloride along with the chlorine water when testing for sulphite in the solution obtained by dissolving a supposed precipitate of barium sulphite in hydrochloric acid: chlorine-water alone is sufficient.

SULORAC.—No marks whatever are given for equations, as ability to write these has nothing to do with analytical skill.

INCEPTOR.—We cannot suggest any satisfactory explanation for your failure to obtain a precipitate of zinc sulphide on adding ammonium sulphide to the filtrate from the aluminium-hydroxide precipitate.

RETRAC.—There was a residue, insoluble in water, left behind on evaporating the filtrate from the iron group to dryness after the addition of sodium phosphate, but you must have overlooked it. It consisted of ammonium magnesium phosphate.

TINCT. CALUMBÆ.—The browning of turmeric paper upon moistening it with a liquid containing hydrochloric acid, and then drying it, does not necessarily indicate the presence of boric acid, as hydrochloric acid alone will produce a somewhat similar effect. A drop of sodium hydroxide should be applied to the brown stain to complete the test.

SOMERLED.—Your report does not indicate that you tested for the presence of the barium group or of magnesium. We have not been able to obtain the reactions for sulphites which you report.

WESTMINSTER.—Nessler's reagent is too delicate as a test for ammonia to be used for most ordinary qualitative purposes. The distilled water of most laboratories contains enough dissolved ammonia to yield a distinct reaction with "Nessler."

G. H. PALMER.—Even assuming that a precipitate was produced on passing hydrogen sulphide through an acidulated solution of the powder, this would not prove the presence of a ferric salt. Many other oxidising agents besides ferric salts precipitate sulphur from hydrogen sulphide.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

A man named Saunders was remanded at Bow Street on May 26 on a charge of stealing a gold watch and chain, value 20*l.*, the property of Mr. John Brown, druggist, High Holborn, W.C.

The Huddersfield Town Council has accepted the tender of Mr Ralph Cuthbert, chemist and druggist, of 12 Westgate, Huddersfield, for the supply of drugs to the Corporation for the ensuing year.

At the Christchurch County Court on May 26 Mr. G. E. Bridge, chemist and druggist, Bournemouth, obtained judgment against a livery-stable keeper of Southbourne for 10*l.* 13*s.* for damages done to his (Mr. Bridge's) brougham.

On May 24 John Roberts was remanded at Andover on a charge of stealing a syringe and two cases of surgical instruments, valued at 5*l.*, from the surgery of Dr. E. A. Farr, of Heath House, Andover.

Last week a quantity of photographic chemicals were stolen from a canvas tent at Shipley. As some of the chemicals were poisonous, and it is probable that boys were the robbers, the fear is expressed that these dangerous articles may fall into the hands of children, and a warning has been given in the local Press.

An errand-boy named William James was charged at Nottingham on May 21 with stealing a quantity of medicines and powders, value 8*s.*, belonging to his employer, Mr. J. Chambers, chemist, Arnold. The lad was sent out to deliver and post a number of packets, but instead he kept the packets and the postage-money. He was handed over to the care of his grandfather, on the latter paying 1*l.* costs.

Digitized by Google

Mr. R. C. Andrews, chemist and druggist, will supply drugs to the Winchester Board of Guardians for the current year.

James Whitby, described as a chemist's assistant, was fined 10*s.* and costs at Warrington on May 23 for travelling on the L. & N.W. Railway without having paid his fare.

On May 23 the wine-licence formerly held by Mr. Francis Blake Wride, chemist and druggist, at 34 High Street, Shirley, Southampton, was transferred to Mr. Arthur George Dunford.

At Lambeth on May 28, Henry Harris, of Neate Street, Camberwell, was fined 10*l.* and 4*s.* costs for having sent carbide of calcium by rail without distinctly marking the nature of the goods on the outside of the package or giving notice to the railway company.

At the Manchester Police Court on May 27, Frederick Spencer, a chemist in the employment of Messrs. Lewis's, 45 Market Street, Manchester, was charged, with five other assistants of the same firm, with stealing perfumes, brushes, &c., from the drug-department, and was committed for trial.

Arthur Russell and William Hammerton, the two men who broke into the shop of Mr. L. Salter, chemist and druggist, at 2 Bradninch Terrace, Southall (see *C. & D.*, May 10, page 717) were each sentenced to five years' penal servitude and five years' police supervision at the Middlesex Sessions on May 24.

The Southmolton Board of Guardians on May 22 discussed the recommendation of the Local Government Board that Guardians should provide expensive drugs and medicines instead of the medical officers. The Board decided that as the present plan had worked well for many years they did not see their way to make any alteration.

Analysts' Reports.

During the past quarter thirty samples of drugs were taken in Kent for analysis. Of these only one was certified as being adulterated—a sample of beeswax, which contained 30 per cent. of paraffin-wax.

The public analyst for Hampshire states that the percentage of adulterated samples during the quarter ended March 25 had been 7·87. With the exception of one sample of brandy, milk and butter were the only articles found to have been adulterated.

Cricket.

Boots Athletic C.C. (First Eleven) *v.* Newstead C.C.—Played on May 24 at Newstead, Boots winning by 43 runs to 38.

Boots Athletic (Second Eleven) *v.* Y.M.C.A.—Played on Boots' ground at Nottingham on May 24, Boots winning by 47 runs to Y.M.C.A. 27.

"Hawley" C.C. *v.* Kindrug C.C.—Played at Finsbury Park on May 24, with the following result:—Hawley C.C., 31; Kindrug C.C., 83 for 4 wickets.

Davy Hill's C.C. *v.* Burgoyne's C.C.—Played at Honor Oak on May 24. Scores: D.H.C.C., 73; Burgoyne's C.C., 7. For the winners C. Parker scored 27. G. Tombs captured 5 wickets for 6 runs, and E. Sibley 4 wickets for 1.

London College *v.* South London School of Pharmacy.—Played at Nunhead on May 24. London College batted first, and made 19, while Muter's knocked up 30. In the second innings London College managed 45 (Hands 15), and Muter's scored 71, Turner having 29 to his credit. The bowling for South London School was very creditable, Ross taking eight wickets for 18.

Birmingham Notes.

Mr. W. F. Haydon, pharmaceutical chemist, has resigned the secretaryship of the Birmingham Chamber of Commerce, which he has held for the past twenty-two years.

On Tuesday last the shop and dwelling-house occupied by Mr. Beech, chemist, High Street, King's Heath, was sold by auction for 1,050*l.* It is freehold, rent 55*l.*, and he has a lease of a few years to run.

Miss Braham has been appointed to the newly-created dispensership at the Homœopathic Hospital, Easy Row. She was a pupil of Miss Britain at the John Bright Street Hospital, and holds the Apothecaries' Assistants' Certificate.

With the news of Lord Beauchamp's approaching marriage are revived the usual tales. He originated the "seidlitz-powder balls" while Governor of New South Wales, which were so called because he issued blue cards and white cards, which carried different privileges at these social functions. It was of him that the old lady claimed acquaintance because she had taken "his dear father's pills for many years."

The Welsh water-scheme is proving to be a very expensive business. The cost has up to the present exceeded estimates by two millions sterling, and we are in fear of being toothless on account of its want of hardness. A new trouble has now arisen: it is found that a minute organism, such as the Liverpool people encountered in their Vyrnwy water, has made its appearance, and 200,000*l.* will have to be spent in filter-beds at the Welsh end. This organism is called *Crenothrix polyspora*, and comes from peaty and marshy districts. It possesses the power of depositing ferric oxide in its gelatinous sheath. In a short time it completely chokes the passages and stops the flow of water, a 5-foot diameter tube becoming in two years' time reduced to 4 feet.

Alleged Frauds.

Edward Beauchamp Rogers, Algernon Wallis, Ransome Wallis, Shepherd James Ransome, Henry Everard Norman Rogers, Arthur James Ransome, and Joseph John Rolls Short appeared at the Mansion House on May 26 to answer charges of conspiring together to obtain money, valuable securities, and credit by false pretences. The information was sworn by Mr. J. B. Knight, senior examiner in the Department of the Official Receivers in Bankruptcy, who stated that the defendants Edward Beauchamp Rogers and Henry Everard Norman Rogers were until lately trading together in partnership, under the style of Messrs. Rogers Brothers, as produce-merchants, at 21 Mincing Lane, E.C., and 85 Great Tower Street, E.C.; the defendants Wallis were until lately in partnership as Wallis, Sons & Co., wholesale provision-merchants, at 5 Tooley Street, E.C.; the defendants Ransome traded as Messrs. S. & E. Ransome & Co., colonial and general merchants at 49 Leadenhall Street, E.C.; the defendant Short carried on business as Messrs. Thomas & Short, export and import merchants at 7 Crosby Square, E.C.; and Richard Martland Newton carried on business as a bristle and horsehair merchant at Upper Vauxhall Street, Manchester. Between June 30, 1890, and November 30, 1901, the defendants had been engaged in combination in putting off to various banks and firms their mutual acceptances and cheques for large sums as being genuine trade bills and cheques, whereas in fact they were given for the accommodation of each other. The total sum involved was 34,124*l.* A remand was granted for a week, all the defendants being admitted to bail in their own recognisances in 1,000*l.*, and sureties in the same amount.

Chlorodyne in Cough-mixtures.

On May 28, at St. Pancras, Dr. Danford Thomas held an inquiry into the cause of death of John Wyde (41), a potman, living in Euston Road, N.W., who died after taking a dose of a cough-mixture obtained from a local chemist. The Coroner said the label on the bottle was simply "Knowles, dispenser, Euston, formerly dispenser to the French Hospital." Deceased's landlady said the mixture was very efficacious in the case of colds, but the chemist always warned people not to take too much of it at a dose. Dr. F. B. Mudd stated that there was chlorodyne in the mixture, and it should not be supplied by the chemist, because it might do harm to the patient. The Coroner: It contains morphia, and there are certain diseases to which morphia or opium does much harm. Dr. Mudd: It is a common thing for chemists to put chlorodyne in their mixtures. The Coroner: It relieves pain, and that is the reason they put it in. The people, never thinking of the harm it has done, go back to it, as they have got relief. There is a certain soothing-syrup which sends children to sleep, but then often they never awake again. Dr. Mudd said death was due to pneumonia, and a verdict of death from natural causes was returned.

The Week's Poisonings.

Twelve fatalities from poisoning are recorded since our last report, in only two of which were unscheduled poisons used. Sulphonal was taken in overdose by a retired army officer at South Kensington, and hydrochloric acid was taken by a retort-seller at Leytonstone, who had suffered much from dyspepsia. In the scheduled list, prussic acid was taken in three cases, and cyanide of potassium caused two deaths, while carbolic acid was responsible for three suicides, and arsenic and laudanum for one each. The prussic acid was taken by an Islington sculptor, by Mr. N. W. Frater, chemist and druggist, East Ham, and by a man named Heald, of Coggleshall. At the inquest on Mr. Heald, it was stated that a 1-oz. bottle containing Scheele's prussic acid was found on deceased, who had previously assisted Messrs. Poulton & Son, veterinary surgeons. Cyanide was taken by an Islington man who was afraid of blindness, and by a notorious coiner, named Edward Heavyside, who had been arrested by the Manchester police with about 15*l.* of spurious silver coins in his possession, and who had the cyanide concealed in his cork leg. In opening an inquest at Norwich on May 21 on the body of a woman named Alice Drake, who committed suicide by taking carbolic acid, the City Coroner (Mr. R. W. Ladell) said that was the second death from carbolic acid he had inquired into during the past fortnight. People could purchase the poison without disclosing their name, and he did not think such facilities ought to be given.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Medicines at Killarney.

The expense of medicines to the Killarney Union has been very high of late, and the Guardians have called for a sworn inquiry to be held into the matter.

Early-closing.

The druggists in the East-end of Belfast have joined with the grocers and arranged as a half-holiday each Tuesday from 2 o'clock during the summer months.

Personal.

Mr. Thomas J. English, L.P.S.I., Rathgar Road, Dublin, is the popular selection as Poor-law Guardian for the Rathmines township.

Mr. W. J. Baxter, J.P., M.C.P.S.I., has been re-elected President of the Coleraine branch of the Young Men's Christian Association.

At a meeting on May 26 of the Governors of the Armagh County Infirmary Mr. A. C. McBride, pharmaceutical chemist, Armagh, who had acted as Registrar, was appointed Secretary of the institution.

Dr. McWalter a Guardian.

Dr. J. C. McWalter, at the Poor-law election, the result of which was declared on May 27, was elected a Guardian for the North City Ward of the North Dublin Union. He was almost at the top of the poll, securing a larger number of votes than the Lord Mayor of Dublin (Mr. T. C. Harrington, M.P.), who is one of the Councillors for the ward in the Corporation. Dr. McWalter has also been returned as Guardian for the South City Ward, in the South Dublin Union, so that he will have a seat on both the City Boards of Guardians.

Presentation.

Mr. W. F. Moore, of the firm of Hugh Moore & Alexander (Limited), chemists and druggists, Dublin, was last week the recipient of a gold watch and chain and an illuminated address from the congregation of Rutland Square Presbyterian Church, on the occasion of his resignation of the position of treasurer of the church after twenty-five years' service. Mrs. Moore was at the same time presented with a handsome silver tea-service.

Business Change.

Mr. A. Galashan, L.P.S.I., late manager of Dr. Merrin's Medical Hall, Lower Camden Street, Dublin, has opened a pharmacy two doors away from his late employer's shop, and on premises formerly occupied as a drug-store by a relative of Dr. Merrin.

Cork Exhibits.

The *Cork Examiner* for last week contains appreciative notices of the goods which the Cork Chemical and Drug Company (Limited) and The Shandon Chemical Works are showing at the Cork Exhibition. The former company is the modern form of N. Harrington & Son, whilst the latter is carried on by Messrs. Harrington Brothers, whose London office is at Oliver's Yard, Aldersgate Street, E.C.

Cost of Medicines.

For several days past an inquiry has been held in the Belfast workhouse by Dr. Joseph Smyth, medical inspector Local Government Board, relative to the high expenditure on medicines and medical and surgical appliances in the workhouse and dispensaries. Mr. M. Campbell, who has been dispenser for the past eighteen months, said the medicines and appliances were ordered by him under the approval and signature of the medical officers. He admitted that the use of fifty-three reams of paper, at a cost of 22*l.* 18*s.*, for the six months was a big item. The nurses got the paper for various purposes, and he drew their attention to the extravagant use of it. The use of 86 cwt. of linseed-meal, at 24*s.* per cwt., was also large. Black draught was an expensive mixture very largely used; "white mixture," which he compounded himself, was more economical. The outlay for tablets was much greater than if they were compounded in the surgery. For air-cushions the price according to contract should have been 3*s.* He saw in the invoice that they were marked "special," and charged 8*s.* 6*d.* each. Mr. Benjamin Clarke, of the contracting firm, admitted having made a mistake in altering, without authority, the order for the rubber air-cushions. He supplied the red rubber because the winsey had been returned on several occasions. He also had nothing in writing to justify him in overriding his contract by supplying spittoons at 18*s.* per doz. instead of at 3*s.* 6*d.* per doz. Dr. David Burns, senior medical officer and house-surgeon, said the divided responsibility was the source of leakage. Lint and cotton-wool were articles that lent themselves most to waste, because of the inexperience of the nurses. 2,032 lbs. in six months was, he admitted, a large quantity of lint in these days. The evidence will be submitted to the Local Government Board.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Students' Rambles.

On May 22 a botanical excursion to Garelochhead was indulged in by the students and demonstrators of the Glasgow School of Pharmacy. A most enjoyable day was spent, the party sailing from Craigendoran, and a number of interesting botanical specimens were obtained.

On Victoria Day, May 22, about thirty students of the West of Scotland College of Pharmacy had an excursion to the Falls of Clyde, Lanark, with their principal (Mr. T. S. Barrie). On arrival at the falls the party was photographed, and a botanical search was entered upon, a large number of splendid specimens being collected. Corra Lynn and the Bonnington Fall having been photographed and admired, the students on the way back to Lanark halted for a game at football.

An Opening.

In a letter recently sent from Algiers to Mr. Charles Kerr, pharmaceutical chemist, Dundee, the writer remarks that the English doctor at Birmandries says there is a splendid opening for an English chemist in Algiers. The chemists there are most unsatisfactory, and the writer orders all his medicines direct from Mr. Kerr. The weather is uncertain, "but the fine days are magnificent."

Edinburgh Pharmacy Athletic Club.

The annual sports were held on May 22 at Powderhall Grounds, Edinburgh. An excellent programme, including foot and cycle races, five-a-side football tie, and a tug-of-war competition was provided, and a record entry of competitors was made. During the evening a collection was made for the aid of the injured at the Ibrox Park disaster, and this, along with a donation from the club funds, will be handed over to the "Scottish Referee" Shilling Fund.

The preliminary ties of the five-a-side football competition for possession of the Anderson Challenge Cup were played on May 21, and resulted as follows:—

First Round.—Pottage's beat Raimes, Clark & Co.'s by 2 goals to 1 point. Inman's beat Macfarlan's by 2 points to 1 point. T. & H. Smith's beat Duncan, Flockhart & Co.'s by 1 goal 2 points to nil.

Second Round.—Inman's beat Pottage's by 2 goals 2 points to nil.

Glasgow Notes.

Judging from the display of photographic material in chemists' windows, even in working-class districts, that side-line is growing in popularity.

The order of the day from the Trade Association is that the advanced prices of the agreement entered into some months ago are to be loyally maintained until further notice.

A local chemist who recently advertised three weeks running for an apprentice had only one applicant, and he was a crippled dwarf, who had been recommended to try the craft as an easy calling.

Glasgow drapers have hitherto confined themselves mainly to their legitimate business, but some of the big central warehouses are now beginning to deal in soaps, perfumery, and certain proprietaries.

An abnormally dull and unprofitable winter is being followed by a quiet spring. Last year the exhibition explained everything. At present it is the facile but futile formula that money is scarce.

It used to be a distinguishing-mark of the superior pharmacy that its windows contained nothing but carboys and show-jars, but *autres temps autres mœurs*. Even genteel West-end pharmacies now have attractive displays of goods in the window.

Chemists are warned against an impostor who is going the rounds. He is tall, thin, of a sallow complexion, and has an American accent. He represents himself as an American "drug-store clerk," who has come over to "Yurrop" for the sake of his health, and after some general conversation contrives artfully to mention that he is embarrassed owing to his remittance being overdue, and that a small "temporary loan" would be most acceptable. The man seems to have some knowledge of the American drug-trade and is very plausible.

Chemists' Bowling.

The annual bowling-match between teams representing the wholesale and retail trade in Glasgow was played on May 23 on Hillhead Green. The weather was fine, and the turf in excellent condition. After a most enjoyable game the wholesale representatives were the winners by a majority of seventeen shots. The following were the teams:

Wholesale.	*Retail.*
R. McAdam	G. Robertson
G. Mackay	G. S. Kitchin
H. Thomson	W. L. Currie
W. Greig (skip)	J. Moir (skip)
= 20 shots.	= 17 shots.
J. Walker	D. Moir
M. Wallace	R. Gordon
D. Houston	T. Adam
J. Cairncross (skip)	W. Galbraith (skip)
= 27 shots.	= 13 shots.

Glasgow Chemists' Trade Association.

It has been decided by the Executive of the new Association to employ a paid canvasser to call on all chemists in Glasgow and the West of Scotland soliciting support for the new venture. The Cockburn tariff is to be observed meanwhile, and reports of the Association's doings are to be sent to the trade journals, as there is a general feeling prevalent that the policy of secrecy had been a mistake. When the Association is on a proper business footing it is proposed to make overtures to other trade associations with a view to federation, so that manufacturers may be influenced to fix a minimum price for their products yielding a 20-per-cent. profit. There does not appear to be any active resistance to the Association's proposals, but local sympathy with its objects still appears somewhat apathetic.

French News.

(From our Paris Correspondent.)

Assault and Battery.—A little case was decided in one of the Paris police courts recently which has interested pharmacists here. The plaintiff was an assistant, who summoned his former employer (a pharmacist) for assault. There had been a difference between them in the pharmacy, and the employer called in a policeman to eject the assistant, but the latter declined to be forcibly put out of the *officina*. The pharmacist finally lost his temper, and the assault followed. The result was judgment for the plaintiff, with 100f. (4*l.*) damages and 25f. (1*l.*) fine.

Poisoning by Belladonna.—A correspondent writes from Valence that a Mme. Eugénie Arnaud, residing near there, was rather indisposed a few days ago, and tried to doctor herself by taking a glass of a beverage she had prepared some months previously by macerating in wine belladonna-root, which she had mistaken for gentian. She naturally found it had a very unpleasant taste, and her husband and a neighbour (Mme. Breynat) each took a glass of the concoction to try it. About an hour later all three persons were attacked with violent pains, and, no doctor being within call, they were treated by a neighbouring pharmacist. M. Arnaud and Mme. Breynat soon expired, after terrible suffering, but Mme. Arnaud owes her life to the fact that she drank the poisoned beverage hot, and vomited it after a few minutes.

A Chemical-works Ablaze.—There was a big fire on Friday morning, May 23, at MM. L. Salles Fils' chemical-works at Ivry, near Paris, and damage to the extent of 600,000f. (24,000*l*.) was done. A workman was engaged in tarring wicker baskets intended to hold carboys of sulphuric acid. He let some tar fall on the fire over which he was heating his pot of tar, and a big flame sprang up, which set a pile of about a thousand wicker baskets alight. Before any effective assistance could be obtained the sulphuric-acid chamber was ablaze. There was an immense quantity of the acid stored in a reservoir, and when this gave way the acid flowed about, adding terror to the fire. The fire-brigades from half-a-dozen stations were quickly in attendance, and after three hours' work they mastered the conflagration.

An Interesting Centenary.—The past week has seen quite an imposing celebration in Paris of the centenary of the organisation of the "House Surgeons" service in the Paris Hospitals. It was in 1802 that a decree was issued containing regulations for a service of *Internes en médecine*, who were entrusted with giving the necessary medical assistance to the sick and injured poor at any time of the day or night. Selected, as they usually are from the best men amongst the medical students, they are looked upon as an *élite* body of future practitioners, from whose ranks will issue the leading lights of French medical science. The celebration commenced last Saturday afternoon by a large meeting at the Trocadéro presided over by M. Waldeck Rousseau, the Prime Minister, and the audience was a representative one of French political and scientific men. In the evening a grand banquet was given at the Palais D'Orsay Hotel, Dr. Brouardel being in the chair. On Sunday a statue was unveiled at the Hôtel Dieu Hospital to the house surgeons who have died whilst on duty, who number about forty. The *fête* terminated on Monday evening by a gala performance at the Opéra-Comique. Working side by side with the house surgeons here are the hospital pharmacists, who do very useful work and enjoy a reputation and respect scarcely less than their colleagues of medicine. The pharmacists are appointed nominally for two years.

South African News.

(*From our Correspondent.*)

O.R.C. TRADE.—The Director of Customs for the Orange River Colony has issued a report on trading in 1901, which shows the value of goods imported at 718,438*l.*, as against 1,190,903*l.*, for the year 1898. The exports for 1901 were 22,693*l.*, and in 1898, 1,923,425*l.*

AN INSTANCE OF BRITISH INEPTITUDE has reached me from a prominent firm of South African buyers, who had occasion to purchase rather heavily towards the end of last year. Orders were placed in London both by cable and mail, and more than one of the favoured export firms showed their appreciation by close attention to requirements and quick despatch; but one house (a well-known London one) got their order by cable, and the goods were not in the buyer's hand when the mail left. They wrote saying that they could not get the shipment away, then allowed a month almost to slip before again communicating with the Cape firm, which nettled them not a little. If the home-firm could not get the goods shipped, surely a letter explaining the situation should have been sent. It is this kind of thing that diverts trade to other countries.

IS IT PEACE?—That is what the South African chemist was thinking out when the mail left. Of news, one way or the other, there is nothing definite. Rumours there are in plenty. No man cares to predict an ending to the war; indeed, to talk peace to a Cape chemist is apt to elicit laughter. But whatever happens in the near future in this connection, the simple fact remains that the trade maintains itself in a most remarkable manner. To say that business is good would be overstepping the mark; but it is by no means bad. During April a slump in the peninsula retail trade was in evidence, owing in a measure, perhaps, to the exodus of colonists to England for the Coronation, and a lack of visitors. Affairs at the Table Bay docks are still in a congested state, and chaos seems to be the order of the day. The permit system is still in full swing, while the military authorities close the line for civil traffic every now and again for a few days. The building-trade is brisk in drug-circles both in Cape Town and the suburbs, which means good business in fittings, &c., for some manufacturers.

PHARMACEUTICAL FEDERATION is a subject talked about in the various States in South Africa. Most probably pharmaceutical federation may come before the political. From a purely business standpoint the latter is the most sought for kind of federation, but in the absence of the outlook brightening there is no reason why the chemists of South Africa should not try to work out their own salvation, so far as their own affairs are concerned, by adjusting the existing anomalies in connection with acceptance of certificates. In Cape Colony the Government, acting in accordance with the Medical and Pharmacy Act, registers certain oversea certificates on sight, and among them most of the continental diplomas. The Cape Pharmacy Board is considering the matter of rejecting the foreign ones unless the Governments issuing them accept the British certificates, or will allow colonial chemists to practise in the colonies of the respective Governments, but the Board is taking a long time to come to a decision on the matter. The Natal Pharmacy Board does not accept anything outside Great Britain and Ireland, not even the Cape diploma, and this forms a barrier to any scheme of interchange of chemists' papers. The Governments of the Transvaal and Orange River Colony are at present "one-man" affairs, but to bring both territories into line would be a comparatively easy matter, if the authorities would give the local representatives a half-hour's hearing. Then the Cape and Natal should not be difficult to come together and unite with the other States for the elevation of pharmacy. If the Cape can carry out her programme regarding the continental diplomas, Natal would lose none of her dignity by throwing in her lot with the Cape, accepting such diplomas as are registered in that colony, and by forcing up her own standard to that required at the Cape in future examinations.

Colonial and Foreign News.

NO PHARMACY-COMPANIES IN RUSSIA.—New regulations have been issued in Russia which require the proprietors of drug-stores to be pharmacists.

ANALYSIS OF FOODSTUFFS IN BRAZIL.—With reference to the notices which have appeared in this journal on the subject of the treatment in Brazil of articles of food and drink alleged to contain deleterious substances, the Board of Trade are now prepared to consider any applications which may be made to them, by consignors of goods which have been condemned by the Analytical Department at Rio de Janeiro, for samples of such goods to be re-analysed at the consignors' expense by competent chemists, on the goods being returned to the United Kingdom.

PATENTS AND TRADE-MARKS IN CUBA.—During the American occupation of Cuba, persons desiring insular protection for their inventions and trade-marks were required first to patent and register in the United States, and then record in Cuba certified copies of their U.S. patents and trade-mark registrations. The American intervention having come to an end, and the Cuban republic proclaimed, the new Government has made arrangements for granting patents for invention of seventeen years' duration, and trade-mark registration of fifteen years' duration renewable for similar terms. All documents must be in the Spanish language.

WHAT DUTCH CHEMISTS' ASSISTANTS WANT.—A meeting of the Dutch Pharmaceutical Assistants' Society was held recently in Holland to consider proposals for improving the position of assistants. It was decided to send a petition to the Pharmaceutical Society, asking proprietors to close their pharmacies at 9 P.M. in towns of 100,000 inhabitants or less, and at 10 P.M. in larger towns; also that assistants might be allowed a fortnight's holiday yearly, as well as two free evenings a week and a free Sunday every fortnight. The Medical Society is to be asked to use its influence to stop Sunday and evening consultations, and the Government is to be asked to consider ways and means of introducing Sunday-closing for pharmacies.

AUSTRIAN CHEMISTS' ASSOCIATIONS.—The strike of the Vienna pharmaceutical assistants is ended, an arrangement having been arrived at between the employers and the leaders of the strike movement. All the grievances were discussed at a joint meeting, at which representatives of the Government were also present, and a scheme was finally drawn up and accepted on both sides. The regulations come into force on June 1, and include a clause for closing Vienna pharmacies at 9 P.M. The demand for Sunday closing has been set aside. A free hour in the morning after night duty is to be granted by mutual arrangement. The working time of every assistant, exclusive of night duty and breaks for meals, is to be eight hours per day, and a fortnight's holiday is to be given.

WIESBADEN POISONING-CASE.—A case of strychnine-poisoning in Wiesbaden which has excited a good deal of attention is now ended. It appears that a Mrs. Heep had a prescription for salol-powders made up on August 18, 1900, at Siebert's drug-stores in Wiesbaden, and died shortly after taking one of them. On analysis the remaining powders were found to contain 0·3 to 0·5 gramme of strychnine. Otto Siebert, the owner of the stores, produced the two jars out of which the salol had been taken, and it was discovered that the salol-powder in one of them was strongly impregnated with strychnine. There was, however, no evidence to show how the strychnine got into the jar. Siebert was charged at the Wiesbaden County Court, on September 20, 1901, with the unauthorised sale of the salol, with not having observed the regulations regarding the keeping of poisons, and with having caused the death of Mrs. Heep through negligence. He was acquitted of the last charge, and sentenced on the first two to six weeks' imprisonment and 20m. fine. The Public Prosecutor appealed to the Imperial Court for a revision of the sentence, with the result that the first judgment was quashed and the case directed to the Frankfort Criminal Court, where it was heard on May 12, and Siebert was found guilty of homicide through negligence. He was sentenced to fifteen months' imprisonment.

South African Drug-trade.

First Impressions by a Special Representative of "The Chemist and Druggist" now in South Africa, with Notes on the Wholesale Houses of Cape Town, and Hints to British Houses for Betterment of Trade with South Africa.

SO much of special interest has appeared in THE CHEMIST AND DRUGGIST concerning South Africa and its pharmacies that to complete the pharmaceutical record it becomes almost imperative that information should be published concerning the large wholesale houses, upon whose enterprise not only Cape Colony and Natal, but the Transvaal, Orange River Colony, and Rhodesia, and, on occasions, the military as well, have relied for their supply of drugs, surgical-appliances, and medical comforts. Cape Town, the home of the three largest wholesale drug-houses of the colony—Lennon (Limited), Heynes, Mathew & Co., and P. J. Petersen & Co.—is a delightful town in many ways, except when the "south-easter" is blowing. Then the dust and wind take full possession, and sweeping across the Flats for the time being destroy the happiness and comfort of both the business man and pleasure-seeker. The first view of Table Bay and Mountain, as seen from the incoming ship at sunrise on a summer morning, is, to the weary seafarer, one of the most beautiful on earth. A closer connection scarcely realises expectations, for when one gets ashore in the teeth of the wind, and spends a whole day amidst Custom House officials, Cape boys, cabs, and dust, earlier ideas of the beautiful are liable to be shaken. Apart from that Cape Town is a fair city, and the environs—the Gardens, the Avenue, and the quaint Franco-Dutch houses of the suburbs, nestling deep in the shade of trees and shrubs—form an attraction which the wealth and beauty of South Africa find irresistible during a portion of the year.

The principal thoroughfare of the city—Adderley Street—is as well known in South Africa as Prince's Street to a Scotsman or Piccadilly to the rest of the world. It is a fine broad boulevard, with handsome buildings and shops, equalling many of the best in Manchester, Glasgow, or Liverpool. Three of the finest and best appointed are the pharmacies of the firms referred to above, and despite some knowledge of South Africa and its enterprising business men, it came as a surprise to the writer, fresh from home, to be able to walk into pharmacies fitted and stocked with all that was latest in the drug-world, and at the same time having an appearance equal to the most select pharmacies of the superior watering-places of England—Folkestone, Eastbourne, Bournemouth, for instance. Perhaps this parallel was drawn because of the close proximity of the sea at all these places, and the abundance of foliage and spotlessly clean houses in all. It is not, however, the object of these notes to fully describe retail pharmacy in Cape Town, as so much has already appeared from time to time in THE CHEMIST AND DRUGGIST on the topic, and your representative, in a somewhat curtailed stay in the peninsula, chiefly devoted his time to a deeply interesting and

CAPE TOWN.

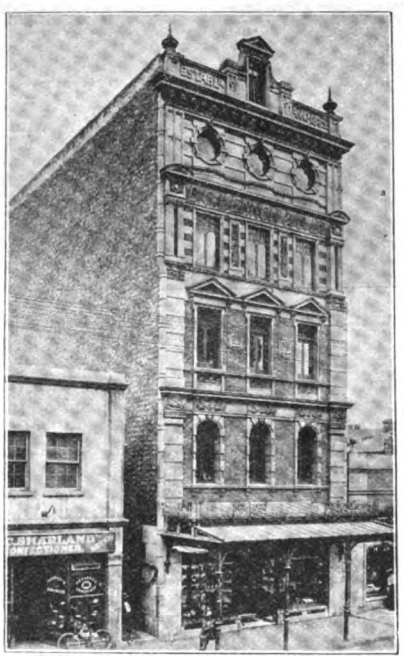
pleasurable inspection of the wholesale houses. Here, again, to one who knows the wholesale houses of the old country fairly well, expectations were more than realised, and our younger brethren of the newly developed Southland are in the front rank of their particular branch of commerce. The size, order displayed, business acumen, and establishments generally compare favourably with most of the English first-class houses.

LENNON (LIMITED).



As regards extent of country in which this firm has branches and operates, it has an almost unique position in the drug-trade of the Empire. They are represented by going concerns in most of the important towns and centres in South Africa from Cape Town to Bulawayo, and from Durban to Mafeking. Yet "Lennons"—using their familiar

PREMISES OF LENNON (LIMITED) IN CAPE TOWN.

cognomen—like many more huge trading concerns, started in a very small way only half a century ago. In 1850 a Dr. Dunsterville, of Port Elizabeth, acquired a small dispensary, which he ran in conjunction with his medical practice, and having for his manager Mr. B. G. Lennon. The learned doctor shortly afterwards returned to Europe, and Mr. Lennon took over the dispensary, and the initial stage of the firm's business came into being. A few years later Mr. R. A. Fairclough became associated with the founder, and subsequently on Mr. Lennon's health failing a partnership under the title of B. G. Lennon & Co. was entered upon between these gentlemen. It was about this period that the rush to the diamond fields came along, and the firm, taking advantage of the universal wave of prosperity, began opening up-country branches and pushing their trade in the immediate interior. With more extensive trading the necessity for increased accommodation at headquarters became a matter for serious consideration, and when the adjoining premises to those already occupied at Port Elizabeth became vacant, they were promptly secured and subsequently purchased. The company's present establishment still occupies the site of the original premises. Succeeding years brought increased business, and the time came when it was thought desirable that a London depôt should be started. About 1880 Mr. A. Walsh joined the firm and became managing partner at Port Elizabeth, and Mr. Fairclough sailed for England, ultimately establishing a buying and manufacturing agency at Bunhill Row, London. In 1895 the London depôt was moved to its present situation in Leadenhall Street, E.C. (now there is a fine place on the Surrey side of the river). In 1884 Mr. H. Tebb joined the firm, opening a branch in St. George's Street, Cape Town, but the premises there proved altogether too small for the business done, and a more commodious place was secured at the corner of Adderley and Strand Streets, and in 1891 the present splendid building, which we illustrate, was occupied. In this year also the firm resolved itself into a limited-liability company under the title B. G. Lennon & Co. (Limited), and traded thus until the reconstruction on January 2, 1899, when the style was altered to Lennon (Limited). Mr. A. J. Rivett has joined the directorate since the new title was initiated, and he now ably conducts the enormous business done at the Cape Town house, where he is resident director.

The Lennon pile of buildings has a commanding corner site close to the foot of Adderley Street near the railway station and close to the most important electric-tramway termini. The building has five floors, and the retail pharmacy holds the corner position of the block; next to this is a separate surgical-department beautifully fitted, also in the main street, and a step or two further down is the photographic shop, where a splendid stock of all the latest cameras, plates, and photographic necessaries is held and well displayed. Round the corner in the broad thoroughfare of Strand Street is the entrance to the spacious offices, and there on the right as one goes in Mr. Rivett has a neat private office where he receives business callers and holds the reins of the interests of the firm. The spacious offices occupy the ground floor as one enters the building, and immediately behind is the manufacturing-laboratory. Ascending to the first floor we find the typewriting-room, and the patents, sundries, and perfumery stock and show rooms. Necessarily very large stocks are held, for a great number of the branches are fed from this store, while others draw from Port Elizabeth. Long vistas of stacks and stores meet the eye, and on closer inspection everything is found to be splendidly arranged and numbered. On the second floor are drugs, bottles, the "wet" room, and packing-department, all the stocks being alphabetically arranged. One room on this floor is devoted almost entirely to aërated-water essences in which a large business is done. Here also are the oils and tinctures room, and close at hand stocks of glass measures and funnels and heavy quantities of all classes of bottles. Ascending again we find the third floor devoted to ordinary store packages, soda, acids, soda-water machinery and plant; and we incidentally learn that in the manufacture of minerals here American loaf sugar is largely used and preferred. On the fourth floor are varieties of bottles, wools, lints, and long stacks of proprietaries and various other preparations in original cases and bales. The mezzanine or intermediate floor, running back from the office and behind the Adderley Street shops, is devoted to the spirit and tincture rooms, and here also we notice the chloroform and volatile oils, and a

BRANCH OF LENNONS IN JOHANNESBURG.

useful and surprising innovation in the shape of a rubbish-destructor, the heat from which is directed to the pans in the laboratory. Electric light is laid all through the building, and the whole is fitted with a complete scheme of automatic

Digitized by Google

water-sprinklers in case of fire. Such is Lennon's Cape Town establishment—the centre of an immense organisation.

P. J. Petersen & Co.

Some think Plein Street, Cape Town, a busier thoroughfare than Adderley Street, so far as trade is concerned, and it is here one finds the handsome pharmacy, photographic store, and surgical-instrument depôt of Messrs. P. J. Petersen & Co. Across the way in Barrack Street is the firm's wholesale warehouse. Petersen's was established in 1842 as a retail business, chiefly in Dutch medicines. This gradually increased, and with the expansion several girls were employed as packers. Next a six-roomed building was taken over, and bit by bit trade grew, and to meet the tide, in 1892, the whole of the premises were rebuilt, and a large block of four stories with a frontage of 60 feet and a depth of 78 feet took the place of the diminutive structures of former days. Again, seven years later, this building proved inefficient, and in 1899, an additional four-storey structure was erected at the back of the principal warehouse. The total depth back from the street of these huge warehouses is now 148 feet, and the total floor-space of the two combined is 32,000 square feet.

As one enters the building, on the left is the general office, while to the right is that of the general manager, Mr.

Petersen's Wholesale Premises in Cape Town.

Henry Evans. Under his guidance, The Chemist and Druggist representative started on his tour of inspection, beginning with the ground-floor store, where is an immense stock of American proprietaries, such as Chamberlain's cough and diarrhœa remedy and pain-balm, Ayer's cherry pectoral, hair-vigour, and sarsaparilla, and Scott's emulsion, for which last the firm have the South African agency; and they are also agents for Berkefeld filters and Horlick's malted milk. There is a large demand for the Berkefeld filters in South Africa, and they are selling by the dozen at present. Messrs. Petersen have recently been fitting up some at the Kimberley mines, and a specially large one supplies 500 gals. of filtered water per hour. We are informed, also, that the military authorities always stipulate Berkefeld in requisitioning for filters, and in Bloemfontein the authorities will not have water unless it has passed through these special purifiers.

Continuing our round we pass large cases of Stearns's wine of cod-liver oil and headache-cure, and eventually enter the perfume department. Inspecting the large and various stock I learn that a London firm have a good hold of trade here, but it is generally felt that there is room for improvement in the get-up of English perfumes, the French being much superior in style and quality to the bulk of English goods. Up a flight of stairs to the patent-medicine floor, and we stand in the middle of a huge stock, and as we walk round note large quantities of dressings and plasters, gauzes, and antiseptic cotton-wool. "The Americans score here," is the comment. Messrs. Burroughs Wellcome & Co. practically hold sway in South Africa for compressed drugs. Passing on to the packing-room we find workwomen engaged in making special trusses and chest-protectors. Above this is a flcor stocked well with essences, and one floor higher we find the laboratory, where Mr. James Herd Millar, pharmaceutical chemist, formerly with Messrs. Barron, Harveys & Co., is in charge. The pill-machinery is here, and the drying-cupboards, with an engine for driving the machinery. In the pill department we see some excellent specimens of gelatin-coated pills. A fair business is done in veterinary medicines, and for the military a special conical ball is made, which is not tapered at both ends, as is usual. There is not so large a demand now as at the beginning of the war, when a large dose of carbonate of ammonia was given to the horses as they came off the transports. Now the army veterinary authorities are having their medicines made at home. On this floor is the Dutch-medicine packing department, with a number of girls busily employed putting up the vials, labelling, and packing into cartons. Moulton's pain-paint for colic, toothache, &c., is one of the specialities of the house, and it is made in 100-gal. lots. It retails in 2-oz. phials at 1*s.* 6*d.*

By this time we have reached the top floor of the front building, and having, by way of experiment, tested the Turkish-bath-like atmosphere of the loft just under the corrugated-iron roof, we gladly descend to the ground floor again. Leaving by a back entrance we cross a small yard and enter the second warehouse. On the ground floor are nearly all original-package goods, and such things as carbolic acid in drums, and cylinders of CO_2. The German houses can sell this latter commodity at colonial-landed cost, and, of course, British trade is the loser thereby. Messrs. Stevenson & Howell's essences are here also, and a goodly array of "Izal" disinfectant. On the next floor are kept soda-water manufacturing apparatus and the firm's own tin-making machinery. There is also a large stock of bleaching-powder, and in an adjoining department we inspect complete sets of shop-rounds, oil and syrup bottles, ointment-jars, and handsome recessed-label bottles, some of the latter in course of preparation. These are sent out by Messrs. Petersen to the trade in 50*l.* sets complete. In this warehouse also are stored large quantities of Dutch medicines; and on the third floor we find an interesting article of the Mincing Lane type, in a large-bulked quantity of fresh buchu-leaves of fine quality. This is grown in and around the Pearl and Clanwilliam districts of the colony, and the lot we inspected was only awaiting a further consignment before shipping the whole to England. Another article the firm do largely in is curry-powder, and we saw a small hillock of it on the top floor, weighing in all about 2 tons. This article is usually sent out in 500-lb. lots.

Making our way down again, we pass through a section to the side of the front building, where several rooms are stocked full of bottles of almost every variety, and "boys" are kept here to do nothing else but wash bottles. Crossing the street to the corner of Plein Street we enter the surgical-instrument shop. The first apparatus that meets the eye on entering is a very fine American dental machine. Dental apparatus and dental requisites form a very important part of this branch of the firm's business, and they hold very large stocks of artificial teeth, mostly English, although there are inquirers for American goods. Ellwood Lee's ligatures, gauzes, and antiseptic sponges are in evidence, and in a second department a fine English-made surgical chair is on view, with hydraulic movement. Attached to the pharmacy at the corner, to which we have already referred, is the wholesale and retail photographic department. An extensive stock of all the latest requisites and novelties is held, and a large business is done in cameras and plates of all classes. Developing is carried out largely, and prices are much the same as at home. In this department also is

Digitized by Google

shown a fine lot of scientific instruments, microscopes, opera and field glasses, and artists' colours.

HEYNES, MATHEW & CO.

This firm of wholesale chemists and druggists and photographic dealers, whose central establishment is in Adderley Street, Cape Town, was founded in the early sixties by the present senior partner, Mr. John Alfred Mathew (pharmaceutical chemist and "Square" man) and the late Mr. John Heynes, when those gentlemen purchased the business of Messrs. J. T. Pocock & Co. in Adderley Street. After the death of Mr. Heynes, the business was carried on by the remaining partner with great success, and ultimately, in 1897, the senior partner's sons, Mr. Frank Carleton Mathew and Mr. Alfred H. Mathew, were admitted into partnership. Since that date the enterprise of the firm has resulted in still further successes, and to-day the firm's name is over pharmacies and drug-stores in many of the more important centres of South Africa, while they are proprietors also of half-a-dozen pharmacies in the immediate neighbourhood of Cape Town. Mr. J. A. Mathew, as is well known to many leading pharmacists at home, is the President of the Colonial Pharmacy Board, and may be looked upon as the *doyen* of the drug-trade in Cape Colony. Even now, at an advanced age, he takes a keen interest in the Cape Pharmaceutical Society, and he still holds the reins of the firm's extensive business, although his sons relieve him in the management, Mr. Frank Mathew managing the wholesale and Mr. Alfred the retail part of the business. Mr. Mathew, sen., was the first South African born to take the British Major qualification. Branch establishments of the firm are now open at Sea Point, Green Point, Malmesbury, in the environs of the colonial metropolis, and also at Mossel Bay, Rondebosch, Bloemfontein, and Kimberley; and quite recently the firm have taken over the business of J. T. Pocock & Co. (the second of that name), of Shortmarket Street, Cape Town. The firm devote a great deal of attention to photography and photographic materials, and this special department, in the hands of a most capable and energetic manager, has developed almost beyond expectation.

It was a broiling hot day in February as I stepped into the cool shade of Heynes, Mathew & Co.'s stately building in Adderley Street, but the heat of the colony, while producing "rooineks" has not the same languor-compelling effect as that of London, no doubt owing to the extreme purity and lightness of the air. So as I climbed to the third floor, and the wholesale manager's office, I steadily mopped my forehead, and, during a short wait, gradually cooled off to temperate degree, and viewed the busy scene of the packing-room and the large quantities of glassware. Mr. Frank C. Mathew soon appeared, and I had a run of the building with him. Passing through the congested packing-room, he told me they will have more room at their disposal soon, as a new store in an adjacent street is about ready. Walking through I noticed a bandage-cutting machine on this floor, and, passing through an open door, entered the Dutch-medicine packing room. These medicines are packed by girls, as in large packing departments at home, the difference here being that the "Cape" workgirls are interesting to the eye of the new comer, in that they vary in colour from dark chocolate to almost white. The Dutch medicines and droppels are mostly put up in 1-oz. vials, with labels printed in the *taal*. The *C. & D.* gave some interesting illustrated information concerning them two years ago. The composition of these medicines, so largely taken by the Cape Dutch, and the strange outlandish reading of the labels at once excite the interest of the Britisher. Messrs. Heynes, Mathew & Co. are the proprietors of four different sets of these remedies, all of which are in demand in different sections of the country. Passing on we notice amongst the packed goods "Aesiab blood-mixture" and "Capillarine hair-restorer," proprietaries of the firm having a big sale. From this floor we ascend to the top floor, and by a steep ladder climb into the turret-tower, shown in the photo, whence we have a splendid panoramic view of the city, the harbour, and Table Mountain. Descending to the top floor, which is principally packed with bottles and general stores, and so to the next stage, we are struck by the sight of an immense quantity of fragrant curry powder, for which we learn the firm have such a demand that in some of their busiest years they can hardly meet it by working extra time and all day on Sunday. In another department on this floor we find a new Gardner's sifter and mixer, which has just been put up, and a small pill-plant at work. There is also going forward in an adjacent room the manufacture of tomato-sauce, and we see the huge pans full of the peeled tomatoes ready for the pulping-stage. Cordials are made here largely also, for there is a big demand for them in the colonies. Everything necessary is close to the hand of the workmen and workwomen—tincture-presses, stills, and pill-dryers, and an eight-horse power engine to complete the outfit. In another section we find large stocks of all the well-known proprietaries, and especially several American remedies in larger quantities, which one seldom or never sees at home. The "wets" are also here, and it comes as a little of a shock at first to see glycerin and spirit. ammon. arom. filled into whisky-bottles, but that is the way in South Africa. You see, the bottle that once held whisky is looked upon affectionately by all classes, and

PREMISES OF HEYNES, MATHEW & CO., IN ADDERLEY STREET, CAPE TOWN.

can be used again. I received here a brief lecture from Mr. Mathew on the absurdity of English proprietary-manufacturers sending their specialities out stamped, which entails on arrival payment for stamps and duty on their value. On the second floor is the photographic stock, which is necessarily large, and I was informed by my guide that "taking photographic trade generally, probably the cream of it is ours." There are well-fitted dark-rooms here, but the chief developing-work was being done at the Rondebosch branch in the suburbs, and the printing-out at Kenilworth, eight miles distant, owing to the scarcity of water in Cape Town. To meet this awkward state of things, which is not uncommon in Cape Town, the firm are boring a well behind the Adderley Street premises, at a cost of 2*l* 10*s*. per foot, and they hope in a little time to be independent of the town supply for trade-purposes. Next I was shown into the comb-and-brush, toilet-requisites, perfume, and soap room, in which a large trade is carried on. Apart from perfumes manufactured by the firm, I noted French and English, the former so much more in evidence that English houses should appreciate the urgent necessity for close attention to this market, and cultivation of taste on French lines. The colonial does not want second-rate goods in perfumes—he desires a first-rate article, strikingly put-up, and does not

Digitized by Google

care, as a rule, what he pays for it, so long as he gets it A1 class. All round I hear the cry that there is great room for improvement if Britishers wish to hold the trade as against the French houses.

En passant we admire the electric lift which has lately been added to the appointment of the building, and, finishing the round of the warehouse and stock-rooms, I walk out to the street, and enter the handsome pharmacy at the corner. It is one of those described in the opening paragraph, but now I have more time to admire the elegant showcases, and the variety of perfumes and toilet-requisites; but I learn the pharmacy does not altogether satisfy the requirements of the proprietors, and shortly it is to be entirely re-cased. The ceiling is prettily decorated, and, utility uniting with decorative art, running all round is the useful water-sprinkler system. Next I pay a visit to the photographic retail shop, which is excellently appointed, and is quite distinct from the pharmacy.

[Our representative's observations on business with South Africa will appear in a future issue.—Editor.]

Recent Wills.

Brown.—The executors and executrix of the will of Mr. Edward Brown, of 20 Thornton Road, Morecambe, and formerly for many years of Leeds, pharmaceutical chemist, who died on March 4, are his son, Mr. Edward Oliver Brown, of Leeds, his daughter, Miss Jane Elizabeth Munro Brown, of Brotherton, and Mr. Seth Pollard and Mr. Isaiah Pawsey, of Morecambe. The late Mr. Brown, who had been an intimate acquaintance with Thomas Carlyle, left property of the gross value of 1,713*l.* 17*s.*, but the net value is *nil.*

Maxey.—Probate of the will of the late Mr. William Henry Maxey, chemist and druggist, of 68 Broad Street, Worcester, who died on February 6 at Mott Haven, Victoria Road, Malvern Link, has been granted to his executors, Mrs. Fanny Jane Maxey, the widow, and Mr. Samuel Bromley Garrard, 7 Sansome Place, Worcester, solicitor. The gross value of the estate is 5,349*l.* 1*s*, and the net personalty 1,190*l.* 3*s.* 8*d.*

Mowatt.—The will of Mr. John Rodman Mowatt, pharmaceutical chemist, 109 High Street, Cheltenham, who died on December 19, has been proved by the sole executrix, Miss Mary Letitia Mowatt, sister of the deceased. The gross value of the estate is 3,996*l.* 15*s.* 7*d.*, and the net personalty 3,474*l.* 0*s.* 8*d.*

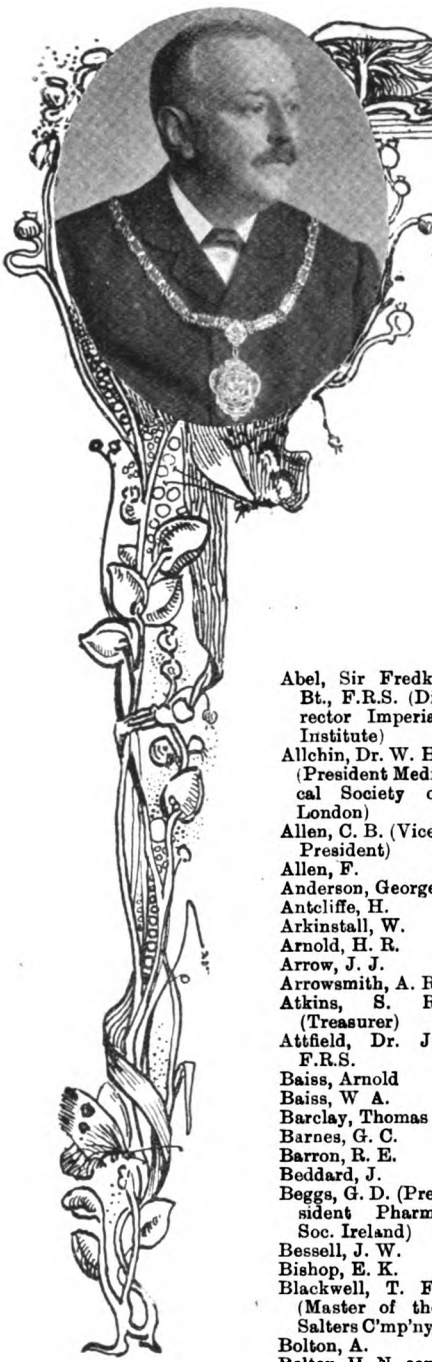
Penrose.—Mr. Arthur Wellesley Penrose, pharmaceutical chemist, of 12 Manor Gardens, Holloway, who died on October 23, has left a gross estate of 13,710*l.* 14*s.* 11*d.*, and a net personalty of 12,968*l.* 17*s.* 6*d.* His executors are Mr. Arthur Petch Penrose, 32 Compton Terrace, Islington, pharmaceutical chemist and dental surgeon, son; Mr. Samuel Tillcott Huggins, 32 Compton Terrace; and Miss Ellen Petch Penrose, spinster, daughter of the deceased. The gross estate is valued at 13,710*l.* 14*s.* 11*d.*, including net personalty 12,968*l.* 17*s.* 6*d.*

Pharmaceutical Society of Great Britain

Annual Dinner

of the Members and their Friends at THE HÔTEL METROPOLE

Tuesday May 27th 1902



THE PRESIDENT IN THE CHAIR

The gentleman who is responsible for the ticket-depart ment of these annual dinners has struck a vein of originality which, before he is done, he may regret having found. The above heading is a reproduction—as good as can be done in black ink—of the ticket that diners got for Tuesday evening. The picture part of it is a panel from the pharmaceutical-chemist diploma, and is emblematic of the luxury which attends high-class pharmacy. It had a nice brown tint on the ticket, and the lettering was in red and black. We have sacrificed a line or two which told the diners what door they should go in by, and when. These are inappropriate now; indeed, a few who were there would have been pleased to have had it as well impressed on their minds how to get out and home.

The same happy designer effectively reproduced last year's list of guests, with a portrait of the present President in the corner, where was the first President last year, and as the stalwart crier at Lloyds' (who amuses himself in the evenings by playing the part of toastmaster) asked each guest his name he handed him a list. Behind him stood Mr. Newsholme, with the chain of office fitting him so well that it seems part of him. Orders bristled round him on the bosoms of medical and scientific celebrities. By the programme, a quarter-of-an-hour was allowed to chat before dinner, but a little more than that was actually given, and during that time one could see who were "strangers" in certain respects. First we noticed Mr. Thomas Barclay, of Birmingham, a rare visitor to these functions; Mr. G. D. Beggs, President P.S.I., making his *début* here; Mr. Claridge Druce, fresh from a five-weeks' sojourn in Sicily, and near him Mr. Naylor, "bearded like the pard," who found Morocco splendid and health-giving. Mr. Idris talked South Africa, where he has lately been, with Mr. W. K. Mager, of Queenstown there, who is wintering here—neat comment on the flowery month of May. The Hon. F. S. Grimwade, M.L.A., of Melbourne, and Mr. Thomas Stephenson, from Bombay, represented other parts of the Empire. A full list of the guests is given on the next page.

The dinner was actually commenced at 7.15, and by 9 o'clock the diners had got through ten dishes, with fixings, fruit, coffee, and some very good wine. It was done in the hotel's usual good style. We noticed that the President had

The Toasts.

"HIS MAJESTY THE KING." By the President.

"THE HOUSES OF PARLIAMENT." By the President. Replies by Messrs. Lawrence and Roberts.

"THE MEDICAL PROFESSION." By the Vice-President. Replies by the Presidents of the Colleges of Physicians and Surgeons.

"OUR COLONIAL EMPIRE." By the Treasurer. Reply by Mr. Grimwade.

"THE PHARMACEUTICAL SOCIETY OF IRELAND." By the President. Reply by Mr. Beggs.

"OUR GUESTS." By the President. Replies by the Master Cutler and Sir Dyce Duckworth.

"THE PRESIDENT." By Sir William Turner.

Digitized by Google

on his right the Presidents of the Royal College of Physicians and of the General Medical Council, Mr. W. F. Lawrence, M.P., Sir F. Abel, the Master Cutler (fra Sheffield), Sir J. C. Browne, Professor Tilden, Dr. T. Stevenson, Mr. M. Carteighe, Dr. Cottle, the President of the Institute of Chemistry, Professor Collis, and Mr. Savory. On his left were the President of the Royal College of Surgeons, Mr. Grimwade, Sir Dyce Duckworth, Mr. Samuel Roberts, M.P., Dr. Donald MacAlister Mr. Walter Hills, the President of the Society of Public Analysts, the Master of the Apothecaries' Company, the Presidents of the Pharmaceutical Society of Ireland, of the British Pharmaceutical Conference and of the Medical Society of London, and Professor Greenish.

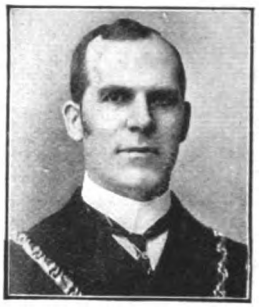
There were six spur tables, and their chairmen were Messrs. Charles Umney, G. S. Taylor, R. Bremridge, S. R. Atkins, Isaiah Bourdas, and Wm. Warren. The Georgian Singers gave us some music after dinner, but the lengthy speeches must have cut their programme short. By 10 o'clock the Whitehall Room was half empty, many of the diners preferring to smoke in the hall, and there was more grumbling than usual about the speaking being too spun out. The fault was as much with the listeners as with the speakers, but it may be noted for future guidance that it is nowadays more in accordance with the fitness of things to devote not more than two minutes to proposing a toast. Mr. Atkins was, as ever, particularly eloquent, and his was the speech of the evening. Mr. Grimwade, who followed him, also spoke well, and Sir William Church's speech was an outstanding feature of the evening's proceedings.

'Twixt the cutlets and the quails,
Quoth the burly Man of Toasts,
"Wish of President prevails,
Take ye wine now with your hosts."

The Speeches.

Our staff rhymer courts the Muses
To split up the prosy way
With a little bunch of quatrains
On the guests at Table A.

LOYAL TOASTS.



'His Majesty the King" having been loyally honoured, the PRESIDENT gave "The Houses of Parliament." He expressed regret that the Pharmaceutical Society had no direct representation in the House of Commons. It would be better for the public if someone who knew something about pharmacy and the administration of the Pharmacy Act were elected to Parliament. How this was now to be brought about he did not know. He hoped the time would come when some one of their distinguished members would perhaps sink his individuality as a pharmacist, take to politics, and become a member of Parliament. It is highly desirable that the sale of poisons should be regulated and dealt with in a fair manner, not only in the interests of pharmacists, but in the interest of the general public. Since 1868 the Council of the Pharmaceutical Society had been trying to get legislation in the House of Commons in various ways, and at the present time they wanted help for the Pharmacy Bill which was considered some twelve months ago. It now rested with the Privy Council to say what is to be the outcome of the Select Committee's labours regarding the amendment of the schedule of poisons under the Pharmacy Act. He wanted every pharmacist to interest himself in his own member of Parliament as regards the sale of poisons.

Mr. W. F. LAWRENCE, M.P., said perhaps the chief reason for his being singled out to reply was because he had had the honour for over seventeen years of representing that very important and interesting district in the heart of Liverpool, which was known as the "Valley of the Shadow of Death. Although a commoner he valued the House of Lords as a sedative and a palliative, and he hoped it had a long future before it. In Parliament they carried out what they believed was the national will of the people, and he would endeavour to do his best to advance the interests of pharmacy in the House.

Mr. SAMUEL ROBERTS, M.P., also replied, mentioning that he was present as a guest of the President, and also as his member. He quite agreed with the President's remarks regarding the direct representation of pharmacy in the House of Commons. Other people and bodies were directly represented, and there was no reason why someone who knew the needs and requirements of pharmacy should not be elected.

MR. LAWRENCE.

MR. ROBERTS.

He would be pleased at any time to give them his services for the cause of pharmacy in the Commons.

Lively Cambridge Don-ald twitting
Hills and Roberts—new M.P.
Soon upon the Front Bench sitting
We May Roberts hope to see.

The VICE-PRESIDENT (Mr. C. B. Allen), in proposing

THE MEDICAL PROFESSION,

said the toast was one that would be enthusiastically received by a community of civilised people in any portion of the habitable globe. More particularly was that the case with those associated with pharmacy, however, for pharmacy, by a process of differentiation, had sprung from the medical body. He was proud, as a representative of pharmacy, to welcome the distinguished members of the medical profession with them that night. The gathering was truly representative of pharmacy, for they had with them pharmacists from the extreme North of Scotland, the West of England, "dear old Ireland," and even from the colonies. Being co-workers with the medical profession, pharmacists could, in a measure, appreciate and share the discouragements and joys of that body, but he trusted that pharmacy and medicine would in the future work even more closely together. The advance in pharmaceutical education would tend towards a closer union, and the work done by pharmacists in large hospitals, where they are in direct contact with doctors, besides their help in the regions of physiological and sanitary research, would be generally recognised. Furthermore, they had been of material assistance, he thought, in the production of the British Pharmacopœia—("Hear, hear" from Dr. MACALISTER, and much applause)—and the researches that had already been made with a view to inclusion in the next edition would be found extremely valuable. He was rather afraid, however, that the medical man of the future, while highly scientific, would be absolutely devoid of business knowledge. He would counsel the profession to take to heart the opinion that Mr. Cecil Rhodes recorded in his will regarding the business capacity of the dons of Oxford. ("Oriel," corrected Dr. MACALISTER, amid laughter.) He thought a sounder knowledge of business methods would be an advantage to the profession. In referring to the work done by medical men in the South African War, Mr. Allen alluded specially to the case of Major Babtie (the son of a pharmacist), who won the Victoria Cross for bravery at the battle of Colenso. Towards the close of the speech the audience exhibited noisy symptoms of uneasiness, and Mr. Allen's peroration could only be indistinctly heard.

Chain-encircled Newsholme, beaming,
Medicine interests seeks to rouse,
Chips his neighbours, staid beseeming—
Right, Sir Selby; left hand, Howse.

Sir W. SELBY CHURCH, as representing the physician branch of the medical profession, said his task was a particularly hard one, as pharmacists, by their close association with medicine, knew its strength and also its weaknesses. It is many years ago, he said, since medicine first began to specialise. Mesue and Nicolai each published formularies, and from these and the works of Æsculapius the Pharma-

Digitized by Google

Copœias of a later date probably sprung. It is doubtful whether the first Pharmacopœia was that published at Florence or the one issued from Nuremburg, but he was inclined to think that the latter (published in 1542) had premier claim. From that time the rise and progress of pharmacy had been great—how great his hearers were much better able to judge than he. The amount of capital, scientific knowledge, and hard work now devoted to the science of pharmacy make it one of the most important branches of knowledge at the present day. The medical profession had to thank the Pharmaceutical Society for the enormous improvement in the purity, potency, general utility, and convenience of drugs and medicines. The difference between the preparations of the present day and those of our forefathers is remarkable. He was somewhat surprised to learn from conversations with his analytical-chemist friends that British pharmacy is, however, not so perfect as he thought it was. (Laughter.) He had been told that arsenic was to be found in ferrum redactum, and, of course, they had all heard of the phosphate-of-soda revelations. Sir Benjamin Brodie had said that he considered the ablest practitioner was not the one who was acquainted with the largest number of drugs, but he who knew how best to make use of one or two. There was, he thought, a great amount of truth in that remark, and it was applicable in even a greater degree to the practice of the present day. The number of new medicines was nowadays entirely bewildering. He (Sir William) was quite content to be left behind with a few of the old drugs. From the time of their birth nowadays they were expected to subsist on medicated foods and drinks, and instead of eating the delicacies and drinking a glass or two of champagne as they had been doing that night, they would probably be told that their food should have been peptonised, enzymed, or predigested, and that medicated wines should have been drunk He thought there was much truth in what the Vice-President had said regarding the needs of the younger practitioners. It was, for one thing, extremely desirable that the profession should be better acquainted with the British Pharmacopœia than it is now. He had been much struck in watching the examinations with the extreme ignorance displayed, even by qualified men, of the Pharmacopœia. The present-day practitioner knew all about predigested foods and tabloids, but his friend Sir Dyce Duckworth would bear him out when he said that the ignorance of ordinary Pharmacopœia preparations was extraordinary. Only the other day a candidate—a qualified practitioner—was being examined, and Sir Dyce Duckworth or one of his examiner colleagues asked the candidate to give the ingredients of a preparation in the Pharmacopœia. Now, he confessed that was not a question that he would like to have given to himself, so, feeling rather sorry for the candidate, he asked him to write out in proper form a prescription for a blue pill and a black draught—a simple task the candidate proved totally unable to do! He thought it his duty to draw the attention of the profession to the shocking neglect of therapeutics, and to counsel a greater attention to this material branch of study.

Dr. H. G. HOWSE, replying for the surgeons, said it was popularly supposed that their side of the profession had nothing to do with medicine, but only with cutting. He remembered as a young man being asked by a member of the laity "how many arms and legs he had cut off now." Although great differentiation in the work of the surgeon had gone on, he thought it would be acknowledged that more than mere amputation was necessary in the practice of surgery. Surgeons had come to depend on medicine as material to successful practice, and they were indebted to pharmacists for the way they had worked in elaboration of the newer remedies and purification of the elder.

Genial Carteighe hale and rosier,
For a comrade aye alert,
Shared his nectar and ambrosia
With the Government expert.

OUR COLONIAL EMPIRE.

Mr. S. R. ATKINS said his pleasure in proposing this toast was modified by the impossibility which he felt in condensing in a few sentences the remarks he would like to make. He interpreted the term "colonial empire" as meaning something more than the colonies. He took it to mean that great "trans-marine empire"—(loud cheers)—he did not mean ultra-marine—which it took the Prince and Princess of Wales some 40,000 miles to traverse and some months of time. It was more than three hundred years since we began empire-building. It was in 1583 that we acquired Newfoundland; shortly afterwards the first plank in the Empire of India was laid by the incorporation of the East India Company in 1600; and a wonderful history is revealed in the conquest of India, and in the work of Clive and men like the brothers Lawrence and the magnificent soldiers by whom they were surrounded. From this we pass to the West, where we began empire-building in North America in connection with the conquest of Virginia in 1620 Going back to the Tropics, the first of our acquisitions was that of Barbados, which brings forcibly to our minds the unparalleled disaster which has recently overtaken St. Pierre and Martinique. In Canada we have something like 3½ millions of acres absolutely waiting for colonisation. "In our South African colonies—now, I am not going to say one word," said Mr. Atkins, "to offend the sensibilities of the most pronounced politician—but I consider it would be a most pronounced blunder to make any retrocession of territory in South Africa—(loud cheers)—and I say it not as a politician. Our flag which we are proud of is not only a symbol of empire, but it really represents the cause of freedom and impartial justice. (Hear, hear.) It is a well-known fact that any man who lands in British dominions is at once free. I venture to make this further remark—and I am not ashamed of it—that our flag represents Christianity. We do not impose our faith on every man, but I do believe the very centre of my existence, the one great hope of this world with all its sin and sorrow, is Christianity. I do not know who the poet is, but I remember his phrase, in speaking of Britain:—

She is a precious gem set in a silver sea,

and, thinking of the gems that gather round the central gem, I come to the Australian Commonwealth. I ask the representative of that great country who is present with us to-night, What have you sent us from Australia? Why, the most precious thing you have—your sons, to fight for us in South Africa. (Loud cheers.) You also send us many products, including timber, and some wonderful little bits of timber—in the willow. (Laughter.) I have the honour of coupling with this toast the name of the Hon. F. S. Grimwade, member of the Legislative Council of Victoria. I only wish I knew him more thoroughly, and, in associating his name with this toast, I would like to call him my friend. He is a son of a very old friend of mine."

Gracious statesman from Australia
Chatting confidences free
With Sir Dyce, who spoke of failure,
Gave advice—and sought no fee.

The HON. F. S. GRIMWADE (member of the Legislative Council of Victoria) said he was entirely carried away by the Treasurer's eloquent speech, and he did not feel he could do full justice to the toast. He was in England five years ago and attended the Society's dinner on that occasion, and felt it a great distinction to be with them again that evening. Although they lived at the very confines of the Empire, they were pleased and proud to be Britons just as much as those who lived within the precincts of the throne. Nothing would give greater delight in the colonies than the ending of the war; but the war must not end too soon, as they did not want to lose any freedoms which the Flag

MR. GRIMWADE.

Digitized by Google

meant. He need hardly remind them that when the war broke out they did not in Australia question whether it was a wise war or whether it could be avoided. All they thought was that England was at war, and so were the colonies, and they sent the best of their sons to fight in the battle-field at the call of duty. Many died, but they left a halo round their lives which will endure as long as the colonies. He had lived in the colonies forty years, and although he thought it a great pleasure to come home to England and to be received with kindness unspeakable, yet he was proud of having lived in Australia, and to have helped in building up the Empire there. Mr. Atkins had referred to the three million acres of land in Canada. They have as much land in Australia which wants settling on. Already they have four million inhabitants, but they could do with twenty-five millions. He hoped that in twenty years' time the population of Australia would be as much as in England at the present time. If they kept up the liberty of conscience and freedom, and all the advantages of a free country, Australia would be as great an influence for good as England is to-day. Whatever happens he believed that, as long as time endured, it would be the great desire in Australia that it shall form an integral part of the British Empire. (Hear, hear.)

Crichton Browne and learned Tilden
Kept their neighbours in a stir;
Witty talk those worthies filled in,
One with braw Dumfriesshire burr.

The President then proposed

The Pharmaceutical Society of Ireland.

He said it was a number of years since they had the President of the Irish Society at their dinner, and they were very pleased to welcome the President, Mr. G. D. Beggs. Many of them spent some time in Ireland last year at the Conference and enjoyed themselves very much. Anyone who comes into the society of Irishmen is bound to enjoy himself, and thiswas particularly true of Mr. Beggs. The two Societies had much in common, and also much uncommon. They were united in the belief that fresh legislation was required in regard to limited companies trading in pharmacy. It was unjust that seven men should be allowed to do what one man may not do. The British Society is trying to deal with the question in the draft Bill which is now lying at the Privy Council office. In their anxiety that something should be done to get over this great anomaly he was sure they would have the assistance of the Irish Society. It was sometimes difficult to see eye to eye with the Irish Society, because the two Acts of Parliament are different. Their differences were not due to any disrespect, because their Society had the greatest respect for the Irish Society, and they would support them as best they could.

Humour in spontaneous bubbles
Bursts from Beggs and Claridge Druce.
Ne'er a thought of company troubles
Mars the minds to joy let loose.

Mr. G. D. Beggs said he was quite overwhelmed with the kind words with which the Pharmaceutical Society of Ireland had been received. It was a small body, but had the interests of pharmacy at heart. They had done their best, and hoped they had proved not an unworthy child of the parent Society, whilst maintaining that it was their duty to fight manfully for themselves. The Pharmacy Acts differ, but there was no reason why the two Societies should not be united on minor points. There were many points of union on which the two Societies might join together and thereby advance pharmacy. He did not know whether it was the case here, but in Ireland they felt a want of the youth coming into their calling. The reason was, he thought, because the young man, after he has devoted his time and labour, and spent long hours for small remuneration, finds that the huckster and grocer can do as he does with the exception of adding after his name the magic letters "M.P.S." They could rely on the Irish Society to fight to the death so as not to allow their privileges to be taken from them. Let the two Societies work together and advance pharmacy, and make the calling what it should be. In regard to the Conference, he looked upon it as a privilege to Dublin for the Conference to visit there, and he felt it a privilege to be at that dinner. He would not come over the water a long journey if he did not think it an honour to be among them. He hoped the good feeling between the two Societies would be continued, and handed down from generation to generation. Ireland had also given some of her best blood to the war, and they were still willing to sacrifice every man they had. (Loud cheers.)

Voelcker, silver-haired and sturdy,
Healer of the farmer's ills,
Chews "Asperges" and tilts in wordy
War with Blackwell or with Hills.

Dr. J. A. Voelcker (President of the Society of Public Analysts), in proposing the

Pharmaceutical Society of Great Britain,

said his Society was situated on the opposite side of Bloomsbury Square to the Pharmaceutical Society, so that he might be regarded as a kind of "Mrs. Over-the-Way." He congratulated the Pharmaceutical Society on the manner in which they had advanced pharmacy and chemistry throughout the Kingdom. When he thought of such well-known names in chemistry as Dr. Anthony Todd Thomson and Dr. Pereira, and remembered that both Sir John Bennet Lawes and Sir Joseph Gilbert (who had done more for agriculture than any others in the country) were pupils of Dr. Anthony Todd Thomson, he thought they ought to be proud of their record. Tilden and Carteighe had also done much for the progress of chemistry, and the Pharmaceutical Society had shown an excellent example to the analysts by its efforts in the protection of its members and its work of benevolence. He hoped pharmacists and analysts would come closer and closer together in the future.

The President, in reply, said while both the Pharmaceutical Society and the Society represented by Dr. Voelcker were charged with public duties, they differed in many particulars. The Pharmaceutical Society, although it looked after the interests of its members, was by no means a trade union. There was nothing either in Charter or Acts to warrant them fixing prices for work done or anything of that sort. Their principal duties were concerned with looking after the interests and safety of the public, and pharmacists ought to do their best to live up to the responsibilities put upon them by Parliament in the selling and handling of poisons. He then spoke of the illustrious gentlemen who had honoured them as guests that evening, and concluded by proposing

Our Guests.

The Master Cutler first responded in a neat and concise speech, and he was followed by

Sir Dyce Duckworth, who lamented that his unhappy fate was to close up the fountains of oratory. He particularly commended the excellent speech delivered by Mr. Atkins. If pharmacists wanted a direct representative in Parliament, he thought they could do no better than get the eloquent Treasurer of the Pharmaceutical Society elected without loss of time. In his speech the Treasurer had not only struck the true note of patriotism, but other notes had been made prominent which were quite as important. He (Sir Dyce) confessed admiration for the excellent training the Pharmaceutical Society required of its diplomates, and he had long felt that the position of pharmacy in this country was nothing like what it ought to be. Contrasted with the recognition given to pharmacy in France, Germany, Russia, Denmark, or Sweden, it was deplorable, and he hoped greater recognition was in store for British pharmacy in the near future.

Courtly Turner, ne'er infamous,
"Canapé" for Church prescribes,
And discusses ignoramus
Who at B.P. physic gibes.

The now attenuated gathering was on the point of dissolution when the venerable Sir William Turner arrested the hurrying train-catchers with a few graceful words of commendation on the way in which the President had conducted the gathering. A last round of applause was given for the President, and the company scattered to their respective domiciles, well fed, well wined, and beaming content.

Pharmaceutical Society of Great Britain.

SIXTY-FIRST ANNUAL MEETING.

THE annual meeting took place at midday on May 28, at 17 Bloomsbury Square, W.C. There were under ninety members present, including the President (Mr. G. T. W. Newsholme), Vice-President (Mr. C. B. Allen), Treasurer (Mr. S. R. Atkins), Councillors M. Carteighe, A. Cooper, O. Corder, W. G. Cross, W. S. Glyn-Jones, J. Harrison, W. Hills, R. A. Robinson, A. L. Savory, and A. Southall, and Messrs. F. Bascombe, Peter Boa (Edinburgh), H. Matthews (Oxford), A. Bottle, I. Bourdas, J. W. Bowen, E. N. Butt, H. Cracknell, E. H. Farr (Uckfield), G. B. Francis, W. Giles (Aberdeen), A. W. Hanson, E. W. Hill, W. M. Holmes, W. L. Howie, T. H. W. Idris, D. R. Jacks, R. H. Jones, J. E. L. Moore, W. Pickard, W. P. Robinson, G. S. Taylor, J. F. Tocher (Peterhead), W. Warren, and W. W. Will.

At a Council-meeting held just previously the order of the meeting had been settled and the new by-laws read a third time.

The President and Councillors came into the general meeting at five minutes past 12, and were received with applause. The babble of conversation was allowed to proceed for a few minutes before the President rapped for order and called on the Secretary to read the notice convening the meeting.

THE ANNUAL ADDRESS.

The PRESIDENT said: Gentlemen, in moving that the sixty-first annual report and financial statement be received and adopted, I would like briefly to refer to the chief items of revenue and expenditure with a view to explaining broadly the position of the Society. Of course, any member present will be perfectly in order to criticise individually the accounts and ask for information concerning particular amounts, but I think it will be convenient for the meeting if I first take a general consideration of the balance-sheet, reserving any detailed explanations, if it should be necessary, to refer to later. First of all, I ought to ask you if it is your wish that the annual report and financial statement be taken as read.

A LEAN YEAR.

This was agreed to, and the PRESIDENT proceeded: The sixtieth year of the existence of our Society is to be recorded as one of the "lean" years. Comparison with 1900 reveals a difference of over 4,500*l.* on the wrong side of the account-book, and we have to read in our balance-sheet the unpleasant line "Deduct balance of revenue-account, 1,654*l.* 2*s.* 7*d.*" I do not suppose that our experience is singular in finding two or three years of comparative plenty followed by a period of reaction, and I do not think we ought to be unduly depressed by what is, after all, a perfectly natural and, so far as the Council is concerned, clearly foreseen occurrence. During 1899 and 1900 the Society's revenue was largely augmented by the rush of candidates to anticipate the operation of the new rules coming into force in July, 1900. But there was no such stimulus last year, and the changed conditions manifest themselves with full force in the first balance-sheet of the transitional period. The net income from examinations in 1900 was 8,104*l.* and in 1901 it only reached 5,315*l.*, so that our 1,654*l.* deficit is more than accounted for by this falling-off in fees, if one likes to look at it in that way. There might be some ground for apprehension if this diminution of revenue were to become permanent or progressive, but I see no reason to doubt that the normal condition will be restored in due course—perhaps sooner than some pessimistic minds anticipate. Speaking for the Council, I may venture to say that we do not regret the step taken in abolishing the old Preliminary examination, and, in spite of the evil consequences that have been attributed to that action, we believe the time will come when it will be recognised as a policy of wisdom and a decided impetus to pharmaceutical chemists.

THE SCHOOL NEEDS SUPPORT.

The other items of revenue approximate nearer to the average. School-fees have been 140*l.* less, and I am sorry to find that the anticipations of the Council in regard to the school have not been realised. You will remember that the Vice-President, who occupied this chair this time last year, expressed the confident hope that the falling-off in school-fees would be temporary, and that the opportunities—one might say the unique opportunities—afforded by the Society's school for providing a thoroughly efficient pharmaceutical training would be very largely utilised as years went on. In this hope his colleagues most certainly participate. I cannot, however, indicate to you any signs of an early fulfilment, and though last year was a bad year in more callings than pharmacy, it is unwise to disguise the fact that the school is not receiving, and has not been receiving, the support which the money and attention bestowed upon it by the Council justified us in expecting. It is not the loss of 140*l.* in fees that is to my mind the serious consideration. As a matter of fact, from a pecuniary point of view, the school-account was better in 1901 than it was in the preceding year, the net cost being 1,052*l.*, as against 1,218*l.* It is not the monetary position that induces serious reflections, but rather the broad question whether, in expending 1,000*l.* or 1,200*l.* a year in maintaining this worthy tradition of the days of our founders, we are doing the highest possible good in the way of promoting a uniform system of education for those who wish to practise the pharmaceutical calling. I yield to no man in my reverence for the class of the work of the School of Pharmacy, or respect for the memory of its distinguished teachers or students. But it does occur to me that possibly our duty to present and future generations of pharmacists may require some modifications of traditional policy. This is a matter which you may be sure that your representatives on the Council will very carefully consider in connection with technical education in Great Britain generally. It may be that the developments in University teaching now going on around us will make it possible before long for students to regard the University as the natural gateway to a pharmaceutical qualification. At any rate, you must not shut your eyes to the important changes or progress in educational matters, and I hope you will absolve me from any idea of disloyalty to our School in making these remarks.

THE ANNUAL SUBSCRIPTIONS

to the Society show an increase of over 200*l.* for the year with a slight decrease in the number of members. Both facts may be accounted for by the number of persons who have been taken from the annual list and transferred to the roll of life-members. There seems a great disposition among the younger men to become life-members by payment of 10*l.* 10*s.* down, and I am scarcely surprised, for it is a good investment for the life-compounder if not for the Society. (Laughter.) Turning now to the other side of the account, the two great items of expenditure which show any marked increase are those relating to the *Journal* and the law-costs. In regard to the former, there is an adverse balance of 2,285*l.*, or 800*l.* more than in the preceding account. I employ the words "adverse balance" in their descriptive sense, and it must not be understood as implying anything more than that the balance of the account is on the expenditure side. The Council has felt that these figures are too high and indicate the need for a more economical basis in the production of the Society's official organ. I have noticed evidences of alarm in certain provincial towns, and there appears to be an altogether unwarranted fear that the Council are proposing to enter upon a starvation policy, and generally to act in a foolish manner in spite of expert advice and warning. I do not know the origin of these ideas, but they are not very flattering to the members of the Council, who very seldom get enough of flattery to spoil them at any time. (Laughter.) I am glad of this opportunity—the first that has occurred—of dispelling the fears of

AGITATED MEMBERS AT BRADFORD

and elsewhere. The Council are determined to see to two very simple matters which should commend them-

Digitized by Google

selves to every member. They are (1) that whatever money is spent upon the *Journal* the members shall have money's worth, and (2) that the *Journal* shall be produced at the lowest possible cost consistent with efficiency. That is a mere business determination, and need not be disturbing to business men. The *Journal* is your property, gentlemen, and I conceive that it is the duty of the Council to ensure that the money spent upon it shall improve the property, otherwise it is simply thrown away. It is not expedient that I should enter upon a more detailed discussion of the subject, but I will tell you that the Council have now before them the consideration of what changes may be desirable in the conditions under which the *Journal* is at present produced and published, and I hope that my successor in this chair next year will be in the fortunate position of announcing that you have an improved journal and a largely reduced adverse balance. The law-costs have been exceptionally heavy during the past year, the net cost of that department of our work being nearly 1,500*l.* When it is considered that this is in addition to the penalties and costs incurred, one is apt to imagine that we are buying our law in a dear market. But you must remember that the year has been marked by a number of somewhat expensive processes which have been in the nature of test-cases, and have enabled us to obtain important interpretations. It is said on authority that

Omelettes always Involve the Breaking of Eggs,

and the truism applies also to such legal luxuries as appeals. To a very large extent the law-costs may be taken as a measure of the activity of the Council in protecting the public and incidentally registered persons from unqualified persons, so that a Pharmacy Bill is not altogether an unmixed evil. But it may seem a little hard that work which is done for the public is to be paid for by the members of a voluntary Society, and that 10,000 chemists who are benefited by the decisions obtained in the courts should be content to allow the same Association of voluntary subscribers to bear all the burden. I shall have to speak later on of the cases which have proved the most expensive, but I may say here that a large portion of our outlay—980*l.*, or thereabouts—has been in respect to the administration of the law in Scotland. For England and Wales the cost has been about 500*l.*, which includes 150*l.* for our supplemental charter, and 65*l* balance of costs in the White case. On the whole, I do not think the Council are to be charged with undue extravagance in the conduct of law-cases. The first consideration must always be to win your case rather than anticipate the reckoning, and in order to do so the best man must be requisitioned and consulted. It is not always the actual fighting that costs the money, but the preparation for it. As an instance, I may say that the presentation of the case to the Medical Council against the employment of unqualified assistants in the doctors' shops involved two or three journeys to London by our solicitor in Edinburgh, and our Mr. Rutherford Hill had also to arrange for the evidence to be obtained in Glasgow and the West of Scotland. There were also consultations in London with counsel, and an enormous amount of documentary testimony to be collated and considered. This cost considerably over 300*l.*, and not a farthing of the outlay was recoverable. I do not think we shall be called upon to deal with such

An Exceptional State of Affairs

again, but if we are, I hope you will not complain if the Council promptly and vigorously responds to the demand, though it may swell the adverse balance on the law account. (Hear, hear.) Other items of expenditure are pretty much as usual, and call for little comment from me. The Library Account is 178*l.* larger. This is explained by the 175*l.* which the new edition of the catalogue cost to issue. The sundry expenses in connection with the Museum also show a slight increase, which will, I feel sure, not be objected to by anyone.

The North British Branch,

too, has cost more. The total increase is about 30*l.*, and two-thirds of it is under the head of Miscellaneous Expenses. I could explain in detail how and why the money has been spent, but it is hardly necessary to do so. I ask you to take my word for it, as one who knows from personal knowledge and observation of the Branch, that that extra 20*l.* represents a good deal of extra work, the pharmaceutical value of which cannot be represented in the financial statement. Now I come to an item of expenditure I would gladly see doubled, and that is the 108*l.* 2*s.* 11*d.* spent upon local organisation. I may be open to retort that this subject is to me like the head of King Charles to Mr. Dick. (Laughter.) But be it so. I am convinced that the future of pharmacy is to a large extent dependent upon the character of the

Internal Organisation of the Society,

and any imperfect, indifferent, or incomplete system will give little attractive value to the Society, and that body, instead of being a living power, must remain a monument of glorious possibilities. I do not want the Society to acquire a monumental reputation of that kind. I do not see why it should always be a potential rather than an actual influence, and that, perhaps, explains my reiterated appeals for a more highly developed local organisation. At present my ideas have been partially put into practice, and I may express my acknowledgments to the Registrar and his staff for the great pains taken in arranging the thousand and one details which the new scheme necessitated. But I have learnt enough of the working of the scheme during the past year to tell you that it will not accomplish its object, and the object I had before me when I first invented it, if it is confined to the narrow limits accorded it to-day. It requires more spade-work—if I may borrow a political simile—and to prosecute this species of preliminary labour effectively needs more money. There is, however, another need, that money cannot buy—men. If we could secure the services of a few additional really earnest local officers, we might go far with a very little money. I take this opportunity of expressing my personal indebtedness to the local officers for the help they have given. The Council has already passed a formal vote of thanks, but I am glad to add my expression of gratitude for the really large volume of valuable information they have placed in possession of the officers at headquarters. The foregoing are the chief items in the statement before you, and I do not think further comment on the balance-sheet is called for. A number of

Minor Economies

have been effected in the general administration, and I do not anticipate any objection on that score. I would like to warn members, however, that, in the ordinary progress of events, the secretarial staff must be greatly increased, and that the wages-bill must be expected to rise accordingly.

It was recently decided to place the Society on the telephone-service, and we have several other business-developments in progress, intended to bring the Society's organisation into closer accord with modern commercial ideas. But progress has its obligation as well as its advantage, and if you see a larger sum next year for salaries, I hope you will make allowance for the benefit bestowed upon the Society by having an adequate official clerical staff to transact the detail business.

With regard to the report of the Council, which has been distributed to every member and published in the Pharmaceutical Press, I do not know that there is much occasion to amplify the official statements, bald as they are. The fact is that in these days, when the Council does almost everything under

The Observant Eye of the Press,

there is no scope for annual reports. All the important transactions of the Council have been published from time to time, together with a good many of the unimportant, so that the report is now little more than a reiteration of more or less wearisome matter that has been common knowledge for some time. Olympus has very little thunder left at May, I assure you, and it becomes increasingly difficult for a pharmaceutical Jove to preserve even a semblance of awe-striking attributes for twelve months on end.

In respect to the Government Visitor's report on the examinations, and his strong expression of opinion that

Digitized by Google

COMPULSORY COURSES ARE REQUIRED

in at least chemistry and pharmacy, I would like to remind you that we have referred the Privy Council to their ruling in 1886, when we tried to do what Dr. Stevenson thinks so essential, and we have, I fancy, driven home the point that if there are no "compulsory courses" it is certainly not the fault of the Pharmaceutical Society. Their Lordships have taken up the attitude that we have no power to institute these courses under our present status, and no doubt their position is based upon the advice of the Law Officers of the Crown. All we can do therefore is to convince the Department of the futility of calling our attention to desirable lines of conduct unless it is prepared to help us to obtain the necessary powers to follow such lines. I hope that before very long, we may have the power to introduce "periods of time and courses of study" between parts of the qualifying examinations. The time appears ripe for both, and the draft clause of the Pharmacy Acts Amendment Bill designed to effect the improvement is already in the hands of the Government. Glancing for a moment at the Society's legal work, I would impress upon the members the large amount of time and the infinite pains spent upon these reported cases of infringement. The task of dealing with 409 cases, which is nearly double the number in 1900, is by no means a light one, and you could easily appreciate the importance which the Council attaches to their duties as prosecutors under the Acts when I say that the bulk of our time each month is taken up in considering the evidence in these cases and the allied circumstances. As I said earlier in my remarks, law-costs have been exceptionally heavy. It has been found necessary to take up one or two flagrant 17th section cases —notably one case in Staffordshire, where nicotine was sold labelled "Brandy," and caused death; and also in Scotland, where it was sought to rule our Registrar out of court as having no title to sue. The cost of such cases is somewhat higher than some of the 15th section cases, for the Society cannot recover any penalty under summary procedure in England. Still, we have the satisfaction of knowing our exact position with regard to prosecutions under Section 17 in Scotland, for the High Court has decided that the Registrar under the Pharmacy Acts is the proper prosecutor in such cases. We also know that the practice of not paying penalties for conviction is

NO LONGER A SAFE GAME

for defendants in Scotland, since the High Court has declared that the Sheriff might attach to his judgment an alternative of imprisonment in default of payment. It was worth while spending a few pounds to stop the old sniggering at justice. Connected with law, too, are some parliamentary items, such as the draft Pharmacy Bill, concerning which our solicitors in London and Edinburgh have been engaged and counsel employed. The Council also found it expedient to protect the Society's property by entering an action for trespass against one of our neighbours in Great Russell Street. The differences have been amicably adjusted, and the rights of the Society acknowledged and confirmed. I do not think I need say any more on the report itself, but I must just for a few moments allude to what is in the last paragraph of the report, which is, perhaps, the most unpleasant and certainly the most painful one of the whole We have

LOST BY DEATH

during the year several men who were distinguished in pharmacy—their names are set out here in this list. When we see here men who have been closely associated with us on the Council, either at present or in years gone by, we are bound to admit that the loss has been an exceedingly great one during the year. They include Mr. W. Martindale and Mr. J. T. Davenport, both past-Presidents of the Society; Mr. Randall, a former member of the Council, and many others who were not quite so closely connected with us, but were, at any rate, known to most of us here. I have referred previously, at the Council-meeting and in the country to the death of our old colleague Mr. Martindale. I need not say any more, because I know that what is in the hearts of all is the utmost respect and affection we had for him. There has, since this report has been issued, also occurred the death of another member. I refer to Mr. Andrews. He was with us in this house not very long ago; he was a regular attender at the annual meetings of the Society, interested himself in pharmacy in many ways, and was a man who was always anxious to benefit his fellow-men. I need say no more now, but will just content myself with moving the resolution that the annual report and statement of accounts as published be received and adopted.

The VICE-PRESIDENT said: Gentlemen, I have much pleasure in seconding the resolution. I do not propose at the present moment to say anything about it. Perhaps you will allow me to say something by-and-by, if necessary.

Discussion.

In the discussion which ensued, Mr. WRIGHT (Yeovil) complained that the statement of the President in reference to the position of the *Pharmaceutical Journal* was misleading, because it estimated the cost of the publication by the difference between the expenditure and the net amount received from advertisements. The actual cost, he considered, was rather to be gauged by the net income relative to expenditure. The balance-sheet of the *British Medical Journal* showed a deficit of 5,965*l*. That, divided among 16,000 members, made the average cost to each member about 7*s*. 6*d*. Taking the adverse balance on their *Journal* in the same way, it worked out at 9*s*. 6*d*. per member per year, but if the loss had been upon the same ratio as that of the *British Medical Journal*, it would have been but 5*s*. So that if they had a greater or less amount of expenditure it did not matter, the profits being dependent upon the proportionate increase in the advertisements. This required that the *Journal* should be more attractive to readers, which could only be accomplished by giving a larger number of pages. Why not revert to the old practice of selling the *Journal* to those outside the Society at 10*s*. a year?

Mr. CAMPKIN said they were indebted to Mr. Wright for his friendly criticism. As to the cost of the *Journal*, he considered that this was not to be looked upon in a mere financial sense, because the publication brought the members in contact with the executive body week by week, and was useful in the dissemination of information. As to chemists and druggists who claimed that the executive of the Society were not representing them, it was

A COMPLAINT FREQUENTLY HEARD,

and it was difficult to convince these gentlemen that their interests were sufficiently attended to by the Pharmaceutical Society. Much of the work that had been undertaken with regard to local matters was not widely enough known, and therefore those referred to had no knowledge of the efforts the executive made on their behalf from time to time. The first requirement of the chemist was protection of title, and then a recognition of his position as a qualified and registered man, and protection against the unholy competition of unqualified dealers. He trusted that the Council would be able to give more public information. The general feeling was that there had been too little notice taken of the House of Lords' decision given in 1880, and it was supposed that there had not been a sufficient attempt on the part of the executive to reverse that finding. That it was a final decision, inasmuch as it was the result of the appeal to the House of Lords, had been given as the answer again and again, but that that should be the excuse for not making further legislative attempt was not the opinion of the general body of chemists. There had been many attempts by means of draft Pharmacy Bills, but failure had resulted, and it seemed impossible for the moment to hope for anything in this direction, because although we had a Government with a larger majority than had been known in the history of the country, it happened also to be the most powerless—(laughter and cheers)—all legislative business of such a character as this went to the wall, and that would apparently be the result of any further attempts. He took it, however, that the Society would be failing in its work if it did not make an endeavour to secure the registration of the qualified men and to protect them against

UNHOLY COMPETITION.

If every local organisation would only take upon itself to bring home these facts and this injustice to its local members, the condition of chemists and druggists would be absolutely different. His experience was that there was

Digitized by Google

a lamentable ignorance with regard to the injustice which they as qualified and registered men laboured under. The local organisations should be advised to bring these matters under the notice of their members.

Mr. CAMPBELL (Shepherd's Bush) read Section 15 of the Pharmacy Act:—

> . . . Any person . . . who shall take, use, or exhibit the name or title of chemist and druggist, or chemist or druggist, not being a duly registered pharmaceutical chemist or chemist and druggist, or who shall take, use, or exhibit the name or title pharmaceutical chemist, pharmaceutist, or pharmacist, not being a pharmaceutical chemist . . . shall for every such offence be liable to pay a penalty or sum of five pounds . . .

Yet he saw Parke's Drug-stores, Day's, and Boot's using the title. He had inquired of the Secretary of the Society who were the managers of the branches of these drug-stores near him, and he could not say—in fact, the result of his inquiries was to show that it was not possible to ascertain the names of the responsible managers at the respective branches. He admitted that to remedy this would be a difficult task, but declared that it must be accomplished or their charter would become useless. He was sorry to see that these companies were supported by several leading chemists, some even on their Council, who conducted their business under

FALSE NAMES,

known as trade-names. No chemist, he declared, had a right to keep open a shop unless he displayed his own name only. ("Oh! Oh!" from Mr. Walter Hills.)

Mr. PENTNEY said the reason why a great many chemists would not join the Society was because they looked upon it as a fraud, and believed they had ground for their view. Having complained that a communication to the Society as to an infringement of the Pharmacy Act had not been acknowledged, the speaker said that under the head of law cases he did not grumble at all. He only wished there were

MORE PROSECUTIONS

against traders who were not chemists, and thought more details of the prosecutions and fines should be given in the report.

Mr. HYSLOP congratulated the Council upon the reports, and said the Society should regard itself as being under a cloud in having lost so many leaders of special types that could never be replaced, and it was certainly time for them to consider how their leaders for the future were to be "evolved." With regard to the *Pharmaceutical Journal*, they must remember that that publication had definite and exclusive ends in view, and should not introduce gibes and jokes. (Laughter.)

THE SECRET OF THE SUCCESS

of trade-journals was that there was so much juvenility abroad in the world—in the Government, the Church, and other great organisations; but they should remember that they had masters of old to look back upon, and should not encourage the juvenile element to the detriment of the Society and the best interests of the chemists and druggists. Still, he begged them to "cheer up," and remember that—

> "All theory, dear friend, is gray,
> Life's golden tree is green alway."

THE PRESIDENT REPLIES.

The PRESIDENT rose at 1.8 to reply. Mr. Wright, he said, had expressed himself rather strongly, and seemed to think that the *Journal* ought to be sent out at considerably more cost to the Society, but he could assure them that the Council had given the matter the greatest consideration, and that presently further improvements might be looked for. He asked them to trust the Council to do the best it could in the matter. Mr. Campkin referred to the ten thousand people outside the Society who, as well as those who belonged to the Society, wanted more information on legal matters, and said that if they placed more confidence in people outside the Society they would come in. The Council has tried all sorts of ways and means to get more members. It seemed to be forgotten that members of the craft owe a duty to the Society, which is always doing something for the benefit of the craft. In regard to Mr. Campkin's complaint of the inaction of the Council in that nothing had been done to rectify the House of Lords decision, the Council had drafted a number of Bills, and one at the present time was with the Government. Mr. Campkin said it was not much good going to the Government, but later on said they should keep pegging away, which seemed to be somewhat contradictory. The Council was not going to stay its hand, but would continue to do its best to improve the condition of pharmacy. As to local organisation, it was exceedingly important that their officers should take the members into their confidence, and not only the members, but the local Members of Parliament, and he thanked Mr. Campkin for the work he had done in the latter direction. Mr. Campbell asked why nothing had been done to make Section 15 of the Pharmacy Act operative. Well, he would refer Mr. Campbell to the draft Pharmacy Bill, which should convince him that the Society was doing its best to put pharmacy on a proper footing. In that Bill he would call Mr. Pentney's attention to the clause which would give the Registrar power to require the name of the manager in charge of each shop. Acting under advice, they did not give the details of the prosecutions undertaken during the year, and on the whole he thought it was better to show it as in the report. As to the Council being a sham and a fraud, he could not help that. (Laughter.) The Council had been elected by the members, and would continue to do its very best. Replying to Mr. Hyslop, the President said the Council is always glad to have the advice of anyone connected with its body. He would like to add that while the Council felt it an honour to fill the position it did, it was a little unfair to expect the Council to do all the work. The Council required a little more sympathy—or flattery, if they liked to put it so. Members should ask themselves what they could do to help the Society, and ask themselves if they were doing their duty.

The PRESIDENT then formally put the motion that the report be received and adopted, and it was carried unanimously.

Scrutineers were appointed to count the votes for the Council election, and the auditors were reappointed.

Attention was then called to the registers of chemists and druggists and pharmaceutical chemists which were on the table as required by the by-laws.

Mr. MACEWAN then proposed a vote of thanks to the President and Council for the way they had done their duty during the past year. There was a good deal, he said, in the latter remarks by the President as to lack of sympathy from the members. The members should not forget that the Councillors, who were mostly heads of important business houses, gave not only their time, but brains, in doing a great deal of work on behalf of the Society and its members.

Mr. FEAVER CLARKE briefly seconded the motion, which was put, and carried unanimously.

The PRESIDENT thanked the meeting for the resolution. It was nice to have their labours recognised in that way.

The meeting was then adjourned till 3 o'clock on Thursday.

Special General Meeting.

THE BY-LAWS.

THE PRESIDENT called on the Secretary to read the notice convening the special general meeting for the purpose of considering the proposed new by-laws and altering the wording of the poison regulations.

This having been done, the PRESIDENT explained that the by-laws had been read, confirmed, and approved in Council, as required by the charter, and now came before the members for approval. The by-laws had been under consideration a long time, and were approved some time ago, with the exception of one clause. Owing to the objection, the Council had withdrawn the by-laws from the Privy Council, and those now submitted were identical, with the exception of clause 23 of Section X. If the meeting did not care to take the by-laws in that form, they could be taken seriatim.

Mr. CARTEIGHE, in seconding the motion, which the President proposed, said the only real alteration was in clause 23, in regard to the fee for re-examination in case of illness. The matter had been before the Law Lords, and,

Digitized by Google

as the Society had no desire to be unduly harsh in dealing with candidates and their money, the old clause had been restored, with the exception that the language had been made clearer and more definite. He had been officially informed that the Privy Council was prepared to approve the other by-laws, and, if pressed, he had no doubt that the disputed clause would also have been approved. As, however, he was a strong man, belonging to a strong Council, he thought the Council were well advised in taking back and reconsidering the by-laws. The alteration met the view of the objectors.

The by-laws were then approved by the meeting.

POISON REGULATIONS.

The PRESIDENT then proposed the addition of the words "and liquid disinfectants" to Clause 3 of the Poison Regulations. The necessity arose some months ago after the attention of the Council had been drawn to the matter by the medical officer of health for Sunderland. That gentleman drew attention to the lax manner in which carbolic acid and poisonous disinfectants were being sold, and suggested that some alteration should be made in the way they were distributed by local authorities. The Local Government Board had the notion that the regulations applied to the distribution as well as the sale of disinfectants, and called the attention of the Privy Council to the matter. At the request of the Privy Council the Council of the Pharmaceutical Society considered the matter, and concluded that the addition of the words suggested would get over the difficulty as to the sale of disinfectants. As regards the distribution, the local authorities had been reminded by the Local Government Board that similar precautions should be taken. The alteration was far-reaching, but he (the President) had reason to believe that the Privy Council would accept the amendment.

Mr. R. A. ROBINSON seconded the motion. It was, he said, an alteration which commended itself to everyone.

Mr. A. P. BARNARD asked if the regulation would apply to the non-poisonous disinfectants sold by oil-shops, and

Mr. L. ATKINSON inquired if the words "Not to be taken" blown in the bottle are a sufficient notice that the contents of the bottle were not to be taken internally.

Mr. CARTEIGHE said he thought they were equivalent, but such words would not relieve a chemist from labelling "Poison," in accordance with Section 17 of the Pharmacy Act.

The PRESIDENT then, on the advice of the Solicitor, put a motion rescinding the old Clause 3, and substituting one altered in accordance with the recommendation of the meeting.

The motion was carried.

THE CHAIN.

Mr. CARTEIGHE said before the meeting adjourned he would like to congratulate the President on the handsome chain of office he wore for the first time at an annual meeting. He congratulated Mr. Newsholme as the first President of the Society to wear a chain of office.

The PRESIDENT thanked Mr. Carteighe for his eulogistic references, and said the handsome chain and badge always attracted attention when he wore it at public functions. The other day when at a dinner a gentleman said, "May I take wine with your worship?" mistaking him for a mayor. He did not know whether to take it as a compliment altogether, as he considered the President of the Pharmaceutical Society ranked before a mayor.

Mr. CARTEIGHE: But you took wine with him all the same?

The PRESIDENT: Yes.

Mr. HILLS: In electing any future president we shall not only have to consider his moral and mental qualities, but also his physique. (Laughter.) I shall be quite out of it. (Laughter.)

The members then adjourned to the Examination-hall for refreshments.

COUNCIL ELECTION.

THE result of the poll for the election of seven councillors was declared at the adjourned meeting on May 29 at 3 P.M., the President in the chair. Mr. E. N. BUTT (chairman of the scrutineers) read his report, which showed the following result of the votes:—

Glyn-Jones, W. S.	2,256	Harrington, J. F.	1,756
Harrison, J.	1,985	Southall, A.	1,555
Carteighe, M.	1,963	Campkin, A. S.	1,303
Young, J. Rymer	1,911	Pickering, C. E.	822
Park, C. J.	1,834	Morrison, J. W. T.	783

The number of papers issued was 5,448 (180 fewer than last year). Whilst 2,573 were returned (177 less than last year), 19 of those received were informal, and 13 were received too late, making 2,541 papers to count.

The PRESIDENT declared the first seven elected, and Mr. CARTEIGHE proposed a vote of thanks to the scrutineers, which Mr. PETER BOA seconded.

Mr. BUTT having replied, the meeting terminated.

Chemical Society.

A MEETING was held on Wednesday, May 28, when the chair was taken by Professor Meldola, F.R.S., Vice-President. There was a large gathering of agricultural authorities.

The first paper gave the results of an inquiry instigated by the Board of Agriculture into the poisonous nature of the leaves and young shoots of the yew-tree. The investigation was carried out in the Government laboratories by Dr. Thorpe and Mr. Stubbs, who have been able to confirm the results already obtained by Hilger and Brande and other workers, and like them are inclined to ascribe the poisonous property to an alkaloid

TAXINE.

This substance is amorphous, and gives only amorphous salts; it has the composition $C_{37}H_{52}NO_{10}$, but is probably not homogeneous. No physiological experiments have yet been carried out, so that no definite evidence of its toxic character is available. Professor Dunstan, in discussing this contribution, remarked on the uncertain character of yew-poisoning cases, and the conflicting opinions held by different people with regard to its action, and drew attention to the fact that Mr. Dymond a few years ago did some work on this subject which had to be given up for lack of time; it appears, however, that a crystalline hydrochloride was then obtained. The next paper was read by Dr. Leather on

SOIL SAMPLES,

in which he gave a series of tables illustrating the accuracy, or, as he himself put it, the inaccuracy, with which soil samples for agricultural analyses can be collected by boring with an auger.

SOME SALINE WATERS FROM INDIAN WELLS,

was the title of Dr. Leather's second paper, which gave an account of the solid constituents of some Indian well-waters used for irrigation. The solids were usually from 0·2 to 2 per cent., and consisted largely of sodium chloride. Mr. J. Spiller, in the ensuing discussion, drew attention to an Indian water he analysed in 1865, which contained 8¼ per cent. of total solids, and from which it was possible to prepare a natural washing-soda containing 75 per cent. of real sodium carbonate.

Dr. Hewitt and Mr. Woodford then proceeded to describe some further results they have obtained in the study of fluorescence among compounds derived from eosin.

IT is reported that Mr. M. Petersheim, florist, of Erfurt, Prussia, has received a large order from Windsor Castle for flower and vegetable seeds.

TRANSVAAL PATENTS AND TRADE-MARKS.—The newly proclaimed law reduces the fees on patents from 475*l.* to 49*l.* 10*s.* for the whole term of fourteen years, payable in instalments. In cases of opposition, any objector or applicant residing abroad or having no fixed property within the Transvaal, may be required to give security for costs to the satisfaction of the Commissioner. The principal change as to trade-marks is the very important one enabling applicants to register (*a*) an invented word or words; (*b*) a word or words having no reference to the character or quality of the goods and not being a geographical name. Under the old law words alone could not be registered, so Mr. Reginald W. Barker informs us.

Digitized by Google

THE EMBEZZLEMENT CHARGE.

At the South London Sessions, Newington, on May 23, before Mr. Loveland-Loveland, K.C., Joseph Milne (26), chemist's manager, surrendered to his bail to answer a charge of having feloniously stolen, on April 17, two sums of 15*s.* and 13*s.*, the moneys of his employers, Messrs. Lewis & Burrows (Limited), wholesale and retail druggists, and further with having on May 6 and 7 feloniously stolen the sum of 3*l.* 17*s.* 1*d.*, also the moneys of his employers, whilst acting as manager of their branch at 17 Lavender Hill, S.W. Mr. H. C. Biron (who, with Mr. H. T. Waddy, appeared for the prosecution) detailed at great length the facts of the case, as already reported in our issue of May 17, page 776. Robert Evans, the deputy-manager, repeated his evidence as to the method adopted by the prisoner, himself, and another assistant, named Sharman, in making up the sales.

Mr. Loveland-Loveland: Then you were a party to this strange arrangement?

Witness: Well, yes—in one way.

Mr. Loveland-Loveland: I should say in every way.

In cross-examination by Mr. Edmondson (for the prisoner), he said he was a qualified dispenser, but Milne was not. At the time he wrote to he firm he (witness) was under notice to leave. Prisoner was an exceptionally smart manager, and had worked up the trade of this shop remarkably.

Mr. Loveland-Loveland: How long has this extraordinary balancing practice been going on?

Witness: I could not say.

Mr. Loveland-Loveland: When he told you to make up your till by not entering the sales, why did you not say, "I cannot do that; it would not be right"?

Witness: Well, he was my manager.

Mr. Loveland-Loveland: Is that all you can say to your acquiescing in fraud?

Witness: I acquiesced in one way.

Mr. Loveland-Loveland: Your one way appears to have been all the wrong way.

Harry Richard Sharman, an assistant, gave corroborative evidence of the practice of paying in more than was really taken by borrowing from the "rest" tills and making out false bills for fictitious sales. This was done often. He had confidence in the manager, and did not think it wrong at the time. Evidence having also been given by Mr. Ernest Wm. Gough, the general manager of Messrs. Lewis & Burrows (Limited), Mr. Edmondson, after being overruled by the Bench on a technical objection, argued that the evidence against the prisoner was only that of two persons who were really accomplices, and the law demanded corroboration of accomplices' evidence. Mr. Loveland-Loveland considered there had been corroboration. The prisoner, electing to give evidence, was sworn, and denied he had ever applied any of the company's money to his own use. The money he produced to Mr. Gough had never been outside the premises. His instructions were never to leave the money in the till all night, and that was why it was in the stock-room, hidden from burglars. He held the money back to pay in on the Saturday to look a big day's takings. It now appeared foolish; but he had worked day and night to make the business a success. He admitted that he wrote out bills for goods that were never sold, and added the "rest" money to the actual takings to make better trade appear, and when bills were not made out it was to balance the fictitious bills. He did these things with no dishonest intention. He saw now that it was indiscreet, but never dreamt that the construction would be put upon his actions that had been.

In summing up the case, Mr. Loveland-Loveland said the facts revealed a most remarkable system of making up the accounts by the prisoner and his assistants. So far as Evans and Sharman were concerned, it did not matter whether they were accomplices or not; but he was sure no jury had ever listened to a more extraordinary story. But the question was, Did the prisoner steal the money or not, and was the prisoner's explanation of the whole affair satisfactory so far that he only acted foolishly, and not criminally?

After a very lengthy consideration in private, the jury returned a verdict of not guilty, and the accused was discharged.

Things that Happen—Sometimes.

Improper Dispensing Methods.

The Cork.

A "classy" assistant at York
Always picked out his teeth with a fork;
But he found a successor
When, heedless of presser,
He charmed us by chewing the cork.

Business Changes.

Mr. W. T. Martin, chemist and druggist, Lewes, has opened a branch at Newhaven, Sussex.

Mr. Parker, chemist, has transferred his lease at Terminus Road, Eastbourne, and opened a pharmacy at Clinton Place, Seaford, Sussex.

Mr. John Brown, pharmaceutical chemist, has purchased the business at Berwick-on-Tweed formerly belonging to Mr. John Hutchinson.

Boots (Limited) have acquired the premises at 7 Bank Buildings, Barking Road, East Ham, E., which they will open as soon as alterations are completed.

Mr. William R. Girling, pharmaceutical chemist, has purchased the old-established business formerly carried on by the late Mr. J. T. Maxey at 8 High Street, Wisbech.

Mr. G. W. Smithson, chemist and druggist, formerly with Messrs. Glaisyer & Kemp, Brighton, has purchased the business lately carried on in High Street, Rotherfield, by Mr. G. G. Hornsby.

Mr. R. S. Angus, chemist and druggist, Stonewell, Lancaster, who succeeded a few years ago to the branch business of Mr. W. Wyatt, has found it necessary to remove to more commodious premises adjoining.

In consequence of the Strand Improvement Scheme the business of Messrs. Constantine & Jackson, of Wych Street, Strand, W.C., has been transferred to the City Pharmacy, Chancery Lane, W.C.; and Mr. G. S. Boutall's business in Newcastle Street, W.C., has been closed.

The old-established business of Mr. F. Boor, Fallowfield, Manchester, has been purchased by Mr. R. G. Edwards, pharmaceutical chemist, who proposes transferring the chemist's portion of the business to his establishment opposite, 269 Wilmslow Road, Fallowfield.

Harley's Ear-lotion.—In October last the incorrigible rascal Richards, *alias* Kemp, *alias* Dalesford, *alias* James Harley, was sentenced at the Old Bailey to four months' imprisonment, in conjunction with the still bigger rascal "Dr." Nicholson, of "free ear-drum" fame, with whom he had been working for many years. He has therefore only been out of gaol two or three months, but he is already at his old game again, and as "James Harley," Secretary of the Audiophone Company, Stockdale Road, Battersea Park, S.W., he is now sending round to the Press advertisements offering "to deaf people" Harley's Ear-lotion, of which "one bottle will cure any ordinary case."—*Truth.*

Observations and Reflections.

By XRAYSER.

The Dentists Act Case at Cardiff

resulted in a judgment which if maintained would widely extend the scope of that Act, but which I think can be easily shown to be contrary to the express terms of the statute. The defendant, Mr. Malins, had apparently carefully made it clear that he was a chemist, and not a registered dentist; he used none of the expressly protected titles; and the Stipendiary himself agreed promptly with the contention put forward on behalf of the defendant that the Act does not prohibit anybody from undertaking dental work of any kind, or, as it was expressed, "carrying on the business of a dentist." That is obvious, he said. That the Act recognises the right of unregistered persons "to perform dental operations and give dental attendance and advice" is made quite evident by Section 5, which provides that no unregistered person shall recover any fee or charge in any court for such service. That disability is the only legal result which follows dental practice by an unregistered person. But the dentists want to get more than this out of the Act. They point out that Section 3 says the unregistered person may not only not use certain specified titles, but that neither may he take or use "any name, title, addition, or description implying that he is registered under this Act or that he is a person specially qualified to practise dentistry." Whereupon the Cardiff Stipendiary properly asks,

What Does "Specially Qualified" Mean?

The Act itself contains the answer, but the simple process of reading the Act does not seem to have suggested itself to anyone concerned in the case. The preamble reads "Whereas it is expedient that provision be made for the registration of persons *specially qualified* to practise as dentists in the United Kingdom," &c. One object of the Act, therefore, is to register persons specially qualified. Now turn to Section 6. Therein the persons are indicated who are "entitled to be registered under this Act." They and they only are "specially qualified." The qualification is specific, specified, special. You may be better or worse qualified than the Act stipulates; but you cannot be registered unless you are qualified in the special manner indicated. Take this test: Suppose Mr. Malins could prove to a competent authority that he was all he claimed to be and more; that he could fit teeth perfectly, and could extract them so that the victim enjoyed the operation. Would the authorities register him? Not at all. They would say "You may be marvellously well qualified, most highly qualified, but you are not 'specially qualified' within the meaning of the Act." It will not do for the dentists to fit one meaning to the term in the preamble of the Act, and another to the same term in the penal section.

The Genius of the Speciality Men

was the most striking feature of the Medical Exhibition held at the Queen's Hall last week. The neurasthenia, anæmia, and adynamia from which I gather we are all suffering must be the consequence of the ignorance of our ancestors. They did not know how essential proteids, hæmoglobin, iodine, phosphates, and choline were to their system, and they went on feeding themselves on beef and beer and suet-puddings, munching up arsenic and bacteria as necessary concomitants. They had no prettily capped bottle of stuff at hand "to antagonise specific pathogenic germs," and had only to rely on an occasional vomit, or, perhaps, on "Nature's Best Restorative," which the front page of the Exhibition catalogue assures us is still "Pure Old Brandy." This is some of the physiological learning I collected during a stroll round the exhibits. I should have learned a good deal more if it had not been for the band above me, the purpose of which seemed to be to interfere with the fluency of the gentlemen in charge. It may have been a very good band, but it certainly checked business.

The Somerset House People

are very nice as officials and tax-collectors, but it is a little risky to treat them as ordinary human beings. Mr. West possibly thought that if they regarded the antikamnia tablets as a component part of the prescription he sent them, they would tell him so. To my thinking they were, and I should have dispensed them from an unstamped package with a light heart and a clear conscience. Patients would gaze with some amazement, I fancy, on their prescribed medicine if it came to them with a revenue-stamp stuck round it, and I should feel it my duty to save them and the prescriber from that annoyance. But to ask "the Department" whether the 1½*d.* was necessary or not in such a case, is like asking a cabman whether his fare is 1*s.* or 1*s.* 6*d.*

In One of the Entrances

to the great Revenue shop in the Strand a slate is hung up, on the frame of which the letters C.S.S.A. are branded, and all over which are inscribed such notes as these: Brown 16, Robinson 25, Simpson 33, and so on. Passing through, the other day, in order to contribute towards the cost of the war, I noticed this slate, and asked the janitor what it meant. He explained that the several gents who had written their names and the numbers of their rooms on the slates had orders for the Civil Service Supply Association, and that the man from that shop would call and fetch these shortly, and that the goods so ordered would be delivered before 4. I asked if I could have a similar slate hung up there and send daily for orders, but obviously my friend did not regard that suggestion as serious. It seemed to him the most natural thing in the world that the shop in which his "gents" had shares should make use of the national walls for their advertisements, while we who pay those gents are to content ourselves with that privilege.

Mr. Braxton Hicks

was certainly the liveliest of London coroners. He appeared to enjoy the work of his somewhat lugubrious office, and was almost always on good terms with his juries. He was not a prejudiced man at all. He had, as he once told me, hereditary sympathies with doctors, but I do not remember that he was ever unreasonably bitter against the prescribing chemist. By his action in promoting the Wheeldon case, which increased the pecuniary value of the pharmaceutical certificate by nearly 50 per cent., he did a great service to qualified chemists, and I know that he fully appreciated the action of the *C. & D.* in forcing that case into the High Court. I urged him once to a carbolic-acid crusade, but he had cheap lamps on his mind at that time, and would not be drawn off to any other object.

FAITH-HEALING is regarded by the Swiss authorities as an infringement of the medical laws, and two faith-healing experts in Zurich have recently been fined.

DR. CLAPTON, in "The Life of St. Luke," objects to physicians at the present day being called disciples of Æsculapius because, he says, the Asclepiades of Pergamos were quacks. Very likely they were, says the *Lancet*, but "so far as we know Æsculapius was not, and the treatment as carried out at his chief shrine Epidauros, was quite sound."

Editorial Comments.

A Family Party.

THIS is, we think, the appropriate title for the annual meeting of the Pharmaceutical Society held in London this week. The same old faces, with, alas! a few vacant chairs; the old speeches, and perfect harmony were there. Were it not that inveterate custom dictates that something should

Digitized by Google

be said in this column in regard to the meeting, these few sentences might as well not be written. The President of the Society is, in part at least, responsible for the uneventfulness of the meeting. He rushes business along peacefully, with just sufficient pause to allow those who want to speak to get up, yet not enough to enable them to finish off mentally the first phrases of what they want to say. Consequently the listeners on Wednesday had the painful experience of hearing one or two speeches which were too obviously not the true reflection of the interior light, and humour degenerated to a miserable pun or two. No wonder the veteran and erudite Mr. Hyslop bewailed that the gaps in the old guard are not filled by drafts from the juvenility. We can promise any young member of the Society who has practised in local literary societies an undreamt-of pharmaceutical reputation for very little trouble and an annual speech of not more than five minutes' duration. The path to greatness is straight enough. One should make a point of reading the reports of the Council proceedings monthly, note matters of importance and their development. Contrast what the Irish Council does, and do not overlook the topics of provincial associations, nor those which otherwise agitate British pharmacy. Con these annotations with the Council's report on the year's work, and select one or, at the most, two topics for remark. Write a speech of a quarter-of-an-hour's duration on these, beginning with a quotation from Emerson, or a compliment to the President, working in two or three genuine witticisms (stolen if need be), some sound criticism, and finish either with a line from Horace or something obscure but good from an English poet. Cut the speech down to half, read it to a friend and halve it again according to his advice. Learn to deliver it well, go to Bloomsbury with a friend who will supply pre-arranged interjections for the appropriate repartee, and when the speech is fired off the reputation of the speaker will be made. There are some who could do it without all this preparation. Anyway, we gather from Wednesday's proceedings that a few successful young orators and a little more money are the present chief needs of the Pharmaceutical Society.

The Opium Outlook.

UP to within ten days ago the news regarding the forthcoming opium-crop in Turkey had been of an exceptionally favourable character, the probable output being estimated by several authorities in Smyrna at from 10,000 to 11,000 cases. As is often the case, however, with opium, adverse weather conditions just prior to collection has a considerable influence on the estimates. It is so on the present occasion, as according to the latest reports received in London it appears that hot southerly winds have lately prevailed, and no rain has fallen in many of the districts where it was needed to bring the crop to full maturity. This has somewhat unsettled the market in Smyrna, and it is said that interior dealers have instructed their Smyrna agents to hold for higher prices. To give colour to their convictions, the same dealers have given orders to buy for their account, and this little speculation on the part of the natives has led to an advance of quite 6*d.* per lb. locally. Large buyers have naturally withdrawn from the market, and the higher range of figures now asked is only being paid by shippers who have pressing engagements. The advance in Smyrna is not likely to last, and it is quite expected that when the weather alters an easier market will set in. When it is considered that the stock of old opium in Turkey is large—viz., about 2,500 cases—and that the consuming markets have been very dull for the past six months, the present advance would appear to be ill-advised, and an early reaction may be looked for. From a reliable source we are assured that the harvesting has not been interrupted, and the damage done is trifling in comparison with the very large crop. There has been a steady decline in the London opium-market, in conjunction with Smyrna and other markets, for several months. An important factor in the situation, and one which has helped to bring down prices during the past season is the abundant supply of Persian opium of good quality. The opening prices for the new crop of talequale in Smyrna is expected to be about 6*s.* 6*d.* per lb., and old crop will be worth fully 6*d.* per lb. more from a manufacturer's point of view, as fresh opium contains fully 3 to 4 per cent. more moisture than old, well-seasoned stuff, and, besides, poorer qualities of new crop are generally sold first. In face of the present large crop opium is likely to remain cheap for some time to come, as all the consuming markets appear to be well stocked.

Poisoning in 1900.

THE annual tabulation of mortality (albeit nearly two years late) issued by the Registrar-General, and just to hand, shows that the deaths registered in England and Wales during the year 1900 numbered 587,830, and were in the proportion of 18·2 per 1,000 of the population. According to the report urinary diseases accounted for a mortality equal to a rate of 618 per million living among males, and 378 per million among females. At ages below 35 the mortality from these diseases is inconsiderable, but above that age urinary diseases in the aggregate become steadily more fatal as age advances. It is noteworthy that at almost all periods of life, and especially at advanced ages, males die much more rapidly from these diseases than females. Of the total number of deaths 91·81 per cent. were certified by registered medical practitioners. Inquests were held on 6·27 per cent., while the causes of the remaining 1·92 per cent. (representing 11,257 deaths) were uncertified. Uncertified deaths during 1900 showed an increase of 0·07 per cent. The total number of deaths from poisons and poisonous vapours was 1,192, and the details are set forth in the following table:—

	Negligence and Accidents		Suicides	
	Male	Female	Male	Female

Kind not stated	23	9	26	11

A cursory analysis of the list will show that the poisons sold by chemists are responsible for only a small proportion of the deaths. The scheduled poisons caused 339 deaths, while unscheduled articles that could be obtained anywhere were responsible for 370 deaths; anæsthetics used by doctors and dentists caused fatalities in 116 cases, while 237 were killed by improper food, noxious gases, and lead or industrial poisoning. The scheduling of carbolic acid took place in September of 1900, and it is interesting to note that although only three months are included, the fatalities from that once-favourite poison show a decrease of 42 on the previous year. The figures for ammonia and hydrochloric acid show that these were favourite media of destruction, as they still are. The "arsenical-beer" figures recall the beginning of the arsenic scare, and it is notable that the Registrar-General's figures are in accordance with medical experience, which is to the effect that women are more prone to succumb to arsenical neuritis than are men.

UNLIMITED.

[In our report of the Medical Exhibition in last week's issue Messrs. S. Maw, Son & Sons were referred to as "S. Maw, Son & Sons (Limited)," the writer having unconsciously copied the Exhibition-catalogue style of the world-known firm (page 796).]

When firms historic grow and thrive
They usually have imitations.
But, howsoe'er men may contrive,
They'll find Maws have no limitations.

COMPOUNDING IN IRELAND.

The failure of the Pharmaceutical Society of Ireland to convince the Dublin Magistrate that compounding *per se* by persons who are not pharmaceutical chemists is not a surprise, and was, indeed, almost a foregone conclusion. Compounding and sale constitute the offence, and we are glad to learn that the Society authorities are to take early steps to have this consideration placed before the legal authorities. It may, therefore, be taken as still *sub judice*, and for that reason it is not politic to discuss the matter more fully at this stage.

VOLCANIC DUST.

By the last West Indian mail we received from Mr. W. J. Knight, chemist, Barbados, a sample of volcanic dust which fell on that island on May 7. It is exactly like powdered pumice, and has a sulphurous odour. In chemical composition it does not differ, as far as we can ascertain, from other volcanic dust. It consists of silica and magnetic oxide of iron. Under the microscope the black, drab, white, and transparent particles are plainly discernible, and by elutriation these can be roughly separated. A similar dust-storm was experienced in 1812, and larger crops are reported to have been gathered in the following year, but as far as we can judge the dust which fell this month does not contain any elements likely to benefit the soil. Alkaline felspar is sometimes used as a manure, but the silica in the sample we examined is not accompanied by more than traces of sodium and potassium. Mr. Knight says, in a letter which accompanies the sample: "St. Vincent is about ninety miles to the westward of Barbados, and Martinique about 130 to the north-west, and it is perhaps doubtful from which of these the 'dust' came; probably the latter, as the eruption took place a couple of days before, while the St. Vincent explosion occurred only a couple of hours before the first appearance on our island." Mr. Blenkinsop (May & Baker, Limited) also received a sample from a friend in Barbados, and it is of the same character. The rapid transmission of the dust from the volcanoes to Barbados is remarkable.

A GERMAN RETORT.

The following is a translation of a communication to the *Pharmaceutische Zeitung*:—

I beg to call the attention of the editor to the article entitled "German Thoroughness," which appeared in The Chemist and Druggist, May 17. The Chemist and Druggist refers to a paper which was published in No. 3 of the *Pharm. Ztg.*, by Dr. C. R. Böhm, on "Cerium Oxalicum Medicinale," to the effect that Dr. Böhm ignored therein the work of Power and Sheddon on cerium oxalicum. I also consider the passage in Dr. Böhm's paper that "most chemists are unacquainted with the qualities and methods of preparation" [of cerium oxalicum] to be unfounded. Dr. Böhm is, further, not quite without reason, reproached for the want of scientific proofs of his statements based on his own experiments. The complaints made in the same article of Dr. Kobert not having mentioned Dr. Wild's communication in his paper on the physiological effect of ipecacuanha alkaloids appear to me to be without foundation, when one considers the exact and scientific work of Dr. Kobert and the unimportance of that of Dr. Wild.

The correspondent quoted our remarks about Dr. Kobert being a corresponding member of the Pharmaceutical Society

Digitized by Google

(see page 772), and "Wir kommen auf den Artikel zurück," says the editor. Our colleague does so with a vengeance in the issue of May 24, taking up the cudgels especially on behalf of Dr. Kobert, and saying that we charged the Rostock scientist with ignorance of the literature on the subject, or with having intentionally ignored the same. In saying "This is what Dr. Wild said, but we should not be surprised to find Dr. Kobert get all the credit on the Continent," we made no such charge, but said that we hesitated "to regard absence of reference to Dr. Wild's work in the paper before us as indicating that he (Dr. Kobert) is not acquainted with or has ignored it." That hesitation is quite justified by what the *Pharmaceutische Zeitung* now says — viz., "That in the lecture of Dr. Siedler, a few lines of which only were contributed by Professor Kobert, the Wild papers were quite expressly mentioned." Our Berlin colleague also defends Dr. Böhm, and chides us in the most elegant *tu quoque* style, *e.g.*:—

> The paper has evidently forgotten the *Pharmaceutische Zeitung*, which is read with such great attention on the Thames, which appears all the more ungrateful, as it was in this very German paper that an exhaustive paper on these works taken from the information contained in THE CHEMIST AND DRUGGIST was published (*Pharmaceutische Zeitung*, 1900, No. 53). What remains of English thoroughness here?

Need we assure our Berlin friend that our appreciation of the *Pharmaceutische Zeitung* is heightened by the patriotic manner in which it sticks up for German thoroughness.

CORONATION HOLIDAYS.

The Manufacturers' Section of the London Chamber of Commerce has made an inquiry within the metropolitan area in regard to what the proprietors of factories and workshops are to do the week of the coronation of the King, and from the replies the following statement has been prepared:—

> That 80 per cent. are in favour, or intimate their intention, of closing their works on the three days, June 26, 27, and 28;
> 16 per cent. propose to close on two days;
> 6 per cent. propose to close on one day only;
> 10 per cent. desire to work on June 28; and in a large number of cases it is intended to hold the annual beanfeast on that day.

As regards payment during these holidays to workpeople employed by the day or hour (and in a few instances piece-workers also) the replies show:—

> That 13 per cent. will pay full wages on the 26th, 27th, and 28th (2½ days);
> 20 per cent. will pay two days' wages;
> 26 per cent. will pay one day's wages;
> 2 per cent. propose to pay half wages on 2½ days;
> 28 per cent. will make no payment when closed during the period of the Coronation holidays.

Following upon this inquiry, a memorial to the Home Secretary has been prepared praying that overtime should be allowed where necessary on Saturday, June 21, and on four, instead of three, evenings the same week in those trades where overtime is already permitted under the Act of 1901, and also that overtime should be allowed for two weeks preceding the Coronation holidays in those trades where it is not allowed. If this is done, it is expected that practically all factories and workshops will be closed on June 26, 27, and 28. We understand that most of the chemical-factories are to be closed three days

WINE-LICENCES.

The Standing Committee on Trade of the House of Commons had up to the Whitsuntide recess progressed with the Licensing Bill as far as Clause 19, and a report of the amendments so far was issued with the Parliamentary papers this week. Clause 8 is of special interest to chemists and druggists who hold off wine-licences. It is in the following terms:—

(1) Notwithstanding anything contained in section seventy-three of the Licensing Act, 1872, a justices' licence shall be required in the case of every Excise licence under which intoxicating liquor may be sold by retail to be consumed off the premises,

Provided that this subsection shall not apply to any Excise licence taken out by a spirit-dealer or wine-dealer for premises which are exclusively used for the sale of intoxicating liquors, and which have no internal communication with the premises of any person who is carrying on any other trade or business.

(2) Notwithstanding anything contained in section eight of the Wine and Beerhouse Act, 1869, and in sections sixty-nine and seventy-four of the Licensing Act, 1872, the Licensing Justices shall be at liberty in their free and unqualified discretion, either to refuse a licence for the sale of beer, wine, spirits, liqueurs, sweets, or cider by retail to be consumed off the premises, on any grounds appearing to them sufficient, or to grant a licence to such persons as they deem fit and proper.

(3) Any application for the grant of a licence, to which this section applies, in respect of any premises on which the applicant was, at the commencement of this Act, authorised to sell beer, wine, spirits, liqueurs, sweets, or cider by retail to be consumed off the premises, shall be deemed to be an application for the renewal of a licence, and shall be subject to the provisions of the Licensing Acts relating to the renewal of licences.

As has been previously pointed out in THE CHEMIST AND DRUGGIST, subsection (2) practically repeals the present law which makes it obligatory upon magistrates to grant off wine-licences except on one of the four grounds specified in the 1869 Act (see THE CHEMISTS' AND DRUGGISTS' DIARY, page 284). The new Bill also proposes to fix the annual licensing meetings for the first fourteen days of February in each year, instead of September.

NON-INFLAMMABLE FLANNELETTE.

The specification for the process of overcoming the tendency of flannelette to take fire when brought in contact with flame, to which reference was made in the *C. & D.*, March 22, page 465, has just been published. The discovery, which has been patented by Dr. W. H. Perkin, F.R.S., Manchester, and Messrs. Whipp Brothers & Tod (Limited), consists in treating cotton with a solution of a soluble tungstate, a soluble aluminium salt, and an organic acid, the acid being subsequently removed. Four examples of the fireproofing-solution are given, the first one being made as follows:—

> One hundred parts of an aluminium-sulphocyanide solution (33° T.) are mixed with 25 parts of acetic-acid solution (11° T.), and then 200 parts of sodium tungstate (56° T.) are added in small quantities at a time, and well stirred, so that any precipitate which may form dissolves again.

The fabrics are soaked with the solution, squeezed, and heated to remove the organic acid, and cause the tungstate precipitate to be formed in the fibre.

BILTONG AS A FOOD.

Professor W. D. Halliburton has recently superintended the analysis of South African biltong, prepared by sun drying the flesh of a kind of buck, and when required for use is scraped with a knife or grated on a nutmeg-grater. The effectiveness of sun-drying is shown from the small percentage of water revealed on an analysis of biltong. The ash shows phosphates in greatest proportion, with smaller quantities of chlorides and sulphates. The full analysis of the organic solids is shown in the following table:—

Water	19·410	per cent.
Solids	80·590	,,
Inorganic solids	6·592	,,
Organic solids	73·998	,,
Proteids	65·866	,,
Fat (ether extract)	5·140	,,
Glycogen	0·133	,,
Sugar	0·090	,,
Extractives (by difference)	2·769	,,

These figures show that, chemically, biltong is a valuable food, the large percentage of proteids pointing especially to a high nutritive value.

Bismuth Citrate and its Liquor.

By William Duncan, F.C.S., Pharmaceutical Chemist.

SINCE the introduction of liquor bismuthi, many processes have been published for the preparation of an ammonia-soluble bismuth citrate, from which a liquor might easily and quickly be made; but so far as my experience goes they are all either tedious, wasteful, or fail to produce a soluble citrate. It is an easy, though slow, method to prepare a liquor directly from freshly precipitated bismuth hydroxide, citric acid, and ammonia, but the product, unless containing ammonium citrate, does not keep well. Undoubtedly, therefore, the production of a pure citrate is a thing to be desired.

In 1876 Rother published a method, ultimately adopted by the U.S. Pharmacopœia, which consisted in boiling bismuth subnitrate with a strong aqueous solution of citric acid:—

One hundred parts of bismuth subnitrate are boiled with 70 parts of citric acid in 400 parts of water for fifteen minutes, or until a drop of the mixture yields a clear solution with ammonia. Then add 500 parts of distilled water, allow the suspended matter to deposit, and wash with water till the washings are tasteless, and finally dry.

The stimulating effect of repeated failures on my part to obtain a pure citrate by this method led me to try to find an explanation and a remedy. It is true an ammonia-soluble bismuth citrate is obtained in the first instance by Rother's process, but the subsequent washing ruins the product by contaminating it with oxysalt. When molecular proportions of bismuth subnitrate and citric acid are boiled together, bismuth citrate is formed and nitric acid liberated. Now, although bismuth citrate is insoluble in water, it is readily so in dilute nitric acid, with the result that any attempt to wash the precipitate causes precipitation of this dissolved salt, and the product consequently gets ruined. I find, however, that if sufficient alkali be added to neutralise the free nitric acid, the process gives an ammonia soluble citrate. This neutralising must be done with caution as, if the slightest excess beyond that necessary to neutralise the nitric acid be added, great loss of bismuth citrate results from the formation of a soluble sodium salt. This is especially the case at high temperatures, so it is better to let the mixture cool before adding the alkali, and then wash. If we were sure that the formula for bismuth subnitrate, $BiONO_3H_2O$, is correct, we would have little difficulty in getting a soluble citrate; but, as it is, we are between two evils. If too little citric acid be used, our product is contaminated with undecomposed subnitrate. On the other hand, if too much, we run the risk of loss in the wash liquor. But as the latter is the lesser evil, I prefer to use more citric acid than theory requires, and find I get a perfectly soluble citrate, even though I do not neutralise with alkali before washing.

Recalling some former work carried out to explain the difference in action between bismuth subnitrate and alkaline carbonates and bicarbonates, I reasoned that it should be unnecessary to *boil* the nitrate and acid to get the citrate; for if bismuth subnitrate be soluble in water, no matter how slightly, the reaction should be completed in the cold in a reasonable time, as the liberated nitric acid would get gradually stronger, carrying more bismuth into solution, and thus give a greater chance to the citric acid to form the citrate. On putting this theory to the test, I found it completely successful, and I have repeatedly made the salt in the following manner, the quantities taken being in accordance with the equation—

$$BiONO_3H_2O + H_3C_6H_5O_7H_2O + NaHCO_3 = BiC_6H_5O_7 + NaNO_3 + 4H_2O + CO_2.$$

That is, 302·64 parts bismuth subnitrate, 208·5 of citric acid, and 83·43 of sodium bicarbonate. The citric acid is powdered, mixed in a mortar with the bismuth, and made into a cream with a sufficient quantity of water, and the whole set aside for two hours, occasionally stirring. When the action is complete (known by dropping a little of the creamy paste into ammonia and seeing if a clear solution is obtained), the alkali is cautiously added, and the citrate finally washed. A similar method is adopted when using excess of citric acid, but omitting the addition of alkali. The reaction is usually completed in half-an-hour, but I give it two hours, the time varying with the quantity of water originally used to form the cream. Eight hundred grains of this citrate, dissolved in a sufficiency of ammonia solution, diluted with water to 1 pint and then filtered, gives B.P. liquor bismuthi: or, at least, what I believe the B.P. intends liquor bismuthi to be.

So-called bismuth citrate is an acid, not a salt, analogous to antimonyl-tartaric acid, and, like it, forms salts analogous to tartar-emetic. That this is so is shown by its general behaviour. It combines with alkaline hydroxides to form soluble salts, which salts are precipitated by barium nitrate. This precipitate, after washing, contains barium, bismuth, and citric acid, and if digested with ammonium sulphate to remove the barium, ammonium bismuthyl-citrate is again formed, and can be washed out with water. It decomposes alkaline carbonates and bicarbonates in cold water, readily on heating, with effervescence, not from forming a double citrate in the ordinary sense, for if it were so bismuth hydroxide would be separated during the reaction, which does not occur. I have come to this conclusion from a general study of the deportment of the compound. From gravimetric and volumetric determinations I believe the compound is citric acid, with a hydrogen atom of the carboxyl group replaced by bismuthyl BiO, and that it plays the part of a dibasic acid, its formula being $C_3H_4OH(COOH)_2COOBiO$ or $H_2BiOC_6H_5O_7$. If this be so we can readily understand why freshly precipitated bismuth hydroxide liberates ammonia from neutral ammonium citrate, and why the amount of ammonia required to form a clear solution with the salt never corresponds to that required to form the salt $BiC_6H_5O_7(NH_4)_2C_6H_5O_7$ or $(NH_4)_2BiC_6H_5O_7$, but in reality corresponds to a salt $(NH_4)_2BiOC_6H_5O_7$. Many other facts might be given to prove this statement, but these may be reserved for the present.

The preparation of bismuth citrate necessarily entails time and labour, no matter how it is done. It is decomposed by persistent boiling or continuous washing, and if dried till it ceases to lose weight becomes bismuth citrate—$BiC_6H_5O_7$—from loss of a molecule of *combined* water, not *absorbed*, as the British Pharmacopœia, 1885, puts it. In this dried form it refuses to dissolve in ammonia, but in time by assumption of water will revert to the acid—$H_2BiOC_6H_5O_7$—and regain the power of combining with bases and forming soluble salts with the alkalies. This being so, I think it a mistake to attempt to make the liquor in the way that it has generally been done, and I believe the following process for liquor bismuthi is to be preferred over all such hitherto published where bismuth citrate is first prepared, washed, &c.:—

Bismuth subnitrate	...	...	628·75 gr.
Citric acid	...	...	571·68 gr.
Ammonia solution	...	...	a sufficiency
Distilled water to	...	...	20 fl. oz.

Mix the bismuth subnitrate and citric acid in a mortar with 1½ oz. of water; set aside, occasionally stirring for two hours, or until a little of the mixture yields with ammonia a clear solution. Then add a sufficient quantity of ammonia solution to dissolve, dilute with distilled water to 20 oz., and filter.

This gives a liquor containing ammonium bismuthyl-citrate equivalent to 3 gr. of the oxide—Bi_2O_3—or 5 gr. of

Digitized by Google

the citrate—$BiO_6H_3O_7$—and 1 gr. ammonium citrate in each fluid drachm, the latter improving the stability of the preparation. The preparation also contains about 1 gr. of ammonium nitrate in a drachm, the presence of which has no deleterious effect on the liquor medicinally or chemically, and the getting rid of which necessitates the preparation of a nitrate-free citrate first, greatly increasing the labour and cost without any corresponding advantage. Those who prefer a concentrated liquor can make such in a similar way, as ammonium bismuthyl-citrate is a very soluble salt, and those who prefer alcohol as a preservative can add 1 oz. or 2 oz. to each pint.

The Royal Dispensary, Edinburgh.

Pharmaceutical Veterans.

A Link in Chloroform Anæsthesia.

THE last issue of *Meyer Brothers' Druggist* which we received bears on the cover the portrait of a reverend-looking old gentleman, which we learn from the first article in the number is that of Mr. George McPherson, a native of Melvildeirg, Gairloch, where he was born in 1826. Before he reached his majority McPherson was engaged in the old Edinburgh Infirmary as an assistant in the dispensary, and was there in 1847, when Sir James Y. Simpson first used chloroform. Mr. McPherson is still hale and hearty, and lives at the Blue Island, Ill., a suburb of Chicago. He went out to Canada in 1848, and, after eight years' experience there, proceeded to Chicago, where he was employed by Sawyer, Paige & Co. as a manufacturer of chemicals. He went into business for himself in 1860, and did well until the great fire of 1874, when he disappeared. "He was lately unearthed," says our contemporary, "by the Veteran Druggists' Association," and, among many other reminiscences, told how Simpson introduced chloroform. From this we quote the following. There are points in the story not quite in accordance with the previously accepted records, and these we have annotated in the larger type :—

MR. GEORGE MCPHERSON.

It was called chloroform in Edinburgh at that time in common language, but according to the nomenclature that then obtained it was known as "terchloride of formyle."

The story told by the medical students who resided in the infirmary and ate at the same table with the assistant apothecaries [I.] was, that Professor Simpson procured various chemicals, among them chloroform (which, it is said, was known to chemists 150 years [II.]), and invited two of his students to his room to join him in his experiments. While inhaling chloroform the three fell off their chairs on to the floor one after the other [III.]. Soon thereafter Professor Simpson reported his discovery. McPherson saw the first operation that was performed publicly before the medical profession and medical students of Edinburgh. It was performed in the operating-room of the Royal Infirmary, he thinks, in the latter half of November, 1847 [IV.].

The amphitheatre was well filled with perhaps five or six hundred spectators. McPherson sat as far away as he possibly could. The man, after having inhaled the chloroform, was placed face down on the operating-table, and when Professor Syme inserted the knife to cut out the tumour . . . McPherson had to retire.

A few days afterwards a lady was taken to the infirmary from a railroad accident, with a fractured thigh-bone. McPherson was ashamed of his chickenheartedness at the first operation, and took a place with the assistant medical students within the railing. When the body was placed in position, Professor Miller looked at the faces around him and said to McPherson, "will you go and get me a blanket?" That in place, and the chloroform administered, the operating-professor looked up again and said to McPherson, "will you hold this leg?" The leg was held, and in a few moments the holder had it to himself.

Alexander McDougal, treasurer, superintendent, and apothecary of the Royal Infirmary [V.] was an enthusiastic chemist, and made every chemical that could be prepared. He had a large room in the infirmary, closely shelved all around, filled with small bottles containing samples of the products of his skill. Of course he must make chloroform, and he chose McPherson to assist him and to regulate the temperature during the progress of the distillation.

I. There was only one apothecary or dispenser at the Edinburgh Infirmary in those days, but since the new infirmary was opened, a quarter of a century ago, a chief and an assistant dispenser are responsible for the pharmaceutical work. They have helpers to assist them. "Eating at the same table" with the resident medical staff is no longer indulged in.

II. Fifteen years is nearer the mark. Liebig and Soubeiran discovered chloroform in 1831, but an American named Samuel Guthrie is said to have been before them by a day or two. The late Mr. David Waldie told Simpson about chloroform, and promised to send him some, "but it did not come, and Duncan & Flockhart supplied it." (Simpson's Life in "Famous Scots Series," page 56). It is mentioned later in the same work that "Mr. Hunter, of Duncan & Flockhart, had to work hard to manufacture sufficient to supply the demand from 52 Queen Street" (Simpson's house). Mr. James Buchanan, the senior partner of Messrs. Duncan, Flockhart & Co.'s, in a recent letter to us says: "The first 2 oz. of chloroform which Sir J. Simpson used was made by Mr. Hunter, a partner of our firm, in a wooden cask, and he had it ready at two o'clock in the morning. I saw and smelt it in the morning, and thought it was like essence of apples. It was 'terchloride of formyle' then, and Sir J. Simpson coined the word 'chloroform' for it. It was sold to medical men at 2*s.* 6*d.* per drachm in 1847."

III. The two students whom Mr. McPherson had in mind were Dr. George Keith and the late Dr. Matthews Duncan, Simpson's assistants. In a letter to Mr. Waldie (November 4, 1847), Simpson said :—

I am sure you will be delighted to see part of the good results of our hasty conversation. . . . The first night we took it, Dr. Duncan, Dr. Keith, and I, all tried it simultaneously, and were all "under the table" in a minute or two.

IV. Mr. J. D. Morrison, dentist, now of Aberdour, was the subject. He was a friend of Simpson's, and in the latter's announcement of the discovery on November 10, 1847, the first operation performed under chloroform is mentioned, and a letter of Mr. Morrison's is printed therein. (See *C. & D.*, September 27, 1890, page 453, and October 4, 1890, page 487.)

V. Mr. Buchanan well remembers Mr. McDougall, who was Treasurer of the Royal Infirmary for many years, but he never thought Mr. McDougall was a chemist, so that on this point Mr. McPherson's memory may have betrayed him.

These reminiscences by Mr. McPherson are of peculiar interest, for, saving Mr. Buchanan and him, there are few on the pharmaceutical side who remain to tell the story of those early and exciting days.

A TWELFTH-CENTURY DISPENSARY.

Sketched from a reproduction of a MS. at Trinity College, Cambridge, printed in "Social England," and published by Cassell & Co. (Limited).

Digitized by Google

Our Town Traveller.

THE continuance of wintry weather at a time o' year usually associated with balmy spring, when—

> We joyed to see strange sheens
> Leap from quaint leaves in shade;
> A secret light of greens
> They'd for their pleasure made

—suggested a pessimistic opening which the Editor has deleted, for the sudden and long-looked-for advent of summer has justified the note of cheery optimism as to the future (the present then was poor) which prevailed in the retail trade during the cold weather of last week. Then, in spite of the cold, the chemists' windows had already donned their summer garb, and while the outfitters displayed to shivering over-coated pedestrians stocks of summer waistcoats and light underwear, the members of our own calling were not behind in their tempting, though at the time unseasonable, exhibitions of soaps, perfumery, and summer medicines. "Coronation" is now in the air, and the proximity of the great national event asserts itself in the form of "Coronation" bouquets, sachets, soaps, &c., which are largely in evidence. The most striking Coronation attraction I have seen is a huge honeycomb sponge in the form of a circle about 3 feet diameter, exhibited in the window of Mr. Michael E. Foster, of Bishopsgate Street, E.C.

Mr. G. S. Boutall in Ludgate Hill called my attention to his attractive window-display of soaps by Messrs. Armour, of beef-juice fame. From beef to soap seems at first sight a far cry, but when we remember that beef-fat is a by-product in the stock-yard industry, the connection becomes intelligible. The chief soap in this display is "Coronation Rose," tastefully put up in boxes of three tablets, retailing at 1*s.* 6*d.* per box, or 6*d.* per tablet.

The windows of Messrs. S. F. Goss (Limited) in Regent Street show to great advantage. The various sections of the Regent Street frontage are each devoted to some special toilet line, grouped with an eye to classification, effect, and colour, which is very pleasing. One section shows soap-bowls, loofahs, and bath-brushes; another, smelling-bottles, sprays, and toilet glassware generally; while a third gives a display of violet perfumes and soaps with a prevailing colour suggestive of the perfume.

Several chemists whose shops are on the line of route of the Coronation procession have cards in their windows announcing the fact that they have seats to let. Business in this line is not very brisk as a rule, and several shop-owners told me that they have decided not to place their windows at the disposal of the public at all, and thus save much worry, trouble, and possible damage to stock and fixtures. The usual window-displays of summer salines are very common. In connection with these there is a novel showcard in the window of Mr. Jones, Southampton Row. It represents a young man and a maiden, and runs thus:—

> In the spring a young man's fancy lightly turns to thoughts of love, but if his love-making is to be successful, he must look his best and keep his wits about him. JONES'S HEALTH SALINE enables him to do this by clearing the skin and cooling the blood, &c., &c.

Water-softeners are exhibited in a number of chemists' windows at present. Undoubtedly the most attractive of these is "Bathodora" (Crown Perfumery Company), which makes a most elegant article for window-display. The design of the cartons is in itself artistic, while the various perfumes as represented by their respective tints (violet, rose, &c.) add a scheme of colour to a window containing it which is both pleasing and refreshing.

WAR-DRUGS.

"As peace seems so near, it would not be embarrassing the Government if you were to get some particulars of the source of the soldiers' medicines," soliloquised the Editor to me one afternoon this week. It at once occurred to me that I could not do better than call on Messrs. Davy, Hill & Co., Park Street, S.E., as they held the War Office drug-contract during the greater part of the war. I found Mr. C. A. Hill willing to take me over the premises, and in his company spent an extremely interesting two hours. In 1896 the two firms of Davy, Yates & Hicks and A. S. Hill & Son amalgamated, and now carry on business under the title of Davy, Hill & Co. Both the businesses can be traced back 150 years, but increasing years seem to have brought renewed vigour. A disastrous fire in 1897 resulted in a rearrangement of the premises, so that now the manufacturing business is situated at 64 Park Street, counter-specialties are packed at 103 Southwark Street, whilst crude drugs are stored at a warehouse in the Skin-market. I began my itinerary by going over the Park Street laboratories. The building was formerly a chapel—it was here that the late Mr. Spurgeon first preached when he came to London in the fifties—but has been converted into a five-floored laboratory. On the top floor is the galenical and chemical laboratory, which is in charge of Mr. Collins. I say chemical-laboratory advisedly, as the number of chemicals made here is quite exceptional. At the time of my visit I saw bismuth. salicylas, ferri phosph., plumbi acetas, cupri sulph., barii chlor., ammonii sulph., sodii benz., and potassii citras in various stages of manufacture. Several of these, being home-manufactured, are improvements on commercial products; for instance, the lead acetate, besides being chemically pure, is turned out light in bulk (like burnt alum) and readily falls to powder—improvements which every chemist who sells "sugar of lead" in small quantities will at once appreciate. I noticed the batch of citrate of potash was distinctly yellow. "Yes, that's because it's very hot," said Mr. Hill. "See, here's some that's cold." Then I remembered that potassium citrate is one of those chemicals, like zinc oxide, which assume a yellow tint when heated. There were also the usual steam-pans in which galenicals such as ext. cascara sagrada, ext. anthem., dec. sarsæ, syr. tolu, oxy. scillæ, liq. rhœados, distilled waters, and inf. buchu were being made, and in one corner ext. malti was vigorously boiling in a vacuum-pan. There are twenty assistants employed in this department, and they all seemed to be very busy. "We are not working at the tension we were," remarked my guide, referring to the time of the War Office contracts, which led to a talk on war-medicines, one of the objects of my visit. Here are some of the extraordinary items which were ordinary in 1900 and 1901, and occurred again and again during that period of excessive pressure:—

10,000 2-lb. bottles glycerin.
10,000 2-lb. bottles ol. ricini.
6,000 1-lb. bottles acid. carbolic.
2,400 1-oz. bottles cocain. hydrochlor.
5,400 4-oz. blocks quin. sulph.
2,560 ¼-oz. bottles atropine.
3,000 1-oz. bottles morph. tart.
1 ton of iodoform.
1 ton of sulphonal.
4 cwt. hyd. ox. rub.
4,000,000 pills.
2,000,000 15-gr. sodium bisulphate tablets.

Take the last item, for instance: it required about 2 tons of the salt, which had to be made and recrystallised before compressing into tablets. It must be remembered also, to properly appreciate the resources of this house, that these goods were always urgently required—being generally ordered by cable. Overtime and Sunday work were, of course, necessary, as at one time over a thousand cases of drugs were despatched every week. Besides holding the contract for the soldiers' drugs, Messrs. Davy, Hill & Co. also supplied the veterinary medicines. The number of horse-balls sent out was, in round figures, 600,000, and such things as 75 tons of mustard compressed into ½-lb. cakes were common. The War Department seems to have tumbled to the convenience of compressed drugs, and it was necessary to instal special machines for making blocks of quinine and mustard.

Continuing my walk through the various departments, I next visited the analytical laboratory, where four chemists are kept employed checking and assaying the multifarious articles to be met with in a wholesale drug-house. Mr. Hill has just succeeded in isolating an alkaloid from monsonia, and I was privileged to see the first few crystals of the as yet unnamed alkaloid, of which more will be heard presently. The essential-oil and quinine rooms were next inspected, and the tablet, lozenge, pill, and chemical-food departments. I watched the ingenious gelatin-coating machine at work, where, by the use of compressed air, the necessity for pin-

Digitized by Google

holes is done away with. Mixing, pill-making, and coating were proceeding in different parts of the room, machinery being used in each stage. In the lozenge-room I sampled aniseed and peppermint lozenges, soft from the cutter, the fine flavour of the peppermint-lozenges, made with English oil, being particularly noticeable. The tablet-machines were throwing out several hundred chlorate-of-potash tablets a minute. The scaling-room gave me a warm five minutes; here 40 lbs. of citrate of iron and quinine can be scaled every day, besides other usual and unusual scaled goods, such as potassium boro-tartrate and green citrate of iron. Freshly scaled chemicals are things of beauty; what a pity it is that subsequent packing and transporting breaks up the scales so! I next inspected the tincture-room (an 80-gal. batch of tr. cinchon. was just being started in a giant percolator), drug-mills (scammony was being powdered and ung. hydrarg. being made, whilst the edge-runners were grinding sawdust to clean them), emulsion department (where malt and oil and white liniment were in process of manufacture), oil-filtering floor, order department (three sections, devoted to town, country, and export orders), wet and dry departments, packing-floor, bottle-washing department, receiving-room, stores, offices, and boiler-room. Next, after a cup of tea in the partners' office, we went to see the big building at 103 Southwark Street, devoted to packing counter-specialities. The basement is used as a store for the many varieties of bottles required for packed goods; two men are continuously employed washing bottles for this purpose alone, whilst each floor is devoted to bottling and packing liquids or weighing up such things as seidlitz-powders and Epsom salts. The young women naturally become very expert at leather-capping and labelling, and the quantity of patent-medicine stamps needed for chemists' special articles is enormous. Among the goods being put up were Eau de Menthe (first introduced by a founder of the firm—Dalmahoy—in 1755), Grecian bath-powder, floral brilliantine (beautifully perfumed), effervescing Carlsbad powder, foot-powder, tooth-paste (in round-cornered square pots), and insect-powder (ready for summer demand). Evach water, introduced in 1899, is also stored here. There are many other things I should like to refer to, but I refrain, as I think I have already given *C. & D.* readers enough to ponder upon.

The casual wayfarer in that region of Southwark known as Bankside will not fail to detect an aromatic odour in the atmosphere which seems incompatible with the surroundings. The neighbourhood of Love Lane, Southwark Street, S.E., is redolent of spices, and the cause is not far to seek, for the searcher with keen olfactory sensibilities will soon locate the premises of

GEORGE MAYOR & CO,

the spice-grinders. The "Bohemian Mills," as they are called, were partly burnt down last November, but enough of the old building remains to add a picturesque quaintness to a prosaic trade, and to give the effete onlookers of the present day some idea of the solidity with which business-houses were built fifty or sixty years ago. The "Bohemian Mills" were established in 1850, and stand on the site of the Royal bear-gardens that flourished during the reign of Queen Elizabeth. The reconstructed portion of the premises is, perhaps, more suited to present-day needs, new machinery, offices, and warehouses being required. Messrs. Mayor are blacklead manufacturers and importers on a large scale, and they do much in packing sundries of various kinds for the drug-trade. Blackleads, stove-polishes, knife-polishes, emery-cloth, glass-paper, Venetian red, fullers' earth, and rottenstone are each packed in a variety of styles and sizes to commend them to those chemists who know how to cater for the housewife with her multifarious needs. The firm now put up besides many culinary delicacies, such as blancmanges (in six flavours—almond, strawberry, lemon, vanilla, raspberry, and chocolate) and flavouring-essences. Attractive lines of citrate of magnesia and salines—loose and in tins or pottles—are *de rigueur*, while "sherbet" and seidlitz-powders are dealt with in hundredweights or by the dozen. Messrs. Mayor & Co. deal direct with retail chemists, and in the case of packed specialities the name and address of the retailer are printed on free with certain quantities. They are, besides, manufacturers of "The World's" disinfectants, for which they have a special factory in Union Street, Southwark.

G. B. KENT & SONS (LIMITED)

say that the Coronation has been the means of booming their brush-trade to quite an appreciable extent. Everybody is decorating for the great event, and paint is the usual medium. Paint requires to be administered by means of a brush, and the demand for paint-brushes is phenomenal. Not only painting, but cleansing is also requisite, and brushes of a variety of kinds figure in these operations also. Even toothbrushes are specially adapted for the occasion. In a recent issue we recorded the fact that the Princess of Wales had been presented with a box of Kent's "Coronation" tooth-brushes, specially made, when visiting Bethnal Green, and I recently inspected a facsimile of the box in Messrs. Kent's showrooms in Farringdon Road, E.C. The "Coronation" box contains one dozen toothbrushes of assorted stiffnesses and styles, each brush being separately packed, in red, white, or blue boxes. The boxes bear on the outside portraits of the King and Queen, and showcards with appropriate wording can be had with each order. The chemist can thus satisfy the Coronation craze even to the length of tooth-brushes, and the cost is something like 5*s.* per dozen wholesale. Another showcard I saw in Messrs. Kent's establishment would interest many chemists. It is in black-and-white imitation ivory, with a section of hair-brush painted thereon, and the intimation that ivory hair-brushes may be refilled. The re-bristling of a favourite hair-brush is a thing that customers would often be glad to have done if they only knew that it could be, and many pharmacists might find the display of these cards in their shop a pecuniary advantage.

LENNON (LIMITED).

Exigencies of space have compelled Messrs. Lennon (Limited) to remove their London office and warehouse to a specially erected building at 53 to 58 Queen Elizabeth Street, Tower Bridge, S.E. Calling one day this week, I saw Mr. Fairclough, the general manager, whose connection with the concern dates back to 1869. With him I made a tour of inspection, and although the whole fabric was in a state of transition, I saw enough to convince me that the firm mean to maintain their reputation as one of the leaders in South Africa. The premises, which are built of brick and iron encased in concrete, comprise four spacious floors and basement, and cover a superficial area of 7,000 square feet. On the ground floor are the counting-house, private office, and packing and forwarding departments. The development of packed specialities is carried out on the second floor. Box and carton making is a new feature here, and as the company have now some twenty branches throughout South Africa they find it advantageous to manufacture for themselves both by hand and machinery. The third floor is reserved for proprietary medicines and druggists' sundries, of which large stocks are carried, especially the former. The preparation of tinctures and other galenicals, grinding, sifting, &c., is also to be extended, and the top floor is devoted to this branch. Here are also stored crude drugs and chemicals. The flat roof of the building will probably be utilised for bleaching castor and other oils. The basement, which is also used for storage-purposes, contains a 25 h.p. Hornsby gas-engine. The building is lighted throughout with electricity, and an electric lift connects all the floors; but there is a wide stone staircase which more than satisfies L.C.C. requirements. The doors are made of teak, which is the most fire-resisting of woods.

There can be little question but that the possession of a "Royal remedy" has a pecuniary benefit. I imagine that

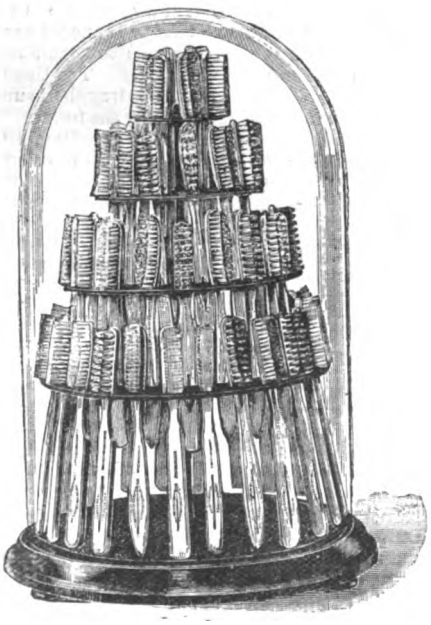
ASHTON & PARSONS (LIMITED)

have found it so, for I learned on calling at 17 Farringdon Road, E.C., the other day, that "Phosferine" has ousted all its blood-relations from their original domicile, and secured full possession of the premises. This seems a big thing to do: three floors and a basement (and none of them small or constricted at that) for a little thing like "Phosferine." But it shows that the three brothers who guide the affairs of Ashton & Parsons (Limited) have, with the help of several Royal families and the humbler peoples of all the countries of the world, made "Phosferine" a very big thing indeed. Moreover, if there had not been some intrinsic merit in the preparation itself, not even Royalty could have accomplished

Digitized by Google

these things. And so it has come to pass that the business of manufacturing the ordinary homœopathics has been transferred to 48 Farringdon Street, E.C., where they can be prepared and packed without being overshadowed by the purple arrogance of their Royal cousin. The new premises are quite as spacious as the principal buildings (where, by the way, the head offices will still be), and there is room for the expansion which is anticipated. The ground floor contains packing-rooms and a private laboratory and offices, while the basement is devoted to the stock of cosmopolitan printing which the large export business demands, and for heavy stock and cases. A lift to the street above will prove helpful there. Plenty of air and light are characteristic of the entire building.

I usually contrive when I am in the neighbourhood of Blackfriars to look into the classically appointed suite at the end of the Embankment, from whence



OPPENHEIMER, SON & CO. (LIMITED)

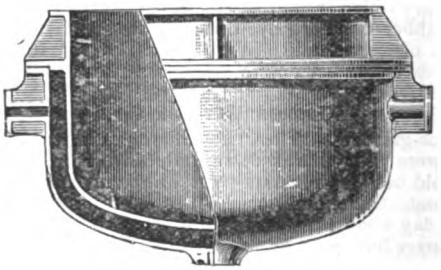
palatinoidize an ailing world. On my visit the other day I found that Dr. J. B. Rankin, a Scotchman whom a long residence in the United States had nearly transformed into an American, had come to reinforce the headquarters staff. A demand for the exhibition of novelties produced a concentrated extract of the suprarenal gland, called "Renaglandin." This is said to be a hæmostatic of considerable value, and Mr. Ball had many tales to tell of its usefulness in surgical practice. Its styptic properties are best diffused by means of an aëriser, the fine cloudy spray obtained assuring an even and pleasant application. It is particularly recommended in dentistry, especially where there is prolonged bleeding after extraction. A small plug of cotton-wool soaked with the liquid and placed in the cavity will stop all hæmorrhage. A curiosity to demonstrate the value of the palatinoid method of administering drugs was a phosphorus palatinoid, made over a year ago by Messrs. Oppenheimer, which took fire immediately on its being cut open and exposed to the air.

It seems impossible at this juncture in national affairs to name any new thing without reference to the Coronation in some of its phases. The coming pageant has cast its more or less beneficent shadow over all things, and even in Manchester Avenue, Aldersgate Street, E.C., where

H. A. WANKLYN

sweeps aside all unnecessary frivolities, I found the "Royal Sceptre" toothbrush and its "Royal Sceptre" showcase and

stand. The latter is a handsome piece of work, as will be seen from the illustration. The black frame contrasts strikingly with the white bone and bristle of the toothbrushes it contains, and the base is of black wood, velvet lined. The four tiers suspend four rows of toothbrushes, in all patterns, in full view of customers, and the stand may be placed either on counter or in window. The goods are well shown, and kept free from dust. The case is given free with an order for four gross of toothbrushes, or half-price is charged with a two-gross order. The price of the stand by itself, with glass cover complete, is 13*s.* 6*d.*, the size being 11 inches by 17 inches.



In an old-fashioned-looking building externally (but which possesses surprising internal modernity) at 96 St. John's Street, E.C., the

RENSON MANUFACTURING COMPANY

has recently established a packing business which buyers appear to appreciate. At least the company has outgrown its original quarters in Woodbridge Street, and the new premises in St. John Street seem restricted enough for the business that is going on, although the Woodbridge Street factories are still retained. The packed specialities run the usual gamut of the chemist's stock—salines, seidlitz-powders, culinary essences, vaseline, bay rhum, carbolic and other tooth-powders, cloudy ammonia, hair-washes, and so on. Items which took my special attention were eau de quinine in a nice, uncommonly shaped bottle; glycerin and cucumber; and penny packets of Epsom salts packed in a box, labelled and finished off, to sell at 11*s.* per cwt. The Renson almondised cod-liver-oil emulsion is an egg-emulsion of pleasant taste, seductive appearance, and good keeping properties. Sanitary fluid and carbolic acid in liquid and powder bulk largely in the stock. The carbolic acid liquid is nicely put up in ribbed poison-bottles with metal caps, the name and address of the retailer being printed on free with three-dozen quantities.

ACID-PROOF APPARATUS.

Messrs. B. A. Smith & Co., 33 Crutched Friars, E.C., in addition to being dealers in drugs and fine chemicals, are the sole agents in Great Britain and colonies for the sale of Messrs. De Dietrich & Co.'s (Niederbronn, Alsace, Germany) enamelled acid-resisting chemical apparatus. I am assured by their manager that the sale is steadily increasing in this country, and that once used they are always used. As regards price, it is of course understood that they compete

with other makes of enamelled iron which possess acid-resisting properties to a less extent. Messrs. Dietrich's apparatus is guaranteed to stand the high temperature required in many processes of chemical-manufacture. This may be best proved by the fact that the cast-iron enamelled vessels are used by Webb's Patent (Limited), of Manchester, in their process of concentrating sulphuric acid, where they are constantly worked at a very high temperature. They have also been adopted by many of the leading firms in the Kingdom.

What more appropriate to finish these notes than

A TALK ABOUT FLIES?

They are beginning to buzz where the flowers are opening, and even the night moths are heard darting against the window-panes o' nights where Welsbach glows. It was Mr. Eli Marshall, of Marshalls (Limited), 27 Red Lion Square, E.C., with whom I had the talk. The register of pharmaceutical chemists still bears Mr. Marshall's name as of Henfield, Sussex, although it is years since he left there for London, but it was while he was in Henfield and behind the counter that he commenced to make the "Reel" fly-catcher. It soon developed into quite an important village industry,

Digitized by Google

for Mr. Marshall gave out the boxes, bast-fibre, and "gum" to the villagers, who did the work in their own homes, and he practically deputed the supervision of his pharmacy during the summer months while he looked after the trade in the "Reel" catchers. The trade grew, which seems a mere commonplace to say, for what better penny novelty than the "Reel" was ever introduced? But in the growing there were enough checks to subdue most men. Thus, when Mr. Marshall placed his first order for 5 tons of Japanese birdlime, the London broker flatly refused to execute it all at once, or even to send the order out to Japan otherwise than in driblets. Now Marshalls (Limited) never have less than 10 tons of the "gum" in stock, and during the season Mr. Marshall has roomfuls of girls filling the boxes and tubes—which are still, by the way, prepared outside as a home-industry, but the actual filling is a safer operation when done at headquarters. Since he came to London, Mr. Marshall has developed toilet and perfumery specialities as only one who has personal knowledge of middle-class drug-trade can. If anyone who reads this will take the trouble to turn up the advertisement of Marshall's (Limited) (there ought to be one in this number), he will notice that the goods fill a void of a dozen years ago. They are inexpensive things, in sachets and the like, which just meet the purses of those who, while at the chemist's, want to buy something nice for a friend, or the articles are so tempting and moderate in price that customers cannot resist getting one or two. Mr. Marshall's idea is that the disposition of the rich to buy fine perfumes, sachets, and toilet-articles exists amongst those less well-to-do, and as he could not get exactly the class of articles needed when he was a retailer, he endeavours to supply them now. From this topic we proceeded to discuss the question of a compulsory curriculum and all its appendages, and there we struck a line which I understand is no business of mine.

Public Dispensers' Association.

A GENERAL meeting was held on Wednesday evening May 28, the President (Mr. W. Duff) in the chair. There was a fairly good attendance. The President reported that his visit to the Dispensing Committee of the Pharmaceutical Society was in every way satisfactory, and he hoped to be able to give more definite information at a later date. One thing, however, he would draw attention to—viz., that that they would speedily have to alter their constitution, and the Council had decided to place before them the following alteration, which they deemed necessary; and, in order that the matter might receive full consideration, it would be fully discussed at a special general meeting, to be held on June 11, due notice of which would be sent to all members. The alteration in question was in Rule 4, under "Constitution":—

That no dispensers [from this date, June 11] in public institutions be eligible for membership unless they hold the qualifying certificate of the Pharmaceutical Society.

The President added that he and his colleagues, having duly considered the point, were of opinion that this should in no way affect those who were already members, but who were holding any other qualification—it would apply to those who joined after the date of the passing of the alteration. The President called upon Mr. H. D. Kelf, pharmaceutical chemist, to read his paper on "Some Aspects of a Dispensers' Duties." This proved a very interesting *résumé* of the duties which fall to the lot of a typical Poor-law dispensing chemist, comprising not only dispensing and its attendant worries, but also the charge of all the surgical instruments and attendance at operations if necessary, photography, microphotography, *x*-ray work, electrical knowledge, and bacteriology, besides the usual bookkeeping required in a large institution, have also to be attended to. This, Mr. Kelf went on to show, proves that dispensers in Poor-law and other institutions must be men of scientific training and resource, and he considered that the duties should tend to raise not only their status but their financial position. Mr. F. Noad Clark (who had taken the chair, as the President was compelled to leave) opened the discussion, which was interesting, and the author was heartily thanked for his paper.

Notes of Novelties.

CORONATION COUNTER-BILLS.

MESSRS. FORD, SHAPLAND & CO., chemists' printers, 6 Great Turnstile, High Holborn, W.C., send us a specimen of their new Coronation handbills, of an original design, suitable for advertising chemists' own specialities.

"SPLITLETS."

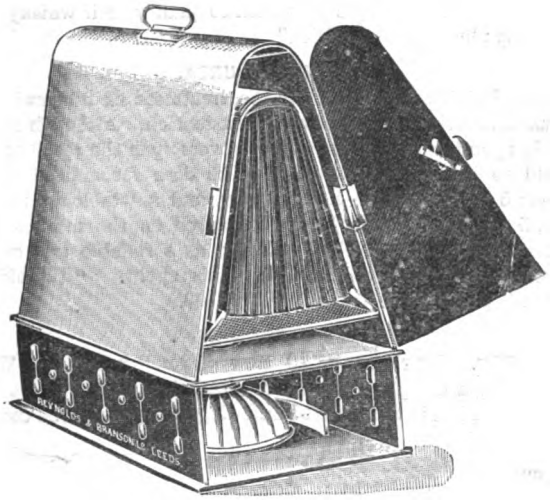
UNDER this catchy title Camwal (Limited) have introduced a miniature mineral-water bottle which holds about one-third the quantity of the ordinary "split." Camwal have discovered that the ordinary "split" holds too much for many people who wish to qualify their whisky or brandy; hence the "splitlet."

"TABLOID" UREA.

THE administration of urea in the treatment of tuberculosis has of late received considerable attention. Although still only upon trial, the reports of observers upon the results are said to be very encouraging. The dose recommended is from 5 to 20 gr. three times a day, and a "tabloid" urea, gr. 5 (0·324 gramme), has been placed on the market by Messrs. Burroughs Wellcome & Co. as a reliable and convenient means of administering this agent. "Tabloid" urea is put up in bottles containing 100.

A NEW PRICE-LIST.

MR. WM. MARTINDALE, 10 New Cavendish Square, W., is issuing a complete wholesale price-list of 56 pages, crown 4to. The list is well printed and elegantly got-up, the cover (of which we give an illustration in miniature) giving a representation of the "Extra Pharmacopœia," natural size, embossed in colours, with a branch of *Erythroxylon Coca* as background. The work is divided into four sections — (i.) general chemicals and galenicals; (ii.) Martindale's special preparations; (iii.) surgeons'sundries; (iv.) analyses, stains and reagents for analytical work of all descriptions, Martindale's special apparatus for urine-testing and bacteriological investigation, general chemical and bacteriological apparatus. Part i. occupies twenty-six pages, and, as is to be expected of such a house, the newer and less common remedies figure largely in this list—antitoxins, lymphs, pastilles, plaster-mulls, &c., being quoted; while such new remedies as Yohimbine, Taphosote, Phosphotal, and other articles referred to in the "Extra Pharmacopœia" all find a place. This section forms a useful supplement to the "Extra Pharmacopœia," inasmuch as medical men and pharmacists will be able to observe its contents set out from a commercial standpoint. Part ii. occupies only eight pages, and comprises those specialities so long associated with the name of Martindale. In this also are quoted alkaloidal oils, glass and gelatin capsules, effervescent preparations, elixirs, inhalers, pastils, perles, and chocolate-tablets. In part iii. surgical instruments and sundries are dealt with in a very comprehensive manner; while part iv. covers the strictly scientific, and is itself sub-divided into four sections—viz., (1) analyses; (2) chemicals, stains, mounting-media, &c.; (3) Martindale's special analytical apparatus; and (4)



Digitized by Google

general chemical and bacteriological apparatus. In the last portion the firm's well-known urine test-cases are described and illustrated, as well as urea-apparatus, uric-acid outfit, and bacteriological test-cases and requirements. The price-list has been compiled by Dr. W. Harrison Martindale, and indicates the extension and development of the firm's wholesale business.

A PORTABLE DISINFECTOR.

We have received from Messrs. Reynolds & Branson (Limited), Leeds, the very neat and ingenious apparatus for disinfecting letters, books, gloves, and similar articles, illustrated herewith. By means of a formaldehyde tablet

placed in a concave receptacle, and heated by a nightlight it is possible to quickly and effectively disinfect letters, books, and such-like. When a book is to be operated on it should be placed as shown in the illustration, so that its leaves may be free and open. The door should be closed before lighting, and the nightlight burned for half an hour, after which the apparatus should remain closed for an hour more. Most medical men recognise the hidden danger that lurks in such articles of attire as gloves, and it will now be possible for a doctor to remove all traces of disease-germs from his gloves after visiting infectious cases. The much-discussed question of microbe-laden library-books need no longer trouble readers, for any volume may now be perfectly and easily sterilised before use, or should a book be sent back after being read by a sick patient it can be returned with a perfectly clear conscience on account of its microbe-free covers and pages. The question recently raised by a medical contemporary regarding the danger of opening letters at the breakfast-table, and the reasons given in that paper for exercising more care, point to the usefulness of some such apparatus as this. The disinfector is light and portable, and made of tin, with sliding perforated shelf. It stands about 12 inches high, has a handle at the top, and gives us the impression of being simple, strong, serviceable, and neat in appearance.

"VARVEIN."

This is a new preparation, brought out by Varco (Limited), Savoy House, Strand, W.C, as a cure for varicose veins, piles, inflammatory swellings, and so forth. In a pamphlet attached to each bottle the proprietors point out the disadvantages of the usual treatment for varicose veins, in that elastic stockings are simply a palliation, and not a cure, while the radical cure by means of a surgical operation is inconvenient and expensive. "Varvein" claims to be made from the prescription of a medical man who has made a special study of such diseases. It is to be applied freely, night and morning, with a camel-hair brush, over the affected parts, and, being poison, must not be used when the skin is broken. It is said to act by strengthening the coats of the weakened veins, and causing them gradually to resume their normal condition. For internal piles it is to be injected, night and morning, in the proportion of 1 of "Varvein" to 5 of warm water. "Varvein" is sold in 2-oz. bottles at 2*s*. 9*d*., and is on the P.A.T.A. list.

SOAP-COLOURS.

Messrs. K. F. Kramer & Co., 11 Rangoon Street, E.C., are sole agents for the U.K. and colonies for Messrs. Fr. & Carl Hessel's (of Leipsic), soap-colours, a specimen box of soaps coloured by means of these being now before us. These specimens are guaranteed to be coloured in the exact proportions which are indicated in the price-lists, so that any soap-manufacturer having one of these sample boxes beside him will have no difficulty in employing the colours to best advantage. The colours are clear and brilliant, and, judging from the proportion required and the prices given, appear to be very economical. Messrs. Kramer will send a sample box free to any manufacturer who applies for it. This firm also issue price-lists of soap-making machinery and other specialities for the trade.

"MODERN SHOPS AND SHOP-FITTINGS."

This is the title of a beautifully produced illustrated catalogue which has just been issued by Messrs. Philip Josephs & Son, 93 Old Street, London, E.C. It is devoted to exhibition show-cases, counter and wall showcases, counters and counter-drawers, cashiers' desks, dispensing-screens, drug-fittings for shops, dispensaries, and hospitals, and various other wall-fittings and desks. The illustrations are produced from drawings and architects' designs, and each is accompanied by a full specification and prices. Any of our subscribers can get a copy of the catalogue on application to the firm, who, by the way, are presenting to their customers a fountain pen, which writes very easily, if we may judge from the facility with which it has written this paragraph.

FREE SHOP-FITTINGS.

On more than one occasion last year Messrs. Ayrton & Saunders, 34 Hanover Street, Liverpool, announced that as an advertisement of their shop-fitting department they would completely fit a shop (at a cost of 100*l*.) and give a 50*l*. window-enclosure (or other fittings), and a 25*l*. window-enclosure or showcases to the three chemists who sent in the largest number of orders in a certain period. Messrs. Ayrton & Saunders now inform us that, having gone carefully through their books, they find the following three chemists entitled to the presentations: Mr. E. J. Morris, the Villa Cross Pharmacy, Handsworth, Birmingham (complete 100*l*. shop); Mr. E. R. Thomas, 40 Castle Street, Beaumaris (50*l*. window-enclosure or other fittings); and Mr. F. A. Parker, Derby Road, Huyton (25*l*. window-enclosure or showcases).

CORONATION "ERASMIC" SOAP.

Our Town Traveller mentioned some time ago that the Erasmic Company (Limited), 117 Oxford Street, W., had in preparation a Coronation soap. Now it comes to us, as dainty a tablet as can be imagined, and in an elegant box (three cakes to the box). The basis is good, for a slight rub of the tablet gives an abundant lather, even with hard London water; the perfume is elusive and elegant—elusive because it takes the user from one dreamy odour to another, and the real thing is never caught. The box is peculiar in having the corners cut off, and the lid bears sepia portraits of the King and Queen, as well as the national flags in colours.

Photographic Notes.

By a Pharmaceutical Camerist.

THE ANNUAL EXHIBITION

of the Royal Photographic Soc'ety of Great Britain is to take place at the New Gallery, 121 Regent Street, W., from September 29 to November 4. There are the usual five sections—(1) pictorial photographs, (2) professional work, (3) apparatus and material, (4) photo-mechanical work, and (5) scientific photography. The last days for receiving exhibits are September 11 and 12.

HAND-CAMERAS

are responsible for a lot of spoiled plates and films, and I notice a Scarborough chemist has called attention to the necessity of confining the range of subjects photographed to 25 feet and beyond in the case of most hand-cameras. Now that it is customary to begin photography with a hand-camera, the warning is more necessary than it was a few years back, when an amateur always began with a stand-camera, and was taught to focus. I always recommend a beginner to practice estimating distances, but some of them, who belong to Volunteer corps, know more about that matter than I do.

THE GRUN LENS.

Since I last mentioned the invention of this new lens the specification of the English patent has been published, and those correspondents who have asked for further particulars should obtain the specification from the Patent Office. Its number is 6,194 of 1901. The fluid employed is preferably cedar oil, but any other fluid with a refractive index as near as possible to that of glass may be used, essential oil of copaiba, and monobromide of naphthalin being given as examples.

PHOTOGRAPHIC CATALOGUES.

The new price-list of photographic apparatus and accessories sent out by Messrs. F. Darton & Co., 142 St. John Street, E.C., contains some good lines in cameras and other apparatus. Photographic chemists obtain a substantial discount off the quoted prices.

The new catalogue of photographic apparatus and material issued by Messrs. F. Newbery & Sons, Charterhouse Square, E.C., is just to hand. The list is considerably larger than the one sent out last year, which seems to show that the department is appreciated by chemists. The goods are enumerated in alphabetical order, and I find they include a good selection of the new-style roll-film cameras.

FOCUSSING-SCALES

on cameras are not always accurate, but an easy method of testing them is given in a recent number of *Photography*. The process is carried out by night, the camera being firmly fixed and the distances carefully measured off from it. Only one plate is used. Place a lighted candle at one of the distances, focus by the scale, and give a brief exposure. Then shift the candle to the second distance, a little to one side, so that the image shall not overlap the first. Focus by the scale again for that distance, and make another exposure. Repeat the process for each distance. Then develop the plate, and all the images should be found to be sharp.

DEVELOPING FILMS.

Recent experiments with the new Ensign films sent out by Messrs. Houghton, 88 and 89 High Holborn, W.C., have convinced me that the method of developing a whole spool of film in one piece is quite as sure as if the film is cut up into separate exposures. A deep dish of developer is needed, and the film must be held with one end in each hand, and passed to and fro through the developer. If preferred development can be started by this method and the film cut up as soon as the outline of the pictures appears. In this way the annoying mistake of cutting through an exposure cannot occur.

TESTING STOPS.

At the last meeting of the Optical Society Dr. Drysdale demonstrated a singularly simple method of determining the values of the stops of any lens. This is more convenient than the Kew method, all that is needed being to focus sharply on a screen some distant bright point of light, then to move the screen inwards by a definite known amount, and to divide the diameter of the disc of light then seen on the screen by the distance moved. For instance, if with a certain lens a distant lamp is focussed, and it is then found that pushing in the screen 4 inches causes the disc to expand to 1 inch diameter, the aperture is F/4. If with a smaller stop pushing the camera in 2 inches gives a $\frac{1}{10}$-inch disc, the stop is F/20.

SOMETHING NEW

is what a Mr. Inston, in the *Amateur Photographer*, calls a heterogeneous mixture of chemicals used for developing platinum-paper. He claims to have discovered a method of giving sepia tones to platinotypes by adding mercuric chloride to the oxalate-bath. There is not much novelty in the use of mercuric chloride for that purpose, so Mr. Inston acidifies the bath with citric acid, and puts in a little potassium citrate. This is the result, he says, of "some recent empirical experiments"; so I suggest that he continue the investigation by adding a little hypo., washing-soda, baking-powder, and paraffin, and see what happens. There is, however, "something new" in the article, in the last sentence of the following note:—

> I would like, as a last strong recommendation, to urge the importance of the worker making certain of the purity and genuineness of his chemicals. Let him mix them for himself—don't let him trust to the chemist who prepares the family prescriptions, and who hands him the bottles made up, so far as he is concerned, and to speak appropriately, *in camera*.

To obtain pure chemicals, the best way is to purchase them at a chemist's shop, as the chemist has been especially trained to test both chemicals and drugs; but the suggestion that a chemist is not to be trusted to make up photographic formulæ I do not quite understand. It evidently does not mean that the chemist is incapable of compounding, because, if he can make up family prescriptions, it follows that he can mix photographic recipes, which are of a simpler order than medical formulæ. The only other construction to put upon it is that the chemist is dishonest, which is a cowardly and untrue insinuation.

DARK-ROOMS.

Belfast.—Bell's Medical Hall, 25 North Street.
Bradford.—J. M. Newbould, 174 Lumb Lane.
Brighton.—J. Padwick, 5 Preston Street.
Glasgow.—W. W. Wilson, 147 Great Western Road.
Malvern.—A. Mander, Belle Vue Pharmacy.
Old Charlton.—J. Milner, 9 The Village.

Nottingham Chemists' Association.

THE annual meeting was held at the Victoria Station Hotel, Nottingham, on Wednesday evening, May 28, Mr. R. Fitzhugh, J.P., the President, in the chair.

The annual report stated that the Association is in a stronger position than it was a year ago, and the membership now stands at sixty-five. There appeared to be no falling-off in the interest taken by the members in the work of the Association. The report was adopted, as was also the Treasurer's report, which showed a balance in hand of 2*l.* 19*s.* 8*d.*

The election of officers was then proceeded with. Mr. R. Fitshugh was chosen President for the twenty-sixth year in succession; Mr. T. Wilson was elected Vice-President; Mr. E. Gascoyne was re-elected Treasurer; and Mr. A. Eberlin and Mr. W. Gill were re-elected Hon. Secretaries.

The ballot for the election of Council resulted as follows, the first eight being elected: Mr. A. E. Beilby, 24; Mr. F. R. Sergeant, 24; Mr. R. Beverley, 23; Mr C. A. Bolton, 23; Mr. A. Middleton, 23; Mr. J. Beachell, 17; Mr. J. Smith, 17; Mr. J. T. Rayson, 14; and Messrs. A. R. Bennett, J. S. Radford, and E. W. Whitchurch, 11 each. Thus Messrs. Beachell and Rayson displace Messrs. Radford and Bennett.

Arrangements of meetings during the 1902–3 session were afterwards discussed.

Legal Reports.

High Court Cases.

Beecham Cases.

Mr. Justice Buckley on Tuesday, May 27, had before him a motion by Joseph Beecham, trading as Thomas Beecham, St. Helens, against James H. Alcock, of Queen's Road, Manchester, and Oldham Road, Newton Heath, to restrain the defendant and his servants from selling or offering for sale as Beecham's pills any pills not manufactured by the plaintiff. Defendant did not appear. Mr. Martelli, for plaintiff, explained the case, and his Lordship expressed himself satisfied with the evidence, and granted an injunction until the trial.

On the same day, before Mr. Justice Joyce, Mr. Martelli moved for an injunction to restrain the Public Benefit Drug Company, 41 Scotland Road, Liverpool, until the trial of the action or further order, from selling or offering for sale as Beecham's pills any pills not manufactured by the plaintiff. The defendants did not appear, and Mr. Justice Joyce agreed to the motion.

Also on Tuesday, before Mr. Justice Farwell, Mr. Martelli applied for and obtained a perpetual injunction restraining James Halkyard, 2 Bradford Street, Ancoats, Manchester, from selling as Beecham's pills pills not manufactured by the plaintiff. The defendant consented, and is to pay an agreed sum as damages.

Pharmacy Act (Ireland).

Compounding by Unqualified Persons.

In our issue of May 10 we reported the evidence and argument heard by Mr. Swifte, K.C., in the Dublin Southern Police Court on May 2, regarding several summonses taken out by the Pharmaceutical Society against druggists for illegal compounding. Mr. Swifte reserved judgment, which he gave on Friday, May 23, dismissing the summonses, without costs. Before his Worship gave judgment,

Mr. O'Shaughnessy, K.C., said: Will your Worship allow me to mention a matter? I understand a summons was heard here some weeks ago against a young gentleman named Adams?

Mr. Swifte: Yes.

Mr. O'Shaughnessy, K.C.: I would like to direct your attention to the Act of Parliament before you deliver judgment on it.

Mr. Swifte: Whom do you appear for?

Mr. O'Shaughnessy, K.C.: Nominally for Adams, but really for Dr. McKenna.

Mr. Swifte: Dr. McKenna is not before me at all.

Mr. Clay (for the Pharmaceutical Society): I object to Mr. O'Shaughnessy reopening this case.

Mr. Swifte: It is rather a peculiar thing to reopen a case that has been heard and only awaits judgment.

Mr. O'Shaughnessy, K.C.: As I said, I nominally appear for young Adams, but in reality I appear for Dr. McKenna; and, according to the common law, a master is entitled to appear for his apprentice.

Mr. Clay: This matter has been fully discussed and argued, and I object to any intervention now when you are about to deliver judgment on it.

Mr. Swifte: I do not know what Mr. O'Shaughnessy's request is.

Mr. O'Shaughnessy, K.C.: We served notice on Mr. Clay that this application would be made. I want to call your Worship's attention to a section of the Act, and also to the old Act (the Apothecaries Act). The matter is one of vast importance to those engaged in the business. The defendant (Mr. Adams) is an apprentice to Dr. McKenna; he has passed the examination of the College of Surgeons, and he is learning materia medica with his master——

Mr. Swifte: I must decline to hear you at all on the matter. Perhaps the necessity will not arise. The defendant Adams was represented by a solicitor at the hearing.

Mr. O'Shaughnessy, K.C.: Very well, sir.

Mr. Swifte then delivered judgment. He said that there were two summonses heard on May 2, one against Fredk. Wm. Sweny, 1 Lincoln Place, and the second against Fredk. John Adams, 24 Aungier Street, the summons in each case being for that defendant "did keep open shop for compounding medical prescriptions, and did compound a medical prescription for one F. W. Leslie, contrary to the Pharmacy Act (Ireland), 1875, the defendant not being a person properly qualified in that behalf according to law." It was agreed that the result of the one summons against Sweny should rule the other. The facts were not substantially in controversy. It appeared that in February last Mr. Leslie, the inspector for the Pharmaceutical Society, went into the shop at 1 Lincoln Place, and there found Sweny (the defendant) alone behind the counter. He asked Sweny to make up a prescription for him, which Sweny did, and handed Leslie the bottle containing the mixture. Now, Sweny was only a registered druggist, not a pharmaceutical chemist, which latter qualification alone would authorise him to compound a prescription. Mr White had pointed out that the mere compounding of a prescription was not an offence when there was not a sale by the party for himself, but the summons did not charge the defendant with selling. The evidence given for the defendant Sweny was that the shop, 1 Lincoln Place, was not kept by him, but by a company incorporated as "F. W. Sweny & Co. (Limited)." The premises were held by him under a lease, and sub-demised by him to the company for twenty-one years at a yearly rent of 60*l.* He (Mr. Swifte) noted that the capital of the company consisted of 500 shares of 1*l.* each; and the seven signatories (two of whom were duly qualified pharmaceutical chemists) took one share each. The defendant described himself as a registered chemist and druggist, and the consideration for the sale of the defendant's business to the company was 443 fully paid-up shares, and he was appointed manager at 120*l.* a year. In that state of things he did not consider it necessary to refer further to the evidence. He (Mr. Swifte) visited the premises, and he found printed, in front of the house, in conspicuous capitals, the words, "Chemist—Sweny—and Druggist." Lower down, across the window, were the words, also in conspicuous letters, "Prescriptions carefully compounded"; and on a little ledge, in comparatively small letters, the words "F. W. Sweny & Co. (Limited)." He (Mr. Swifte) thought the first of these descriptions was misleading. The defendant Sweny was not a chemist, and he was not proprietor of the shop, as any person passing by would be led to suppose. The company and the defendant Sweny were, as Mr. White had pointed out, two distinct entities; and he (Mr. Swifte) felt bound, on the point raised, to dismiss the summons against Sweny, holding that, in the first averment, no offence was charged, and in the second, that the charge was made against the wrong defendant. He thought that the summonses were launched without sufficient care, and that the name "F. W. Sweny & Co. (Limited)" ought to have been seen by the Society's inspector. On the other hand, the defendant seemed to have no merits. The prescription was made up by an unqualified person, and the misleading character of the inscription over the door was an unpleasant feature in the case. Therefore, on the whole, he would dismiss the summons as against Sweny, without costs. The same order would also apply to the case against Adams.

Mr. O'Shaughnessy, K.C., having made some remarks about Adams and Dr. McKenna,

Mr. White said that his Worship seemed to say that Mr. Sweny was not a chemist. He was on the register of chemists and druggists.*

Mr. Swifte: I did not know that he was a chemist at all.

Mr. Clay: He is not a pharmaceutical chemist. That is our case, and that is admitted.

Mr. Swifte: The cases are over now.

Mr. Clay: Yes, for the present. He then mentioned the case against Mrs. Josephine Preston and Mrs. Margaret McDermott (trading as Bowers & Co., 164 Great Brunswick Street), and it was agreed to further adjourn it until

* Strictly, his name is on the list of registered druggists, and he, having been in business as a chemist and druggist between the passing of the principal Act and the Amendment Act, is entitled to call himself chemist and druggist. The register of chemists and druggists contains only the names of those who were trading as such before the principal Act of 1875.—Editor.

Digitized by Google

June 13, as Mr. Ignatius O'Brien, K.C., who was to appear for them, could not attend.

On May 24, in the Southern Police Court, Mr. Machin, solicitor, appeared, and said to Mr. Swifte that he had fallen into an error in saying that Mr. Sweny was not a chemist. He (Mr. Machin) had documents to show that Mr. Sweny was a qualified chemist. Mr. Swifte said he had looked into the *Pharmaceutical Calendar*, not under the list of druggists (for it was admitted that he was a druggist); but he looked under the head of "chemists," and the name was not there. He now found Mr. Sweny's name in the list of druggists, with a note that he was "entitled to be called a chemist and druggist." He regretted very much that the mistake had occurred, and he took that opportunity of saying that Mr. Sweny had done nothing that he was not entitled to. He certainly would suggest to the Pharmaceutical Society that the statement in their *Calendar* was misleading.

Sale of Food and Drugs Acts.

LIME-WATER.

AT Watford Petty Sessions, on May 27, William Edward Lander, druggist, of St. Albans Road, Watford, pleaded guilty to selling lime-water 40 per cent. deficient in lime. Fraud was not suggested, and in answer to the Bench defendant said he could not understand the deficiency. A fine of 1*l.*, with 1*l.* 0*s.* 6*d.* costs, was inflicted.

AT the same court Ernest S. Stone, chemist and druggist, St. Albans Road, Watford, was summoned for a similar offence. The Inspector stated that the case was almost identical, and the same penalty and costs were imposed.

SWEET SPIRIT OF NITRE.

AT Bow Street Police Court, on May 28, Charles Keele, described as a chemist, 3 Great Russell Street, W.C., appeared before Mr. Marsham to answer a summons charging him with selling sweet spirit of nitre deficient in ethyl nitrite to the extent of at least 52·5 per cent. Mr. H. C. Jones, who appeared for the Borough of Holborn, stated that defendant had shown him a letter from the wholesale firm from whom he purchased the spirit, in which the firm said they had no doubt the analysis was correct, and that the deficiency was caused by the sweet nitre having been kept in a half-empty bottle in a warm place.

The defendant told the Magistrate he had endeavoured to avoid complaints by keeping his sweet nitre in a tightly stopped bottle and in a cool place. Wholesale chemists found it so volatile that they were selling it in 4-oz. bottles. He had shown Mr. Jones his invoices to prove that he had the spirit in fresh every month to avoid as much as possible evaporation. Mr. Marsham imposed a fine of 40*s.* and 12*s.* 6*d.* costs.

AT the same court G. S. Boutall, chemist and druggist, 239 High Holborn, W.C., was summoned for selling sweet spirit of nitre deficient in ethyl nitrite to the extent of at least 58 per cent. Mr. H. C. Jones supported this summons also. Mr. Harry Wilson, who defended, said Mr. Boutall did his very best to sell in accordance with the British Pharmacopœia, and purchased from one of the best firms in London. He had given his managers notice to buy in smaller bottles in future so as to avoid evaporation. The defendant was fined 3*l.* and 12*s.* 6*d.* costs. The Defendant: The manufacturers have taken all the responsibility. If you had a pint of chloroform, and pulled the stopper out, there would be none left in the morning. He considered the fine excessive. He had fifteen shops, and always conducted his business properly. Mr. Marsham: If I had known you had fifteen shops, I should have put a little more on. (Laughter.)

GREGORY'S POWDER.

AT Bow Street Police Court, on May 28, Thomas Williams, chemist, 98 Gray's Inn Road, W.C., appeared before Mr. Marsham, charged with selling Gregory's powder containing 60 per cent. of magnesium carbonate. Mr. Jones (representing the Holborn Borough Council) said that Gregory's powder should be compounded of rhubarb and light magnesia. According to the analyst's certificate, magnesium carbonate was used instead of light magnesia. A powder mixed in this way would not have the intended effect. When the inspector asked for the powder he was told there was none in stock, and some was made up for him. Mr. Marsham: I suppose there was plenty of rhubarb?—Mr. Jones: Yes. The defendant: That is the important part—the most expensive part. Mr. Marsham: I suppose you sell a great deal of Gregory's powder?—The Defendant: Not very much. So far as I know, the effect of light magnesia is not very different from that of magnesium carbonate. The defendant was ordered to pay 4*l.* 12*s.* 6*d.*

Fertilisers and Feeding-stuffs Act.

ALLEGED DEFICIENT PHOSPHATES.

AT the Guildhall, on May 28, Maximilian Kirten, 150 Leadenhall Street, E.C., was summoned at the instance of the West Sussex County Council for having aided and abetted an offence committed by certain persons trading as the Chemical-works (late H. & E. Albert), on November 8, 1901. The Chemical-works, it was alleged, on the date mentioned sold to the Sheppey Glue and Chemical-works (Limited), for use as a fertiliser, 17 tons of Thomas phosphate-powder, accompanied by an invoice which was false in that it described the powder as containing 38 to 45 per cent. total phosphates. The evidence was to the effect that the Chemical-works was a company registered in Germany—against which was a separate summons—and that the defendant was the London agent. Mr. W. Stevens, director of Stevens's Chemical-manure Company (Limited), 30 Mark Lane, E.C., also of the Sheppey Glue and Chemical-works (Limited), 34 Mark Lane, E.C., said the latter company, in July, 1901, entered into an agreement with the Albert Company to purchase of them 17 tons of Thomas phosphate-powder the agreement being signed by the defendant as their London manager. Thirteen tons of the stuff was sent to Lord Leconfield's estate agent at Petworth. Expert evidence was given to show that the manure did not contain from 38 to 45 per cent. of phosphates in accordance with the invoice. The summonses were adjourned.

Bankruptcies and Failures.

Re FRANK HAROLD BROMFIELD, 88 Broad Street, Blaenavon, Mon., trading as a Chemist and Druggist.—The Official Receiver (Mr. W. L. Daniel) has issued a summary of the debtor's statement of affairs, which shows gross liabilities 469*l.* 1*s.* 1*d.*, of which 419*l.* 1*s.* 1*d.* is expected to rank for dividend, and net assets 34*l.* 15*s.* 9*d.* Debtor alleges as the cause of failure "bad trade owing to the stoppage of the local colliery and iron and steel works for the last two years."

Re ALFRED GOULD, late of 19 White's Row, Commercial Street, E., Isinglass Manufacturer.—In the London Bankruptcy Court on May 27 the first meeting of creditors was held before Mr. G. W. Chapman, Official Receiver. The only proof lodged was that of the petitioning-creditors, Messrs. J. M. Meyer & Co., who claim 68*l.* 16*s.* 5*d.* It appeared that the debtor had not surrendered under the proceedings, and that there was not a quorum of creditors present entitled to vote for the appointment of a trustee and committee of inspection. Under these circumstances the meeting was adjourned for a week, the public examination being appointed for June 19.

Re PARK, MACFADYEN & Co., 24 Lime Street, E.C., also trading at 69 Wall Street, New York, as Park, Son & Co., and at Kingston, Jamaica, as Turnbull & Co., West Indian Commission-merchants.

THE first meeting of creditors was held at the London Bankruptcy Court on May 26, before Mr. E. S. Grey, Official Receiver. The origin of the firm dates from the end of the eighteenth century, and during recent years five different classes of business have been transacted. Advances were made to sugar-planters and others; there was an export business from London to Jamaica and the West Indies; another export business to the West Indies was conducted in New York; the firm worked two estates in Jamaica; and they had a general stores there as well. The failure is ascribed to the inability of the debtors to recover sums locked up in advances to sugar-planters and others; to the short crops of the past five years, and to the wet season of 1901–2. The first heavy loss was sustained in 1898, when the firm lost 19,000*l.* over one sugar-estate in Jamaica, but they experienced

Digitized by Google

no serious anxiety about their affairs until the last six months, when the increasing demands of the New York house caused them to be tight for money. Having dealt with proofs amounting to 88,646*l.*, the Receiver announced that the liabilities were roughly estimated at 186,000*l.*, and the assets at 177,000*l.* Mr. C. Fitch Kemp, C.A., had been appointed as special manager, and had taken steps to protect the estate for the benefit of the English creditors. In the absence of any offer Mr. Fitch Kemp was appointed as trustee to administer the estate in bankruptcy, assisted by a committee of inspection. Appended is a list of some of the principal creditors:—

Re William Lowson Loten, 19 (late 30 and 31) Mytongate, Kingston-upon-Hull, Chemist and Druggist.—At Hull, on May 26, a sitting for the public examination of this debtor was held. The Official Receiver stated that the debtor, who was bankrupt, had applied some time ago for his adjudication to be annulled, on the ground that he had paid his debts in full. The order was made, but since then it appeared creditors to considerable amounts had been omitted, and he (the Official Receiver) applied for an order restoring the case for public examination. After debtor had paid the creditors in full, with 4 per cent. interest, he (the Official Receiver) handed him over the balance of 300*l.* When he received notification of further claims he applied to debtor for repayment of the 300*l.*, but he said he had spent it. Debtor had stated that he had paid several old debts—some 40*l.* or 50*l.*—principally owing before his bankruptcy. This was a serious admission for him to make, as they had never been included in his statement of accounts. The Official Receiver applied for an order on debtor to prepare an account showing the money. The debtor undertook to furnish particulars within fourteen days, and the examination was adjourned.

Gazette.

Partnerships Dissolved.

Mascall, S., Clark, L., Waddington, A., and **Mascall, J.,** under the style of G. S. Mascall & Clark, Queen's Buildings, Tottenham Court Road, London, W.C., surgical and veterinary instrument makers; so far as regards A. Waddington.

Nicol, W. H., and **Marston, W.,** under the style of Nicol & Marston, Leeds, dentists.

Deeds of Arrangement.

Bardsley, Thomas, trading as Bardsley & Co., 115 Liverpool Road, Manchester, and 21 Alice Street, Sale, wholesale druggist and butchers' outfitter. New Companies & Company News.

R. Cruickshank (Limited).—Capital 30,000*l.*, in 1*l.* shares. Objects: To take over the business of chemical manufacturers, electrical engineers, and general mill-furnishers, carried on as "R. Cruickshank," at Birmingham. No initial public issue. The first directors are G. N. Cruickshank, W. A. Bindley, and W. J. Gell. Qualification, 250 shares. Registered office, Camden Works, Camden Street, Birmingham.

Brodrick's Patents (Limited).—Capital 3,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on at Northfield, Worcestershire, by J. H. Brodrick, and to manufacture and deal in non-intoxicating drinks, compounds, colouring, flavouring, and other preparations, and essences and chemicals, and to deal in sugar, malt, hops, fruit, &c. No initial public issue. The subscribers are to appoint the first directors. Qualification, 100*l.* Remuneration as fixed by the company.

C. A. Regent (Limited).—Capital 1,000*l.*, in 1*l.* shares. Objects: To carry on the business of chemists, druggists, and manufacturers of and dealers in proprietary articles, scientific, surgical, and optical instruments, &c. The first subscribers are: J. H. Kingham, 30 Market Square, Aylesbury, gentleman; T. R. Saunderton, Princes Risboro', Bucks, farmer; Mrs. M. S. Kingham, 30 Market Square, Aylesbury; H. J. Benett, 90 Victoria Street, S.W., chemist; J. Nicol, 77 Victoria Street, S.W. chemist; M. C. White, 7 Norbiton House, Camden Street, N.W., secretary; and W. E. Smith, 26 Salisbury Road, Highgate Hill, N., clerk. No initial public issue. Registered without articles of association. Registered office, 77 Victoria Street, S.W.

Diamond Lubricating Company (Limited).—Capital 5,000*l.*, in 1*l.* shares. Objects: To acquire the business of manufacturers of and dealers in all classes of lubricating substances and kindred businesses now carried on by J. C. Person, W. C. Person, G Harvey, and D. L. Schutz at Bute Street, Pendleton, and at 94 Market Street, Manchester, as the "Diamond Lubricating Company," and to carry on the business of manufacturers, extractors, melters, and refiners of and dealers in grease, oil, &c., chemists, druggists, oil, colour, and varnish merchants, &c. No initial public issue. The first directors are J. C. Person, W. C. Person, G. Harvey, and D. L. Schutz (all permanent). Qualification, 1,000*l.* Registered office, 94 Market Street, Manchester.

"Petanelle" (Limited).—Capital 50,000*l.*, in 1*l.* shares. Objects: To adopt an agreement between the Société Français des Tourbes Pasteurisantes, of 4 Rue de Frevise, Paris, and 6 Wool Exchange, E.C., and A. H. Hersee, on behalf of the company, of the other part, and to carry on the business of manufacturers of and dealers in "Petanelle," and all articles manufactured therefrom; manufacturers of and dealers in peat, fuel, peat-moss, peat-litter, peat-fibre, peat-wool, peat-fibre mixed with wool or other materials, peat-waste, peat-soap, charcoal or carbona, surgical dressings and appliances, chest-protectors, body-belts, disinfectants, hygienic clothing and bedding, horse and dog clothing and the like; chemists, druggists, drysalters, oil and colour men, &c. Minimum cash subscription, 7 shares. The first directors are J. Burke, W. G. Miller, C. Steel, J. Susman, and J. Dixon. Qualification, 2 shares. Remuneration of chairman, 250*l.* per annum; of ordinary directors, 200*l.* per annum, to be increased according to profits.

Sudlow & Clapham (Limited).—Capital 2,000*l.*, in 1*l.* shares. Objects: To adopt an agreement between T. W. Sudlow, of the one part, and J. R. Clapham (for the company), of the other part, to acquire the business carried on at 158 High Street, Stockton-on-Tees, by T. W. Sudlow, and to carry on the business of chemists and druggists, dealers in mineral waters, manufacturers of and dealers in proprietary articles, chemical, photographic, surgical, scientific, and other apparatus, &c. The first subscribers are: J. R. Clapham, High Street, Yarm, grocer; J. Clapham, Erdington, near Birmingham, chemists' assistant; R. H. Clapham, High Street, Yarm, grocer; J. Clapham, High Street, Yarm, grocer; Mrs. M. Clapham, High Street, Yarm; Mrs. A. M. Lane, Alston, Cumberland; and T. W. Sudlow, Dimsdale Terrace, Stockton-on-Tees, chemist. No initial public issue. J. R. Clapham is the first director. Qualification, 100*l.* Remuneration as fixed by the company. Registered office, 158 High Street, Stockton-on-Tees.

Reynolds & Sons, Dentists (Limited).—Capital 1,000*l.*, in 1*l.* shares. Objects: To acquire the business of an artificial-teeth

Digitized by Google

manufacturer, carried on by R. W. Reynolds at 91 Newport Street and 102 Chorley Old Road, Bolton, as "Reynolds & Sons," and to carry on the business of artificial-teeth manufacturers, chemists, druggists, perfumers, &c. The first subscribers are: J. Agnew, 27 Pedder Street, Bolton, commercial traveller; T. Taylor, 91 Newport Street, Bolton, dental mechanic; R. W. H. Reynolds, 102 Chorley Old Road, Bolton, managing director; W. E. Reynolds, 43 Clarendon Street, Bolton, warehouse manager; W. J. S. Reynolds, 23 Hebden Street, Bolton, commercial traveller; Miss S. H. Reynolds, 41 Deansgate, Bolton; and Mrs. A. Reynolds, 102 Chorley Old Road, Bolton. No initial public issue. R. W. H. Reynolds is the permanent managing director. The ordinary directors are J. Agnew, W. E. Reynolds, T. Taylor, and W. J. S. Reynolds. Registered office, 91 Newport Street, Bolton.

SECCO FILMS (BRITISH AND COLONIAL) LIMITED.—Proofs for intended dividend to be sent to Mr. Percy Ravenscroft, Jewry House, Old Jewry, E.C., by June 7.

WILLIAM BARR & CO. (LIMITED).—This company having been requested by the creditors' committee to go into liquidation, a resolution to that effect was passed on May 16.

SALT UNION (LIMITED).—The report for the year ended December 31, 1901, states that the gross profit on salt, inclusive of revenue from other sources, amounted to 228,158*l.*, and the net profit to 95,542*l.*, with the balance brought forward from 1900, 101,770*l.* From this has to be deducted debenture interest for the year, 54,000*l.*, leaving an available balance, 47,770*l.* There is also to be deducted a deficiency caused by the reduction in capital, 6,735*l.* Particulars of the dividend, &c., appeared in last week's issue (page 802).

BRUNNER, MOND & CO. (LIMITED).—The annual meeting was held at Liverpool on May 28. Sir John Brunner, M.P., who presided, commented upon the directors' report, and stated with reference to 60,000*l.* placed to suspense account, that next year, as in other years, they would have to provide for improvements in their plant. Dr. Mond, in seconding, said the earnings were higher than they had ever been in any year since they commenced. Their trade was flourishing, and the position of the company after an existence of twenty-one years was as strong as, or stronger than, it had ever been before. The motion was adopted unanimously, and the following directors were re-elected: Mr. E. Milner Mr. C. J. Galloway, Dr. D. B. Hewitt, Mr. H. Brunner, and Mr. Hugh Bell.

Births.

SARGEANT.—On Friday, May 23, at Leeds, the wife of Mr. F. Pilkington Sargeant, of a son.

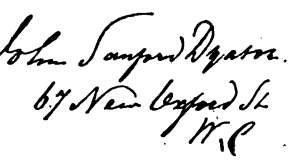
THOMAS.—On May 26, at 1 Westbourne Park Villas, Bayswater, W., the wife of Mr. John Aubrey Thomas, chemist and druggist, of a stillborn child, prematurely.

Marriages.

SMITH—ALLEN.—On May 10, at the Holy Innocents' Church, South Norwood, by the Rev. Bickersteth Ottley, Vicar of St. Mark's, Mr. William G. Smith (of Messrs. R. W. Greeff & Co.) to Miss Frederica Sarah Marion Allen, daughter of Mrs. S. M. Allen, Chagford, South Norwood.

STENHOUSE—MCINTOSH.—At the Waverley Hotel, Aberdeen on May 26, by the Rev. Robert Forgan, B.D., Gilcomston U.F. Church, Aberdeen, James Stenhouse, Spott Farm, Dunbar, to Esther Florence, only daughter of James McIntosh, chemist, Huntly, N.B.

Deaths.



BOGIE.—At Deaconess' Hospital, Edinburgh, on May 20 Mr. Thomas Speedie Bogie, chemist and druggist, Melrose. Aged 58. Mr. Bogie was a native of Kirkcaldy, and was apprenticed to a Dr. Grey there. At the end of his apprenticeship he went to the Greenland whale-fishing in the capacity of ship's surgeon, and appears to have so well satisfied the owners that he made another voyage to the far North. After that he was for several years with Messrs. Sang & Barker, wholesale druggists, Edinburgh, and while with them passed the modified examination shortly before the Pharmacy Act actually became law. About 1870 he started in business in Melrose and did well, also playing his part in the management of town affairs.

BREDT.—On May 25, at Cologne, after a short illness, Hildegard, the beloved wife of Mr. Wilhelm Bredt (of Messrs. Widenmann, Broicher & Co.), 113 Palace Road, London. Aged 26.

COWLES.—At Beccles, on May 19, Mr. Charles Cowles, chemist and druggist, formerly of Stratford. Aged 67.

CULLEN.—At Paisley, on May 16, Mr. Thomas Cullen, chemist and druggist. Aged 71.

DYASON.—On May 10, John Sandford Dyason. Mr. Dyason was well known in his earlier years as a private tutor, and in scientific circles was an authority on meteorological phenomena and colour-schemes. He was the author of several books, including "The Chromatics of the Sky," and put his colour theories into practice in some oil-paintings, which are exhibited at South Kensington. Mr. Dyason was a regular attendant at the evening meetings of the Pharmaceutical Society, and his silent figure on the front benches often excited the curiosity of the present generation of pharmacists, to whom he was not so well known as to the older order. He was introduced to the meetings years ago by his friend, Mr. Alexander Bottle, of Dover. One cold night this year, when warming himself before the stove in the lecture theatre at Bloomsbury Square, he explained to the writer what a pleasure it was to come to the evening meetings, and so keep in touch with modern scientific thought. He also gave some interesting particulars of his earlier life, of his tutorship to the Marquis of Bute and friendship with Professor Huxley. Mr. Dyason, besides being a Fellow of several learned societies and a member of the Institute of Architects, had served in several public capacities, such as Guardian of the Poor of Marylebone and Chairman of the Regent's Park Games Association. Of late years his circumstances were much reduced, but of his real necessity he never gave his many friends any idea, and there is a touch of sadness in the fact that when, a few weeks ago, he was taken ill, he applied to the relieving-officer for assistance, and was removed to the Marylebone Infirmary. His illness developed into acute pneumonia, and when he died it was a pauper's grave that received his body. A few friends are arranging to have his remains exhumed, so that he can be placed by the side of his wife and daughter, who died some years ago, and the stigma of a pauper's grave removed. The signature given above is a reproduction of the name-slip which he gave to the writer.

FRATER.—At East Ham, on May 22, Mr. Mark William Frater, chemist and druggist. Aged 48.

METCALF.—At Oswaldtwistle, on May 18, Mr. William Metcalf, of Messrs. William Metcalf (Limited), chemical-manufacturers, Church, Lancashire. Aged 77. Mr. Metcalf commenced life in a colliery, but subsequently started the chemical-works at Church, which are now a prosperous concern. He took a keen interest in local affairs, being chairman of the old local board for ten years. He was also a member of the County Council, and President of the Oswaldtwistle Liberal Association.

ROBINSON.—At Stanley, co. Durham, on May 24, after a short illness, Joseph Robinson, jun., chemist and druggist, only son of Mr. Joseph Robinson, chemist. Aged 27. Mr. Robinson, jun., served his apprenticeship with his father, and after experience gained in Newcastle, Edinburgh, &c., settled down in Stanley in his father's business, and to which he succeeded a few months ago after his father's retirement. Mr. Robinson was of a happy and obliging disposition, and the esteem in which he was held was evidenced by the great crowd which attended the funeral in St. Andrew's Cemetery on Tuesday. Representatives of both the wholesale and retail drug-trades from Newcastle and the North-Eastern districts were present. The immediate cause of death was rheumatic fever. Mr. Robinson leaves a widow and child.

Westminster Wisdom.

(By our Parliamentary Representative.)

Parliament Reassembles.

What promises to be the most interesting part of the parliamentary Session opened on Monday. How long it will last is a matter of doubt, for the reason that if Mr. Balfour persists in his proposal to hold an autumn Session it may not be thought desirable to sit beyond the end of July; but I find that the opinion entertained by the majority of members is that they will be very fortunate if they get away in time to handle a gun on the Twelfth. Whatever its duration, the work will be important. The Education Bill, the Licensing Bill, and the London Water Bill all stand to be disposed of, and the questions arising out of peace will in themselves need much debate. Private bills do not now demand serious thought, because one of these days the Government will, in the ordinary course, appropriate all the available time for their own purposes. All questions therefore of legislation affecting the business of the chemist and druggist and resulting from the efforts of private members can be dismissed for a year.

Reports of Commissions.

It is equally certain that nothing will be done this year to base legislation upon the reports of the Poisons Commission and the Arsenical-poisoning Commission. Both Commissions are pursuing their investigations in a somewhat leisurely fashion, and their reports will not appear for a long time; but even should the documents be laid on the table to-morrow the Government would not touch them this session.

Commercial Education.

The shadow of the Education Bill made the debate on the vote for the Board of Education on Monday extremely dull. It was felt that there was no use of discussing matters which will necessarily come up again. But one point may be mentioned. Some changes have been made in the evening school regulations, with the view of promoting commercial education, and Sir Albert Rollit, who has for long been a doughty champion in this cause, suggested that more attention ought to be paid to the matter in all elementary schools.

Anthrax and Swine-fever.

While anthrax is increasing it seems that swine-fever is decreasing. In the first three months of this year the number of cases was fewer than at any time during the last seven years. In his speech on Tuesday the Minister of Agriculture did not foreshadow any special action to combat anthrax, but he commented on the extraordinary amount of ignorance in regard to the disease that prevails among farmers and cattle-raisers. As to swine-fever he mentioned that the regulations in Ireland will in future be in accord with the regulations in Great Britain.

Monkey-lymph Again.

I thought we had heard the last of the monkey-lymph question. Mr. Broadhurst is of a different opinion. The matter has excited him deeply, and on Tuesday he gravely warned the President of the Local Government Board that he is determined to have it threshed out. On the spot he essayed to show how the threshing should be done, but unfortunately he had not got up the facts, and he seemed glad to sit down. Then another member got into the breach. This was Mr. Thomas Bayley, who asserted that the heart of the country is moved to indignation over Dr. Copeman's experiments, particularly in view of the doctor's connection with the Local Government Board. An impertinent member interrupted him to ask whether he would explain why a monkey is inferior to a calf, but he declined to have his knowledge made the subject of cross-examination. Mr. Long afterwards explained what Dr. Copeman had actually done. He had made some extremely valuable experiments on his own account, and he vaccinated himself with the so-called monkey-lymph. Having satisfied himself that the lymph was not likely to produce injurious results he inoculated certain children. But Mr. Long pointed out that the Local Government Board had no responsibility. They, however, considered that it was undesirable that the scientific men employed by the Government should be precluded from scientific research which not only contributed to their own efficiency, but enormously to the public service by the results which they obtained.

General Medical Council.

THE Council assembled for its summer session on Tuesday, when there was a full attendance of members. The proceedings opened with Sir William Turner's

Presidential Address,

which intimated an unusually short sitting. Sir William first spoke of examination visitors' reports, including an inspection of the First Professional examination for the English "double qual.," and after a brief reference to the Council *v.* Colleges matter, went on to speak of the Midwives Bill and lack of progress with the Penal and Disciplinary Bill promoted by the Council two years ago. The Finances Committee is to make some suggestion for "raising the wind." Sir William also stated that the penal business will be exceptionally heavy this session, and made the following remarks regarding the Pharmacopœia:—

A special Indian edition of the Addendum to the British Pharmacopœia has been prepared and published, and the Government of India have purchased the greater part of the first issue of 4,000 copies. We have been requested by the Privy Council to send a delegate to an International Congress to be held in Brussels on the subject of a proposed International Pharmacopœia limited to drugs of a drastic nature. At the May session held in 1900 I was authorised to appoint one or more members to act as delegates, and the Chairman of the Pharmacopœia Committee has, at my request, kindly consented to represent the Council.

Preliminary Education.

The chief subject of discussion was raised on a report from the Executive Committee on communications received from the British Medical Association respecting preliminary medical education, and a request from the Association that the Council would receive a deputation on the subject—the deputation consisting of sixteen gentlemen, to include the President of the Association, the President-elect, President of Council, Treasurer (Mr. Andrew Clark), Sir Walter Foster, M.D., M.P., Sir John Moore, M.D., and Mr. Horsley, F.R.S., and Professor Findlay (who afterwards, however, disclaimed it), members of the G.M.C. The Preliminary Education Committee of the Association had come to the conclusion that there is at present no adequate guarantee that registered medical practitioners have received a liberal education; that the G.M.C. had recognised by its action in 1898 that the minimum standard was too low, but that practically no progress had been made. The Association felt therefore that the time had come for them to take up the matter, and made specific recommendations. The Executive Committee recommended the Council not to receive the deputation, but to send copies of the reports on the matter.

Mr. Horsley moved, as an amendment, that the report be entered on the minutes, with the omission of the latter part. He urged that the matter had been brought before a body of practitioners intimately acquainted with the proceedings of the G.M.C., and to say that they were unaware of the reports and resolutions was an insult to their intelligence.

Mr. Brown said he should be sorry to see the paragraph expunged; it should remain as an historical opinion in all its barefacedness. (Laughter.)

Sir John Tuke, as Chairman of the Education Committee, took to heart the slight cast on its efforts, and thought the paragraph should stand.

After Dr. MacAlister and Dr. McVail had spoken, Mr. Horsley withdrew his opposition on the point, but moved that the deputation be received. Sir C. Nixon seconded this. Mr. Windle also thought that it should be received. Dr. Payne and Mr. Tomes then spoke in support of the motion, which was carried.

After a motion by Mr. Brown with reference to copies of the Midwives Bill had been disposed of, the Council

Digitized by Google

"deliberated *in camera*," and so ended the first day's proceedings.

WEDNESDAY'S BUSINESS

does not much concern us, but a serious penal case occupied the attention of the Council in the afternoon. It was that of Dr. Marcus Robert Phipps Dorman, of 9 Norfolk Crescent, Hyde Park, London, W., registered as M.B., Bac. Surg. 1892, Dip. Public Health 1893, M.D. 1899, Univ. Camb., Mem. R. Coll. Surg. Eng. 1892, Lic. R. Coll. Phys. Lond. 1892, who was summoned to appear before the Council on the following charge:—

That in or about the months of November and December, 1901, when attending a Mrs. Florence Sparks, a married lady suffering from dipsomania, in a professional capacity, though without the cognisance of her husband or her own family adviser, you abused your position and used your influence to ruin her.

Mr. Sparks was represented by Mr. Montague Sherman and Dr. Dorman by Mr. McCaw, and these gentlemen concurred in their desire that the proceedings should not be made public, and that, following the example of the Incorporated Law Society, the Press should be excluded. The case was accordingly heard *in camera*.

On resuming, the President announced that the Council adjudged the accused practitioner to have been guilty of infamous conduct in a professional respect, and directed the Registrar to erase his name from the Medical Register.

The name of Mr. John Flanagan (Scotch triple qual.), of Patrick's Terrace, Castlerea, who is in prison for throwing a corrosive fluid, was also erased, and the same was done in the case of Edward Thomas Ffrench, of Glasson, who has been sentenced to penal servitude for life.

The Registrar was also directed to erase from the Dentists' register the name of Samuel Marston, dentist, Belgrave Gate, Leicester, who had been convicted of bigamy.

Personalities.

MR. FRED INGRAM, of Johannesburg, is returning by an early steamer after a year's sojourn at home.

MR. JAMES R. JAMES, representative of Messrs. Dakin Brothers in India, has returned home on a visit.

MR. T. W. CURTIS, chemist and druggist, has been re-elected a member of the Holbeach School Board.

MR. W. J. LUND, chemist and druggist, of Penny Street, Lancaster, is contemplating retiring from business.

MR. T. H. WILLIAMS IDRIS, L.C.C., J.P., has agreed to act as President of the London Chemists' Association.

MISS ADA A. BARGERY, of Burnley, has been appointed dispenser to the Prescot Workhouse, at a salary of 100*l.* per annum.

MR. OSWALD BARKER, of Messrs. Barker Brothers, opium and general commission merchants, Smyrna, is paying a visit to this country.

MR D. E. MACDONALD, chemist and druggist, formerly in business in Penny Street, Lancaster, and late of Bulawayo, is returning to South Africa.

MR. WILLIAM CARTER, general manager of Messrs. Treacher & Co. (Limited), Bombay, is now in England, and is not, we understand, to return to India.

MR. LEONARD C. WEBSTER, pharmaceutical chemist, formerly of Coolgardie, W.A., gave us a call this week on his way North to Edinburgh, where he is to study medicine.

MR. H. CREEMER COOPER, L.R.C.P., M.R.C.S., L.S.A., L.D.S Eng., son of Mr. Albert Cooper, of Gloucester Road, South Kensington, has removed from Ealing to 36 Cavendish Square, W., where he will continue his practice as a dental surgeon.

MR R. J. ROBERTS, chemist and druggist, Medical Hall, Towyn, Merionethshire, has made practically a free gift to that town of Dolgoch estate, with its beautiful ravines, waterfalls, and glens. The property is nearly 250 acres in extent, and is visited annually by thousands of people.

MR. W. DONALD SMITH (of W. Smith & Sons, pharmaceutical chemists, Madras) and Mrs. Smith arrived in London last week, and have gone for a short stay in Wales prior to the Coronation celebrations. Mr. Smith is to take part in the procession on June 27 as an officer of the Madras Volunteer Guards.

A CAMBRIDGE CORRESPONDENT suggests that our notes on Mr. George Peck last week convey the impression that Mr. A. Sidney Campkin is not, like Mr. Peck, a Liberal. The fact is, we omitted to state that the Liberals voted for Mr. Campkin and the Conservatives for Mr. Peck. We observe that Mr. Campkin was one of the delegates at the A.M.C. of the Manchester Unity of Oddfellows, held during Whit-week in Newcastle-on-Tyne, and took an active part in the work. He was elected second on the poll as one of the ten delegates to the Friendly Societies' Conference to be held at Chester next March.

UPON Mr. A. H. Cox, J.P., of Arthur H. Cox & Co, pill-manufacturers, Brighton, taking his seat upon the Brighton Borough Bench on May 26, after being absent through ill-health, the Mayor said before the business was taken he was sure he was "voicing the wishes of his colleagues in extending a hearty welcome to the senior member of the Bench, the late Alderman, and now Mr. Cox, upon his taking his seat again upon that Bench. They were all very glad to see him in such excellent health in his ninetieth year. They sincerely hoped he would still be spared to take a continued interest in the town of his adoption."

IN view of the hopes of pharmacists respecting pharmacy degrees it is interesting to note that Mr. John Barclay, B.Sc., pharmaceutical chemist, of Southall Brothers & Barclay (Limited), has been appointed External Examiner to the Birmingham University in Materia Medica and Pharmacy. The first examination at which Mr. Barclay will officiate will take place in June, and will be in connection with the degree of Bachelor of Medicine of the University. The appointment will be regarded as an official recognition of pharmacy, through a pharmacist, by the University authorities. It speaks well for the University that it should have the materia medica and pharmacy department in the hands of a medical man who is a qualified pharmacist (Dr. Coole Kneale), and that the examination of medical men in pharmacy should be entrusted to one who is a pharmacist pure and simple. It may be added that the requirements in materia medica and pharmacy for the Birmingham University are very high, differing entirely from the smattering required by the Conjoint Board of Examiners for the Colleges of Surgeons and Physicians.

East Indian News.

FOR STEALING a lot of goods from his employers, Messrs. Kemp & Co. (Limited), Bombay, Gangaram Bagi, a Ghatee lad, at the beginning of this month got one day's imprisonment and ten stripes.

FIRE.—A fire occurred at Poona College, Bombay, on May 2, caused by the explosion of chemicals, and killed one servant and injured one student. The building in which the explosion occurred was destroyed.

GERMAN ENTERPRISE "EAST OF SUEZ"—The German East Africa Steamship Company have from May 7 extended and improved their connection with India and the Far East by linking on Rangoon and Colombo to their Bombay-Zanzibar regular service.

CEYLON PRODUCTS.—The annual report of the Director states that an investigation of the native drugs of Ceylon is being set on foot, and plots of all possible species are being laid out at Peradeniya. Increased interest has been shown in cinchona cultivation in Ceylon, and seed has been purchased from abroad and planted in various districts. By the planting of improved varieties, and by the practice of grafting of better kinds on poor stocks, it is hoped this product may again attain its former importance. Camphor has been planted a good deal during the year, the chief check being the difficulty of getting good seed, there being no local supply as yet. Camphor is not recommended as the main industry for any estate, but only as a minor industry. The cultivation of cardamoms is extending, and the exports have increased. Pepper shows signs of extension of cultivation, and the Director thinks it should at least be possible to dispense with the present large import of this spice. Exports of cinnamon show a rise in bales and a fall in chips. Vanilla planting has slightly extended.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Templar Malins's Case.

SIR,—If ever a man was ridden over rough-shod, and the law made to fit the case, it is that of the one named above. Should you take any action in fighting the matter out, please call on me for a sovereign. Yours faithfully,

Middlesborough, May 26. S. RICHARDSON.

SIR,—If the Cardiff Stipendiary's judgment in the Malins case is allowed to stand, then I guess all chemists who have a sign "Teeth carefully extracted" are open to a fine of 20*l*. I think it would be worth while to have the point settled once for all, and with that in view my contribution to the appeal-box is five guineas. Yours faithfully,

ARTHUR OGLESBY,

Barnsley, May 23. Ex-Dentist.

Heath Again.

SIR,—In the old days Hounslow Heath and the Kentish Black Heath were places where honest folk often had to part with their goods, and get nothing for them in return. There is still a danger from a Kentish Heath in the same direction, as an order I got for "New-Skin," read in the light of the paragraph on page 489 of your issue of September 21, 1901, will show. I presume this "Henry Heath, Heath House, Lydd, Kent," who is favouring me with an order for a 63*s*. lot of "New-Skin," is the one against whom you issued your timely warning.

Yours truly,

J. E. GARRATT.

More about Essential Oils.

Sir,—There are several points of interest in the last issue of Messrs. Schimmel's report to which I think attention might with advantage be drawn. The continental views of scientific work done in England and those held over here do not often coincide. Anyone reading pages 34 and 35 (lemon oil) would hardly appreciate the facts of the case. Briefly stated they are as follows. Messrs. Schimmel & Co. failed to find pinene in lemon oil (or, as they prefer to put it, proved its absence). Messrs. Burgess and Child have positively demonstrated its presence in a sample which Mr. Child saw coppered after being pressed in his presence. Messrs. Schimmel & Co. now propose to confirm Messrs. Burgess and Child's work. Those who have seen that work and the crystalline compound prepared by Messrs. Burgess and Child hardly need Messrs. Schimmel & Co.'s confirmation: it may be useful to themselves. They may be able to procure samples from "an absolutely reliable source," but certainly not from a more reliable source than the one just mentioned. When Messrs. Schimmel & Co. have confirmed this work, it must not be lost sight of under a mass of verbiage that Messrs. Burgess and Child have the sole and entire credit for the discovery.

On page 63 we read "it is a well-known fact that the methods which are nowadays employed for testing the quality [of sandal-wood oil] have been devised by us." Until now I was under the impression that Messrs. Schimmel made a very strong point of the santalol content of this oil. In this they were kind enough to confirm my previously published results, and it is quite new to me that they claim the credit of this method, which was never referred to in their reports till some time after my paper was published. On pages 58 and 59, in their very temperate criticism of my recently published notes on otto of rose, I fail to see one point which seriously controverts the statements I made, whilst I could have wished to have seen the points discussed in order to be sure of getting at the bottom of the matter. If my notes and the pages mentioned are read side by side, I think it will be found that none of my points are refuted.

These remarks are written in no offensive spirit, as Messrs. Schimmel & Co. appear to think from their last communication to me, but critics must expect to be criticised.

Yours faithfully,

ERNEST J. PARRY.

208 High Street, Borough S.E., May 26.

Fighting the Unwashed Everywhere.

SIR,—I am pleased to see from your notes that Glasgow is catching on to the price-list idea. There can be no doubt whatever that the cutter has taken advantage of the chemist everywhere by representing in price-lists that the published price of a "patent" is the chemist's price, and the cut-price only the stores' price. In reality there has been practically no difference between chemists' prices and the stores' prices for several years. I would strongly urge chemists in every district invaded by these stores to join together in publishing a chemists' price-list. This is the only method by which the public can be led to see that the chemists' price for a 2*s*. 9*d*. article is not 2*s*. 9*d*. whilst the stores' price is only 1*s*. 10*d*. Let each chemist get a liberal supply of these lists bearing his own name, so that he may be able to flood his own particular area with price-lists. The manufacturer of "patents" views this line of action with suspicion, but let him look out for himself. If a manufacturer comes forward and offers to establish special terms for a special district, let the chemists ask him how he is to set about it unless he joins the P.A.T.A. I know of no method by which manufacturers can force agreements outside the P.A.T.A., unless they resolve not to supply their goods through wholesale channels. Kodak (Limited) tried to impose restrictions on traders, and the natural outcome is that they are now refusing to supply the wholesale. Important manufacturers of "patents" have refused to join the P.A.T.A., probably because they thought that free trade in "patents" paid them best. Very well, let them have free trade. We can easily give them more than enough of it. The only way by which they can force agreements is by joining the P.A.T.A., which has recognised powers, and publishes a regular list which is in the hands of every chemist in the country. The P.A.T.A. renders it much easier for chemists to draw up a common price-list. In such a list all articles on the P.A.T.A. will of course be entered at the restricted prices; all articles not on the P.A.T.A. must be entered not higher than the lowest prices published in wholesale net "patent" lists. Some chemists may think it indiscreet in me to give this indication of how a price-list may be drawn up, but there is absolutely no need for secrecy. It a price-list is drawn up on these lines the stores' man may cut a ½*d*. below it here and a 1*d*. below it there, but that will be of no importance whatever. It is not the ½*d*. and the 1*d*. which have done injury, but constant misrepresentation, by which the people are led to believe that the published price of a "patent" is the chemists' price, and the cut-prices the stores'. The chemist is in reality in a better position to cut than the store, and has nothing whatever to fear if he will go boldly forward on these lines. I have no doubt that this line will quickly lead to large manufacturers, such as Beecham and Seigel, joining the P.A.T.A., and fixing a price for their articles, which shall put an end to their goods being sold without profit. I am not speaking on these points as a member of the Glasgow committee. Although I would like to see this course adopted generally in Scotland, I hope the suggestion of so likely a policy may not fall on barren ground throughout England. I am still persuaded that we must ultimately have fresh legislation, and that our case will receive favourable consideration in the House of Commons when we get it introduced, but unfortunately the parliamentary machine is at present so choked up that no kind of legislation seems possible. Meanwhile, much can be done by chemists to meet the unjust competition to which they have been submitted for years in this country. When we succeed in reducing the dividends paid by limited drug-companies to about 1½ per cent. all round, as appears already to be the case with some, the conscience of the people may be stirred to the acknowledgment of the fact that it is unjust and against all moral principle for a State to force one man to sow and encourage another to reap. JAMES REID.

Dumfries, May 26.

Liable Labels.

The following is the wording of a nice label sent to us by *Mr. Tranmer*:—

Lanoline and camphor jelly, for chapped hands, cracked lips, rough skin, &c.

Prepared only by H. M. Tranmer, chemist, 42 High Street, Smethwick.

He deleted "&c." and "only," and the Commissioners of Inland Revenue replied, "Not liable to stamp-duty as altered."

An Old-time Toothache-cure.

SIR,—Many remarkable entries are to be found in old church registers. Perhaps the following, which appears on one leaf in the register of the parish church, Tetbury, Gloucestershire, may be hard to beat:—

Charles Fisher, a soulder, was shot on Monday, May the $\frac{1729}{23}$, at the 4-miles house, for desertion.

(Witness) JOHN MITCHEL. Clark.

Close at hand, for the benefit of suffering posterity, the worthy "clark" has handed down the following:—

TOOTHACHE.

Oil of origanum	...	...	2*d.*
Spirit of wine...	...	...	1*d.*
Spirit of turpentine...	...	...	1*d.*

Yours very faithfully,

T. VALENTINE PETTIFER, F.R.C.V.S.

The Limes, Tetbury, Glos.

The Literature of Pharmacy.

SIR,—It has been stated that a knowledge of pharmacy must have existed from the earliest times, if "Adam the gardener and his wife" cultivated plants and bestowed names on animals it is inferred that he described plants also. Solomon is said to have written volumes on the subject. Herodotus states that the Babylonians collected information by bringing their sick folk to the front in order that passengers might suggest a remedy. The Egyptians derived their plant-lore from the Babylonians. Moses, a priest in the temple of Isis, prescribed formulas to be compounded "after the art of the apothecary"—and treated diseases in an experienced manner. The Grecians derived their knowledge of medicine from the Egyptians. Hippocrates and Galen were the most renowned practitioners, the latter employing only herbs and simples, but with such success that the cures he effected were ascribed to magic. One of his favourite remedies is still recognised as valuable—viz., Taraxacum (from *Tarasso*, to remove), descending to our times through the Romans, probably by Celsus. The first attempt to systematise pharmacy in Great Britain was adopted by Alfred the Great, who sent an envoy to Helias the Patriarch, of Jerusalem, who supplied the mission with numerous drugs, including aloes, scammony, senna, and rhubarb. Alfred confided the valuable consignment to the clergy, who retained control of this vast power for hundreds of years (see "Leechdom, Wort Cunning, and Star Craft of Early England," translated by Rev. T. V. Cockayne, Ph. Soc. Library). On the breaking up of the monasteries, the disinherited monks, on being dispersed throughout the land, carried the learning of the cell and cloister into remote places; not the least important was that of medicine, leading to the founding of colleges as well as to general practice. At length appeared three important volumes entitled the London, Edinburgh, and Dublin Pharmacopœias—these now amalgamated are designated "The British Pharmacopœia." Other books existed representing numerous hospitals—Gray, Royle, A. T. Thompson—were resorted to by the ordinary chemist and druggist, until that masterpiece by Jonathan Pereira ("Elements of Materia Medica and Therapeutics," 1839) arose like a sun, diffusing light and warmth universally. The latest production is the "Extra Pharmacopœia," the result of the life labours of William Martindale, the honoured and beloved exponent of literary and scientific pharmacy, an invaluable bequest both to prescribers and dispensers of every degree—so copious and reliable. But the pharmacist of the present day requires something more than volumes of reference. There is a demand for information requisite for the health and strength, yea, even for the vital existence of every living soul connected with the craft. This kind of mental food is supplied by organs representing pharmacy. "Men cannot live on bread alone," neither can they exist wholly upon science, but a combination of both is essential for health of body and spirit. THE CHEMIST AND DRUGGIST started into life like Minerva, a bold, adventurous spirit, with ample resources of capital, tact, and above all, a *bonhomie* in conducting its affairs, so that the *C. & D.* is an essential the wide world o'er, and its hebdomadal visits eagerly looked for—and by the pleasing combination of effects has become not only the ally but the supporter of pharmacy, and the promulgator of trade-interests—we may say with Pope:—

"'Tis thus the mercury of man is fixed,
Strong grows the virtue when the nature's mixed;
Whilst one cements what else were too refined;
And in one interest body acts with mind."

A Bleached Mixture.

Sir,—Can you explain the cause of following mixture losing its colour? We have made it up regularly during the last year, and only within the last two days have we had this change take place:—

Hematic hypophosphites (P., D. & Co.)	℥j.
Syr. Eastonii...	℥j.
Syr. ferri phos. co.	℥iij.
Aq. ad	℥vj.

On standing overnight the mixture becomes quite bleached. A new Winchester of chemical food was opened and used last time, but that is the only difference between this and other previous mixtures.

Yours faithfully,
J. A. (209/65.)

[The change is, perhaps, due to some change in the hypophosphites, but some reader may be able from experience to suggest the reason for the bleaching.]

An Excipient Wanted.

Sir,—Kindly inform me the best excipient for the following pills:—

Menthol.	gr. j.
Thymol.	gr. j.
Camphor.	gr. ij.

Ft. pil. j. Mitte vj.

And oblige,
Dublin. (224/60.)

[Roe's pill-excipient given in the *C. & D.*, December 28, 1901 page 1044, answers splendidly for such pills as the above.]

229/58. *Dental.*—When tr. chloroform co. is ordered in a prescription of any date we would not hesitate in giving the preparation of that name which was official in the 1885 Pharmacopœia.

Miscellaneous Inquiries.

224/39. *E. D. H. B.*—Particulars of the King's consumption sanatoria scheme were given in the *C. & D.*, January 11, page 51. Some addresses are given there from which other particulars may be obtained.

217/1. *Tincture.*—Opium yields its virtues to water hence the use of that solvent for making the extract, and with spirit in the tincture about 64 per cent. of opium is soluble in water.

207/57. *P. M.* (Bombay).—We cannot appreciate your difficulty of being unable to remove postage stamps stuck in an album. We put the paper on which the stamps were stuck in cold water for half an hour, and the stamps peeled off readily.

226/10. *A. B. C.*—Emulsion of Petroleum with Hypophosphites. See The Chemists' and Druggists' Diary 1902, page 516.

225/72. *Dubious.*—The address of the Institute of Mining and Metallurgy is Broad Street House, New Broad Street, E.C. The Secretary will furnish you with particulars of the course of training required.

226/40. *Phœnix.*—Removing Aniline Marking-ink Stains. Refer to *C. & D.*, April 12, page 583.

217/35. *Sarsæ.*—Sarsaparilla-drink. With dec. sarsæ co. and syrup you will not have any difficulty in imitating the sample of sarsaparilla you send.

225/64. *Calcis.*—Metal Polish.—See *C. & D.*, March 29, page 511.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

234/64. Who supplies Apitol, an indigestion-remedy?

238/48. Who are the English agents for Garfield tea?

236/11. Makers of or agents for Boar's Head brand gelatin marked "A. & B."

234/25. Who makes 12-oz. green glass, barrel-shaped, handled, Harrogate water tumblers?

240/27. Who supplies printing-out paper in packets, with retailer's name and address printed on?

240/48. Present address of proprietors of Nichols' Voltacloth, Margery's whoopterine, and Psycheia cream.

239/4. *Floral* writes:—What is generally sold about Nottinghamshire and Derbyshire for (*a*) 5 ha'porths for cough-mixture; (*b*) 4 ha'porths for diarrhœa; and (*c*) Red bottle? Will subscribers in those counties please furnish replies.

Coming Events.

Friday, May 30.

Royal Institution. Discourse by Mr. Marconi postponed; in place of it Professor Fleming will lecture on "The Electrotonic Theory of Electricity."

Monday, June 2.

Society of Chemical Industry (London Section), Burlington House, Piccadilly, W., at 8 P.M. "A Contribution to the Chemistry of Whiskey," by Dr. P. Schedrowitz; "Estimation of Perchlorate in Saltpetre," by Dr. A. Dupré; "The Will Test for Nitro-cellulose," by Dr. R. Robertson; and "Effect of the Alcohol Duty on Chemical Industries," by Dr. O. Silberrad.

Tuesday, June 3.

Chemists' Exhibition at St. James' Hall, Manchester, opens, and remains open till Friday night.

Wednesday, June 4.

Pharmaceutical Society of Great Britain, 16 Bloomsbury Square, W.C., at 11 A.M. Council-meeting.

Pharmaceutical Society of Ireland, 67 Lower Mount Street, Dublin, at 3 P.M. Council-meeting.

Thursday, June 5 [p 12].

Chemical Society, Burlington House, W., at 8 P.M. The following papers will be communicated:—"The Action of Ungerminated Barley Diastase on Starch" (Part I), by J. L. Baker; "The Decomposition of Chlorates" (Part V.), "Potassium Chlorate in presence of Oxides of Manganese," by W. H. Sodeau.

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: May 29.

THE business tone has slightly improved in a few directions, and, although transactions are mostly small, it is to be hoped that the improvement will be maintained. The principal alteration has been a sudden reduction in cocaine, which came as a surprise to the market. Phenacetin, on the other hand, has been advanced. Cod-liver oil is rising in Norway, but the market here is distinctly quiet. Menthol has advanced owing to spot scarcity, and the same may be said of Japanese wax. The quarterly auctions of cinnamon were held this week, at which very small supplies were offered, and met with a good demand at dearer rates all round. Isinglass also sold well in auction at higher prices. Quinine is a nominal market in second-hands, and shellac is lower. The following are the principal fluctuations of the week, including those recorded at the auctions of first-hand drugs, reported on page 870:—

Higher	Firmer	Easier	Lower
Aloes (Cape)	Oil, peppermint	Capsicums	Chillies (Jap.)
Ammonia sulphate		Ipecacuanha (Cartagena)	Cinnamon (chips)
Cardamoms and decort. seed			Cocaine
Cinnamon			Pepper (black)
Honey (Jamaica)			Shellac
Isinglass			
Menthol			
Oil, cod-liver			
Phenacetin			
Wax, Japanese			

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from May 21 to 27, inclusive:—Acetate of lime (@ New York), 3,845; acetate of soda (@ Treport), 102; acid, boric (Ital.), 40; acid, carbolic, 125 cks.; argol (@ Bordeaux) 114, (@ Cape) 47; arrowroot (@ St. Vincent), 1,999 pkgs.; arsenic (@ Hamburg), 10; bay oil (@ Guadeloupe), 4 cks.; belladonna-leaves (@ Hamburg), 5; benzoin (@ Singapore), 36; birdlime (@ Kobe), 158 cs. *in transit*; bleaching-powder 132, (@ Treport) 79, (@ Dusseldorf) 198 cs.; bromine (@ Hamburg), 20; canary-seed, 191; cardamoms, 106; caraway-seed, 245; castor oil (E.I.) 424 cks. 85 cs., (@ Antwerp) 93 brls.; chamomiles (@ Ghent), 28; cinnamon oil (@ Colombo), 4; citrate of lime (@ Messina) 123, (@ Palermo) 22; cinchona (@ Calicut) 860 bls., (@ Madras) 59; civet (@ Aden), 1 cs.; coca-leaves (@ Ceylon), 4; cod-liver oil (@ Rotterdam) 50 cs., (@ Norway) 11; coriander-seed, 129; cumin-seed (@ Morocco), 66; cuttle-fish bone (@ Marseilles), 32 cs.; cream of tartar, 168; croton-seed (@ Ceylon), 46; dragon's-blood, 10; drugs (@ Madras), 6 bls.; ergot (@ Vigo), 15; essential oils (@ Messina) 27, (@ Ostend) 11; eucalyptus oil (@ Bremen) 20 cs.; ganja (@ Calcutta), 21 cs.; gentian, 28; ginger (@ Calicut) 151 pkgs., (@ Kobe) 171; glycerin (@ Marseilles), 60 cks.; gum arabic (@ Alexandria), 27; gum, unenumerated (@ Aden) 36 bgs., (@ Suez) 855; honey (Chil.) 19 brls., (Jamaica) 153; juniper-berries, 100; lime oil (W.I.), 10; lime-juice (@ Jamaica), 18 pns. 15 pkgs.; liquorice (@ Batoum) 400 cs., (@ Naples) 25; liquorice-juice (@ Messina), 16; mustard oil, 49; myrrh (@ Aden) 36 bgs., (@ Hamburg) 24; nux vomica (@ Mangalore) 267, (@ Tellicherry) 160; opium (@ Genoa) 39, (@ Hong-Kong) 13, (@ Constantinople) 6; orris (Ital.), 78; otto of rose (@ Constantinople), 2 cs.; phosphorus (@ Montreal), 100 cs.; potassium cyanide, 42; quince-seed (@ Cape), 6; rhubarb (@ Shanghai), 45; sal ammoniac, 73; saltpetre (@ Calcutta), 678; sandalwood (E.I.), 380; sarsaparilla (@ New York), 61; seedlac (@ Madras) 62, (@ Calcutta) 60, (@ Karachi) 130; senna (@ Suez), 20; shellac, 3,033; button lac, 447; sticklac (@ Singapore), 176 cs.; sugar of lead, 44; sulphur (@ Catania) 67, (@ Girgenti) 500 tons; tamarinds (W. I.), 12 brls.; tartar (@ Naples) 22, (@ Rotterdam) 4, (@ Marseilles) 18, (@ Bordeaux) 132, (@ Messina) 34; wax, bees' (Ital.) 8, (Chil.) 17, (Fr.) 4, (@ Morocco) 29, (Aust.) 8, (@ Aden) 20; wax, Carnauba (@ Brazil), 167 bls.; wax, ceresin (@ Hamburg) 25, (@ Stettin) 10; wax, Japanese (@ Hamburg), 11; wax, unenumerated (@ Hamburg), 34; wine-lees (@ Messina) 452, (@ Palermo) 398; wood oil (Chinese), 405; zinc oxide (@ Rotterdam) 76 bls., (@ Antwerp) 12, (@ New York) 500, (@ Hamburg) 25.

London Markets.

ACID, CARBOLIC.—A report from Leipsic states that the output continues to increase. The synthetic article is also being pushed, so it is not surprising prices have again been reduced.

ACID, CITRIC.—Firm, at 1*s.* 0¾*d.* to 1*s.* 1*d.* per lb., the latter being makers' price.

ALBUMEN.—The exports of albumen and egg-yolk from Hankow during 1901 considerably diminished, the figures being 1,013 cwt and 4,782 cwt. respectively, against 2,825 cwt. and 22,533 cwt. in 1900. Only one factory continues working in Hankow against a glutted home market and an extravagant local price for eggs. The trade may revive if the importation of foreign salt mixed with borax is permitted.

ARGOL.—Sales of small to medium grey Cape, but very dusty, have been made at 40*s.* per cwt.

ARROWROOT.—On Wednesday, for the first time since the eruption in St. Vincent, some first-hand parcels were offered at auction, but without result, as holders were firm and buyers did not respond. Fair to good was bought in at 4½*d.* to 5½*d.*, and fine at 6*d.* to 7*d.* per lb. Bermuda was also withdrawn at 1*s.* 8*d.* per lb. It appears that about half the present crop of St. Vincent arrowroot has been saved, and as this is the principal month for shipment some 2,000 packages have just arrived.

BELLADONNA-ROOT.—From 38*s.* to 40*s.* per cwt. has been paid this week for root of fair quality.

BUCHU.—For the few remaining bales on this market 1*s.* per lb. is asked, and holders are firm. An easier market is reported from the United States (the principal consumer), owing to arrivals there. In auction, 8 bales of oval green leaf were shown, for which 9*d.* was wanted, a bid of 8½*d.* being refused.

CANARY-SEED.—Slight rains over practically the whole of the growing district in Turkey has benefited the crop, but more rain is badly required. The price in Constantinople is 9*s.* 3*d.*, f.o.b., with stocks down to 6,000 sacks.

CINNAMON.—The usual quarterly sales, held last Monday, were exceptionally small, and the competition being good nearly the whole quantity was disposed of at steady to higher prices. Very fine superior firsts were 2*d.* per lb. dearer; good firsts, of which only a few bales were offered, sold at 3*d.* per lb. advance, good seconds at 1½*d.*, and lower qualities occasionally ½*d.* to 1*d.* higher. The following were the prices obtained: Superior I., 1*s.* 5*d.* to 1*s.* 9*d.*; II., 1*s.* 3*d.* to 1*s.* 5*d.*; III, 1*s.* 2*d.* to 1*s.* 5*d.*; IV., 10*d.* to 11*d.*; good I., 1*s.* 1*d.* to 1*s.* 3*d.*; II, 10*d.* to 1*s.*; III., 9½*d.* to 10*d.*; IV., 8*d.* to 10*d.*; ordinary III., 9*d.*; and V., 8*d.* per lb. Chips were cheaper, good bright, little dusty, selling at 2 5/16*d.* per lb.

COCAINE has been reduced 1*s.* 6*d.* per oz. by makers, who now quote hydrochloride at from 16*s.* 3*d.* to 16*s.* 9*d.* per oz., according to quantity. *Pure* cocaine is 2*s.* 6*d.* per oz. more. This drop came as a surprise to the market, as during the past month the idea was prevalent that an advance would take place. The reduction is said to be the result of underselling the Convention.

CODEIA.—The quotation for 100-oz. lots from makers is 10*s.* 7*d.* per oz., not 10*s.* 5*d.* as reported last week, that being the price for 300 oz. quantities.

Digitized by Google

Ergot.—Inactive but firm, Russian being quoted 1*s.* 9*d.* per lb., spot, and 1*s.* 6*d.*, c.i.f.

Galls.—The exports from Hankow during 1901 amounted to 45,985 cwt. (110,147*l.*), against 48,354 cwt. (107,875*l.*) in 1900.

Gentian is very firm, at 20*s.* per cwt., on the spot.

Juniper-berries.—The principal holders are now asking 13*s.* 6*d.* per cwt.

Lemon-peel.—Fresh English hand-cut peel is quoted 9*d.* per lb.

Lime-juice.—For good unworked West Indian 1*s.* 5*d.* per gal. is said so have been paid for some 15 puncheons, and the market is now very bare. In auction, 1 puncheon of unworked West Indian sold at 1*s.* 2*d.* per gal.

Mastich.—From Constantinople higher prices and a better demand are reported, but it is hardly likely to affect this market, as stocks here continue large.

Menthol is again dearer on the spot, with business in Kobayashi crystals early in the week up to 13*s.* 9*d.* per lb., but 14*s.* 3*d.* is now asked for this brand, and the market is very firm.

Oil, Anise, Star, is quiet, with small spot sales at 4*s.* 2½*d.* to 4*s.* 3*d.* per lb.

Oil, Cod-liver.—Our Bergen correspondent writes on May 24, that the Finmarken fishing has not improved; on the contrary, matters have undergone a change for the worse. This fact has induced local speculation, and some large purchases have been made with the idea of bringing supplies into fewer hands. Values in consequence have advanced, and best Lofoten non-congealing oil is now quoted 110*s.* per barrel, f.o.b. The exports from Bergen to date amount to 3,672 barrels, against 4,391 barrels at the same time last year. The London market is quiet, buyers for the most part preferring to look on, now that the consuming season is closing. Agents ask higher prices, in sympathy with Bergen, and to-day 120*s.* and 130*s.*, f.o.b., are given out as quotations for two leading brands.

Oil, Lemongrass.—A small spot business is reported at 5½*d.* per oz.

Oil, Peppermint. — All descriptions of peppermint are tending firmer. There is more doing in Japanese dementholised oil, and 3*s.* 9*d.*, spot, has been paid for a fair quantity. American HGH is unchanged at 8*s.* 10½*d.*, spot.

Opium.—Constantinople, May 16.—There has been a marked advance during the last day or two to the extent of 5 per cent. to 6 per cent., owing to continued drought, which is beginning to tell on the crop. In the absence of rain within the next nine or ten days we shall probably hear of serious damage. The week's sales amount to 2 cases "druggists'" at 7*s.* 3*d.* May 23.—Continued drought during the past six weeks has done damage to the crop, and the output in Asia Minor has, in consequence, been reduced to the extent of 15 per cent. to 20 per cent. Rain, however, has now fallen and further risks are postponed. Salonica districts also have suffered by the drought, and the crop now, under most favourable conditions, will be under 2,000 cases. Comparing the extensive area of land sown this season with the amount of damage done by the drought, we doubt very much if prices will be affected presently on this score, as the crop should still be a large one. Speculators have been on the alert during the past week, but found few or no sellers; this, no doubt, in consequence of unfavourable reports or pending further developments of the crop. The sales amount to 12 cases "druggists'" at the parity of 7*s.* 8*d.* per lb., f.o.b.

Orris.—Values continue to rule very low in Italy, and the markets are very quiet. Quotations to hand this week from Leghorn are 24*s.* to 25*s.*, c.i.f., for good picked Florentine, and 23*s.* for sorts.

Phenacetin has been advanced 1*s.* 10*d.* per lb., makers now quoting B.P. crystals or powder in bulk at from 6*s.* to 6*s.* 7*d.* per lb., net, without discount, according to quantity, with extra charges for smaller packages.

Potash Permanganate remains low in price, and for small crystals 33*s.* per cwt. is asked.

Potashes.—First American potashes are quoted 25*s.* per cwt., and seconds 24*s.*, spot, Montreal being 2*s.* and 1*s.* more. First American pearl are worth 40*s.*, spot, or probably 37*s.* 6*d.*, c.i.f.

Quicksilver.—Very firmly held at 8*l.* 15*s.* per bottle.

Quinine.—A lifeless market in secondhands, with quotations nominal at about 1*s.* 0¼*d.* per oz. for good German sulphate in bulk.

The exports from Java during March amounted to 38 cases, which were shipped to New York. From January 1 to March 31 the total shipments have been:—

	1902	1901	1900	1899	1898
Cases	412	500	470	337	119

Senega.—Business has been done at 2*s.* 2*d.* per lb., net, on the spot. The Minnesota correspondent of the *O. P. & D. Reporter* writes that the outlook for the coming season is not very favourable for the senega crop. He thinks that there will be no cheap senega quoted in future, as the land is being taken up for farming purposes. The Indians (he says) will not dig root as long as the Government supports them, and white labour is too high-priced, and is better paid for other work. At present there is no stock of any consequence being held in the West.

Shellac is depressed and lower, little business having been done. Second Orange TN is worth about 112*s.* 6*d.* per cwt., spot, and firsts, 128*s.*

Spices.—The auctions were resumed on Wednesday, and were fairly heavy, but the demand being slow the bulk was bought in, the lots sold going mostly at lower prices. Cochin *Ginger* was steady, 20 bags washed rough sold at 39*s.* per cwt., but the remainder was bought in, as also were cuttings at 37*s.* 6*d.*, bold cut at 75*s.* to 95*s.*, medium at 65*s.* small at 55*s.*, and Calicut brown rough at 42*s.* for ordinary, and at 40*s.* for small. Only a few barre's of Jamaica sold at 34*s.* 6*d.* to 36*s.* 6*d.* per cwt. for Rhatoon, at 37*s.* 6*d.* to 40*s.* for common, and at 47*s.* for middling, being about 1*s.* per cwt. cheaper, but rough Japan slightly limed was bought in at 35*s.* per cwt. Since the sale several hundred barrels of Jamaica ginger have been sold at 1*s.* per cwt. advance on the auction prices. Fair Amboyna *Cloves* were bought in at 5⅜*d.* per lb. Zanzibar are quoted 3 15/16*d.* on the spot, and for June-August delivery. Japan *Chillies* were lower at 29*s.* per cwt. for good long red. *Capsicums* were also cheaper, fair red Japan on short stalk sold at 16*s.* to 17*s.* per cwt., good red East India cherries brought 27*s.* per cwt., ordinary Bombay being bought in at 20*s.*, Ceylon at 22*s.*, and fine Egyptian at 47*s.* 6*d.* per cwt. *Pimento* neglected, ordinary to good was bought in at 2¾*d.* to 2 7/8*d.* per lb. *Nutmegs* steady, 80's were bought in at 1*s.* 6*d.* per lb.; 65's sold at 2*s.* 5*d.* *Mace* partly sold at 1*s.* 3½*d.* per lb. for good pickings. *Cassia-vera* was bought in at 25*s.* per cwt., *Cassia-lignea* at 55*s.* per cwt. for whole, and at 50*s.* for good chips. *China-cinnamon* sold at 24*s.* per cwt. Black *Pepper* lower, bold heavy East India estate sold at 5⅜*d.* to 5⅝*d.*, and small heavy at 5¼*d.* per lb. Singapore was bought in at 5¾*d.*, and fair Alleppy at the same price. Penang white was also cheaper, common to fair sold at 8 7/8*d.* to 9*d.* per lb. Fine bold Singapore white sold at 10½*d.* per lb. Siam was bought in at 9⅜*d.* to 9½*d.* per lb., and fine Ceylon at 10¼*d.* per lb.

Wahoo-bark is offered at 9½*d.* per lb. net, spot. From the U.S. it is reported scarce at 9*d.* to 10*d.* per lb.

Wax, Japanese.—The scarcity on the spot continues, and prices show an advance of quite 3*s.* per cwt. since last week, holders now asking 41*s.*, with the possibility of obtaining a little at a shade under this figure.

Wild-cherry Bark.—A fair quantity has been placed this week at from 4¼*d.* to 4½*d.* per lb. net, spot; forward delivery is quoted 4¼*d.*, c.i.f.

London Drug-auctions.

At the auctions of first-hand drugs there was very little demand publicly and fluctuations in value were few. Cardamoms met with better support and were slightly dearer, especially decorticated seed. Aloes was neglected; no benzoin was offered. Jamaica honey sold at rather dearer prices and both Cartagena and Rio ipecacuanha experienced slight demand, the former being a shade easier. Rhubarb was held at very high prices, especially Shensi. Practically no Tinnevelly senna was offered. Jamaica

Digitized by Google

beeswax sold steadily, but other descriptions were dull of sale. The following table shows the quantities of goods offered and sold:—

	Offered	Sold
Aloes—		
Cape	3	3
Curaçao	99	2
Socotrine	22	6
Ambergris	5	4
Annatto-seed	10	0
Balsam copaiba	10	5

Madagascar	3	3
Magazan	8	0
Mogador	7	0
Spanish	12	0
Tasmanian	3	0
Zanzibar	158	0

ALOES.—Three cases of Cape seconds, partly soft, were offered, but withdrawn, as they had previously been offered for sale. The price was understood to be 40*s.*, and they were afterwards sold privately. Curaçoa aloes was plentiful, but neglected, only two cases selling at 29*s.* per cwt. for bright capsy. Bright but reddish and coarse livery was taken out at 35*s.* A keg of stiff liquid Socotrine sold cheaply at 26*s.*, and a bid of 68*s.* 6*d.* was refused for stiff pasty Socotrine in kegs, 72*s.* 6*d.* being wanted; hard drossy sold at 28*s.*

AMBERGRIS sold at full prices, 90*s.* per oz. being paid for a couple of tins containing two pieces of fine but rather earthy. From another catalogue 2 tins were sold at 80*s.* and 47*s.* per oz., the latter "subject."

BALSAM COPAIBA.—Of 10 cases of bright thick Maracaibo, 5 sold at 1*s.* 8*d.* per lb.

BALSAM PERU.—Thin balsam was limited at 6*s.* per lb.

CALUMBA.—Medium to bold bright yellow washed was taken out without mention of price, and from another catalogue 100 bags of dull sorts, slightly wormy, sold at 9*s.* per cwt.

CANNABIS INDICA.—Tops were held at 2*s.* 6*d.* per lb., and the price is expected to further advance when further progress has been made. Siftings are cleared.

CARDAMOMS.—The tone was distinctly better than of late, and prices showed an advance of 1*d.* in some instances, while decorticated seed was 1*d.* to 2*d.* dearer. The following prices were paid:—Ceylon-Mysores: Good medium-sized pale, bright smooth, 2*s.* 1*d.* to 2*s.* 2*d.*; medium and bold pale long, 1*s.* 8*d.*; small and medium bright pale, 1*s.* 6*d.*; small and medium pale, 1*s.* 2*d.* to 1*s.* 4*d.*; very small pale, 1*s.* to 1*s.* 1*d.*; brown and split, 1*s.* to 1*s.* 1*d.* Ceylon-Malabar: Light shelly pale, 10*d.* to 11*d.*; bold and medium pale were held at 2*s* per lb. Decorticated seed sold at from 1*s.* 6*d.* to 1*s.* 9*d.* per lb. Several parcels of cardamoms were held at high limits, and were not pressed for sale.

HONEY.—Jamaica of the new crop sold at full to dearer prices, as follows: Fine set white, in barrels, 24*s.* per cwt.; fair to good pale, partly set and partly thick, in cases and casks, 17*s.* 6*d.* to 19*s.* 6*d.*; yellow candied, in cases, 19*s.* 6*d.*; fair to dark amber, liquid, in barrels and casks, 16*s.* to 17*s.* 6*d.*; and inferior dark, 12*s.* 6*d.* to 15*s.* 6*d.* per cwt. The principal broker who offered remarked that there would be very much less honey sent from Jamaica this year.

IPECACUANHA.—Rio was in slight demand publicly, at unchanged rates, fair grey, rather lean, selling at from 9*s.* 9*d.* to 9*s.* 10*d.* per lb., and a bale of badly sea-damaged at 8*s.* 6*d.* Cartagena description was a shade easier, 3 bales selling at 4*s.* per lb. for fair grey dusty root.

MUSK.—For pile I. small to medium, thin skin blue Tonquin pod, few broken and dampish, 72*s.* 6*d.* per oz. was wanted. Privately finest thin blue-skin pod can be had at this figure. A parcel of trimmings sold at 4*d* per oz.

During 1901 122,448 oz. of musk, valued at 126,274*l.*, were exported from Hankow, compared with 35,175 oz., valued at 78,362*l.*, in 1900. There were also exported from Chinkiang last year 586 oz. (15,835*l.*), against 250 oz. (422*l.*) in 1900.

MUSK-SEED.—West Indian of good odour sold at 1*s.* 3*d.* per lb.

NUX VOMICA.—Dull of sale. For bold bright seed of Bombay character 10*s.* per cwt. was wanted.

OIL, CASSIA.—Further sales were made to-day without reserve, 2*s.* 1½*d.* per lb. being paid for 12 cases of 73½-per-cent. oil and 2*s.* 3*d.* to 2*s.* 3½*d.* for 10 cases of 78-per-cent.

OIL, EUCALYPTUS.—For B.P. quality (68 to 70-per-cent. cineol) 1*s.* 2*d.* per lb. was wanted.

OIL, LIME.—A case of fair West Indian distilled brought 2*s.* per lb.

SENNA.—Practically nothing was offered to-day as the season for shipment is now closed, and no further arrivals of Tinnevelly leaf may be expected until about August. A few bales of pods were offered and sold at from 1½*d.* to 2*d.* per lb.

RHUBARB was held at firm prices all round. The following were the sales: Nine cases fine flat High-dried, of good pinky fracture and bright coat, 9*d.* per lb. Shensi was held for very high prices, and the limits in several instances were not disclosed. For 3 cases of "druggists'" trimming root of good pinky fracture, slightly stalky, 3*s* 4*d.* per lb. was paid; and a case of very bold flat orange-coated Shensi apparently sold at 3*s.* 8*d.* The bulk of the Shensi offered was taken out at fancy prices. No Canton sold publicly.

STROPHANTHUS.—Rather fluffy Kombé seed was taken out at 2*s.* per lb., 1*s.* 9*d.* being the limit. For two lots of weevily 2*s.* was wanted.

VANILLA.—A tin of fair Ceylon crystallised beans sold at 6*s.*; and a tin of brown at 4*s.* 6*d.*; with pickings at 1*s.* per lb.

WAX, BEES'.—Jamaica was steady, but other descriptions were dull of sale. Good bright red and pale yellow Jamaica sold at from 7*l.* 17*s.* 6*d.* to 8*l.*, and brown and greyish, 7*l.* 15*s.* Madagascar (3 packages) sold at 7*l.* 2*s.* 6*d.* for fair block, and 6*l.* 10*s.* for very dark. Mozambique rolls, slightly wormy, were limited at 7*l.* 5*s.* per cwt. For 30 bales fair Zanzibar block, slightly foul, a bid of 6*l.* 17*s.* 6*d.* is to be submitted. Two cases unbleached Bombay wax sold at 6*l.* 2*s.* 6*d.* Bleached Spanish was held at 7*l.* 17*s.* 6*d.*, and fair but slightly drossy Morocco at 6*l.* 10*s.* per cwt.

Heavy Chemicals.

There is little of change or special interest to be recorded, the general tone of the market remaining substantially as referred to in recent reports, and that both as regards values and business passing. A particularly pleasing feature is that the home-trade demand keeps up very well indeed.

SULPHATE OF AMMONIA has fully maintained the firm tendency referred to last week and, with strong demand continuing, is considerably dearer at all ports. Beckton terms, 12*l.* 15*s*; London and Leith, 12*l.* 17*s.* 6*d.*; Hull, 12*l.* 12*s.* 6*d.* to 12*l.* 13*s.* 9*d.*

ALKALI-PRODUCE.—Bleaching powder moving fairly well at unchanged rates. Softwood casks, free on rails, 6*l.* 7*s.* 6*d.* per ton; f.o.b. Tyne and Liverpool for export, 6*l.* 10*s.* to 7*l.* per ton. Caustic soda in steady demand, 76 to 77 per cent., 10*l.* 7*s.* 6*d.* to 10*l.* 15*s.*; 70 per cent., 9*l.* 15*l.* to 10*l.*; and 60 per cent., 8*l.* 15*s.* to 9*l.* per ton. Ammonia alkali, 58 per cent., in strong request and steadily maintained, at 4*l.* 10*s.* to 4*l.* 15*s.* per ton, free on rails in bags. Soda-crystals firm, at 62*s.* 6*d.* per ton, f.o.b. Tyne, and 67*s.* 6*d.* per ton, f.o.b. Liverpool. Bicarbonate of soda without change, at 6*l.* 7*s.* 6*d.* to 6*l.* 12*s.* 6*d.* per ton in large casks, f.o.b. Liverpool, and 6*l.* 15*s.* to 7*l.* per ton in 1-cwt. kegs. Saltcake very quiet and a shade lower, at 22*s.* to 23*s.* per ton in bulk, free on rails. Hyposulphite of soda, in spite of steady demand, still keeps very low in value: ¾-cwt. casks, 5*l.* 5*s.* to 5*l.* 15*s.* per ton, free on rails or free on board; 1-cwt. kegs, 6*l.* to 7*l.* 5*s.* per ton, according to quantity and quality. Sulphate of soda (Glaubers salts) continues to move well, at unchanged figures of 27*s.* 6*d.* to 32*s.* 6*d.* per ton, free on rails in bags. Chlorates of potash and soda keep very quiet, and are without any improvement in value: potash,

Digitized by Google

2⅞*d.* to 3*d.* per lb., and soda, 3¼*d.* to 3½*d.* per lb. Yellow prussiate of potash has a shade firmer tendency, but so far is unchanged, at 5½*d.* to 5⅝*d.* per lb. for best Lancashire makes. Silicates of soda in steady request, both on home and export account: 140° Tw, 4*l.* 2*s.* 6*d.* to 4*l.* 12*s.* 6*d.* per ton; 100° Tw, 3*l.* 12*s.* 6*d.* to 4*l.* 2*s.* 6*d.* per ton; and 75° Tw, 3*l.* 5*s.* to 3*l.* 15*s.* per ton, f.o.b. Tyne or Liverpool in usual casks, according to quantity and destination.

Liverpool Drug-market.

Liverpool, May 28.

Castor Oil.—Steadiness still characterises the market for good seconds Calcutta on the spot, 2⅛*d.* being asked for store parcels, and the quay has been cleared. First-pressure French is held for 2¾*d.* per lb. Second-pressure French is offered at 2⅜*d.* per lb., but is in limited supply.

Ginger (African).—A further upward movement has taken place in this, and 37*s.* per cwt. is now asked for good sound root.

Canary-seed.—Considerable movement has taken place in this, and 1,200 bags are reported sold at 34*s.* to 35*s.* 6*d.* per quarter, and since these purchases the price has steadily advanced to 40*s.* per quarter for good bright Turkish.

Arsenic is firmly held at 13*l.* to 13*l.* 15*s.* per ton, according to holder.

Honey.—Business continues to be in limited compass, but there is more inquiry on the market, and sales of Chilian are recorded at late rates.

Acacia Sorts.—Further sales of fine white have been made at 40*s.* per cwt., 48 serons selling in one line at this figure. For similar grade 45*s.* is now asked, and very little is offering.

Beeswax (Chilian).—A small parcel of Chilian at auction sold with good competition—3 bags pale yellow at 7*l.* 17*s.* 6*d.* per cwt., and 1 bag greyish at 7*l.* 10*s.* per cwt. For 19 cwt. pale yellow at auction 7*l.* 15*s.* has been realised.

Quillaia.—A good many tons have changed hands at from 12*l.* 17*s.* 6*d.* to 13*l.* 2*s.* 6*d.* per ton, the last-named price being lowest for any quantity.

Grains of Paradise.—Only limited supplies are available at 70*s.* per cwt.

Gum Catechu.—The market has been practically cleared, and 40*s.* per cwt. is now asked for good free cubes.

Jaborandi-leaves.—The recent import has been cleared off the market at prices ranging from 1*s.* 5½*d.* to 1*s.* 9½*d.* per lb.

German Drug-market.

Hamburg, May 27.

Business is very quiet, and there is little doing on our drug-market just now.

Agar-Agar is firm; spot is quoted 310m. and forward delivery 295m. per 100 kilos.

Camphor, Refined, is dull and declining; the makers' price is still officially 435m. per 100 kilos, but second hand offers at 415m. per 100 kilos., and perhaps a shade under this.

Coriander-seed is scarce, at 20m. per 100 kilos. for spot delivery.

Cocaine has been reduced 50m. per kilo. by the factories, who now quote 550m. per kilo.

Condurango is flat, at 120m. to 110m. per 100 kilos.

Cumin-seed is steady, at 52m. to 51m. per 100 kilos.

Cevadilla-seed is quiet and lower, at 90m. per 100 kilos.

Ergot is firm and scarce; Russian is quoted 340m. to 345m., and Spanish 350m. to 355m. per 100 kilos.

Menthol for spot delivery is very scarce, and held at 32m. per kilo., but does not show much activity.

Japanese Wax is very firm; 74m. per 100 kilos. has been paid, and 76m. is now asked.

Santonin is firmly held, at 38m. per 100 kilos.

Star Aniseed is dull, at 118m. per 100 kilos.

Cod-liver Oil is very firm, with non-congealing oil quoted 115m. per barrel.

Castor Oil is steady, but the demand is only small.

Cassia Oil is neglected, at 5½m. to 6m. per kilo.

American Drug-market.

New York, May 20.

The market presents few features of interest. The consuming demand is not heavy, and transactions rarely exceed jobbing proportions.

Arrowroot.—St. Vincent is higher on account of the damage to the crops on the island, and 8c. to 10c. per lb. is asked in barrels.

Balsams.—Copaiba is in light supply, and firm at 38c. to 40c. per lb. for prime Central American, but little business is doing. Peru has declined to $1.25.

Beeswax.—Business is restricted owing to scarcity of supplies. No yellow is obtainable below 31½c., and up to 35c. is asked for prime goods.

Buchu-leaves are a trifle easier, and, while quotations show no change, current figures are being shaded.

Cannabis Indica.—Prime green tops are strong at 70c., with small parcels obtainable at 67½c. The tendency is upward.

Cinchonidia is quiet, at 24c. to 25c. per oz.

Coca-leaves.—Truxillo are selling freely at 21c. to 22c.

Cod liver Oil.—Demand is seasonably small, but prices are moving upward, and $29.50 is now an inside figure for prime goods.

Golden-seal (Hydrastis) has sold up to 52c., and the market is firmer. Demand is not heavy.

Jalap is easy, at 9c. to 10c. per lb.

Gamboge is quiet but firm, and prime pipe is held at 72c. to 75c. per lb.

Oil of Peppermint has sold at $1.65, and the market is decidedly easier.

Opium is a trifle firmer, but $2.80 will still buy.

Sarsaparilla.—Mexican is quiet at 6½c. to 6¾c., and Honduras at 28c. to 31c. per lb.

Cablegrams.

Smyrna, May 28, 11 A.M.:—Values on the opium-market are well maintained. The sales for the week ending Wednesday evening amount to 30 cases. Copious rains have fallen, especially in the lower districts, where damage to the crop is reported.

Bergen, May 28, 7 20 P.M.:—Continued poor results are reported from the Finmarken district, and 115*s.* per barrel, f.o.b., is now asked for best Lofoten non-congealing cod-liver oil. Up to date, total catch of cod has been 40,900,000, against 46,750,000 at the corresponding period of last year. This has yielded 18,600 barrels, against 30 000 barrels in 1901.

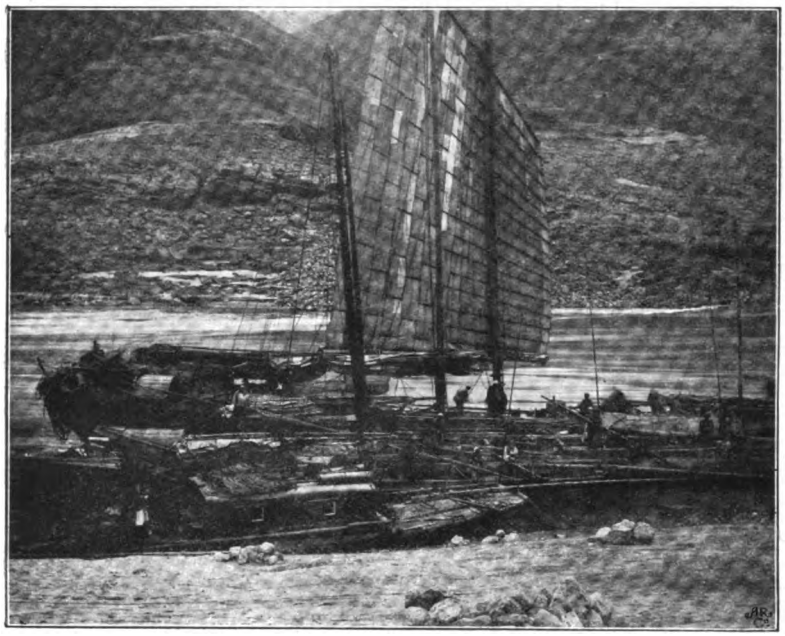
Hamburg, May 29:—Cod-liver oil has advanced to 112m. per barrel. Star aniseed is lower at 115m. per 100 kilos. HGH oil of peppermint is steady at 8½ m. per lb., and both ergot and Japanese wax are firm.

New York, May 29:—Business here is quiet. Opium is in a firmer position owing to the advance in Smyrna; $2 85 per lb. is now asked. Menthol has advanced to $4 per lb. Caffeine has declined to $3.25 per lb. American HGH oil of peppermint is firmer at $2, and bulk oil is quoted $1.70. Mexican sarsaparilla is lower at 6c. per lb. Cod-liver oil is advancing, $30 being asked for best non-congealing per barrel. Simarubra-bark is higher, 23c. per lb. now being asked.

Soda in China.

Among the imports into the port of Cainkiang which appear for the first time as a separate entry, is British carbonate of soda, of which 29,483 cwt., valued at 10,694*l.*, was shipped. The Chinese have long used soda for washing, cooking, dyeing, and bleaching purposes, but the native stuff is very inferior, and this fact has led Messrs. Brunner, Mond & Co. to try their sodas on the China market, and with considerable success. The soda is, of course, not only purer, but can actually be laid down cheaper. The large sale of this make has affected the dealers in native soda rather severely, and they have caused rumours to be circulated that an epidemic of throat-troubles from which the Chinkiang province has been suffering (due to the extreme dryness of the past winter) is the result of using foreign soda. Two local magistrates have been found to give support to this view by public proclamation, and the Chinkiang Taotai has given tacit countenance to their proceedings. Another branch of Messrs. Brunner, Mond & Co.'s business which they hope to extend is the sale of chemical fertilisers, and object-lessons are being given by their agent on wheatfields in the neighbourhood of Chinkiang, one-half of a field being chemically fertilised and the other half being dealt with by the farmer in his own way. If superiority of the fertilised portions is in any way marked, a bright future for these products in China may be looked for. So says the British Consul at Chinkiang.

German Customs Tariff.



The Customs Tariff Committee of the Reichstag at its sitting on May 28 passed Clauses 270, 271, 272, exempting from duty hydrochloric acid, sulphuric acid, nitric acid, rejecting a motion for the imposition of a duty of one mark on hydrochloric acid and sulphuric acid, and a motion in favour of a duty of one mark on hydrochloric acid only. The committee also passed without amendment Clauses 273, 274, 276, and 277, dealing with other acids.

Chinese Wood-oil.

By AUGUSTINE HENRY, M.A., F.L.S., &c.

WHEN travelling on the Yangtse above Hankow, nothing is more pleasing to the European than the sight of the fleets of beautiful junks which sail up the river to enter the great lake in Hunan. They are marvellously clean, and their sides glisten in the sun like mirrors. These boats are coated over with wood-oil, which is the universal substitute for paint in Central China. The timbers of boats and the woodwork of houses are preserved by this remarkable substance, which is called *t'ung yu* by the Chinese. This oil is obtained by pressure from the seeds of a tree known to botanists as *Aleurites cordata*, Steud. *T'ung* is rather a general name in China for several trees with large foliage, such as *Paulownia* (two species), *Sterculia platanifolia*, &c.; and the *Aleurites* indeed has leaves much resembling the last-named tree.

[*Photo by Mr. A. E. Pratt, Author of "Through the Snows to Tibet."*

CHINESE JUNKS LYING AT ANCHOR ON THE YANGTSE RIVER.

The junks are varnished with Chinese wood-oil, which enables them to withstand the friction of the swift currents and preserves the wood.

Wood-oil is well known in this country to specialists; but it is only of late years that it has been used to any extent in England. Even now it is scarcely a regular article in the London market. I understand, however, that it is imported directly in considerable quantities by certain large firms and companies, who preserve a good deal of secrecy concerning their mode of using it. It would appear to be employed as a substitute for linseed oil in the making of paint, and it is possible that it enters into the composition of some varnishes. It is shipped from China in casks weighing about 3 cwt. each.

My object in writing this paper is not only to draw attention to the useful properties of the oil, but also to point out that the tree which supplies it should be planted largely in suitable localities in certain of our colonies and in the United States.

Aleurites cordata belongs to the *Euphorbiaceæ*, and is indigenous to China and Japan. It is said also to occur in Cochin China, but it may only be planted there, as it is occasionally in Singapore and other tropical countries. I have met with the tree wild in the maintainous parts of Hupeh in Central China, at elevations of from 500 to 5,000 feet; and it attains a height of about 40 feet. It is largely planted in mountainous districts in the provinces of Hupeh, Szechwan, Hunan, Chekiang and Fukien. In Central China it succeeds best in rocky barren spots, where there is a thin soil, and where farming is impossible. Cultivated trees rarely exceed 20 feet in height; but they have large spreading crowns. The leaves are large, broadly ovate, acuminate, cordate at the base; and are either entire or three- to five-cuspidate or three- to five-lobed. The flowers are ornamental, generally pink in colour, and very numerous. The fruits, which ripen in autumn, are about the size of apples, green, and containing three or four large seeds. The seeds are occasionally met with in the London market, and contain about 35 per cent. by weight of oil. They are poisonous, causing vomiting and purging. A small tree will bear 100 or 200 lbs. weight of fruits; and little labour is required either in planting the trees or in collecting the fruits. The climate of those parts of China where the tree is most cultivated is an extreme one. The summer is hot, the temperature rising to 100° F. in July and August, which are very dry months. The winter is cold, snow often lying on the ground for days, but severe frosts are unknown. The tree is also planted much further south, and will succeed in tropical regions. It comes soon into bearing, and would seem to be very suitable for planting over large tracts of the United States, and in certain of our possessions, as Ceylon and the Nilgiris, in Natal, and in the mountainous parts perhaps of the West Indies. It can be tried in barren mountainous regions, where farming or ordinary planting would be impossible. The supply available in China is probably only large enough for native consumption; and any great demand for the oil from abroad would undoubtedly raise the price very soon. Once the useful properties of the oil are generally known, its consumption in the arts may become very considerable.

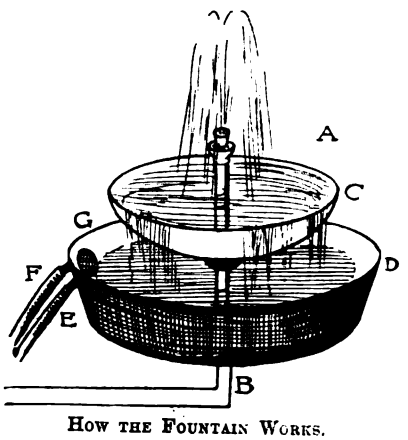
The Chinese extract the oil from the seeds by rude wooden presses with wedges. Hankow is the great Chinese market for the oil, and it arrives there from the country districts in tubs fitted with tight-fitting lids. It is thence exported to all parts of China. The Chinese distinguish two kinds of the oil, black and white. *White t'ung oil* is cold-drawn, and is a yellow, transparent, moderately thick oil, used in Central China for varnishing furniture and umbrellas, for lighting-purposes, and for making oiled paper. Most of the specimens which I have seen in the museums at Kew and Bloomsbury Square are of this kind. One from Hong-Kong had a white deposit in the bottom of the bottle. *Black t'ung oil* is extracted by heat and pressure, and is a thick, blackish, opaque liquid. It is cheaper in price than the other kind, and is used for coarser work, as in making putty used in caulking boats, for painting boats, &c. There is a specimen at Kew of this kind, which was sent from Pekin by Dr. Bretschneider. This kind is apparently never imported into England.

G

Digitized by Google

The uses of wood-oil in the Far East are numerous. The Japanese use it in their lacquer-work, applying the oil as a preliminary coating to the articles which are to be covered with the lacquer, which is derived from *Rhus vernicifera*. The Chinese, in using the same varnish or lacquer, mix it with the wood-oil. The best kind of Chinese ink is prepared from the soot obtained by burning wood-oil. It is also used medicinally, as an application in skin-diseases, ulcers, &c. Apparently, when applied to woodwork it solidifies into a resinous layer, which is impermeable to water and resistent to even more powerful solvents. It is also used by the Chinese in mixing paints.

The most remarkable property of the oil is its extraordinary siccative quality, which exceeds that of any other oil known. It is this quality which may make it of great importance in this country. Those interested in the chemistry of the oil will of course read the various papers which have been written on the subject. The first investigator was Cloez; see *Comptes Rendus*, vol. lxxxi. 1875, 469, and *Bull. Soc. Chim.* xxvi. 286, and xxviii. 23.



Later, Messrs. Davies and Holmes wrote articles concerning the properties and uses of wood-oil, which were published in the *Pharmaceutical Journal* [3] xv. 636, 637. The oil was also examined by Mr. J. H. B. Jenkins, and his report is contained in *Jour. Soc. Chem. Indust.* (1897) xvi. 195. As illustrative of the drying quality of the oil, I may quote from Mr. Jenkins's paper the following paragraph:—

"Four grammes of the oil was exposed in the boiling-water oven in a shallow porcelain dish 7 cm. in diameter. After ¼ hour's exposure there was evidence of a skin commencing to form around the edges. In two hours the oil would not flow, and was entirely covered by a crinkled skin. The average gain of weight during four hours' exposure was 0·36 per cent. per hour. For comparison, raw linseed oil was exposed in another dish: after four hours there was no evidence of a tendency to 'skin,' neither was there any sensible increase in weight."

A Fountain Display.

By G. Morrey, Pharmaceutical Chemist.

ONE of the most attractive displays out of many I have had has been a fountain worked from the ordinary main water-supply. I have frequently noticed cases where people have brought their friends either into my pharmacy or outside my windows in order to show them the display. There may be others who would like to work one, so I give a short explanation of mine. I first obtained from an ironmonger a gun-metal fountain-jet, such as are used for fountains in lakes, &c. (letter A in figure). This was attached to an iron pipe B, ½-inch, passed through the bottom of two bowls, C and D, which form the basin of the fountain. This was for the water-supply from the tap of the main, to which it was connected by a sufficient length of ⅜-inch composition gas-piping, a few inches of ½-inch rubber tubing, making the connections, so that it can easily be disconnected if required. The bowls may be any size or shape that can easily be obtained. In my own case I procured a cheap flat round tin pan, 22 inches diameter, for the bottom bowl, and the top one was an ordinary *papier-mache* show-bowl, 12 inches diameter, as supplied by Messrs. W. B. Fordham & Sons. These I painted light green. When the connection is made with the tap, if the water is very carefully turned on, a beautiful spray is thrown up from the jet A. The height to which the water is thrown up can be easily regulated at the tap. The water falls into bowl C, and, when full, overflows into bowl D; it is then carried away from the lower bowl D by means of ½-inch composition gas-piping, attached with rubber tubing to outlet E, 1 inch from top of bowl. The waste water is conducted to the sewer, or may be used for ordinary cleaning-purposes. The piping for waste water must not be less than ½-inch, or, owing to many bends, it may become stopped up. The outlet F is an emergency exit, placed ½ inch above E. The two exits E and F should be covered with wire gauze, to keep extraneous matter out of pipe. The whole of the connections would be better all strong rubber, but in most cases gas-compo. can be obtained cheaper.

How the Fountain Works.

How the Fountain Looks.

The fountain is now ready for fixing, and may be placed in the window or centre of pharmacy facing the door, arranged on boxes about 3 feet from the floor. In either case, a good mirror must be placed exactly behind the fountain-jet. Drape the mirror with coloured art muslin, make a striking display of the goods it is desirous to advertise all around the fountain-stand, interspersed with pretty ferns, flowering plants, or cut flowers. In the larger bowl place some clean sand and pretty shells, with about a dozen goldfish; in the smaller bowl three tiny china floating swans or any other available novelty.

The cost of the entire display, including fitting up by a plumber, should not exceed about 20*s.*, and it may be put away in the winter and brought out quite fresh each spring. During the hot weather it keeps the place nice and cool, and customers frequently remark how refreshing it looks. A much more elaborate affair may be arranged by those who care to spend more money on it, but I have described how I did it in a small country town, and I find it has paid me many times over for the outlay, by the attention it has drawn to my establishment.

Market Drayton.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.
ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
Sydney, N.S.W. .. 114a Pitt Street.
Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THE "C. & D." IN SOUTH AFRICA.

THE CHEMIST AND DRUGGIST for years past has worked assiduously to make its influence felt throughout South Africa, and, as a consequence, it is being subscribed to and read by all the principal firms and individual chemists south of the Zambesi. It is the official organ of the following Societies in South Africa:—

South African Pharmaceutical Association.
The Pharmaceutical Society of Cape Colony.
Natal Pharmaceutical Society.
Rhodesian Pharmaceutical Society.
The Pharmaceutical Society of the Transvaal.

To every member of these Societies THE CHEMIST AND DRUGGIST is sent weekly, and that, says the publisher, is the best reason in the world for those who want to do business with chemists in South Africa to advertise in THE CHEMIST AND DRUGGIST.

OUR COUNCIL ELECTION COMPETITION.

THE best postcard we received was from Mr. A. Inglis, 35 Tennison Street, Nottingham, who succeeded in placing five of the ten candidates in the actual order in which they appeared at the poll. His vote was as follows:—

W. S. Glyn-Jones.	J. R. Young.	A. S. Campkin.
M. Carteighe.	J. F. Harrington.	C. E. Pickering.
C. J. Park.	A. Southall.	J. W. T. Morrison.
J. Harrison.		

We therefore send the guinea to Mr. Inglis. The competitions B and C did not reach the superlative stage stipulated in the announcement, so the two half-guineas are reserved.

Summary.

THE LATEST STORE-PRICES are given on p. 876.

SOME CORONATION HOLIDAYS are specified on p. 876.

THE GLASGOW doctors'-shop agitation is dying of inanition (p. 879).

POOR-LAW DISPENSERS have formed an Association of their own (p. 897).

THE PLANTS which yield patchouli and its adulterants are figured on p. 908.

THE LABEL forms the subject of this week's improper dispensing method (p. 888).

A CHEMIST'S ASSISTANT named Redhead has been arrested on a bigamy charge (p. 877).

SKETCH PORTRAITS of the new members of the General Medical Council are given on p. 883.

A STUDY IN PERCENTAGES arising from the Council election is one of "Xrayser's" topics (p. 889).

THE conditions on which proprietary articles are admitted to Turkey are stated in a note on p. 892.

A PRELIMINARY EXAMINATION to be conducted by the General Medical Council is now advocated (p. 889).

HALIFAX CHEMISTS propose to educate the public about the superior quality of chemists' wares (p. 898).

FOR not marking calcium carbide packages carried by rail a Camberwell man has been fined 10*l.* (p. 876).

THE EXPERIENCES of Mr. George T. Branch, who acted during the war as a sergeant compounder, are told on p. 908.

OUR Special South African Representative sends some useful hints to home houses in regard to trade there (p. 907).

AN excess of tartaric-acid in baking-powder has been considered an offence under the Sale of Food and Drugs Acts (p. 881).

THE BRITISH PHARMACEUTICAL CONFERENCE arrangements in Dundee are crystallising fast, and are referred to on p. 879.

THE ACIDITY OF SULPHUR, analyses of liquorice-juice and of W.I. volcanic dust, and a false sandarac are the notes on p. 893.

THE name of Dr. William Park (Airdrie) has been removed from the Medical Register because he seduced a patient (p. 833).

A "FULL AVERAGE" ROSE CROP is practically assured in Bulgaria, so that the present low prices of otto will probably continue (p. 904).

TINCTURE OF HENBANE made from the fresh plant has points which commend it. Mr. John Barclay, B.Sc., details them in a note on p. 893.

THE AMERICAN EXHIBITION at the Crystal Palace was opened last Saturday (p. 877), and a Chemists' Exhibition has been held in Manchester this week (p. 894).

PRESCRIPTIONS for poor people and the prescribing of proprietary medicines were the most interesting topics discussed by Edinburgh chemists at their meeting last week (p. 898).

THE HIGH COURT has declined (p. 831) to give a monopoly of the word "Aërators" to Aërators (Limited), with the result that a new company, embodying the word, has been registered (p. 833).

THE BRITISH PHARMACOPŒIA REPORT acknowledges the Pharmaceutical Society's research-work, and proposes to pay the Society 100*l.* for it; also to have another digest of criticisms (p. 884).

WE show in an article on p. 891 that the late Dr. Greenhow did not approve of a curriculum for the Minor examination, although the Pharmaceutical Council has indicated that he did in a letter to the Privy Council.

PEACE DEMONSTRATIONS and Derby Day have interfered with business this week. Cod-liver oil has risen rapidly; menthol, Japanese wax, and cream of tartar are dearer. Quinine is quite nominal, and opium is passive (p. 904).

THE FINANCIAL CONDITION of the General Medical Council is precarious. It was discussed at the meeting last week, and it is proposed to raise the wind by increasing the registration-fees. For this a new Act is required (p. 883).

ALCOHOL played a good part in this week's London meeting of the Society of Chemical Industry, the chemistry of whisky being treated by Dr. Schidrowitz, and Dr. Silberrad advocated the use of duty-free alcohol for certain industrial purposes (p. 887).

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Shortly before noon on May 31 there was a fire in the cellars of Taylor's Drug-stores at Skipton. The damage was slight.

A special meeting of the Public Dispensers' Association is to be held on June 11 at St. Bride's Institute, E.C., at 8 P.M., to consider the alteration of the qualification rule.

The Colorado beetle has again made its appearance at Tilbury. All information about it can be obtained from the Secretary, Board of Agriculture, 4 Whitehall Place, London, S.W.

On Friday, May 31, Mr. A. Sidney Campkin, J.P., chemist and druggist, was re-elected Chairman of the Cambridge Assessment Committee, an appointment which he has held for upwards of fifteen years.

Mr. Frank L. Teed, the public analyst for the City of London, in his report for the first three months of this year, states that he examined 428 samples of foods and drugs, and reported against 53.

At the Buralem Police Court last week, Thomas Bardsley a butcher's outfitter, from Manchester, was fined 40*l.* and costs for adulteration of mace with 22 per cent. of ground rice. The defendant was allowed seven days in which to pay the fine.

At Bow Street Police Court on May 29, William Henry Prendergast, *alias* Edward Barrow, described as a druggist, was committed for trial on a charge of conspiring to defraud in connection with the business carried on in Holborn by Barrow & Way, drysalters.

The shop of Mr. R. H. Richards, chemist and druggist, 118 Rushey Green, Catford, was visited by two old errand-boys and another lad on May 20. They took 5*l.* 2*s.*, and have since been before the Magistrate at Greenwich, who meted out punishment to fit the crime.

During the past quarter two samples of camphorated oil, one of milk of sulphur, and one of tincture of rhubarb, were taken for analysis in Cheshire, and of these only one (milk of sulphur) was adulterated, the analyst certifying that it contained 45 per cent. of sulphate of lime.

During the five weeks that ended on May 31 only four persons in the English drug-trade failed. This is below the average. In the same time ninety-two grocers failed—an eloquent tribute to the fact that low profits in the retail may mean big ones in the wholesale grocery-trade.

The case against Maximilian Korten (*C. & D.*, May 31, page 861) was disposed of at the Guildhall (London) on Friday, May 30. The Alderman imposed a fine of 40*s.*, and 25*s.* costs, and consented to state a case. The summons against the Chemical-works (late H. & E. Albert) was withdrawn.

The Corporation has decided to retain the services of Professor Klein, F.R.S., as bacteriologist for the City of London at a fee of a hundred guineas and a further payment of two guineas for each bacteriological examination. Dr. Andrews is also to be retained at a fee of a guinea for each examination.

At the Liverpool County Sessions on June 3, John Hall (69), described as a chemist, was sentenced to six months' imprisonment with hard labour for obtaining 4*s.* 2*d.* by means of false pretences from Elizabeth Cummings. Prisoner represented himself as a pickle manufacturer, and would supply the woman at a very low rate.

Coronation Holidays.

The following firms announce they are to be closed on Thursday, Friday and Saturday, June 26, 27, and 28:—Messrs. Hopkin & Williams; Messrs. Howards & Sons; Messrs. S. Maw, Son & Sons. Messrs. Wright, Layman & Umney (Limited) will be closed on June 25 and 27. We shall be glad of notifications from other firms stating whether they will be closed two or three days.

Store-prices.

The following are the additions and alterations noted in the June circular of the Army and Navy Stores:—

Yardley's Hospital Brand carbolic and coal-tar soap, 3*s.* per doz. (added); fluid beef, Baron Liebig's "Photo" brand: 2 oz., 10½*d.*; 4 oz., 1*s.* 7*d.*; 8 oz., 2*s.* 9*d.* (reduced); Epps's cocoa, ½ lb. (reduced); Roger & Gallet's violette merveille soap, per doz boxes, 12*s.* 6*d.* (reduced); Enderby's knee-cap, 25*s* (added); "Hemel" dentifrice, 1*s.* 4*d.*, 2*s.* 2*d.*, 3*s.* 9*d.* (added); tabloid compound liquorice-powder, 4½*d.*, 1*s.* per bottle (added); tabloid menthol and cocaine, 9*d.* per bottle (added); tabloid ammonium chloride and liquorice, per bottle 1*s.* (added); tabloid mucin compound, per bottle 1*s.* 8*d.* and 5*s.* (added); Jetta restorative, 8*d.* and 1*s.* 4*d.* per bottle (added); vaseline hair-wash, 10*d.*, 2*s.*, and 2*s.* 8*d.* per box (added); Trexophyton truss, 10*s.* each (added); sodium silicate, per gal., including tin, 2*s.* (added); indiarubber sponges, 6 by 4 by 2½ inches, 6*s.* (added).

Dispensers' Appointments.

Mr. P. A. Kelly, chemist and druggist, has been appointed dispenser to the South Devon and East Cornwall Hospital, Plymouth.

For the appointment of dispenser at St. Pancras Workhouse there were thirty-four candidates:—viz., four pharmaceutical chemists (two ladies), twenty-one dispensing chemists (four ladies), four apothecaries' assistants (two ladies), and five whose qualification was not stated. Miss Clara M. Fox, dispensing chemist (Minor 1901), Newcastle, secured the appointment. The salary begins at 110*l.*, with dinner and tea daily.

West Ham Hospital.

On Saturday, June 21, the staff of the West Ham Hospital, Stratford, E., are to have an "At Home." Mr. Alfred Capper, the celebrated thought-reader, has consented to help in the entertainment, and a number of friends, amateur and professional, will do their best to provide for the amusement of the patients, the staff, and the guests. A collection will be made in aid of the funds for the Coronation festivities. The institution is one deserving of support, as it does good work in a poor district. Mr. Thomas Alex. Cook (Edward Cook & Sons, Limited, East London Soapworks) is Chairman of the Hospital Committee. Anyone in the trade who would like a ticket should write to the matron of the hospital, and the Secretary will receive donations.

Carriage of Calcium Carbide.

At the Lambeth Police Court last week, Henry Harris, Neate Street, Camberwell, was summoned under Section 105 of the Railway Clauses Act, 1845, by the Great Western Railway Company, for having on April 8 and May 1 unlawfully sent by a railway goods of a dangerous nature—to wit, carbide of calcium—without distinctly marking their nature on the outside of the package or giving notice in writing to a servant of the company at the time of sending. He was fined 5*l.* and 2*s.* costs upon each of the two summonses.

Birmingham Notes.

The beautiful avenue of chestnut-trees and limes along the Bristol Road is suffering severely from the slow electrocution to which the trees are being submitted by the overhead system of electric traction.

Birmingham is slowly and surely gathering to itself eminent medicos to direct its hospital-work. Dr. Lamb, who has had a brilliant career at Edinburgh, has been appointed chief at the Ear and Throat Hospital.

Mr. Lowther, chemist, of Moseley, is to leave his present shop on the Green, in order to occupy large new premises, which are being erected at the corner of Salisbury Road, an excellent position for such a business as pharmacy.

Edgbaston must be a happy-hunting ground for pharmacy. "The cry is still, They come!" Within a small area are Messrs. Boots (2), Mr. Hedges, Mr. Chase, Mr. Arblaster, Mr. Adam, Mr. Perry, Messrs. MacIsaac, Messrs. Bellamy & Wakefield, Mr. Wilkes, and Mr. Atkins (brother of the Salisbury Pharmaceutical Councillor).

Pharmacy has, within the past few years, handed many of her sons over to the sister branch of medicine. In conversation with one who knows, the following were enumerated

Digitized by Google

Dr. Featherstone (formerly with Mr. Howes), Mr. Kneale (from Mr. Thompson's), Mr. Harvey (from Messrs. Snape & Sons), Messrs. Hodgetts, Evans & Hasluck (formerly with Messrs. Corfield & Son), Mr. Aston (Coventry Road), Mr. Newton (Moseley Road), Mr. Baldwin (Great Sister Street), and many others who, however, were of a previous decade. They have all done well.

Friendly rivalry in suburban places is very evident. A newcomer has made his window resplendent with trappings of wondrous hue and Vinolia soap and preparations. Chip No. II., of four years' standing, follows suit with even more brilliant purplings, but with Erasmic soap and preparations. Chip No. III. beats the lot, not in dainty colouring but with a very neat display of soap and preparations of his own, and a few testimonials which show that he has gained public favour by recommendation and merit *plus* judicious advertisement.

While before Mr. Registrar Glaisyer—well known to your readers—a brother chip was up for examination in bankruptcy the bankrupt objected to kiss the book, on the ground that he was suffering from rapid consumption. The Registrar said, "I think we'll risk it. Kiss the book." The bankrupt, "Well, it does not matter to me." This action was criticised in the papers, and called forth an explanation from Mr. Glaisyer that the book was an old one, and not intended to be used again, and immediately afterwards he took possession of it and reverently burnt it himself. Why did the Registrar not administer the oath in the Scotch fashion? It is equally legal and binding.

Westminster College Conversazione.

The Westminster College of Chemistry and Pharmacy celebrated its twenty-seventh anniversary on Friday, May 30, when, in spite of the inclement weather, some 300 students and their friends assembled at the King's Hall, Holborn Restaurant. The guests on arrival were received by Mr. G. S. V. Wills, the Principal of the college. Dr. Alfred Matcham presented the medals for the session 1901, and in doing so referred in a few happy sentences to Mr. Wills's work in founding and carrying on the arduous but most successful work of the college. Pharmacy, he said, was now being raised to the rank of a profession inasmuch as the examiners at the "Square" were so framing their questions as to prevent all but the most capable from entering the ranks of pharmacy. Mr. Wills twenty-seven years ago foresaw this, and laid the foundation then for what had proved, in the light of subsequent events, to be a complete success. The following are the medallists for the session:—

Chemistry.—A. H. Penistan, J. Talbot, and L. S. Willox.
Botany.—B. Bickley, R. M. Holmes, and W. C. Sumption.
Materia Medica.—J. E. Hyde, A. J. McCabe, and E. G. Watts.
Pharmacy.—F. W. Beken, J. Talbot, and G. T. Walker.
Dispensing.—G. H. Bartleman, H. H. Cannon, and J. E. Hyde.

Mr. Wills suitably replied. During the evening a most enjoyable concert was given by several of the students and their friends, and Mr. Arthur Helmore contributed an amusing sketch entitled "How to please the musical ear, and how not to." In one of the side rooms Mr. J. Orme, of Messrs. Muller, Orme & Co., gave an interesting demonstration of the Röntgen rays, which was a constant source of attraction throughout the evening.

Peace Paragraphs.

This is the peace prescription a well-known Metropolitan pharmacist suggested to a business friend:—

Sp. whiskianus consideralibus.
Peli limonis pinchibus.
Nutmegus sprinklibus.
Waterus pumpibus non multum.
M. Ft. hst.

Sig.: Gentlemen, I drink to you peace.

When a staid pharmacist breaks out thus (and he is not the solitary sample) what wonder that men and women danced in Cheapside by day, and others sat on the kerbstones with their pewter-pots of beer within fifty steps of the Bank of England—the busiest and wealthiest spot in the universe?

Mrs. Harriett Fewings, of Topsham, near Exeter, was dancing at the peace rejoicings in Fore Street on June 2, when she fell down unconscious. She was at once taken to the shop of Mr. Culshaw, chemist, when life was found to be extinct.

The students of the South London School of Pharmacy on June 2 sent a telegram to the King expressing their congratulations on the ending of the war before his Majesty's Coronation, to which the following reply was received: "The King thanks you for your loyal congratulations on the conclusion of hostilities in South Africa."

Cricket.

Kindrug *v.* Wellcome.—The result of last Saturday's match was as follows: Kindrug (Dakin Brothers), 35; Wellcome (Burroughs Wellcome & Co.), 26.

London College *v.* Metropolitan College.—Played at Nunhead on Saturday, May 31, and resulted in a win for London by ten wickets. Scores: Metros, 14 and 37; London, 47 and 5 for no wicket. Chief scorers for Metros.: Kendal, 7; Salmon, 7; and Thomson, 7; for London: Whitehouse, 13; Jones, 8; and Williams, 7. For London, Hands took five wickets for five runs in the first innings, and Fry five for twelve in the second.

The American Exhibition

was inaugurated at the Crystal Palace on May 31 by a banquet, at which were many members of the American Society. The toasts of "The King" and "President of the United States" were drunk with equal enthusiasm, the former to the accompaniment of the National Anthem, and the latter to the tune of "The Star-spangled Banner." Mr. John Morgan Richards, in declaring the exhibition open, said the committee recognised the exhibition should not only be in a good place but should consist of good things. The exhibition was not quite ready, he added, but enough was shown to give an idea of what it would be like when finished. The first fireworks of the season were given at the same time, several items specially referring to the exhibition. The exhibits of interest to chemists are those of Mr. John Morgan Richards, who shows such well-known lines as Carter's pills, sozodont, and antikamnia (a huge raven in the middle of the stand advertises the first-named medicine); Messrs. Parke, Davis & Co., with a selection of their specialities, including euthymol, the stall being ornamented with hanging carboys; The American Soda-fountain Company, Eugene Rimmel (Limited), Kodak (Limited), and the Anglo-American Oil Company. There is also a special exhibit of American type-writing machines. The exhibition is to remain open during the summer months.

A Bigamy Charge.

Ernest Redhead was married on December 21, 1893, at the Leeds Registry Office, to Annie Moore. He subsequently left his wife and went to West Hartlepool, and afterwards worked as a chemist's assistant at Bishop Auckland, where he lodged with a widow named Mary Elizabeth Shirley, and married her in London on March 1, 1901. Redhead now stands committed at Leeds on a charge of bigamy. Mrs. Shirley admitted in evidence that when Redhead was in a situation in London she paid him two visits, and lived with him as his wife. She expressed her willingness then to work and support Mrs. Redhead if the latter would allow her to live with the prisoner. Mrs. Shirley has had a child of which Redhead is the father, and she is now in the workhouse infirmary, West Hartlepool.

The Rogers Brothers Failure Sequel.

The eight city brokers and merchants who are charged with obtaining money on false pretences (see *C. & D.*, May 31, page 828) again appeared before the Magistrate at the Mansion House, London, on June 3. Mr. Muir explained that the proceedings were taken under the Debtors Act and the Larceny Act, and in the course of his statement said the defendants Edward and Henry Rogers were produce merchants and brokers in Mincing Lane, probably the largest house in the trade. Since 1888 they had been sole partners, and their drawings had exceeded their profits; since 1890 the business had been insolvent, and in 1895 they entered on accommodation-bill transactions with Wallis & Co., and

Digitized by Google

later on with Thomas & Short, Newton, and the Ransomes. When the bills became due elaborate devices were resorted to to conceal the frauds. All the defendants, except R. Wallis, had admitted that the banks would not have discounted the bills if they had known their true nature. Defendants were again remanded.

Groome, London.

On Friday, May 30, at the Birmingham branch of Camwal (Limited) a very pleasing ceremony took place, showing the good will existing between the employers and their employés. The event was the transfer of Mr. W. F. M. Groome, the sub-manager, to a similar position at the London works of Camwal (Limited), and the staff and employés thought they could not show their appreciation of the manner in which he has discharged his duties in a better way than by presenting him with a handsome cigar-case, together with a letter expressing the sentiments of the employés, and signed by them all. Mr. Groome acknowledged the gift in feeling terms, and has arranged to treat the hands to a trip to the Wolverhampton Exhibition on the first available occasion.

Slag-wool Death.

At Portsmouth on May 30, the Borough Coroner held an inquest on the body of John Eades, a shipwright in the dockyard, whose death was distinctly traceable to inhalation of the dust of silicate cotton (or slag-wool) with which he had been packing the casing of a refrigerator on board a cruiser. Dr. Wright deposed that the air-passages and vesicles leading to the lungs were full of minute tubercles which he attributed entirely to the inhalation of the silicate cotton; this had started an inflammation of the throat and lungs, making them more susceptible to an attack of consumption, which was the direct cause of death. The Coroner said some regulations should be laid down for the employment of this dangerous material.

The Week's Poisonings.

Eleven fatalities from poisoning have occurred since our last report, two being due to carbolic acid, two to oxalic acid, and one each to laudanum, morphia, white precipitate, chloride of zinc, hydrochloric acid, sheep-dip, and a poisonous lotion. The carbolic acid was taken by a Coventry woman and by a soldier's wife at Dover, in the latter case in mistake for beer. A Llanelly fishmonger and an Ashton tailor each took oxalic acid and died. The laudanum was taken by an elderly lady at Rock Ferry, who lived alone, and had been dead some days before the body was discovered. A Scotch surgeon, named James Waddell, from Airdrie, while in Manchester negotiating for a practice, swallowed several morphine pills, and died.—At an inquest held at York on the body of a young lady, from Scarborough, it was stated that she informed her friends that she had taken a quantity of white precipitate powder, which she obtained from Mr. William Holmshaw, chemist and druggist, at Taylor's Drug-stores, 18 Garfield Road, Scarborough. The jury added a rider to their verdict, recommending that white precipitate should be placed under Part I. of the Poisons Schedule.—A shepherd at Wylye, near Warminster, died through taking a dose of sheep-dip solution. — A woman named Trueman died at Castleton, near Rochdale, from the effects of taking a poisonous lotion in mistake for medicine. A mixture and a lotion were supplied by Dr. Lord, and at the inquest the Coroner (Mr. F. N. Molesworth) said the lotion-bottle was plainly marked "Poison" with a red label, but it seemed to be an ordinary medicine-bottle, and it was always advisable when poisons were sent out to put them in a differently shaped bottle. In addition to having the bottle labelled "Poison," there were two other ways of distinguishing it—one by having a bottle a different shape, and another by having a sort of bell on the cork, so that when a person drew the cork out it jingled. Those were very good things to use. Such a number of people had died in that way that it was advisable to take all precautions when poisons were dispensed. The foreman of the jury thought there was little doubt that it was an accident, and the Coroner said there was also little doubt that the lotion ought not to be sent out in a plain bottle.—A Leicester shoemaker drank spirit of salt in mistake for a preparation he had procured for toothache, with fatal results; and the chloride of zinc (soldering-fluid) was taken by a Hammersmith engine-turner.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Dr. J. C. McWalter, who has been somewhat unwell lately, has gone to the Continent for a rest and change. He went over to Antwerp on June 2.

Business Changes.

Mr. F. W. McCully, registered druggist, has opened a new drug-hall in Victoria Road, Derry City. The premises are well fitted.

A new drug-business has been opened in Londonderry by Messrs. MacLaughlin and Allen, both from the establishment of Mr. W. A. Frizell, pharmaceutical chemists, Waterloo Place, Londonderry. Messrs. MacLaughlin & Allen are at present located in temporary premises in Great James Street.

Contract.

Messrs. Fannin & Co., Dublin, have been declared contractors for medical appliances for the Strokestown Union, at 26 per cent. under the L.G.B. scale. There was no other tender received.

Burglary.

The premises of Mr. G. W. Lawson, druggist, Limavady, were last week burgled, and cash to the amount of about 6*l.* taken from the till.

Not an Apothecary.

Some of the Dublin daily papers, in announcing the appointment of Miss Jessop as dispenser to the South Dublin Workhouse, fell into the error of describing Miss Jessop as an apothecary instead of pharmaceutical chemist. The Secretary of the Apothecaries' Hall, Ireland, calls attention to the error.

The Belfast Inquiry.

The inquiry into the cost of drugs and medicines supplied to the Belfast Union, recently concluded, was an eye-opener to some of those concerned. It is thought that considerable changes will be made in the manner of making new contracts throughout Ireland by the Local Government Board. There is some talk of establishing central drug depôts at Belfast and Dublin, with competent chemists in charge, who will both buy and test the goods supplied to each Union.

Explaining.

Following the magisterial decision in the case of the Pharmaceutical Society of Ireland *v.* Sweny, reported last week, Mr. R Keating Clay, solicitor for the plaintiffs, has addressed an open letter to the Dublin newspapers, calling attention to the fact that defendant's solicitor brought the question of status under notice of the Magistrate subsequent to the decision, and without reference to the Society, with the result that Mr. Sweny's position was misunderstood. Mr. Clay points out that Mr. Sweny is a registered chemist and druggist, but is not a pharmaceutical chemist, and he is therefore not entitled to compound medical prescriptions.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Edinburgh Assistants' and Apprentices' Association.

The first botanical excursion of the summer session took place on Friday evening, May 30, the forty members and friends leaving Caledonian Station at 8 30 P.M. for Colinton, under the leadership of Mr. W. B. Cowie. The weather was unfortunately cold and wet, and the party returned by train instead of by road as originally intended. The effects of the cold spring were everywhere visible. Only on one favour-

Digitized by Google

ably situated hawthorn-bush were the blossoms beginning to open, and vegetation seems at least six weeks behind time. Fifty-three species were collected.

Dundee Conference Arrangements.

The local committee of the British Pharmaceutical Conference have now practically concluded the preliminary arrangements for the meeting to be held in Dundee from August 11 to 14. As already intimated, Lord Provost Hunter and Mrs. Hunter are to receive the visitors in the Art Galleries on the Monday evening. The Galleries are situated in the Albert Institute, a building devoted to art, literature, and science, which has, since the last visit of the Conference, been erected in the centre of the town, south-east of the High School. On Tuesday, August 12, the sessions of the Conference will commence in the University College buildings. After the day's business is over, and about 4 o'clock, a special train will take the members and their friends to St. Andrews, passing over Tay Bridge (the longest structure of the kind in the world), and on arrival at St. Andrews tea will be served. Then the visitors will see the University buildings and other historic associations. Golfers may get a round on the world-famed links, but this is rather a remote possibility. It has been suggested that during the Conference a match between north and south might be played either at Monifieth or Carnoustie, which are within quite a short distance of Dundee. Mr. James Russell, editor of the *Wizard of the North*, Nethergate, Dundee, is the local chemist most likely to engineer an affair of this kind. In the evening of Wednesday, August 13, there will be the usual concerts in Gray's Assembly Rooms, Nethergate. The Thursday's excursion is to be to Comrie and St. Fillans. The arrangements for this are rather novel. A new steamer has been chartered to take the party from Dundee up the Tay to Perth, where a special train will be in waiting to convey them to Comrie. Those who do not care for the sail (twenty miles or thereabouts, on a river which Scotchmen consider to equal the Rhine in parts, and good enough to need no comparison) may take the special train at Dundee. Comrie is the place for earthquakes. It was there that George Gilfillan, a noted Dundee divine, was born. He was more than a divine, and his series of British Poets is now a much-prized work. At Comrie the Conference party will have an excellent midday meal in a hall, then they will drive to St. Fillans, and from there train back to Dundee. It will be a comfortable leisurely day, passed in some of the grandest scenery in this country, and should the weather be fine we can conceive of nothing more pleasing. Mr. Wm. Cummings, Reform Street, Dundee, is the local Secretary.

Athletic Sports.

The sports at Powderhall, promoted by the Edinburgh Pharmacy Athletic Club, and reported by the *C. & D.* as having occurred on Wednesday of last week, did not take place until Wednesday of this week. We were officially informed on May 27 that they would take place on "Wednesday evening first." It is always advisable for correspondents to specify dates, as vague terms encourage error.

Glasgow Notes.

There is a druggist's shop not far from Glasgow Cross which remains opens till 3 A.M.

On Monday Charles Milford, a commercial traveller, introduced opium into a wound on his wrist, from the effects of which he died.

The Trade Association has issued a printed copy of the Cockburn tariff, and is circulating it in Glasgow and the West of Scotland.

A local chemist, who prefers at present to remain unknown, is engaged on a novel which will deal largely with the romance and reality of life in the Scotch drug-trade. The tale is to have the inevitable love interest.

The Glasgow University Council has adopted a scheme for establishing a D.P.H. course and qualification. Owing to the manner in which the examinations were conducted some years ago, this diploma fell into deserved discredit.

An enterprising suburban chemist, who evidently believes in the attractive power of novelties, has placed a handsome plunge battery in his window. The public seem to be much exercised as to the meaning of the vertical galvanometer and the shunting mechanisms.

It is announced that Sheriff-Substitute Mair is about to retire from the Bench. It was this Judge who, in one of the prosecutions against an Airdrie doctor's unqualified shopman, delivered a furious diatribe against the Pharmaceutical Society because it molested shopkeeping doctors.

This is a journalist's story. A lady, who had taken a new house, called on the occupier to arrange for getting entry before the term-day. The lady of the house was very gracious, and remarked incidentally that if the caller cared to buy a 10*s.* bottle of medicine which she did not want to carry away with her she thought matters might be settled satisfactorily.

Dr. A. G. Foulds, of this city, has been experimenting with infusion of eucalyptus as a cure for diabetes. He was informed by the late Mr. James Dick, a well-known Glasgow citizen and philanthropist, that a New Zealand friend, to whom a Maori woman had recommended the infusion as a cure for influenza, found that its use not only removed the influenza, but also delivered him from a long-standing diabetes.

The agitation amongst Glasgow medical men against the Medical Council's veto on the employment of unqualified dispensers in shop-surgeries seems to be dying of inanition. A motion submitted to the Southern Medical Society that a memorial be presented to the Privy Council protesting against the partial and oppressive administration of the Pharmacy Act by the Pharmaceutical Society in collusion with the General Medical Council has been shelved, and the legal adviser of the Glasgow Faculty of Physicians and Surgeons has reported against the legal right of that body to resist the Medical Council's decree.

Business Changes.

Messrs. Arthur Gibson & Co., chemists, Edinburgh, are about to open a branch at Kirkgate, Leith.

Mr. Martin Jamieson, chemist and druggist, has taken over the business lately carried on by Mr. David B. Cowper, chemist, at 6 Lochrin Buildings, Edinburgh.

Mr. James Anderson, chemist, 36 Horne Street, Edinburgh, has opened a branch of his business at the suburban end of Morningside Road, near the railway-station.

A Chemist Tholes an Assize.

This seems a dreadful thing to do, but it was the defence which Mr. Thomas Lumsden, chemist and aërated-water manufacturer, Linlithgow, pleaded to the Magistrates last week when he was charged with "having, on 9th May, on the public street, opposite his shop at 45 High Street, Linlithgow, laid down a quantity of broken bottles, and suffered same to remain there longer than was necessary, whereby he rendered himself liable in a penalty of 2*l.*" We gather from the report sent to us that Mr. Lumsden was summoned to appear on a certain day, and the case was not called, and next day he said he had "tholed an assize." As the Procurator-Fiscal stated that Mr. Lumsden had been merely brought there as a warning to be careful, the Bailie imposed no penalty.

The Chemist and the Loan.

Mr. W. J. Campbell, chemist, Invergowrie, is taking action against Messrs. J. B. Reekie, manufacturer, Kirkcaldy; David Mackie, draper, there; and William Doig, sen., chemist, High Street, Dundee, as trustees under the settlement of his father, to recover 100*l.*, stated to have been borrowed from him on July 12, 1887.

STOUT Old Lady (to chemist's youthful assistant): "Boy, d'ye keep a prepartion for reducing flesh?" Boy: "Yes'm." "Well, I don't know how much I ought to get." "Better take all we've got."

THE CHARCOAL METHOD of getting the arsenium mirror from arsenious oxide is troublesome unless carefully performed, and the blackness of the mixture to be heated is likely to obscure the test, as well as the presence of moisture which often remains behind. If, however, the arsenical powder be mixed with powdered potassium cyanide and gently heated in an ordinary dry glass tube, a very successful mirror is easily obtained.

Digitized by Google

French News.

(From our Paris Correspondent.)

Apollinaris Water.—The Paris Academy of Medicine have recommended that the authorisation to import Apollinaris water into France be withdrawn. The grounds of the recommendation are that an analysis of the water made in 1900 shows a variation of composition from what it was in 1838, and that the water is artificially impregnated with gas at the time of bottling.

An Act of Vandalism.—The bust of Raspail, the well-known chemist, which is placed in the Square bearing his name at Lyons, was removed from its base one night last week. The bust was found with the head half buried in the ground, and in falling had done considerable damage owing to its weight. A similar attempt was made five months ago, and the authorities at Lyons are endeavouring to trace the perpetrators of the outrage.

Embezzlement and Burglary.—A bookkeeper, Eugène Albaret, 42 years of age, was at the Seine Assizes recently condemned to two years' imprisonment for embezzling 27,000*f.* (1,080*l.*) from his employer, M. Berthiot, manufacturer of pharmaceutical products. Albaret provided comforts and luxury for himself and family with the money.—On Wednesday night of last week burglars broke into the offices of M. Paletot, maker of pharmaceutical cachets, rue des Hospitaliers Saint-Gervais, Paris. While they were busy with the iron safe they were disturbed by the night watchman, and decamped without securing any spoil.

Against Chloroforming-accidents.—The question of the prophylaxy of accidents resulting from chloroforming has been under discussion again at the Paris Academy of Medicine. Dr. Laborde read a long paper on the subject of precautionary measures to be taken to prevent accidents, and recommended the following:—

(1) Inject before administering the chloroform—

Morphine	... ...	1 centigramme ($\frac{1}{6}$ gr.)
Atropine	... ...	1 milligramme ($\frac{1}{60}$ gr.)
Sparteine	... ...	10 centigrammes (1$\frac{1}{2}$ gr.)

(2) Place a clip on the patient's tongue at the outset of the anæsthesia.

Dr. Laborde described a special forceps invented by him for this purpose, for which he claims a good many advantages both for the patient and the operator.

Transport of Compressed Gases.—In accordance with a decision of the Council of Hygiene of the Seine, the Paris Prefect of Police has issued an order regulating the transport of compressed gases. By the terms thereof manufacturers, dealers, and carriers cannot forward or place on the public thoroughfare receptacles containing gases compressed at a pressure of more than 15 kilogrammes per square centimetre except by strictly observing the following conditions: (1) Oxygen, hydrogen, and all other compressed gases may not be transported at a higher pressure than 200 kilogrammes. (2) Consignments may only be made by persons possessing a pressure-gauge of which they understand the working. These persons must, whenever required, fit the gauge to the receptacle to show that the highest prescribed pressure has not been exceeded. (3) The receptacles must be seamless cylinders of steel or forged iron. The maximum length to be 2 metres (say, 6$\frac{1}{2}$ feet), and the maximum interior diameter 21 centimetres (say, 8$\frac{1}{4}$ inches). These cylinders must be submitted, at the expense of the sender, to a preliminary official test to prove that they will stand without leakage or bulging, a pressure equal to one and a half times that of the gases they will contain. This test must be repeated every three years. (4) The cylinders are only to be transported in covered vehicles, and should never be moved violently or exposed to the rays of the sun or heat. A six months' interval is to take place before the order is enforced, to allow the manufacturers to comply with the conditions.

Perfumery to the value of 10,640*l.* (76 tons) was exported from Nice last year, against 7,832*l.* (56 tons) in 1900.

Colonial and Foreign News.

A Liebig Medal.—The Society of German chemists purpose having a gold medal struck in commemoration of the centenary of the birth of Justus v. Liebig, which is to be celebrated on May 12, 1903. The medal will be awarded annually to a German chemist who has furthered applied chemistry.

Drugs and Medicines in Bolivia.—According to the *Bulletin* of the Bureau of American Republics for April, the French Chargé d'Affaires at La Paz says that the market for the following drugs and preparations is very good in Bolivia: Peppermint liqueur, kola, neurosine, sulphate of quinine, cocaine, cascara sagrada, medicinal creosote, antidiphtheritic serum, &c. Most of the preparations now used are of French origin.

Opium in China.—According to a Laffan telegram from Pekin, dated May 22, a German firm at Shanghai has applied to the Chinese Government to be allowed to have a monopoly of the sale and preparation of opium; it proposes to pay 50,000,000 taels annually for the privilege; the smaller concerns would be farmed out. It is understood that the Government is in favour of accepting the offer, but there are international and provincial obstacles in the way of such a scheme.

Synthetic Indigo.—In the annual report for 1901 of the Badische Anilin und Sodafabrik of Ludwigshafen, it is stated that the net profit amounts to 505,986*l.*, which exceeds that of the previous year by 24,550*l.* The year 1901 commenced with somewhat unfavourable prospects, as the textile industry had not recovered from the crisis it passed through in 1900. The prices of the company's products could not be raised in spite of the slightly higher cost of manufacturing on account of keen competition. The production and sale of synthetic indigo have made satisfactory progress according to the report, and competition with natural indigo has consequently become more severe, and has also led to a reduction in price.

German Potash Syndicate.—On the authority of the *Financial Times*, it is now stated that a complete understanding has been arrived at between the German Potash Syndicate and the South American Visquia Trust. The syndicate, it is said, has made certain adequate concessions to the trust as regards settling the standard price, and the trust has, on the other hand, engaged to buy no salts from any firm not belonging to the syndicate. In consequence of this arrangement, the "Potash Company Einsigkeret," which had become the property of the American trust, has now joined the German syndicate. As an equivalent for this consolidation of interests, the German syndicate has agreed not to sell its goods to any firm, works, or groups of persons who should attempt to disregard the stipulations between the trust and the syndicate or should seek to compete with them or break through the principles laid down by the German-American combine. It is also reported that an English syndicate has bought the Eime Potash-works at Goslar for 90,000*l.* The chairman of the company which has sold the works has stated that the British syndicate has a capital of 235,000*l.*, and proposes to acquire possession of other potassium undertakings in Germany. The Eime Company has two bores in operation, one of which yields an average of 40·30 per cent. of chloride of potassium, and the other an average of 60·30 per cent.

Opium-poisonings.—The wrong-headedness of the system of education in Bengal is alleged by the *Madras Times* as a potent cause of disaster to the community. Young men of a certain class, who have been given an English education, are, says the *Times*, unfitted by their training for hard manual labour. Their aspirations, therefore, turn in the direction of clerkships or wives with handsome dowers. When their expectations are disappointed, some get reckless and give way to criminal practices; others become despondent and end their existence. A case illustrative of the latter class was brought to light at the coroner's court recently. A young Bengalee, Hindu, named Kisory Lall Chunder, aged 22, who had been educated up to the sixth

Digitized by Google

Government standard, tried hard for several months to obtain employment, but failed to get in even as a candidate either in Government or mercantile service. His private means not being sufficient to maintain him independently of his father, he took his ill-luck greatly to heart, and in a fit of desperation swallowed a large quantity of opium and died.—An inquiry regarding the death of Mr. R. J. Smith, of the Bombay Customs Preventive Service, held recently, showed that death was due to poisoning by a fatal dose of opium, which the deceased administered to himself by mistake.

South African News.

(From our Correspondent.)

STARTING EARLY.—Messrs. E. P. Butler and H. Richards are opening a business at Johannesburg under the style of Cleghorn's Pharmacy.

RETIRED.—Mr. E. W. Wells, chemist, of Grahamstown, has retired after a long period of personal attention to one of the old-established pharmacies of the Eastern Province, in which he was very successful. He has transferred his business to Mr. A. Paterson (who was his senior assistant for six and a half years) and Mr. W. E. Griffiths (formerly an assistant with R. Lumsden & Co., King William's Town, for four and a half years). Mr. A. Paterson was apprenticed with Messrs. McKenzie & Co., Edinburgh; Mr. W. E. Griffiths with Mr. S. F. Wardley, Tonbridge, Kent; and they are both Minor men. They will carry on the business under the old name.

ACCORDING to the *Natal Government Gazette* the value of the apothecary wares, drugs, and chemicals imported into the colony during the first three months of the present year was 20,023*l.*, against 14,299*l.* for the corresponding period of 1901. The following values are also given, the figures in parentheses being for the first quarter of 1901: Acetic acid, 222*l.* (31*l.*); medicinal preparations, 16,629*l.* (13,260*l.*); drugs (free), 6,024*l.* (2,575*l.*); extracts and essences, 7,521*l.* (4,558*l.*); Kafir ochre, 14,500*l.* (200*l.*); perfumery, 3,683*l.* (2,188*l.*); photo ware, 8 024*l.* (4,516*l.*); saccharin, 53*l.* (88*6l.*); saltpetre, 37*l.* (25*l.*); sheep-dip, 2,355*l.* (2,942*l.*); soaps, other than toilet, 11,229*l.* (19,883*l.*); toilet-soaps, 4,821*l.* (1,838*l.*); spices, 377*l.* (693*l.*); spirit of wine, 23*l.* (12*l.*).

American Notes.

THE CHEMIST AND THE "CRAPS."—A chemist named Alfred J. Howarth has begun a suit in the Supreme Court to recover $5,896, which, he asserted, he lost playing the game of dice known as "craps," in the Boswyck Club at Brooklyn. He has named as defendants the proprietors of the club. The answers of the defendants have not been filed.

FIGHTING THE LOCUSTS.—Preparations are being made to fight the seventeen-year locusts which are expected to appear about Philadelphia at any moment. As soon as the first locusts appear in the city squares they are to be met with a shower of Paris green. The City Forester has had a mixture prepared, composed of one pound of Paris green to 200 gallons of water, which will be applied to all city trees by spraying.

MEXICAN SULPHUR.—Those in the sulphur-trade and the wholesale drug-trade generally are interested in a story that comes from the city of Mexico to the effect that Popocatepetl, a great Mexican volcano, is to pass into the hands of a New York syndicate, which will develop the sulphur deposits the mountain contains. General Sanchez Ochoa is the owner of the mountain, and, according to the *N.Y. Commercial*, four wealthy New York firms are interested in the matter.

CUTTING IN PATENTS.—According to a New York contemporary the "cut" in prices by makers of proprietary medicines has caused the greatest rush of buying patent medicines in the history of Syracuse. At the same time druggists are reaping a harvest from the sales of articles in nearly all other lines of goods they handle. Retail dealers declare the ultimate outcome of the drug-war is difficult to forecast, but, without exception, each advances the opinion that the manufacturers of proprietary medicines on which the "cut" is operative will in the end bear the brunt.

Legal Reports.

High Court Cases.

RIGHT TO THE WORD "AËRATORS."

ON Saturday Mr. Justice Farwell concluded the hearing of the case, Aërators (Limited) *v.* Tollitt and others, and gave judgment. He said the plaintiffs claimed an injunction to restrain the defendant from registering a company under the name of the "Automatic Aërator Patents (Limited)," on the ground that the name so closely resembled that of the plaintiffs as to be calculated to deceive. The plaintiffs manufactured and sold bottles and syphons for holding liquids which could be aërated by means of "Sparklets," which were small metal appliances containing compressed carbonic-acid gas. The defendants proposed that the new company with which they were interested should acquire patents for aëration of liquids contained in tanks or cisterns of large size. The articles were in themselves quite distinct, and no confusion could arise as to them, the only question in the present case being as to the similarity of the names. Having dealt with the law of the matter, Mr. Justice Farwell observed that the plaintiffs could only assert their rights as members of the public if and so far they could show special damage to themselves. But the choice of their own name rested with themselves. The registrar had no discretion to refuse any name put forward on behalf of the company, and if by reason of the adoption of one single word in common use they ran the risk of suffering injury they had only themselves to blame, and they could no more acquire a monopoly of the use of the word "aërators" than an individual could acquire a monopoly of his own name or the name of the article he manufactured. The plaintiff's trade-mark was "Sparklets," and this name was put prominently forward on their shop-fronts, invoices, bill-heads, and letter-paper. When the plaintiffs ascertained that the defendants intended to register the Automatic Aërator Patents (Limited) they themselves applied to register another company with a small capital under very much the same title, and they were only prevented from doing so because the defendants' application was first lodged. The plaintiffs' managing director, who gave his evidence in a very fair and candid manner, stated that although their chief object was to be beforehand with the defendants and prevent their registration of the name, yet they had intended that the new company should carry on business under that title, and that by the exercise of proper care he did not anticipate that any confusion would arise. But this new company of the defendants was intended to deal in articles similar to those sold by Aërators (Limited), and if due care could prevent confusion in such a case, could it not do so in a case where the articles dealt with were so different as those of the plaintiffs and defendants. In his opinion the plaintiffs were attempting to monopolise a word in common use. This they could not be allowed to do, and the action would be dismissed with costs.

Sale of Food and Drugs Acts.

BAKING-POWDER.

AT Stockport on May 28, Samuel Johnson, 156 Chestergate, Stockport, was summoned for selling baking-powder which the analyst certified to contain 63·27 of rice-starch and 14·37 of tartaric acid. There was an excess of tartaric acid, but the offence was the inclusion of so large a quantity of rice-starch, 20 per cent. being stated as an ample quantity. Although no standard is fixed, the best authorities are agreed, said the prosecution, that 20 per cent. was sufficient. It was pointed out that the firm from whom defendant bought the baking-powder guaranteed it "free from alum or any other substitute for tartaric acid." Dr. Meredith Young said the powder had either been carelessly or ignorantly mixed. The quantity of rice-starch would increase the bulk and decrease the value of the active parts. Mr. William Thomson gave it as his opinion that 20 per cent. was a sufficient quantity of rice-starch. Mr. Potts, for the defence, contended that the starch was necessary, and as there was no standard fixed for the proportion the purchaser could not be prejudiced. The fact that there was an excess of tartaric acid showed there was no intention to defraud. It was

Digitized by Google

simply a question of quantities, and no fixed quality had been laid down. The Magistrates imposed a fine of 5*s.*, and 3*l.* 5*s.* costs.

County Court Cases.

Salary in Lieu of Notice.

At the Brompton County Court on May 30, before Judge Stonor, Mr. Edward Altree, chemist's assistant, 280 Fulham Road, S.W., sued Mr. George Howard Fisher, chemist and druggist, 53 King's Road, Chelsea, S.W., Shaftesbury Avenue, W., and Broad Street, E.C., for 1*l.* 1*s.* balance of salary, and 2*l.* for a week's salary in lieu of notice. The plaintiff personally conducted his case, and Mr. W. D. Cunningham, solicitor, appeared for the defendant.

The plaintiff stated that in October, 1901, he was engaged by the defendant as assistant at 2*l.* a week. The money was not paid regularly on Saturday nights, as it should have been. One day last November, when he asked to go out for lunch defendant swore at him and told him to go. He (plaintiff) considered that this was because he had stopped lending defendant money. Defendant, in the box, denied that he had ever borrowed money from plaintiff or had sworn at him, and said plaintiff had dismissed himself. Answering questions put by the plaintiff, the defendant stated that he always paid him his salary in full on Saturday nights; and he denied that he ever borrowed any money from the plaintiff.

The plaintiff produced a note-book, in which, he said, appeared items, referring to "allowances," in the defendant's own handwriting.

The Judge (to the defendant): Is that your handwriting?

Defendant (looking at it): I do not remember ever having seen this book before.

The defendant, at the Judge's request, wrote upon a slip of paper, "to allowance."

The Judge (after carefully comparing this writing with that in the book): I think this is the same handwriting. I do not think it is any use disputing this case further in face of the fact that the defendant denies all knowledge of the items in this book. I am satisfied that the plaintiff is entitled to recover. There will be judgment for the plaintiff, with costs.

Not Paying the Apothecaries' Society.

On Tuesday, June 3, at the Halifax County Court, before Judge Cadman, Mr. George Pearson, against whom the Apothecaries Society recently obtained a penalty of 20*l.* for practising as a medical man, he being uncertificated, appeared on a judgment summons. The Judge had ordered the fine to be paid by instalments of 1*l.* per month, but no instalment had been paid. Pearson stated that he is employed as a dispenser at 30*s.* a week and free house, but had to pay 5*s.* for cleaning. He added that he had pawned his instruments to advocate his case, whereupon the Judge said it had only cost him (defendant) his breath, and he ordered him to pay in twenty-eight days.

Dispute Between Partners.

At the Grantham County Court on Tuesday last, Alfred Hutchinson, of North Parade, Grantham, sued Tom Kingston, chemist and mineral-water manufacturer, of Westgate, Grantham, in an equity suit. Mr. J. B. Barlow, for the plaintiff, said on July 11 last plaintiff and defendant became partners as mineral-water manufacturers, and carried on business in Oxford Street, Grantham. A verbal arrangement was made to the effect that plaintiff was to pay 110*l.* for a half-share of the business, that he was to pay a certain amount of cash down, and was to be credited at the rate of 2*l.* per week until the balance of the purchase-money had been paid. Mr. R. A. Young, for defendant, said there was an agreement for a partnership, which agreement was never carried out, therefore there never was a partnership. After hearing plaintiff's evidence, the Judge said there was evidence of partnership and dissolution. On behalf of the defendant Mr. Young agreed that there was a partnership, and accepted 220*l.* as the value of the assets of the business, the defendant to continue the business on giving a fidelity bond of 150*l.*, and the Registrar to take the accounts.

Bankruptcies and Failures.

Re Frank Harold Bromfield, 83 Broad Street, Blaenavon, trading as a Chemist and Druggist.—The creditors met for the first time at the Official Receiver's office, Merthyr, on May 30, when the statement as reported last week (page 861) was repeated.

Re A. C. H. Newton-Mason, High Street, West Bromwich, trading as a Chemist.—The trustee under this failure announces that he has completed the realisation of the estate, and is prepared to pay to the unsecured creditors a first and final dividend of 3*s.* 8½*d.* in the pound.

Re Mrs. Laura V. Crossley, 126 Oxford Street, W., trading as Blanche Leigh, Soap and Perfumery Manufacturer.

A meeting of creditors of this debtor was held on May 28 at the offices of Hastie's (Limited), solicitors, 65 Lincoln's Inn Fields, W.C. A statement of affairs was submitted which showed liabilities 5,250*l.*, and assets estimated at 4,930*l.* Amongst the liabilities the bank figures for 800*l.*, for which it holds as security lease of premises at 126 Oxford Street. The solicitor stated that he had called the creditors together for the purpose of obtaining the signature of each creditor to a deed of assignment, and unless he received the signatures that afternoon he should file a petition in bankruptcy. The creditors present strongly protested against this proceeding, and pointed out that it would take a week to get all the signatures. The meeting broke up, and the petition was filed the same day.

Deeds of Arrangement.

Kissell, John Victor, 298 Harrow Road, W., pharmaceutical chemist. Trustee, John Baker, Chiswell House, Finsbury Pavement, E.C. Dated, May 26; filed, June 2. Liabilities unsecured, 517*l.* 9*s.* 8*d.*; estimated net assets, 129*l.* 1*s.* 10*d.* The following are among the creditors:—

	£	*s.*	*d.*
Barron, Harveys & Co., London	22	0	0
Davy, Hill & Co., London	23	0	0
Hovenden & Sons, London	11	0	0
Idris & Co., London	13	0	0
Kissell, E. E., Taunton	339	0	0

Maw, Son & Sons, London	13	0	0
Sanger, J., & Sons, London	11	0	0
Shirley Brothers, London	12	0	0
Waller, Malvine & Co., London	12	0	0

Sykes, James, trading as James Sykes & Co., Heckmondwike, manufacturing chemist and oil-merchant. Trustee, Thomas Howard, 16 Piccadilly, Bradford, chartered accountant. Dated, May 26; filed, May 27. Unsecured liabilities, 1,183*l.* 17*s.* 10*d.*; estimated net assets, 732*l.* 8*s.* 4*d.* Amongst the creditors are:—

	£	*s.*	*d.*
Clauss & Ree, Manchester	12	0	0
Foster, J., & Co., Leeds	52	0	0
Macnair, A., & Co., Manchester	11	0	0
McArthur & Co., Liverpool	11	0	0
Perkins, T. W., Wellingborough ...	10	0	0
Skelton Brothers, Bradford	75	0	0
Spencer & Co., Hull	43	0	0
Walker, W., & Sons, Otley	10	0	0

Gazette.

Partnerships Dissolved.

Bywaters, C. H., and **Prior, A. G.,** under the style of the Granite Paint Company, Cross Street, Creek Road, Deptford, Kent, paint, colour, and varnish manufacturers, glass and lead merchants, and dealers in oil and colourmen's sundries.

Gilston, P., Chadwick, J. W., and **Gregg, J.,** under the style of P. Gilston & Co., Hunslet, Leeds, and Knottingley, Yorkshire, glass-bottle manufacturers.

The Bankruptcy Acts, 1883 and 1890.

Receiving Orders.

Crossley, Laura Verrall (carrying on business as Blanche Leigh), of, and carrying on business at, 126 Oxford Street, W., soap and perfumery manufacturer, the wife of Herbert Crossley, trading separately and apart from her husband, having separate estate and assets.

Digitized by Google

Dean, Joseph (trading as Joseph Dean & Son), Sutton-within-Macclesfield, Cheshire, mineral-water manufacturer.

ADJUDICATIONS.

Gould, Alfred, Knatchbull Road, Brixton Road, S.W., lately White's Row, Commercial Street, E., isinglass-manufacturer.

Park, William Charles Cunningham, Macfadyen, James John, and **Park, James** (carrying on business in co-partnership as Park, Macfadyen & Co., also as Park, Son & Co., and as Turnbull & Co.), at Kingston, Jamaica, West India merchants.

SCOTCH SEQUESTRATION.

Barr, William, Bellshill, manufacturing chemist. Creditors will meet in the Library, Law Agents' Room, County Buildings, Hamilton, June 10, at 12 o'clock. James Hogg, solicitor, Clydesdale Bank (Limited), Bellshill, agent.

New Companies & Company News.

CHEAP AND GOOD (LIMITED).— Registered in Edinburgh. Capital 5,000*l.*, in 1*l.* shares. Objects: To carry on the business of manufacturers, merchants, general traders, drysalters, chemists; also the business of a general supply association in all its branches. The first directors are to be afterwards appointed. Qualification, 50 shares. Remuneration as fixed by the company. Registered office, 116 Buchanan Street, Glasgow. [Compare with *C. & D.*, April 5, p. 537.]

SAVILLE'S (1902) (LIMITED).—Capital 35,000*l.*, in 1*l.* shares. Objects: To carry on the business of manufacturers of and dealers in brewers' requisites, antiseptics, disinfectants, sheep-dips, manures, and other agricultural and chemical products, and to take over the business of Saville's (Limited) (incorporated in 1899). No initial public issue. The first directors are C. H. L. Cazatel, E. W. Rowsell, C. Stansfeld, G. R. Ewens, and H. C. Ewens. Qualification, 100*l.* Remuneration as fixed by the company. Registered office, Chorlton Road, Hulme, Manchester.

J. C. TWIST (LIMITED).—Capital 30,000*l.*, in 1*l.* shares. Objects: To take over the business of a soap manufacturer, carried on by J. C. Twist, at the Chelsfield Soapworks, Orpington, Kent, to carry on the business of soap-manufacturers, soap-boilers, candle, taper, night-light, and glycerin manufacturers, oil-refiners, perfumers, &c., and to adopt an agreement with the London and General Industries (Limited). No initial public issue. The subscribers are to appoint the first directors. Remuneration, 150*l.* per annum for the chairman and 100*l.* each per annum for the others.

AUTOMATIC AËRATOR PATENTS (LIMITED).—Capital 15,000*l.*, in 1*l.* shares. Objects: To acquire from H. Swales, F. G. Hampson, and R. G. Orr the benefit of certain applications for patents and other rights relating to an improved method of or apparatus for aërating liquids, to turn the same to account, to establish engineering-works, &c. No initial public issue. The first directors are F. G. Hampson, R. G. Orr, H. Shield, and H. Swales. Qualification, 250 shares. Remuneration, 750*l.* per annum and a share in the profits, divisible. Registered office, 14 Sherborne Lane, E.C.

HERMOS (LIMITED).—Capital 2,000*l.*, in 1*l.* shares. Objects: To carry on the business of pharmaceutical, manufacturing, and general chemists, druggists, oil and colour merchants, drysalters, &c. The first subscribers are:—C. Howard, 11 Queen Victoria Street, E.C., solicitor; H. Major, 125 Atherlay Road, Waverley Park, S.E., clerk; C. H. Brookes, 69 Barmouth Road, Wandsworth Common, S.W., clerk; H. Hoyle, 32 Mildmay Road, N., clerk; A. Major, 11 Queen Victoria Street, E.C., auctioneer; J. L. Quinlan, 39 Canonbury Road, N., clerk; and C. T. Fernyhough, 46 Queen Victoria Street, E.C., accountant. No initial public issue. Registered without articles of association.

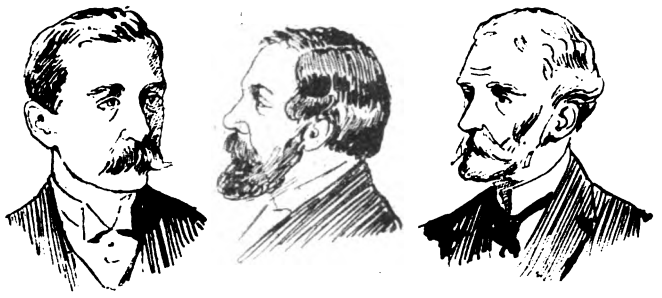
RAYBOULD, WHITEHOUSE & Co. (LIMITED).—Capital 7,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on by G. Raybould and J. Whitehouse as "Raybould, Whitehouse & Co.," at Dudley, Worcestershire, and to carry on the business of chemists, druggists, vendors of patent-medicines, drysalters, oil and colourmen, druggists' sundriesmen, &c. The first subscribers are:—G. Raybould, 69 Snow Hill, Dudley, chemist; J. Whitehouse, Wartell House, Wellington Road, Dudley, druggist; Mrs. B. E. Raybould, 69 Snow Hill, Dudley; Mrs. C. J. Whitehouse, Wartell House, Wellington Road, Dudley; Miss E. Raybould, Salop Street, Dudley; Miss H. Whitehouse, Wartell House, Wellington Road, Dudley; and R. Marshall, 199 Wolverhampton Street, Dudley, solicitor. No initial public issue. The first directors are G. Raybould and J. Whitehouse. Qualification, 1,000*l.* Registered office, Reform Works, Wellington Street, Dudley, Worcestershire.

SALT UNION (LIMITED).—At the annual meeting of the shareholders held in Liverpool on June 3, Mr. T. B. Royde (the chairman) stated that during the past year the Union sold 50,000 tons more salt than in the year before, although there had been a decrease of 50,000 tons in chemical salt. The gross profit had increased by 34,000*l.*

SPIRITINE (LIMITED).—In the Chancery Division on May 30, Mr. Justice Farwell heard a motion in the case of Owen *v.* Spiritine (Limited) for the appointment of a receiver of the assets of the company, which carries on business as manufacturers of spirit appliances at Willesden. It was stated that the plaintiff was a debenture-holder, and 106*l.* remained unpaid on the plaintiff's security. The company was entirely without funds, having overdrawn its account with the London Joint Stock Bank. Judgment had been obtained against it, and it was unable to satisfy the execution levied. His Lordship held that the company's case was hopeless, and he appointed a receiver as asked.

TREACHER & Co. (LIMITED), BOMBAY.—The company's thirty-eighth annual report and balance-sheet, made up to March 31, 1902, has been issued. The directors regret to have to record a considerable decrease in the company's profits, due partly to the ever-increasing keenness of competition and consequent fall in prices, and partly to the general trade depression. The balance available for distribution amounts to 33,000*r.* 5*a.* 4*p.*, from which the directors propose to pay a dividend of 15*r.* per share, or 3 per cent., amounting to 30,000*r.*, carrying forward 6,000*r.* 5*a.* 4*p.* to next year's account. The directors express confidence that a return of general prosperity will be followed by an increase in the company's earnings and by better dividends.

LIEBIG'S EXTRACT-OF-MEAT COMPANY (LIMITED).—The annual meeting was held on June 3 at the Cannon Street Hotel, Mr. C. G. Gunther (chairman of the company) presiding. In moving the adoption of the report (see *C. & D.*, May 24, p. 802), the Chairman said the shareholders were to be congratulated on the results obtained, considering that the River Plate country had been suffering from the effects of a severe drought. Their company, however, had escaped comparatively lightly owing to capable management in the selection of their cattle-farms. The sales of the extract all over the world have continued most satisfactorily, and the new trade-mark—"Lemco"—is gradually becoming firmly established. Oxo, the new fluid beef, also continues to make steady progress, especially among the medical profession and hospitals. The report declaring a dividend of 20 per cent. on the ordinary shares was unanimously adopted. An extraordinary general meeting was afterwards held for the purpose of altering some of the articles of association in compliance with the new Companies Act.



FULLERS'-EARTH UNION (LIMITED).—The annual general meeting of the Fullers'-earth Union (Limited) was held on May 28, at Winchester House, E.C., the chairman of the company (Mr. S. Stanley Brown) presiding. The Chairman reported increased sales of the company's product. The trade is now 3½ times larger than it was nine years ago. The company would shortly have to pay off the existing debenture debt of 10,000*l.*, and the directors had decided to give the shareholders the opportunity of subscribing for 15,000*l.* 5 per cent. debentures. The profit-and-loss account for the year ended March 31 showed a balance of profit of 5,213*l.* 18*s.* 6*d.*, which, with 610*l.* 14*s.* 1*d.* brought forward, gave a total balance of 5,824*l.* 12*s.* 7*d.* to be dealt with. The interim dividend on preference shares paid in November, 1901, absorbed 1,074*l.* 11*s.* 3*d.*, and dividends making 5 per cent. for the year on preference shares and 4 per cent. on the ordinary shares of the company were declared, leaving a balance of 1 848*l* 13*s.* 3*d.* to be carried forward, of which 1,000*l.* will be placed to a reserve fund.

THE MUCILAGE-CORK.—All pharmacists are very familiar with the difficulty of corking mucilage-bottles, and know that as the mucilage hardens around the cork and in the neck of the vessel it is difficult to draw the cork without fracture or leaving some attached to the bottle. All these may be lessened, or even done away with altogether, if the cork be first well soaked in glycerin, or even smeared with it.

General Medical Council.

OUR report of the Summer Session proceedings, left off last week at a point in Wednesday's sitting before the Council, considered a proposal by Mr. Ball for returns of

DR. MACKAY. MR. JACKSON. DR. FINLAY.

New Members of Council.

professional examinations from licensing bodies, additional information being wanted on the following points:—

1. Where credit is allowed for a single subject or group of subjects only at any examination, the number of students who pass or are rejected in such portion of the examination should be furnished separately from the list of those who pass or are rejected from the entire examination.

2. That in addition to giving a return of the candidates rejected at any examination, the number of such candidates who have been previously rejected upon one or more occasions for the same examination be indicated, with the number of such previous rejections in each case.

This was agreed to after a lengthy discussion.

Next day (Thursday, May 29) was devoted to

PENAL CASES.

The first was that of Dr. William Tyndale Watson, Tottenham, N., who in November, 1901, received twenty-nine days' imprisonment for indecent assault. Dr. Watson appeared himself, and was represented by Mr. A. A. Strong, LL.B. Lond., solicitor. Mr. Joseph Howard (M.P. for Tottenham), the Rev. Charles Howell (vicar of Holy Trinity, Tottenham), Dr. Gilbart Smith, and others testified their high opinion of Dr. Watson's character, and evidence was given as to Dr. Watson's health. After half-an-hour's deliberation *in camera*, the President announced that, owing to the state of Dr. Watson's mental and physical health, the Council would not remove his name from the *Medical Register*.

The next case taken was that of Robert Rendall, M.B., Great Yarmouth, charged last November with infamous conduct in a professional respect by holding medical appointments in connection with the National Medical Aid Company (Limited) and the Liverpool Victoria Legal Friendly Society, at Great Yarmouth. Mr. Rendall attended, and stated that he had absolutely ceased his connection with the societies. After a short deliberation, the President informed Mr. Rendall that the Council, having considered the facts and evidence submitted by him in relation to his action since the last session, has resolved to proceed no further in regard to the charge proved against him.

The third case taken up was that of Mr. William Park, M.B., C.M., Airdrie, who was summoned to answer a charge of infamous conduct in a professional respect, by seducing and subsequently eloping with a lady, the wife of a clergyman, who was under his professional care in his hydropathic establishment at Limpley Stoke, near Bath. Mr. Park did not appear, but on his behalf Mr. Montague Shearman applied for a postponement of the case. Mr. Park, he said, had through a misunderstanding, supposed that his case would not be heard till November, and three days before he received formal notice to attend that day, he had signed a contract with the Royal Mail Steamship Company to act as surgeon on board, and had sailed from England on May 21. Mr. Newson (for the injured husband, who was also present) opposed the application on the ground of the expense and trouble to which the complainant, who had brought witnesses, had been put. The Council's legal adviser thought the case should be proceeded with, and on the application of defendant's counsel it was heard *in camera*. After about an hour the President announced that the Council judged Mr. Park guilty of infamous conduct in a professional respect, and directed his name to be taken off the register.

A DELAYED APPLICATION.

Mr. Abiathar Wall, L.S.A. Lond. 1871, L.R.C.P.E. 1872, L.R.S.C.E. 1872, a medical practitioner entitled to be registered under the Medical Act (1858), but who neglected to effect such registration until after the "appointed day" (June 30, 1887), under the Medical Act (1886), applied for registration, and the English Branch Council was authorised to accede to the request.

HARD UP.

The first business on Friday was the appointment of committees. That over, the report of the Financial Relations Committee was brought up by Mr. Horsley. This showed that during the past seven years there has been a deficit of 1,200*l.* per annum, which is attributed broadly to small income and excessive work, and to remedy matters an amendment of the 1858–1886 Medical Acts is needed. The financial history of the Council began in 1858, when a 2*l.* registration-fee was authorised, and this yielded about 35,000*l.* Some of this was invested, the interest and the principal yielding the Council altogether 75,485*l.* The various editions of the British Pharmacopœia have given a profit of 3,600*l.* The 5*l.* registration-fees have come 900*l.* short yearly of the current expenditure. In regard to the Pharmacopœia, which is the first of the Council's assets, the committee say:—

The receipts and expenditure upon former editions of the Pharmacopœia cannot now be ascertained with exactitude, as, although at times statements have been prepared, the accounts have not been kept entirely separate from the general expenses of the Council. So far as can be ascertained, up to the year 1880 there was a small balance of profit amounting to 80*l.*, from 1880 to 1885 a profit of 350*l.*, and from 1885 to 1898 a profit of 2,000*l.* So far the new edition of 1898 shows a better result, there being an apparent profit of 800*l.*, whilst unsold copies are in hand to the approximate value of 400*l.* Thus over the whole period from 1858 to the present time the Pharmacopœia has yielded about 3,600*l.*, or about 90*l.* a year. Although for the reasons above stated these figures must not be taken as exact, it is probable that the error is not large enough to be material.

After dealing fully with the branch and General Councils' finances and their adjustment, the latter including a suggestion to make the branch Councils pay in their moneys and accumulated funds to the General Council, the report concluded with suggested amendments to the Medical Acts. These included the repeal of section xi. of the 1858 Act, which provides autonomy in Scotland and Ireland, and increase of the registration-fee for medical practitioners from 5*l.* to 7*l.*, and a new provision imposing a registration-fee of 1*l.* on students registered.

Mr. Victor Horsley, in a note, called for an annual registration-fee, and Dr. Heron Watson objected to the increased fee and to Mr. Horsley's suggestion, and went straight to the point in the following note:—

A self-imposed restriction upon the faculty of much speaking on the members of the Council, with a commensurate shortening of the meetings, a greater number of hours devoted to the actual business of the Council and its committees, implying, if need be, morning, afternoon, and evening sittings, might well be adopted as a preliminary tentative measure, and, should this increase in the number of hours prove insufficient, the withdrawal of all fees for attendance upon the meetings, while only travelling and hotel expenses be continued, might most reasonably be adopted.

Certainly it appears to me that some such self-denying regulation should be passed, so as to manifest to the medical profession that what is done by the Council is due to a single minded determination to confer benefits, and not to bind burdens, upon the profession at large.

Dr. Bruce concurred with this and the other contents of Dr. Watson's note.

Mr. Horsley hoped the Council would accept the report as a step forward in the direction of financial reform.

A long discussion followed.

Dr. Norman Moore asked what advantage registration was to the students or the public, and if the Council had power to compel it? If they went to Parliament in order to raise money they must make it clear that they used their funds in

Digitized by Google

the thriftiest manner, and be prepared for elaborate criticism as to the way in which they spent their time.

Dr. Atthill was surprised at these remarks, and Dr. McVail was also highly indignant at the latter part of them. They had, he said, strong grounds for going to the Government for assistance if the work could not be done without increased funds.

Sir C. Nixon also expressed his high opinion of the useful work and lofty aims of the Council. He thought compulsory registration desirable; for one thing, it would make medical education uniform.

Sir J. Tuke pointed out that compulsory registration of students would infer the right of the Council to lay down the conditions of registration, and anyone cognisant of the feeling of various licensing-bodies knew what opposition would be raised to that.

Dr. Bruce was of opinion that radical reform was called for. The business of the session should be got through within a week, and penal cases should be taken earlier in the day. It was a scandal that parties summoned to appear should sometimes be detained the night in London because the Council could not finish or had not got to the consideration of their cases on the day named.

Dr. Heron Watson's note as to speaking was put as an amendment, and seconded by Dr. Bruce, Sir J. Tuke supporting it, explaining that the great mass of the Council's expenditure was in fees paid to members, and the average M.P. would say, "You must not ask more from the profession; make some sacrifice yourselves." (Hear, hear.)

Sir C. Nixon suggested, amidst laughter, that it would be quite possible for members to refuse their fees. He, for one, did not see that he was called upon to give time for the benefit of the State and the profession without some reasonable recompence.

Dr. McVail emphatically declined to devote longer hours to the business of the Council.

The amendment did not commend itself to the members. Sir Wm. Thomson invited Dr. Watson to enlarge upon it, and Mr. Brown also "wanted to know." Dr. Watson, however, sternly declined to waste the time of the Council in telling members what they already had in print before them. In spite of his self-suppression his amendment found considerable support, and was lost by only 11 to 14, 5 not voting.

The recommendations of the report as to revenue were considered *seriatim* under the following heads: (1) The institution of a student's registration-fee of 1*l*; (2) raising the initial registration-fee of practitioners from 5*l*. to 7*l*.; (3) remodelling the financial administration of the funds so far as the mutual relations of the Council and its branches are concerned. No. 1 was carried by 13 to 12. Before taking No. 2, Mr. Jackson moved that an annual licensing-fee of 10*s*. be substituted for the present 5*l*. registration-fee. Mr. Horsley seconded, and there was a lot more talk, but Mr. Jackson had only two supporters. No. 3 was carried. Then the Council came to the consideration of the legal and political aspects of the desired reforms, over which there was more talk at a cost of 1*l*. a minute, but the members were not satisfied, and the debate was resumed on Saturday, when Dr. Little moved that the discussion be adjourned till next session, and that it be left to the President to make, in the meantime, such provisional arrangements as appeared to him most conducive to economy. The President was not sure that he was disposed to act the part of the benevolent despot, and Sir Wm. Thomson and Dr. MacAlister thought that the Council should not hand over the business of the Council for the next six or twelve months to any single individual, however benign. This way out of the difficulty found only two supporters, and Sir J. Tuke then, resuming the discussion, gave his reasons for opposing the motion. He held that the proposed Bill would indefinitely postpone fiscal reform.

Dr. Mackay, seconded by Dr. Finlay, made a suggestion which bridged over the differences that divided the advocates of retrenchment and reform, and the motion was carried by 20 to 6 Four did not vote, including Sir John Tuke.

A report of the Finance Committee was presented by Mr. Bryant, and passed.

A Long and Wearisome Discussion,

enlivened only by little passages of arms between Mr. Horsley and Dr. MacAlister, followed in committee on the further consideration of the report of the Committee on the Prevention of Personation, and was not concluded when the Council rose. It was hoped that the business of the session would have been finished on Saturday, and the President gravely reminded the members of the fact, and added that there was nothing in the programme which could not be got through easily on Monday. The programme was not, however, got through on Monday. At the President's suggestion, the Council addressed themselves, when they reassembled and were fresh to their work, to the more important matters of examinations, students' registration, and public health, postponing the consideration of personation. Perhaps the Council were too fresh and ready for the fray, for these subjects occupied them all the afternoon. At 6 o'clock Dr. McVail allowed the standing order to be suspended till the conclusion of the public-health debate, but would not hear of any more business being taken that day. The reports of the Examination Committee on the examinations of the Scottish Conjoint Board of the Irish University were re-entered and adopted after a short discussion on an irregularity in passing one candidate, in which Dr. Watson, Sir Hector Cameron, and Dr. Payne took part; and an expression of regret from Sir Wm. Thomson as to the absence of an examination in operative surgery.

The report of the Students' Registration Committee stated that applications having been received for the approval by the Council of the Plymouth Municipal Science, Art, and Technical Schools and St. Olave's Grammar School, Southwark, S.E., the former school was approved, but not the latter.

After a little row about the non-recognition of a student from Stonyhurst College (which is not an "approved institution"), there was a long discussion on the report of the Public Health Committee on proposed amendments to the regulation in regard to the diploma of public health, which was adopted.

The members were not altogether happy about the regulation though they had passed it, and when they met on Tuesday Dr. Norman Moore proposed that an explanatory note should be added in order to make the regulation workable in London, and this was agreed to on a division.

The upshot of the further consideration of the report of the Committee for the

Prevention of Personation

was that motions were carried which will ensure preservation by the Registrars of all forms of application for registration, and applications for restoration to the Medical or Dentists Register must under exceptional circumstances be accompanied by a statutory declaration in an approved form.

The British Pharmacopœia.

The report of the Pharmacopœia Committee was brought up by Dr. MacAlister. It showed that up to the present date 32,083 copies of the British Pharmacopœia, 1898, and 354 copies of the Indian and Colonial Addendum, 1900, have been disposed of. The Government of India has been supplied with 3,500 copies of the Addendum. The stock of the B.P. now in hand is 400 copies, and a further issue of 1,500 copies was recommended. The report proceeded as follows:—

Since the last report of the committee two meetings of the Conference with representatives of the Pharmaceutical Societies of Great Britain and of Ireland have been held, at which useful discussions have taken place as to the preliminary researches which are necessary in preparation for the next Pharmacopœia. The Conference has also had before it a series of reports containing the results of a minute and exhaustive inquiry into the solubilities of the chemical substances included in the Pharmacopœia. This inquiry has been conducted by Professor Greenish, under the direction of the Research Committee of the Pharmaceutical Society of Great Britain, in the laboratories of the Society. In order to ascertain the purity of the drugs under examination, it has been necessary to scrutinise afresh the chemical tests given for them in the Pharmacopœia. This scrutiny has led to suggestions for the improvement of these tests which promise to be of great value in relation to pharmaceutical chemistry, and will certainly call for the fullest consideration in the revision of the Pharmacopœia. Similar researches are in progress in relation to the percentage of the ash which should be yielded by good specimens of the official vegetable drugs; and here, again, collateral inquiries have been

Digitized by Google

instituted bearing on the identification of the vegetable drugs and of their powders.

Methodical and laborious inquiries of the above nature cannot be carried on without incurring considerable expense, and the committee understand from the representatives of the Pharmaceutical Society of Great Britain that in this case the cost has been unexpectedly heavy. The committee highly appreciate the service rendered by the Society and its officers to pharmaceutical science in general, and to the revision of the Pharmacopœia in particular; and they desire to express their appreciation by recommending that a grant of 100*l.* be made to the Society as a contribution towards the expense incurred by it in carrying on these valuable investigations.

The committee are further of opinion that it is desirable that a digest of the criticisms and researches bearing on the Pharmacopœia, which have been published from 1898 to the present time, should be procured; and they recommend that the sum of 50*l.* be placed at the disposal of the committee for this purpose.

The report was received and its recommendations were agreed to; and after the Council had carried a motion disapproving of the Midwives Bill, it had a revival of the

Glasgow Doctors' Shops Matter,

in the form of a letter from the Glasgow Southern Medical Society to the Scottish Branch Council, protesting "against the notice of the General Medical Council to registered medical practitioners published in the *Glasgow Herald* of December 14, 1901, as being unwarrantable, oppressive, and vexatious." The letter was entered on the minutes without comment, and this, with a hearty unanimous vote of thanks to the President, concluded the proceedings of the session.

Westminster Wisdom.

(By our Parliamentary Representative.)

The Peace

It would be as impossible to play "Hamlet" without the Prince as to write any parliamentary notes this week without at least an allusion to the peace. Although the most stirring scene was in the Commons when Mr. Balfour read "the terms of surrender," the proceedings in the Lords were more picturesque. Peeresses in hundreds crowded the galleries, and Royalty was represented by the Prince of Wales and the Duke of Cambridge, who sat beside the venerable Lord Kelvin. Thoughts are now in the future. It is realised that there will be an immense boom in commerce of all kinds in South Africa, and some persons who are for ever croaking about our sleepy ways in business matters will be pleasantly surprised to learn that very active steps are being taken to ensure that British industry shall have its full share in the prosperity. We shall know in a few days what modifications, if any, the cessation of hostilities has enabled the Chancellor of the Exchequer to make in his Budget proposals. Writing before any announcement, I shall content myself with mentioning the prevalent opinion among parliamentary hands that the most prudent course would be to abandon the addition to the income-tax and maintain the duty on corn. Of course, the Chancellor knows as well as anybody else that much pressure will be brought to induce him to take the opposite course.

Necrosis.

When the Home Office vote was under consideration Sir Charles Dilke made the disquieting statement that there has been a slight revival of necrosis in the match-making industry in connection with the boxing of dry matches. It was pointed out by Mr. Ritchie that the revival is very slight. In 1898 there were twenty-one cases; in 1899, eight; in 1900, three; and in 1901, four. The alleged "revival" is therefore the increase from three to four.

Lead-poisoning.

As regards lead-poisoning there has been a very marked improvement during the year. Mr. Asquith attributes this entirely to the intervention of the Home Office, and thinks that if the matter had been left to the pressure of public opinion, to the influence of self-interest, or to the initiative of the local authorities, the improvement would never have taken place. A different view—on what grounds it is not easy to ascertain—is taken by Mr. Coghill, who comes from the Potteries. It is this hon. member's firm belief that the rules of 1898 would have been quite effective without the addition of the special rules which were issued a couple of years ago. If the Home Office officials are itching for new work, why, he asks, do not they turn their attention to house-painters, among whom there were twelve cases of lead-poisoning and five deaths in March alone.

Foreign Competition and Government Interference.

It is an old complaint that we have to thank Government inspection and restrictions for a good deal of the success of our foreign competitors. The idea is that our manufacturers are handicapped by regulations from which foreigners are exempt. Something was said on the subject in the Commons the other day. One member made sweeping allegations, but the Home Secretary asserted, in reply, that we are not the only nation which is advancing in the matter of factory and workshop supervision; indeed, in some points we lag behind foreign law. He admitted, nevertheless, that too much inspection may possibly do harm, and that care must be taken not to go beyond what is demanded by the condition of things.

Vivisection.

During the week the question of vivisection has cropped up several times in connection with a demand for more inspectors. Mr. MacNeill, who is forcible, if not always convincing, declared that in too many instances vivisection is carried on out of a very devilish spirit of curiosity, and has an effect on students subversive of the best feelings of humanity. On behalf of the Government, it was stated that while it may become necessary to appoint additional inspectors, it would also be absolutely impossible to ensure that an inspector should be present at all operations, for that would require an army of inspectors. As to the argument that the animals suffer intense pain after recovery from the anæsthetic, we are assured that this is not so, because life is destroyed before the return of consciousness. A very large number of the animals have been seen and carefully examined by the inspectors, and in no case have they found that an animal has been unnecessarily kept alive in pain.

The Midwives Bill.

It is arranged, if nothing more important comes in the way, to devote Friday, June 6, to the consideration of the Midwives Bill, as amended by the Standing Committee. There are several amendments on the paper, but should these be disposed of, the Bill will have been so far advanced that it may be sent to the House of Lords next week.

Milk Blended Butter.

Mr. Hanbury (President of the Board of Agriculture) stated to a deputation on Tuesday that he has a Bill on its way to his colleagues to deal with milk-blended butter. In this he does not go so far as to prohibit the sale of milk-blended butter altogether; but it must not be sold as butter—it must be sold under a special name in large letters, and words must not be added to the effect that it is very much better than butter.

The Whitsuntide Bank Holiday.

Replying to Mr. Trevelyan the other day, Mr. Balfour said if he were certain that the first Monday in June would always be fine, and that the first Monday after Whitsunday would always be wet, he would not mind changing the law so that the former would stand for the latter.

Re Austin & Co., Islington, N., Box-makers.—A meeting of creditors was held on May 29 at the Inns of Court Hotel, W.C., when a statement of affairs was submitted showing liabilities 3,249*l.* and assets 862*l.* The solicitors (Messrs. Letts Brothers), on behalf of the debtor, offered a composition of 5*s.* in the pound, payable within eighteen months, but as this could not be guaranteed, it was refused. When the creditors came to question the debtor they found that the statement was very roughly got up. The meeting was adjourned until Thursday, June 5, when the debtor submitted a more precise statement, and made an offer of 6*s.* in the pound, which is likely to be accepted.

Society of Chemical Industry.

LONDON SECTION.

MEMBERS had considerable difficulty in reaching Burlington House on June 2, owing to the crowded state of the streets consequent on the peace rejoicings. It was past 8 when Mr. Otto Hehner took the chair, and despite the double windows of the lecture-theatre, the sounds of revelry frequently mingled with the speakers' voices.

At the Chemical Industry Club dinner held previously the readers of the papers were the guests, and Hon. F. S. Grimwade, Mr. Russell Grimwade, B.Sc, and Dr. Dreyfus (New York), were the guests of Mr. Tyrer, their healths being proposed, and the Hon. F. S. Grimwade replied. These gentlemen, and Dr. Holder (Berlin) attended the meeting. After they had been welcomed, Dr. Divers proposed a vote of thanks to the Chairman, whose year of office terminated at that meeting.

THE CHEMISTRY OF WHISKY

was the subject of the first paper, by Dr. Philip Schidrowitz, and the following are points which interest pharmacists. Of the three processes tried for the estimation of fusel oil, the Allen-Marquardt is found the most satisfactory, especially if steam-distillation is employed. The German official process is not suitable for whisky, and the French (Savalle) method, although it answers well for brandy, is not so good for whisky. Dr. Schidrowitz mentioned that absolute alcohol of commerce contains considerable quantities of aldehyde. In colour-tests, where it is necessary to decolourise the liquid, animal black answers well, but increases the aldehydes; basic lead acetate, with the excess removed by potassium sulphate, is the method preferred by the lecturer. The aldehyde content of whisky tends to increase with age, due to oxidation, but air and moisture are necessary.

In the discussion, in which Mr. Grant Hooper and Dr. Hewitt took part, the opinion was expressed that the chemistry of whisky would never be put on a satisfactory basis until the manufacturers who are able to operate on large quantities and follow the conditions minutely took up the subject.

Dr. Roberts then read a paper on

THE WILL TEST

for nitrocellulose, which gave the results of experimental work at Waltham Abbey. This shows that the test is of much value, and in some cases yields more information than the old Abel test.

The Chairman then read an abstract of a paper by Dr. A. Dupré on the estimation of

PERCHLORATE IN SALTPETRE,

in which it was stated that it is important, if trustworthy results are expected, to heat to a definite temperature for a certain time, and estimate the chlorine both before and after heating. Dr. Dupré prefers not to use manganese dioxide in the test.

It was now 10 o'clock, so that Dr. O. Silberrad could only make a running comment on the paper he had prepared on

THE EFFECT OF THE ALCOHOL-DUTY

on chemical industries. The subject naturally falls, he said, into three divisions—(1) where the alcohol remains in the finished product (as in tinctures, on which, when exported, a rebate is allowed); (2) when alcohol is used as a solvent, but is not a component of the finished product; (3) when the alcohol is a reacting ingredient. The use of duty-free spirit would lead to many new employments, would help some industries (such as sugar-purification) and would lead to the manufacture of many chemicals in England which are obtained from abroad where duty-free alcohol is allowed for use in manufactures. As an instance of how the last-named would be brought about, it was mentioned that the manufacture of caffeine is now an English industry owing to the use of duty-free tea. Scientific research would probably be stimulated if duty-free alcohol could be used. Some benefit would result if the range of denaturing agents was greater. The Government might arrange the use of duty-free spirit either by special denaturants or by a protective duty on imported goods in the manufacture of which alcohol is used. A rebate on exported goods of this class could be allowed in the same way as is done in the case of tinctures.

Mr. Tyrer spoke appreciatively of the spirit in which the Excise had met makers of tinctures. Not only was the duty remitted (when exported), but an allowance was made for waste and for possible error in analysis. He thought such liberal treatment made by a very conservative department showed the confidence the Excise have in the manufacturing community, and he did not see why similar concessions could not be arranged in other manufactures involving the use of alcohol.

Mr. Grant Hooper said that, whilst as a chemist he felt every sympathy with chemists, as an official of the Excise he had to keep in mind the fact that twenty-four millions are raised every year by the duty on alcohol. If part of that revenue is taken away, some other source must be discovered. They must also remember that the spirit must be unfit for drinking-purposes. Methylated spirit is often drunk in factories in which it is used. Recently in the North of Ireland he saw a coal-heaver dead drunk at half-past 9 in the morning with a partly used bottle of methylated spirit in his pocket. Inquiries made at the chemist's shop indicated on the label elicited the fact that the man obtained the spirit "rather frequently." If the temptation was great to drink the nauseous methylated spirit, it would be a hundredfold greater with pure spirit.

Mr. Reid thought it would be possible to devise means of preventing the drinking of duty-free spirit; it was managed in Germany, and he did not see why it could not be done in England. Anyhow, he did not think a drunken coal-heaver should make the Government handicap respectable manufacturers. The revenue would not diminish, because spirit would be used in manufactures which are not at present carried on in this country. It would benefit agriculture by leading to the growth of more potatoes.

The discussion was here closed owing to the lateness of the hour, and members made their way as best they could to the suburban railway stations.

NOTTINGHAM SECTION.

THE last meeting of the Session of the above Section was held at University College, Nottingham, on May 28, Mr. L. Archbutt, F.I.C., being in the chair. Dr. J. Gordon Parker, Director of Herold's Institute (Leather Industries Laboratory) read the first paper, on "The Application of Kjeldahl's Method of Estimating Nitrogen in the Tan-yard as a Means of Controlling the Process." The author referred to the progress that the application of science in the leather industry has made during the last ten years, especially in the way of checking waste and of valuing new materials, and showed how the estimation of the nitrogen could be used to give valuable indications to guide the tanner in his lengthy operations, lasting in some cases as long as twelve months.

The paper was discussed by the Chairman, Dr. F. Stanley Kipping, and Messrs. Wood, Trotman, Pentecost, and Adams, and in his reply Dr. Parker said that chrome-tanned leather—which is fast replacing the oak-tanned for the uppers of boots on account of its comfort and lasting qualities—has a great future before it. For machinery-belts chrome-tanned leather is the best material obtainable at the same time it must be well made, as if one goes wrong in the process it may only possess half the strength of oak-tanned leather.

Mr. Ernest A. Lewis, F.C.S., chemist to Muntz's Metal Company, followed with a paper on

THE ALLOYS OF COPPER AND MANGANESE.

He said that manganese of 97-per-cent. purity can now be obtained, the chief impurities being silicon and aluminium, which oxidise when melted and form a slag with the manganese oxide present. Manganese alloys with copper in all proportions. The melting-point of manganese, generally given as 1900° C., is actually 1280° C., according to Mr. Lewis's investigations.

Mr. Lewis, in replying to the discussion, said that the alloy with 1 per cent. of manganese is used for boiler-tubes that have to resist the action of corrosive waters in the

Digitized by Google

Argentine railways. The 5-per-cent. alloy is used on some German and Hungarian railways for stay-bolts in fire-boxes, as it keeps its strength well at high temperatures, and is not liable to crack. As to the question of the formation of definite chemical compounds, when 1 per cent. of manganese was added to melted copper the manganese diffused so rapidly that he had no doubt one was formed. As regards hardness the 1-per-cent. alloy is the softest. With 5 per cent. of manganese it becomes harder, and the 50-per-cent. is so hard that it is impossible to file it with the best steel files. The alloys with 70 and 80 per cent. of manganese spontaneously fall to powder, which is not the case with the one containing 90 per cent.

Scientific Progress.

Acidity of Sulphur.—According to Mr. Norman Leonard (*The Analyst*), the average acidity of eight samples of sublimed sulphur examined was 0·08 per cent. Part of this may be due to oxidation in the process of sublimation, but may also be formed by exposure to air and moisture. Mr. Leonard found that after washing a quantity of sublimed sulphur till it was neutral, and storing it damp, it became decidedly acid after three months, and at the end of four years contained 0·2 per cent. of sulphuric acid; a specimen of washed sulphur, dried at 100° before storing, gave after four years a barely perceptible acid reaction, corresponding to about 0·0025 per cent. of sulphuric acid.

Analyses of Liquorice.—Schroder and Kramer give the following figures for several brands of liquorice-juice, including the well-known Solazzi:—

	S. Franco	Cassano Stern	Barracco	Solazzi	Martucci
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
Water ...	17·22	13·46	13·37	14·75	13·27
Ash	4·68	4·18	4·97	4·62	3·96
Insoluble ...	17·24	20·17	18·90	22·80	29·58
Juice... ...	67·12	62·19	62·76	57·83	53·19
Glycyrrhizin	10·40	9·40	9·50	9·02	8·80

—*Apotheker Zeitung*, 1902, 323.

Volcanic Dust.—The *Chemical News* publishes the following detailed analysis, by Mr. B. E. R. Newlands, of the volcanic dust which fell at Barbados from La Soufrière on May 8, to which reference was made in the *C. & D.* last week:—

SiO_2	51·60
Al_2O_3	21·12
Fe_2O_3	9·28
CaO	9·07
MgO	3·96
Na_2O	0·59
K_2O	0·81

A False Sandarac.—R. Hanke has described (*Pharm. Centralh.*, 228) a false sandarac which he obtained from a Vienna firm of druggists. It was said to come from Spain, and in appearance it differed very little from the real article, being lemon-yellow in colour, transparent, and the tears elongated and rounded at the tips. When chewed it broke into fine powder and stuck to the teeth, whilst it softened on the water-bath and flowed together into a resinous mass. The two latter facts distinguished it at once from true sandarac, and taken together with its complete solubility in carbon disulphide, turpentine, and acetic acid, and partial solubility in 50-per-cent. chloral hydrate seemed to indicate that it consisted largely of colophony. The author also determined the acid-number of the resin, which he found to be 169, as against 140 for true sandarac, and 151 to 176 for colophony. The proof that this false sandarac consisted of colophony would have been much more complete if the author had isolated from the sample a specimen of abietic acid, which is very easily prepared pure, and is readily identified by its melting-point, composition, and colour-reactions.

Things that Happen—Sometimes.

Improper Dispensing Methods.

The Label.

There was once a young chemist, named Rickett,
Who knew all about football and cricket;
But he never would hamper
His shop with a damper
For label, preferring to lick it.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

Beech, F. *Dyeing of Woollen Fabrics.* 33 Illus. 8¾ × 5½. Pp. 246. 7*s.* 6*d.* net. (Scott & G.)

Colman, C. S. *Types of British Plants.* 16 full-page plates, by Eva Aflalo; other Illus. 7½ × 4¾. Pp. 250. 6*s.* (Sands.)

Crinon (C.). *Revue des Médicaments Nouveaux.* 9th edition 6½ × 4. Pp. 425. 4f. (Rueff, 106 boulevard Saint-Germain, Paris.) [This edition contains particulars of all the new medicaments introduced during 1901, including such remedies as acetopyrine, agurine, guaiacol camphorate, pyramidon camphorate, glycero-arseniates of lime and iron, hontine, lecithine, and purgatol. The book also contains information about some hundreds of other "new" remedies.]

Duncan, F. M. *First Step in Photo micrography.* 7 × 4¾. Pp. 101. Illust. 1*s.* (Hazell, Watson & Viney.)

Hayward (J. W.). *Protoplasm, its Origin, Varieties, and Functions.* 7½ × 4¾. Pp. 51. 1*s.* 6*d.* (J. Wright & Co., Bristol.) [The elaboration of an essay by a medical man, read before the Birkenhead Literary Society last year. Mind is not, the author says, a separate entity that uses the brain, but the sum of the phenomena resulting from the activity of the grey matter of the nervous system.]

Lehner, S. *Ink Manufacture.* Trans. from the German. Illus. Cr. 8vo. Pp. 162. 5*s.* net. (Scott & G.)

Stirling, G. *Synoptical Tables of the British Pharmacopœia.* 1898. 6½ × 4¼. Pp. 64. 1*s.* 6*d.* net. (Gower.)

The importation of morphine into Hankow in 1901 increased to 5,570 oz., compared with 3,328 oz. and 3,642 oz. in the two previous years. A little was even re-exported westward.

Lord Cromer, in his annual report on Egypt, mentions that eighty-five *hashish* patients were admitted to the only asylum in Egypt in 1901, as against 128 in 1900, the improvement being due to the vigorous campaign against the importation and use of the drug.

The ss. *Muristan* from Ormuz in the Persian Gulf has arrived at Newport-upon-Usk with a cargo of 1,500 tons of red oxide, which has been bought by a firm in the Midlands for paint-making. This is the first cargo of red oxide that has been brought to Newport.

Observations and Reflections.

By XRAYSER.

The Medical Preliminary Examination is in an unsettled state. The General Medical Council thought it had finished the subject when the expert educationists were called in, and various examination boards levelled up their examinations to the requirements specified by the experts. Now comes in the British Medical Association with a proposal to have a Preliminary examination conducted by the General Medical Council itself. The G.M.C. impatiently nipped the proposal in the bud, although it gives a chance of relieving its financial embarrassment, which is so acute that the Council proposes to pick the pockets of newly qualified practitioners to the extent of another two sovereigns, and to raise the student's fee from 5*s.* to 1*l.* I fancy the G.M.C. will not find Parliament so pliant on that score as the Pharmaceutical Society found the Privy Council. But this is not the moral I desire to tag on. I should like to call the attention of our New Preliminary examination enthusiasts to the fact that we have scarcely finished conducting a pharmaceutical Preliminary examination ourselves when the medical profession cry out for a distinct medical Preliminary examination to be instituted. It is thus said, in effect, that a mere list of recognised examinations is not beneficial to medicine.

I was not Delighted to notice that the munificent sum of 6*l.* was offered by correspondents in the *C. & D.* last week to help Chemist Malins to convince the Judges in the High Court that by inviting the people of Cardiff to have their molars attended to by him he has not infringed the Dentists' Act. If there is to be a fight twenty times that will be needed. Apparently the dental pulse of the trade is feeble. There is nothing to be gained by fighting for a principle unless there are enough in the business to compensate for the outlay, and I do not feel inclined to say another word about this matter if an ex-dentist and another *plus* Chemist Malins, a 5*l.* pound note, and a sovereign are all that I have to wage war for. My own cheque is ready when it is wanted, but who are they who feel aggrieved by the Cardiff decision?

The Council Election should have figured first in this page, but it never really reached the condition of a first-class contest, and it lost all its interest for me when the *C. & D.* printed that territorial map and numbed the sensation of Mr. Park probably figuring as one of the triumvirate at the bottom of the poll. I congratulate Plymouth on its success. It discovered that Mr. Park is a retailer, and rubbed the fact in so well that the voters did not appear to realise that there is not a single member of the Council who is not the same. We all know that "silence is golden," but Mr. Park will have frequent change for a sovereign during the next three years if I am not mistaken.

An Interesting Study in Percentages is afforded by last week's voting if one compares it with that of three years ago, when precisely the same seven candidates were returned. In 1899 out of the 5,468 papers sent out 3,688 were recorded, and this year, of 5,448 distributed 2,541 were recorded—I take no notice of the papers returned by the few M.P.S.'s who showed deficient intelligence in recording their votes. In 1899 there were thirteen candidates; this year ten. It was natural that the seven successful men last week should get a larger majority of the total votes than in 1899. They scored 82 per cent. last week and 71 per cent. three years ago. There has been a jumble in the positions of candidates also, and, strange to relate, they have all gone up in the estimation of the voters. I prove this by the percentages of votes they got, shown as follows:—

	1899	1902
Carteighe ...	2,575 = 69 per cent.	1,963 = 77 per cent.
Glyn-Jones ...	1,927 = 52 „	2,256 = 88 „
Harrington ...	2,163 = 59 „	1,756 = 68 „
Harrison ...	2,068 = 56 „	1,985 = 78 „
Park	2,155 = 58 „	1,834 = 72 „
Southall ...	1,779 = 44 „	1,553 = 61 „
Young... ...	2,291 = 62 „	1,911 = 75 „

I will not carry my arithmetical deductions further. It will be seen that

Mr. Glyn-Jones is the only person who, on a poll two-thirds the size of that of 1899, has increased his numerical vote. In the light of this fact his position at the top of the poll last week is quite a secondary consideration. He was sixth in 1899, and entered the Council a not very welcome guest. To-day he is recognised as one of the ablest members—a master of detail, hard worker, and with an infinite capacity for taking pains. His chief defect is that he is never in two places at once, and acts as if he were. One year he speaks oftener than Mr. Carteighe, and the next year Bond Street outdistances Poplar. Perhaps forensic responsibilities account for that, or perhaps Mr. Glyn-Jones realises that he was a man down Poplar way seven years ago unknown to the trade, and is still so many years on the bright side of 40 that a quieter pace is good for him and none the worse for us. There is not much in the croak about juvenility when there is such an organiser as Mr. Glyn-Jones on the Council, and I look to him, Mr. Robinson, and the President to make the most of the new by-law which enables the Council to appoint conveners of committees in County Council fashion. Here Mr. Newsholme's experience as a Guardian, and Mr. Robinson's on the London County Council, should be of immense advantage to the Society, for the new *régime* should banish the one-man rule, which has made "Council work" a mere farce, and the President, with or without "the office," the real ruler of the Society.

Facts and Comments, by Herbert Spencer, is the title of a small work lately issued by the famous philosopher, pregnant with thoughts expressed in only just as many words as are necessary to make them clear. The essays have no connection; they are just ideas which have occurred to the author in the course of his studies, and for which he has not found a place in his great treatises. At one moment he considers "the pursuit of prettiness"; at another he deals with views on eternity. Among his essays is one on Vaccination, in which he argues that if the operation renders the constitution immune to smallpox, it must do so by some radical influence on the body which may be—and which Mr. Spencer, basing his opinion on the statistics of infant mortality, believes, is—dangerous. In another article, entitled Distinguished Dissenters, Mr. Spencer crosses swords with Matthew Arnold in regard to the critic's complaints of the lack of culture characterising those who devote themselves to their business and their Bethel. Mr. Spencer instances in reply the men who made modern chemistry—Priestley the Unitarian, Dalton the Quaker, and Faraday the Sandemanian—and refers to them as men who have served the world far more than those who have merely cultivated literary graces.

WOOD OIL to the value of 265,873*l.* 34,025 cwt.) was shipped from Hankow in 1901, against 365,621*l* (393,061 cwt.) in 1900.

Editorial Comments.

The Peace.

THE sounds of London's multitudes in exuberant revelry froth up to our office windows in token that the British Empire is at peace with all mankind, and that the Boers in South Africa acknowledge King Edward VII. as their lawful sovereign. The two years and more in which we have been at war have absorbed millions of treasure and thousands of lives; the war has been a struggle between a small, hardy, and patriotic race with one as hardy and patriotic which has had the advantage of centuries to achieve greatness. It has not been solely between them, however, for after the first few weeks of the struggle the points immediately in dispute became secondary, as this tight little island had to prove its fitness to stand alone. And we now know that the war has been instrumental in showing the world what it seemed not to realise—that the British people at home and abroad are one nation, though seas keep them sunder. So much may we say, but no more, of those sentiments which are common to all true Britishers.

As a journal of pharmacy and the drug-trade, it is more appropriate that we should refer to those matters which come within our special department. It scarcely needs repetition that chemists and druggists and chemists' assistants have played their part in the war in their professional capacity and also as weapon-wielders. Some came from remote parts of the Empire to volunteer as army compounders and as hospital orderlies; many South African chemists did the same, and hundreds of home men went out. A few of them lie beneath the African veldt, others have returned in poor health, and it can be said of none that they earned much except experience and the consciousness of

Digitized by Google

having done their best for their country. It is fitting that their services should be acknowledged once again on the completion of peace, and we hope that those who have served and returned may by some method of reunion help to keep green the memory of their peculiar services.

A note which we published last week on the quantities of medicines which Messrs. Davy, Hill & Co. supplied to the army during the war gave a grand idea of the work the compounders went through, while it also demonstrated in comparison with the Crimean war experience how much the drug-trade of this country has improved, for there has not been a complaint of scarcity or poor quality in medicines during the whole period of the war. It is only fair to infer that this has been owing to the expeditious manner in which the contractors for medicines, as well as surgical-dressings and other aids to healing, have coped with the exceptional demand. Now we look forward to a period of accelerated prosperity in South Africa. The rush so long prophesied has begun. The country is not ready for it (it is still under martial law, and will be for many a day), nor is there much indication that more druggists will be wanted. The rush will go on nevertheless, therefore we may give a few particulars of the conditions of pharmacy in the several colonies. Each has its own pharmacy law, and the British Minor certificate and Irish licence are recognised as qualifying for registration and licence as chemists and druggists there. Without these an examination must be passed locally. The condition of pharmacy in all the colonies is good, and prices are good, but cutting of proprietary articles exists in the principal large cities. We have recently heard from some sources that colonial chemists are inclined to exhibit that slowness which indicates absence of the keenest competitive methods. It is said that they are wonderfully independent and many of them unenterprising. New comers would put an end to that. It will be well, however, for those at home who think of going out to South Africa to bear in mind that there are scores of chemists out there who have prospected the country well, and are prepared to plant branches of their businesses in the best openings. These colonials know the trade, and will get it The new comer must learn it. It is rough in parts and requires an exceptional store of that universal knowledge which is a pharmaceutical characteristic. Agricultural and veterinary experience, chemical knowledge applicable to assaying, familiarity with the sources of mining chemicals, and experience of the aërated-water business are there as essential to the successful man as registration, capital, and enterprise.

The Minor Curriculum.

RECENTLY, in commenting upon the division of the Minor examination, we stated that this has become necessary owing to the much-increased stringency of the examination, and we also stated that the addition of a course of collegiate training would be inimical to public interests. It may not be generally known that Dr. Stevenson's predecessor—the late Dr. Greenhow—held this view very strongly. It is true that in a letter to the Privy Council regarding the suggested compulsory courses of instruction in chemistry and pharmacy the Pharmaceutical Council last month said it

> is much gratified to find that the Lords of the Council now recognise that the establishment of compulsory courses of instruction is highly desirable—in fact, practically essential. More than twenty years ago the late Dr. Greenhow urged this view, and Dr. Stevenson has persistently reiterated the same recommendations. As a result of Dr. Greenhow's representation, the Society in 1885 formulated and approved by-laws providing for the division of the Qualifying examination and the institution of periods of study between the portions of the same.

This is such an elaboration of the facts that we can only attribute it to some treacherous memory which has perverted the suggestions which Dr. Greenhow actually made to the Privy Council "more than twenty years ago." These were, *first*, that the Preliminary examination should be passed before apprenticeship; and, *second*, that a definite period of shop-apprenticeship with a duly registered chemist and druggist should be taken between the date of registration as an apprentice and entering for the Minor. In his report for 1880 Dr. Greenhow said:—

> The Minor examination, which confers all the privileges of the Pharmacy Act, as now conducted, *affords a sufficient guarantee of competence* to keep open shop for retailing, dispensing, and compounding medicines. It is thoroughly practical, and *any increased stringency could only have the effect of adding to the already large number of candidates who are rejected.*

Here the italics are ours, and they are sufficient to exclude comment; but we may add that the greatly increased stringency of the Minor examination which has taken place since then has much increased the failures, and thus proved how true a prophet Dr. Greenhow was. In the same report he dealt very fully with the compulsory curriculum then proposed, and the following passage shows that he was utterly opposed to it:—

> The propriety of compelling candidates for this examination to pass a certain time at a school of pharmacy has been a good deal discussed lately among persons who are interested in the subject of pharmaceutical education. I am, however, of opinion that a curriculum or special course of study at a school of pharmacy is not required for persons who are preparing for the Minor qualification. The examination, when properly conducted, affords a sufficient guarantee of a candidate's fitness for registration under the Pharmacy Act, and the examination is not at present so high that a fairly educated young man cannot very well prepare himself for it during the period of his apprenticeship, more especially if the length of the apprenticeship were extended to five years. Neither, on the other hand, do I think it desirable to raise the standard so high that special study at a school of pharmacy would be required. The Pharmacy Act was enacted in order to secure that chemists and druggists should possess a competent practical knowledge of their business, and to place some restriction upon the indiscriminate sale of poisons. These objects being already in a great measure accomplished under the system now in force, it does not appear to me necessary, in the interest of the public, to require any higher qualifications to entitle a person to be registered as a chemist and druggist than already exist. As a fact, however, I may state that the greater number of the candidates for the Minor qualification do actually study at a school of pharmacy, with the very frequent and obvious result of being crammed up for their examination without having acquired practical skill and competence. The question of studying or not at such an institution may, therefore, I think, very well be left to the discretion of the candidates themselves.

It will be seen that this gives not the slightest ground for saying, as the Pharmaceutical Council has to the Privy Council, that Dr. Greenhow "urged the establishment of compulsory courses of instruction." What he did say was that he entirely agreed with two of the Curriculum Committee's recommendations in regard to the Preliminary examination being passed before apprenticeship, and that the apprenticeship should be for three years with some duly registered chemist and druggist. He repeated this in the next report, also that "a curriculum is not required for the purpose of the Pharmacy Act." In the two subsequent reports the matter is not specifically referred to, and this brings us to the point at which the curriculum by-laws were formulated, approved by the Society, and not approved by the Privy Council. We have made it clear that Dr. Greenhow, with his experience of the Minor examination from 1838 and its public purpose, was opposed to a collegiate curriculum, and that almost solely because he believed public safety did not require it, and that public convenience would be jeopardised by giving too professional a tone to the drug-trade. It has yet to be shown that his successor, Dr. Thomas Stevenson, who has proposed a modified curriculum, has viewed the matter in this light, and he

Digitized by Google

certainly can only judge from the more stringent examination which Dr. Greenhow protested to be unnecessary. Since Dr. Greenhow's report certain changes have occurred in pharmacy which deserve consideration, and these we propose to return to.

Proprietaries in Turkey.

The United States Consul at Harput, Mr. Thomas H. Norton, has been advising his Government recently regarding the import of pharmaceutical specialities into Turkey. By an imperial order issued some time ago the entrance of pharmaceutical specialities of unknown composition, or not meeting the requirements of the French Codex, is forbidden. An exception, however, is made in the case of such specialties of these two categories as have been approved by an "official academy" (*académie officielle*) or chartered medical society. In order to secure the entrance of an article of this nature, the importer is required to secure an authorisation from the Imperial Medical College at Constantinople. The latter requires that the demand for such authorisation should be accompanied by a certificate from the "academy" endorsing the article in question, and either a sample of the article or the formula of its composition, where there is a departure from the requirements of the French Pharmacopœia. All the documents in the case should be certified by the Ottoman Consul in the country of origin. The latter point appears to be the cause of trouble, for it has been shown that the great majority of the documents presented in such cases are either so vague or so improperly certified that the desired permission cannot be granted. In order to avoid delays and difficulties of this character, the Turkish medical officials urge strongly that great care should be taken to secure proper Ottoman consular certification for all papers submitted in connection with such importations. Further, they call attention to the requirement that all formulas should be written either in French or in Turkish. Quantities and proportions should be stated with the utmost clearness. The names of constituents employed should be those used in a purely scientific nomenclature, and not those customary in trade. Thus, "acetanilide" should be used, and not "antifebrin"; "iodo-chloro-oxyquinoline," and not "vioform," &c., although Mr. Norton, with true commercial instinct, is of opinion that the trade designations, in parentheses, could advantageously follow the purely scientific names. In general, formulæ and labels should be of such a character that they can be easily understood by official examiners possessing a very limited scientific knowledge and practically no familiarity with commercial terms. It should constantly be borne in mind that Turkish officials look with exaggerated suspicion upon anything containing poisonous or explosive constituents. The extreme difficulty of procuring potassium chlorate in Turkey for such an innocent use as a throat-gargle is an example in point.

AN APPEAL

is being made on behalf of Mr. Arthur Wingham, F.I.C., who is incapacitated from following his profession by an attack of paralysis. Mr. Wingham, after studying at the Royal School of Mines, was chemist to the Broughton Copper Company, Manchester, from 1882 to 1886, and afterwards made a series of investigations on English tobacco and Oriental alloys. In 1889 he was appointed assistant examiner to the Science and Art Department in chemistry, and was also engaged as assayer to the Royal Mint. Early in 1890 Mr. Wingham contracted blood-poisoning, which developed into spinal paralysis. His sources of income are now quite exhausted, and his near relatives are dead. A fund is being raised, of which Mr. Bennett H. Brough, 28 Victoria Street, S.W., is the Hon. Treasurer, to whom subscriptions can be sent. Mr. Andrew Carnegie heads the list with 25*l.*

TALK AT £1 A MINUTE.

The financial position of the General Medical Council is somewhat critical, as will be gathered from our report. In 1901 the total income was 8,557*l.* 0*s.* 7*d.*, and the total expenses 10,061*l.* 12*s.* 7*d.* Of the expenditure, 8,033*l.* 3*s.* 3*d.* was incurred by the General Council, 1,100*l.* 15*s.* by the English branch, 540*l.* 16*s.* 4*d.* by the Scottish branch, and 390*l.* 18*s.* by the Irish branch. Dr. Heron Watson considers if the councillors would not speak so much they would make both ends meet. Last year the councillors got 3,019*l.* 11*s.*, which was 439*l.* 19*s.* less than in 1900, yet three-eighths of the General Council's expenditure, only 446*l.* 0*s.* 4*d.* being spent on inspection of examinations, one of the most important parts of the Council's duties. There are thirty-one members of the Council, so that the average payment is about 100*l.* per annum to each member. The meetings are held twice a year, and last for about a week at a time, which appears to make the payment figure out at the rate of 2,500*l.* a year; but a large part of the fees is paid in respect to committee work between times. Anyone who has attended the Council meetings cannot fail to have been impressed with the fact that much of the talking is superfluous, and is done by a small section of the Council. If the members were paid only for what they do in committee, and not at all for the Council proceedings, there would be less talk, more work, and a great saving of money.

THE PORT OF LONDON.

The London Chamber of Commerce is making an urgent appeal for funds to oppose the London and India Docks (Various Powers) Bill in the House of Lords, and the Secretary has issued a circular dealing with the proposals of the docks company as contained in Clause 16 of the Bill. This clause has been framed to enable the docks to effectively control the movements of barges and lighters in and at the entrances to the docks, and can be so used as to deprive merchants of "free delivery." It is a custom of the port of London that a consignee has the right to have his goods delivered into craft, and therefore free of landing-charges, if he is ready to take delivery of the goods within twenty-four hours after arrival, and at the present time 76 per cent. of the cargo that is discharged in the London and India Docks is treated in this way. The docks company now seek for power which would be equivalent to enabling them to divert goods on to the quays, under circumstances which would render the goods liable to full charges (variously described as "landing," "consolidated," and "management" rates) for services which often would neither be required nor performed. The Bill has passed the report stage in the House of Commons, and strenuous efforts are now necessary in order to arrest the further passage of the clause.

BUSINESS IN PATENTS.

The report of the Comptroller-General of Patents, Designs, and Trade-marks for 1901 shows that the year has been a busy one. The number of applications for patents was 26,777, against 23,922 for 1900, and of these 13,062 survived to the sealing stage, about a hundred fewer than in 1900. Of the applications, 17,813 were from the United Kingdom, 601 from other parts of the Empire, and 8,363 from foreign countries. Seventy-three per cent. of the last-named came from the United States and Germany. There were 580 applications from women, chiefly relating to household subjects. The attention of inventors was directed to motor-cars, airships, submarine boats, and the protection of the public from accidents due to broken live wires. There are inventions for sealing beer-bottles and preventing vibration in tube-

Digitized by Google

railways were all suggested by events which took place in 1901. It is interesting to note that only 5 2 per cent. of the patents sealed in 1883 were maintained for the full period of fourteen years. The fees received by the Patents Department amounted to 210,187*l.* During 1901, 8,775 trade-mark applications were made, and 3,246 registered, the fees in the department amounting to 10 508*l.* The total surplus from the Patent Office was 107,291*l.* During the year the new Patent Office, which is to cost altogether 163,750*l.*, was practically completed, and the number of visitors to the library has increased to 101,584, the highest figure for the last three years. There are now 84,040 volumes in the library, representing 28,131 works.

QUALIFIED DISAPPROVAL.

The *Medical Press*, referring to the recent actions by the Pharmaceutical Society of Ireland as to illegal compounding, says:—

The Society has been sufficiently long in existence to know its legal rights, and no cases in which these rights are not infringed should be brought into court. Public opinion will support them in jealously guarding their many and great privileges; but if the public come to believe that, forgetting their position, they by groundless legal actions interfere with legitimate trading, their activity will be interpreted as trade envy. The law that regulates the business of the pharmaceutical chemist has, on all points that were at all open to doubt, been decided by the Judges of the superior Courts. In the first case the decision was given on a legal point, which was held to rule the second case. We are, and throughout all their legal proceedings have been, prepared to support the Society in seeing that prescriptions were compounded by certified pharmaceutical chemists or other legally qualified persons. But when cases come before the Courts in which the commonest attention to the requirements of the statute on which their rights are based is wanting, we feel that the Society is endangering its reputation, and we feel disappointed that they do not exercise more care in the selection of their position before courting public and legal decisions.

Superlative forensic ability is not exhibited in these remarks, our contemporary slurring over the real point—viz., that certain persons not authorised by law to compound medicines were summoned, and the Society's defeat has merely revealed a weak point in the legal armour which it was well to have made clear.

GERMAN RETAIL PHARMACY.

A new order respecting the carrying-on of pharmacies in Prussia, together with the regulations for the State visitation thereof, came into force recently. It may interest those who long for State protection in pharmacy to know how their Prussian *confrères* are looked after. The order contains the minutest instructions regarding the fittings, utensils, and contents generally of the pharmacies, as well as rules for the engagement of pupils and assistants. The most important innovation in the new order is that the pharmacist who has no assistant may, with the consent of the Government President (*Regierungspräsident*) in future absent himself from his pharmacy for a time without supplying a deputy, provided he is within an hour's call. A further concession is also granted in that permission is given, in places where there are two or more pharmacies, for them to close in turn on Sundays and holidays. Amongst other alterations and innovations, many of which were in force before the issue of the order, in accordance with special regulations, is an order for the production of the book containing the entries of the receipt and sale of animal vaccine; and an important innovation for those parts of the country with non-German populations is that all medicaments must be labelled in German, but that the directions for use may be given in a foreign language. A description of the State inspection of pharmacies was given in the *C. & D.*, August 18, 1900. A ministerial order has also been issued in regard to the dispensing of prescriptions containing toxic ingredients. It is enjoined that such prescriptions should only be transmitted by telephone in exceptional cases of life and death. In such cases, to prevent any mistake, a written authorisation, signed by a doctor, is to be demanded by the bearer on handing over the medicines prescribed, but telephonic prescriptions for medicaments not in the poisons list may be dispensed by the pharmacist on his own responsibility.

Tincture of Fresh Hyoscyamus.

By JOHN BARCLAY, B.Sc.

A SATISFACTORY preparation may be obtained from the fresh herb, and experiment seems to show that in making a tincture by this method a more complete exhaustion of the drug takes place. It is hoped that before long a standard for alkaloid in the official tincture will be fixed, and when that time arrives it would, in the opinion of the writer, be well worth while for the Pharmacopœia to consider the advisability of introducing a tincture made from the fresh herb.

Two experimental lots of tincture were made, the process in each case being identical, but the herb in sample No. 2 (see below) being more leafy and better grown than in No. 1. One pound of the fresh herb, consisting of stalks and leaves, was, after being thoroughly crushed, macerated for about ten days in a pint of 90-per-cent. alcohol. The tincture was then strained from the marc, and the latter treated with 4 fl. oz. of distilled water, after which it was again closely pressed. As a result two lots of tincture, each measuring 33¾ fl. oz., and weighing 2 lbs., were obtained. The tinctures proved to have the following characters:—

Tinctures from Fresh Herb.

	No. 1 (Plant stalky).	No. 2 (Plant well-grown and leafy).
Sp. gr. at 15·5° C.	0·949	0·948
Total solid matter dried at 100° C. ...	2·23	2·82
Total alkaloid by titration	0·0075	0·0097

The tincture prepared by the official method from dried drug of good quality gives figures of which the following may be taken as fair averages:—

Tincture Prepared by Official Method.

Sp. gr.	0·957
Total solid matter	3·00
Total alkaloid by titration ...	0·008

A comparison of these figures shows that in the tincture from the fresh herb the proportion of alkaloid to total dissolved matter is considerably higher than is the case with the official preparation. It may be noted, too, that the "fresh" tincture is superior in both aroma and in colour to the "dried" preparation. To the manufacturer, at any rate, the preparation of a tincture by this method would be a boon, since it would do away with the necessity of annually drying large quantities of the herb; whilst the retail pharmacist who was able to devote a corner of his garden to the growth of *Hyoscyamus Niger* might annually in the spring prepare his own tincture from the fresh plant.

AMONG the imports into Beira, Portuguese East Africa, last year were: Areca, 1,239 lbs. (15*l.*); olive oil, 11,703 gallons (3,039*l.*); spices, 9,686 lbs. (237*l.*); medicines, 3,339*l.*; opium, 43 lbs. (10*l.*); soap, 143,021 lbs. (1,984*l*); and toilet-soap, 1,909 lbs. (118*l.*).

THE use of sulphate of copper—the only remedy against "Peronospora"—is steadily increasing in Corfu, where about twenty-eight tons were consumed last year with more or less satisfactory results. A good quantity of inferior quality to that imported from the United Kingdom is imported from the Piræus, but the results are not satisfactory. The retail market price is about 45dr. (22*s.* 6*d.*) per cwt.

Chemists' Exhibition.

THE ebullience of emotion induced by a long-wished-for Peace had scarcely subsided when this annual exhibition, organised by the *British and Colonial Druggist*, opened at St. James's Hall, Manchester, on June 3. But the exhibitors —forty-five in number—had not allowed their patriotic considerations to materially interfere with the object for which they had foregathered, and with a few exceptions the exhibits were all in working order at opening-time. Although fewer in number than on the occasion of the exhibition at the same town two years ago, the exhibits as a whole contrast favourably as far as appearance goes, and in some cases better shows are made. The exhibition remains open until Friday, June 6, inclusive. The actual novelties were far from numerous, and we have arranged our brief notes of the exhibitors in alphabetical order.

Ayrton & Saunders have a tripartite pavilion, in which window-displays predominate. There are four of these, illustrating how "I X.L." eau de Cologne, fancy perfumery, confectionery, and toilet-paper respectively may be effectively displayed to catch the fickle public eye. The "Royal Orchid-blossom" perfume is evidently an adroit combination of Coronation and Chamberlain, and the name alone should make it popular. Toothpastes in great variety are given place here, the customer's name being printed when three dozen pots are ordered. As a special exhibition offer Messrs. Ayrton & Saunders are prepared to supply with all orders for 1 lb. of their bulk perfumes a free recess-labelled show-bottle with glass stopper.

Beatson & Co. have an unassuming but interesting show of shop-rounds, drawer-labels, graduated measures, and other chemists' glassware.

E. Breffit & Co. (Limited) have a stand with all kinds of glass bottles on view. Dispensing and perfumery bottles are, of course, given first place, and visitors have a comprehensive selection of shop-rounds and show-bottles to select from.

Brook, Parker & Co. (Limited) are primarily dealers in crude vegetable and "botanic" drugs. For these there is a considerable demand in the Midlands, and the variety shown at this stall, both loose and packed, will be an astonishment to many. But the exhibitors have also an increasing business in packed pharmaceutical specialities, and have a reputation for such things as packed chloride of lime, naphthaline shells, perfumed amulets, and infants' soothers. They are also developing a perfumery department, and show several creditable specimens of their craftsmanship. The "Torch" fly-catcher and "Nexine," a cement, are two of their specialities, and they also claim to be the only importers of *Capsicum annuum* into this country. A string of the pods is a conspicuous object on the stall.

Camwal (Limited) have a very pretty and quite new exhibit which takes the fancy of the onlookers. It represents a rustic summer-house trellised with roses, and a lattice-work enclosure suffices for the display of Camwal specialities. An installation of a Camwal cabinet and a "Premier" tap for the private production of soda-water is a prominent feature, but there are many Camwal advertising devices. Signs that are works of art by day and pioneers of illumination by night predominate. They are mostly shaped like syphons, with an electric light inside, but some may also be used with incandescent lighting, and a shield-shaped lamp with a gold syphon showing through a ruby glare is an attractive and appropriate sign for a chemist. Seltzer water is being specially pushed, and stone ginger-beer is said to be a strong local favourite. The "Splitlet" bottle is making its maiden appearance. It holds about two-thirds of the usual split. The Camwal syphon-carriages and tricycles are novel and useful. They are in three designs, and are fitted with movable pigeon-holes to hold two dozen syphons, while there is a drawer underneath for small parcels. These are supplied to chemists at reduced prices on condition that the advertisement for Camwal waters painted in gold lettering on the sides is allowed to remain. The Camwal syphon-stands, hexagonal in shape and fitted in mahogany, with black and gold lettering, are an ornament to the pharmacy. They are in two sizes, holding about three dozen and about four dozen syphons, and cost 3*l.* 10*s.* and 5*l.* 10*s.* respectively to Camwal customers.

Cheltine Foods (Limited) are showing their food-specialities, and the list of "Cheltine" products is increasing. Chemists have now a variety of labels to choose from should they desire to take up the sale of these foods in their district. The customer's name and address are printed on free when gross lots are ordered, but a sample order for three dozen will also be printed gratis.

The Crown Perfumery Company have a pretty square enclosure, displaying their latest lines. The series of soaps recently introduced—packed three cakes in genteel-looking boxes of various shades, designed especially for chemists' "own" soaps—are receiving most attention, but there are myriads of other soaps to tickle the hard-to-please customer's fancy. The latest perfumes include the "Crown Toilet Otto"—very nattily got up—and a new Coronation perfume, which appears to be a pleasing blend of Carnatia, Crab-apple blossom, and Peau d'Espagne.

Cussons, Sons & Co. have a pyramidal erection near the main entrance, which takes a lot of inspection, so great is the variety of packed proprietaries on show. The firm deal only with the wholesale trade and for export, and there is a preponderance of penny lines. As they do their own printing and make their own boxes and bottles, they have thus advantages in catering for their particular *clientèle*. The "San Toy" cachous, of assorted colours, and put up in tubes, are new, and there is also a pictorial showcard printed in a dozen colours for the display of cheap bottles of perfume.

Daisy (Limited), as usual, is characterised by novelties. The acrobatic lady, the winking clown, the deadly dude, and their many companions keep the sightseers amused and add to the gaiety of nations.

A. de St. Dalmas & Co. are apparently prepared to plaster the entire community. They have a comprehensive exhibit of plastering—hæmostatic, kidney, sedative, breast, corn, bunion, and all the other varieties that heal or weld together the wounds of a suffering humanity. The dental plasters (capsicum)—eight in a box, to sell for 6*d.*—are neat, and not dear. A new plaster-of-paris bandage has no loose plaster adhering to its sides. It is ready rolled to dip in water and apply. The "Varico" leg-bandage has a socket for the foot, which allows a regulation of the pressure when folding round the leg. A patent plaster-stand and caddy is also shown, with rollers for the plaster—a very handy method for shop use when a small quantity only of the plaster is required to be cut. The same method is used for storing guttapercha tissue and oiled silk. A useful caddy for the surgeon contains spools of adhesive plaster of assorted widths; the surgeon has only to snip off a piece of plaster from whichever spool he requires. The spools are fixed on rollers inside the caddy.

Eduardo et Cie. are pushing "Dr. Hales's" coca, meat, and malt wines and "Oak-tree" burgundy in flagons. The firm will procure licences for chemist-customers who do not already have them.

The Erasmic Company (Limited) have a very pretty stand, with ribbons and a profusion of flowers in bunches and festoons. There are some artistic caskets, but the company's representative is responsible for our not going into these.

Evans, Sons & Co. illustrate in their model pharmacy the latest advances in shopfitting and the comprehensiveness of their business. The fittings this year are of mahogany, with satinwood linings and mouldings. A lincrusta ceiling is finished with a frieze in which the Royal coat-of-arms is embodied. The wall-cases and showcases are filled with Hawley's counter-adjuncts and Savars' sundries. At the entrance to the shop are a pocket of gum arabic, an original bale of cloves, a seron of cinchona, a case of aloes, a 100-lb. original copper of oil of lemon, a bale of sarsaparilla, and other drugs as imported, and which are objects of real curiosity to the retail visitor. Instead of glass knobs, the shop-drawers have now a loose metal handle of dulled bronze, and the glass drawer-labels are so fixed on the inside that they may be moved from one drawer to another. Zinc shells are provided for drawers in which greasy or oily powders (such as linseed-meal) are stored, and these also are transferable from one drawer to another, besides being fitted with automatic lids, which open and close

Digitized by Google

with the pulling-out or pushing-in of the drawer. A new drawer for holding slip-labels is also shown, which is fitted with zinc lids over each compartment, thus keeping the labels clean and flat. In place of the usual dispensing-screen in the centre of the pharmacy a Best's soda-fountain has been fitted to meet the prevailing desire for iced drinks, but it is removable, and will also fit the marble slab, with mirror back, affixed in the wall fittings, if so desired. A case of Margerison's soaps also finds place beside the entrance. Adjoining the model pharmacy is a very striking exhibit of Montserrat lime-fruit juice and its preparations. Pyramid pillars in white enamel are surmounted with bottles of lime-fruit juice, cordials, &c., and appropriate Montserrat legends adorn the edges of the spacious pavilion. The internal arrangements consist of a fine display of all the Montserrat preparations, including cordials, sauces, arrowroot, lozenges, and jujubes, and another of Best's soda-fountains—larger and more ornate than the one in the pharmacy. This fountain is in full working order, and the weary wayfarer stops instinctively to rest, listen to the music, and slake his parching thirst.

FARROW & JACKSON (LIMITED) are showing the "Duplex" and "Arctic" marble soda-fountains and the "Challenge" counter-fountain in majolica ware, as well as several varieties of saturating-plant.

HEATH BROTHERS are packers, shopfitters, and local druggists' sundriesmen. They have a linen-polish called "Easio," a furniture-cream called "Glosso," and a "Guinea" gold paint, and their show, which is to the left of the main entrance, comes in for a good deal of attention. Their goods are of the usual sundries variety, the most noticeable article being "baby's corner," a special showcase for displaying hair-brushes, soothers, small-tooth combs, mouth-sponges, powder-puffs, and other requisites of babyhood.

The HOLME PREPARATIONS COMPANY have a nice little exhibit of the "Malloween" series of toilet specialities. "Malloween" liquid is for the complexion, and the powder is for the nursery. "Lanatta" pills, also on view, are said to be a remedy for sea-sickness. The articles have been placed on the P.A.T.A. list, and vigorous representatives are interesting the visitors.

E. GRIFFITHS HUGHES has a small stall near the top of the hall, where he is explaining the properties of Karswood creosote, Karswood "Insectile" spice for poultry, "Ramasin" beetle-powder, and "Kruschen salts"—a rheumatism-cure.

INGRAM & ROYLE (LIMITED) have as conspicuous objects in the foreground of their exhibit the quaint earthenware jars with handles that hold the new "Ober-Selters Wasser." This is a natural water, and is produced "without being artificially aërated."

JOHNSEN & JÖRGENSEN (LIMITED) and H. POTHS & CO. have a combined display which includes a new series of glass photographic trays of all sizes. These are of respectable thickness to obviate breaking, and are ribbed outside so that they may not easily slip from the operator's fingers. Shop-bottles and jars of excellent finish and out-of-the-way tints are shown, one dark-brown ointment-jar being unusual. Special prominence is given to the dark-blue shop-bottles for storing poisons, which are labelled in white-enamelled raised letters.

KAPUTINE SYNDICATE (LIMITED) has a miniature circus, with dancing dervishes or other quaint demon-like apparitions gyrating rapidly. This is a patent electric window-show to illustrate, presumably, the thankfulness of suffering mortals who have been Kaputined free from headache.

THOMAS KERFOOT & CO. are showing in the handsome pavilion they had at this exhibition two years ago. The stand is in nine divisions, showing respectively varieties of jujubes, bouquet-lozenges, licorice-preparations, perfumery, B.P. lozenges, pills (pearl, sugar, and chocolate coated), compressed tablets, granular preparations, and counter-adjuncts. The goods are all beautifully displayed, and suggest the acme of perfection in lozenge-making. A new showcard for "Sweet Lips" cachous shows several dainty maidens tripping demurely over the stepping-stones in a stream. A show-vase is displayed containing over 40 lbs. of compressed tablets. The perfumery-show is very chaste, "Briar violets" being the latest perfume. "Laxorines" are laxative fruit-bonbons, which the ordinary child will devour with avidity and relish. Two are said to suffice for an adult. They are packed in red leatherette cases with gold block label. An attraction to this exhibit is an ancient metal mortar in a fine state of preservation that is placed over the doorway of the pavilion. The mortar, which is 170 years old, has been lent by Mr. Donald, of Chester.

The MALTOVA FOOD COMPANY are creating considerable interest with "Maltova," a combination of carefully prepared extract of malt with raw eggs. The natural proteids of the egg are included—albumin, vitellin, lecithin, and nuclein—and a specially nutritious food is thus the result. "Maltova" has only been a short time on the market, but its merits are being speedily recognised, and visitors are lingering round the stall while the representative of the company demonstrates its merits with a graphic eloquence which only Leeds can produce.

WILLIAM MATHER (LIMITED) are especially proud of a new plaster designed to replace the ordinary indiarubber porous plaster. Mr. Pidd, who is in charge of the exhibit, thinks "Zebra plaster" would be as appropriately descriptive a name to give it as any. By a new process the ordinary plaster (belladonna or what not) is painted on the rubber background in striped ridges, thus ensuring greater cleanliness when applied, and the spaces between the stripes enhance coolness and non-stickiness. I.R. plasters are being especially pushed, and a new variety of surgeons' rubber-adhesive plaster has the plaster painted in broad stripes on a large sheet, so that the surgeon may snip off a piece without having the plaster sticking to his fingers, and without the trouble of the spool. A framed curiosity encloses a gathering of about 28,000 dead flies (weighing in all 2¾ oz.) that were killed by 4 of Mather's fly-papers.

MELLIN'S FOOD (LIMITED) initiate visitors into the qualities of their preparations in an orange-covered stall near the platform.

ARTHUR NEWTON & CO., in a lonely nook at the end of the hall, exhibit a neutral hypophosphite syrup, a substitute for chemical food, called "Rose Phosphates"; an emulsion of cod-liver oil, containing 2 gr. of ferric phosphate in each ounce; an Easton's syrup which is said "to keep well" and liq. anemon. co., an extract of the meadow-anemone in combination with digitalis and several carminatives for the relief of painful menstruation. Other "Newton" proprietaries are also shown.

OLDFIELD, PATTINSON & CO. have an attraction which few miss and the ladies never. To call attention to their new perfume—"Sweet-Pea Blossoms"—they have a profusion of the real blossoms, of delicate shades of colouring, in vases on their centre stand. The perfume, in five sizes, is tastefully got up, and neat cards are distributed with the bottles. This firm have also a good show of galenicals and packed specialities. A series of violet-powder, fullers' earth, "Lavender" bath-salt, and "Lavender" water-softeners, in barrels, to retail at 6*d*., are well-produced, and looked big value for the money. Toilet-goods in coloured collapsible tubes are here as elsewhere, and the "Silver Churn" dairy specialities are worthy of inspection. Essence of rennet is put up in amber bottles capped with tinfoil.

OPPENHEIMER, SON & CO. (LIMITED) are specially pushing "Rectones." The newest "Rectone" contains renaglandin, and is said to be especially effective in local rectal troubles where there is hæmorrhage. Peptonised milk and peptonised beef are also administered in "Rectones," each rectone being said to be equal to 2 oz. of beef. Wedge-shaped "Rectones," each containing 5 gr. of soluble quinine bisulphate, are also shown. The usual series of palatinoids and bi-palatinoids are present with "Maglactis" as a corrective for any acidity that may be engendered by the hot weather.

PARKE, DAVIS & CO.'S interests are being well looked after by the ubiquitous Mr. Hickey and two or three other representatives. The exhibit is unpretentious but select, and fitted in good taste. The Whitall Tatum globes, with hidden electric lights, cast a ghastly glare on the 50*l*. worth of adrenalin that stands between them, but there do not appear to be any novelties beyond those we have already noted, except it be a new line of American bay rum recently introduced, the 4-oz. size to retail at 1*s*., with a good percentage of profit. The firm are now making all the B.P. pills, and sugar and gelatin coated pills of private formulas are taken in hand and the best execution guaranteed. Compressed drugs in tablet form are also put up in bottles with lithographed labels. Buyers of euthymol tooth-paste in 5*l*. lots are given a window-display and extra discount.

Digitized by Google

John Quilliam & Co. are the proprietors of J. J. Watts & Co.'s homœopathic remedies. They are mainly plaster-manufacturers, however, and show an extensive line of all kinds of plasters. The genuine quality of the rubber used in the "Canterbury" enemas is demonstrated by the abnormal distention of the ball. These enemas may be had in six shades of rubber, and are British made. The "Vibratile,' an electric massage-apparatus, is also shown here.

Rosbach (Limited) have a nice little show of their table-water.

John Sanger & Sons have an attractive stall, with a predominance of filled collapsible tubes. The usual variety of toilet articles is reinforced by a boot-cream, which the chemist can sell in this handy form at 6*d*., or even less, and still have a good profit. The "Ozoid" safety medallions, to sell at 2*d*. and 3*d*., are a sure selling line for the hot weather. Perhaps the daintiest novelties are the sixpenny sachets on cards, each with a landscape or portrait, and a gilt border as if framed. These look well, and are fragrant without being nauseous. A series of Christmas perfumes (taking Time by the forelock) has been produced in mauve, red, and green, with wedgwood engravings. These are single, double, or treble boxed. Brilliantine vaseline, in a nicely bedecked bottle, is new, also "Gegenüber dem Josephs Platz Cologne," with or without menthol. The mentholised Cologne for headaches is named "Neurol." Bath-gloves, body-belts, and, of course, infants' soothers galore are to be seen, while there is likewise on view a 12 by 16 photo, from which a print is taken, the developer used being a single twopenny packet of the Wallsgrove Pyro-soda developer.

Shirley Brothers (Limited) show cheap perfumery, feeders, and a large variety of carded goods.

H. Sommerfeld has a small stand displaying his various advertising novelties.

Strenbo (Limited) announce that they are the food specialists of Manchester. They are showing their fluid-beef, of which the *Lancet* speaks so highly; Liebig's extract of meat, at cheap rates; and a granular preparation, they have named "Sunrise lemonade crystals."

The Veno Drug Company are offering special terms to chemists for window-displays of their seaweed tonic and other preparations.

Vinolia Company (Limited), although labouring under the disability of an accidentally smashed case, have, as usual, a very pretty exhibit. The latest Vinolia novelties are a series of soaps, "Olive Oil" (no fat used in the preparation), "White Rose," and "Jasmin." Needless to say all are elegant, and they are shown to full advantage in four illustrative window-shows, arranged to demonstrate the possibilities of display. There is the inevitable Coronation casket, of course. The Vinolia casket contains two bottles in a handsome case, and the price is 8*s*. 6*d*. The "Liril" series is made much of, and household soaps are not forgotten.

Thomas West has a bright little exhibit of O'Kell's "Mona Bouquet" perfume, sachets, soaps, lozenges, and cachous, "Mona" lavender, and a variety of O'Kell's floral perfumes.

James F. Wilkinson, the printer, has an advertising blotting-pad which, at least, one enterprising Welsh chemist has found effective. Another Manchester chemist has ordered 5,000 special Coronation envelopes, which he is to fill with sachet-powder and distribute free to his customers during Coronation week with a 3*d*. bottle of perfume. A gigantic two-colour poster (76½ by 61 inches) for mural decoration is shown, which advertises the virtues of a mineral-water makers' goods.

James Woolley, Sons & Co. (Limited) naturally make a fine show. Their exhibit includes the requirements—galenical and sundry—of a chemist's business, and the whole is tastefully and effectively arranged. The proprietaries of the firm—and they are numerous and increasing—are given considerable prominence; but the strictly pharmaceutical portion of the business is not overshadowed. The novelties include a "Coronation Bouquet," fragrant and tastefully attired. A special presentation-box, with two bottles of perfume, has a regal and coronal appearance, which the 7*s*. 6*d*. asked for it fully justifies. Boro-thymol dentifrice and phenate-of-soda tooth-paste are effective tooth-cleansers, and leave an agreeable "clean" feeling in the mouth after use. The "Boval" series now comprises "Boval" ambulance-cases, retailing at 1*s*. 6*d*. and 3*s*. 6*d*., and clinical thermometers (with customer's own name engraved when a dozen is ordered). The more recent products in elegant pharmacy are an aromatic cascara elixir, which is not only agreeable, but active; chocolate-coated Bland's pills, soluble ear-cones (for the aural administration of morphine, cocaine, &c.), and nicely finished oval-shaped suppositories. The fumigating-tapers, looking like a piece of pill-piping—as a matter of fact, they are rolled on a pill-machine—shed an aromatic fragrance around the stuffy hall. The sloppy pieces of cancellous tissue (or decalcified bone), which are used for packing wounds, on view here are exciting much curiosity. The decalcified bone, which is preserved in a carbolic-acid solution, is spongy, and is thus easily absorbed by the wounded tissues, and being pliable it easily adapts itself to the surface of wounds. Messrs. Woolley are particularly strong on photographics, their section on exhibit being very complete. "Victoria" hand-cameras and "Victoria" stand-camera outfits are largely in evidence. The "Practical" hand-camera, with a patented changing-arrangement, is worth looking at. "Klito," "F.O.P.," "Frena," and other well-known makes are shown, and a large variety of general photographic goods. The "Victoria" developing-powders are sent out in large glass tubes, containing six charges, each sufficient to make 4 oz. of developing-solution. The chemicals are stored in double boxes, the alkali being kept separate in each case. This and the fact that the tubes themselves are airtight should do much to retard decomposition.

Wyleys (Limited) are showing several good-looking emulsions that prove the Coventry firm to have mastered the intricate art of emulsification. A cod-liver oil emulsion, a petroleum-and-egg emulsion, and a concentrated (1 to 3) lin. alb. are each perfect to all appearance, the reduced liniment being as satisfactory in appearance as its congener. Tropels, cachets, and capsules have each been recently noticed, and the latest pill appears to be a pink-coated pill of ferrous carbonate and calcium sulphide, which has a large local reputation as a "complexion-pill."

Young's Patent Hygienic Bin Company are demonstrating the superior economical advantages of their round-cornered galvanised bins.

Cyanogenesis in Plants.

At the meeting of the Royal Society on May 15, the second part of a paper on this subject, dealing especially with the great millet, *Sorghum vulgare*, was read. It was by Professor Wyndham R. Dunstan, M.A., F.R.S., Director of the Scientific Department of the Imperial Institute, and Dr. T. A. Henry. The authors have investigated the nature of the poison contained in the young plants of *Sorghum vulgare*, the great millet or guinea corn (the *Juár* of India or *Dhurra shirshabi* of Egypt), which yields an important food-grain. The young plants have proved fatal to animals, especially in Egypt, and the authors show that the young plant, but not the seeds or old plants, when crushed with water furnishes prussic acid (about 0·2 per cent. of the dried plant). The acid is not present in the free state, nor is it produced by acting on the plant with boiling water or with alcohol. The production of the poison is due to the action of a hydrolytic enzyme, apparently identical with the emulsin of bitter almonds on a cyanogenetic glucoside which has been named "dhurrin." This glucoside has been proved to be derived from parahydroxymandelic nitrile by the association of the residue of one molecule of dextrose. Its formula is therefore $C_{14}H_{17}O_7N$. It crystallises well, and is soluble in both water and alcohol. When hydrolysed by emulsin or by dilute acids it is converted into parahydroxybenzaldehyde, dextrose, and hydrocyanic acid according to the equation—

$$C_{14}H_{17}O_7N + H_2O = C_7H_6O_2 + C_6H_{12}O_6 + HCN.$$

When warmed with alkalies, dhurrin is resolved first into dhurrinic acid and ammonia—

$$C_{14}H_{17}O_7N + H_2O = C_{14}H_{18}O_9 + NH_3.$$

This acid subsequently undergoes further hydrolysis when warmed with dilute hydrochloric acid into parahydroxymandelic acid and dextrose—

$$C_{14}H_{18}O_9 + H_2O = C_8H_8O_4 + C_6H_{12}O_6.$$

Dhurrin differs from the other two known cyanogenetic glucosides, the amygdalin of bitter almonds and the lotusin

Digitized by Google

found by the authors in *Lotus arabicus*, in being derived from dextrose and not from maltose.

The authors point out the protective purpose served by the existence of the cyanogenetic glucoside in the young plant, and they are at present engaged in examining several other plants which have furnished prussic acid, among them being *Manihot utilissima*, *Linum usitatissimum*, *Lotus australis*, and *Phaseolus lunatus*.

Poor-law Dispensers.

A CONFERENCE of dispensers holding appointments under the Poor Law was held on May 30, at Surrey House, Victoria, Embankment, E.C., to consider the advisability of forming an association of poor-law dispensers. Amongst those present were Messrs. George (Poplar and Stepney Sick Asylum), F. E. Trayner and A. Howell (Hackney), J. Hickman (Strand), H. D. Kelf and J. F. Dunstan (Southwark), W. E. Miller, F. I. Turner, and A. A. Smith (St. Pancras), E. Darch and P. L. Thomas (Lambeth), H. H. Hewitt (Holborn), G. B. Walker (Greenwich), C. Spencer and J. J. Smith (St. Marylebone). Mr. Montagu Smith (Lewisham) took the chair, and said he had been asked to preside by several prominent dispensers in the Poor-law service. He judged from the number present and the replies that had been received from those unable to attend, that the want of an association was felt. He was pleased to see so many present who had been members of the Poor-law Dispensers' Association (1897-1900), and who would remember the useful work that was done by that body. The reason the Poor-law Dispensers' Association was not still in existence as a separate Association with its own Executive, was known to all. He felt that dispensers appointed by Boards of Guardians were frequently in need of advice and assistance, and that they could best obtain these from such an Association as the one they had met to form. (Hear, hear.) If the Association were formed it would require the heartiest and permanent support of all Poor-law dispensers. Mr. J. F. Dunstan said the result of inquiries had shown him how greatly in need of a permanent association dispensers in the Poor-law service were. At a conference of delegates of sectional Poor-law Associations at Lambeth Board-room, at which he was present, some time ago, he was much struck by the attitude taken up by the Masters', Relieving Officers', and Assistant Clerks' Associations. They emphatically stated that they did not desire amalgamation with the Poor-law Officers' Association, as they were quite capable of safeguarding their own interests through the medium of their sectional Associations. They required no outside assistance whatever. As a section of the Poor-law service he urged that an association of dispensers holding appointments under the Poor-law was desirable. The question of qualification would not come up for discussion, as all dispensers sanctioned by the Local Government Board would be eligible for membership if an association should be formed. Mr. Dunstan finished by moving "that a Poor-law Dispensers' Association be formed," and the resolution was seconded by Mr. Walker.

In the discussion which ensued, Mr. W. E. Miller said he was afraid the Association, if formed, would not be permanent, and advised all Poor-law dispensers to join the Public Dispensers' Association, where their interests would be looked after. The old Poor-law Dispensers' Association had fallen off in membership immediately dispensers obtained an increase in salary from the Local Government Board in 1900.

Mr. Spencer said he agreed with what Mr. Dunstan had said, but thought that instead of forming an association a sub-executive of the Public Dispensers' Association would do all that was required; but the Chairman pointed out that the rule allowing such an executive had been removed from the prospectus of the Poor-law Dispensers' Association.

The motion, being then put, was carried, 14 voting for and 2 against.

Mr. Montagu Smith was unanimously elected President, and, in thanking the members for the honour they had done him in electing him, said that whilst he remained President of the Association it should never in any way be antagonistic to the Public Dispensers' Association. The other officers elected were as follows: Vice-President, Mr. A. Darch; Hon. Treasurer, Mr. G. B. Walker; Hon. Secretary, Mr. H. D. Kelf; Committee, Messrs. J. F. Dunstan, E. Darch, H. D. George, J. Hickman, A. Howell, J. I. Smith, W. H. Smith, F. E. Trayner, and J. F. Turner.

Business Changes.

MR H. W. SCORELL, chemist and druggist, has acquired the business formerly carried on by Mr. W. F. Gadd, pharmaceutical chemist, at Queen Street, Ramsgate.

MR. CHARLES BROWN, pharmaceutical chemist, of Northallerton, has purchased the business at 161 Bury New Road, Manchester, lately carried on by Mr. J. A. Jones.

MR. GEORGE NELSON EDWARDS, chemist and druggist, has purchased the Wolsey Pharmacy, 47 St. Nicholas Street, Ipswich, formerly carried on by Mr. F. H. Palmer.

THE business of Mr. W. F. Goodwin, chemist and druggist, carried on under the style of the Plymouth Co-operative Society at 20 Cornwall Street, has been taken over by the Plymouth Co-operative Society (Limited).

Trade Notes.

A CORONATION SOUVENIR, consisting of a prettily illustrated booklet on "The Coronations of the Kings and Queens of England," is published by Boot & Son (Limited), Old Bailey, E.C., for distribution by retailers.

EDWARDS' HARLENE COMPANY, 95 and 96 High Holborn, W.C., are making a special offer in our advertising-columns of sample bottles and advertising-matter to chemists purchasing a 2*l*. parcel of Harlene during June.

MR. REGINALD W. BARKER, British and Foreign Patent and Trade-mark Offices, 53 Ludgate Hill, E.C., informs us that an Australian Commonwealth Patent and Trade-mark Act is not likely to be passed or come into force prior to 1904.

ON FLIES.—Messrs. Kay Brothers (Limited), Stockport, have, under the title of "Something about Flies," printed as a booklet a lecture delivered by a Stockport surgeon dealing with flies, fleas, and ticks. The information is popularly conveyed, and copies of the booklet, which contains twenty-four pages, can be had by chemists for distribution.

A NEW DEVELOPING-DISH has been brought out by Messrs G. Houghton & Son, High Holborn, W.C., called the "Crystalate" dish. It appears to be made of a kind of *papier-mâché*, and is hard and black, like vulcanite. We should imagine the dish will wear well, and although it is breakable, it possesses the advantage of being cheaper than earthenware. A higher grade dish is made in brown material, for professionals to use.

GOOD WORK.—Some excellent samples of commercial printing have been sent us by Messrs. Spottiswoode & Co. (Limited), New Street Square, E.C. The illustrations in the book advertising a popular draper are beautiful specimens of half-tone work, whilst the examples of covers in colours show that British printing and designing are still at the top. Chemists on the look-out for new ideas in advertising-matter should write for a set of samples, addressing their inquiries to the firm's Catalogue and Advertising Department.

A CORONATION PLASMON LUNCHEON is a clever idea. It is a handsomely illuminated box containing about a score of plasmon biscuits and four cakes of plasmon chocolate—enough to keep one going from breakfast to dinner on Coronation day—yet so compact that several boxes could be stowed away in the coat-pocket, and leave room also for a little liquid refreshment. The luncheon sells at 6*d*. A liberal display of the luncheon would be good business for chemists just now. International Plasmon (Limited), 66A Farringdon Street, E.C., are the purveyors.

CORONATION SEATS.—Messrs. C. H. Glover & Co. (Limited), Ormside Street, Old Kent Road, S.E., the well-known box-makers, inform us that thay are erecting a commodious

Digitized by Google

stand in front of the Passmore Edwards Free Library, Borough Road, where the Coronation procession will halt, also another in Fleet Street. These are both exceedingly commodious stands, and seats on them can be got from 1*l.* 1*s.* to 5*l.* 5*s.* We may remark that carpenters are now charging a guinea a seat for erecting stands, but Messrs. Glover being in that line can give the seat-holders advantages which in other cases go to the carpenters; and besides, we observe that Messrs. Glover's Old Kent Road seat-holders will have the use of the library for the whole day. Lavatories, retiring-rooms, ping-pong, music, &c., will be available. High-class refreshments, fruit, ices, iced drinks, will be sold at reasonable prices. Even better arrangements will be made for the Fleet Street stand.

Personalities.

Mr. E. O. Gilbert, of Sydney, N.S.W., one of the proprietors of bile beans, is now on a visit to London, with the view to further extending his company's business in various parts of the British Empire.

Mr. R. J. Roberts, Towyn, whose splendid gift of the Dolgoch estate to Towyn was announced last week (page 865), was born in Hwylfagroes, Dyffryn Ardudwy, Merioneth. He started in business as a chemist at Towyn in 1867, and has been for years a member of the local Board of Health. Mr. Roberts took a prominent part in defending common and other public rights at a time when encroachments were threatened some years ago. A portrait of Mr. Roberts was given as a supplement to the *Cambrian News* of May 30.

We had a call the other day from Mr. George H. Veitch, chemist and druggist, who has just arrived home after an eight years' sojourn in Ceylon. Mr. Veitch, who served his apprenticeship, and was for some time an assistant, with Messrs. Frazer & Green, of Glasgow, went out to Messrs. Neil S. Campbell & Co., of Colombo, with whom he remained for three years. He afterwards went up country to Norwood, where for five years he was manager of the establishment of Messrs. Brown & Co. (Limited). Mr. Veitch speaks highly of Ceylon, and letters to him may be addressed c/o The Chemist and Druggist.

The *American Druggist* reports that Mr. Thomas Maben, Ph.C., F.C.S., of Glasgow, the resident Scottish representative of Parke, Davis & Co., arrived in New York, and was the guest of honour at a dinner given in the New York Yacht Club on Saturday, May 24, which was attended by a number of gentlemen prominent in American pharmacy, amongst them being Professors Joseph P. Remington, Virgil Coblentz, and H. H. Rusby, Mr. S. W. Fairchild, New York, Mr. William Muir, Brooklyn, Mr. Thomas F. Main, Secretary of the New York College of Pharmacy, Mr. T. J. Keenan, and Mr. Eustace H. Gane. Mr. Caswell A. Mayo, editor of the *American Druggist*, acted as toast-master.

Births.

Notices under this heading are charged 2s. 6d. *each.*

Ermys Jones.—At St. Asaph, on May 28, to Mr. J. Ermys-Jones, pharmaceutical chemist, and Mrs. Ermys-Jones, of a daughter.

Shaw.—On June 2, the wife of Mr. J. Shaw, 304 London Road, Thornton Heath, of a daughter.

Marriages.

Bancroft—Richardson.—On May 24, at the Presbyterian Church, York Road, Kingstown, by the Rev. F. S. Gardiner, M.A., Arthur Wm. Bancroft, Stockport, eldest son of Mr. R. A. Bancroft, Rochdale, to Charlotte, second daughter of Mr. Andrew Richardson, chemist, London; and 40 York Road, Kingstown, Ireland. [Miss Richardson served her apprenticeship with J. Leonard & Co., apothecaries and chemists, 136 Great Britain Street, Dublin.]

Blue—Gow.—At the South U.F. Church, Coupar Angus, on June 3, the Rev. Alexander Wylie Blue, of John Street U.F. Church, Glasgow, to Dora, youngest daughter of Mr. James Gow, chemist, Coupar Angus. [Miss Gow graduated as M.A. at St. Andrews University.]

Spiller—Davenport.—On June 5, 1877, at St. Mary's Church, Islington, John Spiller, F.C.S., of 2 St. Mary's Road, Canonbury, to Emma, eldest daughter of the late Samuel T. Davenport, of the Society of Arts. Silver wedding.

Deaths.

Andrews.—On May 26, at the Frankfort Pharmacy, Plymouth, Annie Louisa, wife of Mr. Thomas Newton Andrews, jun., chemist and druggist.

Baetcke.—At Berlin on May 25, Dr. Carl Baetcke, President of the German Pharmaceutical Society. Dr. Baetcke was born in Berlin on May 13, 1852. His father, Gustav Baetcke, was the owner of a pharmacy there, but died when Carl was 16 years old. For eleven years thereafter the pharmacy was placed under a manager while Dr. Baetcke was completing his pharmaceutical training, and he took over his father's business in 1879, and became a member of the German Pharmaceutical Society in 1880. From 1893 he was a district President of the Society at Berlin; on January 1, 1900, was appointed a member of the Board of Directors; and a year later was elected President. Dr. Baetcke was, besides, for eight years, President of the Society of Berlin Pharmacists, and had for many years been a pharmacy-inspector. He was a director of the E. Schering company.

Bettle.—At Wellington, Somerset, on May 5. Mr. Frederick Selby Bettle, chemist and druggist. Aged 65.

Cull.—At Hounslow Heath, on May 17, Mr. Joseph Cull, chemist and druggist. Aged 83.

Evans.—On May 12, Mr. Thomas Evans, pharmaceutical chemist, late of Bloom Street, Liverpool. Aged 80.

Jones.—At Aberayron, on May 12, Mr. David Alban Jones, chemist and druggist. Aged 33.

Peet.—June 4, at Holbeach, Lincolnshire, Charlotte, wife of Mr. Henry Peet, J.P., chemist and druggist, Mount Pleasant, Liverpool, and daughter of the late Mr. William Tinsley, of Somerset House, Holbeach St. John's. Aged 46.

Pendlebury.—At Newmarket, Victoria, on March 20, Mr. James Pendlebury. Aged 68. Mr. Pendlebury was born in Lancashire, England, in 1834, and went to Victoria in 1857. After several periods of assistantship, he started in business as a chemist on his own account in Punt Road, South Yarra, and in 1883 took over the business at Newmarket which he carried on till his death. Mr. Pendlebury had been an invalid from heart-trouble for the last year of his life.

Webster.—On March 3, at Freemantle, Western Australia, Mr. Alfred E. Webster, Registrar of the Pharmaceutical Society W.A. Aged 39. Mr. Webster was born at Newcastle-on-Tyne, and carried on business as a chemist in High Street, Freemantle. Rheumatic fever and heart-weakness were the causes of death.

The value of the drugs and chemicals imported into Cape Colony during the two months ended February 28, 1902, amounted to 58,000*l.*, against 39,000*l.* for the corresponding period of 1901. These figures are exclusive of imports by the Imperial Government.

Edinburgh Chemists' Trade Association.

THE annual meeting of this Association was held at 36 York Place, Edinburgh, on May 29, Mr. George Lunan (Chairman) presiding.

THE ANNUAL REPORT.

Mr. C. F. Henry (the Secretary) read the annual report, from which it appeared that the membership numbered seventy-four, the same as last year, for while three members had left, the same number of new members had been enrolled. During the year there had been three meetings of the Association and three committee-meetings. The report was agreed to. Mr. R. L. Hendry submitted the

ANNUAL FINANCIAL STATEMENT,

which showed a balance in hand of 42*l.* 18*s.* 10*d.*, as compared with 36*l.* 16*s.* 8*d.* at the close of last year. The usual donation of 2*l.* 2*s.* was made to the Benevolent Fund, and 1*l.* 1*s.* to the Orphan Fund of the Pharmaceutical Society. Mr. J. R. Hill stated there were five beneficiaries of the fund in Scotland at the present time getting grants of about 5*s.* or 7*s.* 6*d.* weekly. There were no annuitants, but these were cases which had been getting 10*l.* and 15*l.* a year for several years.

The next item on the list of business was the proposal to issue circulars to medical men with regard to the marking of

PRESCRIPTIONS FOR POOR PEOPLE.

Mr. C. F. Henry said the idea of bringing up this matter occurred to him on account of a medical man saying to him that he always sent poor patients to a certain shop because they got their medicines there at a more moderate price. Twenty years ago it was the custom for most medical men to mark prescriptions of poor people "ex" or "p.p." in the corner, but the younger generation did not seem to know of that arrangement, and he believed if it was observed now it would be carried out with as great willingness and faithfulness as in times past. They might send out a circular to medical men intimating that this arrangement was still in force, and that it would be carried out if the prescriptions were marked.

Mr. Nesbit (Portobello) thought if they were going to circularise the doctors they might go a little further and send a copy of a paper by Dr. Luff regarding the prescribing of proprietary articles.

Mr. R. L. Hendry said he was afraid if they invited medical men to distinguish prescriptions there would be too many marked "ex."

Mr. Storrar remarked that certain markings were distinctly objectionable. He had a prescription with "charge 4*d.* for this" in Latin in the corner. Needless to say, he paid no attention to it. It was not a very desirable thing to do in a small place where they generally knew as well as the doctor who were poor patients, and acted accordingly. But in large towns it would be a decided benefit both to the patients and the chemists to have it done.

Mr. David McLaren said a medical man that morning told him such marking would be a step in the right direction. He (the speaker) also thought Dr. Luff's paper about prescribing proprietary medicines should be sent out. These proprietary things were becoming a perfect pest.

Mr. Hill said the question of prescribing proprietary medicines was a very ticklish subject, and one could not always be quite sure that medical men would receive a suggestion as to the propriety of his doing so. If they wished to approach them, the most judicious way would be to do so through one of themselves, who might write a paper and let it speak for itself.

Mr. Forret agreed with regard to the marking of prescriptions, but thought the other matter should be left in abeyance; and Mr. McBean expressed similar views.

Mr. Bowman said there was some difficulty in knowing who were really poor patients.

Mr. Storrar said he had doubt as to the wisdom of sending out Dr. Luff's paper. He thought a doctor getting that paper would say he had seen it before, and throw it aside without reading it, and by sending it out they were practically lecturing the medical men they sent it to, and that might be resented. By far the best way would be to appoint a committee to make selections from the paper and from some other sources—short, pithy sentences—on a single sheet, pointing out what was a distinct grievance to the chemist. Doctors were prescribing nowadays with less than half the ingredients, and they were prescribing preparations of which they knew practically nothing. It was a decline in the art of prescribing, and it was certain to end also in a decline in the art of dispensing, because when a man wanted a preparation of particular drugs or a combination of certain drugs, he should pick out the drugs himself, and allow the druggist to dispense them in the proper way.

On the suggestion of the Chairman, it was agreed to remit both matters to the committee till the next meeting of the Association.

FEDERATION OF LOCAL ASSOCIATIONS.

The proposal that this Association should be a member of the Federation, which was partly discussed at last meeting, was again brought up, and, after some conversation, it was agreed by a majority to join the Federation.

ELECTIONS.

Mr. Storrar was elected a member of the Association, and the office-bearers for the ensuing year were elected as follows: Chairman, Mr. W. S. Glass; Vice-Chairman, Mr. J. A. Forret; Secretary, Mr. C. F. Henry; Assistant-Secretary, Mr. E. Brindle; Treasurer, Mr. R. L. Hendry; Committee, Messrs. Blenkiron, Boa, Bowman, Lunan, McBain, D. McGlashan, D. McLaren, Macpherson, James Nesbit, and Storrar.

Halifax Chemists' Association.

A MEETING of this Association was held at the Old Cock Hotel on May 20. Mr. F. D. Crossley suggested that the Association should take in hand

THE EDUCATION OF THE PUBLIC,

with a view to combat the evils of the patent-medicine trade. He said the public were ignorant not only about drugs, but many household requisites and articles used in cookery. He suggested that the remedy for this ignorance was to educate the public, contending that if more information were given, the public would use safe and simple remedies in place of proprietary articles, and these remedies would also have the merit of cheapness. Mr. Crossley proposed that the Association should issue a pamphlet containing information to the public as to how minor ailments could be treated by simple remedies (either plain drugs or preparations of the same). The cost of such undertaking would, he said, be comparatively small, as it would be divided amongst the chemists of the Association. He thought a propaganda of this kind could not fail to have a beneficial effect. Allusion was made to the possibility that such a course might render the medicines recommended liable to stamp-duty, but the ammoniated-quinine case now before the Courts would, the meeting was assured, settle that point. The merits of the simple remedies which would be recommended—such as Gregory powder—should be set forth in the simplest possible language, and the book should bear the names of the members of the Association as a guarantee of good faith. A committee was formed to consider the subject, draft a pamphlet, and report.

After a vote of thanks to Mr. Crossley, the question of the West Riding Federation was raised, and a resolution in favour of the movement passed unanimously.

THE imports of drugs and chemicals into the Transvaal during the two months ended February, 1902, amounted to 54,000*l.*, against 5,000*l.* for the corresponding period of 1901.

THE ST. PETERSBURG PHARMACEUTICAL SOCIETY, which was formed eighty-four years ago, has forty-seven honorary, thirty-one corresponding, and ninety-eight active members. It publishes a journal, has a chemical-bacteriological laboratory, a pharmacy school for pupils, a very extensive library, charitable and scholarship funds, &c.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Is Chemist Malins "Specially Qualified"?

Our Cardiff correspondent writes: "Mr. Templar E. Malins, chemist and druggist, Woodville Road, Cardiff, who was recently fined 20*l.* and costs for using a description implying that he was specially qualified to practise dentistry within the meaning of the Dentists Act, has made written application to the Stipendiary Magistrate to state a case with the view of having the matter argued in the High Court."

In addition to the subscriptions promised last week, we have received an offer from Mr. F. W. Doubleday (Dorking) of 2*l.* 2*s.*, also the following letter:—

SIR,—I suggest all chemists interested in extractions should subscribe to carry the case to the High Court. You set a movement on foot about six years ago, when a number of chemists agreed to subscribe a stated amount to defray the costs of a test-case on the rights of chemists to extract teeth. I daresay the majority of us would be willing to re-offer the amounts therein promised, in order to carry this case on. It would be hard lines with some of us if we had to send our extractions to registered dentists, and thereby lose the most profitable section of our businesses.

Yours truly,

2 Fernhead Road, W., May 30. WM. GEO. BURGE.

[We may explain that two summonses were served on Mr. Malins, and one has yet to be heard, and would advise all interested to read the report of the first case, published in our issue of May 24, page 800. We understand that the solicitor of the Chemists' Defence Association does not advise the case to be taken to the High Court, but we await the decision in the second case before submitting the facts to counsel, if need be, for an opinion.—EDITOR.]

Volcanic Dust.

SIR,—The interesting account of the volcanic dust at Martinique in your last issue recalls to me a reminiscence. Some years since Limehouse Church was destroyed by fire. When the fire reached the roof the heat and water made the slates with which it was covered separate into layers. As the heat increased these began to swell into a spongy mass, and became brown pumice stone. If the mountain Pelée is composed of slaty rocks, would not these, by being intensely heated, with access of vapour become a fluid mass, which, with the steam generated, would be disintegrated and blown from the summit in powder? There could not have been granite or any siliceous matter present as there was no lava. Would some of your geological readers give an opinion?

Yours,

Swinton Street, W.C. H. O. HUSKISSON.

Mr. Campkin will Stand Again.

SIR,—May I be permitted through your columns to tender my sincere and heartfelt thanks to those 1 303 of my fellow-members of the Pharmaceutical Society for their generous and sympathetic support on my behalf at the recent Council-election? Their support greatly encourages me to again place my services at their disposal in the event of a future vacancy, when, though "'tis not in mortals to command success," I may do more—deserve it.

Yours very truly,

Cambridge, June 3. A. SIDNEY CAMPKIN.

A Link in Chloroform Anæsthesia.

SIR,—Mr. George MacPherson's reminiscences and the comments on them in THE CHEMIST AND DRUGGIST for May 31, while shedding new light on some points in the early history of chloroform anæsthesia, raise some fresh difficulties to beset an already obscure question. Some years ago, in the course of a controversy with Dr. Berdoe and other anti-vivisectionists, I had occasion to overhaul the documentary references to the introduction of chloroform as an anæsthetic, for the purpose of showing that its administration to the human subject must have been suggested, as in the case of ether, &c., by experiments on animals. If we are to accept the statement of Sir J. Y. Simpson and his coadjutors, they were in total ignorance of any such experiments, and merely tried chloroform along with other "likely" and "unlikely" substances. This seemed so antecedently improbable, that I sought diligently for all the facts of the case. These are summarised below—

1832.—Discovery of chloroform by Soubeiran, Dumas, and Guthrie.

1835.—Determination of chemical constitution by Dumas.

1838.—Dr. Formby, of Liverpool, exhibits chloroform for internal use as a soothing anti-spasmodic.

1842.—Dr. Mortimer Glover, a young Edinburgh graduate, discovers by experiment that it is a powerful narcotic poison to animals, and that one of its effects as such is to produce insensibility, or anæsthesia.

1845.—Dr. Morton, U.S.A., introduces ether as a general anæsthetic.

March, 1847.—Flourcur, the French physiologist, proves that the inhalation of chloroform causes in animals precisely the temporary anæsthesia caused by inhalation of ether.

Summer, 1847.—Chloric ether = chloroform diluted with spirit, used by Lawrence in St. Bartholomew's Hospital, London.

Autumn, 1847.—Chloroform first used by Sir J. Y. Simpson in Edinburgh.

The authorities for these statements are Sir Robert Christison ("Life," ii., pages 351-2); "Memoir of Sir J. Y. Simpson," by J. Duns; art. Chloroform, "Encyc. Brit," ninth edition; and Cooper's "Dictionary of Surgery," art. Surgery.

In view of the foregoing sequence of facts, it is morally certain that, if neither Simpson nor his assistants knew anything of the antecedents of chloroform, Mr. Waldie, who lived in the city where it was first used internally (*i.e.* Liverpool), must have given Simpson some information upon that point, and would probably have heard of the experiments of Glover and Flourcur, else whence the suggestion to Simpson to try chloroform?

When we come to the details of the discovery by Simpson of the anæsthetic properties of chloroform there are serious discrepancies. There are different versions of the memorable scene in the dining-room at Queen Street. According to Simpson, the idea of trying the chloroform was entirely extemporaneous—

I had had the chloroform beside me for several days, but it seemed so unlikely a liquid to produce results of any kind that it was laid aside, and on searching for another object among some loose papers after coming home very late one night my hand chanced to fall upon it, and I poured some of the fluid into tumblers before my assistants, Dr. Duncan, Dr. Keith, and myself.

Professor Miller, who was also present, gives a substantially similar report; but Dr. Matthews Duncan's version flatly contradicts that of his principal. In Sir R. Christison's words ("Life," II., 352-3)—

One day, when Sir James Simpson and Dr. Matthews Duncan were in Dr. Gregory's laboratory at the college, Dr. Duncan got possession of every liquid in the laboratory he imagined "would breathe"—four or five bottles were thus carried off, and chloroform was one. At this time the correspondence with Mr. Waldie about anæsthetics, and the suggestion by that gentleman to try chloroform, had not been heard of by Dr. Duncan. He had previously experimented on himself with various substances, but found none suitable. On trying chloroform, he was convinced that the article sought for was found. The same or next evening the trial was repeated by Dr. Keith, Sir J. Y. Simpson, and himself. This is the trial which is now a matter of history, but the previous trial has never been noticed.

If Dr. Duncan's statement is authentic he has been the victim of a serious injustice at Sir J. Y. Simpson's hands, and, while Mr. Waldie must always have credit for his suggestion, we do not directly owe to it the introduction of chloroform. We seem to have here another illustration of that fatality of confusion which often obscures the origin of great scientific discoveries.

Glasgow, June 2. J. P. GILMOUR.

"Classy *v.* Massy."

A classy assistant of York,
Is accused of biting his cork,
But he found that such deeds
Were only in Leeds,
And not in classic old York.

(242/48.)

SIR,—I should like to be permitted to protest, on behalf of the York chemists, against the impeachment embodied in your pharmac-artist's sketch of to-day. The York chemists, believe me, Sir, are far too well educated to think of biting their corks. I, myself, remember reading in a "book of instruction" which used to be handed to the new assistants of a classic pharmacy in Liverpool, so far back as 1868, these words: "Never lick a label, and on no account bite a cork; it is offensive and improper," and I have borne in mind these words to this day; besides which I know of no York chemist whose "os distens" would accommodate such a cork as your artist suggests. It is not a York cork, but a West Riding cork—I should say a "disused puritzer"—that your artist has come across in Briggate.

Faithfully yours,

York, May 31. EDWARD B. KENDALL.

Wholesalers' Invoices

SIR,—It would be a great gain to retailers if wholesale firms would send out their invoices promptly. The habit, which is practised to excess by a certain monopolising camera-house, of sending them out several days after the goods, compels the consignee either to leave them on the counter (which is inconvenient), to make a list of the articles (which wastes time), or to remember them, which on a large consignment would be impossible. A recent correspondent of yours urged promptness in the despatch of statements; but, whilst recognising the need of this, it seems to me of much greater importance that invoices should be sent in time for immediately checking the goods.

Yours sincerely,

71 Lavender Hill, S.W. E. KINGSLEY MONKS.

Coronation Day.

SIR,—As a number of assistants in London will have a holiday on this day and be unable to see the Coronation, the Chemists' Managers' and Assistants' Society have arranged an outing to the flower-gardens of Messrs. Potter & Clarke. Any assistant may obtain a ticket free on application at once to the Secretary, or to Mr. G. Cullwick, 48 High Street, Notting Hill Gate. It is intended to start for Carshalton early in the afternoon, returning in time for the illuminations. Messrs. Potter & Clarke have very kindly offered to provide light refreshments; as this event is also open to ladies, we trust that all the limited number of tickets will be immediately applied for in order that we may complete the arrangements, further particulars of which will be posted to all who intend going.

Yours faithfully,

52 Acacia Road, St. John's Wood, N.W. C. E. PICKERING, (President).

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

238/47. *Pharmacy.*—The following typical prescriptions show how proprietaries should be treated when dispensed:—

Not Liable to Stamp-duty.	*Liable to Stamp-duty.*
Syr. hypophos. co. (Fellows) ... ... ℥ij.	Syr. hypophos. co. (Fellows) ... ... ℥iij.
Aq. ad ... ... ℥viij.	
M.	

The fact that the second prescription is dispensed from a stamped bottle does not relieve the dispenser of the responsibility of stamping the 3 oz. of the syrup when dispensed. See article in *C. & D.*, May 24, page 807.

238/32. *B. B. F.*—There is no general patent to prevent you making miscible crude carbolic acid.

243/8. *F. H.*—Proprietary medicines that are given away are not liable to stamp-duty.

242/15. *East Anglian.*—The titles "liver-beans" and "gout and stomach beans" do not infringe anybody's rights.

242/7. *J. M.*—A qualified army compounder is not, according to the Pharmacy Act, a qualified person entitled to be registered as a chemist and druggist, and consequently he may not start business as such.

243/1. *Cepia.*—You do not say when your year's engagement commenced, and upon that depends largely your title to a holiday this year. If your engagement terminates at the end of June and your holiday falls after that, we do not think you are legally entitled to any monetary consideration because you do not receive a holiday. In any case, allowance cannot be enforced in respect to a holiday which falls on a date after the termination of an engagement.

242/13. *Johannis.*—Your influenza-mixture label renders the preparation liable to stamp-duty on account of the italicised portion in the direction for use as under:—

DOSE FOR ADULTS.—Two tablespoonfuls *to be taken on the first appearance of a chill, or pains in the back and head, and continued every four hours until all symptoms disappear,* gradually reducing the dose.

The gout-mixture and quinine-and-iron tonic labels are not liable.

243/2 *C. W.*—The conditions for registration as a chemist and druggist in Cape Colony are similar to those in Great Britain—namely, candidates must show that they have passed a suitable Preliminary examination, and have been engaged three years in dispensing medical prescriptions. The examination is not so stiff as the English Minor or the Irish Licence examination, and a registered druggist who has had experience in dispensing should, with the coaching that he may obtain locally, have no difficulty in qualifying.

245/58. *Sheep-dip.*—The decision in the Court of Appeal in the Worcester weed-killer-case covers your question. The farmer whom you employ to canvass for orders for poisonous sheep-dip will not infringe the Pharmacy Act, and he may receive payment and settle accounts on your behalf. You, being a registered chemist, also act legally.

243/40.—*Quandary.*—The admission of a partner, B, by A does not invalidate the indentures of apprenticeship to A.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

205/57. *Northern.*—A Dressing for Morocco Leather should contain white of egg, as albumen is used in finishing the leather. The following preparation is good:—

White of five eggs.	
Sperm oil	6 oz.
Acetic acid	6 dr.
Glycerin	6 dr.
Oil of turpentine	1 oz.
Methylated spirit	5 oz.
Water to	30 oz.

Beat the eggs thoroughly with an egg-beater. Mix the oils, acid, and glycerin, and add gradually to the eggs, using the beater constantly. Transfer to a bottle, and add the spirit diluted with its own volume of water; finally make up to measure.

216/37. *Electra.*—Electricity in Tooth-extraction.—We noticed the paragraph in the *Lancet* about the "new" painless method of extracting teeth by means of high frequency currents. Full particulars were given in the *C. & D.*, 1891, January 3, page 32, March 21, page 430, and April 25, page 593. Even then a Clapham chemist informed us that a similar method was in vogue in 1862.

Digitized by Google

204/56. *Mudan.*—**Kidney and Liver Mixture.**—The following is a good recipe from "Pharmaceutical Formulas":—

Ac. nit. mur. dil.	...	...	... ℥ij.
Succ. taraxaci	...	...	... ℥iv.
Tr. buchu ...	...	...	... ℥iij.
Tr. podophylli	...	...	... ℥j.
Spt. juniperi ...	...	...	... ℥ij.
Liq. strychninæ	...	...	... ♏xlviij.
Syrupi... ...	...	...	... ℥vj.
Aq. ad ...	...	...	... ℥vj.

M.

Sig.: ℥ss. ex aqua ter in die.

218/56. *J. H.*—**Drink-cure.**—We believe your customer is referring to the Tyson cure, which the labels on the bottle of "Tysiloids" allege to be composed of—

Ext. nuc. vomic.	...	...	} ana $\frac{1}{20}$ gr.
Ext. brucinæ...	...	...	
Ext. chirettæ...	...	...	... $\frac{1}{10}$ gr.
Ext. yguazæ ...	...	...	... 1 gr.
Pulv. glycyrrh. co.	...	...	... q.s.

You will see that the formula is humbug.

208/8. *S. H.*—**Sheep-dip.**—If you add the same quantity of sodium carbonate as arsenic to the soft soap we think your difficulty as to dissolving will vanish.

203/3. *Hibernia.*—**Liquors for Syrups** are made by similar processes given for the syrups, but sugar is not added. The liquor is concentrated by evaporating the weaker percolates, if necessary.

232/5. *H. G. M.*—**Mr. Roe's** paper on formic aldehyde appeared in the *C. & D.*, November 2, 1901, page 726.

232/46. *M. M. Co.*—For process of manufacturing sodium silicate see *C. & D*, August 17, 1901, page 330.

238/23. *Vin. Sarsæ.*—(1) If you want to make your Vin. Ferri dark you should add a little ferri ammon. cit. to it. (2) For dec. sarsæ co. conc., see the British Pharmacopœia liquor.

238/38. *Albion.*—The preparation which you send is a caustic, which owes its properties to sodium ethylate.

194/62. *Plumbum* (South Australia).—We shall pass on your request, but you should have enclosed stamps to the value required.

A Prize Poster.—Mr. R. J. Widdowson, of the Midland Drug Company, Hucknall Torkard, sends us a startling but amusing poster, which is appropriate for the coming season. It runs as follows:—

MURDER!

A Whole Family Killed.

Murderer at Large.

500*l.* Reward.

Description of the Murderer:

Dark hair, clean shaven; height, 5 feet 11 inches; age, about 32 walks with a slight limp.

When last seen was wearing a bowler hat and dark-grey suit.

The Above Reward will be Paid

to anyone who gives information that will lead to the arrest and conviction of the murderer.

Story of the Crime:

Whereas on or about Wednesday last the said murderer did with malice aforethought lay down a quantity of Richard Jephson Widdowson's disinfectant insect-powder, with the result that he poisoned a whole family of beetles. This is not his only crime for he has been the cause of hundreds of other deaths through the same means.

This Reward will be Paid

by the Beetle Association on the day the murderer is sentenced.

(Signed) Judge Beetle.

The poster won the prize in a monthly competition instituted by *Advertising* for the most original advertising ideas.

POSTAGE OF INVOICES.

Messrs. May, Roberts & Co., druggists' sundriesmen, Clerkenwell Road, E.C., issue to their customers the following statement:—

"The words 'To follow' on our invoices we contend *relate to the mode of consignment.* The Postal authorities differ from us on this point; for weeks they have examined our invoices and have surcharged those found with the words 'To follow.' They have been aided in this by the fact that we have a private posting-box on the premises, and the letter-carriers have instructions to sort out the book-post packets, tie them into a bundle, and take them to the office to be overhauled. N.B.—Kindly refuse to pay all surcharged letters."

The result is that a summons was issued by the P.O. authorities against Mr. Saml. Roberts for 19*s.* 1*d.* surcharges on 229 postal packets, and the case was heard before Mr. Baggallay on Thursday afternoon, June 5. Mr. Arnold, who stated the P.O. case, said the Postmaster General had decided that the invoices, as sent by Messrs. May, Roberts & Co., with "To follow" marked against any article, or with a cross, and a printed slip stating that—

> Lines marked × the goods are to follow, and will be procured as soon as possible, and sent with the next order, unless customer's instructions to the contrary

—were to be treated as letters. The defendants thought differently and appealed to the Treasury, who confirmed the Postmaster-General's decision. At the instigation of the defendants, the addressees had refused to pay the surcharges, and the 229 packets had been returned to the defendants, who had also refused to pay. A clerk from the General Post Office proved the facts, and the returned invoices were inspected by the Magistrate. Mr. H. C. Richards, K.C., who appeared for the defendants, contended that the summons was bad, inasmuch as the stamped book-packets sent were described as "unstamped letters." This led to a good-humoured discussion between Mr. Richards and the Magistrate, the latter saying that at first blush he should say the packets were unstamped letters. Mr. Richards held that they could not be unstamped letters—at the most they could only be insufficiently stamped book-packets [? letters]. His point was that they were not unstamped letters, and as under one of the sections of the Postal Act the Magistrate was allowed to inquire and "examine into matters of fact," he thought Mr. Baggallay should decide on the facts. He pointed out as an absurdity the fact that the printed slip referring to the cross was not itself looked upon as making the packet a letter, but the fact that a cross had been marked at the side. It transpired that there had been no case heard or definition given as to what constitutes an "unstamped letter." Mr. Baggallay held that the packets sent were "unstamped letters," because they were not sufficiently stamped and the Treasury having upheld the Postmaster-General's decision, precluded the question of facts. He found for the plaintiffs for 19*s.* 1*d.*, but agreed to state a case for appeal.

TWO SUMMONSES.

Messrs. Parke, Davis & Co., wholesale chemists, of Heston Wells, Hounslow, were, at the Brentford Court, on June 5, summoned at the instance of Inspector W. Tyler for having in their possession nine weights, ranging from 4 oz. to 2 gr., unstamped, and a ℥j. measure also unstamped.

The evidence for the prosecution showed that the inspector found three weights in one of the mixing-rooms. They were only a trifle light. Three more were found in another room, and in the stock-room the liquid-measure was discovered.

Defendants' representative said that the weights were not used in the business. At their City house they had them, and one of the City inspectors had assured him that they need not be stamped, as he was satisfied they were not used for trade purposes. They were used to adjust scales. The London County Council inspector had agreed with this view, and all the correspondence was in the hands of the firm's solicitor.

At the request of the defendants' representative an adjournment was granted to prove non-use for trade purposes.

At the same time the firm were further summoned under the Factory Acts for not having furnished a return of the number of persons employed in their works at Hounslow prior to March 1, 1902. The only witness was Mr. E. W. Willson, assistant inspector under the Act, who said that by virtue of Section 130 of the Act, the Secretary of State fixed March 1, 1902, as the date by which a correct return of all young persons employed in the factory should be sent in. Witness forwarded the notification to the defendants, but on May 7, when he called at the factory, and saw a gentleman who described himself as secretary to the manager, he found no record in the register of the notice having been complied with.

Defendants' representative stated that he sent the return on May 8 by post addressed to the Home Office. The Chairman said: The point is not sending it before March 1. I impose a fine of 2*l.*, and costs.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1l., obtainable through any money-order office.

(*From the "Trade-marks Journal," May* 14, 1902.)

"ZAN-PALATON"; for toilet-preparations. By the Zan-Palaton Company, 47 Mosley Street, Manchester. 244,774.

"MAGIC WHIRL"; for perfumery and toilet-articles. By H. Mack, Kohlgasse 31, Ulm-on-Danube, Germany. 245,596.

Device (essential particular) of the earth and the wording "PHIXALL, BEST ADHESIVE ON EARTH"; for a cement. By Setten & Durward, 117 Livery Street, Birmingham. 242,052.

"PLYCA"; for knife-polishing powder. By J. Whiteley, Shaw Street, Bradford. 245,431.

(*From the "Trade-marks Journal," May* 21, 1902.)

"SEMICOALON"; for chemical fuel-savers. By the Semicoalon Company, 8A Fossgate, York. 245,316.

"HOVIS"; for chemicals and surgical instruments. By the Hovis-Bread Flour Company (Limited), 34 Victoria Street, Westminster, S.W. 245,582 and 245,585.

Device (the essential particular) of the old ship "Dreadnought"; for chemicals. By Gale & Co., 15 Bouverie Street, Fleet Street, E.C. 241,694.

Combination of devices (the essential particular) of a seal and the words "Canadian Seal Oil"; for a liniment. By C. F. Rowley, Rose Mount, Middle Road, Scholing, near Southampton. 244,367.

"SERO"; for chemicals. By the Rose Remedy Company, 434 Strand, W.C. 244,943.

"PETOL" and circular device with smoking-vessels and the word Petol four times; for medicated soaps, toilet-papers, skin-salves, medicated snuff, an inhalation, asthma and bronchial cigarettes, and an eye-wash, and for surgical bandages and medicated wool, &c., and for peat-fibre and furniture-cream. By A. C. Kennedy, Eustace Lodge, Robin Hood's Bay, Yorkshire. 245,045 and 245,047; 245,224 and 245,214; 245,221.

"FRUITINE" (no claim for "Fruit"); for a medicine. By J. D. Walker, 187 Gorgie Road, Edinburgh. 245,483.

"VANPAD"; for chemicals. By Seabury & Johnson, Maiden Lane, New York, U.S.A. 245,526.

URIFORM"; for a medicine. By Schieffelin & Co., 170 William Street, New York, U.S.A. 245,530.

Sketch of a pine-tree, and the word "Pinool" (no claim for "Pine"); for fibrous substances and wool. By F. T. Bond, 3 Beaufort Buildings, Gloucester. 244,079.

Combination of devices (the essential particular), being a bear standing on a shield-device, with three stars and the letter S; for gelatin. By Heidelberger Gelatine-Fabrik Stoess & Co., Heidelberg-Ziegelhausen, Germany. 243,721.

Portrait of a young man and the word "TAPPOBONNE"; for curry-powder. By Guneratne (Limited), 2 Ellis Street, Sloane Street, S.W. 242,802.

Device and the word "SENAEB" (the essential particulars); for an infant's food. By E. Beanes & Co., Wallis Road, Hackney Wick, E. 243,831.

"SAUMURETTE" (the essential particular—no claim for "Saumur"); for a non-alcoholic mineral-water. By J. Barker & Co. (Limited), 83 High Street, Kensington, W. 244,096.

"SOPHOS"; for liquid ammonia and goods in Class 48. By W. Hill, 78 McAlpine Street, Glasgow. 244,120.

CLYZOL"; for a paint-remover. By Thomas, Bonavita & Olivier, 55 Rue Billiard, Paris. 245,229.

"ONGOLLA" (no claim for "Ongol"); for perfumery and toilet articles. By Osborne, Garrett & Co., 51 Frith Street, Soho, W. 245,149.

"LOXINE" (no claim for "Locks"); for perfumery and toilet articles. By E. H. Tibbetts, 67 Bull Street, Birmingham. 245,660.

London Drug Statistics.

THE following statistics are compiled from information supplied by public warehouses. They relate to the receipts and deliveries of some of the leading drugs from and into the London public warehouses for the month of May, 1902, and to the stocks on May 31.

* Stocks lying at Smith's Wharf and Brewer's Quay are not included in this return.

† Includes the quantity at Red Lion, Bull, and Smith's Wharves; also the Docks.

NOTE.—The figures relating to the deliveries, as given above, reveal a fair business in most crude drugs. Aloes was in good demand, especially gourds, of which the stock is again exhausted. The supplies of "balsams" is fairly heavy compared with last year. Crude camphor is getting low in stock, and shows a reduction of over 2,000 packages against 1901. A little more demand was evinced for cubebs, but stocks are still large, although less than at the same time last year. Calumba-root is hardly likely to improve in value, and although there were no imports last month the stock is over five hundred packages in excess of last year, and the deliveries during the past two or three months have been very meagre. Cardamoms are arriving in fairly large quantities, and so far this year there is an increase of over 1,200 packages compared with the first five months of 1901; deliveries were good last month. Stocks of asafetida are large, but fine quality is wanting. There are over 1,000 packages of ipecacuanha in the warehouse, but the drug being in firm hands there is not much hope for a substantial reduction in price. Sound rhubarb is not likely to be cheaper this season according to reports; stock is about five hundred chests less than last year, and deliveries have been good during the previous two months. Stocks of shellac have slightly increased compared with April of this year, but they are about 10,000 cases less than in May, 1901. The stock of quinine sulphate is now 3,824,368 oz, against 3,558,032 oz. at the same time last year, or an increase of 266,000 oz. There were landed last month 271,984 oz., against 180,000 oz. in April; deliveries, however, were about 30,000 oz. better than in April. This, together with the large shipments of cinchona from Java, help to depress the quinine-market.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: June 5.

THE declaration of peace has been hailed with no greater delight than in the produce markets, and with the complete restoration of confidence which may now be expected, the outlook is more hopeful for a period of better business in the near future. The demonstrations on Monday and the "Derby" on Wednesday have naturally interfered with business this week, and with the approaching Coronation holidays the month of June is not likely to show much activity. The chief alteration has been in cod-liver oil, which has advanced daily, and several dealers in Norway are reported to have withdrawn from the market. Menthol has again advanced, the spot market being very bare. Japanese wax is also dearer. High grades of cream of tartar are scarce, and there has been a distinct advance. Tartaric acid is steady. American spermaceti is easier. There was a large sale of vanilla this week, the bulk selling at steady prices for medium, and dearer for fine and common. Sulphate of copper is neglected, and prices are easier. Nitrate of soda is also easier. Quinine is a flat market. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Menthol Oil, cod-liver Vanilla (fine) Wax (Japanese)	Cream of tartar	Copper sulphate Soda nitrate Spermaceti	Quinine (second-hands)

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from May 28 to June 4, inclusive:—Acetate of lime (@ New York), 834; acetic acid (@ Rotterdam), 63; acid, carbolic (@ Amsterdam), 30; acid, tartaric (@ Rotterdam), 40; albumen, 17; aloes (@ Mossel Bay), 75; argol (@ Cape Town), 37; arrowroot 25, (@ St. V.) 531 brls. 93 tins; balsam copaiba (@ Maranham), 7; benzoin (@ Singapore), 40; bleaching-powder (@ Antwerp), 27; calumba, 60; camphor (@ Kobe), 68 tubs 150 cs.; canary-seed (@ Constantinople), 817; cardamoms, 39; caraway-seed, 448; cassia fistula (@ Dominica), 16; castor oil (@ Antwerp) 5, (@ Italy) 55; chamomiles (@ Ghent), 10; cinchona (E I.) 61, (@ Colombo) 129, (@ Madras) 17, (@ Valparaiso) 12; cocculus indicus, 100; cochineal (@ Las Palmas), 18; cod-liver oil (@ Boston) 30, (@ Rotterdam) 50, (@ Bergen) 31, (@ Aalesund) 225, (@ Drontheim) 10; cream of tartar (@ Bordeaux) 147, (@ Tarragona) 10; cumin-seed, 120; essential oils (@ Messina) 98, (@ Palermo) 72; gentian, 13; ginger (@ New York) 52, (@ Yokohama) 390 bgs., (@ Bombay) 80, (@ Hong-Kong) 100, (@ W.C. Africa) 18; wax, Carnauba, 105; wax, ceresin (@ Dusseldorf), 20; zinc oxide (@ Amsterdam) 45, (@ Rotterdam) 20.

The Peace.

At the meeting of merchants and brokers on 'Change at 3.30 P.M. on Monday, a most imposing and loyal demonstration took place, led by Mr. John Mullett, and supported by Mr. F. Harwood Lescher. The National Anthem was sung most heartily, followed by three cheers for the King Mr. Lescher called for three cheers for Lord Kitchener. Mr. Mullett then asked for three cheers for our fighting-men, adding that he hoped after these had been given they would each raise a hand skyward as a silent token to those who had fallen in helping to bring about the peace they were celebrating. This tribute was given amid an impressive silence. Three cheers for Lord Milner terminated the proceedings. A congratulatory telegram in the following terms was afterwards sent to the King:—

"The merchants and brokers assembled this afternoon upon the London Royal Exchange, having sung the National Anthem and given hearty cheers for your Majesty, beg to express their most sincere and loyal congratulations to your Majesty upon the conclusion of peace."

On Tuesday Mr. Mullett read the reply which had been received from his Majesty. It was as follows:—

"Am commanded to thank the merchants and brokers on the London Royal Exchange for their loyal congratulations to the King on the conclusion of hostilities in South Africa.—KNOLLYS."

Three cheers were afterwards given for the King, after which the incident closed.

A similar demonstration took place at midday on Monday at the London Commercial Sale-rooms.

Bulgarian Otto of Rose.

Our correspondent in Bulgaria, under date of May 23, writes us as follows:—"The distillation of this year's rose harvest, which has just begun, is proceeding under most favourable conditions. For the last ten days, abundant rains have fallen throughout the whole district, and the benefit caused by these timely rainfalls is of course great. More than an average crop is already assured, and the quality of the new otto promises to be the richest. The present prospects are that this unusually favourable weather will continue throughout the whole season, and if such should be the case the new crop will turn out not only above the average but also of the best quality."

Heavy Chemicals.

The general demand in the heavy-chemical market at all the principal centres continues to be of a fairly satisfactory character, and, generally speaking, an increased business is being transacted in practically all departments. Values keep for the most part firm, and show little or no fluctuation.

ALKALI PRODUCE.—There are no changes of note to be mentioned here. Caustic soda, bleaching-powder, and ammonia alkali are all in very steady request and firm, at unchanged rates.

SULPHATE OF AMMONIA is rather quiet. Values keep up well, although the tone at Leith is not quite so strong as it was. Beckton terms, 12*l.* 17*s.* 6*d.*; London, 13*l.*; Leith, 12*l.* 15*s.*; Hull, 12*l.* 12*s.* 6*d.*

BENZOLS are very quiet and easier in value; 90 per cent., 8*d.* to 8¼*d.* per gal., and 50 per cent., 7*d.* to 7¼*d.* per gal.

CALCIUM CHLORIDE in fairly good request, with prices a shade lower, at 57*s.* 6*d.* to 62*s.* 6*d.* per ton, f.o.b.

ALUMINA PRODUCTS.—With the textile, paper-making, colour, and other consuming trades fairly well employed, demand keeps very satisfactory. Prices are practically without alteration, and, if any change should take place, it is more likely to be in an upward direction than otherwise. Crystal alum: loose lump, 5*l.* to 5*l.* 5*s.* per ton; lump, in tierces, 5*l.* 5*s.* to 5*l.* 10*s.* per ton; ground, in bags, 5*l.* 12*s.* 6*d.* to 5*l.* 17*s.* 6*d.* per ton, with customary extras for various sized casks. Sulphate of alumina, best qualities, pure white, and practically free of iron, 87*s.* 6*d.* to 95*s.* per ton, in ordinary large casks, with allowances for bags and loose slabs. Aluminoferric, 55*s.* to 65*s.* per ton, varying with condition and package. Aluminous cake, 52*s.* 6*d.* to 60*s.* per ton. Hydrate of alumina, purest and highest strength Al_2O_3, 11*l.* 15*s.* to 12*l.* 5*s.* per ton, in large casks. Hydrate of alumina, special pulp, 12*s.* 6*d.* to 15*s.* per cwt. Hydrate of alumina, special pulp, dried, 37*s.* 6*d.* to 38*s.* 6*d.* per cwt., in usual casks; ground, 38*s.* to 39*s.* per cwt. Aluminate of soda and carbonate alumina, 35*s.* to 37*s.* 6*d.* per cwt, according to quantity, package, &c.

Liverpool Drug-market.

Liverpool, June 4.

CASTOR OIL.—Good seconds Calcutta remains in a steady position at 2⅞*d.* to 2⅛*d.* per lb., and business is passing at these figures. First-pressure French is still held for 2⅛*d.*, and for second-pressure French 2¼*d.* would still be accepted.

QUILLAIA.—Further sales have been made at prices ranging from 13*l.* to 13*l.* 2*s.* 6*d.* per ton, in parcels of several tons at a time.

Digitized by Google

GRAINS OF PARADISE are slightly easier, holders being disposed to accept 65*s.* to 70*s.* per cwt.

BEESWAX (CHILIAN).—A recent arrival was offered at auction and there was good competition. The following prices were realised:—2 bags fine yellow, 8*l.*; 7*l.* 15*s.* for 6 bags good yellow; 1 case 7*l.* 8*s.* 9*d.*; and 3 bags scrapings at 6*l.* 7*s.* 6*d.* per cwt. Thirty-four bales Gambia (W.C.A) sold at 7*l.* 5*s.* cwt.

GINGER (AFRICAN). The advance in this has been more than maintained, considerable sales having been made at 37*s.* per cwt., and a parcel of 7 bags good sound root realised 37*s.* 6*d.*, which is now the market figure.

ACACIA SORTS.—The run has been chiefly upon the lower grades during the week, and 1 ton of good hard sorts sold at 30*s.* per cwt. Several other transactions were effected in the neighbourhood of this price.

SULPHATE OF COPPER is selling steadily at 18*l.* 5*s.* per ton for 98 to 99 per cent.

CANARY-SEED continues to be quietly steady at about 40*s.* per quarter for good bright Turkish, but very little business is to be reported at the price.

LINSEED OIL.—Steadily held for 33*s.* 9*d.* to 34*s.* per cwt., according to quality.

TURPENTINE.—Again dearer at 36*s.* per cwt., and holders are confident it will still further rise.

HONEY.—There has been more movement in the lower grades of Chilian and Peruvian for export, prices ranging from 15*s.* to 16*s.* 6*d.* per cwt.

PIMENTO (JAMAICA).—The sale is reported of 20 bags good quality at 3*d.* per lb.

German Drug-market.

Hamburg, June 3.

Our drug-market is quiet, and shows little business.

AGAR-AGAR is firm, at 315m. per 100 kilos.

BALSAM PERU is quoted 12m. to 11¾m. per kilo

CAMPHOR, REFINED, is declining and very quiet; the makers' price is officially 435m. per 100 kilos in ton lots, but lower prices are accepted. Second hand is quoted 415m. to 410m. per 100 kilos.

CORIANDER-SEED is scarce, spot being held at 20m. per 100 kilos.

ERGOT is tending firmer, Russian being held at 315m. and Spanish 355m. per 100 kilos.

GALANGAL is lower.

JALAP is quiet and lower, at 85m. per 100 kilos.

LYCOPODIUM is firmly held, at from 450m. to 460m. per 100 kilos.

MENTHOL is quiet, although little is offered; spot, 31½m. per kilo.

JAPANESE WAX is very firm; 78m. per 100 kilos. has been paid, while some holders ask even 80m.

QUININE is unchanged; second hands ask 39m. per kilo.

SANTONIN is very firm, at 38m. per kilo.

STAR ANISEED is flat, at 116m. to 115m. per 100 kilos.

OILS, FIXED.—Cod-liver oil is very firm and advancing; to-day's quotation for non-congealing oil is 145m. per barrel. Linseed oil for spot delivery is firm; cotton-seed oil is lower; Chinese wood oil is a fair demand.

OILS, ESSENTIAL.—Star-anise is dull, at 10m. to 9.95m. per kilo. Peppermint firm: HGH at 8½m. per lb., and Japanese at 8¾m. per kilo.

Cablegrams.

HAMBURG, June 5.—Agar-agar is firmer. Refined camphor is dull of sale. Japanese wax is very firm at 78m. per 100 kilos. Carnauba wax is quiet, and turpentine is advancing, American now being quoted 69m. per 100 kilos.

SMYRNA, June 5.—The sales of opium for the week ending Wednesday evening amount to 20 cases, at the equivalent of from 7*s.* to 7*s.* 8*d.* per lb., f.o.b. Market is maintained.

NEW YORK, June 5.—Business here is fair. American oil of peppermint is firm at $1.70 per lb. Mexican sarsaparilla is easy at 6c. per lb. There is a scarcity of wahoo bark of root, and 18c. per lb. is wanted. Both balsam of Tolu and balsam Peru are lower at $1 20 and 28c. per lb. respectively. Cod-liver oil is advancing, and to-day's quotation is $31 per barrel. American beeswax is scarce and firmly held.

BERGEN, June 4, 6.5 P.M.—The cod-liver oil market has been greatly excited, up to 137*s.* per barrel, f.o.b. Bergen, having been paid for best Lofoten non-congealing oil. The excitement is due to the fact that the fishing at Finmarken is closing. The catch of cod up to date amounts to 41,500,000, against 37,700,000 at the same time last year. This has yielded 18,800 barrels of oil, against 30,000 at the corresponding period of 1901.

London Markets.

ACID, BENZOIC, from gum has been slightly reduced, makers quoting from 4½*d.* to 4¾*d.* per oz., according to quantity.

ACID, TARTARIC, is steady at 10½*d.* per lb. for foreign and 11¼*d.* to 11½*d.* for English in crystals or powder.

ALOES.—The s.s. *Gascon* from Mossel Bay, Cape Colony, has arrived with 75 cases.

ARROWROOT.—A few hundred barrels of fair manufacturing quality of St. Vincents have been sold at 4*d.* per lb. We note a further arrival of 500 barrels.

BALSAM TOLU in small tins is offered at 1*s.* 4*d.*, and large tins 1*s.* 3*d.* per lb., net.

BENZOATES have been reduced, the following prices now being quoted for the B.P. preparations:—Ammonium, 5*s.* 4½*d*; and sodium, 5*s.* 1*d.* Potassium is 5*s.* 5½*d.* per lb.; and caffeine 6½*d.* per oz.

BUCHU.—A few bales of rather yellowish oval leaf, ex auction, were sold last week at 9*d.* per lb.; and for a few bales of round green leaf 1*s.* is wanted.

CANARY-SEED.—Rains have practically assured the crop in Turkey, but the present low stocks prevent decline. Price is 9*s.* 2*d.*, f.o.b.

CHAMOMILES.—The inquiry runs principally on the cheaper grades, at from 45*s.* to 60*s.* per cwt, but these descriptions continue scarce. Fine flowers are quoted 62*s.* to 65*s*, c i f., and common at 51*s.* to 52*s.*

CINCHONA.—The auctions to be held at Amsterdam on June 19 will consist of 5,947 bales and 314 cases, weighing 530,851 kilos. The shipments from Java to Europe have amounted to:—

	1902	1901	1900	1899
May (Amst. lbs) ...	1,044,000	746,000	816,000	943,000
Jan. to May (Amst. lbs.)	4,199,000	4,169,000	3,252,000	3,964,800

CIVET.—For guaranteed pure civet 8*s.* per oz. is asked, but the bulk of the stuff offering is of common quality, and can be had at from 6*s.* to 6*s.* 6*d.*

COCA-LEAVES.—Good green Truxillo are quoted 9*d.* per lb., net. During March 695 bales were shipped from Java, of which 655 went to Bremen and 40 to Holland. The shipments from January 1 to March 31 have been:—

	1902	1901	1900	1899	1898
Bales	1,090	75	150	93	265

COCCULUS INDICUS is quoted at 8*s.* 6*d.* per cwt.

COCOA-BUTTER.—The result of the auctions held at Amsterdam on June 3 was as follows: Seventy tons Van Houtens sold at 64¾c. to 68¾c. per half-kilo. (average price 67·10c., against 67·70c. at the previous auction); 13 tons de Jong at 62½c. to 63c.; while of 13 tons Mignon offered, 1,200 kilos. sold at 62½c. per half-kilo. In the London auction, 60 tons Cadbury's brand sold at from 1*s.* to 1*s.* 0⅝*d.* per lb, average being 1*s.* 0 1/16*d.* against 1*s.* 0⅛*d.* at the previous auction.

COPPER SULPHATE.—The shipping season now being over the article is neglected, and prices are easier. On the spot, Anchor brand is quoted 19*l.* per ton, and Liverpool 18*l.* to 18*l.* 7*s.* 6*d.*, f.o.b.

CREAM OF TARTAR.—A scarcity of supplies on the spot has led to an advance of 1*s.* per cwt.; 98-per-cent. powder (B.P.) is now quoted 77*s.* 6*d*, and 95-per-cent, 75*s.* per cwt Best white crystals are 73*s.*, all spot.

CUBEBS.—The export of cubebs from Java during March amounted to 182 piculs, of which 166 were shipped to Singapore and 16 to Rotterdam. The shipments from January 1 to March 31 have been:—

	1902	1901	1900	1899	1898
Piculs ...	635	568	501	661	212

ERGOT is rather scarce on the spot and firmly held. Good sound Spanish has been sold this week at from 1*s.* 8*d.* to 1*s.* 8½*d.* per lb., spot.

GALLS.—Higher prices are asked for Chinese, and business has been done at 52*s.* 6*d.* per cwt., c.i.f.

GAMBIER.—Cubes are quoted 40*s.* per cwt., spot, which figure has been paid for small lots.

Digitized by Google

Gentian remains very firm, at from 19*s.* to 20*s.* per cwt, spot, and 17*s.* to 18*s.*, c.i.f.

Guaiacum.—Good glassy block is quoted 1*s* 6*d* per lb., net.

Jalap.—A parcel is offered at 4½*d.* per lb., net.

Menthol.—The cheap parcels which were offered at 13*s* 9*d.* per lb. have been cleared, and 14*s.* to 14*s.* 3*d.* is now asked for Kobayashi, small sales being reported. It is said that no Kobayashi crystals are to be had in Japan. Nippon-brand is offered at 14*s.*, c.i.f.

Musk.—Genuine pile I. thin skin blue pod is quoted 75*s.* per oz.; that offering at 72*s.* 6*d.* is understood to refer to piles I. and III. mixed.

Nux Vomica.—Bold bright Cochin seed has been sold at 11*s.* per cwt., spot. A Calcutta advice, dated May 15, states that there are about eight tons on the market, but quality is not satisfactory. The asking rate is Rs. 2 12.

Oil, Anise, Star, is quoted 4*s.* 3*d.* to 4*s.* 4*d.* per lb, spot.

Oil, Bergamot.—One importer quotes 6*s.* 10*d.* per lb, c.i.f., in contract quantity.

Oil, Castor.—The value of Calcutta seconds is 2¾*d.* per lb., and small sales are reported thereat. A report from Calcutta, dated May 15, states that the demand has somewhat improved, but sales are retarded, owing to crushers generally not accepting the prices offered.

Oil, Cod-liver.—The Norwegian market (writes our Bergen correspondent on May 31) has been excited on account of very bad news from Finmarken, where the fishing has come to a standstill, partly on account of stormy weather, but chiefly owing to lack of fish. Prices are rapidly rising, and to-day 125*s.* per barrel, f.o.b. Bergen (see our cablegram for latest quotation), has been paid for best Lofoten non-freezing oil. The greater part of this year's production has passed into a few firm hands. The exports from Bergen to date amount to 3,733 barrels, against 4,730 barrels at the same time last year. Quotations on the London market have risen almost daily, in sympathy with Norway, and although there has been more inquiry, not much business is reported on account of the prohibitive prices. Early in the week 130*s.* per barrel was paid on the spot, but later 145*s.* was reported to have been paid for best medicinal oil. Agents' quotations are nominally from 145*s.* to 150*s.*, c.i.f., but several are without prices, as their principals have temporarily withdrawn from the market. Newfoundland oil has been sold at 4*s.* 6*d.* per gal., but holders now ask 5*s.*

Oil, Lemon.—Genuine is quoted 2*s.* 7*d.* per lb., c.i.f.

Oil, Olive.—The export of olive oil from the port of Corfu was more than double last year compared with the preceding year—viz, 18,197 barrels during 1900, and 42,350 barrels in 1901, with a value of 31,063*l.* in the former, and with 63,321*l.* in the latter year, and this owing to better quality and price and the large stock in hand. The crop of the oil in 1901 was estimated at about 110,000 barrels.

Oil, Orange.—Sweet is quoted 5*s.* 4*d.* to 5*s.* 5*d.* per lb., c.i.f.

Oil, Peppermint.—American HGH is quoted 8*s.* 9*d.* per lb., London terms.

Oil, Sandalwood.—Best English drawn oil is quoted 1*s.* 9*d.* per lb.

Oils, Fixed.—Linseed is easier at 32*s.* 3*d.* per cwt. in barrels. Refined rape is unchanged at 27*s.* 6*d.*, and refined cottonseed is 27*s.* 3*d.* to 28*s.* 3*d.* Ceylon cocoanut is 33*s.* 6*d.*, spot, and Cochin 37*s.* Lagos palm dull at 29*s.* per cwt. Petroleum steady at 7⅝*d.* to 7¼*d.* for American water-white, and 5⅓*d.* to 6⅜*d.* per gallon for Russian. Turpentine has been active at advancing prices, American closing 35*s.* 3*d.* to 35*s.* 6*d.* per cwt., spot.

Opium.—The London market remains passive, with little business, Persian being quoted 8*s.* 9*d.* to 9*s.* per lb., spot. Good Smyrna druggists' is rather scarce on the spot at 8*s.* 3*d.* per lb.

Smyrna, May 23.—Serious damage to the already matured crop has been prevented by a favourable change in the weather, rain having fallen throughout the week. The first arrivals of new crop are expected on the Smyrna market in a day or two, but several weeks must elapse before this will be available for shipment. The new qualities are found to be rich in intrinsic render, which is generally the case whenever there is a large crop, for the farmers, having a considerable supply of the natural gum, do not have recourse to adulteration to increase their produce. The market is much weaker, but values, however, have not declined much lower than what they were last week. The sales consist of four cases selected rich material at from 7*s.* 8*d.* to 7*s.* 11*d.* per lb., c.i.f. The arrivals of old crop in Smyrna to date amount to 3,145 cases, against 3,846 cases at the same time last year.

Constantinople, May 30.—Copious showers have fallen since our last report, and crop prospects are again excellent. Market is unchanged, but holders show no signs of any serious giving way. There are no sales to report.

Quinine.—A very dull market in second hands, with prices nominal. Good brands of German sulphate could probably be had at 1*s.* 0½*d.* per oz., spot, although for "new" stuff 1*s.* 0¾*d.* is wanted. Makers' price is 1*s.* 3*d.*

Saffron is very firm and prices in Spain are gradually moving upwards. Best B.P. quality is quoted 24*s.* 6*d.* per lb., net, on the spot.

Seeds.—Russian *Anise* is quoted 19*s.* 6*d.* per cwt., but is little inquired for. *Canary* slow but steady, at 36*s.* 6*d.* per quarter. *Coriander* firm at 10*s.* 3*d.* per cwt. for Morocco, being scarce at the moment on the spot. The new crop *Cumin* is arriving from Morocco and is of excellent quality, but the demand is slow. The nominal quotations are 25*s.* per cwt. for fair, and 27*s.* for good. Dutch *Caraways* are unchanged at 24*s.* 6*d.* per cwt. *Hempseed* is scarce and dear at 36*s.* per quarter. *Linseed* firm at 60*s.* to 62*s.* per quarter for fine clean. *Fenugreek* slow of sale at 7*s.* 6*d.* per cwt.

Shellac.—There has been a fair trade on the spot, the value of standard TN being 109*s.* per cwt. Futures have been more active at dearer prices, the business done including June delivery at 108*s.* to 108*s.* 6*d.*, July 109*s.*, August 108*s.* to 109*s.*, September 108*s.* to 108*s.* 6*d.*, and October 110*s.* to 111*s.* per cwt.

Soda Nitrate is gradually weakening, and the spot-price is now 9*s.* 9*d.* per cwt. for refined.

Soy.—Chinese is worth from 1*s.* 5*d.* to 1*s.* 10½*d.* per gallon, according to quality.

Spermaceti.—American refined is quoted 11½*d.* per lb., c.i.f., in quantity.

Spices.—As usual on Derby Day, the public sales were not held last Wednesday. Business privately has been on a small scale, and there are no alterations in prices to note. Cochin *Ginger* is held for 39*s.* to 40*s.* per cwt. for washed rough. Japan is quoted 33*s.* to 34*s.* per cwt. Zanzibar *Cloves* are steady, at 3¼*d.* per lb. for August-October delivery. Singapore black *Pepper* is quoted 5⅝*d.* per lb; Singapore white, 9¾*d.*; Penang, 9*d.*; and Siam, 9⅜*d.* per lb.

Sugar of Milk.—Finest white American powder in barrels is quoted 38*s.* 6*d.* per cwt.

Tamarinds.—A Calcutta advice, dated May 15, states that supplies have somewhat increased and prices are easier.

Vanilla.—The large supply of 1,250 tins was offered at auction on Tuesday, when over a thousand were sold, common and fine being dearer, while medium were irregular but easier. Fair to good chocolate Seychelles, 7 to 8½ inches, sold at from 14*s.* 6*d.* to 19*s.* 6*d.*; 5 to 7 inches, 7*s.* 3*d.* to 15*s.*; 4 to 6½ inches, 6*s.* 9*d.* to 11*s.* 6*d.*; 2½ to 4 inches, 6*s.* to 7*s.* 6*d.* per lb. Mauritius, 7 to 8½ inches, from 16*s.* up to 22*s.* 6*d.*; 3½ to 6½ inches, 6*s.* 6*d.* to 14*s.* per lb.

Wax, Bees'.—The export of beeswax from the Portuguese colony of Beira during 1901 amounted to 117,762 lbs., valued at 4,427*l.*

Wax, Japanese.—For good pale squares 43*s.* per cwt. has been paid, and very little is now to be had.

Mr. G. Marconi will lecture on "The Progress of Electric-space Telegraphy" at the Royal Institution on June 13.

Mr. W. E. Bambrough, chemist and druggist, formerly of Penzance, is opening a pharmacy at 207 King's Road, Fulham, S.W.

G. B. Kent & Sons (Limited).—The directors have declared interim dividends at the rate of 5½ per cent. per annum upon the preference shares and 5 per cent. per annum on the ordinary shares.

Digitized by Google

South African Drug-trade.

By OUR SPECIAL REPRESENTATIVE.

IN my walks abroad I have had the opportunity of hearing many things that one does not generally learn at home, and it may interest merchants and packers to read what South African pharmacists and others are saying about various trade topics, and what representatives of the craft in South Africa consider as "pointers" to some of the big houses who send out drugs, proprietaries, and adjuncts in large quantities to this country. In the first place, there is a strong feeling in drug-circles in Cape Town regarding

STAMPS ON "PATENT" MEDICINES,

and it is warmly urged that British proprietaries might very well be exported to this country *without* the stamp. Firms like Elliman, Sons & Co., Scott & Bowne, and a few others already send out their specialities without the English stamp, and it is somewhat of a mystery to dealers here why manufacturers and wholesale houses generally cannot fall into line and export *sine* stamp. In a number of instances they refuse to do so, and it is not unlikely that the question will be taken up by pharmaceutical societies in South Africa. [It has since been well discussed. See *C. & D.*, May 17, page 758, and page 772.—EDITOR.] In the case of a parcel of stamped proprietaries coming into Cape Town, what takes place? Not only have the people in the colony to pay the English stamp-duty, but in the majority of cases 20 per cent. Customs Union duty also on the actual value of the stamps, that being the duty on patents and proprietaries in South Africa within the Customs Union. Mr. Frank C. Mathew, in the course of a conversation, was most emphatic on this point. In his opinion there is absolutely no legitimate reason why these medicines should not come out unstamped. All the more prominent American lines reach South Africa direct from the manufacturers, and, of course, are unstamped. It is true that they have in many instances carried the American war-stamp, but buyers in South Africa never felt that, wholesale prices remained the same—or, in other words, the American manufacturers paid the tax. The English 1*s.* 1½*d.* and the American 25c. articles retail at the Cape at from 1*s.* 3*d.* to 1*s.* 6*d.* As the situation stands in South Africa, the retailers feel that they do better with prominent American patents than with the English goods of the same class.

PHOTOGRAPHIC MATERIALS.

In cameras, plates, and all photographic requisites, British firms do the business right through the country. Recently, however, American cameras have found some favour, and they are being imported to a slight extent, but it is not unlikely that they may come in stronger in the future. As regards films and plates there is not much information obtainable, but if Americans get in with the camera there appears to be no reason why they should not also do equally well with the adjuncts. There is also a very extensive business in mounts. At one of the largest wholesale houses there was a serious complaint against the manner in which photographic goods are packed in England for exportation, and instances were given in which numbers of packages of plates were entirely spoiled because they had been sent out in boxes too light to stand the rough usage of loading and unloading during shipment. Some of the boxes were filled to the brim, and when the outer shell was damaged there was not sufficient inner packing to preserve the delicate goods inside, with the result that they also met with treatment which made them of no use whatever on reaching their destination. In another instance one of the big houses here take the precaution to have their goods packed or superintended by their own house in London, so that they may arrive here in first-class condition.

TOILET-SOAPS.

In high-grade soaps the French keep the lead, but there is not so great a demand for these as for perfumes, and home goods are consequently not far behind. The ordinary run of toilet soaps sell very well all along the littoral, and Pears' soaps, Vinolia, milk-and-sulphur and Erasmic herb soap are all met with. The local wholesale prices of these are out very fine in many places, as most of the big stores handle them both in the wholesale and retail. German soaps of the ordinary toilet variety are more in evidence in Port Elizabeth, East London, Natal, and Delagoa Bay than in the Colony proper, while the trade in American toilet-soaps is hardly worth more than passing attention.

TINCTURES AND EXTRACTS.

The demand for fluid extracts in Cape Colony is supplied by English or local manufacture. Tinctures are made locally by the large firms, but pharmacists and drug-stores import large quantities from home. The price of German so-called B.P. tinctures landed in South Africa is much lower than English price, but at the Cape not much advantage is taken of that fact, as some time ago German tinctures were found to be not up to B.P. strength. German tinctures and soaps are more to the fore in Natal than in Cape Colony, which is somewhat difficult to understand, the Cape being so much more cosmopolitan in its dealings than the "garden colony."

PACKED COUNTER-ADJUNCTS.

English firms have been paying some attention to this department of trade, and the effect is at once apparent on visiting the pharmacies and drug-stores. Evans, Lescher & Webb, Lorimer & Co., and Southall Brothers & Barclay must all have an excellent trade out here. But the American proprietaries are also much in vogue, as will have been gathered from the notes on wholesale houses.

MINERAL-WATER ESSENCES, CHEMICALS, AND CO_2.

The business in mineral-water essences is in British hands, and such firms as Stevenson & Howell and W. J. Bush & Co. get the cream of the trade. The American fruit-essence business is practically *non est*. Soda bicarbonate, however, continues to come into Cape Town, and the trade in this requisite appears to be on the increase. There have of late also been some heavy shipments of American cream of tartar landed. Liquefied CO_2 in cylinders, however, is displacing the soda-and-acid process. There is a point for the consideration of English manufacturers here again. German CO_2 can be landed in South Africa at about the same price as the English costs at the ship's side at home, and British manufacturers will do well to keep this fact in mind in view of the large increase in the mineral-water trade which is likely to take place here within the next few years. Saccharin is also in large demand in mineral-water manufacture. So far as I could gather, there is only one chemist in the Western Province of Cape Colony—Mr. R. S. Smiles, of Mowbray—who is manufacturing mineral waters and running a drug-store at the same time; but in the Eastern Province chemists and druggists take up this line more seriously, and the syphon business there is, generally speaking, very good.

VARIA.

Dental goods, teeth, and the necessary implements for the profession of dentistry are dealt in in fast-growing quantities. This business has gone forward greatly during the past few years, and more than one large house has launched out considerably in these lines as well as in surgical instruments with no small amount of success.

Confectionery, cachous, medicinal lozenges and the like are all from British firms so far as the drug-trade is concerned, and the same may be said of mineral-water essences, as the American fruit-essence business is now practically a thing of the past.

A WART-CURE.—Some time ago we received from Messrs. F. Newbery & Sons, of Charterhouse Square, E.C., a specimen of "inventiveness and confidence" on the part of a Danish manufacturer, which we think will be hard to beat. It is a sample of a marvellous remedy for warts, called a "Vidundersnoren" or "wonderful string," and consists of a piece of blue-coloured worsted about one foot long. The directions for use, as given in English, are as follows:—

When the person, whose warts are wanted to disappear, has fallen asleep, you must tie knots on the string—one knot for every wart—touching the wart in question as near as possible. After this you must bury the string on a spot where it is likely to be undisturbed. Everything is to be made in the greatest silence.

The price of this remedy, which appears to have a great future before it, is (with instructions) 5*s* per string.

A SERGEANT-COMPOUNDER'S EXPERIENCE.

Although many British chemists' assistants freely gave their services to the Government during the Boer war, comparatively few had the experience Mr. George T. Branch had in getting remuneration more consistent with their position as pharmacists than compounders who volunteered at home for less than Yeomen got. Mr. Branch was principal demonstrator at the Metropolitan College of Pharmacy until 1900, when he went out to South Africa. He has been endowed by nature with an excellent constitution and an abnormal thirst for botany and bug-hunting, as our American *confrères* are accustomed to call entomology. After three months' pastime of that character at the Cape he got a touch of the war-fever, and offered his services to headquarters in any capacity, but especially as a medical assistant. He was promptly appointed a sergeant of the Cape Pioneer Regiment (3rd Battalion), and, as he begged not to be placed at any of the base-hospitals, they kept him always on the trek. Elandsfontein, Boksburg, Springfontein, and other places in the Vaal district have been centres of his work up to four months ago, when he was sent down the country with a heavy dose of enteric fever. Now Mr. Branch is at home for a short holiday, and will return by-and-by to take up chemical work at one of the Transvaal mines.

Mr. G. T. Branch.

It is intensely interesting to listen to all that Mr. Branch has to say in regard to his duties as a sergeant-compounder. He has nothing but good to say of the medical officers under whom he worked, or, rather, to whom he was responsible; for it is a peculiarity of Mr. Branch's case that, saving the first few weeks, when the surgeon-major supervised his work, he practically was surgeon, physician, and pharmacist to the squads of men whom he accompanied. The squads were in many engagements, and Mr. Branch and the four orderlies of the R.A.M.C. who assisted him did all the dressings that were necessary, the most serious cases being despatched as quickly as possible to the nearest hospital. During his service of about two years, 1,400 men passed through his hands, some of them suffering from enteric fever; but he lost not a single case. This was undoubtedly owing to the attention given to the sanitation of the camps. Thus, whenever the company to which Mr. Branch was attached went on the trek, he made a thorough inspection of the camping-ground, paying special attention to the water-supply, and had all the water treated with permanganate of potash and boiled before the troopers used it. This helped to ward off enteric fever, and he had few cases comparatively. Much of the time was spent in blockhouses, and there the duties were largely sanitary also. After a few months' service, Mr. Branch was advanced to the position of staff-sergeant, and was practically left to himself, the P.M.O. of the district to which he was attached having realised from the report-sheets sent in that the men were in good hands.

Mr. Branch joined the forces at three times the pay that men who enlisted at home received, and he was treated in every respect more like pharmacists who joined the army for the Crimean War and Indian Mutiny. We asked Mr. Branch what he thought of the Concentration Camps, and he replied that they are marvels of organisation and cleanliness. Everything possible is done for the inhabitants of these camps, and we gather that, had it not been for them, the death-rate in the civilian population of the Transvaal would have been much higher. He speaks well of the future of the Transvaal, but says that there is several years' work to be done before the country reaches anything like the condition it was in before the war broke out. The Transvaal has been swept as clean of houses as if one were to draw a hand through a child's brick house and sweep the bricks off the table. It will take time to restore these houses and to replenish the farms, for farming, in Mr. Branch's opinion, will be much developed in the new colonies.

PATCHOULI AND YLANG-YLANG OILS.

Some interesting details of the plants which yield the oils of patchouli and ylang-ylang are given in the current issue of *Roure-Bertrand Fils Report*, from which we reproduce the illustrations here shown. The source of the Penang oil

Pogostemon Patchouli var. Penang.

Pogostemon Patchouli var. Java.

is well known to be *Pogostemon Patchouli*, but that of the Java oil has hitherto been a matter of doubt. It now appears that the two plants are merely varieties of *P. Patchouli*, the Javanese tree having more elongated leaves. The leaves of both plants are shown above. Numerous foreign leaves have been found in the bales of patchouli-leaves which appear on the European market, and, according to Bertrand, the principal of these are the two leaves here depicted—viz., *Urena lobata* and *Hyptis suaveolens* The former is practically inodorous, and is known by the Malays as "down poo poolate." The latter has an odour of pennyroyal, and is called "Selasih hutan." It is usually assumed that ylang-

Urena lobata.

Hyptis suaveolens.

ylang and cananga oils are derived from the same plant, and that the difference in the method of production accounts for the great difference in the odour-values of the oils. Bertrand supports this statement, but at the same time points out that a Javan distiller affirms that his oil of cananga is distilled from an entirely different plant from *Cananga odorata*. Bertrand considers the differences in climate and in the methods of distillation are quite sufficient to account for the difference noted in the oils.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4d.; Summer or Winter Number, 1s.; DIARY, 3s. 6d. Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

CIRCULARS AND PRICE-LISTS.

HOW TO DISTRIBUTE THEM TO THE DRUG-TRADE.

MANY of the best advertisers in the drug-trade have endorsed our view that it is more effective as well as cheaper to distribute circulars and price-lists stitched up in THE CHEMIST AND DRUGGIST than to send them singly by post. We make such insets in the *C. & D.* notable by the fact that we only receive them twice a year for distribution, and we ensure that they get into the hands of the right people. We would advise those who think of having an inset in our Summer number (July 26, 1902) to write to our Publisher for particulars. He will also give assistance, if required, in designing or arranging insets.

"PHARMACEUTICAL FORMULAS."—We are now binding this work entirely in black buckram, which experienced librarians find is more lasting than leather. The price of the work remains the same—7s. 6d., by post 8s., from our offices, or for the published price from any wholesale house.

Summary.

THE MIDWIVES BILL has passed through the House of Commons (p. 934).

A DYSENTERY BACILLUS has been discovered, as well as a curative serum (p. 913).

PHARMACEUTICAL APPRENTICESHIP in Germany is described by Mr. H. Helbing on p. 941.

THE POISONS SCHEDULE of New South Wales has been considerably augmented (p. 915).

OFFICIAL DETAILS of the arrangements for the B.P.C. meeting at Dundee are given on p. 918.

REGINALD BETTS, an English chemist and druggist, has been found dead in Sydney, N.S.W. (p. 915).

LATEST advices from California indicate that there will be very little honey available this year (p. 937).

BEER is now brewed without mashing. So Dr. T. E. Thorpe told the Chemical Society last week (p. 920).

MR JOHN BOLAM, a well-known Newcastle chemist, has retired from business. His portrait is given on p. 941.

A FOUNTAIN OF LIQUID AIR 6 feet high was shown by Professor Dewar to the Prince of Wales last week (p. 910).

KODAK (LIMITED) is taking proceedings under the Trade-Marks Act against sellers of certain photographic films (p. 920).

BRITISH TRADE IN MAY was good. We compare it and the year up to now with the same periods of 1901 and 1899 (p. 926).

THE causes of Mrs. Crossley's bankruptcy are mentioned in a report on p. 931. Mrs. Crossley traded as Blanche Leigh.

PHOSPHO-MANNITIC ACID resembles in some respects glycerophosphoric acid, and is suggested as a therapeutic agent (p. 922).

A FEW MORE SUBSCRIPTIONS for the Chemist Malins appeal-case are announced. The Magistrate has refused to state a case (p. 935).

THE POLICE have prosecuted in two cases under the Irish Pharmacy Acts, and secured convictions—in one case the full penalty (p. 930).

THE TRADE-TITLES "Sedna" and "Maletta" provided the Dublin High Court with an interesting case last week, which is reported on p. 912.

THE woman who personates Mary Masters has been before the Yeovil Magistrates (p. 911). A portrait of the real Mrs. Masters will be found on p. 942.

MR. ROBINSON'S POLICY as a pharmaceutical councillor is to give members full opportunity of considering proposals before voting on them (p. 917).

THE BRENTFORD MAGISTRATES have decided that weights used in checking work produced by employés are used in trade and must be stamped (p. 927).

THE PRIVY COUNCIL OF IRELAND has refused to sanction a compulsory course of theoretical chemistry for the Pharmaceutical Licence examination (p. 919).

ABOUT 93,000*l.* is the sum represented in seven recent wills, abstracted on p. 922, but three of them account for 75,000*l.*, and that was not made in pharmacy.

MR. NEWSHOLME has been re-elected President of the Pharmaceutical Society of Great Britain, Mr. Allen Vice-President, and Mr. Atkins Treasurer (p. 916).

PEPSIN-WINE containing glycerin may only be sold, say the Inland Revenue authorities, by those who hold a wine-licence. We think this view should be modified (p. 925).

A UNION of educational and examination authorities is suggested by the President of the Pharmaceutical Society (G.B.) to keep the Boards of Examiners and Council in closer touch (p. 917).

DUTY-FREE SPIRIT is the subject of an addition to the Finance Bill, which was moved by Mr. Haldane on behalf of the Explosives Committee, and approved by the Chancellor of the Exchequer (p. 933). We comment upon the significance of the new clause (p. 926).

MR. DICKINSON, sitting at the Thames Police Court, has heard evidence and argument for and against the Inland Revenue action against Mr. Glyn-Jones, for selling recommended ammoniated tincture of quinine unstamped. The case is fully reported on p. 928.

MARKET movements are few and unimportant this week, but there is a steady undercurrent of firmness in most articles of produce. Gentian, Japanese wax, and oil of bergamot are higher. Quinine has been more inquired for, and has touched 1s. in second-hands. The drug-sales are reported on p. 937.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

A *conversazione* of the freemen of the Spectacle-makers' Company is to be held on June 19 at the Carpenters' Hall, London Wall, E.C.

The tender of Messrs. Allen & Hanburys (Limited) for the supply of drugs to the Hammersmith Board of Guardians has been accepted.

Mr. Charles Estcourt, the Manchester city analyst, reports that during the last quarter he analysed eight samples of drugs, and they were genuine.

The Rotherham Board of Guardians has selected Mr. G Coverdale, pharmaceutical chemist, to supply drugs to the workhouse for the ensuing half-year.

Messrs. Middleton Brothers, of St. George's Street, E., have obtained the contract for the supply of disinfectants to Dartford (Kent) Urban District Council for the ensuing year.

The medicines which Mr. Seyler, the Glamorgan public analyst, examined last quarter were Friar's balsam, flour of brimstone, tincture of rhubarb, and paregoric, and they were all genuine.

St Faith's (Norwich) Board of Guardians has accepted the tender of Mr. John Cossey, chemist and druggist, Norwich, for the supply of trusses to the Workhouse for the next half-year.

Mr. Alfred Livesey, chemist and druggist, Tenby, has been appointed chemist and dispenser to the Pembrokeshire Imperial Yeomanry during their three weeks' annual encampment at Tenby.

It was agreed at the meeting of the London County Council on June 10 that, in view of the large increase in the photographic work, the chemist should be empowered to obtain further assistance for at least three months.

William Prendergast, otherwise Edward Barrow (58) druggist, has been sentenced to fifteen months' hard labour for conspiracy in connection with a bogus company of which he was the head, and which was known as "Barrow & Way."

At a meeting of the Governors of the Royal Albert Memorial, Exeter, on June 9, a recommendation by the College Committee, that the Principal should consult the chemists of Exeter and report upon the desirability of continuing the class in pharmacy, was adopted.

At the Rochester County Court on June 10, Mr. Albert Edward Farrow, chemist and druggist, High Street, Old Brompton, Chatham, obtained judgment against Mr. Fred Conquer (a musician in the Royal Engineer band, Brompton Barracks) and his wife for 6*l.* 14*s.* 5*d.* for goods sold and gas consumed.

An explosion occurred on June 5 at the firework-factory of Messrs. James Pain & Sons, at Mitcham. The explosion took place in a shed where the chemicals are stored, Mr. Craig, the manager, being employed mixing chemicals for coloured lights at the time. The manager and a lad who was also in the shed were killed.

At Sheffield on Tuesday, June 10, the Sheffield Chemists Company (Limited), aërated-water manufacturers, Montford Road, Sheffield, were fined 3*l.* and costs for employing three women after 2 o'clock on Saturday afternoon, May 17; and David Holmes, mineral-water box manufacturer, Sheffield, was fined 4*l.* and costs for failing to securely fence the fly-wheel of a gas-engine. Both cases were under the Factory Act.

Royal Institution.

The Friday evening discourse on June 6 was by Sir Benjamin Baker, on "The Nile Dams and Reservoir." The Press were not admitted because of the presence of the Prince and Princess of Wales, but from an official account we learn that some interesting experiments took place in the library. The best of these seems to have been one by Professor Dewar, in which a fountain of liquid air, six feet high, was produced and illuminated from above. Beautiful condensation effects were produced as the jet broke into spray and clouds, and when, eventually, the liquid air reached the surface of the water, snow and ice were abundantly produced.

London Chemists' Association.

The first annual general meeting will be held on Wednesday, June 18, at the Holborn Viaduct Hotel, at 3 P.M., to receive the report of the General Purposes Committee and to elect a Committee for the ensuing year. Mr. F. E. Bustard has given notice that he will submit the following resolution to the meeting:—

That this Association urges upon the Council of the Pharmaceutical Society the advisability of bringing a test-case before the courts of law at an early date for the purpose of deciding finally the right or otherwise of limited liability companies to use the title of "chemists."

Coronation Notes.

Mr. J. H. Weston, chemist, Runcorn, has published a special Coronation issue of *Weston's Household Journal*, intended as a souvenir of the Coronation. Information is given about the ceremony, the regalia, and the origin of the national anthem.

Mr. Russell J. Colman, the Mayor of Norwich, and a director of J. & J. Colman (Limited), has placed his grounds at Crown Point, where accommodation can be provided for 50,000 guests, at the service of the inhabitants of the city on Coronation Day, and has subscribed over 100*l.* to the prize-fund for the Coronation sports.

Besides the firms mentioned in last week's issue (page 876) the following intimate their intention of closing on Thursday and Friday, June 26 and 27:—Messrs. Evans, Lescher & Webb; Messrs. Baiss Brothers & Stevenson (Limited); Messrs. Corbyn, Stacey & Co. (Limited); The "Sanitas" Company (Limited); Messrs. Raimes & Co. (York); Messrs. Potter & Clarke; Messrs. T. & H. Smith & Co.; Messrs. Arthur H. Cox & Co., Brighton.

Those closing on Thursday, Friday, and Saturday, June 26 to 28, include THE CHEMIST AND DRUGGIST, and Messrs. George Eade & Sons. We shall be glad to hear of others.

A Pharmaceutical Contingent.

The *Carisbrook Castle*, which arrived from the Cape last Saturday, contained a goodly contingent of the drug-trade. Mr. George Darroll, Cape Town, President of the Pharmaceutical Society of Cape Colony, was on board, accompanying his aunt, Mrs. Darroll, of Wynberg, who with her family is to settle in England. There were also Mr. J. R. Barnsley, chemist, of Beaconsfield, C.C.; Mr. O. C. Allen, who was formerly with Lennons and is now in business in Portuguese territory; Mr. Frank Blackmore, pharmaceutical chemist, Weston-super-Mare, who has been visiting South Africa; and Mr. Astell J. Willson, of Port Elizabeth, an old apprentice of Mr. William Hayes, Dublin, who has for more than four years been one of the representatives of Messrs. C. E. Gardner & Co.

To Liquidate Peace.

Messrs. Evans, Sons & Co., of Hanover Street, Liverpool, having received an order for upwards of 2,000 cases of Montserrat lime-fruit juice for South Africa, the consignment was despatched from the Lime-Fruit Juice Stores, Fleet Street, Liverpool, on June 10, in sixteen large lorries, and the sight of so unusual a scene attracted hundreds of spectators as the carts traversed the principal streets of the city, on their way to the dock at Birkenhead for shipment. The lorries were decorated with the Union Jack and other patriotic emblems, and inscribed with the following legend in bold red characters: "Welcome Peace and Prosperity in South Africa. For the Men in Khaki. Montserrat Lime-Fruit Juice."

Pure Food.

At an influential gathering of public analysts of the metropolis at the Westminster Palace Hotel on June 3, it was decided to form a National Pure-food Association, with the object of arousing interest in all questions affecting the national food-supply, such as "the sources from which food-

Digitized by Google

stuffs are obtained, the adequacy or otherwise of supplies, the superior value of home products, the advantages of utilising as far as possible colonial products, and the purity of food-materials, with their general relationship to the public health."

"Beware of Mary Masters."

At Yeovil on June 2, Mary Masters was charged with wandering abroad for the purposes of begging and gathering alms. She pleaded guilty, and Mr. Arthur Newton, chemist and druggist, of Hendford, said the woman called at his house, and with a polite bow said, "Mr. Newton, I presume?" On his replying in the affirmative the prisoner said that her late husband was a chemist in Worcester, and he died fifteen years ago. She was a candidate for the Benevolent Fund, but had not been able to get on the Fund up to the present. She asked for help, and he gave the woman a shilling. Subsequently his assistant called his attention to a letter in one of the trade journals, which set forth that a woman giving the name of Mary Masters, who represented she was the widow of a chemist, was practising a form of imposture in the south-eastern counties and London in the manner adopted by the prisoner. He communicated with the police, and Masters was arrested. The Bench decided to associate pardon with the Peace proclaimed on the previous day, and the woman was discharged along with all the other prisoners. [See also note on page 942.]

Presentation to Mr. Frederick Lawson, B Sc.

On Thursday afternoon, June 5, the principals and students of the Northern College of Pharmacy assembled in the lower lecture-room for the purpose of presenting Mr. Lawson with a case of cutlery and plate on the occasion of his approaching marriage. Mr. Sharp presided, and called upon Mr. Sixsmith to make the presentation. In the course of his remarks, Mr. Sixsmith said subscriptions had been given most readily, and the letters received from past students one and all expressed the debt they owed to Mr. Lawson for his never-failing assistance in their studies. The presentation, he continued, showed the kindly feeling that existed between the students and their tutor. Mr. Lawson, in accepting the present, expressed the very great pleasure and surprise it gave him. Probably some of the subscribers were at the College at the same time as his intended, who is a chemist, so that most likely some of the donations were given in consideration of her, and on that account he would like to express thanks on her behalf. He was pleased to say that the kindly feeling which he had for his pupils did not terminate with the examinations; he was always pleased to welcome them at all times. Mr. Beech proposed a vote of thanks to Messrs. Sharp and Sixsmith, who had been instrumental in collecting subscriptions and purchasing the present. This Mr. Holden seconded, and it was carried *nem. con.* Mr. Hodges thought the time opportune for singing "For He's a Jolly Good Fellow," which was done. Then a half-holiday was proposed, at which point Mr. Clayton, who had remained passive during the former part of the proceedings, remarked, "This is where I come in." He thought a holiday a very proper way of bringing such a pleasant proceeding to a close. So all agreed.

Birmingham Notes.

Messrs. Holden's drysaltery and varnish works at Bordesley Green Road took fire on Wednesday, June 4, but no serious damage was done.

Mr. G. H. Brunt, the Hon. Secretary of the Midland Pharmaceutical Association, has been seriously ill with pneumonia, but the prospects of recovery are now very hopeful.

The lucky lady pharmacist, Miss C. M. Fox, who succeeded in getting the St. Pancras dispensership in the face of so much competition, is well known in Birmingham. She was a pupil at the General Hospital and with Mr. F. H. Alcock, and has held some good appointments.

A smart advertisement emanated last week from London, many local professional men being recipients. It was in the form of a booklet bound in red with a gilt crown on the cover, and when the envelope was first opened it suggested at least an invitation to the Abbey. But alas! it was only an advertisement of somebody's wares.

The grocers are formulating a scheme which will enable them to secure a living-profit on all proprietary articles Mr. S. A. Wright, of Smethwick, stated that he deplored the existence of cutting and "the fact that so many of their fellow-traders were calling their creditors together." This at our city's quarterly meeting on Wednesday.

Joseph Beech, chemist, of 269A Icknield Park Road, Birmingham, was arrested on June 6 under a warrant charging him with performing an illegal operation on the wife of a fitter named Adderley. He appeared before the Magistrates at the City Police Court, and was remanded till June 9, his solicitor stating that he believed they had a complete answer to the charge. On June 9 Beech was brought before the Stipendiary, when a further remand was granted. Owing to the critical condition of Mrs. Adderley, bail was refused.

Second Time Fails.

The premises of Mr. T. Kenny, chemist and druggist, Beverley Road, Hull, have been again entered by burglars, but fortunately nothing of any value was stolen. Some few months ago Mr. Kenny's premises were burgled of 20*l.* His shop was in charge of his son and a boy, when a well-dressed man entered and asked his son to forward at once some syphons of soda-water to an address in Beverley Road. The lad was despatched on the errand, and he had scarcely left the place when another man went in and said he had been sent to make arrangements for fixing a large sign on behalf of Beecham's at the side of the house. He drew Mr. Kenny, jun., outside, and although the shop was only left a short time a third man entered and quickly cleared the post-office till of 20*l.*, a sum which Mr. Kenny had to make good within twenty-four hours.

Mineral-water Bottle Dangers.

At an inquest held at the London Hospital on June 7, it was stated that deceased, the son of a mineral-water manufacturer in Mile End, went for a bottle of lemonade to drink, and the bottle, bursting in his hand, cut his neck, and he died in the London Hospital. In reply to Mr. Wynne Baxter, the father of deceased said that the gas was put into the bottles by means of a machine which regulated the pressure. The Coroner: According to the evidence, soda-water and lemonade bottles are more dangerous than many bombshells.

Accidents to Chemists.

On May 31 a retired chemist named William Neal, living in Brighton Road, Croydon, fainted and fell in the street. The medical man who was called in found that Mr. Neal had fractured both his skull and his right thigh, besides sustaining other injuries. He gradually sank, and died a few days later.

Mr. T. J. Woodcock, chemist and druggist, Church Plain, Yarmouth, was driving home through Northgate Street, when his pony and car collided with a new electric tramcar out on a trial trip. Mr. Woodcock was thrown out and sustained injury to his head. He was treated at a neighbouring surgery, and then conveyed home. His vehicle was badly smashed.

Mr. S. A. Sturton, pharmaceutical chemist, Goldhawk Road, Shepherd's Bush, W., while riding a bicycle in the neighbourhood of Willesden, a few days ago, fell sideways from his machine and sustained severe concussion of the brain. The case at first assumed very serious aspects, but recent inquiries show that Mr. Sturton is progressing favourably.

Students' Outings.

The annual botanical excursion of the School of Pharmacy Students' Association took place on June 7 to Caterham and the neighbourhood. An early start was made from Charing Cross, quite a large party having assembled. After a little delay at Caterham, owing to a slight shower of rain, the party tramped through the woods to Godstone, hunting for flowers by the way. Everything was very backward, but a large and varied assortment of specimens was obtained. A halt was made by the way for lunch about midday, and Godstone was reached by 4 o'clock, the party presenting a rather dilapidated appearance, owing to having been caught in a thunderstorm about an hour previous. A good tea at Ye Clayton—a fine old village inn—soon restored all to

Digitized by Google

good humour. Tea over, Mr. R. R. Bennett proposed a vote of thanks to the Hon. Secretaries, Messrs. Collett and Hines. This was cordially awarded, and Mr. F. G. Hines then moved that the thanks of all be tendered to Mr. W. H. Lenton, who had assisted in the arrangements and acted as leader and guide; also to Messrs. H. Deane and R. R. Bennett for their kind assistance. This was likewise tendered to the full, and the return journey by road to Caterham was commenced, and all journeyed back to London sorry to leave the pleasant Surrey hills.

On June 5 the students of the Sheffield College of Pharmacy, accompanied by the Principal (Mr. J. W. J. Turner), went to Manchester and had a practical day's outing. Microscopy technics were reviewed at the laboratories of Messrs. Hakers & Garnett (Limited), Longsight, after which the Botanical Gardens at Old Trafford were visited. Practical pharmacy was demonstrated at the laboratories of Messrs. J. Woolley, Sons & Co. (Limited), where B.P. ext. ipecac. liq. and ext. bellad. liq. were being made on a large scale, and capsule making and filling, gelatin-pill coating, the evaporation of liq. sarsæ co. conc., and other processes were seen in full operation. Materia-medica specimens were afterwards inspected at the exhibit of Messrs. Evans, Sons & Co. and other well-known firms at the Chemists' Exhibition in St. James's Hall. The day's lesson was much appreciated and enjoyed.

Public Dispensers' Association.

The members met at St. Bride's Institute, Bride Lane, E.C., on Wednesday evening, June 11, and by a large majority resolved that after that date no dispenser in a public institution should be eligible for membership of the Association unless he holds the qualifying certificate of the Pharmaceutical Society.

Fire.

A fire occurred on June 8 at the premises of Messrs. Benjamin North & Co., wholesale druggists, of St. James Street, Nottingham, and considerable damage was done before the conflagration was subdued.

Cricket.

Boots C.C. (Sheffield) *v.* Hayhurst's C.C.—Played at Roewood, Sheffield, on June 5. Result: Boots, 42; Hayhurst's, 25. For the winners Street took 7 wickets for 16 runs and Walkden 3 wickets for 5.

The Hooligan District.

At Clerkenwell Police Court on June 11, Edward Ryan (25), a gasfitter, was charged before Mr. D'Eyncourt with stealing from 72 Euston Square, St. Pancras, fifteen bottles of scent, value 1*l*., the property of Mr. G. S. Boutall, chemist and dentist. William Brown, manager to the prosecutor, said the previous evening he heard a noise in the shop, and, running from behind the counter, saw the prisoner standing by a large glass case with a number of bottles of scent, which he had taken from a case. Brown seized the prisoner, who became violent, broke away, and bolted from the shop, but was ultimately captured by a police-constable. At the police-station fifteen bottles of scent were taken from the prisoner. Mr. Boutall informed the Magistrate that the prisoner was the ringleader of a dangerous gang who infested Euston Road and the neighbourhood. His shop was situated close to the spot where Mr. Murray Spicer was killed last week. Prisoner was remanded.

The Week's Poisonings.

The fatalities from poisoning since our last report number eleven—all but two being caused by scheduled poisons. Two were caused by laudanum, and two by carbolic acid, and a Sheffield butcher took a mixture of laudanum and rat-poison. A Watford clerk, employed by the Photo Syndicate (Limited), took a fatal dose of an intensifying-solution of perchloride of mercury. Oxalic acid was taken by an Islington widow, and prussic acid by Lennox Pierson, a "nose and throat specialist" in practice in Paddington; while a Kensington footman drank cyanide of potassium. The unscheduled poisons were aromatic vinegar, taken in mistake by a girl at Tunbridge Wells, and a liniment containing ammonia that caused the death of a Windhill labourer.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

A Concession.

The Ballinrobe Guardians have been apprised by the Local Government Board for Ireland that half the cost of repairing surgical instruments will be allowed.

Personal.

Mr. P. N. White, J.P., chemist, Sligo, was again unanimously chosen as Chairman of the Sligo Board of Guardians, for the fourth time in succession.

Good for the Doctors.

There is a smallpox epidemic in Belfast at the present time, and consequently a rush to be vaccinated. Chemists are benefiting by the scare, which is producing quite a run on vaccination shields.

The July Examinations.

The Registrar of the Pharmaceutical Society of Ireland gives notice that all applications for the under-mentioned examinations must be lodged with him by 11 o'clock A.M. on the following dates:—The Preliminary examination, June 17; for Registered Druggist examination, June 24; for Pharmaceutical Licence examination, June 25; for Pharmaceutical Assistant examination, June 30.

Oxalic-acid Poisoning.

On June 5, Mr. E. L. Flannigan (Belfast City Coroner) held an inquest on Samuel Crowe (aged 43), who had died from poisoning. Deceased bought some oxalic acid from Mr. McNaught, chemist, Bridge End, Ballymacanett, Belfast, and, swallowing some, died soon after. The jury found a verdict of suicide whilst temporarily insane.

"Sedna" *v.* "Maletta."

In the Chancery Division, Dublin, on June 5, Messrs. Deans, Logan & Co., Belfast, mineral-water manufacturers, sought an injunction to restrain a Castlerea trader, named Loftus, from selling as "Sedna" a beverage wholly different in character. Counsel for plaintiffs said that "Sedna" was composed of the active principles of coca-leaves, kola-nut, and meat dissolved in wine. It was found that the beverage sold by defendant as "Sedna" was a concoction called "Maletta," in which extract of malt was the chief ingredient. Mr. Alexander Deans explained to the Master of the Rolls how it came that one label stated that the beverage was manufactured by the "Snaed Company," Belfast, and the other "Deans, Logan & Co." The former was his son's name reversed. His son was a qualified chemist, but was at present in South Africa. For the defence, it was pointed out that three years ago defendant purchased a dozen bottles of "Sedna," and had three yet unsold. There was very little demand for "Sedna" in Castlerea. Defendant deposed that when the case arose he sent the remainder of the unsold "Sedna" to Sir Charles Cameron, who reported that the quantity in each was insufficient to enable him to make a quantitative analysis. The Master of the Rolls pointed out the improbability of anyone trying to palm off a stuff under the name of "Sedna." He never heard of "Sedna" or "Maletta," and before he would believe that a conspiracy had been entered into he would like to know whether "Maletta" could be obtained at a cheaper rate than "Sedna," which was obtained by defendant at 1*s.* 11*d.* per bottle. It was admittedly an unknown substance in Connaught, and had no value in its fancy name there; and to believe that vile perjury had been committed to bolster up a case of fraud out of which no man in his senses would expect to make half a crown in the year was absurd. He dismissed the action, with costs.

Medicines to the value of 2,795*l.* were shipped to Salaverry (Peru) during 1901, against 2,052*l.* in 1900, an increase of 743*l.* Of the above amount the United Kingdom last year sent 297*l.* worth, Germany 487*l.*, U.S.A. 626*l.*, France 565*l.* Belgium 520*l.*, Chili 205*l.*, and Italy 93*l.*

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Coronation Certificates.

In connection with the Coronation celebrations at Linlithgow, Councillor Alexander Spence, chemist and druggist, has intimated his desire to present a certificate to each of the school-children attending the procession. The local Coronation Committee have accepted Mr. Spence's gift, and expressed their cordial thanks to the donor.

Dundee Notes.

The chemists of Dundee announce that they will close on Wednesdays from 3 P.M. to 7 P.M. during June, July, and August.

Mr. William Cummings and Mr. A. B. Anderson, chemists, Dundee, visited London last week to make arrangements for the forthcoming British Pharmaceutical Conference.

The annual meeting of the Forfarshire and District Chemists' Association will be held in Lamb's Hotel, Dundee, on June 18, at 4 o'clock. Members are requested to take their lady friends, so that a Ladies' Committee may be formed to assist at the Conference. Formal business and the draft programme for the Conference will be submitted.

Personal.

Mr. John Nesbit, pharmaceutical chemist, Portobello, is a candidate for election to the representation of Portobello on the Edinburgh Parish Council.

Business Changes.

Mr. John Wright, chemist and druggist, has acquired the business formerly carried on at 160 Fountainbridge, Edinburgh, by Mr. A. F. Dawson.

Mr. David Harley, chemist and druggist (lately with Messrs. Duncan, Flockhart & Co., Edinburgh), has purchased the business of Mr. James Forster, at 121 High Street, Musselburgh.

To Help Technical Education.

The Governors of George Heriot's Trust have issued a public appeal for funds to help in the extension of the Heriot-Watt College. A sum of about 50,000*l.* is required to develop the work of the Day Technical College and to cover the cost of additional buildings, including elementary laboratories for engineering, electricity, and chemistry. An additional lecture-room for chemistry, special rooms for gas-analysis and spectroscopic work are also required, and the establishment of a chair of Mining and Metallurgy is likewise strongly urged.

The staff of the manufacturing department at Messrs. T. & H. Smith & Co.'s establishment in Edinburgh has been very successful this year at the Heriot-Watt College, no fewer than four medals having been awarded to three of its members. Two medals for elementary electrical engineering and for electricity and magnetism were obtained by Mr. Martin. One medal and a prize of 2*l.* 2*s.* were given to Mr. Winton for advanced organic chemistry, and a medal in the same subject was taken by Mr. Kego.

Edinburgh Pharmacy Athletic Club.

Last week's sports included the following contests:—

300 Yards Handicap (confined to apprentice Club members).—1st, G. H. Clarke; 2nd, J. A. Gray.

Half-mile Flat Race (Club members).—1st, J. M. Hendry; 2nd, G. H. Clarke; 3rd, J. Murray.

220 Yards (confined to trade).—1st, J. Murray; 2nd, G. H. Clarke; 3rd, W. P. Anderson.

One Mile Bicycle Race (confined to trade).—1st, J. J. Sutherland; 2nd, W. C. Taylor.

Final Tie Five-a-Side Football.—T. & H. Smith & Co., one goal; Inman's (Limited), *nil.*

Tug-of-War Competition.—J. F. Macfarlan & Co.

Dr. Inglis Clark (Hon. President) presided afterwards at the presentation of the prizes by Mrs. Clark.

Glasgow Notes.

Several doctors' shops on the south side have been closed.

Only a few local chemists celebrated the peace with decorations. Mr. T. Robinson, West Nile Street, claims to have been one of the first to fly a flag. He hoisted his colours on Sunday evening, June 1.

The town's canvass on behalf of the Trade Association has been a gratifying success. Practically all local chemists have signed the petition to the manufacturers, and a large majority have been enrolled as members.

A tale, probably of the *ben trovato* order, is current as to the disparity of dispensing-prices. It is said that for the same prescription one suburban chemist charged 10*d.*, a city "drug-store" 1*s.* 6*d.*, and another chemist, a new neighbour of the first, 6*d.* The customer has gone back to number one.

There are likely to be changes in the representation of Glasgow on the Executive of the North British Branch, Messrs. W. L. Currie, R. McAdam, and J. Anderson Russell, all members of long standing, having declined renomination as candidates. His many friends will regret to hear that Mr. Currie's retirement is due to the unsatisfactory state of his health.

One part of the report of Dr. Hill, the legal adviser of the Glasgow Faculty of Physicians and Surgeons, *re* the doctor's-shop question, has created consternation amongst doctors who dispense in their houses. Dr. Hill explains that while it is quite legal for the doctor's wife or maid to compound a prescription containing a scheduled poison, the medicine containing such poison can only be legally handed over to the patient or his representative by the medical man himself.

Some years ago there was quite a number of "chemists and dentists" in Glasgow. Now there is not even a handful. The explanation is that death is thinning the ranks of those who were registered as being in practice as dentists at the passing of the Dentists Act, and a man has now to choose between one calling and the other. There is, perhaps, no city, however, which is so overrun with unregistered practitioners. In some districts they actually outnumber the registered dentists.

French News.

(From our Paris Correspondent.)

LIQUID AIR.—Professor d'Arsonval, of the College of France, delivered a lecture on Friday, June 6, before the Astronomical Society here on liquid air, and illustrated his observations with a series of interesting experiments. Amongst other things he liquefied several quarts of air and converted red and blue chemical compounds into a pure alabaster-white by freezing them.

THE BACILLUS OF DYSENTERY.—The Pasteur Institute has a number of branches in France and abroad, including three French colonies—viz., Senegal, Tananarive, and Saigon. The last-named was established by Dr. Calmette, the present director of the Pasteur Institute at Lille. The Institute at Saigon is attached to the French Colonial Office, and is now under the control of Dr. Métin, who has already made a name by several important researches. For some months past he has applied himself especially to the study of dysentery, and news has just been received at the Pasteur Institute, Paris, that he has discovered the micrococcus of that malady. The Pasteur chemists here also state that Dr. Métin has discovered an efficacious serum against dysentery, though the news of this important research is not yet officially confirmed.

THE PEACE AND FRENCH COMMERCE.—M. Fumouze, President of the Paris Chamber of Commerce, of Paris, and a well-known wholesale pharmacist, has been interviewed by a *Figaro* reporter as to the probable consequences of the peace on French commerce. M. Fumouze remarked that before the war the French did little commerce with the Boer Republics, but that these countries may now become rich by the products of their soil and open to international com-

Digitized by Google

merce. He expressed his regret at the "deplorable action" of certain papers which "daily insulted neighbours who ought to be friends," and his satisfaction that this state of things was now ended. "If peace re-established harmony between two great nations that all tended to unite, it would be twice welcome as the end of a sad war and as the announcement of a new honeymoon." M. Fumouze has a good many friends in England, not the least of whom is Lord Avebury.

Paris Academy of Medicine.—At a recent meeting of this Academy Dr. Josias read a paper with a view to proving the possibility of the transmission of the foot-and-mouth disease to human beings through infected milk. The doctor mentioned in support of his contention the case of a thirteen-months-old baby that came under his notice recently. The mother had brought her child up for a year, and it was then given milk from a cow that was afterwards found to be suffering from the foot-and-mouth disease.* The baby developed soon afterwards all the symptoms of the disease, and its life was only saved by energetic treatment. The disease in question being rather prevalent amongst cattle in France, Dr. Josias urged that the sale of milk should be prohibited from infected localities unless it has been previously sterilised or Pasteurised, and the Academy voted a resolution to that effect. The Academy received recently a communication demonstrating the fact that the new element, radium, has an illuminating-power which is visible to blind persons, save in exceptional cases. The fact had already been shown that radium was visible by the normal eye when a perfectly opaque screen was interposed, and important results are expected from the new experiments with blind persons.

South African News.

(From our Correspondent.)

Trade-mark.—Messrs. Burgoyne, Burbidges & Co., manufacturing chemists and wholesale druggists, of 12–16 Coleman Street, London, E.C., have given notice in Cape Town to apply for registration of the trade-mark "Zotal" in respect of disinfectants, manufactured or unmanufactured, in Class 2.

A Chloroform Fatality.—Last month, according to the *Bloemfontein Post*, Mr. Drummond, a chemist, latterly a resident of Johannesburg, while under chloroform for the amputation of his arm, sank into unconsciousness, from which he was never resuscitated, and died in the operating-room.

Pharmaceutical Examination.—The Colonial Pharmacy Board (Cape Colony) conducted an examination on May 8. Seven candidates presented themselves, and of these the following five passed: Arthur Barclay Bull, James Moore, Isaac Adrian van Niekerk, Allan Murray Will, and William Thomas Keating. Two failed.

Personal.—Among Colonial visitors to England who left Cape Town last week (May 21) were Mr. George Darroll, of Cleghorn's Pharmacy, Cape Town, President of the Pharmaceutical Society of Cape Colony and Government nominee on the Cape Pharmacy Board, and Mr. J. R. Barnsley, of Beaconsfield, near Kimberley.

A Promising District.—In the opinion of many far-seeing business men, writes a Johannesburg correspondent, the West Rand (including Krugersdorp and Randfontein) will in the future be one of the most important districts outside Johannesburg. It has the advantage of a fertile country behind it, inhabited by progressive farmers, producing grain, tobacco, and excellent fruit.

Business Changes.—The well-known Transvaal pharmaceutical firm of Messrs. Jolly & Adcock has been dissolved by mutual consent. Mr. T. E. Jolly is taking over the businesses at Johannesburg and Roodepoort, while Mr. E. J. Adcock will carry on the concerns at Krugersdorp and Randfontein.—The business in Long Street, Cape Town, hitherto carried on under the firm-name of S Adams & Co. has changed hands. The new proprietors are Messrs. H. R. Peck and W. Aitken, who will trade for the present under the old title.

Lovesick.—At Durban a native has been sentenced to pay 2*l.* or suffer a month's imprisonment for attempting to administer a "love-philtre" to a young European girl. Accused was employed in the neighbourhood where complainant resides, and induced an umfaan to take the medicine, with instructions to run it through a sieve, and put it in the young lady's tea. If she drank it, said the native, she would love him or would die.

Trade of Orangia.—The Collector of Customs at Bloemfontein has issued a specification, dated April 30, showing the goods imported into the Colony during the last quarter of the year 1901, in comparison with 1898. From the Cape Colony drugs and chemicals valued at 12,754*l.* were imported in 1901, against 15,212*l.* in 1898; from Natal, 1,794*l.*, against 792*l.* Extracts and essences from Cape Colony, 1,767*l.*, against 596*l.*; from Natal, 158*l.*, against 113*l.* in 1898 Medicinal preparations, 7,096*l.* from Cape Colony, against 9,033*l.*; from Natal, 323*l.*, against 1,043*l.* Essential and perfumed oils, 55*l.* from Cape Colony, against 348*l.* in 1898. Perfumery, cosmetics, powder, and soap for toilet use from Cape Colony, 956*l.*, against 824*l.* in 1898

The Scholtz Case.—At a meeting of the Colonial Medical Council at Cape Town on May 2, it was decided to appoint centres for the forthcoming examinations for nurses' certificates at Cape Town and Kimberley. A letter was read from the President of the Cape of Good Hope branch of the British Medical Association deprecating the publication in the press of the verdict of the Medical Council (with comments) in the inquiry held by it into charges brought against Dr. Scholtz before the Council's decision had been confirmed or otherwise by the Governor in Council, and requesting the Council to place before the Association the official correspondence in the case, so that the profession at large may be able to form a correct opinion upon it. It was also urged that the correspondence be printed and sent to every medical man on the Colonial Register. A special meeting is to be called to deal with the letter.

Diamond Field Notes.—Messrs. N. C. Ruffel (Limited) opened their new premises in Dutoitspan Road last month.—Mr. J. R. Barnsley, a well-known Beaconsfield chemist, is holidaying.—Messrs. A. Nicolson and W. Wilkins, two Kimberley chemists, played in a tennis-tournament which excited the inhabitants last month.—Griqua's letter (*C. & D.*, April 19, page 614) will not, says a Kimberley correspondent, encourage any intending emigrants, but I should be sorry to come back to the retail in England, and the majority of assistants I have met here are of the same mind.—Hermanus Johannes Steyn, described as a farmer, appeared before the Magistrate of Kimberley on May 17, charged with contravening the Medical and Pharmacy Act by illegally practising as a doctor. A native witness stated that, acting on the advice of a friend, he took a child to see "Dr." Steyn. The accused gave him two bottles of medicine, the sum of 2*s.* being charged. Cross-examined, the witness admitted that Steyn never represented himself as a doctor, and the case was adjourned

Settling Down.—The first general meeting of the members of the Chemical and Metallurgical Society since the beginning of the war was held in the Chamber of Mines, at Johannesburg, on May 10. There were thirty-five members present, and Mr. E. H. Johnson presided. The cash balance in bank was stated to be 44*l.* The Chairman reviewed briefly the circumstances (chiefly warlike) that had transpired since the previous meeting in September, 1899. He alluded to the members, not a few, who had laid aside the burette for the rifle, and had gone to swell the sad "roll of honour." He spoke hopefully of future development, and hinted at the formulation of a scheme whereby a properly-equipped lecture-theatre might be instituted for members' use. Mr. Crosse said it had been suggested that a public lecture-hall should be erected in connection with the various technical societies, in which there would be one or two committee-rooms and lecture-rooms for the different societies. Mr. Crosse then read some "Notes on the Analysis of Cyanide Solutions," the discussion being adjourned until the next meeting.

* We have heard of a similar case in the North of London, where the patient was the child of a man who had been in contact with cattle suffering from foot-and-mouth disease.—Editor.

Australasian News.

Chiefly from "The Chemist and Druggist of Australasia," May 1902. 6d. per copy, post free.

WHOLESALE THEFTS.—A receiver of 140*l.* worth of drugs stolen from Messrs. Elliott Brothers (Limited), Sydney, was, on April 10, sentenced to twelve months' imprisonment, to be reduced to six months if restitution to the extent of 100*l.* is made.

MR. D. J. WILLIAMS, George Street West, Sydney, was elected a member of the Council of the N.S.W. Pharmaceutical Society, on April 15, in place of Mr. W. G. Bladon, resigned. At the same meeting Mr. W. Short was elected President, Mr. S. Mears Vice-President, and Mr. H. S. Brothwood was re-elected Treasurer. Mr. Williams, the new councillor, is a native of Ballarat, Victoria, but has lived in Sydney since he was 10 years of age.

WEBSTER MEDAL.—As a memorial of the late Mr. A. E. Webster, Registrar of the Pharmaceutical Society of Western Australia, whose death was recorded in the *C. & D.*, June 7, page 898, a Webster Medal is to be founded. The medal, which is to be a gold one, will be annually presented to the candidate obtaining the highest percentage of marks in the Qualifying-examinations of the year. This announcement was made at the annual meeting of the W.A. Pharmaceutical Society on March 26, when several members paid tribute to Mr. Webster's many good qualities.

IRISH LICENTIATES.—In the "Calendar" of the Pharmaceutical Society of Ireland is a notice to licentiates who emigrate to the Colonies to the effect that pharmaceutical licentiates are permitted to act as pharmaceutical chemists in various colonies without further examination. In the case of Queensland it is stated that "it appears that those applying for such registration must be at the same time members of the Society." The Pharmacy Board of Queensland, at a meeting on April 10, made it clear that it is not essential to registration that pharmaceutical licentiates should also be members of the Society.

THE AUSTRALIAN FORMULARY.—At the meeting of the Pharmaceutical Society of Australasia at Melbourne, on April 10, the final proof of the Australian formulary was laid on the table. Copies were sent to the other Australian States asking if they were desirous of joining in the publication, and also if the various societies had any suggestions to make. At the meeting of the N.S.W. Pharmaceutical Society on April 15, it was stated that copies of the formulary could be supplied at 16*l.* 13*s.* 4*d.* per thousand, but the secretary finds that the work could be done in Sydney at 6*l.* 15*s.* for the first thousand and 3*l.* 15*s.* for succeeding thousands. It is thought that the Victorian Society have made a mistake in their quotations.

FREE DISINFECTANTS.—From the Sydney Town Hall about one ton of chloride of lime and 200 gallons of phenyle (1 in 20) have been distributed weekly during the plague epidemic. The morning following the discovery of a new case is always busy. Phosphorus paste was used for rats till they became too cunning to take it. Arsenic was then tried, but rats are beginning to leave it alone, and a return to phosphorus is contemplated. About 600*l.* has been spent on disinfectants and poison since the distribution began, and 530*l.* has been spent in other ways. Six carts were formerly employed distributing 400 tins of poison daily from house to house, and 1,000 tins a day were also distributed from the town-hall.

COMPANY-MEETING.—At the annual meeting of the Kempthorne, Prosser, N.Z., Drug Company at Dunedin, on March 20, a dividend of 7 per cent. was declared. The managing director (Mr. T. W. Kempthorne) was in the chair, and stated that, although the company had had a fairly good year's business, the results were unsatisfactory. It appears that the late managers at Christchurch and Wellington, who have been in the service of the company for twenty years, had sent in stock-returns which would require investigating, and the tariff-changes had caused a greater loss than was provided for in the previous year. A shareholder said the fact that a dividend of 7 per cent. could be paid when only 2½ had been earned was a tribute to the cautious policy adopted by the board in the past. The report and balance-sheet were adopted, and the retiring directors (the Hon. F. S. Grimwade and E. N. Grimwade) re-elected.

N.S.W. POISON SCHEDULE.—Various alterations in the poison schedule of New South Wales have been gazetted during the month of April. The effect of the proclamations is to remove from the poison schedule bluestone, white vitriol, Atkinson's preservative, Hill's vermin-killer, the permanganates, and some other rarely-asked-for drugs, and to add other poisons to parts one and two. The poison schedule now stands as follows, the portions in italics being new:—

FIRST PART.

Arsenic.
Prussic acid.
Strychnine.
Savin and its oil.
Ergot of rye and its preparations.
Chloral hydrate.
Laudanum.
All poisonous vegetable alkaloids and their salts.

SECOND PART.

Cyanide of potassium and all metallic cyanides.
Preparations of cyanide of potassium and all metallic cyanides.
Aconite and its preparations.
Tartar emetic.
Preparations of tartar emetic.
Corrosive sublimate.
Preparations of corrosive sublimate.
Cantharides.
The tincture and all vesicating liquid preparations of cantharides.
Oxalic acid.
Preparations of oxalic acid.
Chloroform.
Preparations of chloroform.
Belladonna and its preparations.
Opium, and all preparations of opium or of poppies other than laudanum.
Arsenical preparations, except green and other coloured paints.
Preparations of prussic acid.
Preparations of strychnine.
Preparations of all poisonous vegetable alkaloids and their salts.
Essential oil of almonds, unless deprived of its prussic acid.
Chloral hydrate and its preparations.
Preparations of morphine.
Red oxide of mercury (commonly known as red precipitate of mercury).
Ammoniated mercury (commonly known as white precipitate of mercury).
Nux vomica and its preparations.
Carbolic acid.
Hydrochloric acid or strong spirit of salt.
Strong nitric acid.
Strong sulphuric acid.
Phosphorus, except red amorphous.

DEATH OF AN ENGLISH CHEMIST.—On April 28 an inquest was held at Sydney on the body of Reginald Betts. He had taken lodgings in the city under the name of Robert Hayward, but a fortnight earlier had shown the boarding-house keeper papers in the name of Reginald Betts, including a certificate from the examiners of the Pharmaceutical Society of Great Britain, dated "London, February 20, 1889," showing that he was a qualified chemist and druggist. When he arrived on April 3 he said he had just come from New Zealand. He was always more or less intemperate, and had lately suffered from insomnia. Dr. Jamieson, who was called in, said the body showed symptoms of poisoning, and there was a strong odour of chlorodyne about. A constable produced three bottles which had contained chlorodyne, and stated that among the effects he found several letters addressed to Robert Hayward, apparently from his wife. A telegram dated December, 1901, addressed to "Hayward, Albany Hotel, Ryde," was as follows, "Sending draft and passage-ticket to G.P.O., Southampton, to reach there to-night. D.A.C." There was also a discharge from the Suffolk Volunteer Corps in the name of Colour-Sergeant R. Betts, and other letters were addressed "Reginald Betts, Chemist." The jury returned a verdict of death from poisoning, adding that there was not sufficient evidence to show that it had been self-administered. [The address of Reginald Betts on the British Register is given as Thoroughfare' Woodbridge, Suffolk.]

Pharmaceutical Society of Great Britain.

COUNCIL-MEETING.

A NEW era of punctuality was inaugurated on Wednesday, when the first meeting of the new Council began exactly at 11 o'clock. Mr. Taylor and Mr. Wootton were the only councillors not present. Mr. Wootton's absence from this meeting, as well as from the annual meeting, was due to a sharp attack of pneumonia, which passed the critical stage on Sunday, June 1, and he is now improving. A resolution of sympathy was passed with the family of the late Mr. Frederick Andrews. Mr. G. T. W. Newsholme was next elected President, for the third year running; Mr. C. B. Allen, Vice-President; and Mr. S. R. Atkins, Treasurer. The standing orders were adopted as usual, but a committee was appointed to consider whether the method of procedure could be improved. The old committees were re-elected, a new one—the *Journal* Investigation Committee—appointed to consider the conduct of the *Journal*, and the President made a suggestion for the appointment of an Education and Examination Committee, which is to be considered by the General Purposes Committee. Delegates were appointed for the British Pharmaceutical Conference, but the question of sending a delegate to the American Pharmaceutical Association was left over till next meeting.

The monthly meeting of the Council was held at 16 Bloomsbury Square, W.C., on June 11. It began exactly at 11 o'clock, there being present Messrs. Atkins, Corder, Cross, Gifford, Glyn-Jones, Newsholme, Park, Robinson, and Young. Before the reading of the minutes was finished Messrs. Allen, Cooper, Harrington, Harrison, Savory, Southall, and Symes had arrived, and the clock had not indicated a quarter past 11 before Messrs. Hills, Carteighe, and Storrar had dropped into their places at the Council-table.

Mr. G. T. W. Newsholme, who took the position of Chairman, called on the Secretary to read the minutes of the previous meeting.

An item in the minutes not previously made public was the appointment of the President, Vice-President, Treasurer, and Messrs. Carteighe, Hills, Glyn-Jones, and Savory as a *Journal* Investigation Committee. A chemist who wished his name restored to the register was informed that the fee of 1*l.* 1*s.* must be sent with his application.

The Chairman mentioned that he had received a letter from Mr. Taylor (Bolton), asking to be excused from attending the meeting, and that Mr. Wootton's absence was due to illness. The councillors, the Chairman said, would be sorry to hear that Mr. Wootton had been very dangerously ill, but he was now out of danger and making good progress towards recovery. (Hear, hear.) On the Chairman's suggestion, a letter of sympathy is to be sent to Mr. Wootton.

The Late Mr. Andrews.

The Chairman next referred to the death of Mr. Frederick Andrews, who had served the Society as councillor and auditor. He (Mr. Andrews) always thought very highly of the Society, and did his best to further its interests in every way.

The Vice-Chairman, in seconding a resolution of sympathy which the Chairman proposed, said he was elected to fill the vacancy on the Council caused by the retirement of Mr. Andrews some eighteen years ago. At that time Mr. Andrews felt he could not give the time needed for Council-work and also that the time had arrived when he could rest on his oars. Mr. Andrews was always most thoroughly in earnest in everything he undertook in connection with the Society, and there was no meeting of importance in London connected with pharmacy at which he was not present.

The resolution was carried unanimously.

Election of President.

Mr. Chater handed round voting-papers containing a list of the councillors, and each member was required to indicate his choice for the presidency. The Secretary then, having collected the papers in the voting-box and straightened them out, declared there were nineteen papers—one a blank, the other eighteen indicating Mr. Newsholme as President. (Applause.)

The Chairman, having declared himself President, thanked the councillors for electing him to that post for the third time. He appreciated the honour, and, whilst he would have been equally glad to have supported one of his colleagues in the office, he was willing to take on the work for another year. A good deal of a provincial President's time was spent in travelling, which placed him at a slight disadvantage compared with a London President; but, having been so well backed up by the Vice-President of the past year, he felt the disadvantage was more than neutralised. He hoped the coming year would result in some legislation of benefit to chemists. If the draft Pharmacy Bill could be passed, he felt it would be of permanent benefit to the craft (Hear, hear.)

Election of Vice-President.

A similar process of election was gone through in electing a Vice-President, eighteen of the papers being for Mr. Allen and one was blank.

The President having declared Mr. C. B. Allen duly elected,

The Vice-President said the best reward they could give him for his past services was to re-elect him unanimously as they had done. He was pleased his services had been thought worthy of notice by the President.

Election of Treasurer.

Mr. S. R. Atkins was next re-elected Treasurer, and, replying, said that to be Treasurer of the Pharmaceutical Society was an honour in life he valued, and he hoped that nothing he would do would be a discredit to that honour.

The Standing Orders

were next adopted, and, on the suggestion of Mr. Robinson, a committee, consisting of the President, Vice-President, Treasurer, and Messrs. Carteighe, Glyn-Jones, Robinson, and Young, was appointed to consider and report if the methods of procedure could be improved.

Other Elections.

Mr. Richard Bremridge was elected Secretary and Registrar for the ensuing year.

Dr. B. H. Paul and Mr. John Humphrey were re-appointed editor and sub-editor of the *Pharmaceutical Journal*.

Mr. E. M. Holmes was appointed curator of the Society's museums, and

Mr. J. R. Hill Assistant-Secretary in Edinburgh for the ensuing year.

Thirty-two persons were restored to their former places in the Society, two were restored to the register, and a number of persons were elected members or student-associates.

Committees.

The Council, having considered in committee for some time, re-appointed the following committees:—General Purposes; Law and Parliamentary; Finance; Benevolent Fund; Library, Museum, School, and House; Freehold Investment; Research; Dispensers; Watch; and *Journal* Investigation, the last-named with the addition of Mr. Harrison.

Delegates

were appointed to represent the Society at the meeting of the British Pharmaceutical Conference to be held at Dundee on August 11, those who signified their intention of being present being the President, Vice-President, Treasurer, and Messrs. Cooper, Gifford, Southall, Symes, and Storrar. The Secretary is also to attend.

A Suggestion

was then made by the President that a committee be appointed to form a permanent conference on educational and examination matters. It would bring the Council and Boards of Examiners into closer touch if such a conference could be arranged, the first meeting to be in Dundee at the same time as the British Pharmaceutical Conference. The suggested composition of the committee was the President

Digitized by Google

Vice-President, four councillors, and two members from each of the Boards of Examiners.

The PRESIDENT gave his views of the matter from a written report, which

Mr. ROBINSON suggested should be sent to the councillors for consideration. He did not quite understand the suggestion, but gathered that the committee was to obtain information on educational questions.

The PRESIDENT: And report to this Council.

Mr. ROBINSON: I feel it will only be consistent with my policy to move that the report be sent to the members for consideration.

Mr. HARRISON seconded Mr. Robinson's motion, and said he felt there was much in the President's suggestion that the Boards of Examiners should be brought more in contact with the Council. He had thought, however, that the President and Vice-President being *ex-officio* members of the Boards of Examiners was sufficient safeguard.

Mr. HILLS also pleaded for a little more time to consider the matter, although he was sure that a subject which had had the President's attention would meet with the approval of the Council.

Dr. SYMES thought that during the Conference was a good time for the suggested meeting. There are several points which could be discussed—for instance, the question which has been before the Council for a long time past of imposing minimum periods of study on students. Most students at present took certain periods of study voluntarily, and it was a question as to whether the Boards of Examiners should require evidence of such study from candidates.

The PRESIDENT said he had mentioned the matter at that meeting as the time was short before the Conference, but he would have copies of his suggestion sent to all members of the General Purposes Committee before it met again.

Mr. GLYN-JONES: Will you also please tell us if it is to be an administrative committee?

Mr. CARTEIGHE: And do not call it a conference on any account; it will only lead to confusion.

The TREASURER agreed with the principle of the President's suggestion, but did not see that the meeting need be held at Conference-time.

The PRESIDENT: My idea was that all the members would be present.

FINANCE.

The acting Finance Committee presented a report showing the following balances on the

	£	s.	d.
General Fund	£3,891	0	2
Benevolent Fund...	909	6	4
Donation account	230	16	0
Orphan Fund account	46	3	3

The amount submitted for payment was 1,835*l.* 14*s.* 7*d.*, made up of the following items:—Salaries and annuities, 727*l.* 18*s.* 4*d.*; *Journal*, 642*l.* 7*s.* 6*d.*; current expenses, 300*l*; sundries, 165*l.* 8*s.* 9*d.*

The report was adopted.

BENEVOLENCE.

The report of the councillors acting as a Benevolent Fund was taken in committee; after which

The VICE-PRESIDENT, in moving the adoption of the report, said the committee recommended a grant of 5*l.* in one case, and several other cases were deferred. The Vice-President mentioned that Miss Hayes, for whom he appealed for votes some time ago, had been elected to a pension from the Home for Incurables, and asked members to use their votes and influence to secure the election of Robert Valentine Honman to the London Orphan Asylum, Watford. The election is fixed for June 23.

LIBRARY REPORT.

The Library, Museum, School, and House Committee, which met on May 14, reported. The PRESIDENT said that, in accordance with a suggestion of Mr. Robinson, he would not read the report, but ask for remarks on the paragraphs *seriatim*.

Mr. ROBINSON: Copies of the report should be handed to the Press.

The report dealt with the attendances at the Society's libraries and museum. The Professor of Chemistry reported that the laboratories badly required cleaning and painting, and the Vice-President was requested to inspect the premises, and report on the work that should be done during the vacation. The committee recommended that Professor Collie be authorised to purchase certain physical apparatus which he considers essential for the lectures on physics, at a cost not exceeding 15*l*, and that the amount be charged to the Society's general fund. The legacy received under the will of the late Mr. Martindale is to be expended in the purchase of new books on pharmacy for the library, as they are published, until the amount (17*l.* 19*s.*) is exhausted. The library is to be closed on Thursday evenings from the end of May until the end of September. The library and museum are also to be closed at 5 P.M. each day (except Saturday) during July, August, and September, and entirely from September 1 to 14 inclusive. The Society's house is recommended to be connected with the telephone service.

The same committee, sitting as a Research Committee, were handed by Professor Greenish Part III. of the report on "Solubilities," which is to be published in the *Journal*. Professor Collie reported that the Salters' Research Fellow is still engaged on the standardisation of coca-solutions. Three advanced students, who have just passed the Major examination, were admitted to the research laboratory as workers for the remainder of the session.

The PRESIDENT put the paragraphs one by one, and asked for remarks.

Mr. HARRISON hoped the new method of putting the report would not preclude any remarks the President had to offer.

The PRESIDENT: I have no remarks to make.

The report was adopted.

THE INAUGURAL ADDRESS.

The selection of a suitable person to deliver the inaugural address to the students of the School of Pharmacy in October was left with the Library, Museum, School, and House Committee.

DIVISIONAL SECRETARIES.

Mr. William Greig, Orford Row, Walthamstow, was appointed Divisional Secretary for Walthamstow, in place of Mr. Saunders, who has left the neighbourhood.

Mr. Wm. Harvey wrote resigning his position as Divisional Secretary for N.E. Bethnal Green owing to increasing infirmity. The PRESIDENT referred to the great service Mr. Harvey had rendered to the Society, and received the resignation with regret.

LETTERS

The new honorary and corresponding members wrote, thanking the Council for the honour paid to them.

The General Medical Council sent a cheque for 100*l.* to the Society, in accordance with a resolution passed at the meeting of the G.M C. last week (*C. & D.*, June 7, page 885).

The Research Committee are to consider what shall be done with the cheque.

The Secretary of the Aberdeen Pharmaceutical Society wrote complaining that there are many open shops in the district owned by medical men, where poisons are dispensed by young persons without proper supervision—causing unfair competition and danger to the public.

The General Purposes Committee are to look into the matter.

AN AMERICAN INVITATION.

The Secretary of the American Pharmaceutical Association wrote to the officers and members of the Society that the Association would hold its fiftieth annual meeting at Philadelphia on September 8 This being the golden anniversary, the Society was invited to send a delegate.

The PRESIDENT asked if any councillor was willing to represent the Society.

Mr. CARTEIGHE: It is your duty as President to go, and besides you have got the chain. (Laughter.)

The PRESIDENT: Perhaps you will go, Mr. Carteighe.

Mr. CARTEIGHE: I have already been. When I was President I thought it my duty to go and represent the Society. (Laughter.)

The PRESIDENT: Perhaps between now and next month someone will volunteer.

Mr. CARTEIGHE said the meeting is an important one. The Association occupies the same position in America that

Digitized by Google

the Pharmaceutical Society does here. It is a body with members from all States, and represents American pharmacy as a whole. Those who have not been to such a meeting have no idea of the extent of the loyalty, almost affection, that Americans have for a Britisher. Such a meeting is an education and an experience.

Dr. SYMES: It is like our Conference.

Mr. CARTEIGHE: Yes; but it takes a part in the compilation of the National Pharmacopœia.

Mr. ROBINSON: The invitation is addressed to the officers and members, so that it is open for a member not a councillor to represent us.

Mr. CARTEIGHE: I may mention I have received a private invitation, as I am an honorary member. I think you ought to go, Mr. President; it would make you more competent than ever to fill the Presidential chair.

The matter was left over till next meeting.

OTHER OFFICIAL MATTERS.

The Pharmacy Board of Victoria sent details of their year's work—the annual report, which the PRESIDENT said would be placed in the library.

The Privy Council sent a formal acknowledgment of the receipt of the new by-laws and altered poison-regulations.

The Colonial Secretary sent a copy of the proclamation issued by the administrator of the Orange River Colony in regard to the qualifications of chemists.

The SECRETARY read extracts from the proclamation, the gist of which was given in the *C. & D.*, May 17, page 758.

Mr. HILLS: It is all very interesting, but is not it what we had from the Colonial Office some time ago? They asked us then for suggestions.

The PRESIDENT explained that on a previous occasion the Colonial Office asked for suggestions, and a committee drafted a reply. He thought it was very satisfactory to be able to help the Administrator of the Colony in dealing with the heavy task of re-establishing order.

Mr. ROBINSON: Shortly, it is that our diplomas will be recognised.

The PRESIDENT: Yes; but it is only a temporary measure.

This concluded the public business.

NORTH BRITISH BRANCH.

THE annual meeting of Scotch members of the Society will be held at 36 York Place, Edinburgh, on Friday, June 20, at 11 A.M., when Mr. Boa (Chairman) will make a statement, and the scrutineers will report on the election of Executive. For the eighteen vacancies the following twenty-three persons are candidates:—

*Boa, Peter, Edinburgh
*Cowie, W. B., Edinburgh
Cummings, W., Dundee
Currie, A., Leith
Dey, A. J., Edinburgh
*Doig, W., Dundee
*Dott, D. B., Edinburgh
*Dunlop, T., Glasgow
*Fisher, J. H., Dumfermline
Giles, W., Aberdeen
Gilmour, J. P., Glasgow
*Henry, C. F., Edinburgh
*Johnston, J., Aberdeen
*Kerr, C., Dundee
*Maben, T., Glasgow
*Mitchell, D., Inverness
*Navsmith, A., Arbroath
Nesbit, James, Portobello
Rowland, G. H. C., Edinburgh
*Spence, A., Linlithgow
*Strachan, A., Aberdeen
*Tocher, John, Dumfries
Wilson, W. P., Haddington

Those marked with an asterisk are members of the retiring Executive.

THE POISON-BOOK.—Mr. Madge, Gonger Street, Adelaide has been fined for not making the necessary entries in the poison-book as required by the Poisons Act (S.A.). Mr. Madge had made entries on slips of paper instead of in a poison-book. The matter was brought to light as a result of the suicide of a customer who purchased some strychnine.

A LOST CERTIFICATE.—Some twelve years ago Mr. Stephen Shaw deposited his Minor certificate at the office of the Pharmacy Board of Queensland for the purpose of registration. The Board, being satisfied of the *bona fides* of the application, registered Mr. Shaw, but the certificate could not be found. Mr. Shaw has now gone to South Africa and wants to produce his certificate as evidence of qualification. The Queensland Board are to do all they can to assist Mr. Shaw by furnishing him with a letter, explaining how the certificate got lost.

British Pharmaceutical Conference.

A MEETING of the Executive Committee was held at the Pharmaceutical Society's House on Tuesday, June 3, 1902. Present: Mr. G. Claridge Druce (President), in the chair; Mr. Naylor (Vice-President), Mr. J. C. Umney (Hon. Treasurer), Professor Greenish, Messrs. Atkinson, W. Cummings, Farr, Tyrer, and White, Messrs. Ransom and Peck (Hon. General Secretaries), and Mr. Hearn (Assistant Secretary). Mr. A. B. Anderson, of Dundee, also attended as a deputation (with Mr. Cummings) from the Local Committee. Apologies for absence were received from Dr. Attfield, Dr. Symes, Messrs. Atkins, Beggs, Kerr, Martin, and Wells. The deputation from Dundee (Messrs. Anderson and Cummings) presented the

DRAFT PROGRAMME

for the annual meeting, which was as follows:—

MONDAY EVENING, AUGUST 11.

8 P.M. Reception by Lord Provost Hunter and Mrs. Hunter in Victoria Art Galleries. Music, refreshments.

TUESDAY, AUGUST 12.

10 A.M. Opening of Conference in Chemistry Lecture-hall of University College. Address by the President.
1 P.M. Luncheon in Queen's Hotel.
2 P.M. Sessions of Conference resumed.
4.15 P.M. Special train from Tay Bridge station direct to St. Andrews, "the grey old city by the sea." Tea. Walk through West Port and South Street to the Cathedral and St. Regulus Tower, returning by Castle and the Scores to the golf-links.
9 P.M. Train *vid* Tayport and Newport, arriving at Dundee 9.45.

WEDNESDAY, AUGUST 13.

10 A.M. Sessions of Conference resumed.
1 P.M. Luncheon in Queen's Hotel.
2 P.M. Sessions of Conference resumed and closed.
4.30 P.M. Afternoon tea in the grounds of University College.
6 P.M. Dance and smoking-concert in Gray's Assembly-rooms.

THURSDAY, AUGUST 14.

9.15 A.M. Sail from steamboat-pier to Perth in twin-screw steamer *Thistle*. ("The scenery is fine as far as Newburgh, then, as we approach the 'fair city,' it assumes an unrivalled picturesqueness.")
10.40 (about) A.M. Special train from West station to Perth for those who do not go by steamer.
11.40 (about) A.M. Special train from Perth to Comrie through Strathearn. ("Combines types of all the most exquisitely beautiful scenery to be found in the Highlands.")
1 P.M. Luncheon in West-end Public Hall, Comrie.
3 P.M. Drive to St. Fillans. ("No spot in Britain so thoroughly embodies our most cherished conceptions of Arcadia as St. Fillans.")
4 P.M. Return drive to Comrie.
5 P.M. Tea in Public Hall, Comrie
7.30 P.M. Train leaves Comrie for Dundee.
9 P.M. Arrive in Dundee.

Mr. J. C. Umney proposed, and Mr. Ransom seconded—

That the hearty thanks of the Committee be accorded to the deputation for their kindness in coming to present the programme.

This being carried, the programme, after one or two slight alterations, was unanimously approved.

The Hon. Secretaries reported that, after considerable correspondence, &c., the railway companies had decided that they could not issue reduced-fare tickets to Dundee, but suggested that members of the Conference should avail themselves of the advantages offered by tourist-tickets. Arrangements have been made with Dundee, Perth, and London Shipping Company to take members of the Conference and their friends at single fares (22*s* 6*d*., first cabin) for the double journey. The steamers sail from the Dundee Wharf, Limehouse, and the journey takes about thirty hours.

OTHER BUSINESS.

Mr. W. T. Grice, F.C.S., of Calcutta, was appointed Colonial Secretary for Bengal.

An invitation to send delegates to the golden anniversary of the American Pharmaceutical Association was received.

Several gentlemen were elected to membership.

Digitized by Google

Pharmaceutical Society of Ireland.

COUNCIL-MEETING.

THE Council met at the Society's House, 67 Lower Mount Street, Dublin, on Wednesday, June 4, at 3 o'clock. The President (Mr. George D. Beggs) occupied the chair; and the other members of the Council who attended were the Vice-President (Mr. J. I. Bernard), and Messrs. P. N. White (Sligo), Kelly, H. V. Goldon (Birr), W. V. Johnston, T. Batt, J. Smith, and Geo. Brown.

PEACE AND PLENTY.

The PRESIDENT said: Before we take up the business on the agenda-paper, it is only right that I should allude to events that have taken place during the past week. I refer to the signing of the treaty of peace. As subjects of the Empire, we feel it to be a matter for rejoicing that this cruel war—whether it was a just war or otherwise it is not for me to say—has been brought to such a happy termination. (Applause.) I am sure that every member of the Council will agree with me when I say that it is our fervent wish now that peace reigns again, that both the victor and vanquished will unite in making Africa a peaceful and prosperous part of our vast Empire. (Applause.)

I have further to mention that I had the honour to be the guest of the President of the English Society at their annual dinner, and it gives me great pleasure in informing you that all possible honour was done your Society, and I, as your President, was greeted with the utmost cordiality and friendship, and, as far as I can gauge the feelings of the members of that Society, I am happy to say that they appear to be quite of the idea that the two Societies should run side by side. Although on the main points we cannot work in unison, I am with them in saying that there are minor matters—I emphasise the word "minor"—with reference to which the two Societies may work together which would be an advantage to both Societies and pharmacy in general. But as regards the welcome I received at their dinner, it could not have been more hearty and cordial than it was, and I was extremely pleased to be there.

A PHARMACY DEGREE.

The VICE-PRESIDENT said the first matter on the agenda-paper was the resumption from last meeting of the consideration of a proposal to apply to the Royal Commission on University Education to provide a University degree in science for Irish pharmacists. It was desirable to postpone the consideration of the subject for the present. This suggestion was agreed to.

THE CASTLE OBJECTS TO A CHEMISTRY COURSE.

The following letter from the Clerk of the Privy Council (Mr. J B Dougherty) to the Registrar was read:—

Sir,—With reference to the proposed regulation adopted by the Council of your Society on January 1 last making a course of elementary chemistry compulsory in the case of candidates for the Pharmaceutical Licence, I am directed by the Lord-Lieutenant to inform you that his Excellency and the Privy Council have declined to approve of the regulation, considering that the objections set out in my letter of February 5 have not been removed by your reply, and that, as the examination in elementary chemistry is compulsory in the case of these students, it may be left to them to avail themselves of the best means at their disposal for acquiring the knowledge necessary for passing such examinations.

The VICE-PRESIDENT: The Castle authorities do not seem inclined to foster pharmacy, or raise it to a higher than the existing standard. They seem to think that if a man grinds up sufficiently to scrape through an examination it does not matter whether he is thoroughly prepared or not. In view of this it will be ridiculous for us to continue to spend the funds subscribed by the members of the Society for the educational purpose that we have been applying them to, when we find that the powers that reign in this country do not assist us in any way, but, in fact, throw cold water on our efforts. We have done our duty. Further we cannot go. They do not appear to understand that it is necessary for a man to be properly trained in order to be a pharmacist.

The PRESIDENT: I may say, in support of the remarks of the Vice-President, that we gave the subject every attention, and did so at the request of their own Government inspector, who pointed out the deficiencies of the students in that particular subject. Those who did take out the lectures at our school were the better men at the examinations; and their own inspector strongly advised that the courses should be taken out, but they seem to throw cold water on anything that we do to advance pharmacy.

Mr. KELLY said the letter from the Privy Council was most disheartening. The Council had gone to the trouble and expense of establishing a school and engaging a teacher in order to afford their students an opportunity of learning theoretical chemistry; and they only charged a guinea for a four months' course of lectures.

The PRESIDENT: I fear the school will have to be given up. There is no use in throwing away our money. We shall not carry it on next session unless we are sure of a certain number of students. We have guaranteed our professor a certain sum for the current session, and we will certainly carry on the school to the end of this session.

The REGISTRAR: The session is over.

The PRESIDENT: Then I would be inclined to propose that unless we get a certain number of students the school should be discontinued, for there is no use in running a school which is appreciated neither by the students nor by the authorities, who should look at the matter in a different light. The school is in its way second to none in the country; and as long as attendance at it was supposed to be compulsory we had a very good attendance. Now that the students have got the cue that it is not to be compulsory the attendance has fallen off.

Mr. SMITH: Would it be well to have an interview with Sir George Duffey in order to see if anything can be done?

The VICE-PRESIDENT: What they say is, "Examine the man, and if he is not fit to pass stick him." We shall have a very sufficient answer to any strictures that the inspector may pass in future with respect to candidates not knowing elementary chemistry

Mr. KELLY: The school has cost us about 100*l.*

The VICE-PRESIDENT: It is a very funny position. The Government inspector recommends a thing, and the Government will not allow it.

Mr. SMITH: That is why I think Sir George might do something.

The VICE-PRESIDENT: He did all he could in the matter.

ILLEGAL USE OF "M.P.S.I."

The VICE-PRESIDENT said he desired to call attention to the fact that a number of licentiates of the Society were using the title of "M.P.S.I.," although they were not members of the Society at all. No doubt this might occur through inadvertence, but they had no right to use the title unless they subscribed to the Society. If the practice did not cease, the Council would have to take the matter up.

The PRESIDENT: Give them warning that they cannot use the title.

The REGISTRAR: In any cases that came under my notice I wrote asking for subscriptions, and I got many subscriptions in that way.

Mr. GOLDON: Have we power to stop it?

The PRESIDENT: You have. You can prevent a man from calling himself a member of the Society if he does not subscribe to it.

OTHER BUSINESS.

A letter from the Secretary of the American Pharmaceutical Association invited the Council to send delegates to the celebration of its "Golden Anniversary," which is to take place in Philadelphia next September. The Registrar was directed to write for information.

On the motion of the PRESIDENT, seconded by Mr. SMITH, thanks were voted to the Pharmacy Board of Victoria for a donation of a copy of their report for 1901.

Other business having been disposed of, the Council adjourned.

"PRACTICAL METHODS OF URINE-ANALYSIS (Second Edition) is an excellent work, which I will have great pleasure in bringing to the notice of my students." So writes Mr. T. P. Barrie, F.C.S., and other teachers have written to the same effect. The book may be obtained from our office by post for 2*s.* 9*d.*, or from wholesale houses at 2*s.* 6*d.* (the published price).

Digitized by Google

Chemical Society.

A MEETING was held at Burlington House, W., on Thursday, June 5, Dr. T. E. Thorpe presiding. The first paper was contributed by Dr. Julian Baker, on the hydrolysis of starch by

UNGERMINATED BARLEY DIASTASE.

This enzyme exhibits in its action on starch certain differences from that of malt diastase—*e.g.*, it decomposes this material with the production of dextrin, maltose, and a little glucose, but the dextrin so formed is only slowly attacked by the diastase, and further resolved into maltose. The dextrin obtained on this reaction appears to be one of the earliest products of hydrolysis of starch, and gives the characteristic blue iodine reaction and therefore the author proposes to name it amylodextrin *a*.

In the discussion which followed, Dr. Thorpe drew attention to a new Belgian process of obtaining malt, now in operation at Messrs. Benskin's Watford brewery, by which the mash-tun is entirely done away with, and the conversion of the grains into malt liquor accomplished in a few minutes.

Mr. W. H. Sodeau next gave a further instalment of his work on

THE DECOMPOSITION OF CHLORATES.

In the present paper he discussed the various explanations which have been put forward to account for the facilitating action of manganese dioxide in the decomposition of potassium chlorate by heat, and came to the conclusion that McLeod's hypothesis, which assumes potassium permanganate to be formed, does not account for all the phenomena of this complex action. The explanation, he believes, is to be found in the occurrence of alternating oxidations and deoxidations of the manganese dioxide, which is a scientific way of begging the question.

The next paper was contributed by Mr. C. Smith, B.Sc., on the diazo-amino-compounds of

ARYLTETRAHYDRO β NAPHTHALENE,

and described the properties of several compounds of this class, throwing light on the structural relations of benzene and naphthalene, and also on the constitution of diazo-amino-compounds. Dr. Morgan, in the discussion which followed, made use of this contribution as a peg on which to hang a lengthy dissertation on his views of the constitution of azo-amino bodies, which provoked Dr. Thorpe sarcastically to inquire whether Mr. Smith desired to "supplement" Dr. Morgan's remarks.

"PHOSPHORUS TETROXIDE"

was the title of the next contribution, which was read by Mr. West. The author has prepared this oxide in considerable quantity by heating Thorpe and Sutton's phosphorus trioxide at 300° C., in sealed tubes, when it decomposes, forming phosphorus and the new oxide. The latter is a most remarkable substance, volatilising only with difficulty at 1,400° C, and dissolving in water to form phosphorus and meta-phosphoric acids, whence it appears that it is really a molecular combination of P_4O_6 and P_4O_{10}—*i.e.*, of the trioxide and pentoxide—and this conclusion is borne out by determinations of its vapour-density, made in a special furnace capable of melting steel, which supports the formula P_8O_{16} for the new oxide.

AT THE NEXT MEETING,

on Wednesday, June 18, at 5.30 P.M., a ballot for the election of Fellows will be held, and the following amongst other papers will be communicated:—

"Elimination of a Nitro-group on Diazotisation; Dinitro *p*-anisidine." By R. Meldola and J. V. Eyre.

"A New Type of Substituted Nitrogen Chlorides." By F. D. Chattaway.

"The Colour-changes Exhibited by the Chlorides of Cobalt and Some Other Metals, from the Standpoint of the Theory of Electro-affinity." By F. G. Donnan and H. Bassett, jun.

"Preliminary Notice of Some New Derivatives of Pinene and Other Terpenes." By W. A. Tilden and H. Burrows.

"The Preparation of Pure Chlorine, and its Behaviour towards Hydrogen." By J. W. Mellor and E. J. Russell.

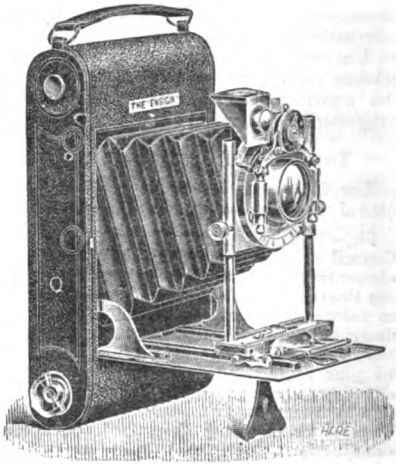
Photographic Notes.

By a Pharmaceutical Camerist.

THE WATKINS MANUAL.

MR. ALFRED WATKINS has brought out a useful book under the above title, the chief purpose of which is to explain his excellent systems of calculating exposures and developing by the aid of factors. The subjects have been touched on in various text-books, but the "Watkins Manual" is the first that has been solely devoted to an exposition of the principles and practice of exposing and developing by factors. The book is published by Messrs. G. Houghton & Son, High Holborn, W.C., at 1*s*, and can be safely recommended to amateurs by photographic chemists.

ENLARGING-APPARATUS.



MESSRS. BARCLAY & SONS (LIMITED), 95 Farringdon Street, E.C., have brought out an enlarging-apparatus which should have a large sale amongst amateurs who go in for small plates. It is intended to make enlarged prints from quarter-plate or 2¼ by 2¼ inch negatives, and when once the exposure is found, enlarging is by means of this apparatus as simple an operation as making a contact-print. The form of the apparatus is shown in the engraving, and its selling-price is 18*s*.

I noticed also, when at Barclay's, a well-made printing-frame with no projections. It is called the "95," and has some points of superiority over most other frames. The price, too, is reasonable.

NEW CAMERAS.

MESSRS. G. HOUGHTON & SON have introduced three new sizes in daylight loading roll-film hand cameras. The No. 2 Scout takes a picture 3¼ by 2½ and is similar in build to the No. 1 Scout. The "Ensign" Model B, is an improvement on the "Ensign" Model A. It is fitted with rising and falling front (see illustration) for both horizontal and vertical pictures, which makes it essentially the camera for use with high-class lenses. The "Ensign" Model C is another camera adapted for films 5 by 4, or plates 4¼ by 3¼.

CAUTION TO CHEMISTS.

I HEAR that the Kodak Company are taking legal proceedings against several photographic chemists for alleged infringement of their trade-marks. Persons are said to have asked for, say, "A spool of film for a Brownie camera," and been supplied with a film not made by the Kodak Company without explanation that the film is another make. Photographic chemists who do not sell Kodak goods should again impress upon their assistants the necessity of explaining to customers that the films supplied, although fitting Kodak cameras, are not made by the American company.

Digitized by Google

Business Changes.

COHEN'S DRUG-STORES is about to be removed from 146 to 253 Commercial Road, E.

MR. S. J. HURST, chemist and druggist, has opened a branch business at 40 Skirbeck Road, Boston.

MR. A. DAVY, chemist and druggist, Beckenham Road, Penge, is opening a branch at 1 Grand Parade, Sydenham, S.E.

MR. THOMAS PAGAN, chemist and druggist, has purchased the branch business of Mr. G. Wilson at 63 Rice Lane, Liverpool.

MESSRS. NEEDHAMS (LIMITED), chemists, are making considerable extensions at their premises, 297 Edgware Road, N.W.

MR. H. R. DUNCAN, chemist and druggist, has purchased the Tontine Street business of Messrs. Hall & King, chemists, Folkestone.

MR. R. JONES OWEN, chemist and druggist, has removed from 5 Market Terrace, High Road, to 8 The Parade, Westberry Avenue, Wood Green, N.

MR. H. WYKE TUPMAN, pharmaceutical chemist, 6 Montague Street, Worthing, has made extensive alterations in his pharmacy—a receding front with central doorway replacing the old front and side door.

Birth.

Notices under this heading are charged 2s. 6d. *each.*

SCAMPTON.—On June 3, at East Cliff Pharmacy, Bournemouth, the wife of James H. Scampton, chemist and druggist, of a son.

Marriages.

CAIRNS—FLEMING—At Craigsford Mains, on June 5, by the Rev. A. B. Taylor, M.A., Earlston, John Cairns, chemist and druggist, to Helen Thomson, youngest daughter of Mr. John Fleming.

CLENDINNING—WILSON.—On June 4, 1902, at Holy Trinity Church, Rathmines, Dublin, by the Rev. H. Wilson, B.A., T.C.D., Vicar of Holy Trinity, Kilmaine, cousin of the bride, assisted by the Rev. S. M. Harris, M.A., Rector of the parish, James Hamilton Clendinning, L.R.C.S.I., L.P.S.I., the Medical Hall, Rathmines Road, to Annie, youngest daughter of R. J. Wilson, 26 Leinster Road, Rathmines.

DOBSON—CLARKE.—At Mathers' Hotel, Dundee, on June 4, by the Rev. Robert Lorimer, Mains, assisted by the Rev. Charles Richardson, Glasgow, John Dobson, chemist and druggist, Stranraer, to Catherine, second daughter of Mr. J. P Clarke, Strathmartine.

KELF—DAVIES.—On June 9, at St. John's, Westminster, by the Ven. Archdeacon Wilberforce. D.D., Rector, Henry David Kelf, pharmaceutical chemist, East Dulwich, to Clara L. Davies, late of Christchurch, N Z.

PERKINS—PARNELL.—On June 5, at St. Mark's Church, Wolverhampton, by the Rev. R. G. Hunt, M.A., Vicar, assisted by the Rev. A. L. Bickerstaff, M.A., Vicar of St. Mary's, Bilston, George Mitchelson Perkins, chemist and druggist, Evesham, to Frances Mary (Daisy), younger daughter of the late Mr. Jas. Parnell, chemist, Wolverhampton.

ROBBINS—CLOAKE.—On June 11, at Christ Church, Westgate-on-Sea, Robert William Robbins, chemist and druggist, of Bexhill-on-Sea, to Frances Mary, only daughter of Mr. George Cloake, Montagu House, Westgate-on-Sea.

Deaths.

BIRKS.—On April 14, at University Street, Montreal, Mr. Richard Birks, the oldest druggist in business in Canada. Mr. Birks, who was 97 years of age, had been connected with the retail drug-business for seventy-seven years, of which fifty-eight had been spent in Canada. He was born at Wombwell, in Yorkshire, England, when "Good King George" was still on the throne. Mr. Birks was 10 years old when the Battle of Waterloo was fought, and five years later George IV. became King. Since then William IV., Queen Victoria, and Edward VII have reigned, and Mr. Birks thus lived under five British Sovereigns. He was educated at Brampton Grammar School, and served his apprenticeship with Dr. Hudson, at that time a well-known London apothecary. He afterwards received a commission from the British Government to proceed to Jamaica with a number of botanists who were to study the plant-life of that island. All the members of the expedition contracted yellow fever and, with the exception of Mr. Birks, died. Mr. Birks returned to England, where he remained till 1844, when he emigrated to Canada, living two years at Toronto and the remainder of his long life in Montreal. Mr. Birks was able to attend to his business regularly almost up to the time of his death, his faculties being unimpaired.

COTMAN.—The death occurred at Langdon Hills, Essex, on June 4, of Dr. John Sell Edmund Cotman, who was in practice in the Minories, E C. Aged 55. Dr. Cotman was born in Norwich, but went out to South Africa when about 14 years of age, and was for some time a chemist in business in Natal. He returned to this country about twenty years ago with the intention of qualifying as a medical man and returning to Natal, but settled down in the metropolis instead.

FERRIE.—At Middleton, on June 6, Mr. Andrew Ferrie, chemical-manufacturer, Eccles, died on the station-platform from heart-disease.

GREEN.—At Hull, of typhoid fever, Mr. Hugh Green, chemist and druggist. Aged 29. Mr. Green was the youngest son of the late Mr. F. Green, of Ketton Hall, Darlington, and served his apprenticeship with Mr. James Robinson, pharmaceutical chemist, Darlington.

HARRISON.—At Clitheroe, on June 5, Mr. Wm. Harrison, chemist and druggist, of Castle Street. Aged 66. Mr. Harrison's end was probably hastened by the fact that his wife died on June 2.

KAY.—On June 5, at Park Villa, Roundhay, Leeds, suddenly, Mr. Charles William Kay, chemist and druggist, 128 Roundhay Road. Aged 35.

LITTLEFAIR.—At Manchester, on June 1, Mr. Thomas Littlefair, chemist and druggist. Aged 34. Mr. Littlefair was manager to Boots (Limited), at their Oldham Street branch, Manchester, and died from an acute attack of pneumonia, after being ill for only a week. He leaves a widow and one child. At one time he managed a chemist's business at Cornholme. He was a native of Cumberland.

MACCREATH.—The death is announced at Kwala Lumpor, Straits Settlements, of Mr. David MacCreath, chemist and druggist, proprietor of the Dispensary. Mr. MacCreath was the son of a chemist in the South of Scotland, and served his apprenticeship with Messrs. H. C. Baildon & Son, of Princes Street, Edinburgh. Thereafter he came to London, and was several years in an Oxford Street pharmacy. He was about 40 years of age.

NEAL.—At 112 Brighton Road, Croydon, on June 2, Mr. William Neal, chemist and druggist. Aged 47.

ROBERTS.—On June 11, at the Westham Pharmacy, Weymouth, Kate Eliza, wife of Mr. Arthur H. Roberts, chemist and druggist.

WEGENER.—Considerable surprise was evinced in Hong Kong on April 24 when it became known that Mr. O. Wegener, senior partner of Messrs. Lauts, Wegener & Co., dealers in Chinese produce in Hong Kong and Canton, had committed suicide by shooting himself with a revolver at his residence, "The Castle," Seymour Road, Hong Kong. A letter was afterwards found, written by the deceased, stating that owing to ill-health he had taken his life to save himself further suffering. He was much respected in Hong Kong.

WILLIAMSON.—At Darlington, on June 1, Mr. Edward Williamson, chemist and druggist. Aged 71. Mr. Williamson had been in business at Darlington for thirty years, having pharmacies first at High Row and latterly at Bondgate. He was assisted in his business by his eldest son, Mr. Leonard Williamson, pharmaceutical chemist.

Scientific Progress.

Hydrate of Chlorine.—M. de Forcrand (*Comptes Rendus*) has proved the composition of this substance to be $Cl_2 + 7H_2O$. Faraday made it out to be $Cl_2 + 11H_2O$, and Roozeboom, by the same method (analysis of desiccated crystals), believed the constitution to be $Cl_2 + 6H_2O$.

Oil of Anise.—Professor Edward Kremers, in the second of his reports for the U.S.P. on valuable oils, deals with oil of anise (*Pharm. Rev.* XX., page 161). He discusses the production and chemistry of the oil, as well as current literature, especially referring to the work of John C. Umney on the subject. Each of the U.S.P. statements is critically examined and explained, but the only addition suggested is a figure for the optical rotation.

Preparation of Safrol from Camphor Oil.—Mr. Ch. Sugiyama in a paper communicated to the Pharmaceutical Society of Japan, regrets that although the work of preparing camphor, white and red camphor oil, from the ordinary camphor oil, is a special achievement of his fellow-countrymen, the investigation of their real nature and to make it known to the world is very rare among Japanese. On the contrary, the investigation of camphor oil is carried on with great zeal in foreign countries. The author has therefore made various experiments on camphor oil, and he has succeeded in preparing safrol from it, and his method of preparation is reported in the *Journal* of the Society [in Japanese].

Adulteration of Turpentine.—Andouard (*Répertoire de Pharmacie*, 1902, 442) gives the details of the examination of a number of samples of adulterated French turpentine. The adulterant used is the so-called "white spirit" of the Americans. This is a light petroleum spirit, of sp. gr. about 0·807, and with very little optical activity. The high boiling point of its later fractions, together with the alteration in sp. gr. and the optical rotation, is sufficient to enable the adulteration to be detected with ease. We are informed by a correspondent that the adulteration of ordinary American turpentine is far from uncommon. Much of the so-called pure turpentine is very grossly adulterated with both light petroleum spirit and rosin spirit.

Assay of Cinchona-bark.—In a communication to the Belgian Academy of Medicine, Myttenaere criticises the methods of assay of cinchona-preparations as given in the Dutch, British, Swiss, Austrian, and Italian Pharmacopœias, then gives the details of the process which he considers most satisfactory. He takes 7 grammes of the finely powdered bark, and shakes it for three hours with 140 c.c. of chloroform and 10 c.c. of ammonia solution. He then adds 3 grammes of powdered gum tragacanth and 20 c.c. of water. The whole is shaken well and allowed to settle, 100 c.c. of the chloroformic solution is then filtered off. The solvent is evaporated, and the residue dried on a water-bath. It is then redissolved in a little chloroform and treated with 15 c.c. of decinormal hydrochloric acid. After due separation of the solvent the excess of acid is titrated with alkali, and the number of c.c. of the acid used, multiplied by 0·0309, represents the weight in grammes of alkaloids in 5 grammes of the bark. Corresponding methods are given for the determination of the alkaloids in galenical preparations of the bark.—(*Répertoire de Pharmacie*. 1902, 218.)

Phospho-mannitic Acid.—Portès and Prunier, who are well known on account of their work in connection with the glycerophosphates, have made a further series of experiments in order to see if phosphoric acid is equally efficacious in the etherification of other polyatomic alcohols, such as mannite. They publish their results in the current issue of the *Journal de Pharmacie et de Chimie* (1902, 457). The process which they found yielded the most satisfactory results in preparing the pure compound is as follows: Three molecular proportions of mannite and three of phosphoric acid (the mannite having been dissolved in 500 c.c. of water for every 550 grammes) are heated on a water-bath for seven days. After the reaction is complete the mass is dissolved in cold water. The solution is treated with subacetate of lead which precipitates free phosphoric and phospho-mannitic acids, leaving the excess of mannite in solution. The precipitate is well washed, then suspended in water, and treated with sulphuretted hydrogen. Excess of this is removed by a current of air, and barium carbonate and, finally, baryta-water is added, until complete precipitation of the phosphoric acid. The phospho-mannitate of barium remains in solution and can be filtered off. If prepared now, it is found to be somewhat impure, but can be purified by decomposing it with sulphuric acid, reconverting into the barium salt, and precipitating with alcohol. Thus prepared the barium salt is a white powder, of crystalline nature, soluble in cold water, partially decomposed by boiling water, insoluble in alcohol, oils, and ether. The free acid is a gummy mass. Whether this new class of phosphoric-acid compounds will play as useful a part in medicine as the glycerophosphates have remains to be seen.

Things that Happen—Sometimes.

Improper Dispensing Methods.

The Wax.

There was a young chemist named Racks,
Whose training had been rather lax.
His method revealed it,
When parcel he sealed it
By covering the counter with wax.

The Cork.

The scandalised people of York
Are for prodding "F. R." with a fork;
But they mustn't pursue it,
For *he* didn't do it:
The verse was but *ours*; his—the cork.

Recent Wills.

EVANS.—The will of Mr. Thomas Whitty Evans, chemist and druggist, of Aberdare, who died on March 20, has been proved at 2,451*l.* 3*s.* 11*d.* gross, and 2,279*l.* 12*s.* 2*d.* net. The executors are his widow, Mrs. Rebecca Evans, and Mr. Thomas Phillips, solicitor.

HARVEY.—Probate of the will of Mr. Joseph Smith Harvey, chemist and druggist, of Market Jew Street, Penzance, who died on February 20, has been granted to his widow, the sole executrix. The gross value of the estate is 1,551*l.* 12*s.* 9*d.* and the net personalty 1,021*l.* 2*s.* 11*d.*

HARWOOD.—The will of the late Mr. Ebenezer Green Harwood, chemist and druggist, 92 Clarence Street, Bolton, who died on February 15, has been proved at the Manchester District Registry by his executors, Mr. Henry Green, 108 Fishergate, Preston, gas manager, Mr. John Benjamin Goulburn, 15 Westwood Road, Bolton, registrar of births and deaths, and Mr. William Johnson, 92 Clarence Street, cashier. The gross value of the estate amounted to 13,626*l.* 6*s.* 7*d.* and the net personalty to 13,046*l.* 17*s.* 1*d.*

IRVINE.—The late Mr. Robert Irvine, F.C.S., of Royston, Granton, N.B., consulting chemist to Messrs. A. B. Fleming & Co. (Limited), of Granton, who died on March 20, has left a gross estate of 14,005*l.* 2*s.* 1*d.*

REYNOLDS.—Letters of administration to the estate of the late Mr. J. J. Reynolds, of 144 Lordship Lane, N., who died intestate on January 16, have been granted to his widow, Mrs. Susannah Reynolds. The gross value of the estate is sworn at 116*l.*

STEBBING.—The will of Mr. Walter Stebbing, chemist and druggist, 12 Gordon Road, Lowestoft, who died on February 10, has been proved by his executors, Mr. Edward Ernest Ransom, of East Dereham, gentleman, and Miss Hannah Bradfield, of 12 Gordon Road, spinster. The gross estate is valued at 3,170*l.* 4*s.* 11*d.*, and the net personalty 2,387*l.* 4*s.* 11*d.*

WILSON.—The late Mr. George Fergusson Wilson, F.R.S., of Heather Bank, Weybridge, and Oakwood, Wisley, formerly a director of Price's Patent Candle Company (Limited), and inventor of the process by which Price's glycerin is made, who died on March 28, has left a gross estate of 58,748*l.* He once saw a boy, run over by a cab, treated promptly and well at the Royal Free Hospital, Gray's Inn Road. He remembered the incident, and has left the hospital 1,000*l.* He leaves a similar sum to King's College Hospital, as he once attended Professor Daniel's chemical lectures at King's College.

Observations and Reflections.

By XRAYSER.

Modern Photography may be said to date from the use of gelatin as a medium for the silver salts used in negative-making, which was first successfully employed by Dr. R. L. Maddox, who has just died at Southampton. He did not at first see the need for washing out the soluble silver salts from the emulsion, nor were the first plates produced of anything like the sensitiveness they have now attained, but it is easy to see that the paper he published in 1871 is the germ from which modern dry-plate photography has arisen.

Dr. Maddox was living at Southampton when he did the experimental work which resulted in the gelatin dry-plate. He was a keen microscopist, and the desire to record the marvels of the microscope quickly and accurately led him to take up photography. Like Wedgwood, ill-health seems to have dogged the footsteps of Dr. Maddox throughout his life, and would seem to account for his residence at Constantinople and the Riviera, where he carried on medical practice. Some years ago a fund was raised to make good a loss sustained through a defaulting co-trustee, and it is interesting to note that some of the plate-makers who have reaped immense fortunes by the manufacture of gelatin dry-plates sent subscriptions, and that the loss Dr. Maddox sustained was more than covered.

Sir James Y. Simpson neither discovered chloroform, nor was he the first to use it as an anæsthetic. That is perfectly evident from Mr. J. P. Gilmour's statement last week. I may also go further, and say that Simpson may not have given full credit to those who were associated with him in the introduction of chloroform-anæsthesia. I have been told by those who knew him that he was a man of dominant personality, and imperious. He had the roughness which is said to be characteristic of all obstetricians, blended with the humility of the Scotch elder. His friends have unduly lauded him, perhaps, but there is no getting over the fact that it was his advocacy which established chloroform-anæsthesia, and mere historic research will not wipe out that gift to mankind.

Edinburgh was singularly fortunate during the first half of last century in her medico-pharmaceutic relations. They established her reputation for morphia, and Sir James Simpson was on most friendly terms with Messrs. Duncan & Flockhart, which gave her a start in the chloroform-industry. It seems that the spirit-duty in Scotland was then a little lower than it was on this side of the Border, and this gave Edinburgh manufacturers an advantage. They have retained it for more than a generation after the fiscal advantage was obliterated. But it must not be forgotten that their methods were early perfected, and the reputation of their product was always high. One of the hardest knocks Edinburgh chloroform ever had was about twenty years ago, when M. Yvon, of Paris, discovered that commercial chloroform decomposed permanganate-of-potash solution, which he inferred to be due to impurities in it. The discovery was received with a flourish of trumpets at Bloomsbury Square and there was intense excitement throughout the country when it was ascertained that not a single sample of British chloroform would stand "the permanganate-test." The Edinburgh makers were prompt in reply, and they made the authorities on the other side ridiculous, for the explanation was that all commercial chloroform contains a small amount of alcohol (added to preserve it), and it is this alcohol that reduces permanganate. Yvon's London supporters, like their bubble-scare, collapsed, and British chloroform has not been seriously attacked since.

The British Pharmacopœia is now more precise in regard to the alcohol-content of chloroform than it was at the time of the Yvon scare. I see the General Medical Council has not made much out of that interesting publication; at least, by spreading the profits over the forty-six years from the passing of the Medical Act to the present time, the committee which inquired into the Council's poverty succeeded in figuring down B.P. profits to 90*l.* a year. I suppose, if something were allowed for rent, taxes, and office-work, the profits might be worked down to *nil*, and that, to my thinking, is exactly what should be the result in the best organised Society. It was, at all events, the intention of the State, when it empowered the General Medical Council to publish the British Pharmacopœia, for the Medical Act does not allow the General Medical Council to fix the price of the book; this is done by a State department, which takes care that the G.M.C. does not make a business of it. This may seem hard, but the fact is everyone who has to do with getting up a new B.P. is paid—now that the Pharmaceutical Society has received a grant from the Council.

The Baking-powder Case reported in last week's *C. & D.* puzzles me. I have noticed several cases lately, and as long as conviction under the Sale of Food and Drugs Acts is obtained for large excess of acid or soda, or for the use of alum in place of tartaric acid, I cannot gainsay the righteousness of the conviction, as articles so compounded may be injurious to health. But the offence in last week's case was "an excess of rice-starch," which was held to be to the prejudice of the customer. The powder sold contained 63 per cent. of rice-starch, and the prosecution urged that 20 per cent. was enough, which view the Magistrate upheld. I think this unjust, because, in all my experience, I have found that as much ground rice as there is of tartaric acid and bicarbonate of soda combined is the proper quantity to use. I notice that "Pharmaceutical Formulas" gives as high as 56 per cent., and I feel sure that, if the defence had been properly worked up, the case for the prosecution would have broken down.

The "C. & D." has Scored Again with topical information. The articles on South African trade in the last two issues were not only timely, but good and profitable reading, particularly because they show that, although blood is thicker than water, it is not thick enough to prevent colonials buying in the cheapest and best markets, be they British or foreign. If I were to judge by the tone which the *C. & D.* representative puts in his notes, I would say that colonial chemists are inclined to back up the foreigner, with the object of getting better terms out of the English houses; colonials may prefer to say, "making the English houses wake up," but they come to the same thing in the end.

In the Matter of Perfumes, for example, France unquestionably leads, just as Chicago does in pork-packing and Burton in beer. They cannot help it. France grows the odours, and her artists lead the world in beauty and fortitude of design. These are the elements of the perfume-trade. Some of our manufacturing perfumers now realise the fact, and are buying French art as well as French floral pomades. If they could have them put up by French girls and sold on French terms they might meet the prejudices or requirements of the colonials; but I doubt it. English perfumery is made for English people, and the majority of them prefer it. I am not in the minority—this time.

Editorial Comments.

Sale of Pepsin-wine.

We are indebted to Messrs. Parke, Davis & Co.'s London house for an interesting correspondence which they have recently had with the Secretary of the Board of Inland Revenue in regard to the preparation of pepsin-wine. They submitted the following formulas for pepsin-wine, and asked whether wines prepared from either of these would meet the requirements of the Board of Inland Revenue for non-excisable wines:—

No. 1 Formula.

Pepsin	320 gr.
Hydrochloric acid	2 fl. dr.
Glycerin	3 fl. oz.
Sherry	sufficient to make 1 pint.

No. 2 Formula.

Pepsin	100 gr.
Dilute hydrochloric acid	2 fl. dr.
Glycerin	3 fl. oz.
Sherry	sufficient to make 1 pint.

To this the Board replied [E2521/1902, Excise] that pepsin-wines prepared according to the formulas cannot be sold without a wine-licence. Messrs. Parke, Davis & Co. then

Digitized by Google

submitted the following amended formula, and asked whether a pepsin-wine prepared in accordance therewith might be sold without a licence, and if not, why?

Pepsin	320 gr.
Hydrochloric acid	2 fl. dr.
Water	2 fl. dr.
Glycerin	3 fl. oz.
Sherry...	sufficient to make 1 pint.

Thereupon Messrs. Parke, Davis & Co. received the following letter:—

E. 2521. Inland Revenue,
Somerset House,
London, W.C.
8th April, 1902.

GENTLEMEN,—In reply to your further letter of the 2nd instant, I am directed by the Board of Inland Revenue to acquaint you that, while they allow pepsin-wine containing 320 gr. of pepsin and 2 dr. of strong hydrochloric acid per pint to be sold without a wine-licence, the addition of glycerine would sweeten and largely remove the unpalatable character of such wines, and that it was on this ground that exception was taken to the formulas previously submitted by you.

I am to add that for the same reason the amended formula would be open to objection.

I am,
Gentlemen,
Your obedient servant,
J. P. BYRNE,
Asst. Secretary.

This decision will, we believe, cause general surprise, for it has been understood since 1890, when the Board of Inland Revenue restricted the sale of this wine without licence to preparations containing 320 gr. of pepsin and 2 dr. of hydrochloric acid in 20 oz., that the use of glycerin with it is immaterial. This idea has been followed by the British Pharmaceutical Conference Committee, which, in the 1901 "Formulary," gives a formula for the wine containing 1 oz. of glycerin per pint. It is unquestionably the case that the formula which the Board of Inland Revenue approved in 1890 was sherry *plus* the stated quantities of pepsin and hydrochloric acid and nothing else; but the Board are labouring under a mistake if they suppose that glycerin is used in these formulas for the purpose of removing the unpalatable character of such wines. We would suggest that they should reconsider the whole subject, permitting at least the amount of glycerin prescribed by the British Pharmaceutical Conference. Our reason for this suggestion is that glycerin is not only an excellent solvent for pepsin, but in alcoholic preparations it helps to preserve the proteolytic power of the ferment. We do not here dispute the Board's ruling as to the palatability of alcoholic medicines, but if this is persisted in it will be necessary for chemists and druggists as a body to maintain to the full their rights under 16 George II., cap. 8, Section 12, which preserves the freedom of physicians, apothecaries, surgeons, and chemists in the preparation of spirituous medicines for sick, lame, or distempered persons only.

British Trade in May.

THE Board of Trade returns for May are fairly satisfactory, and although there is nothing particularly striking about the figures they have a special interest because they deal with the final month of the war, and thus show how we stand after a diversion of more than two and a half years in normal trade conditions. It is pleasing to find that the trade of the country is still healthy, our imports showing an increase of 2·18 per cent. compared with last year; while our exports exhibit a slight decrease of 2·16 per cent., being due to a decline in the coal-shipments. The figures for the two years and the year 1899 are as follows:—

	May.		
	1902	1901	1899
	£	£	£
Imports ...	43,353,705	42,426,759	40,876,628
Exports ...	22,831,974	23,336,662	23,030,240
Re exports ...	5,256,747	6,056,229	5,746,798
	January to May		
	1902	1901	1899
	£	£	£
Imports ...	222,135,337	220,724,360	198,403,349
Exports ...	114,123,191	116,135,974	104,541,727
Re-exports ...	27,209,714	28,560,356	27,986,107

The figures for 1899 show the condition of the trade of the country before war rumours had any influence upon it, and it is apparent that trade has improved rather than fallen off. It is unnecessary to more critically examine the figures for that year, but, turning to the present time, we find that the 927,000*l.* increase in imports last month was principally made up of articles of food and drink, after which come manufactured and miscellaneous articles, metals, and oils. Chemicals showed a decline of 21,500*l.* Manufactured articles continue to pour into the country, no less than 8,483,000*l.* worth having been imported last month, an increase of almost 298,000*l.* Among the declines a big feature is a reduction of 820,000*l.* in raw material for textile manufacturers and 704,000*l.* in raw material for other trades. The first of these decreases was anticipated, and both are believed to be temporary. Among the imports of chemicals, valued at 502,698*l.*, the chief declines were in borax by 19,300 cwt., bleaching-materials by 5,376 cwt., soda compounds by 1,816 cwt, and saltpetre by 4,474 cwt. Sulphur, on the other hand, rose by 36,700 cwt. The over-production and low price of borax has probably led to the decline, while British chemical-merchants will be pleased to see a reduction in the imports of continental bleaching-powder. We are getting more regular supplies of quicksilver now, but the price does not move. The figures are:—

	1902	1901	1900
May ... ... (lbs.)	760,500	88,575	89,370
January–May... (lbs.)	2,025,820	1,562,244	284,814

During May we imported only 3,583 oz. of saccharin for home consumption, but so far this year the imports amount to 858,644 oz. The high price of turpentine has led to a considerable reduction, the imports for the first five months of the year amounting to 84,303 cwt., against 133,985 cwt. last year. Olive oil, palm oil, and petroleum all showed substantial increases, but cocoanut and seed oils of all kinds have declined. Cinchona improved by about 2,000 cwt. in May, but the imports for the five months are below last year's. The figures relating to shellac and other lacs have diminished and are still very low. Gum arabic dropped 4,000 cwt. last month, but it is balanced by 4,000 cwt. increase on the year. We bought more soap and soap-powder from abroad, having imported 119,121 cwt. this year

Digitized by Google

an advance of 2,000 cwt. on 1901. Our foreign quinine purchases amounted to 270,000 oz. (January-May, 805,000 oz.), and it cost us 1*s.* to 1*s.* 0½*d.* per oz.; our imports of unenumerated drugs amount this year to 450,000*l.*

Turning to the export of chemicals, there is a more hopeful sign that the British chemical-industry is slowly returning to a healthy and prosperous condition, inasmuch as the exports for the first five months of this year show an increase of 309,065*l.* on a total of 4,283,533*l.* We are not able to show in what countries we have scored as regards alkali (soda compounds), but each article shows an individual increase, caustic soda being the largest. There has been a revival in the copper-sulphate business, which, in view of the keenness of American competition, is satisfactory, and evidently the purity of British make enables it to hold its own as a remedy against "peronospora." The United States is still our best customer for bleaching-materials. The decline of 3,000*l.* in medicines exported is slight compared with the total of 563,827*l.* for the five months. We exported 52,427 oz. of British quinine and salts in May, valued at 3,940*l.*, or 1*s.* 6*d.* per oz. This compares very favourably with 3,953 oz. (225*l.*, or 1*s.* 1¾*d.*) of foreign quinine exported. Thus, the value of foreign quinine re-exported has risen since the beginning of the year, for in January 17,600 oz. was exported, at a value of 493*l.*, or 6¾*d.* per oz., although in the same period 22 290 oz. was imported at 1,168*l.*, or 1*s* per oz. The soap-trade has, we observe, more than recovered the falling-off shown in January-April, for last month the exports increased by 38,100 cwt., making an increase of 6,800 cwt. for the five months.

All these figures indicate that our manufacturing industries are waking up from the quiescence which was natural during the war period, when few dared to venture upon new lines of business, and high freights cramped export-trade. Some of our great foreign rivals have taken the declines and fluctuations of the past two years to mean decadence, forgetful of the fact that our exports are practically altogether in goods manufactured by ourselves, and that the decreases never amounted to more than could be accounted for by the diversion of the living producers to upholding the country's flag. With the return of these men to business, we shall naturally see an increase in our imports, more than half of which is foodstuffs, and two-thirds of the rest is raw materials for manufactures. The increase may be regarded by some as a sign of decadence, although it happens to be quite the opposite.

Duty-free Spirit.

At last the Government has consented to relax the conditions upon which duty-free alcohol may be employed for manufacturing-purposes in the United Kingdom. The permanent officials of the Revenue Department have been gravitating in this direction for some time, and it has been known privately that they were not averse to giving manufacturers ample facilities provided the revenue could be secured. They can do this, we believe, under the present law, and have in one case at least permitted the use of pure methyl alcohol in a manufacturing-process carried on on a large scale, and methyl alcohol is liable to the same duty as ethyl alcohol. The clause moved by Mr. Haldane as an addition to the Finance Bill, and accepted by the Chancellor of the Exchequer on behalf of the Government, and agreed to by the House of Commons, is purely permissive; but when it becomes law, as will be the case in a few days, it places on the statute-book an excellent principle, and at the same time removes one of the greatest impediments to the development of chemical industries in this country.

Mr. Haldane is a member of the Parliamentary Explosives Committee, upon which Sir William Roberts-Austen and Sir William Crookes are the chemical experts, the Committee's chemist being Dr. Silberrad, who last week dealt with this very subject in a paper communicated to the London Section of the Society of Chemical Industry. It may be remembered that in his presidential address to the Society in 1896, Mr. Thomas Tyrer dealt very fully with the subject, in which he first became interested when we started the agitation for drawback on spirituous preparations. Mr Tyrer. became so enthusiastic on that matter, that he took it in hand and carried it through as the Chairman of the Chemical Section of the London Chamber of Commerce. He has infused a similar enthusiasm into the Society of Chemical Industry's Duty-free Spirit Committee, and he has thoroughly coached Mr. Haldane as to the German spirit laws, the conditions of chemical manufactures in this country, and the whole history of the subject. This coaching is reflected in Mr. Haldane's speech, but before this stage was reached, the Government officials interested had been interviewed, and there was much work to do before they acquiesced in Mr. Haldane's proposal. This latest service of Mr. Tyrer's deserves this recognition, for its aims are national and its results incalculable.

We emphasise the fact that the provisions are permissive. Hitherto the Board of Inland Revenue have not, as stated, been unwilling to grant or facilitate powers for granting the use of duty-free alcohol for industrial purposes, but the conditions which they have laid down have been apparently so stringent that chemical-manufacturers did not consider the game worth the candle. The authorities require manufacturers to give an exceedingly heavy bond; the processes of manufacture have to be conducted in bond, and the constant presence of one or more I.R. officers is essential. In general terms these appear not to be unsurmountable difficulties, although they have seemed so when the details have been discussed with the Inland Revenue officers, but they are no more stringent than the regulations under which alcohol itself is manufactured in this country, and even tobacco-factories have to submit to a degree of official supervision which gives no worry to those supervised. We see no reason why the same should not be the result in chemical industries which take advantage of the new principle. That the innovation will have great influence for good on the chemical-trade of this country goes without saying. It may not be immediately taken advantage of, because it cannot be expected that even the largest business houses will be immediately prepared to sink fresh capital in housing the manufacturing-process and in giving the Revenue authorities security for proper use of the regulations, but in time these will. It may be a year, probably two years, before the details are worked out, and, of course, manufacturing pharmacists will not be excluded.

GUR-R-R-R-R-R-R-R-R.

"What number, please?" "3226 Gerrard."——"Hulloa! Are you there?" "Yes; we're the Pharmaceutical Society." "We're The Chemist and Druggist. We want to congratulate you on your latest effort to get up to date by installing the telephone. The introduction of modern business methods will bring you more in touch with the workaday chemist."

TINCT. QUIN. AMM.

The following is a reprint from "The Annals of Pharmacy and Practical Chemistry" (1853) of what is thought to be the first published formula for this preparation:—

Ammoniated Solution of Quinine.

A preparation under the above title, being now occasionally ordered by the prescriber in cases where the use of quinine in

Digitized by Google

combination with ammonia is indicated, and when it is wished to administer this combination in a state of perfect solution, we publish the following formula, having found that it meets the desired end:—

℞ Quinæ disulphatis ... ... gr. xxxij.
Spiritus tenuoris ... ... ℥iiiss.
Liquoris ammoniæ ... ... ℥ss.

Mix the quinine with the spirit and add the ammonia, which will at first precipitate the quinine, but afterwards redissolve it. Each drachm of this solution contains 1 gr. of quinine. It will mix readily with water, and, moreover, it is necessary that it should be taken in some such fluid, as the ammonia is too pungent in the solution to be administered undiluted.

"The Annals of Pharmacy" was edited by Messrs. Bastick and Dickinson, and was noted for its vitriolic criticism of the Pharmaceutical Society. The Annals lasted for three years.

SULPHUR RAIN.

There has been a lot of nonsense in the daily newspapers about showers of sulphur in the South of England, and some people have connected it with the recent volcanic eruptions. Mr. Charles Turner, Principal of the Manchester College of Pharmacy, has pointed out in the *Times* that the "sulphur" is pollen from coniferous trees; but Mr. H. B. Matthews, formerly Government Analyst, Straits Settlements, is reported to have analysed the stuff and found it to be sulphur. We are surprised! Sulphur-showers are common in Canada, and they are made up of coniferous pollen. Catkins are very prolific in England this year.

ARSENIC AND CANCER.

At the Bolingbroke Hospital on Wednesday, Mr. Jonathan Hutchinson, F.R.C.S., delivered the first lecture on "The Nature and the Causes of the Prevalence of Cancer." The lecturer referred to the increase of arsenic in medical prescriptions, remarking that at the present time the drug was used three times as much as thirty years ago. Used mildly, arsenic might be beneficial, but an undue use caused cancer in some cases, and in others greatly aggravated it.

GLYCERINATED VACCINE LYMPHS.

Two years ago the *Lancet* instituted an investigation into the purity and activity of vaccine lymphs. These investigations have appropriately been renewed and continued this year, and the report is published in last week's issue of that journal. The brands supplied and reported on are those manufactured by the Jenner Institute for Calf-lymph, Battersea; the Animal Vaccine Establishment (Dr. Chaumier), Paris; Messrs. Ferris & Co., Bristol; Faulkner's Pure Reliable Glycerinated Calf-vaccine Lymph, Long Acre, W.C; Dr. Warlomont's Glycerinated Calf-vaccine (Markt Brothers & Co., Beech Street, E.C.); the Establishment for Vaccination with Calf-lymph, Marylebone Road, N.W. (Dr. Renner); Association for the Supply of Pure Vaccine Lymph, Pall Mall East, S.W.; the Institut de Vaccine Animale, Paris; S. Maw, Son & Sons, Aldersgate Street, E.C.; the Birmingham Vaccine Establishment; Dr. Hime's Calf-vaccine Institution, Bradford; the Rebman Publishing Company, Shaftesbury Avenue, W.C.; Messrs. Burgoyne, Burbidges & Co., Coleman Street, E.C.; E. Merck, Jewry Street, E.C.; the Local Government Board, and the Instituto Vaccinogeno, Milan. In all cases the lymphs were examined bacteriologically and the number and nature of the "extraneous" bacteria found are indicated in tabular form. The relative bacterial purity of samples received during January and February is shown by the number of colonies found on agar plate, gelatin plate, anaërobic tube, and spores. Thus the number of colonies per 0·05 gramme found on agar come out relatively as follows:—Merck, 0; Local Government Board, 12; Birmingham, 26; Maw, 33; Institut de Vaccine Animale, 40; Ferris & Co., 61; Hime, 72; Faulkner, 87; Burgoyne, 94; Warlomont, 170; Rebman, 600; Jenner Institute, 600; Renner, 2,075; Chaumier, 10,000; Association for the Supply of Pure Lymph (Darke), uncountable; Instituto Vaccinogeno, 1,500. The activity of the lymphs was determined by experimenting on rabbits and comparing with statistics from various sources of effects on human subjects, and the conclusion come to appears to be that all the vaccine lymphs at present on the market are, as regards their capability for producing vaccine vesicles, of very trustworthy character at some period or other after their preparation.

FROM POLICE COURTS.

USE OF WEIGHTS IN MANUFACTURING.

AT Brentford Police-court on Thursday, June 12, the hearing of the weights case against Messrs. Parke, Davis & Co., Hounslow, in respect to certain unstamped weights and measures was again heard. Mr. W. P. Bodkin, barrister, appeared to defend, and after Inspector W. Tyler, for the prosecution, gave his view of the law,

Clara Rowe, employed by the defendants, stated that her work was tested, before she was paid, by weights, in order to see that she had made the bulk of material go as far as it ought.

Mr. Bodkin then explained that his clients were manufacturers only. The drugs for the manufacture of pills were carefully weighed, and the material in bulk was given to the girls to make into pills. This being done, the unstamped weights were used to see if the material had been properly utilised. They were thus used for the private purposes of the firm only, and were not used for trade within the meaning of the Weights and Measures Act, Sect. 29. In "Orick *v.* Theobald" Mr. Justice Wright laid it down that weights used privately need not be stamped unless they were at any time used to check other weights. In this case there was no such checking. The girls who made pills were not paid by the number they made, but by the quantity of material in bulk they dealt with. Their remuneration was not calculated by the amount of finished work they turned out, but by the amount of material which went through their hands.

Mr. Parker, manager at Hounslow, bore out these points in evidence. He added, in cross-examination, that the glass measure was found in the mixing-room, but it had got there by mistake, having been taken over from his private laboratory. The checking and testing weights were not allowed in the mixing-rooms. He had a notice in the establishment, "These weights must not be used for weighing for trade."

Mr. Bodkin further urged that the solitary or accidental use of a weight or measure should not be held as a user in trade. To be used in trade, there should be systematic or continuous employment of them. The Justices, after deliberating in private, came to the conclusion by a majority that the weights were in use for trade. They imposed a fine of 1*s.* and costs.

WEAK TINCTURE OF IODINE.—At Lambeth Police Court on Thursday, June 12, Parke's Drug Stores (Limited) were summoned for selling at their branch in Rye Lane, Peckham, tincture of iodine, which was deficient in iodine to the extent of 40 per cent. One of the company's representatives suggested that it was merely a case of misadventure. No one could be more careful than the defendants were. Defendants were ordered to pay a fine of 3*l.*, and 2*l* 19*s.* 6*d.* costs.

Samples of curd soap and pil. ferri are being taken by food and drug inspectors in the North London district.

MESSRS. R. W. GREEFF & CO., chemical-merchants, have removed from 20 to 29 Eastcheap, E.C.

The imports of quicksilver into Amoy during 1901 amounted to 32,133 lbs. (4,110*l.*), against 27,467 lbs. (3,700*l.*) in 1900.

GERMAN imports into Turkey last year included drugs and colours valued at 86,600*l.*, being less than in three former years.

"COME here, Johnnie," called his mother, appearing at the window with a cake of soap and a scrub-brush. "Good-bye," said Johnnie sorrowfully to his playmate; "I gotter go an' take th' water cure."—*Boston Post.*

Legal Reports.

Stamp Act, 1812.

Sale of B.P. Preparations.

At the Thames Police Court on June 6, before Mr. Dickenson, the hearing of the case against Mr. W. S. Glyn-Jones, 159 East India Dock Road, E., was resumed (see *C. & D.*, May 24, page 798). Mr. Denniss, of the Solicitor's Department, Somerset House, again appeared to prosecute for the Inland Revenue authorities, and Mr. Kirby (Messrs. Neve, Beck & Kirby) appeared for Mr. Glyn-Jones.

Mr. Denniss, on resuming the case, said that in the interval they had had an opportunity of dealing with certain points, as suggested by his Worship at the last hearing, but had failed to agree on all of them.

The points referred to

were as follows, the questions being formulated by Messrs. Neve, Beck & Kirby, submitted to the Inland Revenue authorities, and replied to by them:—

For the purpose of the proceedings in this case it is admitted as follows:—

1. That the defendant is a registered chemist and druggist and served a regular apprenticeship.
2. That the defendant holds a licence for the sale of medicines liable to duty under the Medicine-stamp Duty Acts, and sold a bottle of ammoniated tincture of quinine B.P. which did not bear a medicine-stamp.
3. That ammoniated tincture of quinine B.P. is a mixture, composition, or preparation of medicinal drugs bearing different denominations or having different properties.
4. That the ammoniated tincture of quinine B.P. sold by the defendant was prepared in accordance with a formula published in the British Pharmacopœia of 1898, and the words "B.P." on the label affixed to the bottle are intended to indicate that it was so prepared.
5. That the denominations, properties, qualities, virtues, and efficacies of ammoniated tincture of quinine B.P. are known, admitted, and approved of in the prevention, cure, or relief of influenza and colds, and that influenza and colds are ailments affecting the human body.
6. That the defendant has not, nor claims to have, any occult secret or art for the mixing, compounding, or preparing of ammoniated tincture of quinine B.P.
7. That the defendant has not, nor claims to have, any exclusive right or title to the mixing, compounding, preparing, or vending of ammoniated tincture of quinine B.P.
8. That ammoniated tincture of quinine B.P. has not been, and is not, prepared or sold under the authority of any royal letters patent.
9. That the defendant is not the originator of ammoniated tincture of quinine B.P., and that ammoniated tincture of quinine B.P. is made and sold by chemists in general throughout the country.
10. That ammoniated tincture of quinine B.P. as sold by the defendant would not have been liable to duty if the words "A well-known and highly recommended remedy for influenza and colds. Dose, one teaspoonful in water every four hours until relieved" had not formed part of the label, but as sold by the defendant with those words was liable to duty unless the last special exemption at the end of the schedule to the Act 52 George III., c. 150, is applicable to it.

The meaning of "B P."

The Magistrate said he wished to have it clear as to the points 8 and 9, especially as to the meaning of B.P. in the name "ammoniated tincture of quinine B.P." He took it that there is a tincture apart from the B.P. one.

Mr. Denniss said, in reply, that "B.P." really means the article is prepared according to the British Pharmacopœia. But that made no difference to this case.

Mr. Kirby: There is more than one way of making ammoniated tincture of quinine—the present B.P. one and others before it.

Mr. Denniss: They are substantially the same. The formula, he added, was first given in the 1874 Additions to the British Pharmacopœia 1867, it was repeated in the B.P. of 1885, and again in the present or 1898 B.P. The first mention of the tincture was in the "Annals of Pharmacy and Chemistry," 1853, of which there was only one copy available, and the other side had it. (Laughter.) He proposed to give evidence as to what ammoniated tincture of quinine B.P. meant. He admitted that Mr. Glyn-Jones was not the original maker of ammoniated tincture of quinine, although he might be of ammoniated tincture of quinine B.P. labelled as in this case.

The Magistrate wanted to know if there was a difference between the tincture as now compounded and that, say, of 1853.

Mr. Kirby replied that the present B.P. tincture was not the same thing as the one of ten years ago.

Mr. Denniss disagreed, and said a witness would prove that the present B.P. tincture was one and substantially the same thing as the others and the 1853 article.

Evidence for the Prosecution.

Mr. Charles Proctor, of the Government Laboratories, was then sworn, and stated that he is in the habit of examining pharmacopœial articles and other medicines. The letters "B P." added to the names of articles meant that they were prepared according to the British Pharmacopœia.

Mr. Denniss: Chemists are bound to make them up according to the B.P., are they not?

Mr. Kirby: I do not admit that; only when they are ordered by medical prescription.

Witness, in further examination, explained that he had made a search of pharmaceutical literature, and found that the tincture was first mentioned in the "Annals of Pharmacy and Chemistry," 1853.

Mr. Kirby handed his copy to the Magistrate, who examined Bastick's formula for ammoniated tincture of quinine, and asked witness, "Is there any difference between tincture and solution?"

Witness explained that a tincture is a spirituous solution. He then received the "Annals," and read out the formula, viz:—

Disulphate of quinia	...	...	32 gr.
Proof spirit	...	...	3½ oz.
Solution of ammonia	...	...	½ oz.

This formula, he added, was repeatedly mentioned in the *Pharmaceutical Journal* afterwards, and he described the formulæ of the B.P. Addendum 1874, B.P. 1885, and B.P. 1898, saying that the last was the same as the others only that the quantities were changed to accord better with the metric system as set out in the preface. The difference in the amount of the quinine in a drachm dose was $\frac{3}{59}$ gr. or $\frac{84}{1000}$ gr. The ammonia and spirit were altered similarly, 60-per-cent. alcohol replacing proof spirit of the older Pharmacopœias. The quinine was the essential ingredient.

In cross-examination by Mr. Kirby, witness said if a sample of tr. quin. amm, B.P. 1885, were sent to the Government laboratories he would not describe it as B.P. 1898. He admitted that ammonia is an essential ingredient of the tincture, and that it had been decreased from 1 in 8 to 1 in 10, or 20 per cent. There were also alterations in the strength of spirit, in the dose, and in the directions for making the tincture. He had traced the matter back to 1853 at Mr. Denniss's suggestion.

Mr. Kirby: Then you got it from us or through reading The Chemist and Druggist?

Witness smiled assent. Replying to further questions by Mr. Kirby, he said as far as he could trace the tincture had never been a proprietary medicine. The formula was first published by Bastick in 1853 because it was a good one. Others may have existed, but Bastick's became the standard formula.

Mr. Kirby: So doubtless the B.P. chose this one as the best?

The Witness: Yes.

Mr. Denniss: I do not see how the witness can answer for what the B.P. did. He has already said his investigations only result in these discoveries: it is not proof that that was all that actually existed.

The Magistrate: Can you tell me, Mr. Proctor, is ammoniated tincture of quinine generally admitted as a remedy for influenza and colds?

The Witness: Oh, yes, throughout the world now.

Mr. Kirby: Is the ammoniated tincture of quinine, 1898, a different article from before?

Witness: No; it is substantially the same.

The Magistrate: Perhaps it would now be best to get back to the chief point and settle that first. I mean

Digitized by Google

THE QUESTION OF OWNER OR COMPOUNDER.

Mr. Kirby: The witness clearly proves the defendant could not be either, for it was owned and compounded as far back as 1853.

The Magistrate: That is, perhaps, one way of looking at it. Now, we will take it that you bought this ammoniated tincture of quinine as you say from a wholesale house; was it then in these bottles?

Mr. Kirby: We bought it expressly for this case in these bottles.

The Magistrate: Yes; but without these labels?

Mr. Kirby: They were labelled, doubtless, "Ammoniated tincture of quinine," but we admit putting the present label on.

Mr. Denniss: You see, your Worship, the exemption in the Act does not apply to any medicine in which any person claims a proprietary right, therefore the words "owner or proprietor" at the end of the exemption cannot be used in the sense of a person having a proprietary right in the above sense, but the ordinary meaning of legal owner of the article sold.

The Magistrate: Do you admit that the defendant is exempt if he is not the original or the first vendor? We know he is not the maker or proprietor.

Mr. Denniss: He is the proprietor of that bottle. My friend rather takes the view that the Act refers to the contents of the bottle.

The Magistrate: So do I.

Mr. Denniss then quoted from the 1802 Act that the duties are payable by the owners and proprietors, or makers and compounders, or original and first vendors, adding that his first contention was that defendant was the owner or proprietor.

The Magistrate: Which? Is there any difference between the original or first vendor?

Mr. Denniss: No.

The Magistrate: And "vendor" is "seller"?

Mr. Denniss: Yes.

The Magistrate: But you say he is the proprietor.

Mr. Denniss: I would rather use the word "owner."

The Magistrate: So he must either be the owner or first seller in order to get a conviction. Well, we will get on. I see we have a lot to get through to decide the meaning of these words.

Mr. Kirby asked if he should call evidence as to the 1898 tincture being different from the others, and as to common rights in it since 1853.

The Magistrate said the mere question of facts depended upon what view was taken in another place, and thought the case might be decided on the question of law.

Mr. Kirby explained that Mr. Denniss considered the facts immaterial, and

CALLED MR. JOSEPH INCE;

when

Mr. Denniss said: Will your Worship allow me a moment? You see, the point is, Who was the first person to sell this particular bottle of ammoniated tincture of quinine? They say they go back to 1853, but we say this was first labelled by Mr. Glyn-Jones and first sold by him, so that he is clearly the person liable. So far as 1853 is concerned, we say that is immaterial.

The Magistrate: The point is, Who first sold this article with a recommendation?

Mr. Denniss: Mr. Glyn-Jones. He admits it.

The Magistrate: But did anyone else before him? The witness will perhaps explain.

Mr. Ince then gave his evidence, which generally corroborated Mr. Proctor's as to the history of the preparation; but he added that the tincture was in common domestic use before 1853, although there was no common formula for it. It had never been a proprietary article, and he spoke from personal knowledge dating back to 1850, from tradition, and acquaintance with journalism. The alterations in the 1898 B.P. formula were not of great importance.

The Magistrate: More technical than substantial?

Witness: Yes.

In cross-examination by Mr. Denniss, witness stated that B.P. means a medicine compounded according to the British Pharmacopœia.

Mr. Denniss: You have told us this article in and up to 1853 had not been patented, nor had anyone proprietary rights. How can you positively assert that?

Witness: If there had been, I do not see how the Pharmacopœia Committee could be ignorant of the fact.

Mr. Denniss: What do you mean by proprietary medicine?

Witness: Anybody can make it.

Mr. Denniss: You mean not a patented medicine?

The Magistrate: That is a different thing. The words "prepared only" make a medicine proprietary. There are a number of pills made that are not patented: take Beecham's pills; nobody knows what is in them except Beecham, and they are a proprietary medicine.

In further cross-examination, witness said one formula for the tincture (*P.J.* 1871) was 1 gr. of quinine sulphate in 3j. spt. ammon. arom.

Mr. Denniss: Did they ever say it was ever used for influenza?

Witness: Influenza is a modern word.

The Magistrate: Is it? I thought it was used to describe the sneezing sickness.

Witness: The Italians used it in that sense, and it was first used here in 1847.

There was a little more chat on this point, which the Magistrate closed by saying that if the case were taken to another place it would be on (1) whether the ammoniated tincture of quinine was recommended, (2) or as to whether Mr. Glyn-Jones was the original or first vendor, or the owner. It was a nice point.

Mr. Denniss: If Mr. Kirby says Mr. Glyn-Jones was not the first vendor, then he must prove who actually was, which he has not yet done.

Mr. Kirby: My friend admits that it has never been a dutiable article, for, according to 42 Geo. III., c. 56, s. x., every person who makes a dutiable medicine must inform the Commissioners of Stamps where it is made. That provision is still in force, and if ammoniated tincture of quinine has ever been a proprietary article the record should be at Somerset House.

The Magistrate (to Mr. Denniss): You said three classes of persons might have incurred liability—first, the 1853 originator; second, the wholesaler; and, third, the person who for the first time recommended the tincture to the public. You must show the third, as the first and second are excluded.

Mr. Denniss: If he goes to the High Court, it is to prove that Mr. Glyn-Jones is not the first vendor of this article. (To Mr. Ince): Who was the first vendor of ammoniated tincture of quinine?

Mr. Ince: I do not know.

The Magistrate: If I find as a fact that defendant is not the first vendor, no High Court can upset me.

Mr. Denniss: It is perfectly immaterial whether thousands have sold it without recommendation. We say, he is the first to recommend it, and that has to be disproved.

Mr. Kirby: This case is like right-of-way. We prove long user. Since 1853 it has been sold without stamps. If it ever was proprietary the evidence is in Somerset House, for the first maker must have given notice there where he was to make it, and the duty ought to have been collected on millions of bottles. The official rule is, "Once liable to duty, always liable."

Mr. Denniss: I do not admit that. Anybody, not necessarily a chemist, can make up a preparation and have it stamped.

The Magistrate: If ammoniated tincture of quinine is not recommended, it is not liable to duty.

Mr. Kirby: Reduced to a point of law, the fact is that if Mr. Glyn-Jones is fined, all ammoniated tincture of quinine will

HENCEFORTH BE LIABLE TO DUTY.

The Magistrate suggested that that depended on whether defendant was the first vendor or the owner, and asked what the wholesale house had done.

Mr. W. S. Glyn-Jones was called on this point. He said he bought four bottles similar to the one sold from Messrs. Gale & Co. (Limited). [Invoice put in.] There was then no recommendation on the bottles—simply tr. quininæ ammon. He put the present label on it himself, for the purpose of having this question tested.

Digitized by Google

Cross-examined by Mr. Denniss, he said he was at the time of the sale the owner of the bottle and its contents.

Mr. Denniss: The point of your contention is that if an article is in the B.P. it may be sold with a recommendation?

Mr. Glyn-Jones declined to admit that. His contention was contained in the exemption clause that permitted a chemist to sell compositions known, admitted, and approved of in the relief of any disorder.

Mr. Kirby: He does not claim the exclusive right to prepare it.

The Magistrate: You do not highly recommend it. You say, "It is a highly recommended remedy for colds and influenza." That is done by everybody, not by you particularly.

Mr. Glyn-Jones: Quite so.

The Magistrate (to Mr. Denniss): What is it you object to on this label? You said last time he might call it "Influenza-mixture."

Mr. Denniss denied that he had said so. He might have said "cough-mixture," as the Board allowed designations which were necessary to distinguish one preparation from another. If recommended for an ailment it was liable.

The Magistrate: Suppose he said, "Mixture: Recommended by the highest medical authorities."

Mr. Denniss: It must pay stamp-duty.

The Magistrate: What do you say to this?—"The best medicine for young and old in health and sickness."

Mr. Denniss: It would be liable if for human beings. Veterinary medicines are exempt.

Mr. Kirby was then called upon to address the Court. He first referred to the exemptions as specified in the book of rates, also to entire drugs, and, referring to the 1812 schedule of articles specifically charged, denied the correctness of Mr. Denniss's contention that it included everything.

The Magistrate pointed out that eau de Cologne is mentioned in the schedule, but is not liable.

Mr. Denniss said the liability had not been repealed, and the same was the case in regard to certain lozenges—peppermint, for example.

SPEECH OF COUNSEL FOR THE DEFENCE.

Mr. Kirby scoffed that suggestion, and remarked that Somerset House was always citing the case of Smith *v* Mason in a way that made him think it was their only case. There Gregory's powder was in question, yet it showed that the 1812 schedule did not include everything, for Gregory's powder existed when the schedule was drawn up. Dr. Gregory gave the formula to the world without reward; it was never proprietary. Mr. Denniss's contention that the article sold was the bottle, including the contents, was disproved by 42 Geo. III., c. 56, s. xiv., where it distinguished between the enclosure and the "drug, herb, medicine, medicament, or other preparation or composition liable to the duty."

The Magistrate: I see the list in that Act says, "and all other articles."

Mr. Kirby (continuing) said when the framers of the Act meant it to be particularly inclusive they said so—*e.g.*, "Daffy's Elixir, by whomsoever made." As to the meaning of "owner" or "proprietor," he cited 42 Geo III., c. 56, s. iii. (Alpe, page 27), as proof that the owner means the owner of the formula—*i.e.*, the actual maker and compounder. Mr. Glyn-Jones was not, for he bought it. The maker was the wholesale house, and as neither they nor anyone had ever taken out proprietary rights, the defendant was justified in adopting the label by right of the exemption clause. Going back to the Act upon which defendant was summoned, Mr Kirby quoted from the exemption clause (Alpe, page 105) that passage in which the person mixing, compounding, preparing, uttering, or vending claims no exclusive right, and said that was exactly the case here. Mr. Denniss had said the label made the article liable, but he (Mr. Kirby) contended that the label did not alter the nature of the medicine. For example, in the case of a row of bottles shown in a window, one only with such a label as that on the bottle which defendant sold, and the rest a label with the name of the article only, if Mr. Denniss was right in his contention, that one bottle alone was liable to duty, though, as a matter of fact, the recommendation applied to all the rest, as well as every bottle of ammoniated tincture of quinine which might be sold in the country. The whole matter turned on the meaning of "thereof" in the exemption clause, where are exempted all

mixtures, compositions, or preparations [sold by chemists and others specified] which have not been, are not, nor shall hereafter be, held out or recommended to the public by the owners, proprietors, makers, compounders, original or first vendors *thereof*.

What could this mean but that they must go back for liability to the original vendor of ammoniated tincture of quinine, and not to Mr. Glyn-Jones? To prove that the contents of an enclosure and not the package are liable to duty he quoted 43 Geo. III., c. 73, s. iii., 42 Geo. III., c. 56, s. xiv., and 52 Geo. III., c. 150, s. i., all of which are to be found in Alpe. The summons stated that the defendant had sold not a package but "a medicine" liable to duty—viz., ammoniated tincture of quinine, which, he submitted, was no offence, but if there were a conviction then this tincture would always be liable to duty, however sold. There could be no escape from that, as the general charge of duty (see Alpe, page 53) clearly showed that once an article is made liable it is always liable. Yet, he argued, it was to avoid the absurdity of this interpretation that exemptions were provided for chemists and others. If, for example, it were not for the exemption clause the B P. doses for ipecacuanha-wine, which state how much to use as an expectorant and how much for an emetic, would make every ounce of the wine sold by a chemist liable to duty, because the directions were a holding-out.

The Magistrate: It is clear that chemists are to have some privilege. If they are not to have *this* privilege what are they to have?

Mr. Kirby: That is what I say.

PROSECUTING-COUNSEL REPLIES.

Mr. Denniss: It is as well to state what privilege Mr. Glyn-Jones has. Suppose he sold magnesia tablets mentioned in the schedule, they would have to pay duty, but not if they were an entire drug merely.

The Magistrate: The chemist is not liable to pay duty if the original or first vendor or owner has not recommended the article.

Mr. Denniss: Magnesia tablets sold by anyone are liable to duty. He quoted 42 Geo III., c. 56, s 3 and s. 6, 9, and 11, to prove that the original or first vendor means the vendor of the particular article in question.

The Magistrate: What is the difference between "original vendor" and "vendor"? In the enacting part "vendor" is used, and in the exemptions "original vendor."

Mr. Denniss: The first vendor is not the man that makes gallons, but the man vending the particular amount sold—this bottleful.

The Magistrate: Why not the manufacturer?

Mr. Denniss: He has not recommended it, and the tax commences with the first person that does so—Mr. Glyn-Jones in this particular case. There is no question of duty without the label.

The Magistrate: But the first vendor, the wholesale firm, have claimed no proprietary rights. Is not the defendant the second vendor, and justified to label the bottle?

Mr Denniss: I say Mr. Glyn-Jones is the first vendor of this bottle.

The Magistrate: How, when he bought it of a wholesale house like that?

Mr. Denniss: He was the first vendor after affixing the label. It would be quite wrong to assume that the Act referred to the person they have talked about in 1853. How could the person of 1853 be the owner of the bottle or its contents now before the Court, which is compounded under the 1898 B.P.? Mr. Denniss then proceeded to show that, by the 1783 Act, the persons named had to take out licences, and when they did all the medicines they sold had to be stamped.

At this stage (after two and a half hours' debate) the Magistrate adjourned the case until June 25, at 2 P.M., when it is understood he will give his decision.

Factory Act, 1901.

AT Brentford Petty Sessions on June 4, before Mr. Montagu Sharpe and other Magistrates, Messrs. A. & F. Pears (Limited) were summoned by the Inspector of Factories for neglecting to send a return of employés as required by the Factory

Digitized by Google

Act, 1901. Mr. E. S. Wilson, one of the inspectors under the Act, stated that such return must be sent in by March 1. He went to Pears' works on May 7 and reported that the return had not been supplied. He was informed that the list had been made out, but on plain paper because the official form sent out by the Home Office had not been received. As a matter of fact, the list had been forwarded to the Chief Inspector of Factories, but as it was written on plain paper the return did not satisfy the requirements of the Act. Mr. C. Robinson, for the defendants, pointed out that no date appeared in the Act itself as to when the return was to be sent in, and until the Secretary of State made known his wishes in the matter, no one knew when or how the list was to be supplied. Messrs. Pears had complied with everything except the form of return, which had been sent to them mixed up with a number of advertisement sheets, and under the circumstances he asked the Bench to say that the proceedings were uncalled-for. Evidence was given in support of Mr. Robinson's statement. The Chairman agreed that it would be better if the Home Office dropped the habit of sending important forms with bundles of literature, such has had been mentioned in that case. People were apt to ignore the parcel altogether, and thus contravene certain sections of the Act. The circumstances of the case were such that defendants would only be called upon to pay 20*s.* as costs.

Pharmacy Acts (Ireland).

THE POLICE PROSECUTE.

AT the last Stradbally (Queen's Co.) Petty Sessions, two summonses relating to the sale of poison were heard, the defendant in each being Patrick Whelan, general merchant, Stradbally, and the complainant Sergeant P. Daly, of the R.I.C. In the first summons the defendant was charged with selling and exposing for sale, at his place of business at Stradbally, phosphorus, contained in a bottle of "E. Steiner's Vermin-destroying Paste," which he was not authorised to sell. In the second summons the defendant was charged with selling and exposing for sale a packet of Cooper's sheep-dipping powder, containing 20 per cent. of white arsenic.

Sergeant Daly proved the purchase of the poisons on March 10 and April 29, and mentioned that on the first occasion he cautioned defendant that he was not authorised to sell poisons. Witness handed the Magistrates a copy of the *Gazette*, containing the Order in Council certifying that phosphorus was a poison within the meaning of the Act. He also put in the reports of Professor Tichborne, which stated that the vermin-destroying paste contained 2 per cent. of phosphorus, capable of killing thirty-five persons; while the sheep-dip contained 20 per cent. of arsenic, which would destroy 1,500 persons

Colonel Cosby (Chairman of the Magistrates) said he believed Mr. Whelan would not sell poison contrary to law, that he was ignorant of the law, and that he (the Chairman) could not convict the defendant under Section 30 of the Act of 1875, wherein the minimum penalty was 5*l.*

Sergt Daly produced a report of the Templemore case, in which the Queen's Bench Division held that the Magistrates could not amend the summons, and that they were wrong in not fining the defendant 5*l.*

Mr. Timmins (another Magistrate) said that he was also ignorant that these articles were poisons under the Act, and that he considered that the Pharmaceutical Society should expend some money in letting traders know that the selling of these articles was contrary to law.

Mr. Whelan, the defendant, said he had been selling Cooper's dipping-powder for the last twenty years, and did so in ignorance of the law. He had returned a case of dipping-powder which he had ordered before the summons was issued. As regarded the vermin-paste, the police were his best customers.

Sergt. Daly said that ignorance of the law was no defence. He had proved the cases, and he must press for a conviction.

The Magistrates, having consulted, said that Mr. Whelan acted in ignorance of the law. They would convict him under the fifteenth section of the Act of 1890, and fine him 1*s.*, with 2*s.* 2*d.* costs, in each case.

AT Dromore West (co. Sligo) Petty Sessions, on June 4, summonses were heard against a shopkeeper at Templeboy, named Robert Brett, for selling Sandford's rat-poison, and keeping open shop for the sale of poisons. Sergeant Barrett, R.I.C., Inspector of Weights and Measures, Caskey, was the complainant. From his evidence it appeared that he went into Brett's shop, and seeing the rat-poison on the desk, asked the defendant if he sold it. Brett said "No," but that if a customer asked for it, he would sell it. The sergeant then asked for a packet and paid 6*d.* for it. Brett said his place was infested with rats, and he only got the one packet for his own use, and hence that he could not have sold any but the packet which he let the sergeant have. The Magistrates held that they were bound by the decision in the Templemore case, and could not impose a smaller penalty than 5*l.*, which they did on the first summons. The second summons they dismissed without prejudice. They recommended the defendant to memorialise the Lord Lieutenant with the view of having the fine reduced.

High Court Cases.

A PATENT-DYE APPEAL.

IN the Court of Appeal, on June 11, before Lords Justices Vaughan Williams, Romer, and Stirling, the case of the Badische Anilin und Soda Fabrik *v.* W. G. Thompson & Co. and others was heard, on appeal by the Basle Chemical Company, one of the defendants, from an order of Mr. Justice Buckley, giving leave to serve a writ out of the jurisdiction. Mr. Upjohn, K.C. (with whom was Mr. Parker), spoke in support of the appeal, but the hearing was not finished when the Court rose.

The case was resumed on Thursday, and their Lordships, in the result, held that there was no ground for interfering with the discretion of the learned Judge, and they accordingly dismissed the appeal, though Lords Justices Romer and Stirling expressed themselves as not altogether free from doubts on the point.

Sale of Food and Drugs Acts.

CAMPHORATED OIL.

ON June 2, Thomas Rains, of Rainham, was fined 5*s.* and 15*s.* 6*d.* costs at Chatham, for selling camphorated oil which was not up to B.P. standard.

LIQUORICE-POWDER.

AT the Sheffield Police Court on June 10, John Turner, herbalist, 778 Attercliffe Road, Sheffield, was summoned for selling compound liquorice-powder which was destitute of sulphur.

The Stipendiary took the view that a mistake had been made, and dismissed the case, on the defendant paying the cost of the summons—7*s.*

Bankruptcies and Failures.

Re LAURA VERRALL CROSSLEY (trading as Blanche Leigh), 126 Oxford Street, W., and Paris, Soap and Perfume Manufacturer and Vendor.

THE creditors met on June 10, at the London Bankruptcy Court, before Mr. E. L. A. Hough, sen. (Official Receiver). The debtor states that she commenced business in Paris some five years ago, with a capital of 2,000*l.*, borrowed from her husband. Shortly after the start she opened a small branch depôt at 5 Brook Street, W. The French business prospered and extended so rapidly that her assets were absorbed in land, plant, and stock. Eighteen months ago she took premises at 126 Oxford Street, W., the present London depôt. A profit has been made from the outset, but it has been spent in advertising the business. The debtor estimates her trade liabilities in France at 10,000*l.*, and her liabilities on loans and mortgages at 20,000*l.*, whilst she values the French assets at 25,000*l.*, exclusive of goodwill, which may be worth anything up to 10,000. The English trade debts amount to about 2,700*l.*, against assets valued at 3,500*l.*, and there are certain cash liabilities which may rank against the estate. The debtor attributes her failure entirely to want of capital, which caused her some eighteen months ago to enter into negotiations for the conversion of both the English and French businesses into a company, with a capital of 200,000*l.* The promoters undertook to provide 40,000*l.* working capital, subject to the French creditors accepting 25 per cent. cash and 75 per cent. in shares in discharge of their claims. Creditors for about 2,000*l.* rejected the offered terms, and the arrangement fell through, whereupon, to protect the creditors, Mrs. Crossley instituted liquidation pro-

Digitized by Google

ceedings in Paris, and filed her petition in the London Bankruptcy Court. At the request of creditors, the Chairman adjourned the meeting for a week, with a view to enabling other creditors to attend and take a part in the selection of a trustee and committee of inspection.

The bulk of the creditors are for advertising, besides whom the following appear:—

	£	s.	d.
Beeson & Co. (Limited)	30	1	0
Crossley, Herbert	855	0	0
Hasties, Messrs.	99	0	0
Houchin, James	245	5	6
Osborne, Garrett & Co.	11	15	6
Towner, W. J.	25	6	0
Walker, Jas., & Co.	240	18	1
Willett, Mrs. E. E.	4,700	0	0

Re Joseph Bloom Meggitt, formerly managing director of Messrs. Samuel Meggitt & Sons (Limited), Sutton-in-Ashfield, Glue and Chemical-manure Manufacturers.—This debtor appeared for his public examination at the Nottingham Bankruptcy Court on June 6. Since his statement of affairs had been made out he had returned the interest he had in his late father's estate at 50*l.* Since 1893 he had been a director and manager of Samuel Meggitt & Sons (Limited) at a salary of about 600*l.* a year. He also held shares in the company to the extent of about 11,000*l.* He now returned these shares as worth 20*l.* He had kept no books, and he attributed his failure to the depreciation in value of the shares. It was owing to the appointment of a receiver and the voluntary winding-up of the company that the value of the shares had depreciated. The examination was closed.

Gazette.

Partnership Dissolved.

Smith, R. D., and **Jeffree, F.,** under the style of Roland Smith & Jeffree, Maitland House, Lower Clapton, and Clapton Square, N.E, surgeons, apothecaries, accoucheurs, &c.

The Bankruptcy Acts, 1883 and 1890.

Adjudications.

Crossley, Laura Verrall (carrying on business as Blanche Leigh), Oxford Street, W., soap and perfumery manufacturer, wife of Herbert Crossley, trading separately and apart from her husband, having separate estate and assets.

Dean, Joseph (trading as Joseph Dean & Son), Sutton-within-Macclesfield, Cheshire, mineral-water manufacturer.

Trust Deed.

A circular has been issued stating that **Mr. William Macpherson**, chemist and druggist, Fife Street, Dufftown, N.B., has granted a trust-deed for behoof of his creditors. The statement of affairs shows liabilities of about 1,200*l.*, and assets estimated to realise about 900*l.*, thus showing a dividend of about 15*s.* in the pound, subject to the costs of realisation. The trustees are taking steps to dispose of the business and heritable property, the business being meantime carried on under a manager. The agent for the trustees is Mr. A. Blacklaw, 12 King Street, Aberdeen, to whom all claims should be addressed.

New Companies & Company News.

Medical Supply Company (Limited).—Registered in Dublin. Capital 300*l.*, in 1*l.* shares. Objects: To carry on the business of chemists, druggists, &c. The first subscribers are:—Ellen M. White, Brerogue, co. Sligo; T. Lynch, Castle Street, Sligo, chemist; E. J. Howley, Market Street, Sligo, clerk; A. A. Duigenan, Castle Street, Sligo, chemist; F. J. Meenan, Castle Street, Sligo, clerk; W. Kerr, Sligo, solicitor's assistant; and T. D. Howley, Sligo, solicitor's assistant. The first director is Ellen M. White. Qualification, 300 shares. Remuneration as fixed by the company. Registered office, Old Market Street, Sligo.

Cu-Cola Company (Limited).—Capital 2,000*l.*, in 200 founders' shares of 1*l.* each, and 7,200 ordinary shares of 5*s.* each Objects: To acquire the business of a patent-medicine proprietor and vendor carried on at 78 High Holborn, W.C., as the "Cu-Cola Company," to carry on the general business of chemists, druggists, and the like, and to employ qualified persons to act on the company's behalf as chemists, dentists, opticians, &c. The first subscribers are:—J. Dicker, 29 Tabley Road, N., gentleman; W. G. Meade, 78 High Holborn, W.C., postman; H. Gerard, 15 Brooklyn Road, Shepherd's Bush, W., clerk; F. Goodchild, Sidney House, Highgate Road, N.W., secretary; M. St. Lo, 7 Adam Street, Strand, W.C., artist; A. Court, 7 Adam Street, Strand, W.C., accountant; and W. Rogers, 51 Reverdy Road, Bermondsey, S E, clerk. No initial public issue. The first directors are H. W. Sharp and H. G. Dicker. Registered office, 78 High Holborn, W.C.

Dowden & Pook (Limited).—Capital 6,000*l.*, in 10*l.* shares. Objects: To take over the business of a manufacturing chemist, cordial-compounder, and wine-brewer carried on by J. M. Dowden at 41 Bermondsey Square, London, and the business of cider-manufacturers and merchants carried on by F. W. Marshal, Receiver for debenture-holders of Pook's Devonshire Cider Company (Limited), at Newton Abbot, Combe-in-Teignhead, Exeter, Bristol, London and Plymouth. The first subscribers are: J. M. Dowden, 41 Bermondsey Square, S.E., cordial-manufacturer; W. E. Crimp, 17 Essex Street, W.C., solicitor; R. G. Pook, Torrington House, Newton Abbot, cider-merchant; E. J. Smythe, 110 Kennington Park Road, S.E., accountant; C. A. Dowden, Main Road, Warminster, gentleman; A. Buchan, 10 Offley Road, Brixton, S.W., clerk; and H. O. Fryer, Sydney Cottage, James Street, Walthamstow. No initial public issue. The first directors are J. M. Dowden, R. G. Pook, and W. E. Crimp. Qualification 100*l.* Remuneration as fixed by the company. Registered office, 41 Bermondsey Square, S.E.

Liebig's Extract of Meat Company (Limited).—The directors have declared an additional dividend for the year 1901 of 3*l.* per share, making, with the interim dividend, 20 per cent. for the year, payable on and after June 30. Warrants will be forwarded on June 28 to the proprietors registered on June 20.

A. J. White (Limited).—The report of the directors of this company for the year ended March 31 states that the net profits for the year amounted to 63,364*l.* After paying the preference dividend and adding 2,702*l.* brought forward, there remains a balance of 36,066*l.* A dividend of 5 per cent. upon the ordinary shares is proposed, leaving 11,066*l.* to be carried forward.

Electrolytic Alkali Company (Limited).—At an extraordinary general meeting of the Electrolytic Alkali Company last week at Middlewich, it was decided to increase the directorate from seven to nine, and Mr. G. H. Harrison, J.P., Stourbridge, and Mr. W. D. Pilkington, J.P., St. Helens, were appointed. It was stated that a large extension of the works had commenced, and it was expected that another unit of cells would be ready by the end of the month.

Virol (Limited).—The report for the year ended March 31 states that the sales for the period show an increase of 31 per cent. over those for the twelve months of the previous year. The net profit amounts to 2,204*l.* as against 1,918*l.* for the previous fourteen and a third months. The accounts show a total profit of 4,122*l.* the advertising expenditure having been charged to capital account. The directors do not recommend the payment of dividends while the business is in the development stage; they have, therefore, decided to let this balance stand at the credit of profit-and-loss account. The question of increasing the working-capital is having the attention of the directors, and when a suitable time arrives for placing the balance of the unissued capital, amounting to nearly 31,000*l.*, the matter will be laid before the shareholders.

Boots' Companies.—Subscriptions are invited for an issue of 120,000 7-per-cent. 1*l.* preferred ordinary shares in Boo's Pure Drug Company (Limited), offered at 1*s* per share premium, which, the prospectus states, will be carried to the general reserve fund. The auditors certify that the profits of the last two years amounted to 23,300*l.* and 24,758*l.* respectively, and that the average annual profit was 20 per cent. over the average of the previous three years, while the number of sales to customers is reported to have increased by 8,200,308 since September, 1896. It is stated that the company's assets, exclusive of goodwill, show an excess of 274,142*l.* over all liabilities other than share capital.—An issue of 50,000 5-per-cent. cumulative second 1*l.* preference shares is announced by Boots Cash Chemists (Eastern) (Limited), which has an authorised share capital of 300,000*l.* The prospectus states that the profit last year amounted to 21,092*l.*, as compared with 9,252*l.* in 1895, while the management expenses were the same (750*l.*) in both years. The properties are valued at 201,672*l.*, and goodwill is put at 25,000*l.*; 96,000*l.* in preference shares has already been issued.

Westminster Wisdom.

(By our Parliamentary Representative.)

DUTY-FREE SPIRIT.

Mr. Haldane, who is a member of the Explosives Committee, had the following notice of motion on Tuesday's papers dealing with the Finance Act, 1901:—

To move the following clause:—

(1) Where, in the case of any art or manufacture carried on by any person in which the use of spirits is required, it shall be proved to the satisfaction of the Commissioners of Inland Revenue that the use of methylated spirits is unsuitable or detrimental, they may, if they think fit, authorise that person to receive spirits without payment of duty for use in the art or manufacture upon giving security to their satisfaction that he will use the spirits in the art or manufacture, and for no other purpose, and the spirits so used shall be exempt from duty.

(2) The authority shall only be granted subject to a compliance with such regulations as the Commissioners may require the applicant to observe for the security of the revenue, and upon condition that he will, to the satisfaction of the Commissioners, if so required by them, render the spirits unpotable before and during use, and will from time to time pay any expenses that may be incurred in placing an officer in charge of his premises.

(3) If any person so authorised shall not comply with any regulation which he is required to observe he shall, in addition to any other fine or liability, incur a fine of 50*l.*

The matter came on for consideration at a late hour on Wednesday night, and after an interesting discussion the Chancellor of the Exchequer accepted the clause, which was added to the Finance Bill in due form. Mr. Haldane, in moving the adoption of the clause, explained the subject. He pointed out that as the result of the unenlightened policy of this country, manufacturers have been prevented from carrying on industries, because it has been impossible to get the cheap alcohol that is necessary for certain processes. Alcohol is a very powerful solvent for certain substances, and it has got this very valuable property, that although it disintegrates the substances to which it is applied it enters into no combination, but leaves the substances as they were, and enables them to be adapted to the purposes for which they are wanted. The Explosives Committee, of which he is a member, have been considering the matter, and they have found that for powder-manufacture a supply of pure nitrocellulose is needed, and they think that this should be obtainable at home instead of abroad. To facilitate this purpose the clause has been drafted. Mr. Haldane proceeded to state that the Committee found that this question does not only concern powder-manufacture but six or seven other great industries in this country or industries which might become great, and therefore they thought it right to go a little out of their way to make their proposition in such a form as would benefit the chemical industry generally. In regard to celluloid, night-candles, and all things which resemble ivory and other substances, foreign nations have an enormous advantage over us in the fact that they can use alcohol without impurities, and in this way Germany has taken from us several important manufactures. The same handicap has been placed on the colour-industry, in respect of those colours which are prepared from coal-tar, and need the free use of alcohol. Germany has annexed this industry. There is also the industry of preparing perfumes and scents, and of as great importance is the matter of drugs. The valuable remedies, antipyrin and sulphonal, are scarcely produced in this country, owing to the difficulties which the existing revenue law places in the way of their manufacture. In this connection he quoted the case of one German firm which has made 60,000*l.* out of antipyrin alone. Nearly the whole of the chloral used has to be made abroad. As regards chloroform, the case is more disastrous still. We can produce it in this country, but we cannot export it. If you want to export it to Australia, you find that the operation of the existing revenue law is that it costs the British manufacturer 2*s.* 1*d.* to put it down at Australia, whereas the German manufacturer can put it down at 1*s* 1*d.* Also, on account of the duty on pure alcohol, a great deal of most valuable research-work had to be done abroad. All this, he thought, made out a case for the relaxation of the revenue law. The conditions imposed by the clause were so stringent that there could be no practical possibility of abuse. It would lead to a larger production of alcohol, and would, he hoped, be the beginning of a more enlightened commercial policy by restoring to this country a few industries which had gone from it, and of which we ought not to lose sight. He trusted the clause would commend itself to the Chancellor of the Exchequer.

Mr. Thomas Cochrane backed up the proposal, and mentioned the manufacture of fulminate of mercury, which requires the use of duty-free alcohol.

Mr. Cawley testified to the prejudicial effect of the present system on the British aniline-dye industry, and said that if the law were altered he thought we might have a chance of getting back business which had gone abroad.

Colonel Sadler, F.C.S., was satisfied that if the facilities asked for were granted we should see an important development of many industries. He knew a perfume which was now manufactured in France and which could not be manufactured here on a large scale, simply because alcohol could not be procured at a sufficiently low price.

Next came an exceedingly interesting speech by Mr. Fletcher Moulton. He said that out of coal-tar we have not only made certain drugs of great value, but we have almost got to such a pitch of knowledge that we can prophesy the production of drugs having special qualities which are to be obtained in a particular way from coal-tar. Sulphonal was thus discovered, and so have other drugs which have to be taken internally. Indeed, this coal-tar chemistry is assuming a position of prime importance. Purity of alcohol is an essential, but by putting a heavy tax upon pure alcohol we have made it impossible for the English manufacturer to manufacture pure drugs in this country. The hon. member went on to make a suggestion. It was that the Chancellor of the Exchequer should consult the chemists at his command to see whether at the same time the burden could not be taken off all agents of great value which are used in manufacture, such as ether.

The Chancellor of the Exchequer thought they were pretty well agreed that this debate had been one of unusual interest. The matter was of great importance, and he had carefully investigated the effect of the proposed clause, and thought it was one to which he might assent. He did not wish now to enter into the further subject very properly brought before the Committee by so high an authority as the hon. member for Launceston (Mr. Fletcher Moulton), but he would make inquiry into that subject and see if it was possible to extend the clause in the manner suggested. This might require longer time than would elapse before the report stage, and he would not definitely promise that anything should be done in the present Session. The Committee would feel that the law on this subject was somewhat antiquated, that chemistry and science generally had made enormous strides, and that it might well be that the progress of our industries might be hindered and their development prevented by effects of the laws never anticipated by those who framed them, and which the Government would be bound to examine into with a view to a remedy. He agreed to the clause.

Mr. Caine feared the clause might encourage alcoholism, and thought the subject should have been dealt with in a separate Bill.

The Chancellor of the Exchequer pointed out that the clause as it stood gave full authority to the Commissioners of Inland Revenue to take all necessary precautions, and he would undertake that they would bring it into operation in a tentative manner.

Mr. Henry Norman asked the Chancellor of the Exchequer whether it would be possible under this clause to introduce into this country on more favourable conditions the form of solidified alcohol known as spiritine.

The Chancellor of the Exchequer said he should not like to answer the question off-hand, but he confessed he did not wish at present to agree to any extension of the clause.

Mr. Moulton explained that spiritine was a mixture of alcohol with a little resin soap, and was used largely for the purpose of heating curling-tongs. Methylated spirit was used in making it. In regard to Mr. Caine's fears, he explained that in almost all the uses of alcohol in manufacture it was rendered just as unpotable the moment they had added it to their dye-bath as if they had methylated it.

The clause was read a second time and added to the Bill.

Free Trade in the Empire.

The Peace has been dwarfed this week in Parliament by the most interesting controversy that has arisen out of the corn-tax in respect of the future commercial relations of Great Britain and the Colonies. Until Monday the debate went on the assumption that the Government were determined to make protection the outcome of the new duty, but the Chancellor of the Exchequer gave a new horizon to the outlook by hinting that the thoughts of Ministers are turning in the direction of an Imperial Zollverein, or free trade with the Colonies. So much importance is attached to the Chancellor's words in the lobby that I may quote two or three sentences:—

If we could have free trade with our Colonies I do not see why that should necessarily involve increased duties on our part against foreign nations; but if we could have free trade with our Colonies even some sacrifice in that direction might be made. It is not possible, everyone who has looked into the matter knows, that there should be free trade at the present time between England and her Colonies. Cannot we try so to consider the commercial relations between us that we may make trade freer than it is now without necessarily injuring any foreign country at all? I am bound to say that my idea of dealing with this great and most important question is upon the basis of free trade, not upon the basis of protection.

Much more will be heard of the subject in the next few weeks, for it is to be discussed at the Conference with the Colonial Premiers.

The Midwives Bill.

This much-debated Bill has now passed through the consideration stage in the House of Commons, and, as I remarked last week, it is very probable that it will be added to the Statute-book before the end of the Session. The most important point was raised by an amendment moved by Dr. Ambrose, one of the Nationalist members for Mayo. He proposed that from and after January, 1905, no woman shall habitually and for gain attend women in childbirth unless she is certified as a midwife under the Act, and he pointed out that the insertion of these words, which was approved by the British Medical Association, was the only guarantee that unqualified women would be prohibited from practising. The member in charge of the Bill (Mr. Heywood Johnstone) replied that, with the sole exception of the Apothecaries Act, the current of legislative authority was against penalising unqualified practitioners. What followed soon convinced him, however, that something must be done to end the Sarah Gamp *régime*, and in the end he accepted the amendment in a modified form, which will make the clause operative after January 1, 1910. There was also an attempt made to extend the Bill to Scotland and Ireland, but this was successfully resisted with the assistance of the Solicitor-General for Scotland. In the event of the Bill becoming law, it is understood that separate measures will be introduced next Session to apply the principle to these two countries.

The Sale of Butterine.

Mr. Hanbury, the President of the Board of Agriculture, has introduced a Bill to amend the Sale of Food and Drugs Acts, 1875 to 1899, with respect to the sale of butterine. This is a development of the right hon. gentleman's policy of raising the standard of butter and butter-substitutes, and in fulfilment of his promise *re* excess of water in butter.

Parcels-post to United States.

Mr. Austen Chamberlain made the interesting announcement on Tuesday that negotiations, having for their object the establishment of a parcels-post between this country and the United States, have for some time been in progress. He added that no statement as to the final result can yet be made.

Patent-renewal Fees.

Mr. Gerald Balfour has informed Sir John Leng that it is not at present contemplated to reduce the patent-renewal fees so as to approximate the cost of a patent in the United Kingdom to that in the United States. He points out that if the Bill now before Parliament becomes law a considerable increase in the Staff of the Patent Office must follow, and the work done—which should be of material benefit to the inventor—would cause so large an expenditure of money as very greatly to reduce the present surplus. Sir John Leng had suggested that the surplus revenue from patents might be used to reduce the fees.

Trade Notes.

"Chemical Handicraft."—Under this title Messrs. J. J. Griffin & Sons (Limited), Sardinia Street, W.C., have published a new edition of their illustrated catalogue of chemical apparatus and reagents. The catalogue runs to 447 pages, and is a complete list of the apparatus required in modern chemical laboratories.

The Addition to the Poisons Regulations which, when sanctioned by the Privy Council, will require liquid disinfectants to be put in bottles distinguishable by touch, will put another problem before registered retailers of poisons—viz., how to distinguish disinfectants from lotions and liniments. The makers of the "Practical" poison-bottle say this is no problem; their bottle is distinguishable from all others.

"Sovereign" Water-bath.—Messrs. Barclay & Sons (Limited), 95 Farringdon Street, E.C., are placing on the market a new water-bath called the "Sovereign." It is an upright metal bath of the capacity of a little over 5 pints,

and it is fitted with a lid and brass tap communicating with the inner bath. The tap is so arranged that the whole of the contents can be drawn off. It is intended to use glycerin in the outer compartment, a hole being left as a safety-valve, whilst another tube is provided for the insertion of a thermometer. The bath is coppered outside, and costs a sovereign.

Tablet-making.—Messrs. Arthur H. Cox & Co., St. Martin's Place, Brighton, whose name is so well known in connection with coated pills, have taken up the manufacture of compressed tablets. We have examined a selection of these goods, and can substantiate the claims of makers as regards solubility. The effervescent lithia tablets dissolve entirely and quickly when placed in water, each tablet being equal to 5 gr. of lithium citrate. Among the sugar-coated tablets are cascara and Blaud's pill, the latter coloured pink. These, we find, are well made, and on cutting a tablet in half the coating is seen to be of the same thickness throughout. Tablets for making external applications are coloured and put-up in distinctive packages. The stock tablets are sold in bulk or packed for retail in screw-capped bottles, and Messrs. Cox tell us they are prepared to make and pack any kind according to customers' prescriptions.

"The Advertising World" published at Granville House, Arundel Street, W.C., has been doubled in size, and is now produced in an effective cover printed by the three-colour process. The contents are very good, especially the review of advertisements in the magazines and dailies, and

Digitized by Google

the criticisms of booklets, catalogues, &c. There are also a number of readable articles, the one of greatest interest to our subscribers being written by "the manager to one of the most extensive advertisers in Great Britain." This might appropriately be termed "The Impertinences of an Advertising Manager." It is a bald-headed attack on the P.A.T.A. in general and of chemists and druggists in particular. He is "sore" about the latter class because says he "chemists have worried and badgered the public to take their own substitutes." This is a ridiculous fallacy which we thoroughly exposed some years ago, when out of a score of purchases of Carter's little liver pills in London our buyers were offered substitutes in only one or two shops and these were "big cutting drug stores" which the writer of the article regards as the special friends of the proprietary manufacturer. That, however, has nothing to do with the *Advertising World*, which is wise in giving publicity to all sides, and we expect that the advertising manager is a good enough fellow apart from his bile, which were better worked off with a Carter than with a pen.

A SACHET PINCUSHION.—A useful and ingenious novelty in the shape of a combined pocket-pincushion and sachet has been introduced by Messrs. F. Schutze & Co., of 89 Southwark Street, S.E. The illustration shows the front of the pincushion and the reverse may be used for customer's own name and address, or other advertisement. The sachet-pincushion, which will fit the vest pocket is of leatherette, with chamois-leather edges for the insertion of pins, and forms a useful souvenir of the Coronation. The price is 3*d.* each, five being hung on a show-card.

Trade-Marks Applied for.

(*From the "Trade-marks Journal," May* 21, 1902.)

"AMBROLIA" (no claim for "Amber"); for goods in Class 48. By Meyer Brothers, 97 Gracechurch Street, E.C. 245,823.

"ZAZA"; for perfumery and toilet articles. By Breidenbach & Co., 48 Greek Street, Soho Square, W. 245,833.

(*From the "Trade-marks Journal," May* 28, 1902.)

"ENDOORA"; for chemical substances. By T. Hinshelwood & Co., Glenpark Street, Glasgow. 244,255.

"COALTARENE" (no claim for exclusive use of "Coal Tar"); for goods in Class 1. By A. Rowan & Brothers, Dunbar Wharf, Narrow Street, Limehouse, E. 245,921.

Device of jockey's cap (the essential particular) and words "MOLYNEUX'S CHALLENGER DISTEMPER-PILLS"; for distemper-pills. By H. Molyneux, The Kennels, Smallfield, Horley, Sussex. 244,463.

"LINGULINE"; for goods in Class 2. By J. J. Broderick, 63 Patrick Street, Fermoy, co Cork, Ireland. 245,581.

"VERASTIGMAT"; for lenses. By Seabrook Brothers & Co., 21 Edmund Place, E.C. 243,529.

"PIXIE" and "JACKO"; for photographic cameras. By the Brooks-Watson Daylight Camera Company (Limited), 81 Tower Buildings, Water Street, Liverpool. 245,485 and 245,486.

"PAGOR"; for photographic apparatus. By C. P. Goerz, 4 and 5 Holborn Circus, E.C. 245,564.

"TRIX"; for photographic apparatus. By Bishop & Vincent, 460 Holloway Road, N. 245,848.

Device of hand holding spray (essential particular) with words "WHIRLING SPRAY"; for syringes. By the Marvel Company, 11 Queen Victoria Street, E.C. 245,884.

"REFILLETTES" (no claim for "Refil it"); for ink-tablets or pellets. By Cochran & Co., Greenland Street, Liverpool. 245,667.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Dentists Act Case.

SIR,—In 1896 THE CHEMIST AND DRUGGIST invited the British Dental Association to consent to a test-case being taken to the High Court in which a person not registered under the Dentists Act—a chemist by preference—had announced by circulars, door-plate, or other respectable form of advertisement that he undertook the extraction of teeth or the supply and fitting of artificial teeth; they, after consideration by their executive, declined. I venture to think the reason was because they stood very little chance of winning. They have since been very cautious in the prosecutions they have taken lest such a case should be forced on them, and many unregistered men have enjoyed the freedom occasioned thereby. I am somewhat puzzled therefore at the apathy displayed by these unregistered ones over the effort being put forth to carry my case, which simply embodies what was wanted in the test-case, to appeal. If the local volcanoes are allowed to erupt with impunity, the big one will follow and endeaver to obliterate us. I think we are justified in exerting special efforts to retain what has been and what ought to be a valuable asset in a chemist's business, and to check those dentists who, by disputing our right to say we do the work, attempt to take more than their Act gives them.

Yours faithfully,
Cardiff, June 11. TEMPLAR E. MALINS.

P.S.—The Cardiff Stipendiary has sent a note declining to state a case for the High Court *re* the Dentists Act, on the ground that the application is merely frivolous.

SIR,—I shall be glad to subscribe one guinea to the above if you decide on further action. Yours truly,
Charlbury and Chipping Norton. H. W. G. MORRIS.

SIR,—If an appeal be decided on in the Malins case I shall have pleasure in tendering my half-guinea.
Yours faithfully,
F. C. WARDALE, M.P.S.L.
22 High Street North, East Ham, E.

SIR,—Put me down for one guinea in the event of the case being taken to the High Court. There is nothing in Mr. Malins's advertisements but what is used by thousands of chemists all over England, and if that conviction be allowed to stand the dental business is in great danger of being wrested from us. Yours faithfully,
W. F. E. (247/33).

The Pharmaceutical Benevolent Fund.

SIR,—I often ask myself the question, Who gets the benefits of the Benevolent Fund—the destitute or those who have not reached that stage, but have plenty of influence to back them? I have unfortunately had to apply twice, and although my petitions were signed by subscribers who had known me personally for more than twenty years, they were rejected each time. I will state the facts of my case. I went for a change of air to my wife's friends, and was there taken so ill directly afterwards that I could not with safety be removed. I had to keep my bed nearly two years. This was the effects of Russian influenza, from which I have never recovered, it having left me with a chronic internal disease of the most painful kind which often prostrates me for days and prevents me doing any kind of work. Several eminent surgeons say my case is incurable. The committee said I could get help from my friends. How could I, when my wife's father

Digitized by Google

was only receiving a salary of 60*l.* per annum, and out of this had a wife and family to support? What is the good of a petition, duly signed by proper and interested persons, if (as in my case) it is to be cast on one side as waste paper? Have the committee the absolute right to ignore the wishes and intentions of subscribers? The questions asked a person who requires a grant or yearly allowance from the Benevolent Fund are, to say the least, infamous. You apply for help, and your signatories prove that you are a fit and proper person. This ought to be sufficient. Why pry into private matters of the past and require you to expose these things to others? This is not only very hurtful to one's feelings, but adding insult to injury. If things cannot be managed better than this, the sooner the Benevolent Fund gets into the hands of someone who will distribute it in a business way, the more useful it will prove, and many who do not now subscribe will willingly do so. It is a shame and a disgrace to the business of a chemist and druggist to think that when misfortune overtakes a man he is positively in a worse position than the commonest workman, and if without funds—which is too often the case—there is nothing for him after many years of toil and slavery but the union.

Yours faithfully,

Ex Uno disce Omnes. (248/84)

[The grievance which the writer of this letter apparently has is that the Benevolent Fund Committee asked him questions which he resents. The regulations require the fullest inquiry, and our experience of the fund is that it is administered humanely and with every respect to the feelings of applicants. Moreover, we have never heard of a deserving applicant who has not been relieved.—Editor.]

Honour to the Pharmacist.

Sir,—The pageant recently enacted at Kingston-on-Thames to celebrate an important historic event was a happy and bright commemoration of the coronation of Edward I., who sat on the identical stone 1,000 years ago. But, it may be questioned, what has this circumstance to do with the pharmacist? Proximately and relatively it has, and admits of demonstration; and with your permission I will repeat, as accurately as memory serves, the information vouchsafed by the late Alderman Gould, J.P., sometime Mayor and Local Secretary of the Pharmaceutical Society for Kingston—

I felt confident (said he) that the King's stone, which confers its name on our borough, must be in existence somewhere, and for many years sought its whereabouts, but without success. At last, quite by accident, I entered the backyard of a shoemaker, where I noticed, half-buried under a mass of leather-clippings and rubbish, a large stone. I immediately had it exhumed, cleansed, and eventually placed in its present position, mounted up on a block of freestone, on the plinth of which is inscribed in ancient characters the names of the sovereigns that have successively occupied the seat. The Cromwellians, in their zeal to subvert royalty, were unable to destroy this indestructible memorial, which happily remains until this day in the place of honour, secured by a cast-iron railing designed for the purpose.

It is much to be regretted that the latter years of so active and important a life should be marred by bodily affliction. Yet up to the last he bravely endured suffering, and might be seen drawn in a Bath chair to and from the Town Hall, still with a cheery look and recognition of his numerous friends and acquaintances. Such an example commends itself to every pharmacist who desires to leave the world a little better than he found it.

Yours faithfully,

Deal, June 3. R. Goodwin Mumbray.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

248/11. *Poison.*—Homœopathic medicines containing scheduled poisons in quantity sufficient to be analytically and physiologically provable can only be sold by registered persons.

244/14. *A. H.*—You have been misinformed. There have been no recent actions by the Pharmaceutical Society of Great Britain as to the illegal sale of sheep-dips.

240/34. *Subscriber.*—A chemist, not registered as a dentist, who exhibits a show-case of artificial teeth, and states, without further qualification, that he supplies artificial teeth of the best quality, and extracts or stops teeth, does not, in our opinion, infringe section 3 of the Dentists Act.

248/66. *W. A.*—The sentence in your corn-paint label, "A second application may be necessary," implies that one application cures. In your advertisement you say—

> These forest glades my spirit chafe—
> I hear the hunter's horns,
> I wish I knew a certain, safe,
> And speedy cure for corns.

"Try the——Corn Paint," you add. The paint is liable to duty.

240/14. *Income-tax.*—The Commissioners of Inland Revenue do not require you to specify your drawings and things of that kind. The statement which you submit is not satisfactory, because the item "Expenses" is too general. From the gross profits you are entitled to deduct:—

(1) Repairs of premises and supply or repair of implements, utensils, &c., used in the business of chemist and druggist, such as mortars, fittings, bottles, &c. (average of three years).
(2) Bad debts.
(3) Rent of business premises or certain other rent as specified in the return.
(4 Business expenses—*e.g.*, salaries of employés, postages, local taxes, gas and fuel, stationery, advertising, and any other outlay incurred in business as an expense in carrying it on.

You are not required to specify these, but you should carefully determine your net profits for 1899, 1900, and 1901 on the above basis, and return the average of the three years as your income for 1902. If the local assessor has charged you income-tax, you not being liable, submit a full statement on the above lines to the Commissioners at Somerset House and claim repayment.

248/29. *Agreement.*—An agreement between a chemist and druggist and his assistant, to the effect that the latter will not start in business in a specified district within a certain time, is enforceable, although the assistant is unqualified, if the terms are reasonable.

246/56. *Ajax* is an indentured apprentice to a limited company, which does not employ a registered chemist and druggist to teach him the business, and he wants to know if the indentures are being faithfully administered. "Ajax" is apprenticed to the company, and if there is no clause in the indentures requiring a registered chemist and druggist to teach him the business, the contract is being fulfilled, as a limited company is capable, according to the House of Lords, of carrying on the art and trade of a chemist and druggist.

*** *We are compelled to hold over many letters and replies to correspondents.*

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

243/48. Address of suppliers of swansdown for making puffs.

244/50. Who are the makers or London agents for Ozonet?

250/17. What is the composition of Baines's blister, or where can it be obtained?

249/57. Pulv. catarrhine is a Russian remedy for influenza. Can any of our readers tell us its composition?

The Tsetse-fly.—The Liverpool School of Tropical Medicine expedition, which visited the Gambia in the summer and autumn of last year, succeeded in isolating the animal parasite "Trypanosoma," which is the cause of tsetse-fly disease, so prevalent among the horses in South Africa.

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: June 12.

IT cannot be said that the Peace has brought any perceptible improvement in business so far as regards drugs and chemicals, but a revival is hardly looked for until the half-yearly stocktaking and Coronation holidays are out of the way. There is, however, an undercurrent of firmness in most articles, although no important fluctuations have occurred. A little more inquiry has been shown for quinine in second-hands, but the spot price has reduced. The excitement in cod-liver oil (which was mainly confined to the Norwegian market) has died down, but the firm position is maintained. Japanese wax is at famine prices owing to the continued scarcity. Menthol is quiet, and in essential oils there are practically no changes, with the exception of Sicilian oils, which are tending higher, especially bergamot. Gentian is now held for higher prices. Both sulphate of ammonia and nitrate of soda are easier. The following are the principal alterations of the week, including those recorded at the drug-auctions:—

Higher	Firmer	Easier	Lower
Cardamoms		Ammonia sulphate	Dill-seed
Dragon's-blood		Pimento	Elemi
Gentian		Quinine (second-hands)	Ginger (Jamaica, common)
Oil, bergamot		Soda nitrate	Kino
Wax (Japanese)			Nutmegs
			Pepper, black and white
			Quince-seed
			Turmeric

Arrivals.

The following drugs, chemicals, &c., have arrived at the principal ports of the United Kingdom from 5 to 11, inclusive:—Acid, carbolic, 108; acid, citric (@ Bordeaux), 36; acid, tartaric (@ Bordeaux) 13, (@ Rotterdam) 18; arrowroot (@ St. Vincent), 203 brls.; benzoin (@ Singapore), 30; bleaching-powder (@ Antwerp), 170; bromine (@ Hamburg), 167 cs.; canary-seed, 500; cardamoms, 259; caraway-seed, 100; castor oil (@ Antwerp) 106 brls., (Ital.) 10; chamomiles, 15; cinchona (@ Mollendo), 431; citrate of lime (@ Messina), 21; cream of tartar (@ Barcelona) 63, (@ Tarragona) 30; cocaine, crude (@ Salaverry), 2 cs.; cod-liver oil (@ Drontheim) 17, (@ Aalesund) 18, (@ Bergen) 43; colocynth, 6; cumin-seed, 42; cuttle-fish bone, 20; cream of tartar (@ Amsterdam) 6, (@ Bordeaux) 44; essential oils (@ Ostend), 6; eucalyptus oil (@ Melbourne), 87 cs.; fennel-seed (@ Salonica), 246; gentian, 63; gentian-powder, 49; ginger (@ Jamaica) 825, (@ W.C. Africa) 492 bgs., (@ Sierra Leone) 235, (@ Bombay) 265 bgs. 175 cs.; honey (@ N.Z.) 18 cs., (@ Jamaica) 148, (Chil.) 39; insect-powder (@ Trieste), 14 brls.; juniper-berries, 75; lemon-juice (@ Palermo), 54 pkgs.; lemon oil (@ Palermo), 7 cs., 6 × ½ cs.; lime-juice (@ Jamaica), 3 pns.; menthol, 10; nux vomica, 500 pockets; olibanum, 255; opium (@ Smyrna) 103, (@ Bushire) 165 cs.; phosphorus (@ Montreal), 120 cs.; potash chlorate (Swed.), 32; rhubarb (@ Bombay), 19; "roots" (@ Bahia), 4; safflower, 6; saffron, 2; sandalwood, 109; senna (@ Bombay), 46; sugar of lead, 14; tamarinds (@ Antigua), 40 brls.; tartar (@ Bordeaux) 167, (@ Amsterdam) 53; turmeric (@ Bombay), 100; wine-lees (@ Messina) 381, (@ Alicante) 1,097 sacks; wax, bees' (Span.) 43, (@ Bombay) 13; wax, unenumerated (@ Bremen), 50 cs.; zinc oxide (@ New York), 260.

Californian Honey.

The following communication has been sent us by a Mincing Lane firm, and is an extract from a letter just received from California:—

To-day we have received reports from our offices in Los Angeles and Ventura counties, as well as from San Diego co., saying that in consequence of the absence of late rains there will be very little honey this year. In some apiaries the bees are only making sufficient honey for their own requirements. Last year at this time we already had a good deal of honey coming into the market, and we were selling the empty cans and cases on a large scale, but so far this year no new honey has arrived, and apiarists are not buying any cases or cans for the reason that they will have no honey to put in them.

Senega-root.

The *Winnipeg Commercial* of May 26 has the following in regard to the situation of senega-root:—"A dealer who is well posted says there are practically no stocks in either the Twin cities or the Winnipeg markets. It is estimated that there is only 1 ton in the former and 1½ ton in the latter market of old root. New York is supposed to have very small stocks, and the same with Europe. Consumers are using up their purchases to a low point, some of them holding off waiting for the new crop. The selling prices are 50c. in this market, and 52c. to 54c. in New York. It is expected that not sufficient quantity of root will be received to fill orders before July 1. It is difficult to say what quotations for the new root will start at. It will take a good while to replenish stocks all over the world, and there is likely to be strong competition for what new root is dug. Minnesota and the Dakota crop grows less every year; when the ground is once ploughed over it destroys the plant. The land is also being ploughed up in Manitoba, where the principal supplies now come from."

Heavy Chemicals.

At all the main centres of the heavy-chemical market a very fair demand, at mostly unchanged values, continues to be the ruling feature. Home-trade requirements keep up steadily, and for export a heavier request is apparent. Both bleaching-materials and alkali stand well in the exports for the first five months of the year, in each case an increase over last year being shown.

ALKALI-PRODUCE.—Caustic soda and ammonia-alkali continue to move briskly, but bleaching-powder is a shade quieter. Chlorates, prussiates, and saltcake are also decidedly dull.

SULPHATE OF AMMONIA is somewhat quieter in demand, but supply is still none too plentiful, and values are practically as last mentioned.

RECOVERED SULPHUR steadily maintains a firm tone, and, with strong demand, is still rather scarce; 5*l.* 5*s.* to 5*l.* 10*s.* per ton, f.o.r., in bags, are ruling figures.

GREEN COPPERAS is well maintained in value, and demand continues good. Best Lancashire makes 42*s.* 6*d.* to 45*s.* per ton, f.o.b. Liverpool; Welsh, 13*s.* 6*d.* to 15*s.* per ton, in bulk, f.o.r.

BROWN ACETATE OF LIME.—In good request, and firm at 5*l.* 10*s.* to 5*l.* 12*s.* 6*d.* per ton.

SATINITE.—Moving steadily at 60*s.* to 65*s.* per ton, f.o.r. or f.o.b. Liverpool, in usual casks.

LINSEED AND COTTONSEED CAKES find a steady market. Linseed-cakes, 95 per-cent. pure, 7*l.* 15*s.* per ton; oil-cakes, 6*l.* 15*s.* per ton; cotton-cakes, firsts 5*l.* 2*s.* 6*d.* to 5*l.* 5*s.* per ton, and seconds 4*l.* 12*s.* 6*d.* to 4*l.* 15*s.* per ton.

MAGNESIUM SALTS are steady at unchanged rates with fair demand. Magnesium chloride, 62*s.* 6*d.* to 67*s.* 6*d.* per ton; magnesium sulphate (Epsoms), 62*s.* 6*d.* to 67*s.* 6*d.* per ton, f.o.r., in bags; carbonate of magnesia, 37*s.* 6*d.* to 40*s.* per cwt.

Liverpool Drug-market.

Liverpool, June 11.

CASTOR OIL.—No fresh feature has presented itself in connection with the price of good seconds Calcutta, which remains at 2⅝*d.* to 2 1/16*d.* per lb., and the volume of business passing thereat is moderate. First-pressure French is still held at 2¾*d.* to 2¼*d.*, and second-pressure 2 1/16*d.* to 2¾*d.* per lb.

QUILLAIA.—The movement in the stocks of this continues steadily, 20 tons being reported sold at 13*l.*, and further sales of ton lots at 13*l.* 2*s.* 6*d.* per ton, which may be considered the value.

HONEY.—There has been only a limited transfer of stock at steady prices, 16 brls. of Pile 1 being reported at 25*s.* per cwt.

TURPENTINE.—The upward movement in this continues, 37*s.* to 37*s.* 6*d.* per cwt. being now the value, and these prices are being paid.

GRAINS OF PARADISE.—Ten bags were offered at auction but brought no bid. The holders are firm at 65*s.* per cwt.

Digitized by Google

BEESWAX (CHILIAN).—For the parcels which has been grudgingly offered by the few holders full prices have been paid, 7*l.* 17*s.* 6*d.* per cwt. being realised for 4 packages good yellow Chilian.

GINGER (AFRICAN).—Further sales are reported 37*s.* to 37*s.* 6*d.* per cwt.

ACACIA SORTS.—The movement in the stocks of this continues and 72 serons of hard to softish Soudan sorts have changed hands at 31*s.* per cwt.

CANARY-SEED.—The upward movement is fairly well maintained, although there are practically no transactions which indicate the exact price. Forty shilling per quarter may be taken as the value of good bright Turkish.

CARNAUBA-WAX.—This is selling more readily, and a sale is reported of six tons grey at 47*s.* to 50*s.* per cwt., and four tons yellow at 68*s.*

LINSEED OIL remains quiet at 33*s.* 3*d.* to 34*s* per cwt., according to quality.

CAPSICUMS.—Two hundred and twenty bags Niger offered on the market and were held for 30*s.* per cwt. This grade has not offered for a long time.

BALSAM COPAIBA (PARA).—Ten packages just arrived were offered at auction but were withdrawn, and have since been sold on private terms.

German Drug-market.

Hamburg, June 10.

Business in nearly all branches is very quiet at present, and there is very little doing on our drug-market just now.

AGAR-AGAR is firm; spot is quoted 320m. to 325m., and forward delivery 310m. per 100 kilos.

CAMPHOR (REFINED) is very quiet, with second-hand sellers at 415m. to 412½m. per 100 kilos.

CONDURANGO is dull and lower; spot is quoted 110m. and forward delivery 100m. per 100 kilos.

CUMIN-SEED is quiet, at 51m. to 50m. per 100 kilos.

ERGOT OF RYE is unchanged, but firm for spot delivery.

GALANGAL is lower, at 33m. per 100 kilos.

JAPANESE WAX is very firm and scarce; 78m. per 100 kilos. has been paid.

LYCOPODIUM is quiet, at 450m. per 100 kilos.

MENTHOL is unchanged, at 31m. per kilo.

SANTONIN is firm, at 38m. per kilo.

STAR-ANISE is dull and lower, at 115m. per 100 kilos.

SENEGA-ROOT is declining; forward delivery is quoted 450m. per 100 kilos.

SUGAR OF MILK is quieter, at 78m. per 100 kilos,

COD LIVER OIL remains very firm; 140m. per barrel is asked for new non-congealing oil.

CASTOR OIL shows more demand, first-pressing on the spot is quoted at 54m. in barrels, and September-December delivery 50m. per 100 kilos.

ESSENTIAL OILS are all unchanged.

American Drug-market.

New York, June 3

Business is of average volume for the season of the year, and the market generally has a tame appearance.

BALSAMS.—Peru has declined to $1.20 per lb., owing to lack of interest. Tolu is also easier at 26c.

BEESWAX.—Supplies are scarce, and 34c. to 36c. per lb. is being paid for desirable grades of yellow.

COD-LIVER OIL continues to move upward, and $31 is now asked for the best brands.

JAPAN WAX has sold up to 8¼c. per lb., and the market is firm at this figure.

OIL OF PEPPERMINT is a trifle firmer, owing to adverse reports regarding the new crop. Quotations are firm at $1.70, and the chances are against a large crop this year.

OPIUM is slow of sale at $2.85 per lb.

SARSAPARILLA.—Mexican is offering at 6c., but little business is passing.

WAHOO.—Root-bark is a scarce article at 18c. per lb.

Cablegrams.

BERGEN, June 11, 7.35 P.M.:—Since my last telegram practically no fish have been caught at Finmarken, so that the figures relating to the catch are unchanged, being 41,500,000 cod, against 37,800,000 at the same time last year. The yield of oil amounts to 18,800 barrels, against 30,300 barrels at the corresponding period of 1901. Market for best non-congealing oil is very firm, and 140*s.* per barrel, f.o.b., is now asked.

HAMBURG, June 12:—Both cod-liver oil and turpentine are advancing and HGH oil of peppermint and menthol are firmer.

NEW YORK, June 12:—Business here is very tame. Opium is a dull market, at $2 80 per lb. Cod-liver oil has been advanced to $36 per barrel. Round buchu-leaves are firmer at 24c. per lb., and for menthol $4.25 is now asked Serpentary-root has been reduced to 35c. per lb., and senega is a firm market at 50c. per lb.

ACID, CARBOLIC, shows no change: 39° to 40° C., B.P., detached crystals, are offered at 7¾*d.* to 8*d.* per lb; 39° to 40°, ice crystals, 6¼*d.*; and ordinary crystals, 6*d.*; 34° to 35°, 6⅛*d.* per lb. Crude, 75-per-cent., 2*s.* 3*d.* per gal.

ACONITE.—Foreign is firmly held, good stuff being scarce; 35*s.* per cwt., c.i.f., is quoted. English is also scarce, and dear.

ALMONDS.—The crop-reports are unfavourable, especially at Bari, where it is said to be practically a failure. In France, however, the crop is promising well. Old stocks are still important—viz., about 10,000 bags in Sicily, and 30,000 bags at Bari. Of late Bari has been buying in Sicily. Sweet are quoted 71*s.* per cwt. of 50¾ kilos., f.o.b., and September-October shipment 77*s* 9*d.*

ARROWROOT.—A large quantity of St. Vincents was offered at auction on Wednesday, but none sold, fair being bought in at 4*d.* to 4¼*d.*, good at 4¾*d.* to 5¼*d.*, and tins at 6½*d.* per lb.

ARSENIC is quiet, at from 13*l.* 5*s.* to 13*l.* 15*s.* per ton, on rails Garston.

CANARY SEED.—In auction ten bags Mogador offered, and sold at 36*s.* per quarter.

CASCARILLA.—About 20,000 lbs. of cascarilla were exported from Perené (Peru) to Lima during 1901. It was all of inferior quality, being gathered from trees growing wild in the forest. The price obtained for it was only 4 soles (8*s.*) per quintal of 100 lbs., placed in La Merced.

CINCHONA.—The 6,291 packages to be offered at Amsterdam on June 19 contain 27,587 kilos. (965,545 oz.) quinine sulphate. The manufacturing-bark contains an average of 5·87 per cent. quinine sulphate, against 5·35 per cent. for the May auction, and 5·45 per cent. for the previous ten auctions of 1901. There was a good demand in the drug-auction for the 269 serons of Loxa and Huanoco bark offered, and the parcel was disposed of at rather lower prices, the Loxa selling at from 9½*d.* to 1*s.* per lb., and the Huanoco at from 6¼*d.* to 6¾*d.* per lb.

The shipments from Mollendo during 1901 amounted to 312,516 kilos. (18,750*l.*), against 183,549 kilos. (9,177*l.*) in 1900. They were absorbed as follows:—London, 258,043 kilos.; Liverpool, 2,198 kilos.; Hamburg, 44,798 kilos.; and Havre, 7,477 kilos.

COCA-LEAVES.—The exports from Mollendo during 1901 amounted to 559,797 kilos. (27,990*l.*), against 352,161 kilos. (18,608*l.*) in 1900. They were divided as follows: London, 1,394 kilos.; Hamburg, 341,339 kilos.; Havre, 39,546 kilos.; and San Francisco, 177,518 kilos. The exports from Salaverry during 1901 were 387,547 kilos., against 335,771 kilos. in 1900, an increase of about 15·50 per cent.

COCAINE is quiet at the recent reduction, the outlet mainly applying to deliveries off contract. The exports of crude cocaine from Mollendo during 1901 amounted to 734 kilos., against 398 kilos. in 1900. Hamburg received 646 kilos., and Havre 88 kilos. From Salaverry the exports considerably increased, both to Callao and Germany, the figures being as follows: 1901, 678·88 kilos.; and 1900, 284 kilos., or about 138 per cent. increase.

GALLS.—Chinese are easier for shipment, being offered at 50*s.* 6*d.* per cwt., c.i.f.

GENTIAN.—The recent firmer tendency has now crystallised into an advance, and 19*s.* to 20*s.* per cwt., c.i.f., is asked, owing to scarcity.

GLYCERIN is unchanged but firm at from 67*s.* to 70*s.* per cwt. for English double distilled s.g. 1·230, in tins and cases. Crude is 35*l.* to 37*l.* per ton. German is also unchanged. It is expected that there will be an advance now that the South African war is over.

LEMON-JUICE (CONCENTRATED).—Notwithstanding heavy stocks and a general absence of demand, values have not declined any further in Messina, and are likely to remain on

Digitized by Google

present level for some time. Both lemon-juice and citrate of lime are quoted 12*l.* 5*s.* per pipe of 130 gal., f.o.b., June-July shipment.

MENTHOL quiet, with sales of single cases at from 14*s.* 3*d.* to 14*s.* 6*d.* per lb., spot.

OIL, BERGAMOT.—Higher prices are asked from Messina this week, agents quoting from 7*s.* 8*d.* to 8*s.* 3*d.* per lb, c.i.f., according to brand and quantity.

OIL, COD-LIVER.—Our Bergen correspondent writes on June 7 that the excitement which characterised the market last week has now subsided somewhat, but the market is none the less firm, although the advance is now checked. The news received from Finmarken from day to day confirms the impression that the fishing has been a complete failure in that district. The price for best Lofoten non-congealing oil is now 140*s.* per barrel, f.o.b. Bergen. The exports from that port to date amount to 3,735 barrels, against 4,968 barrels at the same time last year. Another advice from Bergen dated June 9 quotes 134*s.* per barrel, c.i.f. London. It is said that in very few instances have the recent high prices been paid on the London market, and that only for retail parcels from second-hand sellers at a trifle below the current Norwegian quotations.

OIL, PEPPERMINT.—Very quiet. For Japanese demen-tholised oil 3*s.* 10*d.* per lb. is asked.

OIL, WOOD (Chinese).—Very little is obtainable on the spot from first hands; 29*l.* 10*s.* per ton is about the value.

OIL, YLANG YLANG.—For good Manila 4*s.* per oz. is quoted, and small sales are reported thereat.

OPIUM.—Constantinople, June 6. The crop is now practically assured, and, failing continued rains this month, the yield should be a record one in every respect. The market is dull, with no buyers, but holders will not sell at under 7*s.* per lb., f.o.b. The sales amount to 3 cases "druggists'" at 7*s.* 3*d.*

POTASH PRUSSIATE is quiet at 5¼*d.* per lb. for British make, and 5*d.* for Beckton.

QUININE.—A little more business has been done this week at easier prices. A few thousand ounces of good brands German sulphate have sold at 1*s.* 0¼*d.*, and on Wednesday 1*s.* was accepted for 5,000 oz.

SHELLAC is steady, and a moderate spot business has been done at unchanged rates, fair TN Orange selling on a basis of 108*s.* per cwt. for cash.

SODA NITRATE is easier, at 9*s.* per cwt. for refined.

SPICES.—Business privately has been quiet, but the auctions on Wednesday were heavy, and a fair proportion sold, but in several instances at lower prices. There was no demand for Cochin *Ginger*, and all the parcels offered were bought in, bold cut at 80*s.* to 90*s.*, unassorted at 62*s.* to 70*s.*, tips at 40*s.*, cuttings at 37*s.*, washed rough at 40*s.*, and Calicut brown rough at 42*s.* 6*d.* per cwt. Japan was bought in at 33*s.* per cwt. for rough limed, and at 35*s.* for unlimed. A few bags sold at 32*s.* 6*d.* per cwt. Jamaica met with fair competition, and a good quantity sold at irregular prices, being cheaper for common, but steady for the better descriptions. Common dark and lean sold at 34*s.* to 37*s.*, middling dull 38*s.* to 41*s.*, and middling to good washed 42*s.* 6*d.* to 50*s.* 6*d.* per cwt. Zanzibar *Cloves* sold at 3¾*d.* per lb. for fair; Penang were held for 6½*d.* for ordinary, and good for 8½*d.* per lb. *Pimento* quiet; ordinary partly sold at 2⅝*d.* per lb. Good long Japan *Chillies* were bought in at 31*s.* per cwt.; picked Java sold for 42*s.* 6*d.* Fine Tellicherry Capsicums, bold cherries, sold at 28*s.*; Egyptian were bought in at 45*s.*, long East India on stalk at 25*s.*, and fine Natal at 90*s.* per cwt. *Nutmegs* were rather lower. *Mace* steady. *China-cinnamon* was bought in at 25*s.*, and *Cassia-lignea* at 53*s.*, per cwt. Black *Pepper* sold at lower prices, Singapore at 5¼*d.* to 5⅜*d.* per lb. for common, and at 5⅜*d.* to 5½*d.* for fair to good; Tellicherry at 5½*d.*, East India at 5⅝*d.* for small shot Malabar, and 5¼*d.* to 5⅝*d.* for fair to fine bold, and Penang at 4⅞*d.* to 5⅛*d.* per lb. Alleppy was bought in at 5½*d.* per lb. White was ¼*d.* per lb. lower Penang sold at 8⅛*d.* to 8⅝*d.* per lb. for ordinary, and at 8⅝*d.* to 8¾*d.* for good. Fair Singapore partly sold at 9¼*d.* to 9½*d.* per lb. Good to fine was bought in at 10¼*d.* to 10¾*d.*, and Siam at 9¼*d.* per lb.

London Drug-auctions.

Next Drug-sales, July 10. Prompt day, July 5.

AT the auctions of new and old drugs, a fair proportion of the goods changed hands at and after the sale. Cape aloes brought high "record" prices, Curaçao were in fair request, Scootrine showed no change, and "East African" were neglected. Sumatra benzoin was in active demand, and brought firm rates; Palembang steady, and Siam quiet. Calumba went off cheaply, and cardamoms were dearer. Dragon's-blood was also dearer; dill-seed and elemi sold at lower prices. Gamboge quiet. Jamaica honey sold steadily; other kinds neglected. Ipecacuanha quite inactive, but unchanged. Kino sold at lower rates. Rhubarb quiet. Jamaica grey sarsaparilla met an active demand at steady prices. Tinnevelly senna was mostly of common description; turmeric brought lower prices when offered "without reserve." Jamaica and Zanzibar beeswax steady. The following table shows the quantity of goods offered and sold, the asterisk denoting private sales:—

ACID, TANNIC.—Five cases of B.P. quality were held at 1*s.* 6*d.* per lb.

ALOES.—Steady, and in fair demand. A parcel of 22 boxes Curaçao sold without reserve at 26*s.* for fair brown liver to capey; capey ditto, 26*s.*; dark liver and drossy,

Digitized by Google

14s. to 18s. per cwt. From another catalogue 6 boxes dull liver realised 19s., and a further 37 boxes sold at 23s. to 24s. for fair liver, and 18s. to 20s. for dull ditto. A few Socotrine in kegs sold at 72s. 6d. per cwt. for good pasty. Of Cape aloes 18 cases offered, and sold, with keen competition, at 42s. 6d. to 44s. 6d. for good bright seconds, 37s. 6d. for softish ditto, and 30s. 6d. for dull.

Areca.—Good sound, rather dark, sold at 18s. per cwt., and the same price was wanted for a parcel of paler but slightly wormy seed.

Argol.—Fair pinky Cape brought 35s. per cwt.

Balsam Copaiba.—Good bright to cloudy Maranham was held at 2s. 2d. per lb. and bright thick Maracaibo sold at 1s. 8d. per lb.

Balsam Tolu.—For a new parcel, in large tins, 1s. 3d. per lb. was wanted.

Benzoin.—Sumatra was in excellent demand at steady prices. Good seconds, packed with small to medium almonds, sold at from 7l. 2s. 6d. to 7l. 15s.; good fair ditto, 6l. 12s. 6d. to 6l. 15s.; and fair ditto, 6l. 5s. to 6l. 7s. 6d., with common seconds at 6l. Good glassy Palembang in tins realised 37s. 6d. Of Siam, 2 cases pea-grain siftings, in block, sold at 6l 15s., and 6 cases small seedy pickings, in block, 62s. 6d. per cwt.

Buchu.—For fair round greenish leaf 11½d. was refused, 1s. being wanted, which figure has been paid privately for one or two bales.

Calumba.—Very cheap. Small to bold natural brown sorts, slightly wormy, sold at from 7s. to 9s. per cwt.

Cardamoms were in good demand, and prices showed an advance of from 2d., and in some instances 3d., per lb. The following rates were paid:—Ceylon-Mysore: Extra bold pale, bright smooth, 2s. 10d. to 3s.; bold pale ditto, 2s. 6d. to 2s. 7d.; bold medium pale, 2s. to 2s. 2d.; small pale, smooth, bright, 1s. 10d. to 2s. 1d.; bold medium dullish, 1s. 5d. to 1s. 8d.; small and medium pale, 1s. 3d. to 1s. 6d.; very small palish, 1s. 1d.; brown splits and pickings, 1s. to 1s. 1d.; decorticated seed, 1s. 8d. to 1s. 9d. per lb. Ceylon-Malabar: Bold palish, 1s 9d.; small and medium leanish brown, 1s. 2d. to 1s. 3d. per lb. Mangalore: Medium to bold brownish, 2s. 4d.; leaner ditto, 1s. 8d. to 1s. 11d.; very brown ditto, 1s. 3d.; small and lean, 1s. to 1s. 3d. per lb.

Cassia Fistula.—Good pod from Dominica realised 27s. per cwt.

Coca-leaves.—Fair greenish Ceylon brought 1s. per lb.

Cocculus Indicus.—An odd lot sold at 5s. per cwt., and in another instance 100 bags were held for 8s. 6d., a bid of 7s. 6d. being refused.

Colocynth.—Small to bold Syrian apple, rather dull, was held at 1s. 6d. per lb. Two casks of very broken Spanish sold at 1s. For brownish Turkey pulp 3s. was wanted, and good pale apple 1s. 7d. per lb.

Cubebs.—Fair, slightly stalky berries, country damaged, sold at 30s. per cwt.

Cumin-seed.—Good Morocco of new crop was held at 32s. per cwt., and the same figure was asked for Maltese.

Dill-seed.—About 1s. 6d. to 2s. lower. Fair Bombay sold at 8s. 6d. per cwt.

Dragon's-blood.—The feature of this article was the offering of 2 cases of fine fiery block, partly slabs run together, for which 14l. was wanted, the highest bid obtainable being 12l. 2s. 6d. Two other cases of fine reboiled lump, similar quality to the block, were bought in at 16l. A case of fair lump sold at 10l. 10s., and a case of dull ditto at 9l., being dearer; 8l. 5s. was paid for a case of very seedy lump of medium colour. Fair finger, nicely wrapped, was held at 9l., at which business has been done privately.

Elaterium.—A box from Malta was limited at 1s. 3d. per oz.

Elemi was considerably lower, 2 cases of good pale gum from Manila selling at 70s. to 71s. per cwt.

Fennel-seed.—Good quality sold at 18s. per cwt.

Gum Ammoniacum.—A parcel of 11 cases sold without reserve at 10s. for very dark seedy and partly blocky; and 5s. for dark and matted block. From another catalogue palish siftings were sold at from 22s. to 25s. per cwt.

Gum Arabic.—The business done privately includes a fair quantity of Aden olibanum scented, at from 34s. to 35s. per cwt.

Honey.—Jamaica sold at steady rates, at the following prices:—Very dark amber liquid, in cases and barrels, 15s. to 17s.; palish set, in barrels, 16s. to 18s. 6d.; firm set white, 19s.; and firm set palish, 16s. to 16s. 6d. per cwt. Palish set Californian was held at 26s.

Ipecacuanha.—Both descriptions were quite neglected to-day, and in the case of Rio only sea-damaged was disposed of, 4 bales selling at from 8s. 8d. to 8s. 9d. per lb. Sound root was held at from 9s. 7d. to 9s. 10d. There was plenty of Cartagena on offer at 4s. per lb.

Kino was disposed of at very low prices, from 6d. to 6¼d. per lb. being paid for small black Cochin grain.

Kola.—Fair washed West Indian were held at 3½d. per lb. A small lot sold at 3d. and a bag at 2d. per lb.

Nux Vomica.—For nice bright bold Cochin seed 10s. per cwt. was paid for a few bags. Dull and earthy Bengal was held for 8s. 6d.

Oil, Castor.—Fair Calcutta seconds were limited at 2¾d. per lb.

Oil, Eucalyptus.—Several parcels of B.P. oil were held at 1s. 2d. per lb., and a sale of commercial quality was made at from 6d. to 8d. per lb., "without reserve."

Oil, Geranium.—Two cases of Bourbon of fine quality previously offered, were sold "without reserve" at 16s. 6d per lb.

Oil, Lemon.—Two parcels of fine quality Messina and Palermo oil were held at 3s. per lb.

Oil, Lime.—West Indian distilled was limited at 1s. 11d. to 2s. per lb.

Oil, Wintergreen.—D & O brand was offered at 6s. 3d. per lb., at which figure private sales have been made.

Orchella-weed sold at 12s. per cwt.

Orris.—Dull Florentine sorts sold without reserve at 19s. 6d. per cwt.

Quince-seed.—About 3d. per lb. cheaper, good Cape selling at 1s. per lb.

Rhubarb.—Slow of sale. Two cases small to medium flat High-dried with good pinky fracture sold at 9d. per lb., and 2 cases good Canton pickings realised 1s. Native round rough High-dried with three-quarters good pinky fracture was held at 5½d. per lb. Medium to bold round Shensi was bought in at 3s. 3d. to 3s. 6d.

Sarsaparilla.—Grey Jamaica was in fair supply, and sold at steady prices, 1s. 3d. to 1s. 4d. per lb. being paid for sound, and 11½d. to 1s. 1d for slightly sea-damaged; 15 bales of rough and coarse grey Jamaica sold at from 11½d. to 1s., and 16 bales of Lima Jamaica were bought in; 1s. 2d. was wanted for good.

Scammony-root.—Only 2 bales offered, and 27s. 6d. per cwt. was wanted.

Senna.—The bulk of the Tinnevelly was of common quality, which sold at from 1d. to 1½d. per lb. Medium greenish leaf brought 2½d. to 2¾d., and bolder ditto 4½d. Pods sold from 1d. for dark to 2¼d. for good. Alexandria quite neglected; fair broken leaf was held at 5d., half-leaf at 4½d., siftings 2d. to 2½d., and good pale pods 7½d. per lb.

Tamarinds.—Thirteen barrels of fair Dominica sold at 12s. 6d. per cwt. in bond.

Turmeric.—Several parcels were put up without reserve, and sold at 12s. per cwt. for dull Madras finger, and 11s. 6d. to 12s. 6d. for Bombay finger.

Wax, Bees'.—Jamaica sold at steady prices, from 7l. 17s. 6d. to 8l. per cwt. being paid for fair to good bright red. Zanzibar sold at unchanged rates, 7l., subject, being paid for fair block, slightly grey, and 7l. to 7l. 2s. 6d. for pale yellow to dark Mozambique rolls. No Madagascar was offered.

My Apprenticeship.

In Germany.

I ENTERED my apprenticeship at Eastertide, 1877, just twenty-five years ago, having obtained the school certificate which, in Germany, carries the privilege of one instead of three years' military service and entitles the holder to follow the career of a pharmacist. A general liking for the natural sciences induced me to select pharmacy, and I was fortunate enough to find in Apotheker Seyberth, of Wiesbaden, a jovial and indulgent master. Thus I served my apprenticeship under happy and pleasant conditions, full of opportunities for seeing and learning all that could be taught in a German pharmacy.

Times have changed, but not even twenty-five years ago was every one lucky enough to pass his apprentice years under conditions more or less ideal. In this Wiesbaden pharmacy a good deal of work was carried out, often as many as 70 prescriptions a day being dispensed, and sundry sales were numerous. My duties began early in the morning, at seven o'clock or earlier, and were continued to 10 o'clock in the evening, one afternoon in the week and every second Sunday being allowed off, and also one afternoon in the week for theoretical study. Likewise reading was permitted after supper. The term of apprenticeship is fixed by law as three years, after which the Gehuelfenexamen (a kind of Minor) held by a Government commission must be passed before one is qualified to serve the three years' assistantship which prefaces admittance to the university.

MR. H. HELBING.

During the three years' apprenticeship there is therefore much knowledge to be acquired in order to be able to pass the examination at the end of the term, and as the subjects of this examination are many, there was not much time to be lost. Both my master and the senior assistant took care that my education was not neglected either from a practical or theoretical point of view. At first I was occupied in the "defectur," that is to say, the laboratory where the galenicals were prepared for use in the pharmacy, and where much real practical experience was gained. All ointments (even ung. hydr. cin.) were at that time prepared in the laboratory, as well as all tinctures and a great many extracts and chemical preparations, such as bismuth subnitrate, argentum nitricum, acid. benzoic. ex resina, sulph. præcipitat., aq. chlorata, liq. alum. acetic, ferrum sulfuricum, cuprum sulfuricum, liq. plumb. subacetic., tartar. stibiatus., hydr. præcipitat. album, ext. ferri pom., ferrum oxyd. saccharat., liq. fer. perchlor., &c. All the fresh herbs obtainable were bought from the peasant women of the neighbourhood and dried or converted into extracts. Thus large quantities of digitalis and hyoscyamus passed through my hands, as well as chamomiles, which were partly distilled for oil, whilst nearly all the aromatic waters were distilled in the Wiesbaden pharmacy, and large quantities of raspberry syrup were made from the berries freshly gathered in the surrounding forests.

The laboratory was in every respect well-fitted, including a large steam generator, with still attached, and a commodious drying-oven, &c., so that all preparations could be made on a sufficiently large scale; in fact, in some cases, like narcotic extracts and iron preparations, such quantities were made that a business was done in selling them to wholesale druggists for selling again. Of course I had to turn my hands to everything, and in this way gained an all-round experience. Of all the preparations made in the laboratory I had to keep account and give a full description in the form of essays, which were entered into a separate book for subsequent inspection. Much of my time was devoted to systematic botany, and frequent excursions in the surrounding country in the Rhine valley gave ample opportunities for the collection of a comparatively large herbarium of over 1,500 distinct wild specimens. The pressing and mounting of these also occupied a great deal of my spare time, but every facility was at hand. A good proportion of the three years was also spent in the dispensing department, at first only for prescription-reading and then for compounding, until perfect proficiency was attained in the preparation of any mixtures, pills, emulsions, plasters, and the like. During my apprenticeship I remember that three staple pharmaceutical preparations—viz., iodoform, sodium salicylate, and vaseline, were introduced into medicine.

The examining authorities consisted of two local pharmacists and a Government official from the medical department. To them I had to submit my herbarium and the essays on the laboratory preparations for inspection; the examination was an affair of several days, and was divided into three parts:—

1. Written examination. Subjects: Botany, pharmaceutical chemistry, physics.

2. Practical examination. Subjects: Dispensing two prescriptions, preparation of galenicals, chemical preparations.

3. Oral examination. Subjects: Translation of Pharmacopœia (at that time printed in Latin), pharmaceutical regulations, physics, botany, materia medica, pharmaceutical chemistry.

The written and oral examinations were conducted in the Government buildings, the practical part in the laboratory of one of the examining pharmacists. On the certificate were given detailed marks for each subject, and reference made to the herbarium and laboratory journal.

Speaking for myself, I feel that I owe very much to my apprenticeship, and that no public teaching could have given me such complete insight into the pharmaceutical arts, and even now the practical experience gained in the days of my apprenticeship proves of the greatest importance and service to me.

H. Helbing

Personalities.

MR. FRANK ROSS (Messrs. Thomson & Taylor, Bombay) left London last Saturday on his return to India.

MR. J. AUSTIN THOMAS, chemist and druggist, late of Borough Road, Birkenhead, is leaving for South Africa next week.

WE regret to hear that Mr. T. B. Groves, of Weymouth, the veteran pharmacist, and ex-President of the British Pharmaceutical Conference, is rather seriously, though not hopelessly, ill.

DR. FREDK. B. POWER, F.C.S., director of Messrs. Burroughs Wellcome & Co.'s chemical laboratories, has been elected an honorary member of the Philadelphia College of Pharmacy, where he graduated before studying under the late Professor Flückiger.

DR. E. M. HOUGHTON, co-director of the bacteriological and physiological departments of Messrs. Parke, Davis & Co.'s factories at Detroit, Mich., is now in London, having completed a tour of the principal laboratories of Europe, gathering new ideas where they were to be found.

MR. HERBERT KNAPMAN, B.A., of Emmanuel College, Cambridge, has passed in the First class, First division, of Part II. of the Mathematical Tripos. He was second wrangler in Part I. last year. Mr. H. Knapman is the son of Mr. J. W. Knapman, Librarian of the Pharmaceutical Society.

D

Digitized by Google

MR. HAROLD LEENY, M.R.C.V.S., Burgess Hill (who is well known in the drug-trade), returned to London on June 7 after five months' work under the War Office as a veterinary transport officer. During his service Mr. Leeny visited South Africa twice, and has seen a good bit of the rest of the world.

SIR W. T. THISELTON DYER, whom we usually associate with botany, has a thoughtful critique of Mr. Edward Clodd's "Huxley" in *Nature* of June 5. Sir William's article deals mainly with Huxley's theological opinions, and he criticises Mr. Clodd's presentation of these opinions and his conclusions somewhat adversely.

A PARTY of Bradfordians, including Dr. Charles Forshaw, are to make holiday in St. Kilda during Coronation week. They have been authorised to inform the inhabitants that the King "trusts they will have a successful season in their occupation of fulmar fishing." They are also to present the minister of the island with a Union Jack. Special Coronation medals (copies of which have been accepted by the King, Queen, and Prince of Wales) are to be presented by the deputation to the inhabitants of the island.

SIR JOSEPH DALTON HOOKER, G.C.S.I., C.B., who has been appointed a Foreign Knight of the Prussian Ordre Pour le Merite for Science and Arts, will enter upon his 86th year within four days of the Coronation. Sir Joseph, who is one of the greatest living botanists, took the M.D. degree at Glasgow University in 1839. Like his friend Huxley, he served for some years as a medical officer in the Royal Navy. He was Director of the Royal Gardens at Kew from 1865 to 1885, and was President of the Royal Society from 1872 to 1877.

MR. JOHN BOLAM, chemist and druggist, Northumberland Street, Newcastle-on-Tyne, has just retired from business. He is a native of the district, and served his apprenticeship, some forty-four years ago, in a little shop in Northumberland Street, under Mr. Edward Walker, an old Savory & Moore's man. He passed the modified examination in 1869, and has been in business on his own account for over thirty years. Mr. Bolam had one of the best dispensing-businesses in the North of England, and, although in the immediate vicinity of "Stores" and modern businesses, he has always adhered to the old-fashioned window displays which were characteristic of the drug-trade of fifty years ago. He has never taken any active part in public affairs, yet is well known in the town, and is in close and confidential touch with the leading medical men of the city. In conversation with a CHEMIST AND DRUGGIST correspondent he remarked, with reference to the changes in the thoroughfare since he started business, that properties then changed hands for 600*l.* which could not now be touched for 12,000*l.* Mr. Bolam's business, so far as the premises are concerned, becomes extinct on his retirement, the premises having been acquired by an adjoining firm of drapers, whilst the prescription and account books, trade fixtures and stock have been purchased by Messrs. Brady & Martin, and transferred by them to their retail establishment at 29 Mosley Street. Of Mr. Bolam's sons, one, an M.D. of Durham University, is Professor of Physiology in the College of Medicine; another is assistant Electrical Engineer to the Corporation of Bristol, and a third is in the penultimate stage for the L.D.S. diploma. His many friends in the drug-trade will wish him a lengthened enjoyment of the leisure he has so thoroughly earned.

MR. BOLAM.

THE annual production of alcohol from sugar-cane in Peru is estimated at over 2,000,000 gals., of which 600,000 gals. is exported to Bolivia, but, if other outlets could be secured, there would be no difficulty in increasing the production largely.

Mary Masters.

WE published a few weeks ago a letter from Mr. Richard Bremridge, Secretary and Registrar of the Pharmaceutical Society, in which he warned the trade regarding a woman who was falsely representing herself to be Mary Masters, an unsuccessful candidate at the last election of Benevolent Fund annuitants. The impostor was caught at Yeovil (see page 911), but the Magistrate was in such a complaisant mood owing to the declaration of Peace that he let her off; so that the drug-trade may not be done with her yet. It is, therefore, appropriate to note the description of the woman:—

Black sailor hat, green skirt, black bodice with beads, long dark old cloak worn at the buttons, black woollen wrapper round neck. Age about 62. Height, 5 feet 4 inches, but looks taller. Blue eyes and grey hair. Double chin. Says she belongs to Broseley in Shropshire. Weeps readily.

She is said to be now *en route* for Exeter *viâ* Honiton, and chemists in and around those places will do well to make a note of this warning.

We cannot, unfortunately, get hold of a photograph of her, but it may serve the purpose as well to give the portrait of the real Mary Masters, which was taken at her own house

THE REAL MARY MASTERS.

last week as she is unable, and has been unable for some time, to leave her house, owing to illness. Mrs. Masters is 79 years of age, and is the last person in the world who would take a peripatetic tour in search of alms. Should any of our subscribers be visited by the spurious Mary Masters they should quietly send out for a policeman and give her in charge; then telegraph the fact to Mr. Bremridge (16 Bloomsbury Square, London, W.C.), who will assist the police in the matter.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
Melbourne, Vic. — Fink's Buildings, Elizabeth Street.
Sydney, N.S.W. — 114a Pitt Street.
Adelaide, S.A. — 76 Brookman's Building, Grenfell Street.
New York, U.S.A. — Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4d.; Summer or Winter Number, 1s.; DIARY, 3s. 6d. Postal orders and cheques to be crossed "Martin's Bank (Limited)."

MEMS. FOR ADVERTISERS' DIARIES.

JUNE 23.

Consider advisability of having a good inset in "The Chemist and Druggist" Summer Issue of July 26.

Ask printers for quotation for printing 12,000 copies of a 16 page illustrated price-list, to use as inset in "C. & D."

Write to the Publisher of the "C. & D.," 42 Cannon Street, London, E.C., for his terms for inserting the 16 page inset, and ask his advice about getting it up.

CORONATION WEEK.

THE Public Holidays on Thursday and Friday of next week, and the consequent necessity of ensuring the despatch of THE CHEMIST AND DRUGGIST before midnight on Wednesday, June 25, compel us to send all that issue to press on Tuesday. We shall keep our Supplement open until Wednesday, so as to get in important news which reach us by the first mails that morning. Correspondents will please note this announcement and act upon it.

Summary.

STUDENTS will find another offer on p. 944.

THE POST-OFFICE will not allow a ½d. letter-postage (p. 944).

A TALE of teeth extraction from Paris will be found on p. 949.

SOME FACTS in regard to American perfumery are given on p. 959.

PHARMACY appears to be in a bad way in Egypt. See the note on p. 959.

THE TROUBLES of the official telephone are graphically depicted on p. 956.

SEVERAL interesting new companies have been registered this week (p. 965).

MR. DOWZARD communicates some useful analytical factors for essential oils (p. 961).

MORE CORONATION HOLIDAYS in the wholesale drug-trade are mentioned on p. 944.

DR. ALFRED HILL'S last report as public analyst to Birmingham is abstracted on p. 915.

CAPE TOWN CHEMISTS held a successful dinner last month which is reported on p. 950.

MESSRS. MAY, ROBERTS & CO.'S invoice-postage case has been mentioned in Parliament (p. 955).

MR. JAMES HARTFORD, a well-known New York merchant, formerly of London, is dead (p. 951).

THE QUESTIONS given in the Jacob Bell scholarship examination this week are printed on p. 967.

FURTHER evidence in regard to arsenic in food and drink has been taken by the Royal Commission (p. 944).

FORFARSHIRE CHEMISTS are going ahead with their arrangements for the Conference in Dundee (p. 966).

ABERDEEN DOCTORS' SHOPS are not numerous, yet there is one for every five chemists' shops. See note on p. 948.

GLYCO-THYMOLINE has been the subject of an action in the High Court, with Dodd's drug-stores in defence (p. 962).

THE hearing of the second case against a Cardiff chemist for infringement of the Dentists Act has been postponed (p. 962).

THE chemistry of terpenes was dealt with by Professor Tilden in a paper communicated to the Chemical Society this week (p. 956).

THE WIDOW'S CLAUSE of the Irish Pharmacy Act has come into Court for the first time, but the case has not finished (p. 962).

THE SALE of nicotine insecticides by unregistered persons is being put down by the Pharmaceutical Society. Two cases are reported on p. 962.

DUTY FREE SPIRIT is the subject of an interesting expository letter by Mr. Thomas Tyrer printed on p. 968. He shows that pharmacy will not benefit much by it.

SHORTNESS IN CASH is not a good ground for dismissing a chemist's manager without due notice. So the Bloomsbury County Court Judge decides (p. 964).

NEW POISON REGULATIONS have come into force in Mombasa and Uganda, also regulations dealing with opium and Indian hemp. They are epitomised on p. 959.

IN "OBSERVATIONS AND REFLECTIONS" are some interesting notes on the editors of the "Annals of Pharmacy," whose note on tr. quin. ammon. is now of topical interest (p. 957).

THE MARGATE CORONER'S ideas regarding the Pharmacy Act restrictions on the dispensing of poisons have led him to suppose that a prescribed sleeping-draught containing poison should be labelled poison (p. 945).

A PENNY per proof gallon has been added to the import-duty on spirit, to balance the increased cost of grain to home distillers (p. 955). It is pointed out that most imported spirit is made from potatoes, and not from grain (p. 971).

THE GLASGOW CHEMISTS' TRADE ASSOCIATION is flourishing, and is so well backed up that it proposes to make national a local petition to manufacturers of proprietary medicines with the object of securing 20 per cent. profit (p. 954).

THE LONDON CHEMISTS' ASSOCIATION has passed two resolutions, one urging the Pharmaceutical Society to take a test case on the title question, and the other to appoint a deputation to interview the Council on the same matter (p. 952).

BUSINESS is slackening down in view of the approaching Coronation, although fair quantities of drugs have passed into consumption during the past fortnight. Among the articles that have advanced are aconite, foreign alcohol, eserine, and glucose. Cream of tartar is again firmer, and quinine is lower (p. 971).

Corner for Students.

Conducted by Leonard Dobbin, Ph.D.

Students, please note. All communications should be addressed to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

All communications and reports must bear the names and addresses of the writers, not necessarily for publication. The reports of those who ignore this rule are liable not to be dealt with.

Qualitative Analysis.

A MIXTURE of not more than three salts will form the subject of the next exercise in qualitative analysis. The mixture is to be submitted to a thorough systematic examination, all its constituents are to be detected, and proof is to be given that the substances detected are the only constituents of the mixture.

Students' applications for portions of the mixture of salts (accompanied by a *stamped and addressed envelope*, not a stamp merely) will be received up to Tuesday, June 24, and the samples will be posted on the following day.

Students' reports will be received up to Saturday, July 5. Each report should contain a concise account of the work done, and should include a list of the constituents detected. In this list any substance regarded as an accidental impurity should be distinguished from the essential constituents of the salts composing the mixture.

The report on this month's analysis will be published next week.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

The Royal Dental Hospital of London has received 500*l.* from the trustees of Smith's (Kensington Estate) Charity.

Mr. H. Cook, chemist and druggist, Chatham, was thrown out of a trap while driving, on June 9, and was badly bruised and shaken.

The Chemists' Managers and Assistants' Society are to have a garden-party at Carshalton on June 26. Tickets from Mr. D. Davies, 187 Newington Butts, S.E..

The latest convert to automobilism at Boston is Mr. H. T. Pilley, pharmaceutical chemist, who has purchased a 4½ h.p. De Dion voiturette to carry four.

Isle of Wight Board of Guardians has appointed Mr. A. Milledge, chemist and druggist, Newport, and Messrs. Hewlett & Son to supply druggists' requisites to the workhouse.

Thomas Melone (30), while stirring a vat of caustic liquid at the chemical-works of the United Alkali Company, Widnes, overbalanced himself and fell into another vat containing caustic liquid. He died a week afterwards.

Amongst a number of persons charged by the police with making bonfires in the public streets of Bourne to celebrate peace, appears the name of A. Skinn, chemist's assistant. The case, which was heard at Bourne Police Court on June 10, excited great public interest, and all the accused were discharged.

The Court of Assistants of the Society of Apothecaries of London have passed a resolution requiring that on and after July 1 candidates for any examination in medicine shall produce evidence of having received instruction in the administration of anæsthetics at a recognised medical school or hospital.

The Royal Humane Society on June 16 awarded their bronze medal to Robert L. Mesney, described as a chemist of Broadstone, Dartmouth, for plunging into a deep pond at Crediton and rescuing a woman from drowning.

On the invitation of Mr. Alfred D. Breeze, Chairman of the Plymouth Incorporated Mercantile Association, several members of the Three Towns' Chemists' Association visited, on June 11, the milling works of Messrs. Hosken, Trevithick, Polkinghorne & Co. (Limited); also the electrical depôt and the refuse-destructor.

At the Nottingham Guildhall on June 16, Mr. James Lord, chemist, of Upper Parliament Street, Nottingham, appeared to prosecute a mechanical dentist in his employ, named James G. Desborough, for embezzling sums of money amounting to 10*l.* or 12*l.* Defendant pleaded guilty, and was fined 5*l.*, or a month's imprisonment in default.

Of 158 samples taken at Coventry last year under the Sale of Food and Drugs Acts ten were of drugs, and all were genuine. They included camphorated oil (2), one each of lime-water, Dover's powder, carbolic powder, compound liquorice-powder, seidlitz-powder, Friar's balsam, and paregoric-elixir. Four samples of soda-water were also taken.

Coronation Holidays.

In addition to the firms already mentioned in our issues of June 7 and 14, the following have intimated their intention of closing on June 26 and 27: Messrs William Sutton & Co.; Mr. William Toogood; Messrs. Hirst, Brooke & Hirst (Limited), Leeds; Messrs. F. Newbery & Sons.

The following will close on June 26, 27, and 28: Messrs. Thomas Tyrer & Co. (Limited); Messrs. R. Hovenden & Sons (Limited); Messrs. F. Schulze & Co.; Messrs. Spratt's Patent (Limited); Messrs. J. A. Wink & Co.; Messrs. T. & H. Smith & Co.; Messrs. Burroughs Wellcome & Co.; Messrs. Sparks, White & Co.; Messrs. W. B. Fordham & Sons (Limited); Messrs. R. Sumner & Co. (Limited), Liverpool.

Messrs. W. Butcher & Sons will close on June 25, 26, 27, and 28.

Messrs. Kay Brothers (Limited), of Stockport, are closing their works for the whole of the Coronation week in celebration of the event.

The P.O. can No Further Go.

The Association of Chambers of Commerce having addressed a memorial to the Postmaster-General to have all written or printed matter open to inspection, and not exceeding 2 oz. in weight, carried for a ½*d.*, have received a reply, stating that the Postmaster-General dissents from the view expressed by the Association "that the change would involve but a very slight loss to the postal revenue." He is not in a position to say precisely or even approximately what the financial effect of such a concession would be; but he is satisfied that it would be much more serious than the Association suppose; and he is unable to recommend his Majesty's Government to adopt it. The concessions which have been made in the past have gone at least as far as it is possible to justify.

Arsenic Commission.

The Royal Commission on Arsenical-poisoning met on June 13, at the Westminster Palace Hotel, under the chairmanship of Lord Kelvin. The other Commissioners present were Sir W. Hart Dyke, Sir William Church, Professor Thorpe, and Dr. White Legge. Mr. Otto Hehner, public analyst, was recalled, and stated that the joint committee of the Society of Chemical Industry and the Society of Public Analysts unanimously recommended the Marsh-Berzelius test for the detection of minute quantities of arsenic. He considered it was better to have a test which could detect exceedingly minute traces of arsenic, even although such traces might not be harmful to human beings. If a standard were fixed prohibiting more than $\frac{1}{100}$ gr. of arsenic per gal. of beer the brewers would have no difficulty in working within such limits. Absolute freedom from arsenic could not, however, be secured with certainty. Mr. A. Chapman, one of the Hon. Secretaries of the Society of Public Analysts, advocated the fixing of a standard of $\frac{1}{100}$ gr. of arsenic per gal., although the large majority of beers he analysed contained less than $\frac{1}{200}$ gr. Professor Delépine, of Owens College, Manchester, gave the results of his experimental

Digitized by Google

investigations upon the action of arsenical beer. He used rats in his experiments, because these animals readily took beer and weak alcoholic solutions, and could easily adapt themselves to considerable variations in diet. The Commission adjourned till June 20.

Bound Over.

At the Mansion House on June 13, William Henry Chancewell Ward (26), chemist and druggist, was charged, before Mr. Alderman Morris, with embezzlement. Accused pleaded guilty to the embezzlement of one sum of 3*s.* 4*d.* Evidence was given as to a purchase to this amount at the Apothecaries' Hall, Water Lane, E.C., and that the prisoner, who served the customer, had not accounted for the money. The prisoner, a qualified chemist, had for over four years acted as one of the assistant dispensers at Apothecaries' Hall. When spoken to upon the subject he admitted appropriating 2*s.* of the money, and Mr. Myers on his behalf urged that the accused, a married man with two children, was in such ill-health that when he surrendered himself a few days before he was told to go home and go to bed. This he did, and he had again surrendered himself that morning. If the Alderman would take a lenient course there were friends in court who would take charge of him. He was absolutely ruined by these proceedings. Mr. Wilkinson said the prosecutors were compelled to institute this prosecution, but desired that the prisoner should be dealt with leniently. Mr. Myers thanked the prosecution for this recommendation, and the Alderman bound two friends of the prisoner in 20*l.* each to produce the accused if he should be called upon for sentence.

The Coroner and the Pharmacy Act.

Mr. Toke H. Bovs, the Margate Borough Coroner, held an inquest on June 16 on the body of a man named Fisher, who died after taking an overdose of a sleeping-draught. Deceased was of intemperate habits, and on June 20, 1900, Dr. Sutcliffe prescribed for him a sleeping-draught, which the doctor administered himself, taking what was left of the mixture away. The prescription remained in deceased's possession, and it was not again made up until April 22 last, when it was dispensed at Mr. T. D. Evans's pharmacy, Northdown Road, Margate. On June 15 five doses were left, and deceased drank the lot, and died an hour later. Mr. Percy Sayers, chemist and druggist, who made up the prescription, said the mixture contained bromide of potassium, solution of morphia, and chloral. The Coroner then asked whether the sale was entered in the poisons-book, and the witness replied in the negative. The Coroner pointed out that the Pharmacy Act held that any ingredients in the Poisons Schedule when they entered into a mixture should be registered in the poisons-book. Mr. Sayers replied that in the case of a medical-man's prescription the copying of the prescription was all that was necessary, and Dr. Sutcliffe supported him in his contention. The Coroner: Is it necessary to put a red poison-label on the bottle containing such a preparation?—No, it is not. You are fully qualified, but notwithstanding the powerful nature of the medicine it is not necessary to label it "Poison," is that your opinion? I speak from my experience. It is not usual to label any prescribed medicine "Poison." The Coroner, after referring to the Act, said, "It appears to me that it should have been labelled according to my reading of the Act." Dr. Sutcliffe pointed out that entering the prescription in the prescription-book answered the same point as registering the poisons in the usual poisons-book. The fact that a patient could have a prescription made up at the chemist's without his medical attendant being consulted was the fault of the system. The jury returned a verdict of death by misadventure, and the Coroner, addressing Mr. Sayers, said, When you go home, if you have a copy of this Act, study it. (Mr. Sayers: I have) It is an important Act passed over twenty years ago for the better safety of people. I think myself the bottle ought to have been labelled "Poison." Mr. Sayers: It is not the usual custom, Sir; I think I have fulfilled the conditions of the Act in every way. Dr. Sutcliffe interrupted by saying he thought Mr. Sayers acted perfectly right in making up the prescription, and that he had fulfilled the requirements of the law. The Coroner (to Mr. Sayers): I am not attaching any blame to you. Study the act yourself. Mr. Sayers repeated that he had studied it, whereupon the Coroner observed: And you say you have no occasion to label it "Poison," and to enter it in the poisons-book? Yes.

Birmingham Notes.

For storing 17 gals. of rubber solution and 80 lbs. of calcium carbide in an unsuitable place and without a licence, a local trader has been fined 15*l.*

On June 12 a party of pharmacy students visited Cannon Hill Park botanical grounds with a view to botany, but Jupiter Pluvius proved too much for them.

The local smallpox scare has fostered the inventive genius of the pharmacist, and various especial forms of vaccination-shields have been put on the market.

Miss May Wolseley was married on June 10 at King's Norton Church to Dr. Brinton. Another vacancy is created in the good dispenserships of Birmingham by this event.

The fire at Queenwood College which caused the death of Mr. Charles Wilmore, the Principal, recalls the fact that John Tyndall, Edward Frankland (father of Professor P. F. Frankland), and Andrew Pears (of Pears, Limited), were educated there.

The Edgbaston Botanical Gardens, which have been in existence for seventy years, are languishing for want of funds. In stating its claims to the public, Professor Hillhouse asserts that "it is the most beautiful city garden that England possesses."

The kaolin industry at Lusculyan Valley, Cornwall, has been visited by the Birmingham Natural History Society this week. It is stated that kaolin is granite decomposed by the action of tourmaline, the top layer being chorlite and granite; next comes ferruginous granite, then well-marked granite followed by a bed of kaolin 100 feet thick.

In a case of attempted suicide by laudanum before the Courts last week, the Magistrate requested the police constable in charge of the case "to make a report to the Chief Constable with reference to the chemist from whom the laudanum was obtained." After swallowing a bottleful the prisoner had thrown the phial through the window, but it was subsequently found with the label intact.

The committee in charge of the Coronation festivities in a little village not very many miles from Birmingham have decided to regale the inhabitants with pork pies, pickles, and tea. The suggestion is said to emanate from the local doctor and the local chemist, who are prominent officials in the matter. To complete what is probably a base slander, says the *Birmingham Mail*, it is being inquired what part the local undertaker is taking in the proceedings. He ought at least to be a liberal subscriber to the fund.

Dr. Alfred Hill, medical officer of health and analyst for the city of Birmingham, has issued his report for the past year. During that period seventy samples of drugs were analysed, of which sixty-four were found to be genuine and six (or 9 per cent.) adulterated. A good part of the report is taken up with a consideration of the tr. benz. co. cases. Dr. Hill says of the case which was dismissed by the Magistrates as the result of a Somerset House analysis, that how the chemists at Somerset House could say that it afforded no evidence of being below the strength of the compound tincture of benzoin made according to the process described in the British Pharmacopœia, "excites my wonder and passes my comprehension. It is most unsatisfactory, not to say disheartening, that the certificate of a public analyst, who has given special attention to the subject, should be discarded in favour of one giving no analytical details and no standard." In regard to a sample of extra strong seidlitz-powders which contained 23 per cent. of tartaric acid in excess of the proper quantity, the powder in the blue paper was of the correct composition, but its quantity was 23 per cent. too much. The report says "The B.P. only recognises one strength of seidlitz powder, but an unofficial formula for 'double' or 'extra strong' requires the same amount of tartaric acid and bicarbonate of soda as the British Pharmacopœia, with twice as much Rochelle salt. This sample agreed with neither the official nor the unofficial formula." A third sample differed from any he had previously seen, by having the alkaline powder wrapped in white paper and the acid powders in

Digitized by Google

blue paper. A sample of tincture of iodine was examined which contained 18·2 grammes of sodium iodide, and 7·8 grammes of potassium iodide per litre, instead of 25 grammes of potassium iodide, probably an unintentional substitution, as sodium iodide is more expensive than potassium iodide.

Royal Institution.

There was a large audience on June 13 to hear Mr. Marconi discourse on "The Progress of Electric Space Telegraphy." Much of the lecture was taken up with answering objections that have been made to the lecturer's work. The interesting announcement was made that a new magnetic detector has been devised, which is an improvement on the old coherers. The detector is more sensitive and trustworthy than a coherer, and although at present only thirty words a minute can be sent it is hoped to be able to reach a hundred when the instrument is perfected. It was mentioned that on the *Campania* and *Lucania* as much as 60*l.* a trip has been collected for the transmission of messages by wireless telegraphy, and that the Canadian Government has granted a subsidy of 16,000*l.* towards the erection of a station at Nova Scotia. Readable messages have been sent from the station at Poldhu, in Cornwall, to a ship 1,551 miles away, and indications were received as far as 2,099 miles off. It has been noted that this signalling took place at night; during the day the distance at which signals could be transmitted was about 700 miles only. This result may be due, Mr. Marconi said, to the diselectrification at the very highly charged transmitting elevated conductor operated by the influence of daylight, but he did not think the effect of daylight would be to confine the working of Transatlantic wireless telegraphy to the hours of darkness, as sufficient sending energy could be used during daytime at the transmitting station to make up for the loss of range at the signals.

They are Seven.

A Spalding paper, giving some clippings from its old files, says that before 1776 there was not one druggist resident in Spalding, and a Mr. A. Lloyd used to attend on market-days from Peterborough. Mr. Wilcockson was the first druggist to reside in the town, and he occupied a house in Bridge Street. In 1846 there were eight druggists at Spalding, and at the present time there are seven.

Fires.

Damage to the extent of about 200*l.* was done by fire on June 11 at the works of Messrs. Geo. Moxon & Sons, oil refiners, Milnsbridge.

On June 7 a fire broke out on the premises of Mr. J. T. Davy, chemist and druggist, High Street, Irthlingborough, Northants. The conflagration originated through the ignition of some chemicals in a cupboard at the back of the shop. This was apparently extinguished, but during the night the matchboarding smouldered, and the fire broke out again in a servant's bedroom over the shop, and before it was extinguished the second time considerable damage had been done.

Disinfectant Distribution.

At a meeting of the Preston branch of the Independent Labour party in Preston on June 14, a resolution was passed protesting against a recent decision of the Corporation to limit the supply of disinfectants, and recommending a return to "a free and unrestricted issue of the same" to all applicants.

At the Glossop Town Council on June 11, Alderman S. Rowbottom drew attention to the fact that a man in the borough had committed suicide by drinking carbolic acid, which had been supplied by the sanitary inspector. He asked if it was wise for the inspector to let anybody have carbolic acid that wanted it. He thought free distribution was a mistake. The disinfecting ought to be done by the inspector or his men. A chemist would not have supplied the acid without precautions. The inspector replied that under the Local Government Board regulations and the by-laws of the Council he was bound to supply carbolic acid when requested for disinfecting-purposes. He took great precaution as to whom he supplied, and always gave verbal and printed instructions. The bottles were labelled "Poison." In the case referred to the acid was not supplied to the person who took his life, but to the owner of a house where a case of scarlet fever had occurred. The suicide obtained the acid from the house-owner.

Property Sales.

The business premises occupied by Mr. W. Davidson, chemist and druggist, Garden Lane, Chester, were sold by auction on June 13, realising 890*l.*

The premises at 5 and 7 Orange Street, Halifax, together with adjoining property, were purchased for 1,250*l.* at an auction on June 12 by Mr. Proctor, of Pollard's Drug-stores, Halifax.

Trade-Mark Notes.

In answer to a resolution of the Associated Chambers of Commerce urging that facilities should be afforded by the Board of Trade for a full inquiry into the working of the present law as regards trade-marks, Mr. Gerald Balfour has replied, "that before giving a definite reply he would be glad to give further consideration to the matter; he hoped, however, to be in a position to send such a reply in the near future."

The definition of trade-mark under the new patents and trade-marks law in Spain has been extended, and is now much the same as in Great Britain. The maximum term for registration is now limited to twenty years. It is also provided that taxes should be paid every five years, failing which the registration will lapse. There is a provision that registrations which were effected twenty years ago and upwards have to be renewed within six months, and all other registrations will require renewal before the expiration of twenty years from the respective dates of registration, failing which the rights of the owners will lapse.

Public Dispensers' Association.

A special meeting was held at St. Bride's Institute on June 11 (*C. & D.*, June 14, page 912), at which there was a good attendance. A resolution was moved by Mr. H. T. Samuel:—

That instead of the words, "All dispensers in public institutions are eligible for membership" (Rule 4), it should read, "After this date, no dispensers in public institutions are eligible for membership unless they hold the Qualifying certificate of the Pharmaceutical Society."

The resolution was seconded by Mr. Boyd Donnan. Mr. J. J. Smith asked what was the reason of the suggested change; and the President replied that the qualification-question had been a bone of contention for many years, and the Council now felt the time had arrived when it should be definitely settled. Mr. Goodall spoke in support of the resolution. Mr. Turner moved an amendment, seconded by Mr. Bishop, that the words "Or the assistants' certificate of the Apothecaries' Hall" be inserted after the words "Qualifying certificate of the Pharmaceutical Society." He said it might be news to some of those present that only those holding the "Hall" certificate were legally qualified to act as assistants to L.S.A. men. Mr. Spencer asked whether Hall men were acting illegally in dispensing for anyone else than a L.S.A. Mr. Jones, pharmaceutical chemist, spoke against the original motion, as he thought it an unnecessary restriction. Mr. Samuel said it was useless to shelve the matter again, since although they had been open to receive subscriptions from any dispenser during the past six months, only about six Hall men had joined. Mr. Spencer stated that their hands were more or less forced by the conferences recently held and the Association of Poor-law Dispensers, and Mr. Welford also spoke in favour of the resolution. Mr. Lindsay moved that the discussion be postponed until the October meeting, but Mr. Cairns moved that the question be now put. The President then first put Mr. Lindsay's amendment—it was lost by 16 to 4; then Mr. Turner's amendment—4 for, 19 against; and, finally, the original motion—23 for, 5 against, this voting including provincial members' votes. The Chairman then declared the resolution carried, and the meeting terminated.

Exeter Association of Chemists and Druggists.

A meeting was held on Tuesday, June 17, Mr. G. Stocker presiding. The question of pharmaceutical education was discussed at some length, particularly in view of the possible discontinuance of the pharmaceutical classes at the Royal Albert

Digitized by Google

Memorial College. On the motion of Mr. Rowsell, seconded by Mr. Lake, it was considered advisable that the classes in pharmacy and materia medica should not be discontinued, but that greater provision be made for the practical teaching of these subjects. The Hon. Secretary reported that he had been approached by the Secretaries of the Royal Institute of Public Health, which holds its annual congress at Exeter from August 20 to 26, with regard to the proposed discussion on the sale of poisons. On the motion of Mr. Stone, seconded by Mr. Rowsell, it was resolved that Mr. W. S. Glyn-Jones be invited to visit Exeter and read a paper to the Congress on the pharmaceutical aspect of this question. In regard to the Coronation holidays, it was decided that attendance be given at the following hours on those days: Up to 10 A.M., 1 to 2 P.M., and 6 to 7 P.M.; and that notices to this effect be placed on the door of each establishment.

School of Pharmacy Students' Association.

The final business meeting of the Association was held on Tuesday, June 17, at 17 Bloomsbury Square, W.C. Mr. W. H. Lenton (Vice-President) occupied the chair. The Hon. Secretaries presented their report for the session 1901-2, and the Hon. Treasurer's balance-sheet. Those statements showed that the Association has had a very successful time both socially and financially, while the number and quality of papers read were quite up to the standard. Both reports were unanimously passed. The meeting terminated with a vote of thanks to the Hon. Secretaries (Messrs. B. Collitt and Frank G. Hines) for their services.

Scab in Sheep.

The outbreaks of sheep-scab in Great Britain last month numbered 25, as against 38 in May of 1901 and 57 in May of 1900. They comprised 12 in England, 7 in Wales, and 6 in Scotland, and were distributed over 10 administrative counties of England, 5 of Wales, and 4 of Scotland. The largest county total was three in Aberdeen. During the month of May the disease was known to exist in 24 administrative counties of England, 11 of Wales, and 14 of Scotland, the total being 49. No marked increase of the disorder need be expected, says the *Times* agricultural specialist, until the autumn months set in. The following table shows the course of the disease during the last six months. The total of 1,238 outbreaks compares with the corresponding total of 1,439 for the six months that ended with May, 1901:—

Month	England	Wales	Scotland	Great Britain
	No.	No.	No.	No.
December, 1901 ...	134	81	12	227
January, 1902 ...	183	233	33	449
February	67	139	49	255
March	51	130	26	207
April	23	41	11	75
May	12	7	6	25
Total outbreaks ...	470	631	137	1,238

We may remind our readers that the disease is due to the presence of an acarus, and cure depends upon killing the parasite, the presence of which on a sheep is proof of the existence of scab. The parasites can be detected by gently scraping a little scurf off an affected part, and examining it under a microscope with a ½-inch power. (See *C. & D.*, June 9, 1900, page 959, for figure.)

An Informal Dinner

of the new Council of the Chemists' Assistants' Association was held at the Horse Shoe Hotel, W.C., on June 12, over which Mr. J. W. Peck presided. After dinner, Mr. Peck announced that the Council were losing Mr. A. C. Franklin (of Messrs. Savory & Moore, New Bond Street, W.), who was going out to take a position in the Government Laboratory at Hong-Kong. Mr. Franklin briefly replied to Mr. Peck's good wishes, and the remainder of a very pleasant evening was enlivened with music and recitations.

The Week's Poisonings.

Since our last report thirteen fatalities by poisoning have occurred, in four of which unscheduled poisons were the cause. Three carbolic cases—two at Manchester and one at Peckham—are recorded, and a like number from oxalic acid. The latter was taken by a Leigh dairyman, and by young women at Melton Mowbray and at Heanton Punchardon. Laudanum was taken with fatal results in two cases—at Leeds and at Undercliffe, near Bradford. In the latter case the victim was a gipsy girl who obtained the laudanum from Mr. John Calvert, pharmaceutical chemist, of Idle Road, Bradford. At South Reddish a fustian-cutter took perchloride-of-mercury solution which he used in photography. It is singular that poisoning from a similar cause was reported last week. At Batley a four-year-old boy purchased a "surprise packet" of sweets, containing amongst other things a small piece of chewing-gum. After finishing the contents of the packet he became suddenly ill and died. The medical opinion given at the inquest was that death was the result of ptomaine-poisoning caused through eating the chewing-gum in the manufacture of which some negligence had probably taken place. A Portsmouth woman took hydrochloric acid and died, and a Bolton driller drank a quantity of "insect-liquid" in mistake for beer and died from the effects. The infant daughter of an insurance agent at Loughborough Junction appears to have got hold of a few crystals of bichromate of potassium and to have eaten them. She died from poisoning, the mother explaining that the bichromate was used for an electric battery, and it is supposed that some of the crystals must have fallen to the floor from the box in which they were kept, where the child picked them up.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Royal Dublin Society.

The Prince of Wales has consented to become a Vice-Patron of the Royal Dublin Society. The King is Patron, the Society having enjoyed the patronage of the reigning monarch for 156 years.

Personal.

Mr. J. E. O'Neill, wholesale druggist, Maghera, has been elected, for the second time without a contest, a member of the Magherafelt District Council and Board of Guardians. He has since been chosen as Vice-Chairman and Deputy Vice-Chairman of the respective Councils.

Examiner Vacancy.

A vacancy will shortly occur for examiner in chemistry at the Licence examination of the Pharmaceutical Society of Ireland, as Mr. Watson has intimated his retirement from that position after the July examinations.

Are We Decadent?

Meetings of creditors and subsequent compositions by chemists are becoming quite numerous in Ireland as compared with former years; 3*s.* and 3*s.* 4*d.* in the pound are two of the latest settlements.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

No Want of Skill.

In the Edinburgh Sheriff Court on June 12 Sheriff Henderson issued an interlocutor in an action by Mrs. Margaret Lawrie or Craik, against William Edwards, dentist, Leith, for 100*l.* damages for injuries received during a dental operation. The circumstances of the case were reported in our issue of May 17 (page 756), and the Sheriff found that

Digitized by Google

the pursuer had failed to prove that the pain from which she suffered was caused by the negligence and want of professional skill on the part of the defender. On the other hand, the Sheriff found that the defender had proved that he performed well and skilfully the operation which he was called upon to do. He, therefore, dismissed the action, and assoilzied the defender, granting him expenses.

Edinburgh Institute of Public Health.

The ceremony of presenting the newly erected and equipped Institute of Public Health to the University of Edinburgh took place on Wednesday afternoon, June 11. Principal William Muir presided, and there were present Sir John Usher, of Norton, the donor of the institute; Sir Wm. Turner; Mr. Hunter Stewart, Professor of Public Health; the Solicitor-General for Scotland; the Bishop of Edinburgh; and many others, including a large representation of Edinburgh Town Council. Sir John Usher formally presented the institute to the Vice-Chancellor. Sir Wm. Muir, who expressed gratitude to those who had established the Chair, and to Sir John for having given them that magnificent building. An address was also presented to Sir John by the students' representative council, on behalf of the general body of the students, expressing their thanks for his gift.

Edinburgh Chemists' Assistants' and Apprentices' Association.

The second botanical excursion of the summer session took place on Friday evening, June 13, the party leaving Waverley station at 8.15 for Inveresk, under the leadership of Mr. J. Rutherford Hill. The weather was fine, and about twenty-five members attended. They explored the railway embankment back to the point where the railway crosses the River Esk, and then walked down the river-bank to Musselburgh, and thence to Joppa, where electric tramcar was taken back to town. At the Inveresk junction quite a number of unusual plants were gathered on the embankment, including *Lepidium draba* (in great abundance), *Erysimum orientale*, *Silene inflata* var. *maritima*, *Medicago sativa*, and *Cerinthe minor*. The ground was very rich, and it was felt that another evening would be required to do justice to it.

Aberdeen Doctors' Shops.

Chemists and druggists of Aberdeen are a little shocked by the publicity given at the meeting of the Pharmaceutical Council last week to their suggestion that the position of doctors' shops in their city merits official inquiry. They did not dream of publicity at this stage. Aberdeen is peculiar among East of Scotland towns in having the largest proportion of doctors' open shops, and although, in consequence of the General Medical Council's circular to medical men regarding open shops, one has closed and negotiations for the disposal of another are pending, the tendency is for doctors commencing practice in working-class localities to keep the pot boiling in an open shop. At present there are eleven or twelve such shops in Aberdeen and its suburbs, and in only one of these is there a chemist and druggist. Similarly, only one can compare with the registered chemists' shops in style and business done, all being feeders of the medical practices. The proportion of doctors' shops to druggists' is as one to five.

Golf.

Teams representing the Edinburgh Pharmacy Club v. the Edinburgh Chemists' Club brought off a match over the Braids last week, the result being a win for the "Pharmacy" by five holes. The scores were:—

"Pharmacy"	Holes	"Chemists"	Holes
D. S. Philp	2	Jas. Stott...	0
A. C. Aitken	1	A. W. Wilson	0
C. Stewart	0	H. D. Alexander ...	2
J. J. Sutherland ...	1	Jas. Finlay	0
J. A. Gray	5	W. C. Baker	0
J. Stewart	1	Geo. Lunan	0
J. Cochrane	0	W. G. McNab	4
D. McLaren	1	D. N. Wylie	0
	11		6

In the Edinburgh Pharmacy Club final spring competition for the "T. & H. Smith Trophy" Messrs. Gray and Clarke (Duncan, Flockhart & Co.) beat Messrs. Anderson and Cochrane (Duncan's classes).

Personal.

Mr. John Nesbit, pharmaceutical chemist, has been elected, by a majority of 103 over his opponent, to represent Portobello on the Edinburgh Parish Council.

A Fatality and a Mistake.

A traveller for a London firm of wine-merchants was found dead in a Glasgow hotel on June 14, death being attributed to laudanum poisoning. An empty laudanum-bottle was found at his bedside.

An Edinburgh woman named Pae drank a solution of boric acid on June 16 with the intention of poisoning herself. She thought it was carbolic acid she was drinking, but the only effect of her escapade was to cause her to be sent to prison for three days for attempting suicide.

Outing.

The employés of office and warehouse of Messrs. T. & H. Smith & Co., Duke Street, Edinburgh, journeyed to Peebles for their annual outing on Saturday, the party numbering about 150, being conveyed thither by special train. After dinner, which was served in the Commercial Hotel, Mr. Smiles, who occupied the chair, made a few remarks, and thanked the principals of the firm, on behalf of the employés, for their kindness and liberality in defraying all the expenses of the outing. The party afterwards visited the principal sights of the place, including the famous gardens on the estate of Sir Charles Tennant, M.P., The Glen, Inverleithen.

Glasgow Notes.

Big batches of candidates are going up from the local pharmacy schools to the July examinations.

Still another cure for cancer. Rabbit's serum is the specific extolled in a pamphlet at present in circulation. The author is a local man.

The Muirhead Medical School for Women remains *in posse* owing to the inability of the trustees to come to terms with the University. Thanks to the delay the original bequest of 30,000*l.* has now swelled to 40,000*l.*

In a morning newspaper a "family doctor" deplores the discontinuance of bleeding and blistering "in moderation" and the comparative disuse of poulticing. He alleges that even that Lilliputian lancet, the leech, is being neglected, and the druggists leech-jar is fast becoming a relic of the past.

A Glasgow chemist has received a parcel of a monocotyledonous root and several whisky-bottles of infusion of it from South Africa. His correspondent says the root is popular amongst the natives as a cure for piles and dysentery, and suggests that the consignee should experiment with the material sent.

Mr. C. Sherry, of the Botanic Gardens, has been giving the Andersonian naturalists interesting information about the rare species of gymoosperms in the Municipal collection. It seems that the mephitic atmosphere of Glasgow is fatal to many *Coniferæ*, &c., which thrive in the open air elsewhere. The more notable species under cover include Bidwell's araucaria (Australia), plum-fir (*Podocarpus Andina*), the maiden-hair tree (*Salisburia adiantifolia*), the parasol fir, several rare araucarias, seldom seen in cultivation, a pigmy form of the Chinese *Arbor vitæ* (*Thuja orientalis*) not artificially dwarfed, a few rare *Hepaticæ*, and a fungus entirely new to Britain called *Omprophilo Jacintha*.

Dundee Notes.

Mr. Wm. Walker, chemist, Downfield, has been appointed postmaster for this rural and rising suburb of Dundee.

Mr. William Sime, chemist and druggist, is opening a pharmacy in a new building now being erected in Lochee Road, on the grounds of old Dudhope House. The fittings are being supplied by Messrs. Ayrton & Saunders, Liverpool.

Peter Mearns, from Edinburgh, was on Friday last sentenced to forty days in gaol for a theft of 37*s.* from Mr. A. B. Anderson's pharmacy in Princes Street, on May 22, 1901. His record stands at seventeen previous convictions, and his method is to slip into shops on silent shoes at quiet intervals.

Digitized by Google

Golfing at Conference time and by B.P.C. members will be looked after by Mr. James Anderson, chemist, Commercial Street, Dundee. He is a member of the Carnoustie Club, and is arranging for a few rounds of the links there. Those who are to take their sticks to Dundee should write to him. Mr. James Russell is looking after the music and the ladies.

Odd things happen now and then even in Dundee and the *Dundee Advertiser*, as the following clipping showeth:—

DUNDEE CHEMISTS' HALF-HOLIDAY.—Please note, shops will be closed on Wednesdays from 3 till 7 in June, July, and August.

BLESSED be the Lord God of Israel for ever and ever. And all the people said, Amen, and praised the Lord.—1 Chron., xvi. 36.

Messrs. James Hardie & Son, pharmaceutical chemists, High Street, are adding to their pharmacy the shop next door, which will double their accommodation for dispensing and retail trade. Mr. Hardie, sen., acquired the premises over twenty years ago, and has, with the firm, since utilised the cellarage and a large warehouse behind. The character of the front is now to be altered as little as possible, but it is to be modernised.

There is some life yet left in Dundee chemists' assistants and apprentices, says a correspondent. It occurred to those of them who are studying at the Technical Institute under Dr. Lumsden (chemistry) and Mr. Aimer (botany) that they should celebrate the half-holiday accomplishment by taking a trip to Monikie on Wednesday, June 11. Messrs. Harry Robertson (Davidson & Gray's), Alexr. Barrie (C. Kerr's), James McMillan (Mr. Park's), and George Lindsay (Mr. Williamson's) worked out the details, and when they all gathered together at 2 o'clock they filled two brakes, for each had brought his sister, or some other fair one with him—generally the latter—forty altogether. They had a good time at Monikie, and a hearty tea, returning to town by 10 o'clock. There may be something else of a similar nature should summer weather happen to get to Dundee this year—anyway, winter meetings for consideration of technical matters and interchange of opinion on trade topics are not improbable.

French News.

(From our Paris Correspondent.)

POISONOUS BLACKING.—In the case in which a man suffered from symptoms of poisoning through wearing a pair of boots originally brown, that had been dyed with a special blacking, the following judgment has been given. The manufacturer of the blacking was condemned to 50f. fine, and the insertion of the judgment in two Parisian papers. The Tribunal admitted that the directions were given on the bottle that only one coat of the blacking should be given, whereas it had been proved that the bootmaker put several coats on the boots. But the judges considered that the type of the directions was insufficiently large to draw the attention of the public to the danger.

NOTES FROM THE SOUTH.—It is announced that an official course on pharmaceutical legislation will shortly be commenced at the Montpellier School of Pharmacy. Fifteen lectures will be given by one of the professors of the Faculty of Law of that city, but only be given once every two years.—The Federation of Pharmacists of the South-East have decided to petition the Minister of Public Instruction in favour of raising the French Schools of Pharmacy, which in the less important centres are linked with those of medicine into autonomous Faculties. The matter will, however, in the first place, be submitted to M. Massol, Director of the Montpellier School of Pharmacy, for an expression of opinion from him and the professors of the School on the subject.

THE PHARMACIEN IN WAR-TIME: THE ECHO OF A SIEGE.—In their last work, *Les Braves Gens*, the well-known French military writers MM. Paul and Victor Margueritte celebrate the heroism of Colonel Teyssier, who defended Bitche so gallantly in 1870–71. Thanks to the initiative of M. Guesquin, pharmacist, of 112 rue du Cherche Midi, Paris, the gallant colonel is to be presented with his bust in bronze. M. Guesquin, like Dr. Francoz, the Senator, acted as a pharmacien aide-major through the long and terrible siege of Bitche (August 7, 1870, to March 27, 1871). The garrison surrendered with all the honours of war, and it is not long since the two pharmacists were present at a banquet given to the surviving officers of the famous defence.

"SUGGESTION" AND TEETH-EXTRACTION.—M. Moirand, a dentist of one of the Paris hospitals, relates the employment of "suggestion" under circumstances that are apparently novel. A youth of 17 presented himself as a patient with a decayed molar in the upper jaw, and the dentist decided that extraction was necessary. The patient positively refused to have the tooth drawn, and after some discussion his father, knowing him to be very sensitive to hypnotic suggestion, took him to M. Bérillon, a specialist in hypnotism. The latter saw the youth, and, amongst other things, said to him, "On such a day you must return to the dentist at the hospital, and tell him from me to make an injection of cocaine and extract your tooth painlessly." In due course the patient returned to the dentist and sat himself in the operating-chair of his own accord. M. Moirand then pretended to make an injection of cocaine, waited a short time as though for the anæsthetic to take effect, and then extracted the tooth. The patient did not flinch, and appeared insensible to pain, though the operation was a somewhat difficult one. He afterwards left the chair of his own accord, and then appeared to gradually recover his self-possession. The dentist refers to this as a case of painless dentistry, interesting from two points of view. He considers that in the first place the hypnotic suggestion produced absolute anæsthesia, and, secondly, that it enabled an operation to be performed on a recalcitrant patient. It is claimed that there was a suppression of will and a suppression of pain, the case not being the first of its kind.

A PHARMACEUTICAL PURIST.—A correspondent writes from Marseilles:—"It was the 'glorious first of June,' Peace Proclamation Day at Marseilles, and I had been down to the Joliette to see the *Olympia* arrive with the Maharajah of Jehpore aboard, bound for the Coronation. It was on the tramway, coming back, that I met a chance acquaintance, who wanted to make a small purchase at a pharmacy. I don't know where he went to at last, nor what he spent; but his objections to the various establishments we passed were as extensive and peculiar as Mr. Sam Weller's knowledge of London. To begin with, he had only to look on the back of the tramway-ticket to find the address of a pharmacy; but he held that a place advertising on tramway-tickets was beneath contempt. The 'British Pharmacy' advertised 'Seasickness cured in five minutes'—'And what can you think of a place that makes such a claim?' said he. 'Wasn't everybody aboard sick coming over?' (He spoke feelingly.) Then another, which advertised 'Same prices as the cutting pharmacies' (*pharmacies au rabais*), was objected to logically enough. 'For if he sells at same prices as the cutters, what is he but a cutter himself?' The enterprising pharmacist near the post-office who advertises 'Babies weighed gratis,' is doubtless popular with mothers, but my companion was a bachelor, and his objection to the 'Pharmacie des Reformés' proved him a consistent Catholic. The widespread prejudice against the 'cumul' of the medical and pharmaceutical practice disposed of the claims of a 'Medicin-Pharmacien de 1re classe,' and M. Charrues, 'Pharmacie des Commises et des Employés,' brought forth the scornful remark, 'Is thy servant a girl-clerk—a female counterjumper, that he should do this thing?' And here I left him."

DRUGS AND CHEMICALS to the value of 43,000*l.* were imported into Natal during the quarter ending March, against 30,000*l.* for the corresponding period of 1901. The above figures do not include free importations for the use of the local Government or military stores.

DRUGS AND CHEMICALS to the value of 71,000*l.* were imported into the Transvaal during the quarter ending March, against 9,000*l.* for the corresponding period of 1901. The above figures do not include free importations for the use of the local Government or military stores.

South African News.

(From our Correspondent.)

PLAGUE was still in evidence at Port Elizabeth when the last mail left.

TRADE MARKS.—Mr. S. H. Ward has notified his intention of applying for registration in Cape Colony of the word "Febrisum" in Class 3 in respect of substances used in pharmacy.

FLOATING THE SANATORIUM.—Messrs. Walsh & Walsh, the proprietors of the Sanatorium and Baths, Caledon, Cape Colony, intend floating that concern. The capital is 140,000*l.* Only 20,000 preference and 20,000 ordinary 1*l.* shares will be open for subscription.

NEW LICENCES.—Mr. Leo Behrmann has been granted a licence to practise as a chemist and druggist in Natal.—The following have been licensed to practise as medical practitioners in Cape Colony: Henry St. John Randell, M.B. (formerly of London, England); Edward Albert Seale, M.D. (late of Foxrock, co. Dublin, Ireland); David Charles Rees, M.R.C.S., L.R.C.P. (formerly of London, England); Frederick Burke Carron, M.R.C.S., L.R.C.P. (late of Ontario, Canada); Robert Neville Geach, M.R.C.S., L.R.C.P.; Robert Derwent Parker, M.B. (late of Buxton, England).

PERSONAL.—By letter dated from Government House, Bloemfontein, on May 13, 1902, Lord A. Thynne (secretary), "authorises Norwood Coaker, Esq., to use the Style and Title of Chemist and Druggist to His Excellency the Deputy Administrator of the Orange River Colony." Mr. Coaker who is the senior practising druggist in the O.R.C., held a like appointment to President Reitz. His family connection with South Africa covers a very long period. His father was acting Master of H.M.S. *Tweed*, which took out Sir Lowry Cole, as governor, and according to Alderman Sir Henry Keppel, he was the first person to form the idea of building a breakwater in South Africa, a work which he carried out with the aid of Bluejackets and Marines from his ship's company.

A SHEEP-DIP TRANSACTION.—In the Supreme Court, Cape Colony, Messrs. Malcomess & Co. had brought an action against Messrs. A. R. McKenzie & Co. for the recovery of certain cases of sheep dip or their value, but on May 21, when the case was called, it came before the Court as a question of costs only. It appeared that Messrs. A. R. McKenzie & Co. had agreed with the plaintiffs to deliver on their behalf certain 500 cases of sheep dip to the Colonial Government, the defendants undertaking to store, look after, forward, and take receipts for these cases. From what could at first be ascertained, receipts had been obtained for 414 cases delivered, but there were none for the other 86 cases, although it had since been discovered that these cases also had been delivered, and Malcomess & Co. had obtained payment for them. Accordingly the only question was as to the costs of the action, and, after hearing evidence, judgment was given for the plaintiffs for costs of the action.

CAPE TOWN CHEMISTS' DINNER.—The first annual dinner of the Cape peninsula chemists took place on May 21, in the York Room, Grand Parade Restaurant, Cape Town, Mr. F. W. C. Thomas, Vice-President of the pharmaceutical Society and member of the Colonial Pharmacy Board in the chair, supported by Mr. A. J. Rivett, also a Vice-President of the Society, and resident director of Lennon (Limited), and Mr. J. A. Mathew, president of the Colonial Pharmacy Board. Upwards of seventy sat down to dinner, among them being Messrs. D. K. Petersen (P. J. Petersen & Co.), Mr. F. C. Mathew (Heynes, Mathew & Co.), Geo. Hamilton and Alex. Cameron (Cameron & Hamilton), C. H. Hopkins (Hopkins and Cherry), J. S. North, S. Johnson (Lennon Limited), W. A. Sleggs, Harry Evans (P. J. Petersen & Co.), S. C. Sivertsen, John Hall, J. D. Buckle, J. H. Cooper, H. L. Stonham, and the Secretary. The following foreign representatives were also present: Messrs. E. W. Raven (Burroughs Wellcome & Co.), H. Magness Elgar (Frederick Stearns & Co.), and W. E. Barlow (Burgoyne, Burbidges & Co.). The loyal toasts, which included Lord Milner, and Sir Walter Hely-Hutchinson, having been given with musical honours, Mr. A. J. Rivett submitted "Success to the Pharmaceutical Society of Cape Colony." He said it was not a perfect Society, and had not escaped criticism, but in so far as it had been the means of bringing together some who had not otherwise many opportunities of becoming acquainted, it had done something towards promoting friendly feeling and good fellowship among them. (Applause.) As a society they were fortunate in having a fair number of members; moreover their financial petition was satisfactory, and they had not wanted for scientific men to give lectures and papers, but there was a defect he regretted, and that was the difficulty in getting a quorum at the meetings. The situation was peculiar and reminded him of a comparison made by a friend who under similar circumstances used to say "Samson was a very strong man, but if Samson had not got a shirt, he could not pull it on." And so it was with the Society. Since the beginning of the year he had noticed that the attendance on the part of members had been somewhat more numerous, and he trusted that this was an augury for a still better state of things for the future. It had been extremely gratifying to him to learn that during the past few days their brethren in Bulawayo, although a rather small community, had rolled up to the Pharmaceutical Society meetings with commendable energy. In conclusion Mr. Rivett expressed the hope that chemists would not be satisfied with showing only a little more interest in the Society and its work, but that they would be "thorough" in everything, and if they kept this motto before them he felt perfectly sure that the subject of his toast would be realised. (Cheers.)

Mr. J. S. North, in responding, said he was glad to see the Pharmaceutical Society trying to draw the members together. If the younger members of the Society would only take more interest in pharmaceutical affairs in time their Pharmaceutical Society would rank as one of the strongest in the oversea Empire.

Mr. S. Johnson (Lennon Limited), proposing "The Press," said they appreciated the freedom of the English Press, because there was no doubt but that a great deal of that liberty which they as Englishmen loved so dearly was due to it. They all valued their newspaper in the morning; and their trade journal, and would be miserable fellows without them. The Cape Town representative of THE CHEMIST AND DRUGGIST, replied. Mr. R. B. Sainsbury proposed "Our Visitors" in an exceedingly jocular manner, causing considerable merriment by his quaint sayings. To this Mr. Morgan suitably responded. Mr. J. A. Mathew, toasting "The Chairman," said no one had shown such diligence in attending the meetings or such thorough interest in the work of the Society. If only some of the younger members would take a leaf out of Mr. Thomas's book the Society would flourish as a green bay tree. The Chairman, in the course of his reply, expressed great pleasure at seeing so many of his confrères around him at the first dinner of the Society. On this particular occasion they had shown *esprit de corps* at any rate. He regretted the absence of their president, Mr. Geo. Darroll, who was on his way to Europe; also of Professor Hahn and Dr. Marloth. All chemists were cordially invited to join the Society. By joining and attending the meetings they could do much to further the cause and interests of pharmacy in South Africa. After referring briefly to the work now in hand, the chairman concluded by saying he had the best interests of pharmacy in the country at heart, and he would do his best to further them for all time. (Cheers.) During the evening an excellent musical programme was gone through, and thanks are due to Messrs. Harry Evans, C. W. Brydges, R. Sainsbury, and others, for its success.

IN STATU QUO.—The Proprietary Association of America held their annual meeting in New York on May 7 and 8. There seemed to be no business of moment to discuss, and a memorial from the Executive Committee of the National Association of Retail Druggists suggesting a method to stop cutting was not favourably received, the majority being of opinion that the tripartite plan of operation, which has been working for some time, was the best and should continue. This plan, as we have explained before, is an agreement between the Association, the National Association of Wholesale Druggists, and the N.A.R.D. for the maintenance of prices.

Digitized by Google

Births.

BARCLAY.—At Birmingham, on June 10, the wife of John Barclay, B.Sc., of a son.

HEWLETT.—At Hillside House, Beckenham, Kent, on June 12, the wife of John C. Hewlett, of a daughter.

Marriages.

BOURDAS—GOODSON.—On June 10, at Holy Trinity Church, West Hill, Wandsworth, by the Rev. Hubert Curtis, assisted by the Rev. W. Reed, Ernest Clarkson Bourdas, M.D., F.R.C.S.E., second son of Mr. Isaiah Bourdas (of Bradley & Bourdas, pharmaceutical chemists, Belgrave Road, W.), and of Dunoon House, Clapham Common, S.W., to Lily Gertrude, youngest daughter of Mr. Henry Smith Goodson, of Fairlawn, West Hill, Putney, S.W.

CLARK—THOMSON.—At 39 Dublin Street, Edinburgh, on June 12, by the Rev. James Thomson, M.A., St. Andrew's Parish Church, Glasgow (uncle of the bride), Alexander John Clark, chemist and druggist, Edinburgh, to Marion, second daughter of the late Mr. John Thomson, Roslin.

MAXWELL—CURTIS.—On June 11, at the Methodist Church, Stephen's Green, Dublin, by the Rev. T. Davidson, Fawcett Maxwell, L.P.S.I., third son of James Maxwell, Armagh, and proprietor of the Medical Hall, Dalkey, to Elena Gertrude, daughter of William G. Curtis, Donnybrook.

SADLEIR—LIDBETTER.—On April 19, at St. Thomas's Cathedral, Bombay, by the Rev. F. N. Hill, Presidency Chaplain, Horace Sutton Sadleir, chemist and druggist, late of Gloucester, to Lena, only daughter of the late Mr. William Lidbetter, of Brighton.

SMITH—GOSTLING.—At the Congregational Church, Stowmarket, on June 17, Walter James Smith to Beatrice, youngest daughter of Mr. George J. Gostling, chemist and druggist, Stowmarket.

WATTS—HARLEY.—At the Drummond Arms Hotel, Crieff, on June 11, by the Rev. Andrew Campbell, Crieff, assisted by the Rev. Thomas Hardy, D.D., Foulis Wester, William Watts, chemist and druggist, Crieff, to Mary Duncan, daughter of Mr. James Harley, chemist and druggist, Drummond View, Crieff.

Deaths.

BENNETT.—At Newark-on-Trent, on June 6, Mr. William Bennett, chemist and druggist. Aged 76. Mr. Bennett had carried on business in Castlegate, Newark, in the premises now occupied as a branch establishment by Mr. G. W. Cherrington, pharmaceutical chemist. Mr. Bennett was a Newarker by birth, and was the son of a butcher. He was apprenticed to his elder brother, a chemist, in Kirkgate, Newark. He was first in business at Swineshead, near Boston, but returned to Newark about thirty years ago. He was very highly respected as a sound and upright business man, always courteous and kindly, but modest and retiring in disposition.

ENGLISH.—At Pickering, Yorks, on June 11, Mr. Robert Coulson English, chemist and druggist. Aged 25. Mr. English had only recently taken over the business in Pickering, which had been in the hands of the family for many years. Consumption was the cause of death.

FICKUS.—On June 13, in London, Mr. William Fickus, of St. Helens, Tunbridge Wells, and of Messrs. Fickus, Courtenay & Co., St. Dunstan's Buildings, E.C. Aged 60.

HARRIS.—At Merthyr Tydvil, Mr. Evan William Harris, chemist and druggist, lately in business at 128 High Street, Merthyr. Aged 54. Mr. Harris was a native of Caermarthen, and purchased the business in Merthyr twenty-six years ago. He was a member of the local Chamber of Trade and a Deacon of the Market Square Congregational Church. He was always held in the highest regard for his amiable and business-like qualities. He leaves a widow, two sons and three daughters. One of the latter, Miss May Harris, recently qualified as a chemist.

HARTFORD.—A cablegram received in London on Friday, June 13, announced the death of Mr. James Hartford, Vice-President of the Schoellkopf, Hartford & Hanna Company, of Buffalo, N.Y., and elsewhere. Mr. Hartford was manager of the New York office, and chiefly devoted himself to the drug and allied branches. A few weeks ago he was operated on for an internal trouble, but without relief. Mr. Hartford was born in Ireland fifty-six years ago, and after serving his apprenticeship to the drug-trade with Messrs. Boileau & Boyd, of Dublin, he, on September 13, 1876, qualified by examination as a pharmaceutical chemist. Later he came to London and joined Messrs. Burgoyne, Burbidges & Co.'s staff, and subsequently rose to the position of market-clerk, which he resigned in 1884, when he went to New York. Joining Messrs. McKesson & Robbins, in a position similar to that which he held in London, he quickly took a firm grip of the New York drug-market, and in a few years joined with the late Mr. Jacob Schoellkopf and Mr. Maclagan in founding the firm of Schoellkopf, Hartford & Maclagan. The growth of this business was in a great measure due to the keen business capacity of Mr. Hartford, and in January, 1900, the concern was incorporated under the laws of the State of New York, and became known as the

MR. JAMES HARTFORD.

Schoellkopf, Hartford & Hanna Company, having a capital of £2,100,000. This company also absorbed the Schoellkopf Aniline and Chemical Company, of Buffalo and Boston, and the Hanna-Schoellkopf Company, of Philadelphia. Mr. Hartford's close connection with this country and the esteem in which he was held, enabled him to secure the influential support of some of the leading British houses, the agencies of the company including that of Messrs. Howards & Sons, Messrs. T. Tyrer & Co., the Gas Light and Coke Company, Messrs. C. Lowe & Co., Mr. Julius Grossman, and Sir J. B. Lawes (Lim.). Although a citizen of the United States, Mr. Hartford up to the time of his death maintained his interest in British affairs. It was he and the late Mr. A. H. Mason who laid the foundation of the New York Section of the Society of Chemical Industry. Mr. Hartford also retained his membership of the Pharmaceutical Society of Ireland, to which he had been on many occasions an excellent friend. Mr. Hartford was Chairman of the Drug Committee of the National Wholesale Druggists' Association of New York last year. He was well known on London 'Change. He was a good and forcible writer, and in the early days of his American career frequently contributed to our pages. The portrait which we give is from one taken in his office, for which we are indebted to Messrs. Samuel Lambert & Co., 132 Fenchurch Street, E.C., who are the representatives of the Schoellkopf, Hartford & Hanna Company in this country.

MAUNDER.—On June 8, at the Teignmouth Pharmacy, Somerset Place, Teignmouth, Frederick Charles, only son of Mr. J. H. Maunder, chemist and druggist.

Digitized by Google

PALMER.—Recently at Ramsey, Hunts, Mr. Frederick William Palmer, chemist and druggist. Aged 72.

READ.—At Altrincham, on May 27, Mr. Henry Read, chemist and druggist. Aged 68.

SMITH.—At Birkenhead, on June 5, Mr. John Hunton Smith, chemist and druggist. Aged 83.

STORIE.—On June 15, Mr. Robert Storie, chemist, Dalkeith, and residing at Torsonce Road, Eskbank, died under very distressing circumstances. He had walked to Dalhousie, and started homewards in the evening, but was evidently taken ill on the way, for his body was found on the roadside on the following morning, death being attributed to failure of the heart's action. Mr. Storie was a native of Dirleton, near North Berwick, and served his apprenticeship with Messrs. Duncan, Flockhart & Co., of Edinburgh. He went to Dalkeith as a partner in Welch & Storie's business about twenty-five years ago, and only retired quite recently. He took a keen interest in the public business of Dalkeith, and, before his health broke down, in pharmaceutical affairs, being at one time a member of the Council of the North British Branch. He did much useful work as a Town Councillor, and in connection with an offer by Mr. Carnegie of 4,000*l.* to assist in the institution of a public library, Mr. Storie also contributed 50*l.* Mr. Storie was about 50 years of age, and a bachelor.

London Chemists' Association.

THE first annual meeting of this Association was held on June 18, at the Holborn Viaduct Hotel, E.C. Mr. Albert Cooper was in the chair, supported by Mr. W. S. Glyn-Jones (Vice-Chairman), Mr. G. P. Pond (Treasurer), Mr. R. H. Jones (Hon. Secretary), and several members of committee—altogether some thirty-six members being present. After the preliminaries had been gone through, the Secretary read the annual report and balance-sheet. The report recapitulated the steps that led to the formation of the Association and the election of the General Purposes Committee at the general meeting in January last. The committee has met at intervals since then, and distributed circulars explaining the work the Association intends undertaking. The roll of members includes the names of ninety-four chemists, from every part of London, this number having been enrolled without special canvassing. A local committee has been formed in the S.E. district.

THE FINANCIAL STATEMENT

shows that members' subscriptions amounting to 24*l.* 0*s.* 10*d.* have been received, whilst the expenditure has been, printing and stationery 10*l.* 18*s.* 10*d.*, postage 7*l.* 18*s.*, hire of rooms 4*l.* 19*s.*, leaving a balance of 5*s.* The Chairman invited remarks from the members, and Mr. Pond said that the report hardly reflected the amount of work done, as there had been nine committee meetings, at which a large amount of detail was settled. The Hon. Secretary, in reply to Mr. Bunker, said sixty-four more members had signified their intention of joining, but had not so far paid the subscription, and Mr. Pond rejoined that as soon as the Association was regularly formed, and the duties of its officers defined, a large number of chemists would join. Mr. Hick suggested the employment of

A PAID CANVASSER,

but Mr. Willson thought that each member should be a canvasser. Mr. Pentney said the Association would never meet with a great amount of success until it had a paid canvasser. What is everybody's business is nobody's. Mr. Bunker mentioned that the South London section had obtained the use of a room at the Metropolitan College of Pharmacy and had made arrangements for a meeting to be held in October. Mr. Glyn-Jones was afraid it would not pay to have a paid canvasser to collect 5*s.* subscriptions; it would be an expensive way of getting the money in. He did not think the number of chemists who had joined the Association was small, and, after all, the main point was that at last the nucleus of an organisation of London chemists was formed. The subscriptions should be paid promptly, 5*s.* paid at once was worth 7*s.* 6*d.* obtained after a lot of trouble. Mr. Pentney said it must be remembered that if they paid a canvasser 25 per cent. of the subscriptions collected, it would be an initial expense only, and Mr. Hick explained that he meant canvassing for members not money, but, of course, the one could be done at the same time as the other. Mr. Upfill thought the Association a good idea, it would wake up the Pharmaceutical Society; and at their meetings they could let each other know if anything was going cheap. (Laughter.) The canvass by a neighbouring chemist was the best way of collecting subscriptions, and amid laughter he told how Mr. Willson had called on him, and after telling him the objects of the Association, collected his subscription. It would be no good a West-end chemist calling in another district, as they did not understand the needs of other parts of London. In the West-end a chemist would sell a bottle of physic where he (the speaker) would only sell a pennyworth of jalap.

The Chairman, replying to the remarks, said he was glad to have such a free discussion; and on putting the adoption of the report and balance-sheet to the meeting it was carried *nem. con.*

Messrs. Powell and Barnes were elected auditors, and Messrs. Watson Will and Edwards (Hornsey) members of the General Purposes Committee in place of Messrs. Dawson and Harrington. A little discussion took place as to the members who should retire next year, the rules not being quite clear, but the matter will be gone into by the committee.

A TEST-CASE.

Mr. F. E. Bustard, who referred to himself "as a small shopkeeper down Tottenham way," next in a neatly delivered speech spoke to the motion standing in his name—

That this Association urges upon the Council of the Pharmaceutical Society the advisability of bringing a test-case before the courts of law at an early date for the purpose of obtaining a final decision as to the rights or otherwise of limited-liability companies to use the title of chemists.

The motion, Mr. Bustard said, did not raise the right of companies to carry on business as chemists—its purpose was to challenge their right to use titles which implied registration under the Pharmacy Act. The House of Lords case had settled the right of companies to carry on a chemist's business, and he did not think that any Act of Parliament would ever be got to upset that decision. It could not truthfully be asserted that the public were in any more danger from a shop owned by a company where a qualified chemist was employed than they were from a branch shop owned by a chemist. He (the speaker) acknowledged that he was fighting for his own interests, and he considered he was justified in defending a title he had won by hard work. (A Member: You were employed by a drug company, and a most unsuitable person to raise the question.) This remark drew forth cries of order, and an explanation from Mr. Bustard that everyone had a right to sell his labour in the best market. Continuing, he said the question of title had never been settled: the House of Lords' case did not raise the question of the use of the title. Perhaps the Pharmaceutical Society had had counsel's opinion on the subject, and that was the reason a test-case was not taken. If they had had such an opinion chemists ought to know it. Mr. Justice Bramwell contended that as the directors or managers of a company could be got at, a company could be made as responsible as an individual. It would be a restraint of trade to prevent them from keeping open shop. It would be no restraint of trade to prevent a company from using a personal title any more than an unqualified partner. Mr. Bustard quoted the "shipping-druggist" case from "Pharmacy and Poison Laws," in which an unqualified man in partnership with a qualified man was fined, the case being taken to the Queen's Bench. The speaker wished it to be understood that he was not attacking the Society, but that whilst there was no chance of stopping company-trading in drugs, chemists were quite justified in asking the Society to take up a test-case on the question of the title.

The resolution was seconded by Mr. G. P. Pond, who hoped it would be carried unanimously, although it was not a resolution he considered would do any good in itself. (Laughter.) It was no use urging the Pharmaceutical Society to do anything. He was in favour of the

Digitized by Google

resolution however, as far as it went, but he thought a little alteration might improve it. At this point Mr. Burton inquired whether Mr. Pond was seconding the resolution or proposing an amendment, and several members thought his speech was not in order. Mr. Pond, continuing, said he was in favour of the resolution, but he thought it was only part of the tree. It wanted root, he said, amid great laughter, and then they should plant the tree and its root in the mouths of the Pharmaceutical Council. He had a practical illustration of the evil spoken of by Mr. Bustard on view in the shape of a bottle of medicine he had had made up that day at Spiers & Pond's. On the label that firm of butchers—(much laughter)—were designated chemists. After Mr. Pond's speech the member who interrupted Mr. Bustard said it surprised him, and would discredit the resolution in the eyes of the chemists of North London, when it was known who the proposer was. Mr. Pentney interrupted, saying he "smelt a personality." This the bellicose member denied, explaining that he had never seen the proposer in his life before, but the chemists in North London were aware of his one-time company connection, and if he (the speaker) called on some of them soliciting membership for the Association he knew the sort of reception he would get. Mr. Bunker thought they ought to be glad that the proposer of the resolution had mended his ways since he left North London; and Mr. Glyn-Jones having added a few words deprecating criticism of private conduct at a public meeting, the clamour was subdued. Mr. P. H. Burton said it was hardly correct to say that the matter of the title had never been tested in the courts, and recalled the case instituted by the Pharmaceutical Society against the Leith Depôt in 1887. In that case the Sheriff decided in favour of the Society, but on the decision being appealed against the Court of Session found for the defendants. After that decision and the case of the Society and the London and Provincial Association, the Pharmaceutical Council ought, in his opinion, to have gone to Parliament and said, "This Act as now interpreted makes the title and qualification of a chemist useless for us." That would have been a most favourable opportunity, he contended, for asking for the amendment of the Act, in so far as the liability companies and corporations were concerned. Such a step would have met with the approval of the entire trade, and at that time there would have been great probability of their desires being obtained. Instead of that the Pharmaceutical Council always appeared to be under the impression that a *quid pro quo* was necessary before anything could be obtained from Parliament, and a curriculum scheme was always forthcoming. There might be other reasons, of course, for their not moving during these past twenty years, but they were not reasons that were known or understood by the ordinary men of the trade. Mr. W. M. Campbell agreed with the resolution, and thought neither chemists nor companies should be allowed to use "false" names on their poison-labels. The name appearing on a poison-label ought to be that of the *bonâ fide* seller of the poison. Another diversion was created by Mr. R. B. Betty, who thought what was wanted was a new Pharmacy Bill. He moved as an amendment—

That considering the anomalous conditions under which the limited-liability companies carry on the business of chemists, this Association urges upon the Pharmaceutical Council the necessity of introducing an amended Pharmacy Bill either to the House of Lords or the House of Commons at the earliest opportunity before a test-case is taken.

This was seconded by Mr. J. Edwards, but the original resolution proved the attraction to the speakers, and Mr. R. Willson, taking up the thread where Mr. Betty broke it, suggested that they seek the co-operation of all the pharmaceutical associations of the country on the subject of Mr. Bustard's resolution. Why should they not fight the question of titles in the courts? he asked. ("Got no coin," interjected Mr. Hick.) But the Society has got it, said the speaker. ("Not for that," retorted Mr. Hick amid laughter.) Mr. Pentney said he would have liked to support both resolution and amendment, but he liked the former because it was the most definite. One of the aims of the Association was "the prompting of the Pharmaceutical Society to greater action." Mr. Hick was inclined to think they ought not to consider themselves better judges of the advisability of having a test-case tried than the Pharmaceutical Council. Doubtless counsel's opinion had been obtained, and the Council should certainly know best. Thereupon Mr. Glyn-Jones created a mild sensation by deprecating the discussion of such a question as that embodied in Mr. Bustard's resolution in open meeting. It would make, perhaps, a very profitable subject for discussion in committee, but speaking for himself he did not feel justified in discussing the subject openly.

Mr. Bunker promptly said he considered things had been discussed *in camera* quite long enough, and it was about time the majority of chemists had a say. (Hear, hear.) He considered the resolution was an absolutely proper one for a meeting of chemists to discuss. Mr. Burton acidly suggested that it was seemly that Mr. Glyn-Jones should defend his colleagues on the Council, but what he complained of was that the Council had let twenty years elapse and nothing had been done in this matter of title. Mr. Glyn-Jones said he was the last man to object to criticism, but he considered an open discussion such as they had heard would by its publication do more harm than good. Mr. Truman saw no harm in the discussion, and Mr. Pentney good-humouredly twitted Mr. Glyn-Jones, to the delight of the meeting and the enjoyment of the victim. He suggested that the large majority at the last Council election was having a baneful effect, and hoped Mr. Glyn-Jones was not becoming "Square-ised." Then Mr. Pickering having supported the original motion, the Chairman first put the amendment, which was lost, and afterwards the resolution, which was carried.

ANOTHER MOTION

was then proposed by Mr. Pond—

That a deputation from this Society wait on the Council of the Pharmaceutical Society with a requisition to convene a general meeting to consider the question of a test-case.

It was no use, he explained, urging the Society; that would not move them. They must take some definite action.

Mr. Campbell seconded this motion, but Mr. Glyn-Jones opposed it, stating that a demand to the Pharmaceutical Council to call a public meeting to discuss such a subject was not likely to be acceded to. He suggested that a deputation from the Association might be appointed to wait on the Council and discuss the matter privately. Mr. Bustard felt very puzzled over the proceedings. Had the trade at large not a right to know what was going on? he said. This brought up Mr. Hick, who asked if Mr. Bustard would publish an adverse decision. Mr. Bustard said he would, for if things went against them such a storm of public opinion would be raised on the side of the chemists that legislation for their benefit would surely ensue. The probability of public opinion being aroused was laughed to scorn by the majority of the meeting, and ultimately Mr. Pentney formally moved that a deputation from the General Purposes Committee of the Association be appointed to wait upon the Council of the Pharmaceutical Society and discuss the resolution passed at that meeting. A lively two hours' talk was concluded with votes of thanks to the Chairman and the Hon. Secretary.

GERMAN ALCOHOL TRUST.—The British Consul for the Grand Duchy of Baden in his annual report states that the alcohol trust has not as yet gained a firm foothold. Its success in raising the price of spirit has of course led to an increased production, which, in presence of the depression in trade and consumption, has become over production. Assisted by unusually large crops of potatoes which could only be turned to account by distillers, the stocks of spirit rapidly accumulated and prices have fallen. A bitter war prevails between the syndicate and the outside firms, whose existence it threatens. The champions of the trust maintain that, but for its agency, the large potato crops would have aggravated the misery of an untenable position, and that, by the increasing consumption of spirit as fuel for cooking purposes, a practically endless trade is being gradually opened to distillers. Moreover, they assert that the trust alone is in a position to regulate the price of alcohol, whether for exportation or for home consumption, in a rational manner. The chief dangers to the syndicate threaten it from within, and from the apparent dearth of capital to carry through such operations.

Glasgow and West of Scotland Chemists' Trade Association.

In connection with the movement to prevent "cutting" in prices a beginning is being made with proprietary medicines and preparations, and a petition, which is by-and-by to be submitted to the manufacturers of these proprietary articles, is now being extensively signed by members of the drug-trade in Glasgow. The petition is in the following terms:—

To Manufacturers of Patent and Proprietary Medicines and Preparations.

We, the members of the Glasgow and West of Scotland Chemists' Trade Association and Associated Dealers in Patent and Proprietary Medicines, humbly submit for your consideration the following grievances under which we labour, and we solicit your consideration and aid towards the removal of the same.

We have observed with increasing anxiety the reduction of profit and the ever present tendency to make patent and proprietary medicines of known value a source of attraction in general stores, largely for the purpose of securing enhanced profits on other goods, the market-value of which is not so well understood. This practice, which cannot be defended as being sound or equitable, is ever on the increase, and places the petitioners at a serious disadvantage, which is quite unwarranted and unjust.

The very limited turnover in the business of a chemist and druggist necessitates a larger return on cost-prices than is the case in most trades, in which the consumpt is greater or the value of the commodities much higher.

We, therefore, solicit your assistance in establishing fixed minimum wholesale and retail prices for such preparations as you manufacture, and in doing so we would suggest that such a course will be for our mutual benefit for the following reasons:—

It will remove the increasing tendency to substitution, which extreme cutting has fostered.

It will induce traders generally to take a greater interest in the pushing of such goods as bear a reasonable profit.

It will operate against the tendency to monopolies in the sale of such goods, which is increasing, and cannot be to the advantage of the manufacturer.

It will result in your goods being handled over a much larger area.

The Association's canvasser during the past three weeks has called upon all the chemists in business in Glasgow, including a great number of the doctors' shops in the city where registered chemists are employed, and 98 per cent. of the registered men have signed the petition in favour of a minimum profit of 20 per cent. on all proprietary articles. A further encouraging feature is found in the fact that, during these three weeks no fewer than 130 registered chemists have become members of the Association, and all those who have signed the petition have expressed their hearty approval of the action of the Executive.

In view of the success that has attended their effort, the Executive have decided to extend the scope of their operations. At their last meeting the committee resolved to approach a large number of the wholesale houses in Scotland and England, in order to secure their active co-operation by getting their various travellers while on their journeys to canvass the trade for signatures to the petition. Further, the Executive have communicated with all the chemists' trade-associations throughout the country, asking their co-operation in making the petition a national one, and up to the present replies have been received from twenty-nine local Associations, offering the most cordial and practical support to the movement, and in numerous other cases the Secretaries have written promising to lay the matter before their Associations at the earliest possible moment. The circular sent to the Associations is in the following terms:—

An Association has recently been formed in Glasgow and the West of Scotland, having for its objects the following:—

The securing of fixed wholesale and retail prices of patent and proprietary medicines.

The prevention of extreme cutting.

The promotion of general trade interests, by the formation of central and district committees.

It is proposed to follow (as closely as our conditions will allow) the proposals enunciated by George J. Seabury, of New York.

We are desirous of securing the aid of your Association, and will be pleased to learn that you can co-operate with us in securing such very necessary and desirable results.

The present deplorable condition of the drug-trade in many towns calls for immediate remedy.

The tendency to extreme cutting being ever on the increase, with the result that the inability of the drug-trade to meet the competition of general dealers, fancy-goods warehousemen, and others who use patent and proprietary medicines of known value as a bait to secure trade in other goods which bear large profits, has resulted in the loss of many articles to the legitimate dealer.

We are most desirous to have this unfair condition of dealing remedied without delay, and have no doubt that by securing an almost unanimous support from the trade, with the aid of your and kindred associations, that the conditions precedent to cutting may be again secured, if not in full, certainly to a large extent.

We feel that a considerable effort will be necessary to secure unanimity, and to this end we will gladly supply you with forms of petition for signature, and co-operate with your Association on such lines as may seem mutually advantageous.

In the name and on behalf of the Executive Committee, who will esteem the favour of an early reply, I am, yours faithfully,

T. Dunlop.

It is proposed that in the early part of the coming winter a conference of manufacturers of proprietary articles should be held either in London or Glasgow to receive deputations from the various Associations who have taken in hand the preparation of petitions on the lines of the Glasgow one, that these deputations should submit their respective petitions, state their grievances, and voice the feeling of widespread dissatisfaction that exists as to the present arrangements for handling proprietary goods, and ask the manufacturers to assist the petitioners in having their grievances removed.

Trade-Marks Applied for.

(*From the "Trade-marks Journal," May* 28, 1902.)

Device of shield and title of the firm; for food-substances. By Staple, Strong & Co., Staple Street, Long Lane, Borough, S.E. 244,091.

Picture of blackbird eating cherries; for food-substances. By W. Raby Hooper, Dalmeny House, 2 Monument Street, E.C. 244,581.

"Lemdash"; for an ingredient in food. By Stevenson & Howell (Limited), 95a Southwark Street, S.E. 245,279.

Device (essential particular) with words "Cura et Industria"; for mineral and aërated waters. By W. Walker & Sons, 52 Union Street, Aberdeen. 245,398.

Combination of devices (essential particular) with wording; for a hair-restorer. By Clutterbuck & Perry, 1 Queen's Road, Peckham, S.E. 244,516.

"Pinesyl" (no claim for "Pine"); for perfumery and toilet-articles. By Baiss Brothers & Stevenson (Limited), 4 Jewry Street, E.C. 244,972.

"Duograph"; for copying-frames. By Thomas De la Rue & Co. (Limited), 110 Bunhill Row, E.C. 243,819.

(*From the "Trade-marks Journal," June* 4, 1902.)

"Sophos"; for Brunswick black, Berlin black, &c. By W. Hill, 78 McAlpine Street, Glasgow. 245,913 and 245,914.

"Chameleon"; for a veterinary liniment. By C. F. Roberts, Boston, U.S.A., care of A. M. & W. Clark, 53 Chancery Lane, E.C. 245,450.

"Ostrilion Brand"; for chemicals and mineral waters. By F. Lenders & Co., 29 Great St. Helens, E.C. 216,058 and 218,065.

"Pertussin"; for pharmaceutical preparations. By Anna Taeschner, Berlin, care of Haseltine, Lake & Co., 45 Southampton Buildings, W.C. 243,755.

"Theratol"; for a mouth-wash. By the Therapeutic Drug Company, 48 Dorset Street, W. 245,020.

"Phanocea"; for an ointment. By the Conora Company, 11 Placquett Road, East Dulwich, S.E. 245,292.

"Whirler"; for curative tablets. By the Marvel Company, 11 Queen Victoria Street, E.C. 246,041.

"Netta"; for a camera. By Whyte, Ridsdale & Co, 73-5 Houndsditch E. 244,716.

"T. H. Arthur's Cureopathic"; for curative electrical appliances. By T. H. Arthur, 51 Ystrad Road, Pentre. 244,532.

Designed label for "Olivia Brand" olive oil. By Jeancard, Gazan & Doumin, 13 St. Mary Axe, E.C. 243,853.

Westminster Wisdom.

(By our Parliamentary Representative.)

ANOTHER DEBATE ON MIDWIVES BILL.

On the third reading of the Midwives Bill in the House of Commons on Friday, June 13, there was another debate which chiefly turned on the amendment which was accepted the previous week, and constitutes it an offence for midwives to practise after January 1, 1910, without being certificated. An attempt was made to get a pledge from the Home Secretary that he would not seek to have the amendment deleted in the House of Lords. Mr. Ritchie, while expressing his own view which was against the change, said he would not take any further action in the matter, and the promoters announced that as the amendment was of the nature of a compromise they looked upon it as a thing not to be touched. The Bill has now been introduced in the House of Lords where it is under the charge of the Duke of Northumberland.

FOREIGN SPIRIT AND GLUCOSE DUTIES.

The House went into Committee on Ways and Means on Monday.

The Chancellor of the Exchequer moved that on and after June 17 the respective duties customs on imported spirits should be increased by one penny, when the grain duties were taken off the duty on foreign spirits was reduced by a penny, and now that the grain duty was reimposed it was only fair to home manufacturers, the Chancellor explained, that the duties on foreign spirits should be increased by the penny. The duty was re-imposed with the object of preventing the foreign obtaining an unfair advantage of the home manufacturer. The motion was agreed to, and also another to equalise the conditions between the home and foreign manufacturers by fixing the import duty of foreign solid glucose at 3*s.* 3*d.*, and the liquid glucose at 2*s.* 6*d.*

IRELAND AND THE ANALYSIS OF POISONS.

Mr. Field has discovered another Irish grievance—namely, that there is no State analyst for Ireland, and that poisons, foods, and other commodities are sent across the Channel to Somerset House for analysis. He wants a "duly qualified professor" appointed to act for Ireland, and he has given notice of a question to the Chief Secretary.

THE SALE OF BUTTERINE.

Mr. Hanbury's Bill to amend the Sale of Food and Drugs Acts with respect to the sale of butterine provides that the clauses of those Acts relating to the sale of margarine shall apply to the sale of butterine with certain exceptions. These are that the section of the Act of 1899 which restricts the amount of butter-fat in margarine shall not apply to butterine, and that it shall be indicated on the label or wrapper that the butter has been adulterated or impoverished, a statement which is to be accompanied by another, showing the approximate increase of water which has been caused by the adulteration or impoverishment.

INVOICE-POSTAGE.

On Monday Mr. H. C. Richards asked the Secretary to the Treasury, as representing the Postmaster-General, if his attention has been called to the complaint of Messrs. May, Roberts & Co., 9 and 11 Clerkenwell Road, that they have been surcharged on invoices enclosed in halfpenny wrappers, as an insufficiently stamped letter, because one item of description on the invoiced goods was marked with a cross, and such cross so added was treated in the manner of a communication, and not in accordance with the Treasury Warrant, while the words, "Lines marked X the goods are to follow, and will be procured as soon as possible, and sent with the next order unless customers instruct us to the contrary," are permitted to pass at the halfpenny rate; and, seeing that the words "To follow," on an invoice under the head of conveyance are surcharged, whilst the words "To follow by Sutton," or "To follow by Pickford," are permitted at the halfpenny rate, whether he will give directions to the postal authorities to discontinue the practice, which causes delay, of opening the postal-pockets of this firm in transmission, especially when posted in their private letter-box?

Mr. Austen-Chamberlain replied:—

The Postmaster General is aware of the circumstances of the case of Messrs. May, Roberts & Co., and holds that the invoices referred to were correctly surcharged on a proper construction of the Treasury warrant. As regards the latter part of the question, it is necessary to examine packets passing through the post at the halfpenny rate of postage in order to check any infringement of the regulations, and the Postmaster-General sees no reason for exempting the firm in question from the operation of a regulation which applies to everyone else.

AMENDMENT OF PATENT LAWS.

Mr. Ritchie has told Colonel Denny that he has good hopes that the Bill for amending the patent laws will be passed during the present Session of Parliament.

Personalities.

THE new divisional secretary for Walthamstow is Mr. William Gray, chemist and druggist, of Orford Road.

Mr. H. W. SELBY, chemist and druggist, has started in business at the Sussex Road Pharmacy, Haywards Heath.

MR. G. CLARIDGE DRUCE, HON. M.A., pharmaceutical chemist, has been admitted as a member of Magdalen College, Oxford.

Mr. CHARLES W. WHITE was a guest at the Royal Asiatic Society's dinner to the Indian princes at the Hôtel Métropole on Tuesday, June 17.

Mr. GEO. J. SEABURY, of New York, called at our office this week to shake hands. He is staying at the Prince of Wales' Hotel, Kensington West. He looks well.

MR. ALEX. CAMERON, of the firm of Cameron and Hamilton, pharmacists, Cape Town, Salt River, and Observatory, arrived last week in the *Saxon*. He may be addressed care of this office.

DR. CHARLES FORSHAW, dentist, Bradford, has been commanded to convey the good wishes of the Queen to the inhabitants of St. Kilda, and to distribute from her Majesty photographs of the King and Queen in commemoration of the Coronation.

Oil of Turpentine.—Some recent work done in the laboratory of the Canadian Inland Revenue Department has resulted in the following definition of oil of turpentine. The definition must be regarded as provisional, and subject to correction and amplification. Oil of turpentine is a liquid, *colourless* in thin layers, and having a *yellow-red* tint, equivalent to about 1 unit of yellow and 0·1 unit of red (Lovibond scale) when viewed in a column 2 dm. long. *Clear*, but made decidedly opaque by shaking with 0·1 per cent. water, and giving an *opaque distillate* of one-tenth volume, which settles clear in a few hours. *Odour* peculiar and characteristic, quite distinct from that of gasoline, rosin oil, or acetone, and capable of disguising these odours to the extent of 10 per cent. admixture. *Density* between 0·860 and 0·880 (usually about 0·870), but samples which have been long exposed to air may have a higher density. The *first fraction* of one-tenth volume has a density between 0·856 and 0·870 (usually about 0·860). The *residual tenth* should not exceed 0·900. The *boiling-point* should lie between 154° and 158° C., and nine-tenths should distil below 180° C. The *fixed residue*, on evaporating over boiling water in a 4-inch hemispherical dish, should not exceed 2 per cent. The *viscosity*, at 20° C., should be nearly 1·230 (water = 1·000)—McGill viscosimeter. *Flash-point* should be about 32° C. (Abel instrument). Should *dissolve* completely in an equal volume of glacial acetic acid, and the first fraction should similarly dissolve. A *saturated solution* of asphaltum should not be rendered translucent by dilution to ten volumes. (This test is best made by comparison with a sample of known purity.) The *optical activity* of the first fraction should increase in a + direction by oxidation. The *refractive index* at 20° C. should lie between 1·4667 and 1·4722. That of the first fraction should not exceed 1·4700. Moistened iodide-of-starch paper should become blue when suspended over turpentine exposed to air. *Free bromine* in solution should be decolorised. *Strong sulphuric acid* should polymerise and char the sample at a boiling temperature. A *rise of temperature* should result on mixing with sulphuric acid.

Chemical Society.

THE last meeting of the session was held on Wednesday afternoon, June 18, under the presidency of Professor Emerson Reynolds, who took the opportunity of announcing that the present system of holding alternate evening and afternoon meetings would be continued during next session. There was a very long list of papers, and the Chairman suggested that in order to get as many as possible read it would be necessary for each author to limit himself to about five minutes. Professor Meldola took the first place with a contribution by himself and Mr. J. V. Eyre on

THE DIAZOTISATION OF NITRO-COMPOUNDS,

in which he described the changes which occur in diazotising dinitro-para-anisidine, by which a nitro group in the meta position, to the amido group is eliminated in presence of hydrochloric acid, with the production of a chloro-derivative, whilst in presence of sulphuric or nitric acids the normal action only occurs. The second contribution was by Professor Tilden and Dr. Burrows on some

NEW DERIVATIVES OF PINENE AND OTHER TERPENES,

which was read by Dr. Tilden, who recalled the fact that it is now just twenty-seven years since he introduced the use of nitrosyl chloride as a reagent for obtaining well-crystallised derivatives of pinene. In spite of the great amount of investigation in this direction during that period, it has not yet been found possible to write a single formula for this hydrocarbon which satisfactorily accounts for all the observed facts, and this has led the Professor to again take up the subject. The authors have obtained by digesting pinene nitrosyl chloride with potassium cyanide a cyano derivative which shows some peculiar properties, and appears to be remarkably reactive, furnishing other crystalline derivatives with methyl iodides and sulphuric and nitric acids, all of which are being further investigated.

Dr. Donnan and Mr. Bassett then gave an account of some work on the

COLOUR-CHANGES OF COBALT AND OTHER METALLIC CHLORIDES.

The conversion of the ordinary red solution of cobalt chloride into a blue substance by desiccation is familiar to everyone, and several explanations have been suggested to account for this behaviour, such as dehydration—the anhydrous salt being supposed to be blue, whilst the hydrated salt is red—and the colour of the cobalt ion, but these all break down at some point. The authors find that cobalt chloride probably dissociates on heating into a complex cobalto-chlorine ion, which is blue, and a colourless chlorine ion, and this suggestion they find is in harmony with the fact that the addition of various metallic chlorides causes these colour-changes just as easily as the application of heat. This contribution was followed by one on some

NEW TYPES OF SUBSTITUTED NITROGEN CHLORIDES,

by Dr. Chattaway, who has succeeded in preparing bodies of this class containing three negative groups directly attached to the nitrogen atom. At this point the President again appealed for brevity on the part of authors, apparently in view of the next papers, which dealt with the preparation of pure chlorine and the combination of

DRY HYDROGEN AND CHLORINE,

contributed by Messrs. Mellor and Russel, who find, as has already been observed by Baker and other investigators of the inhibiting action of complete desiccation, that thoroughly dried mixtures of pure hydrogen and chlorine are just as readily exploded by electric sparks as undried specimens, but do not combine so easily under the action of heat.

Two other papers dealing, one with the elasticity of vapours, and the second with the oxidation of diberzylmesitylene, presented no features of general or pharmaceutical interest. Among those taken as read was one from the Pharmaceutical Society's Research Laboratory by Mr. Tickle and Professor Collie on some hydroxy-pyrone derivatives. In the course of the evening a ballot for the election of Fellows was held, and the following gentlemen connected with pharmacy were elected:—Mr. S. V. O'Connor, Wexford; Mr. T. H. Moore, Clapham, S.W.; and Mr. J. L. Gaile, formerly demonstrator to the Pharmaceutical Society.

Things that Happen—Sometimes.

The Trials of "3226 Gerrard."

"Are you there?" comes in virile peremptory tones,
Familiar and hard to forget.
"Why don't you tie up that loquacious G—n J—s?
He's the worst—bar myself—I have met."

"Are you there?" with a twang of melodious song,
And a playful suggestion of pout.
"Have you any young men who can play at ping-pong
In your school? If you have, let them out."

"Are you there?" comes a whisper, both oily and meek,
"I have done an unqualified job,
And I hear that you're goin' to 'ave me 'fore the Beak;
Can't this business be squared by a bob?"

"Are you there," with a brisk, up-to date sort of ring,
And suggestion of smartness complete.
"I just wanted to ask if you had such a thing
As a *good* cure for hot, sweaty feet?"

"Are you there?" comes irascibly into his ear,
"Why don't your Society wake up?
There's a man down the street sells carbolic like beer,
In a jug, or a can, or a cup."

[And so on *ad infinitum*.

THE EARLY DAYS OF VACCINATION.—The recently published work by Miss Lillian C. Smythe on the Court of Versailles, entitled "The Guardian of Marie Antoinette," has aroused some interest here (writes our Paris correspondent), and a friend has drawn my attention to an amusing reference to vaccination contained in the book, which is also a specimen of the lengths to which fashion allowed itself to be carried. Louis XV. died of smallpox in 1774, and his heir submitted to inoculation in spite of the continued unpopularity of vaccination. Miss Smythe says:—

The great news at Court was that the King had decided to be inoculated for smallpox. This decision caused great results; for not only was his Majesty's example followed immediately by Monsieur and by the Comte d'Artois, but it gave rise to a new headgear—a matter of equal importance. Coiffure à l'inoculation had instant vogue. It included a serpent representing medicine, a club to indicate the blow it dealt disease, the rising sun that stood for Louis, and an olive-tree full of fruit, plainly telling the anticipated happy results. The "pouffs de circonstance" were considered very delicate tributes of sentiment; and one lady went to Court bearing on the two sides of her head discreet references to both the dead and the living Louis.

Observations and Reflections.

By XRAYSER.

Duty-free Alcohol

will be a splendid thing, but I am inclined to think that pharmacy has got more out of the tincture drawback than it ever will from duty-free alcohol. The drawback has enormously developed colonial trade with Great Britain, and it is worth remembering that THE CHEMIST AND DRUGGIST agitated this question for a long time before the London Chamber of Commerce approached it. The *C. & D.* supplied the arguments and the statistics—the powder and shot—and the Chamber, with Mr. Tyrer as bombardier, fired it off. I do not discredit what they did, but I must put in a word for the *C. & D.* Although duty-free alcohol for industrial purposes has been agreed to, it must not be forgotten that methylated spirit is duty free, and it will be only when that spirit, or any new form of denatured spirit, is proved to be unsuitable for important manufacturing processes, that the Inland Revenue authorities will allow pure spirit to become duty free. Mr. Haldane's speech pretty well covered the branches in which such spirit will be employed—namely, in making explosives and synthetic dyes. I am not sanguine about the manufacture of alkaloids and synthetic medicines making much headway in this country. The margin of advantage is too trifling to encourage that hope.

The Formula Printed

for tinct. quin. ammon. last week is useful just now when the question of the origin of that much-used preparation is being talked of in the Thames Police Court, and serves to bring to mind the "Annals of Pharmacy," which for three years kept such a merciless hail of criticism on the Pharmaceutical Society. The editors of the "Annals" were Wm. Dickinson and Wm Bastick, two West-End chemists, and the pages of the early volumes of the *Pharmaceutical Journal* bear testimony to the fact that Jacob Bell was quite their equal in stinging retort.

The Trouble Arose

after the passing of the Pharmacy Act, 1852, as to the admission of chemists who commenced business after the date of the charter and before the passing of the Act. By-laws were drafted to admit such chemists as applied before a certain date to membership of the Society without examination. Mr. Dickinson, who had been elected a member of Council in May, 1851, seconded the resolution at the general meeting called for the purpose of confirming or rejecting the by-laws. Afterwards, Mr. Dickinson repented having done so, and a strong antipathy to them was quickly developed. It is difficult at this distance to follow every move of the two combatants, but it ended in the question as to whether it was legal to place the name of any person on the register of members and pharmaceutical chemists, unless the examination specified in the Act had been passed.

The Legality of the Election

of about eight hundred members—a third of the members of the Society—was in question and Lord Palmerston approved of the by-laws for a year only, pending a settlement of the question in the law courts. The case dragged on for many months, but the Society won on all points. It was during this case that the pronunciation of "pharmaceutical" was settled in favour of a soft "c." The only occasion on which it was proposed to expel a member of the Pharmaceutical Council arose through the outspokenness of the "Annals." At a Council-meeting in December, 1853, a motion for the expulsion of Mr. Dickinson was brought forward, eleven voting for it and three against, whilst one member did not vote. The President (Mr. Deane) announced that Mr. Dickinson was expelled, and he withdrew. It was immediately discovered, however, that the three-fourths majority required for the expulsion of a member had not been reached, and a letter was sent to explain that Mr. Dickinson was still a member. He continued to be a councillor till the May meeting of the following year, when he did not seek re-election.

We Next Hear

of Mr. Dickinson in connection with the scrutineer scandal of 1870. Mr. Dickinson, as a scrutineer, falsified the returns of the number of votes at the Council election. Mr. Andrews (who died last month) was chairman of the scrutineers, and to him fell the unpleasant duty of impeaching Mr. Dickinson at the adjourned annual meeting. A firm of accountants was employed to recount the votes, and Mr. Dickinson resigned his membership of the Society. The explanation which he gave of his strange conduct was that the system of counting was rotten, and it is due to this scandal that the improved system now in vogue was adopted. I find I have not said anything about Mr. Bastick, who was a member of the Board of Examiners and a frequent contributor to the *Journal*. He was a more modest man than his co-editor, and although he resigned his position as examiner in 1854, owing to his connection with the "Annals," he continued to contribute papers on scientific subjects to the Society.

As You Were

is the state in which the Pharmaceutical Council stands so far as officers are concerned. Mr. Newsholme has done well as President in difficult circumstances, and were it not for the comparatively modern method which has concentrated most of the detail work of the Council into the President's hands, he would as a provincial President have done better. I have often heard it said that the man who becomes President of the Pharmaceutical Society of Great Britain must be content to give nearly two-thirds of his business time to the Society's work. I also understand that, saving the Vice-President and Treasurer, the other twenty members have little to do except to approve or otherwise of arrangements made. Thus the Council as a whole is not a working body in the fullest sense. There is no excuse for this now that the by-laws permit any member of the Council to be appointed as chairman of a committee. There are ten standing committees, which would provide sufficient devolution of work to employ the energies of all the members, yet leave the principal officers in touch with every department.

The Greater Committees

would remain in charge of the President and Vice-President, but I would give Mr. Cooper charge of that part of the Benevolent Fund which deals with grants, and Mr. Hills might take charge of annuitants and orphans, each having a sub-committee. I would make Mr. Carteighe convener of a School Sub-committee, Mr. Atkins of a Library and Museum Sub-committee, and Mr. Harrington would look after the House. Mr. Glyn-Jones would be convener of a sub-committee dealing with legal cases, and Mr. Wootton could be trusted to keep an eye on Parliament. Dr. Symes as convener of the Research Committee, Mr. Savory of the Evening-meetings Committee, Mr. Park of the Dispensers' Committee, Mr. Robinson of the *Journal* one, and Mr. Butt of Ground-rents, would exhaust the existing committees, and leave Messrs. Corder, Cross, Gifford, Harrison, Southall, Storrar, and Young without special duties to perform, but there is need of some members to look after such matters as local organisation and local secretaries, pharmaceutical education and educational institutions, examinations, and many other matters which the General Purposes Committee gathers together monthly. The conveners would be the jackals of their departments, and if the system worked as it should, in time each Councillor would become a specialist, and thus relieve us of the difficulty of finding a single man who are specialists in every department.

Editorial Comments.

East African Poison-law.

SIR CHARLES ELIOT, K.C.M.G., British Commissioner at Mombasa, East Africa and Uganda Protectorates, has recently published in the official gazette regulations in regard to the sale of poisons and opium in the protectorates. Under the poisons regulations the following articles are scheduled as poisons:—

Arsenic and its preparations.	Coculus (*sic*) indica.
Cyanides of potassium and all metallic poisons.	Datura.
Corrosive sublimate.	Ergot of rye.
Oxalic acid.	Henbane.
Tartar emetic.	Nux vomica.
Aconite.	Strychnine.
Belladonna.	Prussic acid.
Calabar-bean.	St. Ignatius bean.
Chloroform.	Cantharides.

No person may sell or keep open shop for selling—by wholesale, retailing, dispensing, or compounding—any of these without a licence from officers to be appointed by the Commissioner. The conditions as to labelling are the same as in the Pharmacy Act, 1868, but all the poisons are treated as if they were of the first part of the Home Schedule, each sale being entered in the poisons-book and signed for. Wholesalers are exempt from putting their names on the labels, and physicians or surgeons are exempt from entering in the poisons-book any medicines supplied to their patients, while the same exemption extends to "any article when forming part of the ingredients of any medicine dispensed by a person authorised by the Commissioner to dispense medicines," provided the medicine is labelled with the name and address of the seller, and the ingredients are entered in the prescription-book with the name of the person to whom the medicine is sold or delivered. These latter provisions appear not to extend to physicians or surgeons—a peculiarity which may be intentional or not. The wording of the clause is a modification of Section 17 of the Pharmacy Act, and if it was the draftsman's intention to permit medical practitioners not to label or enter poisonous medicines he has introduced a novelty into British pharmacy-law which should not be allowed to pass unchallenged.

Digitized by Google

The opium-regulations are for the purpose of preventing any unlicensed person growing, producing, manufacturing, selling (either wholesale or retail), exporting, importing, or transporting opium, poppyheads, preparations or admixtures of opium, and intoxicating-drugs prepared from the poppy, also bhang, ganja, churus, and chandoo natron. The Commissioner is empowered to fix the number of licences to be issued in any district, and to sell the licences by public auction. He may also restrict the hours during which opium is sold, the amount to be sold, and otherwise regulate the traffic in opium and the intoxicating-drugs named. These regulations have been drawn up to meet the possible abuse of opium and Indian hemp by the numerous settlers from India who are now in British East Africa. We observe that they have been approved by the Marquis of Lansdowne, apparently without reference to the Council of the Pharmaceutical Society. It would be an advantage if expert opinion were obtained in all such cases.

American Perfumery.

WE have received a copy of the eighth report of the Manufacturing Perfumers' Association of the United States—a goodly volume, extending to over 200 pages, and dealing with the meeting of the Association held in New York in February last. The Association is intended to conserve the interests of the members and associate-members, the latter class including those who supply perfumers with materials. Its Presidents have been Messrs. Bowles Colgate, Alfred G. Wright, Theo. Ricksecker, Henry Dalley, and James E. Davis—all well-known men in the United States, and for that matter out of it. Much of the volume deals with protection and reciprocity in such a straightforward manner that we are somewhat surprised that the Association have ventured to publish a verbatim report of the proceedings, for no better weapon could be put into the hands of American Free-traders than this volume, which is practically a declaration that, so far as American perfumery-manufacturers are concerned, their first object is to protect their business interests. Trade reciprocity with other countries should be trimmed to meet this principle also. At the same time the members have a whole-hearted belief in American perfumery, and are utterly opposed to the practice of putting it up in a manner to imitate foreign kinds, or even to use foreign names, and a resolution to that effect was discussed. They are also much concerned about perfumery formulæ being given to retailers by houses who supply perfume materials. The Report admirably demonstrates the advantage that such Associations are to manufacturers for they give an opportunity of discussing many little details of business and securing uniformity in carrying them out, although in some cases to the disadvantage of retailers. There are fifty-one active members of the Association and forty-five associate-members, It appears that Messrs. Colgate & Co., of New York, are the oldest firm of perfume manufacturers amongst them, their business having been established in 1806. Messrs. Bruen, Ritchey & Co., of the same city were established in 1834; Messrs. Lazell, Dalley & Co., in 1839, and Messrs. James S. Kirk & Co., of Chicago, in the same year, but the Michigan Drug Company, of Detroit, established in 1819, takes second rank to Messrs. Colgate. Mr. James E. Davis, General Manager of the last named, is the present President of the Manufacturing Perfumers' Association. The Association estimates that at least a million dollars' worth of imported perfumes and toilet preparations are sold in the United States apart from those which they put on the market. This estimate is based upon the imports of perfumery and toilet preparations which are shown as follows:

—	Alcoholic Perfumery	Preparations for Hair, Mouth, Skin, and Teeth	Total
	Value of Imports	Value of Imports	
	$	$	$
1884	273,897	163,173	437,070
1890	257,464	118,139	275.603
1891	258,831	159,125	417,956
1892	267,331	176,324	443,655
1893	296,706	209,777	506,483
1894	233,281	170,709	403,990
		30,245	
1895	300,569	256,536	587,350
1896	337,065	263,881	600,946
1897	374,497	320,100	694,597
		10,373	
1898	16,565	124,010	413,219
	262,271		
1899	332,626	167,100	499,726
1900	339,967	175,606	515,573
1901	382,679	207,885	590,564

Up to 1898 the import duty on alcohol in perfumery was $2 per gallon, and 50 per cent. ad. val. In 1898 the duty was changed to 60 cents per lb., and 45 per cent. ad. val. The duty on toilet preparations was 50 per cent. until 1895, when it was reduced to 40 per cent., where it remained until 1898, when it was raised again to 50. The internal duty on alcohol is so much less than the import duty on perfumes that an excellent margin of profit is left to the American makers.

Pharaonic Pharmacy.

PHARMACY in the land of Egypt seems to be in a bad way if we may rely upon the *Egyptian Gazette*, wherein a writer bewails the fact that the pristine renown of the Egyptian pharmacist has given place to the incomplete morality of a tradesman of questionable principles. Philosophy and pharmacology, which our Egyptian contemporary ascribes as attributes of ancestral pharmacists, are to-day represented in many cases by the study of the Appendix in the French Codex devoted to the exposure of frauds and substitutions. This branch of knowledge, it is unkindly suggested, is undertaken not with a view to preventing deceit, but really to teach it. The treatment and study of drugs are absolutely neglected by the pharmacists of Egypt, and the Government is urged to take public notice of illegalities with which it must be quite cognizant. Poisons of all kinds, "from belladonna to potassium cyanide," can be bought in Egypt without any trouble or reference to the existing law forbidding indiscriminate sale, and substitution and adulteration are everywhere rife. In the realm of substitution bromides are dispensed in place of iodides, "with a trace of iodine to pass the starch-test"; and tartaric acid for citric acid, without the least compunction. Wholesale, as well as retail, druggists adulterate borax with cheap carbonate of soda, and one intelligent Cairo druggist uses calcium sulphate. Quinine can be bought at some drug-shops at less than the wholesale market-price. The same barrel is often the source of "common spirit, rectified spirit, and 75 per cent. of ether." To prevent these abuses the *Gazette* writer suggests a few reforms. First and foremost pharmacies should be run under the personal supervision of the qualified owner. At present shops are owned by any-

Digitized by Google

one, the qualified chemist merely lending his name for a pecuniary consideration. To illustrate this, it is shown that a second-rate pharmacy is now on the market at Cairo, the price being 300*l.* for stock, goodwill, and signboard. The proprietor has already tried to sell out to a man who does not know the colour of rhubarb, and whose experience of drugs ends with his knowledge of the uses of castor oil and Epsom salts. The principle of "one man, one pharmacy" is also advocated, and the ownership of open pharmacies by doctors is deprecated, as well as the practice prevalent amongst medical men of taking a percentage on their prescriptions. The practice of prescribing such things as "Spanish Pharmacy Elixir" and "New York Pharmacy Prescription No. 1,083," with monetary reward in view, are condemned as disgraceful. Government restriction in the number of pharmacies is also advised, it being stated that in the Fagalla district of Cairo there are about one dozen drug-shops in one street. This, it is argued, tends to the lowering of the status of the profession by encouraging the sale of sweets, spirits, and groceries, and such heinous offences as prescribing and the drawing of teeth. The iniquity does not end there, for it is averred that assistants are quite incompetent; few pharmacies employ qualified men, which we are not surprised at when we learn that a married man of 40 is expected to manage a business for 3*l.* a month, and to work up to 11 o'clock at night for that, as we recently reported when the Cairo assistants met to discuss their grievances. The *Gazette* reformer urges the Government to introduce continental methods of inspecting and controlling pharmacies; but before anything like that is attempted some system of registration appears to us the first thing to be arranged.

ACCLIMATISING PLANTS.

The last report of the Cape of Good Hope Government botanist recalls the experiments made by Baron von Ludwig in 1840–1860 to acclimatise ornamental shrubs and trees at the Cape. Many of the trees introduced are still in evidence, and many of them have proved of benefit to the Colony. The *Nicotiana glauca*, Grah., is, however, quite a plague to the ostrich-farmer, and the South American, Buenos Noches (*Cestrum nocturnum*, Jcq.) has also an evil repute. When hedges of the latter are lopped and cattle eat the cuttings a death or two generally follows, but whether the cestrum is distinctly poisonous, or by fermenting in the first stomach produces tympanitis, is not clearly known. The contributions made by the Baron to the Cape arboriculture include many useful and beautiful trees, such as the fast-growing shade-tree *Phytolacca* (*Pircunia*) *dioica*, L., and the *Jacaranda mimosæfolia*, Don. The latter is known popularly as the "blue acacia," but is not an acacia, and no acacias are blue. The jacaranda tree was nearly exterminated by the dorthesia (woolly bug of Australia), but the avenging vedalia came along and exterminated the pest. Jacaranda is again beginning to flourish, and flowered last year in the Municipal Garden. Mr. P. MacOwan devotes the greater part of his report to a scheme for supplying herbaria to such public schools and institutions as take a live interest in botany, and particulars of the work done in completing the classification of the Government herbarium.

PRESS PRESCRIBING.

The "medical advisers" to family papers are notoriously untrustworthy. The latest instance of dangerous advice brought to our notice is the following from a weekly:—

"W. A." might use suppositories containing 2 gr. of powdered camphor, ½ gr. of the green extract of belladonna, and 15 gr. of theobroma. He might also take the ethereal tincture of lycopodium in 20-drop doses in water at bedtime. Tincture of bucco in similar doses, combined with an ounce or two of the infusion of triticum repens, is a good remedy. Twenty-drop doses of the tincture of cimifuga in water twice a day after food will also do good. Two or three drops of the tincture of cantharides in water at bedtime may do good. *A drachm and a half of the sulphate of zinc*, and ½ gr. of the extract of belladonna, made into a pill, taken at bedtime, *may do good*. Twenty-grain doses of the bromide of potassium twice a day is also a remedy. Five grains of the arseniate of iron, and 90 gr. of the aqueous extract, or ergot, made into thirty pills, is another remedy; but I do not expect that any remedy will continue its good effects very long, as he has already discovered. Still, *some* of these *may cure him* altogether.

For comprehensiveness this is hard to beat, but we question whether a pill containing 1½ dr. of sulphate of zinc taken at bedtime would be conducive to "W. A.'s" comfort.

MEDICAL ACCOUNTS.

In a recent issue of the *Financial News*, Mr. J. P. Laurence, M.B., gave his reasons for considering the present system of medical finance unsatisfactory. That medical men are lax in sending out their accounts is well known. Mr. Laurence thinks they should be rendered, if not quarterly, half-yearly. The practice of sending out bills without details does not strike this gentleman as unreasonable. He argues that "if any man trust another so far as to put his life and the lives of his wife and children in his hands, he may surely trust him not to overcharge his account." It is this confiding spirit that has time after time led the human race to disaster, and to appeal to it shows a lamentable ignorance of business principles. The system of fees is governed by unwritten laws, and patients are divided for fee-purposes into three classes—those occupying houses rented (1) from 50*l.* to 100*l.*, (2) from 25*l.* to 50*l.*, (3) under 25*l.*, the fees being 2*s.* 6*d.* to 3*s.* 6*d.* for the last-named, and 5*s.* to 10*s.* 6*d.* in the first class, with an increase of half to twice these amounts for special or night visits. We agree with the writer that many hardships press on medical men, the large amount of bad debts incurred being well known, and medical men are often expected to wait for years before payment. Perhaps after an experience of certain phases of medical etiquette the public get to look on the profession as something altogether different from any other class of men who work for their living.

OPTICAL EDUCATION.

The report of the Educational Committee of the Optical Society was presented at the meeting on June 12. The committee was appointed to inquire into the system of optical education in operation at the Northampton Institute, to consider the feasibility of establishing classes in other centres, and to generally discuss the best methods of training opticians. The committee was formed last October, but the report is not much more than an endorsement of the scheme laid down by Professor Silvanus P. Thompson in a lecture before the Society of Arts on April 23 (*C. & D.*, April 26, page 659). The portion of the report not there suggested is that which defines opticians as (A) those who make and (B) those who sell optical instruments. The two classes are recognised as requiring different qualifications and training. The standard of preliminary education for Class A is put as the sixth standard of a Board-school, and for Class B as the Oxford and Cambridge Local examination. The after-instruction is divided into four grades. In the first and second grades A and B require similar teaching except that B is more advanced. Grades 3 and 4 for Class A concern the physical properties of materials and machine-methods, whilst for Class B there are type-instruments and specialised instruction in one branch. The course of education sketched out is to take at least four years, the lectures occupying two nights a week. Professor Thompson's suggestion of an optical institute is adopted, and it is proposed to appoint a deputation to wait on the Technical Education Board of the London County Council to urge the establishment of such a school or institute as soon as possible.

Notes on Commercial Essential Oils.

By EDWIN DOWZARD, F.C.S.

ANISE OIL.

THE B.P. directs that the sp. gr. be taken at 20° C. This constant in all the following cases was determined at 15·5° C. There is no difficulty in determining the sp. gr. at this temperature, as congelation does not take place readily until the oil is cooled considerably below the actual solidification-point.

The following figures were obtained in the examination of thirty samples of this oil :—

Sp. Gr. at 15·5° C.

Number of Samples	Sp. Gr.
3	0·9810 to 0·9815
5	0·9822 to 0·9835
8	0·9840 to 0·9845
8	0·9850 to 0·9860
5	0·9863 to 0·9886
1	0·9895

Optical Rotation (100 m.m. tube)

Number of Samples	Rotation
7	−1° 20′ to −1°
9	−0° 50′ to −0° 30′
5	−0° 16′ to 0°
3	+0° 2′ to +0° 6′
5	+0° 12′ to +0° 21′
1	+0° 40′

21 samples vary between 0° and −1° 20′

9 samples vary between +0° 2′ and +0° 40′

All the authorities state that anise oil is lævorotatory, but 30 per cent. of the oils examined were dextrorotatory (dextrorotation is looked upon as an indication of the presence of fennel oil). I do not think there is sufficient evidence to prove that the samples which gave the following figures were adulterated.

Number	Sp. Gr.	Rotation	Melting-point	Solubility in Alcohol
1	0·9840	+0° 2′	15·1° C.	2 vols. 90%
2	0·9860	+0° 4′	16·2° C.	2½ „
3	0·9870	+0° 14′	14·7° C.	3 „
4	0·9886	+0° 20′	17·0° C.	2 „
5	0·9895	+0° 22′	17·5° C.	2 „
6	0·9882	+0° 21′	17·0° C.	2 „
7	0·9845	+0° 24′	14·1° C.	2½ „
8	0·9860	+0° 21′	14·5° C.	3 „
9	0·9813	+0° 40′	13·0° C.	3 „

The last sample is the only one open to suspicion. All the oils I have examined since August, 1900, have been lævorotatory.

Melting-point.

Number of Samples	Melting-point
2	13°· to 13·5° C.
3	14·1° to 14·7° C.
5	15·1° to 16·2° C.
8	16·5° to 17·0° C.
6	17·5° to 18·0° C.
4	18·5° to 18·7° C.
2	19·1° to 19·2° C.

According to Parry ("The Chemistry of Essential Oils," page 244), the solidification-point or the melting-point should not be below 15° C. If Parry means that the solidification and melting points are identical, he is mistaken, because in the great majority of cases the melting-point is 2·5° C. higher than the solidification-point, in a few cases 2·4° C. and 2·7° C., and in still fewer 2° C. Solubility in 90-per-cent. alcohol varies from 1½ to 3 vols., usually about 2 to 2½ vols.

CLOVE OIL.

The sp. gr. limits given by the various authorities vary to some extent; they are as follows:—

British Pharmacopœia ...	Not below 1·050
Parry	1·048 to 1·065
Schimmel	1·045 to 1·070

The following results were obtained in the examination of 11 samples of clove oil, which were all known to be genuine:—

Number of Samples	Sp. Gr. 15·5° C.
1	1·0474
3	1·048 to 1·0495
5	1·050 to 1·052
2	1·056 to 1·0574

Optical Rotation (100 m.m. tube)

Number of Samples	Rotation
10	−0° 44′ to −0° 30
1	−0° 24′

These results show that the minimum should be about 1·047.

Eugenol

was determined by the potassium-hydrate method (see *C. & D.*, Vol. 57, No. 1,073), with the following results :—

Number of Samples	Eugenol
5	84 per cent. to 85 per cent.
4	86 per cent. to 87 per cent.
2	89 per cent. to 91 per cent.

CINNAMON OIL.

Eight samples were examined with the following results :—

Number of Samples	Sp. Gr. at 15·5° C.
5	1·0321 to 1·0324
2	1·035 to 1·0351
1	1·0386

The last sample is outside the B.P. limits (1·025 to 1·035). The following figures were obtained in its examination :—

Sp. gr....	1·0386
Rotation	−0° 14′
Cinnamaldehyde	84 per cent.
Eugenol	3 per cent.

This was a genuine oil free from added leaf oil. The above figures prove that a high sp. gr. is not necessarily an indication of adulteration. Schimmel & Co. state they have distilled an oil which had a sp. gr. of 1·038.

Optical Rotation (100 m.m. tube)

Number of Samples	Rotation
2	−0° 14′ to −0° 4′
4	+0° 6′ to +2° 16′
2	+2° 28′ to +2° 30′

Parry states that the oil is optically inactive, or, at most lævorotatory to the extent of −1°. The greater number of the samples I have examined were dextrorotatory. The following are the figures obtained in the examination of the sample having the highest dextro power :—

Sp. gr....	1·0327
Rotation	+2° 30′
Cinnamaldehyde	80 per cent.
Eugenol	9 per cent.

Cinnamaldehyde.

Number of samples	Cinnamaldehyde
3	68 per cent. to 77 per cent.
5	80 per cent. to 84 per cent.

Eugenol.

Number of samples	Eugenol
4	3 per cent. to 5 per cent.
2	6 per cent. to 8 per cent.
2	9 per cent. to 10 per cent.

Eight per cent. is usually stated as the maximum limit for eugenol, but as the sample containing 10 per cent. of eugenol also contained 77 per cent. of cinnamaldehyde, and had a sp. gr. of 1·0337, it could hardly be considered adulterated.

INTERNATIONAL PHARMACOPŒIA.—The Belgian Academy of Medicine is making arrangements for the holding of a conference for the unification of the formulas of potent medicaments. The conference will meet at Brussels on September 15. The following nations have expressed their agreement with the proposal that all civilised countries should come to an understanding as to the establishment of a uniform standard of composition for heroic medicaments in international use:—Germany, Great Britain, Austria-Hungary, France, Italy, Spain, Portugal, Holland, the United States, Russia, Denmark, Sweden and Norway, Switzerland, Turkey, Greece, Servia, Bulgaria.

Legal Reports.

High Court Cases.

A GLYCO-THYMOLINE CASE.

IN the Chancery Division of the High Court of Justice on June 13, before Mr. Justice Joyce, Mr. Sebastian, on behalf of the plaintiffs, said that in the case of the Kress & Owen Company & T. Christy & Co. *v.* Dodd (trading as Dodd's Drug-stores) he had to take an order by consent. The action was brought by the proprietors of a patent medicine called "Glyco-thymoline," and which was especially useful for a throat-wash and gargle. The defendant was a gentleman who kept a shop, in which he dealt in drugs. An unfortunate customer went to get some of the plaintiffs' preparation——

Mr. Justice Joyce: Why do you say "unfortunate"?

Mr. Sebastian: Because the result of taking what the defendant gave him was to burn his throat and make him very uncomfortable. It had been agreed to treat the motion as the trial of the action, that there should be a perpetual injunction restraining the defendant in the terms of the notice of motion, and an agreed sum paid for damages and costs.

Mr. Justice Joyce made an order in the terms agreed upon.

PHOTOGRAPHIC ASSOCIATION (LIMITED).

MR. JUSTICE BUCKLEY, sitting for the disposal of company business, had before him on Tuesday, June 17, a petition by R. Bagster for the compulsory winding-up of the Photographic Association (Limited). Mr. Buckmaster, K.C., said this was a judgment-creditors' petition. The company was incorporated in 1899, and on May 26 the petitioner obtained judgment for 205*l.*, and costs. The allegation was that the company was insolvent. His Lordship granted the petition. Later in the day, however, counsel who appeared for the petitioner applied to have the order rescinded, and to have the matter postponed for a fortnight, as there was a good prospect of the company making a satisfactory arrangement and paying all the creditors in full. His Lordship accordingly rescinded his former order and allowed the petition to stand out of the list for a fortnight.

Dentists Act.

THE CARDIFF CASE.

AT the Cardiff Police Court on June 13, before the Stipendiary (Mr. T. W. Lewis), Templar E. Malins, chemist and druggist, of Woodville Road, Cardiff, was summoned for having, on May 12, at his premises in Queen Street, not being a legally qualified medical practitioner, and not being registered under the Dentists Act, 1878, unlawfully used an addition implying that he was a person specially qualified to practise dentistry. Mr. D. W. Evans, instructed by the South Wales and Monmouthshire Dental Association, said the Stipendiary would recollect that this summons was adjourned by him a month ago, and he (Mr. Evans) had now to ask for a further adjournment, as defendant had not yet made up his mind what to do in the case in which he had been already convicted (see *C. & D.*, May 24, page 800).

The Stipendiary: I am told he is taking proceedings in the High Court.

Mr. Evans: We have heard nothing about them yet.

The Stipendiary said the case had better be adjourned for another month.

Pharmacy Act, 1868.

NICOTINE INSECTICIDE.

BEFORE the County Magistrates at Kingston-on-Thames on June 12, Joseph Hutchinson, seed and artificial-manure merchant, appeared to answer three summonses—for selling a poisonous vegetable alkaloid known as nicotine without having his name and address on the bottle, for selling the poison to an unknown person, and for failing to make an entry of the sale in the poisons-book. Mr. Vaughan Williams, barrister, appeared to prosecute on behalf of the Pharmaceutical Society; and Mr. T. G. Dobbs, solicitor to "The Traders in Poisons or Poisonous Compounds for Technical and Trade Purposes Protection Association," appeared to defend.

Mr. Vaughan Williams, in opening the case, said the poison the defendant was charged with selling was contained in a compound known as "The X L All Vapouriser Fumigator," used for the destruction of insects in greenhouses.

George Henry Steer deposed that, acting under instructions from the Pharmaceutical Society, he visited the defendants' premises at Cobham on May 5, and purchased a bottle of the fumigator. It was supplied to him by the defendant's brother, who did not know him, and the defendant's name and address were not on the bottle.

Harry Moon, clerk to the Registrar of the Pharmaceutical Society, deposed to receiving the bottle from the last witness and sending its contents to be analysed. There was a label on the bottle containing the following notice:—

Tobacco is generally considered to have somewhat poisonous properties, and the juice of tobacco which collects in the stem of a pipe is well known to be poisonous. This compound contains the concentrated nicotine of tobacco, and should be kept in a safe place and out of the reach of children.

By Mr. Dobbs: A special committee had been appointed by the Privy Council to inquire into the sale of poisons for purposes connected with agriculture.

Mr. Thomas Tickle, B.Sc., said the compound contained over 20 per cent. of nicotine—sufficient, in his opinion, to kill between five hundred and six hundred persons. In 2 oz. there were 186 gr.

Mr. Dobbs, in defence, urged that an article of this kind, which was sold for trade and technical purposes, had been held to be exempt from the provisions of the Pharmacy Act. If it were not so, the businesses of many tradesmen would be ruined, and it would be vesting a monopoly in poisons in the hands of chemists—a thing that the Legislature never contemplated.

The Magistrates considered the case proved, and fined the defendant 2*l.* on each of the three summonses, including costs. They consented to state a case.

AT the Leeds West Riding Court on June 17, C. E. West, manufacturer of horticultural sundries, Roundhay, was summoned at the instance of the Pharmaceutical Society (1) for not entering the sale of poison, (2) for selling poison in a bottle insufficiently labelled, and (3) for selling poison to a person unknown to him.

On April 23, Arthur Foulds, a representative of the Society, called at the defendant's premises, and asked for a preparation known as extract of nicotine. He was supplied with it in two bottles, which did not bear the name and address of the seller. The defendant said he had no knowledge of having sold extract of nicotine to the inspector, and if he did it was quite unintentional. He was the patentee of a fumigator, and only sold the nicotine in connection with it to his customers. The Bench fined defendant 20*s.* and costs in each case.

Pharmacy Acts (Ireland).

THE WIDOW'S CLAUSE.

ON June 13, in the Southern Divisional Police Court, Dublin, before Mr. E. G. Swifte, K.C., Mrs. Josephine Preston and Mrs. Margaret McDermott were summoned by the Pharmaceutical Society of Ireland for having, on February 11, 1902, kept open shop for compounding medical prescriptions, and compounding a medical prescription for F. W. Leslie, at 164 Great Brunswick Street, Dublin, contrary to Section 30 of the Pharmacy Act (Ireland), 1875.

Mr. R. Keating Clay (of Messrs. Casey & Clay, solicitors) represented the Pharmaceutical Society; and Mr. Ignatius O'Brien, K.C. (instructed by Messrs. J. L. Scallon & Co., solicitors) appeared for defendants.

Mr. Clay said that the case was a rather peculiar one. Under Section 32 of the Act the representative of a deceased pharmaceutical chemist, who was actually in business and fully registered at the time of his death—which they admitted Mr. Bowers was—shall be entitled to carry on the business "so long as such business shall be conducted *bona*

Digitized by Google

fide by a duly qualified assistant, and a duly qualified assistant within the meaning of this section shall be a pharmaceutical chemist registered as such under this Act." The Pharmaceutical Society also admitted that the business had been carried on by a fully qualified chemist. In this case Mr. Scallon was good enough to let him look at the administration to the mother of the late Mrs. Bowers. She was the representative of the chemist, and she carried on the business for five years. Then she died, and administration *de bonis non* had been taken out by Mrs. Josephine Preston, a sister of the deceased. He (Mr. Clay) contended that it was never intended, under Section 32 of the Act, that the business should be carried on *ad infinitum*, but that the immediate representative of the pharmaceutical chemist should be allowed to carry it on *bona fide* for a term to give an opportunity of disposing of it.

Mr. O'Brien, K.C., said Mr. Clay admitted there was a qualified pharmacist employed during the time of the administration of the estate of Mr. Bowers, and even during the time of the administration *de bonis non*.

Mr. Clay: We don't know whether in the premises all the time; we know he was there.

Mr. O'Brien, K.C.: I can give it in evidence. I thought Mr. Clay admitted it.

Mr. Swifte: When did Bowers die?

Mr. O'Brien, K.C.: He died on June 29, 1895, intestate, and the grant of administration is to his mother and next of kin, Margaret Bowers, on September 10, 1895. Margaret Bowers died on January 22, 1902, and on April 1, 1902, a grant of administration *de bonis non* was made to Mrs. Josephine Preston (sister of deceased). In the original grant the amount of the assets were set down at 4,657*l.* 8*s.* 1*d.*, and the amount of the assets declared to be unadministered under the new grant were 2,078*l.* 0*s.* 8*d.*

Mr. Swifte asked who the second defendant was.

Mr. O'Brien, K.C., said the original intestate died leaving his mother and four brothers and sisters. One of these sisters was Mrs. Margaret McDermott, and the other Mrs Josephine Preston. They were the two parties prosecuted. When the Pharmaceutical Society originally came to the conclusion to make this a test case, they wrote asking the names of those who were carrying on the business, and in error they were informed that these two ladies were carrying it on as the executrices of their deceased mother, whereas, as a matter of fact, they were only carrying it on as administrators *de bonis non*. They had agreed that the grant should relate back, so as to cover the date in the summons on February 11. The intention of the legislature must be considered in the matter. The object of the statute was not so much to assist any particular trade or corporation, but to protect the public against the dangers to which they were exposed through unqualified persons compounding medicines, and especially poisons. The case of the English Pharmaceutical Society against the London Provincial Supply Association—the House of Lords case—decided that while a corporation is not a person within the meaning of the Act, it could carry on the business of pharmacy so long as there is a properly qualified pharmacist on the premises. The Legislature, therefore, thought the public were fully protected when a properly qualified pharmacist was employed, and that was the case in this instance.

Mr. Swifte: Were there properly qualified pharmacists acting all through in this since the death of Mr. Bowers, or perhaps it was the same pharmacist all the time?

Mr. O'Brien, K C: It might not be the same person, but all were properly qualified. The remarks of the Lord Chancellor in the case referred to showed that a number of persons could carry on the business, and derive the profits of it, provided a duly qualified pharmacist was employed. Referring then to Section 32 of the Irish Act he (Mr. O'Brien) contended that "executor" there must be taken to include executor *de bonis non*. There were quite a large number of country towns where there was only one fully-qualified pharmacist. Extracting a grant of administration might occupy a very considerable period of time, and it would be a very curious thing if, on the death of the pharmacist, and pending the extraction of the grant, the establishment should be closed. Or take another case. Supposing the grant was duly extracted, they could not tell how short it might be in operation. The administrator might die on the day he got the grant, and it would be a very extraordinary thing, from the point of view of the public, if the place were to be shut up pending the extraction of the new grant. The literal text of the section supported his (counsel's) contention that the executors could carry on the business so long as they employed a properly qualified assistant.

Mr. Clay contended that Section 32 only dealt with the immediate representative of the deceased chemist. Mr. Bowers died in June, 1895, and it was not to be supposed that the section meant that an executor of any kind could carry it on *ad infinitum*. The mother of the deceased chemist—Mrs. Bowers, who was the immediate representative—carried it on for five years, and the Society did not interfere with her; and they dealt with the case now for the protection of the public solely, and not for the purpose of harassing any person.

Mr. Swifte: You could not have proceeded against the mother, so that you need not take any credit for that.

Mr. Clay: We say that Section 32 only refers to the immediate representative of the registered chemist, and that it does not cover a family carrying on the business *ad infinitum*.

Mr. O'Brien said he admitted the facts—the sale to Leslie and everything.

Mr. Clay said there were two defendants, but the one decision would do.

Mr. O'Brien, K.C.: We will take a decision in the case against Mrs Preston.

Mr. Swifte: Very well. I will consider the matter, and will let you have notice of when I will give judgment.

Sale of Food and Drugs Acts.

SALICYLIC ACID IN WINE.

AT Chorley on June 10 Hunters (Limited), the Wigan and District Equitable Co-operative Society, and Messrs. O. & G. Rushton were each summoned for selling wines containing salicylic acid. In the case of Hunters (Limited) a sample of "Kovah" was said to contain 6 gr. of the acid per pint, which Mr. W. C. Williams, B.Sc., one of the county analysts, said was not necessary as a preservative. Mr. W. Thompson, consulting chemist to Messrs. Sutcliffe & Bingham, makers of "Kovah," gave an entirely opposite opinion; and Drs. McAllister and T. Bradshaw both stated that there was nothing injurious in the wine. A fine of 5*l.* and costs was imposed, however. In the second case, raisin-wine containing 8½ gr. of acid per pint was sold, and in the other orange-fruit wine with the same percentage of acid. The Co-operative Society was fined 1*l.* and costs, and Messrs. Rushton 5*l.* and costs.

Factory and Workshops Act.

AT Brighton (Sussex) on June 13, Messrs. Davis & Co., trading at 131 Sussex Street, Brighton, as the Sussex Drug Company, were fined 5*s.* and costs for failing to send to the Chief Inspector of Factories a correct return specifying the number of persons employed in their factory during 1901.

County Court Cases.

A CYANIDE EXPERIMENT.

IN the Westminster County Court, on June 12, Mr. C. H. Cribb, F.I.C., public analyst, brought an action against Mr. Spaull, a finance agent, to recover five guineas for making certain experiments. Plaintiff's solicitor said a Mr. Bolton was the inventor of a process to manufacture cyanide, and attended at the plaintiff's with Mr. Spaull. It was agreed that plaintiff should make an experiment in connection with this process. He made the experiment, but there was nothing more than a trace of cyanide as a result. The solicitor for the defence said Mr. Spaull was helping Mr. Boulton to bring out the invention. Mr. Bolton had made successful experiments himself, but Mr. Spaull said they wanted a central place in London where a demonstration could be given and where about a ½ lb. could be made before witnesses. There was a great deal of delay, and when Mr. Bolton saw the apparatus plaintiff had prepared he said at once that it would not be of any use. They went elsewhere, and had the demonstration satisfactorily performed. Mr. Bolton, who

Digitized by Google

said he was a practical chemist, stated that he told plaintiff he should want ½ lb. of the chemical produced, and plaintiff agreed to do it. A fee of five guineas was to be paid for "the necessary experiment," and that, he contended, was for the production of the amount mentioned. Plaintiff's experiment was not successful and at another laboratory it was, and the charge was 2*l.* Plaintiff's apparatus was inadequate. He (witness) had many successful experiments himself, but had not a suitable laboratory to make a ½ lb. in the presence of visitors. The process was not a failure, except when plaintiff tried it. Mr. Spaull, in his evidence, said after the failure of the first experiment plaintiff made an offer to try again for nothing, and this plaintiff, in answer to the Judge, stated to be correct. He wanted the thing to succeed, if possible, and he had got everything then for the experiment and another one would not have been much trouble or expense. Judge Woodfall said it was not agreed by the plaintiff that he would make a success of the experiment. He had done what he agreed to do—make the necessary experiment—therefore he had carried out his contract and must be paid. He accepted plaintiff's statement as to the second experiment that he was willing to do, and found for him, with costs.

An Annuity.

At Camelfield County Court on June 12, Mr. Edward James Hurdon, chemist and banker, was sued by Mary Tink for an annuity declaration of 30*l.*, with arrears up to March 25, 1902, and the usual costs, under a will made by Mrs. Hawke, of Camelford. After hearing counsel, the Judge made a declaration that 30*l.* be paid annually, and gave judgment for 42*l.* 10*s.* arrears, with costs.

Lorry *v.* Bike.

At the Manchester County Court on June 16, Mr. George Hibbert Westmacott, chemist and druggist, Manchester, obtained judgment for 15*l.* damages against Messrs. Thompson, McKay & Co., carriers, for injuries to himself and the ruin of his bicycle. A lorry belonging to the defendants turned a corner too sharply, and ran into Mr. Westmacott while riding his bicycle. Judge Parry said it was a too common custom for drivers to turn corners and come into busy thoroughfares without making a proper detour. Mr. Westmacott had narrowly escaped with his life.

Encroaching.

At Holbeach County Court on June 14, Sir Sherston Baker heard an action brought against Mr. Chas. Wass, chemist, from whom 30*l.* was claimed for wrongful encroachment on a piece of land in High Street, Holbeach. Mr. Wass bought some land, upon which he had erected premises, and it was alleged that there had been an encroachment of 13 inches or 14 inches upon the adjoining land. The Judge, after viewing the land and premises, came to the conclusion that there had been an encroachment, and gave judgment for the plaintiffs for 20*l.* and costs.

Peremptory Dismissal.

At the Bloomsbury County Court on Wednesday, June 18, before Judge Bacon, Mr. Frederick Cripps Squire, a chemist's manager, of 41 Foulden Road, Stoke Newington, sued Henry Squire [Mr. C. C. Reece], chemist, 46 Newman Street, W., for 3*l.* 10*s.*, for a week's wages, house rent, and gas, in lieu of notice. Mr. Ray, solicitor, appeared for the plaintiff, and defendant conducted his own case.

The plaintiff stated that he was engaged as manager of the defendant's branch business at 107 High Street, Camden Town, at a salary of 2*l.* 10*s.* a week, with house rent and gas. As usual on Saturday, December 28, he made up the cash, after making payments, as he kept the books, and there was a balance of 2*l.* 12*s.* 6*d.*, which was placed in a desk. On Monday morning it was discovered that the desk had been opened, and 2*l.* abstracted, only a balance of 12*s.* 6*d.* being left. Soon after the discovery Mr. Kingston, defendant's collector, called to audit the books, and he told him what had happened. Witness had not taken the money. Mr. Kingston sent defendant a message, in consequence of which he came up to the shop in a towering rage, called them "a —— lot of thieves," and told them to clear out at once. There was a written agreement for a week's notice on either side, which agreement was in the possession of the defendant.

Judge Bacon (to defendant): Do you want to cross-examine him?

Defendant: Well, rather. (Laughter.)

Judge Bacon: Then do so at once.

Defendant: Who had you in the house at the time—Christmas time?

Plaintiff: What do you mean?

Defendant: Did not you tell me you had friends there, and that somebody must have taken the money? I had six or seven hundred pounds' worth of stock in the house, and I let you live in the house, but never authorised your friends to do so.

Plaintiff: The money was short, and I did not know who had taken it.

Defendant: Did not I tell you I must have straight men in my shops? I have seven shops, your Honour. I have taken 20*l.*, 21*l.*, and 22*l.* in a day in that shop, and that Saturday they only took 10*l.*

Plaintiff: Well, what sort of weather was it? Was it not wet?

Judge Bacon: All that may be a very good reason for changing your staff, but nothing I have yet heard justifies you in sending plaintiff away without notice.

Defendant: He was short in the money.

Judge Bacon: That might be a good reason for getting rid of him with proper notice, but unless you can prove that he took it, that he stole it——

Defendant: Well, I put him there in charge of the shop; the money was short. I can surely carry this further?

Judge Bacon: You could prosecute him if you think it advisable to run the risk.

Defendant: Yes, for I must get the money back before I pay it.

Judge Bacon: Do not talk rubbish, man. I am not here to advise you what course to adopt; all I tell you is, you were not justified in sending your manager away on mere suspicion that he might be the man who robbed you. Judgment for the plaintiff.

Defendant still continuing to expostulate, His Honour said, sternly: Go away, sir. Call the next case.

Chemist's Debts.

In the Westminster County Court on Tuesday, June 17, the case of Ashton *v.* Lyon came on for hearing before Judge Woodfall, plaintiff applying for the committal of the defendant, a chemist, living at Brighton, for non-payment of a judgment-debt in respect of goods supplied in the way of trade. The defendant said he had suffered with very bad health for some time past, and in consequence had been obliged to give up his business. The Judge made an order of 5*s.* a month.

Bankruptcies and Failures.

Re William Lawson Loten, Mytongate, Hull, Chemist and Druggist.—The adjourned public examination of this debtor was taken at the Hull Bankruptcy Court on June 16. The Official Receiver (Mr. A. S. Maples) questioned the debtor as to a written statement made by himself at the Bankruptcy Offices to the effect that he had paid several old debts amounting to about 40*l.* or 50*l.*, most of which were owing before his bankruptcy. Debtor denied having made any such payments, and excused himself by saying he was very ill when he made that statement. The examination was again adjourned, in order that the debtor might lodge certain vouchers with the Official Receiver.

Re Laura Verrall Crossley (trading as Blanche Leigh) 126 Oxford Street, W., and Paris, Soap and Perfume Manufacturer and Vendor.—The creditors under this failure met on June 17, by adjournment, at the London Bankruptcy Court, before Mr. E. L. A. Hough, sen. (Official Receiver). No accounts have yet been lodged, but proofs to the amount of 8,306*l.* have been tendered by creditors, whilst the assets are roughly valued at 2,000*l.* No offer being submitted, Mr. J. F. Salaman, chartered accountant, Bucklersbury, E.C., was appointed as trustee to administer the estate in bankruptcy, assisted by a committee of inspection. The public examination of the debtor is appointed for July 9.

Digitized by Google

Re CHARLES HENRY WALKER, 54 Shaw Street, Liverpool, Chemist and Druggist.—The public examination of this debtor was held at the Liverpool County Court, on June 12. It was elicited from the debtor that he began business, in 1878, at Great Crosby, and in 1881 opened a second shop at Blundellsands. He closed the Great Crosby shop in 1884, but continued at Blundellsands up to 1894, when he closed the business, having paid all his debts. Owing to ill-health he was not in employment until 1896, when for three months he represented as traveller the British Electrozone Corporation. He afterwards sold goods for the Stockton Heath Forge Company, such as spades and pickaxes. For some time in 1897 he acted as dispenser to the Hayden Syndicate for the Cure of Intemperance, and from October 1898 to January 1901 he was weight-taking at the Liverpool docks, and afterwards for some two months was engaged as dispenser at the Liverpool dispensaries. He took the Shaw Street shop in 1901 and attributed his insolvency to insufficient capital, and to the fact that the wholesale houses would not give him credit. This he was unable to understand, because up to that time he had paid his bills, but he subsequently discovered that the wholesale houses did not regard the shop as a promising one. Several executions were put in by creditors, some of whom he paid out. The liabilities are stated at 350*l.* and the assets 3*l.* Debtor was allowed to pass his examination.

According to the accounts now filed under this failure the liabilities to unsecured creditors amount to 349*l.* 2*s.* 1*d.*; to partly-secured creditors, 4*l.* 6*s.* 6*d.*, less estimated value of security, 3*l.*, which leaves 1*l.* 6*s.* 6*d.* to rank; total, 350*l.* 8*s.* 7*d.*; and assets consisting of stock-in-trade (cost 30*l.*), 20*l.*; trade fixtures, fittings, utensils, &c., 30*l.*; together 50*l.*, from which 46*l.* 17*s.* 6*d.* has to be deducted for preferential claims, leaving net assets, 3*l.* 2*s.* 6*d.*, and disclosing a deficiency of 347*l.* 6*s.* 1*d.*

ADJUDICATIONS.

Hall, Joseph, Ashton-under-Lyne, veterinary surgeon.

New Companies & Company News.

DERMA FEATURAL COMPANY (LIMITED).—Capital 1,000*l.*, in 1*l.* shares. To acquire patents and rights, to turn the same to account, and to carry on a business not particularly described. Table "A" mainly applies. The first directors are H. P. Wendt, R. E. Fivey, and H. J. Morgan.

RIDER & STANISLANS (LIMITED).—Capital 1,500*l.*, in 1*l.* shares. Objects: To carry on the business of photographers, photographic printers, photo-lithographers, general printers, stationers, paper-makers, chemists, druggists, manufacturers of and dealers in photographic and scientific materials and appliances, &c. No initial public issue.

MORRIS & BOLTON (LIMITED).—Capital 15,000*l.*, in 1*l.* shares (5,000 preference). Objects: To take over the business of printing-ink and varnish manufacturers carried on at 17 Tooks Court, Furnival Street, E.C., and at Eclipse Pudding Mill Lane, Marsh Gate Lane, Stratford, E. Registered office, 17 Tooks Court, Furnival Street, Holborn.

WALTER TOMLINSON & SON (LIMITED).—Capital 1,007*l.*, in 1*l.* shares. Objects: To acquire the business of mineral-water manufacturers carried on by W. Tomlinson and T. A. Tomlinson at Woodroyd Works, West Bowling, Bradford, and to carry on the same and the business of manufacturers of other beverages. No initial public issue. The subscribers are to appoint the first directors. Qualification of ordinary directors, 100*l.*-shares or debentures.

MANN'S DRUG STORES (LIMITED).—Capital 6,000*l.*, in 1*l.* shares (3,000 preference). Objects: To acquire the business carried on by Edward Manwaring and W. H. Butcher, at 45 Rye Lane, Peckham, S.E., and 31 High Street, Clapham, S.W., as "Mann's Drug Stores," and to carry on the business of chemists, druggists, dentists, opticians, drysalters, oil and colour men, manufacturers of optical, photographic, surgical, and scientific apparatus and materials, &c. The first subscribers are: Mrs. A. Butler, 45 Rye Lane, Peckham; Mrs. M. A Dodman, 2 Banyard Road, Bermondsey; Miss M. A. Dodman, 2 Banyard Road, Bermondsey; Miss A. Manwaring, 4 Garnies Street, Peckham; Ernest Manwaring, 4 Garnies Street, Peckham, gentleman; W. H. Butcher, 45 Rye Lane, Peckham, chemist; and Edward Manwaring, Elm Lodge, College Road, Dulwich, S.E., pickle-manufacturer. No initial public issue. The first directors are Edward Manwaring, Ernest Manwaring, W. H. Butcher, and P. Manwaring. Qualification, 100*l.*

ENGLISH MANUFACTURING CHEMICAL ASSOCIATION (LIMITED).—Capital 20,000*l.*, in 1*l.* shares. Objects: To adopt an agreement (the parties to which are not named) and to carry on the business of soap, glycerin, oil, tallow, and chemical manufacturers, candle makers and merchants, chemists, druggists, drysalters, oil and colour men, manufacturers of electrical, chemical, photographic, surgical, and scientific apparatus and materials, &c. The first subscribers are: A. John, 12 Wigmore Street, London, chemist; H. M. Poole, 43 New Oxford Street, London, chemist; A. S. Lloyd, 1 Churton Street, Westminster, chemist; A. A. Beale, M.B., 4 Acacia Road, St. John's Wood, N.W.; H. Hollinghurst, 1 Park Road, East Twickenham, chemical-merchant; F. Henderson, Mountain Auckland Hill, near Norwood, leather-merchant; and F. C. B. Carter, 2 Poplar Grove, West Kensington Park, W., chemist. No initial public issue. The subscribers are to appoint the first directors. Qualification, 100*l.* Remuneration as fixed by the company.

KELPION (LIMITED).—Capital 15,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on at Norgrove Buildings, 59A Bishopsgate Street Within, E.C., and 10 Wrestlers' Court, E.C., as the "Kelpion Company," to adopt an agreement with J. W. Collins and S. Lambert, and to manufacture and deal in a stainless, non-irritating, iodine-ointment, known as "Kelpion," and other medicinal preparations, chemicals, drugs, foods, &c. The first subscribers are: J. W. Collins, Kelva, Waldegrave Road, Upper Norwood, S.E., manufacturing chemist; H. T. McNeale, 6 Pall Mall, S.W., gentleman; S. Lambert, 59A Bishopsgate Street, E.C., chartered accountant; A. A. Brown, 5 Springwell Avenue, Harlesden, N.W., clerk; W. Turk, 11 Suffolk Road, South Norwood, S.E., clerk; H. Webster, 9 Wellesley Grove, Croydon, cashier; and A. Forbes, 23 Southampton Street, Camberwell, S.E., clerk. No initial public issue. The first directors are J. W. Collins, S. Lambert, and H. T. McNeale. Qualification, 250 shares. Remuneration 50*l.* per annum and 25 per cent. of the profits remaining after payment of the preference dividend and 10 per cent. on the ordinary shares, divisible.

A. S. ANDREWS & SONS (LIMITED).—Capital 10,030*l.*, in 8,000 10-per-cent. cumulative preference shares of 1*l.* each, 2,015 ordinary shares of 1*l.* each and 300 "B" shares of 1*s.* each. Objects: To take over the business of surgical-instrument manufacturers carried on at the Factory, Higham Hill Road, Walthamstow, as "A. S. Andrews & Sons," to carry on the same, and to adopt an agreement with A. S. Andrews. The first subscribers are: R. D. Cooper, Addison Lodge, 26 The Drive, Walthamstow, Congregational minister; H. du P. Andrews, 22 Church Hill, Walthamstow, surgical-appliance maker; W. Andrews, Webb Lodge, Walthamstow, truss-maker; T. Cormack, 1 Pasquire Road, Walthamstow, surgical truss-spring maker; H. A. Dutton, 157 Wood Street, Walthamstow, leather-cutter; J. A. Bowly, 8 St. Phillip Street, New North Road, Islington, N., surgical-spring maker; and G. F. Gibbons, 70 Norfolk Road, Dalston, leather-cutter. No initial public issue. The number of directors is not to be less than two nor more than five; the first are A. S. Andrews (managing director), Mrs. M. Andrews, H. du P. Andrews, and R. D. Cooper. Qualification, 200*l.* shares or stock or 100 "B" shares.

PARKE'S DRUG-STORES (LIMITED).—The directors have declared an interim dividend at the rate of 6 per cent. per annum on the ordinary shares for the half-year ending March 31 last.

KODAK (LIMITED).—The directors announce that a payment of 1*s.* per share will be made on July 1 in respect of ordinary shares and of 1½ per cent. in respect of preference shares. The payment on the ordinary shares is the equivalent of the ordinary interim dividend of 2½ per cent. together

Digitized by Google

with a bonus of 2½ per cent. The payment on the preference shares is the equivalent of the usual interim quarterly dividend at the rate of 6 per cent. per annum.

Virol (Limited).—The second annual meeting of shareholders of this company was held on June 12, when the Chairman (Mr. B. S. Straus) said the sales for the last year showed an increase of 31 per cent. over those of the preceding twelve months. The increase in the latter part of the year was considerably greater, the sales from January to May of the present year being more than 80 per cent. above those for the corresponding period last year. Virol had been thoroughly tested by the medical profession, and a striking testimony to the intrinsic value of the preparation was the fact that it was already used in over 200 leading hospitals and public institutions. The Royal Antarctic Expedition had also ordered a large supply of Virol for the *Discovery*. The directors recommended that the total net profit, 4,122*l.* 8*s.* 6*d.*, should be carried forward to the next accounts. In reply to a shareholder the Chairman said he thought it right that shareholders should have the first opportunity of subscribing for any new capital that was issued. The report and accounts (see *C. & D.*, June 14, page 932) were unanimously adopted.

A. J. White (Limited).—The fifth annual meeting of shareholders in this company was held on June 17 at the Memorial Hall, Farringdon Street, E.C. There was a numerous attendance. The Hon. Timothy L. Woodruff, the chairman of the company, who presided, moved the adoption of the report and accounts (an abstract which was given in last week's issue, page 932). He said not only had the business progressed favourably in this country during the past year, but in the United States also, where they had the right man in the right place to manage the concern. Their plant and machinery were being kept up to date. The directors proposed to pay 5 per cent. dividend on the ordinary shares, and carry forward 11,065*l.* 16*s.* 2*d.* to next year's account. Mr. A. S. Apgar seconded the motion for the adoption of the report and accounts, and approval of the dividend. Some discussion followed, several shareholders maintaining that an extra 1 per cent. should be added to the dividend recommended. Eventually, however, the directors' proposal was carried and the report and accounts, with the 5 per cent. dividend, approved of.

Business Changes.

Bambrough's Drug stores is about to be opened at 207 New King's Road, Fulham, S.W.

Messrs. Price, Hickman & Co. have removed from 17 Mincing Lane to 4 Mincing Lane, E.C.

The Volcanic Aëration Company has removed from 203 Great College Street, N.W., to 6 Mitre Street, E.C.

Mr. A. H. Bell has purchased the well-known business of Mr. W. Wilcockson, in London Road, Osmaston, Derby.

Boots (Limited) have opened new branches at Briggate and King Edward Street, Leeds, and at 622 Romford Road, Manor Park, E.

Mr. F. H. Moore, chemist and druggist, having secured an extension of lease, is reconstructing and enlarging his premises at 38 High Street, Notting Hill, W.

Holloway's Drug Company is opening a new business at 41 Queen Victoria Street, E.C., under the personal supervision of Mr. E. A. Holloway, chemist and druggist.

In consequence of the disposal of the premises, Mr. Jonathan Stephens, chemist and druggist, has removed from 114 Fore Street, Devonport, to Station Road, Keyham.

Mr. Edward P. Blamey, chemist and druggist, formerly proprietor of Messrs. Row & Co.'s dispensing establishment in Fore Street, Devonport, has purchased a business at Fowey, Cornwall.

Mr. F. A. Davis, Bristol district representative of Messrs. T. F. Bristow & Co. (Limited), Clerkenwell, is now to cover the Birmingham district, which Mr. W. S. Statham, who is retiring, has travelled for twenty-five years.

Mr. E. Whaley, chemist and druggist, of 24 Market Place, Kingston-on-Thames, has relinquished business, and has disposed of his prescription and recipe books to Messrs. E. C. Tamplin & Son, of Eden Street, Kingston-on-Thames.

The chemist's business at 12 Arundel Street, Landport, Portsmouth, which since the death of the late Mr. Wm. W. Hayles has been carried on by his widow, has now changed hands, and will be conducted under the style of Francis & Co.

Mr. Fred. E. Johnson, M.P.S., F.C.S., of the late firm Messrs. Allison, Johnson & Foster, Hull, has commenced business on his own account at 11 and 12 Blanket Row, Hull, as a manufacturer's agent, consulting chemist, assessor and valuer.

Forfarshire Chemists' Association.

In view of the Conference, a brave turn-out of ladies took place along with the members of this Association at the annual meeting, held in Dundee on Wednesday, June 18. The afternoon was fine, and augured well for the meeting in August. Apologies from Miss Russell (Newport), from Mr. A. B. Anderson, and others were read. Thereafter the President (Mr. Kermath, St. Andrews) intimated that the time had now come for him to resign, and he asked those present to appoint new office-bearers for the next session.

Mr. A. B. Anderson (who was unfortunately absent through indisposition) was elected President; Mr. Park (Broughty Ferry), Vice-President; and Mr. Wm. Cummings, Hon. Secretary.

On the motion of Mr. Jas. Russell, the retiring office-bearers were cordially thanked for their services.

It was intimated that a balance of 5*l.* 19*s.* 2*d.* remained in the Secretary's hands. Members were also invited to send in suggestions for the Bell and Hill's Fund present of books to the local Association.

A copy of the Conference-programme, prepared by the Local Committee, was then placed in the hands of all present for consideration, and principally with a view to appointing a committee of ladies to make suitable arrangements for the comfort and entertainment of the lady visitors. Mr. Jno. Gray proposed that Mrs A. B. Anderson be appointed president of this committee. Along with her husband, she had had many opportunities of attending such entertainments, as they had been conducted during past years. This was seconded, and agreed to. Mr. Jas. Russell undertook to act as Hon. Secretary to the Ladies' Committee.

Mr. Chas. Kerr, as President of the Local Committee, then read correspondence which he had had with Professors Steggall, Geddes, Marshall, and Walker, of the University College, all of whom heartily offered their assistance in various ways to promote the success of the meetings.

Mr. Ford (Kirriemuir) moved a vote of thanks to Mr. Kermath for presiding.

The ladies present were Mrs. Jno. Anderson, Mrs. A. B. Anderson, Miss Ferrier, Mrs. Jno. Gray, Mrs. J. M. Hardie, Mrs. C. Kerr, Miss Kerr, Mrs. J. W. Russell, Mrs. Greig, Mrs. Nasmyth (Arbroath), Mrs. Park, Miss Park (Broughty Ferry), Mrs. J. H. Thomson (Lochee), and Miss Kermath (St. Andrews). They conferred for a short time after the meeting to arrange some preliminary business.

A Potash Dinner.—A wonderful dinner was given at the Hotel Bristol, Berlin, on Wednesday, June 4, to celebrate the coming to terms of the American Virginia Chemical Company and the German potash monopoly magnates. A special *menu de luxe*, with the American Eagle grasping the Stars and Stripes, in gold and colours, on the top, and below a miniature photograph of the Kaiser as centre of the outspread German Eagle, was given to each guest as a souvenir. The inside of the menu was worthy of the luxurious outside, the compact of peace between the two powerful combinations being sealed with the best of fare and rare wines. The diners were Herr Ribbert, Mr. White, Herr Albrecht, Herr Weichinger, Herr Vogel, Herr Gressner, Mr. Morgan, Herr Bielmann, Mr. Spilsbury, Mr. Cremshaw, Herr Paul Ribbert, and Herr Engelhardt.

Jacob Bell Scholarship Examination.

THE following papers were set at the examination held on June 17. The time allowed for the first four papers was three hours (11 A.M. to 2 P.M.), and for the chemistry, pharmacy, and botany papers two hours (3 to 5 P.M.):—

LATIN.

1. Translate into English—

Primus se Danaum magna comitante caterva
Androgeos offert nobis, socia agmina credens
Inscius, atque ultro verbis compellat amicis;
"Festinate viri; nam quae tam sera moratur
Segnities? alii rapiunt incensa feruntque
Pergama; vos celsis nunc primum a navibus itis
Dixit, et extemplo, neque enim responsa dabantur
Fida satis, sensit medios delapsus in hostis.
Obstipuit retroque pedem cum voce repressit
Improvisum aspris veluti qui sentibus anguem
Pressit humi nitens, trepidusque repente refugit
Attollentem iras et caerula colla tumentem:
Haut secus Androgeos visu tremefactus abibat.
Inruimus densis et circumfundimur armis,
Ignarosque loci passim et formidine captos
Sternimus; adspirat primo fortuna labori.

Vos celsis nunc primum a navibus itis.

3. Translate into English—

(*a*) Nonnulli excolatum pingue frigida aqua eluunt, et manibus, non secus atque ceratum mulieres, confricant; ita enim candidius redditur. Alii, postquam lanas lavarunt, coquunt cum aqua in lebete levi igne, et supernatans pingue tollentes, aqua eluunt, excolatumque in fictilem patellam, quæ calidam aquam continet, lineo panno operiunt et soli exponunt.

(*b*) Misce, fiant pilulæ duodecim, quarum capiat æger binas horâ somni, quando opus sit.

4. Translate into Latin—

(*a*) In this time of danger they resolved to get together, as quickly as possible both ships and men.

(*b*) The safety of the soldiers, he said, and the honour of their country, were in their own hands; defeated, they had no hope, and no retreat; conquerors, the glory of victory and the spoils of England lay before them. Of victory there could be no doubt.

ENGLISH.

1. Parse fully—

"What seemed his head
The likeness of a kingly crown had on."

2. Write a short essay on *one* of the following subjects:—

(*a*) The "good old times" compared with the present.

(*b*) The present relations between Great Britain and her colonies.

(*c*) Compulsory military service.

ARITHMETIC.

1. Buying spirit at 5*s.* a gallon, I dilute it with water to such an extent that, selling it at 4*s.* 6*d.* a gallon, I gain 20 per cent. How much water have I added to each gallon of spirit?

2. Reduce $\frac{1}{2}$ of $\frac{99}{100}$ of $\frac{50}{451}$ of ·0409 of 1 cwt. 3 qrs. 7 lbs. to the decimal of 2$\frac{1}{2}$ tons.

3. A person bought equal weights of sugar at 1*fr.* 45c. per kilog., and of coffee at 2fr. 70c. per kilog., paying 83*f.* for the whole. Find, approximately, how many English pounds of each he bought.

FRENCH OR GERMAN.

FRENCH.

1. Translate into English—

Il y a des capitales qui ne sont que de gros villages; il en est d'autres qui sont des labyrinthes; mais aucune ne semble, comme Paris, avoir été créée et mise au monde pour être le vrai théâtre de la pensée et des passions. Tout grand qu'il est, il n'a rien d'accablant par son étendue; il est harmonieux dans toutes ses parties, agréable à parcourir, commode sans uniformité, riche en points de vue de toute sorte et propre à tous les états de l'âme, admirablement adapté, enfin, à la race ingénieuse, sensible et légère qui l'habite. On parle souvent de l'attachement du montagnard pour sa maison, du paysan pour sa chaumière; mais qu'est-ce que tout cela à côté de l'invincible chaîne qui attache à Paris les plus malheureux de ses enfants? J'entends par là ceux qui y sont nés ou qui sont venus l'habiter de bonne heure; en un mot, ceux auxquels chacune de ses rues, chacun de ses pavés disent quelque chose.

2. Translate into French—

A proper consideration of the value of time will inspire habits of punctuality. "Punctuality," said Louis XIV., "is the politeness of kings." It is also the duty of gentlemen, and the necessity of men of business. Nothing begets confidence in a man sooner than the practice of this virtue: and nothing shakes confidence sooner than the want of it. He who holds to his appointment and does not keep you waiting for him, shows that he has regard for your time as well as for his own.

GERMAN.

1. Translate into English—

Es war einmal ein König, der sehr krank war. Er hatte drei Söhne, die gingen hinunter in den Garten und weinten; da begegnete ihnen ein alter Mann, der sie nach ihrem Kummer fragte. Sie erzählten ihm, ihr Vater wäre so krank, dass er wohl sterben würde. Da sprach der Alte: "Ich weiss noch ein Mittel, das ist das Wasser des Lebens; wenn er davon trinkt, so wird er wieder gesund; es ist aber schwer zu finden." Da sagte der älteste Sohn: "Ich will es schon finden," ging zum kranken Könige und bat ihn, er möchte ihm erlauben auszuziehen, um das Wasser des Lebens zu suchen, das ihn allein heilen könnte. "Nein," sprach der König, "die Gefahr dabei ist zu gross; lieber will ich sterben."

2. Translate into German—

The father and child seated themselves on the hill, and saw below the gay and numerous vessels that glided over the river. "There," said Adam, quietly, pointing to the lofty roofs—"there seems to rise power; and yonder (glancing towards the river) seems to flow genius! A century or so hence, the walls shall vanish, but the river shall roll on. Man makes the castle and founds the power—God forms the river, and creates the genius."

CHEMISTRY.

1. State what is meant by the term atomic weight and name the experimental data necessary for its determination.

2. What are the reactions that may occur between the following pairs of substances?—

(*a*) Iodine and sulphur dioxide.
(*b*) Arsenious oxide and hydrogen sulphide.
(*c*) Mercury and nitric acid.
(*d*) Potassium ferrocyanide and sulphuric acid.
(*e*) Phosphorus and calcium hydroxide.

Indicate the conditions that will give the most definite products or complete reaction in each of the above cases.

PHARMACY.

1. In applying the process of evaporation to preparations that heat has a tendency to injure, how may the injury be minimised?

2. Write a short note on the pharmacy of the following articles illustrative of their chief properties:—

Gum acacia.
Scammony.
Mercuric chloride.
Liquid extract of male fern.
Podophyllum resin.

BOTANY.

1. (*a*) Describe three types of root and account for their different morphological characters. (*b*) What are root hairs?

2. State what you know of latex, and give instances of its occurrence.

Recent Wills.

DOWLING.—Letters of administration to the personal estate of the late Mr. Robert Dowling, the younger, chemist and druggist, of 18 Eldon Street, Reading (formerly of 14 King's Road, Reading), who died on February 18, have been granted to his father, Mr. Robert Dowling, chemist and druggist, Market Place, Reading, by whom the gross estate is valued at 153*l.* 3*s.* 8*d.*

GILL.—The will of Mr. James Payne Gill, of 10 Silent Street, Ipswich, formerly manager to Messrs. Grimwade, Ridley & Co., Ipswich, who died on February 7, has been proved at the High Court of Justice by his widow, Mrs. Ellen Mary Gill, sole executrix. The gross estate is valued at 887*l.* 8*s.* 6*d.* and the net personalty 505*l.* 10*s.* 7*d.*

MUMFORD.—The late Mr. George Selby Mumford, of the firm of Messrs. G. S. Mumford & Sons, spice and seed merchants, &c., Newcastle Granary and Mills, Farringdon Road, E.C., has left a gross estate of 64,362*l.* 3*s.*

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

"Honour to whom Honour."

Sir,—In your last issue you were so good as to devote a paragraph of the leading article on "Duty-free Spirit" to a history of Mr. Haldane's clause, moved in the House of Commons. You say that I coached Mr. Haldane. Strictly speaking, I did not, having had no communication with him. But I did suggest to Dr. Silberrad—the chemist to the Explosives Committee, of which Mr. Haldane is a member—who consulted me some months ago, the desirability of learning what had been already done by the Excise authorities, to what extent the concessions made had facilitated business, and whether further concessions were needed. I gave the names of several gentlemen who had assisted the Excise in arriving at a workable scheme, such as Mr. David Howard, Mr. Chas. Umney, Mr. E. A. Webb, Mr. B. E. R. Newlands, and others. Dr. Silberrad interviewed or corresponded with them and drew up a report, the principal heads of which he consulted me upon. In my opinion there were omissions, which I attempted to supply, with the result that his report was rearranged, if not rewritten. His committee wisely assented to its publication—unofficially. In the result, the report was presented in a summarised form as a paper before the London Section of the Society of Chemical Industry, reported in your issue of June 7, and which will appear in the Society's *Journal* of June 30. Thus was it that Mr. Haldane was coached, and through his committee and motion in the House a concession has been granted which may have very far-reaching results. On perusing the remarks of Mr. Fletcher Moulton, K.C, on ethers, chloroform, chloral, &c., I see the friendly promptings of Mr. A. Gordon Salamon also.

Some correspondents are elated by the hope of "free" alcohol for medicine. They will be disappointed. Others expect unrestricted use for scientific purposes. They too will be left in expectancy. Some imagine the industries in which ethyl and methyl alcohols are employed will be at once revived or a "boom" result. They also will not have their faith rewarded. The Government is blamed in some quarters for not granting concessions years ago. It is germane to the present position to inquire, Were they asked for? Was any way pointed out by which fears as to fraud could be overcome and the revenue safeguarded? I think no really serious determined attempt was made, at least by responsible parties.

It may naturally be thought that the good intentions and promises of those desirous of utilising concessions should be of value; but the authorities dealing with and responsible for so great a revenue must be cautious and conservative. Nevertheless the official attitude has softened. It no longer utters a *non possumus*, but is willing, if not anxious, to hear and learn. The history and development of the drawback of exported tinctures, essences, and perfumes proves how much can be conceded without laying serious burdens on manufacturers. In this case it must always be remembered that the makers first paid duty on the spirit used, hence the revenue was already conserved. It should be borne in mind that long before these concessions were given generally, some twelve or fourteen years ago, to any who took out the licence, similar ones as regards rebate of duty had been made to exporters by the Customs and to certain wholesale druggists. I believe the late Mr. Peter Squire, of Oxford Street, obtained the first concession as regards tinctures, and used it to his advantage.

The wording of the clause accepted by the Chancellor of the Exchequer is clear as to the scope of the concession. It is for art or manufactures, but the conditions are to be governed by the Excise authorities. In my opinion, the onus of proof is upon the user, and rightly; but I feel sure that recent experience of the temper of the authorities justifies the conviction that they will be reasonable, and that the conditions imposed will not be so onerous, as some fear, as to throttle any new or revived industry. Let it be remembered that full and precise regulations and experience of their working are at the disposal of the authorities, in the existing laws and regulations both of Germany and France. In 1895, by the courtesy of Messrs. Domier and Mr. H. Lorenz, I was enabled to procure copies, and, having translated them, referred to them in my address as President of the Society of Chemical Industry. These regulations were placed by me, as Chairman of the Chemical Section of the London Chamber of Commerce, at the disposal of the members and of the authorities, and I have just been asked to place further copies at the disposal of the latter. It should be remembered that the new or revived industries under regulated concessions will scarcely affect the existing revenues, since, as Mr. W. F. Reid, Chairman-elect of the London Section of the Society of Chemical Industry, pointed out, the spirit required by these industries would in the main be additional to the existing demand, and therefore scarcely a source of danger to existing revenue from one point of view.

As to ether, chloroform, &c., which can be made of excellent quality from methylated spirit, but which, as Mr. D. Howard pointed out, are obviously more costly, *per se*, than when made from undenatured spirit, it is clear that there cannot be a dual permission for the use of methylated and pure spirits for the manufacture of the same products in the same place. Nor can there be any discrimination on exportation between one and the other. It should not be forgotten that abroad the use of alcohol, undenatured in some form or other, is very jealously guarded, and even in pharmacy is surrounded by restrictions which English pharmacists would scarcely endure. The hopes lie with the greater industries, and although it may be, as some fear, that German manufacturers will go to the last extreme in protecting their industries by ridiculously cutting—if not losing—prices here and abroad, yet in course of time this will work its own cure. In the meantime it behoves our technologists to be alive to the opening doors for research, and the still unlimited range of practical work, remembering that this new move is largely a case of supply, demand, and guarded facility. I do not for a moment believe that the facilities will be so guarded as seriously to hamper the enterprising and the honest. A correspondent thinks that the demand of the Government for undenatured alcohol for explosives made by itself and for reasons of State is at the bottom of this change, and that when it has got the concessions it wants other industries may be met with regulations so stringent as to kill them. I do not think so. Is it not obvious that the Government could supply itself alone on any conditions?

One correspondent refers to the need of reform in our patent laws, in the direction of compulsory licences to work patents taken out in this country by foreigners. The Chambers of Commerce, led by Manchester, have done good work in this direction, and by no individual more than by Mr. Levinstein, the President of the Society of Chemical Industry, who has made this reform his own, and whose coming presidential address in Liverpool may be looked for with interest in July. The President of the Board of Trade has conceded the principle contended for, and publicly promised to insert provisions meeting the compulsory granting of licences, either in the proposed Bill itself or an amending one. At any rate the "field is white unto the harvest," and with reasonable demands, enterprise, and skill, I have great hope of the realisations in considerable degree of the "enthusiasms" of my later years, for which I have striven and diplomatised with little or no advantage to myself. The Society of Chemical Industry recognising that this question is mainly a technological one, has fittingly appointed a committee to co-operate with any existing bodies, or proceed as may seem best for securing the full advantage of the concession. The committee is representative, and includes the President (Mr. Levinstein, a colourist), the Treasurer (Mr. Hall, a soapmaker), Mr. Howard (alkaloids, &c.), Mr. Reid (explosives, &c.), Mr. A. G. Green (organic colourist), Mr. A. Gordon Salamon (synthetic

Digitized by Google

perfumes, &c.), and Dr. W. S. Squire (spirit-distillation, &c.), with power to add to their number.

Yours faithfully,

Stratford, E., June 17. THOMAS TYRER.

P.S.—This committee has already met and decided to place its knowledge and experience at the disposal of the authorities. *A propos* of the new duty of 1*d.* a gallon on imported spirit it is singular that the German Government has only just removed the bounty on exported spirit. *Verb sap.*

Chemist Malins' Case.

SIR,—As a would-be subscriber to the previous fund initiated to obtain a High Court decision on a test-case, I regret to say that I do not feel disposed to subscribe to the Cardiff appeal. I have received the enclosed printed letter from Mr. Malins, also a report of the trial, and his pamphlet advertisement which was challenged by the prosecution. I do not admire the style of Mr. Malins' letter, and the sympathy I had previously felt greatly evaporated after seeing the pamphlet with photograph on. Surely it is too aggressive to open professional consulting-rooms entirely apart from one's chemist's business. Many of my fellow-chemists must find it impossible to disregard the important ethical considerations involved, and as the legal aspect of this case appears to centre upon a particularly fine point of law, I would suggest that we should wait for a better one.

Faithfully yours,

Kingston-on-Thames, June 17. WM. E. CLARKE.

[NOTE BY THE EDITOR.—We are obliged to Mr. Clarke for the printed letter which has been sent out by Mr. Malins, and which we had not seen or heard of before. Mr. Malins in a concluding paragraph asks those to whom he addressed the printed letter to let the Editor of THE CHEMIST AND DRUGGIST know what they are willing to subscribe. This should not have been said without our authority. We have given the hospitality of our columns freely for this matter, but we wish to make it clear that our responsibility is confined to intimating these subscriptions, and, if need be, receiving the money.

Since the foregoing was put in type Mr. Malins has written to us respecting his circular, but does not send a copy. He informs us that an offer was made to him to withdraw the second case on condition that he would not appeal in the first one. This he declined.

Garlic as a Remedy in Consumption.

SIR,—An article appeared in *The Medical Press and Circular* for June 4, 1902, entitled "The Successful Treatment of Tuberculosis and Lupus by Garlic," by Dr. W. C. Minchin, medical officer of Kells and of the Fever Hospitals. Dr. Minchin has used the juice of garlic for several years with great success in cases of incipient, moderately advanced, and in certain very advanced cases of pulmonary tuberculosis, and declares that he has had so much success with it, that he has come to look upon few cases of consumption as hopeless. The remedy is so simple and applicable to rich and poor alike, either at home or in the hospital-wards, that I am anxious to make use of it in my own practice. But there is one almost insuperable objection to its use in general practice—its abominable odour. I once suggested to a young society beauty that as a remedy for insomnia she should eat a large Spanish onion every night. She protested that rather than eat onions she would never sleep again. Another lady to whom I recommended garlic for phthisis, said she preferred phthisis. But cannot our clever up-to-date pharmacists manage to give the active principle or principles of the onion tribe in a tasteless form and correct the malodorous sulphides and oxide of allyl so that their vile emanations when swallowed do not make us offensive to ourselves and associates? Perhaps some of your readers may be able to overcome this difficulty.

I am Sir, Yours, &c.,

EDWARD BERDOE, M.R.C.S., L.R.C.P.Ed.

London, June 13.

The Sovereign Water-bath.

SIR,—I do not know whether Messrs. Barclay & Son are introducing this bath as a novelty—if so, it is an ancient one, as you have a figure in your 1898 DIARY, page 488, very similar in construction. I took the tip from your illustration, and utilised two old essence-of-lemon coppers, and fitted one inside the other, allowing about 2 inches space between for water, fitted a tap through outer to the inner one, and slanted the bottom of interior towards the tap so as to drain all off. By this means I have filled grosses of bottles and 1*d.* and 2*d.* tins of vaseline. It is a most useful article, as you can leave it on dispensing-counter with light (Bunsen burner) underneath, whilst you are attending to customers. A few dozens of bottles can be filled in a short time, and, if carefully watched, without any waste. Your DIARY for that year was, to my mind, one of the most practical ever issued, and should be glad if your next year's was on similar lines. I gleaned many hints that amply repaid me for outlay. It is astonishing what useful bits of apparatus can be made out of free packages, such as vaseline-tins, with the aid of a handy tinsmith, a few pence, and a little native ingenuity. Yours truly,

Elland, June 14. GEO. HODSON.

Dispensing Notes.

Cocaine Precipitate.

SIR,—I should be much obliged if you can tell me how the following ought to be dispensed:—

Sodii bicarb.	℥ss.
Sodii chlorid.	gr. xv.
Cocain. hydrochl.	℥ss. gr. vj.
Aq. rosæ ad	℥iv.

Ft. lotio. To be used as a spray for the throat.

I could not get a clear solution by mixing them together, but by dissolving the $NaHCO_3$ and NaOl together, and the cocaine in a separate portion, and pouring the cocaine solution gradually into the first solution I got a clear mixture. After standing a few hours, however, a precipitate was formed. Do you think the bicarb. ought to be omitted?

Yours truly,

H. B. H. (242/45.)

[Cocaine hydrate is formed in the solution, but if the prescriber would consent to the omission of the sodium bicarbonate the difficulty would be got over].

Ung. Potassii Iodidi.

SIR,—Will you kindly explain to me, through the medium of the *C. & D.*, the cause of failure in the following? I recently prepared a quantity of ung. pot. iod. Immediately the solution of pot. iod. and pot. carb. came into contact with the lard the iodine of the pot. iod. was liberated, discolouring the whole. The B.P. directions were minutely carrried out. As a rule, as in this case, we use pure lard, instead of the benzoated lard.

I may, however, mention that the lard was taken from the bottom of the shop-jar, and may have been somewhat rancid.

Yours, &c.,

POT. IOD. (243/38.)

[We have recently made experiments on this ointment when combined with a mercuric salt, and hope to give the results in an early issue. Meanwhile we shall be glad to hear from any reader who has ideas on the subject.—EDITOR.]

Digitized by Google

A Camphor Mixture.

SIR,—While being deeply grateful to "S. D. D." (179/56) for the method he gives us to be employed with perfect success in compounding the camphor mixture in your issue of April 5 last, which came to hand by last mail, I cannot resist the temptation to call "S. D. D.'s" attention to a small error which he inadvertently allowed to creep in in his explanation. As it will be seen, the mixture in question is intended to be a ʒij. one. But according to "S. D. D.'s" mode of procedure we will have a mixture ʒiij. ʒ iiss. when done, for he makes no allowance for the spt. camphor. and vin. colchici. Yours truly,

Mayaro, Trinidad, B.W.I., May 6. B. F. M. (234/30.)

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

232/30. *Vindex.*—No special outfit is required for South Africa. Clothes that are worn here do out there, if they include a light flannel suit and appropriate summer underclothing. Winter nights are very cold there.

230/51. *Vet.*—Black Antimony does not produce sterility in mares. "Hyams" in calves may probably mean "heaves." See "Veterinary Counter-practice."

236/12. *Unqualified.*—We have not had room for your letter, but we hope that this will not prevent you writing again when the occasion arises. It is advisable, in replying to a correspondent who signs his own name, to do the same.

227/35. *Veritas.*—We cannot account for your statement, as the sample of hair which you send is dyed a nice brown, presumably with the hair-dye. If the hair has been washed before application of the dye, there is sufficient alkali left on it to counteract the acidity of the pyrogallic solution; but in any case the hair may be brushed afterwards with a hair-brush upon which a few drops of ammonia solution have been sprinkled.

248/70. *E. O. R.*—(1) There is no book published dealing solely with the adulteration of drugs. There are good paragraphs in Greenish's "Materia Medica," and in "Pharmacopedia." (2) We have the matter under consideration.

254/4. *Alpha.*—You can rely upon the firms who advertise mechanical dentistry for chemists in the DIARY.

230/36. *F. M. A.*—(1) Quinol Developer.—The average proportion of ingredients per oz. of this developer is quinol 3 gr., sodium sulphite 15 gr., potassium hydrate 4 gr., or potassium carbonate 30 gr. From this you will see your formula is weak in accelerator and too strong in quinol. (2) The non-liable labels are duly noted.

250/9. *In Vino Veritas.*—Prepared chalk is about the best powder for use in cleaning syphon-tops. If the chalk is moistened with ammonia it is improved in detergent properties. A little crocus may be added with advantage.

233/21. *Verax.*—Combined Toning and Fixing-bath ("Pharmaceutical Formulas," page 439).—The directions for this are: "First wash the prints till the water is free from milkiness, then immerse in the bath for not less than ten minutes, till they acquire the proper tone. Afterwards wash for two hours by changing the water every quarter of an hour."

248/43. *Memo.*—The method of making cyclostyle-ink is more or less a trade secret. There is no book on the subject.

248/55. *L. M. & Co.*—Manganese Borate is a well-known siccative. It is used for the preparation of linseed-oil varnish as follows: One part of manganese borate is mixed and afterwards heated with 5 parts of linseed oil to 200-220° C., and this quantity added to 500 parts of hot linseed oil.

249/8. *S. H.*—Sheep-dip Trouble.—The difficulty in not getting a good emulsion with the soft-soap and arsenic dip is no doubt due to the use of hard water. Try making up the solution with rainwater.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

253/17. First-hand sellers of Calais sand.

254/55. Maker of a non-alcoholic coca-wine.

232/36. Maker of india-rubber stoppers for bottles.

256/5. Address of "The Coffee Cigarette Company."

256/27. Makers of Droitwich powder, a remedy for rheumatism.

255/44. Who supplies rice starch, "Monkey Brand"? It comes from Holland.

252/72. Makers of "Granitine" developing-dishes and half-plate hand-cameras.

Trade Notes.

BILLON'S OVO-LECITHIN DEPÔT, 16 Water Lane, E.C., have published in pamphlet form a useful summary of researches on, and the uses of, ovo-lecithin. Any *C. & D.* subscriber can obtain a copy on application to the depôt.

THE DOOMO FLY-CAGE in national colours is Messrs. Jno. H. Smith & Co.'s latest idea. Any chemist who sends 1*s.* 9*d.* to them at Newark-on-Trent will get three dozen of this typical and catching penny line sent to them, post paid.

ADRENALINE SOLUTION is now being extensively prescribed in this country for stopping hæmorrhage of all kinds. The same applies to France, and Dr. Robin has contributed a lengthy article on it to the *New York Herald*. Adrenaline is manufactured by Messrs. Parke, Davis & Co.

A LONDON DEPÔT.—Messrs. Tunbridge & Wright, of Reading, have opened a London depôt at 12 Little Britain, Aldersgate Street, E.C., where a stock of their specialities, including the well-known "Fly Cemetery," Mackenzie's "Catarrh Cure," "Viko" and Cole's Ointment, will be kept.

MR. THOMAS BEECHAM, St. Helens, is publishing little cards, showing in colours the designs of the crowns to be worn by the King and Queen at the Coronation, with the words of the National Anthem on the back. Any chemists who would like a few of the cards to distribute to their customers can get a supply by writing to the head office at St. Helens.

GLYCO-THYMOLINE.—It will be observed from an announcement which appears in the advertisement section of this issue that glyco-thymoline is the name of a preparation made by the Kress & Owen Company, for whom Messrs. Thos. Christy & Co., Old Swan Lane, E.C., are the agents. An injunction which Mr. Justice Joyce has granted to restrain the imitation of the article should especially be noted.

TABLOID HYDRARG. SUCCINIMID.—Messrs. Burroughs Wellcome & Co., Snow Hill Buildings, E.C., have brought out a tabloid hypodermic hydrargyri succinimidum, each tablet containing $\frac{1}{6}$ gr. of the salt. Succinimide of mercury has been before the medical profession for some years as a remedy for syphilis, and its use has lately been revived by Horowitz of Vienna. The injection is said to be comparatively painless, and not followed by abscesses.

A CORONATION SHAMPOO is quite in the orders of the day, and to Messrs. J. Pigott & Son, 33 Marlborough Street, Cork, is due the credit of supplying the requisite preparation in an attractive form and under the title "Pigott's Coronation Dry Shampoo." It makes a good shampoo with an abundant lather, although it is free from ammonia, potash, quillaia, and soap. Lady Emma Bernard says, "It is a delightfully cooling and refreshing hair-wash," and we notice that Dr. MacNaughton Jones orders it. It is also a profitable line for chemists' retail.

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: June 19.

THE business-tone remains much as previously reported, although there has been a perceptible increase in deliveries of some of the chief articles of produce from the warehouses, such as aloes, Sumatra benzoin, dragon's-blood, etc., showing that there is a steady consumption. Outside of this there is little new to report. The additional import-duties (referred to elsewhere) on foreign spirit and glucose have, of course, increased the price of those articles to the extent of the duty. A considerable advance is announced in eserine owing to the scarcity of raw material. Cream of tartar is firmer again owing to continued scarcity. Menthol is easier for arrival, and quinine is lower again owing to heavy bark shipments so far this month. Should there be a decline in the Amsterdam unit a reduction in the makers' price will probably follow. The following are the principal changes of the week:—

Higher	Firmer	Easier	Lower
Aconite	Cream of tartar	Ammonia sulphate	Cinchona
Alcohol	Pepper, black Singapore	Benzols	Menthol (forward delivery)
Canary-seed		Chamomiles	Oil, anise star
Eserine		Ginger (Jamaica, medium)	Oil, turpentine
Glucose			Pepper (Penang)
			Quinine
			Saltcake
			Shellac

Arrivals.

The following drugs and chemicals have arrived at the principal ports of the United Kingdom from June 12 to 17, inclusive:—Acid, carbolic, 85; acid, tannic, 9; acid, tartaric (@ Rotterdam), 70; arrowroot (@ Havre), 19; arsenic (@ Hamburg), 10; bleaching-powder (@ Tréport), 136; camphor, (@ Hamburg) 201 tubs, (@ Kobe) 150; camphor oil (@ Hamburg), 300 cases; canary-seed, 100; cardamoms, 85; caraway-seed, 60; castor oil, (@ Antwerp) 28, (E.I.) 125; chamomiles (@ Ghent), 8; chloride of lime, 62; cinchona (@ Colombo), 50; citrate of lime (@ Messina), 131; cod-liver oil, (@ Christiansund) 5, (@ Aalesund) 10, (@ Bergen) 20; cream of tartar (@ Spain), 5; croton-seed, 1; cumin-seed, 413; drugs, (@ Trieste) 586 pkgs., (@ Fiume) 55, (@ Philadelphia) 30, (@ Hamburg) 10, (@ St. Nazaire) 19, (@ Bombay) 61, (@ Boulogne) 13; essential oils (@ Messina), 349; galangal (@ Hong Kong), 134; gentian (@ Bordeaux), 32; ginger (@ W.C. Africa), 58; gum arabic (@ Trieste), 99; gum sandarac, 26; honey, (Chil.) 850 brls. 5 cs., (@ New York) 20; insect-flowers, 13; iodine, 55; liquorice-juice (@ Sicily), 5; kola (W.C.A.), 25; menthol, 2; nux vomica, 136 bgs.; olibanum (@ Bombay), 710 cs.; opium (@ Calcutta), 47; phosphorus (@ Brussels), 10 cs.; potash chlorate (@ Gothenburg), 58; potash cyanide, 40; quicksilver (Span.), 15; quillaia, 639 bls.; saffron, 2; saltpetre (@ Calcutta), 1,649; sarsaparilla, (@ New York) 50, (@ Guayaquil) 4; senna, (Tiny.) 33, pods 3; shellac 1,733, button 448; soy, (@ Osaka) 15, (@ Hong Kong) 201; spermaceti (Chil.), 25; squills, 6; sulphur, (@ Catania) 2,720 bgs. 294 brls. 1,816 cks. 250 tons, (@ Girgenti) 650 tons; tartar, (@ Bordeaux) 16, (@ Rotterdam) 72; turmeric, 25; vanilla, 6 cs.; wax, bees', (Chil.) 120, (@ W.C. Africa) 26, (@ Auckland) 8; wax, ceresin, 5, (@ Stettin) 48, (@ Hamburg) 20; wax, unenumerated, (@ Havre) 19 pkgs., (@ Hamburg) 20, (@ Antwerp) 15; zinc oxide, (@ Rotterdam) 41, (@ Hamburg) 35, (@ Amsterdam) 40.

Not Removed.

The brief note which appeared in our last issue to the effect that Messrs. R. W. Greeff & Co., chemical merchants, Eastcheap, E.C., had removed, was wrong. The firm remain at 20 Eastcheap, and have no intention of removing.

British v. Foreign Spirit.

THE following are the views of a London importer in regard to the new spirit regulations and duties:—"The concession in regard to duty-free spirit may lead to a revolution in the manufacture of fine chemicals, if the Government will really do what they promise, and allow manufacturers to use alcohol as cheap as foreign manufacturers—*i.e.*, without charging an antiquated differential duty of about 100 per cent. on the present value. It is recognised that rectified British spirit is too high in price to allow manufacturers to compete with the German make, so that it would appear more economical to purchase rectified German spirit (B.P. quality), which can be laid down in the Thames at about 5*d.* or 6*d.* per gal. in bond. If such spirit can be used without any further "duties or customs," all would be well, but if duty-free alcohol refers to either English grain-spirit at 1*s.* 3*d.* per gal., or German spirit at 5*d.* or 6*d*, plus 5*d.* for differential duty, it is difficult to see how British manufacturers are placed on a footing to compete with the foreign manufacturer. Now comes the extra 1*d.* on the differential duty in its bearing on duty-paid spirit. It simply means that we have to pay 1*d.* more for our spirit (which is in most cases made from potato), because the few English distillers of S.V.R. have to pay 1½*d.* per cwt. on some grain which they use for distilling purposes, while many an English distiller can distil molasses in bond—*i.e.*, free of duty. My argument is that the British manufacturer has to pay 1*d.* per gal. more for the foreign spirit he uses, or else he has to buy the dearer grain spirit. A way out of the difficulty would be for the Chancellor of the Exchequer to impose the extra 1*d.* on foreign *grain* spirit, but not on other *plain* spirit.

Heavy Chemicals.

On the whole there seems to be a somewhat increased inquiry for both main and miscellaneous products, and, if anything, business in the heavy-chemical market is slightly more brisk. Demand for export at all ports is heavier, and with home consuming trades being fairly well employed a steady demand in this branch is also apparent. Deliveries against existing contracts are well up to the average. There is little new to be reported about values, they being for the most part steadily maintained at unchanged rates.

ALKALI PRODUCE.—Bleaching-powder is moving off rather better again at 6*l.* 7*s.* 6*d.* per ton for softwood casks, free on rails, and for hardwoods, f.o.b., Tyne or Liverpool, for export, 6*l.* 7*s.* 6*d.* to 7*l.* per ton. Caustic soda in steady demand, 76 to 77 per cent., 10*l.* 7*s.* 6*d.* to 10*l.* 15*s.* per ton; 70 per cent., 9*l.* 15*s.* to 10*l.* per ton; and 60 per cent., 8*l.* 15*s.* to 9*l.* per ton. Saltcake quiet and a little lower again, at 21*s.* to 23*s.* per ton, free on rails, in bulk. Amonia alkali, soda crystals, &c., unchanged in value or position.

SULPHATE OF AMMONIA is again a shade easier, and prices are a point lower all round, and there is tendency towards further decline.

ZINC SALTS are in moderate consumptive demand, with values a trifle lower. Zinc-sulphate crystals, 5*l.* 17*s.* 6*d.* to 6*l.* 2*s.* 6*d.* per ton. Zinc-chloride solution, 100° Tw., 5*l.* 15*s.* to 6*l.* 5*s.* per ton.

BENZOLS are dull, with little prospect of improvement—in fact, values have again declined a shade; 90 per cent., 8*d.* per gal.; and 50 per cent., 7*d.* per gal. Aniline oil and salt 4½*d.* and 4¼*d.* per lb. respectively.

LEAD PRODUCTS in steady request and prices well maintained. White sugar of lead, 24*l.* 5*s.* per ton less 2½ per cent., Glasgow. Brown sugar of lead, 17*l.* per ton, less 2½ per cent., Glasgow. Nitrate of lead, 22*l.* 10*s.*, less 2½ per cent, Glasgow.

PEARL HARDENING in better demand both on home and export account, at 60*s.* to 65*s.* per ton, in usual casks, free on rails or free on board.

Liverpool Drug-market.

Liverpool, June 18.

CASTOR OIL.—The position of good seconds Calcutta remains practically unchanged, and sales are being made at 2¼*d.* to 2⅛*d.* per lb., according to quantity. The s.s. *Statesman* has arrived with about 600 casks, but this has not affected the market quotation. First-pressure French is still quoted at 2⅜*d.* to 2⅝*d.*, and seccnd-pressure 2⅛*d.* to 2⅜*d.* per lb.

TURPENTINE.—The movement for the week has been entirely in favour of sellers, and 40*s.* to 40*s.* 6*d.* per cwt. is now quoted for the remaining stocks.

CANARY-SEED.—Fifty bags of good bright Turkish have been sold at 37*s.* 6*d.* per quarter, and since that transaction 320 bags

Digitized by Google

have been sold at 40*s*. The remaining stocks are in exceedingly small compass, and higher prices will no doubt be asked for what is available.

Calabar Beans.—Two bags sold at auction, and realised 10¾*d*. per lb.

Beeswax (Chilian).—For seven bags fair yellow at auction 7*l*. 16*s*. 3*d*. per cwt. was paid.

Quillaia.—Notwithstanding somewhat heavy arrivals, sales continue to be made at 12*l*. 17*s*. 6*d*. to 13*l*. per ton, a large parcel of 30 tons being sold at the latter figure. It is expected that values will be fully maintained.

Gum Acacia.—Further sales of Soudan softs have taken place, but the quantity is somewhat limited. The tendency is still in buyers' favour.

Carnauba Wax.—Considerable business has been transacted during the week at prices which show the maintenance of recent figures.

Honey.—The demand for Chilian and Californian is still limited, but the position of Californian has been improved by the reports of short yields in producing districts. Holders seem inclined to hold their stocks for more money. The values of Chilian are unaltered.

Sulphate of Copper.—Firm at from 18*l*. 5*s*. to 18*l*. 10*s*. per ton.

German Drug-market.

Hamburg, June 17.

Business is extremely quiet here.

Agar Agar is a little firmer for spot goods at 325m., and for forward delivery the value is 310m. per 100 kilos.

Camphor.—Refined is in an unsettled position. Makers are selling under their official price of 435m.; and second-hand holders quote 415m. per 100 kilos.

Ergot is decidedly firm and scarce. Russian is held at 340m., and Spanish at 350m. per 100 kilos.

Galangal is slow of sale at 33m.

Japanese Wax is firm at 80m. to 85m. per 100 kilos.

Menthol.—Spot delivery is firm at 32m.; and forward is lower at 30m. per kilo.

Star-anise Seed is lower at 115m.

Senega is also lower at 495m. on the spot; and forward delivery at 450m.

Star-anise Oil lower at 10m., and 9¾m. for 10-case lots.

Peppermint Oil (HGH) is quoted 8¼m. per lb.; and Japanese spot 8¾m. per kilo.; and forward delivery 8m.

Sugar of Milk quiet at 80m. per 100 kilos.

American Drug-market.

New York, June 10.

The market is quiet, and there is an absence of features of particular interest.

Balsams.—Canada Fir is easier, and $3.50 per lb. will buy.

Beeswax.—Ordinary yellow is offering in small lots at 31½c., c.i.f. The finer grades are fetching prices up to 33c.

Buchu-leaves are scarce on the spot, and firm at 24c. to 26c. for prime green.

Cod-liver Oil has taken a decided upward turn, and $35 is now an inside quotation. Small lots have sold at $31 up to $31, and some dealers refuse to quote at present.

Golden Seal (Hydrastis).—Fall-dug root is firmly held at 52c. to 55c., but spring root is offered at 51c.

Menthol has advanced to $4.15 per lb.

Oil of Peppermint is unchanged but firm, and should any extensive demand arise during the next few months prices would reach a high figure. It is as yet too early to speculate on the new crop.

Serpentary has declined to 35c. per lb.

Cablegrams.

Bergen, June 18, 8 20 p.m.:—The value of best Lofoten non-congealing oil is unchanged, but firm at 140*s*. per barrel, f.o.b. The fishing at Finmarken remains much as previously reported, only 400,000 cod having been caught during the week, which now makes the total catch to date 41,900,000, against 38,000,000 at the corresponding period of last year. The yield of oil is now 18,900 barrels, as compared with 50,300 barrels last year.

Amsterdam, June 19:—At the auctions of cinchona held here to-day 6,291 packages were offered, containing 27,587 kilos. quinine sulphate. Of the above quantity 5,525 packages were sold at an average unit of 7.25*c*. per half-kilo., against 8.65c. paid at the auctions on May 15. The following were the approximate quantities of quinine purchased by the principal buyers: English and American factories, 9,938 kilos.; the Brunswick factory, 3,511 kilos.; the Mannheim and Amsterdam factories, 4,161 kilos.; the Frankfort-on-Main and Stuttgart factories, 2,532 kilos.; and various buyers, 3,780 kilos. The prices paid for the manufacturing-bark ranged from 6*c*. to 84c. per half-kilo., and druggists' bark from 6*c*. to 61½c. per half-kilo.

New York, June 19:—Business here is quiet. Cod-liver oil is excited, and $89 per barrel is now the lowest figure. Opium remains easy, at $2.80 per lb. Senega is lower, at 47c. per lb. Cartagena ipecacuanha has also been reduced, and $1.10 will now buy. Peppermint oil is firm, at $1.70 per lb. for bulk. Wild-cherry bark of the new crop is scarce, at 5*c*.; and bleached beeswax is also scarce, at 35*c*. per lb.

Smyrna, June 19:—The opium-market is steady, the sales for the week ending Wednesday, amounting to 25 cases for America. For current talequale 7*s*. per lb., f.o.b., has been paid, and 7*s*. 2*d*. for Yerli.

Acid, Citric, is firm, owing to the advance in juice 1*s*. 0¼*d*. per lb. is the lowest price for English crystals.

Acid, Tartaric.—In better demand at from 10½*d*. to 10⅝*d*. per lb. foreign, and 11¼*d*. for English.

Aconite.—Importers do not offer "c.i.f." owing to scarcity. There is also little Continental root on the spot, and orders for a quantity cannot be filled; 38*s*. appears to have been the last price paid.

Alcohol.—The addition of a 1*d*. per gallon on foreign spirit now brings the duty on that imported for methylation purposes (principally German potato spirit) to 5*d*. per proof gallon. Druggist's quality is quoted 6*d*. to 6½*d*. per gallon, c.i.f., in bond, according to quantity.

Aloes has been in fair demand since the auctions, and sales of Socotrine in cases are reported at 72*s*. 6*d*. per cwt.

Antimony.—White oxide of French make, guaranteed 98 per-cent. pure, is quoted 29*s*. per cwt., and grey at 32*s*, spot.

Benzoin.—After the good business last week at dearer prices, there is naturally little doing, the inquiry being mostly for Sumatra gum at between 9*l*. and 11*l*. per cwt. Further sales of Siam ex auction are reported at 6*l*. 15*s*. for Siam grains in block, and for good shivery block 13*l*. 10*s*. is asked.

Canary Seed is dearer on bad crop reports and small stocks. The price of Turkish is 39*s*., c.i.f., for shipment, but parcels on the spot may be bought at 38*s*. From all accounts the canary-seed crop in Turkey has suffered severely from the drought and the outturn is not likely to be more than that of last year. There are no sellers at present, and price is nominally up to 10*s*. f.o.b. Constantinople.

Cascara Sagrada is slow of sale with sellers of two-year-old bark at 25*s*. per cwt.

Chamomiles.—Quiet and easier, with sales of fairly good flowers at 50*s*. per cwt., spot.

Cinchona.—The shipments from Java for the first half of June were exceptionally heavy—viz., 666,000 Amsterdam lbs.

Cocoa Butter.—The auction to be held at Amsterdam on July 1 will consist of 55 tons Van Houten's, 8 tons De Jong, 4 tons Helm, 4 tons Betke, and 12 tons Mignon.

Cream of Tartar.—The upward movement continues owing to scarcity and the advance in crude tartar, prices abroad being above the parity of those ruling here. For 98 per cent. powder (B.P.) 79*s*. per cwt. is quoted, and 78*s*. for 95 per cent. Best white commercial crystals are offered at 74*s*., and powder at 76*s*.

The exports from Bordeaux to the United Kingdom during 1901 were 41,166 cwt., against 35,887 cwt. in 1900, and of raw tartar 1,146 cwt. was exported, against 2,516 cwt.

Dragon's-blood.—Since the auction a few cases of dull *Reed*, slightly damp, have been sold at 8*l*. per cwt., and a case or two of fine lump at 13*l*. 10*s*. The s.s. *Candia*, from Singapore, has arrived with 19 cases.

Eserine.—In consequence of the extreme scarcity of Calabar beans and the indifferent quality that is offered, makers have made a substantial advance of 3*s*. per gramme, the prices for sulphate and salicylate now ranging from 7*s*. 6*d*. per gramme, net, for 50-gramme lots, to 8*s*. for small

Digitized by Google

wholesale quantities. Pure is 9*s.* in small lots. Makers are said not to be anxious sellers.

GLUCOSE.—The addition of a further Customs-duty of 6*d.* per cwt. on solid and liquid glucose now brings the rate to 3*s.* 3*d.* and 2*s.* 6*d.* per cwt. respectively.

HENBANE.—Foreign leaves of the new crop are quoted 33*s.* to 40*s.* per cwt., c.i.f., according to quality.

INSECT-FLOWERS.—Sellers abroad are anxious to make progress. Closed flowers are quoted 110*s.* to 130*s.* per cwt., "half-closed" 95*s.* to 100*s.*, "open" 80*s.*, c.i.f.

IPECACUANHA.—Quiet and unchanged. The arrivals this week are only 2 bales of Rio and 8 bales cultivated root from Bahia.

JALAP is quoted at 4½*d.* per lb., spot, a new lot being offered at this figure.

LIME JUICE.—It appears that the prevailing unseasonable weather is the only hindrance to an advance, as spot supplies are at a very low ebb. From 1*s.* 4*d.* to 1*s.* 5*d.* per gal. is quoted for raw West Indian.

MATICO.—The exports from Mollendo during 1901 amounted to 30 kilos. only (2*l.*), against 598 kilos. (59*l.*) in 1900.

MENTHOL.—Quiet at from 14*s.* to 14*s.* 3*d.* per lb., spot. To arrive a considerable quantity has been sold in Japan, for shipment to the Continent, at from 12*s.* 6*d.* to 12*s.* 9*d.* per lb., c.i.f., being lower.

NUX VOMICA.—A report from Calcutta, dated May 29, states that there have been several inquiries on the market for America, but buyers and sellers have been unable to come to terms, and no sales worth mentioning have been made. Imports have continued on a small scale, and stocks remain light at about 25 tons.

OIL, CASTOR.—Quiet. First pressings of Hull make is quoted 25*l.* per ton for November-December delivery ex wharf London. Belgian on the spot is quoted 26*l.* for firsts and 23*l.* for seconds.

OIL, COD LIVER.—According to our Bergen correspondent the Finmarken fishing is still continued, with but little success however, and should there not be an improvement soon the fishermen will be compelled to suspend operations. The market is very firm at 140*s.* per barrel, f.o.b., Bergen, and there is only a limited quantity available at that figure. The exports from Bergen up to date amount to 4,132 barrels against 5,283 barrels at the same time last year. The London market is dull and practically no business is reported.

OIL, OLIVE.—A report from Messina, dated May 31, states that the weather has been unusually cold and wet, with snow and frost in the mountain districts. This has, of course, not been favourable to the olive-oil crops, but it is yet too early to make any forecast. On the London market finest Lucca oil is quoted 4*s.* 6*d.* to 5*s.* 6*d.* per gallon. The position of all descriptions is strong, but there is not much doing.

OIL, PEPPERMINT.—There has been some inquiry for Japanese dementholised, holders of which are asking 3*s.* 10*d.* to 4*s.* per lb., spot; 40-per-cent. oil is very scarce, at about 8*s.* 6*d.* per lb.

OIL, TURPENTINE.—American closes at 38*s.* 9*d.* per cwt., but not much doing.

OPIUM.—The London market is very dull but fairly steady. Good Persian is obtainable at 8*s.* 3*d.* per lb.

SMYRNA, June 7.—The weather for the past two weeks has been very favourable, and the harvest is taking place under propitious conditions. Notwithstanding the good crop prospects, and the large stocks of Persian and old Turkey drug, buyers on the producing markets are foolishly paying comparatively high prices, which keeps the market firm. For good working material, 7*s.* 3*d.* to 7*s.* 6*d.* per lb. is asked, but there are no buyers at these prices. The sales for the week amount to 31 cases, comprising 25 cases current talequale, at from 7*s.* 6*d.* to 7*s.* 8*d.* per lb., c.i.f., and 6 cases inspected Karahissar, at 7*s.* 11*d.* The arrivals in Smyrna to date amount to 3,362 cases (including 52 cases of the new crop), against 4,079 cases (and 9 new crop) at the same time last year.

CONSTANTINOPLE, June 13.—The crop prospects are all that can be desired, and everything points to an abnormal yield, which is now estimated to reach 8,500 to 9,000 cases. Prices will, no doubt, range very low, and the general idea prevailing is that the parity of 6*s.* 3*d.* to 6*s.* 6*d.* will be touched, providing speculators do not force up prices. The gathering of the Salonica crop is in full swing, owing to excellent weather, and the yield is now expected to reach 3,000 cases. The week's sales amount to 3 cases "druggists'" at 7*s.* 3*d.* per lb., f.o.b. Market is quietly steady.

ORRIS.—Letters from Messina intimate a better demand lately, fair quantities having been purchased by the United States, Germany, and England. Values do not seem to move, however, and importers' prices are still very low, from 24*s.* to 25*s.* 6*d* per cwt., c.i.f., for picked root, and 21*s.* for sorts.

OTTO OF ROSE.—As will be seen from our Bulgarian correspondent's letter, only a middling crop is now expected, owing to the unfavourable turn in the weather at the time of harvesting. As present values of otto are now very low, and with a possible increase in the consumption this year, a reduction in prices from those now ruling can hardly be looked for.

PHENACETIN.—The market remains in an anomalous condition, as although the official price is maintained at 6*s.* per lb. for bottom quantities, there is no business to be done while continental makers quote 1*s.* or more under these figures.

QUICKSILVER is in steady demand at 8*l.* 15*s.* per bottle.

QUININE.—A very quiet and easier market in second-hands. At the close of last week 11$\frac{15}{16}$*d.* per oz., spot, was accepted for a quantity, and 11$\frac{15}{16}$*d.* for October delivery, but subsequently there were sellers at 11¾*d* for spot, and 1*s.* has been paid for December. A certain proportion of the quinine sold at the lower prices was manufactured ten to twelve years ago, but for comparatively new German sulphate, say, two to three years old, 1*s.* has been paid for spot delivery, showing a margin of 3*d.* on the makers' price. It is quite anticipated that makers will reduce their official figure before the end of the week.

RHATANY.—The exports from Mollendo during 1901 amounted to 4,008 kilos. (400*l.*) of which Hamburg absorbed 1,940 kilos., and Havre 2,068 kilos. In 1900 11,564 kilos. (1,156*l.*) were shipped.

ROSE-PETALS.—It appears that the French crop has been partly spoiled by bad weather. New are quoted 3*s.* 2*d.* to 3*s.* 3*d.* per lb., c.i.f.

ST. IGNATIUS' BEANS.—There is a little inquiry, with holders firm at 3¾*d.*, and buyers at a shade under.

SHELLAC.—The quotation for fair Orange TN on the spot is now 105*s.* to 108*s.* per cwt. cash terms, and a small business has been done at these figures. Futures have fluctuated, and early in the week a fair business was done, including July and August delivery, at 105*s.*, but on Wednesday the market was inactive.

SPICES.—At auction on Wednesday Cochin *Ginger* was sold at 38*s.* per cwt. for rather dull washed rough, and at 34*s.* to 34*s.* 6*d.* for good cuttings, being steady. Jamaica mostly sold, but at irregular prices, medium qualities being rather easier; common dark to ordinary dull sold at 34*s.* 6*d* to 37*s.*, middling dull to fair washed at 39*s.* 6*d.* to 43*s.*, and good to fine washed at 48*s.* to 57*s.* per cwt. Japan is unchanged at 33*s*, and Bengal at 42*s.* per cwt. Penang *Cloves* partly sold at 5½*d.* per lb. for dark; good Zanzibar sold at 4*d.*, but fair were bought in at 3¾*d.* For June-August delivery there are rather buyers at 3¾*d.*, but business is slow. Amboyna were held for 5¼*d.* per lb. for fair. *Pimento* slow, a few lots sold at 2⅝*d.* per lb. for fair, and 2½*d.* for ordinary. *Capsicums* were bought in at 26*s.* per cwt. for fair cherries, and 18*s.* for middling red on stalk. *Cinnamon-bark* sold at ½*d.* to ¾*d.* per lb. Singapore black *Pepper* is firmer, greyish to good was bought in at 5½*d.* to 5¾*d.* per lb.; but privately business is doing at 5½*d.* to 5$\frac{9}{16}$*d.* on the spot, and at 5⅝*d.* for January-March shipment. Alleppy partly sold at 5¼*d.* to 5⅝*d.* for good small. Penang was lower, selling at 4¾*d.* per lb. Singapore white was bought in at 9½*d.* per lb. for common dark, and 10⅜*d.* to 11*d.* for good to fine. Penang was bought in at 8¾*d.* per lb. Business is doing privately at 9⅝*d.* to 9¾*d.* per lb. for fair Singapore, and at 8½*d.* for Penang.

STAR ANISEED.—An advice from Hong-Kong dated May 9 states that a fair business has passed during the preceding fortnight, about 500 piculs having changed hands; 55*s.* 6*d.* per cwt., c.i.f., is quoted.

Digitized by Google

Sulphur.—The Messina market was exceedingly quiet during May. No improvement in exports to France and Italy has taken place, which during April were 9,000 tons less than last year. Demand for U.S.A. was slow owing to previous large arrivals of brimstone at New York. The total stock in Sicily is about 250,000 tons against 190,000 tons last year. Almost the whole of this is owned by the Anglo-Sicilian Sulphur Company. Prices are maintained, and will be for the present unless it be for a large quantity. It is suggested that to obtain such a reduction the principal exporters and buyers ought to unite and make a low bid, which at the present time has some chance of being accepted. At the end of June the new melting begins, and from August to December from 3,000 to 4,000 tons will be pouring in daily. This requires large sums of money, and although there is not the slightest doubt the company can procure whatever capital may be required, it may be convenient for them to get rid of a large portion of their stocks by making a momentary reduction in prices. Best unmixed seconds are quoted 83*s.* 6*d.*, best thirds 75*s.* 6*d.*, refined block sulphur 85*s.* per ton of 13 Sicilian cantars, f.o.b.; refined roll 95*s.*, sublimed flowers 101*s.*, and mixed ditto 93*s.* 6*d.* per ton of 20 cwt., f.o.b. On the London market foreign flowers are quoted 6*l.* 10*s.*, and *roll* 6*l.* 5*s.* per ton.

Turmeric.—Small sales of fair split Cochin bulbs have been made at 10*s.* per cwt. Bengal is quiet at 15*s.*, spot, and for arrival there are lower offers on the market.

Vanilla.—The exports from Réunion (Bourbon) during 1901 amounted to 50 tons (77,002*l.*) against 95 tons (151,006*l.*) in 1900. There are 40,000 vanilla-plants in German East Africa, principally in the Kitopeni plantation. The British Consul reports that the product requires greater care in German East Africa than in any other countries, but the same results are achieved by careful treatment. The amount exported last year is not stated.

Wax, Carnauba.—During 1901, 901 tons were exported from Pernambuco, against 830 tons in 1900. Of the former quantity, the U.K. received 327 tons, U.S.A. 234 tons, and other countries 340 tons. From Ceará the exports amounted to 108,239 kilos. in 1901, 169,931 kilos. in 1900, and 103,287 kilos. in 1899.

Wax, Japanese.—The spot-price is 44*s.* per cwt., and a small business has been done at this figure.

The Bulgarian Rose-crop.

Our correspondent in Bulgaria, under date of June 14, writes us as follows:—"The distillation of this year's rose-harvest is rapidly nearing the end. In a week at the most it will be all over, and by July 1, I shall be able to send you a full and verified report regarding the total yield of the crop. The weather during the last ten days has been most unfavourable—excessively dry and tropically hot with pernicious southern winds. This unwelcome change has not only been very sudden, but also extremely unusual, and it will greatly affect the general yield of the crop. Only a fortnight ago everyone felt sure of a crop considerably above the average, but now even the most sanguine farmers expect only a middling crop. It is the weather during the harvest that makes, after all, a rich or poor rose-crop. In addition to the damage caused by the excesive hot weather in the lowlands, the rose-bushes have sustained considerable damage from blight, which has dried up and withered the young and unmatured rose-buds. It is too early yet to give you exact estimation of the total yield, as the harvest is not yet over, and the reports coming from all the sections of the rose-district are not yet verified. It is a confirmed habit with the growers to always minimise the crop in order to realise higher prices for their produce, and all current news and reports need strict verification. Judging from all present indications and personal observations, the total yield of the new crop is likely to run between 70,000 and 85,000 Turk. oz.

Japanese Drug and Chemical Markets.

Yokohama, May 20.

General trade is very quiet in both imports and exports, and the drug-trade shows no exception. Owing to heavy fall in the price of silver, the export trade to China is now in a very bad condition.

In export stuffs menthol crystals are wanted at 8 yen to 8.20 yen, without any important transactions; holders are not anxious sellers in face of light supply. Dry ginger is unchanged, but with less important business. Oil of peppermint is firmly held at the unchanged rate of 2.60 yen per catty, without sellers of large quantities. Crude camphor is lower, this being solely due to the negative decision regarding "Monopoly of the Home Product." Soon after the Bill was rejected by the Upper House the article was lowered to 70 yen per picul, and present quotation is 65 yen, with still a lower tendency. It is rumoured that the Monopoly-agent of the Formosan Government is now trying to obtain some reduction out of the Monopoly scale of 73 yen per picul, which price means considerable loss to the agency. Refined camphor has also been reduced, and refiners are forcing sales; the present quotations are 93 sen to 95 sen per lb. for 1-oz. and ½-oz. tablets. Iodides are firmer, and demand, both at home and abroad, continues fairly brisk, consequently the raw material is again higher. The new crop will commence at the end of June. The present quotations are for crude iodine, 3.50 yen; iodide of potassium, 3.55 yen; iodoform (Ph. Jap.), 5.55 yen; resublimed iodine, 4.75 yen per lb. respectively. Bleaching-powder (31 per cent.) is quoted 5.25 yen per 100-lb. case. Copper sulphate can be had at 13.90 yen per picul in wholesale quantities.

In import articles, tartaric acid is selling well, but market is weak at 54 to 55 sen per lb. for P.J. quality in casks and kegs. Citric acid is also weak at 69 sen per lb. in keg; but the quotation has advanced a little since my last report. Carbolic acid in white crystals is weak, owing to free arrivals of cheap cargo; the importations since March 1 up to present time are estimated at 1,200 cwt. Seasonable demand has now commenced, and the quotation is 42 sen per lb. in bottles and 34 to 35 sen per lb. in drums. Bismuth subnitrate, P.J. quality, is steady at 2.65 yen per lb. Cocaine is scarce, and price is naturally very high; holders quote 11.50 yen per oz., but this is only until arrivals; forward goods can be had at 9.70 yen per oz. Balsam copaiba has advanced; the present quotation is 1.07 yen per lb. Morphine is weak at 39 yen per lb. Quinine has advanced, and a good many transactions have been made at the prices ranging from 60 to 63 sen per oz. Sugar of milk is higher at 24.50 yen per cwt. Santonin is steady at 9.20 yen per lb. Thymol crystals are lower at 4.50 yen per lb. Cinchona-bark has advanced, and present price is 50 yen per picul for 7-per-cent. quality. Ergot is weak at 95 sen per lb. Condurango has advanced, and available stock seems to have been well concentrated; holders now ask 28 sen per lb., which is below cost. Rio ipecacuanha is lower at 6.25 yen per lb. Saffron is weak at 17 yen per catty, without purchasers. Senega is firmly held at 1.40 yen per lb. Shellac is dearer; "A1" is quoted at 95 yen per picul, with a small supply.

Manchurian Hemp Oil in Russia.

According to a report issued by the Central Bureau of the Russian Customs Department, 10,000 poods of Manchurian hemp oil were despatched from Kharbin to Vladivostok for shipment to Odessa in January of this year. The *Novoe Vremya*, in noticing the venture, speaks of it as the first attempt in the way of importing hemp oil into Russia from Manchuria, and declares that it has been a highly successful one. This trial consignment of Manchurian hemp oil has sold so satisfactorily, and been found to be of such good quality, that a second consignment of 100,000 poods from Kharbin is already on its way to Odessa.

American Oil of Peppermint.

A correspondent of the *O. P., & D. Reporter* states that the area planted with peppermint this year is about 15 per cent. to 20 per cent. greater than last year, but little or no increase is expected in the area that will be distilled, as a certain proportion of the mint has been eaten by worms. Should the season be unusually favourable from now on (May 24), the yield of oil may be 10 per cent. to 15 per cent. greater. Should it be a poor season, it will be less than last year's crop in the total amount produced. The total American crop last year was about 130,000 lbs., scarcely more than half the world's annual consumption, which is probably not less than 200,000 lbs. On account of the small crop last year, the greater part of the surplus which had been carried over has now been consumed; and, in fact, it has been decreasing for a couple of years, since the over-production from 1897 to 1899 placed the markets much below the cost of production, which discouraged further planting, the result being that the stocks are much smaller now than for many years, and are daily growing less.

The shipments of bismuth ore from Mollendo last year amounted to 4,227 kilos. (85*l.*), which was sent to Havre.

We once again hear of Doctor Priestley; but after all his disappointments on the other side of the Atlantic, where he expected to receive every gratification of his heart, we doubt whether the Honour which has been conferred on him by the National Institute of France will be sufficient to console him for the ingratitude of America.—From the *Times* of 1802.

June 25, 1902, 5 P.M.

Coronation Holidays.

We have made inquiries this morning as far as the telephone and other means have permitted, and find that the following firms will close on Thursday and Friday, as arranged, resuming business on Saturday, June 28, at 8 A.M.:—

Burgoyne, Burbidges & Co., Coleman Street, E.C.
Davy, Hill & Co., Park Street, S.E.
Hodgkinsons, Clarke & Ward, Whitecross Street, E.C.
Hodgkinson, Prestons & King, 81 Bishopsgate Street, E.C.
Howards & Sons, Stratford, E.
Potter & Clarke, Artillery Lane, E.C.
T. & H. Smith & Co., City Road, E.C.
Thos. Tyrer & Co. (Limited), Stratford, E.
Wright, Layman & Umney, Southwark Street, S.E.

The following will close for the three days:—

Burroughs Wellcome & Co., Snow Hill, E.C.
W. Butcher & Sons, St. Bride Street, E.C.
S. Maw, Son & Sons, Aldersgate Street, E.C.
THE CHEMIST AND DRUGGIST, 42 Cannon Street, E.C.
Parke, Davis & Co., Queen Victoria Street, E.C.

The following will close on Thursday only:—

Barron, Harveys & Co., Giltspur Street, E.C.
Evans, Lescher & Webb, Bartholomew Close, E.C.

The following have cancelled their closing-arrangement.

Arthur H. Cox & Co., Brighton.
Raimes & Co., York.
Sanitas Company (Limited), Limehouse, E.

The Glyn-Jones Stamp-case.

At the Thames Police Court this afternoon proceedings were resumed in the action at the instance of the Board of Inland Revenue against Mr. W. S. Glyn-Jones, chemist and druggist, for selling without a medicine-stamp a bottle of ammoniated tincture of quinine, which was said to be "a well-known and highly recommended remedy for colds and influenza." The earlier stages of the case were reported in the *C. & D.*, May 24 and June 14. Mr. Glyn-Jones relied upon the exempting clause which permits chemists and druggists to utter or vend unstamped, under certain conditions, mixtures known, admitted, and approved of in the prevention, cure, or relief of any disorder. The case was resumed to-day, when the Inland Revenue barrister concluded his remarks, after which Mr. Dickinson (the Magistrate) gave his decision in favour of Mr. Glyn-Jones.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. — Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. — 114a Pitt Street.
- Adelaide, S.A. — 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. — Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of SIXTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

CIRCULARS AND PRICE-LISTS.

HOW TO DISTRIBUTE THEM TO THE DRUG-TRADE.

MANY of the best advertisers in the drug-trade have endorsed our view that it is more effective as well as cheaper to distribute circulars and price-lists stitched up in THE CHEMIST AND DRUGGIST than to send them singly by post. We make such insets in the *C. & D.* notable by the fact that we only receive them twice a year for distribution, and we ensure that they get into the hands of the right people. We would advise those who think of having an inset in our Summer number (July 26, 1902) to write to our Publisher for particulars. He will also give assistance, if required, in designing or arranging insets.

Summary.

THIS NUMBER completes our sixtieth volume. An index is inserted between p. 1000 and p. 1001.

WE ASK a solution of the hieroglyphics on p. 990.

IRISH SOAP is getting popular in the Emerald Isle (p. 980).

THE nature of the King's illness is referred to in a note on p. 992.

SOME interesting and useful practical notes will be found on p. 990.

DR. S. GULLI gives useful information regarding oil of bergamot-leaves (p. 995).

SIX PRIZES are awarded to our DIARY "Hints and Verses" competitors (p. 995).

THE West Indies promise to be able to supply citric-acid materials (p. 994).

THE STUDENTS' CORNER PRIZES go to Killingworth Station and Newcastle (p. 976).

DR. VAN LINGE has resigned the managership of the Java cinchona-factories (p. 995).

THE first stage in the action alleging infringement of "Kodak" rights is reported on p. 998.

THE ROYAL COMMISSION on the port of London proposes in effect to municipalise the docks (p. 994).

EXETER CHEMISTS are endeavouring to get the Technica College pharmacy-classes continued (p. 979).

SEVERAL AMENDMENTS on the Licensing Bill especially interest chemists and druggists, and are referred to on p. 1000.

THE *Lancet* seems to be in favour of taking the sale of some poisons out of the hands of chemists and druggists (p. 993).

OUR PARLIAMENTARY CORRESPONDENT sends us a "communication" about the Poisons Committee which is of special interest (p. 1000).

THE route which the Coronation procession was to have taken contains comparatively few pharmacies. We give photographs of them on p. 982.

AT the cinchona-auctions on Tuesday there was a steady demand at a reduction of 15 per cent., the average unit being 1½*d.* to 1⅝*d.* (p. 1006).

THE PRIVY COUNCIL has approved of the regulation which requires liquid disinfectants containing poison to be put in bottles distinguishable by touch (p. 978).

MESSRS. J. P. GILMOUR (Glasgow), JAMES NESBIT (Portobello) and W. CUMMING (Dundee) are the new members of the North British Branch Executive (p. 997).

KODAK (LIMITED) have beaten the Inland Revenue authorities in the latter's contention that the company must pay income-tax on the American profits as well as the British (p. 998).

QUININE in first hands is 2*d.* lower, and phenacetin has been reduced 1*s.* 4*d.* for home consumption. Cream of tartar, canary-seed, and juniper-berries are dearer. Shellac and arsenic are lower (p. 1005).

THE LORD CHIEF JUSTICE and two Judges have made absolute the rule requiring the Brentford Justices to state a case for High Court consideration in reference to "Pure-gum pastilles—Influenza" (p. 998).

A TITLE TEST-CASE is recommended to the Council of the Pharmaceutical Society by the Scotch members, who wish to interdict shareholders of limited companies from using the title "chemist and druggist" (p. 997).

THIS WEEK'S "Observations and Reflections" are on the London Chemists' Association, the Glasgow Trade Association, Mr. Seabury's anti-cutting plan, the Bradford Charms, B.P. solubilities, and Gregory's powder (p. 991).

MR. SWIFTE, the Dublin Magistrate, has held that there is no limit in the Irish Pharmacy Act (Widows' Clause) as to the conducting of the businesses of deceased pharmaceutical chemists. He has accordingly dismissed the summons taken out by the Pharmaceutical Society against two ladies (p. 1004).

LATE NEWS.

The lamentable illness of the King was announced while these pages were being prepared for press, and, it having been decided by the Government that the public holidays on Thursday and Friday should stand, we have considered it unnecessary to cancel our own arrangements as to publication. We are reserving space in the Coloured Supplement for the insertion of news which may be received on Wednesday, and refer our readers to the Supplement accordingly.

Corner for Students.

CONDUCTED BY LEONARD DOBBIN, PH.D.

REPORTS.

THE powder distributed to students on May 28 contained 5 parts of sodium ammonium hydrogen phosphate, (microcosmic salt), 4 parts of potassium chloride, and 1 part of potassium chlorate.

The calculated composition of such a mixture is—

K	24·2
Na	5·5
NH_4	4·3
Cl	19·0
ClO_3	6·8
PO_4	22·7
H	0·2
H_2O	17·2
	99·9

The powder also contained, as impurity, a trace of sulphate.

Samples of the powder were distributed to sixty-six students, and forty-five reports were submitted for examination.

Sodium was the only constituent of the powder which all our correspondents succeeded in detecting. The failures in the detection of the other constituents were—(*a*) metallic radicals: potassium, 3; ammonium, 1; (*b*) acid radicals: hydrochloric, 1; chloric, 24; phosphoric, 3. No fewer than fourteen students (almost one-third of those who sent in reports) failed to observe the water, which was abundantly evolved when the powder was heated in a dry tube.

Judged from the standpoint of the many failures in detecting its presence, the chlorate constituted the only real difficulty in the present mixture. A number of students who noted the evolution of a yellow gas when the powder was treated with sulphuric acid concluded that chlorate was not present because crackling was not observed when the mixture was heated. The reason why the chlorine peroxide liberated during this treatment did not, in most cases, afford this customary indication of its presence and decomposition was that it was mixed with a large proportion of hydrochloric acid produced by the simultaneous decomposition of the chloride present. The peculiar and unpleasant odour of chlorine peroxide was, however, very plainly distinguishable even in presence of the admixed hydrochloric acid, and should have led to a more general detection of the chlorate.

A few of those who concluded from their preliminary examination that they had to do either with chlorate or with hypochlorite did not succeed in settling which of the two was present. There ought not, however, to have been any difficulty about this, since hypochlorite liberates iodine from a mixture of potassium iodide and dilute acetic acid, while chlorate does not.

The numerous failures to observe the water which was driven out on heating the powder seem to indicate that sufficiently close attention is not always paid to gaining the maximum amount of information obtainable from one of the most important and valuable of preliminary tests.

Almost all our correspondents were aware at an early stage in their systematic analysis that the powder dissolved completely in water, yielding an alkaline solution, and that the phosphoric radical was present. This knowledge might have been turned to account subsequently, since, in the circumstances, there was no need to test for iron, aluminium, magnesium, or the metals of the barium group, all of which form phosphates that are insoluble in neutral or alkaline solutions. Very few students noted this point, however, the majority simply following the routine practice laid down in "the chart." On the other hand, a few supposed that their analyses showed the presence of some of those very metals which the complete solubility of the powder in water and the presence of phosphate in this original solution really proved to be absent.

A small number of our correspondents fell into a somewhat unusual error in consequence of using saturated solution of ammonia (instead of a mixture of this with at least three times its volume of water) along with ammonium chloride as group reagent for iron, chromium, and aluminium. They obtained a white precipitate, which some mistook for aluminium hydroxide, while others found that it had not the properties of that substance. The precipitate really consisted of ammonium phosphate, $(NH_4)_2PO_4.3H_2O$, and disappeared on the addition of a sufficient quantity of water. When any ordinary solution of an alkali-metal phosphate is mixed with about its own volume of saturated solution of ammonia, this salt is usually precipitated at once or after standing for a short time.

The trace of sulphate present as impurity in the powder was almost uniformly overlooked, the addition of barium chloride to the acidulated solution only producing a precipitate of barium sulphate after the mixture had stood for some time.

PRIZES.

The First Prize for the best analysis has been awarded to JAMES ALFRED HAY, Westmoor Lodge, Killingworth Station.

The Second Prize has been awarded to

A. STEWARDSON, 24 Campbell Street, Newcastle.

First Prize.—Any scientific book that is published at a price not greatly exceeding half-a-guinea may be taken as a first prize.

Second Prize.—Any scientific book which is sold for about five shillings may be taken as a second prize.

The students to whom prizes are awarded are requested to write at once to the Publisher naming the book or books they select.

TO CORRESPONDENTS.

Special Memoranda, suggested by this month's reports:—

1. Do not add magnesium sulphate, mercuric chloride, &c., as supposed special tests for carbonate (or bicarbonate), without considering that many other sets of salts besides carbonates give precipitates with magnesium and mercuric solutions. These "tests" usually mislead.

Digitized by Google

2. Do not use liq. amm. fort. in conjunction with ammonium chloride as a group reagent for iron, chromium, and aluminium. Dilute solution of ammonia should be employed.

3. Do not boil a powder with sodium carbonate to prepare a solution to be tested for acid radicals, when it contains alkali metals only and is entirely soluble in water. The original aqueous solution should be used in such a case.

4. The solution of ferric chloride employed in testing for acid radicals should be almost neutral. The ordinary (strongly acid) solution may be mixed with a solution of sodium carbonate until any further addition would yield a permanent precipitate.

E. F. CARTER.—The aqueous solution gave a distinct alkaline reaction when tested with red litmus-paper, although turmeric paper was not affected by it. The phosphate present was responsible for this behaviour. When stating the reaction of a solution to test-papers it is well to mention the kind of test-paper used—*i.e.*, red litmus, blue litmus, turmeric, &c.

FLORA MCDONALD.—You give the formula for perchloric acid (probably through mere inadvertence) where it seems certain that you mean chloric acid.

LITHIUM.—You do not report any test that proved borate to be absent. See reply to E. F. Carter.

W. HUNT.—On adding silver nitrate to the aqueous solution of the powder, you obtained a white precipitate, and were led to the detection of chloride. Had you added the same reagent in excess, the formation of a yellow precipitate, due to the presence of phosphate, could also have been observed. The ferric-chloride solution you used must have contained too much free acid, otherwise you should have obtained a precipitate of ferric phosphate on adding it to the original aqueous solution.

ULEX.—From the systematic examination of this powder you have learned how important it is to use distilled water in qualitative analysis. The phosphate present was certain to yield some insoluble calcium phosphate if mixed with a water-supply containing calcium salts. The sodium present was much more than a trace, as the quantitative composition of the powder shows.

OOMA.—A report which indicates that the writer has observed closely, and has deduced accurate conclusions from his observations, is the kind which always obtains the highest marks. The mere form of the report is a matter of somewhat secondary importance, and the form you adopt is quite a good one. It is a general rule, although not without exceptions, that the most careful observers and the most accurate reasoners are also the writers of the clearest and most systematic reports. Prepare a solution of sodium hydrogen tartrate for yourself. Dissolve 1 oz. of tartaric acid in water, and divide the solution into two equal parts. To one half add sodium carbonate until the liquid, after boiling, is neutral, and then add the other half:

$$H_2C_4H_4O_6 + Na_2CO_3 = Na_2C_4H_4O_6 + H_2O + CO_2;$$
$$Na_2C_4H_4O_6 + H_2C_4H_4O_6 = 2NaHC_4H_4O_6.$$

See reply to "B. K. N."

A. C. WALKER.—When alkali metals alone are present it is superfluous to boil the powder with sodium carbonate prior to testing for acid radicals; and it is plainly superfluous to filter when, as in this case, no precipitate is produced.

TIN.—In the known presence of ammonium salts the bitartrate and the chloroplatinate tests for potassium do not prove the presence of the latter with certainty. You should either have decomposed the ammonium salts by ignition before testing for potassium, or else have applied some test for potassium to which ammonium salts do not under any conditions respond.

H. T. H.—The formation of a yellow precipitate on the addition of silver nitrate to a neutral solution might indicate the presence of phosphate or of arsenite, but not that of arsenate. See reply to E. F. Carter, and last sentence of reply to W. Hunt.

GEO. SHREEVE.—We cannot reconcile your statement, that the original solution gave no result on the addition of ferric chloride, with our own experience. In our hands the result was the immediate precipitation of ferric phosphate. If your ferric-chloride solution contained so much free acid as to prevent a similar precipitation, it was quite useless as a test for acetate, &c.

IRISHMAN.—You employed film tests under some misapprehension if, as you report, you heated the substance "on a thread of asbestos in both oxidising and reducing flames." In these tests the substance is always heated in the reducing flame, but the respective films are collected by holding the porcelain plate just above the reducing-tip and a short distance above the oxidising-tip of the Bunsen flame.

B. K. N.—Magnesium could not be present in appreciable quantity in an alkaline solution containing the phosphoric radical. Read the general remarks bearing upon this point.

PHOSPHOR.—You report that you removed the chloride from the aqueous solution of the powder by adding excess of silver nitrate, and that, after filtering, you proved chlorate to be absent from the filtrate by finding that zinc and sulphuric acid gave no precipitate. Probably you were mistaken about the silver nitrate having been added in excess, as the same test in our hands gave clear indications of the presence of chlorate.

R. R. P. HAMBLEN.—See last sentence of reply to W. Hunt.

N. E. S. C.—You obtained evidence in the preliminary examination of the presence of nitrate or chlorate. You subsequently proved nitrate to be absent, but you do not appear to have followed up the indication of chlorate by making any special test.

PHOTO and S. A. SHEARD.—The precipitate you obtained on adding mercuric chloride to the aqueous solution of the powder consisted of mercuric phosphate.

J. H. WILLIAMS.—The precipitate formed on adding silver nitrate to the original aqueous solution was entirely soluble in ammonia. We fail to understand what it was that you observed which misled you into supposing that it only dissolved partially, and left a residue of phosphate.

J. M. PEARSON.—You state that the original solution, acidulated with nitric acid, gave a white precipitate with silver nitrate, soluble in ammonia; but you do not draw any conclusion from this, and you do not give any summary of results. Defects of this kind in your report are likely to do considerable injustice to your work.

RENZO.—The precipitates you obtained on adding ferric chloride and magnesium sulphate to portions of the original solution consisted of ferric phosphate and ammonium magnesium phosphate respectively.

E. G. WATTS.—Red litmus-paper, as well as blue, should have been used in examining the reaction of the aqueous solution. We cannot explain why you failed to obtain a white precipitate of calcium phosphate on adding calcium chloride to the original aqueous solution. See also reply to Geo. Shreeve.

MANNA FLAKE.—See reply to "B. K. N."

PRIMUS.—See replies to "Photo" and to "Renzo."

K. H.—We have not been able to obtain the sulphuric acid and alcohol reaction for borate which you describe.

SULORAC.—From the first part of the reply to "Ooma" you will perceive that we attach more importance to the substance than to the form of students' reports. The form you adopt is as good as any other. But you must try to observe closely and to reason from your observations. More complete examination of the flame-colouration, and closer attention to the action of sulphuric acid upon the powder, should have led you to find potassium and to suspect the presence of chlorate. On the other hand, the fact that alkali metals were alone found to be present should have indicated that a sodium-acetate and ferric-chloride separation of the phosphoric radical, and also that the operations of boiling the powder with sodium carbonate and of filtering the solution obtained (although no precipitate was formed), were all alike unnecessary.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

At Thames Police Court on June 19, a man named Lock was committed for trial on a charge of breaking and entering the Eagle Chemical-works, Barchester Street, Bromley, and stealing various articles.

At Market Rasen County Court on June 13, Mr. W. B. Jevons, chemist and druggist, of Market Rasen, obtained judgment for 14*s.* and costs against Jas. Brown for leaving his employ without giving a week's notice.

A case of lupus of thirty years standing has been cured in Newcastle-on-Tyne through nearly two hundred applications of *x* rays on consecutive days. The patient was subjected to exposures of fifteen minutes' duration, and after inflammation of the tissues had set in a complete cure ensued. The face is practically free of scars.

The annual general meeting of the Röntgen Society will take place at 20 Hanover Square, W., on July 3.

Mr. C. D. Cumber, chemist and druggist, has enlarged and refitted his branch establishment in Holdenhurst Road, Bournemouth.

The Belper Board of Guardians has accepted the tender of Mr. C. W. Southern, chemist and druggist, of Belper, for the supply of chemists' goods to the workhouse.

In consequence of increasing business Mr. T E. Rossiter, chemist and druggist, has been making extensive alterations and refitting his dispensing establishment in Bampton Street, Tiverton.

Taylor's Drug-stores (Limited), of Leeds and Bradford, in order to boom their "G.P. Government" tea, offered to the first fifty purchasers of tea on June 25 a coloured portrait of the King and Queen.

Mr. J. Kear Colwell, F.I.C., public analyst of Finsbury, in his quarterly report, says that two of the samples of camphorated oil submitted to him were deficient in camphor to the extent of 55·5 and 58·2 per cent.

After a long discussion at a meeting of the Stroud Board of Guardians on June 20 with regard to the supply of drugs to the workhouse, it was decided to allow Dr. Cooke, the medical officer, 40*l.* extra on his salary—20*l.* for dispensing and 20*l.* for drugs.

The action of the Badische Anilin- und Soda-Fabrik against W. G. Thompson & Co., and Basle Chemical Company again came before Mr. Justice Buckley on June 20 in respect to a motion which was ordered to stand over until the trial of the action.

The Cheltenham Guardians have accepted the tender of Mr. W. H. Hill, chemist and druggist, of High Street, Cheltenham, for the supply of sanitas (crude) at 4*s.* 3*d.* per gal.; Savory & Moore's food at 8*s.* 6*d.* per dozen tins, 1*s.* size; and waterproof sheeting at 3*s.* 6*d.* per yard.

At Bedford on June 19, three youths, named Barley, George, and Lee, were committed for trial on a charge of breaking into the premises of Mr. Joseph S. Norman, pharmaceutical chemist, at 70 Tavistock Street and 24 St. Augustine's Road, Bedford, and stealing 1*s.* worth of menthol and eucalyptus lozenges and 2*s.* in money.

Poison Regulations as to Disinfectants.

The Privy Council has agreed to the resolution of the Pharmaceutical Society of Great Britain to the effect that liquid disinfectants containing scheduled poisons must be sent out in bottles distinguishable by touch. The resolution was in the following terms:—

That Clause 3 of the present regulations for the keeping, dispensing, and selling of poisons within the meaning of the Pharmacy Act of 1868, made in accordance with Section 1 of the Act, be rescinded, and that the following be substituted therefor:

That in the dispensing and selling of poisons all liniments, embrocations, lotions, and liquid disinfectants containing poison be sent out in bottles rendered distinguishable by touch from ordinary medicine-bottles, and that there also be affixed to such bottles (in addition to the name of the article and to any particular instructions for its use) a label giving notice that the contents of the bottle are not to be taken internally.

This is binding upon all chemists and druggists, and our subscribers should make special note of it.

Arsenic Commission.

The sittings of the Royal Commission on arsenical-poisoning were resumed on June 20. Mr. Arthur Ling, Secretary of the London Section of the Society of Chemical Industry, detailed some experiments he had made with fuels used for malting. He had never found a sample of malting-fuel free from arsenic. To determine arsenic in fuel, he took advantage of the discovery of Mr. B. E. R. Newlands that, when fuel is mixed with a base, such as lime or soda, and burnt, any arsenic it contains is retained with the ash. The method consists in burning two portions of the fuel, one portion alone, and another mixed with an excess of lime or any other convenient base, and determining the arsenic in a solution in hydrochloric acid of each of the residues thus obtained by the Marsh-Berzelius method. The amount of arsenic found in the residue from the plain fuel represents the fixed arsenic, whilst that found in the residue of the fuel and base is the total arsenic. The difference between the two gives the volatile arsenic. The chief source of arsenic in all coal is the pyrites or coal brasses.

Mr. E. S. Beaven, of Warminster, who stated he had been engaged in the malting-industry for twenty-five years, had only found negligible traces of arsenic in samples of malt. He laid stress on the fact that a large proportion of the samples of malt examined were absolutely free, or contained only the merest traces of arsenic. The method of drying malt by allowing the products of combustion to come in contact with the malt imparts a special flavour to the malt.

Merry Spectaclemakers.

A *conversazione* of the freemen holding the diploma of the Spectaclemakers' Company was held at the Carpenters' Hall on June 19. The guests were received at the top of the grand staircase by Sir Wm. Hart-Dyke, M.P., Sir Marcus Samuel, Mr. W. E. H. Thornthwaite, and Colonel T. Davies Sewell. Two bands—Pritchard's and the Ladies' Bolero Band—performed during the evening, and the Clifford Essex Pierrots filled up the intervals with songs and piano and banjo solos. Miss Florence Kemp also sang "Oh, dry those tears" in an exquisite manner. In the large hall there was an exhibit of optical instruments, to which such well-known firms as Messrs. Botwright & Grey, Ross & Co., S. Maw, Son & Sons, Raphael, Wheway & Refern (Limited), J. J. Hicks, and Culver (Limited) contributed. Refreshments were served in the court-room during the evening.

British Medical Association.

The seventieth annual meeting of the Association is to be held in Owens College, Manchester, on July 29, 30, 31, and August 1, the President being Dr. G. B. Ferguson, of Cheltenham. An address in medicine will be delivered by Sir Thomas Barlow, Physician to the King's Household, and in obstetrics by Dr. W. J. Sinclair, Owens College, Manchester. The annual exhibition in connection with the meeting will take place in the Drill Hall, Burlington Street; Dr. A. B. Ritchie, 117 Boston Street, Hulme, being the Hon. Secretary entrusted with the arrangements.

Royal Society.

Among the papers read at the meeting of the Royal Society on June 19 were the following: "Note on the Effect of Mercury-vapour on the Spectrum of Helium," by Professor J. Norman Collie, F.R.S. "The Seed-fungus of *Lolium temulentum*, L., the Darnel or Poisonous Rye-grass," by E. M. Freeman. "On Methods for the Limitation and Regulation of Chloroform when Administered as an Anæsthetic," by A. Vernon Harcourt, F.R.S. "On the Measurement of Temperature"—Part I., "On the Pressure Coefficients of Hydrogen and Helium at Constant Volume, and at Different Initial Pressures"; Part II., "On the Vapour-pressures of Liquid Oxygen at Temperatures below its Boiling-point, on the Constant-volume Hydrogen and Helium Scales"; Part III., "On the Vapour-pressures of Liquid Hydrogen at Temperatures below its Boiling-point, on the Constant-volume Hydrogen and Helium Scales," by Dr. M. W. Travers and others.

Birmingham Notes.

The statement made by Dr. Hill in his report as M.O.H. and city analyst concerning seidlitz-powders shows that he has not so wide an acquaintance in the wrapping of seidlitz-powders as he has of the amount of total solids present in 100 c.c. of tr. benzoini composita, for, in conversation with a well-known pharmacist, it was asserted that he has never packed seidlitz-powders in any other way than white paper for alkali and blue paper for acids. It should be stated that the experience of the pharmacist in question extends over thirty years, and he recommended his unusual method.

The chemistry examination for the medical course was recently held at the Varsity, and of twelve candidates only six passed, and this on an extremely easy written paper and a "small go" of a practical, and after a curriculum rigidly adhered to. In this connection something has been stated about the stiffness of the materia-medica examination; all this should be taken *cum grano sodii chloridi purissimi*, for a University must have students, and this may frighten them.

Digitized by Google

The present prospects of much decoration on Coronation Day by pharmacists come up to, and in some cases excel, the efforts of their fellow-traders. The general system here is to club together and have streamers and a uniform display through the whole length of each thoroughfare.

Mr. Arthur Chamberlain, in his speech at Kynoch's (Limited) meeting, asserted that the position in the business world was not at all cheering. "They were tied round with red tape, battened on by inspectors, and cramped at every turn, and the people responsible for such a state of things said, 'Why is it that English business-men have no longer that initiative, that energy, that self-reliance which used to distinguish our race?'" What would he say if engaged in the calling of pharmacy, with its Inland Revenue officers always on the door-step, F. and D. Act emissaries, Somerset House and the possessive case *et similia*.

Miss Rennie, a Minor pharmacist, has secured the dispensership of the Darlington Associated Medical Charities at the yearly stipend of 104*l*. There were about twenty applicants.

Exeter Pharmacy Classes.

The members of the Exeter Association of Chemists and Druggists met at the Royal Albert Memorial College on June 18, at the invitation of Mr. A. W. Clayden (the Principal of the College), to discuss the question of the advisability or otherwise of continuing the pharmacy classes in connection with the College. Mr. Clayden explained that the classes were originally started, at the request of the chemists of Exeter, to supply what he understood was a want. They had been fairly successful in so far that the students they had had in them who had been sent up to the examination of the Pharmaceutical Society had been successful; but there had never been an adequate number of students, and if the attendance did not improve there would probably be a motion for their discontinuance. He asked for an explanation of this lack of support. Mr. Stocker asked whether the instruction given in pharmacy and materia medica supplemented that which students had learnt in the shop, or whether it was merely a repetition of their daily work. Mr. Milton said there was a sort of impression abroad that there was not much information to be obtained beyond what the students could learn in business, and that there was not adequate provision for the proper teaching of the subjects. Mr. H. W. Gadd said he undertook these classes at short notice last autumn, and had to evolve a syllabus. His object had been to supply whatever the student required, and to supplement the knowledge that he had obtained elsewhere. This session, since last October, the only students who had presented themselves had been some who had had no opportunities of learning prescription-reading, posology and dispensing, and therefore he had to devote a good deal of time teaching them those subjects; but if more advanced students entered, he should not require to take up their time by going over subjects they should learn in the business, but should spend the time in teaching them theoretically and practically the more elaborate processes of the Pharmacopœia, and particularly the standardisation of drugs and galenicals. Mr. Clayden said they were much handicapped by the advanced and elementary students having to work in the same laboratory, but the Governors of the College had now under their consideration a scheme for building additional laboratories. After further discussion, the President (Mr. Stocker) communicated to the Principal the resolution passed by the Association:—

That it was advisable that the classes in pharmacy and materia medica be not discontinued, but that greater provision should be made for the practical teaching of those subjects; that, subject to this being done, the members would support these classes, and at the same time suggest the advisability of their being advertised in the technical journals, and notices sent to the chemists of the neighbourhood.

Mr. Clayden promised to lay the resolution before the Governors, and the President, Messrs. Lake, Lemmon, and Milton were appointed a sub-committee to confer with Mr. Clayden from time to time on the subject of the pharmacy courses.

A Chemists' Picnic.

On June 19 about thirty members of the North-East Lancashire Chemists' Association, accompanied by their wives and friends, had their annual outing, Higher Hodder being fixed upon as the destination. The party chartered a char-à-banc, and took the Wilpshire Road on the outward journey, returning through Mellor Brook. Refreshments were partaken of at Higher Hodder, and a pleasant time was spent in exploring the neighbourhood, several camera enthusiasts amongst the party finding themselves well occupied in the search for choice "bits" on which to "try a plate." The arrangements for the event made by the Hon. Secretary (Mr. G. B. Pickworth) were of a complete character, and the pleasure-seekers returned at 10.30 P.M., well satisfied with the afternoon's experiences.

Three Towns' Junior Chemists' Association.

Mr. C. T. Weary (President of the Senior Association) invited the Junior members to join him in a visit to Mount Edgcumbe Park on June 18. The party were conducted by the Earl of Mount Edgcumbe's steward through the orangery, garden battery, Italian, French, and tropical gardens. High tea was afterwards provided by Mr. Weary, to whom a vote of thanks was unanimously accorded.

Carbolic-absorption.

On June 20 Mr. John Troutbeck held an inquiry at Westminster concerning the death of Thomas David Kerridge (33), a labourer in the service of the Hammersmith Borough Council. One of deceased's lodgers had complained of the drains, and Kerridge promised to bring home some disinfectant. On June 9, at the Council's depot, he took an old stoppered bottle from a dustbin, filled it with carbolic acid, and put it into his trousers-pocket. He was going home to dinner when the bottle burst and the acid ran down his left leg. He did not return to work, and two days after, as he had a severe pain in his back, he went to St. George's Hospital. Mr. Wm. F. H. Coke, house surgeon, said Kerridge had a large superficial burn, extending from his groin down to his ankle, and a patch on his thigh. He went on well until June 16, when he died quiet unexpectedly. A *post-mortem* examination showed that death was due to uremic poisoning, the result of the acid acting on his kidneys. Mr. H. Mair, district surveyor at Hammersmith, said the deceased must have got the acid surreptitiously from the disinfecting-shed.

Poisonings.

Since our last report and up to June 24, only six poisoning-fatalities have been reported; three being due to laudanum, and three to the unscheduled poisons hydrochloric acid, nitric acid, and butter of antimony. The laudanum was taken by a solicitor's clerk at Bexhill and by a Sunderland man named Clipson, who, whilst suffering from asthma and bronchitis, was given a prescription containing laudanum by a friend. The doctor said opium-poisoning was the cause of death.—At Pill, near Bristol, on June 16, an inquest was held on the body of a child four months' old, who was given a dose of cough-mixture supposed to contain Friar's balsam but which contained laudanum.—A Southwark man, who had had his skull fractured by hooligans, took hydrochloric acid in a fit of depression; and a Liverpool labourer drank nitric acid. A man at Weston-super-Mare drank a quantity of butter of antimony, and then hanged himself.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Recoupment Lost.

At the last meeting of the Athy Board of Guardians, a letter was read which stated that the Local Government Board had no power to allow recoupment in respect of the cost of medicines supplied for use in the Ballylinan district during the past half-year. The medical officer admits that he disregarded the regulations respecting the analysis of drugs. The L.G.B. consider that in the interest of the ratepayers the Guardians should call upon him to make good the loss to the Union through his neglect, and they request

Digitized by Google

that Dr. McKenna may be informed that any similar neglect of duty will lead to serious notice being taken of his conduct.

The Discount Question.

At the last meeting of the Cootehill (co. Cavan) Board of Guardians a letter was read from the Local Government Board to the effect that they had had again before them the minutes of proceedings of the Board of Guardians on March 21, when the tender of Mr. Robert Armstrong, Cootehill, was accepted for the supply of medicines to the Union at an abatement of 3 per cent. on the Board's prescribed list; and with reference thereto the Local Government Board had to state that the following rates of abatement had been secured in other unions: Carrickmacross, 12½ per cent.; Castleblayney, 12½; Clones, 20; Monaghan, 15. The Local Government Board considered that the Guardians would do well to ascertain why such unfavourable terms were granted in Cootehill Union. The Guardians referred the letter to the contractor for an explanation.

Irish Soap.

At the last meeting of the Clonmel (co. Tipperary) Board of Guardians, Alderman Pope referred to the soap-contract, and said the price was 13*s.* 3*d.* per cwt.; but, as he pointed out at a previous meeting, the best soap would cost about 20*s.* per cwt. He produced a bar of the soap supplied, and said it was very inferior to that contracted for. Alderman Pope said the wholesale price for best tallow brown soap was 1*l.* 4*s.* per cwt., while the Guardians paid only 1*l.* 0*s.* 6*d.* per cwt. The Chairman and several members said it would be dangerous to reject the article, and no order was made.

Mr. A. J. Cahill, Dublin, writes to the *Irish Times* that he has pushed the sale of Irish toilet-soap for the past two years, with the result that his trade in toilet-soap has largely increased. Mr. Cahill thinks that the Irish soap-makers should be a little more pushing, and spend more money in advertising their products.—Messrs. J. Leonard & Co. also point out that the only arsenical soap they sell is made in Dublin "by a special process, which renders it not only harmless but beneficial." This is in reply to a statement in the *Irish Times* that "chemists' windows are filled with injurious, not to say dangerous, arsenical soaps made in England and America."

Calcium Carbide.

The Belfast Harbour Commissioners have issued new draft regulations respecting the storage of carbide of calcium. Stringent rules are laid down regarding the shipping and carriage of the article, amongst which are the giving of due notice to the harbour-master of the arrival of carbide of calcium, removal into the harbour in hermetically closed metal vessels, each to contain not more than 140 lbs., and to be labelled "Carbide of calcium; dangerous if not kept dry."

Business Change.

Mr. James Hodge, late manager to Messrs. T. Reid & Co., surgical-instrument makers, Parliament Street, Dublin, has started on his own account in the same line at 41 Wicklow Street.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Public Notice.

The creditors of Robert Lyle Mackirdy, physician and surgeon, The Brae, Lossiemouth, in the county of Elgin, and chemist and druggist, 85 Victoria Street, Rothesay, in the county of Bute, now deceased, will receive a dividend, on August 5, in the office of Messrs. John Wilson & Stirling, C.A., 154 St. Vincent Street, Glasgow.

Aberdeen Doctors' Shops.

A correspondent supplies us with the names of all the doctors in Aberdeen who keep open shops, bringing the number up to fifteen. Two of the doctors are trying to dispose of their shops, and one is managed by a chemist and druggist. He adds that nine of the doctors have openes within the past ten years. This may be, but our inquiried of those who have thirty to forty years' experience in Aberdeen brought the reply that doctors' shops were as numerous forty years ago as they are now. There are forty-six chemists' shops in the city.

Glasgow Notes.

Boots (Limited) open their Sauchiehall Street premises early in July.

There are stirrings of a feeble, half-hearted weekly summer half-holiday movement. As this was a failure even in Exhibition year, it is not likely to succeed now. In some of the suburbs the privilege is secured by amicable co-operation.

On the new Executive of the N.B. Branch Glasgow has only three-fifths of the representation which it enjoyed on the old. This will please the critics, who maintained that the "Sea-born city" has always been over-represented. That averment belongs to Dundee now.

Owing to the extension of the electric-car lines, local railways, &c., the suburbs of Glasgow are undergoing sudden and systematic expansion. Hence all the new starts in the drug-line are in the suburbs or environs of the city. The ground is occupied almost as soon as opened.

An advertiser offers 25*s.* a week (outdoor) for an experienced senior assistant, who must be a skilful dispenser, good all-round counterman, have a knowledge of bookkeeping by double-entry, understand photography and the sale of photographic material, and present unexceptionable references as to his possession of the foregoing qualifications, and to certify that he is an abstainer and non-smoker.

A Sunday customer for S.V.M., who found the chemist deaf to every entreaty, at last pulled out the tremolo stop, and said, with quivering accents, "Oh, man, dinna be sae hard-hearted; it's tae mak' varnish to pit on a wee wean's coffin!" But the pill-maker's cardiac organ was made of even tougher material than ten-year-old pills, and the seeker of S.V.M. went away imprecating the immortal gods.

A propos of the inquiry in last week's *C. & D.* as to the dispensing a prescription containing cocain. hydrochlor. and sodii bicarb., a West-end oculist here goes a little further. His directions are to filter out the precipitate and send out the filtrate. One dispenser who ventured to point out to the prescriber that the filtrate contained nothing but sodium chloride got snubbed for his pains, and propounds the query, "Is it allowable in the circumstances to save your cocaine hydrochloride and supply a solution of sodium chloride of the proper strength?"

Edinburgh Chemists', Assistants', and Apprentices' Association.

A summer meeting and botanical demonstration in connection with this Association was held at 36 York Place, Edinburgh, on June 18, Mr. J. W. Plenderleith (President) in the chair. The meeting was devoted to the examination of plants collected by members of the Association of which there were a large number chiefly from the Colinton and Inveresk districts. From the railway bank at the latter place were the unusual plants *Anthemis arvensis* var. *anglica*, *Poterium sanguisorba*, *Rœmeria hybrida* (a violet-coloured horned poppy), *Valerianella Olitoria*, *Pulmonaria officinalis* (the leaves not spotted); a *Vicia* like *Vicia sativa*, but with smaller leaves and a very dark purple flower; a composite like *Matricaria inodora*, but with smaller capitula destitute of any ray-florets; and some others. The plants were arranged systematically on the tables in accordance with Bentham's "Flora" by Mr. Rutherford Hill, who gave a demonstration at 9.15 P.M. Special attention was directed to the reasons for the arrangement of the different plants, each genus and species was named and described, and attention called to such points as the irritable stamens in *Berberis vulgaris*, the mixed inflorescences in *Compositæ* and *Umbelliferæ*, the difference between the *Scrophulariaceæ* and the *Labiatæ*, the significance of plant-names, and the doctrine of signatures. On the motion of the Chairman thanks were given to Mr. Hill.

LOCUM or Temporary; free July 5; Minor; 30; good references. "Tereb." (232/8), Office of this Paper.

LOCUM: 23: unqualified: good experience and references. "Narthex," Clarendon Villa, Hurst Grove, Bedford.

MANAGER or Assistant; Minor qualification; aged 51; single. "Progress," 70 Dudley Street, Walsall.

COMPETENT Assistant; London experience; married. Hughes, 19 Mather Road, Claughton, Birkenhead.

QUALIFIED; 23; 5 ft. 10 in.; outdoors; under qualified directorship only. Williams, Penberthy, Hayle, Cornwall.

BRANCH Manager; qualified; 28; all-round experience; disengaged July 14. "Branch," 26 Sewell's Walk, Lincoln.

UNQUALIFIED Scotchman; manager; Store or Branch; Dublin; 12 years' experience. 223/35, Office of this Paper.

ASSISTANT; unqualified; experienced; good Dispenser; outdoors preferred. "Urotropin" (232/5), Office of this Paper.

MINOR Student seeks season engagement, or to assist during holidays; Dispensing and Photographic. 232/17, Office of this Paper.

SENIOR or Branch Manager; qualified; 26: high-class London and Provincial experience; Photography. 232/30, Office of this Paper.

ASSISTANT; outdoors; London or South preferred; unqualified; allround; 30; Photography. "H." (231/39), Office of this Paper.

AS Manager, Senior, &c.; qualified; married; aged 35; with view to succession preferred, but not essential. 232/13, Office of this Paper.

MANAGEMENT of small shop; view purchase; 30; 15 years' good experience. "Manager," Duck & Son, Chemists, 26 Albany Road, Cardiff.

LOCUM or temporary Assistant; M.P.S.; disengaged June 19; abstainer; good references. "Chemicus," 19 Cathles Road, Balham Hill, S.W.

LOCUM (22), 5 ft. 6 in., unqualified, 6 years' experience, excellent references, until end of July disengaged. Wyse, 51 Talbot Street, Southport.

LOCUM; 27; experienced, Photographic, Homœopathic, Prescriber, Dispenser; London, provincial, seaside; references. Kirkland, Kexby, Gainsborough.

LOCUM, Dispenser, qualified, experienced, desires engagement latter part of July and September; terms moderate. "Dispenser" (232/36), Office of this Paper.

ELDERLY Gentleman seeks engagement; small Country Retail, or Dispenser to medical gentleman; duties light. Williams, Arundel Triangle, Bournemouth.

LOCUM or Branch Manager; disengaged; qualified; middle-aged; experienced, London and country; good Prescriber, Extractor, &c. "Dispenser," 9 Fair Street, Cambridge.

JUNIOR, aged 26, 5 ft. 11 in., 6 years' experience, requires comfortable berth, early in July; City or suburbs; Part-time, or short hours (for study). Apply, "Velox" (231 6), Office of this Paper.

COMPETENT Assistant; 26; height 5 ft. 8 in.; 8 years' experience; Dispensing, Counter, and Photographic; unqualified; outdoors; London preferred; disengaged. Keats, 156 Clapham Road, London, S.W.

QUALIFIED; aged 46; height 5 ft. 10 in.; unmarried; good Prescriber and Dispenser; London and provincial experience; salary moderate; disengaged. Address, "Masonic," 37 Chester Street, New Swindon.

MANAGING Assistant; 38; married, no family; experienced Dispenser, Prescriber, Extractor, Photographer; sober, steady, and gentlemanly; disengaged middle of July. "Manager," c/o Needham's (Limited), Lowmoor, Yorks.

LOCUM, season Assistant or Manager; similar provincial experience; qualified; excellent Prescriber, rapid Dispenser; Photography; 5 ft. 11 in.; 25; married; abstainer; good address. Griffiths, 23 Queen Street, Kidsgrove. (Wires—Griffiths, Pharmacist, Kidsgrove).

A BROTHER of a Pharmacist at Nice, who has assisted in the pharmacy, requires a situation in England to enable him to perfect himself in the English language; he will accept a situation in return for board and lodging, or he would be willing to exchange places with the son of an English Chemist with a knowledge of English pharmacy. Apply, Rebec, Pharmacien, Nice.

GENTLEMAN, Ph.C., F.C.S., young and energetic, having an extensive and intimate knowledge of the Retail and Wholesale trade, comprising experience of the Retail in the country, the West-end, and French and English Pharmacies in Paris, 3 years analytical work, and 9 years directing manufacturing business, desires a post either at home or in South Africa. 231/30, Office of this Paper.

WHOLESALE

PHARMACEUTICAL Chemist desires position in Wholesale; moderate salary; highest credentials. "Major," 80 Tyrwhitt Road, St. John's, S.E.

MISCELLANEOUS.

Special charges are made for Advertisements under this heading, which can be obtained on application.

SODA-WATER TROLLEY.—A boy of eight can easily convey 3 dozen syphons and cases any distance; 35*s.*, carriage paid. Arthur & Co., Cambridge.

DEVELOPING ROLLABLE FILMS, any size, 1*s.* per roll, cash with order, postage extra; returned next day; Cameras bought, exchanged, and let on hire; always a large stock of second ones. Martin, Chemist, Southampton.

TO Manufacturing Chemists and others.—For Sale, cheap, about 40 Fermenting Rounds, of a capacity of 25 barrels each of the Best Slavonien Oak 2 in. thick; height, 5 ft. 2 in.; diameter at top, 5 ft. 7½ in.; diameter at bottom, 6 ft. 4 in.; also a quantity of other material. For particulars, apply Imperial Lager Brewery, South Tottenham.

WATER-GLASS, the most perfect egg-preserver known; sample tin, with full directions, 1*s.*; enough to preserve 1,500 eggs, 5*s.*; both carriage paid; also Shell Flint Grits, &c. Special terms to Chemists. The Excavator Co. (Limited), 18 Ironmonger Lane, London, E.C.

REMOVAL OF FACTORIES.—Bargains for immediate Sale.—20 ranges of drug drawers with glass labels and knobs; 15 plate-glass fronted serving counters; 20 dispensing screens; desks; perfume cases; 20 wall cases from 3 ft. to 20 ft. long; sponge cases; counter drawers, and an immense quantity of useful and good fittings for sale at reduced figures to save expense of removal; all goods must be cleared.
PHILIP JOSEPHS & SON, Shop Fitters, 93 Old Street, London, E.C. Telephone 9057, London Wall.

CHEMIST'S SHOP-FIXTURES.—Ranges mahogany drawers, with bevelled-edge glass labels and cut-glass knobs, shelving above, lockers below; mahogany dispensing-screens; counters with glass-case fronts; wall-cases; bent-front and flat-top counter-cases; counter-desks; tooth-brush cases; complete shop-rounds, &c.; every requisite for chemists, new and second-hand; extensive stock to select from, at extremely low prices; practical men sent to all parts; estimates free. Matthews, Chemists' Fitter, 14 and 16 Manchester Street, Liverpool. Works: 9 Preston Street. Telephone 6695. Illustrated catalogue on application.

McADAM & CO., Sharebrokers, Blackheath, London, S.E. Telephones 81 and 81A Lee Green.

WEDNESDAY'S NEWS.

Mr. T. H. W. Idris,

who is a Justice of the Peace for London, has been appointed on the Commission of the Peace for the county of Merioneth. He is also President of the Merionethshire County Agricultural Society for this year.

From the Colleges.

On Monday, June 23, the students of the Imperial College of Pharmacy visited Kew Gardens.

At the Manchester College of Pharmacy, Mr. Rothwell, of Bolton, has been awarded a prize of books for the best theoretical work in chemistry, botany, &c. The medal awarded by an old M.C.P. student was secured by Mr. S. H. Walton, of Didsbury.

Blackpool and Fylde Chemists' Association.

From a somewhat indistinct report of a meeting of this Association held at the Palatine Hotel, Blackpool, on Monday evening, we gather that Mr. H. P. Withers presided, and that the chief business discussed was closing on Coronation Day. It was decided to telegraph congratulations to the King.

Sport.

Boots Cricket Club (Sheffield) played Sheffield Bankers' "B" team at Roewood, Pitsmoor, Sheffield, and, after a very exciting game, won by 3 runs. Scores: Boots, 70: Bankers', 67.

The London College of Pharmacy Cricket Club concluded its season on Saturday last by a match at Nunhead between Mr. Wootton's XI. and Minor Students. Result: Mr. Wootton's XI., 32; Minor Students, 42.

At the Huddersfield Athletic Festival on Saturday June 21, Mr. R. G. Eacott, of the Leeds College of Pharmacy, won the "Thomas Holliday" Challenge Shield, given with a gold medal, for a 300 yards hurdle-race, by 5 yards, in 41⅘ secs.

The third competition of the Edinburgh Chemists' Golf Club for the Gibson Handicap Medal was played last week with the following result: 1st, Mr. George Robertson, 93—12=81; 2nd, Mr. D. N. Wylie, 90—5=85; 3rd, Mr. James Stott, 85+1=86. Messrs. Duncan McLaren (96—5 =91) and James Anderson (106—15=91) tied for the fourth place.

A Rational Movement.

The Sheffield Board of Guardians at their last meeting decided to discontinue the present system of medical officers dispensing their own medicines in the outlying districts, and to establish branch dispensaries where the district is sufficiently large to allow, while in other districts the medicine is, as far as possible, to be dispensed by the local chemists, on the order of the district medical officer. Mr. Newsholme has been instrumental in bring this about, he being a member of the Board.

Society of Arts.

This Society gave a very successful conversazione in the Royal Botanic Gardens, Regent's Park, on Tuesday evening. The weather was delightful, and the gardens looked like fairyland—more so than usual on account of the number of Oriental visitors who were present. The gardens are at their best just now, and one fair reporter assures us that the trained wild roses look a living reproduction of Burne-Jones's briar rose. There was much else that caught the fancy, and altogether the entertainment was designed to be a fitting prelude to the festivities now, unhappily, postponed.

Murder of Mr. Ivison Macadam.

An Edinburgh correspondent writes as follows in reference to the shooting of Mr. Ivison Macadam, reported on page 981 of this issue:—Mr. Macadam had gone into the laboratory as usual in the morning, but attired in his uniform as Brigade-Major of the Edinburgh Brigade of Volunteers, as it was his intention to start for London with the 2.20 train, to be present at the King's Coronation-procession, when McClinton, one of the servitors of the hall, entered the room, locked the door, and, taking aim at Mr. Macadam, shot him dead on the spot. At the time when the event took place Dr. Stevenson Macadam, deceased's brother, and several student were in the room, and although they observed the janitor come in with his rifle in his hand, it did not attract attention, as he was known to be a Volunteer and a good shot, and he frequently brought the rifle to the hall with him. The report of the rifle, and Mr. Macadam falling on the floor, apparently dead, created great consternation among the students, and they at once rushed to get out of the room by a back door. Mr. James Forbes, one of Mr. Macadam's assistants, having heard the report of the rifle, went into the laboratory to see what was the cause of it, and McClinton deliberately took aim at him and fired, the shot severing the femoral artery. Dr. Stevenson Macadam went up to McClinton and ordered him to hand over the rifle to him, and he did so. Dr. Whittaker, who was engaged in a demonstration at the time, was called in and pronounced Mr. Macadam dead, and Mr. Forbes was taken to the Royal Infirmary, where he died in a few hours. McClinton was arrested by the police.

Legal Reports.

Since our white pages went to press we have received a full report of the Irish Widow's Clause case, which we hope to deal with next week. A brief report is printed on page 1004 of this issue.

A VINOLIA SHOW-CASE.

AT the Clerkenwell County Court on Monday, the Vinolia Company (Limited) sued Alexander Percival, Church Hill, Walthamstow, to recover 3*l.* as damages done to plaintiffs' show-case through the negligence of defendant or his servant. It appeared from the evidence that the damage was done at the Agricultural Hall, and plaintiffs' representative told the Judge that 3*l.* had been paid to have the case put right. The Judge adjourned the case to allow the bill to be produced.

KODAK (LIMITED) *v.* THE LONDON STEREOSCOPIC COMPANY.

IN the Chancery Division on Tuesday, before Mr. Justice Farwell, Mr. Moulton, K.C., mentioned this case, and said he would give his statement of claim on Wednesday, and the defence was to be given the following week. Perhaps his Lordship would then give them leave to apply, as it was important that the action should be tried before the Long Vacation. Mr. Justice Farwell said that last week he was informed that there were 169 actions, and he could only do a certain amount of work in the time at his disposal. There were other suitors to be considered, but he would bear in mind what had been said when the parties were ready for trial.

TERPENELESS OIL OF LEMON.

MR. JUSTICE JELF, sitting in the King's Bench Division with a common jury on Tuesday, commenced the hearing of the case of L. Lumley & Co. (Limited) *v.* Hopwood & Co., which was an action by the plaintiffs, a London firm of factors and merchants, against the defendants, manufacturing chemists, to recover damages for breach of a contract to supply a certain quantity of terpeneless oil of lemon. Mr. Spencer Bower appeared for the plaintiffs, and Mr. Drury for the defendants.

Mr. Bower said the plaintiffs were supplied with something, but there was a great dispute as to what it was. The defendants said it was commercially the article asked for, but it was neither scientifically, chemically, nor commercially terpeneless oil of lemon, and the plaintiffs had not got what they bought. The plaintiffs were therefore entitled to the difference between the contract-price and the actual saleable value of what they had got—there was no market in the proper sense of the word. He explained what the oil is, and how it is made, and said there were two defences. First it was said that they had bought by sample—that it was verbally arranged that a sample should be taken of certain stuff manufactured by Stevenson & Howell, and that the defendants were to supply stuff up to sample. This the

Digitized by Google

plaintiffs absolutely denied. Their order for the oil came from China, and their purchaser made a mistake in ordering 80 lbs. at 55*s.* per lb. when he only required 4 lbs. He had ordered two consignments of 40 lbs. each, but cancelled the second consignment by cable. On the arrival of the first consignment, while admitting their liability, they re-shipped it to the plaintiffs without taking it out of bond, asking them to sell it for their account and debit them with the loss. Plaintiffs wanted to keep in with their purchaser, and did what they could to help them. They approached the defendants and asked them as an indulgence to help them. The defendants offered to take it back for 38*s.* per lb., but the plaintiffs thought that was not helping them very much, and they tried to dispose of it elsewhere. They had a sample analysed by Messrs. Ogston & Moore, and found out then for the first time that it was not terpeneless oil of lemon, and contained 10 per cent. of terpene. They gave notice of that to the defendants, and altered their tone altogether, asking for the return of the 110*l.* they had paid.

Mr. Maitland Lumley, manager to the plaintiff company, and Mr. Alexander Bennett, partner in G. H. Ogston & Moore, having given evidence, the case was adjourned.

Varia.

THE CRAZE.—Near-sighted old gentleman, gazing in chemist's window at an assortment of buttermilk soap-balls: "Dear me, what large ping-pong balls!"

THE Austrian Ministry of Commerce has recently published decrees revoking fifteen patents of the Badische Anilin-und Soda-Fabrik, on the ground that the patented articles are not manufactured in Austria, but imported from abroad. This decision is of far-reaching importance to Austria, as it will probably lead to the establishment of new trades and new manufactures.

YANKEE HUMOUR.—The New York *Evening Post* chaffs one of its Boston contemporaries as follows: "If there are any weary registered drug-clerks in this town who are looking for a long period of unbroken and beatific rest, they should apply to Boston, where they will learn something to their advantage. The following advertisement is clipped from a Boston newspaper:—'Registered Drug-Clerk Wanted.—To sleep in store for one year at least. References as to honesty and ability from last employer required.'"

OLD AND CRUSTED.—A young man obtained a letter of recommendation from a former employer to aid him in securing a situation. This he was quite unable to read, and everyone to whom it was presented gave it up. It was taken to a printing-office, but even compositors had to confess themselves beaten. As a forlorn hope it was taken to a chemist, who had the reputation of being able to read anything. The man of drugs gazed at the paper long and thoughtfully, and then proceeded to make up a mixture *secundum artem*. Finished and wrapped, he handed it to the astonished owner of the letter, remarking: "Two shillings; and a very good cough mixture it is!"

DANGERS OF SULPHONAL.—A correspondent of the *Standard* warns the public about the great danger people—especially women—run in taking sulphonal as a harmless sleep-producing agent. A comparatively small number of medical men of late have advised caution in its use, he remarks, on the ground that its abuse resulted in temporary insanity; but few mention that, taken constantly, it will cause death as surely after a time as arsenic or strychnine. It undermines the strength very gradually, so that the victim is only aware that she feels weak, and languid, and ill. These sensations increase till in a longer or shorter period, if the drug continues to be taken, serious symptoms appear, which culminate in coma and death.

HAPPY NOW!—For a long time, owing to the enormous distance of the nearest pharmacies and the increasing population, the district of Nomate, in Italy, has felt the necessity of an establishment of its own. Some time ago a young chemist, Mr. Marco Leoni, opened a shop in the place, when suddenly the news spread abroad that, although begun under good auspices, it would have to be closed at the instance and claims of neighbouring chemists and druggists. When the Municipal Council held its next meeting, at sound of the summoning-bell the populace turned out in front of the Council-house and shouted, "We want the local pharmacy. Hurrah for Marco Leoni, the chemist! We want Leoni!" Whereupon Count Francesco Borgia, the Syndic of the district, always a friend of the people, who, together with other leading men, had supported the founding of the new shop, persuaded the crowd to withdraw, assuring them that the pharmacy so desired, and, indeed, indispensable, would be patronised and aided by the authorities. And the public peacefully retired with cries of "Long live our Syndic! Hurrah for our druggist, Leoni!"

At the Counter.

MISCELLANEOUS ATTEMPTS.—Glycerin appears to be a stumbling-block to many spellers. It is variously given as "gilseriene," "galsrin," and "glizrin" in a selection of cases. "Licteh-powder" is somewhat wide of the mark but understandable; but "mecelidisken ointment" is complicated until you are told it is yellow, and is "for drawing and healing." "Ukerliptis" is phonetically accurate enough for all practical purposes, and "anti-camera pills" and "anti-money" are equally so, although the latter has a suspicion of bimetallism about it. "Camels" and "serior" are puzzling until one thinks them out; but "prucsic ointment," in spite of its deadly appearance, is easily distinguished. A "ball of sulfor and Abom soap" is quaint, and so is the request in a clerkly hand for a bottle of "pinter water." "Cuch anell" is an old friend, as well as "harmonea"; but "tinceriamer" is ingenious, and "harrow O matick confection" seems a long way round. "Suckatanoles," "gum-wackam," and "carryseeds" are ingredients in a family recipe of which we have three samples; and it is peculiar to note the spelling of senna in the same order. It is variously given as "sinne," "sennea," and "sina." Another recipe calls for "seprela, hourehound, and dandy lyen."

OPTICS AND HARMONY.—Mr. Sydney Wild, chemist and optician, of Macclesfield, recently examined a lady's eyes and discovered cataract. She told Mr. Wild in the course of a subsequent conversation that her eyes had always been queer. They were examined by a doctor, when she was 18 years of age, and he told her that the "queer feeling" was due to "the octave nerve of her heart being weak." Mr. Wild also relates a conversation with a small boy, who asked for a "pennyworth of music." The chemist told his customer he was not a music-seller, and the youthful messenger presently returned with a paper bearing a request for "harmonium."

SOUTH AFRICAN ODDITIES.—Mr. J. R. Barnsley, of the South African Diamond Fields, at Beaconsfield, sends the following from a native customer:—

Nov. 25 11 01. my Deare King mr. J. R. Barnsly please please my King giveth girl midicini for Bosm my childrn sick Bosm. I can speack cry all nigth and morning. Well you ougth give Well midicini please please my King. Well you ought put twoo midicini had sick to and Bosm you ought put all twoo midicini had & Bosm please please my King lord. I am Philemon Zingoka.

The earnestness of this request invests its extravagance with considerable pathos.—From Ladybrand Mr. N. Coaker sends this:—

1/ Kina eindoos Kokspillen of Bekemps pillen of ander soort werk op gal.

—which, being translated, means "one shillingsworth of quinine, and a box of Cockle's or Beecham's pills, or any other sort, to work off the gall." An "Oprechte burgher" recently asked Mr. Coaker for "something to work for perjury." The non-coms. occasionally inquire for "oil of candlewood sandals," and a Dutchman wanted a "nice drink, not a fizzical drink."—A Cape Town chemist recently received the following, evidently from one of the Kaffirs employed at the water-works on the top of Table Mountain:—

Table Mountain. 30 of September 1899. Plese give this boy medsen is corfin and cherat this boy is want melesin at all corfin and cherat. Tom Walter up the Mountain.

A cough-mixture was supplied.

FROM GORGIE.—Mr. J. A. Center, of Gorgie Road, Edinburgh, sends a piquant batch. First of all he encloses as a "real curiosity" an order for "ipecacuanha-wine," spelled correctly. Then he asks what we would give if asked for "Seamy Torden." Precipitate ointment is his solution. His little lot includes "Yougilipe jubes," "Tinisidan powder, "Buracatic acid," "Setliditz powders," and "beledonian-oipement."

A LOVE-PHILTRE?—A Wrexham chemist had the following recently presented for dispensing:—

please suplie Nrs. Jones with this my husband gone away I want to make him come back dragon blood.

Perhaps the lady had rather much of the dragon already in her composition; hence the errant husband.

Summary of Principal Contents of to-day's issue of "The Chemist and Druggist."

THIS NUMBER completes our sixtieth volume. An index is inserted in it.

WE ASK a solution of the hieroglyphics on p. 990.

THE nature of the King's illness is referred to in a note on p. 992.

IRISH SOAP is getting popular in the Emerald Isle (p. 980).

SOME interesting and useful practical notes will be found on p. 990.

THE West Indies promise to be able to supply citric-acid materials (p. 994).

SIX PRIZES are awarded to our DIARY "Hints and Verses" competitors (p. 995).

THE STUDENTS' CORNER PRIZES go to Killingworth Station and Newcastle (p. 976).

DR. S. GULLI gives useful information regarding oil of bergamot-leaves (p. 995).

DR. VAN LINGE has resigned the managership of the Java cinchona-factories (p. 995).

THE PRIVY COUNCIL has approved of the regulation which requires liquid disinfectants containing poison to be put in bottles distinguishable by touch (p. 978).

MESSRS. J. P. GILMOUR (Glasgow), JAMES NESBIT (Portobello), and W. CUMMING (Dundee) are the new members of the North British Branch Executive (p. 997).

KODAK (LIMITED) have beaten the Inland Revenue authorities in the latter's contention that the company must pay income-tax on the American profits as well as the British (p. 998).

QUININE in first hands is 2*d.* lower, and phenacetin has been reduced 1*s.* 4*d.* for home consumption. Cream of tartar, canary-seed, and juniper-berries are dearer. Shellac and arsenic are lower (p. 1005).

THE first stage in the action alleging infringement of "Kodak" rights is reported on p. 998.

THE ROYAL COMMISSION on the port of London proposes in effect to municipalise the Docks (p. 994).

EXETER CHEMISTS are endeavouring to get the Technical College pharmacy-classes continued (p. 979).

SEVERAL AMENDMENTS on the Licensing Bill especially interest chemists and druggists, and are referred to on p. 1000.

THE *Lancet* seems to be in favour of taking the sale of some poisons out of the hands of chemists and druggists (p. 993).

OUR PARLIAMENTARY CORRESPONDENT sends us a "communication" about the Poisons Committee which is of special interest (p. 1000).

THE route which the Coronation procession was to have taken contains comparatively few pharmacies. We give photographs of them on p. 982.

THE LORD CHIEF JUSTICE and two judges have made absolute the rule requiring the Brentford Justices to state a case for High Court consideration in reference to "Pure-gum pastilles—Influenza" (p. 998).

A TITLE TEST-CASE is recommended to the Council of the Pharmaceutical Society by the Scotch members, who wish to interdict shareholders of limited companies from using the title "chemist and druggist" (p. 997).

THIS WEEK'S "Observations and Reflections" are on the London Chemists' Association, the Glasgow Trade Association, Mr. Seabury's anti-cutting plan, the Bradford Charms, B.P. solubilities, and Gregory's powder (p. 991).

MR. SWIFTE, the Dublin Magistrate, has held that there is no limit in the Irish Pharmacy Act (Widows' Clause) as to the conducting of the businesses of deceased pharmaceutical chemists. He has accordingly dismissed the summons taken out by the Pharmaceutical Society against two ladies (p. 1004).

Exchange Column—Bargains.

TERMS.

DEPOSIT.—The purchaser of anything advertised in the Exchange Column may remit the amount to us, and we only pay the money deposited on advice from the remitter. We charge a commission of 6*d.* on any transaction of £3 or less, or 1*s.* if above that amount, which is payable by the purchaser.

Limited to the Advertisements of Surplus Stock, Shop Fittings, Apparatus, Photographic Goods, Books and Periodicals, Formulæ, Addresses Wanted and Articles Wanted.

½d. *per word with name and address.* **1d.** *per word if we register the address and attach a number.*

No Advertisement inserted for less than 6d.

Remittances payable to EDWARD HALSE, and crossed MARTIN'S BANK, LIMITED.

FOR DISPOSAL.

DRUGS AND CHEMICALS.

Any reasonable offer accepted.—2 lbs. gum. sang. drac., 4 lbs. P. gran. Paradise, 2 lbs. rad. serpentariæ, ½ lb. rad. chiratæ, 2 lbs. sem. anisi, 4 lbs. pulv. cymini, 2*s.* 9*d.* Lewis's vegetable bitters, 3 2*s.* 9*d.* Lewis's rheumatic essence, 1 injection Brou. 230/16, Office of this Paper.

MISCELLANEOUS.

Latest editions, Minor books; chemical apparatus and reagent bottles; microscope, 100 botanical slides, &c. Apply, ASHKANAZY, Chemist, Dartford.

PROPRIETARY ARTICLES.

Quite fresh, 16 2*s.* 6*d.* Mellin's emulsion, 15*s.* doz.; 56 1*s.* ditto, 8*s.* doz. Medical Hall, Canterbury.

SHARES.

Shares for Sale.—See Miscellaneous column (page 95).

What offers? 4 ordinary, 11 preference Camwal shares. ASHKANAZY, Chemist, Dartford.

WANTED.

Platinum disused utensils and scraps. P. ROWSELL, 9 Derwent Grove, Dulwich.

Two O'Brien check-tills. Full particulars, lowest price, LEAVY, Castleblayney.

In a new condition, complete fittings, bottles, utensils, &c., for shop 11 ft. square. 2/13, Office of this Paper.

Immediately, split Apollinaris bottles; 4*s.* 6*d.* 100 given if sent carriage paid. WHYSALL & SON, Grantham.

Southall's "Materia Medica," Green's "Botany," vol. I.; "Selecta Prescriptis" (Pereira). HENSHAW, Alsager, Cheshire.

Printed by SPOTTISWOODE & CO. LTD., New-Street Square, and Published at the Office, 42 Cannon Street, in the City of London.—*June* 28, 1902.

Digitized by Google

Shot Dead.

Professor Ivison Macadam was shot dead on June 24 by a lunatic in the Surgeons' Hall, Edinburgh. Professor Macadam was a son of the late Dr. Stevenson Macadam, and occupied the Chair of Chemistry at the New Veterinary College, Edinburgh, also teaching the subject at his late father's laboratories in Surgeons' Hall. Further particulars will be given in the Coloured Supplement.

French News.

(From our Paris Correspondent.)

WASTEPAPER FOR WRAPPING.—M. Alapetite, Prefect of the Rhine Department, has decreed that meat, pastry, butter and cheese, fruits, and fish shall henceforth be wrapped by retailers in clean, unprinted, and unsoiled paper.

BOVINE TUBERCULOSIS.—Parisian papers give many details regarding Dr. Garnault, who is inoculating himself with tuberculous matter from cows in order to prove that Dr. Koch is wrong in saying that bovine tuberculosis is not communicable to men. He injected the stuff into his forearm in the presence of medical witnesses. He anticipates no results for from two to three weeks. The disease may then manifest itself in the form of a local affection, and eventually spread to the lungs, or the chest may be immediately and directly attacked.

THE TELEPHONE is gradually coming into more extended use in Paris, and the physicians are endeavouring to obtain a reduced tariff for its use. At a recent meeting of the Syndicate of Paris Doctors it was decided to approach the Postmaster-General on the subject. It appears that the Professors at the Faculty of Medicine here enjoy a rebate of 50 per cent. on the annual subscription for their telephones. The Syndicate points out that the principal result of this reduction is to allow these eminent practitioners to be summoned by their wealthy clients with greater celerity than those less favoured, for comparatively few Paris doctors seem able to afford the 400f. (16*l.*) per annum that the telephone costs. The Syndicate has voted a resolution in the following terms:—"Considering that in this Republic of France equality exists for everyone, and consequently all have the right—especially the poor—to expect speedy assistance in case of illness, the Syndicate consequently petitions the Postmaster-General to extend the favour of a reduced telephone-tariff to all medical practitioners." I refer to this question, as the Paris pharmacists will, of course, wait for the result of this petition with some interest. All the leading pharmacies subscribe to the telephone, and a somewhat general opinion prevails that if physicians obtain a reduction of 50 per cent. on the tariff the same must be accorded to pharmacists, who are equally concerned in the art of healing.

East Indian News.

BUSINESS CHANGE.—The English Drug Company has, in consequence of increasing business, removed from 394 Mint Street to more commodious premises at 32 Stringer's Street, Esplanade, Madras.

PROPOSED COMBINATION OF AËRATED-WATER MAKERS.—A movement to establish a combination of the larger manufacturers of ice and aërated-waters is contemplated in Colombo. Owing to competition, prices have been cut very low, and it is thought combination will put an end to this cutting.

CIRCUMSTANTIAL EVIDENCE.—According to the *British Medical Journal*, a case of considerable interest from a medico-legal point of view has been reported by the chemical examiner to the Bengal Government. A murder was committed at the Bengal Club in Calcutta, and examination of the blood-stains on the garments of the murderer showed that the blood contained filariæ. This established a connection between the murderer and his victim, and it indicated, moreover, that the murder had been committed at night.

American Note.

STORAGE OF COMBUSTIBLES IN NEW YORK CITY.—The New York Bureau of Combustibles have recently issued new regulations regarding the storing of combustible substances, which is causing some heartburning amongst pharmacists. A representative of the *American Druggist* who interviewed the Inspector of Combustibles on the subject was supplied with a list of regulations affecting drug-stores, which states that permits for the keeping of explosive compounds will be issued to retail drug-stores that are located in the same building as a hotel, dwelling, lodging, boarding, or tenement house for the following limited quantities only:—

4 doz. nitrite-of-amyl perles.
4 oz. picric acid in glass-stoppered bottles.
16 oz. collodion, with not more than 8 oz. in a container.
16 oz. cantharidal collodion, not more than 8 oz. in a container.
16 oz. flexible collodion, not more than 8 oz. in a container.
2 oz. spirit of glonoin (1-per-cent. solution), not more than 1 oz. to be in a container.

Should the store be self-contained, the permit may allow increased quantities. A licence must be obtained for, amongst other things, the manufacture, sale, or use of any inflammable gas, crude petroleum, gasoline, benzene, pinoline, camphene, burning fluid, acetic ether, ether, or nitrous ether. In retail drug-stores situated in other buildings, as specified, permits will be limited to—

15 gals. alcohol,
15 gals. wood alcohol,
10 lbs. spirit of nitrous ether,
1 lb. acetone,
1 lb. aldehyde,

all to be stored in glass or metal containers. Thirty pounds of sulphur will be allowed, and 1 oz. of phosphorus under the same conditions; while for storage in self-contained buildings 11 lbs. of phosphorus and 110 lbs. of red phosphorus may be kept in a vault or fireproof closet; and 50 lbs. of metallic magnesium and 16 barrels of sulphur (5 roll, 5 sublimed, 3 washed, and 3 precipitated) will be permitted if the store is detached.

Trade Notes.

FIRE-PREVENTION.—The British Fire Prevention Committee, 1 Waterloo Place, Pall Mall, S.W., informs us that owing to the recent fatal fires in the metropolis a special industrial section has been started in connection with the main committee. The new section is designed to meet the requirements of business-men who desire advice as to the best way of protecting their offices, works, or factories from fire. The subscription from each firm is one or two guineas.

AN APERIENT WATER.—Among the multitude of aperient waters that are now extant, Friedrichshall still holds its own. It is of stable composition, and the high percentage of magnesium and sodium sulphates revealed by an analysis of the water ensures its efficacy as an aperient. It is not so nauseous as some waters that claim the same medicinal properties, and one thing emphasised in connection with its use is that "the longer Friedrichshall is taken the smaller is the quantity necessary to effect the purpose." The London manager is Mr. G. Greiner, 10 and 12 Milton Street, E.C.

M. L. BAUDIN finds that by the use of a light petroleum ether, possessing a density of 0·647 at 15° C., a thermometer can be constructed which does not solidify at the temperature of liquid air, and which can be used to measure temperatures down to that point. The instrument shown before the Academy of Sciences was graduated at four fixed points—the boiling points of oxygen, nitrous oxide, methyl chloride, and the melting-point of ice.

Digitized by Google

LONDON PHARMACIES ON THE CORONATION PROCESSION ROUTE

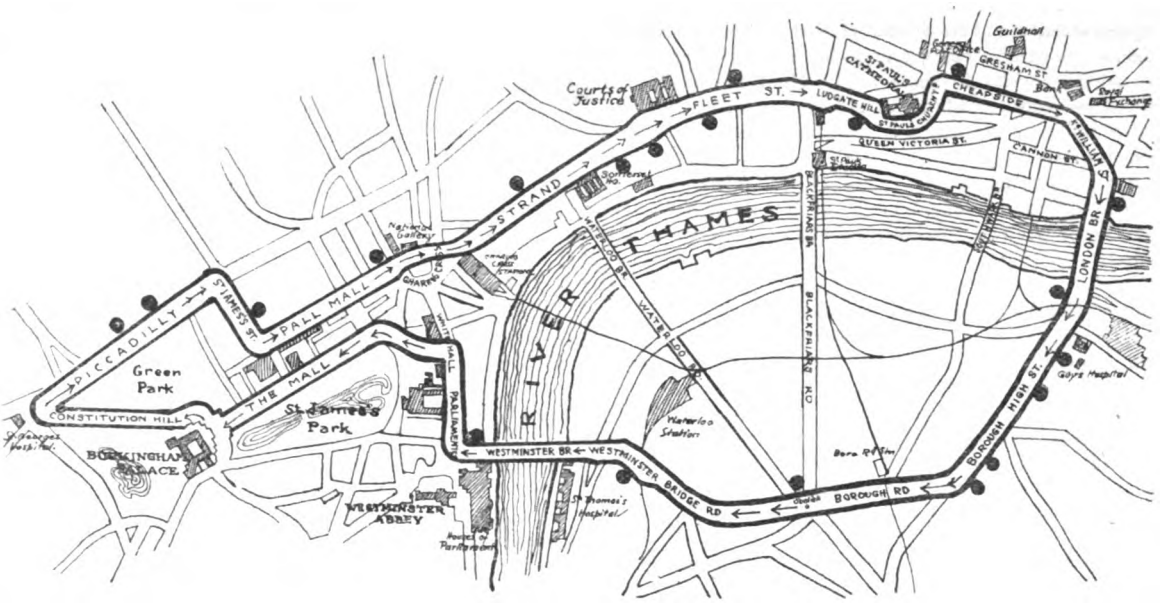
THE following comprises the greater portion of an article which we have ready for insertion in connection with the Coronation of King Edward VII. It would be easy now to sacrifice the article as a whole, but there would be a fateful significance in that course, and, in the sincere hope that the King will yet traverse the route mapped out, we venture to tell what there is of pharmaceutical interest on the way.

When our Pharmaceutical Camerist first thought of the material which this great event would afford him he dreamt of pharmacies by the hundred, but a little thought and the London Directory reduced the number to those that are depicted on pages 985 and 987. Not many, but a good representation of London pharmacy. Of the twenty pharmaceutical places on the route, thirteen represent the older *régime*—the pharmacy of a couple of centuries ago, more or less. There are also a few modern pharmacies, and one or two drug-stores, so it may be said that the pharmacies passed by the procession give a living illustration of the evolution of the trade since 1700. From antique pharmacies in antique garb to ancient pharmacies in modern dress, and from these to modern-fashioned drug-stores and high-class retail chemists', we have at a glance the pharmaceutical history of the eighteenth, nineteenth, and twentieth centuries. The most ancient establishments on the route are naturally those in the City and Borough High Street, the more modern being in Westminster and Piccadilly. Most, though by no means all, of these chemists have made arrangements to let seats in their windows to view the procession and thus compensate themselves for disorganisation of business.

In describing the pharmacies one naturally takes the order in which they are on the route, commencing at Piccadilly, and in this order they are referred to as near as possible.

TRAFALGAR SQUARE.

Showing National Gallery in background. The procession was to pass in front of the Gallery.



Perkins & Co., 99 Piccadilly, begin the number handsomely in the Badminton Chambers building, right in the heart of the Piccadilly Clubs. Near neighbours are the Hurst Park Club, the Imperial Service Club, Naval and Military Club and the Junior ditto, the Badminton, the Junior Constitutional, the Isthmian, and the St. James's Clubs. Aristocrats abound in the district, and the Perkins pharmacy reflects the tone of the neighbourhood. It is a handsome shop, with a fine broad window (broader than it is high), and there is generally an attractive but elegant show in it. Mr. Thomas Frampton Perkins, pharmaceutical chemist, established the business twelve years ago. It is in high-class and modern West-end style. The firm make a speciality of American proprietaries, for which they have several good agencies. Their chief speciality is "peptopain"—a combination of pepsin and papain, which was prescribed by the late Sir Andrew Clark.

Mr. John Warner, one of the first to pass the Minor examination, has a beautiful pharmacy further east, at 114 Piccadilly, and two doors west from the Junior Athenæum Club. The exterior, as well as the interior, is in keeping with the dignity of the district.

Until we come to St. James's Street there are no more pharmacies, although in Bond Street are Messrs. Dinneford & Co.'s, Savory & Moore's, and others; in fact, West-end pharmacy is largely carried on in what are, to the procession, side streets. In the section of Piccadilly east of St. James's Street are several pharmacies, as well as Burlington House, which gives shelter to the leading learned societies of London.

St. James's Street has but one pharmacy, No. 8, that of Pope Roach & Son, now carried on by Mr. Herbert William Roach, pharmaceutical chemist. It has a quaint frontage, with six panes of glass in the bay window, but eighteen months ago it had several multiples of that number, which with the framework were broken by a disorderly cab-horse. Then the opportunity was taken to somewhat

Digitized by Google

modernise the window, which still, however, has in front of it the cellar-grating and railing that give some West-end shops an old-world appearance. This house is old in reality, for it was established by a Mr. Giddy early in the eighteenth century, and was taken over by the late Mr. Pope Roach sixty years ago. The premises have a further interest attached to them, inasmuch as Lord Byron lived there for seven years. The firm holds two Royal warrants as chemists to the King and Prince of Wales respectively, and others of the Royal Family are among its customers. Clubmen and military men are fond of dropping into this quaint pharmacy, which is celebrated for its morning tonics and other articles of that nature, including a sea-sickness draught introduced by Mr. Pope Roach fifty years ago. This is put up six in a box, and the *World* speaks highly of it for alleviating the horrors of a Channel passage.

In Pall Mall proper there is no pharmacy, but at No. 62 lives Sir Francis Laking, M.D., who is the King's personal medical attendant. At No. 7 Pall Mall East, nearly opposite the Royal College of Physicians, and at the corner of Whitcomb Street, is the pharmacy of Hooper, Struve & Co. (Limited). Struve was the inventor of aërated waters, and the firm's business in these, both in London and Brighton, is one of the best. The head of this business is the well-known Lieut.-Col. Clifford Probyn, J.P., Mayor of Westminster, who has been doing much work in connection with the Coronation. Col. Probyn is a master in public affairs, and has filled many civic and masonic positions. His business extends in several directions, and includes a pharmacy in Grosvenor Square, a centre of the fashionable world, and the one in Pall Mall East, to which the connection of Mr. Priest, Parliament Street, with his renowned cement, was added a few years ago. Several other specialities, such as "Carnabyn," are controlled from No. 7. The pharmacy is peculiar in being a single shop with five show-windows, four of them on Whitcomb Street. These are quietly but effectively dressed, and the interior is substantially fitted for the first-class retail and dispensing business done in it. The pharmacy is in charge of Mr. Duckett.

HIGH COURTS OF JUSTICE.
Almost in front of this the City authorities were to join the procession.

Here end the West-end pharmacies in the strictest sense. The next that the procession passes is that of F. W. Nurthen & Co., 390 Strand, W.C. This is a very old-established pharmacy, having been in existence since 1714. It has been in the hands of the present proprietors for thirty-six years, and in its early days the shop was tenanted by a doctor. The proprietors have little or no record of those early days beyond the fact that at one time it was occupied by a M Davies, who made and exhibited in Exeter Hall a working model of the electric telegraph when that application of science first came before the world. About ten years ago a new frontage was put to the shop, and the appearance of the establishment is now quite modern.

Starkie & Co. have two pharmacies in the Strand, Nos. 7 and 126, but the latter only is passed by the procession, the former being in the Grand Hotel buildings, at the top of Northumberland Avenue. The proprietor, Mr. Richard Stringer Starkie, is one of the oldest Major men living (he passed half-a-century since), and, although an invalid, he personally directs the business, occupying rooms on the upper floors of 126 Strand. His conversation on the subject of the "good old days" is full of interest. Born in the Strand, he has lived there all his life, being the third successive owner of a business established in 1788. It originally belonged to Mr. Stringer, who had a shop close to Charing Cross, at the corner of Northumberland Street. This shop is now the Grand Hotel buffet. Mr. Starkie's father was assistant to Mr. Stringer, and afterwards managed the business, which became his own early in the nineteenth century, some years before the present Mr. Starkie was born. It was then known as "Starkie, late Stringer." The business was of the old-fashioned type—all galenicals, of whatever

Digitized by Google

nature, being made on the premises. Perfumery and soaps were also stocked, and Mr. Starkie's father was the first chemist in London to exhibit Pears' soap in his window—transparent soap being a novelty in those days. Mr. Starkie tells with some amusement how his father obtained, after considerable trouble and at some expense, Royal warrants to trade as chemist to George III., George IV., and William IV., and, finding that, owing to the death of the monarchs, such warrants did not last long, he did not trouble to obtain one from Queen Victoria, considering his three former titles sufficient to trade on. He little dreamed that Queen Victoria's reign was destined to be the longest in history. Owing to street alterations Mr. Starkie removed temporarily to premises close at hand, and afterwards returned to the more modern premises at No. 7 Strand, under the Grand Hotel, which is not far from his original premises. The shop at 126 Strand has been in existence for twenty-one years. Mr. Starkie is ably supported by his two managers, Mr. Russell at No. 7 and Mr. Talbot at No. 126, and he makes it a rule to keep his business well up to date, and never to employ any but qualified assistants in any capacity whatever.

At 166 Strand, close to Somerset House, is one of the pharmacies of Henry Lamplough (Limited), which is referred

ST. PAUL'S CATHEDRAL.

to later. It is one of the most attractive business-places on the route, the window-displays being especially fine, thanks to the modern frontage.

The pharmacy of Mr. John E. Greaves, chemist and druggist, 199 Strand, although a modern one, represents a business over 100 years old. Originally, under the name of Dicker, it occupied a position adjoining Temple Bar, while later it came into the possession of Messrs. Huggins & Co. At the time of the removal of Temple Bar the pharmacy had to be transferred to 199 Strand, where advantage was taken to fit up in modern style. It is now owned by Mr. Greaves. "Huggins's ozone-papers," well known to the trade, emanate from this shop, and its windows are always an attraction to provincial chemists, as they are full of medicinal specialities exhibited in an attractive way. The interior is not extensive, but the most is made of it, the fittings being unconventional and attractive.

Entering Fleet Street, and taking the right side from the Strand, we soon reach No. 68, where Mr. George Peter Pond, chemist and druggist, wields both pestle and pen, for if any agitation is going on in the drug-trade Mr. Pond has something to say, and says it well. He is a leader in the London Chemists' Association at present, and, having an "agin'-the-Guverment" tendency, he can be relied upon for a little healthy criticism at any time. His pharmacy smacks wholly of business; the window is so well stocked that at the dinner-hour Fleet Street and its alleys digest their meals by a mere gaze at the contents—a tribute to the latter's potency much indulged in. The business has been in existence for over 100 years, and Mr. Pond has had it for forty-three years. He incorporated with it the business of Lloyd & Co., 75 Fleet Street, carrying both on under one roof. He has some good specialities—*e.g.*, Pond's areca-nut tooth-paste, "Arthriticus," and "Tippoo's Indian tonic saline." Mr. Pond showed our representative a very artistically designed card of admission for Procession Day, the main portion being intended as a souvenir of the event. It gives portraits of the King and Queen, and pictures of various incidents in their lives and of their residences.

Across the street, at the corner of Shoe Lane, is one of the cosiest little pharmacies on the whole route—that of Hancock & Co., 128 Fleet Street, in the *Morning Advertiser* block. Our snapshot of it was taken at one of the quietest hours of the day, and the corner shows the business possibilities of the place. It is a very old pharmacy. Though the early proprietors are unknown, it is certain that the premises have been in use as a drug-shop since 1760. In its earliest days it was occupied by a doctor, and during some recent alterations an ancient scroll was discovered, revealing the antiquity of the shop as a medical hall. About 1830 the premises were taken by Messrs. William Nason

THE MANSION HOUSE.

Taken from the east, thus showing the junction of Cheapside and Queen Victoria Street.

& Son, whose "Pettigrew's Pectoral Lozenges" are still sold by the present proprietor. Following Messrs. Nason came Mr. Joseph Hancock, and after him Mr. Robert Hancock, who held the business for some forty years, and latterly the present proprietor, Mr. Frederic Boxall, chemist and druggist. The business, in spite of its antiquity, is conducted on modern principles, the chief specialities of the firm being antiseptic throat-pastilles and "Dr. McWhinnie's red ointment."

We are now getting into the centre of the City. Almost under the shade of St. Paul's stands one of Mr. George Squire Boutall's thirteen stores—St. Paul's Pharmacy, on Ludgate Hill. This is the only one of Mr. Boutall's branches on the procession route, the Strand branch having recently been pulled down in connection with street improvements. The Ludgate Hill place was started some ten years ago by Mr. Boutall, on modern lines, as a high-class cash chemist's business. Mr. Boutall makes a speciality of French and American proprietaries, of which he carries a large stock. His principal specialities are "Boutall's cough-balsam," "Dr Golding Bird's head, stomach, and liver pills," and "Pedler's bronchial and asthmatic lozenges." Mr. A. F. Beckwith,

Digitized by Google

Digitized by Google

pharmaceutical chemist, the manager of this branch, makes most attractive windo w-displays.

Cheapside, or rather the Poultry, was once the home of the Bell and Dragon, the sign of Messrs. Corbyn, Stacy & Co., who closed their premises a few years ago, although the stock, fittings, and connection were taken by the manager, Mr. Waring, round to Bucklersbury, which is just off the route. The only druggist's shop in Cheapside is No. 134, belonging to Henry Lamplough (Limited), whose business was founded by Mr. Henry Lamplough. The present company was formed in 1886, and the Broad Street premises were the first of the branches established, the head offices being at Holborn Circus, to which Mr. Lamplough removed from Snow Hill, where he started business sixty years ago. The Strand and Cheapside branches are managed respectively by Mr. Charles Varnam and Mr. Gregory. The speciality of this firm is, of course, "pyretic saline," particularly in the form of effervescing draughts, the secretary of the company informing our representative that during the summer months as many as 8,000 draughts are often sold at their five shops n a single day. Some of the shops are small, the New Broad Street one especially so, and No. 134 Cheapside is a good second to it; but they are so well arranged that it is possible to get through a lot of business in them. Cheapside is essentially a place for window-display, as mainly thus is trade obtained and built up.

The procession was to stop for a few minutes at the Mansion House; then to go through the Mecca of the assurance world, past King William's statue at the junction of Gracechurch Street, Eastcheap, King William Street, and Cannon Street. No. 43 King William Street is the pharmacy of Hooper & Co., which was established in 1831 by the inventor of Hooper's cachous, an ingenious and enterprising man to whom also we owe the basis of the ink which is used in printing stamps. Mr. William Perkes Parry, chemist and druggist, was the owner of the business until twelve or thirteen years ago, when he had so much developed the manufacturing part of it (Bartlett Hooper & Co.) that he sold the retail to Mr. Sydney Fowle, the present proprietor. It is in a busy thoroughfare, and has a fine old-world frontage, of which the most is made by attractive displays of specialities, a good thing also being done in summer drinks.

A few yards southwards London Bridge begins. It is in the process of widening. One cannot pause to think of the memories that the bridge calls up, for this is a business place, and on the river below the greatest volume of commerce which the world has ever seen is carried under disadvantages. These are the outcome of the City's antiquity, and may never be wholly eradicated. Towards the east there stand together a sturdy relic of Norman times in the Tower of London and that stupendous and artistic feat of modern engineering, the Tower Bridge. The vista towards the west is the metropolis itself, blending commerce, education, law, government, and legislation in the view.

Entering Borough High Street the first token of pharmacy on the south route is at the premises of W. W. Flood & Co., wholesale druggists, No. 206, on the right side, Messrs. Bartlett Hooper & Co. being No. 208. These we do not illustrate, as our photographs are confined to retail pharmacies. The left side of Borough High Street is most favoured by the drug-trade. At No. 97 is the business of Stevens & Co., which was founded in 1792, and which, though it has since changed hands, still keeps up the old name. The firm possesses an old bell-mortar over 100 years old. The front is peculiar, for at a short distance one would think that the business of hair-dressing is carried on along with pharmacy, but close contact reveals the fact that it is the first-floor tenant who does the shaving and hair-cutting. This is the first shop on the route in which we find a good display of trusses in the window—a fact accounted for by the shop being in the proximity of markets and warehouses where porters abound.

We soon reach what appears to be the oldest drug-business on the route, that of Mr. David White, 193 Borough High Street, S.E. It was established as far back as 1700 by one Mr. Field, and was subsequently carried on by Mr. Beedzler, under the title of "Ye Golden Key," at 18 Norton Folgate. After that came Mr. Callum, then Mr. Rackham, who died two years ago. The present owner, Mr. D. White, having bought the business from Mrs Rackham in September, 1900, it is now carried on under the title of "White, late Rackham." The premises are over 200 years old, having been a tobacco and snuff manufactory before becoming a pharmacy. Mr. White has in his possession several very old-fashioned bottles, jugs, chairs, &c., which go to prove the antiquity of the place, as well as the style of the building. A glance at the picture on page 987 will show that the front has been somewhat modernised, and those on the outlook for something to replace the old-fashioned shop-lamps should note the effective reflecting-lamps which illuminate the window-contents, and tell passers-by, by means of the red bullseyes and crosses, that medicines are sold there.

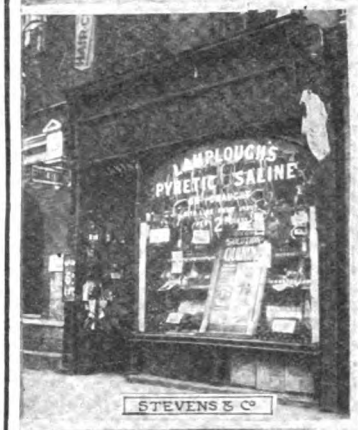
The next drug-shop belongs to Drew & Co., 277 Borough High Street. This business was established in 1790 by a Mr. Yate. Mr. Beriah Drew has been in possession for over forty years, and until fifteen years ago the business was carried on at the corner of Lant Street. The shop is a double-fronted one, and was in possession of the carpenters at the time of our visit. A wholesale business is also done by the firm.

On the east side of the street is the business of Parry & Garnham, No. 18. This is another of the ancient houses, having been established about 1750 by Mr. South, the father of the well-known Mr. John South, surgeon, and of Sir James South, the celebrated astronomer. After him came Mr. Rouse, who built the present premises while the street was in course of construction, about 1830. In 1855 Mr. Parry joined as assistant, and later Mr. Garnham, these two taking over the business on October 1, 1863. There are in the books many prescriptions of well-known people of the Borough in those days, and the firm have an old ledger containing the following curious entries, among others:—

	£	s.	d.
Jan. 21, 1800—Mr. George Brandon.			
To 12 lbs. salt @ 5/9 per lb.	3	10	8
Jan. 4, 1800—Right Hon. G. Bingham.			
To 12 doz. chalk eggs @ 1*d.* per egg	0	12	0
Feb. 1, 1800—Mr. Thomas Johnson.			
To 112 lb. tobacco	100	0	0

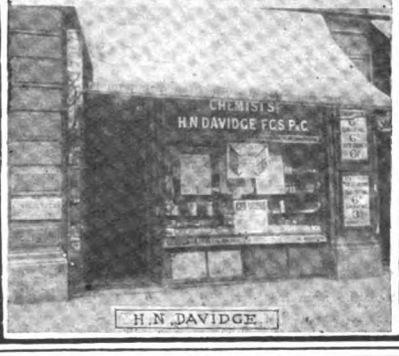
The premises are fitted with very old-fashioned shop-rounds, holding nearly ½ gal. each, and the firm have in their possession many old and curious pharmaceutical appliances. The present business is mostly dispensing, and of a high-class nature; it is well situated in a very busy thoroughfare which contributes largely to its support.

The only other drug-shop in Borough High Street is No. 305, belonging to Boots Cash Chemists (Southern) (Limited), an old Day's Drug Company shop and an old business, having been established some fifty years. It formerly belonged to Mr. Pond. The manager of this branch is Mr. H. Neil, chemist and druggist. The Boots Company are building an establishment in Borough Road, which is also on the procession route.



At St. George's Circus, which divides Borough Road from its western continuation — Westminster Bridge Road—is situated the Royal Ophthalmic Hospital, at which Miss A

Digitized by Google



Digitized by Google

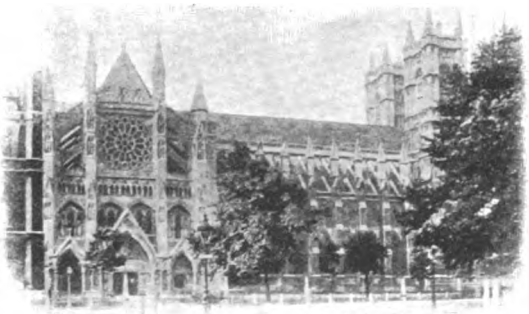
Neve, pharmaceutical chemist, is the dispenser. There is only one pharmacy in the road—viz., the Westminster Drug-stores, 179 Westminster Bridge Road. The business is comparatively new, and was formerly carried on under the name of Francis Hicks & Co., but a few years ago it was taken over by Mr. Oldcorn, of Piccadilly Circus, and is carried on as a cash drug-store.

THE BANK OF ENGLAND.
The centre of the world's finance. Taken from a point on the north-west corner of the Mansion House.

LONDON BRIDGE.

Before touching Westminster Bridge the procession skirts the grounds of St. Thomas's Hospital on the Albert Embankment and directly opposite the Houses of Parliament. Here Mr. Sydney Plowman, F.R.C.S., M.P.S., of Melbourne, was pharmaceutist, as the chief dispenser is called, until the present holder of the position, Mr. Edwin White, B.Sc., M.P.S., succeeded him. On the north side of the bridge and to the east of the roadway is the pharmacy of Mr. H. N. Davidge, 8 Bridge Street, Westminster. This business has been established for nine years. It was originally the Palace Drug Company, and was taken over by Mr. Davidge (a Major man) about three years ago. It is run on very modern lines, being a high-class dispensing and retail business. A large trade is done with America and other visitors. The Houses of Parliament also furnish Mr. Davidge with considerable custom, and there are a number of prescriptions for Cabinet Ministers on his books, the "slight indispositions" to which Ministers have been liable of late being in most cases treated by medicines from this pharmacy.

ST. THOMAS'S HOSPITAL.
Is on the south side of the Thames, opposite the Houses of Parliament.



Mr. Davidge also does a large soda-fountain business and in photographic lines. His most prominent speciality is "Dr. Prince's New Zealand corn-cure."

This is the last pharmacy on the route—Mr. Priest's, which formerly stood in Parliament Street, having been pulled down a year or two ago. We have indicated by discs on the map where the pharmacies are situated. They are not as thick as blackberries, and long though the route is we do not think that it will take many if any more druggists. It may be remembered that in our Winter Issue a Paris correspondent told how he started on a tour of the Grands Boulevards to pick out the pharmacies, and he obtained a mere handful.

These notes point to the necessity for keeping pace with the times. Even the oldest businesses have had to conform to modern methods, and let us hope that the health of King Edward VII. will soon be restored so as to enable him to pass in State through the most modern, and at the same time most historically interesting, city in his wide dominions.

South African News.

(*From our Correspondent.*)

THE CAPE ANALYST'S REPORT for the first quarter of the year contains little of interest to the drug-trade. Mr. Juritz had not a single medicine to examine during the period. Of eight samples of vinegar analysed two were artificial, and the sellers were fined 3*l*.

MEDICINE DISCOUNTED.—There was not a single medical man at the chemists' dinner held at Cape Town on May 21 (see our last issue), writes a subscriber, who wants to know if those responsible purposely excluded the medicos, or are relations between the two professions strained at Cape Town.

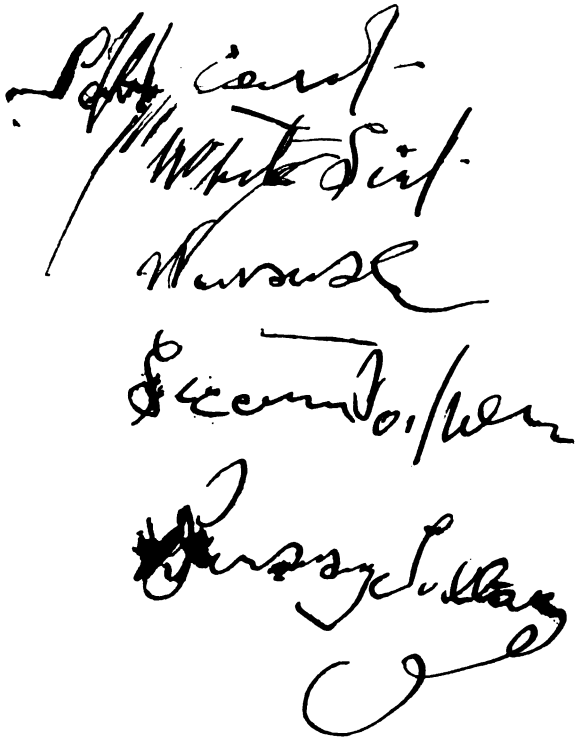
A CHARGE OF FRAUD.—At Johannesburg on May 28, W. A. Henry (22), who described himself as a chemist and a native of Nova Scotia, was committed for trial on a charge of theft by means of worthless cheques. Accused was said to have resided for some time at Potchefstroom, and to have been manager for a short time to Mr. George Rankin, chemist, while there.

THE CAPE GOVERNMENT HERBARIUM has now been moved from rooms in the building of the Department of Agriculture to more suitable premises near the Cape Town Museum, and Professor MacOwan, Government botanist, is a happy man in consequence. It has taken years of ceaseless agitation to get adequate premises for the herbarium, and those who gained the ears of the Government in this connection are to be congratulated. Now that the herbarium has been suitably located one is prompted to ask when the Government intends to provide the senior analyst with reasonable accommodation? The reports which periodically appear in this journal show that the work of the department has increased; even during the war it was fairly maintained, but the facilities for the efficient discharge of the work remain as they were—exceedingly meagre. The work that will fall on the laboratory within the next year will tax the staff greatly, and in cramped and badly lighted rooms it will be difficult to keep up to the level of efficiency.

IN THE DIAMOND-FIELDS.—Further evidence was given against the old farmer, Hermannes Johannes Steyn, at Kimberley, on June 2, in the charge against him of infringing the Pharmacy Act by having practised as a doctor (see *C. & D.*, June 14, page 914). Mr. Lezard, who defended, informed the Court that the accused was the possessor of a patent for the cure of cancer and a licence for the sale of patent medicines. It was pointed out, however, that the patent was taken out in 1897, when 10*l* had been paid, but was not renewed three years later, when it ought to have been. Evidence was given of Steyn attending a woman who was suffering from cancer, and supplying plasters and medicines. A sum of 3*l* 10*s*. was charged for these, but Steyn specifically told the husband of the patient that the charge was for the medicine and plasters only, and not for attendance. Similar evidence was given by a Beaconsfield woman, who said the accused had cured two of her sons of ailments—one a sore throat, the other a sore leg. In the latter case the lad had spent six months in hospital without relief. Steyn never represented himself to be a doctor, and asked for no payment on any occasion. The case was again adjourned.

THE PEACE.—The news that peace had been signed reached Cape Town on Sunday morning, June 1, and on Monday, June 2, all the centres of the drug-trade in Cape Colony received the congratulations of the *C. & D.* Our Kimberley correspondent, telegraphing to the Cape Town office, stated that special peace celebrations were in evidence there on June 3, and that the whole town was decorated for the occasion. The trade at Diamondopolis was jubilant. The *C. & D.* correspondent at Durban also wired that that city was celebrating peace in style, but anxiously waited further particulars, as the trade there was looking forward to business with a thoroughness characteristic of Natalians. At Cape Town the news was received joyfully of course, but scarcely an extra flag has been flying since the event was proclaimed. The drug-trade of the South African metropolis has accepted the peace news in much the same way as it would a success in the field, and after all, from a business point of view, we are far from being out of the wood. Feeling at Port Elizabeth is much the same. The talk of suspending the constitution of the Cape Colony, and the Ministerial crisis occasioned thereby owing to a difference in opinion in the Cabinet, all tend to make the business man think pretty seriously.

CONGESTION AT THE CAPE DOCKS.—At a meeting of the Table Bay Harbour Board, held towards the end of May, it transpired that claims were on file for merchandise lost to the tune of 2,703*l*. Forty-eight claims out of the foregoing, aggregating in value 1,654*l*. 6*s*. 1*d*., were, the general manager explained, in course of settlement, the goods having been traced. This may be, but it would appear that little attention is paid to claims until the merchants threaten legal proceedings. The dock officials report every now and then that the management is improving, and no doubt this is a fact; it has improved considerably of late, but when it is known that merchandise arriving last September (including an entire shipment owned by a drug-house and lost by the dock people) only receives attention in May following, it will be admitted that the management has a long way to go to reach perfection point. Home readers exporting to South Africa *viâ* Cape Town can draw their own conclusions as to the state of the shipping arrangements at this port during the latter half of last year. The amount and value of goods pilfered from chemists' importations—and it is assumed that importers of other goods suffer too—is on the increase, and should there be no decrease there will be plenty of litigation against the Board in the not far distant future. It is stated that many of the dock hands are expert case-openers, and are well up in the art of abstracting perfumery and the like. Hitherto it has been the motto of the dock authorities to blame anybody but themselves in matters of this kind, but now that the military authorities will gradually relax their hold on portions of the dock-space, there can be absolutely no excuse for the inefficiency of the management of the Table Bay Docks. *A propos* of thieving at the docks, I may state (adds our correspondent) that the Cape Government Railways have been compelled to resort to the most stringent measures to protect freight in transit, especially liquor and tobacco. There is a movement on foot to run special freight-trains carrying these products northward, and extra vigilance is to be maintained all along the route as the trains travel.



Colonial and Foreign News.

GERMAN TAX ON BLEACHING-POWDER.—According to the new German tariff, the duty on bleaching-powder is to be reduced from 3 m. to 2 m. per 100 kilos. The rate of 3m. which was introduced in 1865, was retained in 1879 because, the imports, which came chiefly from this country, still exceeded the export. The paper-manufacturers at that time asked for a removal of the duty, but were not successful. Since then, however, as the preamble to the proposed tariff recognises, the German production has advanced to such an extent that it is not only possible to practically exclude the British import from the German market, but also to export increased quantities yearly. Now, however, merchants and consumers want the duty fixed at considerably less, or abolished altogether. With this object the Federal Council has been approached.

THE PROPOSED OPIUM-FARM.—The recent proposals of a German firm (see *C. & D.*, June 7, page 880) to farm revenues in certain provinces of China are attracting less attention than they deserve. Last autumn a representative of the French Customs service in Indo-China spent some time at Wu-chang in an effort to gain the adherence of the Viceroy Chang Chil-lung to a bold scheme for farming the opium revenues of China on a system similar to that of the opium-farms in Hong-Kong, Indo-China, and Siam. The scheme was unfavourably received, and the French official returned to Saigon. Germany, through Messrs. Arnhold Karberg & Co., apparently now aspires to obtain for herself this immense privilege, and has secured the co-operation of the Russo-Chinese Bank. It is necessary for our Government to take warning, wires Dr. Morrison, the correspondent of the *Times*.

Digitized by Google

Things that Happen—Sometimes.

What is it?

This is not a Reynolds cartoon, but an order from a customer. We should like a solution of it from our readers, either in prose or rhyme.

Practical Notes and Formulæ.

Thiersch's Solution,

used for the sterilisation of dental instruments, is recommended on account of its cheapness and efficacy. It consists of—

Boric acid	2 parts
Salicylic acid...	3 parts
Distilled water	1,000 parts

Lanolin-glycerin Ointment.

It is not generally known, says Frank Edel, that a mixture of 1 part of anhydrous lanolin and 3 parts of petrolatum will readily take up 4 parts of glycerin and hold it perfectly. This is an observation made in the course of practical work, which is useful to remember.

Dental Cements.

There are two kinds of dental cements—zinc-chloride and the zinc-phosphate cements. In the case of zinc-chloride cements, a powder consisting of zinc oxide and glass, with liquid zinc chloride, is used; glass-powder is equally adapted for the phosphate cements.

Ruble's Cement is made by moistening zinc oxide in a Hessian crucible with nitric acid and calcining. The lump of zinc oxide obtained is very finely powdered, and used with zinc-chloride solution of a sp. gr. of from 1·9 to 2. This cement hardens in a few minutes, and is of great permanency.

Fairthorne's Cement.

Powdered glass	5 parts
Powdered borax	4 parts
Silicic acid (SiO_2)	8 parts
Zinc oxide	200 parts

Powder very finely, and mix; then tint with a small quantity of golden ochre or manganese.

The compound, mixed before use with concentrated syrupy zinc-chloride solution, soon becomes as hard as marble, and constitutes a very durable tooth-cement.

Rostaing's Cement.—Melt in a crucible an intimate mixture of 1 part of secondary calcium phosphate ($CaHPO_4$) with 15 parts of pure zinc oxide and 16⅔ parts of secondary ammonium phosphate $(NH_4)_2HPO_4$, until the mixture flows quietly and uniformly. The molten mass, when cooled, is powdered and dissolved in diluted phosphoric acid, and 5 per cent. cadmium oxide added; when this is dissolved, evaporate to a syrupy consistence. Next, knead a mixture of 2 500 parts of zinc oxide and 500 parts of magnesia with 50 grammes of boric acid, dissolved in water, into a stiff paste; dry, and calcine in a Hessian crucible for some hours at a white heat. The greenish mass obtained is finely powdered and roasted in the air until it turns white, and may be tinted as desired with manganese peroxide or ochre. The resultant powder is made into a paste with the solution above described, and furnishes a very firm cement.

Huebner's Cement.

Zinc oxide	500 parts
Powdered manganese	1·5 part
Yellow ochre...	to colour
Powdered borax	10 parts
Powdered glass	100 parts

As a binding-liquid use acid-free zinc chloride, prepared by dissolving pure zinc, free from iron, in concentrated pure hydrochloric acid, keeping the zinc in excess. When no more hydrogen is evolved, the zinc in excess is still left in the solution for some time. The latter is filtered and boiled down to the consistency of syrup.

Commercial zinc oxide is not dense enough for dental use, and the treatment with nitric acid is adopted to obtain a dense product.

Testing Nutrient Foods.

The value of the new nutrient chemical-foods can be judged either by chemical analysis, clinical observation, or colour-analysis. The last method is, according to Ehrlich, capable of demonstrating the different proportions of ingredients by their elective affinity for basic and acid aniline dyes. Pappenheim's colour-solution can be used instead of Ehrlich's tri-acid reagent. A small quantity of the powder to be examined is placed in a centrifugalising glass half-full of distilled water, 10 drops of the colour-solution added, the mixture shaken for two minutes, and centrifugalised. The coloured powder is then examined macroscopically and microscopically. Starch is separately tested for by adding 2 drops of tincture of iodine to the powder in distilled water and separating the stained powder in the centrifuge. By this method plasmon is found to consist of casein, plasmon cocoa to contain 20 per cent. of plasmon. Plasmon oats cocoa, contains casein of plasmon, which is stained pale green; parts of the husks of the oats stained grass and dark green; the cocoa and starch are partly well preserved (stained blue) and partly altered (stained violet), showing a partial conversion into dextrine. Plasmon biscuit and toast also contain portions of husks and altered starch granules. "Palaktogen" consists of casein, as is seen by the light-green staining. "Soson" consists of much altered muscle fibres and amorphous masses, which stain red. "Heyden's Food" consists of vitellin, albumen, and albumose. The particles are stained green. "Fersan" is said to contain 81·89 per cent. albumen, derived from ox-blood. When stained it takes on a dark-brown colour. Under the microscope green amorphous masses are seen, representing acid albumen, while the hæmoglobin appears as a brownish-red substance. "Haimose" is also a blood-preparation, and showed similar staining. Krewel's "sanguinal" pills contain hæmoglobin (stained reddish brown), and myosin (stained ruby red). There are further starch granules and sugar, the latter forming the coating of the pills. Hæmatogen cocoa contains hæmoglobin (reddish brown), starch, and cocoa granules. "Aleuronat" contains wheat, stained red, as well as particles of husks, stained green, and amorphous masses. The starch is chiefly unaltered. "Roborat" stains a reddish violet. Under the microscope red amorphous masses are seen, which represent the albumens of rice, wheat, and maize, and a few green particles representing the husks. The starch is partly stained blue (therefore unaltered) and partly violet (therefore transformed into dextrin).

Observations and Reflections.

By XRAYSER.

The Annual Meeting of the London Chemists' Association was a misnomer. The Association has not existed a year—I was going to say that it scarcely exists even now, and is in the gestation stage—but what I wish to emphasise is that not having worked for a whole year there is some excuse for the meagre results reported, except in the spending department. The receipts were 24*l.* 0*s.* 10*d.*, and the outlay 23*l.* 15*s.* 10*d.* Now, ninety-four gentlemen who have paid five shillings each, you have the opportunity of paying again. A new financial year has commenced. The sixty-four who are elected, but have not paid, will get off with a crown each. This is a veritable grievance to such as Mr. Pentney, who pay their way as they go. They should take action for the delayed crowns.

That Five Shillings Over will go a long way towards paying the expenses of the deputation to Bloomsbury Square, but not if the members adjourn to the Holborn Restaurant afterwards. If they talk the Pharmaceutical Council round to thinking there is the tiniest loophole for proceeding against limited companies who use the title "chemist and druggist," or anything like it, they will be very, very dry. I reserve further remarks until the eventful interview has been reported.

The Glasgow Petition Attracts Me. There is nothing new in it, for proprietary manufacturers have been asked hundreds of times to fix minimum wholesale and retail prices for their preparations. Nor do I think the bait which the G.W.S.C.T.A. offers one that will catch the manufacturers, but 98 per cent. of the chemists of Glasgow united together and keeping so will take a lot of beating. I hope Glasgow chemists will not make the mistake of watering down the moral effect of that 98 per cent. by pouring in the influence of other large centres. Manufacturers are disposed to come to terms with retailers in a district, such as Glasgow, but hitherto they have been shy of dealing with the whole country at a time. I do not think they will resist the 98 per cent. of Glasgow chemists if the latter look after the 2 per cent. who stick out for freedom of action—in this case to cut as they like.

George J. Seabury's Plan applies to the 2 per cent. It is simple when dealing with 98 per cent. willing to sign their names to something else than a petition. Mr. Seabury's plan consists in the 98 per cent., or, let me say, full-price men, forming, if necessary, a joint-stock company to start a store next door to the cutter and undercut him; "the better plan, however, would be, whenever possible, to secure the nearest pharmacist to the cutter and arrange with him" to cut below his neighbour's prices. "The balance of the members of the Association in any and all parts of the city are to stand firm for the full retail price established by the manufacturer." The idea is one for local application, but it can become national if all the big centres of population are as good at organising as Glasgow. I should not think it would suit the London Chemists' Association, for less than 10 per cent. of the chemists in the metropolis have joined it.

Absolute Solubilities appear to be the aim of Professor Greenish and Mr. Upsher Smith in their work for the British Pharmacopœia Committee. In a recent report (*P. J.* June 14) they deal with arsenious acid, boric acid, and chromic acid, and review the tests in each case. One gramme of crystalline arsenious acid was found to be soluble in 91·99 c.c. of water 61° F. in seven days, and in the same time the same amount of amorphous acid dissolved in 68·87 c.c. of water at 61° F. The Pharmacopœia gives the solubility as 1 in 100. Boric acid dissolved to the extent of 1 in 24·4 in eight days (B.P. solubility 1 in 30), and chromic acid 1 in 0·599 in three days (B.P. "very soluble"). Exact solubilities like these are of limited application, even as tests, and as solubilities are given in Pharmacopœias for the guidance of prescribers and dispensers, we need factors applicable to compounding conditions, that is, solubility in five minutes, and a few multiples thereof. These can be so easily ascertained that I am surprised the Professor and his assistant do not give them as a matter of course.

The Bradford Charms are referred to in the last number of *Folk-lore*, and some further details are given as to their origin. It appears that the "old hall" is High Fernley Farm, Wyke, near Bradford, and that when the occupier Mr. Josiah Lightowler, was whitewashing his cattle-shed the fancy took him to remove some square pieces of wood nailed to the rafters. Behind each of the seven pieces of wood a piece of parchment, folded and wafered, was discovered. The cattle-shed, or mistal, as it is called locally, was originally part of the dwelling-house, and a stone over the doorway is dated 1696. A neighbouring house, High Fernley Hall, built in 1678, seems to have obtained a ghostly reputation through one of the occupants being disappointed in love. The rejected suitor is said to have cut off his head and afterwards haunted the district. It hardly seems feasible for a man to cut off his own head, but the tradition that a headless horseman haunted the neighbourhood would probably be quite enough to drive the neighbours to use charms to protect themselves and their belongings from evil.

"The Academic Gregories" is the title of the latest of the "Famous Scots" Series, and as it includes Professor James Gregory (1753–1821), the originator of Gregory's powder, I bought a copy to see if it stated when the Professor first prescribed the powder. Mr. Kirby said recently at the Thames Police Court that Gregory's powder was well known before 1812, but as I could find no reference to it in Gray's Supplement (where a pulv. rhei co. of quite different composition is given), nor in Brande's "Manual of Pharmacy" or Pereira's "Materia Medica," all posterior to 1812, I had come to the conclusion that it was either not well known in 1812 or did not exist. "The Academic Gregories" gives me no clue, but I am indebted to a friend for a reference to a report of an evening meeting of the North British Branch of the Pharmaceutical Society in 1879, at which Mr. John Mackay showed an autograph prescription for the powder by J. G., which was dated December 22, 1816. It was first introduced into the Edinburgh Pharmacopœia of 1841, and at that time Christison spoke of it as being better known as Gregory's powder. Here my researches end.

AUSTRIAN QUICKSILVER.—The Government quicksilver-mines at Idria are said to be in an unsatisfactory condition, and, according to the local newspapers, there is a possibility of the works being closed. They appear to have been worked for over three hundred years, and give constant employment to 1,200 workmen. The annual production is about 800,000 quintals of ore, which yield some 5,000 quintals of quicksilver.

Editorial Comments.

The King's Illness.

THE calamity which has befallen the British nation on the eve of the Coronation of King Edward VII. is too great to be calculable at a moment when our chief concern is the welfare of our Sovereign and the happiness of his Consort. In a sense the King is a relative to every one of his subjects, and when he is laid low the circumstance upsets us almost as much as if the illness were within our own homes. The Coronation, that supreme manifestation of ancient formulas and imperial loyalty, has in the twinkling of an eye become of secondary importance, and in its place there has welled up a flood of devoted respect for the man who for the next few weeks has to battle with the grim enemy who is without respect of persons. Perityphlitis, from which the King is suffering, is a serious matter, but not necessarily a fatal malady. It

Digitized by Google

is synonymous with appendicitis. In general terms the disease is an inflammation of the vermiform appendix of the bowels, and several varieties are recognised. The fact that the disease recurs is well known; some people there are who have an attack yearly. Perityphlitis is usually caused by some irritation, and the chill the King was reported to be suffering from was probably an early symptom of the inflammation. The treatment in a simple case consists in putting the patient under opium to stop all movement of the bowels, with a view to allowing the inflammation to subside, and it is only in severe cases, or where complications are feared, that operative measures are taken. The operation consists in cutting down to the abdominal cavity and removing the inflamed portion of the bowel. Recovery is usually certain in young and healthy persons, thanks to the perfection of modern surgery, but in the case of the King, who is not young, and, if recent accounts can be relied on, is in poor health, the matter assumes a very grave and serious aspect At the time of writing we only know that the operative measures had to be taken because an abscess had been discovered. There is, therefore, ground for apprehension, and the postponement of the Coronation festivities is more than justified. If, as we hope, the operation prove successful, the patient will not be allowed to leave his bed for three weeks, and then some time must elapse before he can be removed from London. Sir Frederic Treves, who operated on his Majesty, is, perhaps, the most skilled surgeon in such cases; but before our subscribers receive this they will have seen from the bulletins how his Majesty is progressing, and we join with them in saying with sincerity akin to the circumstances—

"GOD SAVE THE KING."

"Lancet" and Law-breakers.

RECENTLY magistrates in various parts of the country have in an unhesitating manner fined unqualified persons for selling an exceedingly poisonous preparation of nicotine The actions have been instituted by the Pharmaceutical Council, and it is particularly noteworthy that the summonses have not been for the mere act of sale, but for the neglect of those precautions which are deemed by the law to be necessary in distributing poisons to the public. They have not been actions for infringing the rights of those exclusively entrusted by the State with the sale of poisons, but actions for endangering the safety of the public We are, therefore, much surprised to observe that the *Lancet* of June 21 prints an Editorial note which virtually condemns the Pharmaceutical Council. The note is in the following terms:—

> It is, of course, difficult to suggest a satisfactory system of control by which all poisons or poisonous preparations can be sold. Tobacco, paint, and alcohol are poisons, but there is practically no limit to their sale. Whilst admitting, however, the danger to the community which the unrestricted sale of poisonous compounds intended exclusively for agricultural purposes would possibly involve, it is pretty evident that the provisions of the Pharmacy Act were never intended to apply to such preparations. The sale, for instance, of a weed-killer or insecticide does not surely require the offices of a particularly well-educated or qualified person, such as is the chemist and druggist. The chemist and druggist is required to possess an accurate knowledge of poisons for obvious reasons, chief amongst which is that he dispenses them for internal administration. Elsewhere we record a case in which a seed and artificial-manure merchant was summoned for selling a poisonous vegetable alkaloid known as nicotine without having his name and address on the bottle, and for selling the poison to an unknown person, and for failing to make an entry of the sale in a book kept for the purpose, contrary to the provisions of the Pharmacy Act, 1868. The preparation was sold as a "vaporiser fumigator" which is used for the destruction of greenhouse pests. Evidence was given to the effect that the compound contained over 20 per cent. of nicotine, 2 oz. containing as much as 186 gr. of the alkaloid—a quantity, it was stated, sufficient to prove fatal to at least 300 persons. The case was considered proved and the defendant was fined 2*l.* on each of the three summonses, including costs. Consent, however, was given to state a special case for the Court of Appeal. Instances of this sort are multiplying, and it is to be hoped that the Privy Council Poisons Committee may find that they will be able to control the sale of poisons in some way which, while duly protecting the public, will not threaten to extinguish an undoubtedly important trade. We learn that the report of this Committee is not expected until the end of the autumn. Their decision will have an important bearing upon the case which we have just discussed.

It is not unreasonable, and it is at least charitable, to suppose that the *Lancet* has not appreciated the grounds of action. Our contemporary claims that it does not require a qualified person to sell poisons, but we would point out that the person on behalf of whose class the *Lancet* protests was not proceeded against because he was unqualified, but because he was either so ignorant of the law respecting the sale of poisons, or so regardless of it, as to omit the most reasonable precautions in their sale. The accused sold enough poison to kill 500 persons just as if it were onion-seeds or superphosphates. The *Lancet* apparently approves of this conduct, but we feel sure that, whatever the Poisons Committee decides, even if it recommend permission for the sale of such poisons by unqualified persons, it will ensure that proper precautions as to labelling and knowledge of the purchaser shall be ensured. We believe the opinions of the *Lancet* carry weight with the public and the Press of the country, which fact makes the somewhat thoughtless note all the more regrettable. Our contemporary usually shows a wholesome regard for the law, but in this instance it encourages law-breakers whose lack of knowledge and carelessness menace the public safety.

London Dock Reform.

THE backwardness of London in many commercial ways is proverbial. At every turn it is hampered by traditions and vested interests, and in nothing more than in the manner in which the world's merchandise is treated when it reaches our great river highway. Most other ports in the country are part of the municipal organisation; the port of London is private property, belonging to companies whose shareholders look for dividends—naturally. As long as this condition exists it was felt that progress would be slow, and a Royal Commission was appointed two years ago with a view to betterment. The Commission has drawn up its report, and the *Shipping Gazette* has been smart enough to get hold of its contents before its official publication. The Commission heard all sides, and now it says much to justify the criticism that has been passed on the existing state of things. That we may neglect, for the proposals offered for betterment are the main thing. These we summarise as follows:—

Proposal 1. The existing docks are to be acquired by a new Dock Authority consisting of forty members, nominated and elected, who will pay out the shareholders in the present companies with Port Stock guaranteed by the City Corporation and London County Council.

Proposal 2. The Dock Authority to improve the docks by spending upon them 4,500,000*l.* in ten years.

Proposal 3. The Dock Authority to control and improve the river Thames from Teddington Lock seawards, spending on it 2,500,000*l.* in ten years.

Proposal 4. Pilotage, lighting, and buoying of the Thames to be transferred from Trinity House to the Dock Authority.

Proposal 5. The Watermen's Company to be extinguished so far as control, &c., of the river are concerned. Its charities to remain.

Proposal 6. The river improvements to comprise deepening the channel to 30 feet from the Nore to the Albert Dock, widening to 1,C00 feet from the Nore to Crayfordness and to

Digitized by Google

600 feet beyond; deepening the channel to 25 to 26 feet from Albert Docks to the London Docks, and widening that section to 300 feet at the bottom.

Proposal 7. A licensing-fee to be imposed on barges and lighters.

Proposal 8. Dues to be levied on goods landed, with some exceptions.

It will be seen that these proposals aim to get the Port of London on a level in working with such ports as Liverpool. They seem simple enough; but the fact cannot be overlooked that the property and vested interests, which have to be bought up before a beginning can be made in reform, are exceedingly valuable and powerful. Nothing looks easier on paper than to transfer such interests from several authorities to one; but all experience goes to show that in the concrete such changes are slow of performance. Here we have to deal with, amongst other matters, a guarantee to be given by two bodies which do not pull together in all things—the City Corporation and the London County Council; and while with unity of purpose and determination on the part of these bodies for the commonweal the financial difficulty could easily be overcome, we have yet to secure the unity. Here Parliament may take pity on London and force the matter, which is certainly imperial in most respects.

Citric Materials.

THE possibilities of the West Indies as a field for the production of concentrated lemon-juice and citrate of lime is discussed in a monograph by the Hon. Francis Watts, F.I.C., F.C.S., and published in a recent issue of the *West Indian Bulletin*. Mr. Watts is the Government Analytical Chemist to the Leeward Islands, and has devoted much attention to this subject. It appears that experiments have been carried out in Dominica and Montserrat for the last thirty years, while during the last ten years the advance has been very marked on the commercial side. So far, however, supplies have been placed on the market at irregular intervals, the consequence being that they often arrive at a time when there is no particular demand, and after buyers had made their contracts so that they sold with difficulty and at lower prices than Sicilian make. This shows want of organisation, and may be remedied by a closer acquaintance with British market conditions, by the careful use of marks and brands, by intimation of the condition of crops, their probable quantity, and the probable times of arrival on the market. In Dominica it is customary to carry the concentration of lime-juice to a higher figure than the standard strength of 84 oz. of citric acid per gal. According to Mr. Watts, concentrated juice from the island ranges in strength from 105 to 120 oz. per gal., or even higher. That such degree of concentration is attainable without considerable loss is due to the fact that juice of good quality is used for concentration. On many estates in Dominica the whole of the juice obtained is concentrated, whereas in some places the finer qualities are exported as raw juice, while the inferior ones alone are exported. Evidence is afforded by Italy and Sicily, however, that the preparation of citrate of lime is gradually displacing that of juice, as, for instance, from December 31, 1900, to September 30, 1901, 1,969 pipes (590½ tons) of citrate of lime were shipped from Messina and Catania, against 549 pipes of concentrated juice, and the figures for the corresponding period of 1899–1900 were 2,085 pipes (635½ tons) citrate and 1,671 pipes of juice. The West Indian producers should therefore turn their attention to the production of citrate if they wish to obtain best prices for their goods. As matters stand at present Mr. Watts anticipates that citrate will prove more expensive in preparation than concentrated juice, owing to the cost of erecting heating apparatus and drying-chambers and of importing and transporting lime. The London market for citric acid has been exceedingly dull this year so far, and the price has never been so low as it is now. The same remark applies to tartaric acid, and the chief reason for the recent depression was the wintry weather when summer should have been with us. The present conditions are therefore not rosy for the West Indian industry, added to which concentrated lemon-juice is now quoted at a very low figure in Sicily—viz., 12*l.* 5*s.* per pipe, f.o.b.—and the season for contracting (January to April) is over. Comparing the above prices with previous years, we find that in

1901	prices ranged from	17*l.*	to 19*l.*	per pipe.
1900	„ „	„	13*l.* to 17*l.*	„
1899	„ „	„	13*l.* to 20*l.*	„

We have, however, indicated the first point that West Indian makers of juice or citrate should attend to—viz., get into touch with buyers or consumers here and guarantee supplies which will justify them in looking to the West Indies as a reliable producer.

CYANIDE-POISONING.

The Victorian Department of Mines has issued instructions (printed on calico) as to the method of treating a case of potassium-cyanide poisoning. The antidote recommended is freshly made ferric hydrate, prepared from ferrous sulphate, sodium hydrate, and magnesium oxide, and instructions are given to have ready (*a*) an hermetically sealed bottle containing 7½ grammes of ferrous sulphate in 30 c.c. of water, (*b*) an hermetically sealed bottle containing 1½ gramme of caustic soda dissolved in 300 c.c. of water, and (*c*) a tube containing 2 grammes of magnesia. The two solutions are mixed in the tin vessel in which the antidote is packed, the powder added. The whole mixture is administered to the patient, and the stomach afterwards well washed out. The instructions given on the poster are simple, and if carried out promptly should result in many lives being saved. It will be observed that the iron antidote has been chosen in preference to the peroxide-of-hydrogen method, which is slower in action. Chemists in mining districts should have no difficulty in selling the antidote and apparatus for first-aid treatment. The calico poster can be had from R. S. Brain, Government printer, Melbourne.

USE OF MARKED SYPHONS.

An Edinburgh correspondent, writing to us in regard to the statement of the Chairman of the Edinburgh and District Aërated-water Manufacturers' Defence Association to the effect that it is illegal for any person to sell syphons of aërated waters the contents of which are not actually made by the manufacturer whose name is stamped on the syphon, calls our attention to a case heard ten years ago in the Court of Session, Edinburgh, where a firm of wholesale wine-merchants attempted to prevent a dealer in casks from selling casks bearing their name. The dealer proved that he had bought the casks in the ordinary course of trading from merchants who had paid the wholesalers their invoice-price for them. The dealer declined to discontinue to buy or sell such casks, and the wholesale wine-merchants were advised that they had no case, and abandoned their action. Our correspondent presumes that the same legal conditions apply to bottles or syphons. If the circumstances were exactly the same, that would be the case; but it rarely happens in the aërated-water trade that bottles and syphons marked with the names of the manufacturers are actually sold by the latter to the retailer. If they are, the man who buys them may do what he likes with them, provided when he uses them for his own make of beverages he so labels the bottles or syphons as to show that the contents are not manufactured by the firm or person whose name is marked upon the bottles or syphons.

Oil of Bergamot-leaves.

By DR. SALVATORE GULLI.

THE composition of the oil of bitter-orange leaves, known in trade by the name of oil of petitgrain, has been the subject of numerous researches of late. On the contrary, until now no attention has been given to the oil of bergamot-leaves.*

This oil has been distilled for several years in this district, where, as it is known, the chief industry is the cultivation of bergamot-trees and the manufacture of bergamot oil. The yield of oil is limited; 100 kilos. of leaves give only 150 grammes of oil.

The pure oil of this season has a sp. gr. of about 0·871 to 0·873, an optical rotation from +25° 30′ to +26°, and an ester-content, calculated as linalyl acetate, of about 32 to 34 per cent. It is soluble in 90-per-cent. alcohol (1 : 1). It contains methyl anthranilate.

The distillation of this oil is only carried on to a limited extent, and takes place between February and April, at the time of pruning, the amount of the production per year in this district varying according to the demand. It may be calculated at about 20·25 kilos.

The oil is rarely pure; turpentine oil is often distilled together with bergamot-leaves, and very often into the still leaves and young saplings of bitter orange are added. Adulterations are extensively practised with the addition of peel essences.

The oil of bergamot-leaves is put on the market as oil of petitgrain, or it is used to adulterate the oil of both bitter and sweet orange flowers. This adulteration, however, is easily detected, because it alters both the sp. gr. and the optical rotation, and increases the linalyl-acetate percentage of pure oils.

Reggio Calabria.

OUR DIARY COMPETITION.

HINTS AND VERSES AWARDS.

THIS matter (so far as home competitors are concerned) has been overlooked. We now have pleasure in intimating the following awards:—

TWO TEN-SHILLING PRIZES.

To Mr. William Lister, Ambleside, for his shop-hint on a mortar-holder (*C. & D.*, January 25, page 121), and to Mr. A. Pereira, 140 Hornsey Road, N., for his ingenious window-shelf (*ibid.*).

FOUR FIVE-SHILLING PRIZES.

To Mr. J. H. Payne, Thrapston, for his hint on making furniture-cream (*C. & D.*, April 19, page 636); to Mr. F. E. Carpenter, Burnham, Somerset, for this verse:—

Come wealth or want, come good or ill,
Assistants young and old, accept your part;
Be civil to all your customers,
And serve them all with honest heart.
Who misses or who wins the prize,
Go, lose or conquer if you can;
But if you fail, or if you rise,
Be one and all a gentleman.

To Mr. A. E. Warden, 15 Hawksdale Road, Waverley Park, S.W., for this:—

P erhaps the most inviting ad.
E ngenders thoughts of Godliness;
A ltho' most bold the "Little" lad—
R emembers "The Cult of Cleanliness."
S ee then, the baby in the tub;
S ee, next, our old friend "Bubbles";
O r "Grandma," who believes in "rub,"
A nd Furniss's man, of bi-ennial scrub,
P ear's Soap should end all their troubles.

Also to Mr. W. E. Powell, 19 Laitwood Road, S.W., for his ingenious precedent to the lonely furrow (*C. & D.*, January 25, page 121).

* Messrs. Schimmel & Co. mention (*Berich.*, October, 1896, 65; April, 1902, 76) two oils received from the middle of France, known by the name of "Petit-grain citronnier" and "Petit-grain mandarinier."

Personalities.

MR. BOREHAM, of Roe & Co., chemists, Rockhampton, Queensland, is now in London.

MR. S. J. COLEY, chemist and druggist, has been re-elected unopposed a member of the Stroud School Board.

MR. GEORGE CADBURY, of Cadbury Brothers, Bourneville, Birmingham, has offered to subscribe 1,000*l.* to the Garden City Pioneer Company, on condition that the whole capital of 20,000*l.* is raised.

LIEUT. JOHN GIBSON, chemist and druggist, of the A (Hexham) Company, 1st V.B.N.F. has been appointed to the command of the E (Bellingham) Company at the Brigade Camp at Aldershot during Coronation week.

WE have had a chat with Mr. Geo. J. Seabury, of New York, in regard to the proposal of the Glasgow Chemists' Trade Association to confer with proprietary manufacturers regarding a fixed minimum profit on goods. He considers that Glasgow chemists are going the right way. "Stick together, brethren," is his message to them until he returns from the Continent in October, when, if his health permits, he will express his views more directly. Meanwhile he is making a study of the Glasgow movement.

MR. WM. A. MCGUFFIE, of McGuffie & Co., chemists, Brisbane, Queensland, is now in London, and expects to be in this country until October. Mr. McGuffie was a fellow-apprentice with Mr. Peter Boa at Stranraer, and thereafter was twelve years with Mr. William Wallace, St. Vincent Street, Glasgow. He has been in Queensland as long, and six years ago started business on his own in Brisbane. His success may be judged by the fact that he has recently taken two partners to assist him in the business.

DR. A. R. VAN LINGE has resigned his position as technical manager of the Bandong quinine factory, Java. The directors approached Mr. P. van Leersum, Government director of the cinchona plantations, and requested him to accept the position. Mr. Van Leersum fell in with the proposal, but was unwilling to vacate his position with the Government. A petition was then addressed to the Government asking that Mr. Van Leersum be allowed to temporarily accept both offices, and in view of the great interest taken by the Government in the welfare of the factory, the request has been acceded to. Mr. Van Leersum has now left Lembang to take up his residence at Bandong. Much of the success of the Bandong factory was due to the exertions of Mr. van Linge, and not only did he perfect the process of manufacture, but invented and personally supervised the construction of the machinery and apparatus used in the works. His portrait was given, with a description of the Java cinchona and quinine industry, in our issue of July 27, 1901.

Scientific Progress.

Japanese Saffron.—Ch. Sugiyama gives in the *Journal* of the Pharmaceutical Society of Japan the results of examination of saffron prepared from *Crocus sativus*, Linn., grown by Soyeda, and compares them with European saffron.

Volumetric Estimation of Thallium.—V. Thomas (*Comptes Rendus*) employs a modification of Feit's method for estimating thallium volumetrically. A thallic salt is treated with potassium iodide, and a greenish-black precipitate is obtained. This may be considered as a mixture of thallous iodide and iodine, resulting from the decomposition of an unstable triiodide, $TlI_2 = TlI + I_2$. To estimate thallium volumetrically the solution should contain the metal in the form of thallic sulphate, and the transformation into thallic sulphate is absolutely necessary in the case of thallium existing in the liquid in the form of a halogen salt. Excess of potassium iodide is added, and enough arsenious solution to produce a pure yellow precipitate of thallous iodide. This is filtered, and to a portion of the filtrate excess of arsenious acid is added.

THE title "infusoria" was first used by Ledermuller, who in 1763 published an account of his experiments with infusions of hay, pepper, &c., and of the organisms which he discovered in them.

Pharmaceutical Society of Great Britain.

NORTH BRITISH BRANCH.

A MEETING of the Executive was held at 33 York Place, Edinburgh, on Friday, June 20, Mr. Peter Boa (Chairman) presiding.

LEAVING CERTIFICATES AND THE PRELIMINARY.

The ASSISTANT-SECRETARY read the minutes of the General Purposes Committee, from which it appeared that the Council had intimated that they had resolved to accept Leaving certificates of candidates for registration as pharmaceutical students along with any other certificate of a recognised examining body.

THE SCHEME FOR UNIVERSITY TRAINING.

It was also reported that the Council had approved of the principle of Mr. Tocher's draft scheme for the promotion of university training for Scotch students, subject to the condition that the degree in pharmacy was accompanied by a certificate that the holder was entitled to registration as a chemist and druggist in Great Britain. The General Purposes Committee had a meeting with Mr. Tocher, who submitted a summary of his scheme. In accordance with a resolution then come to, a committee of the Board of Examiners had been asked to prepare a final draft, to be submitted officially to the four Scotch universities. It was also agreed that details of the scheme, and a copy of the application to the universities, should be submitted at the same time to the Carnegie Trust. The Executive remitted the draft to the General Purposes Committee with powers.

SUNDAY PARCEL-POST FOR MEDICINES.

The General Purposes Committee had under consideration a suggestion to ask the Postmaster-General to institute a Sunday parcel-post service for the carriage of medicines. The opinion of the committee was that it would involve a large increase of Sunday postal labour, and they agreed to recommend that all medicines urgently required on Sundays should be transmitted by letter-post, as now permissible. The Executive adopted the recommendation.

THE ELECTION OF THE NEW EXECUTIVE.

The ASSISTANT-SECRETARY read the report of the scrutineers appointed to examine the votes for the election of the new Executive, and it was approved of and ordered to be submitted at the meeting of the Branch to be afterwards held.

AMERICAN PHARMACEUTICAL JUBILEE.

The ASSISTANT-SECRETARY read a letter which had been received from the American Pharmaceutical Association inviting the members of the Pharmaceutical Society in Scotland to be represented by delegates at the golden anniversary meeting of the Association to be held at Philadelphia on September 8. The Executive instructed that the invitation should be suitably acknowledged, and it was agreed that if any member in Scotland intended being present at the meeting he should be asked to act as a delegate.

THE STATUS OF THE SCOTCH BOARD OF EXAMINERS.

Mr. KERR (Dundee) asked Mr. Storrar what had been the outcome of his inquiry in regard to the question raised about the relative position of the Boards of Examiners in London and Edinburgh.

Mr. STORRAR said that, however it had arisen, there was a misapprehension, and that it had been made perfectly clear that there was no intention to differentiate between the Boards in England and Scotland. He pointed out that in regard to the word "board" the interpretation in the introduction to the by-laws was that the singular number included the plural. Mr. Storrar further explained that a proposal had been made to institute a joint committee composed of members of the two Boards along with a certain number of members of the Council.

This was all the public business.

MEETING OF THE SCOTCH MEMBERS.

A MEETING of members of the North British Branch was thereafter held, Mr. Boa presiding.

CHAIRMAN'S REMARKS.

Referring to the work done by the Branch during the year, Mr. BOA first dealt with the certificates for the First examination, stating what had been done on the initiative of Mr. Maben and the result (see above). He did not know whether that would be of much service to young men entering the trade, but thought it would be very useful. He knew several young men who had two or three good Leaving certificates, and previous to this recommendation having been adopted they had to take all the subjects again at some other examination. Now they would not. The Leaving certificates were rather better in point of quality than some other certificates which the Society accepted, so that there would be no deterioration whatever in the quality of the examination. Local organisation had taken up considerable time of the Executive and the General Purposes Committee, and Glasgow and Aberdeen had been dealt with in detail, so that the organisation under the new scheme was in these two cities practically complete. He took that opportunity of saying that a very great deal of good work had been done for the Society by the local officers who had been appointed or continued in office under this scheme. He pointed out the difficulty there had been in strictly adhering in Scotland to the Council's idea of the local divisional districts being synonymous with the parliamentary divisions, and the additional work which the irregularity of some of the districts had entailed. He took that opportunity of acknowledging, on behalf of the Executive, the readiness with which the local officers had responded to the calls made upon them for information and assistance. (Applause.) In view of certain matters which were under discussion at present, he would refer to the work of the Privy Council Departmental Committee on the sale of poisons, because questions might arise which would make it very important that registered chemists throughout the country should act together, and he had no doubt that in time this scheme of local organisation would prove extremely useful should emergency arise. In the event of their wishing to get the whole united influence of the trade throughout the country brought to bear on Parliament or any other body, there was no doubt that the divisional secretaries would be found to give the assistance which their conduct so far justified them in expecting. (Applause.) The outstanding feature, perhaps, of the pharmaceutical year was the scheme for the establishment of a degree in pharmacy, which was being worked out very laboriously and ably by Mr. Tocher. (Applause.) He referred to this in detail, and passed on to the subject of the examinations, calling attention to the fact that the number of Major candidates during the year showed a very large increase on previous years. They had had eleven Major candidates, of whom eight passed, and for the examination about to begin five Major candidates had entered. Speaking of the failures in the Minor he said that last year he noted that there was a gradual increase in the number of passes, although the increase was not so large as they would like to see. The percentage was nearly 41 this year, as compared with 40·8 last year, but 40 per cent. was still a very moderate pass, and he would like to see the passes at least equal to the failures. The division of the Minor had been discussed considerably during the year, and it was gradually gaining support, not only throughout the country but he noticed in the Council also, and it was just possible they might have the division of the Minor at no great distance of time. So far it had been associated with the question of a compulsory curriculum. He remembered very nearly twenty years ago taking part in a debate in connection with their Junior Association, in their old rooms in George Street, on the subject "Is a Compulsory Curriculum Desirable?" On that occasion the vote was distinctly in favour of it. They had been talking about it for twenty years, and they were not a bit further forward. He thought if the division of the examination was recognised as desirable they should not wait for this never-coming compulsory curriculum, but adopt the division and take the compulsory curriculum when it came. Mr. Boa next referred to the election of the examiners and

Digitized by Google

the work of the evening meetings of the Branch, and spoke of the satisfactory library report. He next referred to the membership of the Society in Scotland as somewhat unsatisfactory. For the first time since he had had anything to do with making up the annual report he was afraid they had to admit a decrease. According to the voting-papers sent out they had a deficiency of 41. That could not be taken as an absolute figure, but so far as their means of getting at it went that represented the shortage. He did not think he could attempt to explain it in any way, but there was one thing he noticed, and that was that in the election of the Council in London there were about 180 voting-papers fewer sent out this year than last. That showed a shortage not only north but south of the Tweed, but in Scotland they had more than their proportion according to membership. Some of the shortage might be accounted for by men going across the Tweed, and when they went south they ceased to vote for the North British Executive. There was in existence now—this was the second year of it—an arrangement by which, instead of the subscriptions being collected by the Divisional Secretaries, they had to be remitted direct to headquarters. It seemed to him, looking at the matter with two years' experience, that this was, perhaps, a case of over-centralisation. ("Hear, hear," and applause.) Speaking about doctors' shops, he told the meeting what the General Medical Council had done. It had been alleged that the Society prosecuted only assistants in doctors' shops, and not those in the chemists' shops. There was no foundation whatever for the statement. If a complaint of an infringement was made inquiry followed, and if the necessary evidence was forthcoming, it did not matter who the unqualified assistant was—whether a medical practitioner's or a chemist's assistant—he was prosecuted. He, nevertheless, thought it would be well for them, before making complaints about unqualified assistants in doctors' shops, to see that their own hands were clean. Mr. Boa regretted that Scotland had only one representative on the Council, and also that Mr. Currie, Mr. McAdam, and Mr. Anderson Russell were retiring from the Executive.

Election of New Executive.

The ASSISTANT-SECRETARY then read the report of the scrutineers on the election of the new Executive. It stated that 574 nomination-papers had been issued, and as a result 53 members were nominated, but only 23 accepted. Of the voting-lists 597 were issued, and 251 returned. Of the latter 2 were informal, so 249 were recorded, with the following result:—

Peter Boa, Edinburgh	228
D. B. Dott, Edinburgh	219
C. F. Henry, Edinburgh	216
Charles Kerr, Dundee	214
John Tocher, Dumfries	211
Alexander Strachan, Aberdeen	208
William Doig, Dundee	206
Thomas Dunlop, Glasgow	206
Donald Mitchell, Inverness	206
Andrew Naysmith, Arbroath	202
Alexander Spence, Linlithgow	199
W. B. Cowie, Edinburgh	196
J. H. Fisher, Dunfermline	195
Thomas Maben, Glasgow	183
John Johnston, Aberdeen...	174
J. P. Gilmour, Glasgow	157
James Nesbit, Portobello	142
William Cummings, Dundee	122

The above eighteen form the new Executive. The following were the unsuccessful candidates:—

W. P. Wilson, Haddington	109
A. Currie, Leith	96
William Giles, Aberdeen	95
A. J. Dey, Edinburgh	92
G. H. C. Rowland, Edinburgh	72

On the motion of Mr. DAVID GILMOUR, seconded by Mr. ROWLAND, the scrutineers were thanked, and the CHAIRMAN declared that the first eighteen gentlemen, with Mr. G. T. W. Newsholme (President), Mr. C. B. Allen (Vice-President), and Mr. David Storrar (Kirkcaldy), *ex-officio* members, formed the Executive for 1902–3.

Dr. COULL moved, and Mr. KERR seconded, a vote of thanks to the retiring Executive and to the Chairman, which was agreed to.

The Protection of Pharmaceutical Titles.

Mr. LYON rose just as the meeting was about to break up, and said that as this was a representative meeting of Scottish pharmacists he thought it a suitable occasion on which to raise a discussion about the question of titles which were being used by limited companies.

The CHAIRMAN at this point interrupted Mr. Lyon and said he would be quite pleased to hear what he had to say, but he thought they should consider whether it would not be better that any discussion on this subject should be taken in committee.

The meeting agreed to hear Mr. Lyon in private. On resuming, Mr. LYON moved, and Mr. C. F. HENRY seconded, the following resolution, which was unanimously adopted and ordered to be transmitted to the Council:—

That this meeting of members of the Society resident in Scotland, being of opinion that circumstances do not warrant them in expecting in the immediate future legislative enactments of a suitable kind, respectfully suggest to the Council that it bring an action for interdict against the shareholders of a limited company which habitually uses the title "chemist and druggist" in connection with its trade-name.

This was all the business.

Business Changes.

MR. W. BRAY, chemist and druggist, Fore Street, Redruth, is removing to more commodious premises two doors from his present shop.

MESSRS. S. LAMBERT & Co. have (owing to City improvements) removed from 132 Fenchurch Street, E.C., to 14 Mincing Lane, E.C.

THE lease of their present premises having expired, Jones's Drug Stores at Wimborne Road, Winton, will shortly be removed a few doors below in the same street.

MR. JOHN STRACHAN, chemist and druggist, Jedburgh, has removed to new premises at 22 High Street, in a property acquired by him a few years ago. The new buildings are designated "Victoria House."

Marriages.

FORRESTER—MCNIVEN.—At Falkirk, on June 17, by the Rev. A. Ross Taylor, M.A., Andrew Forrester, chemist and druggist, Falkirk, to Jane Helme, elder daughter of Mr. James McNiven, chemist, Falkirk.

GALLOWAY—MUTER.—On June 18, at the parish church, Horley, by the Rev. S. Bache Harris, M.A., Vicar of St. James's, Kennington, and the Rev. H. T. Lewis, M.A., Vicar of Horley, Edward Alexander Galloway, of Hillside, Anerley, to Alice Isabel, youngest daughter of Dr. John Muter, F.R.S.E., of the Châtelet, Horley, Surrey.

TUTTON—LOAT.—On June 18, at St. Michael and All Angels' Church, Cumnor, Berks, by the Rev. J. O. H. Carter, chaplain of New College, Oxford, Alfred Edwin Howard Tutton, F.R.S., F.C.S., H.M., Inspector of Schools, Secondary Branch, Board of Education, of 17 Bardwell Road, Oxford, to Margaret Ethel MacLannahan Loat, youngest daughter of Mr. William Loat, of Cumnor Place, near Oxford.

Deaths.

DIXON.—At Cottingham, Hull, on June 14, Mr. William Dixon, chemist and druggist. Aged 67.

ORLEDGE.—At Frome, on June 10, Mr. Robert Orledge, chemist and druggist. Aged 75.

PARKER.—On June 15, Mr. E. Parker, for twenty-seven years dispenser at the Dover Hospital. The deceased, who died from apoplexy, had served in the Crimean War.

RILEY.—On June 19, at Liversedge, Mr. Tom Garside Riley, chemical-manufacturer. Aged 58.

Legal Reports.

Trade Law.

Distraint Following Notice to Quit neutralises the latter. This was neatly shown on June 28 by Mr. Paul Taylor sitting in the Southwark Police Court. The son-in-law of the occupier of a house in Westminster Bridge Road, on the route of the Coronation procession, said that the landlord suggested terms with regard to the letting of seats which were not agreed to, and on June 7 the landlord served them with notice to give up possession. They at once tendered the rent due to the previous Saturday, but this was refused. Subsequently two other notices were served, the last expiring on June 16. They, however, paid no attention to them, and on June 19 the landlord put in a distress for rent up to date. Mr. Taylor said that, by levying a distress for the rent covering the period of the notices, the landlord was treating them as tenants, and had consequently waived his notices. The landlord has thus to give the tenants fresh notice, which will carry them over the Coronation procession day.

High Court Cases.

About Kodak and other Films.

In the Chancery Division on June 20, before Mr. Justice Farwell, Mr. Kerly mentioned a motion in the matter of Kodak (Limited) *v.* the London Stereoscopic Company.

Mr. Upjohn, K.C., for the defendants, said he must ask for this motion to stand over as no fewer than ten affidavits had been sent to his clients the previous night, and he had not had time to examine them. He might say that from what he had seen of the evidence apart from the affidavits it seemed clearly a case in which there was a dispute which could not well be disposed of on motion. Kodak (Limited) had brought a number of actions against different people in the various branches of the Chancery Division, and he should have thought it would be better that the motions should stand over until one against Messrs. George Houghton & Sons had been decided.

Mr. Kerly dissented from the proposition that the motions should stand over until the motion mentioned by his learned friend had been decided.

Mr. Upjohn said the issues were substantially the same in all of them. An injunction was sought for to restrain the use of the name Kodak and other names registered by the plaintiffs.

Mr. Justice Farwell: Is there any likelihood of the hearing in the other motion coming on soon?

Mr. Kerly replied that the matter stood in this way. There were certain dealers who asserted a right to sell films under the plaintiffs' registered names, and as soon as they heard of it the plaintiffs commenced proceedings. There were certain big dealers against whom they had already moved, and Messrs. Houghton and the London Stereoscopic Company were two of them. It was not a fact that it had been agreed that other motions should stand over pending the motion against Messrs. Houghton being heard.

Mr. Justice Farwell observed that the London Stereoscopic Company were a well-known firm, and there was ample security as against them.

Mr. Kerly said it was a serious matter for the plaintiffs, as hat happened was this: When a customer came in and asked for the plaintiffs' films he was served with somebody else's. "Kodak" and other names were registered trade-marks of the plaintiffs, so it was not merely a case of passing off.

Mr. Upjohn: It is said that these words simply relate to sizes.

Mr. Kerly Whether that be so or not, what does it matter?

His Lordship: I cannot say.

Mr. Upjohn: I had ten affidavits last night.

Mr. Kerly: My friend is a little led away by the quantity of paper he has seen.

His Lordship: You had better let the motion stand over.

Mr. Kerly said he was instructed that the defendants had the affidavits at midday on Thursday.

Mr. Upjohn: It was 4.30 in the afternoon, and as to quantity and number my learned friend Mr. Waggett counted them. (Laughter.)

Mr. Kerly was afraid there was something behind it.

His Lordship: Why cannot you have all these motions transferred to one Judge? Who is the Judge before whom the motion against Messrs. Houghton comes?

Mr. Kerly said it was Mr. Justice Buckley.

Mr. Justice Farwell said he would direct the motion to stand over until Tuesday next, and in the meantime he would see what could be done.

Kodak (Limited) and Income-tax.

Before Mr. Justice Phillimore, sitting to try Revenue cases in the King's Bench Division on June 19, the case of Kodak (Limited) *v.* Clark, Surveyor of Taxes, was argued. Mr. Danckwerts, K.C., appeared for the appellants, Kodak (Limited), and Sir R. Finlay, K.C., Attorney-General, and Sir Ed. Carson, K.C., Solicitor-General, represented the Revenue authorities. At a meeting of the Commissioners under the Income-tax Acts for the division of Finsbury held on March 13, 1901, Kodak (Limited) appealed against an assessment which had been made on its profits of 140,000*l.* for the period which had expired from the formation of the company on November 21, 1898, to April 15, 1899, and also in respect of 365,515*l.* for the year ending April 5, 1900, under Schedule D of the Income-tax Acts. The company, it was stated by Mr. Danckwerts, was formed with a capital of 1,600,000*l.* in 1*l.* shares, and its registered office was at 43 Clerkenwell Road, E.C., but its business was to a great extent carried on at Rochester, New York State, under the style of the Eastman Kodak Company. The Surveyor of Taxes had maintained that, the company having its registered offices in England, where the directors met and transacted business, it was liable for assessment on the profits made in America, especially as the English company controlled the American company. The question for the Court to decide was whether on the facts there was any evidence to justify the assessment of the company for all profits under Schedule D. After hearing counsel on both sides at considerable length his Lordship said there must be judgment for the appellants, and the case must be remitted to the Commissioners of Inland Revenue with an instruction directing them that there was no legal evidence on which they could hold that the American company was controlled from England, or that the profits were brought here. The American company was only the agent for the English company. Judgment for the appellants accordingly, with costs.

Sale of a Pharmacy.

On June 19, in the Chancery Division of the High Court, Dublin, the Vice-Chancellor (Mr. Justice Chatterton) had before him an action by Mr. Maclaughlin against Mr. Taaffe to compel specific performance of an agreement to purchase certain house property and defendant's chemist's business in the city of Derry. The action had been listed for trial on February 28 last. On February 25 the defendant tendered a consent for judgment to the plaintiff's solicitor, which consent was afterwards used in obtaining a judgment for specific performance. In the judgment there had been a direction for an inquiry (in case the defendant showed good title to the premises) as to the damages the plaintiff had sustained by the delay of the defendant in carrying out the agreement.

Mr. Wylie, K.C., and Mr. A. Todd, for the defendant, now moved for a stay of the order so far as regarded the inquiry as to damages, on the ground that it was obtained by mistake and against good faith, and should not be proceeded with.

Mr. Matheson, K.C., for the plaintiff, said that the case had been heard, and there was no evidence of a consent having been accepted by the plaintiff; that counsel on behalf of the defendant was in court when the inquiry was asked for and obtained; and hence that the motion now made should not be granted.

Mr. Todd, B.L., replied on behalf of the defendant, and the Vice-Chancellor granted the application and stayed the inquiry.

"Delightfully Soothing."

The King v. M. Sharp, Esq., and others, Justices, &c., and Sanguinetti.

In the King's Bench Division on Monday, June 23, before a Divisional Court consisting of the Lord Chief Justice, Mr.

Digitized by Google

Justice Darling, and Mr. Justice Channell, the Solicitor-General appeared to show cause why the Justices of Brentford should state a case under the following circumstances. It appeared from the affidavit of Montague Sharp and two other Justices of the Peace for Brentford that on March 24 they heard and determined an information laid against Francis John Sanguinetti, chemist, of Ealing, alleging that he sold unstamped a certain box of gum pastilles contrary to the Medicine-stamp Act, 52 George III., c. 150. The box was labelled:—

F. SANGUINETTI, Chemist, Ealing, W.

Pure Gum Pastilles.

Influenza.

Delightfully soothing
To Singers and Public Speakers.

Must be kept in a coo place.

After hearing both sides the Justices found that the words on the label did not, in fact, hold out or recommend to the public any nostrum, proprietary medicine, or specific, or that the pastilles were beneficial for the prevention, cure, or relief of any distemper within the meaning of the Act, and they accordingly dismissed the information. An application being made to them for a case to be stated, the Justices were of opinion that no point of law was involved, and they dismissed the application as frivolous. The Solicitor-General contended that the Attorney-General, on whose behalf he appeared, had a right to have a case stated if he applied for one.

The Lord Chief Justice said that the rule *nisi* to state a case which had been obtained must be made absolute.

The other Judges concurred.

Association Rules and Outsiders.

IN Selkirk Small-debt Court on June 20, Sheriff Smith heard an action in which the Border and South-East of Scotland Aërated-water Manufacturers' Protection Association (Limited) sued George D. Stevenson, aërated-water manufacturer, Galashiels, for 2*l.* 12*s.* 10*d.*, being dues on certain bottles removed by Mr. Stevenson from the pursuers' bottle-exchange at Maxton. Mr. Hilson, solicitor, who appeared for the pursuers, explained that the point in dispute was whether certain by-laws made by the pursuers for the conduct of their bottle-exchange were binding on manufacturers who were not members of the Association. In view of the importance of the question, he moved the Sheriff to order written pleadings, on which the question at issue might be debated. Mr. Norman Macpherson, Edinburgh, on behalf of the defender, opposed the motion, and asked the Sheriff to dismiss the summons. He argued that the claim was irrelevant, and that, in order to be binding on the general public, by-laws must be made in pursuance of some delegated authority, or must be sanctioned by a contract between the persons making them and the persons sought to be affected by them. This was simply a case of an association legislating for outsiders. The Sheriff refused the pursuers' motion, and Mr. Hilson withdrew the summons.

County Court Cases.

NO IMMEDIATE POSSESSION.

AT the Southwark County Court on June 23, Mr. Frederick Shaw, wholesale chemist, of Bunhill Row, E.C., applied for possession of a shop and premises at 99 Alscot Road, Bermondsey, S.E., let under an agreement to an upholsterer named Seex. It was stated for the plaintiff that three quarters' rent was due and in arrear, and there was not sufficient distress to cover the amount. The defendant had left the premises, and the plaintiff asked for an order entitling him to enter and take possession. Judge Addison, K.C., said he could only make an order for possession in one month provided the defendant did not pay all the arrears of rent by then. The statute said very plainly that a tenant was entitled to four weeks in which to pay up arrears. In a case of this kind, however, where the premises had been left empty, such a clause was a defect in the Act. Order accordingly.

Sale of Food and Drugs Acts.

SWEET SPIRIT OF NITRE.

AT the Haltwhistle Petty Sessions on June 19, Thos. Nixon, grocer, Longbyre, was summoned for selling 4 oz. of sweet spirit of nitre, which was deficient in ethyl nitrite to the extent of 42·8 per cent. Defendant said he had had the spirit in his shop for twelve months, and it had been exposed to the sun in the shop-window. He was fined 2*s.* 6*d.*, and costs.

MUSTARD.

AT Bow Street on June 20, Stephen Henry May, general shopkeeper, of 4 York Place, Buckingham Street, W.C., was fined 3*l.*, and 12*s.* 6*d.* costs, for selling mustard containing 47 per cent. of wheat-flour coloured with turmeric.

Bankruptcy Report.

Re FRANK HAROLD BROMFIELD, trading as a Chemist and Druggist at Blaenavon, Mon.—Debtor attended for his public examination at Tredegar Bankruptcy Court on June 20. Replying to Mr. W. L. Daniel, the Official Receiver, he said he commenced business in 1895 with a capital of 100*l.*—money given him by his father-in-law. He had carried on a mixed business. He had been registered as a chemist before the present Act came into operation. He had kept a ledger and a day-book in connection with his business. He had not kept an invoice-ledger; he merely preserved the invoices. He had made a record of the daily cash-takings, but he had not made a note of payments, relying on his bank-book for these latter. The Official Receiver: Am I to assume that you did not pay any money except by cheque? Debtor said that he did make certain payments by cash, and admitted that, consequently, this would afford no definite information as to his financial position. The daily-takings book was made up every night. In consequence of his not having kept a proper set of books, it would have been impossible for him to make out a balance-sheet or a profit-and-loss account. He had not taken stock during the six years he had been in business. He had discovered three years ago that he was insolvent, but continued trading, thinking business would improve. He attributed his failure solely to bad trade, owing to the stoppage of work at a local colliery and at the iron and steel works during the last two years. His liabilites exceeded his assets twelve months ago by 84*l.*, whilst he calculated he had lost 100*l.* on the year's trading, in addition to 120*l.* lost through the strike. Eventually the examination was concluded, subject to the usual conditions.

New Companies & Company News.

MARMITE FOOD-EXTRACT COMPANY (LIMITED). — Capital 50,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with G. Huth and F. Wissler, to acquire any invention or process relating to the production of food-extracts from yeast, or to any apparatus therefor, to turn the same to account, and to carry on the business of manufacturers of food-extracts, &c., chemists and druggists, &c. The first directors are G. Huth, F. Wissler, and E. L. Simon. Qualification, 200*l.* Remuneration, 300*l.* to 1,500*l.* per annum (according to profits), divisible.

SALT & SON (LIMITED).—Capital 4,000*l.*, in 1*l.* shares. Objects: To acquire the business of surgical-instrument makers and anatomical mechanicians carried on by Salt & Son, at 5 Cherry Street, Birmingham, as "Salt & Son," and to carry on the business of manufacturers of and dealers in surgical and sick-room appliances, chemists, druggists, &c. The first subscribers are: F. A. Salt, 5 Cherry Street, Birmingham, surgical-instrument maker; T. T. Gallimore, Kingswood, Warwick, surgeon; A. Oakes, 4 Whittall Street, Birmingham, surgeon; R. A. S. Prosser, 20 Lozells Road, Birmingham, surgeon; J. H. Archer, Tile Hall, Warwick, gentleman; H. H. Copeland, 54 Springfield Road, King's Heath, near Birmingham, clerk; and T. P. Salt, Fern Lea, Park Hill Road, Harborne, near Birmingham, surgical-instrument maker. No initial public issue. Registered office, 5 Cherry Street, Birmingham.

MOSELEY'S FOOD (LIMITED).—Capital 15,600*l.*, in 2,600 6-per-cent. cumulative preference shares of 5*l.* each, and 2,600 ordinary shares of 1*l.* each. Objects: To acquire the business known as "Moseley's Food (Bonny Baby Brand)," and all or any of assets including works and premises at Sheffield, to adopt certain agreements, and to carry on the business of manufacturers of and

dealers in invalid, infant, and other foods. Minimum cash subscription, 1,000 preference shares. The first directors are W. R. Bootland, W. Y. Robinson, C. Moseley, W. D. Yeomans, and one other, to be appointed by the preference shareholders. Qualification, 100*l.* Remuneration, 100*l.* each per annum (120*l.* for the chairman). Works, Heeley Mill, Sheffield; Office, Guildhall Chambers, Manchester.

BLUNTS (LIMITED).—Capital 4,000*l.*, in 1*l.* shares. Objects: To acquire the business of wholesale and retail chemists and druggists, recently carried on by J. H. Blunt & Sons (Northampton Drug and General Supply Company) (Limited), at 2 The Parade, Northampton, and to carry on the business of chemists, druggists, dispensers, drysalters, herbalists, distillers, patent-medicine retailers, oil and colour merchants, mineral-water manufacturers, &c. The first subscribers are:—J. H. Blunt, 10 Cyril Street, Northampton, druggist; T. S. Blunt, 9 Broadgate, Coventry, druggist; F. F. Blunt, 6 Gurney Terrace, Northampton, druggist; W. H. Blunt, 30 Haughton Road, Birchfields, Birmingham, pharmaceutical chemist; J. J. Hart, 11 Prices Street, Northampton, accountant; W. T. Clements, 129 Abington Avenue, Northampton, accountant; and A. Richards, 13 Gurney Terrace, Northampton, chemist's assistant. No initial public issue. The first directors are J. H. Blunt, T. S. Blunt, and F. F. Blunt (managing directors), and W. T. Clements.

BOOTS' COMPANIES SHARES.—At the Exchange Arcade at Lincoln on June 20, fifty fully-paid 1*l.* ordinary shares in Boots Cash Chemists (Eastern) (Limited) fetched under the hammer 45*s.* each. Sixty 1*l.* 6 per-cent. cumulative preference shares in the same company realised 26*s.* each, and one hundred fully-paid 1*l.* 6-per-cent. cumulative preference shares in Boots Pure Drug Company, sold for 23*s.* per share.

STEPHEN SMITH & CO. (LIMITED).—Mr. H. J. Hall (managing director) presided at the fifth annual meeting of this company, held on June 19. He said efforts had been successfully made to open up business in South Africa, which promised satisfactory returns in the near future. The assets, without considering the premises, represented 11*s.* 6*d.* in the pound security for the preference shareholders. The expenditure had been slightly heavier on an increased turnover, but the net profit amounted to 6,096*l.*, and the gross profit showed an increase of 4,020*l.* over the previous year. A further sum of 500*l.* had been placed to reserve, which now amounted to 2,000*l.*, and 1,293*l.* was carried forward to next account. The report and accounts were unanimously adopted.

A. S. WATSON & CO. (LIMITED) (HONG-KONG).—The directors' report states that the net profit for the year, after paying all charges, amounts to $101,774, which, with the balance brought forward from the previous year, makes $108,462. From this has to be deducted:—General manager's commission of 5 per cent. on the net profits for the year, $5,238; remuneration of consulting committee, $2,500; leaving an available balance of $100,723. An interim dividend of 5 per cent. was paid in December, absorbing $30,000, and a further dividend of 6 per cent. (making 11 per cent. for the year) is now proposed, which will absorb $36,000. A sum of $30,000 is to be written off for furniture, fittings, utensils of trade, cargo lighter, machinery, and buildings additions, and $4,723 carried forward.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

Allison (John). *Book-keeping for Retail Grocers and Small Traders.* 7×4½. Pp. 102. 2*s.* 6*d.* (Maclaren & Sons, Shoe Lane, E.C.) [This is a straightforward and useful book, in which the author well epitomises the ordinary transactions of the small retailer, and shows how, with a set of four books, he may always be able to answer the questions, How do I stand? and Who owes me and whom do I owe?]

Bowhill (T.). *Manual of Bacteriological Technique and Special Bacteriology.* 2nd ed. 9⅜×6½. Pp. 310. 21*s.* net. (Oliver & B.)

Percival (J.). *Agricultural Botany, Theoretical and Practical.* 2nd ed. 8×5½. Pp. 818. 7*s.* 6*d.* net. (Duckworth.)

Trade-Marks Applied For.

(*From the "Trade-marks Journal," June* 4, 1902.)

"LUSCIO"; for a flavouring. By Stevenson & Howell (Limited), 95A Southwark Street, S.E. 245,002.

"A-TIKE" and picture of a Yorkshire terrier; for a beverage. By E. P. Shaw & Co. (Limited), Wakefield. 245,110.

"VETNOR" on label; for an ink-stain remover. By Isabel Ingles, Argyll Road, Dunoon, N.B. 243,662.

"STERILINE"; for bleaching-powder. By Phillips, Smith & Co, 92 Hope Street, Glasgow. 245,774.

"KALKULUSINE" (no claim for "Calculus"); for a dentifrice. By E. P. Day, 3 Holles Street, W. 245,001.

Label with word "IGROW" (disclaimed); for a hair-restorer. By Clutterbuck & Perry, 1 Queen's Road, S.E. 245,018.

"MYRA"; for polishes, &c. By H. Mack, Ulm-on-Danube, care of C. A. G. Browne, 53 Wych Street, W.C. 245,597.

(*From the "Trade Marks Journal," June* 11, 1902.)

"IGNIT"; for a chemical. By C. H. Homan, Norway, care of Jensen & Son, 77 Chancery Lane, W.C. 244,981.

"TANNODA" (no claim for "Tanno"); for chemicals. By W. Anderson, 45 John Street, Govan, N.B. 245,875.

"PRIZETTA" (no claim for "Prize"); for a veterinary remedy. By G. Storton, 116 Wellingboro' Road, Northampton. 246,033.

A series of labels for "Morison's Universal Medicines, Pills, and Ointment." By Morison & Co., 33 Euston Road, N.W. 242,757, 242,758, 242,759, 242,760, 242,762, 242,763, 242,764, 244,970, and 245,529.

"VERBASCINE" (no claim for "Verbas"); for a medicine. By A. J. Barnes, 1 Charlemont Street, Dublin. 245,036.

"STURGEON BRAND" ("Sturgeon" not claimed); for chemicals. By J. & E. Sturge, 18 Wheeley's Lane, Birmingham. 244,829.

Double-headed arrow through the word "RENSON"; for chemicals. By the Renson Manufacturing Company, 96 St. John Street, Clerkenwell, E.C. 245,441.

"CONORA"; for medicines. By the Conora Company, 11 Placquett Road, East Dulwich, S.E. 245,959.

"FALSTAFF"; for camel-hair brushes. By Vereinigte Pinsel Fabriken, Nuremberg, care of W. P. Thompson & Co., 6 Lord Street, Liverpool. 245,903.

"BROMONA"; for photographic paper. By Ilford (Limited), Ilford, E. 245,939.

(*From the "Trade-marks Journal," June* 18, 1902.)

Design and the word "ASTÉR"; for alizarine dyes, mineral and vegetable. By Die Farbwerke vorm. Meister, Lucius & Brüning, Hoechst a/Maine. 245,738 and 245,739.

"SERIKON"; for photo films and plates. By B. Acres, 1 Warwick Villas, Hadley, Barnet. 244,926.

"THREE POPLAR"; for chemicals. By Wylie & Co. (Limited), 18 and 19 Ironmonger Lane, E.C. 245,930.

"KELO"; for vermin-killers. By S. M. Stevens, 97 Whitworth Street, Manchester. 246,250.

"GRANULETTES" (no claim for "Granule"); for chemicals. By Alfred Bishop (Limited), 48 Spelman Street, E. 243,795.

"LOYDINE"; for a mouth-wash, &c. By R. E. Lloyd, 14 St. Mary's Road, Garston. 245,640.

"HEROTERPINE" (no claim for "Hero"); for a pharmaceutical preparation. By Schieffelin & Co., New York, c/o Thos. Christy & Co., 4 Old Swan Lane, E.C. 246,166.

"REPELLO"; for clinical thermometers. By G. H. Zeal, 82 Turnmill Street, E.C. 246,013.

"TRIASTAL"; for foodstuffs. By G. B. Loeffler, 83 Upper Thames Street, E.C. 245,849.

"CARLINE"; for goods in Class 47. By Carless, Capel & Leonard, 23 White Post Lane, Hackney Wick, N.E. 245,708.

Design of umbrella; for perfumery, &c. By J. Crosfield & Sons (Limited), Warrington. 240,206.

"TOURNAMENT"; for perfumery, &c. By the Vinolia Company (Limited), Malden Crescent, N.W. 246,090.

"AUCHISSA"; for perfumery, &c. By the Orchissa Toilet Company, Groat Market, Newcastle on-Tyne. 246,244.

Westminster Wisdom.

(By our Parliamentary Representative.)

THE POISONS COMMITTEE.

The following communication has been sent to me, and I give it without comment, knowing that it will interest your readers:—

The Committee which has been sitting for some time past, under the chairmanship of Sir Herbert Maxwell, to consider the amendment of the first schedule annexed to the Pharmacy Act of 1868, has now completed the taking of evidence, and after the Coronation-holidays will proceed at once to the consideration of its report. It may be recollected that the Act of 1868 related to the qualifications necessary for chemists and the sale of poisons. Some time ago it was discovered by the Pharmaceutical Society that it was perfectly possible for an unqualified man to evade the Act by converting his business into a limited liability company. Under the circumstances the Society were anxious to amend the existing laws in such a manner that the whole of the chemists' shops throughout the Kingdom must be registered and the persons in charge thereof duly qualified chemists. In the case of a company it was also urged that even the directors themselves should be required to qualify as chemists. Since the conclusion of the hearing of evidence an admirable *précis* of the statements of the various witnesses has been furnished to every member of the Committee, and when the Committee meets at the close of the Coronation festivities, it is expected that the Chairman will be in a position to submit his draft-report to his colleagues. There is reason to believe that the report may be presented to Parliament before the close of the year, but in any case there is no possibility of legislative effect being given to it until the Session of 1903.

MIDWIVES BILL CRITICISED.

When the Midwives Bill came on for second reading in the House of Lords on Friday, a strong speech against it was made by the Lord Chancellor. The noble lord said he refrained from moving the rejection of the measure, because there are some good points in it; but his main line of objection was that provision has not been made for rural districts, where it is difficult for poor people to get the services of trained midwives, and where these poor people are content with the assistance of some neighbour, who not only attends the mother in childbirth, but looks after the ordinary domestic offices of the household. Eventually the Bill was read a second time, but in committee (to be taken on July 4) a determined effort will be made to secure considerable amendments.

THE LICENSING BILL.

Mr. Alban Gibbs is to propose an amendment on the Licensing Bill with reference to the sale of mineral waters, and the question has arisen whether it will touch chemists and what will be its effect. The amendment is on Clause 9, which stipulates that, notwithstanding anything contained in Section 73 of the Licensing Act, 1872, a justice's licence shall be required in the case of every Excise licence under which intoxicating liquor may be sold by retail to be consumed off the premises, "provided that this subsection shall not apply to any Excise licence taken out by a spirit-dealer or wine-dealer for premises which are exclusively used for the sale of intoxicating liquors, and which have no internal communication with the premises of any person who is carrying on any other trade or business." Mr. Gibbs's amendment is to insert in this proviso, after the words "intoxicating liquors," the words "or of intoxicating liquors and mineral waters." Upon the face of it, this does not appear to have anything to do with chemists, and this view is borne out by Mr. Gibbs himself, who has favoured me with the following note:—

My amendment, as I understand it, is confined to allowing wine-merchants to sell mineral waters without coming under the provisions of the Licensing Bill. It in no way affects anyone who does not sell alcoholic liquors.

Mr. Herbert Lewis and Mr. Cripps have amendments on the paper dealing with the same clause. Mr. Lewis wants to provide that the Licensing Justices shall be at liberty in their free and unqualified discretion to refuse a licence for the sale of beer, cider, or wine by retail to be consumed on the premises, although such premises were licensed on May 1, 1869, on any grounds appearing to them sufficient; while, on the other hand, Mr. Cripps will seek to provide "that where a licence for the sale of wine, spirits, liqueurs, sweets, or cider, not to be consumed on the premises, is in force at the commencement of this Act, an application for the renewal of such licence, or of any licence granted by way of renewal thereof from time to time (whether held by the same person or not), shall not be refused except on one or more of the grounds on which it might have been refused if this Act had not passed." If the latter is not carried chemists who at present have wine-licences may get them taken away from them.

LABORATORY CHEMIST'S CURIOUS APPOINTMENT.

Mr. Harris has discovered that a third-class Surveyor of Customs (late a laboratory chemist) has been appointed Superintendent of Mercantile Marine, Receiver of Wrecks, Registrar to the Royal Naval Reserve, Registrar of Shipping, and Collector of Customs at Middlesborough. I have endeavoured to ascertain the name of the lucky individual, but Mr. Harris prefers not to give names. He tells me, however, that he has learnt that the Board of Customs have satisfied themselves that the gentleman referred to is competent in respect of ability, knowledge, and experience to fill the post, and that under these circumstances the Board of Trade does not feel justified in withholding its sanction to the appointment.

THE NAMING OF KEW PLANTS.

Mr. Akers-Douglas, answering Mr. Cremer and Mr. Bryce, on Monday, said he would be pleased to consider the suggestion as to labelling flowers, shrubs, and trees in Kew Gardens, both in Latin and English, and he had asked for the observations of the Director of Kew Gardens. He had no objection to calling the attention of the trustees of the British Museum to the question, although he had no authority over the management of that institution.

Reviews.

The Factory and Workshop Act, 1901. By WILLIAMS and MUSGRAVE. 8½ × 5½. Pp. 196. Alan Stuart. 3*s.* 6*d.*

THERE are few departments of law more complicated than that which covers industrial pursuits, but this book presents an excellent codification, and will doubtless save a great deal of friction between inspectors and employers and employés. The commentary by Messrs. Willoughby Williams and C. E. Musgrave will be found serviceable for employers. In the first part the effect of the Act is dealt with so far as it concerns factories and workshops. Here rules in regard to the employment of children and women are fully dealt with. In Part II. the changes in the law are epitomised. The third part is a parliamentary history of the Act, and it is followed by the text of the Act with notes, and an appendix in which are given orders and special rules.

Elementary Bandaging and Surgical Dressing. By the late WALTER PYE, F.R.C.S. Ninth edition revised by Thos. Carwardine, M.S., F.R.C.S. Pp. 214. Bristol: John Wright & Co. 2*s.*

THIS little handbook, already well known, has been divided into three parts, Part I. dealing very fully with bandages and splints. The book teems with useful and instructive illustrations as to their mode of application and uses. Part II. deals with sutures, poultice-making (a thing about which the young medical man is usually ignorant), cupping (which although but little used nowadays is sometimes found beneficial), and a few very useful hints on the prevention and management of bed-sores. Part III. deals with "first-aid" treatment of fractures, hæmorrhage, shock, fits, and treatment of concussion, apoplexy, and infantile convulsions, and diagnosis. Restoration from drowning by "Sylvester's," "Marshall Hall's," and "Howard's" methods are clearly explained. The treatment of poisoning-cases is carefully gone into. The book concludes with a few hints on case-taking, which, however, will probably appeal only to a few, as every student follows more or less the particular method taught at his own hospital.

Correspondence

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Glasgow Trade Association.

SIR,—Now that the Glasgow Trade Association circulars are published there can be no harm in making remarks on them. It will be seen that the whole position is changed by the effort being made by the executive of the Association to bring the whole weight of chemists throughout the country to bear on patent-medicine manufacturers, in place of merely approaching them on behalf of the chemists in a circumscribed area like Glasgow or the West of Scotland, as was originally intended. The original position was absolutely hopeless, as it is quite impossible for patent-manufacturers to safeguard any special area, no matter how willing they might be to do so, but the new position is full of hope if chemists throughout the country will unite heartily in backing up the Glasgow Trade Association. As long as it is possible for so-called drug-stores to cut, we chemists must cut, and I maintain we are now in a better position to cut than they are; but we are all, chemists, manufacturers, and, I believe, some stores'-men too, sick of the present absurd and unbusiness-like system of selling goods either without profit or at a loss. If we are all practically agreed, it should not be difficult for us to come to an understanding. Chemists in all parts of the country must, however, back the effort up heartily. Although the smaller stores will probably fall in with more or less willingness, the larger stores will still fight for a position which, bad as it may be, is the best they can get from which to carry on their war on legitimate chemists. In approaching patent-medicine makers there is no necessity for the Glasgow Executive to use the word "humble." The system of keen cutting has injured them quite as much as it has injured us, and although I do not consider that the man who succeeds in floating a so-called patent must be a very good business-man, I have no doubt they all see far enough to enable them to grasp the fact that a fair profit on their articles would result in a larger support by the retail chemist. The Conference between them and chemists will be of mutual benefit, and all that we want on either side is a friendly feeling. I expect large results from this Conference, and I hope it will be possible to arrange it at a date not distant. It will be well, too, if we can include in it the makers of many special articles which do not fall under the head of patents. It is too soon to speak of the work of such a Conference, but no doubt a committee will be formed composed of manufacturers, chemists, and stores'-men, for the purpose of arranging the lines on which action can be taken, and seeing those lines properly pursued. There are several methods which might be adopted with effect to put a stop to the insane cutting which is universal just now, but there is no method which can apply to less than the whole country.

Dumfries, June 23. JAMES REID.

Chemist Malins's Case.

We have received intimations of the following additional subscriptions:—

	£	s.	d.
R. Johnson, Leeds	1	1	0
H. T. Dene, Birmingham	1	1	0
J. Young, Halifax	2	2	0
C. J. McCarthy, Grimsby	0	10	6

Mr. Malins informs us that it will be necessary to expedite this matter of appeal. We therefore suggest that all chemists and druggists who consider their rights to be infringed by the Cardiff Magistrate's decision in his case, and who are desirous to aid in carrying it to a higher tribunal, should intimate their subscriptions without further delay. The refusal of the Magistrate to state a case throws the appeal into the most expensive category, so that the subscriptions promised up to the present will scarcely do more than pay for the application for a mandamus. Without desiring to force opinion on the matter one way or other we would suggest that the additional responses by next week should determine whether the matter be carried further or not.

Press Prescribing.

SIR,—Your remarks concerning the above are opportune, inasmuch as they will serve to put chemists on their guard to notice dose, &c., when making up such recipes. It is a chemist's mission to see that his customers take the right thing and the right dose, and my experience is that a customer bringing such a prescription is more ready to listen to reason than one coming in for a patent medicine. Every one is out of sorts at times, and naturally he will then look over any matter dealing with drugs in the newspaper or journal he may pick up, and it is far better for the chemist and himself if he notices the medical column and leaves quack advertisements to themselves. I like a customer who has a smattering of medical knowledge—he is always on the look-out for more, and a chemist with anything about him is a valued friend to that man, and the man is never tired of recommending the chemist to his acquaintances. It is for the above reason that I protest against too much water being thrown on these "Press Prescriptions" and such-like reading, as I believe, with the chemist's guidance, they are good for the customer. W. N. M. (259/60.)

Ungentlemanly Chemists.

SIR,—If I remember rightly, I have read in these columns communications from chemists complaining of the unsatisfactory manner in which assistants apply for vacancies, how they fail to give full particulars in first letter, and by these omissions undoubtedly cause much inconvenience. But are employers themselves the perfect beings they would have assistants believe them to be? I have overwhelming evidence to prove that many are, to say the least, rude and unbusinesslike. Many are most dilatory in corresponding with applicants, and what is one to think of those chemists who retain copies of testimonials—never return them when a stamped and addressed envelope has been enclosed? One would have thought it incredible that a chemist could treat with silent contempt an offer of a personal interview at applicant's own expense, yet this has been my experience quite recently, and can only be equalled by another instance when I forwarded a reply-paid telegram to a pharmacist many months ago, and am still awaiting his reply. These are hard facts, and I have consulted my solicitors in the matter. In the interests of assistants at large I shall certainly take proceedings against the next employer who thinks fit to retain my testimonials and reply-paid telegrams—property which is not his. Yours faithfully,

VERITAS. (141/16.)

Garlic for Consumption.

SIR,—The promise held out of a remedy for this scourge of humanity will doubtless be hailed with joy by very many sufferers, and if so simple an agent is proved to be efficacious it would entitle the discover to the highest dignity of medical art. We read the Israelites "murmured when they thought of the leeks, and the onions, and the fleshpots of Egypt," and if the modern Hebrew race indulge freely in these alliaceous plants it may account for their freedom from phthisis. But garlic, although extensively used in cookery on the Continent, is not a favourite with us. I fear, however, it would be impossible to obtain the active principle of the onion in a tasteless form; but one thing I can state positively—that the vile eructations of onions are completely subdued by the addition of parsley, and would respectfully suggest a carefully prepared extract of this useful culinary to be exhibited in conjunction with the objectionable garlic.

Yours faithfully,

R. GOODWIN MUMBRAY.

Legal Queries.

253/6. *Fleet.*—The tax on saccharin is 1*s.* 3*d.* per oz. The *C. & D.*, April 27, 1901, page 705, and August 10, page 287, gives full particulars.

Digitized by Google

254/38. *H. B.*—As a licensed retailer of methylated spirit you are entitled to hold a stock not exceeding 50 gal. at one time. The Inland Revenue officer who bothers you about 1 gal. does not know his business.

253/87. *J. W. L.*—Parrish's chemical food is not regarded as the title of a proprietary medicine. Neither your quinine-tonic label nor the blood-purifier label is liable.

255/65. *J. H. W.*—"Daisy," as an entire drug, is free from stamp-duty, but can only be sold by chemists and persons licensed to sell stamped medicines.

251/34. *Eddie.*—Your agreement for the house was originally made in June, and six months' notice for its termination should be given in December. The fact that the agreement has long transpired does not affect the matter.

257/28. *W. F. G.*—If you, an unqualified person, administer any anæsthetic and the person subjected to it dies, you may be charged with manslaughter. No foreign country would register you as a dentist without evidence of qualification.

Miscellaneous Inquiries.

239/31. *W. J. H*—Menthol-pastilles with Irish moss. To make these a glyco-gelatin basis is used, in which the water has been replaced by decoction of Irish moss (1 to 30, simmer twenty minutes). The method of making pastilles on a small scale is given in "Pharmaceutical Formulas," page 412, and "Art of Dispensing," page 152.

239/1. *Nigrum.*—The straw used for Black-straw Hats is dyed before being plaited. The gum-varnish on the finished hat prevents successful results with the ordinary methods; that is why hat-varnishes are used.

235/56. *H_2O.*—*X*-ray photographs are developed the same way as ordinary photographs. Walsh's "The Röntgen Rays," 10*s.* 6*d.* (Baillière, Tindal & Cox), and Isenthal and Ward's "Practical Radiography," 2*s.* 6*d.* (Dawbarn), are both good; the former gives most particulars of the medical and surgical applications of the Röntgen rays.

234/26. *J. M. N.*—The Rapidity of a Lens depends upon the angular aperture—the larger the latter is, the quicker the lens; hence the shorter the focus (other things being the same), the more rapid the lens.

60/19. *E. W.*—Butter-flavour.—This is glycerin flavoured with butyric acid and a trace of coumarin and coloured with annatto.

227/11. *J. P.*—Toning Bromide-paper.—What is the origin of the formula containing "chromatic oxide of iron"? It is hardly likely that an iron salt would be used in a bath containing potassium ferrocyanide and uranium acetate.

227/81. *Pulsatilla* sends 6 dr. of a mixture and asks us to tell him the quantity of each drug it contains. We never analyse samples about which no particulars are given, and not always when the information is supplied.

234/62. *F. E. C.*—The prospectus of the optical examinations of the Spectacle-makers' Company can be had from Col. T. Davies Sewell, Temple House, Temple Avenue, E.C.

250/3. *Veritas.*—Tincture of opium is now weaker in spirit than it used to be, and this accounts for the cloudiness in your toothache-essence. You may use 1½ oz. of the tincture and ½ oz. S.V.R. without damaging the essence.

239/4. *Floral.*—Self-raising Flour.—The simplest formula for this is—

Tartaric acid	1 lb.
Sodium bicarbonate	1½ lb.
Flour	280 lbs.

The ingredients must be dried separately before mixing, and the product must be guarded from damp. The recipe you send is scarcely so good as the above.

239/38 (*J. B. T.*) and 243/29 (*W. T.*).—Colouring Billiard-balls.—The method given in "Pharmaceutical Formulas" answers well if exactly followed.

235/6. *C. & S.*—The recipe for Warner's Safe Cure is only known, we presume, to the proprietors.

257/23. *W. F. G.*—South African situations are frequently advertised in our Supplement—*e.g.*, June 21. You may get one of these if you try, otherwise you should have little difficulty in getting a situation when you go out there, you being a qualified man. We cannot advise you where to start. That is a matter for investigation on the spot, and the same applies to the money required to start. No Government official will give you details. Read the articles and letters on chemists in South Africa which have appeared in the *C. & D.* during the past two years. They will give you most of the information you require.

220/30. *J. & G.*—Colourings for Aërated Waters.—The following are some of the aniline dyes used for this purpose:—*Red*: Rhodamine, magenta, and crocein scarlet. *Yellow*: Saffron-yellow and auramine. *Brown*: Bismarck brown. *Violet*: Hoffman's violet (diluted and blended makes various other shades, such as lavender and damson-blue).

249/68. *X. Y. Z.*—Court Plaster:—

Isinglass	ʒj.
Water	ʒviij.

Dissolve with heat, and mix with a solution of—

Benzoin	ʒij.
Rectified spirit	ʒij.

Apply several coats of this mixture (kept fluid in a water-bath) with a brush to black silk stretched on a frame, allowing each coat to dry before applying the next. Finally, paint the other side with the following solution:—

Chian turpentine	ʒj.
Tincture of benzoin...	ʒij.

Mix.

Plain tincture of benzoin may be used in place of the Chian mixture.

257/50. *Emperor.*—Gold-paint Medium.—Your sample seems to be gold-size. As you are a large user of the medium, would it not be best to work out a formula yourself? The great point is not to let the finished product be acid.

257/17. *L. & D.*—We have never heard of "Culpa" fire-extinguisher. Most of the powder fire-quenchers we have examined consisted of common salt variously coloured.

251/35. *W. F.*—Mixing-machine.—Messrs. Werner, Pfleiderer & Perkins, 117 Queen Victoria Street, E.C., make the kind of machine you require for mixing a paste.

259/81. *S. H.*—Sodium silicate is sometimes used in soft soap, which may account for your want of success with the sheep-dip. Inquire for a sample of soap free from silica.

238/34. *Subscriber.*—American Galenicals.—These can be had from Messrs. Parke, Davis & Co., Queen Victoria Street, E.C.

240/18. *Eggs.*—We have no means of checking the *Times* statement about water-glass solution, but have little doubt that your statement is correct.

253/60. *W. Y.*—Dispensing for Doctors.—See *C. & D.*, October 19, 1901, page 660; or THE CHEMISTS' AND DRUGGISTS' DIARY, 1900, page 274.

252/11. *Stanhope.*—Ointments containing neutral salts can, as a rule, be packed in tin boxes without ill-effect.

222/38. *Photo.*—One-solution Hydroquinone Developer.—See formula for "Crystallos" in THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 527.

PHARMACY ACTS (IRELAND).

THE WIDOW'S CLAUSE.

IN the Southern Police Court on June 20, Mr. Swifte gave judgment in the summons brought by the Pharmaceutical Society of Ireland against Mrs. Josephine Preston and Mrs. Margaret McDermott (see *C. & D.*, June 21, page 962) for having, under the title of Bowers & Co., at 164 Great Brunswick Street, kept open shop for compounding medical prescriptions, and did compound medical prescriptions, they not being properly qualified in that behalf. In the course of his judgment Mr. Swifte reviewed the law bearing on the subject, and held in favour of the contention advanced on behalf of the defendants that executors and administrators are empowered to carry on such a business after the death of the original owner without any limit as to time being imposed upon them the expiration of which would change a lawful act into an unlawful one. In the Licensing Acts there is a specific time-limit governing similar cases, but in the Pharmacy Act the section relied upon does not specify any time. He would therefore dismiss the summons, and as the case was a test one, he would say nothing as to costs.

THE TEMPLAR MALINS PROSECUTION establishes a very valuable precedent, and should serve as a warning to those who endeavour to take advantage of the deficiencies of the Dentists Act by advertising themselves as experts in dentistry, though at the same time avoiding the use of the word "dentist" or its equivalents. The defendant evidently considered that by the use of the description "chemist" he could effectually escape from the charge of advertising himself as a person specially qualified to practise dentistry. Clause 3 of the Act, however, distinctly says that "a person shall not be entitled to take or use the name or title of 'dentist' (either alone or in combination with any other word or words), or of 'dental practitioner,' *or any name, title, addition, or description implying that he is registered under this Act, or that he is a person specially qualified to practise dentistry*, unless he is registered under this Act." (The italics are ours.) The references in his advertisements to the use of cocaine, ethyl chloride, and nitrous-oxide gas would, we should imagine, be quite sufficient of themselves to lead the public to believe that he was a qualified practitioner. The South Wales and Monmouthshire Branch of the British Dental Association are to be congratulated on the success of their action, and it is to be hoped that this conviction, the result of a faithful interpretation of the Act, may be far-reaching in its effects.—*Journal of the British Dental Association.*

"VETERINARY COUNTER-PRACTICE."—*Electra* (216/37) writes: "I received a copy from my wholesalers a few days ago, and I had not had it in my shop a few hours when I cleared its purchase-price handsomely from prescribing and vending two recipes from it. Your 'Pharmaceutical Formulas' is as much used by me as the B.P."

Digitized by Google

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: June 24.

THE Coronation holidays compel us to close this report two days earlier than usual, so that we have little of interest to record. The reduction in the Amsterdam bark unit last week brought about a drop in the "official" price of quinine by 2*d.* per oz., which fact was generally anticipated, and had been discounted in the second-hand market. An auction of cinchona was held in London to-day, when prices were about 15 per cent. lower, compared with the previous London auction. An important reduction of 1*s.* 4*d.* per lb. has been made in phenacetin for home consumption, which now places the British consumer on the same terms as exporters. Cream of tartar keeps in good demand; canary-seed and juniper-berries are dearer. Arsenic and nitrate of soda are lower. The following are the principal changes since our last report:—

Higher	Lower
Canary seed	Arsenic
Cream of tartar	Cinchona
Juniper-berries	Phenacetin
	Quinine
	Shellac
	Soda nitrate

Arrivals.

The following drugs and chemicals have arrived at the principal ports of the United Kingdom from June 18 to 22, inclusive:— Acid, carbolic, 50; acid, tartaric (@ Bordeaux), 25; aniseed, 25; benzoin (@ Singapore), 30; cardamoms, 22; caraway-seed, 100; cod-liver oil (@ Christiansund) 15, (@ Aalesund) 25; cream of tartar (@ Bordeaux) 62, (@ Rotterdam) 53; essential oils (@ Ostend), 7; gentian, 8; gum arabic (@ Alexandria), 209; honey (N.Z.) 3 cs., (Ital.) 10; oil, castor (Ital.) 35; quicksilver (Span.), 4,399; senna (@ Suez), 88; shellac 420, button lac 88; soy (@ Hong-Kong), 60; tartar emetic, 10; wax, bees' (@ Shanghai), 38; wax, Carnauba (@ Pernambuco), 50.

Heavy Chemicals.

A steady continuance of the lately improved tone in the heavy-chemical market may be noted, but otherwise there is very little of special importance to record. At the moment, of course, home-trade demand is at a very low ebb, but it is only just for the time being. On the Tyne the annual race holidays coincide with the Coronation festivities, and only what is absolutely essential is being attended to. Values all round continue as lately reported.

LINSEED AND COTTON-SEED CAKES find a quietly steady market, with values unaltered. Linseed cakes, 95-per-cent. pure, 7*l.* 15*s.* per ton. Oil cakes, 6*l.* 15*s.* per ton. Cotton cakes, first, 5*l.* 2*s.* 6*d.* to 5*l.* 5*s.* per ton, and seconds, 4*l.* 12*s.* 6*d.* to 4*l.* 15*s.* per ton.

BARIUM PRODUCTS.—All moving away steadily, and values are well maintained. The mineral carbonate of barytes, witherite of all strengths, is now in fuller supply over and above what is required on existing contract deliveries. Quotations vary according to strength, quantity, and delivery. Blanc fixe (pure precipitated sulphate of barium in paste form), 7*l.* to 7*l.* 7*s.* 6*d.* per ton in usual 8-9 cwt. casks. Chloride of barium, best ordinary refined crystals, 7*l.* to 7*l.* 10*s.* per ton, in stock, in casks about 10 cwt., and 6*l.* 10*s.* to 7*l.* per ton in bags. Hydrate of baryta, purest crystals, in steady request, and very firm, at 14*l.* to 14*l.* 10*s.* per ton, in usual casks. Nitrate of baryta has, if anything, taken a firmer tone, although quotations are nominally unchanged. Crystals, 17*l.* to 18*l.* per ton, free on rails, in casks, and powdered 17*l.* 5*s.* to 18*l.* 5*s.* per ton. Mineral sulphate of barium, ground, in brisk consumptive demand, and this applies to practically all qualities. Values are unchanged, at from 40*s.* to 100*s.* per ton, in accordance with quality, quantity, and package. Sulphide of barium, crude calcined, 70 to 75 per cent., 5*l.* 10*s.* to 6*l.* per ton in ordinary casks, with quieter demand.

Liverpool Drug-market.

Liverpool, June 23.

CASTOR OIL.—Good seconds Calcutta is obtainable at 2$\frac{13}{16}$*d.* per lb. from the quay, or 2$\frac{7}{8}$*d.* to 2$\frac{15}{16}$*d.* ex store. Very little is now offering from the quay, which has practically been cleared. First-pressure French is held for 2$\frac{13}{16}$*d.* to 2$\frac{7}{8}$*d.*, and second-pressure 2$\frac{11}{16}$*d.* to 2$\frac{3}{4}$*d.* per lb. Very little is doing in the latter grade at the moment.

CANARY-SEED.—Further sales have been made, and 40*s.* has been realised for good bright Turkish in 50-bag lots, and holders are now asking 42*s.* 6*d.* to 45*s.* per quarter.

SULPHATE OF COPPER.—Is easier at 18*l.* to 18*l.* 5*s.* per ton.

CARNAUBA WAX.—Continues to move off steadily at full prices.

QUILLAIA-BARK.—Maintains the recent advance, and sales of c.i.f., parcels, are reported at a parity of present landed prices.

OIL, TURPENTINE.—Still moves up, and 40*s.* per cwt. has been paid, although to-day 39*s.* 6*d.* to 39*s.* 9*d.* would probably be accepted.

ACACIA SORTS.—Sales have been naturally limited in bulk, owing to the nearness of the Coronation festivities, but for a parcel of soft white 45*s.* per cwt. has been paid, establishing an advance of 5*s.* per cwt. on recent values.

ARSENIC, POWDERED WHITE, has declined to 12*l.* 10*s.* to 12*l.* 12*s.* 6*d.* per ton.

GRAINS OF PARADISE.—70*s.* per cwt. is asked by the holders of the few remaining bags.

German Drug-market.

Hamburg, June 23.

Business is very quiet here.

AGAR-AGAR.—Slow of sale, at 315m. spot, and forward delivery 300m. per 100 kilos.

CAMPHOR is quiet in second hands, at 420m. to 415m.

ERGOT is very firm; Russian at 340m. and Spanish at 345m.

LYCOPODIUM is firm, at 460m. in cases.

MENTHOL is unsettled; spot is 31m. and forward delivery 29m.

CEVADILLA-SEED is lower, at 90m.

CONDURANGO is also lower, at 95m.

STAR-ANISE SEED has been reduced to 115m. per 100 kilos.

Japanese Drug and Chemical Markets.

Yokohama, May 27.

General trade continues quiet, and it is especially so with drugs and chemicals. Wholesale druggists throughout the country are now meeting at Tokio in regard to the Drug-law Amendment Bill. They propose to place their decision before the next Session of the Japanese Diet.

In export articles menthol is steady at unchanged prices with no important business. The harvest of peppermint this season is expected to be considerably more than last year's. Oil of peppermint is also firm at 2·60 yen per catty, with a small available stock. It is said that some foreign exporters hold a large quantity of both menthol and oil, which they bought on speculative account. Camphor is a little firmer; present quotation is 65 to 67 yen per picul, and for refined tablets 98 yen per 100 lbs. is wanted, which figure can be shaded for large quantities. Iodides remain firm, and crude is in fairly good demand for both home and export. Iodine can be had at 3·40 yen per lb. for best quality; iodoform is dearer owing to a brisk demand and light supply; 5·60 yen per lb. is the lowest possible price, and some holders ask more. Resublimed iodine is firm at 4·80 yen per lb. Potassium iodide is firmly held at 3·40 yen to 3·50 yen per lb. in wholesale quantities. Galls are quiet, holders asking 25 yen per picul, with buyers at 22 yen. Sulphur is quoted at 28 yen per ton, without important transactions. Sulphide of antimony is quoted at 16 yen per picul, with a small business for export.

In import-goods, tartaric acid is slow of sale and lower, at 54 sen, owing to unseasonable weather of late. Citric acid is quiet, with sellers at 65 sen per lb.; carbolic-acid crystals is exceedingly quiet, owing to recent large arrivals. Cocaine has declined to 10 yen per oz., with a still lower tendency, owing to the arrival of 800 oz. Condurango-bark is firm, at 30 yen per 100 lb. with buyers at 28 yen. Glycerin is very low, at 30 sen for double-distilled s.g. 1·260, although it would cost 15 per cent. higher to import. Rio ipecacuanha is also low, at 6·50 yen per lb. Morphine is cheap, at 38 yen per lb. Quinine is steady at 63 sen per oz., and for hydrochloride, 93 sen per oz. Sugar of milk is lower, at 23·50 yen per cwt.; saffron is also weak, at 17 yen per catty for best quality, and santonin is steady, at 9·10 yen per lb.

Digitized by Google

Cablegrams.

BERGEN, June 23:—The fishing at Finmarken has proved rather better than expected this week, bringing the total catch of cod to date to 42,800,000, against 38,720,000 at the corresponding period of last year. This has yielded 18,930 barrels, against 30,470 barrels at the same time of 1901. The market for best Lofoten non-congealing oil is quiet, but firm at 140*s.* per barrel, f.o.b.

NEW YORK, June 24:—Business here is fair. Quinine has declined to 25*c.* per oz. Menthol is higher at $4.25 per lb., and gamboge is lower at 65c. Cape aloes has advanced to 10c. per lb. Cod-liver oil is strong at $41 per barrel; and cinchonidine is easy at 22c. per oz.

London Markets.

CAMPHOR.—The monopoly-price for crude Formosan has been advanced to 145*s.* per cwt., c.i.f. Crude Japanese is also firmer, and 142*s.* 6*d.*, c.i.f., is asked for July–August shipment.

CANARY-SEED.—Dearer, a good business having been done at 40*s.* per quarter for Turkish on the spot. Stocks are practically *nil* in Turkey, and the market is rising owing to confirmation of damage having been done by the recent drought.

CASSIA LIGNEA.—From Hong-Kong, under date of May 23, a better demand is reported during the preceding fortnight, some 1,000 to 1,500 piculs having changed hands at the parity of 35*s.* 9*d.* per cwt., c. and f., for selected cassia, and 31*s.* for broken. Supplies of the new crop are coming in more freely, as the long-expected rain has fallen. The new crop is estimated at about five to ten thousand piculs smaller than last year's. The Hong Kong stock is about 3,000 piculs.

CINCHONA.—At the auction to-day fair supplies were offered, of which the bulk sold at or after the sale at a reduction of about 15 per cent. on the previous London auction, the average unit paid ranging from 1½*d.* to 1⅝*d.* per lb., or about equal to the Amsterdam unit of last week. A feature of the sale was the offering 400 odd packages of old Cuprea bark, imported in 1881, 1882, and 1888, which were all disposed of at low prices. This was said to be the last of the old Cuprea parcels, and will now put the figures relating to the London stock in a truer position, as the bark contained practically no quinine.

The following table shows the quantities of bark offered and sold:—

	Packages offered.	Packages sold.
South American cinchona ...	956	853
East Indian cinchona	951	888
Ceylon cinchona	265	115
	2,172	1,856

The following were the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
Agents for the Brunswick factory	76,000
Agents for the Mannheim and Amsterdam factories	66,000
Agents for the American factories	49,000
Agents for the Imperial factory	48,000
Agents for the Frankfort and Stuttgart factories	14,000
Messrs. Howards & Sons	15,000
Druggists, &c.	70,000
Total quantity sold	338,000
Bought in or withdrawn	56,000
Total quantity offered	394,000

The following prices were paid:—

SOUTH AMERICAN.—Bolivian cultivated Calisaya, fair to good bright quill, 6*d.* to 6⅞*d.* per lb. for sound (382 bales were offered and sold). Of old South American 471 packages offered and sold "without reserve," including hard Pitayo, at 1¾*d.*; soft Colombian, 1¼*d.* to 1¾*d.*; and Cuprea, 2*d.* to 3*d.* per lb.

CEYLON.—Officinalis, quill chips and shavings, 4⅜*d.* per lb. Succirubra, stem chips and shavings, 3⅝*d.* to 4⅜*d.*; root, 3¼*d.* Ledgeriana quill, 3⅞*d.*; stem chips, 2⅝*d.*; and root, 3⅛*d.* per lb.

EAST INDIAN.—Succirubra original chips and shavings, 3¼*d.*; stem chips, 3⅜*d.* to 4¼*d.* Hybrid branch, 3⅝*d.*; root, 3¼*d.* to 6⅝*d.* Ledgeriana stem chips and shavings, 4¼*d.* to 7¼*d.* Officinalis root, 5*d.* to 5⅜*d.*; stem chips, 3¼*d.* to 4¼*d.*; branch, 2½*d.*

CHAMOMILES have been in fair demand. Fair No. 1 flowers are quoted at from 65*s.* to 66*s.*, and fair brownish ditto 50*s.* per cwt., spot.

CLOVES.—Zanzibar are slow of sale, at 3¼*d.* per lb., spot.

CREAM OF TARTAR has been in good demand and still higher prices are looked for. The Coronation festivities have, no doubt, added to the increased consumption of this article. Prices are unchanged.

GINGER is steady at 39*s.* per cwt. for washed rough Cochin at 32*s.* 6*d.* for Japanese, at 42*s.* for Bengal, and 41*s.* for African.

JUNIPER-BERRIES.—The principal holders have advanced their prices 1*s.* per cwt., and now quote from 14*s.* to 14*s.* 6*d.* per cwt., spot, the inside figure being for 10-bale lots.

LEMON-JUICE.—Raw Messina juice is quoted 1*s.* 3*d.* to 1*s.* 7*d.* per gallon according to quantity.

OIL, CASSIA.—An advice from Hong Kong, dated May 23 reports a dull and still declining market, with sales of about 60 piculs during the preceding fortnight; 80 to 85 per cent. c.a. on the above date was quoted 2*s.* 3⅜*d.* per lb.

OIL, COD-LIVER.—The Bergen market for best Lofoten non-congealing oil is quiet, but very firm at 140*s.* per barrel, f.o.b. There is perhaps a slight improvement in the fishing at Finmarken, but frequent interruptions have occurred owing to stormy weather. The exports from Bergen to date amount to 4,291 barrels, against 5,385 barrels at the same time last year.

OPIUM.—Under date of June 13 our correspondent writes that the Smyrna market has been quiet, sales amounting to 21 cases only, comprising 19 cases Salequale (Yerli grades) at from 7*s.* 6*d.* to 7*s.* 8*d.* per lb., c.i.f., and two cases inspected Karahissar at 7*s.* 11*d.* The large arrivals of new opium which are daily coming into this market will probably lead to low prices for shipment at the opening, in order to induce buyers to operate. There are large orders on hand, both for the States and other consuming markets, at a trifle below present prices, so that in a short time a very active market may be reported. The arrivals in Smyrna to date amount to 145 cases, against 57 cases at the same time last year. Our Constantinople correspondent writes on June 20 that the crop is being gathered in rapidly and under splendid weather conditions. The yield will probably be close on 9,000 cases, and quality very good. Smyrna is weaker at 6*s.* 6*d.* for new Adette, and everything points to a still further decline. The week's sales amount to 25 cases "Druggists" at 6*s.* 5*d* per lb., and the market is quiet.

OTTO OF ROSE.—A French-Bulgarian company has established a factory for the distillation of otto of roses in Karlovo, near Kezanlik, Bulgaria.

PEPPER.—Singapore black is selling at 5½*d.* per lb. on the spot, Singapore white at 9⅝*d.*, and Penang at 8⅜*d.* per lb.

PHENACETIN.—On Monday the makers reduced their prices for home consumption by 1*s.* 4*d.* per lb, which now brings the prices to the same level as those for export from the United Kingdom. The quotation for crystals or powder is now 4*s.* 8*d.* per lb. net for 10-cwt. lots, up to 5*s.* 3*d.* for small wholesale quantities. Bayer's make is unchanged, at 7*s.* 6*d*

QUININE.—Immediately after the Amsterdam cinchona auction last week, manufacturers announced a reduction of 2*d.* per oz. in the official quotation, now 1*s.* 1*d.* for 1,000-oz. lots of German sulphate. Howard's price for this quantity has been reduced to 1*s.* 2*d.*, 100-oz. tins 1*s.* 3*d.* and 1*s.* 4*d.* for vials in lots in 1,000-oz. lots. Whiffens is now 1*s.* 1*d.* in bulk. Quinine salts have also been lowered, Howards prices being the same as other German makers. The second-hand market for quinine has been dull and inactive, prices after the official reduction closing the week with sellers at 11½*d.* per oz. spot, and 1*s.* for December delivery. This week no business appears to have been done, and prices are nominal.

The exports of quinine, quinine preparations, &c., from Germany during the three months ended March amounted to

	1902	1901	1900
Kilos. ...	33,800	49,800	64,100
Marks ...	1,420,000	2,092,000	2,883,000

The Amsterdam quinine works lowered their prices on June 20 for Ed. II by 3½f. per kilo., Ed. III by 4f. per kilo., so that their quotations are now Ed. II 23½f., Ed. III 28f. per kilo

Digitized by Google

SAFFRON.—The exports from Spain during the three months ended March were:—

	1902	1901	1900
Kilos.	21,027	21,204	21,832

SENEGA.—An advice from Minneapolis, Minn., dated June 12, which has been sent to the principal manufacturers and exporters in U.S.A., states that on account of the rains through the north-west the receipts of senega are very backward this year. In order to stimulate digging, it is said that higher prices than those previously ruling at the beginning of the season are being paid to start in the new crop. The firm in question have no old root on hand, but several shipments of new crop are in transit to them.

SHELLAC.—Quiet, with a small trade on the spot, at unchanged prices, fair orange TN selling on a basis of 105*s.* per cwt. for fair. The Calcutta price of TN is cabled lower at 53r.

SODA NITRATE.—Refined has been reduced to 9*s.* 3*d.* per cwt., spot.

TRAGACANTH.—The stock on hand is now very small, and the new arrivals are awaited with interest. Druggists' firsts are scarce and quoted at from 14*l.* to 15*l.* per cwt., and seconds 12*l.* 12*s.* Good fourths are quoted from 8*l.* to 12*l.* which prices mark a substantial advance.

Californian Quicksilver.

The underground conditions of the Boston (California) Quicksilver Company's mines have considerably improved, according to the latest advices. The ore throughout the property shows, on an average, a far superior grade than for months past. The furnace No. 2 is now running well, and its capacity is being steadily increased. The mine has shipped 545 flasks of quicksilver this year up to mid-April, and had 1,219 flasks on hand.

Grecian Olive Oil.

The production of olive oil was unusually abundant in the Zante district last year, being estimated at about 5,000 tuns, of which about one-third was available for export to foreign markets, the remainder being consumed for soap-making and for eating purposes. About 450 tuns have so far being exported, mostly to the United Kingdom, the average price being about 27*l.* per tun, f.o.b., of 252 Imperial gals., though in the British markets the tun is reckoned at 256 gals. Olive-oil soap is mostly consumed in the Levant, and costs 17*s.* to 18*s.* per cwt. Pyrene oil, much the same price.

Borate of Lime.

In future the output of borate of lime in the Mollendo district will be lessened considerably (says the British Consul in Peru) in consequence of a lawsuit about boundaries which the present owners, the Borax Consolidated Company (Limited), have with the Government. Moreover, the fall in prices in European markets also influences the successful working of these deposits. Arequipa will feel this falling-off, as in this industry about some 3,000*l.* a month was spent in the district in the hiring of mules, in forage, and in other necessary expenses, besides the freight paid for conveyance to the coast.

Indian Opium in China.

The import of Indian opium into the port of Ningpo continues to decline, says a British Consular report, while that of Persian has practically come to an end. One cause of the decline is doubtless to be found in the diversion of the supply to Hangchow and its substation Kashing, but another is the increased cost of the foreign drug as compared with the native. Some of the latter reaches the Ningpo district, through various channels, from Ssuch'uan and Yunnan, but the greater part of it is produced in the province itself. There are no indications that the practice of opium-smoking is falling into disuse.

Duty on Celluloid in Germany.

Celluloid in plates, whether white or coloured, was subject to a duty in Germany of 3m. per 100 kilos. until the middle of 1901, when the custom-houses were instructed that black or tortoise-shell plates, without preparatory work, were to be classed as "polished" and subjected to a duty of 200m. per 100 kilos. German celluloid is used to a great extent in the manufacture of ordinary cutlery, while for the better grades of knives imported celluloid must be used. Tests of German celluloid have shown that it is not sufficiently free from acid, which eventually affects the metal parts; and the handles themselves lose their brightness and are liable to shrink. Under these conditions the cutlery industry of Solingen cannot do without the imported article, but the increased duty practically prevents its importation.

Calcium Carbide.

The carbide and acetylene trade on the Continent continues in a very unsettled state. By the maintenance of the Bullier patent in France the manufacture of calcium carbide has become a monopoly, limited to M. Bullier's own company and its licensees, who have started a central office for selling-purposes, the price being 266*l.* per 100 kilos. in large lots. This price, perhaps, would not be prohibitive were the quality of the carbide good; but it is being whispered that current deliveries of carbide in France are much below what customers have been accustomed to. In Germany the new syndicate came into existence in December, and quotes 33m. per 100 kilos. at the various ports. During the past few years the price of carbide in Germany has fluctuated between 40m. and 18m., and the latter figure, which ruled for some considerable period of last year, induced large numbers of people to instal generators. It is estimated in Germany that a central village acetylene-installation can pay its way and meet all competition if it gets carbide delivered at 25m., while the corresponding maximum price for a private person is 30m. or thereabouts.

Gum Arabic and Senna.

Mr. H. C. Wood writes from Assouan, Upper Egypt, to the *American Journal of Pharmacy* that he has had the opportunity of inspecting the senna and gum arabic as they are bought at that place. The trade (according to the chief merchant) since the destruction of the hosts of the Mahdi, has become as active as it was before his misrule, with the difference that camels no longer bear their burdens into Assouan, having been superseded by the less picturesque but more practical railroad. The saving of cost to someone must be great, as from some districts nearly a whole year was formerly required for the transit. The gum arabic is bought of the natives by travelling merchants, sorted into three varieties, packed into large sacks made of palm-leaf, and sold to the merchants at Assouan, who hold it until notified by telegram from Cairo that the market is favourable, when they ship it down the Nile. The gum is gathered during January, February, and March, each collector having vested rights in a certain portion of the forest. The warehouses of the Assouan merchants are simply rectangles surrounded by walls about 10 feet high, made of dried mud.

Produce Notes.

CEYLON CITRONELLA OIL.

A correspondent of the *Tropical Agriculturist* calls attention to the enormous extent of land under citronella grass in the Southern province of Ceylon. There is no doubt, he says, that this hardy grass, growing as it does without any special attention, has spoiled the people for better cultivation. In these citronella districts the abortive attempts to grow cocoanuts, coffee, cocoa, &c., only go to prove that even if these economic products are suited to the districts, they will not tolerate the kind of treatment that is meted out to them by the careless citronella planter. The wholesale adulteration of citronella oil by kerosene has been the downfall of the Ceylon trade in the oil, and it is still practised. The dodge now employed is to pour the kerosene over the grass when it is ready to be operated on by steam, and distil the vegetable and mineral oils together. In spite of the fact that it is periodically said the distillation does not pay, the exports last year from Ceylon show an increase, being 1,430,000 lbs. against 1,409,000 lbs. in 1900. However, there can only be a narrow margin of profit, considering the fact that commercial oil is quoted on the London market at 9¾*d.* per lb. in drums, and 10½*d.* in tins.

QUEENSLAND CHILLIES.

A writer in the *Queensland Agricultural Journal* states that the ease with which chillies and capsicums can be grown in Queensland is amply demonstrated in all the northern districts, where chillies of various kinds have become a weed, and may be seen growing on the roadside for miles. The plant thrives admirably all about the south coast districts, and even grows in parts of the southern tableland where heavy frosts occur, but no commercial use is made of the chillies. An officer of the Department of Agriculture made inquiries of two Brisbane firms relative to the market for chillies. One of the firms (pickle-makers) are large buyers of fresh chillies, and give 3*d.* per lb. for good plump berries 1½ in. long. The other firm import, in connection with their business (as pepper manufacturers) bird's-eye chillies and capsicums from the West Indies in a dried state, and pay

Digitized by Google

6½*d.* per lb. for them. The writer of the article goes on to say: "It strikes us as a most extraordinary thing that we hear of people struggling with large families to make both ends meet in some parts of the north, who are yet at the same time in the midst of a crop which requires no cultivation, and only demands picking and packing to bring grist to the mill. Meanwhile our local manufacturers have to import chillies from the West Indies. Twelve months ago we put up a quantity of chillies in a jar of salt-and-water to test their keeping qualities. They have retained their plump, fresh, red appearance and all their pungent qualities to the present day, thus proving that they can be exported to any distance in a fresh state."

Consular Counsel.

BRITISH GUIANA.

A tax, equivalent to 9*l.* has been imposed on all commercial travellers taking orders for goods in British Guiana. The American Consul at Demerara says the ordinance will handicap import business and check the development of trade, especially that of the United States.

RUSSIA.

The British Vice-Consul at Novorossisk reports that within the past three or four years the cultivation of the sunflower-plant for the manufacture of oil-cake has been extensively adopted by the peasantry and farmers of the district. The industry, which is stated to be very remunerative, is rapidly increasing, and promises to still further develop. It is claimed that the sale of the oil-cake produced in itself more than covers all the working expenditure of the mills. The stalks of the sunflower-plant are used as fuel for driving the machinery, and the ash that remains gives from 25 per cent. to 30 per cent. of potash. Sunflower-seed, when properly crushed, gives 23 per cent. oil, 40 per cent. oil-cake, and 37 per cent. stalk.

SPAIN.

For the information of importers of almonds in the United States, as well as of the growers, the American Consul at Malaga reports that the stock of Jordan almonds in that market is virtually exhausted. There are, perhaps, a few hundred boxes still to be had, but it would be impossible for any exporter to fill a large order for *bonâ fide* Jordans. The crop of 1901 amounted to about 80,000 boxes, and these have practically all been marketed in the United States and London. The prices of Jordans for the past two years have been higher than ever before known, and, unless California succeeds in producing these almonds, there is no reason to believe that the prices will fall, as the demand is always steady. There are a few thousand boxes of Valencias on hand, but these will probably be marketed within the next sixty or ninety days.

ARGENTINE REPUBLIC.

In consequence of the enormous increase during the last twenty years in the immigration from Italy, which represents nearly one-fourth of the entire population, the importation of olive oil from that country has considerably progressed. According to the *Moniteur Officiel du Commerce*, the importations amount to about 6,000,000 kilos. per annum. There are a few native oil-factories in the Argentine Republic, which were founded through the cultivation of sundry oleaginous seeds, such as linseed and ground-nuts, which, however, so far, have only produced poor results. These oil-factories, which are not worked for the production of edible oils, supply, under the name of olive oil, a mixture composed of one-third of ground-nut oil of their manufacture, and of two-thirds very inferior Italian or Spanish olive oil, or of cotton or colza oil.

LEGHORN.

A British consular report on the trade of Leghorn during 1901 has been recently issued, and it contains some interesting information regarding the export of drugs from that port. One of the most striking features of the year has been the extraordinary demand for juniper-berries. The normal price, which is about 14 lire per quintal, has actually been doubled in the course of the year; the supply has scarcely been equal to the demand, and present stocks are almost exhausted. The greater part of this phenomenal demand came from Germany, the United States being the next customer in importance. Last year's crop of orris has been smaller than that of 1900. Many growers, with the prices now ruling, and considering the expensive process of manipulation before the root is fit for export, did not find it worth while to gather. The demand has been quiet, and prices gradually receded, until at present they stand at 53 to 55 lire per 100 kilos. for good qualities. The Consul advises consumers to take advantage of the low price to replenish their stocks, as there will probably be an upward move in prices shortly. The demand for Tuscan wax of good quality has been steady, the export being nearly equal to that of 1900, and well above the average of the last ten years. The trade in Italian honey, however, has gone to pieces. It was never popular in the United Kingdom, but the Belgian markets formerly bought large quantities of it. Now Chilian and Cuban honey have completely ousted Italian honey in Belgium, and Leghorn dealers have been unable to sell at any price. The gathering of gentian, formerly an important trade at Leghorn, is now practically extinct, having been displaced by Italian root. The communal laws of Italy have militated against the industry. It was found that the workers, in making excavations for the root in the hillsides, would leave great heaps of earth and stone standing, and these would be washed down on to the vines below during the heavy rains, causing great damage. Restrictive regulations, therefore, had to be made, which have tended to discourage the industry. The Consul deals with the Tuscan olive-oil industry, remarking that the crop this season has proved a complete failure in many of the important growing-districts, and that it will barely reach one-sixth of an average crop.

Recent Wills.

LAWRENCE.—The Hon. Henry Arnold Lawrence, of 6 Harrington Gardens, and of Lawrence & Co., wharfingers, Rotherhithe and Mincing Lane, Chairman of Borax Consolidated (Limited), who died on April 16 last, has left estate valued at 61,830*l.* gross, including personalty of the net value of 29,671*l.*

WALKER.—Letters of administration to the personal estate of the late Mr. Henry John Walker, retired chemist and druggist, 53 Crescent Gardens, Bath, who died on February 13, have been granted to Mr. Thomas Gunning Harding, 33 Walcot, Bath, undertaker, a creditor of the deceased. Mr. Edwin Henry Walker (son), Miss Blanche Mary Walker, and Mr. Cummings Collins, were appointed executors under deceased's will, but renounced probate. The gross estate is valued at 294*l.*, including leaseholds.

OFFICIAL VALUES of the imports into Pernambuco during 1901 include drugs and medicines valued at 13,483*l.*, of which the United Kingdom sent 3,942*l.*; Germany, 4,467*l.*; France, 3,254*l.*; Portugal, 102*l.*; Italy, 184*l.*; and the United States, 1,337*l.*

"VIDUNDERSNOREN," which was mentioned the other day in THE CHEMIST AND DRUGGIST, has awakened the curiosity of the Editor of *Truth*, who says: "Warts are, I have always understood, amenable to the confidence-trick. They may possibly, therefore, be cured by the Dutchman's piece of blue worsted, though I should think that the requisite material necessary for a successful operation might be obtained for a trifle under 5*s.* At the same time, when one remembers what is paid for Christian Science treatment and other quackery of the same order, the 'Vidundersnoren' cannot be called dear at the price."

A WHIT-MONDAY INCIDENT.—A buxom domestic, hailing from the neighbourhood of Dufton, paid a visit to Appleby hirings. One of her principal duties was to call at a chemist's shop for castor oil, which she fulfilled, expressing a desire that it should be mixed with something to take the taste away. The chemist asked her if she liked soda-water, and she said she did. He then gave her a glass of that drink seasoned with lemon and the castor oil. The girl drank it, but still lingered about the shop, and in a few minutes again asked for the oil. When she was informed that she had drunk it, she loudly exclaimed in astonishment, "Mercy me. Aa wanted it for ma mudder." [We get this from a Penrith subscriber; it appeared in a local paper. It is an old friend. The incident first happened in an American store, or in the fertile brain of an American journalist, and we used to tell the story in our apprentice days.—EDITOR.]
