

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

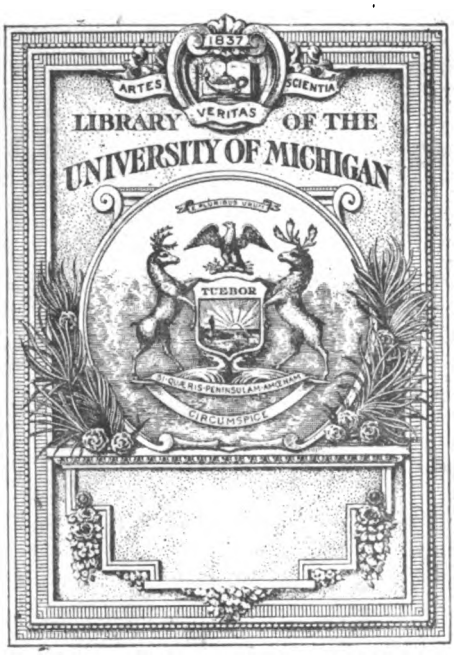
Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.



+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

INDEX.

NOTE.—*References to the transactions of particular firms and companies will be found under the general heading "Trade Notes," or under the name proper.*

ABERDEEN COMB-WORKS (LIM.) 352, 494
— Junior Chemists' ball 4
— Pharmaceutical Association 434, 736, (scholarships) 792
Abernethy, Dr. (fee-story) 637
Abid & Co. (branch) 5
Academy and Literature 239
Accident insurance-claim 350
Accounts, collecting commission (legal) 297
— monthly (rendering) 497, 508, 538
Acetates for Holland 191
Acetic radical, testing for 485
Acetone (danger of) 747
Acetum scillæ (S. F. and D. Act) 727, 777, 808, 811, (editorial) 733
Achras sapota 410
Acid, acetic, and acetates (danger of) 747; glacial (turpentine-test) 661
— arsenious, solubility 991
— boric, titration of 660; solubility 991
— carbolic, and borax (disp. note) 407, 442; antidote 341; as disinfectant (report) 364; colourless 123.
— Carbonic, Syndicate 454
— chromic (danger of) 747; diphenylcarbazide test 612; solubility 991
— citric, materials (W.Indian) 994
— cyanic 109
— cyanuric 109
— gluconic, in diabetes 81
— hydrochloric (China imports) 638; purification of 822; testing 542
— hydrocyanic, constitution 109, 469; formation in plants 896
— isosalicylic 803
— lactic, purification 466
— nitric, absorption-spectra of 469; China imports 638; danger of 747
— permanganic, testing for 286
— phosphomannitic 922
— picric, carriage 34
— proof apparatus 856
— radicals, testing for 619
— sulphuric, ancient and modern 417; China imports 638; in Newfoundland 180; testing 542
— sulphurous as disinfectant 364
— tartaric, Ital. 362; oxidation 431
Aconite, cultivation in G. B. 311
Ade's "Modern Fables" 635
Adulteration of food and drugs 658; a Sheriff on 331; see also Legal, S. F. and D. Acts
Advertisements, abbreviated 407; assessment of 250
Advertising ideas 5, 25, 686, 911; in local papers 402; on tram-tickets 552; Vinolia Co. on 565
— local (legal) 472
Aërated-water bottles (legal) 37, 688, (danger) 911, (colours for) 1003
— essences, &c., in S. Africa 907
— makers in London 235; combine 981
Aërated waters exported 217
Aërators (lim.) 575
Aërators, use of word (legal) 881
Æsculapius, disciples of 847
Afridi wax cloth 389
Agar, W. (port., &c.) 10
Agreement, breach of (legal) 702
— not to start in business 936
Air, liquid 608; D'Arsonval's lecture 913
Airtight Sealing Development Syndicate (lim.) 473
Alabone and his treatment 20, 50, 735
Albright & Wilson's phosphorus-works (explosion) 3
Albumen, Hankow, exports 869
Albumin in urine 82
Alcohol, absolute (poor) 253, (preparation of) 707; alcohol and water, Excise literature 707; danger of 747; duty-free 535, 887, (Haldane's motion) 993, 957; German trust 953; in German pharmacy 454
— methylic (dangers of) 747
Alcohols, esterification of 283; lower, distillation 707
Aldehydes, new reaction for 381
Aleurites cordata (Henry) 596; oil of 873
Aleuronat, composition of 990
Algiers cork-forests 453; chemist wanted 829
Alkali-manufacturers in London 235
Alkali-works in Cheshire 361
Alkaline hydrate and bicarbonate titrating 432
Allen & Hanburys (Plough design) 121 (see also Trade Notes)
Alliance Roll Film Camera Co. (lim.) 383
Allison, Johnson & Foster (lim.) (share-dispute) 472, 706
Almond-paste 510
Aloes, Cape, exports 545
Aloin-test 530
Alpe's "Handy-book" "authoritative" 569
Alum in baking-powders (Mass.) 578; mines at Muth 701
Aluminium alloy (patent) 119; danger of 747; solder (patent) 119
— chloride and ext. nucis vom. (compounding) 509
American chemical-market 211; Chicle Co. 7; Exhibition 218, 877; Pharmaceutical Association 757, 772, 917, 918, 919, 996; trade 731; perfumery 959
Americans at the Cape 490
Amines, aromatic 431
Ammonia, danger of 747
Ammoniacum, to emulsify 403
Ammonium amalgam 14
— fluoride and hydrochloric acid 317
Amyl acetate, danger of 747
Anæsthetic administration 1003
Analyst as expert in therapy 26, 91, 177
Analysts' appointments, &c. 70, 250, 288, 329, 417, 448, 516, 519, 687, 791
Analysts' reports 51, 70, 182, 251, 288, 329, 384, 416, 552, 650, 716, 751, 828, 876, 944, 945, 978
Analytical notes 102, 286, 484, 618, 826
Andrews & Sons (lim.) 965
Anger divorce suit 726
Anglo-French Quicksilver and Mining Concession of China (lim.) 383
Animal food (patent) 119
Animals, contagious diseases 87; lecture (experiments on) 34, 569
"Annals of Pharmacy" 957
Annamese medicines 454
Anthony, Dr. R. S. (case) 223
Anthrax orders 864
Antikamnia advertisement 794
Antipyrin derivatives 612
Antiseptics (patent) 605; power of (L.C.C. report) 364
Anti-tuberculosis dispensaries 106
Anti-Vaccination Bill 216
Antivivisection Society, Sherrington and 34, 569
Apollinaris water in France 880
Apothecaries, ancient (book on) 332
— assistants' examination 36, 251, 686
— Hall of Ireland 718
Apothecary's assistant and death certificate 2
Apotheke zum weissen Adler 255
Apprentice, duty of (legal) 603
Apprentices, training of (Symes) 340, 385; (Wallbridge) 691, 731
Apprenticeship 175, 195, 212, 376, 540, 578, 610, 936
— Aberdeen views 434
— as it was (series of articles) 126, 132
— in Germany 941; in Ireland 293
Arbroath early closing 355
Archibald Eadie & Co. (lim.) 383
Ardeer explosion 688
Are we decadent? 667, 697, 741
Argentine trade 1008
Armitage, Barnard & Co. (lim.) 473
Army dentists 87
Arrhenal, estimation of 612
Arrowroot, St. Vincent 640, 780; tax on 665
Arsenic, birds poisoned with 650; Commission 342, 404, 588, 650, 751, 864, 944, 978; detection and estimation of 54, 77, 609, 749, 879, 978; doses 526; group sulphides testing 649; in beer 54, 70, 588; in crops 430; in malt 51, 588; in reduced iron 531; production of 50
Arsenical poisoning 611
— remedy, new 735
"Art of Dispensing" (review) 617
Artemisia maritima 14
Artemisin, chemistry of 14
Asafetida, bad, Umney on 316
— lachrymosa (sketch) 342
Ashfield, P. J. (personal) 528
Ashton & Parsons (lim.) (new premises) 855
Aspidestra (student's note) 631
Assistants' agreements (legal) 296, 671; qualification wanted 489
Associations, local, decadence in 667, 697, 741; Glyn-Jones on 339
Asthma, amber necklace for 581
At the Counter 512, 816
Atmosphere of school 4; problems of (Dewar) 608
Atomic weights, new 462
Atoxyl 735
Atroscine 82
Austen, John, on Sheffield druggists 632
Austin & Co. (note) 886
Australasia Customs decisions 223, 420; examiners (portraits) 623; Federal customs 46, 555; formulary 915; German perfumery in 187
Austrian Chemists' Associations 808, 831; patent law 617
Automatic pharmacy 426
Automatic Aërator Patents (lim.) 883
Ayres, J. W. (charge against) 2

B.SC. PHARMACEUTICAL, STANDARD 345, 405, 441, 471, (Tocher's scheme) 335
Bachelor of Commerce (Birmingham) 755, 805
Bacon-Shakespeare controversy 19
Bacteriological examination (fees) 71
Badische Anilin und Sodafabrik (dividend) 24
Bad-Nauheim Natural Carbonic Springs (lim.) 23
Bahamas sponge exports 89
Baiss Bros. & Stevenson (lim.) (report) 820
Baker, C. F. (port.) 145
Baker, H. Brereton (appointment) 550; elected F.R.S. 716
Baker, the late Mr. Edward (port.) 550
Baking-powder (formula) 29, (legal) 704, 881
Baku Naphtha Union 40
Balance-case (legal) 493
Baldness, treatment for premature 408
Balloon for advertising 716
Balsam, Peru, syndicate 323
— tolu, quality of 475
Bandoline-wood 595
Bankruptcies in 1901 19, 876
Bankruptcy reports:—
Balchin E. S. 272
Betts, Reginald 299, 352, 494
Bromfield, F. H. 861, 882, 999

Boating fatality 518
Boer hospital equipment 490; resistance (French view) 106; war ended 886
Boers and medical treatment 6
Boiler covering (patent) 605; fluid 709; incrustration facts 251
Boils, to abort 72
Bolam, J. (port.) 942
Bolivia, drugs and medicines in 880
Bombay, American Department Store 534; analyst's report 654; trade in 1901 223
Bone Phosphate and Chemical Co. (lim.) 473
Books:—
Alcoholic fermentation 232
Babies, management of 443
Bacteriological diagnosis 162
Bacteriology 80, 162, 510, 1000
Bandaging 1001
Banting on obesity 694
Batteries, primary 162
Beech's dyeing 888
Bocquillon-Limousin Formulaire 530
Book-keeping 1000
Bolas and Brown on the lens 804
Botany 80, 162, 443, 1000
Bower's botany 804
Bradshaw's Dictionary of Hydropathic Establishments 836
British galls 162
Butt on retouching 259
Books—*cont.*:—
Calendar of Pharm. Soc. 232
Cardiac debility 80
Cash and Dunstan on pseudaconitine and japaconitine 804
Caspari's pharmacy 628
Cattle 542
Chemical-mfrs'. directory 232; societies 942
Chemistry 162, 232
— and physics 232
Cider 162
Clements on weather-prediction 694
Colman's British plants 888
Colour-trade recipes 485
Consumption 183, 507, 814
Cordingley's mercantile abbreviations 530
Crew's manual of physics 628
Crinon's medicaments nouveaux 888
Crowther's physics 836
Drude's optics 804
Duncan's photo-micrography 888
Dutch butter 80
Dye's acetylene 628
Elementary electricity 319
Factory Act 1000
Feeding of infants 232
Foods 95
For the Minor 320
Formation of companies 485
Fruit-wines 162
Ganot's physics 836
Georgievics' textile fibres 485
Gower's metallurgy 691
Hayden's venereal diseases 804
Hayward's protoplasm 888
Higginson on food and drugs 259
Horse-diseases 542
Hughes' chiropody 628
Induction-coils 461
Ingle's agricultural chemistry 804
Ionised air 942
Jackson's skin-diseases 804
Knight's business encyclopædia 804
Lehner's ink-manufacture 888
Manganese bibliography 942
Marpmann's illustrierte fachlexika 232
Matric. English 80
Mechanical dentistry 409
Medical directory 232
— electricity 59
— vocabulary 804
Medicine, domestic 409
Negative-finishing 162
Nursing 162
— as a profession for girls 510
Practical photography 743
Ophthalmic optics 80
Ostwald's chemistry 836
Phillips's engineering chemistry 628
Photography, chemistry of 1003
Quain's dictionary 162
Refrigeration and ice-making 232, 836
Retouching 1004
Rhead & Sexton's assaying 530
Röntgen rays 162, 1003
Saunders's year-book of medicine 804
Sawyer's practical medicine 628
Serviss's other worlds 628
Shenton's sewage 628
Soxhlet's dyeing marble, &c. 804
Spectroscope literature 942
Stirling's tables 888
Surgical handbook 232
Tayler's refrigeration 836
Books—*cont.*:—
Thorpe's historical chemistry 836
Urine-analysis 80
Veterinary pharmacopœia of bazaar drugs 490
Vinegar 162
Vines' botany 628
Walker's advertiser's ready-reckoner 804
Walker's dermatology 628
Walsh on the hair, 836
Water purification 162
White's materia medica, &c. 694
Winkler's gas-analysis 836
Wood's materia medica 485
Boot, Jesse, on his aims 260, 305, (on company-trading) 356, 385, (and cutting-prices) 406
Boot-polishing paste 511; sole-finish formula 709
Boots Cash Chemists (Lancashire) (lim.) 90, (dinners) 230, 260, (in Scotland) 418, 554, 678, 741, (and Taylor's) 35, (Oxford criticism) 2, (shares) 790, 932, 1000; S. London pharmacy 986
Boots, poisoned by 719
Borate of lime in Bolivia 565
Borax Consolidated (lim.) 206, 674
Borax, China imports 638; mining in U.S.A. 63; titration of 660; Turkish 594; lime 1007
Borran (lim.) 90
Botanical gardens at Dahlen 369; Glasgow 948; Edgbaston 945
Bottles, collecting 613; exported 217; corks (patent) 282; Exchange, Edinburgh 451, 999; glass, industry 553; mineral-water (biography) 646

OUR WINTER ISSUE.

The date is January 25, 1902. The number will be
An *édition de luxe* of the best business journal—
The best for beginning the year's business, as well as
The brightest for a good advertisement, and
The surest for distributing circulars and price-lists.
It will be sent to 12,000 business-places.
It will be read by the best buyers in the trade.
It will be kept for reference in every part of the globe.
It will be well, therefore, for manufacturers and merchants to ensure that they have an advertisement or an inset in
The Winter Issue of THE CHEMIST AND DRUGGIST.

Summary.

SOME more calendars are noted on p. 9.

THE list of Rogers Brothers' creditors is printed on p. 23.

WE print a few more C. & D. DIARY hints and verses (p. 25).

THE LATEST store-prices for chemists' goods are given on p. 4.

NEW EUCALYPTI have been described by Mr. J. H. Maiden (p. 14).

WE give a portrait on p. 13 of the late Mr. Wm. Dobbin, J.P., Belfast.

MONEY ORDERS for the Transvaal are now issued by the Post Office (p. 6).

"THE YEAR-BOOK OF PHARMACY" for 1901 was published last week (p. 18).

AMUSING READING is printed in the page on "Fictional Pharmacy" (p. 21).

THE questions set at the Major examination in Edinburgh this week are given on p. 25.

BUSINESS CHANGES are exceptionally numerous this week, being the first of the year (p. 10).

A NEW YORK ACTRESS got green hair by using a certain hair-dye. She is depicted on p. 30.

MR. WILLIAM AGAR, formerly of Mansfield, is the pharmaceutical veteran depicted on p. 10.

HINTS ON EMULSION-MAKING are given by Mr. Joseph Ince in the first of a series of articles (p. 9).

CHEMISTS who have wine-licences should read the paragraph "Selling wines to children" on p. 18.

A COLCHESTER CHEMIST has been fined for selling poisoned grain, and a farmer for using it (p. 22).

MOISSAN has made interesting observations on ammonium amalgam, which we summarise on p. 14.

BUSINESS has not yet been fully resumed on the markets, so that our report is brief and changes few (p. 31).

MR. WINGROVE, the managing director of Spratt's (Limited) is depicted by Mr. Reynolds on his original motor (p. 14).

THE UNITY OF MATTER is not a new idea, but Professor G. D. Hinrichs, of St. Louis, does not carry it much further (p. 17).

THE Manitoban Legislature is trying to restrict the sale of alcoholic liquors by confining it to druggists, doctors, and the like (p. 7).

AMONGST nine new companies, particulars of whose registration we give on p. 23, five take power to trade as chemists and druggists.

OIL OF CITRON is, according to Dr. S. Gulli, obtainable from three varieties of the fruit. He gives particulars regarding the oil on p. 19.

MR. LORD GIFFORD, in a letter entitled "Wake up, London," speaks of his mandate as a pharmaceutical Councillor (p. 27). So do we on p. 18.

MR. J. T. DAVENPORT, a former President of the Pharmaceutical Society, and manufacturer of Dr. Collis Browne's chlorodyne, died on Sunday (p 12).

THE PHARMACEUTICAL SOCIETY OF CAPE COLONY needs an infusion of new blood, we gather from a correspondent, who gives his reasons on p. 6.

WE OFFER for circulation to M.P.'s reprints of an article on p. 17, which contains a letter from the Pharmaceutical Registrar regarding the sale of poisons.

THE ALABONE TREATMENT OF CONSUMPTION has been described by Mr. Anslow Alabone, whose article as far as it concerns pharmacists is described on p. 20.

MR. JAMES REID takes exception to certain passages in Mr. Carteighe's Edinburgh speech. Mr. Reid urges the need for more pharmaceutical legislation (p. 26).

"TO BENEFIT THE CRAFT" we suggest that chemists and druggists should be prompt in securing the influence of their Members of Parliament to oppose any abrogation of the principle of the Pharmacy Act (p. 16).

OL. AMYGD PERSIC. brought a London chemist into court, but he succeeded in convincing the Alderman that the sale as almond oil was under conditions of which the purchaser was aware. A retailer of 8 per-cent. boric ointment was not so fortunate (p. 22).

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

At Greenwich Police Court on December 27, Edward Brewer, of Deptford, was fined 10*s.*, with 2*s.* costs, for selling pepper admixed with 50 per cent. of gelatinised maize flour.

The hearing of the charges of fraud against thirteen persons in connection with the Patent Novelties Company (Limited) was resumed at Manchester on December 27, and again adjourned.

The Guardians of the united parishes of St. Giles-in-the Fields and St. George, Bloomsbury, have accepted the tender of Messrs. Burgoyne, Burbidges & Co., 12 Coleman Street, E.C., for the supply of drugs during this year.

At Southampton, on December 21, 1901, a charge against Mr. W. B. Wride, chemist and druggist, in respect to the theft of a bicycle, was withdrawn, the magistrates approving of this course before any evidence was called.

Further extensions are about to be carried out in the chemical-department at the Phœnix Works, Dartford, belonging to Messrs. Burroughs Wellcome & Co.; and the Urban District Council has approved of the plans submitted.

An arrangement is being made between the earthenware-manufacturers of North Staffordshire and a leading insurance company by which workers in the lead processes of pottery-manufacture can be insured against loss sustained through contracting lead-poisoning.

A medical man named James William Ayres (54) has been committed for trial by the Liverpool Stipendiary on a charge of causing the death of a pawnbroker's assistant named Baines, whom, it is alleged, Ayres knocked down, causing injury that resulted in his death.

At Smethwick, on December 24, John Shouvier (45), described as a chemist's assistant and a native of Jersey, was sent to gaol for one month with hard labour for stealing half-a-crown from the till in a shop at Handsworth, where he was employed as an assistant.

Two schoolboys, named Kerbal and Kauffman, were each sentenced to receive six strokes of the birch-rod by the Manchester city justices on December 31 for stealing a box of cough-lozenges, value 7½*d.*, from the shop of Boots (Limited), Market Street, Manchester.

An Oxford Criticism.

The method by which Boots (Limited) advertise was criticised at the Oxford City Council on December 18, when, speaking on an improvement scheme, Alderman Wilson pointed out that at one corner of the Square mentioned they had a Boots' establishment. The property was the firm's own, granted apparently without any control to an "advertising tradesman coming from abroad into competition with Oxford tradesmen, and putting up what he might venture to describe as a most disfiguring advertisement for his own particular benefit." He suggested that the Council might endeavour to secure a private Act of Parliament for the purpose of restraining persons from disfiguring their town, and so put an end to "these abominations in the way of advertisements for private purposes erected in public places."

Friendly Societies and the G.M.C.

It is stated that the recent action of the General Medical Council in the case of Dr. Rendall, of Yarmouth, is to be vigorously contested by the friendly societies. A Bill will shortly be promoted in Parliament to protect the doctors who are now professionally engaged for the various medical-aid societies, and a special clause of the measure will make it libellous for the Medical Council to term conduct "infamous" on the part of any qualified man, which is merely a breach of professional etiquette. Dr. Rendall has been held to be guilty of "infamous conduct in a professional respect," for having been indirectly connected with a society which canvasses for patients.

Plumbism.

At an inquest held at Hackney on December 30, respecting the death of Robert Wilkins (35), a painter, the widow deposed that her husband had suffered from lead-poisoning about five years ago, and since then had been subject to retching. On December 25 witness went to a chemist and told him her husband had "pains in his inside, and was shivering." The witness was given a bottle of medicine, but death took place on the following evening. William Houghton, who stated that he was an unqualified assistant in the employ of Mr. J. A. Clark, chemist and druggist, The Broadway, London Fields, said he was asked by the last witness for a bottle of medicine for a man who had a cold and pains all over him. He gave a bottle of the "usual cold mixture," which contained 10 gr. each of salicylate of soda, bromide of potassium, and nitre, and 10m. of colchicum wine in each dose. The Coroner: You see that did not do any good. You ought not to have prescribed. A little knowledge is a dangerous thing when one is ill. The Coroner added that so long as the assistant was working under the eye of his employer the law could not be said to be broken, but where unqualified men were put into branch shops it was sailing very close to the wind, and was a public scandal. A man might be prosecuted for holding himself out as a chemist if he was not one, and the Apothecaries' Society [?] might institute a prosecution if it was proved that an unqualified man sold poisons. That offence did not appear to have been committed in this case. A Juror: No, but this man who possesses no qualification at all prescribes for a man who is seriously ill. The Coroner: Yes, and takes the risk. Dr. J. W. Hunter said the autopsy showed that death was due to peritonitis, following the rupture of a gastric ulcer. The theory was that a man who had had an attack of lead-poisoning was liable to the complaint the deceased suffered from. In answer to a juror, the doctor said that the medicine prescribed by the chemist's assistant would do neither harm or good in such a case. The only chance of saving life would have been an operation. The jury returned a verdict of natural death.

The Apothecary's Assistant.

At an inquest held at Westminster on December 31, respecting the death of Patience Glossop Harris, sister of the late Sir Augustus Harris, William Stanley, who described himself as a medical assistant, stated that he had been examined in pharmacy at Apothecaries' Hall, and they allowed him to assist doctors, but only in dispensing. He was not a registered medical practitioner, but had attended Miss Harris for seven or eight years. He refused to say whether he was paid for his services. He gave a certificate of death, certifying that the deceased died from general cirrhosis of the liver and exhaustion. Dr. G. A. Hamerton said death was due to heart failure, from cerebral hæmorrhage, accelerated by intemperate habits. Although "cirrhosis of the liver and exhaustion" were factors in the case, he would not have given a certificate to that effect, as there was the condition of the heart and brain to be taken into account. The Coroner, in summing up, remarked that there could not be the least doubt that Miss Harris engaged a quack in the person of Mr. Stanley, because she knew that such a man would connive in her drinking habits. No doubt one result of that inquiry would be that further proceedings would be taken with regard to the unqualified and unregistered practitioner who had appeared before the Court. The jury returned a verdict in accordance with Dr. Hamerton's evidence, and added a rider to the effect that the attention of the Registrar-General should be called to the lax way in which the certificates of unregistered medical men are accepted.

Birmingham Notes.

Dr. Hill, medical officer of health and public analyst, has just returned to his duties after a somewhat severe illness arising from bronchitis, to which he has been a martyr for some years past.

The Worcestershire County Council have issued a report on the experiments of drying of fruit, vegetables, and herbs, which they caused to be instituted. They think there is a great future for such an industry. Cannot the pharmacist come to their assistance?

Digitized by Google

A serious explosion occurred on Saturday last at Messrs. Albright & Wilson's phosphorus-works, Oldbury, resulting in the serious injury to four men. They were engaged in cleaning out the flues of the Mond gas plant which the firm has recently laid down, when an accumulation of gas took fire and burnt the men severely.

The M.O.H. of the Walsall Rural District Council has issued pamphlets on the rearing of infants. The paragraph "the only food for a baby up to seven months is the mother's milk," got transposed in type by the printer's devil, and read "the only food for a baby up to seven months is *them others* milk," which entirely destroyed the effect of what was intended to be good advice.

A very remarkable prescription has made its appearance in our city. Its owner is a faddist, and wherever he goes he has it "made up" for the sole reason of ascertaining the price charged in different places and classes of shops. It was stamped back and front in every conceivable place by an almost endless variety of stamps, even to rendering it illegible. His complaint was that it had cost him any price between 8*d.* and 2*s.* 6*d.*, and often after reading the document the dispenser with a knowing look would ask, "How much have you paid for this before?" and the candid answer was as above.

Heirs Wanted.

Mr. Sidney H. Preston, 27 Chancery Lane, London, E.C., writing to the daily papers about inquiries which were made in 1901 through "Agony" columns, says the eldest son of H. G. Carpenter, a chemist, who died in an infirmary, is sought; and J. R. Lysnar, a dentist, who left for India, may share in an estate.

Store-prices.

The January price-list of the Civil Service Supply Association (Limited) announces a reduction in the price of respirators from 1*s.* to 9½*d.* each, and of sulphonal tablets (from 2*s.* 8*d.* to 2*s.* per 100, and from 1*s.* to 8½*d.* per 25). Eucalyptus oil (Kangaroo brand) has been advanced from 8*d.* to 9*d.* per bottle, and guttapercha tissue from 10*d.* to 1*s.* per oz.

Students' Affairs.

On December 24, at the close of the course of lectures, certificates were distributed to the successful students at the Westminster College of Pharmacy. At the close of the ceremony Mr. Willox, on behalf of the students, presented Mr. Wills, the Principal, with a silver cigar-case. Mr. Wills in turn presented to each of the gentlemen present a tin of cigarettes, and to the lady pupils (seventeen in number) he gave a bottle of perfume.

The arrangements for carrying on the school of pharmacy attached to the Royal Albert Memorial College at Exeter are now complete. The school provides a full course of instruction in all the subjects required for the pharmaceutical examinations. Evening classes are held as well as day classes, and special attention is devoted to practical work. The school has a complete collection of physical, chemical, and pharmaceutical apparatus, and a fine materia medica collection. Special courses are arranged for medical students and candidates for the Apothecaries' Hall assistant's qualification. The principal of the college is Mr. A. W. Clayden, M.A., and Mr. H. Wippell Gadd, F.C.S., is lecturer in pharmacy, materia medica, and pharmacy law.

Holiday Hilarity.

A hilarious milkman on Bank-holiday tried to perform acrobatic feats with the aid of the sun-blind at Parke's Drug-Stores, in Holloway Road, N. He bent the iron-support, and presently encountered a policeman, with the result that he was fined 35*s.* (or fourteen days in default) at North London Police Court on December 27.

On December 21 a man entered the shop of Alderman Simpson, the chemist-mayor of Stalybridge, and purchased a pennyworth of oxalic acid. On leaving the shop the man was seen to be under the influence of drink, and, fearing suicidal intentions, Alderman Simpson followed him and demanded the return of the poison. The man refused to deliver it up, and a rough-and-tumble ensued, with the result that the police appeared on the scene, and the packet was secured. The man's explanation was that he intended to play a joke at a public-house by "turning water into wine" with the acid.

Chemists to Leeds Police.

The Leeds City Council have made the following appointments of dispensing chemists to the police force:—A Division, Mr. Samuel Taylor, Great George Street, and Mr. James Drewery, Quarry Hill; B Division, Mr. W. H. Briggs, Garden Street, and Mr. Robert Lester, Dewsbury Road; C Division, Mr. T. A. Shaw, Chapeltown Road, and Mr. G. Briggs, Woodhouse Lane; D Division, Mr. J. W. Hardman, Burley Road, Mr. J. W. Horner, Tong Road, and Mr. W. S. Baxter, Town Street, Bramley; E Division, Mr. Samuel Taylor, Great George Street.

Fires.

The works of Messrs. Cowling, liquorice-cake refiners, Pontefract, were completely destroyed by fire on December 31, the damage being estimated at 2,000*l.* Hundreds of workpeople are thrown out of employment.

The pharmacy of the Mayor of Stalybridge (Alderan Simpson) was the scene of a window-fire on December 21. Whilst an assistant was lighting the gas in the window the cotton wool used in the Christmas decorations accidentally ignited, and before the flames were subdued several pounds' worth of damage was done.

A fire occurred on December 21 in a warehouse at the back of the premises of Mr. T. C. Cornwell, pharmaceutical chemist, 14 Piccadilly, Hanley. The flames were noticed at an early stage by the employés of a neighbouring restaurant, who at once communicated with the police, and they extinguished the fire before much damage had been done. The loss is inconsiderable.

Disputed Ownership of a Business.

In the City of London Court on Tuesday, December 31, 1901, before Judge Lumley Smith, K.C., an action was brought by the District Chemical Company (Limited), of Fenchurch Avenue, E.C., against Mr. T. Mander, 49 Rosoman Street, Clerkenwell, E.C., to recover 3*l.* 4*s.* 10*d.* for ten 2-cwt. bags of soda-crystals. The case was before the Court a fortnight ago, when the defendant said the debt was due from Kavanagh, and not from him. He had been Kavanagh's manager, and the order was signed "for Mr. Kavanagh," who had since died. The case had been adjourned for the correspondence to be produced. The Judge now said that if the defendant gave the order he was liable, and that he must pay.

The Crimson Cross.

The Derby Borough Coroner (Mr. John Close) was engaged a considerable time on Wednesday, January 1, investigating the circumstances of the death of Charles Nicholson (52). The Coroner had adjourned the case for inquiries to be made as the result of a communication he had received from Dr. Parry Jones, and because Mrs. Nicholson had stated that her husband had been taking medicine and using ointment supplied to him by Captain Feilden, of the Crimson Cross Dispensary. No charges were made for the remedies supplied, but a box was placed against the door at the dispensary so that persons visiting the establishment might make voluntary contributions. She now stated that Captain Feilden first saw the deceased about twelve months ago. He had called upon him on different occasions, and when he saw him the last time, about a month ago, he told deceased he ought to see a doctor. Deceased, however, would not because he considered they did more harm than good. In answer to Captain Feilden, she stated that as long as the deceased took his medicine he kept going on well, and as soon as he stopped doing so he died. A neighbour also gave evidence as to the deceased's strong objections to a doctor, and Captain Feilden deposed that he attended the deceased for bronchitis and another complaint. He also had something the matter with his heart, and witness advised him to see a doctor. The Coroner: Then you thought it was a case for a properly qualified practitioner? Witness: I thought he would require someone to give him a certificate when he died. A doctor was no good for any other reason. Dr. Parry Jones deposed to making a *post-mortem*, and found that death was due to aneurism. In all probability if he had had a proper medical man attending him he would have

Digitized by Google

lived longer, as the aneurism was of long standing, and would have been found out. The Coroner: If he refused to have a doctor, what could be done for him? Dr. Parry Jones: Nothing. The jury returned a verdict that death was due to aneurism.

"Sequah."

At the Glamorgan Quarter Sessions at Cardiff on Wednesday, January 1, a groom named Charles Brookes was charged with stealing a spring-balance and other articles, the property of Hubert Clark, landlord of the Central Hotel, Pontypridd. One of the witnesses, to whom it was alleged prisoner had endeavoured to dispose of the articles, was Charles Santor, proprietor of what were known as the Crystal Palace Stores at Pontypridd. The following is a bit of the evidence:—

Mr. St. John Francis-Williams, who defended, asked the witness if he were the gentleman known as "Sequah."
Witness: I am, sir.
Mr. Williams: What trade does "Sequah" carry on?
Witness: Medicine.
Mr. Williams: What trade does Charles Santor carry on?
Witness: Medicine, and he also keeps a refreshment-house.
Mr. Williams: In addition to feeding people do you still physic them, or after feeding them do you send them somewhere else to be physicked? (Laughter.)
Witness: When in business, I do the same as other people.
Mr. Williams: What is that?
Witness: To sell.
Mr. Williams: What do you mean—the people or the medicine? (Laughter.)
Witness: I advertise my ——
Mr. Williams: You advertise the medicine and "sell" the people? (Laughter.)
Witness: I do not "sell" the people.

Prisoner and his wife gave evidence, and the jury returned a verdict of not guilty. The same prisoner was next charged with stealing 3*l.* 9*s.* 2*d.* from a cashbox in Charles Santor's bedroom, but again the jury returned a verdict of not guilty, and prisoner was discharged.

The Week's Poisonings.

The passing of the holiday season invariably induces a depressant reaction, which often results in suicide. This year has been no exception, for the suicides have been numerous. Sixteen deaths as a result of poisoning have been recorded since our last report, four of these being caused by unscheduled poisons—liniment of camphor and turpentine, phosphorus, nitric-acid and mercury solution, and gas asphyxiation. In the scheduled list opiates, in the form of laudanum, morphia, chlorodyne, and syrup of poppies, account for seven fatalities; three were caused by carbolic acid, and one each by oxalic acid and chloroform. The latter was inadvertently taken in overdose by a medical man at Battersea Rise, while a solution of oxalic acid was drunk by a young lady at Chatham in mistake for Epsom salts.—A commercial traveller at Bow, who had been troubled with insomnia for some years, took an overdose of his sleeping-draught, which contained morphia, chloral, and bromide of potassium.—A Bradford child, two months old, was given one drop of laudanum in some tea, and its death was attributed to acute bronchitis, accelerated by the laudanum.—The wife of a linseed-oil manufacturer at Brighton, named Body, was found dead in bed on New Year's Eve. The doctor, who was called in, said death was due to carbolic-acid poisoning. This was disputed by the regular medical attendant of the family, who urged a *post-mortem* examination, but the other doctor reiterated his belief, and the jury returned a verdict of "suicide while insane."—The seven-weeks-old son of a Newark pork-butcher was given half a teaspoonful of a mixture of syrup of rhubarb and syrup of poppies, which the mother got from a neighbour. The child died "from opium-poisoning," according to the medical evidence. Mr. L. Priestley, pharmaceutical chemist, called as a witness at the inquest, said he had sold the mixture, but to whom he did not know. Syrup of poppies was a scheduled poison, but it was not necessary to obtain the signature of the purchaser. The dose for an adult was given on the bottle, but it was not usual to state the dose for children, as it would vary according to age and constitution. The jury, in returning a verdict of death from opium-poisoning, added a rider to the effect that in their opinion there should be more stringent regulations as to the sale of such preparations.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Fire.

Richardson's Chemical-works, on the County Down side of the river at Belfast, were burnt down on December 26, 1901. The fire broke out in the early morning, and, although it was under control in two or three hours, the whole of the contents of the building were ruined.

Personal.

Sir Thomas W. Robinson, director of Hayes, Conyngham & Robinson (Limited), Dublin, is a candidate for re-election as member of the Kingstown Urban District Council.

Sir Edward M. Hodgson, J.P., Chairman of the Rathmines and Rathgar Urban District Council, has decided not to seek re-election as a member of the Council at the forthcoming elections.

Business Change.

The premises of the late Mr. W. B. Murray on Stephen's Green, Dublin, have been purchased by Mr. George Brown, M.C.P.S.I., Wexford Street, who will carry on at that address a branch of his Medical Hall.

Laudanum-poisoning.

Lieutenant Barnard R. S. Winter, of H.M. guardship *Empress of India*, stationed at Queenstown, committed suicide in the Imperial Hotel, Cork, on December 24. That evening he purchased laudanum in a chemist's shop, and when found dead next morning there were traces of the poison in a glass, and a bottle containing some laudanum was found on the table.

Deficient Drugs.

At the last meeting of the Callan (co. Kilkenny) Board of Guardians a report was read from Sir Chas. A. Cameron on samples of drugs submitted for analysis, and he stated that the vinegar of squills was about 25 per cent. deficient in acetic acid; compound tincture of rhubarb, correct; 100 c.c. of chalk mixture yielded 2·6 gr. (it should be 9 gr.). There should be 3 per cent. of chalk present, but there was only 2·5 per cent. As, however, the mixture readily separates into chalk and a clear solution, the specimen sent to him might not have been taken from a well-shaken bottle of the mixture. There should be 6 per cent. of sugar in the mixture, but there is not a trace of that substance in it, nor was it ever in it, as sugar would be in solution, and not, like chalk, in suspension.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

The School Atmosphere.

Dr. Chalmers, Medical Officer of Health for Glasgow, in association with the Corporation Chemist and Bacteriologist, is about to recommence the inquiry into the air of schools which he had begun in 1898, but for several reasons could not continue.

Juniors Dancing.

The annual assembly of the Aberdeen Junior Chemists took place on December 24 in the Bon-Accord Hotel, Aberdeen. There was a remarkably good attendance, and a thoroughly enjoyable evening was spent. The secretarial arrangements were carried out by Mr. A. G. Reid, while the M.C.'s were Messrs. G. P. Cruickshank, jun., A. B. Mitchell, and F. Milne.

Laudanum Poisoning

is comparatively common in Scotland at this season. Since our last issue we have received reports that William Forbes

Digitized by Google

(46), keeper of the Y.M.C.A. rooms, Brechin, and Andrew Leitch, jun., contractor, 16 Dorset Place, Edinburgh, have died from the poison.

A man named Arthur Malison was found in Lawnmarket, Edinburgh, on December 26, 1901, suffering from an overdose of laudanum. He was removed to the Edinburgh Royal Infirmary, where he died next morning. The deceased said he had drunk a shilling's worth of laudanum.

New-century Pharmacy.

Mr. William Cumming, chemist and druggist, of Traill Street, Thurso, has the Bovril camp-scene in South Africa as a window-attraction, with perfumes in bottles and sachets as adjuncts.

Mr. T. W. Ferguson, chemist and druggist, who has taken over the business formerly carried on by Mr. John Heron at 335 Cathcart Road, Govanhill, Glasgow, announced in the local press that on December 31 he would present to each customer who purchased a shillingsworth of goods at his pharmacy one 6*d.* bottle of ginger-wine essence or a toothbrush, according to his (or her) desire.

At Christmas, 1900, Mr. D. C. Cairnie, chemist, Thurso, made a popular hit with his "Kruger Reading the Results of the Caithness Election." Now he has two working-models which attract a good deal of attention. One is an enlargement of Sir John Tenniel's famous cartoon in "Punch" showing John Bull fighting the Boer. The other is a life-like model of Kruger with his Bible and pistol and inevitable pipe. Both windows have besides a tasteful display of seasonable goods.

Modern business methods as they prevail south of the Tweed are practised with considerable success by Mr. Robert Suttie, chemist and druggist, Main Street, Cambuslang. His holiday-attraction this year was a pill-counting competition. Cash prizes to the value of 3*l.* were offered to purchasers of sixpennyworth (or more) of Mr. Suttie's goods who guessed the exact number (or the nearest to it) of pills contained in a bottle exhibited in the shop-window. The pills were to be counted on Hogmanay Night (December 31) and the result declared on New Year's Day.

Mr. J. Raffan, chemist and druggist, of 16 Port Street, Sterling, is showing a neat design in window-decoration. The window is an enclosed one, and the groundwork is of white cotton-wool frosted. At the front is the motto, "Each Opening Blossom Freely Breathes its Gratitude," done in red letters on a white ground, with a frame of sea-green moss. In a semi-circle are arranged five pots of flowers—white rose (in the centre), Parma violets, sweet pea, lily of the valley, mistletoe. All these flowers are mounted on their own foliage, and round the base of the pots bottles of the flower-perfumes are arranged in various designs. The mistletoe has an assorted-series of perfumes around it, and sprays of holly are interspersed here and there. A glass shelf, raised about 6 inches, is used for a background. This is covered with cotton-wool, and has on it five evergreen plants. The pots are covered with crinkled paper in green or gold. Christmas-boxes, single fancy bottles and perfume-sachets, fill up the intervening spaces. A white fancy festoon fills up the ceiling. At each end it is finished with a hydrangea, while it is looped up in the middle at the electric light with a bunch of pink roses. This design may be executed with real flowers in an open window, and last season Mr. Raffan showed sweet-pea essence surrounding real flowers cut from his own garden.

THE CHEMIST BLAMED.—A *Daily Mail* correspondent at Athens reports that by the mistake of a chemist who dispensed hyoscyamine instead of thiosinamine as prescribed, Mlle. Lele Crieze, Lady-in-Waiting to the Queen of Greece, has been poisoned, and lies between life and death. Dr. Catanow, who was called in, tasted the medicine on the tip of his tongue. He immediately, became unconscious, but subsequently recovered. Exactly the same accident happened last year with the same chemist, when a lady died from the effects of the poison. By the King's instructions, the chemist is to be prosecuted.

East Indian News.

DR. C. SCHULTEN, who was formerly an assistant with Professor Dr. König at the public station for chemical and scientific research in Münster, in Westphalia, has opened an analytical laboratory at 12 Mission Row, Calcutta.

MESSRS. ABID & CO, chemists and general merchants Hyderabad (Deccan), were to open a new business in Oxford Street, Secunderabad, on January 1, 1902, under the charge of Mr. Armour, lately with Messrs. Pearson & Co., Secunderabad.

OPIUM-AUCTIONS.—It is notified that the opium, to be brought forward for sale by public auction in 1902, will consist of about 24,000 chests prepared at the Patna Factory, and about 24,000 chests prepared at the Ghazipur Factory, each chest containing 1 maund 18 seers 12 chittacks of pure opium, besides 9 seers 6 chittacks used for pasting the leaves of the shell. In accordance with the notification of the Government of India, dated June 21, 1901, 2,000 chests of Patna and 2,000 chests of Benares opium will be sold monthly from January to December, 1902.

MALAY MEDICAL INSTITUTE.—The Government of the Federated Malay States has recently established a research institute in Kuala Lumpur, the capital, which is open to all workers irrespective of nationality. The medical department is fully equipped for pathological, clinical, physiological, and bacteriological work. There is a chemical department for organic and inorganic research, a photographic department, facilities for biological research, and a good working library. Students of tropical medicine will have special opportunities for their particular branch. Beri-beri exists under unique conditions in the States, and malaria in at least four distinct types. The Institute is at present under the direction of Dr. Hamilton Wright, who will reply to all communications.

WEIGHTS AND MEASURES IN MYSORE.—The vagaries of Indian weights and measures have long been a stumbling block to commerce. Not only have presidencies their own particular "standards," so called by courtesy; so have districts, towns, and even villages. The "candy" varies from nearly 800 lbs. to something like 500 lbs.; the "maund" from over 82 to 25 lbs.; and so on. By these variations fraud and blunder are facilitated, so much so that the Mysore Government has issued a draft of "The Mysore Weights and Measures Regulation," which aims at remedying the present defective state of the law. The object of the Government is not to introduce the use of new standards of weight and measure, but to secure adherence to those ascertained by local inquiry to be the standards already in vogue in particular areas. The Government may from time to time prescribe the standard of weight and measure that shall be followed therein, and may declare that any particular weight or measure is correct or is in accordance with such standard.

"PURCHASE a copy of the 'Art of Dispensing' and use it freely."—Mr. F. A. Upsher Smith in the *Pharmaceutical Journal.*

MANILA PHARMACY LAW.—The new general order issued by the Provost Marshal General at Manila for amending the old Spanish laws governing the practice of pharmacy in the Philippines has been discussed by the pharmacists of Manila. At the initial meeting they were unable to agree upon the features which they desired struck out of the bill, but the Board of Health subsequently conferred with the pharmacists, and while some of the features of the bill as originally prepared (see *C. & D.*, November 9, page 754) were eliminated, the other parts of it remain unchanged. The clause in the pharmacy regulations to the effect that the druggist would be liable to heavy penalties for duplicating a prescription without the written consent of the physician who wrote it, does not appear in the new bill. The native pharmacists requested that the graduates of Santo Tomas College be admitted to practice without being required to take the regular examinations. The Board of Health, however, was of opinion that this would be unfair to the graduates of other schools, and did not grant the request.

South African News.

Business is flourishing at Kimberley, but great difficulty is being experienced in getting up sufficient goods from the coast.

Aseptic Milk-cans.—The authorities have notified all the Port Elizabeth dairymen that, after the end of 1901, all their milk-cans must be in perfect order, whilst vendors of milk in reputed quart bottles will be prosecuted.

Theft from Chemists. — James Wharley and Ernest Charles Stevens, Europeans, were found guilty on December 6 at the City Police Court, of stealing a quantity of medical requisites from the shop of Messrs. Wentzel & Schleswig, chemists, Shortmarket Street, Cape Town, and were each sentenced to three days' hard labour.

Plague at the Bay.—There were two cases of plague during the first week of December at Table Bay, one being an European. One of the Plague Medical Officers is suffering from a mild attack of the disease. Up to December 11 there have been 100 cases, forty-two of which have been cured. Ten remain under treatment, and forty-eight have died. The inoculations are disappointing, as since the outbreak only 357 Europeans and 2,899 coloured and native persons have submitted to the operation.

Trade-marks.—Applications have been made in Maritzburg, Natal, for the registration of "The Mexican Hair-renewer" and "Floriline" (in respect of tooth-powder and liquid dentifrice), by the Anglo-American Drug Company (Limited), 33 Farringdon Road, London; for "Mrs. Winslow's Soothing-syrup," by the Anglo-American Drug Company, of 215 and 217 Fulton Street, New York, U.S.A.; and for "Brown's Bronchial Troches," by John I. Brown & Son, 33 Farringdon Road, London, and Boston, U.S.A.

Infringing the Medical and Pharmacy Act.—James Jordan, late of the Canadian Volunteers, was charged on remand at Cape Town, on December 10, with practising as a doctor of medicine, he not being a duly qualified practitioner. The accused was originally before the Court on several other charges, but owing to the peculiar circumstances in which he attended in those instances, the patient being *in extremis* and distant some miles from qualified medical help, no prosecution on these counts took place. The evidence of a man named Pratt, who employed the accused to attend on Miss Schitckat, at Yzerplaats, was to the effect that Jordan had attended this person who is now deceased, it being known that he was not a registered medical practitioner. The Magistrate said there were exceptional extenuating circumstances, and Jordan was fined 5*l.* or one month's imprisonment.

Money-orders for the Transvaal.—On and after January 1, 1902, money-orders may be obtained at any money-order office in the United Kingdom for payment at the following places in the Transvaal:—

Barberton	Krugersdorp	Pretoria
Boksburg	Machadodorp	Roodepoort
Cleveland	Middelburg	Springs
Germiston	Modderfontein	Standerton
Heidelburg	Potchefstroom	Volksrust
Johannesburg		

The remitters must forward the orders to the payees, to be presented by the latter at the offices of payment. The commission chargeable will be the same as for other orders payable abroad—viz, for orders not exceeding 2*l.*, 6*d.*; for orders exceeding 2*l.* but not exceeding 6*l.*, 1*s.*; for orders exceeding 6*l.* but not exceeding 10*l.*, 1*s.* 6*d.* No single money-order may be issued for more than 10*l.* Money-orders will also be issued in the Transvaal for payment in the United Kingdom.

Boers and Medical Treatment.—A correspondent (93/33) writes from Cape Colony regarding the concentration camps in the following terms:—

Possibly, in connection with the Parliamentary report which says that one of the causes of the high mortality in the concentration camps is the "administration of vile concoctions" to sick children by the Boer inmates, the S.M.O. here has prohibited the storekeeper at the camp from selling any medicines—Dutch, patent, or otherwise. Many of the burghers, objecting strongly to stock-mixtures, have had doctors from the town to see them, and had their prescriptions made up in the orthodox manner. Now, this is stopped. The S.M.O. says no town doctor shall see patients in the camp. I think this will cause trouble, for if there is one thing which the Boer loves it is to doctor himself or family with *droppels*, *pillen*, or *salf*, and he will not relinquish the privilege without a struggle. If you give one man medicine out of the same bottle as another, you imply that each has the same disease, and the Boer, when he sees a doctor, *knows* that his symptoms are unique, and expects a bottle of medicine to be prepared specially for him. It seems unfair, on the face of it, for an admittedly overworked staff to refuse those burghers who desire outside medical advice, and are willing to pay for it, to have what they want. I do not know whether the order is a general or a local one, but expect more will be heard of it. All the regulations in the world will not keep the Boers from getting their *droppels* in some way or another; so I suppose, instead of a little wholesale, we shall do a bit more retailing in that line.

German Chemical-exports Decrease.—The following figures relate to the exports of drugs, chemicals, &c., from Germany to South Africa during 1899 and 1900. It will be noticed that refined glycerin and potassium cyanide show substantial decreases:—

—	Cape Colony, Natal, Rhodesia, &c.	Transvaal and Orange River Colony	Year
	£	£	
Perfumery	6,300	2,050	1899

Pharmaceutical Society of Cape Colony.

Shortly after this issue of the *C. & D.* reaches South Africa (writes a correspondent) the annual general meeting of this Society will be held, and it is to be hoped that the gathering will be attended with more success than hitherto. Though financially strong, there is, unfortunately, no denying the fact that the general condition and immediate prospects of the Society are not very satisfactory. Many members complain that the management is far from what it should be, and that the Society's affairs are not conducted in the most businesslike way. The Society accomplished most useful work shortly after its inception in connection with the Amended Medical and Pharmacy Act of 1899. This work has not generally been appreciated at its full worth. Later on in the police courts it also did well for the defence of chemists prosecuted under the Food, Drugs, and Seeds Act. It is a noticeable fact that those who had the help of the Society in that matter now take little interest in the institution to which, in no small measure, their acquittal was due. There is wanted at the head of the Society's affairs a good, strong man, and it is the duty of the members to see that they get such a one, for there is plenty of work ahead which chemists can ill afford to let pass without voicing their opinions. Take the coming Customs conference. When the last conference was held chemists had no opportunity of giving expression to their wishes, consequently different ports within the Union levy duties on quite a number of lines in accordance with some individual view, ranging from "free" to 20 per cent. This was shown up in the *C. & D.* some time ago. Again, there is the existing absurdity of one South African colony not accepting the certificates of the other, except in the case of Rhodesia, where the Cape papers alone are acceptable. The reason for this state of affairs, so far as the more progressive colonies are concerned, is well known and without doubt justified as things stand, but in harmony with trade and other relationships between the various governments and people, pharmacy, too, must fall into line. The "Bloemfontein trick" is not likely to be available as a royal road to a chemist's licence in the future, while a Medical and Pharmacy Act similar to that in operation at the Cape, will be among the first new laws in the northern colonies to receive attention at the hands of the High Commissioner. It would be a pity if Cape Colony, as the most up-to-date pharmaceutically, allowed the federation of South African pharmacy to take place on the initiative of its more alert neighbours. It will be interesting to watch the deliberations and efforts of the four other associations and societies in South Africa; those of the Transvaal, perhaps, most of all.

Colonial and Foreign News.

MONUMENT TO A CHEMIST.—A monument has been erected in Kobé, Japan, to the memory of the late Mr. A. C. Sim, chemist and druggist, whose death was reported in THE CHEMIST AND DRUGGIST of January 5, 1901. A Japanese inscription is on the face. On the other three sides the following inscription appears in English:—

In remembrance of public work performed by Alexander Cameron Sim, a native of Aberdour, Scotland. Born August 28, 1840; died November 28, 1900. Erected by friends in Kobé, Yokohama, and Nagasaki, both foreign and Japanese. During a residence of thirty years in Kobé Alexander Cameron Sim was foremost in assisting all schemes for public benefit and advantage.

THE VICTORIAN FORMULARY.—The Council of the Pharmaceutical Society of New South Wales have had an interview with Mr. Rankin, as representing the Pharmaceutical Society of Australasia, and, as a consequence, passed a motion that they will join with the Victorian Council in the preparation and circulation of the formulæ, and bear a share of the expense. The formulary recently printed must be looked upon as merely a draft, according to Mr. Rankin.

EXTENDING.—Owing to business-pressure, Messrs. Evans & Sons (Limited) have been obliged to bring about an expansion of their premises in St. Jean Baptiste Street, Montreal. The premises are to have a fine front (85 feet long) in St. Gabriel Street, and the buildings will be four storeys in height. The offices and counting-house will be removed to the St. Gabriel Street front when alterations are completed, and the two upper storeys are to be warehouses. While pulling down the old building in St. Gabriel Street, the workmen came unexpectedly on two curious old cellars, built of masonry several feet thick and covered by a roof of solid stonework. The masonry looks like the work of military masons, but for what purpose these ancient vaults were constructed neither Messrs. Evans nor "the oldest inhabitant" of Montreal can tell.

CREOLIN IN GERMANY.—A Brunswick firm recently appealed to the Imperial Patent Office for the revocation of the Mailand mark No. 6,149 (for the use of the word "Kreolin"), and a Hamburg firm appealed to the Hamburg County Court with the same object The Patent Office declared the mark invalid, because it is not true to actual fact and might mislead. The mark bears the words "Guglielmo Pearson, Milano." In reality it is said that such a firm has never existed, and the firm in Milan is entirely an invention of Pearson's. In 1894 and in 1895 the Imperial Patent Office decided that "Kreolin" was a free mark. The kreolin made by Pearson was brought into trade first as "Jeyes' Creolin," and then as "Kreolin Pearson." German manufacturers who made and sold kreolin often added their name to the preparation in the usual way (*e.g.*, Kreolin Artmann, Kreolin Anker). According to the legal position before that time (1887–1894), the term "kreolin" could only be used to denote a special make of goods if the name of the maker were used in conjunction with it. Pearson tried by means of the Mailand mark to protect the name under the earlier law; his claim was, however, refused, and the word "kreolin" was declared free. Pearson had, moreover, declared in his circulars that he marked his kreolin "Kreolin Pearson" in order "to distinguish it from the kreolin of others," so that he had thus contradicted his claim to the exclusive right of the word "kreolin."

PROHIBITION IN MANITOBA.—The Liquor Act, which, it is said, the Government of Manitoba intend shortly to enforce, entirely prohibits retail traffic in alcoholic liquors. Only persons possessing a wholesale or retail druggist's licence are allowed to keep liquor for sale. Alcohol up to 10 gals. may be obtained for mechanical or scientific purposes. A physician may prescribe liquor for a patient, but must give a written order therefor to a druggist. For prescribing-purposes a physician may keep 2 quarts of liquor in his house; dentists are allowed 1 pint, and veterinary surgeons 1 gal. A record of every sale made by a retail druggist must be kept, full particulars being required. This liquor prescription-book must be kept for a year; it must be open to public inspection, and a half-yearly return must be made by the druggist to the chief inspector. A wholesale druggist can only sell 10 gals. of liquor at a time for mechanical or scientific purposes, and only 5 gals. to a doctor or retail druggist. Each applicant for a drug-licence must be recommended by the chief inspector, and if in a city must own £1,000 worth of stock; in the country £200 will suffice. For violations of the Act the druggist is liable to a fine of from £200 to £1,000, or imprisonment for not less than three nor more than six months.

American Notes.

CEDAR-POISONING.—A young lady at New Westminster died last month after taking an ounce of oil of cedar. It is uncertain whether the oil was taken with suicidal intentions or in mistake for a preparation of Jamaica ginger.

THE GUM CHICLE COMBINE.—The shareholders of the American Chicle Company met last month, and on advice of the directors decided against the proposition to increase the capital stock to $3,000,000 as proposed. The company has declared the regular quarterly dividend of 1½ per cent. on its preferred stock, and a dividend of 2 per cent. on its common stock.

PHENACETIN ARRESTS IN DETROIT.—Five persons have been arrested in Detroit on a charge of counterfeiting the labels of the Bayer Company, and of selling phenacetin and other preparations in the United States, the patents for which are held by this concern. It is stated that these arrests are simply preliminary, and that a number of suits will begin all over the United States against persons who have been handling phenacetin and other patented preparations in contravention of the rights of the Bayer Company.

A CO-OPERATIVE MOVEMENT.—"The Drug Merchants of America, Incorporated" is the title of a new organisation which is to conduct general, financial, mercantile, and commercial business affecting the wholesale and retail trade, to maintain a depôt for the exchange of unsaleable goods, and to purchase crude and manufactured drugs for the benefit of the shareholders. The capital of the company is $10,000, divided into 2,000 shares of $5 each. The company is registered under the laws of West Virginia so that the annual meeting need not be held in W. Virginia. The office is 108 Fulton Street, New York.

NOT OF THE NATURE AND QUALITY DEMANDED.—Reference was made in our issue of December 7, 1901 (page 909) to the rejection by the United States Government of quinine supplied on contract by a San Francisco firm. The investigations of an *O. P. & D. Reporter* correspondent show that among the orders placed by the War Department for the equipment of the hospital service in the Philippines was one for about 12,500 bottles of quinine tablets (500 to the bottle) which was given to Clinton E. Worden & Co., of San Francisco, on an open-market requisition without competition. The tablets were issued in due course to the various hospitals, but the surgeons being dissatisfied with the results of their use, the tablets were tested and found to be deficient in quinine to the extent of 36 per cent. The entire shipment was returned to San Francisco, and the contractors were notified that they would be required to again fill the order at the same price with goods coming fully up to the official standard. A member of the contracting firm conferred with the War Department and protested that he had no knowledge of the fraudulent character of the goods supplied. He was advised that the Department would accept the refilling of the contract subject to rigid inspection, and the goods have since been manufactured, delivered, carefully tested, and accepted.

THE SALE OF LIQUOR BY DRUGGISTS.—The Commissioner of Internal Revenue at Washington has issued a circular letter to the collectors which is intended to prevent the sale by druggists of spirituous and malt drinks on physicians' and fictitious prescriptions. The letter states that a druggist is permitted to keep spirits and wines, and use them in combination with drugs in the preparation of medicines that are not beverages, and to sell such medicines without paying special tax as a liquor-dealer. But he cannot sell spirits or wines that are not so combined with drugs, even on a physician's prescription and for medicinal

Digitized by Google

use only. Toilet-articles such as eau de Cologne, bay-rum, ether with alcohol (for use in photography), benzine, &c. (for cleaning-purposes), castor oil, and alcohol (for toilet-use), Florida water, violet-water, &c., toilet-articles made from alcohol, camphor and alcohol, alcohol and ammonia and whiting (a cleaning-preparation), alcohol and shellac (for painters, &c.), are exempted. Malt-extracts manufactured for use as remedies for disease, and not as beverages, as shown by labels on the bottles, are medicinal compounds, and druggists and merchants who sell them in good faith for medicinal use only are not to be called on to pay special tax. As to the compounds called "bitters," "tonics," and the like, the rule is that if they are composed of spirits in combination with drugs, herbs, roots, &c., and are held out as remedies for diseases stated in the labels on the bottles, they are to be regarded as medicines until the facts ascertained as to the purposes for which they are usually sold or used show them to be beverages; and druggists and merchants who sell these compounds in good faith as medicines only are not called on to pay special tax as liquor-dealers. The fact that a compound may be used as a medicine, and may be so intended by the person making it, does not relieve the seller from the liability of a retail liquor-dealer or retail malt-liquor dealer if the compound is intoxicating and is not sold as a medicine. The true test in all such cases is, Was the compound sold in good faith for medicinal purposes only, or was it sold as a beverage or knowingly sold to persons who bought it for use as a beverage?

Trade-Marks Applied For.

(*From the "Trade-marks Journal," December* 18, 1901.)

"Tudor" (no claim for "Tube" or "Tubo"); for filters. By the Berkefeld Filter Company (Limited), 121 Oxford Street, W. 242,069.

"Brotox"; for food prepared from cereals and leguminous substances. By the British Preserving Company, Rayne, Essex. 241,006.

Label, the essential particular of which is the mark of a bird in cage; for an egg-food for birds. By R. Hyde & Co. (Limited), 4 Harold St., Camberwell. 241,523.

Label containing a combination of devices and the word "Gionni"; for liqueurs. By John Hodgkin, F.I.C., F.C.S., F.L.S., 12 Dynevor Road, Richmond, Surrey, formerly wholesale druggist and chemical-manufacturer. 241,262 and 241,263.

"Io"; preparation for the toilet. By John Tait, hairdresser and perfumer, Waverley Market, Princes Street, Edinburgh. 240,940.

"Pro-dit"; for all goods in Class 48. By Taylor & Co., Briggs Street, Norwich. 240,979.

Label, with mark of a cow and words "Tailess Cow"; for a hair-pomade. By Laurie, Laurel & Cie., 14 Benn's Gardens, Liverpool. 241,536.

"Manicola"; for toilet-preparations. By Parke's Drug-stores (Limited), 173 High Street, Camden Town, N.W. 241,923.

"Otala"; for perfumery. By the Vinolia Company (Limited), Malden Crescent, N.W. 242,099.

"Brytso" (no claim for "Bright"); for a cleaning powder. By the Thames Chemical Company, 61 Chancery Lane, W.C. 240,821.

"Coachaline" (no claim for "Coach"); for a polishing-preparation. By the Coachaline Company, 6 Upper St. Martin's Lane, London. 241,424.

From the "Trade-marks Journal," December 25, 1901.)

"Death Dust" (essential particular is a combination of devices); for an insect-powder. By J. H. Winkelmann, 122 West Lombard Street, Baltimore, Maryland, U.S.A. 242,042.

Combination of devices (the essential particular); for chemicals. By Brady & Martin, also trading as B.M. Chemical Company, Northumberland Road, Newcastle-on-Tyne. 241,490.

"Muti"; for a medicated soap; and "Lo Bafo"; for a water-softener for the toilet. By Violet Vaughan, trading as Madame V. Mack, 72 New Bond Street, W. 241,772 and 241,773.

"Gouto" (no claim for "Gout"); for chemicals. By the Gouto Company, Hollis Croft, Sheffield. 241,881.

"Vegone"; for goods in Class 3. By E. T. Pearson, 93 Neuerwall, Hamburg. 241,904.

Device of child asleep in cot with fumigating-apparatus on table; for goods in Class 3. By the Vapo Cresolene Company, 180 Fulton Street, New York. 242,017.

"Aseptet"; for chemicals. By Reynolds & Branson (Limited), 14 Commercial Street, Leeds. 242,357.

"Pilot"; for photographic cameras. By W. Butcher & Sons, 29 to 35 Tranquil Vale, Blackheath, S.E. 242,022.

"Elektronette" (no claim for "Electro"), and device; for a massage appliance. By Agnes Medhurst, Cottesmore, Oakham. 241,719.

"Pecko"; for mineral and aerated waters. By the Kentora Brewery Company, 23 Deering Street, Nottingham. 241,660.

"Nadola"; for toilet-preparations. By Dan Davies & Co., 119 Railton Road, Herne Hill, S.E. 242,064.

"Telmo"; for furniture and leather polishes or creams. By Holroyd & Co., Milnsbridge, near Huddersfield. 242,228.

"Eulactol"; for food-substances. By Nährmittel-Industrie Gesellschaft mit beschränkter Haftung, Eichendorffstrasse, 17, Berlin, N., Germany. 240,482.

Design of label bearing words "Johann Maria Farina zur Madonna, Köln"; for eau de Cologne. By Emil Jancke and Louis Marx, trading as Johann Maria Farina (registered address) zur Madonna, Cologne-on-the-Rhine. 240,246.

(*From the "Trade Marks Journal," January* 1, 1902.)

"Mesotan" and "Edinol"; for photographic chemicals. By Farbenfabriken vormals Friedrich Bayer & Co., Koenigstrasse, 27 Elberfeld, Germany. 242,570 and 242,464.

"Erimus" (the essential particular) and device; for a gold bronze liquid. By Baker Brothers, 15 Corporation Road, Middlesborough-on-Tees. 241,132.

"Torpedo"; for chemicals in Classes 2 and 3. By Heinrich Mack, Kohlgasse, 31 Ulm-on-Danube, Germany. 241,661 and 241,662.

"Capilets"; for medicated tablets and pills. By Jeancard, Gazan & Doumin, 13 St. Mary Axe, E.C. 237,109.

Cullingford's "Quicksine"; (no claim for "Quick"). By E. Cullingford, 19 Coventry Road, Hay Mill, Birmingham. 240,839

"Marach" on label (essential particular the word "Marach"); for a medicine. By the Columbia Chemical Company, 1729 Curtis Street, Denver, Colorada, U.S.A. 241,543.

"Texlo"; for a salve. By A. J. Barnes, 1 Charlemont Street, Dublin. 242,381.

Pflanzennährstoff-Extract "Sitogen" (essential particular is the word "Sitogen." No claim is made for "Sito"); for a vegetable-food extract. By A. R. Schmidt, Bahnhofstrasse, 1 Reichenberg, Bohemia, Austria. 240,711.

"Wheatena" (no claim for "Wheat" or "Wheaten"); for a cereal food. By the Health Food Company, 61 Fifth Avenue, New York, U.S.A. 241,009.

"Lactor" (no claim for "Lacto"); for a milk-food preparation. By the Aylesbury Dairy Company (Limited), 31 St. Petersburgh Place, Bayswater, W. 241,778.

"Lemona" (no claim for "Lemon"); for a preparation made from lemons. By J. MacArthur, Jun., 100 Wellington Street, Glasgow. 237,726.

"Strahlen"; for aërated waters and beverages. By G. B. Westmacott & Son, 17 Market Street, Manchester. 242,116.

Combination of devices and the word "Glycodor" (the essential particulars. No claim for "Glyco"); for toilet glycerin. By the Syndicat International des Producteurs de Glycerin, 112 Rue Royale, Bruxelles. 241,280.

"Vel-Vel"; for toilet soap and powder. By Breidenbach & Co., 48 Greek Street, Soho Square, W. 241,445.

"Skynola" (no claim for "Skin"); for toilet-preparations. By D. Davies & Co., 119 Railton Road, Herne Hill, S.E. 242,063.

"Variosa" (no claim for "Vario"); for goods in Class 48. By The American Toilet Company, Singer Street, Tabernacle Street, London. 242,236.

"Shinio" (no claim for "Shine"); for metal polish. By the Brilliantshinio Polish Company, 5 Fenwick Street, Liverpool. 240,412.

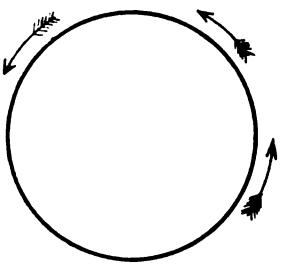
Elementary Dispensing-practice.

By JOSEPH INCE.

EMULSIONS, I.

LATIN. *Emulsio, onis*, f. noun, 3rd declension; from *emulgeo*, to milk out. *Emulsum, i*, n. noun, U S.A.

An emulsion, as its derivation shows, is a liquid externally resembling milk; the milkiness, which is an essential characteristic, is due to the suspension of oily or resinous bodies in water. This is effected by thoroughly dividing them into minute globules, each globule being at the same time coated with an adhesive envelope. The globules so protected are suspended in the water, and lose to a great extent their tendency to re-combine.



Oil cannot be thus divided by means of water only and so suspended, consequently a third body has to be introduced, called the emulsifier, of which mucilage of gum arabic and yolk of egg are types.

No branch of dispensing requires more delicate handling or quicker judgment than that of making an emulsion. The mortar is used for the emulsification of fixed oils or viscid substances; a bottle is used for essential oils, alkaline emulsions, and less viscid liquids generally.

Success depends on the careful management of the initial stage; never add a fresh drop of oil until the globules of the first addition have disappeared so as not to be visible to the naked eye. The general method will be understood by describing one of the simplest forms:—

℞	Ol. olivæ	ʒj.
	Mucilag. acaciæ	ʒij.
	Syrupi...	ʒss.
	Aq. destillat. ad	ʒj.

Put the whole of the emulsifier—that is, the mucilage—at once in the mortar; gradually add the oil, stirring gently from right to left, thus:—

Add the water in small quantities at a time until a thick, creamy emulsion has been formed.

The remaining water may be added rapidly without risk, reserving enough to wash out the syrup from the measure. Syrup is added last.

An emulsion like the one just now in question can scarcely go wrong, as the proportion of the emulsifier is double that of the oil; but the difficulty begins when the reverse happens and the emulsifier is barely sufficient, and no more, to divide the oil. In such cases the mucilage must be entirely free from acidity, very small quantities of oil should be added at a time, and the hand must have been previously trained to the exercise of the lightest possible touch. Until this has been attained, the more difficult forms of emulsion need not be attempted.

This light touch is essential, as heat causes immediate separation, and this is generated by the too energetic action of the pestle.

Let the dispenser also be persuaded to leave well alone as soon as his emulsion is finished; many a good emulsion is ruined by over-rubbing.

As a commencement, try the following emulsion-formulæ:—

(1)

℞	Ol. olivæ	ʒj.
	Pulv. acaciæ	gr. xxx.
	Aq. destillat. ad	ʒj.

Put the acacia in a dry mortar, make it into a fairly thick cream with water, add oil by degrees, and, when completely emulsified, add water, about 1 dr. at a time, up to 1 fl. oz.

(2)

℞	Ol. amygdal.	ʒj.
	Pulv. acaciæ	gr. xx.
	Aq. aurantii floris ad	ʒj.

Almond oil is more easily emulsified than olive oil. Vary the process by rubbing the oil with the gum, and gradually add the water.

(3)

The French have a formula which they use as a basis for emulsions generally; the powdered acacia is invariably employed:—

	Olei [*x*]	4
	Pulv. acaciæ	1
	Aquæ	2

The Belgian method differs slightly:—

Olei, 4; gum. acaciæ, 2; aquæ, 3.

In a dry mortar put the oil and powdered gum, and stir till thoroughly mixed; add the 2 parts of water all at once, and briskly stir.

The further addition of water to this emulsion-basis will cause no separation.

There is still another method much in favour among advanced dispensers, but its practice may be postponed to a later period, and left to more experienced hands.

(4)

℞	Ol. amygdal.	ʒiv.
	Pulv. acaciæ	ʒij.
	Aq. chloroformi	ʒiij.

Put the gum in a dry mortar and on it pour the oil, by preference on the centre; round that pour the water, and by rapid stirring mix all together. A fair test of successful manipulation is when a slight tacking sound is heard and clear spaces are left on the sides of the mortar.

When an emulsion begins to go wrong and shows signs of separation (except in the case of oil of turpentine) throw the vexatious thing away.

Calendars for 1902.

Mr. R. Priest, chemist and druggist, 14 Broadway, Roath Cardiff, issues a presentation almanack, in which too little prominence seems to be given to his own goods.

Mr. J. E. Lockyer, wholesale photographic chemist, 87 Evelyn Street, Deptford, S.E., is in the habit of sending out a useful blotting book. The one for 1902 contains twenty photogravure plates of cathedrals in Great Britain besides postal information, calendars and particulars of Mr. Lockyer's photographic specialities.

Messrs. W. E. Smith & Co., pharmaceutical chemists, Madras, are presenting to their customers this year pocket memo. tablets with the year's calendar on a celluloid cover at the back, the front bearing an engraving of their imposing establishment, Kardyl Buildings. They also give a measure calendar made of celluloid which can be used as a paper cutter or book mark.

The calendar sent out by C. I. Hood & Co. (Limited) 34 Snow Hill, E.C., has above the calendar-pad four attractive coloured pictures of Columbia's daughters—the New England girl, the Southern girl, the Western girl, and the New York girl. The monthly calendar-sheets sing the praises of Hood's sarsaparilla, and on the back of the whole card are given the chief astronomical events for 1902.

Mr. J. S. Palmer, chemist and dentist, Thornbury, Gloucester, uses the universal almanack with a 24-page supplement. In the address at the commencement we notice a curious example of tautology where Mr. Palmer "anticipates (D.V.) moving into his new quarters, if possible, in March 1902." The supplement has an illustration of Mr. Palmer's shop, and its literary contents deal with spiritual matters.

The family almanack and directory sent out by Mr. W. H. Dixon, chemist and druggist, East Grinstead, is a bulky book. It contains illustrations of the interiors and exteriors of Mr. Dixon's two pharmacies, and of his aërated-water factory. A good feature is the illustrated price-list of photographic goods and druggists' sundries. Plenty of information is given about the firm's specialities, and Mr. Dixon is evidently a believer in side-lines. There is no doubt the directory is a feature which ensures the almanack being preserved for the whole of the year.

Pharmaceutical Veterans.

Mr. William Agar,

who has been living in retirement at Newark for the last few years, can truly claim a niche in the *C. & D.* Veterans' column. Mr. Agar was born at Evesham on September 3, 1810, so that he is now in his 92nd year. His father was a supervisor of Excise, and on that account moved from town to town. Mr. Agar was at school at Worksop, but at the time of the Battle of Waterloo was living in Hull. He recollects the illuminations to celebrate that famous victory, which took the form of candles before each window-pane. Mr. Agar has still a vivid recollection of a pressgang at Hull, and when staying at Stockton saw the arrival of George Stephenson's historic "Rocket" on its first run from Darlington. From 1825 to 1831 Mr. Agar was apprenticed to Mr. Caparn, of Newark, who was a predecessor of Mr.

MR. WILLIAM AGAR.

Cherrington, Market Place. The shop was opened at 6 in the morning and closed at 10 P.M., and young Agar's time was fully occupied compounding galenicals and official preparations, which in those days were all home-made. After closing time the young apprentices had to devote the time before bed to mastering the contents of Thomson's "Conspectus of the Pharmacopœias." Naturally Mr. Agar has some interesting recollections of the elections, and can recall several of those functions even before Mr. Gladstone entered political life as member for Newark. Mr. Agar's memory is still so good that he can repeat some of the electioneering rhymes of those distant elections. After his apprenticeship Mr. Agar's father went to live in London, and the coach-ride of twelve hours from the George, Stamford, to Holborn is still remembered by the son. The young man then went round to the retail and wholesale houses to look for a situation, and after some weeks obtained one. Whilst in London Mr. Agar remembers going to an anatomy-lecture in Soho, and visiting the lecture-theatre of St. Bartholomew's Hospital, and the unpleasant sensations he felt on seeing a dead body skinned. After two years in London Mr. Agar opened a business at Retford, where he remained for twenty-three years, moving from there to Mansfield for another thirty years' spell of chemist's life. While at Retford some foxhounds were poisoned, and Mr. Agar detected arsenic in the stomachs. This made him many friends among the squires of that fox-hunting district, and caused his business to progress by leaps and bounds.

Mr. Agar has been three times married, and three of his sons are chemists and druggists. Mr. John George Agar carries on the Westgate Pharmacy, Mansfield, from which his father retired to Newark two or three years ago.

Business Changes.

A BRANCH has been opened by Boots (Limited) at 15 Mercery Lane, Canterbury.

MR. JOHN LEA, chemist and druggist, Folkestone (one of the octogenarians of the trade), has retired from business.

MESSRS. HAW & CO., general produce brokers, Liverpool, have admitted into partnership Mr. Samuel Stopford Haw, son of their senior partner.

MR. A. RUSSELL BENNET, F.C.S., has removed the Nottingham School of Pharmacy to Carlton Chambers, 13 Victoria Street, Nottingham.

MR. J. M. FURNESS, chemist and druggist, of Fitzwilliam Street, Sheffield, has bought the business lately carried on by Mr. Gill in Scotland Street, Sheffield.

MR. HAY MARSHALL, chemist and druggist, late of High Street, New Southgate, has bought the business of Mr. V. H. Gay, Tottenham Lane, Hornsey, N.

MR. GUSTAVUS CABRERA, drug-exporter and merchant, 5 Laurence Pountney Hill, E.C., has retired from business, which will in future be conducted by his son.

MESSRS. BOOTS (LIMITED) have added to their numerous branches a splendidly fitted-up establishment in Old Market, Halifax, which was opened in Christmas week.

MR. C. D. HART, having retired from business, has transferred his interest in the Duffield Road pharmacy, Derby (together with the wine-and-spirit licence and post office attached), to his manager, Mr. H. G. Toy.

MR. FERD. FLASHOFF, of 9 Mincing Lane, is retiring from business, and his son and late partner, Mr. Rudolf Flashoff, will continue the firm and also act as agent for Messrs. Siemssen & Co., Hamburg and China.

MR. T. BREWIS, chemist, Portsmouth, has taken his nephew, Mr. J. W. McIntosh, into partnership, and the business will be carried on under the style of Brewis & McIntosh. The firm has four shops in the borough.

MESSRS. W. H. COLE & CO., 85 Gracechurch Street, E.C., announce that Mr. E. W. Lidderdale's association with them having ceased on September 30, 1901, they have granted the procuration of their firm to Mr. John Clement Tabor.

MR. G. C. G. FREUDENTHEIL, trading as Messrs. Freudentheil & Co., chemical and drug merchants, 21 Mincing Lane, E.C., has admitted his brother, Mr. Harold Graves Freudentheil into partnership. The style of the firm will remain as before.

MESSRS. PARKINSON, who for many years have done work for the Pharmaceutical Society, have acquired the business of George Treble & Son, the old-established shopfitters, and and will carry it on with head offices and showrooms at 27 Southampton Row, Holborn, London, W.C.

MESSRS. FRANK FIELD & CO., general produce brokers, have removed from 37 to 29 Mincing Lane, E.C. Mr. Arthur George Marks has been admitted a partner, and will carry on the business with Mr. Edmund W. Mildred to whom procuration has been given. Mr. Frank Field has ceased to take an active share in the business.

MESSRS. DAVY, HILL & SON, YATES & HICKS inform us that their seniors, Mr. Arthur Bowdler Hill and Mr. Robert Yates, retired on December 31, 1901. For some time the business has been under the active management of Mr. Alan Hicks and Mr. Charles Alexander Hill, F.I.C., F.C.S., pharmaceutical chemist, who will continue it under the style of Davy, Hill & Co., at 64 Park Street and 103 Southwark Street, S.E.

MR. WILLIAM ALFRED JONES who has been actively engaged for a quarter of a century in the drug trade, has commenced business as a general merchant, commission agent, &c., at May Buildings, 51 North John Street, Liverpool, under the name and style of William Alfred Jones & Co., is resident director and buyer for Messrs. E. D. Kinkead, (Limited), wholesale and retail chemists, of Kingston, Jamaica.

Digitized by Google

MR. W. E. HAILSTONE, chemist and druggist, has acquired the business at Hadlow formerly belonging to Mr. R. L. Griffiths.

MR. HECTOR ROESSLER and Dr. Heinrich Roessler, directors of the Deutsche Gold- und Silber-Scheide Anstalt, late of Frankfort-on-Main, retired on December 31, 1901. Dr. Fritz Roessler, formerly deputy-director, and Mr. Louis Fadé, formerly one of the board of directors of Roessler and Hasslach Chemical Company, New York, have been appointed directors to act with those remaining in office — viz, Messrs. Hugo Andreae, Alexander Schneider, and Alfred Schott.

THE PARTNERSHIP hitherto existing between Mr. Auguste Zimmermann and his son, Mr. Charles M. Zimmermann, trading as Messrs. A. and M. Zimmermann, has been dissolved. Mr. Charles M. Zimmermann has commenced business on his own account as merchant and commission agent, under the style of Messrs. Charles Zimmermann & Co. He will take over the photographic department and a few of the agencies. Both firms will be at 9 and 10 St. Mary at Hill, London, E.C.

Trade Notes.

MESSRS. W. J. BRAGG & Co., 19 Old Hall Street, Liverpool, have been appointed agents in this country for Mr. Cujini Pulejo, of Messina, whose specialities are oils of lemon, bergamot and orange.

THIS week's *Tatler* contains an engraving of the prize showcard design for Messrs. P. Burgoyne & Co.'s wines which was referred to in the *C. & D.* a few weeks ago. Another item which we find in a page of Christmas cards is the one sent by Mr. T. J. Barratt to his friends.

KODAK DISCOUNTS.—Kodak (Limited), 43 Clerkenwell Road, E.C., announce in their January trade circular that they have withdrawn the restrictive condition of sale which was introduced early in 1901, and met with such opposition. A new system of discounts has been drawn up in which part of the rebate on Kodaks, roll-holders and films is conditional.

French News.

(From our Paris Correspondent.)

ENGLISHWOMAN'S SUICIDE.—A young lady poisoned herself at the Lorrain Tavern, 60 rue des Ecoles, Paris, last week, in rather a dramatic fashion. Her lover was with her at the time.

THE LATE PROFESSOR BLEICHER.—An account of the obsequies of Professor Bleicher, who was assassinated in his office at the School of Pharmacy, Nancy, on June 8, 1901, has been published in book-form. An excellent portrait of the professor is given as a frontispiece.

PROPHYLAXY OF SYPHILIS.—The French Minister of the Interior has appointed a commission to study the prophylaxy of syphilis, and especially to institute inquiries regarding the frequency of this and similar maladies, in the institutions existing in France for their treatment, and the best means, legislative and administrative, for preventing their propagation. The President of the Commission is Professor Fournier, member of the Paris Academy of Medicine.

NEW GELATIN-FACTORY.—A new gelatin-factory has just commenced manufacturing near the port of La Pallice. The production will consist of fine glues and gelatine, including bleached white gelatine. The bones used are imported from India, as it is claimed that they produce better qualities of certain kinds of gelatine. The capacity of the works is 1,200 tons per year, and they are fitted throughout with electricity.

THE PARIS CENTRAL-STORE OF HOSPITALS.—The Paris Municipal Council discussed the question of its Central Hospital-store on December 19, and came to the conclusion that it requires reorganising. This store serves as a central depôt for distributing medicines and surgical instruments to the hospitals, including drugs. The promoters of the reform speak of securing an economy of 200,000f. (8,000*l.*) per annum.

ANTI-TUBERCULOSIS DISPENSARY AT LILLE.—This dispensary, which has been organised by Dr. Calmette, director of the Pasteur Institute at Lille, was inaugurated last Sunday by Dr. Brouardel, of the Paris Academy of Medicine, who complimented Dr. Calmette on his indefatigable devotion, and said that such dispensaries have every chance of successfully combating tuberculosis. It is interesting to note that the doctors and pharmacists of Lille are up in arms against the Pasteur Institute. They protest that it has become a source of very serious competition to them, as, in addition to the anti-tuberculosis dispensary, a service of biological analysis has been organised and a table-water is made there under the control of the chemists of the Institute. The doctors and pharmacists consider that the public will be attracted by an establishment carried on under the prestige of the name of Pasteur, and they are resolved to do all they can to prevent the encroachments of the Institute.

THE QUESTION OF INSPECTION of pharmacies is to the fore just now, as M. Julien Goujon, Deputy of the Seine-Inférieure, has introduced a Bill into the French Parliament for the purpose of relieving pharmacists, druggists, and grocers from the payment of the tax for inspection. It was originally paid to the inspectors in person, and served to remunerate them; but now the State pays the inspectors independently, and a sum of 250,000f. (10,000*l.*) figures in the Budget for this purpose, whereas the tax produces 370,000f. (or nearly 15,000*l.*). M. Goujon's contention is that if the inspection is necessary the expense ought to be borne by the State, and in any case it is an abuse for the Government to make a profit in such a connection, the excuse for the control of pharmacies being that it is in the interest of the public health. It is unlikely, however, that the proposal will be considered except as a part of the new Pharmacy Bill now before Parliament, but the Deputy may perhaps succeed in getting the surplus funds applied as travelling-expenses so that inspectors can exercise their control out of their own locality.

PHARMACY INSPECTION.—One of the pharmacy regulations in France which is often of a vexatious nature is that of the annual inspection of pharmacies by committees officially named for the purpose, and usually composed of local doctors and pharmacists. The result is that private feelings of antagonism sometime play too prominent a part at the inspections, and the drama at Nancy last June, which resulted in the murder of M. Bleicher, director of the School of Pharmacy, and the suicide of the assassin, who was a prominent cutting pharmacist of the town, show to what extent feeling may be carried. Amongst complaints in connection with inspections may be mentioned the case of a doctor at Saint-Lô, who profited by his position as inspector of pharmacies to commence a sort of petty persecution against local pharmacists. The latter in due course held a meeting and petitioned the Prefect to deliver them from their enemy, suggesting that the offending inspector be asked to join a committee in an adjoining district. They further passed a vote that members of inspecting committees should not be appointed for a district in which they reside, this to apply to doctors as well as pharmacists. The Prefect acknowledged that the petition was well founded, but the matter was shelved as he had no funds to pay for travelling-expenses. In another district a very militant pharmacist complained by a letter in a newspaper that he was submitted to the indignity of having his pharmacy visited by an inspector who was no other than the "most contemptible of the cutting fraternity." This resulted in a feud, and the climax was reached by a regrettable pugilistic encounter between the parties in the street.

AN ACCOMMODATING CHEMIST. — Chemist (to poor woman): "You must take this medicine three times a day after meals." Patient: "But, sir, I seldom get meals these 'ard times." Chemist (passing on to next customer): "Then take it before them."—*The King.*

Deaths.

BAUCHLE.—At New York, U.S.A., Mr. Thomas H. Bauchle, senior member of the firm of Young & Smylie, liquorice-manufacturers, New York. Mr. Bauchle, who was a lifelong resident of New York, was a veteran of the Seventh Regiment N.G., N.Y. He leaves a widow and two sons.

BRIGGS.—On December 23, 1901, Mr. William Briggs, chemist and druggist, of 89 Union Road, Newington Butts, S.E.

CASE.—On December 26, at Holly Court, Ardleigh, Essex, the residence of his brother-in-law, Mr. William Townley Case. Aged 49. Mr. Case was the son of the late Mr. Henry Case, formerly of the firm of Clay, Dod, & Case (now Clay, Dod, & Co.), St. Anne Street, Liverpool. Mr. Case represented his father's firm for many years as traveller in Wales, but for the last fourteen years he was Messrs. Boehringer & Son's agent in the United States.

COCKS.—On December 26, at 4 Green Road, Southsea, Mr Walter James Cocks, chemist and druggist. Aged 42.

CROSFIELD.—The death occurred on December 26, 1901, of Mr. John Crosfield, J.P., of Walton Lea, Warrington, chairman of the directors of Messrs. Joseph Crosfield & Sons (Limited), soap and glycerin manufacturers, Bank Quay, Warrington. Mr. Crosfield was the youngest son of the late Mr. Joseph Crosfield, the founder of the firm, and for fifty years had taken an active part in the public life of Warrington. Of Quaker ancestry, he was an active supporter of John Bright and Cobden in the great days of the Reform movement. He was prominently connected with the Warrington Liberal Association. Mr. Crosfield was a very successful business man. Not only was he at the head of the firm of Messrs. J. Crosfield & Sons, but at one time he also occupied the position of chairman of Messrs. Brunner, Mond & Co. (Limited), of Northwich. He was elected Mayor of Warrington in the year 1882, and in 1891 the freedom of the borough was conferred upon him. He had been a justice of the peace for the borough since 1874, and a county magistrate since 1884. In educational matters he took a great interest, and he helped largely in the building of the Warrington School of Art and other educational institutions.

DAVENPORT.—On December 29, 1901, at 13 Eaton Gardens, Hove, Mr. John Thistlewood Davenport, pharmaceutical chemist. Aged 84. By the death of Mr. Davenport the Pharmaceutical Society of Great Britain loses a Past President who occupied the chair before Mr. Jacob Bell was elected to it. This fact brings into strong relief the exceptionally long connection Mr. Davenport had with British Pharmacy, for although of recent years he had been living in Brighton he had never ceased to take an active interest in his business. He was born at Staines, and when the Pharmaceutical Society was founded he had already had seven years' experience of pharmacy, having been apprenticed in 1833 to Mr. Richard Ward, chemist and druggist, 33 Great Russell Street, W.C., whose business he purchased in 1839. During his apprenticeship Mr. Davenport attended the courses of lectures on chemistry at University College, Gower Street, given by Professor Thomas Graham and Professor Turner, whose "Elements of Chemistry" was in the thirties and forties of last century one of the most popular text-books. Mr. Davenport was a skilled pharmacist, and he gave early proof of his University College training by entering the field as a manufacturer of pharmaceutical chemicals. He was one of the first to make skilled preparations, and his products were awarded medals at the London Exhibition of 1851 and at the Paris Exhibition in 1855. He was elected a member of the Pharmaceutical Society in 1842, and in 1849 was appointed a member of the Council, and a member of the Board of Examiners in 1850. He remained an examiner for twenty-five years, retiring in 1874. He was a quiet and efficient member of the Board, and latterly confined himself to prescription-reading. At an evening meeting of the Society in 1852 he read a paper on pil. ferri carb., in which he suggested that the old formula (myrrh, ferrous sulphate, and sodium carbonate) should be modified so as to use saccharated carbonate of iron, a suggestion which was the origin of that pill. Mr. Davenport succeeded Mr. Henry Deane as Vice-President of the Society in 1853, occupying the vice-chair for two years, when he was elected to the presidential chair. This he vacated in 1856 in favour of Mr. Jacob Bell, whose presidency was terminated by death on June 12, 1859. It was, however, as the manufacturer of chlorodyne that Mr. Davenport was known the whole world over. During his presidency the late Dr. John Collis Browne, M.R.C.S., of the N.P. Army Medical Staff, approached him in regard to putting chlorodyne on the market. Dr. Browne had had exceptional experience in the treatment of cholera in India, and as a result he devised chlorodyne in 1846. Dr. Browne came home and did good work in the cholera epidemic of 1853, using chlorodyne. Before he approached Mr. Davenport he had tried to sell his formula, and even made the offer to Mr. Davenport, who preferred in undertaking the manufacture of the article to share the profits only. But first he wished to assure himself of its efficacy. This was done by trial in several hospitals, and the preparation was placed on the market in 1855 as "Dr. J. Collis Browne's chlorodyne," in bottles at 3*s.* per oz., 5*s.* per 2 oz., and at 1*s.* 6*d.* per oz. for 10 oz. or more. It soon came into general use, and within three years imitations of it openly appeared. Dr. Ogden communicated a formula to THE CHEMIST AND DRUGGIST of January, 1860, and in our February number of the same year an article on "Chlorodyne: its History, Preparation, Properties, Therapeutic Effects, Doses, &c.," appeared, the preparation being treated in a similar manner to pepsin, glycerin, and other remedies which were at that time novel. Dr. Browne and Mr. Davenport in 1864 instituted proceedings against another maker who claimed that his was "the original chlorodyne," the present Lord Chancellor being the leading counsel for the plaintiffs, and Sir Hugh Cairns (afterwards Lord Chancellor) was for the defendant. The application was for an injunction to restrain the use of the title quoted, but the Court, while believing that Dr. Browne was "the true and original inventor of the compound," could not grant the injunction because Dr. Browne had registered his title as "Dr. J. Collis Browne's Chlorodyne." In spite of this decision Dr. Collis Browne's article progressed in popularity. At first it was sold, in part at least, without the medicine stamp, but after December, 1865, Mr. Davenport was informed by the Board of Inland Revenue that "chlorodyne cannot be sold either for dispensing, export, or otherwise without bearing the Government stamp." Since then every bottle that has gone out of 33 Great Russell Street has been stamped. Mr. Davenport had for many years been associated in business with his son, Mr. Horace Davenport, pharmaceutical chemist, the Chairman of Camwal (Limited), and he leaves four sons and two daughters. The funeral took place at Hove Cemetery on New Year's Day.

EVANS.—At Exmouth, on December 28, Mr. Edward Wallace Evans, director of the firm of Hill, Evans & Co. (Limited), vinegar manufacturers, Worcester. Aged 54. Mr. Evans was troubled with gout in his hands, which were ordered to be wrapped in cotton-wool. While reading a letter and trying to light a cigar at the same time, the cotton-wool caught fire and burned his hands. Mr. Evans, who was in a weak state of health at the time of the accident, died from shock following the burns.

GARRY.—On December 30, 1901, at his residence Grentle Street, Mullingar, Mr. C. J. Garry, M.P.S.I. Aged 28. The funeral took place on New Year's Day at the family burial-ground, Meedin.

DOBBIN.—We now give a portrait of the late Mr. Wm. Dobbin, J.P., chemist and druggist, Belfast, whose death was recorded in our last issue. Mr. Dobbin was born at Belfast in 1817, and at an early age was apprenticed to Mr. Andrew Marshall, druggist, High Street, Belfast. He afterwards travelled for Messrs. Daniel & Charles Davis. In 1841 he commenced business in partnership with his two brothers, Leonard and John, as already reported, and when John died and Leonard removed to Cork, William took larger premises at 45 and 47 North Street, and established the business which is still conducted there by William Dobbin & Co. (Limited). He was a man of great energy and an indefatigable worker, and very successful in business. Many leading men in the district received their early training at his hands, notably Sir James Haslett, M.P., Mr. Thomas McMullan, and Mr. James Tate. Mr. Dobbin had an excellent memory, and he was full of reminiscences of the old history of Belfast and old style of business in the district. He was married in 1851 to Miss Catherine Montgomery Greenfield, and they celebrated their golden wedding on May 15, 1901. They had four sons and two daughters. Of the latter, one died young and the other survives and is unmarried. The eldest son, John M. Dobbin, died suddenly about nine years ago. Two sons—William C. Dobbin, M.P.S.I., and James G. Dobbin—are directors of the company. The youngest son, Dr. Leonard Dobbin, is well known to readers of this journal as the conducter of the Students' Corner and a pharmaceutical examiner in Edinburgh.

KENT.—On December 25, 1901, killed in action at Tweefontein, South Africa, Montague Ralph, 35th Company Imperial Yeomanry, in his 20th year, third son of Arthur Kent, colonial broker, of 13 Glazbury Road, West Kensington, and 21 Mincing Lane, E.C.

PENNINGTON.—At 2 Ash Street, Bury, on December 25, 1901, Mr. Thomas Pennington, chemist and druggist. Aged 71. Mr. Pennington was a native of Halliwell, near Bolton, and served his apprenticeship with his cousin, Mr. Thomas Moscrop, a well-known chemist of Bolton. About fifty years ago he went to Bury, taking over the business carried on by a Mr. Thomas Holt at 4 Bolton Street, Bury, where he remained until about three years ago. He then retired from business and went to reside in Ash Street. He was the founder of the Bury Ragged School, which was started in a cottage in Agur Street, Bury. In the work of the school Mr. Pennington took an exceedingly great interest and spent a large amount of his time and money in furthering its well-being. He was superintendent of the Sunday-school and treasurer of the day-school, and was very highly respected.

WARD.—The death is announced at the Medical Hall, Lisburn, of Dr. John Smallwood Ward, L.P.S.I. The day previous to his death he was at his business, and to all appearances in his usual good health. Deceased was a member of the Society of Friends, and opened a retail pharmacy at Lisburn some fourteen years ago, subsequently taking the Scotch Triple medical qualification.

TEA-PILLS.—M. Constantine Popoff, who has large tea-plantations in the Caucasus, in the district of Batoum, has produced tea-pills. These are simply compressed tea—somewhat in the form of the tea-tabloid, but round—and weigh fourteen to the ounce. The pills have been exhibited at Nijni Novogorod, St. Petersburg, and Paris, and are favoured by sportsmen and travellers.

Birth.

WIDDOWSON.—On December 21, 1901, at Baker Street, Hucknall Torkard, Notts, the wife of Rd. Jephson Widdowson, of a daughter.

Marriages.

EDWARDS—JENKINS.—At Newcastle-Emlyn, on December 24, 1901, Daniel Edwards, chemist and druggist, 105 Fortess Road, Kentish Town, N.W., to Emily, eldest daughter of Mr. D. Jenkins, Waunmarlog.

HENDERSON—MCLEOD.—At the Melville Hotel, Edinburgh, on December 26, 1901 by the Rev. David Barnetson, Roslin U.F. Church, David Henderson, chemist, London, to Janet Barnetson, daughter of Mr. David McLeod, Edinburgh.

MCINTYRE—TOWLER.—On December 26, 1901, at St. Mary's, Ellesmere, Salop, by Rev. A. E. Wanton, George McIntyre, chemist and druggist, Cannock, Staffs, to Florence May Towler, of Ellesmere.

PALMER—NEWMAN.—On December 26, 1901, at the Parish Church, Egham, by the Rev. W. Trevor Nicholson, Ralph Palmer, chemist and druggist, to Hilda Gertrude, eldest daughter of Mr. Walter E. Newman, of Egham.

SCOTT—GRANT.—At 6 Valleyfield Street, Edinburgh, on December 26, 1876, by the Rev. Archibald Smellie, Free Greyfriars', James Scott, chemist and druggist, to Annie, eldest daughter of Robert Grant, Stonehaven. Present address, 12 Brunton Terrace, Edinburgh. (Silver wedding.)

Recent Wills.

FARMER.—Probate of the will dated November 8, 1900, of Mr. James Farmer, pharmaceutical chemist, Burrough Street, Castle Donington, Leicester, who died on September 12 last, has been granted to Mr. Thomas Johnson Fletcher, surgeon, Mr. George Trussell Eaton, and Mr. Francis Edmund Burton, solicitor, all of Castle Donington, to each of whom the testator bequeathed 100*l.*, and Mr. Burton to have the option of purchase for 400*l.* of the house in Park Lane, Castle Donington, in his occupation, belonging to the testator. Mr. Farmer bequeathed to his assistants, Percy James and Minnie Audinwood, 120*l.* each, and he left ten dwelling-houses or tenements in the Biggin to be used as almshouses. The present weekly tenants are to pay one-half of the rent which they have hitherto paid, and as vacancies occur the trustees are to elect as almswomen poor widows of good character of sixty years of age and upwards, resident for five years in the parish of Castle Donington without poor relief. The testator left the residue of his property in trust to apply the income in keeping the almshouses in repair, and in defraying the expenses of the trust, and to pay the remainder of the income in November in each year to such deserving poor of good character of the parish of Castle Donington, as the trustees and the churchwardens of the parish may select. His estate had been valued at 11,444*l.* 9*s.* 11*d.* gross, and 10,439*l.* 6*s.* 5*d.* net.

HUBBUCK.—Probate of the will dated April 20, 1900, of Mr Edward Frinneby Hubbuck of Pinehurst, Headley, Southampton, and late of Thomas Hubbuck & Sons (Limited), of 21 Lime Street, E.C., who died August 20 last, has been granted to testator's brother Augustus George Hubbuck and Percy Devonshire Jones and Charles Stone, solicitor, by whom the estate has been valued at 115,083 3*s.* 6*d.* gross, including personalty of the net value of 91,937*l.* 15*s.* 9*d.*

OGLE.—The will of Mr. John Henry Ogle, pharmaceutical chemist, Broadway Chambers, Tunbridge Wells, who died on May 14, has been proved at the principal Registry Office by Mrs. Eliza Martha Ogle, the widow and sole executrix. The gross value of the estate is 1,789*l.*, and the net value of the personalty 928*l.* 19*s.* 3*d.*

"PHARMACEUTICAL TESTING" (Mr. B. S. Proctor) contains easily-applied tests for ensuring the purity of chemicals for use at the counter. Price 2*s.* 6*d.*, by post 2*s.* 9*d.*, from the *C. & D.* office, 42 Cannon Street, E.C.

Scientific Progress.

Artemisin.—Freund and Mai publish in a recent issue of the *Berichte* a paper on the properties of the compound discovered by Merck in the seeds of *Artemisia maritima*, and called by him artemisin. This body has the formula $C_{15}H_{18}O_4$, differing from that of santonin by one atom of oxygen only. Like santonin, it is a lactone, which easily takes up water by dissolving it in alkaline solutions, thereby yielding an alkaline salt of a new monobasic acid. This acid, as was shown from an analysis of its silver salt, has the formula $C_{14}H_{19}O_5.COOH$. Its methyl ester is a crystalline solid melting at 180°.

The Relation of Canadine to Berberine.—As is well known there are three alkaloids present in the rhizome of *Hydrastis canadensis*. These are hydrastine, berberine, and canadine: the last was first so named by Schmidt. Gadamer (*Arch. der Pharmazie*, 1901, 648) now shows that the last base is the optically active form of hydroberberine. A small specimen of the natural base prepared by Dr. Schmidt melted at 132·5° C., and had an optical activity of − 298°. By a series of re-crystallisations of the bromocamphorsulphonic acid salt of hydroberberine, the author has separated the last-named base into two optically active bases, which on examination proved to be dextro and lævo-canadine. In all its physical properties, and in its reactions, the lævo variety was found to be identical with the natural canadine above referred to.

Eucalypti Classification.—At a recent meeting of the Linnean Society of N.S.W., Mr. J. H. Maiden (President) showed that *Eucalyptus pulverulenta*, Sims, is conspecific with the "apple or peppermint" of Victoria (one of the trees known as *E. Stuartiana*, F. v. M.) and the "red or black peppermint" of New England (*E. novæ-anglicæ*, Deane and Maiden), both of which he considers to be lanceolar-leaved forms of the species. Mr. Maiden also showed that at least three species of trees have passed under the name of *E. Stuartiana*, F. v. M., and suggested that it be confined to the "apple or but-but" of Victoria and to the "apple or white peppermint" of New South Wales. Mr. Maiden divided the species *E. Gunnii*, Hook. f., into the type-form and four varieties—*vars. acervula, ovata, rubida*, and *maculosa*.

The Constituents of Kousso Flowers.—Lobeck (*Arch der Pharmazie*, 1901, 672) has re-examined the chief constituents of Kousso flowers, and has shown that ordinary kosin in reality consists of two compounds. Merck's kosin was found to consist of yellow needles melting at 142° C., and to possess the composition corresponding to the formula $C_{23}H_{30}O_7$. By a series of recrystallisations from absolute alcohol, a body was obtained melting constantly at 160°–161°. From the mother liquor a second compound of a deep yellow colour, melting at 120°–121° was obtained. One or more other compounds were also present, but were not fully examined. The compound melting at 160°, which the author terms *a*-kosin, gave analytical results which the author claims to agree with the formula $C_{22}H_{26}O_7$, but an inspection of the results of the combustions does not admit a good agreement. The second compound melting at 120° is claimed to have the formula $C_{23}H_{30}O_7$, the formula originally assigned to kosin by Leichsenring, but in this case also we cannot consider the figures are in the best possible agreement with the suggested formula. The bodies protokosin, kosidin, and kosotoxin, all isolated from the flowers, are then described at length, and an examination of the extract of the flowers concludes a useful and interesting paper.

Ammonium Amalgam.—In continuing his researches on ammonium amalgam M. Moissan has arrived at some interesting results. Sodium amalgam was allowed to act upon ammonium iodide in solution in liquid anhydrous ammonia at a temperature of about −39° C. Under these conditions the sodium amalgam reacts upon the ammonium iodide and becomes more fluid, without the formation of any gas. The sodium iodide formed, together with the excess of sodium, was then removed by liquid ammonia at a temperature of −40°, and then with ether at −80° C. The solid ingot thus produced was then placed in a tube kept at −90° and connected with a mercury pump. It was found that a perfect vacuum could be maintained in the apparatus without any gas being given off by the ingot. The temperature was then allowed to rise, when a mixture of ammonia and hydrogen gases in the proportion of two of the former to one of the latter was given off. All these facts would appear to point to the conclusion that the radicle NH_4 is actually present in the metallic mass prepared at −39°, but M. Moissan believes that this is not really the case, there being a possibility that a metallic ammoniacal hydride is formed. He has found that when sodium amalgam reacts with a solution of ammonia in water, there is a slow evolution of gas without foaming. If, however, sodium hydride in solution in sodium amalgam is placed in the same liquid, there is at once a foaming mass produced, which may last for two or three days.—(*Nature*, 65, 1674.)

"C. & D." Nursery Rhymes.

Dr. Wingrove Spratt.

You know that Spratt
Makes puppies fat
When they are sick and lean,
Of finches, owls,
And barnyard fowls
He's benefactor been.

If linnet-love
Or turtle-dove,
Or pigeon, parrot, pug,
Is feeling sick
He cures it quick,
And tucks it up so snug.

There's poultry meal
That makes them feel
As if they ne'er could stop;
While terrier barks
And blithesome larks
Give praise from sky and kop.

The beasties all,
Both great and small,
To worship gather round,
And Wingrove Spratt
Upraising hat,
The hills with joy resound.

Observations and Reflections.

By XRAYSER.

If 1901

is a fair sample year of the twentieth century, the latter is not going to be a success for Britishers. War, rising taxes, declining trade, a resigned acceptance by our nation of at least a second place in the world's competition, small-pox extending in London, pauperism on the increase—these were the principal reflections of which my mind was capable after I had absorbed about a dozen reviews of the past year in the daily and weekly papers. Scarcely a streak of brightness. Has there been no

Immortal Event

in the year's history? No doubt there has; but it may not be evident till a good way on in the century. It was not till a century after that apple fell in the orchard at Woolsthorpe in front of Newton that it was recognised that that little circumstance was the most important event of the seventeenth century. Perhaps Marconi's S or Santos-Dumont's trip round the Eiffel Tower will figure in history as the most remarkable occurrence of 1901.

In Pharmacy

it looks as if the Privy Council Committee on Poisons has been the principal event of the year. In that room at Whitehall the pharmaceutical Ormuzd and Ahriman are striving one against the other for all they are worth. If the former wins, we shall probably have a firm basis to build our progress on during the century; but the success of Ahriman (agent, Mr. Cross, M.P.) will simply mean 1867 to us. I do not believe the intelligent part of the public wants to travel backward in regard to poison-legislation; but if the officials should show a disposition to go that way, it will be we who must lead the combat against them. After all, the chances are that the Committee will produce a report, *et præterea nihil.*

The Mandrake Legend

is honoured with space in the *C. & D.*, which quotes a particular item about it from *Nature*; that journal translated the same from an old Italian manuscript The document has been carefully preserved for over a thousand years in an Italian library, and has now been lovingly transcribed by a Signor Giacosa, so that from first to last it has probably given hundreds of people a lot of trouble. The stuff the ancients wrote about mandrake has just as much sense in it as the first baby-twaddle we came across; yet frivolity so rules the human mind that probably the majority of readers were specially attracted by that paragraph. Can any antiquarian justify the preservation of this rubbish? Would not the world have been benefited if the manuscript had been burned as well as written in the ninth century?

Mr. Pond's Advice

is reasonable, and I will take it. I will possess my soul in patience until the committee sitting in its 10*s.* room shall have agreed upon the defined purpose of the Metropolitan (or London) Chemists' Association. But Mr. Pond's rebukes compel me to repeat that to resolve on creating a society first, and to discover some purpose for it afterwards, is not the usual process; and I should like also to tender the tip to the committee that if there are, as Mr. Pond tell us, "a thousand and one important matters constantly coming before the trade," the one thing concerning them on which they can rely is that they will be lucky if they can hit on the odd one to present to their fellow-pharmacists with a reasonable prospect of our agreeing with them in regard to it.

A Few More Gleanings

from the "Dictionary of National Biography" may perhaps be acceptable. I notice that Richard Battley, the inventor of liquor opii sed., gets a place in its pages. He was born at Wakefield in 1770, where his father was an architect. After studying medicine in London he became an assistant surgeon in the Navy, and saw a good deal of fighting under Sir Sydney Smith. Returning to London he set up as an apothecary in St. Paul's Churchyard, removing later to Fore Street. The Dictionary says "he introduced many important improvements in pharmaceutical operations." He also arranged a museum of materia medica which he made free to all medical students, and he was a generous supporter of the London Eye Infirmary.

John Morris,

a noted geologist, was engaged for some years as a pharmaceutical chemist at Kensington, but his enthusiasm for science seems to have overcome his commercial instincts, and he ultimately retired from business. His "Catalogue of British Fossils," published in 1845, brought him before the geological world, and in 1854 he was appointed Professor of Geology, and in 1877, Emeritus Professor, at University College, London. He died in 1886 at the age of 76.

Edward Blyth

deserves to be bracketed with John Morris. He, too, was born in 1810, and for some years he carried on a small business as a chemist and druggist at Tooting. But his enthusiasm was all devoted to natural history. From his boyhood he spent his early mornings from 4 A.M. collecting butterflies, sketching trees, stuffing birds, and on similar unremunerative labours. He was not a success as a business man, and he ultimately found his proper sphere as curator of the Asiatic Society's museum at Calcutta. Darwin in his "Animals and Plants under Domestication" makes frequent references to Blyth's observations.

Two other Lives

of different character may be quoted. John Case had a sort of chemist's shop in Ludgate Hill about the year 1700. He called himself M.D., but seems to have been more of a quack doctor than anything. He was successor to one Salford, who had taken over the business of the famous William Lilly, the astrologer who claimed to have predicted the fire of London. Case removed Salford and Lilly's signs from over his shop, and substituted one on which was inscribed the rhyme—

Within this place
Lives Doctor Case.

By that distich, wrote Addison, he made more than Dryden got for all his poetical works put together. Case's poetical genius was not exhausted by that effort. Round his pill-boxes was a label printed thus:—

Here's fourteen pills for thirteen pence,
Enough in any man's own conscience.

Case was the hero of a well-known story. He was at a dinner where the famous Dr. Radcliffe proposed as a toast, "Here's to all the fools, your patients, brother Case." "Thank you, good brother," replied Case; "let me have all the fools; you are welcome to the rest." James Morison, the pill-man—"the Hygeist," as he called himself—also figures in the Dictionary. He was born at Bognie, Aberdeenshire, in 1770, and was engaged in commerce in the early part of his life in London, Bordeaux, and the West Indies. Ill health sent him back to London, where he invented his pills, which cured him, he wrote, "after thirty-five years of inexpressible suffering." Between 1830 and 1840 Morison paid to the Government 60,000*l.* for medicine-stamps. He died in Paris in the year 1840.

Editorial Comments.

"To Benefit the Craft."

THIS title we take from Mr. Carteighe's speech at Edinburgh last month. It may be regarded as the moral of his speech. He was thinking not at all of trade or trade-returns, but of the art of pharmacy, which some people name craft to distinguish it from purely commercial pursuits and professional callings. We do not gather from Mr. Carteighe's speech that he deprecates further legislation for "the benefit of the craft," but he did say (we quote from the official report):—

It would not do for them, now that they had got a great mass of registered men throughout the Kingdom, and, of course, a proportionate number in Scotland, to trust to grandmotherly legislation of any sort. It might be necessary even to oppose it, and to raise the question as to whether they should keep up the individual standard of pharmacy in Scotland, or whether they were to become absolute free traders. The position was very nearly coming to that in the United Kingdom. There were times when he sometimes fancied that they might have progressed in the higher branches of pharmacy even better than they had if they had not been trammelled by certain limitations of the Act of Parliament. He did not mean to say he regretted that the Act was ever passed. On the contrary, the 1868 Act had raised the standard of Scottish pharmacy from the

Digitized by Google

lowest scale to a higher level. The Scottish pharmacist might say, "After all, it has not given me much money." The answer to that was, Would he have been better off if he had had no privileges or would he have been worse off? He was bound to say that in his judgment, though the pharmacist was badly enough off as it was, he would have been very much worse off if there had been no Act of Parliament.

Of course the point of view must not be overlooked. We fancy Mr. Carteighe had in his mind's eye men of the type of Macfarlan and Mackay, Borland and Frazer, who by personality and exceptional pharmaceutical ability won professional respect and public influence which are unobtainable by Act of Parliament. The perpetuation of the race of men of that type is as necessary "to benefit the craft" as fresh legislative powers now are for the conservation of such privileges as have been accorded to pharmacists by the Pharmacy Acts. This latter view happens to have been well put by Mr. Richard Bremridge, Pharmaceutical Registrar for Great Britain, in a letter which he has written to an East Anglian newspaper with reference to a speech made at Rye by Mr. Mathews, Secretary of the Central Chamber of Agriculture, regarding the sale of weed-killers and similar poisonous articles (see last week's *C. & D.*, page 1018), Mr. Bremridge refers to the Worcester case which raised the whole question and remarks:—

> The ground for prosecution [in that case] was that the seller had contravened the provisions of the Pharmacy Act (an Act to regulate the sale of poisons), which was passed with a view to securing the safety of the public.
>
> This legislation was the result of the deliberations of a Select Committee of the House of Commons on the Sale of Poisons, which reported to the House: "*That the Bill do provide that no other person shall, after a day to be fixed by the Bill, sell certain dangerous drugs, to be scheduled in the Bill, unless he be examined and registered.*"
>
> The person referred to by Mr. Mathews as having been prosecuted had not been examined, and was not registered, and he sold one of the articles scheduled in the Bill.
>
> The fact of his not being a member of this Society did not enter into the question, and had absolutely nothing whatever to do with it.
>
> Mr. Mathews went on to say that he thought it very inconvenient that farmers should have to go to a duly qualified chemist to buy any weed-killer or sheep-dip, and that there ought to be free trade in the sale of these "useful poisons."
>
> What special virtue is there in allowing everybody to sell poisons freely, when the whole of the agriculturists' demands can be quite easily supplied by the 16,000 chemists and druggists, who are the persons specially provided by statute to meet these requirements?
>
> The indiscriminate distribution of arsenical weed-killers, which can have but very little interest to agriculturists, is fraught with grave danger, as I can testify from the numerous communications I have had on the subject from Coroners.
>
> Killing weeds in garden-paths does not enter very largely into the business of an agriculturist, and, even if it did, it is not essential to use deadly poison, such as arsenic, as any chemist would tell a farmer that diluted sulphuric acid would do quite as well, and could be used with safety, and could be supplied at a cheap rate.
>
> In regard to sheep-dips, these are supplied by registered chemists and druggists in every country town in Great Britain, and as chemists and druggists are in a position to supply all the demands for the poison that agriculturists are likely to require, there does not appear to be any logical ground for advocating *the unrestricted sale, by unqualified persons, of poisonous preparations like sheep-dip and weed-killers.*

We have italicised two portions of the letter as they bring out forcibly the principle which Parliament assented to in 1868, and another which a Government Department is now doing its best to promulgate through the Committee of Inquiry which is now taking evidence. They are exact opposites. This is the position that the craft and the trade must face. King Edward is to open the second Session of his first Parliament on January 16, and in all likelihood there will be proposed by the Privy Council some amendment of the Pharmacy Act, 1868, to modify the principle of examination and registration referred to by Mr. Bremridge. We think the principle is worth fighting for to the utmost, and that the opportunity, when it arises, should be taken to lay before Parliament in the fullest possible manner the methods by which the principle has been evaded since the passing of the Pharmacy Act. We are not anticipating disaster, but we feel that all the Parliamentary forces available to pharmacy, both of Great Britain and Ireland, should be prepared to deal with the matter promptly and thoroughly. Further than the *pro tem.* withdrawal of the Pharmacy Bill, the Pharmaceutical Council in Great Britain has given no sign of preparedness, but we take the Registrar's letter to indicate that the central authority is alive. The Pharmaceutical Council in Ireland waits developments in Great Britain. Neither body can do much as corporations until the Poisons Committee reports; but individual pharmacists should treat the danger as a personal one, and as their influence will in the long run decide the matter, we suggest that they should put the case to their members of Parliament in the pithy way that Mr. Bremridge does. There is no better time for doing this than the beginning of the Session. If reprints of this article will be of any service, we shall gladly send them to subscribers who wish to write to their Members.

The Unity of Matter.

EVER since the time of Prout and Meinecke, in the earlier part of the nineteenth century, many chemists have been more or less completely captivated by the idea that the undoubtedly close approximation of the atomic weights of many of the elements to exact multiples of that of hydrogen indicates the existence of one fundamental material from which all our so-called elements are built up. Perhaps this idea has been less frequently entertained in recent times than it formerly was, yet it has never been altogether extinguished, and to this day it is impossible to overlook the fact that the approximation is in many cases so exceedingly close as to furnish a striking theme to ponder and speculate upon.

The demonstration of the unity of matter—or, at least, of the fact that the atomic weights of all the elements are exact multiples of half the atomic weight of hydrogen—appears to be one aim of a recently-published book on "The Absolute Atomic Weights of the Elements," by Dr. G. D. Hinrichs, Professor of Chemistry in the St. Louis College of Pharmacy. The book itself is far from pleasant reading. We approached the task with no small interest, and with some hopes of having an early and never wholly eradicated leaning towards the Proutian view strengthened and perhaps confirmed. Our disappointment has been extreme. Dr. Hinrichs may have a case that is in some respects good, but assuredly no case, good or bad, can be presented as his is without suffering grievously in consequence. We are deeply interested in the problem of the unity of matter, but we have nothing but condemnation for the gross personal abuse which the author heaps upon a number of chemists whose names we long ago learned to respect, and this for no further reasons, so far as we can ascertain, than that he does not hold the same views as they do, and that they have had the audacity to publish and discuss the results of their experiments. One well-known chemist is described as "this same pettifogging individual," and another as "this High Muckamuck of the National Government." If Dr. Hinrich's case really requires this kind of treatment, it will not unnaturally be regarded as being in a very deplorable plight indeed. Had the author omitted the page after page of abuse which his book unfortunately contains, and rather included in it, in the space that he would have thereby saved, the essential portions of two other (much more costly) books by himself to which he again and again refers the reader for all sorts

Digitized by Google

of information necessary for a proper comprehension of this one, he would at least have been certain to obtain an attentive perusal, whether his arguments were successful or not in carrying conviction. As it is, we take it that few readers who manage to get through the first third of the book will have any inclination to read the remainder.

Dr. Hinrichs has a very great deal to say about what he calls the "*Morbus Stasii*." As far as we can gather, this disease appears to consist, first, in the adoption of mean results, deduced from the separate results of a number of experiments; and, secondly (and chiefly), in the neglect to sufficiently note slight variations in the results of atomic-weight determinations when varying quantities of material are operated upon. It is worth mentioning, in passing, that the author himself adopts mean results when it suits his purpose to do so. We should prefer to have the *Morbus Stasii*, with all the attendant shortcomings, throughout the whole term of our natural life rather than have what we may call the *Morbus Hinrichsii*, as displayed in the book before us, for five minutes. Really Dr. Hinrichs's friends should see to it that he does not publish any more books of this kind.

THE MANDATE AND THE MAN.

We are glad to notice that Mr. Lord Gifford has broken the silence which has marked his career as a pharmaceutical councillor. We know that he attempted on one occasion when an improper motion troubled the Bloomsbury atmosphere to put in his word, but the Chair suppressed him. There is no other evidence of his work as a pharmaceutical councillor. This is not what was expected of Mr. Lord Gifford. He writes this week about his mandate. Six Council-meetings have come and gone without evidence of action on his part to sustain that mandate. We hasten to say that this affection is not peculiar to Mr. Lord Gifford, but he is the last man in the world whom anyone would have expected to be so afflicted. We now have hopes of betterment. Every chair of the one-and-twenty in the Council-chamber should be occupied by a living, working individual, who has views, and can express them; who has ability, and can use it for administrative purposes and for protecting the interests of registered chemists and druggists. Amongst those now on the Council Mr. Lord Gifford stands out as one who for several years worked night and day in fostering views which led to his election and the conferment of the mandate. His responsibilities are proportionately the greater, for if the period of his office were to continue on past lines there would be an end of sending people with mandates to Bloomsbury. It would serve all purposes just as well to return as councillors men of leisure who would accept the office as an honour pure and simple.

"YEAR-BOOK OF PHARMACY."

The changes in the secretaryship of the British Pharmaceutical Conference and the editorship of the *Year-book* are probably responsible for the belated appearance of the *Year-book of Pharmacy* for 1901, and it is, we think, excusable. Mr. J. O. Braithwaite, the Editor, writes an introduction in which the pharmaceutical progress of the year under review (July, 1900, to June, 1901) is well summarised. The abstracts of papers are arranged under "Chemistry," "Materia Medica," "Pharmacy," and "Notes and Formulæ," in each case alphabetical order being adopted. The abstracts are good on the whole and exceptionally "practical" to the working chemist and druggist. The report of the Conference meeting in Dublin prepared by the Secretaries gives all the papers in full, and we notice that our own reports of the discussions have been freely drawn upon for the *Year-book*. The volume is prefaced by an excellent portrait of Mr. G. Claridge-Druce, the President. If there is any point that we can give the Publication Committee it is that the minimum of space should be given to abstracts of papers which have appeared in journals of pharmacy printed in this country, and that special attention should be given to American and Continental pharmaceutical literature. This is disinterested advice so far as the *C. & D.* is concerned, because it bulks well in the *Year-book*, but it is obvious that to many the *Year-book* can only appeal by its freshness, which is minimised by *C. & D.* or *P. J.* appearing on almost every page.

THE "S.P." OF IT.

Here is a paragraph from the *Evening News* (London) which it may be well for our metropolitan readers to "read, mark, and digest":—

> At a St. Pancras inquest the Coroner pointed out that if a qualified medical man had been called in to attend the deceased instead of a chemist the relatives would have been saved the worry and trouble of an inquest. He might have added that in some cases at least the expense of the funeral would be saved into the bargain.

The paragraphist's own opinion is a bit of abuse wholly uncalled for.

SELLING WINES TO CHILDREN.

Chemists and druggists who hold "off" wine-licences will note that the Child Messenger Act came into force on Wednesday, January 1. The full text of the Act is printed in The Chemists' and Druggists' Diary, 1902, page 284. As holders of "off" wine-licences may only sell in reputed pint or quart bottles (duly corked), they are practically exempt from the provisions of the Act, which make sales to persons under 14 years of age illegal, except the intoxicating liquors are sold and delivered "in corked and sealed vessels in quantities of not less than one reputed pint for consumption off the premises only." The Act is applicable to the United Kingdom, and all persons holding beer, spirit, or wine-licences "on" or "off," must observe its provisions. Persons who send children under 14 for intoxicating liquors are also liable to a penalty, but this does not apply to the messengers of licensed persons. We notice that the Secretary of the Croydon Licensed Victuallers' Protection Society is concerned about the application of the Act to chemists, and tells the editor of the *Morning Advertiser*—

> To watch this matter, because if the Act does not affect the chemist we may look for a number of new applications for licences to sell medicated wines at the next brewster sessions. In the prohibition States of America there is no difficulty in obtaining liquor at a chemist's shop, and it is just possible that it may become the custom here for chemists to supply children under age with small quantities of so-called medicated wines—the said wines being highly fortified with spirit.

These remarks show little knowledge of the law, which does not in the least distinguish between the chemist, grocer, and publican, each of whom it regards as the holder of a licence who must conform to the Intoxicating Liquors (Sales to Children) Act—to give it its full title.

THE LACHNANTHES CURE OF CONSUMPTION.

Dr. Alabone has had a long innings in the *Times*, the correspondence concerning it having started at or about the time of the Tuberculosis Congress, and lasted until only two or three weeks ago. Colonel le Poer Trench championed it, and represented its discoverer—Dr. Edwin William Alabone—deregistered by the General Medical Council, as a martyr to professional jealousy. Now at last the mystery, which we may be excused for fancying was almost as important an ingredient in the cure as the lachnanthes, has been abandoned, and in last week's *British Medical Journal* we are told all about the treatment by the proscribed Dr. Alabone's qualified and registered son. Mr. Anslow Alabone gives the details of a complicated treatment as clearly as he can, and it appears from his statement that lachnanthes is, in his opinion, only a subsidiary drug in the

Digitized by Google

cure. "It has power to allay the cough," he remarks, but the main feature in his view is evidently the form of administration. This we describe on another page, and it will be observed that the process seems to be an eclectic one in the fullest sense. The modern open air and diet methods are likewise adopted to a great extent. Some of the patients get better and some get well. But whether the machinery, or the fresh air, or the lachnanthes, is entitled to the credit it would puzzle even Dr. Alabone to explain.

THE YEAR'S FAILURES.

A statistical abstract of failures and of bills of sale during 1901 published in *Kemp's Mercantile Gazette* shows that the total number of "gazetted" failures in the United Kingdom was 5,174, as against 5,315 in 1900. In the class devoted to "chemists and druggists" the bankruptcies numbered 73, an increase of 15 on the previous year; there were 66 deeds of arrangement, a decrease of 2, and 124 bills of sale, being 13 less than those of 1990. The highest number of failures (904) occurred, as usual, in the grocery and provision trades, but even these, in spite of bad trade, show a decrease of 55 on the previous year.

THE BACON-SHAKESPERE CONTROVERSY.

Mrs. Gallup's discovery of a cypher which proves to her satisfaction that Sir Francis Bacon was a son of Queen Elizabeth and the writer of Shakespere's plays has brought the newspapers, especially the *Times*, a rich harvest of "copy" at a welcome time. Bacon's commonplace-book figures in the controversy, and Professor Silvanus P. Thompson contributes to the discussion the following interesting note:—

This was not the only commonplace-book kept by Bacon. He had another, a miscellaneous collection of scraps on natural history, a part of which was published in 1679 as "Physiological Remains." Amongst these remains there is a list, half English, half Latin, of bodies "attractive and non-attractive." This list has been described as an account of electrical experiments discovered by Bacon himself. Another almost identical list of electrical bodies, in Latin, and also posthumously published in Vol. XX. of the "Philosophical Transactions of the Royal Society," is credited to Dr. Robert Plot, and was similarly disinterred after its author's death. On examining critically into both these lists it is found that substantially each of them is a transcript, without acknowledgment, of the list of electrics given in Book II. of the famous "De Magnete" of Dr. William Gilbert, published in 1600. Unless the pro-Baconians are sufficiently hardy to suggest, on the strength of this find, that Bacon also wrote the "De Magnete" of Gilbert as well as all Shakespeare's plays and all Spenser's poems and all "Burton's Anatomy," they must admit that his habit of copying down other men's sayings or inventions into notebooks of his own was at least liable to confuse their true authorship.

It is unlikely that in 1600 Bacon had begun to write the undisputed works which have made him famous.

On Citron Oil.*

By DR. SALVATORE GULLI.

IN the district of Reggio Calabria and in Sicily the three following kinds of citrons are cultivated:—

1. *Citrus Medica*, var. *Vulgaris* (Risso).—Its fruit has a thick rind and a hard flesh; it is known in Calabria and in Sicily by the name of "Cedro."

2. *Citrus Medica*, var. *Gibocarpa* or *Citrea* (Risso).—It is a small citron known as "Cedrino."

3. *Citrus Medica*, var. *Rhegina* (Pasquale).—Its fruit is rather big, being about two decimeters in length, and it has an abundant eatable flesh, which surrounds the acid-bitter juicy part; known by the name of "Cedrone."

These three varieties of citrons, when treated by hand-pressure, give an essential oil; the yield is limited, however, 1,000 citrons giving an average of from 300 to 350 grammes of oil.

No distinction between the varieties is commonly made on the market because they have almost identical characters. In fact, in Sicily and at Reggio Calabria only the so-called "essenza di cedro or cedrino" is known, which, in England, is understood by the name of citron oil and in France by that of "essence de cédrat." The fruits, however, as a rule are not used for making the oil, but are exported in brine, and consist of all the three kinds confusedly put together. The variety "cedrone" is largely demanded on account of the various applications of its rind. The oil therefore is only made to special order at the period of the fruit-crop, not only in Sicily but also at Reggio Calabria, where there are citron-plantations.

Pure citron oil is rather rare on the market, owing to the fact that makers mix it with less or more abundant portions of lemon oil, and bitter or sweet orange oil. I give below the results of an examination of three specimens of citron oil: No. 1 is pure oil made by myself last year from "cedri" No. 2 is commercial citron oil, containing a great deal of lemon oil; No. 3 is a mixture of lemon oil, of bitter and sweet orange oil, and of lime oil, with small portions of citron oil, as the maker afterwards acknowledged:—

No.	Sp. Gr.	Rotation (100 m.m. tube)
1	0·8703	+67°
2	0·858	+62° 13′
3	0·862	+78° 8′

The two characters—viz., sp. gr. and rotation—are enough to distinguish the difference between pure oil and commercial adulterated oil.

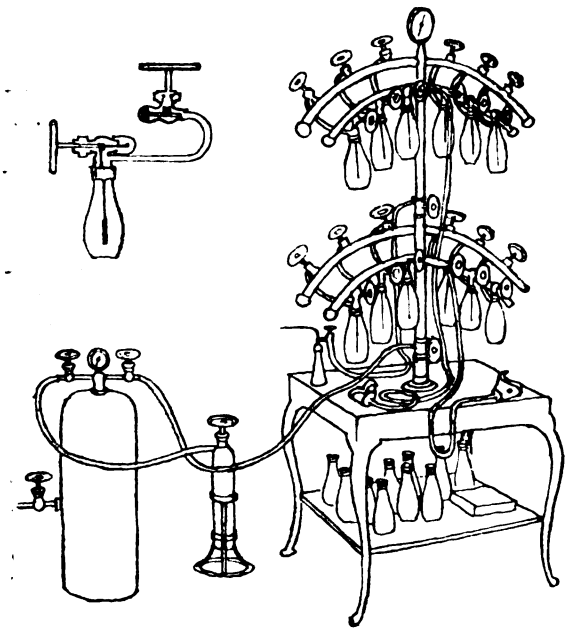
* Compare with note in the *C. & D.*, December 14, 1901, p. 978.

Reviews.

Elementary Ophthalmic Optics, including Ophthalmoscopy and Retinoscopy. By J. HERBERT PARSONS, B.S., B.Sc., F.R.C.S. $8\frac{3}{4} \times 5\frac{3}{4}$. Pp. 182. 6*s.* 6*d.* Churchill.

WRITTEN by the curator of the Royal London (Moorfields) Ophthalmic Hospital, the book is intended to give students of ophthalmology an intelligent knowledge of the optical phenomena involved. The book is mainly mathematical, but the mathematics required are only elementary. Chemists who are taking the full examination of the Spectacle-makers' Company will find this book useful as a preparation for the mathematical part of optics.

The Preservation of the Hair. By R. W. LEFTWICH, M.D. $7\frac{1}{2} \times 4\frac{3}{4}$. Pp. 127. Frontispiece. 2*s.* net. Simpkin, Marshall & Co.



DR. LEFTWICH has produced a readable book on the hair, and one as useful to chemists who put up preparations for the hair as to the hairdresser, to whom parts of it are especially addressed. The chapter on the effects of toilet-preparations on the strength of the hair is very interesting. The experiments were conducted with hair that breaks when subjected to a weight of 7 oz. The hair was immersed for half an hour in various preparations, and its breaking strength again tested. Liquid paraffin and castor oil increased the strength of the hair, whilst strong acetic acid, liquid ammonia, tincture of quillaia, benzol, bay rum, and rectified spirit, decreased the breaking-strength only slightly, but not so much as plain water. A few formulæ are given in an appendix.

UNQUALIFIED DISPENSERS.—A correspondent of the *British Medical Journal*, writing in reference to the General Medical Council's decision on doctors' shops, says:—"Persons entitled to use the abbreviation "M.P.S." after their names must be subscribers to the Society. This is the crux of the whole question of prosecution. Only under very exceptional circumstances will the Pharmaceutical Society prosecute its own members. For it derives its income from them, and it is an almost universal custom for these members to employ 'unqualified'—that is to say, non-qualified, assistants."

Digitized by Google

The Alabone Treatment.

WE mentioned some time ago correspondence in the leading morning newspapers regarding Dr. Alabone's treatment of tuberculosis with lachnanthes. Dr. Alabone has a son, Mr. M. Anslow Alabone (who holds the Scotch Triple qualification), and he took part in the controversy, promising to contribute to the *British Medical Journal* a full account of the treatment. This was printed in the *B.M.J.* for December 28, 1901. The essential part of the treatmens appears to be the spraying of medicaments into the bronchi of the patients by means of an elaborate spray-producer actuated by a pump and cylinder, the latter containing a compressed mixture of oxygen and air. This Mr. Anslow Alabone describes at some length, but we reproduce in outline the apparatus figured in our contemporary.

The elaborate nature of the apparatus appears to be necessary for producing sprays of different degrees of comminution and in order to unite the contents of more than one flask in one spray. The following are the prescriptions used. We print them as they are in the *B.M.J.*, Mr. Anslow Alabone being responsible for the errors:—

Prescription 1.

℞	Formic aldehyde	... ...	mxx increasing to 3j.
	Menthol	... ...	gr. x.
	Eucalyptus	... ...	mv.
	Mollueine	... ...	3j.

Prescription 2.

℞	R. lachnanthes	... ...	mxx.
	Creosote	... ...	miv.
	Pinus canadensis	... ...	mxx.
	Viscidine	... ...	3j.

These are for the first stage. For the breaking-down stage the following are used:—

Prescription 3.

℞	Vin ipecac.	... ...	mx.
	Vin antimon.	... ...	mv.
	Guiac. carb.	... ...	gr. v.
	R. benz. co.	... ...	3j.

Prescription 4.

℞	Pix. liq.	... ...	mx.
	Terebinth	... ...	mv.
	Balsam Peru	... ...	mv.
	R. benz. co.	... ...	3j.

Prescription 5.

℞	Thymol	... ...	gr. x.
	Eucalyptol	... ...	mxv.
	Menthol	... ...	gr. v.
	Viscidine	... ...	3j.

Prescription 6.

℞	R. lachnanthes	... ...	mxx.
	Pinus Canadensis	... ...	mxv.
	Calendulæ	... ...	mvi.
	Viscidine	... ...	3j.

Should any of these cause irritation or coughing one flask is filled with Prescription 7, which is used for two minutes before and after the inhalation, or sometimes at the same time.

Prescription 7.

℞	Eucalyptol	... ...	mxx.
	Menthol	... ...	gr. v.
	Ol. ricini	... ...	mx.
	Viscidine	... ...	3j.

Later, when the patient has been inhaling for some time (say a month) with beneficial results, a prescription with astringents such as the following is used:—

Prescription 8.

	Terebinth	... ...	mxx.
	R. hamamelidis	... ...	mxx.
	Mollueine	... ...	3j.

In cases of hæmorrhage one of the following is given:—

Prescription 9.

	Ext. ergot liq.	... ...	mxx.
	Terebinth	... ...	mx.
	Viscidine	... ...	3j.

Prescription 10.

℞	Hamamelidis	... ...	3j.
	Terebinth	... ...	mxv.
	Viscidine	... ...	3j.

Prescription 11.

℞	Hamamelidis	... ...	3j.
	Renaglandin	... ...	3j.

A syrup is also prescribed containing

℞ Lachnanthes ... ... miij. to xxv.

with one or more of the following:—

Calcium hypophosphite.	
Sodium hypophosphite.	
Potassium hypophosphite.	
Iron hypophosphite.	
Manganese hypophosphite	ad gr. v. to gr. x.
Quinine hypophosphite ...	gr. ii. to gr. v.

and

	Sy. simplex	... ...	3ss.
	Aqua ad	... ...	3j.

made into a syrup. To be taken first thing in the morning and after the last meal at night.

"Mollueine" is supplied by Mr. J. Wells Wood, M.P.S., Stoke Newington and South Hackney, and is a mixture obtained by the action of superheated steam on fats, practically a glycerin of lower sp. gr. than the ordinary B.P. product. "Viscidine" is also obtained from Mr. J. W. Wood, and is a preparation of hydrocarbon oil.

AMERICAN DRUGS IN MEXICO.—American exporters are gradually getting a small hold on the drug-business of Mexico which until quite recently was almost exclusively French. Several proprietary medicines are being well advertised in Mexico by American houses.—*Modern Mexico.*

BIG SPOONFULS.—The following curious suggestion is made by the *Australian Medical Gazette* anent the tablespoonful as a measure:—"The easiest way out of the difficulty is to let pharmacists know that one tablespoonful is considered by medical practitioners as approximately 1 oz., the dessertspoonful as ½ oz., and the teaspoonful as 2 dr. The fact being so self-evident, it seems only reasonable to expect that the formal recognition of it would be rapid." Whilst the medical practitioners are about it, they might tell the pharmacists how to put a quart into a pint measure, or a gallon into a Winchester quart bottle.

Fictional Pharmacy.

MR. H. G. WELLS tells in one of the December monthlies a wonderful tale about an elixir vitæ which quickened nervous impulses to a terrific degree. It does not bear quotation, but here is a passage from a *Windsor Magazine* tale by Mr. H. A. Hering, which is worth preserving in a journal of pharmacy. It tells how the Duke of Guiseley, Prime Minister of these realms, was much worried, and during his afternoon's stroll felt thirsty. He could not venture into a public-house, but—

Two doors further on was a chemist's shop. That would do. The Duke walked in and asked for a glass of water.

The chemist's assistant, who was at that moment engaged behind the counter in working up the atomic weights for an examination, looked up abstractedly.

"Water? Certainly, sir," he said, and with his head full of symbols and figures he groped for the bottle of distilled water which was handy on the shelf. Absently he filled a glass and gave it to the Prime Minister, who drank and was refreshed. The shilling left on the counter recalled the assistant's wandering thoughts.

"He must have wanted it badly," he said to himself, and then his eye wandered to the shelf in estimation of the value given. A wave of horror overspread the assistant's face. He had used the wrong bottle.

"Good heavens!" he cried; "I've given him the Water of Lethe!"

And so he had.

Now the peculiarity of the Water of Lethe was that it brought absolute forgetfulness to the mind of the drinker for a space of time depending on the size of the draught. The chemist's assistant had pretty well filled the glass, and the Prime Minister had drunk it to the last drop, for he was very thirsty; and cold sweat gathered on the assistant's brow when, after a brief calculation, he knew that the gentleman who had left the shilling on the counter would for the space of three years and a month forget all that he had ever learned, all that had gone before, even his own name and every debt he owed. He felt a little easier when he reflected that the drinker would be a long time before he knew who was to blame for the catastrophe, and much might happen in the interval.

The Water of Lethe was in much request by ladies or gentlemen who had done things which prevented their consciences from resting at nights. Two drops would lull the most vigorous conscience to sleep for eight hours, and usually the water was not taken in greater quantities. Never till that night had a whole glassful been drunk straight off, and it was particularly unfortunate that the drinker should have been the Prime Minister of England, for his mind held information of extreme value to the nation.

After leaving the shop he was conscious of a soothing sensation. All the troubles of the day seemed to disappear. Then he forgot there ever were troubles—ever were pleasures—and the Prime Minister of England walked blindly across the road at the imminent risk of his life, sat down on a seat in a park, and nodded benevolently at the moon and the stars, blinking like a new-born babe.

By-and-by darkness came on, and two burglars on business bent appeared. They relieved the Prime Minister of his watch, pocket-book and valuables, swopped hats and overcoat with him, and left him weeping on the grass. Some minutes afterwards a discharged valet of the Duke's came along, recognised his late master, and thinking him drunk and incapable took him to his room in a street off Gray's Inn Road, where he divested him of his dress-clothes, putting a rough tweed suit of his own on the unprotesting Duke. Out of revenge he then cut the Prime Minister's pointed beard close to the chin, and considerably shortened also his venerable locks. He then bundled the grizzled old man in a pilot-jacket into a cab and sent him off to a dissenting parson, who lived in Bethnal Green, and whose card he happened to possess. The old man was taken in and looked upon for three years as a long-lost uncle of the parson's wife, who had emigrated to Australia many years before, and had unexpectedly returned home. These good people taught the Duke (now Sam Bailey) to speak and read and cipher, and his progress was so rapid that before the year was out he had little difficulty in getting employment in the offices of a firm of indigo-merchants at a salary of 30*s.* a week. For three years and two months and a day this went on, when at length Sam Bailey awoke one morning again the Duke of Guisely. He tried to explain matters, but of course no one would believe his story, and his identite was only settled by means of the Permanent Under-Secretary at the Foreign Office. The mystery of the disappearancy and re-appearance of the Prime Minister was never solved.

Two people could have thrown light upon the matter—the one a chemist's assistant who is always failing in his examinations owing to his defective knowledge of the atomic weights; the other a red-whiskered man who keeps a low public house in the neighbourhood of Drury Lane, but, somehow, for reasons of their own, they elected to keep silence.

The tale is a readable one, and though the Water of Lethe is not now a pharmaceutical preparation, the picture of the chemist's assistant abstractedly wrestling with the atomic weights, and at the same time discharging his ordinary duties, will strike a responsive thrill in many a pharmacist's breast.

"PICK-ME-UPS."

Mr. Sidney Thompson is a writer whom we may hear more about if he goes on as he has lately been doing in the *Daily Mail*. In Wednesday's issue he says:—

Walking down Fleet Street [how Johnsonian] in the company of a man who seemed in complete health, I was startled by his remark, as we passed a chemist's shop, "That's my chemist."

"Do you keep a tame chemist to supply you with perennial corn-plasters and tooth-brushes?" I asked.

"Of course not," he said, petulantly, as one whose serious malady is being treated flippantly; "I always go there for my pick-me-up in the morning."

And Mr. Thompson proceeds to tell how a little inquiry among other friends served to convince him that most of them had their own particular chemists. From two or three chemists of large experience—one whose shop in the neighbourhood of Piccadilly Circus is almost a club, where you may meet half the habitués of St. James's and Pall-mall at any hour of the day; and another who has his dwelling and connection in the East-end—he gathered many singular and striking facts—which, indeed, they are. One chemist told him that 50 per cent. of the men in any profession are addicted to drugs of some kind—"addicted" makes the thing look quite horrible, but let this "chemist" speak for himself:—

A man was in here an hour ago, whose name you know, who comes in every fortnight or so and buys a bottle of cocaine solution as big as this—he touched a huge cut-glass decanter of perfume. He has his doctor's prescription all right, so we can do nothing. Another comes in at all sorts of times, and asks leave to come behind the counter for a moment, to inject cocaine into his leg. A third, a big West-end doctor, is always rushing in here, or to whatever chemist's shop he finds himself nearest when he is tired, and gets someone to inject strychnine into his arm. Another—a doctor too—who depends on cocaine for all his energy, is a source of constant amusement to us by his excuses for the amount of cocaine he gets through.

. . . . . .

People dose themselves according to the one or two obvious symptoms, which are generally misleading; and off they rush to buy a bottle of tabloids, and probably do themselves a good deal of injury. But some of the tabloids are really dangerous when taken indiscriminately.

These things, for instance, that contain strychnine and iron and quinine—I always make the purchasers sign the poison-book for them, but plenty of chemists are not so scrupulous. People, buy and take them by the dozen, with the result that their systems get full of strychnine, the arterial pressure is increased, with a probable resultant danger of aneurism, and they keep themselves in a constant state of mental excitement and irritation.

After getting this precious copy, Mr. Thompson consulted a doctor who had tabloids "on the brain," and who gave the interviewer "one startling piece of information that may or may not throw some light on the matter. It was once suggested, it appears, by no smaller a person than an ex-President of the Pharmaceutical Society, that if a customer wrote down what he wanted on a piece of paper, and appended cryptic initials, a chemist would be justified in regarding the document as a prescription!

"The drug-maniacs do not confine themselves to the few poisons named. Opium, though it has never come into general use in England, is to be had cheaply and easily enough in certain provincial districts." This is the pure Sidney Thompson.

Legal Reports.

Poisoned Grain Prohibition Act.

ON Tuesday, December 31, 1901, Thomas William Bates, chemist and druggist, High Street, Colchester, appeared before the Mayor and other magistrates on a summons taken under Section 2 of the Act for selling, between November 10 and 20, to H. W. Hedges, a farmer, poisonous grain calculated to destroy life.

Mr. F. Howe Colam, barrister, who appeared on behalf of the R.S.P.C.A., said the offence was all the more serious because, as the seller of the poisoned grain, he offered the opportunity for another very serious offence to be committed. The proceedings had been taken as a deterrent. All over the country complaints had been received as to poisoned grain and meat being laid down—a very dangerous practice which should be put down at once.

Mr. Bates (interposing): I hope your Worships won't think we chemists poison meat.

Inspector Summons said on December 2 he went with Inspector Robinson, R.S.P.C.A., to Mr. Bates's shop, and told him that he had come respecting some wheat which had been laid down in Colchester by Mr. Hedges, and which, on being analysed, was found to contain strychnine. Mr. Bates said, "I remember selling Mr. Hedges some poisoned wheat. I thought he wanted it to kill mice and rats. I prepared it myself." Defendant added that he would never do it again.

Henry William Hedges, the farmer, was then charged with "knowingly and wilfully laying, putting, and placing in a field" poisonous grain calculated to destroy life.—He pleaded guilty.

Mr. Colam said defendant had admitted laying the grain on his ground, and several dead birds were found lying about. On examination they were found to have been killed by strychnine. Any animal picking up these dead birds might itself be poisoned.

Mr. Bates (rising excitedly): I deny it; it's not true. A cat could eat several poisoned birds.

Other evidence was called; Mr. J. F. Marlar, chemist and analyst, deposing to finding in the crops and intestines of the sparrows strychnine in sufficient quantities to kill.

The Bench held that there had been a breach of the law in each case, and fined each defendant 5*s.* and costs.

Sale of Food and Drugs Act.

ALMOND OIL.

AT the Mansion House (London) Police Court on December 31, 1901, Mr. G. S. Boutall, chemist and druggist, was summoned for selling 6 oz. of almond oil not of the nature, &c, demanded. Mr. Kebble was for the defence. After evidence as to purchase had been given, the inspector was cross-examined as to a conversation that took place between him and Mr. Beckwith (Mr. Boutall's manager, who sold the oil). The inspector stated that he was not told anything about the article not being of B P. quality until after he had paid for it; but, on further cross-examination, he admitted he was not quite prepared to swear to that. The bottle containing the almond oil was labelled, in addition to the English name, "Ol. Amygd. Dulc. Persic." Asked if almond oil is in the Pharmacopœia, he said it is, but "Persic." is not. As "Persic." is not in the B.P., it is therefore not a drug. It was pointed out that the wholesale price of peach-kernel oil is 1*s.* 2*d.* and of almond oil 2*s.* 2*d.* per lb. For the defence it was contended that peach-kernel oil is a commercial variety of almond oil—a wholesale price-list being put in in evidence; that, not being a drug, as mentioned by the inspector, the summons was bad; and that, being labelled as it was, the purchaser had proper legal warning that he was not getting the B.P. variety. Mr. Beckwith said he recognised Mr. May as an inspector, and that made him careful to label the article correctly. Before receiving payment he told the inspector he was supplying him with Persian almond oil. He was under the impression that ol. amygd. persic. meant almond oil expressed in Persia. He did not think the label was contradictory. He regarded the addition in writing ("Ol. Amygd. Dulc. Persic.") as an explanation. Dr. Teed, public analyst for the City of London, gave evidence during the hearing of the case as to the meaning of the words added to the label. He said the botanical name of the peach-tree is *Amygdalus persicanus*. He did not think the oil from it harmful, but it is excluded from the Pharmacopœia. He created some amusement among the chemists present by informing the Court that when the public ask for almond oil chemists should supply the B.P. oil, but when "oil of almonds" was bespoken he thought the essential oil of almonds is wanted. The Magistrate (Mr. Alderman Vaughan Morgan) dismissed the case on the facts.

BORIC-ACID OINTMENT.

IMMEDIATELY after the above case, Mr. F. Boxall, chemist, 128 Fleet Street, E.C., was charged with selling boric-acid ointment containing 8 per cent. of boric acic instead of 10 per cent. Mr. Kirby (of Neve, Beck, & Kirby), on behalf of the Chemists' Defence Association, appeared for defendant, and pleaded not guilty. Mr. Kirby explained that the ointment is, under certain circumstances, difficult to mix so as to be sure that the powder is evenly distributed. There could be no suggestion of fraud in the case, as the cost of the boric acid is less than that of the ointment. Mr. William Johnston, pharmaceutical chemist, gave evidence on that point. He said one could not be sure of always getting the ointment nicely mixed. It might be done perhaps ninety-nine times out of a hundred, and then the hundredth time it might go lumpy through unequal cooling, which it was not possible to always avoid. In answer to questions by the Magistrate and counsel on both sides, he gave it as his opinion that that was the explanation of the deficiency in the present instance, and that the ointment would be equally effectual as an antiseptic in the dressing of wounds. The medical officer of health for the City gave it as his opinion that a purchaser would be prejudiced medically by being supplied with an ointment containing 8 per cent. of acid instead of 10.

The Magistrate thought the case was not a very serious one, and imposed a penalty of 10*s.*, and 14*s.* 6*d.* costs.

Deeds of Arrangement.

Jabez Meadmore, 329 Barking Road, East Ham, drug and chemical vendor.

Bankruptcy Report.

Re ROGERS BROTHERS, 21 Mincing Lane, E.C., Colonial Brokers.

THE first meeting of creditors was held on December 31 at the London Bankruptcy Court before Mr. C. A. Pope, Assistant Receiver, under the failure of E. B. Rogers and H. N. E. Rogers, trading in partnership as above. The failure of the firm is attributed to transactions in bills of exchange for the accommodation of themselves and other firms. Having dealt with proofs amounting to 66,987*l.* the Chairman reported that the debtors had been very closely associated with four other firms who were also in the Court, viz.—Messrs. Wallis, Sons & Co., Mr. R. Newton, Messrs. S. & E. Ransome, and Messrs. Thomas & Short. No statement of affairs had yet been filed, and owing to the complicated nature of the firm's transactions some time must elapse before the accounts would be completed. The debtors had alleged that many of the transactions were entered into by a clerk without their cognisance, but that was entirely denied by the clerk in question, and the matter would have to be closely investigated when the debtors attended the Court for public examination on February 19. The principal asset in the joint

Digitized by Google

estate was book debts for 40,000*l.*, which, however, were only expected to realise between 3,000*l.* and 4,000*l.* Mr. Horace Barrett, as representing creditors for over 25,500*l.*, moved a resolution for Mr. S. P. Child, chartered accountant, to act as trustee and administer the estate in bankruptcy. An objection was raised on the ground that Mr. Child was the trustee *re* Ransome, and as such might be called upon to deal with conflicting interests. After some discussion the resolution was carried, it being further decided that in the event of Mr. Child's appointment not being certified by the Board of Trade, Mr. Harold Walters (Curtis, Thompson & Co.) shall fill the post. The following are amongst the largest creditors:—

SEQUESTRATION.

Menzies, James, 81 Jamaica Street, Glasgow, chemist. Creditors to meet in the Faculty Hall, St. George's Place, Glasgow, January 7, at 12 o'clock. Stewart, Learmont & Marshall, writers, 180 Hope Street, Glasgow, agents.

New Companies & Company News.

BROOKS-WATSON DAYLIGHT CAMERA COMPANY (LIMITED).—Capital 74,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with A. A. Brooks and G. A. Watson, and to carry on the business of manufacturers of, and dealers in, photographic films, plates, apparatus and materials, &c.

COAD'S REFINERY (LIMITED).—Capital 7,000*l.*, in 1*l.* shares. Objects: To acquire the benefit of an invention relating to the treatment of fat, and to carry the business of reducers and purifiers of fat and other substances, chemists, druggists, &c. Registered office, 4 Mitre Court, Fleet Street, E.C.

THOMAS ILLINGWORTH & Co. (LIMITED).—Capital 20,000*l*, in 5*l.* shares (1,600 preference). Objects: To acquire and carry on the business of a manufacturer of photographic papers, dealer in photographic materials and utensils, photographic enlarger and printer, &c., carried on by T. Illingworth as "Thomas Illingworth & Co." T. Illingworth is permanent managing director.

CAMERA CLUB COMPANY (LIMITED).—Capital 4,000*l.*, in 6,000 preference shares of 10*s.* each and 1,000 ordinary shares of 1*l.* each. Objects: To acquire the business of the Camera Club Company (Limited) (now in liquidation), to carry on the same, and to provide and maintain a club-house, dark-rooms, studios, workshops, photographic, scientific, and mechanical apparatus, artists' requisites, books, periodicals, and other conveniences for members and their friends. Registered office, 28 Charing Cross Road, S.W.

SOMERSET TEETH COMPANY (LIMITED).—Capital 1,000*l.*, in 1*l.* shares. Objects: To carry on at 151 Strand, W.C., or elsewhere, the business of manufacturers of and dealers in artificial teeth, dental, chemical, surgical, and anatomical apparatus and appliances, &c., and to secure the services of qualified surgeon-dentists, medical practitioners, and chemists. The first subscribers are:—D. B. Bryett, 9 Sloane Square, S.W., estate agent; T. Fryer, 3 Pom Place, South Kensington, engineer; J. Payton, 54 Sloane Square, S.W., solicitor; F. Richardson, 354 Ivydale Road, Nunhead, estate agent; W. H. Mann, 12 Lower Grosvenor Place, S.W., estate agent; E. B. Eyre, 13 Lower Grosvenor Place, S.W., art valuer; and H. J. Offer, 81 Elizabeth Street, Eaton Square, S.W., estate agent. No initial public issue. Registered without articles of association.

G. H. SCOTT & Co. (LIMITED).—Capital 10,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on by J. Robinson, G. H. Scott, and F. Robinson, as "G. H. Scott & Co.," and to carry on the business of chemical manufacturers, indiarubber and indiarubber substitute manufacturers, druggists, drysalters, oil and colourmen, importers, exporters, manufacturers of and dealers in pharmaceutical, medicinal, chemical, industrial, and other preparations, dyeware, paint, and colour grinders, makers of patent or proprietary articles, manufacturers of electrical, chemical, photographic, surgical and scientific apparatus and materials, indiarubber goods, waterproofs, leather goods and electric cables, &c. The first directors are O. M. Wihl, P. Ireland, and F. Murgatroyd. Registered office, The Hague Bar Works, Hague Bar, New Mills, Derby.

FULLER & Co. (LIMITED).—Capital 2,000*l.*, in 1*l.* shares. Objects: To acquire the business carried on at 18 Rampant Horse Street, Norwich, as "Fuller & Co.," to adopt an agreement with T. B. Fuller, and to carry on the business of wholesale and retail druggists, chemists, drysalters, oil and colour men, booksellers, perfumers, dealers in proprietary articles, makers of photographic, surgical, and scientific apparatus and materials, &c. The first subscribers are:—T. B. Fuller, 68 Mill Hill Road, Norwich, chemist; Esther Fuller, 68 Mill Hill Road, Norwich; Miss E. M. Fuller, 68 Mill Hill Road, Norwich; H. E. Fuller, 70 Mill Hill Road, Norwich, chemist; Clare Mary Fuller, 70 Mill Hill Road, Norwich; C. Morgan, 92 Mill Hill Road, Norwich, evangelist; and A. E. King, 113 Rupert Street, Norwich, chemist. No initial public issue. T. B. Fuller and A. E. King are joint managing directors.

BREEDEN & Co. (LIMITED).—Capital 800*l.*, in 1*l.* shares. Objects: To acquire and carry on the business of dispensing-chemists, patent-medicine vendors, medical herbalists, and drug-merchants, now carried on by Gedge & Co., at Fishponds, Bristol, and to carry on the business of wholesale and retail chemists and druggists, manufacturers and vendors of patent medicines, drysalters, medical herbalists, tobacconists, oilmen, mineral-water manufacturers, &c., and to employ qualified persons as chemists, dentists, opticians, or otherwise. The first subscribers are:—E. J. F. Breeden, Caledonian House, Fishponds, Bristol, wholesale and manufacturing chemist; H. Skelton, M.D., Overn Hill, Downend, Bristol; C. Bernard, Fishponds, Bristol, surgeon; T. Winslow, Fishponds Road, Bristol, draper; E. B. O. Stone, 2 Glebe Road, St. George, Bristol; E. P. Breeden, Caledonian House, Fishponds, Bristol; and Miss B. A. Clark, Caledonian House, Fishponds, Bristol. No initial public ifsue. E. J. F. Breeden is managing director. Registered office, Caledonian House, Fishponds, Bristol.

BAD-NAUHEIM NATURAL CARBONIC SPRINGS (LIMITED).—Capital 46,000*l.*, in 1*l.* shares (10,000 deferred). Objects: To acquire certain lands, buildings, and springs at Bad-Nauheim in the Grand Duchy of Hesse, Germany, and the business of the Bad-Nauheimer Kühlensaure Werke, to adopt an agreement with the said old company, and to carry on the business of mineral-spring proprietors, mineral water manufacturers, bottle-makers, bottlers, and makers of all drinks and articles sold by licensed victuallers, brewers, grocers, chemists, and others. The subscribers are: R. Knapp, "Palmyra," Banstead Road, Purley, Surrey, secretary; G. Morrison, 16 Bisham Gardens, Highgate, N., clerk; R. Garschagenjr, Pomfret House, Sunbury-on-Thames, clerk; E. Whitney, 9 Denholme Road, Maida Hill, W., clerk; R. Foord, 40 Dresden Road, Hornsey Lane, N., accountant; E. Campbell, 19 Sisters' Avenue, S.W., manager; and Mr. F. G. Whitfield, "Morven," Geneva Road, Kingston-on-Thames, manager. No initial public issue. The first directors are T. R. Dewar and W. Kern, each of whom may retain office so long as he holds 12,000 shares. Registered office, 81 Commercial Road, Lambeth, S.E.

Digitized by Google

SHIRLEY BROTHERS (LIMITED).—Mr. Arthur Shirley informs us that he has been appointed managing director of this company, in continuation of his management of the business since its inception. He will join the board after allotment.

BADISCHE ANILIN UND SODAFABRIK OF MANHEIM.—This company, which is especially known for its invention of artificial indigo, has declared a dividend of 24 per cent. for the past year. The capital on which this dividend is paid is 21,000,000m.

LONDON PRODUCE CLEARING-HOUSE (LIMITED).—The directors recommend the following dividends:—4*s.* per share on the ordinary shares (making with the interim dividend 12 per cent. per annum), and 25*l.* per share on the founders' shares, carrying forward about 11,000*l.*

TAYLORS' DRUG COMPANY (LIMITED).—At the annual general meeting held in Leeds, on December 24, after placing 25 per cent. of the net profits to the reserve account, a dividend of 10 per cent. (free of income-tax) was declared, and a balance of 7,688*l.* 7*s.* 4*d.* carried forward to next year's account.

PARKE'S DRUG STORES (LIMITED).—At the meeting of the shareholders of this company held at Winchester House, E.C., on December 30, 1901, Mr. P. Warnford Davis, the chairman, in moving the adoption of the report (which was summarised in the last issue of THE CHEMIST AND DRUGGIST) spoke about the business of the year in some detail, and in the course of his observations stated that the company has started a laboratory for the manufacture and packing of its own specialities. This has been done because some of the company's competitors work on a very large scale and the directors want to keep pace with them. The motion for the adoption of the report was seconded by Mr. Andrew Chatto and carried. The retiring directors and auditors were then re-elected.

VINOLIA COMPANY (LIMITED).—The report of the directors for the year which ended on August 31, 1901, states that the net profit was 20,016*l.*, plus the balance brought forward, 385*l.*, and adjustment of income-tax account, &c., 312*l.*, making a total of 20,694*l.* 1,500*l.* has been written off Consols. The directors recommend a dividend on the ordinary shares at 8 per cent. per annum and to place to reserve 2,500*l.*, leaving to be carried forward 444*l.* They add that during the year, there has been a substantial increase in the sales over those of the previous year, and the profits would have been greater but for the exceptionally high prices of raw materials and special expenses, amounting to 1,470*l.*, incurred in connection with printing and boxmaking works, which are now paying their way. The directors do not consider that the present phenomenally high prices of raw materials will be permanent. The growth of the business necessitated provision for the increased distillation of glycerin, and a new building was erected for extra soap frames, and for drying, cutting and storing soap, while a new engine and engine house have also been put down. The balance of 1,673*l.* from the Vinolia War fund, which amounted to 11,673*l.*, was paid to the Lord Mayor's Fund.

Festivities.

LEONARD'S BALL.

The employés of Leonard's Medical Halls, Dublin, held their ball at 76 Dame Street, on Saturday, December 28, 1901. The party was opened at 8 P.M., and dancing, singing, and gaiety of all kinds were kept up without flagging until 6.30 A.M. of the following morning. Supper was served at 2 A.M., and the usual toasts of prosperity to the proprietor, and success to the staff, were proposed.

AN "EXTRACT" DINNER.

The eighteenth annual dinner to the employés of Messrs. Newball & Mason took place on December 27, at Hyson Green Works, Nottingham, and proved as enjoyable and as popular as former re-unions. The programme (an excellent specimen of the lithographer's and printer's arts) shows that twenty-two songs and two recitations enhanced the pleasure of an evening which was further enlivened by the presentation of Rhodes's ancient burlesque tragic opera "Bombastes Furioso," with the original music, by the Mason-Deaville Dramatic Club.

SUNDRIESMEN DANCE.

The annual dance of the employés and friends of Messrs Lorimer & Moyes, druggists' sundriesmen, Glasgow, was held in the Masonic Halls, 100 West Regent Street, Glasgow, on December 26, 1901. The meeting proved to be of a very social and enjoyable character. Over seventy couples were present, and dancing commenced at 7.30, and was kept up with great vigour until 2 A.M. While the hall was filling up, Mr. Baird Yourg played a number of selections on the organ. Mr. William Dykes, principal of the firm, who presided, made a few appropriate remarks in the course of the evening. At intervals songs and recitations were given. Mr. R. C. Murray was an able Master of Ceremonies.

PLYMOTHIAN GATHERING.

On December 27, the staff of Messrs. Breeze, Jackson & Green (Limited), wholesale and retail chemists, Plymouth, held their annual tea and concert at Sleeman's Restaurant. Mr. Robert Tozer, the senior traveller, presided, being supported by the directors, Messrs. G. Breeze, J.P., A. D. Breeze, and E. W. H. Green, and a gathering of some thirty persons. After a substantial high tea, the Chairman said the steady and substantial growth of the business was alike satisfactory to the shareholders and the staff, and the fact that so few changes took place in the *personnel* of the company showed that the directors and staff worked harmoniously together. On behalf of the staff he wished the firm many years of prosperity. Mr. G. Breeze, J.P., chairman of directors, replying trusted the goodwill now existing between all would long be maintained. Messrs. A. D. Breeze and E. W. H. Green responded. An enjoyable musical programme was then proceeded with.

NEW YEAR PHARMACY BALL AT PLYMOUTH.

In connection with the Plymouth, Devonport, Stonehouse, and District Chemists' Association a ball was given in the Stonehouse Town Hall on Wednesday night, January 1, and, like all the social gatherings arranged by this Association, proved a great success. Nearly 600 invitations were issued to members, their wives and friends, and, as there was a very general response, dancing was spiritedly kept up till the early hours of Thursday morning, excellent music being supplied by Mr. L. Brock's band. The hall was artistically decorated with pretty foliage plants, and the siderooms and corridors were daintily furnished for "sitting out." The programme comprised eighteen dances, but there were, of course, the inevitable extras. Light refreshments were provided, and in addition there was a sit-down supper in the smaller hall. The hospitality was on a bountiful scale, and the catering was entrusted to Messrs. Matthews & Son. Conspicuous in the hall were the pestle and mortar, the gift of Mr. J. Kinton Bond, B.Sc., to the Association some years ago. Another mortar was used as a gong to announce the dances. The committee, by whom the arrangements were made, consisted of Messrs. C. T. Weary (President), J. H. Bailey, A. D. Breeze, Jas. Cocks, D. G. Fairweather, F. A. Goodwin, E. W. H. Green, F. W. Hunt, N. F. Lakeman, C. J. Park, F. A. Spear, G. W. B. Swainson, G. D. Turney, W. H. Woods, and F. Maitland (Hon. Secretary). The floor was in capital condition, thanks to Breeze's compound.

HIS ADVICE.—Scene: Consulting-room of a fashionable doctor, earning five thousand guineas per annum. Doctor: "Well, sir, where is the pain?" Patient: "Here, doctor, in the pit of my stomach; it hurts me dreadfully when I press on it." Doctor: "Then, sir, you must be careful never to press on it!" Exit patient. Fee, two guineas.

"I HAVE found 'Pharmaceutical Formulas' a very useful book and a great help. I have been prescribing some of the recipes, and have found them satisfactory; and when I get started in business here I shall put them up as proprietaries. One hair-wash especially has proved valuable in preventing the hair falling out." So writes a Cape chemist.

Pharmaceutical Society of Great Britain.

THE following is an abstract of the papers set in the Major examination in Edinburgh this week:—

CHEMISTRY.

1. Experimental investigations of Gay-Lussac which contributed to the progress of the atomic theory.
2. Preparation of crystallised magnesium sulphate, magnesium hydroxycarbonate, dry magnesium chloride, magnesium pyrophosphate and magnesium from dolomite.
3. Sources, preparation, and properties of boric acid.
4. Impurities in commercial sulphuric acid; detection and purification.
5. Metallic aluminium, how obtained. Preparation of one salt in which it is the metallic radical, and of one in which it forms part of the acid radical.
6. Constitution of citric acid and how established.
7. Preparation of isomeric dinitrobenzenes.
8. Preparation of sodium sulphocarbolate and action of heat.
9. How to obtain alumina and silica from aluminium silicate.

PHYSICS.

1. Sources of error in vapour density determinations made by Victor Meyer's method.
2. Outline of the ionisation theory of solution.
3. Methods for determining the molecular weight of a substance in solution.
4. Principle of the Leyden jar and practical application.
5. What are a voltmeter and an ammeter for?
6. Construction of an incandescent electrical lamp, and behaviour when in use.
7. Difference between the solar spectrum and that of a candle-flame.
8. Construction of the microscope, and by a diagram show how magnification is brought about.

MATERIA MEDICA.

1. Ergot, its commercial sources and assay of its active constituent.
2. Ipecacuanha root.—Official variety, outline of an estimation process, and how to separate the two chief active principles.

PRACTICAL MATERIA MEDICA.

A leaf to be described and sections prepared, and a powdered drug to be identified and reported on as to purity.

BOTANY.

1. The functions of a chlorophyll corpuscle and how formed.
2. A general account of the *Solanaceæ*.
3. Structure of a dicotyledon root, and suitability for the function it has to perform.

PRACTICAL BOTANY.

Preparations to show structure of specimen, two plants to classify, and one to describe in detail.

Personalities.

MR. H. W. WHITELOCK, chemist and druggist, Romford, has joined the Romford troop of the Essex Imperial Yeomanry.

MR. JAMES SINCLAIR, Ormeau Road, Belfast, has been appointed a temporary examiner to conduct examinations for the purpose of the Irish Pharmacy Acts, 1875 and 1890.

MR. E. H. GANE, pharmaceutical chemist (Bell scholar, 1891), who went to New York in 1895 to take up a position on the scientific staff of Messrs. McKesson & Robbins, of that city, will, from January 1, 1902, take full charge of the manufacturing laboratory of his firm, in place of Mr. B. F. McIntyre.

MISS ELSIE D. DALGLEISH, Eagle House, 7 Park Place, Exeter (aged 11½ years, and the daughter of a well-known drug-trade representative), passed the second-grade examination in pianoforte playing at the recent examinations of the Incorporated Society of Musicians held at Exeter on December 15 and 11.

ON January 1 Mr. Sacheverell, who entered the service of Messrs. G. B. Kent & Sons seventy-four years ago, called to wish the directors "A Happy New Year" on their entering the 125th year of the house. He was accompanied by Mr. Benwell, a late foreman who went to Kent's on March 25, 1846, and is now retired on a pension. The combined years of service of the two gentlemen amount to 130 years—a record hard to beat.

THE granddaughter of President Carnot is engaged to be married, says the Paris correspondent of *Truth*. "*La fiancée*, Mlle. Emilie Canisset-Carnot, has not yet come out, and has been brought up in the old capital of Burgundy, where since his marriage her father, M. Canisset-Carnot, has been Procurator of the Republic. *Le fiancé* is M. Georges Chiris, son of Senator Chiris, whose two daughters are married to sons of the late President Carnot. M. Georges Chiris was born with a golden spoon in his mouth. The senator is the chief distiller of perfumes at Grasse, and is enormously rich. His income from the scents of flowers is, however, threatened by the rivalry of Florida—unless, indeed, like Senator Siegfried, the cotton-manufacturer, he sets up a business-plant in the United States. There can be no more competition in the markets of the world with the perfumes of Florida than, by-and-by, with the olive oil of California, which will be able to supply the whole Russian Empire in Lent with a good substitute for butter."

Hints and Verses.

Contributed on C. & D. Diary Coupon Postcard A by Subscribers or their Employés.

SHOP HINT.—Attend to it, and leave every other man's alone.—J. T. COATS (Edinburgh).

Come wealth or want, came good or ill,
Assistants young and old accept your part;
Be civil to all your customers,
And serve them all with honest heart.
Who misses or who wins the prize,
Go, lose or conquer if you can;
But if you fail, or if you rise,
Be one and all a gentleman.

—F. E. CARPENTER (Burnham, Somerset).

SHOP HINT.—Study the *C. & D.* and you will keep up to date.—ULEXINE.

Page 293.

In vain Shamrock II. the cup tries to lift,
Though tested by trials and spins;
If to pharmacy's seas the venue we shift,
The cry is "Good old Heron wins."

—N. T. MIGNOT TUCKER (Kingsbridge).

SHOP HINT.—Do one thing well—be a chemist, nothing more and nothing less. Life is not long enough to be master of more than one craft.—A. SWABY BARNES (Bennett's Hill, Dudley).

Butcher by name, but not by trade;
Butcher's cameras put others in the shade.

—C. H. BARRETT (Hampstead, N.W.).

SHOP HINT.—Advertise your nursery hair-lotion on your teething-powder wrappers.—LLEWELLIN J. MEYLER (Milford Haven).

As a book of inquiry
The *C. & D.* DIARY
Stands unrivalled for chemists in trade;
Contains *the* Buyer's Guide,
With many hints beside,
It puts other books in the shade.

—W. H. WHITE (Doncaster).

SHOP HINT.—A "dumpling" ladle, formed of wire gauze of about twelve meshes to the inch and 4½ inches in diameter and 3 inches in depth, on a tin handle—sold for a few pence at most tinware-shops—makes a very convenient sieve for first sifting of horse-powders, or powdered gums, &c.—"S."

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Professor Sherrington's Experiments.

SIR,—I should like to add my humble protest to that of "Xrayser" against the inhuman experiments of Professor Sherrington before the Liverpool chemists. Let us hope that next time the Professor wishes to demonstrate his points he will submit himself to be operated upon. That no chemist raised a protest at the meeting, but apparently quite enjoyed the performance, is a disgrace to one and all of them.

Yours truly,
H. B. SHARMAN.

Kilmacthomas Analyst.

SIR,—In giving the results of the analyst's appointment for the poor-law drug-supply I think it would be desirable that the number of dispensaries attached to the Unions should be given at the same time. If the question of these appointments interests anyone outside the analysts themselves, it should be given in such a manner as to convey a correct idea. The Unions differ very much as regards the number of dispensaries attached. Thus, some have only two, some as many as twelve or fourteen. Each dispensary must submit twelve samples a year for analysis. Kilmacthomas Union has only two dispensaries. I hold this Union at the same salary as the previous analyst, who has just resigned.

I am, Sir, yours truly,
CHARLES R. C. TICHBORNE.
15 North Great Georges Street, Dublin, December 31, 1901.

The Analyst as Expert in Therapy.

SIR,—In your last issue you report a prosecution under the Food and Drugs Act, wherein the analyst, after reporting on the quality of the article submitted to him, further took on himself to state that "genuine almond oil is used as a laxative for children, whereas substances such as apricot or peach-kernel oil have no such effect." Now, the gentleman in question is not, so far as I am aware, a member of the medical profession, and I must therefore strongly protest against his posing as an expert on a purely therapeutical question. Further, I will affirm that the laxative properties of good sweet peach or apricot kernel oil are quite the same as those of the oil expressed from almonds, and that there is not in Britain a pharmacologist who could demonstrate any difference by physiological methods.

Yours faithfully,
J. C. MCWALTER, M.A., D.P.H.
Dublin, December 31, 1901.

Kodak (Limited) and Retailers.

SIR,—With respect to Messrs. Kodak's (Limited) new conditions of sale I think it would be of great value to those of your subscribers who are photographic dealers, if some discussion on this subject took place ere they accepted the extra discount offered them. I would respectfully suggest that it behoves all who are interested (either wholesaler or retailer) to confer and consider their position. The business methods of Messrs. Kodak (Limited) are altogether so strange to the ordinary Britisher that one cannot help wondering where one will land oneself, in assisting to create a monopoly, however much it may be for one's interests. Will this enterprising company give an undertaking that, after the photo-dealer has planted the acorn and carefully tended it to fruition, they will not step in and commandeer the oak? They have already thrown over the wholesaler who has done much to bring their business to its present success in this country. Will they promise to refrain from encroaching upon the retailer's ground after he has made a substantial trade for them in any particular district, or shall we see retail branches of Messrs. Kodak (Limited) in all our biggest towns where the amateur is invited to buy direct from manufacturer and so save all middlemen's profits?

Yours truly,
Bloomsbury, Birmingham, W. H. HORNBY.
December 30, 1901.

The Pharmacist and Patent Medicines.

SIR,—Mr. Reid is right so far as old-fashioned advertising ideas are concerned, but we have to deal with a constant change of tactics, and as a great deal of harm may be done before the public find them out, their danger is obvious. The "money-returned" system already referred to is a case in point, and was quoted as a strong instance of an increasing evil. With regard to the methods adopted by another class of advertisers, I have not the actual case before me, but, speaking generally, that kind of thing only differs in detail and may be classed with the objectionable methods under consideration. All this points to the necessity of united action, and it should not be difficult for an examined body of men to at least make it clear to the public that they are not the servants of quacks, and to protect themselves against libellous insinuations whether emanating from English or foreign sources. The point raised by Mr. Reid had not been lost sight of. It is worth putting to the test, and would in any event be a welcome change from the monotony of sitting on the wall year after year.

I am, Sir, faithfully yours,
Penzance, December 23, 1901. WALTER H. KEEN.

Wake up, London!

SIR,—The question of organisation in London has recently come to the front. The remedy proposed is a Metropolitan Association intended to represent the views of the great hitherto unvoiced mass of London chemists. But the whole subject of organisation in London is pooh-poohed, ridiculed, and wrapped with irrelevant observations by various scribes and speakers; so much so that it is evident some people view with concern, and even fear, the formation of any effective association. This proves the necessity for the step. To my mind it is scarcely possible to magnify the importance of the project, and, therefore, I beg permission to criticise and offer suggestions. Are the means suggested likely to be successful? Will the formation of a huge metropolitan association produce an organised London? I see few elements of success in it. A few men whose efforts we must admire, and whose intentions are manifestly honest and praiseworthy, would really form the association, whilst the bulk of the members would be merely subscribers, expecting some problematical benefit to accrue. Presently the association would die of inanition. There is a more promising method in the formation of local associations. It is feasible and practical to form these in districts corresponding to the parliamentary divisions. There is comparatively little trouble, and the expense is trifling in running such associations, whilst the practice of qualified chemists meeting each other periodically is wholly beneficial. Further the federation of London associations presents no difficulty, because of their proximity. Delegates from all parts could meet quite easily. I venture to say that by such a method metropolitan opinion would be educated, formed and expressed.

I offer no apology for coming into this discussion, for effective organisation all round is of the most urgent importance. Opportunities are upon us—opportunities which, if not taken advantage of, will be gone for ever. I would like to digress somewhat. This agitation, essentially one for keeping the exercise of the qualification to the individual, and consequently the prevention of unqualified practice, was some years ago characterised as a passing wave, which would die away with the season. But the movement has spread and spread until now the London rank-and-file are seeing the necessity and the utility of helping themselves. Instead of the agitation being dead, I am on the Council, a direct representative with an unmistakable mandate. Fifth on the poll, and nearly twice the voting strength of any unofficial candidate. Well—*à propos*, of all this, I am charged with the betrayal of the trust so distinctly placed with me, on the assumption, I suppose, that noise must

Digitized by Google

accompany work. But what are the facts? I have protested several times publicly, that members of the Society are in absolute ignorance of the Council's work, and that they ought, at least to have sufficent information to enable them to form an intelligent opinion. I certainly will not rest until this end is attained. The Pharmaceutical Society should be abreast of the times. Again, I have asked more than once, are chemists satisfied that a qualified person shall suppress name and individuality by using a fictitious and unmeaning (as far as the Act is concerned) style and title? In other words, shall a personally acquired qualification be associated with the title as enacted by section 17 of the Pharmacy Act? Is it supposed that I am not serious when I ask members to emphasise the mandate so unmistakably given in May? Are we always to be the shuttlecccks of pharmaceutical journalism? Yours faithfully,

R. LORD GIFFORD.

SIR,—Your correspondent "Xrayser" still continues his efforts, poor though they be, to discourage the formation of the above. Will "Xrayser," without any gibes or jeers, say why these Associations are useless or baneful? It is not enough to say—

I do not like thee, Dr. Fell,
The reason why I cannot tell;
But this I know, and know full well:
I do not like thee, Dr. Fell.

Surely his reason that "If I pay a guinea a year to the Society, I ought not to have to pay another half-guinea to another Society to see that it does its work" cannot hold good, as chemists, poor as they may be, certainly can afford a contribution of 5*s.* per annum. What does your correspondent mean by quoting the South Sea Bubble? He says he does not mean it to apply to the members of the Association; then why use it? Like a naughty boy, he throws a stone, runs away, and says, "Please, sir, I did not do it." Perhaps he means it for wit. If so, why not label it, as all good chemists do their poisons, with instruction when to laugh? Now, "Xrayser," come out into the open: give us your good reasons why the first city in the world should not possess an association which much smaller cities and towns feel it necessary to have for their assistance, protection, and general welfare. Failing this, I fear you must be located to the lumber-room. Yours faithfully,

Dalston, December 25, 1901. J. C. PENTNEY.

Mr. Michael Carteighe's Soporific.

SIR,—"Xrayser's" remarks in last issue of the *C. & D* called my attention to Mr. Carteighe's Edinburgh speech. The chief feature of this speech is a direct expression of opinion on the part of Mr. Carteighe in regard to political agitation as applied to pharmacy. He is of opinion that not much can be got in the shape of legislation to assist pharmacy, and that our only hope for the future is to raise the pharmacist in some vague way, not minutely described, to such a position that the people shall be constrained to give him his due from sheer force of respect, if not admiration. This has been the idea working in Mr. Carteighe's mind ever since he came prominently before pharmacists, and no man in the whole country has had so good an opportunity of carrying an idea into effect. Let us see how it has worked out. The founders of the Pharmaceutical Society, for whom Mr. Carteighe professes great veneration, were essentially politicians, and they handed down to Mr. Carteighe and his colleagues a foundation fixed on a sure political rock. Mr. Carteighe has been building on that foundation for nigh on thirty years, but he has always been building with this in view, that, apart from politics, he could raise pharmacists to a position in which the support of the people would be assured. What has been the result? To-day fewer than 25 per cent. of the qualified men of the country support the Society, less than 10 per cent. of the dispensing in the country is done by qualified men, probably not 50 per cent. of the doors kept open for retailing poisons are the doors of qualified men; we are saddled with a qualifying examination in which the average failures amount to about 75 per cent., and finally young men have practically stopped going in for pharmacy. One would think that a state of matters like this would open the eyes of even Mr. Carteighe to the fact that thirty years of his policy have not led to results which would warrant a man in recommending it too confidently for the future. It is recognised by almost every thinking man now that we must have either speedy legislative relief or practical collapse of pharmacy as it exists. We cannot hold even the small share of pharmaceutical work done now by qualified men if we have not got the qualified men, and the dead stop in apprenticeship must soon lead to a dead stop in qualification. Either the Government, in these circumstances, must accept the Apothecaries' Hall certificate, or some similar certificate, as sufficient for a man to keep open shop on, or else there must be free trade in pharmacy altogether. To most men it will be pretty plain that it is just exactly the politicians we want to deal with a position like this. I do not, however, see why we should not find men who are keen politicians, and also scholars imbued with all Mr. Carteighe's desire to raise the pharmacist to a position in which he shall command respect and support. There is one point on which we are all agreed, including even Mr. Carteighe, and that is that too few men in the prime and vigour of life can leave business in order to attend the Pharmaceutical Council affairs at Bloomsbury Square. The result has been that affairs have been left in the hands of London—mostly West-end—men, and elderly men from the country who have lost interest in, and even touch with, pharmacy as practised now. The old official clique is not in a position to cope with present-day difficulties, simply because it knows nothing about them.

Dumfries, December 30, 1901. JAMES REID.

P.S.—I hope chemists will be able to gather from Mr. Carteighe's speech a reason for so many reforming bills being drafted at Bloomsbury Square and waved in the face of the country, only to be quietly withdrawn and relegated to the limbo of oblivion when interest begins to subside.

J. R.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

246,21. *Subscriber.*—The label for harmless headache-powders will not render a simple drug liable to duty, but as your powder contains two drugs, the sentence "Repeat in two hours if necessary" should be omitted in order to escape liability to stamp duty. If this is done the powders may be sold without a licence by small shopkeepers.

102/13. *Partnership.*—A partnership of a qualified person and an unqualified one for the purpose of trading as chemists and druggists and selling poisons is illegal, so far as the unqualified person is concerned.

251/34. *F.*—The Inland Revenue assessors have ways of their own for estimating the value of premises which should pay inhabited-house duty. Sometimes they charge more than the actual rent of the premises. Sixpence in the pound for rentals above 60*l.* is the proper rate for houses occupied for the purposes of trade. See THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 267.

102/18. *Vigilant* uses a handbill in which a cough and influenza-mixture is referred to, and it is stated that "Our sales of this mixture during 1900 amounted to over "5,000 bottles, a sufficient indication of its excellence. Is this a dutiable recommendation? We think not. On another handbill antiseptic throat-pastilles are described as "from the formula of an eminent specialist." Would this statement render the pastilles liable to stamp duty? This is on the border line and should be submitted to the Board of Inland Revenue for opinion. If the word "Consultant" were used instead of "Specialist" the pastilles would not be liable. "Vigilant" also asks if, after distributing the handbills, he sells the lozenges in unlabelled packages liability would be incurred. That altogether depends upon the condition of the sale. If the handbill involves liability exposure of the pastilles for sale, or even making them, suffices to incur the penalty. See the terms of the Act in THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 281.

Digitized by Google

Antiseptic Foot-powder.—*Mr. W. H. Gross*, Chulmleigh, North Devon, informs us that he has submitted to the Board of Inland Revenue the label given on page 38 of "Pharmaceutical Formulas," and he has been told that the line "and preventing blisters" must be removed if the preparation is to pass without stamp-duty.

237/27. *South American Subscriber.*—(1) We shall endeavour to ascertain for you. (2) See THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 276, for full particulars regarding company-registration. Situated as you are, you must have an office as well as an agent in this country before you can register.

100/59. *A. R. N.*—The only label of those which you send us that appears to involve stamp-duty is that for corn-solvent in which the sentence, "Continue the treatment until the corn disappears," may be construed into a recommendation; but, as the wording is exactly the same as in a label which Alpe declares to be not liable, you may risk it.

103/70. *Clito.*—Please read the paragraph on apprenticeship in THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 275. It contains all the information that you desire.

104/49. *F. M. A.*—Your label for Erasmus Wilson's hair-wash states that the lotion is especially serviceable "in numberless instances, when, from long-continued illness or local disease, a *total loss* of hair has resulted, the most striking effects have invariably been produced by the use of this remedy." Although baldness is not considered a distemper, ailment, &c., the passage quoted is a possible recommendation for the cure of disease. Submit the label to the Board, and let us know the result. In the corn-solvent label the line "Repeat if necessary" should be removed, as it suggests cure. The carbolic-tooth-powder label is on the border-line, and you should submit it to the Board of Inland Revenue for approval; also the petroleum-emulsion label, because it refers to the preparation as a chemical food as well as a popular remedy. The other labels are free from liability. What you state on the handbill regarding quinine-and-iron tonic does not render the preparation liable to stamp-duty.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

78/37. *Bromo.*—Influenza-mixture:—

M.

Dose: Half to one teaspoonful in a wineglassful of water.

77/58. *Koff.*—A good **Cough-mixture** to suit your requirements would result if you made up the formula given in the *C. & D.*, December 21, 1901, page 1010, without the chlorodyne.

77/40. *Physics.*—Everett's "Physics" (Blackie), 3*s.* 6*d.*, and Deschanel's "Physics" (Blackie), 18*s.*, are two books much used by pharmaceutical students.

77/45. *Calendula* (Melbourne).—(1) **Liq. Saccharini**:—

Saccharini	...	...	...	gr. xxiv.
Sodii bicarbon:	...	...	...	gr. xij.
Spt. rectif.	...	...	...	℥j.
Aq. destill.	...	...	...	℥vij.

Misce et solve.

(2) **Syr. Aromaticus** is a Pharmacopœia article.

75/57. *E. O. J.*—To **Prepare Osteological Specimens**, (1) remove as much of the flesh as possible, (2) boil in weak caustic potash to complete the removal, (3) macerate the bones in benzine to remove the fat, and (4) bleach by soaking in warm hydrogen-peroxide solution.

77/54. *D. G. D.*—Clark and Dott found the yield of ol. æthereum mixture in the B.P. process for spt. ether. co. to be 13·375 fl. oz. See an instructive paper on the subject by Mr. J. C. Umney in the *C. & D.*, May 7, 1898, page 766.

74/61. *H. V.*—"Smut" in cereals is the fungus *Ustilago maydis*, and has emmenagogue properties like ergot of rye.

73/59. *E. B.*—To purify rancid veterinary ointment-fat, melt the fat and shake with weak solution of pot. permang., afterwards washing with several changes of warm water.

74/28. *Tinct. Opii.*—The best way of breaking off the laudanum habit is by diminishing the dose or strength of the preparation each week. It is a mistake to look about for a substitute, as you only in this way replace one "habit" by another.

78/18. *H. R.*—There is no calcium phosphate in London water, but some permanent hardness in the form of calcium sulphate. The sulphate is only got rid of for drinking-purposes by distilling, but if for washing-purposes borax neutralises the effect in a great measure.

83/38. *Subscriber.*—(1) We are not acquainted with a book on bottle-making and cutting glass. (2) The formula for aniline marking-ink was last given in the *C. & D.*, October 9, 1900, page 598.

79/48. *Nomen.*—THE CHEMISTS' AND DRUGGISTS' DIARY for 1901 contains the formula for metol-quinol developer.

73/40. *W. & R. H. & Co.*—Squire's "Methods and Formulæ used in the Preparation of Animal and Vegetable Tissues for Microscopical Examination, including the Staining of Bacteria," is the book you require. It is published by Churchill at 3*s.* 6*d.*

85/37. *B. W.*—Why we said it was best to avoid the use of salicylic acid in cod-liver oil emulsion was because we believed that as the preparation is largely taken by young children, it is best to avoid the use of an active chemical preservative.

74/45. *S. J.*—Camphor prevents the solidifying of olive oil to some extent, but as the solidifying-point is only lowered, sufficient cold will cause lin. camph. to solidify.

82/19. *Ledger.*—We cannot repeat carbolic tooth-powder recipes yet awhile. Refer to the past volumes or "Pharmaceutical Formulas."

80/13. *Carbon* asks what are oil of "Cray" and oil of "Cryalb," used by stablemen. Perhaps some of our readers will make suggestions.

213/17. *Steam.*—Steaming windows are the result of defective ventilation or unequal temperature. When these are seen to, the windows will remain clear. It has been suggested to give a coating of glycerin to the glass, but the success is not overwhelming.

88/18. *Veritas.*—The best **Dry Shampoo** is entirely spirituous, and it is to lessen the expense of rectified spirit that water is added. You do not give any hint as to what formulæ you have tried.

80/35. *Assistant.*—Ince's "Latin Grammar of Pharmacy" has a good dictionary of terms at the end. In regard to a good Latin dictionary, as you live in a university city you have only to visit a bookseller and pick a dictionary according to the length of your purse.

85/16. *H. & L.*—**Fever-mixture** to suit your label:—

Liq. ammon. acet.	...	...	...	℥ij.
Liq. ethyl. nit.	...	...	...	℥iij.
Liq. ferri perchlor.	...	...	...	℥j.
Spt. chloroformi	...	...	...	℥ij.
Aq. camph. ad	...	...	...	℥viij.

Dose: Children, from one to two teaspoonfuls. Adults, two tablespoonfuls three times a day.

87/66. *Worms.*—**Worms on Lawn.**—To destroy these a solution of corrosive sublimate is the best. Make a saturated solution of the salt with the addition of hydrochloric acid, and use when diluted to eight times its volume with water.

Digitized by Google

79/20. *Tabules.*—We do not know what "sal nixeral," used by watchmakers, is. From your description we should think it is an alkaline salt, but if you can send us a sample we will find out.

90/63. *G. T. & S.*—**Liquid Coffee.**—Freshly roast and grind 1 lb. of coffee (equal parts of Mocha and Mysore beans) and 12 oz. of chicory and percolate with hot water till 30 oz. of percolate is obtained. Boil the marc with 2 pints of water; press, and when cold mix with the percolate, and dissolve therein 7 lbs. of sugar, and make the whole measure 1 gal.

91/49. *Boots* (Victoria).—If a thicker boot-polish is required, from the recipe you send omit a portion of the liquids.

77/59. *Vet.*—The only information you supply about your sample of powder, that "it is used for dusting cattle," does not warrant us making an elaborate analysis. It contains powdered hellebore, powdered pyrethrum-flowers, and possibly other ingredients.

82/18. *Cathal* sends an Ointment which has given excellent results in cases of sores resulting from diseased bone. The ointment is imitated as follows:—

Cupri acetatis	ʒss.
Pulv. resin.	ʒij.
Ceræ flavæ	ʒij.
Ol. olivæ	ʒij.
Adipis	ʒiss.

Melt the resin and wax together and add to it the acetate, oil, and lard, separately melted and mixed together, and stir till cold.

We should add that considerable caution is required when applying copper ointments to open wounds.

93/18. *J. W. H.*—**Tooth-powder.**—The peculiarity of your sample is the perfume, which it is difficult to exactly match, but the following hits it approximately:—

Cretæ præcip.	ʒiij.
Pulv. iridis	ʒj.
Ol. cassiæ	mij.
Ol. caryoph.	mj.
Ol. origani	mj.
Ol. lavand.	miv.
Ol. bergam.	miv.
Ol. verbenæ	mss.

M. bene.

95/74. *Iridis.*—**Essence of Coffee** for flavouring.—Your sample only suggests the aroma of coffee, and is possibly an artificial product. An excellent colourless essence is made by collecting the aromatic principle given off during the roasting of coffee (which condenses in a suitable apparatus) and the distillate from an infusion of the powdered berries, and dissolving in alcohol. The roasting should be done in a retort, which makes it a somewhat troublesome operation; but as the flavour of the essence depends to a considerable extent on the aromatic principle evolved at this stage it cannot be neglected.

74/21. *S. E.*—The mixture given for weakness of the kidneys consists of tr. ferri perchlor. and inf. calumbæ. The dose of tr. ferri is at least 15 drops in each tablespoonful.

73/69. *X. Y. Z.*—**Laundry-wax.**—This is simply hard paraffin of high melting-point.

87/23. *Syntax.*—The following is an approximate formula for the **Infants' Preservative** you send:—

Magnes. carbonat.	ʒiij.
Ol. anisi	mxx.
Spt. ammon. arom.	ʒiij.
Pulv. rhei	ʒij.
Theriacæ	ʒiv.
Aq. ad	Oj.

Dose: Half to one teaspoonful occasionally.

91/40. *A. M.*—We have no samples by us corresponding to your description. If you send further portions, label them with at least your name and address, and supply as full details of their uses as you can, we shall report.

77/47. *Civitas.*—**The Whooping-cough Powder** you send is powdered calamine. Zinc salts have been recommended at various times for whooping-cough, both the sulphate and oxide being employed. The dose of 2 or 3 gr. of the calamine you send is not excessive, as it contains a good proportion of calcium carbonate.

80/1. *No. O.*—(1) **China Blue** is a well-recognised disulpho-derivative of a triphenyl-rosaniline, and was the subject of one of the earliest patents for aniline dyes (Nicholson, No. 1,857 of 1862). There are, however, many varieties of the same dye, and you would need to get it matched by a dealer in aniline colours, such as Williams Brothers, of Hounslow. (2) Formalin renders gelatin insoluble, and is not therefore a suitable preservative for size. If you give us some details we may be able to advise you.

191/23. *Artful* (Barcelona).—(1) We cannot suggest anything better than gum or dextrin as the adhesive for envelopes sent to tropical countries. (2) Crude glycerin is only effectually purified by distilling several times in an atmosphere of superheated steam. Previous to distillation the raw product is mixed with ivory-black, a special form of animal charcoal. (3) Stick-lac is used on account of its colouring constituent. It is from stick-lac that "lac dye" is obtained in the process of making shellac. Lac dye with mordants gives a brilliant scarlet equal to that produced from cochineal.

91/38. *Excelsior.*—(1) **Baking-powder**:—

Pot. sulph. acid.	ʒxij.
Sodii bicarb.	ʒiv.
Pulv. oryzæ	ʒxvj.

(2) **Cream-of-Tartar Substitute** is acid sulphate of potash with 10 per cent. of flour or acid phosphate of ammonia.

91/10. *Black.*—(1) Drop-black is a pure form of lamp-black. (2) The first formula for stencil-ink in "Pharmaceutical Formulas," page 381, is the one we prefer.

72,71. *P. C.* (Palermo).—The directions given for the preparation of hydrogen peroxide in the ninth edition of Martindale's "Extra Pharmacopœia" contain the essentials of the two processes used commercially. Fuller directions are given in most standard works on chemistry.

229/3. *C. E. P.*—Quain's "Dictionary of Medicine," of which a new edition is being brought out at 21*s.*, is the best supplement you can have to "Diseases and Remedies."

87/25. *Stamina.*—The oil you mention is probably distilled from *Eucayptus maculata* var. *citrodora*, which has a citron-like smell.

76/46. *C. R.*—**Ext. Sarsæ Co.** is made by evaporating dec. sarsæ co. (B.P. 1885) to an extract. A small quantity of oil of sassafras is generally added to replace that dissipated by heat.

92/17. *Jean.*—Your life-assurance policy is not stock-in-trade, but a purely personal matter which has nothing to do with your business stocktaking.

79/24. *W Y.*—We do not know the composition of syr. picis "Frazer." Two formulas for syr. picis were given in he *C. & D.*, September 28, 1901, page 553.

83/21. *T. H. P.*—**Chewing-gum.**—The following is an American recipe:—

Gum chicle	3½ lbs.
White wax	1 lb.
Balsam of tolu	2 oz.
Balsam of Peru	1 oz.

Melt the gum, stirring in as much water as it will hold, then add the wax and balsams. Next prepare a syrup of—

Finely granulated sugar	10 lbs.
Glucose	4 lbs.
Water	3 pints

and mix with the gum-paste in sufficient quantity to make a tough and plastic product. Flavour with cinnamon or cardamoms,

Digitized by Google

79/49. *G. T.*—**To Clean Bloodstained Sponges.**—Wash with warm water and bleach by immersion, first in potass. permanganate solution, and, after rinsing, in solution of sodium thiosulphate.

73/43. *E. & H.*—Your inquiry is not very clear, but as dry-rot in the basement of a dwelling-house is due to stagnation of the air, it is obvious that it is not healthy to live in a badly ventilated house.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

65/38. As to a practical system of labelling manufactured goods so as to be able to trace the batch and sample, and similar to those used by American pharmaceutical houses.

95/73. What rate of piece-work pay is given to women for packing seidlitz powders, seltzogene powders, and starch-gloss, and bottling such things as cod-liver oil, castor oil and perfumes?

104/1. Where can charcoal rings be obtained in bulk or packet?

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, January 6.

Society of Chemical Industry (London Section), Burlington House, Piccadilly, W., at 8 P.M. Professor J. T. Hewitt on "The Retarding Influence of Aldehydes on the Maturation of Spirits."

Tuesday, January 7.

Midland Pharmaceutical Association, Birmingham. Social evening in the Great Western Hotel, at 7.30. Tickets, 2*s.* 6*d.* each, admitting lady and gentleman, can be had from Mr. G. H. Brunt, Hon. Sec., 323, Coventry Road, Birmingham.

Wednesday, January 8.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W.C. At 11 A.M., Council-meeting.

Manchester Pharmaceutical Association. Paper by Mr. J. Grier on "Pharmeceutical Education."

Newcastle-on-Tyne Chemists' Association, Hôtel Métropole, West Clayton Street, at 8.30 P.M. Mr. A. Payne on "Chromatic Photography."

Young Chemists' Association, Lockhart's Café, Grainger Street, Newcastle-on-Tyne, at 8 P.M. President's address, followed by a paper, "Is our Calling a Trade or Profession?" by Mr. Sims.

Chemists' Managers' and Assistants' Society. Annual meeting and smoking-concert at the Horseshoe Hotel, Tottenham Court Road, W., at 8 P.M. Tickets for the concert, 1*s.* each, of Mr. A. Gordon, Secretary, 182 Southwark Park Road, S.E.

THE Junior Pharmacy Ball will be held on February 26. Mr. P. Trick, Salisbury House, London Wall, E.C., has accepted the position of Hon. Sec.

THE Chemists' Ball is to take place at the Whitehall Rooms, Hôtel Métropole, London, on January 15. Tickets can be obtained from Mr. E. W. Hill, 160 Earl's Court Road, S.W.

THE annual dinner of the London College of Chemistry will be held in the Venetian Chamber, Holborn Restaurant, on January 29. Mr. Percy M. Thornton, M.P., will take the chair and present the prizes.

THE Glasgow and West of Scotland Pharmaceutical Association have arranged a social evening at the Cockburn Hotel, 141 Bath Street, for January 16. Tickets, 7*s.* 6*d.* (double), 5*s.* (single), may be had from Mr. T. Dunlop, Hon. Sec., Albert Cross, Pollokshields, Glasgow.

Pea-green Hair.

SOME of our evening papers have been telling the story of

An actress whose name is Verona
Bought hair-dye a druggist had shown her;
When next she was seen
Her hair had turned green,
And few of her friends would have known her.

Miss Lillian Verona, the lady referred to, bought hair-dye known as "henna-leaves" from Druggist Keihl or Kelhle or Diehl (the *New York Journal* gives these three styles), of Third Avenue and Thirteenth Street, New York. She wanted

to make her hair red, but the dye turned it into a magnificent pea-green. She wore the green hair for nearly six months, and sued the druggist for $2,000 damages.

When the plaintiff entered the court-room on December 16, 1901, Judge, jury, everybody, sped quick glances towards her. Her hair was not green. It had gone back to a light brown. She wore a large, white hat, with bunches of frilled white trimmings. Her waist was of yellow and scarlet silk, woven in an Oriental pattern. She clasped her white-gloved hands and looked timidly and in agitation at the jury. She then told her story, and the druggist's case was that if the hair is thoroughly washed just before application henna-leaves will have the desired effect of turning the hair red, otherwise green hair will be the certain result. This view seemed to impress the jury, who returned a verdict for the druggist. The picture represents Miss Verona, her witnesses, and some of the jurymen.

It is curious that the result of the dye was the same that happens when a mercuric-chloride solution follows an application of resorcin preparations to the hair.

"RHEUMATISM SPEEDILY CURED."—Mrs. O'Connor, 19 Upper Sackville Street, Dublin, is advertising a remedy. *Truth* of this week has a good deal to say about it stating that "Mrs. O'Connor" is the latest advertising alias of "Charles Montague," 125 Bristol Road, Birmingham, who has also carried on his business under the names of Napoleon Hirschfeld and Charles Ashley. His *modus operandi* is to send by return of post to anyone who answers the advertisement a parcel of his remedies. A gentleman who replied to "Mrs. O'Connor's" advertisement received two supplies of medicine and a bill for 3*l.* 5*s.* 4*d.* The gentleman then returned all the stuff that he had not used, and the bill was reduced to 1*l.* 18*s.* which *Truth* advises him not to pay, and adds that some of the medicine formerly examined was found to contain salicylate of soda.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: January 2.

BUSINESS in the drug and chemical markets has scarcely yet been resumed after the Christmas holidays and the stocktaking which followed them; consequently there are no important alterations to record. Next week, however, the first drug-sales of the year will be held, and, judging from the offerings already advertised, they are likely to be fairly heavy. Quinine is a firm market in spite of the heavy bark-shipments, although naturally a retail business only has been done. Shellac has been in fair demand on the spot at steady prices, but "futures" have been quiet. Cascara sagrada has been sold at firm prices. Jalap is pressed for sale, and easier prices are quoted from New York. Senega also comes weaker from that source, but reports from primary markets continue to indicate a strong tone. American sugar of milk lower.

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from December 24 to January 1, inclusive:—Aniseed oil (@ Hong-Kong), 35 cs.; argol (@ Cape), 23; arrow-root (@ Natal), 51 cases; arsenic (@ Melbourne) 30 cks., (@ Oporto) 141 brls.; buchu, 3; button lac, 492; calcium carbide (@ Havre), 706 drums; camphor (@ Kobe), 300 cs.; canary seed, 758; cardamoms, 119; cascarilla (@ Mollendo), 15 bls.; castor oil (Belg.) 43 brls, (Fr.) 92 brls. 25 cs.; chillies (Jap.), 100; cinchona (@ Mollendo) 60), (@ Rotterdam) 41 bls.), (@ Paita) 34, (@ Colombo) 16 bls., coca-leaves (Ceylon), 9; cocoanut oil (@ Ceylon), 11 hhds.; cod-liver oil (@ Aalesund), 245 brls., (@ Bergen) 57 brls.; cream of tartar, 126; croton-seed, 21 bgs. 21 cs.; dragon's-blood (@ Singapore), 6; drugs (@ Boulogne) 23, (@ Marseilles) 75 bls. 37 pkgs.; galls (@ Smyrna), 81; gentian, 15; ginger (@ Hong-Kong), 1,251 cks. 1,109 cs; gum arabic (@ Colombo) 65, (@ Bombay) 115, (@ Alexandria) 153; gum, unenumerated (@ Mogador) 80 brls, (@ W.C. Africa) 153, (@ Bombay) 307 pkgs., (@ Jeddah) 124; iodine, 55 pkgs.; jaborandi, 2 bls.; juniper-berries, 69; lemon-juice, 10 pipes; lime-juice (@ Halifax, N.S.), 84 bxs.; matico (@ Mollendo), 86 bdls.; menthol, 15 *in tr.*, (@ Yokohama) 20; musk (@ Colombo), 2 bxs.; oils, essential (@ Hong-Kong), 130 cs.; opium (@ Smyrna) 115 cs.; (@ Calcutta) 10, (@ Constantinople) 20 cs.; otto of rose (@ Constantinople), 1 cs.; peppermint oil (@ Bremen) 82 cs, (@ Hamburg) 25 cs.; pimento (@ Havre), 217; potash chlorate (@ Gothenburg), 40 kgs.; potash permanganate (@ Hamburg, 193; quillaia (@ Valparaiso), 836; rhubarb (@ Hamburg) 27, (@ Shanghai) 60 pkgs.; rose oil (Bombay), 3 pots; saffron, 1; senna (@ Bombay), 399; shellac, 404; sugar of milk (Amer.), 56 cs.; wax, bees' (@ W.C. Africa) 60 pkgs., (Mor.) 24; wax, ceresin, 30; wax, Japanese, 200.

Cablegram.

HAMBURG, January 2:—About 1,000 cases Japanese wax have arrived here. Refined camphor in second-hands is quoted 427m. per 100 kilos., while refiners ask 435m.

ANTIMONY.—A quiet market is reported for Japanese crude at 17*l.* 10*s.* per ton. Crocus is quoted 31*s.*, powder 33*s.*, and black sulphide at 21*s.* per cwt.

BALSAM PERU.—From Leipsic there has been a persistent report that the producers in San Salvador have combined with the idea of raising values. There is no change here, 6*s.* 3*d.* to 6*s.* 6*d.* being the nominal price in the absence of business.

BALSAM, TOLU.—A direct arrival of 30 cases in large tins in New York has brought about a decline in that market, 28*c.* being quoted.

BELLADONNA-ROOT.—For good quality 43*s.* per cwt., c.i.f. has been paid.

CASCARA SAGRADA.—The spot market keeps firm, 26*s.* per cwt. having been paid for good bright bark in quantity. New York advices point to a higher market there.

CASCARILLA.—The exports from Antofagasta during 1900 amounted to 55 cwt., valued approximately at 315*l.*

CINCHONA.—The shipments from Java during December amounted to 1,273,000 Amst. lbs., against 1,091,000 Amst. lbs. last year, and 636,000 Amst. lbs. in 1899. The total for the twelve months is 12,606 000 Amst. lbs., against 10,741,000 in 1900, and 11,399,000 in 1899. The exports from Antofagasta (Chili) during 1900 amounted to 1,240 cwt.

CREAM OF TARTAR.—Very quiet, at 71*s.* per cwt. for first white crystals, and 73*s.* for powder.

GENTIAN keeps firm, at from 15*s.* 6*d.* to 16*s.* 6*d.* per cwt., c.i.f. Gentian powder has advanced 6*d.* to 1*s.* per cwt.

GOLDEN SEAL.—The spot-price is 2*s.* 1½*d.* per lb.

JALAP.—Good quality is quoted from New York at 6*d.* per lb., c.i.f., and it is reported that holders there are anxious to sell. The London market shows no change, occasional sales being made at 6½*d.*

JUNIPER BERRIES are advancing, 11*s.* 6*d.* per cwt. being wanted on the spot.

KOLA —The following figures relate to the shipments from the Gold Coast:—

	1900	1899	1898	1897	1896
Pkgs.	1,907	2,671	3,092	4,278	3,156
Value £	43,132	57,020	35,789	37,869	33,278

LOBELIA.—Herb is very scarce in New York, 5*d.* per lb, c.i.f., being quoted.

MENTHOL.—In view of arrivals the spot-price is a shade easier, at from 14*s.* 6*d.* to 14*s.* 9*d.* per lb. for Kobayashi crystals, and a small business has been done. The c.i.f. quotation is 13*s.* 6*d.* A recent telegraphic advice from Japan states that still higher prices may be expected during the first few months of the year.

OIL, COD-LIVER.—The Bergen market is unaltered but very firm, at 69*s.* per barrel, f.o.b., for best Lofoten non-congealing oil. The stocks are now extremely small in Bergen as well as in the Northern cities. The exports from Bergen to date amount to 13,333 barrels, against 10,681 barrels at the corresponding period of last year.

OIL, LEMONGRASS.—The lowest spot price is 7½*d.* for ordinary Cochin, and 6*d.* to 6½*d.*, c.i.f., nominally. For Java oil 8½*d.* is asked on the spot.

PILOCARPINE.—A second-hand holder quotes 61*s.* per oz. net.

POTASH CYANIDE.—The quotation for 10-ton lots of mining strengths is slightly easier at 9½*d.* per lb.; for druggists' quality (98 per cent.) 1*s.* 3*d.* to 1*s.* 6*d.* is quoted, according to quantity.

QUININE.—There has been no business of importance this week, but the market has remained firm with small sales on the spot at 1*s.* 1⅜*d.* per oz March delivery is quoted 1*s.* 1½*d.*

SEEDLAC.—Previous to the holidays business was done at 105*s.* per cwt. for fair palish.

SEEDS.—There has been an entire absence of business during the past week. In the course of last year the following alterations in prices have to be recorded:—Russian *Anise* is about 3*s.* per cwt. dearer, the present quotation being 21*s.* 6*d.* per cwt. Dutch *Caraways* declined about 8*s.* per cwt. owing to the large crop, and 21*s.* 6*d.* is now the value. Turkish *Canary* is worth 37*s.* 6*d.* per qr., against 34*s.* 6*d.* a year ago, but the price in the interval fell to 30*s.* Morocco *Coriander* declined from 13*s.* 3*d.* to 10*s.* per cwt. during the year, the crop being a full one. *Cumin* also depreciated in value for the same reason, a fall from 32*s.* 6*d.* to 22*s.* 6*d.* per cwt. having taken place in Morocco quality, *Fenugreek* has been a dull article, and is slightly dearer in price, at 7*s.* 6*d.* per cwt. *Linseed* has been steady for fine quality, at 58*s.* to 60*s.* per qr.

SENEGA.—From New York 2*s.* 1*d.* per lb, c.i.f, is quoted for ½-ton lots, and on the spot 2*s.* 1*d.* net is also quoted.

The *Winnipeg Commercial* of December 14 reports that the

Digitized by Google

root-market is practically closed now for the season, as about all the root in sight has been bought, and there are no transactions upon which to base quotations. Holders are very firm in their views, and would readily take care of any additional lots which might come in from the country at full market-values. An advertiser in the above-named paper states that he is willing to pay 46c. per lb. for good dry senega, delivered in Minneapolis.

Shellac.—Under the influence of the holidays a quiet tone has prevailed, and with a reduction in the Calcutta price of TN (now 70 rupees) "futures" have been rather easier. January delivery has sold at 123*s.* 6*d.* to 124*s.*, March at 126*s.*, and June at 129*s.* per cwt. Fair TN orange is quoted on the spot at 124*s.*

Spices.—There has been very little doing, owing to the holidays, and public sales will not be resumed until next week. Black *Pepper* closes at 6⅛*d.* per lb. for Singapore, on the spot, against 6¼*d.* a year ago. There was very little fluctuation in the price during 1901, the lowest touched being 5$\frac{15}{16}$*d.*, and the highest 6¼*d.*, although the statistical position continued to improve throughout that period. White pepper, being still in small supply, with diminishing stocks, has risen about 1*d.* per lb. since last January; the latest quotations are 9$\frac{3}{8}$*d.* for Penang and 9$\frac{7}{8}$*d.* for Singapore. The London stock of Cochin *Ginger* having been drawn upon considerably to supply the demand, and the new crop not promising well, this article became dearer during last year, a rise of about 18*s.* per cwt. (bringing the price of washed rough up to 52*s.*) being established. Other descriptions followed the upward movement, Jamaica advancing about 12*s.* per cwt., Japan about 10*s.*, and Bengal about 7*s.* per cwt. Zanzibar *Cloves* have fluctuated between 3$\frac{11}{16}$*d.* and 4$\frac{7}{16}$*d.* per lb., as influenced by the operations of speculators; but the present price is just about the same as at this time last year—viz., 4½*d* per lb. *Pimento* improved in price during 1901, from 2$\frac{11}{16}$*d.* to 3½*d.* per lb. *Chillies* and *Capsicums* have declined in value during the past year, and *Nutmegs* are dearer; but other spices have been steady in price.

Sugar of Milk.—During the past six months the output of the combined factories in the United States has been doubled, which fact has lowered prices. Best American powder is now obtainable at 40*s.* per cwt. in small wholesale quantities. Italian is quoted unchanged at 41*s.* From Germany it is reported that the offers remain considerably in excess of the demand, and prices have declined in consequence. It is probable that the lowest point has not yet been reached.

Wax, Bees'.—The exports from Tangier during 1900 amounted to 8,212 cwt. (48,193*l.*), against 1,514 cwt. (7,916*l.*) in 1899. Germany received the bulk of the exports in 1900.

Heavy Chemicals.

There is not much doing in the heavy-chemical market yet, the holiday feeling not being over. At the works advantage is being taken of this, and necessary repairs and alterations to plant, &c., are receiving principal attention. Exports are particularly quiet, but home demand is fully equal, if not better, than the average for this time of the year. Values, generally speaking, are steady at unchanged rates.

Bleaching powder is in better demand, especially for export.

Caustic Soda and Ammonia Alkali steady, and in moderate request.

Chlorates and Saltcake quiet.

Sulphate of Ammonia quiet. Beckton, January to June, 11*l.* 2*s.* 6*d.*; Beckton terms, 10*l.* 15*s.*; London, 10*l.* 17*s.* 6*d.*; Leith, 10*l.* 16*s.* 3*d.* to 10*l.* 17*s.* 6*d.*; and Hull, 10*l.* 15*s.* Exports from Leith last week amounted to 809 tons.

Sulphate of Copper weak. Anchor, 19*l.* to 20*l.*; and Liverpool, 18*l.* to 19*l.* per ton.

Liverpool Drug Market.

Liverpool, January 1.

Castor Oil.—Owing to the slightness of demand good seconds Calcutta has remained steady at 3$\frac{1}{16}$*d.* to 3$\frac{3}{16}$*d.* in store; first-pressure French is obtainable at 2$\frac{15}{16}$*d.* to 3*d.* per lb., according to quantity; second-pressure French is held for 2$\frac{7}{8}$*d.* per lb.

Calabar Beans.—At auction a parcel of 8 bags realised 1*s.* 2½*d.* per lb.

Grains of Paradise.—A small arrival has taken place from the West Coast of Africa, and importers ask 80*s.* per cwt.

Gum Acacia.—Further sales have been reported, 43 serons selling at 33*s.* per cwt., and 5- to 10-seron lots soft Soudan at 45*s.* to 46*s.* per cwt. The movement in this article has been most pronounced during the past three weeks, and higher prices are looked for.

Sulphate of Copper.—19*l.* per ton would now be taken. The article is weak.

Arsenic.—Very firm at the advance, and 15*l.* per ton has been paid.

Beeswax (Chilian).—Several parcels have changed hands at prices ranging from 6*l.* 18*s.* 9*d.* to 7*l.* 12*s.* 6*d.* per cwt., the latter price being paid for fine yellow.

Tragacanth.—Twenty-three serons Hog have changed hands at 25*s.* per cwt.

Honey.—Medium grades of Chilian are rather pressed for sale, but the lower qualities are firmly held; 18*s.* per cwt. has been paid for 73 barrels Pile III. The stock is about 5,750 barrels Chilian and 340 cases Californian.

Wax, Carnauba.—There has been more inquiry, with sales of about 240 bags grey at 52*s.* to 53*s.* 6*d.*, the lower figure being for chalky Pernambuco, and 60 bags yellow at 67*s.* to 71*s.* per cwt.

Revision of Import and Export Lists.

The Board of Customs have issued a General Order (113/1901) relative to the revision of import and export lists, to which the attention of importers, exporters, and agents is called. The following are the alterations of interest to the drug-trade:—

Import List.

As at Present.		*As Proposed.*	
Drugs:—		Drugs:—	
Unenumerated (including medicinal preparations not liable to duty)	Value	Quinine and quinine-salts	Oz.
		Unenumerated ...	Value
Dyes obtained from coal tar:—		Dyes obtained from coal tar:—	
Alizarine	,,	Alizarine	Cwt.
Aniline and other coal-tar dyes	,,	Aniline	,,
		Indigotin	,,
		Other coal-tar dyes ...	,,

Export List.

As at Present.		*As Proposed.*	
Medicines, comprising drugs and medicinal preparations:—	Value	Medicines, comprising drugs and medicinal preparations:—	
		Quinine and quinine-salts	Oz.
		Unenumerated ...	Value
Milk, condensed	,,	Milk, condensed, viz.:—	
		Sweetened, whole ...	Cwt.
		Sweetened, separated, or skimmed	,,
Oil-seed cake and other animal-foods, other than bran and pollard	Ton	Cattle-foods, viz:—	
		Cattle-foods containing molasses, or other sweetening matter	,,
		Oil-seed cake and other animal-foods unenumerated, not containing sweetening matter	,,
Sugar: Molasses, treacle, syrup and glucose ...	Cwt.	Sugar, viz.:—	
		Molasses and all sugar and extracts from sugar which cannot be tested by the polariscope	,,
		Glucose, viz.:—	
		Solid	,,
		Liquid	,,

Cocoa-butter Auctions.

Our Amsterdam correspondent, writing on December 24, says:—The auction to be held here on January 7, 1902, will consist of 85 tons Van Houten, 1 ton Helm, 22½ tons de Jong, 4 tons Betke, and 7 tons Mignon. On the same date at London 70 tons Cadbury will be put up in auction.

Duckwari Plantations Company (Limited).

The directors, in their report for the year ending June 30, 1901, state that the cardamom-crop yielded 8,159 lbs., against 8,779 lbs. the previous season. The estimate for the 1902 season is 9,000 lbs.

Alderman Thomas Hyde Hills, J.P., of Cambridge, died suddenly on Thursday morning (January 2) from tetanus. He was a brother of Mr. Walter Hills, ex-President of the Pharmaceutical Society.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

We Are Often Asked

to distribute circulars and price-lists through THE CHEMIST AND DRUGGIST, and we make an effective response twice a year. The first occasion in 1902 will be January 25, and as we shall be closing for press four or five days before that, those who wish to give us insets should acquaint the Publisher of the *C. & D.* about the matter at once. There is little time to lose. If any find difficulty in getting the printing done they also should write to the Publisher, as he can give assistance in such circumstances. In all cases it is wise for business houses to insert effective announcements in our Winter Issue. It will be a good one in every way for business, as it will be circulated to 12,000 of the best buyers of druggists' goods in the world.

Summary.

NEW STORE-PRICES are quoted on p. 35.

SMALLPOX is rapidly increasing in London (p. 35).

MR. CHARLES SANGER is sketched in a peculiar position on p. 46.

FURTHER particulars of the trial of Mr. W. H. Kerr are given on p. 37.

DR. ALABONE disclaims his son's account of consumption-treatment (p. 50).

THE names of the winners in the "Nipper" cameras' competitions are printed on p. 56.

MR. PETER J. DEWAR, a well-known Scottish pharmacist, died in Dingwall last week (p. 53).

QUEENSLAND has got a Pharmacy Act in which pharmacy companies are dealt with (p. 39).

SOME points in regard to liability of labels to medicine-stamp duty are mentioned on pp. 57 and 58.

INTERESTING ABSTRACTS of the patent specifications most recently published are printed on p. 67.

THE Chemists' Managers' and Assistants' Society has started on its new career with some *éclat* (p. 54).

COINS AND STAMPS with King Edward's effigy on them are now available. We illustrate the coin (p. 68).

THE largest arsenic-mine in Devon has been closed. The effect of this on the market is discussed on p. 49.

CONSIDERABLE changes have been made in the Australian Federal tariff. We give particulars on p. 46.

THE PHARMACEUTICAL COUNCIL (G.B.) met on Wednesday, but there was no unusual business to transact (p. 41).

A CHAIN for the badge worn by the President of the Pharmaceutical Society was presented on Wednesday (p. 43).

THE PERFUMERY-TRADE of the world has been inquired into by the French Government with some peculiar results (p. 38).

WHAT is opodeldoc? The question is put by a correspondent who finds that some Scotch chemists give lin. opii for it (p. 58).

CHROMATIC PHOTOGRAPHY was the subject at the Newcastle Chemists' Association meeting this week, Mr. Payne dealing with it (p. 55).

WE give the conditions of the competition for the National Consumption Sanatorium for which Sir E. Cassel has donated 200,000*l.* (p. 51).

THE new Kodak terms have brought wholesale dealers together. We note what they are doing, and what the Kodak Company say (p. 56).

DR. HEWITT, of the People's Palace, proposes to remove aldehydes from whisky by sodium phenyl-hydrazine sulphonate, so maturing it aswell as by age (p. 50 and p. 54).

THE French Government desires to encourage the distillation of otto of rose in France, and has made inquiry about it. We deal with the matter in an article on p. 49.

MR. DREW, the Kensington Coroner, has severely cross-examined a deceased chemist's son in regard to the sale of a child's cough-mixture that contained paregoric (p. 34).

A JOINT COMMITTEE of the Society of Chemical Industry and the Society of Public Analysts have reported upon the testing of food for arsenic. We epitomise their statements on p. 54.

MR. LORD GIFFORD figures well in this number. He spoke at the Council on Wednesday (p. 42); "Xrayser" refers to him (p. 47); he drops into an editorial note (p. 48); and correspondents write about him (p. 57).

DR. BALFOUR MARSHALL has reported on the Pharmaceutical examinations in Edinburgh during 1901, saying that the 10-guinea fee has helped to raise the passes (p. 41); but we note this has not happened this month, as the list on p. 43 shows.

THE CHIEF BUSINESS that the Irish Pharmaceutical Council had before it on New Year's Day was provided in Sir G. Duffey's report on the examinations. He recommends the Preliminary to be divided, as it is too long. A committee is to consider the matter (p. 66).

THE PRINCIPAL EVENT on the market has been a substantial reduction in lithia salts. Pilocarpine and eserine have been advanced. Quicksilver is 2*s.* 6*d.* lower, but mercurials are unaltered. Morphine is 1*d.* lower. Both nitrate of soda and ammonia sulphate are dearer. The first drug-sales of the year are reported on p. 62.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

The new Patent Office in Quality Court, Chancery Lane, W.C., was this week opened to the public. The building has taken three years to construct.

On January 3, a fire broke out on the premises of Mr. F. G. Brice, chemist, Humberstone Road, Leicester, but owing to the promptitude of the fire brigade the flames were subdued before much damage was done.

Mr. John Crosfield, late senior partner of the firm of J. Crosfield & Sons (Limited), Warrington, whose death we reported in last week's issue, has bequeathed a legacy of 1,000*l.* to the Warrington Infirmary and Dispensary.

At Liverpool on January 3, a firm of shipping agents were fined 20*s.* and costs for having caused 1½ tons of picric acid to be brought within the jurisdiction of the Mersey Docks and Harbour Board without having special permission in writing.

The *Zoophilist* mentions that the Secretary of the National Antivivisection Society is in correspondence with the Home Secretary regarding the lecture with physiological experiments delivered by Professor Sherrington to the Liverpool Chemists' Association recently.

Henry James Goode, described as a druggist, of 58 York Road, London (but whose name does not appear on the Register of Chemists and Druggists), was fined 5*l.* and 1*l.* 17*s.* 6*d.* costs, or one month, by the Lutterworth Justices for posting and delivering an indecent advertisement in the district.

William Hall, *alias* Trythall, who is at present in Lancaster Castle awaiting trial on charges of forgery at Barrow, was on January 3, under instructions from the Home Secretary, committed for trial on the further charge of forging a cheque for 5*l.* in the name of Arthur Davis, dry-salter, Bramley, Leeds.

William Fairs, described as a chemist and dentist, of Old Ford Road, E., was fined 20*s.* and 23*s.* costs, at Worship Street Police Court, on January 2, for selling lime-water which on analysis was found to be deficient in lime to the extent of 20 per cent., and also to be prepared with ordinary instead of distilled water.

A circular issued by the Secretary of the Decimal Association (Mr. Edward Johnson) gives the names of 173 members of Parliament who have promised to support the introduction of the metric weights and measures into Great Britain. The circular urges the adoption of the system principally in the interests of our foreign trade.

At the annual dinner of the Derwent Agricultural Club on January 1, the Lord Mayor of York suggested that the Government might with advantage to the agriculturists of this country either take ½*d.* per lb. off the duty on English-grown chicory or put ½*d.* per lb. on the foreign-grown article. This would enable the cultivation of chicory, which was at one time largely carried on in the vicinity of York, to be again made profitable.

Malcolm Brooke Campbell (26), described as a book-keeper, has been committed for trial at Marylebone Police Court on charges of embezzling various sums belonging to his employer, Charles Peirce, veterinary surgeon, and of forging and uttering two cheques, each for 5*l.*, with intent to defraud Mrs. Sarah Adams (the wife of Mr. A. H. Adams, chemist and druggist, 21 Formosa Street, Maida Vale, W.) and a firewood-merchant in Amberley Road, W.

On Wednesday, January 8, at the Burnley Borough Police Court, Mr. Jesse Tomlinson, chemist, was fined 10*s.* and costs for selling camphorated oil which the Borough Analyst reported to be deficient in camphor to the extent of at least 36 per cent. Defendant said the offence would not have occurred had he been in the shop, pointing out that a mistake had been made. A similar penalty was at the same time imposed on a medical herbalist, who sold sweet spirit of nitre 88 per cent. deficient in ethyl nitrite.

The Coroner and the Cough-mixture.

At the Kensington Coroner's Court on January 4, Mr. C. Luxmoore Drew and a jury inquired into the death of Arthur Chapman, aged 2 years and 4 months, son of a Notting Hill carman. The mother said the child had a little cough, and as she did not think it serious she got 2*d.* of cough-mixture from a chemist. The child died next day. Witness produced the bottle in which she received the mixture. It bore a white label—

Cough-mixture.—Slack's Drug Stores, Walmer Pharmacy, 142 Walmer Road, Notting Hill.

Alfred John Slack said he resided at 142 Walmer Road, and was a chemist's assistant. He was not registered, and did not sell scheduled poisons. The following cross-examination then took place:—

The Coroner: You keep a chemist's shop?—Yes. Did you prescribe for this child?—No; my father prepared a gallon of the mixture a week before he died. He was a chemist. The Coroner: You prescribed this mixture?—No. I do not call it prescribing selling from a stock-mixture already made up. If I prescribed I should make it up there and then. Did the mother say what she wanted?—No. You selected it?—It is a mixture we have been selling for ten years. She asked for 2*d.* of cough-mixture for a child. Did you ask the age?—No. I gave verbal instructions about the amount to give—a teaspoonful three times a day. What would that teaspoonful contain?—Syrup of squills, 15 drops; paregoric, 1 drop; ipecacuhana wine, 5 drops; essence of peppermint, 2 mins.; and water with colouring-matter to 1 dr.

The Coroner: What does paregoric contain?—A slight proportion of opium, but I am not selling it now.

The Coroner: You transgressed the Pharmacy Act?—Yes; but it contained only a small quantity. That has nothing to do with it. My officer called on you and asked what the mixture you sold the woman contained?—Yes. You gave him a copy of the formula and signed it?—Yes. Why did you write after paregoric "*sine* opium," when you come here and say it did contain opium? It is purely an attempt to deceive me.—I am sorry I made the mistake. What I am selling now is without opium.

The Coroner: Do not you think it a dangerous thing to give opium to a little child?—It does not contain much.

The Coroner: It is a dangerous thing for a person who does not understand diseases to prescribe a mixture containing poison; and you give it in a very lax way. There is no label on the bottle showing it contained poison.

The Witness: Many chemists never do it.

The Coroner: That is no excuse. Why was it not done in this case?

The witness did not answer.

The Coroner: How much would you give to a child 1 month old?—Fifteen drops.

The Coroner: How would they measure it?—I tell them a quarter of a teaspoonful.

Did you enter the sale in a book?—No; I have not got a poisons-book.

The Coroner: You have certainly committed one or two irregularities. You have no poisons-book, you do not label it "Poison," and you as an unregistered chemist have dispensed poison. Do you know the Pharmacy Act?—I have not read it through. My late father was a member of the Society.

Are you acting as his executor?—No; a Mr. Rynall is his executor.

The Coroner pointed out to the witness that he was liable to a fine of 5*l.* under the Pharmacy Act, and read the section relating to the labelling of poisons.

The Witness: That refers to crude poisons.

The Coroner: No; it refers to poison in any form, and unless you are a registered chemist and druggist it is illegal for you to sell any article containing poison.

The Witness: What I am selling now is paregoric *sine* opium.

The Coroner: Is it made according to the British Pharmacopœia?

The Witness: No.

Dr. A. T. Nash, of Blenheim Crescent, who was called in after the death, said his autopsy showed that death was due to convulsions from tubercle of the mesentery. Death was not accelerated by the opium in the cough-mixture, but it was dangerous to give to a child. The Coroner, in referring to the evidence, told the jury it was an important case on public grounds, and he should consider whether he should take any further steps in the matter. The jury, however, could only return a verdict of death from natural causes.

Smallpox in London.

Sir J. Crichton Browne, in an address to the Sanitary Inspectors' Association, of which he is President, said that if the present epidemic pursues the usual course it will reach its highest level between January and May. At this season, with a vast holiday migration of Londoners to all parts of the country, it is not impossible, he added, that it may be transplanted to remote districts.

Startling proof of another path of infection has come from Dr. J. C. Thresh, who, in a report to the Essex County Council, enumerates seventy-five cases of smallpox in the districts which his duties as medical officer of health take him to. He finds that infection must have been air-borne from the smallpox ships lying off Purfleet, which is the nearest point to the Essex shore, as there was no personal communication between the patients, friends, and attendants and the Essex shore. Whenever smallpox has been under treatment on the hospital-ships outbreaks have occurred at Orsett, and his theory derives further support from the fact that several cases of smallpox have similarly occurred on the opposite side of the river at Crawford, Darenth, Swanscombe, and Dartford. There are now over 800 cases of smallpox under treatment in the Metropolis.

Store-prices.

The January price-list of the Army and Navy Co-operative Society (Limited) states that the sale of chlorinated lime in 1-lb. tins has been discontinued. The following are "additions":—

Anti-malarial outfit, 15*s.* complete; Casumen Prideaux, 6*d.*, 1*s.*, and 2*s.* per box; Copeland's toilet-cream, 10*d.* per bottle; Coke dandruff-cure, 4*s.* per bottle; Crown "Bathodora" violet, 2*s.* 6*d.* per case; Holland's Australian hair-restorer, 3*s.* and 5*s.* per bottle; indiarubber bath-sponges, 3*s.* and 4*s.* 3*d.* each; Magda toilet-cream, 2*s.* 9*d.* per jar; Mennon's borated talcum toilet-powder, 9*d.* per tin; Navanoids (for sea-sickness), 4*s.* 2*d.* per bottle; Houbigant's Poudre Ideale, 8*s.*, and Poudre Royale, 6*s.* per box; Tatcho, 1*s.* and 1*s.* 10*d.* per bottle; vaccination lancets (aseptic), 2*s.* 6*d.* each; vaccine lymph, 10*d.* per large tube, 1*s.* 3*d.* for three small tubes; Yardley's Imperial eau de Cologne, 1*s.* 9*d.* per bottle; Ozonateurs (gilt), 4*s.* 6*d.* each; Ozonatine, 3*s.* 8*d.* per tin; Enderby's patent knee-caps, 25*s.* each.

The Society's own preparations include malt and cod-liver oil, sold at 1*s.* per 1-lb. bottle; cod-liver oil emulsion, 1*s.* per 8-oz. bottle; Norwegian cod-liver oil, 5*d.*, 9*d.*, and 1*s.* 4*d.* per 8-oz., 16-oz., and 32-oz. bottle respectively.

Contracts.

The following contracts with public bodies have been settled:—

Canterbury.—Messrs. Walker & Harris, of Canterbury, to be chemists to the city.

Crewkerne.—Mr. O. W. Catford to supply drugs to the School Board.

Elham (Kent).—Messrs. Corbyn, Stacey & Co., High Holborn, W.C., for the supply of drugs to the workhouse.

Grantham.—Mr. Harry Hopkinson, for the supply of disinfectants.

Maidstone.—Mr. F. R. Stonham, chemist and druggist, Maidstone, for drugs to the workhouse.

Stratford-on-Avon.—Mrs. Loggin, Stratford, to supply druggists' sundries to the workhouse.

Epiphany Offerings.

The annual offering of gold, frankincense, and myrrh on Epiphany Sunday took place at the Chapel Royal, St. James's, on January 5. King Edward has signalised the first celebration since his accession by restoring some of the dignity and impressiveness of which in recent years the ceremony has been shorn. Only small quantities of incense and myrrh were given, and the supplying of these is a privilege of the Apothecary of the Household. The gold took the form of twenty-five new sovereigns. The gifts are first enclosed in white envelopes sealed with red wax, and then placed in a crimson satin bag tied with gold cord.

Wine-licences.

A considerable number of "chemists'" and other wine and spirit off-licences were transferred at the Kensington Licensing Sessions on January 7, but in only one instance does the name of a registered chemist appear. The solitary exception is the transference of the licence held by Mr. John Arthur Barnett, pharmaceutical chemist, at 97 Uxbridge Road, Hammersmith, to Mr. Arthur Butcher.

Birmingham Notes.

At the Staffordshire Sessions on January 2, Messrs. Hedges & Son, chemists, appealed against the assessment of their premises at 111 Soho Road, Handsworth, but after a protracted hearing the appeal was dismissed with costs.

Dr. David Nelson, professor of chemical medicine at Queen's College, Birmingham, was the first physician to introduce pepsin into regular medical practice, and used it in 2,500 cases between 1851 and 1857, and the first liquor pepticus was prepared by Messrs. W. & C. Titterton, chemists, Birmingham. The name pepsin is derived, like the compound word dyspepsia, from the Greek, and denotes "difficult digestion."

Note by Editor.—This is interesting, but the following quotation from an article on pepsin in THE CHEMIST AND DRUGGIST, December 15, 1860, indicates that further light is required:—

The history of this remedy dates from a very remote period. It is mentioned by Pliny, and described by Galen, and also appears in the London Pharmacopœias down to 1677. . . . In 1856 a French chemist succeeded in producing the very unique and comparatively agreeable preparation now in use, which was first introduced into this country by Dr. Ballard, of Myddleton Square, London.

The late Dr. George Harley also had to do with the introduction of pepsin in modern times; so much so that *Punch* satirised his connection with the matter in the pleasantest way.

All on Paper.

Messrs. Boots (Limited) and Taylor's Drug Company (Limited) are continuing the stiff newspaper fight in the populous towns of the West Riding of Yorks. The daily newspapers are getting quarter-page advertisements from companies day after day, and putting them in affectionate juxtaposition on the same page. Boots have opened out on a threatening scale at Leeds and Halifax, and Taylor's announce that they intend to run free entertainments in the Leeds Coliseum shortly.

Burgling.

At Clerkenwell Sessions on January 2, four youths were sentenced respectively to twenty-one, twenty, nineteen, and eighteen months' hard labour for breaking and entering the premises of Messrs. A. J. Fentiman & Co., manufacturing dentists, 2 Upper East Smithfield, E., and stealing various articles.

Three young labourers were sentenced to one month's hard labour apiece by the Portsmouth Magistrates on January 7 for breaking into the shop of the Timothy White Company at 111 Albert Road, Southsea, and stealing nine cases, containing twenty-two bottles of perfume. There were other charges of stealing against the prisoners.

At the West Kent Quarter Sessions on January 2, Joseph William Shaw (32), chemist's assistant, was sentenced to three years' penal servitude for burglariously breaking and entering the dwelling-house of Mr. Oliver Rogers, chemist and druggist, of the firm of Dunkley & Rogers, chemists, Tunbridge Wells, with whom he was formerly employed, and stealing seven cheques, 20*l.* 9*s.* in money, and various articles of wearing-apparel.

Vitriolic Spite.

Mr. Wm. H. Ludlam, chemist and druggist, West Street, Fleetwood, was a witness at Preston Quarter Sessions on January 1 in a case in which a waiter and a chambermaid were charged with damaging 200*l.* worth of furniture at a Fleetwood hotel with oil of vitriol. Mr. Ludlam deposed to selling 8 oz. of sulphuric acid to the waiter, whom he cautioned as to its use. The waiter got twelve months' and the chambermaid six months', with hard labour.

Cheap Physicking.

In making application to the St. Albans Board of Guardians on January 2 for an increase in salary, Dr. Wells, Medical Officer, stated that for 75*l.* per year he had to make 2,000 visits a year and to supply an average of fifty bottles of medicine per week, which worked out at less than 6*d.* fo

Digitized by Google

each bottle of medicine and each visit. An increase of 15*l.* per year was granted.

A Home-made Remedy.

An inquest was held at Penge last week on the body of the 4-weeks old child of Albert Wickens. The mother stated that the child had a cold, and she obtained some laudanum, peppermint, aniseed, and paregoric, and mixed it with treacle and water. She had been in the habit of using this mixture when her children had a cold, and she gave the child three half-teaspoons of the mixture. There was only about a pennyworth of laudanum to over a pint of water. Dr. Michael stated that he found the child suffering from bronchitis and in a lethargic state. There would have been 1 dr. of laudanum in the mixture. He considered that half a drop of the drug would have been sufficient to kill a weak child of that age. He had made a *post-mortem* examination and found evidences of bronchitis and congestion of the lungs. Death was due to these causes, and to the opium, but in what degree each contributed he could not say. Mr. Charles Henson Smith, chemist, 47 Anerley Road, said he sold the mixture. It was a very common mixture used as a household remedy, and he made it up without question. He labelled it "Poison" in accordance with the requirements of the law. He should have considered there was some risk in giving this mixture to a child of the age of the deceased, and he would have refused to have served it had he suspected what it was for. He thought it was for cough-mixture for an adult. The jury returned a verdict in accordance with the medical evidence.

Fly-papers Wanted.

Replying to a correspondent who called attention to the value of fly-papers in the hot weather in South Africa, Sir Redvers Buller says: "I am myself sending out some packets of fly-papers, and I will do my best, if occasion allows me, to advocate some fly-papers being included in all packages of supplies sent out from England to friends in South Africa."

Students at the Glassworks.

On New Year's Day the students of the Sheffield College of Pharmacy, accompanied by the principal and friends, visited the Rotherham Glassworks by permission of Messrs. Beatson. The party was personally conducted by the firm's works-manager (Mr. Winterbottom), and among the interesting processes seen were the making of hand-made bottles, the preparation of fireclay by repeated treading, and the moulding of dome-shaped crucibles each weighing 15 cwt. The latter take a fortnight to fashion, and require from two to four years to thoroughly dry before setting in the furnaces. The ingredients and colours for glass were shown and explained, concluding an excellent technological lecture. The manager having been thanked for his able and lucid guidance, the students returned to Sheffield by train about noon.

The Week's Poisonings.

Fifteen fatalities from poisonings have been reported since last week's issue. Four of these were due to the unscheduled poisons spirit of salt (2), phosphorus, and "a preparation for greased heel in horses." The scheduled poisons were carbolic acid (3), laudanum (3), chloral, arsenic, morphine, strychnine, and prussic acid. The hydrochloric acid was taken in one case by a Maidstone woman, who drank about 5 oz. A doctor at the inquest told the jury that a teaspoonful would kill, and that there was no restriction on the sale of the poison.—In the second case, a house-painter in Caledonian Road, N., drank some by mistake from a pickle-jar. It was stated in evidence that the spirit of salt had been obtained from an oil-shop.—A well-known cricketer, named Beaumont, drank a quantity of Smith's weed-killer at Carshalton last week, and died from arsenic-poisoning.—A labourer at Fenton died from poisoning on January 1. In his pocket was found an empty packet labelled "Scarlett's vermin-killer," which deceased had bought at the shop of Mr. Heap, chemist and druggist, Hanley, some time before. The powder consisted of strychnine mixed with sugar of milk.—A Birmingham house-furnisher named Gordon, who was troubled with insomnia, went to the branch shop of Magor's (Limited), in Stratford Road, and asked for sixpennyworth of chloral hydrate. He said he was used to taking it as a sleeping-draught. He became impatient when Mr. Patrick, the manager, told him he must not take more than a sixth or an eighth part at the most. Mr. Patrick gave the deceased ½ oz.. He asked the deceased to sign the poison-book, and he did so. Half an hour later he was informed of the deceased's condition, and gave an emetic, at the same time advising that a doctor be sent for. Dr. Chadwick injected morphine twice, but in spite of all efforts the man died.—The Hastings Coroner, on January 6, inquired into the circumstances of the death of a gentleman named Bisset, a Ceylon coffee-planter, who suffered from cancer of the tongue. Deceased had only lately arrived in England, and a London physician, whom he had consulted, had advised morphine-injections. A Hastings medical man, Dr. Brodribb, said that as the injections of morphine had been prescribed in London he continued them. The deceased had complained that the morphine did not make him sleep. The nurse had been giving 10m. of 1 in 20. The witness ordered 6m. of 1 in 12. Of this he had one injection. The deceased died from morphine-poisoning, consequent upon congested kidneys. Had the doctor known of the kidney-disease he would not have given the drug, but only have followed the course of treatment from the physician in London. A verdict of death from misadventure was returned.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Dr. Meredith R. Whitla, M.C.P.S.I., Monaghan, has been nominated as a member of the local Urban Council.

Mr. S. Wilson, J.P., pharmaceutical chemist, Medical Hall, Longford, has been installed, for the sixth time, Secretary and Treasurer of Masonic Lodge 76, Longford.

At the examination for assistants to apothecaries and pharmaceutical chemists, held on January 3 at the Apothecaries' Hall of Ireland, 40 Mary Street, Dublin, Mr. Thomas P. Keawell, Nagles Medical Hall, 28 Bolton Street, the only candidate, passed successfully.

Contracts.

The Governors of the District Lunatic Asylum, Mullingar, have accepted the tender of Mrs. English, of that town, for the supply of drugs and medicines during the ensuing year.

Poison Accident.

On June 4 a girl named Culbert, of Holywood, Belfast, took some oxalic acid instead of Epsom salts, but recovered after the administration of an emetic. On the same day a woman named Silcock was detained at the Royal Hospital, Belfast, suffering from the effects of drinking hydrochloric acid.

Laudanum poisoning.

The Coroner's jury which investigated the death of Lieutenant Winter (*C. & D.*, January 4, page 4) returned a verdict of death through an overdose of laudanum. The suggestion of suicide did not arise, and is erroneous, for deceased was buried with full naval honours.

Accidental Poisoning.

On January 6 the Dublin City Coroner (Dr. Byrne) held an inquest into the death of a child, named Sullivan, who died in the Cork Street Hospital. It appeared from evidence given that the child was taken to the hospital three weeks ago suffering from typhoid fever. On Saturday evening Cornelius Foley, resident pupil in the hospital, instructed Nurse Hanell to fill a bottle of medicine from the stock-bottle "mist. acid. sulph." He pointed out the bottle to her and mentioned the name at the same time. He then turned to do other work, and did not see the bottle of medicine again in the pharmacy. There were a number of other bottles on the counter at the same time. There was carbolic

Digitized by Google

acid in the bottle he directed the nurse to use. There was carbolic acid in a blue bottle also, but the "mist. acid. sulph." was in a white bottle. There was a prescription on the patient's bottle, but his directions to the nurse were verbal. The medicine contained glycerin, carbolic acid, aromatic sulphuric acid, and water. Dr. John Day, physician in charge of the hospital, said he was present in the surgery when the mistake occurred. The child's father said that the matter was purely an accident, and so did the jury.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Mr. John Fraser, chemist and druggist, has been re-elected Chairman of the Helmsdale Parish Council.

Mr. George Cruickshank, who has been with Mr. George Milne, chemist and druggist, Turriff, for the past two years, has been presented with a gold pendant and scarf-pin by a few friends, on his departure for Aberdeen.

Business Changes.

Mr. J. A. Finlay, chemist and druggist, has purchased the business of Mr. D. F. Macdonald, 302 Morningside Road, Edinburgh.

Mr. Robert S. Ramsay, chemist and druggist, has acquired the business carried on by Mr. A. N. Bowman at Auchterderran, Cardenden, Fife. Mr. Bowman continues at Lochgelly.

Messrs. Wm. Hay & Sons, aërated-water manufacturers, of Aberdeen, Inverurie, and Alford, have acquired the extensive business known as the Barkmill Aërated-water Works, lately belonging to Mr. R. H. Strachan.

Mr. Robert Inglis, chemist and druggist, who has managed Mr. Arthur McKellar's pharmacy at 69 South Portland Street, Glasgow, for some time, has now acquired the business for himself, and will carry it on under the style of "Alexander Kinninmont (R. Inglis, proprietor)." Mr. McKellar, pharmaceutical chemist, will continue his business at 6 Kensington Terrace, Ibrox.

Glasgow Notes.

The small percentage of passes at the recent Minor examination in Edinburgh is causing a mild sort of consternation. The "surgeon-druggists" are especially interested in the matter, as several of them are anxious to employ qualified men if it were possible to get them.

Trades generally report that there has been a distinct falling-off in the demand for Christmas perfumes this season. Our friends the drapers are credited with annexing a large portion of what was at one time the chemist's perquisite.

To Replace the Preliminary Examination.

The Educational Institute of Scotland has replied as follows to the Secretary of the Forfarshire and District Chemists' Association:—

The information you furnished was carefully considered, and the conclusion come to was that meanwhile examinations could not be specially held in Dundee, more particularly as the distance from Edinburgh is not great, and the expense of a separate examination would be very considerable.

Aërated-water Bottles.

In the Aberdeen Sheriff's Court recently, Sheriff Robertson gave his decision in an action by Mr. R. H. Strachan, aërated-water manufacturer, against Messrs. W. Sinclair & Co., wholesale druggists and aërated-water manufacturers, Aberdeen, for an alleged infringement of interdict granted in March last, restraining the defendants from using the words "Strachan, Aberdeen," or "Strachan's, Aberdeen," on labels or bottles. The Sheriff found that there had been no breach of interdict, except in the case of three bottles, which was admitted. He said that when the bottles complained of were the property of the respondents, and the part of the bottle which was likely to induce mistakes is completely and apparently securely covered up by defenders' own label, he was not prepared to hold that the use of the bottles so labelled is in breach of the terms of the interdict granted. He imposed no penalty, but found respondents liable in expenses, which he modified at 3*l.* 3*s.*

Science for School-teachers.

A new science laboratory was opened on January 6 at Moray House United Free Church Training College, Edinburgh, by Mr. Thomas Shaw, K.C., M.P. It is a building of three storeys, with a floor each for the teaching of physics, chemistry, and art. Provision is made in the physics and chemistry departments for the teaching of sixty-four students in each department, and a room is also available for photographic and photometric work. Practical zoology and botany will be taught during the summer session.

South African News.

PERSONAL.—Mr. and Mrs. F. H. Carman have returned to Cape Town by the *Gaul*, and both are greatly improved in health by their sojourn in the Old Country. It will be remembered that before leaving South Africa Mr. Carman sold his business at Woodstock, Salt River, to Messrs. Hopkins & Co.

PHARMACEUTICAL SOCIETY OF CAPE COLONY.—In connection with the meeting to be held on January 19, a circular has been forwarded to all the chemists in Cape Town and the suburbs, signed by Mr. D. K. Petersen (of P. J. Petersen & Co.), Mr. F. C. Mathew (of Heynes, Mathew & Co.), Mr. A. J. Rivett (of Lennon, Limited), and Mr. Geo. Darroll (of Cleghorn's pharmacy), convening a meeting for the evening of January 18, to consider the question of agreeing to uniform prices for the retail trade.

CAPE TOWN CHEMISTS AT LAW.—In the Supreme Court, Cape Town, before the Acting Chief Justice (Sir John Buchanan) and Mr. Justice Maasdorp, an application was made by Mr. Searle, K.C., on behalf of Messrs. Lennon (Limited) for an order requiring the Town Council of Cape Town to approve certain plans for proposed alterations to their property in Strand Street and Adderley Street. The Council alleged that the proposed alterations constituted an encroachment beyond the line of building-frontage. This was denied by the applicants. After argument, the Court held that the proposed alterations would be an infringement of the contract between the parties, and judgment was for the Town Council, with costs.

CHARGE AGAINST W. H. KERR.—We have already reported (*C. & D.*, December 21, 1901) the result of the trial at the Special Criminal Court, Bloemfontein, on November 1, of William Henry Kerr, dispenser at the Refugee Camp there, who was charged with culpable homicide, by failing to exercise proper skill and care, dispensed a certain liquid—viz., strychnine—which caused the death of three children. Mr. C. L. Botha appeared on behalf of the Crown, while Advocate G. A. Hill, assisted by Attorney G. R. Jooste, defended. The hearing of evidence occupied the Court two days. At the conclusion of the hearing, after about twenty minutes' consideration in private, the President said the Court had carefully considered the very serious case, especially as a man's liberty was at stake. The case had been a very unsatisfactory one throughout, and he thought that the prosecution had failed. There had certainly been some very strong circumstantial evidence against the accused. The evidence of Sister Bryant at first seemed very strongly corroborated. At the same time, the question arose, Why had the medicine-bottle to be refilled twice during the Saturday preceding the demise of the children? He was of opinion that in many instances evidence had been transposed, and that mistakes had been made. If he thought otherwise, the grossest perjury he had ever heard of had been committed. At first it had looked as if the accused had filled the medicine-bottle unconsciously, but Nurse Bryant might also unconsciously have done it while she was speaking to the accused in the dispensary; but in that case the accused would still have been responsible. There was a strong doubt in the mind of the Court, and the accused would accordingly be discharged.

French News.

(From our Paris Correspondent.)

THE PELLETIER-CAVENTOU MONUMENT.—The latest list of subscriptions to this monument show the total to be 38,468f., which is still insufficient to cover the cost, and the list remains open.

NANCY SCHOOL OF PHARMACY.—M. Godfrin, professor of Medical Natural History, has been appointed Director of the Nancy School of Pharmacy for three years, in place of the late M. Bleicher, who was assassinated there last year.

FOSTERING THE EXPORT-TRADE.—The seventh number of the series of Industrial and Commercial Monographs for fostering the export-trade of France has recently been published under official auspices by the National Office for Foreign Trade, as already announced in the *C. & D.*, and is devoted to "Le Commerce de la parfumerie à l'étranger et aux colonies." Its contents are practically confined to giving such information as is likely to be of assistance to French perfumery-manufacturers. It aims to cover the leading markets of the world, and the contents table is divided under the headings Europe, Asia, Africa, America, and Oceania. The information given strikes the experienced exporter as being in some cases of a slightly elementary nature, but I have no doubt that English perfumery firms would be interested in consulting the book. The compilers have aimed at giving the following information, which has been supplied by French Diplomatic and Consular Agents and French Chambers of Commerce abroad:—

The quantities of the following classes of perfumery imported into the leading foreign cities:—

(1) Toilet-soaps; articles of perfumery, such as cosmetics, dentifrices, toilet-waters, toilet-powders, hair washes and dyes.

(2) Amount of imports; fine perfumery, cheap perfumery.

(3) Nature of the perfumery and soaps produced in each country.

(4) Style of putting up goods, and usual contents of bottles and boxes.

(5) Cost of carriage, Customs dues, methods of payment.

(6) Customs and habits followed in purchasing.

(7) Names and addresses of the principal agents in each country capable of representing French perfumery-houses.

(8) List of the most important perfumery-shops, large bazaars, drapers, hairdressers, and all other retailers selling perfumery articles, such as pharmacists, druggists, grocers, &c., whom manufacturers can address either through the post or by travellers.

The following details regarding the perfumery trade in Great Britain are fairly representative of the contents of the work:—

General Information.—England manufactures all kinds of perfumery. It imports from Germany a large quantity of cheap products and buys from France the higher-class goods, as well as some essential oils. Statistics follow of the quantities and values of perfumery imported into Great Britain, comparing the trade of 1895 with that of 1899. The writer continues: "It will be noticed that Germany is supplanting France little by little, thanks to the cheapness of the raw materials which it supplies to English manufacturers. Perfumery is sold under the label of the maker, and the goods are put-up in a similar way to those sold in France. Settlements are, as a rule, made at thirty days' date."

Duty.—"Perfumery and products employed in its manufacture (except perfumed alcohol) are free of duty." The goods that pay duty are indicated together with the tariff, and also cost of carriage to England.

London.—"French perfumery, and particularly the best-class goods," say the compilers, "are much appreciated in London, where the leading manufacturers are represented. Our goods have to meet the competition of the home-made articles and those of the Germans, whose products are cheaper than ours. Offers of service can be made to the following firms." The names follow of four of the leading stores, and four wholesale firms. Information of a somewhat similar nature, with or without addresses, is also given about Cardiff, Glasgow, Liverpool, Newcastle-on-Tyne; but whereas eight names are mentioned for London, seventeen are indicated for Newcastle, thus giving to the uninitiated the impression that the latter town is by far the most important market for perfumery in Great Britain.

HYDROPHOBIA STATISTICS.—According to statistics drawn up by the medical authorities of Paris it appears that 26,165 persons bitten by mad dogs have been inoculated at the Pasteur Institute against rabies since 1886, when the method was first introduced. During the sixteen years only 107 persons succumbed after inoculation. In connection with Pasteur it may be added that his statue will be ready in a few months, and will be erected in the square of the Sorbonne.

ENGLISH PHARMACISTS IN FRANCE.—A result of the law requiring foreigners who wish to start business as pharmacists in France to go through a complete course of general study here was shown in a recent advertisement in a Paris journal. It reads as follows: "A young English pharmacist seeks an active pharmacien, having the French diploma, to participate in the purchase of a pharmacy in the South of France. A very good opportunity to set up in business without capital." Thus an English pharmacist who cannot get the diploma here is apparently willing to provide capital and share the profits with a pharmacien who might otherwise have a chance of remaining an assistant all his life.

Business Changes.

MR. ELLIOTT has opened a new pharmacy in Cheetham Hill, Manchester.

BARRON'S DRUG STORES, of Trafalgar Road, Greenwich, S.E., have opened a branch at 291 New Cross Road, S.E.

MESSRS. REED & SIMNETT, chemists, late of High Street, Lewisham, and Perry Vale, Forest Hill, S.E., have purchased the business of Alfred Allchin (Limited), at Englands Lane, Haverstock Hill, N.W.

MESSRS. FLATTERS & GARNETT (LIMITED) have now opened their new pharmacy at 48 Deansgate, Manchester, which has been handsomely fitted for them by Messrs. Ayrton & Saunders.

MR. JOHN BENSON, chemist and druggist, formerly of Kirkby Lonsdale, has taken over the business lately carried on by Mr. C. H. Smith, chemist and druggist, at 68 Dalton Road, Barrow-in-Furness.

MR. J. JAMES, chemist and druggist, late of Barnsbury Street, Islington, N., has purchased the business lately carried on by Mr. H. N. Daridge, pharmaceutical chemist, at Imperial Buildings, Ludgate Circus, E.C.

MR. ABRAHAM WALTER GREAVES, chemist and druggist, Chesterfield, has taken his son, Mr. Sydney Chater Greaves, chemist and druggist, into partnership, and the business will in future be carried on under the style of "A. Greaves & Son."

THE business lately carried on by Mr. R. L. Griffiths, chemist and druggist, at Hadlow, Tonbridge, has been acquired by Messrs. Hailstone & Knight. Mr. Knight has another business at Crowthorne, Berks. [Corrected announcement.]

MR. W. H. CLUBB, pharmaceutical chemist, Sefton Park and Wavertree, Liverpool, has taken Mr. J. Austin Thomas, chemist and druggist, formerly of Birkenhead, into partnership, and the title of the firm in future will be "W. H. Clubb & Co."

MESSRS. J. & G. COX (LIMITED), gelatin-manufacturers, of Edinburgh, have removed their London office from Eastcheap Buildings to more commodious premises at 24 Eastcheap, E.C. Mr. Leonard H. Roberts continues as their London agent.

THE business carried on by the Ulster Chemists (Limited) at 124 Newtownards Road, Belfast, has been purchased from the liquidator by Mr. John H. Shaw, who was the original owner of that establishment. The company's business at Limavady has been bought by the original vendor, Mr. George W. Lawson, who will carry on the business in future. The business at 171-173 New Lodge Road, Belfast (formerly Mr. W. J. Rankin's), was sold on December 20, 1901; but the lease of the premises was purchased by a gentleman who will put the three golden balls over the doorway.

IN MACKINTOSH-MANUFACTORIES the work is done by women—man cannot stand the fumes—who, it is said, become confirmed drunkards. This is due to the inhalation of carbon bisulphide, which creates a desire for drink.

Australasian News.

Chiefly from "The Chemist and Druggist of Australasia," December 2, 1901. 6d. per copy, post free.

THE QUEENSLAND PHARMACY BILL has been somewhat modified in its passage through the Legislative Council. The Board to be elected for the purposes of the Act is to be elected entirely by the registered pharmacists instead of four members by the Government and three by the pharmacists. A definition of pharmaceutical chemist is proposed to be added to the Bill as "a person skilled in the business of the preparation and preserving of drugs and of compounding and dispensing medicines according to the prescriptions of legally qualified medical practitioners, and registered," &c. The Bill proposed to pay one or more members of the Board to act as examiners, but this indirect payment of members of the Board was objected to by the Council. A new sub-clause was proposed by the Government exempting from the penal section of the Act—

(IV.) Any joint-stock company, if and so long as [the majority and at least three of the directors of such company are pharmaceutical chemists and] no part of the name of such company comprises the name of any person who is not a pharmaceutical chemist and a director of the company at the date of its registration.

The Council omitted the words in brackets. A long proviso was added to the same clause—

Save as by this Act is otherwise provided, it shall not be lawful for any person, firm, corporation, joint-stock company, or society to carry on the business of a pharmaceutical chemist under any personal or firm name other than the name or names of the pharmaceutical chemist or chemists carrying on the said business, or under any title or sign, unless the name or names of [such pharmaceutical chemist or chemists, with the addition of the word "proprietor" or "proprietors,"] is or are all legibly set forth in conjunction with the name, title, or sign of the business in every signboard, label, invoice, or other document in which such name, title, or sign is or are used in or in connection with the business.

Any person, firm, corporation, company, or society carrying on business contrary to the provisions of this section shall be liable to a penalty not exceeding Twenty pounds, and to a further penalty not exceeding Ten pounds for every day during which the offence is continued after conviction.

The Council amended the phrase printed in brackets to the following "the pharmaceutical chemist or chemists who are actually proprietors, managers, or superintendents of such business, with the addition of the word 'manager' or 'managers.'" Homœopathic chemists, who were exempt from the operation of the 1884 Act, continue so as the effect of the modifications of the definitions and addition of a sub-clause by the Council.

CHECKING THE CHEMIST.—During the debate the Hon. D. Marks read from a copy of THE CHEMIST AND DRUGGIST a paragraph from Dr. Luff's inaugural address to the students of the Pharmaceutical Society of Great Britain. What he did not like in the address was that, while it pointed out that the pharmacist was a check upon the medical man, it did not point out that the chemist might require the same careful watching, for he was just as liable to error as the medical man. The speaker, however, did not see how they could provide in the Bill for a check over the chemist.

THE PROFESSION OF PHARMACY.—During the passage of the Queensland Pharmacy Bill through the Legislative Council, two medical members referred to the use of the word "profession" as applied to pharmacy in the Bill. The new Bill proposed to give the Board power to erase from the register the name of any registered chemist "who is, after due inquiry, judged by the Board to have been guilty of infamous conduct in a professional respect." The word "professional" put the medical members of the Legislative Council in arms at once, and the words "in a professional respect" were struck out, and "in respect of his calling as a pharmaceutical chemist" were substituted. The word is, however, retained in clause 26, sub-clause 7, which authorises the Board to make by-laws prescribing the course of study, "professional" practice, &c. The *C.D.A*, commenting on this, says:—

Rarely are two prescriptions presented with exactly the same ingredients. The pharmacist has to apply his knowledge of the principles of chemistry and of the rules of art to the fresh problem supplied by the new prescription. So far as his business consists of work of this kind, he has a distinct claim to the title "profession," just as much a claim as the physician who at first glance diagnoses a case of measles, and yet has to take into account the innumerable factors of the patient's physical constitution and the particular stage of the disease before writing his prescription and giving his directions for treatment.

WHOLESALE DRUGGISTS COMBINE.—As the result of a meeting of the wholesale druggists of Adelaide on November 1, 1901, a Wholesale Druggists' Association is being formed. The new Association is to affiliate with the Grocers' Association, which has been in existence for twelve years, with the object of fixing terms and prices of the leading lines of proprietary medicines.

CONDY'S CRYSTALS.—The Pharmaceutical Society of Australasia have resolved to take counsel's opinion as to the present legal position in reference to the sale of permanganate of potash.—The Chemists' Defence Committee are appealing to Victorian chemists for subscriptions to make up the out-of-pocket expenses (200*l.*) incurred by Mr. Craven in defending the recent action against him.

PHARMACY LECTURER.—Mr. William Whitbread, pharmaceutical chemist (G.B., July 15, 1890), laboratory director with Messrs. A. M. Bickford & Sons, Adelaide, has been appointed lecturer on pharmacy at the Adelaide University. Mr. Whitbread went to South Australia in 1890, and became assistant with Messrs. Stedman & Hoile, Rundle Street, and afterwards manager of Messrs. Smith & Osborne's business, North Adelaide. He then took up his present position with Messrs. Bickford.

OPIUM PROHIBITION.—The N.Z. Opium Prohibition Bill passed its second reading in the House of Representatives on October 9. The Premier announced that there would be a loss of revenue of 8,000*l.* to 9,000*l.* a year, and this was taken to mean that the vice of opium-smoking must have developed to a very large extent. The power to enter premises occupied by Chinese without a warrant was feebly objected to, but was allowed to pass without any serious opposition.

POISON IN PROPRIETARIES.—A proprietor of certain family medicines submitted his formulæ to the Pharmacy Board of New South Wales, and two of the recipes were found to contain small quantities of poison. A discussion thereupon arose amongst the members of the Board as to the policy of being too strict in interpreting the Act, but ultimately the proprietor of the medicines was informed that he could not, without breaking the law, sell to the public medicines containing scheduled poisons.—At the same meeting a communication was read from the Board of Health that an analysis of Powell's balsam of aniseed showed that it contains none of the scheduled poisons, no morphine or opium compounds being present. A previous examination, made in 1900, gave 2 gr. of opium per fl. oz. Further inquiries are to be made in this case, as well as into the matter of Capilla hair-tonic, which the Board of Health find to contain a scheduled poison—carbolic acid.

MEDICAL PRIVILEGES.—The Pharmacy Board of Victoria is to take proceedings against a medical man who, as trustee of the business of a deceased pharmaceutical chemist, has registered himself under the Firms Act as one of the proprietors of the business, although he is not personally interested in the business nor attends the shop. Under section 95 of the Medical Act an exemption is made that the Act shall not extend to or interfere with the business or with any rights and privileges of any legally qualified medical practitioner. Under section 97 of the Act it is provided that any person not being a registered pharmaceutical chemist who takes, uses, or exhibits the name or title of chemist shall be liable to certain penalties. In this case the medical practitioner referred to was not a registered pharmaceutical chemist, and it was contended that the exemption under section 95 did not override the provisions of section 97. The case has been submitted to counsel for an opinion, and counsel advises that the rights and privileges expressed by section 95 do not warrant the keeping of an open shop as a trustee under the will of a deceased pharmaceutical chemist, and that the medical man is, therefore, liable to the penalties under section 97.

American Notes.

For Congressists.—Dr. Frank Wilson, a member of Congress for Brooklyn, has introduced a Bill providing for the maintenance of a Congressional drug-store in the capital, to supply drugs to the members of Congress in case of an emergency.

As in Great Britain.—Twenty-four druggists wanted assistants, according to a recent issue of a Philadelphia Sunday paper, while but seventeen clerks seemed to be looking for jobs. For some time the experience of more druggists wanting clerks than there are clerks wanting druggists has been the rule in the Quaker city.

A Tinware Combination.—A company is said to be about to be organised to compete with the combination known as the American Can Company, manufacturers of tin cans, boxes, &c., for druggists' and manufacturers' use. Druggists say they are now obliged to pay 50 per cent. more for talcum, ointment, and similar tin boxes than they did before the combination was effected.

The Pedlar Druggist.—A perambulating drug-store is the latest New Jersey pharmaceutical innovation. An enterprising druggist has fitted out a motor-car with a stock of drugs, and he is to emulate the milkman and the fish cadger in making a house-to-house canvass for customers. A patent-medicine and sundry business may thus be successfully done, but one can scarcely imagine an extensive prescription business being built up in this manner.

Councillors—and Scotchmen.—Two prominent druggists are now members of the City Council of Buffalo, and both are Scotchmen. The newest member is Mr. Thomas Stoddart, of the firm of Stoddart Brothers, druggists, Buffalo, president of the New York State Pharmaceutical Association, and of the Empire State Drug Company. His colleague is Mr. Neil McEachren, who has been elected a member of the Buffalo Board of Aldermen. Mr. McEachren, who has also a good-going business in the City, was a County Supervisor before being alderman.

Chemists Co-operating.—The Pharmacists' Manufacturing Company, of New York City, has been incorporated at Albany with a capital stock of $20,000, made up of 800 shares of $25 each, and its objects are to manufacture and sell drugs of all kinds. Until it has been decided otherwise by the Board of Directors, stockholders will be limited to the purchase of four shares each, and no druggist can become a stockholder until he has invested $100, or bought four shares of stock. The company is designated as a co-operative organisation, and only retail pharmacists are eligible as shareholders. Any druggist will be allowed to purchase goods of the company, but only stockholders will get the advantages of a reduction in prices. The membership list contains thirty-seven names at present. Building operations are to be begun as soon as a suitable site has been obtained. The company will confine its operations to manufacturing at first; later it will probably do a general wholesale drug business as well.

'Way Down in Tennessee.—The practice of pharmacy is apparently carried on in a lively and unconventional fashion in the southern States. Two items from there indicate the primitive and unanswerable methods of retaliation which prevail amongst its citizens. A young pharmacist who had a quarrel with the chief of police at Meridian finished the interview by throwing a quantity of vitriol in the officer's face. The injured man was fearfully burned, and the aggressor is in gaol.—The proprietor of a drug store in McEwen, Tenn., had a dispute with a local doctor about a prescription. During a heated argument the physician drew his pistol and shot the druggist dead.—A sensational poisoning case has recently been agitating Memphis. A woman is on trial for the alleged poisoning of her husband with arsenic, and two of the principal witnesses are the proprietor of a Memphis drug-store and his assistant, who both testify to selling arsenic to the accused. The deceased man was presumed to have died from gastritis, but, on the body being exhumed and an examination made, arsenic and powdered glass were found in considerable quantities in the stomach.

Colonial and Foreign News.

Not Appreciated by the Fair Sex.—Although pharmacy in Hungary has been open as a profession to women for the past four years, only one lady has passed the examination. The eight ladies who entered at the beginning soon abandoned the profession.

The Naphtha Union.—At a meeting of naphtha merchants at Baku, summoned to deal with the export question, the firms of Nobel and Mantaxbeff withdrew from the Naphtha Union. The other firms, headed by Rothschilds, are stated to have established a combination for the export trade, which is expected to result in an improvement in prices.

Accident to Professor Virchow.—As Professor Virchow was alighting from an electric-tramway car in the Leipziger Strasse, Berlin, on Saturday evening January 4, while the car was still in motion, he had a serious fall, which resulted in a fracture of the thigh and various contusions on the legs, in consequence of which the Professor will for a long time be confined to his room.

Soap and Substitutes for Soap in Syria.—The American Consul points out that while toilet and shaving soaps are imported from abroad, the Syrian soap-manufacturing industry is by no means unimportant. This refers particularly to the Nablous, Haifa, and Tripoli soap-factories. "Mount Carmel" soap is manufactured by an American firm at Haifa. The Consul also refers to the use of the soapwort as a detergent and gives a Beirut firm of exporters a gratuitous advertisement about it.

Austrian Items.—The new (second) edition of the Pharmacopœia for the provinces of Croatia and Slavonia is completed, and will come into force on March 1 of this year. In these provinces pharmacy is now also open to ladies under the same conditions as to the sterner sex. But each application must be presented by the "Landapothekergremium" to the Government, which decides every permit. Pharmaceutical lectures for ladies at the Francis-Joseph University at Agram will not be instituted until 1904.

A School of Medicine for the training of native practitioners was established in Tananarivo in 1897 and has up to the present time sent out 15 qualified men whilst there are 104 students on the books. The teaching staff consists of seven persons: two are civilian doctors of medicine (one European and one Malagasy) and five are medical men or pharmaceutical chemists of the colonial service. The curriculum is of five years' duration, and native practitioners have the opportunity of competing for appointments in a branch of the colonial medical service at salaries ranging from 60*l.* to 100*l.* per annum.

For the Public Health.—The National Assembly for the Republic of San Salvador has decreed the formation of a Public Board of Health. The Board is composed at present of thirteen members, one being a pharmacist. Their object is, with the help of the Government, to better the sanitary condition of the country, and provide special committees on vaccination, food analysis, &c. A quarterly bulletin of the work done will be issued. The first of these, published in September of last year, gives very complete statistical tables of sickness and death-rate, vaccination, and meteorological observations. The President of the Board is Dr. Thomas G. Palomo.

Notes from Honolulu.—The Board of Health of Hawaii has warned druggists from counter-prescribing. The Executive Officer stated that in one case he learned that a drug-clerk had sold homœopathic aconite upon being told that a child had a high fever. The child died. The father had given the patient three of the pellets, and she had gone to sleep never to awake.—A Honolulu druggist has lost a suit for $500 brought by Mrs. Julia Ponsonby for damage to her complexion. She sent to the druggist a prescription for a complexion-wash containing 4 gr. of bichloride of mercury. The druggist put in 5½ gr., and the wash ruined the lady's face. Judge Estee, of the United States District Court of Hawaii, held that there was sufficient evidence to show that the additional 1½ gr. of the bichloride of mercury had been the active agent in destroying the plaintiff's complexion.

Pharmaceutical Society of Great Britain.

COUNCIL-MEETING.

WEDNESDAY'S meeting opened with a vote of sympathy to the family of the late Mr. J. T. Davenport, several of the councillors adding eulogistic remarks from personal knowledge of his good qualities. Dr. Balfour Marshall's report on the Scotch examinations was read, in which an increase in the percentage of passes in the Minor examination was noted. The cause is put down to the increased fee preventing candidates presenting themselves before they are sufficiently prepared. The figures for the examination just finished in Edinburgh do not look as though the increase is to be maintained during the present year. The Finance Committee's report showed that the balance at the end of the year was about 1,000*l.* less than the year before, which is accounted for, according to the President, by the loss of Preliminary-examination fees. The subscriptions to the Benevolent Fund, despite the adverse conditions of the past year, were only 30*l.* below the previous year. The policy of the committee has been to make more grants to needy persons, and in this way 1,000*l.* was distributed last year. Mr. Lord Gifford made an inquiry as to the duties of the *Journal* sub-committee, and is to put his suggestions in writing.

At the monthly Council-meeting, held at 16 Bloomsbury Square, W.C., on January 8, there were present the President (Mr. Newsholme), the Vice-President (Mr. Allen), the Treasurer (Mr. Atkins), and Messrs. Carteighe, Cooper, Cross, Gifford, Glyn-Jones, Harrington, Hills, Martindale, Park, Savory, Southall, Storrar, Symes, Taylor, and Wootton.

DEATH OF MR. DAVENPORT.

After the reading of the minutes of the December meeting the PRESIDENT referred to the death of Mr. J. T. Davenport, which took place on December 29. Mr. Davenport became a member of the Society in 1842, and took the deepest interest in the work of the Society. He was an examiner from 1850 to 1875, member of Council from 1849 to 1865, Vice-President from 1853 to 1855, when he was elected President. Mr. Davenport had a great deal to do with the passing of the 1852 Pharmacy Act, and occupied the Presidential chair between the years of office of Mr. H. Deane and Mr. Jacob Bell. He was associated with the Society at a time when there was an immense amount of labour required to be done, and to the work of Mr. Davenport and his colleagues was due in a great measure the success of the Society in after-years. He lived the greater part of his life within a stone's throw of the Society's house, but had of late years lived at Brighton. The President then proposed a vote of sympathy with the family of the late Mr. Davenport.

The VICE-PRESIDENT, in seconding the vote, said he could add nothing to what had been said from personal knowledge, but had met Mr. Davenport on several occasions, and had been impressed with his remarkable presence and geniality

Mr. CARTEIGHE said, with the exception of himself, Mr. Davenport was the last of a set of men who were examiners before the passing of the 1868 Act, and who took a prominent part in promoting the legislation of the day. Mr. Davenport began business as, what was called, an "operative" chemist; he had been trained at University College, and, like Morson, possessed considerable scientific skill. Mr. Davenport was his (Mr. Carteighe's) senior, but as a young man he was brought into association with him not only on the Council and Board of Examiners, but in social life. Mr. Davenport was a man of extreme amiability, and was also a good classical scholar. He was one of the few men who undertook the Preliminary examination in what he might call the prehistoric days, but his examinership was continued to the time when the examination was conducted more systematically. Having become successful in life Mr. Davenport practically retired from business whilst still comparatively young, and lived at Brighton. Those who attended the British Pharmaceutical Conference and the meeting of the British Association at Brighton in 1872 would remember the hospitality and geniality he showed to the visitors. His (Mr. Davenport's) house was near a hotel where a good number of the Conference visitors were staying—it would correspond to the headquarters of the present day—and practically all who remained for the British Association meeting were made free of the house. It was particularly striking to see the younger men's delight with their host. Mr. Davenport was a man of culture and a born gentleman.

Mr. MARTINDALE said he was examined by Mr. Davenport, and his geniality to all the candidates was most marked. He had been associated with him, after he left London, on the Drug Committee of the Royal Free Hospital, which had to do with examining the drugs supplied to that institution.

Mr. COOPER said he had had a life-long appreciation of Mr. Davenport from the way he treated him at the examination. He (Mr. Cooper) had been reading very hard with the late Professor Braithwaite, depriving himself of sleep, and as a consequence was in an extremely nervous state at the examination. Mr. Davenport showed him such great kindness on that occasion that it made a lasting impression.

The TREASURER, as one of the fossils, desired to offer his testimony to the well-deserved eulogies which had been passed on Mr. Davenport. He was one of the links with the past, and when such men pass away those who knew them ought to bear testimony to their worth. He remembered the Brighton Conference, and how his friend Groves, of Florence, was there with his young Italian wife. They were all invited to Mr. Davenport's house, and he should never forget the very handsome way in which Mrs. Groves, in her broken English, endeavoured to convey her thanks and impressions of Mr. Davenport's striking personality.

ABSENTEES.

The PRESIDENT announced that he had received a letter from Mr. Corder regretting his inability to be present. Mr. Corder's son is suffering from glaucoma, and had had one of his eyes removed. Mr. Harrison had also written that he was unable to be present.

EXAMINATIONS.

The Privy Council sent on a copy of the report of Dr. Balfour Marshall, the Government visitor to the examinations in Edinburgh, which the Secretary read. The report gave the percentage of passes for the Major as fifty (there were eight candidates), and noted that a higher percentage passed than at any time during the past five years. The standard of work was also very much better, as none of the candidates completely failed in any of the subjects; their want of success being due to failure in obtaining the full aggregate of marks required for a pass This, it was added, should be an encouragement for these rejected candidates to again present themselves for examination at an early date.

For the Minor examination the percentage of passes was 44·3, the number of candidates being 415. The following are Dr. Balfour Marshall's "remarks":—

"I have previously been able to report a gradual though slow increase in the percentage of passes, with the exception of last year, when there was a slight falling-off. This improvement has been even more marked than the figures apparently show, as the standard of work over the whole range of examination subjects has been better, due no doubt to more thorough training. This year the percentage of passes has suddenly risen to 44·3 per cent., or nearly 9 per cent. over those of last year, and the candidates have done even better than these figures seem to indicate, as the number who obtained marks in each subject but only failed in the aggregate represents nearly 41 per cent. of the total failures. The practical work was much better done than usual, 69 per cent. being successful, as against 62 per cent. last year. In the oral part of the examination the greatest improvement is seen in botany. I have previously had to report on the large number of failures in this subject, but students are evidently giving it more attention, as they are now much better prepared than in former years. Chemistry, however, still remains the subject which presents the greatest difficulty to the student, yet it is one the importance of which cannot be exaggerated, as it plays such an important *rôle* in pharmacy. There is such a decided improvement this year that we may well look for the cause. It is so coincident with the increased examination-fee that it is probably due to the influence of this preventing students presenting them-

Digitized by Google

selves before the Examiners until they consider they are sufficiently prepared. It was evident that formerly a certain proportion of candidates appeared on the off-chance of passing, or to see what like the examination was. I am strongly of opinion that were a compulsory curriculum instituted there would be a still more marked improvement, as it would thus compel the student to undergo a thorough systematic education in recognised schools of pharmacy, and would prevent that waste of energy by which students, during a three- or six-months' "cram," commit to memory a number of facts which they do not understand and quickly forget. I am able to express entire satisfaction with the manner in which the Examiners performed their duties.

The President said the report was a very valuable one, as it showed both the weakness and strength of the examination. He drew attention to the recommendation for the institution of a compulsory curriculum. Although this was not new, there was no doubt a curriculum was very desirable, and would save candidates a great deal of worry and anxiety. It would also save their pockets if candidates had a systematic training before they went in for the examination.

The Secretary then read the report of the Board of Examiners for Scotland, which showed that out of three Major candidates two passed, and of 91 Minor candidates 28 passed and 63 failed.

Elections.

A number of members and student associates were elected, and others were restored to the Society. One name was restored to the Register of Chemists and Druggists, and two diplomas were granted to pharmaceutical chemists who had passed the recent Major examination.

Finance.

The report of the Finance Committee showed balances as follows:—

	£	s.	d.
General Fund account	1,468	8	9
Benevolent Fund account	876	16	8
Donation account...	117	15	0
Orphan Fund account	318	15	9

—and submitted for payment 913*l.* 3*s.* 8*d.*, made up of *Journal*, 359*l.* 15*s.* 10*d*; current expenses, 300*l.*; rates, 62*l.* 3*s.* 2*d.*; sundry accounts, 191*l.* 4*s.* 8*d.*

The Secretary also mentioned that he had received a telegram from Mr. Hill that 200*l.* would be required for expenses in Scotland.

The President, commenting on the report, said the balance on the General Fund account at the end of the year was less by about 1,000*l.* than it was the previous year. This was accounted for by the loss of Preliminary fees, but the loss was not so great as it would have been owing to the increased Minor fees. In regard to the Benevolent Fund, there had been received a donation of 30*s.*, the balance left on winding up the Liverpool Pharmaceutical Students' Association. The materia-medica cabinet which the Pharmaceutical Society supplied to the Association has been placed under the care of Mr. P. Marsden in the Liverpool University College, for the use of the pharmacy students.

The report was adopted, and a resolution passed authorising the Treasurer to sign a cheque for 200*l.* for current expenses in Scotland.

Benevolence.

The Secretary said that, despite the unpropitious general conditions existing during the past year, and the many calls made on behalf of special charities in connection with the war in South Africa, the Benevolent Fund subscriptions were within 30*l.* of the amount contributed in 1900. There is reason to believe that even a better result might have been achieved if it had been possible, according to intention, to furnish every Divisional Secretary with a list of unpaid subscriptions in his division, and request him to look them up. All that could be done in that way was to send out some two hundred lists to the larger centres, and this was accomplished with much difficulty, late working, and putting aside of ordinary duties. Pressure of ordinary routine work and the smallness of the office staff are thus responsible for the circumstance that nearly two hundred divisional officers were not specifically asked to canvass for the Fund. During the coming year he hoped to be able to communicate with all his local colleagues, soliciting their aid in obtaining increased support to the Benevolent Fund—support of which it stands urgently in need.

The President said, when they remembered the enormous calls that had been made on pharmacists during the past year, there was reason for congratulation that the subscriptions to the Fund had remained practically the same. The funds of the Salvation Army, he understood, had decreased enormously.

The report of the Benevolent Fund Committee was next considered in committee, after which

The Vice-President, in moving the adoption of the report, said the Secretary's remarks about the subscriptions to the Fund being practically level with the previous year were very gratifying. When all the secretaries had been supplied with lists of members in their districts he had no doubt the revenue of the Fund would largely increase. The Fund had need for a considerable amount of money, as the casual grants had much increased. Where, a few years ago, 400*l.* to 500*l.* was distributed in this way, last year the amount was 1,000*l.* The usefulness of the Fund was much increased by the sys'em of casual grants, whilst the grants enabled a large number of distressed individuals, aided by their friends, to keep going. A sum of 130*l.* was granted to ten applicants, amongst whom were the two unsuccessful candidates at the recent election. The practice of granting aid to such candidates was one, he believed, which commended itself to the members.

The Treasurer thought many of their friends outside did not sufficiently realise the work done every month by the Benevolent Fund Committee. It was of considerable importance, no less than 1,000*l.* being distributed in the past year. Much of the success of the Fund must depend on the efforts of the divisional secretaries, and he would ask their friends in the country not to forget the Fund. There were some men who, retiring from business, ceased all connection with the Society, but he thought that after men had made their pile they should still remember the necessities of their poorer brethren.

Dr. Symes said he did not think there were many who made their pile in the present day. The grants made rather exceeded the money in hand.

The Treasurer: We want some money to go on with.

The Secretary: That is so; grants of 130*l.* have been made out of 127*l.* in hand. A sum of 200*l.* is also owing to capital account.

The Treasurer was authorised to pay the annuitants on the usual quarter-days in 1902.

The Library Committee.

The report of this Committee showed the attendances at the libraries and museums in London and Edinburgh. The school staff attended before the Committee and reported, as did also the Editor of the *Journal*. The consideration of the Carnegie trust scheme was deferred. Sitting as the Research Committee, reports as to the progress of work in the research laboratory were received.

The President said there was nothing in the report to call attention, and asked if any member had any question to put.

Mr. Gifford said it would satisfy considerable curiosity if some information could be given as to the *Journal* subcommittee, and as to what was being done in regard to the *Journal*

The President: I don't know how to answer that question. In what direction do you desire information?

Mr. Gifford: There is a feeling that the *Journal* would be better if brought into line with modern ideas.

The President: If you have any recommendations to make, I am sure the Committee would be glad to consider them.

Mr. Gifford: It is very difficult to get information on the matter, and as to the work of the Committee.

The President: If you will place any views on the matter before the Committee, either verbally or in writing, they will be discussed.

Mr. Gifford: I will do so.

DIVISIONAL SECRETARIES

were appointed, Mr. J. G. Isaac, Neath, for Swansea Boroughs; Mr. J. S. Prior for the Stamford Division of Lincolnshire; Mr. H. E. Ellis, Llanfair, for Montgomeryshire; and Mr. G. B. Wright, Hebden Bridge, for the Sowerby Division of Yorkshire.

The PRESIDENT said there was also a vacancy at Cardiff, but a local meeting was to be held to elect a suitable man. Mr. Sanders, who had resigned, was appointed twelve months ago, and gave great promise. It was unfortunate that he was unable to go on.

TEMPORARY EXAMINER.

The PRESIDENT said a difficulty had arisen in connection with the examinations now being held in London owing to the fact that one of the examiners was unable to remain till the examinations were completed. It was desirable, in consequence, that some gentleman be appointed to act as assistant to the remaining examiners.

A motion was then passed appointing Mr. J. E. Saul assistant examiner during the present examinations.

POISON COMMITTEES.

The SECRETARY suggested that it would be convenient if Mr. Hills were appointed a member of the sub-committee on poisons. There are at present two poison committees—a sub-committee which advises Mr. Martindale, and a special committee whose duty it is to deal with the poison schedule. If Mr. Hills were appointed the members of both committees would be the same.

This was agreed to.

STRUCK OFF.

A motion was carried that the name of Mr. Morris William Jenkins, St. Clears, who had not replied to letters addressed to him by the Secretary, be removed from the list of members.

LETTERS.

One was read from the Oxford Chemists' Association, urging that steps be taken to limit the title of "chemist" to those qualified by examination of the Society to hold it.

The Chemists' Managers' and Assistants' Society sent through its President a general invitation to the Councillors to be present at a smoking-concert on that evening. The letter added that the wish had been expressed by some of the Councillors that they would like to make the acquaintance of the Society, and it was hoped that the opportunity would be availed of.

This ended the public business.

EXAMINATIONS IN EDINBURGH.

WE have received from the Registrar of the Pharmaceutical Society of Great Britain the following list of candidates who were granted certificates at the January meeting of the Edinburgh Board of Examiners:—

Three Major candidates were examined, and the following passed:

Hallaway, Robert Railton, Carlisle.
Henderson, John McGregor, Ayr.

Ninety-one Minor candidates were examined, and the following twenty-eight passed:

Alexander, William, Banff
Appleyard, Herbert, Leith
Backhouse, R. Stubbs, Durham
Blechynden, A., Newcastle-on-Tyne
Chalmers, James, Fraserburgh
Clarke, H. J., Stockton-on-Tees
Crane, W. T., Northampton
Daniel, A. W., Stoke-on-Trent
Hamilton, R., Grangemouth
Hogg, W. S., Musselburgh
Idris, T. H. Williams, London
Longstaff, H., Gateshead-on-Tyne
Macdonald, W., Inverness
McPherson, N., New Aberdour
Martin, Thomas, Arbroath
Merriman, C. E. B., Ilkeston
Palfrey, Thomas A., Selkirk
Paton, Andrew Hunter, Ayr
Plenderleith, J. W., Edinburgh
Pool, Robert, Annan
Rennie, Grace I., Birmingham
Smith, Alexander, Macduff
Smith, W., Newcastle-on-Tyne
Stewart, J. S., Auchterarder
Straker, Thomas W., Alnwick
Warmington, F. E., Leamington
West, David B., Fraserburgh
Wilkie, Peter M., Glasgow

The Presidential Badge.

AT the meeting of the Pharmaceutical Society in October, when the winter session was opened, after Mr. Carteighe had invested the President with the official badge which had been subscribed for as a memento of the Society's Diamond Jubilee, Mr. E. Northway Butt suggested that instead of the blue riband by which it was then suspended, a gold chain should be provided, and he further proposed that this should be composed of links representing the Presidents of the Society from its foundation. The idea was cordially endorsed, and Mr. Butt undertook the task of collecting subscriptions for the links.

A quarter of an hour before the meeting of the Council on Wednesday last, a few of the subscribers met in the Council-room to witness the presentation of the chain. Among those present, besides the members of the Council, were Mr. Lloyd Bullock and Mr. Elias Bremridge (both "founders" and nonogenarians), Mr. Horace Davenport, Mr. Bourdas, Mr. Harold Deane, and Professor Greenish. The chain consisted of twenty-one links, and is a beautiful piece of workmanship. Mr. Butt, who was deputed to act as spokesman, in a few happy sentences explained the history of the chain, and hung it on the President's shoulders. Within a fortnight of the suggestion being made, he said, all the links had been subscribed for, and a week later the work was commenced by Messrs. Watherston. The links bear the names of the respective Presidents, and indicate the years during which they held office. They were subscribed for as follows:—

William Allen, F.R.S., by Mr. Cornelius Hanbury.
C. J. Payne, by subscription.
John Savory, by Mr. A. L. Savory.
Thomas N. R. Morson, by Mr. T. Morson, sen.
Peter Squire by Mr. Peter Wyatt Squire.
William Ince, by the Rev. Canon Ince and Mr. Joseph Ince.
Thomas Herring, by Mr. W. C. Herring.
Joseph Gifford, by subscription.
Henry Deane, by Mr. Henry Deane and Mr. Harold Deane.
John T. Davenport, by himself.
Jacob Bell, by Mr. Walter Hills.
George W. Sandford, by his niece and Mr. Charles Blake.
Henry S. Evans, by Messrs. Evans, Sons & Co. and Evans, Lescher & Webb.
A. F. Haselden, by subscription.
Thomas Hyde Hills, by Mr. Walter Hills.
John Williams, by his brother.
Thomas Greenish, by Mr. T. B. Greenish and Professor Greenish.
Michael Carteighe, by himself.
Walter Hills, by himself.
William Martindale, by himself.
G. T. W. Newsholme, by himself.

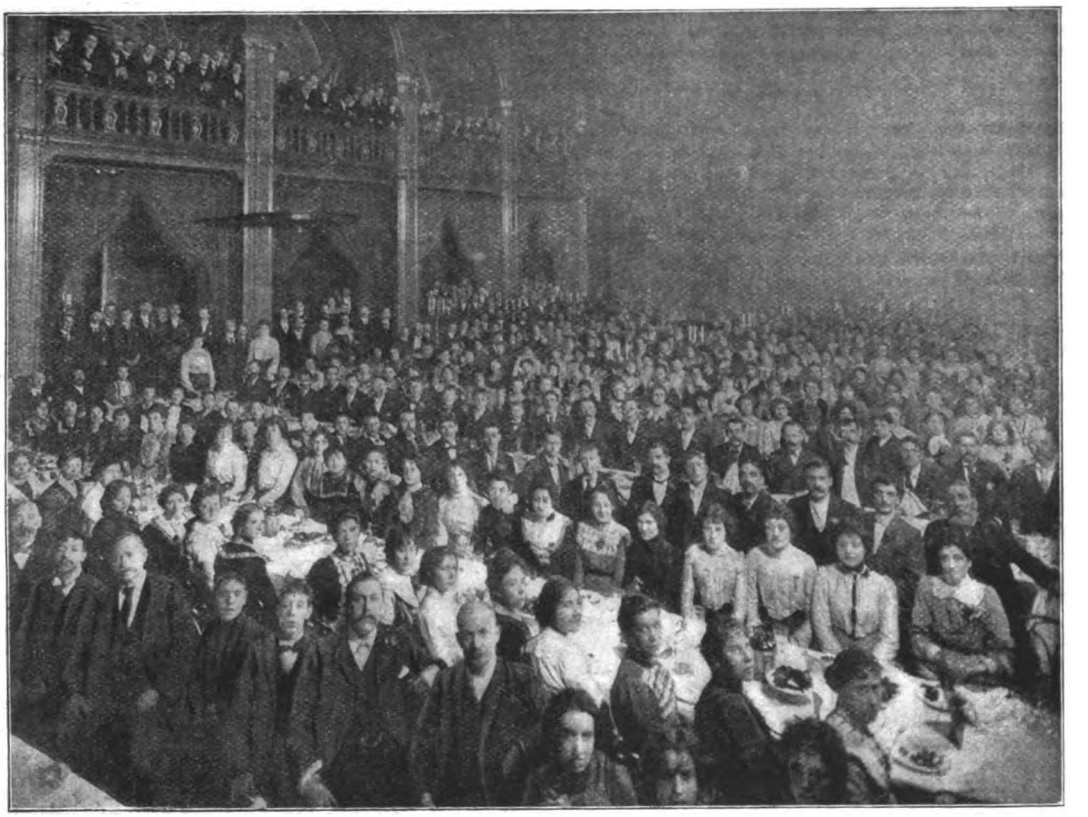
Mr. BUTT said he hoped the chain would add dignity to the Society. It might be regarded as evidence that it was not a nonentity, but was doing valuable work for the country.

The PRESIDENT said they had to thank Mr. Butt not only for the happy idea of the chain, but also for the great trouble he had taken on himself in putting it into execution. Wearing it placed on the President a great responsibility. The illustrious names engraved on the links showed that the Society had a great history. All of these were now dead except those now on the Council. One (Mr. Davenport) had passed away within the past few days. He was confident the badge would impress upon their friends the important work of the Pharmaceutical Society. He would do what he could to maintain the dignity of the office while he held it.

Mr. CARTEIGHE said that as Mr. Horace Davenport was with them he would like to express to him the sympathy of the old friends of his father in his recent bereavement. He had been his colleague on the Board of Examiners and also on the Council, and could testify to his extreme kindness, courtesy, and geniality.

Mr. HORACE DAVENPORT feelingly acknowledged this expression.

A vote of thanks to Mr. Butt for his labours was moved by Mr. WALTER HILLS and seconded by Mr. C. B. ALLEN (Vice-President).



IMPORT-DUTIES ON ETHER IN BELGIUM.—By a royal decree just issued the import-duty on sulphuric ether has been fixed at 5f. per 100 kilos., and on acetic ether at 8f per 100 kilos.

Festivities.

SOME VINOLIANS DINE.

A New Year's dinner was given on Saturday evening, January 4, by the chairman of the Vinolia Company (Limited) to as many of the *employés* of the company as the King's Hall, Holborn Restaurant, would hold. Over 600 members of the staff sat down to dinner. The photograph which we reproduce gives a fair idea of the stupendous size of the gathering. The ball is where the B.P.C. luncheons were held in 1900. The Chairman and Mrs. Burrows received their guests, who presented two very beautiful bouquets and a large basket of fruit to Mrs. Burrows. The Bijou Orchestra played during dinner. The Chairman, in replying to the toast of his health, which had been enthusiastically received with musical honours, said that this autumn's business had been the best the company had ever had, and the prospects were never better. His advice to those who were present was to always try and identify themselves with successful houses, and to try at all times to fit themselves for whatever came in the way. In speaking of the company's manufactures he stated that it was significant that in no single district in London was there such a demand for vinolia products as in the vicinity of their works, where their *employés* resided. The company dispersed at 10 o'clock, after having spent a very pleasant evening, not a little of the brightness having been imparted by the professional musical talent engaged for the occasion

DINNER OF THE VINOLIA COMPANY'S STAFF, KING'S HALL, HOLBORN RESTAURANT.

LEMCO REVELRY.

The office and travelling staffs of Liebig's Extract of Meat Company (Limited) were invited by the Chairman (Mr. C. E. Gunther) to dinner at the Trocadero on January 1, to mark the continued success of "Lemco" and "Oxo" during the past year. The principal representatives throughout the Kingdom were present, and after a genial banquet the whole company adjourned to boxes at the Empire.

MIDLAND PHARMACEUTICAL ASSOCIATION.

The members inaugurated the New Year with a social gathering at the Great Western Hotel, Birmingham, on Tuesday night, January 7. It was a ladies' night, and consequently was of an exceptionally pleasant character. Among those who attended were Messrs. J. Barclay (President), F. H. Alcock and A. W. Gerrard (Vice-Presidents), Dr. Vinzace, J. Poole, C. Thompson, G. E. Perry, C. F. Jarvis, G. H. Brunt (Hon. Secretary), F. Gibson, J. C. Cattell (Knowle), T. Cattell (Sutton Coldfield), A. Harris, W. M. Freeman, H. Jessop, H. Boucher, and others. Mr. Brunt had arranged a programme of great merit. This embraced a pianoforte solo by Mr. J. Tyler; songs by Miss Florence Showell, Mr. Fred C. Evans, Mr. A. Aldridge; humorous songs by Mr. Frank Costello; a recitation by Mr. T. W. Hussey, and a sleight-of-hand performance by Professor Neale.

"CHARMINGLY GOWNED."

Some of the ladies who attended the Plymouth Chemists dance last week attracted the millinery eye of the *Plymouth Mercury* reporter, who says, "It's a fearful thing for a ball secretary when the men are non-dancers and the ladies will not wear their prettiest frocks!" But this was not Mr. F. Maitland's fate, for "some of the gowns worn were very pretty." Then we are told what was worn by Miss Amy Bosworthick, Mrs. Skardon, Mrs. Roach, Miss Harvey (Ashburton), Miss Hoard, Miss Beryl Sale, Mrs. Crocker, the Misses Stroud, Mrs. Hambly, Miss Tierney, Miss Watts, Miss May Hearder, Miss Mabel Hearder, Mrs. Fairweather, Mrs. Alban Young, Mrs. Ralph, Mrs. Jarvis, Mrs. Willie Harris (Marsh Mills), Mrs. Park, and Miss Pomeroy.

Trade Notes.

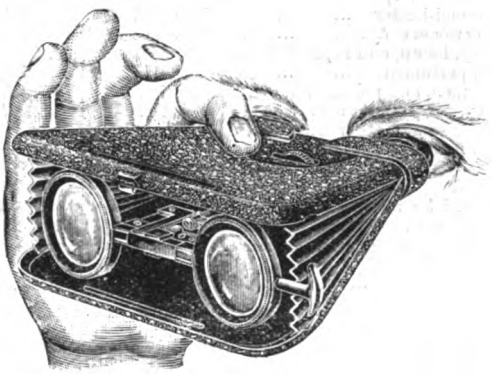
MR. MATTHEW BELL, 6 Rumford Place, Liverpool, has been appointed agent for Mr. Eugenio Godnig, insect-powder manufacturer, Zara, Dalmatia.

WITH REFERENCE to a paragraph on page 24 of last week's issue, Messrs. Breeze, Jackson & Green (Limited), of Plymouth, desire us to state that their business is wholesale only.

MESSRS. J. DEFRIES & SONS (LIMITED), Gravel Lane and Houndsditch, E.C., who carried out the most important public decorations and illuminations at the Coronation of Queen Victoria, and many National celebrations during her reign, have been appointed decorative illuminators to King Edward VII.

MORGAN'S "HUNGARIAN" PASTE is an article which figures prominently in many City offices, for it does its work well, and is economical. It is sold in 6*d.* and 1*s.* sizes and in bulk at 3*s.* 3*d.* per gal. We may also state that Messrs. W. Sutton & Co, 76 Chiswell Street, London, E.C., have been appointed sole wholesale agents.

NITROGLYCERIN TABLETS.—On page 205 of the Buyer's Guide in the *C. & D.* Diary 1902, the nitroglycerin tablets advertised by Mr. W. Martindale, 10 New Cavendish Street, W., on page 330 are inadvertently indexed as capsules. Mr. Martindale was the introducer of nitroglycerin in tablet form, and we shall be glad if subscribers will note the correction in their copies of the Diary.



"GREAT BRITAIN'S GREAT BRIDGES" in the *Tatler* this week attracted our attention. They are the Tower Bridge, Clifton Bridge, the Forth Bridge, Owbridge, Tay Bridge, London Bridge, and Menai Bridge. The central one is the largest of the lot, but the pillar labelled "substitution" reveals the hand of an "adsmith," who mars a good idea by not keeping strictly to his text—Owbridge's lung-tonic.

THERMAL CABINETS.—A correspondent in Wisbech informs us that he, his assistants, and two ironmongers in the town have received circular letters from the Century Thermal Bath Company (Limited) offering the "entire control of sales in your district." Those of our own staff who are registered chemists have received similar circulars. Perhaps the company will explain the matter, especially as they state in the circular that they prefer to place the sale of the cabinets in the hands of chemists, and the circular invites every one to whom it is addressed to remit money for a cabinet of double the value. If all respond there will be no exclusiveness about the matter. This is the point that requires elucidation. We cannot explain it.

SOUTHALL-BARCLAY'S LABORATORY REPORT.—We have received from Messrs. Southall Brothers & Barclay (Limited), of Birmingham, an advance copy of their tenth annual laboratory report. We do not recollect reading the previous nine, but understand that this tenth is much enlarged. It is collated from the company's laboratory note-books, and edited by Mr. John Barclay, B.Sc., F.C.S. It is so interesting that we are sorely tempted to reprint some of it in this issue, but so much of our space was ear-marked before the report came to hand that we must content ourselves with giving a general idea of the contents, and perhaps subscribers who wish more details will write to Messrs. Southall Brothers & Barclay for copies. The substantial parts of the contents are analytical records concerning official and unofficial crude drugs, fixed oils, essential oils, and galenical preparations. Examples of the information are:—*Asafetida*: Ash-yield of twenty-four samples, 12·05 to 66·75 per cent., average 40·6; alcohol-soluble matter, 10·5 to 41·46, average 20 per cent. *Benzoin*: The alcohol (90 per cent.) soluble matter from four samples was 61·04 to 61·1 per cent., average 64·33. Sumatra is, doubtless, meant. It is suggested that the B.P. should order 3 oz. of such stuff to the pint. Out of twelve samples of *Copaiba* eight gave the Gurjun balsam reaction—a statement which is simply astounding. How does an Eastern-Hemisphere product get to South America? In regard to *Oil of peppermint*, useful factors for English, Japanese, American, and Hotchkiss products are given. *Concentrated infusions*: Percentages of total extractive matter for eighteen preparations are suggested, but the strength of the preparations (1 to 7 or 1 to 9) is not stated. These examples do not include some of the most important information, such as the strengths of belladonna and henbane extracts from last season's crop; but we have said sufficient to show that the report is worth sending for.

A POCKET OPERA-GLASS.—One of the neatest and most compact devices in opera-glasses which we have seen was shown to us the other day by Messrs. F. Darton & Co., 142 St. John Street, Clerkenwell, E.C. It is a flat black-morocco case about the bulk of a cigarette-case, which can be stowed away in one's waistcoat pocket. When it is wanted one unsnaps the catch at the wider end, turns a little swivel at the side, which brings the objectives into position as shown in the second figure. Then one finds that it gives excellent definition, and the pleasure of using it

suggests it as the next present for "her." Anyway, it is called "La Mignonne," and the wholesale price is 25*s.* Chemists, whether opticians or not, should be able to do business with it.

Calendars for 1902.

Messrs. Howards & Sons, manufacturing chemists, Stratford, Essex, issue a neat but effective calendar printed in black and gold on substantial white cardboard.

The card-calendar sent out by the Erasmic Company (Limited), 117 Oxford Street, W., is in the form of a very pretty showcard. The centre is occupied with an idealistic landscape, and surrounding it are life-sized and life-like pansies.

Messrs. W. H. Willcox's (Limited) "Date Remembrancer" for 1902 has a month's calendar on each leaf, and is ornamented with illustrations reminding the user of the goods made by Messrs. Willcox, such as the semi-rotary pumps, boiler-fluids, and lubricating-oils.

Spong's household almanack and directory of Biggleswade, issued for the fifty-second year, reaches us from Messrs. Spong & Son, chemists, Biggleswade. The almanack is a substantial publication with plenty of local information and advertisements, and is a credit to Messrs. Spong, who print as well as publish it.

Mr. S. Ell, chemist, Dunster, prints his illustrated almanack, diary, and advertiser, on pink and white paper to enable the different sections to be readily found. The half-tone engravings are of Dunster High Street, with the Castle and Mr. Ell's shop, the home of Dunster marmalade. Mr. Ell's portrait appears on the front of the almanack.

Messrs. Pilchers (Limited), Morgans Lane, Tooley Street, S.E., are sending out with their very convenient pocket diary for 1902 an equally useful tint-book which shows the tints of sixty-nine paints which they manufacture, with the name of the tint in each case. The book goes into one's pencil-pocket, and will be found a great convenience by paint sellers or users. The paints have a beautiful enamelled surface.

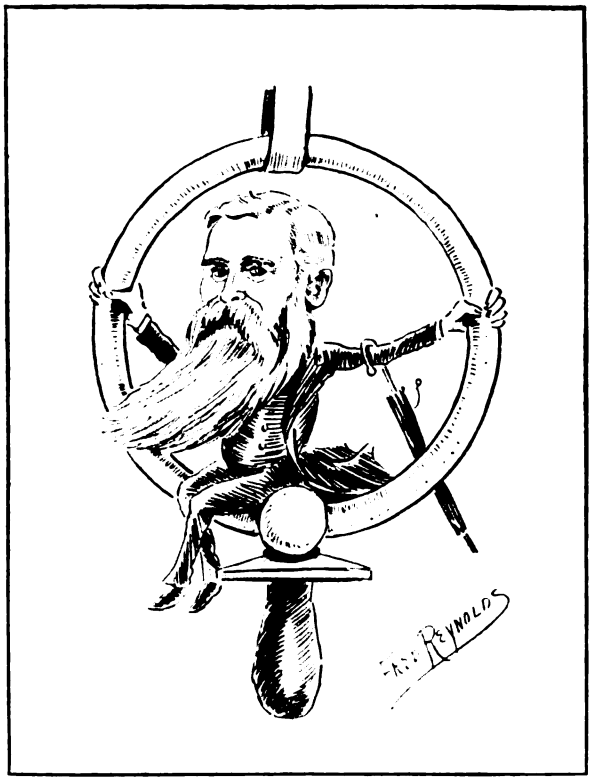
The Australian Federal Tariff.



THE following amendments have been made after a keen debate on nearly all the items by the House of Representatives:—

	Schedule	As amended
Spirituous compounds, which include bitters, essences, fluid extracts, sarsaparilla, tinctures, medicines, infusions, toilet-preparations	14*s.* gal. proof or under	If not containing more than 25 % proof spirit, 3*s.* 6*d.*; 50 %, 7*s.*; 75%, 10*s.* 6*d.* gal.; over, 14*s.*
Opium ... ... lb.	20*s.*	30*s.*
Candles, &c., stearine, paraffin wax, &c. ... ... lb.	1½*d.*	1*d.*
Cocoa-butter, caramel and caramel-butter ... ... lb.	2*d.* and 15%	1*d.*
Confectionery, &c. ... ... „	2*d.* and 15%	2*d.*
Canary, hemp, and rape seed ...	15%	1*s.* 6*d.* cental
Soap, perfumed ... ... lb.	4*d.*	3*d.*
„ n.e.i. and polishing ... „	1*d.*	½*d.*
Honey, preserved ginger, &c. „	2*d.*	1½*d.*
Lime-juice and other fruit-juices and fruit-syrup, non-spirituous gal.	1*s.*	9*d.*
Linseed ... ... cental	2*s.*	2*s.*
If used for making oil ...	2*s.*	free
Mustard seed ... ... lb.	2*d.*	„
Oilmen's stores, special preparation of infants' and invalids' foods	20%	„

The change in the duty on seeds was done at the instance of a Government supporter, who said it was "more convenient." The effect is that it somewhat raises the duty on canary seed, the article most dealt in, and reduces the proportion on hemp and rape seed, the latter being largely produced locally. An important alteration is made in the wording of oilmen's stores. As stated, infants' and invalids' foods are made free, and the words "*when in packages for retail sale*," are now omitted. The intention was not to give a bonus of 20 per cent. for the mere packing of goods, but in practice it appears the Customs officers now consider such articles as whiting, cream of tartar, tartaric acid, &c., dutiable at 20 per cent. On the item "opium," including, as regards' smoking opium, the weight of the immediately containing package, 20*s.* per lb., considerable discussion took place. In Western Australia the duty had been 30*s.* in New Zealand, 40*s.* Western Australia, under the local tariff, had received a revenue of 3,247*l.* from this item alone, whilst the Federal Government at 20*s.* expected to receive 2,000*l.* from that State. The increase to 40*s.* a lb. in New Zealand led to decreased consumption and increased revenue. Sir George Turner held that an increase in the duty would only encourage smuggling. The duty was then raised to 30*s.* per lb., which will be charged on the covering tin as well as the opium. As regards extracts of opium, used medicinally, the duty will be raised proportionately, but the Minister of Customs undertook that opportunity should be given for considering the matter in connection with medicines. It was pointed out that the high duty would encourage the local production of opium, and the Federal Government could not stop the consumption of this article.

MEXICAN QUICKSILVER.—*La Tierra de Mexico* states that quicksilver occurs in Mexico in various places in small quantities. The most important districts are Guadalcazar and Huitzuco, in the States of Guerrero. In the former locality it occurs in calcareous rocks of the cretaceous age, where it forms veins and impregnations; the age of the formation and nature of the deposits being similar to those in California. The production for 1900 amounted to 335 metric tons.

"C. & D." Nursery Rhymes.

A Lullaby.

Hush-a-bye, baby! up Winsley Street
Mother will hurry and buy you a teat;
Get you a soother, with ring or with ball.
Sing you of Sanger and soother and all.

Hush-a-bye, baby! in the same street
Mother will purchase a bottle so sweet—
Bottle "old fashioned," or bottle quite new.
Sing you of Sanger and feeder and you.

Hush-a bye, baby! that very street
Is where they give you a powder-puff neat—
Puff-box and powder, both big ones and small.
Sing you of Sanger and powder and all.

Hush-a-bye, baby! that is the street
Where all the nice things you wish for we meet—
Pilches, protectors, and perfumes at call.
Sing you of Sanger and sundries and all.

In the Interest of Science.

WHEN one's friend is a scientist and given to experiments, a little caution may not be out of place before consenting to do him a little favour. That, however, did not occur to a certain well known public man, whose experience is thus related. He went to the laboratory of an old school-mate, a professor of chemistry, to make a friendly call. The professor was studying a dark-brown substance spread out on a sheet of paper. "I say," he cried, when greetings had been exchanged, "would you kindly let me place a bit of this on your tongue? My taste has become vitiated by trying all sorts of things." "Certainly," responded his accommodating friend, and he promptly opened his mouth. The professor took up some of the substance under analysis and put it on his friend's tongue. The man worked it around his mouth for fully a minute, as though it were something choice. "Note any effect?" asked the professor. "No—none." "It doesn't prick your tongue?" "Not that I can detect." "I thought not. There are no alkaloids in it, then. How does it taste?" "Bitter as gall." "Hem—m—m! All right." By this time the visitor's curiosity was aroused. "But what is it?" he inquired. "I don't know. That's what I am trying to find out. Some one has been poisoning horses with it."

Observations and Reflections.

By XRAYSER.

The Place to Spend a Happy Life for pharmacists is now Queensland A new Pharmacy Act had passed second reading and Committee in the Legislative Council of that colony when the December number of the *Chemist and Druggist of Australasia* was published, and no doubt it is now in operation. The Act, as drafted by the Queensland Pharmaceutical Society, had grouped all the demands which our most clamorous advocates here and there have been formulating for years past as "only bare justice." The curriculum, reciprocity, the division of the examination, companies to be persons, power to de-register licentiates for "infamous conduct in a professional sense," limitation of the rights of executors to carry on businesses, and a 20*l.* penalty on anybody not a pharmaceutical chemist who should "carry on or attempt to carry on the business of a pharmaceutical chemist . . . or use or exhibit any title, term, sign, or symbol, which may be construed to mean that he is qualified to perform the duties of a pharmaceutical chemist," were, and, with only slight limitations, still are among the objects provided for. The provision in regard to signs and symbols is intended, I suppose, to cover coloured bottles and gilt pestles and mortars, and would be comprehensive enough, I should think, to satisfy North-East Lancashire; while "the business of a pharmaceutical chemist" is a description so vague that it will only get defined after a few dozens of actions.

The Legislative Council has made only moderate modifications in the Bill. The pharmacists had secured the support of the Government, the members of which, however, had apparently only superficially acquainted themselves with the proposals, but their best friends were two or three medical members of Council who flew at the measure with jealous invective. This secured the sympathy of the lay members. One of the latter, referring to certain medical criticisms, said he hoped it would extend the powers of chemists. They often did more good than the doctors did. The medical section, however, got a definition of pharmaceutical chemist into the Bill. Their object was to prevent his assumption of any medical authority. They fixed him as "a person skilled in the business of the preparation and preserving of drugs, and of compounding and dispensing medicines according to the prescriptions of medical practitioners." Whether this description will interfere with his monopoly in the sale of medicines remains to be seen. They also resisted the phrase "in a professional sense" in the deregistration clause, and got the words "in respect of his calling as a pharmaceutical chemist" substituted.

The Government insisted on the insertion of a clause in favour of joint-stock companies. The right of friendly societies to dispense for their own members by the aid of a qualified person had already been conceded In regard to companies it was first proposed that "the majority and at least three of the directors of any company carrying on the business should be pharmaceutical chemists," but this was abandoned, and now it is provided that no name of an unqualified person shall appear in the title of such company, and that the name of the qualified manager shall in all cases be used. Details regarding examinations, registration, reciprocity, and the administration of the Act are entrusted to a Board of seven pharmaceutical chemists, four of whom are to be nominated by the Government, and there is to be an appeal from any of the Board's decisions to the Home Secretary only.

The Late Mr. J. T. Davenport has not been seen much in pharmaceutical circles in recent years, and he must have been personally unknown to the majority of the present generation of pharmacists. The last time I saw him was in Bow Street Police Court in 1892, when he was summoned for selling chlorodyne without a poison-label. He was a singularly handsome, aristocratic-looking man, and it was almost pathetic to see him press his way toward the bar when his case was called. His counsel stopped him, and the Magistrate kindly remarked, "Your presence in the court is sufficient, Mr. Davenport." The action was taken by the Treasury to test the law, but I found Mr. Davenport specially indignant against the Pharmaceutical Council on account of it. To be summoned to a police court was a bitter experience for him. Chemists nowadays have to reckon on an occasional appearance in a police court as an almost necessary condition of their business career, so that we can hardly appreciate the sensitiveness of the past generation. Mr. Davenport was a fine specimen of the chemists of the pre-legislative era. He was cultured, refined, and high principled, and a master of his business. I am not sure that examinations have improved on the model. In the obituary notice published last week, I think I detect the intervention of the shorthand writer. Mr. Davenport is said to have been "one of the first to make skilled preparations." "Skilled," I suspect, was a substitution for "scaled."

The Man with the Mandate, he who worketh without noise, the self-appointed apostle of organisation, is taking off his coat. He is not going to be the shuttlecock of pharmaceutical journalism much longer. He certainly will not rest until some few things—I am not quite sure what—are accomplished. On the way to his end he lends a hand to the organisation of London. The federation of London Associations, he says, presents no difficulty because of their proximity. Which is proximate to which? Surely the subjunctive future would be more correct than the indicative present in reference to such a federation. Just now we might as well talk of federating chaos. I am not consciously burlesquing Mr. Lord Gifford's manifesto. I simply cannot understand it. We all want the same things he appears to aim at, but we do not denounce one another because they are difficult to get. Mr. Gifford's policy is as misty as his arithmetic. He had nearly twice the voting strength of any other official candidate, he says, at the last Council election. He had 1,595 votes; there were two other unofficial candidates with over 1,500, and six with over 1,000. How is this for accurate? Aspirations and arguments may sometimes be stated ambiguously; but a controversialist who is loose with his statistics is hopeless.

A National Sanatorium is, in the King's opinion, the best investment which can be made of 200,000*l.* for the benefit of the poor. It is, I think, a wise decision. The utter defeat of tuberculosis in this country, which his Majesty evidently and intelligently aims at, will be a glorious achievement, and will by itself render his reign illustrious. It is recognised by all competent authorities as a possible purpose, and it is doubtful if anyone could suggest any other which would spread so much happiness. I should have thought four smaller sanatoria in various parts of the Kingdom would have been better than one large one, but perhaps the adoption of the latter is not final. This grand endorsement of fresh air as the rational treatment of consumption will give it a new impetus, and will thus multiply the good effect of the generous donation.

Pharmaceutical Affairs.

IN these days of balls, concerts, dinners, and pharmaceutical teas all the elements of the "craft" blend themselves into a harmonious melody which deadens interest in anything that savours of polemics or politics. Yet some good Samaritan is ever ready to blow the placid surface into a mimic storm. How dull matters would have been lately if "Xrayser" had not tilted at a windmill, as some one has expressed it, although it is not a happy simile for the London Chemists Association. His criticism has done the proposed organisation the best possible service, we fancy, by drawing attention to it. Mr. Pentney and Mr. Pond have helped to keep up the game beautifully, and if the Association does not emerge from the ten-shilling room a strong and likeable bantling it will not be through lack of judicious and cheap advertisement. As this mild sensation threatens to pass into everlasting night Mr. Lord Gifford emerges in Venus-like splendour from the nocturnal shade which has recently overshadowed him. He has followed up his epistle of last week with two interventions at this week's Council-meeting, and although neither exactly covered the mandate, they are timely evidence of activity. It is only by work done publicly in the Pharmaceutical Council that we can judge what the members are doing, although most of the work is believed to be done in committee. This is what Mr. Gifford referred to in his letter when he said that members of the Society "ought at least to have sufficient information to enable them to form an intelligent opinion" of what is done by the Council. The most important business done by committees is really never, or but rarely, made public until it is settled. Sometimes members of Council are as poorly informed as outsiders. Take, for example, the Poisons Schedule inquiry. At the November meeting Mr. Southall asked if the Council was to be asked to give evidence before the Committee. "Oh, yes," said the President, "that matter comes later on," and a few minutes

Digitized by Google

later he told the Council that as a result of the Watch Committee's deliberations the President, Vice-President, Mr. Carteighe, and Mr. Cross were appointed to procure evidence and appoint witnesses. We take this as a tolerably good example of the way Council-business is done. It will be noted that the committee met and disposed of most important business without giving the Council, as a whole, the slightest opportunity of expressing an opinion upon it. The Watch Committee exists to transact urgent legal or Parliamentary business, and consists of the President, Vice-President, Treasurer, and London members of the Council, altogether nine members, including, undoubtedly, some of the most experienced councillors. It cannot, surely, be advantageous to have such matters settled without reference to the Council when urgency is out of the question? The Council met on November 6, and "the President or other competent representatives of the Society" were requested to attend the Privy Council Office on November 19, so that there was ample time for the whole Council to consider the matter and decide what should be done. We give this as an example of Council work, for which every member of it is technically responsible, and gets the credit of—if any is going. It is not a solitary case, and we dare say if Mr. Lord Gifford spoke out with his wonted plainness, he would say that when he comes to London every month he finds things cut and dried past alteration or interference. It will be seen, therefore, that the Council has become subordinate to its own committees, for its approval to most of the reports is a mere formality. If the members had in the General Purposes Committee, which meets the night before the Council-meeting, the opportunity of a preliminary review of the whole of the next day's business, or were each member supplied with a general statement of the business to be transacted, the danger of committee-government would be minimised. Probably such government is best, but the members of the Society do not return new members for that sort of thing. And this brings us to the point of these observations. Two months hence the customary declaration that seven members retire from the Council will be made. The retiring members are eligible for re-election. They are Messrs. Carteighe, Young, Harrington, Park, Harrison, Glyn-Jones, and Southall—to name them in the order they were on the poll in 1899. It would be too much to expect that these gentlemen will be returned unopposed. But, may we ask, on what ground any one of them should be rejected? There is no use displacing any except by men who will bring to the Council new or better ideas and methods, and who will devote to their work individuality which will leave its impress on the Council. The matter is sufficiently important to think over.

Otto of Rose.

THE otto-of-rose industry has attracted considerable attention recently, and several attempts, more or less of an experimental nature, have been made in other localities than the Balkans to cultivate the rose for distillation. The fact that the Balkan district, on account of its purely natural advantages, is *par excellence* the rose-garden of the world is sometimes overlooked in dealing with the question, and there is a disposition to accept too readily statements in regard to the impurity of Bulgarian otto. Undoubtedly the industry has suffered from great disadvantages, for that sophistication has existed long enough in Bulgaria to be traditional is true, and the fact is taken advantage of by dealers outside Bulgaria, who "reduce" pure ottos to suit market-prices. On this point a correspondent has something to say in this issue. It may also be noted that although the rose is one of the most delicate of flowers, the methods of distillation adopted by the Balkan peasantry are frequently as rough as they can be; and if Bulgaria is to meet the severe competition which is threatened by synthetic rose and general vilification of Bulgarian trading-methods, the industry must be thoroughly modernised—first by the use of improved stills. We have reason to believe that such improvements are being seriously considered by leading distillers, and the sooner they are carried out the better for Bulgaria.

These observations are induced by the perusal of a report which has just been presented to the French Minister of Agriculture by M. J. Gravereaux, who had collected some 800 kinds of wild roses in his rosery at Haÿ, and was asked by the Minister to visit Bulgaria and report on how roses are cultivated and otto distilled there, evidently with a view to attempt to put the rose-industry on a better footing in France. M. Gravereaux points out that France imports over 30 per cent. of the whole of the Bulgarian crop of otto, England coming next with over 20 per cent.; America (apart from Constantinople, which is merely an intermediary) follows with about 15 per cent., the remainder being chiefly divided between Germany, Russia, and Austria. M. Gravereaux states that the average value of the otto produced in Bulgaria is from 800f. to 1,000f. per kilo., and that one of the principal reasons of adulteration is this low price. Here he is in error, for the lower of these values, and the higher much more so, cover the profitable selling-price of the purest Bulgarian otto. Values do undoubtedly vary with the season; but to say that sophistication is practised because the trade-prices are not remunerative to the distillers and first-hand sellers is a travesty of the truth. Price-influence is practically the same as that which induces the great adulteration of lavender oil in France or lemon oil in Sicily, being independent of the cost of production. So long as too eager buyers attempt to get more than true value for their money so long will adulteration of all essential oils be practised by unscrupulous dealers. The bulk of M. Gravereaux's report is a superficial description of the conditions of rose-growing in the Balkans. He says, "To stimulate the zeal of our compatriots may we not add that Germany has made numerous efforts in this direction? We know, too, that Russia has made plantations of roses in the Caucasus," &c. He thinks Algeria and Tunis lend themselves in a wonderful manner to rose-cultivation, forgetting that the quality of the few essential oils which have been produced in Algeria—geranium oil, for example—compares badly with those produced elsewhere, a circumstance probably due to climatic conditions. Anyway, the reporter suggests that France should make a beginning in Bulgaria by taking a hectare of land in Kazanlik, the chief centre of the Balkan rose-production, plant it with roses, and erecting the requisite distillation-apparatus to carry out the experiments which are needful. It is difficult to see what good this would do to France. The results can almost be foretold, and they should largely benefit the Bulgarian industry. We should have thought that experimental cultivations in the places where it is proposed to grow for distillation in France or her colonies would have been more appropriate, since the avowed object of the inquiry was to enable France, as the largest consumer of otto, to produce cheaper otto than that now manufactured in France. It is true that the French otto differs materially in odour from Bulgarian, and many prefer it, but the superiority in odour is not at all commensurate with the difference in price between the two kinds. M. Gravereaux thinks that French otto would be cheaper if

Digitized by Google

the manufacturers aimed to produce otto of rose rather than rose-water; for otto, he says, is really a by-product. It is apparent that a great deal more information than M. Gravereaux has collected must be available before French growers and distillers can embark upon competition with Bulgaria in this matter.

The Production of Arsenic.

The arsenic industry in this country has fallen upon evil days. Recently Devon Great Consols (Limited) have closed their mines, which were the principal source of the world's supply. This has not so far materially influenced the value of arsenic, and not until the existing stocks, estimated at over 3,000 tons, are worked off, are we likely to see much higher prices. The circumstances which have led up to the closing of the mines and the liquidation of the company may be briefly stated. The Duke of Bedford, who is the ground-landlord, has refused to renew the lease of the mines, which has only five years to run, but he has found employment for many of the miners. In the circumstances liquidation of the company seemed not only desirable but necessary. The company had lost 4,608*l.* on the year's trading, and at the recent liquidation meeting one of the directors stated that the company had been losing 100*l.* per week owing to the fall in the price of arsenic. Moreover, the company were unable to find a buyer for the 1901 production, the consequence being that it was pawned with the bankers. The bank has now given notice of foreclosure It is quite probable the creditors of the company will be paid 20*s.* in the pound, but the shareholders are not likely to get anything. It may also be mentioned that the mine, which was formerly a very rich copper-producer, has afforded dividends amounting to about 120*l.* per share. The only other arsenic mine in England belongs to the Devon Gawton Company (Limited), who have just had to borrow 5,000*l.* to carry on business. They have discharged many of their miners, and all underground developments have ceased pending a revival in the arsenic trade. They also have been unable to dispose of their production. Indirectly the consumption has been affected by a severe drought in Australia during the last two years, which has depleted the stocks of sheep.

Arsenic during recent years has been subject to wide fluctuations in value, the lowest price on record being about 5*l.* 5*s.* per ton, and the highest 20*l.*, these figures applying of course to contracts made with the producers. During the last nine years the average price has been 14*l.*, but in the last five years it has been 16*l.* per ton, and to-day it stands at slightly below that figure. In the present uncertain state of the market consumers are only purchasing for actual requirements, and the fact that the liquidator of Devon Great Consols (Limited) is prepared to receive offers for the whole or any part of the property shows that developments may be in progress. As a producer of arsenic Portugal stands second, and it is said that one firm there has now in stock 1,500 tons, holding it for a higher price. A considerable proportion of the Portuguese output is sent to this country, and the production has increased of late. Within the past few years Australia has also sent us shipments, but only when the home-values were high—say 20*l.*; they have now ceased. Italy, Hungary, and Germany also produce arsenic, but mostly for home consumption. In Canada considerable interest has been shown lately in the exploitation of arsenic production in connection with gold-mining, and an earnest effort is being made by interested parties to have bounties placed upon its production by both the Federal and Provincial Governments. A meeting of citizens was recently held in the town of Actinolite, and an address asking for the bounty was sent to the Minister of Finance at Ottawa. The plea is made that the arsenic required in both the United States and Canada ought to be supplied by Canada, and it is argued that the Dominion is in a better position to supply this trade than Great Britain or Europe, especially as at present no arsenic is produced commercially in the United States. As showing the extent of this industry, we may state that in 1900 there was imported into the United States (according to official figures) 3,145 tons, valued at $333,100, against 4,705 tons, valued at $415,000. Canada during the four years ending 1898 imported 933 tons, valued at $82,000. There is only one arsenic-works in Canada, the capacity of which is 1,000 tons per annum, but if the bounty is granted (which is probable), the output could be increased to 5,000 tons. Hitherto Great Britain has supplied the bulk of America's imports, and it is but natural that the bounty scheme should be viewed with disfavour on this side of the water. At the best there is only a limited use for arsenic, so that the consumption will need to be cultivated. It is asserted that arsenic can be produced in Canada at less cost per ton than anywhere else, owing to the fact that the ore is auriferous as well as arsenical.

THE ALABONE TREATMENT.

Referring to the paper on the treatment of tuberculosis which was given in abstract in the *C. & D.* last week, Mr. Edw. W. Alabone writes to the *British Medical Journal* that it was contributed by Mr. M. Anslow Alabone entirely on his own responsibility, and adds:—

> I know nothing whatever of my son's treatment, and he little more of mine; his statement, therefore, that he has been conversant with my treatment for many years is not only misleading but perfectly inaccurate, although, as he observes, he has seen many cases of phthisis which were deemed hopeless recover under my treatment, but which were not under his "individual" professional care.
>
> I could point out many errors in your criticism of my treatment, and it is hardly fair to ignore the numbers of cases of authenticated cure; but, as an act of justice, might I ask you to defer further judgment till my own treatment—and not that of my son's—has been fully tested—which will shortly be the case?

This letter is a revelation. The younger Dr. Alabone took part in the *Times* controversy entirely in defence of his father, and at the risk of bringing himself into professional disrepute. To be thrown overboard by his father now is hard.

WHISKY-AGEING.

Dr. Hewitt, of the People's Palace, is the man of the week so far as the London newspapers are concerned. Yet his announcement regarding the use of sodium phenyl hydrazine sulphonate was anticipated by Sir Lauder Brunton and Dr. Tunnicliffe about a year ago (see "The Science of Pick-me-ups" in *C. & D.*, March 30, 1901, page 522). The present warm reception of the suggestion is doubtless a tribute to the excellence of the Society of Chemical Industry as a means of publicity. Anyway, Dr. Hewitt has been well talked about, and many interviews have resulted. In one of them Mr. Richard Stallard, of Stallard & Co., Albemarle Street, stated that Mr. J. Lloyd Bullock, pharmaceutical chemist, 3 Hanover Square, who is now 90 years of age, spent many years in trying to discover a quick method of maturing whisky, and in the end came to the conclusion that the one and only satisfactory method is that of bonding for a number of years. He was able to eliminate all the injurious substance, but the whisky would not keep, and had to be drunk directly it was made. It simply became spirit of wine, with no flavour of whisky.

M.P.S's., LOOK OUT.

Messrs. P. Morison & Son, S.S.C., legal advisers to the Society in Scotland, write to the *British Medical Journal*

Digitized by Google

giving an emphatic denial to a suggestion which had been made by a correspondent of the *B.M.J.* that the Council of the Pharmaceutical Society and the Registrar do not administer the law impartially. In their letter they say: "Let 'Scrutator' send the Registrar *or us* evidence justifying the prosecution of any member of the Pharmaceutical Society or his unqualified assistant for a breach of the law, and *we undertake* that, in the interest of the public, proceedings will be taken against the offender." Something of the *Ego et rex meus* about that proclamation.

SANATORIA FOR TUBERCULOSIS.

Sir Ernest Cassel has placed at the disposal of the King 200,000*l.* for charitable or utilitarian purposes, which his Majesty has decided to devote to providing a sanatorium in England for the open-air treatment of tuberculosis. Sums of 500*l.*, 200*l.*, and 100*l.* are to be devoted as money prizes for the best essays and plans for the erection of a suitable sanatorium. An advisory committee has been appointed, consisting of Sir William Broadbent, Bart., K.C.V.O., Sir Richard Douglas Powell, Bart., K.C.V.O., Sir Francis Laking, K.C.V.O., Sir Felix Semon, Sir Hermann Weber, and Dr. C. Theodore Williams, and essays, with the necessary constructive plans, are to be sent in not later than April 15, 1902, to either Dr. P. Horton-Smith (15 Upper Brook Street, W.) or Dr. J. Broadbent (35 Seymour Street, W.). The following clauses from the conditions show the scope of the essays:—

SIR E. CASSEL, K.C.M.G.

1. Medical men of all nationalities may compete. The papers may either be the work of a medical man, or the joint production of a medical man and an architect.
2. The sanatorium is intended for 100 tuberculous patients—50 male and 50 female.
3. Of the total number of beds, 88 will be assigned to the more necessitous classes, whilst 12 will be reserved for the well-to do.
4. The accommodation for all patients is to be comfortable, a separate room being provided for each. Superior arrangements to be made for the more wealthy patients.
5. It may be taken for granted that the sanatorium will be erected on an elevated and sloping site, with a sunny exposure, and well sheltered from cold winds. It will have a farm at a convenient distance, and be surrounded by extensive grounds, well-wooded, and affording ample space for exercises of various kinds. The soil will be dry and permeable, and the water-supply abundant.
6. The sanatorium must be fitted with the latest sanitary arrangements, and equipped with all requirements for scientific research. Provision should also be made for the recreation of the patients.
7. Economy in construction will be an important consideration, but it must not interfere with the reasonable comfort of the patients or the efficiency of the institution.

The committee are certainly going to work in a business-like manner, and we have no doubt the fund will be of great benefit to the class—the genteel poor—which it is intended for. Sir Ernest Cassel, who has so generously placed such a large sum of money at the disposal of the King, is a naturalised Englishman who has made his money in finance. The King stood as sponsor to his grandchild last week.

COLONIAL IMPORT-DUTIES.

The Board of Trade have issued a return, ordered by the House of Commons to be prepared last autumn, of the various duties levied upon imports by the colonies and other possessions of the United Kingdom. It is a Blue-book of over five hundred pages, compiled by Sir Alfred Bateman, and shows with marvellous clearness the diversity of the tariffs of the British Empire. The arrangement of the book appears to be excellent, and gives some idea of the chaos prevailing in the numerous tariffs throughout our possessions. Sections are devoted to paints colours, varnishes, chemicals, dyeing and tanning materials, oils, fats, resins, &c. That relating to chemicals runs to twenty-four pages, but no summary would convey an adequate notion of the duties, the number of the articles affected and the number of possessions levying duties being too great. The Australian Commonwealth Tariff Bill is dealt with in an appendix, but the rates there given have been superseded by the provisional rates, which are at present under discussion in the Federal House of Representatives. In the appendices will be found useful papers on copyright laws and regulations in force in the Empire and the duties leviable in the protectorates and the territories of chartered companies.

THE CITY'S PUBLIC ANALYST.

Such is the quaint heading that the *Times* gives to a paragraph on the quarterly report of the public analyst for the City of London (Dr. F. L. Teed). The report shows that during the period under review 214 samples of food and drugs were analysed. Of these, 48 samples were adulterated, or 19·7 per cent. Ninety-one samples were taken unofficially, and of these 21, or 23·1 per cent., were adulterated. The remaining 153 samples were purchased with all the formalities of the Acts. The unofficial samples were taken in order to ascertain where adulteration was most practised. Dr. Teed adds that the amount of adulteration disclosed by the quarter's work is very large, but the prosecutions that are taking place will tend to reduce them to a much more reasonable figure. This is altogether a case of the new broom, for during Dr. Teed's predecessor's time food and drugs in the City of London were neither so severely pressed into the service of the public analyst, nor were the Common Council men startled by statements to the effect that adulteration is practised in the City on a very large scale.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1*l.*, obtainable through any money-order office.

(*From the "Trade-marks Journal," January* 8, 1902.)

"STEELPHOS" (no claim for "steel"); for a chemical for hardening and annealing metals. By the Steelphos Manufacturing Company, Olmar Wharf, Malt Street, Old Kent Road, S.E. 242,202.

"ABSORBINE" (no claim for "Absorb"); for chemicals in Classes 2 and 3. By W. F. Young, 68 Monmouth Street, Springfield, Massachusetts, U.S.A. 242,163 and 242,164.

"HERCULOID"; for chemicals in Class 3. By Evodie Louise Kernick, 85 Stacey Road, Cardiff. 241,705.

"PETRONOL" (no claim for "Petro"); for chemicals in Class 3. By Reynolds & Branson (Limited), 14 Commercial Street, Leeds. 242,074.

"MARLOW" (the essential particular) and device for a label; for a medicine. By the Marlow Company, 6 Gilmore Place, Edinburgh. 241,135.

"GYPO"; for Goods in Class 17. By John Bennet Lawes & Co. (Limited), 21 Mincing Lane, E.C. 242,726.

"MARVELINE" (no claim for "Marvel"); for marking-ink. By H. Bell, 62 Quay, Waterford. 242,390.

"FLORITZA"; for perfumery and toilet-articles. By the Vinolia Company (Limited), Malden Crescent, N.W. 241,374.

Legal Reports.

Fertilisers and Food-stuffs Act.

Defective Slag.

At Leicester, on January 4, Mr. John W. Proctor and Mr. Richard Thompson, trading under the style of Messrs. Richardson & Co., chemical-manure manufacturers, York, were charged with selling slag which on analysis by Dr. Dyer, analyst to the Leicester County Council, was found to be 7 per cent. deficient in phosphates on the third or lowest quality quoted for, whereas the best quality was ordered and paid for. The defence was that when the slag was ordered the defendants did not have it in stock, they sent on the order to another firm, who were in a similar position, and they transferred the order to a third firm, who supplied the basic slag. It was admitted by the prosecution that the defendants had established a well-earned reputation, and that they would not knowingly commit the offence charged. The defendants further expressed their anxiety to rectify any mistake which had been made. They denied that any moral offence had been committed, as they ordered and paid for the best quality to be supplied. The Bench admitted the *bona fides* of the defendants and decided to treat the action, which was the first under the Act which had to come before them, as a test case. They fined the defendants 20*s.* and 32*s.* costs.

Sale of Food and Drugs Act.

Sweet Nitre.

At the Six-mile Cross (co. Tyrone) Petty Sessions, on January 2, Messrs. W. Armstrong & Co., druggists, Grimlex, were prosecuted for having sold a quantity of deficient sweet spirit of nitre. The certificate of Mr. Barklie, county analyst, showed that the article was deficient to the extent of 25 per cent. For the defence it was contended that the spirit could not be kept up to the proper standard owing to the evaporation through frequent use, moreover the bottle sent to the analyst had not been filled, and there was more room for the air to injure it. The Magistrate said if they went into technicalities they would have to get Mr. Barklie to give evidence At defendants' request the case was adjourned for Mr. Barklie's attendance.

Bankruptcies and Failures.

Re Peter Campbell Forbes, formerly trading as a chemist at St. Andrew's Avenue, Morley.

The public examination of this debtor took place at Dewsbury on January 7. At the last Court debtor undertook to file certain accounts in fourteen days, and the Official Receiver (Dr. E. E. Deane) now complained that debtor had failed to comply with the order. Debtor said he had been unable to do so as he had not had proper access to the books, and had been occupied with other negotiations. The trustee being unable to dispose of his business for more than 50*l.*, he (the debtor) found a purchaser at 200*l.* The Official Receiver said that the trustee complained that he was unable to transfer the office to the new owner of the business because of debtor's action. The Registrar pointed out that the agreement made by debtor and his wife with the landlord was not worth the paper it was written on, and that it could not override the trustee's rights. The Official Receiver stated that debtor was trying to get possession of the premises in his wife's name, which was simply an application for his own benefit, and an interference with the rights of the trustee. The Registrar warned debtor that the trustee must not be embarrassed by anyone. He also warned him that an order of the Court must not be lightly treated, and ordered him to file the accounts required in ten days.

Re Arthur Claude Howard Newton Mason, 113 High Street, West Bromwich, trading as a Chemist and Druggist.—The first meeting of creditors was summoned for January 2, at Birmingham, but none attended, nor was the bankrupt present, and the debtor's affairs were left with the Official Receiver to be dealt with in the ordinary way. Debtor attributes his failure to falling off in trade and severe competition. The immediate cause of the petition was the High Bailiff taking possession under an execution. The statement of affairs discloses liabilities 473*l.* 16*s.* and assets estimated at 300*l.* 14*s.* 2*d.* In his observations the Official Receiver says the bankrupt, who is not a qualified chemist and druggist, was an assistant to his father, who carried on a chemist's and druggist's business in High Street, West Bromwich, till June, 1898. In that month the stock and fixtures were transferred to the bankrupt, in consideration of the payment of 1*l.* a week to his father during his lifetime. The bankrupt estimated that the stock and fixtures were worth 500*l.* as a going concern. The liabilities were paid by his father, who collected the book-debts owing at that time. The bankrupt was left without working capital, and this had been a serious drawback to him. In December, 1900, creditors began to press, and since then he had traded with considerable difficulty. He did not, however, recognise his insolvent position until November, 1901, although the profits for some time past have, in consequence of the severe competition, been insufficient to pay the expenses. In former years the bankrupt's father sent a considerable quantity of goods to India, but the orders had fallen off considerably, and the bankrupt was recently served with a writ for 124*l.* for advertising in the *Indian Daily News*. The bankrupt is unmarried. The following is a list of the principal creditors:—

Re William Longwood Fewster, Westbro', Dewsbury, Chemist and Druggist.—The affairs of this debtor were inquired into at the Dewsbury Bankruptcy Court on January 7. Debtor stated that he started in business nineteen years ago with 20*l.* capital. Some years ago he bought the premises he now occupied at Westtown. He lived at Westbro', Dewsbury, where for some time a business had been carried on in the name of Fewster, chemist. That business was not his, but his wife's, who sold tea, chocolate, &c., and a few drugs, but no poisons, nor anything that a greengrocer could not sell. The few drugs she sold were supplied from his shop at Westtown. He recognised that it was a mistake to have the name of Fewster chemist, over his wife's shop, and he admitted that the labels of his bottles bore the name "W. L. Fewster, Westtown and Westbro'." It had never occurred to him that this was wrong. Orders for drugs for him were left at his wife's shop. The causes of failure was smallness of capital, losses through local strikes, and expenditure in advertising proprietary articles. He had spent hundreds of pounds in advertising. The examination was adjourned to allow the Official Receiver an opportunity of considering the ownership of the shop at Westbro'.

New Companies & Company News.

THE E. W. GILLETT COMPANY (LIMITED).—Registered in Toronto, Ont., with a capital of $350,000. To manufacture and deal in groceries and druggists' sundries, and to acquire the business of E. W. Gillett, Toronto.

INTERNATIONAL DRUG COMPANY (LIMITED).—Capital 1,500*l.*, in 1*l.* shares. Objects: To carry on the business of chemists, druggists, drysalters, oil and colour men, importers and manufacturers of and dealers in pharmaceutical, medicinal, chemical, industrial and other preparations, makers of chemical, photographic, surgical, and scientific apparatus and materials, &c. The subscribers are:—W. G. B. Sweet, 181 Queen Victoria Street, E.C., merchant; H. Bradley, 307 Clapham Road, S.W., druggist; A. W. Wordley, 20 Champion Park, Denmark Hill, S.E., surgeon; H. A. Hart, "Woodlands," Wootton, gentleman; J. Pilkin, 56 Red Lion Street, Clerkenwell, E.C., philosophical-instrument maker; G. G. Hewitt, M.D., M.B., B.S., 15 Walbrook, E.C.; and A. Croft, 8 New Broad Street, E.C., druggist.

POWER MANUFACTURING COMPANY (LIMITED).—Capital 30,000*l.*, in 1*l.* shares (29,000 "A" and 1,000 "B"). Objects: To acquire E. Power's business of a dental and surgical instrument maker, and to carry on the same and any auxiliary business. The first subscribers are:—E. Power, Churchfield Road, Walton-on-Thames, manufacturer; Mrs. A. E. Power, Churchfield Road, Walton-on-Thames; Miss E. A. Power, Churchfield Road, Walton-on-Thames; E. A. Higgs, Walton-on-Thames, clerk; W. H. Ash, Broad Street, Golden Square, W., merchant and manufacturer; C. J. Ash, Broad Street, Golden Square, W., merchant and manufacturer; and C. Dod, 8 Broad Street, Golden Square, W., secretary. The first directors are W. H. Ash, C. J. Ash, and E. Power (managing director). Qualification, 500 "A" shares. Remuneration of ordinary directors, 50*l.* per annum, divisible; of managing director, 500*l.* per annum.

STANSFIELD BROTHERS (LIMITED).—Capital 1,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with Exley Stansfield, and to carry on the business of manufacturers, importers and exporters of and dealers in soaps of all kinds, soda-ash, soap-ash, urine-substitute, sulphur-washes, sulphate of soda, tallow, oils, greases, liquid blues, bleaching-preparations, metal polishes and pastes, turpentine, borax, resin, chemicals, chemical, photographic, and scientific apparatus and materials, &c. The first subscribers are:—G. Stansfield, 5 Victoria Avenue, Cleckheaton, traveller; E. Stansfield, Victoria Avenue, Cleckheaton, soap and chemical manufacturer; O. Stansfield, 13 Swinton Terrace, Halifax, engineer; Mrs. M. Nicholson, Kirkgate, Bendall, near Leeds; Miss L. Stansfield, 5 Victoria Avenue, Cleckheaton; Mrs. H. Stansfield, 5 Victoria Avenue, Cleckheaton; G. Rushworth, 20 Albion Street, Cleckheaton, traveller; and W. Firth, Craven Bank Chambers, Bradford, solicitor.

LIEBIG'S EXTRACT OF MEAT COMPANY (LIMITED).—The directors have resolved to declare a half-yearly interim dividend of 5 per cent. on the ordinary shares of this company, being 20*s.* per share, free of income-tax.

HOMOCEA (LIMITED).—At a meeting of shareholders of Homocea (Limited), on January 8, the old directors resigned and new directors were appointed. It was stated that the recent appeal to the shareholders to take up the debenture-issue was abortive.

Marriages.

DAVIES—HOWELLS.—At St. Peter's Church, Lampeter, on December 26, Richard Llewellyn Davies, chemist and druggist, Clydach, Swansea, to E. J. Howells, of Lampeter.

STEPHEN—ROBERTSON.—At 25 Barony Street, Edinburgh, on January 4, 1877, by Rev. Alexander Williamson, West St. Giles', John Stephen, chemist, Loanhead, to Sarah, younger daughter of the late Roderick Robertson, Edinburgh. (Silver wedding.)

WANDLESS—ANDERSON.—On January 2, at Scotch Street Church, Whitehaven, by the Rev. A. O. Lochore, William Hood Wandless, chemist and druggist, Whitehaven, to Marian, daughter of the late Captain Wm. Anderson, St. Bees.

Deaths.

CHANCE.—On January 6, at his residence, 1 Grand Avenue, Hove, Sir James Timmins Chance, Bart., in his 88th year. Sir James was for many years head of the firm of Chance Brothers & Co., glass-makers, Birmingham. Intended originally for Holy Orders, and afterwards the Bar, he eschewed both and embraced science, made great progress in the art of glass-making, and eventually his firm took first place as makers of glass apparatus for lighthouses. In conjunction with Michael Faraday and the Astronomer Royal he began a work which lasted eleven years, and as a result the dioptric apparatus for lighthouses was devised. He was a warm and practical supporter of education, a genuine man of science, and a large-hearted philanthropist.

CROWDER.—On December 29, 1901, at Edenvale, 177 Lower Addiscombe Road, Croydon, Mr. William Crowder, formerly of Clapton, in his 73rd year. Mr. Crowder was a member of the Society of Chemical Industry attached to the London section, at whose meetings his was one of the most familiar figures. At the Chemical Industry Club on Monday evening his memory was toasted in silence. Mr. Crowder was wont to speak at the meetings, especially when mineral acids were the subject, and his long experience and sound judgment made his remarks well worth listening to. He served on the sectional committee for several years.

DEWAR.—At Dingwall, N.B., on January 4, Mr. Peter James Dewar, pharmaceutical chemist. Aged 83. Mr. Dewar, who was senior partner of the firm of Dewar & Hay, chemists, Dingwall, was born in Avoch, where his father was the Congregational minister. Mr. Dewar started business as a chemist in Dingwall in 1845, and he was for many years closely identified with the public life of the burgh, taking an active part in the educational, religious, and social needs of the day, especially on behalf of the young. The Volunteer movement also received his loyal support, and he filled the various grades of the service up to the rank of captain, by which title he was known to the last. He was a successful business man, having built up a lucrative concern which combined the practice of dentistry with that of pharmacy. He was twice married, and leaves a widow and grown-up family of daughters to mourn his loss. The business is carried on by the surviving partner, Mr. Roderick Hay, a former apprentice with Mr. Dewar, who had been associated with him as partner for some years past.

HAWKER.—On January 1, Mr. Edwin Hawker, of Hawker Brothers, 7 Denman Street, London Bridge, S.E.

KEMP.—At New York, U.S.A., on December 31, 1901, Mr. Edward Kemp, senior member of the firm of Lanman & Kemp. Aged 71.

TAPP.—On January 4, suddenly, at Clapton, Mr. Samuel Tapp, in his 62nd year. Mr. Tapp was well known to the wholesale drug-trade of London, as he was foreman at the London Docks rhubarb warehouse in Crutched Friars for about twenty-two years, from which position he retired in September last. He had previously been with Messrs. Barron, Harveys & Co., and was one of the best judges of rhubarb in the world. He leaves a widow and four grown-up sons.

Winter Session.

Society of Chemical Industry.

London Section.

A meeting was held in the Chemical Society's rooms, Burlington House, on Monday evening, January 6, Mr. Otto Hehner (Chairman of the Section) presiding.

Detection and Estimation of Arsenic.

In March last year, when the arsenic scare was at its height, a joint committee of this Society and the Society of Public Analysts was appointed to report upon the best method for the detection and approximate estimation of minute quantities of arsenic in beer, brewing-materials, foodstuffs, and fuel. It consisted of Messrs. Otto Hehner (Chairman), A. H. Allen, A. C. Chapman, C. Estcourt, David Howard, A. R. Ling (Secretary), R. Messel, and L. T. Thorne. They now recommended the Marsh-Berzelius method, in which arsenic-free hydrochloric or sulphuric acid, zinc, lime, and calcium chloride are required, and Jena glass should preferably be used, as ordinary bottle-glass frequently contains arsenic. Hydrochloric acid is rarely free from arsenic. The pure acid of commerce is therefore diluted to sp. gr. 1·100, coloured yellow with bromine, excess of sulphurous acid then added, and after standing twelve hours about a fifth of it is boiled off, whereby the arsenic is got rid of. If the sulphuric acid contain arsenic, a few grammes of sodium chloride is added to ½ litre of it, and the mixture distilled, the first 50 c.c. being rejected. The rest is diluted with four times its volume of water.

To test for arsenic a 200-c.c. flask or bottle is used, and fitted with a tapped 50-c.c. funnel and exit-tube, the latter being connected with a drying-tube containing a roll of dry lead-acetate paper or cotton-wool (saturated with the same solution and dried), then a wad of ordinary cotton-wool, a layer of granulated calcium chloride, and a wad of ordinary cotton-wool. To this tube is attached a hard glass tube drawn out to a point 0·092 inch in diameter.

Having placed about 20 grammes of zinc in the flask and well washed it with water, dilute acid is run in, and when all air is expelled from the apparatus (a point judged by the hydrogen flame being round) the bunsen burner is placed under the hard tube to test whether a mirror is formed or not, acid being added from time to time. If no mirror is formed in twenty minutes, the test may proceed by the addition of the suspected arsenical material.

Standard arsenical mirrors are prepared by adding hydrochloric-acid solution of arsenious oxide (each c.c. of which contains 0·001 milligramme of As_4O_6) to the generating-flask, first 2 c.c. of the solution, then 4 c.c., 6 c.c., 8 c.c., and 10 c.c., using a new hard tube for each addition. The hydrogen is allowed to come off for twenty minutes before adding the arsenical solution, the bunsen flame being below the tube all the time; the arsenical solution is then added, and the flame continued under the tube for twenty minutes, so that the arsenical mirror may be evenly deposited. The mirror is sealed in while the tube is still filled with hydrogen. The tubes are then mounted on white cards and used for comparison. The estimation of arsenic in different materials was then described. Hydrochloric acid is more sensitive than sulphuric, but whichever is used in making the standards must be used again in the comparisons. Sulphuric acid cannot be used with organic materials without destruction of the organic matter. The following are, in brief, the methods suggested:—

Beer.—Start the apparatus with hydrochloric acid, after ten minutes run in a mixture of 10 c.c. beer and 10 c.c. hydrochloric acid. Test for fifteen to twenty minutes, running in more if necessary.

Malt, Sugar, &c.—Hydrochloric acid and 50 c.c. water warmed to 50° C. are poured on 50 grammes of malt in a separator-funnel. After digesting twenty minutes, about 60 c.c. can be drawn off. Each 20 c.c. contains the arsenic from 10 grammes malt. Use in the apparatus as with beer. Sugar may be dissolved in the acid and water, and used as beer.

To Destroy Organic matter the substance (10 grammes) is (1) heated in a crucible with nitric acid (10 to 15 c.c.), and after brown fumes cease to come off, add 3 c.c. sulphuric acid, heating being continued until the mass begins to char; another 5 c.c. of nitric acid is added, and heat continued until the mass is nearly dry. It is then extracted with dilute acid, filtered, and Marshed. (2) The material is mixed with pure lime or magnesia, dried and incinerated (1 gramme to 20 c.c. beer, or 2 grammes sugar or malt) The ash is dissolved in hydrochloric acid and Marshed.

If sulphites or sulphurous acid be present, it must be oxidised by bromine, excess of the latter being removed by heating. To prove that the mirrors are arsenical, replace the hydrogen in the tube with air, seal up and heat until the mirror disappears. On cooling, minute crystals of arsenious oxide are deposited.

The test is of such extreme delicacy that with quantities of 20 grammes or 20 c.c. it will give an indication of one part of arsenious oxide in 7,000,000.

After Mr. A. R. Ling (Secretary of the Section) had read the report, the Chairman made a few remarks which were taken to mean discouragement of debate on that occasion, and Mr. B. E. R. Newlands quickly confirmed that by moving a vote of thanks to the committee, explaining that the report had yet to be placed before the Council. Mr. Gordon Salamon seconded the motion, and took the opportunity of explaining, as a member of the committee which took evidence at Manchester last year, that the committee were well aware in recommending Reinsch's test that it was not the most delicate, but they then felt the responsibility of adopting so delicate a test as the Marsh-Berzelius one, because at that time, when the scare was at its height, there were practically no beer sent out which would not give some response to Marsh, although they were in no sense poisonous.

Mr. Newlands then put the motion to the meeting. It was carried, but a few questions were put, and the Chairman disposed of them by saying that they would all be found answered in the paper. He then called upon Professor J. T. Hewitt, M.A., D.Sc., Ph.D., to read a paper which virtually was on

The Maturing of Whisky.

Dr. Hewitt is well-known to Chemical Society *habitués* on account of his work in organic chemistry, and it has been whispered recently that he had discovered something which would make new, raw whisky as sweet as milk. He had a good innings on Monday evening, first telling the meeting all about the higher alcohols, acids, and ethers in pot-still and patent-still whisky, especially dwelling upon the fact that there are always few fatty acids in the spirit. About a year ago Sir Lauder Brunton showed that the aldehydes, especially furfural, in whisky and similar spirits, are the hurtful constituents, as they produce the splitting headache next morning. The effect of keeping spirits in cask is to reduce the amount of such aldehydes. Dr. Hewitt spoke about the estimation of these, giving it as his opinion that the colorometric method, by means of aniline acetate, is most reliable, and added figures showing the amounts of aldehydes in Scotch whisky, brandies, Cape smoke, Dop brandy, and the like, but the figures were not startling, as some matured spirits showed bigger figures than raw spirits. He then spoke about the removal of aldehydes, and stated that his discovery consists in the addition of sodium phenyl-hydrazine sulphonate to the low wines still in the course of distillation, the result being that the aldehydes are fixed, and do not come over with the final distillate. This does not diminish the flavour of the spirit, which on keeping in cask for a few months becomes as rich as if it had been kept in them for years.

The discussion on the paper was so long that Dr. Dupré was prevented reading one which he sent in after the programme had been published.

Chemists' Managers' and Assistants' Society.

A goodly gathering of the members of the Chemists' Managers' and Assistants' Society and their friends took place at the Horseshoe Hotel, Tottenham Court Road, W., on January 8. The occasion was a grand smoking-concert, which served the double purposes of promoting social intercourse and holding the annual meeting. Many representatives of the leading wholesale drug-houses were present to support Mr. Frederick Layman, who was in the chair. Before the musical portion of the proceedings began Mr.

Digitized by Google

C. E. Pickering, who is President of the new Society, read the annual report. In the course of his speech Mr. Pickering told the story of the amalgamation between the Chemists' Assistants' Union and the Chemists' Managers' Association. A new set of rules had been drafted by the provisional committee appointed in October, and these were submitted that evening for the approval of the Society. After alluding to their good fortune in securing Lord Avebury as Honorary President, who would safeguard their interests in Parliament, Mr. Pickering said it was proposed to re-elect the existing Council for the ensuing year. He drew particular attention to the new rules drafted, and especially to those governing the Benefit Fund. The membership subscription has been fixed at 5*s.* per annum, and evidence of thorough respectability must be given before the membership ticket can be obtained. As a further inducement the ticket entitles the owner to a year's insurance. A programme of half-a-dozen meetings has been drawn up, but that represents only a portion of the work of the Society, which will do its best to help members into situations, and aid in every possible way to raise the general status of the assistant. It is intended that places of pharmaceutical interest will, in the course of the year, be visited by members of the Society, these being arranged for the half-day holidays. He desired to specially draw their attention to the fact that now every branch of the wholesale as well as the retail trade was eligible to join the Society—for which excellent suggestion they had to thank their esteemed friend the Editor of THE CHEMIST AND DRUGGIST. The membership of the Society had fallen off somewhat during the past few months, but that was entirely due to the temporary disorganisation resulting in the amalgamation, and he predicted a great future for the Society. The concert programme consisted of songs, recitations, and an excellent series of gramaphone-records. The orchestra was supplied by Mr. Rush's orchestra, and some of the songs were sung by members of the Society. "The King" and "The Chemists' Managers' and Assistants' Society" were the toasts of the evening.

London Chemists' Association.

ANOTHER meeting of the committee which has in hand the formation of this Association was held at the Holborn Viaduct Hotel on Wednesday, January 8 There was a full attendance of the members, and, in addition, of three of the new members who have been added to the committee—Messrs. Breese, Goodall, and Truman. Rules were submitted and finally drafted for joint discussion with a committee of the Western Chemists' Association, and subsequent submission to a general meeting of chemists who wish to join the Association. This meeting will be called for January 29.

Manchester Pharmaceutical Association.

AT the meeting held at the Victoria Hotel on Wednesday evening, January 8, Mr. G. S. Woolley (President) in the chair, Mr. J. Grier, of the Pharmaceutical Department, Owens College, was present to read a paper on "Pharmaceutical Education," but owing to the limited number of members present it was postponed in order that the Federation circular on an allied subject may be considered at the same time. The CHAIRMAN, in the course of some remarks on the subject, said one thing which struck him very forcibly was that the education most needed was reading, writing, and arithmetic. If they advertised for a boy nowadays he could scarcely write a decent hand, and if they asked a boy how much three-quarters of a dozen articles came to at 12*s.* a dozen he was at a loss for an answer. Mr. KIRKBY gave instances of the neglect of the primary forms of education for higher subjects, such as Greek and the higher mathematics, which was proving disadvantageous in many respects. The question of providing refreshments at future meetings was suggested as an attraction, and afternoon meetings were once more mentioned.

Newcastle-on-Tyne and District Chemists' Association.

AN ordinary meeting was held in the Hôtel Métropole on Wednesday, January 8, Mr. Robert Wright, President, in the chair. There was an attendance of over thirty.

Mr. ARTHUR PAYNE, F.C.S., President of the Blaydon Camera Club, delivered a lecture on

CHROMATIC PHOTOGRAPHY.

The lecture was illustrated with lantern-slides, diagrams, and specimens, many of which possessed great historical value and interest. Mr. Payne explained, with the aid of a spectrum, the difference between the chemical and visual rays of the spectrum, and showed by means of diagrams the gain in colour sensitiveness obtained by using orthochromatised dry plates. The necessity for the use of a light-filter was explained, and the lecturer insisted upon the necessity of adjusting the light-filter to the brand of plate used by means of an Abney's sensitometer. Mr. Payne showed the different ways in which the light-filter may be placed, and said he preferred, for convenience only, to use it in front of the lens or a Thornton-Pickard shutter. He mentioned that focusing must always be done with the light-filter in position, adding that "so long as the plate and light-filter are used together the colours will be correctly rendered in the same luminosity as the eye sees them at the moment of making the exposure." Many slides illustrated his statements. Turning to photography of colours, the lecturer referred to the work of Carey Lea, Colonel Saint-Florent, Lippmann, Du Hauron, Ives, and Joly. The theory of three-colour photography was explained with the aid of diagrams, and the processes were illustrated with lantern-slides in natural colours.

Votes of thanks to the lecturer and Mr. Hughes, his assistant, closed the meeting. Messrs. Dobson (Morpeth) and Hedley (Newcastle) were elected members of the Association.

Chemists' Assistants' Association.

THE programme for the second half of the present session consists of the following items:—

Jan. 9.—Musical and social evening, 73 Newman Street, W.
„ 16.—Paper, "Bee-keeping," by S. Frost.
„ 23.—Short-paper evening.
„ 30.—Paper, "Plant Misfortunes," by R. E. Lownsbrough.
Feb. 6.—Impromptu discussion.
„ 13.—Paper, "Some Notes on Medicinal Plants Cultivated in Great Britain," by F. Ransom, Ph.C.
„ 20.—Musical and social evening.
„ 27.—Discussion, "The Best Systematic Methods for the Pharmacist."
Mar. 6.—Paper, "Phosphorescence," by Professor J. Norman Collie, Ph.D., F.R.S.
„ 13.—Paper by F. C. Shrubsall, M.A., M.R.C.P.
„ 20.—Annual dinner at Holborn Restaurant.
April 10.—Paper, "Notes on some Pharmacopœial Preparations," by E. A. Andrews, Ph.C.
„ 17.—Exhibition and short-paper evening.
„ 24.—Paper, "Glass," by C. Hymans.
May 1.—Musical and social evening.
„ 8.—Annual general meeting.

Personalities.

MR. A. D. BREEZE, of Plymouth, has been appointed chairman of the Plymouth Mercantile Association.

MR. WILLIAM WRAY HOPKINSON, wholesale druggist, has been elected a member of the Bentley-with-Arksey School Board.

MR. T. H. W. IDRIS is now on a voyage to South Africa. He started from Southampton on December 28 last, and will return by the East Coast route through Egypt.

THE HON. GEORGE T. FULFORD, President of Dr. Williams' Medicine Company, who has been here in connection with the business of that company, left London on Wednesday of this week for Canada.

MISS KITTY HARSTON, the twelve-year-old daughter of Mr. and Mrs. Harston, Burton Road Pharmacy, Lincoln, took honours in Grade II. pianoforte-playing at the recent examination of the Incorporated Society of Musicians.

MRS. THEODORE WRIGHT, who is well known to members of the British Pharmaceutical Conference owing to her exquisite recitations, has accompanied Mrs. Patrick Campbell to the United States as a member of her dramatic company.

PHOTOGRAPHIC NOTES.

KODAK TERMS.

The new conditions under which Kodak (Limited) are to supply retailers have caused considerable stir in wholesale circles, as well as amongst retail dealers. Wholesalers are no longer to be supplied by the company. This hits them rather hard, not because of the profits they lose, but on account of the fact that Kodak goods bulked very largely in their turnover, and those who profess to supply retailers with everything suddenly find themselves unable to carry out that principle as regards a leading line. The wholesale dealers have met and have resolved upon a line of action—in fact, to continue the fight—for they consider that the company have resolved upon the present step because the wholesalers beat them on the film-monopoly scheme.

Messrs. George Houghton & Son, who have been doing over 1,000*l.* a month with the company, have issued a circular regarding the matter, in which they say:—

"Without a word of thanks for past business or of regret for taking such a step they [the company] give us the curt notice contained in a circular letter issued early in December that in a few weeks' time—viz., January 1—they will dispense with our services as distributors. The business in their goods has been to us not very profitable; but for this we do not so much blame them, as it was, of course, optional to us to give away as much of their discount as we liked to our retailing friends. As is well known, however, we have especially set ourselves out for many years past to supply the retailer with everything that he may require in the way of photographic goods at a very small margin of profit, and we venture to think that our action and that of other wholesalers who have done the same, in giving the facilities we offer, both in terms and in keeping a stock of the thousand and one articles required by amateurs, has been very largely instrumental in popularising photography and indirectly and directly increasing the demand for Kodak as well as other manufacturers' specialities. The question naturally arises, What may the retailer expect when the Kodak Company feel themselves sufficiently strong to treat them in a similar manner? We leave our friends to judge for themselves, aided by the above-mentioned facts."

As it is only fair that the company's views should be given, one of our staff called at their head office and was assured that there is no intention on their part of opening any further retail branches. The company already have five branches in London, and one each in Glasgow and Liverpool. It would not, we were informed, pay the company to open branches everywhere. At the same time our representative was told that the effect of opening a branch near a dealer has been to increase his trade.

"LITTLE NIPPER" COMPETITION.

We have received from Messrs. W. Butcher & Sons the following list of prize-winners.

Class A.

First, 2*l.* 2*s.*, W. H. Wills, 13 Tudor Road, Leicester.
Second, 1*l.* 1*s.*, G. W. Porte, Skelton-in-Cleveland.
Third, 10*s.* 6*d.*, Vivian R. Cocq, 45 The Common, Woolwich.

Class B

First, 1*l.* 1*s.*, Walter H. Wills, 13 Tudor Road, Leicester.
Second, 10*s.* 6*d.*, F. Forest, 129 High Street, Guildford.
Third, 5*s.*, J. F. Alexander, 37 Burnbank Gardens, Glasgow.

Class C.

(No. 1 Camera.)

First, 1*l.* 1*s.*, H. R. Lewis, Seymour Street, Bath.
Second, 10*s.* 6*d.*, Lallie Dod, 52 Chalsey Road, Brockley.
Third, 5*s.*, G. Axon, 84 Shaw Heath, Stockport, Cheshire.

(No. 2 Camera.)

First, 1*l.* 1*s.*, Katie King, 53 St. Thomas's Road, Hastings.
Second, 10*s.* 6*d.*, L. Watts, 29 Evering Road, London, N.

Class D. (No. 1 Camera.)

First, 1*l.* 1*s.*, Alfred Wildswith, 2 Well Close Terrace, Leeds.
Second, 10*s.* 6*d.*, Stanley J. Milner, 3 Bellevue, Clifton, Bristol.
Third, 5*s.*, F. Stuart, 25 Ann Street, Cheetham Hill, Manchester.

(No. 2 Camera.)—First, 1*l.* 1*s.*, Rev. W. C. Hope, Powys Villa, Park Road, Cowes, I.W.

Class E.

First, 1*l.* 1*s.*, Kate Dod, 52 Chalsey Road, Brockley.
Second, 10*s.* 6*d.*, A. R. Osborne, 36 High Town, Hereford.
Third, 5*s.*, Sidney Hicks, 2 Kingston Road, Bath.

Class F.

First, 2*l.* 2*s.*, Walter Ridler, Cotteswold Road, Tewkesbury.
Second, 1*l.* 1*s.*, Albert Douglas, 77 High Street, Egham.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

"Defence not Defiance."

Sir,—I have read with the keenest interest your leading article in this week's *C. & D.*, and feel assured that you have done yeoman service to all registered chemists by calling attention to Mr. R. Bremridge's very clear, clever, and concise arguments against any unfair interference with the spirit and intention of the Pharmacy Acts, 1852 and 1868, which have been copied in other civilised countries throughout the world for the regulation of the practice of pharmacy, and have proved satisfactory. I shall be pleased indeed to have the advantage of receiving half-a-dozen copies from you to forward to M.P.'s when the time for action arrives.

Yours very truly,
John Gibson.
January 4. (Divisional Secretary for Hexham.)

[We still have copies of the article in hand. Divisional secretaries and secretaries of local associations, especially, should see to this matter.—Editor.]

The Mandate and the Man.

Sir,—Your article under the above heading reminds me that prior to Mr. Lord Gifford's election to a seat on the Council I took some interest in his candidature, and very naturally I carefully read your criticisms and opinions. You did not then seem to have a very high opinion of Mr. Gifford—in fact, I gather from your tone that his principles were not such as to command sufficient support to enable him to secure a seat. If those whose expectations in Mr. Lord Gifford have not been realised are only the voters you influenced in his favour, then it is consoling to know that there are so few disappointed ones. As far as I am concerned, and also many who supported Mr. Gifford, his proceedings have been quite what we expected. Since the draft Bill met with its temporary check the discovery of dangerous ground has made light stepping very necessary, and those who "rush in where angels fear to tread" are not members of the Pharmaceutical Council. You may have expected Mr. Gifford to play to the gallery, but there is no gallery—we are all in the pit—and the stage chloroform of the Chair is part of the show. At some time or another you may have advanced the interests of some successful candidate, and of him I might say 'Tu quoque," which would be darkly mysterious enough to be piquant. The last sentence in your article is also mysterious, so many people are under the impression that even men of leisure could not accept a seat on the Council as an honour pure and simple, but accepted grave responsibilities and arduous duties in the conservation and promotion of the interests of all who are legitimately engaged in pharmacy. But this may be mere sentiment. In any case I cannot see that Mr. Gifford's responsibilities are greater than those of any other member of the Council. I believe that every member of the Pharmaceutical Council recognises the importance of the trust reposed in him. There are in pharmacy, as in everything else, different views as to the methods by which the interests of the community can be furthered, with probably a little more accentuation in pharmacy of the prevailing principle that what is best for one's self must be best for his fellows. From a local association to a seat on the Council is such a change of environment that it has often been remarked that the attitude of the man has changed. The realisation of a clearly defined responsibility is not conducive, in a man of sense, to rash or impetuous action. Each member of the Council must feel that he is in a tangle of barbed wire—a maze of conflicting interests—the representative of an incoherent class utterly devoid of unity of

Digitized by Google

purpose and unable to logically or consistently express its views as to a practical policy. From personal experience I believe the formation of local associations to be the best means of educating the electors towards definite and unanimous opinions which may be of guidance to their representatives. I recognise the mischief that may be done by such associations if not properly conducted, but the good they do largely counterbalances the little harm they are capable of. I can quite understand an anti-vaccinator condemning local associations. On political questions local associations have a good work before them in educating chemists towards concentration of ideas and unity of purpose. Their tendency is to dispel rather than promulgate the fallacies and inconsistencies which have largely accounted for the Council's past policy being frequently one of masterly inactivity—a policy which, under the circumstances, is much to be commended.

Batley, January 7. R. BROADHEAD.

SIR,—It is amusing to see that Mr. R. Lord Gifford, after a period of repose, is now trying to "wake London up." Certainly noise accompanied work when Mr. R. Lord Gifford was trying for a seat on the Council. He had my vote, and I shall not regret it if he will only keep up the noise. The same reason which Mr. R. Lord Gifford has advanced against the formation of a Metropolitan association might also be advanced against the formation of the Local Associations in the Parliamentary divisions. In each case you will only get a few men to take any active part in the meetings, because the rank-and-file cannot leave their businesses. Mr. R. Lord Gifford will, no doubt, agree with me that it is unwise and illegal for a chemist to leave his shop in the charge of unqualified assistants, and this is the crux of the whole matter. The rank-and-file will not attend these meetings because they do not employ qualified assistants, and consequently cannot leave their businesses, but, with a conscientious and praiseworthy devotion to duty, have to stick to their work almost night and day. In my own town of nearly 40,000 inhabitants there are only two chemists who employ qualified men. There are thousands of chemists who are in this way tied to their businesses, and it is on this account that the provincial meetings inaugurated by the Pharmaceutical Society have been so badly attended by the chemists in the surrounding districts. Mr. R. Lord Gifford must not mistake this non-attendance and inactivity for indifference. It is not everyone that is in the fortunate position of Mr. R. Lord Gifford, who can leave his business and his interests at any time, safely guarded by a qualified assistant. Yours truly,

M. P. S. (110/30.)

The London Chemists' Association.

SIR,—"Xrayser" evidently has conjured up in his brain a London chemists' society so formidably large and powerful that he cannot divest his mind of fear of its mighty influence. But upon what? I ask. May his dream, however, be realised. He does not answer my letter, except to say that he will take my advice and wait to hear the "defined purpose" of the Society to be formed. But he goes on to say my "rebukes . . . compel him to repeat" that "to resolve on creating a society first, and to discover some purpose afterwards, is not the usual process." Also he wishes to "tender the tip to the committee" that we shall not get our "fellow-pharmacists" to agree to any one thing that may be proposed. This is not very complimentary to the trade generally. Either "Xrayser" thinks the committee are a set of dolts, or our fellow-pharmacists are always opposed to one another. I also am compelled to repeat and say again that "Xrayser" is talking about that of which he knows nothing. To create a society first and to discover a purpose for it afterwards is like "Xrayser's" other assertion and charge against the committee—viz., having a scheme without a defined purpose. Both are absurd and ridiculous statements. He has kindly given the "tip" to the committee that pharmacists cannot agree; perhaps he will give us the "tip" as to the "usual process." I would remind "Xrayser" that microbes are not killed with cold water, and dirty water they revel in. As "Xrayser" condescended to say that he would take my advice, let me offer another word—viz., do not write again till you are in possession of the whole matter of facts. Adieu, "Xrayser"! I wish you a prosperous year.

68 Fleet Street, E.C., January 4. GEO. W. POND.

Pure Otto of Rose.

Referring to Mr. F. M. Holmes's paper on this subject and the discussion thereon (*C. & D.*, December 14, 1901, page 966) a Bulgarian correspondent writes:—General and sweeping statements are often made abroad that every Bulgarian grower and exporter is a sophisticator. They are as false as they are ridiculous. Because there are some growers and some exporters who do adulterate their ottos this does not mean that every grower and every exporter is a sophisticator. There are as many honest and straightforward people in Bulgaria as in any country in the world. It is also very erroneous to suppose that it is difficult to procure nowadays absolutely pure otto of rose—all that a dealer or consumer has to do is to ask and pay for pure otto and he will surely get it. If a dealer, or a speculator, or a consumer is willing to pay for the otto he buys or uses only 15*s.* or 15*s.* 6*d.* or 16*s.* or 16*s* 6*d.* per oz. when the price of pure otto in the producing market is as high as 17*s.* per oz., it is only too natural that what he buys cannot be pure. Otto-of-rose brands, whether sold as "virgin otto" or "extra fine otto" or "golden otto," or "absolutely pure otto," whenever offered and sold in the consuming markets 10 or 15 per cent. below the producing market's price, are bound to be doctored. Let it be also well remembered that it is no advantage to buy or use cheap grades. Every time a consumer uses a put-up grade, it is he who pays for the sophistication. The way to stop all sophistication is to do away with all demand for cheap grades. On the other hand, all consumers of high-standing otto know well that many thousands of ounces of pure otto are annually exported from Bulgaria. This fact is known best to those essential and artificial oil manufacturers and dealers who, for special private ends of their own, twice every year preach and proclaim to the world at large that all Bulgarian otto-of-rose growers and exporters have "elastic consciences," and that no pure otto is produced in or exported from Bulgaria.

The Proprietary-medicine Trade.

Mr. Morgan W. James (Llanelly) again writes on this matter. The suggestions which he put forward in THE CHEMIST AND DRUGGIST in November and December last appear not to have received the support necessary to carry out his plan. He now suggests a "plain and simple scheme"—viz., to attack two of the most popular patent medicines at a time. He would begin with Williams's Pink Pills and Mother Seigel's Syrup, and refuse to stock or sell them until the proprietors guarantee a fair profit. He commends this idea to all patent-medicine licensees.

Liability of Labels.

SIR,—As a few days ago I submitted some labels and two counter-bills to the Board of Inland Revenue, and received them back marked "Liable" or "Not liable," I will with your permission pass on the information. I was told by two or three friends that labels specifying that the preparation is for more than one thing were liable. To test this I sent "Gout and Rheumatic Mixture," with dose, also "Head and Stomach Pills." Both returned as "Not liable." I heard of one chemist who was told officially that "Head, Stomach, and Liver" pills were "liable," but I cannot see how the word "and liver" can turn "not liable" into "liable." The next label was "Children's Cough-mixture." After the dose came the words "When cough is troublesome." The label was returned with the words in inverted commas crossed out, and label marked "Not liable with these words erased." I also sent "Neuralgic mixture." On the label occurs the words "Sells morning, noon, and night." This label was returned marked "Liable," so I suppose those words are the offending ones, no explanation being given. I have another label that says "Sells all the year round," which is, I suppose, liable for the same reason. I have a label too that has the words "Till the desired effect is produced." This, I take it, is liable as well. I asked them to say if anything in the bill sent made either of the preparations referred to "liable." Their reply is as follows: "I am to add that price-lists and matter of that character cannot be marked." It is very evident that chemists who issue handbills referring to unstamped articles will have to

Digitized by Google

be much more careful than they have been in wording them. Trusting this may be a little guide to other chemists,

Yours faithfully,

Forest Lane, Stratford. J. E. Eastman.

What is Opodeldoc?

Sir,—There appears to be a prevailing misunderstanding in many shops that when opodeldoc is asked for, linimentum opii should be supplied. I find this error very common with new assistants—especially if they have been reared in the North of Scotland; and I have occasional complaints from customers that what they had before was "dark-coloured," showing evidently that they had been supplied with the opium preparation. I presume there is no doubt that linimentum saponis should be given when opodeldoc is asked for, and it would lead to uniformity were it always supplied.

M. (41/02.)

[The sale of opium-liniment for "opodeldoc" is peculiar, we believe, to parts of Scotland. True opodeldoc is an ammoniated soap-liniment, and on the Continent is always supplied. Soap-liniment without ammonia has come to be regarded in this country as "opodeldoc," and is generally supplied.—Editor.]

"Pick-me-ups."

Sir,—I am a good deal puzzled by the contemptuous notice that you have seen fit to give of the *Daily Mail* article on "pick-me-ups." Most of us who have had a West-end experience could probably write an article twice as long, only much less able. The remarkable thing is, that the writer steers entirely clear of those pitfalls which beset the layman who touches on physic; as far as I remember, this is the first article of the kind I have ever read in the public press that did not "come a cropper." I notice that you do not attempt to controvert any of the statements put forward in the article, and, indeed, I do not see how they can seriously be questioned. The concluding words of the article, to the effect that self-drugging is spoiling the tradition of sound English health, are surely a very timely warning; and I should have thought that facts so correct and conclusions so sound could have received nothing but praise from you.

I am, &c.,

Gorleston, January 7. R. H. E. Bayles.

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists' Diary"—Trade Law or Pharmacy Law Sections.

106/28. *G. J.*—A month's notice on either side is the recognised custom of the drug-trade.

109/23. *E. E R.*—Your envelops for tender-foot powder will not render the article liable to stamp-duty.

107/24. *A. T.*—See The Chemists' and Druggists' Diary for 1902, page 285, for all particulars in regard to the registration of trade-marks.

105/58. *E. B. P.*—The line on your spirit of sal volatile label, "For medicinal use in flatulence, &c." is, we think, an implied recommendation. You should submit this label, and also the "antiseptic powder" label, to the Board of Inland Revenue for opinion. There is nothing on the other labels to render the preparations liable to stamp-duty.

107/19. *C. H. O.*—The Board of Inland Revenue is not required to state its reasons for any of its decisions, but we presume that the reason for striking out the passage in your handbill is that it is an implied recommendation of an article for curing throat-affections and intermittent fevers. That may or may not be applicable to your eucalyptus dentifrice, but in any case it would be wise to strike out the passage, as the Board appears to suggest.

110/68. *Bollo.*—If the antiseptic preparations are not to be applied externally or internally [to or in the human body] as medicines for the prevention of small-pox, your description of them will not involve stamp-duty.

110/43. *J.*—None of the labels involve liability, except the first two, but if the medicines in these cases are aqueous solutions of simple drugs (consisting of the drug and water only) they are treated like entire drugs. We advise you, however, to send samples of these two preparations to the Board of Inland Revenue, labelled as sold, with a full statement regarding their composition. It is always advisable to do this in the case of aqueous solutions of entire drugs.

111/3. *Conder.*—The common notion that a medical practitioner's certificate is necessary before a death can be registered is wrong, and it is perfectly correct to say that a registrar of deaths may accept certificates of death from any person, but only deaths which are certified by medical practitioners are returned as "certified." It is the duty of the coroner to inquire into the causes of deaths which are not certified by medical practitioners, and there would be no "loop-hole to the law" if registrars and coroners were legally brought into complete touch with each other.

111/2. *Dentist.*—Your questions do not cover the ground properly. If you are a registered dental student and the pupil of a registered dentist you may assist your master in all dental operations without bringing him into trouble with the General Medical Council. But if, as we surmise, the dentist is an employé of the company of which you are a director he may, if the facts are ascertained and communicated to the General Medical Council, be charged with covering you, and his connection with the company may be considered infamous conduct. Such a case has not yet to our knowledge arisen. The calendar is not likely to implicate the dentist, as his name does not appear on it, and companies are not amenable to the Medical Council's supervision.

110/54. *Inquirer.*—(1) An unqualified drug-store keeper using the title "wholesale and retail druggist" infringes the Pharmacy Act. (2) Your influenza-mixture requires a stamp, because the label says it is "a most reliable remedy for the above complaint."

112/15. *W. J.*—Such titles as "Lotion for the Eyes" always render preparations liable to medicine-stamp duty. See the article in our Diary, page 281, second column.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

87/31. *St. Ivian.*—"Polode stone" we take to be lodestone, for which magnetic oxide of iron is supplied when required as a domestic medicine.

91/31. *G. W. W.*—Filter the discoloured brandy through kaolin or add to it some shredded gelatin. The colour is derived from the wood of the cask in which it has been stored.

95/19. *S. G.*—Antiseptic Inhalation.—One of the best and most useful in bronchitis is the St. Mary's Hospital formula:—

Ol. eucalypti	℥j.
Ol. pini sylv.	℥j.
Tr. benz. co.	℥j.

℥j. to be added to 1 pint of hot water, and the vapour inhaled.

96/28. *J. W. E.*—The liquid you send used for cleaning off old varnish before applying a fresh coat is amyl acetate.

96/74. *J. H. C.*—Kidney and Back-ache Mixture:—

Potass. acetatis	℥ss.
Potass. nitratis	℥j.
Spt. juniperis...	♏j.
Succ scoparii...	℥j.
Aq. camph. ad	℥vj.

℥ss. bis vel ter in die.

94/30. *Lobelia.*—The tincture of lobelia made with spirit would need to be indicated as "simp." or "B.P. 1885" in prescriptions written after the publication of the 1898 Pharmacopœia.

Digitized by Google

250/4. *Nonex.*—We do not undertake analyses.

62/23. *Elixir.*—(1) **Elixir Sodii Cacodylatis** is made of the strength of 1 gr. in 1 dr. It is difficult to cover the flavour of the cacodylate, but vanilla and tincture of cardamoms answer fairly well, and peppermint, as given on page 237 of the DIARY for 1902. (2) **Suprarenal Solution** for ophthalmic purposes is made by triturating 20 gr. of the dried extract in ½ oz. of water and filtering through cotton-wool. It is best made fresh, but glycerin is a good preservative.

93/59. *Menthol.*—The formula given in the DIARY (page 288) for compound menthol snuff is good for nasal catarrh.

82/28. *T P.*—The sample of sauce owes its favour to garlic and shallots, the latter being present in about the proportion of 2 oz. to the gallon. Your sauce is too mild for the popular taste, and needs the addition of cayenne. There are several suggestive formulas in the chapter on sauces in "Pharmaceutical Formulas."

101/25. *Alpha.*—The good **Lotion for Cuts and Flesh-wounds** is composed as follows:—

Ac. borici	℥ij.
Glyc. ac. carbolici	♏iv.
Tr. lavand. co.	♏iv.
Aquam ad	Oj.

M.

103/37. *Phono.*—We cannot at present supplement the information on Sound-recorders given in the *C. & D.*, November 30, page 899. The broken cylinder you send does not contain any suspended matter.

102/58. *W. A.*—**Violet-perfume.**—See *C. & D.*, December 28, page 1049.

102/55. *L. E. T.*—**Mr. Lionel Laurence**, official instructor of the Spectacle-makers' Company, 326 Birkbeck Bank Chambers, Holborn, W.C., has correspondence classes for preparing for the S.M.C. examination. Local classes are also held where the demand justifies them.

101/36. *Pandya* (India).—(1) **Frank Edel's** "How to Make Tablets," which we supply at 1*s.*, is the only book published on the subject. (2) The DIARY Buyers' Guide will give you the name of a maker of tablet-machinery.

98/43. *W. G. G.* (New Zealand).—We can give no further information about the instrument for the deaf, but may be able to do so in the near future.

101/38. *Junior.*—We do not supply formulæ in imitation of proprietary medicines.

65/38. *Danois* (N.S.W.)—(1) The formulæ for photographic-developers in the CHEMIST AND DRUGGIST DIARIES for 1900 and 1902 will supply you with the quantities of accelerator for the various developing agents. (2) We are inquiring. (3) **Estimation of Strophanthin.**—See *C. & D.*, June 8, 1901, page 920. (4) **Perfume-formulæ.**—See "Pharmaceutical Formulas," and past vols. of the *C. & D.*

95/73. *Hypo.*—(1) **Ung. Resorcin.**—There is no recognised official or official strength for this, but a 20 per-cent. ointment made with vaseline is used in eczema and psoriasis. (2) The art of bottling liquids, particularly those of an oily nature, is not to soil the neck of the bottle. Taking this precaution, and using good corks, the paper slips over the cork will remain grease-free. (3) We are inquiring.

104/3. *F. P.*—**Book on Medical Electricity.**—Jones's "Medical Electricity," 10*s.* 6*d.* (Lewis).

103/43. *G. C. C.*—Water is the best solvent for argol, but the solubility is comparatively slight.

104/67. *C. H.* (Brussels).—The pamphlet on the shellac-industry by Dr. George Watt and Mr. David Hooper may be obtained from Messrs. Sampson, Low & Co. (Limited), Fetter Lane, London, who are agents for the *Agricultural Ledger*.

104/55. *D. E. D.*—The precipitation in the solution for Easton's syrup is quinine phosphate, which is apt to separate in cold weather. A comparatively small proportion of crystallised quinine salt separating from a solution gives it an appearance of solidity.

110/36. *Nomen.*—The reference for the developer formula should have been THE CHEMISTS' AND DRUGGISTS' DIARY, 1900, page 267.

109/31. *S. D.*—**Iridescent Gelatin.**—We cannot say how the iridescence on the sample of gelatin you send is produced, but similar effects are produced as follows:—Make a 10-per-cent. solution of Judea bitumen in benzin, to which a few drops of oil of lavender, oil of spikenard, or oil of turpentine have been added. A little resin or dammar gum is sometimes added. A few drops of this solution dropped on the surface of water forms interference coloured pellicles. The sheet of paper or gelatin to be ornamented is placed in a tank, fitted with means of drawing off water from the bottom, which is filled with water. On the top of the water a few drops of the bitumen-solution is placed, and the water drawn off, leaving the coloured pellicle on the paper or gelatin, to which it adheres after the solvent has evaporated. In the case of bitumen, the deposit becomes insoluble on exposure to light, but various spirit-soluble aniline dyes appear to be used for producing like iridescent appearances.

108/20. *M. Q.*—The reason you cannot concentrate the metol-quinol developer is because of the comparatively sparingly soluble metol. If sodium sulphite is added to a saturated metol solution one or other is thrown out.

107/31. *L. S. S.*—Red diminium, or dominican, is derived from emplastrum de minio, "P.L." 1618 (red-lead plaster). Black and brown diminium has a similar derivation, and is applied to emplastrum fuscum vel nigrum, a plaster made by heating minium, olive oil, and yellow wax together till a blackish-brown colour is obtained, and adding camphor.

257/30. *Anxious.*—Mist. ferri co. cum dec. aloes co. is a perfectly safe mixture for sale as **Female Mixture.** Potassium permanganate is too disagreeable to give in mixture-form.

103/29. *Crinale.*—**Hair-curling Fluid:**—

Potass. carbonat.	℥j.
Liq. ammoniæ	♏ss.
Glycerini	♏j.
Spt. rectificat.	♏vj.
Aq. rosæ ad	♏viij.

M.

109/65. *Daturine.*—Please say what the "admixture" is used for, and its source.

272/28. *J. P.*—The nearest English rendering of "tale-quale" that we can give you is "take it as it comes."

108/54. *J. B.*—A very common preparation, sold under the name of essence of peppermint, is made by dissolving 1 part of the oil in 7 of rectified spirit. It would be perfectly legal to sell this preparation now, as spirit of peppermint is no longer official.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

112/51. **Makers of "Colloid" drug-bottles.**

115/9. **Present address of the Curic Company.**

113/20. **Cocoa-shells for anæmia; where obtainable?**

111/47. **Makers of "Popular hair-frizz" in 1*d.* packets.**

107/63. **Where can Matthew's nail-trimmers be obtained?**

24/30. **Present address of the makers of Denaeyer's peptones?**

111/69. **Who are the makers of Newton Morison's linseed-linctus?**

112/21. **Makers of or dealers in "Cornish stone," as used by brickmakers.**

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: January 9.

BUSINESS has been seriously resumed this week, and although there is no great amount of activity as yet the markets have a steady undertone. The principal change of the week has been a substantial reduction in carbonate and citrate of lithia, due to "outside" competition from the United States. Morphine is a shade easier again. Further advances have taken place in pilocarpine and eserine, owing to scarcity of the raw material. Saffron comes higher from Spain, and for ergot lower offers would be accepted. Quicksilver has been slightly reduced, but mercurials are unaltered. Quinine is practically unchanged, but very little business has transpired. Cocoa-butter was slightly dearer at auction, and at the isinglass-sales a flat tone prevailed. The following are the principal changes of the week, including those recorded at the drug-auctions:—

Higher	Firmer	Easier	Lower
Ammonia sulphate	Oil, peppermint (Jap. dem.)	Balsam Tolu	Buchu
Cascarilla		Croton-seed	Cardamoms
Cocoa-butter		Ipecacuanha	Elemi
Eserine			Ergot
Pilocarpine			Isinglass
Saffron			Lithia and salts
Soda nitrate			Morphine
Wax, bees' (Jamaica)			Oil, cassia
			Quicksilver
			Saltpetre (Bengal)
			Senna (Tiny.)

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from January 2 to 8 inclusive:—Aniseed, 35; arrowroot (St. V.), 228 brls.; asafetida (@ Marseilles), 311; "balsams" (@ Hamburg), 7; benzoin, (@ Penang) 35, (@ Singapore) 38; bismuth (@ Queensland), 58; calumba (@ Hamburg), 11; camphor (@ Kobe), 300 cs.; camphor oil, 10; cardamoms, 179; caraway-seed, 33; castor oil, (Fr.) 50 brls., (Calcutta) 222 cs.; castorum, 1; chamomiles, 10; chillies (Jap.), 102; cinchona, (E.I.) 137, (Ceylon) 91, (@ South America) 57; cocaine, crude, (@ Callao), 11 cs.; cod-liver oil, 268; dragon's-blood (@ Singapore), 13 cs.; essential oils, (@ Hong-Kong) 50 cs, (@ Messina) 287 pkgs., (@ Catania) 8 pkgs., (@ Palermo) 109 pkgs.; eucalyptus oil (Aust.), 8; gambier (cubes), 79; gamboge (@ Singapore), 6; gentian, 88; gum olibanum, 235 cs.; honey (Jam.), 47; lime-juice (W.I.), 24 pns. 367 brls.; menthol (@ Japan), 30, and 10 *in tr.*; nux vomica, 95; oil, lime, 67 cs.; opium, (@ Marseilles) 128, (@ Constantinople) 53, (@ Calcutta) 25; otto of roses (@ Constantinople), 1 cs.; peppermint oil, (@ Yokohama) 30 cs, (@ Hamburg) 20; pot. chlor. (@ Antwerp), 40; quicksilver, (Ital.) 100, (@ Liban) 315; rose oil (E.I.), 19 pots; saccharin (@ Boulogne), 27; sarsaparilla (@ Kingston), 2; scammony-root, 10 bgs.; senna, (@ Suez) 60, (@ Bombay) 128; shellac, 663; button-lac, 239; sulphur (@ Catania), 2,021 pkgs.; tamarinds (@ Antigua), 35 brls.; tonka-beans (@ Para), 14 cs.; wax, bees', (@ Natal) 26, (Chil.) 12; wax, ceresin (@ Dusseldorf), 33 bgs.; wax, Japanese, 65.

The Year's Foreign Trade.

The Board of Trade returns for December, issued this week, complete the figures for the twelve months. The imports during the year show a decrease of 836,177*l.*, on a total of 522,238,986*l.*, and the exports also exhibit a decrease of 10,693,107*l.*, on a total of 280,498,889*l.* Of this ten million decrease in exports, raw materials (chiefly coal) is responsible for eight and a half millions, which is satisfactory. Altogether the figures for the opening year of the new century show that it was a fairly good one considering the adverse conditions.

Bulgarian Otto-of-Rose Market.

Our correspondent in Bulgaria, under date of December 29, 1901, writes as follows:—The Bulgarian otto-of-rose market for the crop of 1901 is now closed. The remaining dozen villages, which still held their ottos in the hope of getting a higher price later in the season, sold their produce within the last fortnight, and Rahmanlari, the last remaining village in the county of Karlovo, has just sold its otto. Of course, there are in almost every village two or three independent growers who will not part with their otto unless paid 4 to 5 per cent. above the highest price of the season. Likewise most of the jobbers are still holding their stock. They, too, sell their otto last, and only when paid 4 to 5 per cent. above the best price. This remaining stock (in all about 12,000 T. oz.), is hardly marketable before the prospects of the coming rose-crop are pretty certainly known.

As was reported in your issue of September 7, 1901, the opening prices of this year's crop were settled unusually late—about the middle of August—and they ranged from 16*s.* to 17*s.* 4*d.* per T. oz., according to the freezing-point of separate lot. These prices, with very slight variations, were maintained well throughout the whole buying season. During the brisk and heavy buying in September and October, there actually was a rise of about 5 per cent. in the price, and some choice lots realised as high a price as 18*s.* per T. oz., but that was foreseen and inevitable. Even during this month, which virtually closes the buying season, some very fine ottos were bought at this price. The average price of this year's entire crop, however, comes to about 16*s.* 9*d.* The quality of the crop was on the whole very fine, the average freezing-point being 66·30° F., nearly one and a half degree above previous crops.

London Markets.

ACID, CITRIC.—Quiet, at 1*s.* 0¼*d.* to 1*s.* 1*d.* per lb.

ACID, TARTARIC, is unchanged, at 11¼*d.* to 11½*d.* per lb. for English and 10½*d.* for foreign.

ALMONDS.—From Sicily, under date of December 31, it is reported that prices have advanced still further, owing to a sudden and unexpected demand at the close of the export-season. Market has since become quieter, but there is no prospect of prices receding to former low limits. Choice Avola are quoted 86*s.* 3*d*, current ditto 62*s.* 6*d.* per cwt. of 50¾ kilos., f.o.b.

ARROWROOT.—At auction on Wednesday Bermuda was bought in at 1*s.* 6*d.* per lb., and Natal at 6¾*d.* Good St. Vincent partly sold at 2½*d.*, but fine was bought in at 4*d.* per lb.

CINCHONA.—The auctions to be held in Amsterdam on January 23 will consist of 4,904 bales and 307 cases (weighing 496,985 kilos.). A supplementary catalogue will be published. The stock in first hands at Amsterdam on December 31, 1901, consisted of 2,748 packages Government bark and 10,352 packages private bark. At the drug-auction 58 bales false Calisaya bark sold at from 4¾*d.* to 8½*d.* per lb., 24 serons Huanoco quill at 5¾*d.* to 6¾*d.* and 26 serons Loxa quill at 1*s.* 4*d.* per lb. Calisaya quill sold at 1*s.* 2*d.* to 1*s.* 8*d.* per lb.

COCOA-BUTTER was slightly dearer in auction, 70 tons Cadbury's selling at 1*s.* 0¾*d.* to 1*s.* 0½*d.*, closing at 1*s.* 0¾*d.* per lb. The result of the auction held in Amsterdam on Wednesday is as follows:—Eighty-five tons Van Houten's sold at 70½c. to 71½c., average price 70¾*d.*, against 69c. previous auction; 22 ½ tons "De Jong" sold at 69c. to 69½c.; 1 ton "Helm" sold at 68¾c.; 4 tons "Betke" sold at 68½c. to 68¾c.; 7 tons "Mignon" bought in at 69c. per half-kilo.

ESERINE.—Another 1*s.* per gramme has been added to the price, owing to the continued scarcity of raw material. Makers now quote 5*s.* per gramme for the sulphate and salicylate salts, and 6*s.* per gramme for the pure alkaloid, with the usual reduction for 10 and 50 grammes.

INSECT-FLOWERS.—The stocks in Trieste at the end of December, 1901, amounted to 160,400 kilos., the receipts to 19,800 kilos., and the deliveries to 40,300 kilos. The following prices are quoted, f.o.b. Trieste:—"Open" flowers, 68*s.* to 74*s.* per cwt.; half-open, 88*s.* to 110*s.*; closed, 116*s.* to 127*s*; and wild, 131*s.* to 145*s.*

Digitized by Google

LIQUORICE-ROOT.—Clean Persian in cut lengths is quoted 12*s.* per cwt. nominally, and in ordinary rough root some quantity has been disposed of at about 7*s.* 6*d.*

LITHIA.—The makers have lowered their quotation for carbonate to 6*s.* 3*d.* per lb. for 2-cwt. quantities, which is a reduction of 4*s.* 5*d.*; 1-cwt. lots are quoted 6*s.* 4*d*; 28 lb. lots, 6*s.* 5*d.*; and smaller wholesale quantities, 6*s.* 8*d.* per lb. The prices for citrate and other salts have not yet been fixed. It is reported that competition from the United States is responsible for the decline.

MORPHINE is 1*d.* easier at 4*s.* 5*d.* per oz. net, in contract lots.

OIL, CASTOR.—French of first pressings in cases is quoted 33*s.* per cwt., c i f., and Italian medicinal at 33*s* 6*d.* Belgian firsts is quoted 26*s.* 6*d.*, spot.

OIL, COD-LIVER.—The Bergen market remains very firm but unaltered at 69*s.* per barrel, f.o.b. The stocks of non-congealing oil are almost exhausted. During the last few days a small business has been done in new unrefined oil, which, when refined, will probably realise 2*s.* or 3*s.* more per barrel than the year-old oil. It is, however, still too early to say anything definitely about the quality and the oil-value of the new fish.

OIL, OLIVE.—From Messina it is reported that the home demand continues very strong. The new oil is eagerly bought for consumption in the large Italian towns, as the quality is excellent. Prices have advanced, and would have risen still further were it not for the large crop in Spain, which country is underselling Italy abroad, and prevents the "bulls" operating.

OIL, PEPPERMINT, is tending firmer, and for spot parcels 4*s.* 3*d.* is now asked for Japanese dementholised. For forward delivery there has been a fair business. American HGH is quoted 9*s.* to 9*s.* 3*d.*, H & P 8*s.* to 8*s.* 3*d.*; JBH "first premium" 7*s.* 9*d.*, and "pure" 7*s.* 3*d.* per lb. spot.

OIL, SASSAFRAS.—Genuine is quoted 1*s.* 7*d.* to 1*s.* 8½*d.* per lb., according to quality.

OIL, SPEARMINT, is offered at 6*s.* 3*d.* per lb. spot.

OIL, WINTERGREEN, is quoted 6*s.* 3*d* per lb. spot.

ORRIS.—Good Florentine sorts are obtainable on the spot at about 29*s.* per cwt.

PILOCARPINE.—The continued scarcity of genuine jaborandi-leaves has led to an advance of 6*s.* per oz., the quotations ranging from 3*s.* per gramme to 70*s.* per oz., according to quantity.

QUICKSILVER.—On Monday the importers reduced quotation 2*s.* 6*d.* per bottle, now 8*l.* 15*s.* Mercurials are unaltered. We have received the following statement from Mr. Alexr. S. Pickering:—

	Imports Bottles	Exports Bottles	Highest £ s. d.	Lowest £ s. d.
1901 ...	35,341	28,833	9 2 6	8 17 6
1900 ...	32,725	25,869	9 12 6	9 2 6
1899 ...	51,696	34,239	9 12 6	7 15 0
1898 ...	54,563	31,014	7 15 0	6 16 0
1897 ...	54,731	30,768	7 7 6	6 9 6
1896 ...	47,159	35,211	7 6 0	6 5 6
1895 ...	49,654	36,827	7 8 6	6 7 6
1894 ...	51,251	43,598	6 14 0	5 7 0
1893 ...	52,525	38,022	6 17 0	6 2 0
1892 ...	56,930	50,211	7 13 0	6 1 0

The estimated consumption in United Kingdom is 13,000 bottles per annum.

QUININE has been very quiet, with a small business at 1*s.* 1⅛*d* per oz. for spot; March delivery is quoted 1*s.* 1¼*d.* The exports of "quinine, quinine-preparations, &c., from Germany during the ten months ended October amounted to:—

	1901	1900	1899
Kilos. ...	169,900	155,100	172,400

SHELLAC.—There has been a fair demand for spot, and full rates have been paid, including second orange TN on a basis of 124*s.* for cash. A moderate business has also been done in futures, comprising January delivery at 125*s*, March 127*s*, and May 128*s.* 6*d.* to 129*s.* per cwt.

SODA NITRATE is dearer, refined now being quoted 9*s.* 10½*d.* and ordinary 9*s.* 9*d.* per cwt.

SPICES.—The public auctions were resumed on Wednesday, but only a small proportion of the quantity offered was sold. There was no demand for Cochin ginger, and it was nearly all bought in; washed rough at 52*s.* per cwt., bold rough at 55*s*, small rough at 45*s.*, Calicut brown rough at 48*s.*, "B" cut at 75*s.*, and "C" cut at 65*s.* A few cases of medium and small native cut sold at 57*s.* Japan was bought in at 42*s.* per cwt. for ordinary rough limed. A small lot of African sold at 35*s.* Jamaica was bought in above the biddings. Zanzibar *Cloves* sold at 3⅞*d.* to 4*d.* per lb. for good quality, but landed damp and packages stained. The quotation on the spot for fair is 4⅛*d*, and for March-May delivery 4 1/16*d.* per lb., being lower. Fine picked Penang were bought in at 1*s* 1*d.* per lb. Fair red stalky Zanzibar *Chillies* were bought in at 35*s.* per cwt. The bulk of the *Capsicums* offered was withdrawn, but a few lots sold; fine picked Egyptian at 45*s.* to 46*s.* per cwt, and bright East India pods at 22*s.* *Pimento* was slow, and very little sold; common at 3¼*d.* and good at 3⅜*d* per lb. *Cinnamon* sold at 9*d.* per lb. for pieces, and at 6*d.* to 6½*d.* for featherings; quillings being bought in at 9*d*, and chips at 3¼*d.* per lb. *Cassia-chips* partly sold at 43*s.* per cwt. *Cassia-vera* was bought in at 25*s.*, and *China-Cinnamon* at 28*s.* per cwt. Black *Pepper* is steady; light Penang was bought in at 5⅞*d.* per lb. Singapore is quoted 6⅝*d.* per lb. on the spot, and 6 3/16*d.* to arrive. White is firm at 9 15/16*d.* for Singapore, and 9½*d.* for Penang on the spot.

SULPHUR.—From Messina under date of December 31 a firmer market is reported, some qualities showing a slight advance. This was contrary to expectation, as prices usually recede towards the end of the year, owing to the efforts of the holders of large deposits at the shipping places endeavouring to effect a favourable settlement of their yearly accounts with mine owners in the interior. This year, however no such settlements have taken place, as practically the entire available stocks are controlled by the Anglo-Sicilian Sulphur Company. The statistical position is decidedly unfavourable, however. During October-November there was a decrease in the exports of about 20,000 tons compared with last year, and stocks still keep about 60,000 tons in excess, in spite of a temporary diminution of receipts in November owing to heavy floods. Current thirds which had been neglected for a long time, all at once came into favour. Tests of this quality vary considerably from 87 to 91 per cent. according to the different warehouses. The Anglo-Sicilian Sulphur Company immediately advanced their price about 3*s.*—unwisely it is thought, as they hold a large stock of this quality. The trade complains of unsteadiness of purpose on the part of the monopoly, who only a fortnight ago refused to purchase back their own warrants, thereby imparting a disheartening tone to the market, and then, without giving notice, considerably raised their price for one special quality, just for the pleasure of making some in cautious shipper pay the difference on a few hundred tons. At Catania, the Socialist Deputy De Felice is forming a trust of the refiners with the assistance of the Government, and also of the Anglo-Sicilian Company; he will probably be successful. The following are the quotations:—Best unmixed seconds, 84*s.* 9*d.*; best thirds, 74*s.*; current thirds, 70*s.* 9*d*; refined block sulphur, 83*s.* 6*d.* per ton of 13 Sicil. cantars f.o.b.; refined roll sulphur in 3 cwt. casks, 95*s.* 6*d.*; sublimed flowers in bags, 103*s.* 3*d.*; current ditto, 94*s.* 3*d.* per ton of 20 cwt. f.o.b. Freights are again stiffening.

London Drug-auctions.

ALTHOUGH eighteen brokers offered goods to-day, the auctions were concluded at about 2 P.M. owing to the dull tone; the tendency of prices was lower. Cardamoms dropped 3*d.*, buchu-leaves were easier, and there was a substantial decline in elemi. Balsam tolu sold steadily in large quantities, croton-seeds were easier, as was also Rio and Cartagena ipecac. Tinnevelly senna was easier, and rhubarb was in fair demand at unchanged rates. The following table shows the amount of goods offered and sold:—

	Offered	Sold		Offered	Sold
Aconite	20 ...	0	Ambergris	15 ...	2
Ajowan-seed	20 ...	0	Ammoniacum	24 ...	1
Albumen	16 ...	0	Annatto seed	98 ...	0

* Sold privately.

Aloes.—Of Cape only three cases were shown, two of which sold at 38*s.* per cwt. for good seconds. Zanzibar aloes in skins was in large supply and neglected; 41*s.* was paid for one case of hard livery. Socotrine in kegs was held at 75*s.*

Ambergris.—Fine lump did not sell. For two tins of black "undeveloped" of fair flavour 15*s.* to 20*s.* per oz. subject was paid.

Areca.—Slightly wormy seed were held at 45*s.* per cwt.

Balsam Copaiba.—For cloudy Maranham 2*s* 4*d.* was the price.

Balsam Peru.—Thin balsam was held at 6*s.* 3*d.* per lb. A case has been sold privately.

Balsam Tolu.—In large supply and in good demand at steady prices. For a string of 23 cases good hard in large tins 11*d.* to 11½*d.* was paid "without reserve"; and 83 cases, part rather soft, but good balsam, sold at 1*s.*; and slightly drossy at 11*d.* per lb. For 17 cases of small tins good hard reddish balsam 1*s.* 4*d.* was wanted.

Benzoin.—Quiet in auction. Of Sumatra, 9 cases of good almondy seconds sold at 8*l.*; and for 8 cases not quite so good 7*l.* subject to 7*l.* 10*s.* was paid. Twenty-two cases of medium seconds, with small almonds, sold at 5*l.* 17*s.* 6*d.* to 6*l.* For good glassy Palembang 45*s.* was refused; and for 57 cases very low ditto in large block, imported in 1900, 10*s.* to 12*s.* per cwt. was paid without reserve.

Buchu-leaves were slightly easier, a few bales selling at from 8½*d.* to 9.*l* per lb. for fair round greenish leaf.

Calabar Beans.—For a parcel previously offered 1*s.* 6*d.* was wanted.

Cardamoms met with a decline of from 1*d.* to 3*d.* on heavy offerings, the following rates being paid:—Ceylon-Mysores, bold pale bright, 2*s.* 9*d.*, subject; bold, rather dull open, 2*s.* 9*d.*; bold medium palish, 2*s.* to 2*s.* 5*d.*; small and medium pale, 1*s.* 8*d* to 1*s.* 9*d.*; small pale, 1*s.* 4*d.* to 1*s.* 6*d.*; small split, 1*s.* 4*d.* to 1*s.* 5*d.*; brown and split, 1*s.* 3*d.* to 1*s.* 5*d.* A pile of 48 cases very small, dull unsorted Mysores and Malabars sold at 1*s.* 3*d.* to 1*s.* 4*d.* *Seeds* sold at steady prices, 2*s.* 4*d.* to 2*s* 5*d.* being paid for good, down to 1*s.* 9*d.* per lb. Eight cases of native wild description sold at 2*s.* 10*d.* to 3*s.* for good bold; and 1*s.* 10*d.* for medium.

Cascarilla.—For fine medium to bold silvery quill a bid of 67*s.* 6*d.* per cwt. was refused, 70*s.* being wanted; for 2 bales lean and twiggy bark 55*s.* was paid, being dearer.

Cassia Fistula.—Good long pod from Dominica realised 28*s.* per cwt.

Coca-leaves.—Fine bright Ceylon sold at 1*s.* 2*d.*, and dullish and broken ditto at 1*s.* to 1*s.* 1*d* per lb.

Colocynth.—Yellowish Spanish pulped sold at 1*s.* per lb.

Croton-seed.—For good bright 45*s.* was the limit from Colombo, but no offer was made; 4 bags of ordinary, mostly dark mixed seed, sold at 15*s.* per cwt., subject.

Cus-cus.—Three lots, amounting to 14 bales, sold cheaply at 10*s.* 6*d.* per cwt, subject, for fair clean.

Cuttle-fish Bone.—Fair white Bombay bone sold at 3½*d.* per lb.

Dragons'-blood remains scarce, and for a case of medium lump 10*l.* 12*s.* 6*d.* was paid.

Elemi.—About 20*s.* per cwt. cheaper, 5*l.* to 5*l.* 5*s.* being paid for 5 cases fine white gum from Manila.

Ergot is tending lower. From Hamburg Spanish is quoted 1*s.* 4*d.* per lb., c.i.f., but little or no business has been done. In auction several small parcels of Spanish sold at 1*s.* 9*d.* per lb., being unchanged. Two bags of Russian wheat ergot were held at 1*s.* 6*d.*

Galangal sold without reserve at 10*s.* to 11*s.* per cwt.

Galls.—Ten cases Chinese sold at 57*s.* 6*d.* per cwt, subject.

Gamboge.—Still very scarce. For good partly blocky pipe, with mostly orange fracture, 12*l.* was paid.

Gum Ammoniacum.—One case of dark block and siftings sold at 15*s.* per cwt.

Honey.—Slow of sale. Of a parcel of 43 cases Honolulu honey 10 had been sold privately at 20*s.* per cwt., but no bid was made for the remainder. Ten barrels brown-set Jamaica sold at 17*s*, and 3 cases thick brown at 18*s.*

Ipecacuanha.—There is now a stock of 1,046 packages in the warehouse, consisting of 563 bales Rio, and 443 Cartagena. The deliveries during December amounted to 55 bales of both kinds, or 23 packages less than in November. In auction prices of both Rio and Cartagena were slightly easier these being very little demand. Five bales of Rio sold at 10*s.* 3*d.* per lb. for lean to fair, and 1 bale at 10*s.* 6*d*, being cheaper. Several bags of Cartagena sold at 4*s.* 8*d.* per lb. for dusty red and mixed root: good clean and bold was held at 5*s.* 6*d.*

Musk.—For 4 caddies of old-fashioned untrimmed pod, part skinny and damp, 41*s.* 6*d.* to 44*s.* per oz. was paid; small and medium thin skin grey, slightly damp, but of fair flavour, were bought in at 60*s.*

Myrrh.—Seventeen bags good bright Aden sorts sold at 75*s.* per cwt., and for 2 cases bold pickings 50*s.* was paid; a case of siftings sold at 40*s.* per cwt.

Oil, Cassia.—Twenty cases, containing 82 per cent. c.a. (according to Parry's analysis) sold at 2*s.* 10*d.* per lb., "without reserve," being cheaper.

Digitized by Google

OIL, EUCALYPTUS.—A large supply was offered, but no business was done. Magnet brand (68 to 70 per cent. cineol) was limited at 1*s.* per lb.

OIL, LEMONGRASS.—For Java description 7*d.* per oz. was wanted.

OIL, YLANG-YLANG.—One bottle of "Manila oil" sold without reserve at 2*s.* 6*d.* per oz.

RHUBARB sold at steady rates. Of Canton, 1 case of fine medium and bold flat, rather spongy, sold at 1*s.* 3*l.*, and small and medium ditto at 10*d.* per lb. Of 16 cases small to bold fine flat High-dried, with good coat and pinky fracture, 2 cases sold at 9*d.*, showing no change. Nine cases of High-dried, slightly wormy, sold "without reserve" at 6*d.* per lb.; and 7 cases of bright rough round native ditto, of good fracture, sold at 6½*d.*; and for 2 cases ditto, with darker fracture, 5½*d.* was paid. For medium round Shensi a bid of 2*s.* 8*l.* was to be submitted. This lot was afterwards sold privately.

SARSAPARILLA.—For grey Jamaica, which is scarce, 1*s.* 4*d.* was refused, 1*s.* 8*l.* being the limit for the best lots; 17 bales Lima-Jamaica were held at 1*s.* 4*l.*, and Guatemala at 8*l.* per lb. Six bales native Jamaica sold at from 4*d.* up to 10*d.* per lb., the latter figure being paid for good red.

SENNA.—Quality was mostly of low grades, which sold at about ½*d.* per lb. easier prices, but for what little fine leaf offered high rates were paid. Good bold greenish Tinnevelly leaf (1 bale) sold at 10*d.*, fair bold greenish ditto 2¼*d.* to 3½*d.*, and ordinary small and medium 1¾*d.* to 2*d.*, with common and yellowish, part badly sea-damaged, at from ⅝*d.* to 1½*d.* per lb. Pods sold at from ¾*d.* to 2*d.* per lb. Three bales of Alexandrian pods sold at 7*d.*

TONKA-BEANS.—A box of fair, part foxy Para sold at 1*s.* 5*l.* per lb.

WAX BEES'.—Jamaica was about 2*s.* 6*d.* dearer, good quality selling at from 8*l.* to 8*l.* 2*s.* 6*d.*, and fair at 7*l.* 17*s.* 6*d.* per cwt. Four packages Cuban sold at 6*l.* 10*s.* for fair to dark brown, and a bale of good greyish mixed Australian sold at 6*l.* 15*s.* Zanzibar sold at from 6*l.* 10*s.* to 6*l.* 12*s.* 6*d.* for good, and 6*l.* to 6*l.* 2*s.* 6*d.* per cwt. for wormy. Madagascar was not offered.

Cablegrams.

SMYRNA, January 9:—Market is steady, the sales from Wednesday amounting to 100 cases at from 8*s.* to 8*s.* 2*d.* per lb. Sellers are very tenacious.

* * * *

HAMBURG, January 9:—Refined camphor is firm; the tone in shellac has improved; and borax-refiners have refused to make contracts at present prices.

* * * *

NEW YORK, January 9:—Business here is dull. Opium is quiet, at $3.05 per lb. Quinine is steady, at 27c. per oz. The following have an easier tendency: Senega, at 51c.; hydrastis, 50c.; buchu, 20c.; and ergot of rye, 40c. per lb.

Heavy Chemicals.

There is rather more activity in the heavy-chemical market now, and business is steadily settling down to more normal proportions. General demand, both on home and export account, is about an average one, and values all round are fairly well maintained.

ALKALI PRODUCE.—Caustic soda in steady request: 76 to 77 per cent., 10*l.* 7*s.* 6*d.* to 10*l.* 15*s.* per ton; 70 per cent., 9*l.* 15*s.* to 10*l.* 2*s.* 6*d.* per ton; and 60 per cent., 8*l.* 15*s.* to 9*l.* 2*s.* 6*d.* per ton. Bleaching-powder moving well, at from 6*l.* 10*s.* to 6*l.* 15*s.* per ton for softwood casks, free on rails. Ammonia alkali, 58 per cent., in brisk demand and firm, at 4*l.* 12*s.* 6*d.* to 4*l.* 17*s.* 6*d.* per ton, free on rails in bags. Soda crystals steady, at 62*s.* 6*d.* per ton f.o.b. Tyne, and 67*s.* 6*d.* per ton f.o.b. Liverpool.

SULPHATE OF AMMONIA.—Beckton, 11*l.* 7*s.* 6*d.* for January to June; Beckton terms, 11*l.* 2*s* 6*d.*; London, 11*l.* 5*s.*; Leith, 11*l.* 2*s.* 6*d.* to 11*l.* 3*s.* 9*d.*; and Hull, 11*l.* to 11*l.* 1*s.* 3*d.* Exports from Leith last week amounted to 809 tons.

LINSEED AND COTTON-SEED CAKES in good all-round demand, with values steady and well maintained. Linseed cakes, 95 per cent. pure, 8*l.* 7*s.* 6*d.* to 8*l.* 12*s.* 6*d.* per ton. Oil-cakes, 7*l.* 7*s.* 6*d.* to 7*l.* 12*s.* 6*d.* per ton. Cotton-seed cakes, firsts, 4*l.* 15*s.* to 4*l.* 17*s.* 6*d.* per ton; and seconds, 4*l.* 10*s.* to 4*l.* 12*s.* 6*d.* per ton.

SOUTH DURHAM SALT continues to move fairly well, at unchanged rate of 11*s.* per ton, f.o.b. Tees.

BICHROMATES OF POTASH AND SODA.—Quiet. Potash, English and Scotch deliveries, 3*d.* per lb., less 4 per cent. Glasgow. For export, ¼*d.* per lb. less and net. Soda for English and Scotch deliveries, 2½*d.* per lb., less 4 per cent. Glasgow. For export, net figures ¼*d.* per lb. less.

GREEN COPPERAS keeps in active demand, and prices are firm, with advancing tendency. Best Lancashire makes, 42*s.* 6*d.* to 45*s.* per ton, f.o.b. Liverpool. Welsh, 13*s.* 6*d.* to 15*s.* per ton, in bulk, free on rails.

Liverpool Drug Market.

Liverpool, January 8.

CASTOR OIL.—The depression in Calcutta good seconds and first and second pressure French continues. For the first named grade 3 3/16*d.* per lb. is asked by holders, although this figure might be slightly shaded for quantity. First-pressure French is held for 3*d.*, and second-pressure 2⅞*d.* For forward delivery slightly easier quotations are given.

CALABAR BEANS.—A further arrival has taken place, and the parcel will be offered at auction.

GRAINS OF PARADISE.—At auction 10 bags were offered, and were sold at prices ranging from 60*s.* to 65*s.* per cwt., and now holders are again asking 70*s.*

ACACIA SORTS.—Business in Soudan descriptions continues good, as several parcels have changed hands at slightly better prices than those prevailing last week. Hard amber description is worth 36*s* to 40*s.* per cwt.; soft Soudan sorts, 42*s.* 6*d.* to 46*s.* per cwt, according to quality.

CANARY-SEED is again moving off, and 200 bags have been sold at 39*s.* per quarter.

ARSENIC.—Again dearer, and 15*l.* 10*s.* per ton is now asked.

SULPHATE OF COPPER.—In much better demand, and 19*l.* 5*s.* to 20*l.* per ton is asked by makers.

BEESWAX.—At auction 7*l.* per cwt. was bid for 20 bags of mixed grey to yellow Chilian, but 7*l.* 5*s.* was asked; 2 tons Chilian were sold at 7*l.*; 8 ballets of Sierra Leone African were sold at 6*l.* 6*s.* 3*d.* For Peruvian at auction 7*l.* 5*s.* was asked.

LINSEED OIL.—Liverpool makes, in export casks, are held for 30*s.* to 31*s.* per cwt, according to quality. There is a steady demand at these prices.

TURPS is very firmly held at a better price—namely, 23*s.* per cwt. There is a moderate trade passing.

TONKA BEANS.—The first arrival of Para for a considerable period was offered at auction, and for the 8 cases 1*s.* 6½*d.* was asked, but the parcel sold at slightly under this figure.

German Drug-market.

Hamburg, January 7.

Business in general is quiet here, but an improvement is soon expected.

AGAR-AGAR is steady, at 395m. to 400m. per 100 kilos.

ANISEED is steady, new crop being quoted 40m., and old crop at 38m. per 100 kilos.

BALSAM PERU is very firm, at 13m. per 100 kilos.

CITRIC ACID is tending firmer, at 237m. per 100 kilos.

CONDURANGO is dearer, 75m. per 100 kilos. being now asked.

CAMPHOR (REFINED) is tending firmer, second-hand holders asking 433m. per 100 kilos.

ERGOT is unchanged, with Spanish quoted 345m. and Russian 340m. per 100 kilos.

IPECACUANHA (RIO) is also unchanged, at 24½m. per kilo., while Carthagena is quiet, at 12½m. per kilo.

JALAP is quiet, at 110m. per 100 kilos.

MENTHOL unchanged, at 30½m. per kilo, spot.

QUININE is quiet, at 39m. per kilo.

SENEGA is lower, at 480m. per 100 kilos.

JAPANESE WAX is quiet, at 66½m. per 100 kilos.

OILS (FIXED).—Cod-liver is unchanged, with non-congealing oil quoted 66m. to 68m. per barrel. Castor, quiet and neglected; linseed advancing.

OILS (ESSENTIAL).—Russian anise oil is quoted 12½m. per kilo.; star-anise oil is quiet, at 10¼m. per kilo.; peppermint oil is very firm, at 8¾m. per lb. for HGH, and 8½m. per kilo. for Japanese.

Borax-mining in U.S.A.

The Stauffner Chemical Company has recently purchased the Frazier Borax Mine in Kern County, and is preparing for extensive mining this winter. Beginning with January the company will ship 150 tons per month.

A Camphor-cargo Wrecked.

A dispatch received at New York on December 17 states that the British barque *Sindia* bound from Kobe to New York went ashore near Ocean City, N.J., and has since become a total wreck. Her cargo (says the *New York Commercial*) included 300,000 lbs. of crude camphor upon which American refiners were depending for fresh supplies. In consequence the refined article has advanced to 57c. in barrels, and 57½c. in cases.

Digitized by Google

Sulphate of Copper for Greece.

The American Consul at Patras telegraphed to his Government, on December 9, that the Greek Currant Bank is about to purchase 500 tons sulphate of copper, and asks for bids for this quantity. In our issue of July 13, 1901, it was noted that in consequence of the great increase in phylloxera in Greece, sulphate of copper has become an important article of importation, the present yearly consumption being estimated at from 7,000 to 8,000 tons. The principal importers are the banks and syndicates who control the Greek currant trade. In 1900, the Currant Bank of Greece imported 2,000 tons.

Indian Government Cinchona and Quinine.

The Budget estimates of the Madras Cinchona-department for 1902–1903 anticipate a further increase in the demand for quinine, and the estimate of receipts has accordingly been raised to 210,000r, or 19,600r. more than the estimate of expenditure for the year. In accordance with a Government order passed on March 10, 1898, the Government, instead of extending its own plantations and competing with private industry, purchases the surplus bark it requires from cinchona-planters at a price per unit which is annually fixed. Provision has been made in the Budget for working up 474,000 lbs. of bark during the coming year to meet the increased demand, and for the purchase of 200,000 lbs. of 3½ per cent. of bark at 2*d.* per unit.

London Drug Statistics.

The following statistics are compiled from information supplied by public warehouses. They relate to the receipts and deliveries of some of the leading drugs from and into the London public warehouses for the month of December, 1901, and to the stocks on December 31.

* Stocks lying at Smith's Wharf and Brewer's Quay are not included in this return.

† Includes the quantity at Red Lion, Bull, and Smith's Wharves; also the Docks.

The statistics of goods lying at City Commercial Wharf are not included in above returns.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, January 13.

Dewsbury Chemists' Association, Church House, Church Street, at 8.30 P.M. Business:—Discussion on Federation's subjects, compulsory curriculum, division of the Minor, and apprenticeship question.

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. Cantor Lecture—Dr. Samuel Rideal on "The Purification and Sterilisation of Water" (I.).

Tuesday, January 14.

Bradford Chemists' Association. Discussion on a proposed drug and dispensing price list.

Wednesday, January 15.

Pharmaceutical Society of Great Britain (North British Branch), 36 York Place, Edinburgh. Evening meeting.

Royal Microscopical Society, 20 Hanover Square, W., at 8 P.M. Annual Address by the President.

Chemists' Ball at the Whitehall Rooms, Hôtel Métropole. Tickets may be had from Mr. E. W. Hill, 160 Earl's Court Road, S.W.

Thursday, January 16.

Glasgow and West of Scotland Pharmaceutical Association. Social evening at the Cockburn Hotel, 141 Bath Street, Glasgow. Tickets, 7*s.* 6*d.* (double), 5*s.* (single), may be had from Mr. T. Dunlop (Hon. Secretary), Albert Cross, Pollokshields, Glasgow.

Chemical Society, Burlington House, Piccadilly, W., at 8 P.M. Papers: 'Myricetin" (Part II.), by Mr. A. G. Perkin; "The Colouring-matters of Green Ebony," by Messrs. A. G Perkin and S. H. C. Briggs; "An Investigation of the Radioactive Emanation produced by Thorium Compounds" (I.), by Messrs. E. Rutherford and F. Soddy.

Midland Pharmaceutical Association, Birmingham, at 8.45 P.M. Mr. F. H. Alcock, F.I.C., on "Cinchona-bark: Its Tincture and Assay."

Edinburgh Chemists', Assistants', and Apprentices' Association, 36 York Place, Edinburgh, at 9.15 P.M. Communications by Messrs. D. Harley and J. Hutcheon.

Friday, January 17.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. "Interference of Sound," by Lord Rayleigh. The bust of Sir Frederick Bramwell, presented to the Institution by subscription, will be unveiled by the Duke of Northumberland.

The Junior Pharmacy Ball will be held on February 26. Mr. P. Trick, Salisbury House, London Wall, E.C., has accepted the position of Hon. Sec.

The annual dinner of the London College of Chemistry will be held in the Venetian Chamber, Holborn Restaurant, on January 29. Mr. Percy M. Thornton, M.P., will take the chair and present the prizes.

The Chemists' and Druggists' annual musical evening will be held on January 28, in the Whitehall Buildings, Belfast. A good programme is being provided, and a large attendance is expected. Mr. James Tate, M.C.P.S.I., will preside.

In addition to the usual classes for botany, materia medica, and pharmacy at the Technical Institute, Belfast, the new class for druggists will begin on Monday evening, January 13. Fee for the course of thirteen lectures, 5*s.*

Fire.—On January 7 a destructive fire broke out in Aberdeen, involving the stores of Messrs. William Paterson & Sons, wholesale druggists and manufacturing chemists, Spring Garden. Fortunately, the offices and part of Messrs. Paterson's factory were saved, so that business will be continued without interruption, although considerable inconvenience will be caused in getting out orders already booked. Mr. A. R. Horne, manager, and Mr. David Ross, chemist to the firm, were on the scene during the progress of the fire, and these gentlemen estimate the loss at about 10,000*l.*

Pharmaceutical Society of Ireland.

COUNCIL-MEETING.

ON Wednesday, January 1, the Council met at 67 Lower Mount Street, Dublin, at 3 P.M. The President (Mr. George Beggs) occupied the chair, and the other members of the Council who attended were: the Vice-President (Mr. Bernard), and Messrs. Grindley (Hon. Treasurer), Smith, Baxter, J.P. (Coleraine), T. N. Moffitt (Belfast), Batt, and Kelly. The PRESIDENT wished his colleagues all happiness and prosperity during the year.

THE VISITOR'S REPORT.

The REGISTRAR (Mr. Ferrall) read the following report of the Lord Lieutenant's visitor, Sir George Duffey, M.D., on the Society's examinations held during 1901:—

PRELIMINARY.

This examination was held, as usual, quarterly. Ninety-four candidates—an increase of twelve over the number in 1900—presented themselves for examination during the year. Forty-nine—52·1 per cent.—passed, and forty-five—47·8 per cent.—were rejected. Last year [1900] the percentage of rejections was 36·5. The high rate of rejections during the present year has been exceeded only once previously—viz., in 1899, when it was 48·1 per cent. The subject in which the largest number of candidates failed was arithmetic. Thirty-eight of the forty-five rejected candidates failed in this subject—thirteen of the thirty-eight showing such ignorance as to be marked 0. Fifteen candidates failed in weights and measures; fifteen also in chemistry; thirteen in English; thirteen in Latin; nine in Euclid; seven in algebra; and six more on other of the optional subjects. Nine of the fifteen candidates also failed in chemistry, more marked 0. Of the 45 rejected candidates 13 failed in one subject only—viz., 8 in arithmetic; 3 in Latin; 1 in English; and 1 in chemistry. Eleven failed in two subjects; 12 in three; 5 in four; 1 in five; 2 in six; and 1 in seven. As regards the optional subjects, 49 candidates (of whom one-third only obtained the bare pass-mark—*i.e.*, 20 per cent.) took botany; 39 selected French; and 6, physics. It is gratifying to notice that there was some improvement in the knowledge of French shown by the candidates. The examination in that language, as conducted by the present Examiner, includes a written as well as an oral examination, and is a more satisfactory test than it formerly was. Of the 94 candidates examined during the year 27 were cases of re-examination. Nineteen were examined for the second time; 11 passed, and 8 again failed. Of five examined for the third time, 3 passed and 2 failed. Of two for the fourth time, one passed and the other was rejected; and one candidate examined for the fifth time was again rejected. Thus, of the 27 candidates examined 15 passed and 12 did not. The Preliminary examinations during the year have been ably conducted by Mr. James Healy, LL.D., R.N.I., and Mr. David O'Sullivan, both of whom came into office at the January examination. The former gentleman examines in English, Euclid, arithmetic, and in French; and the latter takes the other subjects. The questions on the examination papers, which I enclose, appear to be fair and reasonable, and applicable to the age of the candidates, and the training they should necessarily have received to enable them to profit by the special instruction preparatory to their Final examination. The oral examinations were also practical and simple; and the marking for both the written and oral by no means stringent. The results of the year's examination, as given above, show, however, that the standard of preliminary general education of a large number of the candidates is lamentably low.

In my last report I again called attention to the system of marking in Latin and in English, and offered some suggestions with a view to an improvement in the examination. No change, however, as far as I know, has been made in the Preliminary examination with regard to the matters referred to, which therefore I beg respectfully to bring again under your Excellency's notice. I am strongly of opinion that the hours of examination require revision. The examination at present occupies one day only. It commenced at 11 A.M., and, with a brief interval of about three-quarters of an hour in the afternoon, is seldom concluded until after 7 P.M. These long hours are a strain upon the examiners and upon the candidates. Owing to the number of subjects and the number of candidates, the time available for the written and for the oral examination is insufficient, and the candidates are also frequently interrupted when at their written examination by being called up to an oral examination. The average time given to an oral examination is but five minutes, and for each written examination one hour only is allowed. In addition to dictation, the candidates have to write answers to examination papers in seven different subjects. The examination should extend over two days, and more time should be allotted to the written as well as to the oral examinations, and both examinations should not be held concurrently.

THE LICENCE EXAMINATION.

Sixty-nine candidates—an increase of two over the number in 1900—presented themselves for this examination during the year. Forty (58 per cent.) passed and twenty-nine (42 per cent.) were rejected. Last year the corresponding percentages were:—Passed, 38·8 per cent.; rejected, 61·2. The figures for this year show a considerable improvement in the results of this examination, and the percentage of successful candidates is higher than it has been since 1893. Thirty-four—or almost one-half—of the sixty-nine candidates had been unsuccessful at previous examinations; twenty-one, of whom fifteen passed, were examined for the second time; four, of whom one passed, for the third time; five, of whom two passed, for the fourth time; three, of whom one passed, for the fifth time; and one, again rejected, for the sixth time. Of the twenty-nine rejected candidates twenty failed in theoretical chemistry. Two candidates only—who also failed in theoretical chemistry—did not obtain the minimum pass standard in practical chemistry. Similar results, indicative of a want of systematic instruction in the theory of chemical science, have been noted in former reports. The question of the addition to the regulations for the Licence examinations of compulsory attendance upon a course of lectures in theoretical chemistry in a recognised school of chemistry is, I understand, under consideration by the Council of the Society. Some such resolution would, in my opinion, be advisable. In the division of pharmacy twenty-one of the twenty-nine rejected candidates failed—the majority, twelve, in "compounding." An alteration which came into force at the April examination has been made in the marking in this division. The minimum total pass percentage has been raised to 50 instead of 45, and the former sub-division "prescription-reading and British Pharmacopœia," has been divided into two distinct sub-divisions with a maximum of twenty, and a minimum of ten for each. The minimum pass percentage for compounding and for the written examination, has also been raised to 50 per cent. for each sub-division respectively. In the division of botany and materia medica, eleven failed in the former, and eight in the latter; seven of the eleven failed in both subjects. The following is an analysis of the rejections, arranged according to the three divisions of the subjects of this examination: Division 1, botany and materia medica; Division 2, chemistry; Division 3, pharmacy:—

Rejections in Division 1	1
Rejections in Division 2	4
Rejections in Division 3	6
Rejections in Divisions 1 and 2	3
Rejections in Divisions 1 and 3	2
Rejections in Divisions 2 and 3	7
Rejections in Divisions 1, 2, and 3...	6
Total rejections	29

In my report for 1899, I recommended that at the examination in botany and materia medica candidates should be tested as to their knowledge of the use of the microscope. I am pleased to state that at the April examination, for the first time, slides with sections typical of various forms of plant structure were given to the candidates to recognise under the microscope. I have the honour, &c. GEORGE M. DUFFEY, M.D. (Visitor).

The PRESIDENT said the lamentable standard of the Preliminary examination could hardly be laid to the door of the Council. They had invariably endeavoured to make it as searching as possible. He fully agreed with Sir George Duffey that it should be extended over two days. He had attended the last fourteen or fifteen of these examinations, and had invariably found that each of them was more or less of a rush. After a young lad been planted down to his paper, and before he had finished it, he was called away to the oral examination. That more or less distracted his mind from what he had been writing. An examination extending over two days would not be a hardship on the examiners, whilst it would be a great benefit to the students. The strain of one long day would be taken off; and the examinations could be made more searching. He had himself been wearied out by merely attending there and listening to examinations that lasted sometimes up to 7.30 or 8 o'clock at night. Twenty or twenty-one students would be distributed in two rooms; and under the present arrangement the examiners could not keep the two classes going satisfactorily. The Council invariably tried to fall in with Sir George Duffey's remarks, which, as a rule, were very wholesome and just.

The VICE-PRESIDENT moved that Sir George Duffey's report be sent to the examiners for their remarks, and that it

Digitized by Google

should then go to the Law Committee. It was quite true that the procedure at the Preliminary examination required to be altered. He had been present at a good many of them; and he thought that no boy was fit to leave school who would not be fit to pass it. It was only fixed at the ordinary standard of school education. Another matter requiring consideration was the oral examination for the licence. It took place in the presence of students who were writing, but in a whispered conversation which members of the Council and licentiates who were supposed to be present could hardly hear. He had never been able to catch more than one or two of the questions. The examiners should speak loud so that those present who had a right to hear could hear.

Mr. Kelly, in seconding the motion, said the number of subjects the candidates had to answer in at the Preliminary examination was too great. They had to write answers to seven papers. He was sure that the examination was very searching, and he knew that the examiners were tip-top; but he knew also that numerous candidates who failed to pass the Society's Preliminary went to the College of Surgeons and passed at the first attempt. Their examination should be at the same standard as that of the College of Surgeons; but if the subjects were reckoned it would be found that the Society's examination exceeded that of the College in many points, and was much more searching. At the Society's Preliminary a boy was handed a book in French that he had never seen before, and was required to translate, parse, conjugate verbs, and so on; whereas the candidates for the College examination were informed beforehand of the book they would be examined in. The number of subjects at the Society's Preliminary was such that it was impossible for a boy to carry them all in his head. Theoretical chemistry was compulsory at the Preliminary now; but when students came up for the Licence examination it seemed to have faded from their memories in consequence of the number of subjects at the Preliminary.

The President said he was not at all for lowering the standard of examination. If the College of Surgeons' standard was not as high as theirs he did not see why the latter should be lowered. It had been thrown in the Society's face that their Preliminary examination was no test. By making it a two-day examination and affording every possible facility to students coming up to it they would be moving in the right direction; but to lower the educational standard would be wrong. Sir George Duffey's report pronounced the general educational standard of the lads that came up to their Preliminary to be lamentably low. If that were so they would not be justified in lowering the examination in order to come into line with other bodies.

Mr. Smith said he had spoken to a number of members on the subject of the Preliminary examination, and in his opinion the number of subjects was too great. He did not know that chemistry was to be regarded as a part of general education. If the standard were kept up in English, arithmetic, Latin, and, perhaps, French, and chemistry and botany were dropped at the Preliminary, that would not be a lowering of its standard; and it would enable boys to come direct from school to the examination, which at present they could not do. They would have to pass in the other subjects at the Licence examination. The present system was not conducive to obtaining apprentices, and that was a matter that should be considered. He would not dream of lowering the general educational standard, but he would drop one or two of the subjects.

Mr. Kelly said he had not the remotest thought of lowering the standard of examination.

Mr. Baxter said he sympathised with the views of Mr. Kelly; but at the same time he thought that if chemistry and botany were eliminated from the Preliminary a door would be opened to young men who had no intention of becoming pharmaceutical chemists, and the standard of the examination would at the same time be lowered. He concurred with the opinion that the examination should be spread over two days.

The Vice-President said Sir George Duffey was quite right in his statement that the standard of the English education of the students was lamentably low. He (Mr. Bernard) had had messenger boys in his employment who could have knocked some of them into fits. It ought to be no trouble to a boy in these times to gain a knowledge of theoretical chemistry when there were so many technical schools. On the contrary, it ought to be a pleasure to the boy to learn it. When this matter should come before the committee they should have before them the papers of the students who had passed, and of those who were rejected, and then they would see what they would think of them. He had seen some spelling that was absolutely hideous. He saw papers for the license, the writers of which could not spell the word "pharmacy."

The President: I have a son in Wesley College, and I have given instructions to the master that he is to be prepared in theoretical chemistry; and I should be very sorry that he had not the knowledge of that subject and of botany that is required for our Preliminary examination.

Mr. Baxter said that in Coleraine special facilities exist for the teaching of those subjects.

The President: As to the Licence examination, Sir George Duffey spoke very strongly in favour of having theoretical chemistry a compulsory subject. We tried to make it compulsory, but the Privy Council would not sanction it. I think we have now a strong point in our favour when we send back this report with our remarks to the Privy Council—namely, that their own visitor wishes to have the theoretical class compulsory at the Final.

The motion of the Vice-President was then unanimously agreed to.

A letter was read from Mrs. Porter, returning thanks to the Council for their letter of condolence on the occasion of the death of her husband, late member of the Council.

A letter was received from Mr. W. V. Johnston, resigning the office of examiner for the Pharmaceutical-Assistantship qualification, and offering himself for election as a member of Council.

Vice-President: I am entirely opposed to bartering. Is this a contingent resignation?

Mr. Grindley: No.

President: It is a clear, plain resignation. He is now out of office altogether.

Vice-President: If we accept it we should accept it with regret; but I want to know is it on an understanding that he is to be elected on the Council.

The President: Not to my knowledge.

The resignation was accepted.

A letter was received from the principal of the Municipal Technical Institution of Belfast stating that one hundred hours' practical work in chemistry was fully provided for in the day and evening courses of their chemistry department.

The Registrar was directed to write back asking were a hundred hours given in the evening as well as the morning class.

A letter was received from Mr. R. Blair, member of the Council, stating that Mr. E. A. O'Keeffe, headmaster of the Crawford Municipal Institute, Cork, had given him a guarantee that the course of chemistry for pharmaceutical students would be one of 120 hours' practical work in the laboratory.

The Vice-President: They should be informed that we wish the course to be completed within six months.

The Registrar was directed to reply accordingly.

Curriculum of Chemistry.

On the motion of Mr. Smith, seconded by Mr. Kelly, the following new regulation was adopted and ordered to be transmitted to the Privy Council for approval:—

That on and after January 1, 1903, all candidates for the Licence must produce evidence of having attended a course of elementary chemistry extending over a period of three months, such course to consist of at least three hours' lectures per week in a school recognised by the Council; that the students must attend at least three-fourths of the lectures; and that the course shall be taken out before that in practical chemistry.

New Members.

On the motion of the President, seconded by the Vice-President, Mr. A. T. Bennett, Bagnalstown, Ireland; Mr. J. McMurray, Belfast; and Mr. F. G. Warren, Glashill, King's County, Ireland, were elected members of the Society.

The Council then adjourned.

Elementary Dispensing-practice.

By JOSEPH INCE.

EMULSIONS—(*continued*).

ALKALINE emulsions are the least troublesome to make; they are not stable preparations, but on the slightest shake they return immediately to the emulsion state. They are made in a bottle, with the exception of balsam of copaiba and viscid liquids. Some make an alkaline emulsion of the balsam by previously smearing the inside of the bottle with mucilage.

(1)

℞	Ol. amygdal.	ʒj.
	Liq. potassæ	ɱxxx.
	Syrup. aromat.	ʒss.
	Aq. destillat. ad	℥j.

Into a phial put the alkali, diluted with 30 minims of water to equal the oil in bulk; add the oil gradually, each time with the gentlest shake. The water is added by degrees, reserving sufficient to dilute the syrup, which add last.

(2)

℞	Ol. amygdal.	ʒiss.
	Liq. sodæ	ʒss.
	Tinct. scillæ	ɱxv.
	Aq. destillat. ad	℥j.

Bring the liq. sodæ up to an equal bulk with the oil by the addition of aquæ ʒss., and proceed as in No. 1. Tincture, diluted, to be added last.

(3)

℞	Ol. amygdal.	ʒj.
	Potass. subcarb.	gr. x.
	Aq. destillat. ad	℥j.

Dissolve the alkali in 1 dr. of water to equal the oil in bulk. Proceed as before.

In these three cases, and in all similar alkaline emulsions, the alkali is increased in bulk in order that it may completely surround and coat the oil. These emulsions frequently contain a fixed and an essential oil. Mix the two together, and there is no further trouble.

The plan of emulsifying each separately is an unnecessary proceeding.

(4)

℞	Ol. amygdal.	ʒj.
	Liq. potassæ	ɱviij.
	Ol. carui	ɱj.
	Aquæ destillatæ ad	℥j.

Mix the caraway and almond oils, dilute the liquor potassæ up to ʒj. and dispense as usual.

(5)

℞	Bals. copaibæ	ʒj.
	Mucilag. acaciæ	ʒij.
	Liq. potassæ	ɱx
	Tinct. lavand. co.	ɱv.
	Spt. æther. nitros.	ɱx.
	Aq. destillat. ad	℥iss.

Put the whole of the mucilage in a mortar, and add the copaiva by degrees, alternately with a few drops of water. Dilute the potash up to 1 dr., and by its addition complete the emulsification. Water up to 1 oz.; tincture and nitre last, diluted in remaining water. There are other methods. Borax may be included among alkaline emulsions, of which, indeed, it is a beautiful illustration:—

(6)

℞	Pulv. sodii biborat.	℈j.
	Ol. amygdal.	ʒj.
	Aq. destillat. ad	℥iss.

Dissolve the borax in *all* the water: add the whole of the oil at once, and emulsify by a very gentle shake. This emulsion is upset by the addition in ever so small a quantity of syrup, glycerin, or mucilage.

Note.—Oil of almonds is specially adapted to alkaline emulsification; olive oil is far better treated otherwise.

Recent Patents.

THE following are abstracts of complete specifications recently published, of inventions for which letters patent have been granted. Money order offices sell postcards, price 8*d.* each, which, on filling up with the number and year of the patent and posting, secure a copy of any complete specification.

Nail-brush.—Heinrich Jacobson, apothecary, Breslau, has obtained protection for the manufacture of nail-brushes having a plate of pumice-stone screwed on the back or a strip of the same material on the side. (19,758, 1901.)

Catheter.—A. Bachein, chemist, Bad-Wildungen, Germany, has patented catheters which indicate the position of the "window" when in use. The indication is managed by means of a line, or dots, or wording (such as "this side up") running the length of the catheter. (19,285, 1901.)

Briquettes. — F. Chailly, New York, makes improved briquettes by a formula substantially as follows:—comminated combustible material, 90; plaster of Paris, 8; and dextrin or starch 2, or a soluble silicate or silicic acid ½, or the residue of mineral oils generally called "black oils" 2. (17,863, 1901.)

Preserving Wood.—C. S. Lawrence, chemist, Plainfield, and F. McConick, Friendship, U.S.A., preserve wood by plugging holes made in it with a mixture of sodium chloride 16 parts, arsenious acid 8 parts, mercuric chloride 1 part, potassium nitrate 2 parts, and copper subacetate 1 part. (15,316, 1901.)

Another process patented by G. Feyerabendt, chemist, Tilsit, Germany, consists of cooking the wood under pressure in a solution of sodium aluminate, to which some alumina has been added. (15,402, 1901.)

Coloured Lights.—E. Oelbermann, Cologne-Ehrenfeld, produces coloured lights for illumination effects by adding certain chemicals to sodium-free wax and wicks from which the candles or night-lights are made. For red the salicylate or formate of lithium is preferred, and for green the preferable copper salt is crystallised verdigris. (19,286, 1901.)

Epileptics' Bread.—B. Hoffmann, chemist, Budapest, patents an improved flour for the use of epileptics, or those afflicted with nervous affections. Sodium bromide (1) is used with wheaten or rye flour (50), potatoes (30), and caraway-seeds (5). The last two ingredients are for increasing the palatability of the food prepared from the flour. (17,729, 1901.)

Preserving Eggs.—C. T. V. Brun, Vridsloselille, Denmark, by using albumen as in the following recipe claims to overcome the objections of existing egg-preserving processes:—

White of egg	1 part
Sodium silicate solution (cont. 35 per cent. of the soda salt) ...	2 parts
Water	2 parts

(17,331, 1901.)

Waterproof Leather.—R. Croasdale, Syracuse, N.Y., has invented a process of treating raw hide to make it waterproof, unacted on by atmospheric conditions, and translucent. After the preliminary cleaning process the hides are put into a bath of salicylic acid 2, picric acid 3, boric acid 25, and water 1,000 for three or four hours. Salicylic acid hardens, picric acid shrinks, and boric acid cleanses and preserves the hide. When dry the skin is sponged in a dim light with a solution of potassium bichromate 2½, in water 100, and then exposed to light. (19,542, 1901.)

Casein in Photography.—Dr. Otto Buss, Ruschlikon, near Zürich, has patented a process of preparing a sensitive photographic surface in which casein in dilute acid solution is precipitated by a saline solution. The process is worked as follows in the case of printing-out paper. To 9 litres of water are added 800 grammes of pure milk-casein, and a solution of 250 grammes of citric acid in 1 litre of water is stirred into the heated mixture. An opalescent liquid results, to which is added 100 to 800 grammes of glycerin, and the whole filtered. This solution is used in place of gelatin or albumen in coating the paper, which is afterwards "salted" and sensitised. (22,040, 1901.)

Practical Notes and Formulæ.

CREOSOTE PILLS.

E. F. KESSLER contributed a note to the A.P.A. on the manufacture of creosote pills. His method is to drop the creosote on to a small quantity of magnesia, then add a drop of water, and mass with vaseline.

OIL-COLOUR SICCATIVE.

FIVE to ten per cent. of wax is added to many oil-colours sold in tubes as a thickening-agent to prevent the heavier pigments separating. A better addition is, according to Moritz Kitt (*Analyst*, November, 1901), wood oil which has turned solid through exposure to light for a few weeks.

HOT-WATER BOTTLE SUBSTITUTE.

A SIMPLE plan suggested by a writer in the *Philadelphia Medical Journal* is to wrap an ordinary electric-light bulb in flannel and apply to the part. The lamp is connected by a long flexible connection, and when lighted gives off a steady heat very acceptable in pains of the chest and abdomen as well as neuralgic pains of the head. As long as the lamp is alight the heat continues, and does not decrease as is the case of a hot-water bottle.

CASTOR-OIL SOAP.

MIX 100 grammes castor oil with 30 grammes sulphuric acid (sp. gr. 1·847), and set aside in a cool place for two days, stirring occasionally. Then take 100 grammes of this oil, rapidly stir in 60 grammes soda solution (sp. gr. 1·345), and apply a gentle heat until the mixture becomes clear. Set aside several days to allow the sodium sulphate to crystallise out, separate the soap, and boil until it no longer froths, and a sample, on cooling, forms a clear, yellow jelly.—*Pharm. Centralh.*

STOVE-POLISHES.

I.

Selected Ceylon graphite	100 parts
American gas-black	10 parts
Acetic acid, diluted with an equal volume of water	2 parts

II.

Good Ceylon graphite	100 parts
Austrian graphite	50 parts
American gas-black	5 parts
Molasses	1 part
Glycerin, diluted with twice its bulk of water	a sufficiency

III.

Good Ceylon graphite	100 parts
Powdered ivory-black	20 parts
Copperas	40 parts
Glycerin, diluted with twice its bulk of water	a sufficiency

—*Oil and Colourman's Journal.*

THYROID PILLS.

Dried thyroid gland (corresponding to ℥v. gr. viij. of the fresh gland)	℥j. gr. xvij.
Sugar, in coarse powder	gr. xlvij.
Powdered tragacanth	℥ss.
Powdered vegetable charcoal ...	℥j.
Syrup	q.s.

Make into 100 pills.

—*Union Pharm.*

LECITHINE MIXTURE.

Yolk of egg	℥x.
Milk	℥iss.
Glycerin	℥x.
Cherry-laurel water	℥iiss.
Sugar	℥iv.
Sodium chloride	℥iij.

A tablespoonful contains 8 gr. of lecithine, which is extracted from yolk of egg, and is distearoglycerophosphite of choline.—*Rep. de Pharm.*

STERILE LUBRICANTS.

MUCILAGINOUS lubricants for surgeons' use are in demand. The basis is prepared by boiling Iceland moss in water, glycerin and antiseptics being added. It is necessary that the lubricants should be sterile, and on this account they are usually dispensed in collapsible tubes. Before filling the tubes the inside should be coated with melted hard paraffin, so as to prevent the contents from touching the metal of the tubes. This precaution is very necessary in the case of soft soap put up in similar manner.

COOLING-CREAM.

Quince-seed	1 oz.
Boric acid	16 gr.
Starch	1 oz.
Glycerin	16 oz.
Carbolic acid	40 drops
Alcohol	12 oz.
Oil of lavender	40 drops
Oil of rose	10 drops
Extract of white rose	1 oz.
Water to make	64 oz.

Dissolve the boric acid in 30 oz. of water, and in this macerate the quince-seed for three hours, then strain. Heat the starch and glycerin together until the starch granules are all broken, and add the carbolic acid. Dissolve the oils and the extract of rose in the alcohol, and add to the quince-seed mucilage; then mix all together, strain, and add water enough to make the product weigh 64 oz.

—*Bulletin of Pharmacy.*

THE USE OF SOFT WATER.

THE *Lancet* is doubtful whether soft water is any advantage over hard water. Soap is more rapidly soluble in soft water, but the slippery feeling of the soap is less easily removed from the skin, and it is doubtful, when soap is used, whether rain-water or soft water is better for the complexion or skin than hard tap-water. It is certainly not so refreshing. In manufacturing-processes or in the wash-tub use of soap in soft water is an economy. It is said that if London were supplied with soft water the saving of soap would amount to tens of thousands of pounds per annum, and Glasgow is estimated to save 36,000*l.* annually in soap since using Loch Katrine water. That may be so, but in the matter of personal washing there is a waste of soap produced rather than an economy by using soft water. The fact that a tablet of soap disappears more quickly when rain-water is used instead of hard tap-water is proof of this assertion.

New British Coins.

NEW postage-stamps bearing the effigy of King Edward VII. were issued on January 1, and it is said that 90,000,000 of them were sold during the first two days. They are universally condemned, and although the King approved of them before they were issued, it is now stated that he has asked no more of the stamps to be issued. That may be taken *cum grano salis*. The Post Office has a big stock to get rid of, and stamp-plates take time to make. Meanwhile the new coins are awaited with eagerness. We saw a penny the other day, and the annexed engraving, which is somewhat larger than the original, is a fair representation of it. It is much happier in design than the postage-stamp. The illustration shows the obverse of the new coinage, but this will not be seen on silver for some months to come, as under a new regulation the issue of coinage in future is to depend only on the actual necessity for more coins, and it is considered that there is enough silver in circulation at present. The sovereigns and half-sovereigns will be the first to make their appearance, and they will be speedily followed by the "coppers." The silver may not be issued until the eve of the Coronation.

THE CHEMIST AND DRUGGIST

A Weekly Journal of Pharmacy and the Drug-trade.

ESTABLISHED 1859.

Head Office: 42 Cannon Street, London, E.C.

Branch Offices:
- Melbourne, Vic. .. Fink's Buildings, Elizabeth Street.
- Sydney, N.S.W. .. 114a Pitt Street.
- Adelaide, S.A. .. 76 Brookman's Building, Grenfell Street.
- New York, U.S.A. .. Park Row Building.

SUBSCRIPTION RATES.

Ten shillings a year in advance, post free to any part of the world, including a copy of THE CHEMISTS' AND DRUGGISTS' DIARY next published. Single copy, 4*d.*; Summer or Winter Number, 1*s.*; DIARY, 3*s.* 6*d.* Postal orders and cheques to be crossed "Martin's Bank (Limited)."

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Terms for advertising may be obtained on application to the Publisher, *C. & D.*, 42 Cannon Street, London, E.C.

NEXT WEEK'S ISSUE.

THE Publisher wishes to remind advertisers that the next issue of THE CHEMIST AND DRUGGIST being the Winter Issue must go to press earlier than the ordinary numbers in order to give printers and binders ample time to get the large number ready for foreign mails and home delivery without delay. It will be impossible to receive copy for displayed advertisements after Tuesday, January 21. The Supplement will be kept open for small advertisements as usual up to Thursday, January 23. We may add that matters for editorial consideration should be received not later than Wednesday, January 22.

Summary.

SALICYLIC ACID is selling at 11½*d.* per lb. this week (p. 98).

EGG-EMULSIONS are what Mr. Joseph Ince writes about this week (p. 80).

THE January Minor examination at Galen Place is described by a candidate (p. 91).

SOME more chemists' companies have been formed, and one is to be wound up (p. 90).

THEY will not let the Metropolitan Chemists' Association alone. There is another letter on p. 93.

SOME particulars about Royd oil have come out in the Novelties Company case this week (p. 70).

Two of the principal West-end pharmacies in London have stopped the indoor system (p. 87).

ATROSCINE has been further investigated by Dr. O. Hesse, and his results are summarised on p. 82.

THE VICISSITUDES of a bronchial night-light have been related in the City of London Court (p. 89).

"XRAYSER'S" reflections on "the Chain" are wonderfully deep. He appears to admire it (p. 83).

OUR CORRESPONDENT in South Africa reports upon the condition of trade there at the end of 1901 (p. 75).

THE black ink used by the ancient Romans owed its colour to lampblack, so a French chemist says (p. 74).

THE names of those who have passed the Irish Preliminary and Licence examinations are printed on p. 72.

M. GUILLAUME, the Parisian artist, has hit-off the modern craze for physic quite pointedly in a sketch on p. 74.

THE chemists' ball at the Hotel Métropole on Wednesday evening was a brilliant and successful affair (p. 92).

LEEDS appears to be left out in the cold by the resolutions for separate universities for Liverpool and Manchester (p. 70).

COLONEL CHESEBROUGH, the manager of the Vaseline business on this side, is fancifully portrayed by Mr. Reynolds on p. 82.

THE smallest auction of cinchona-bark on record was held in London this week. There were only 80,000 oz. of quinine in the bark. (p. 97).

KODAK'S TRADING-METHODS are criticised in an article on p. 85, the opinion being expressed that the new move is inconvenient to many retailers.

THE Sale of Food and Drugs Acts cases reported include camphorated oil, Gregory's powder, milk of sulphur, and sweet spirit of nitre (p. 88).

MR. T. M. HEALY, M.P., gave some interesting information about the Irish kelp-industry to the Land Commission Court the other day (p. 72).

SIDE-LIGHT on the Poisons Committee's work is reflected on p. 86 by the evidence of a non-pharmaceutical witness and observations from Worcester.

THE ORIGIN OF OPODELDOC is quite an interesting topic, as the notes on p. 83 and p. 93 indicate. They do not quite explain why lin. opii is regarded as "opodeldoc."

AT the Minor examination in London this month 64 passed and 204 failed. Out of ten Major candidates eight failed. The names of the successful are on p. 91.

MRS. SARAH SOUTHALL, widow of the late Mr. Thomas Southall, founder of the business Southall Brothers & Barclay, died on Sunday. She was a centenarian (p. 78).

MR. GEORGE CROKER, a Brixton chemist, has lost an action which his stockbroker brought against him in the High Court respecting commission on shares purchased (p. 88).

WE gather from the Board of Trade returns for 1901 some particulars of business last year, showing that in our own departments there is little or nothing to grumble at (p. 84).

OUR Glasgow correspondent sends a lot of interesting notes this week, including a sarcastic poem (in very broad Scotch) about the deputation which visited the General Medical Council (p. 73).

THE drug and chemical markets have been more active this week. Several important alterations have been made, which include a reduction in salicylates and sulphonal. Crude glycerin is 10 per cent. dearer, and an advance is expected in refined. Expressed oil of almonds is dearer. Quinine is very quiet in view of the large Amsterdam bark-sale next week (p. 97).

Corner for Students.

CONDUCTED BY LEONARD DOBBIN, PH.D.

Students, please note. All communications should be addressed to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

QUALITATIVE ANALYSIS.

A MIXTURE of not more than three salts will form the subject of the next exercise in qualitative analysis. The mixture is to be submitted to a thorough systematic examination, all its constituents are to be detected, and proof is to be given that the substances detected are the only constituents of the mixture.

Students' applications for portions of the mixture of salts (accompanied by a *stamped and addressed envelope*, not a stamp merely) will be received up to Tuesday, January 21, and the samples will be posted on the following day.

Reports from students will be received up to Saturday, February 1. Each report should contain a concise account of the work done, and should include a list of the constituents detected. In this list any substance regarded as an accidental impurity should be distinguished from the essential constituents of the salts composing the mixture.

The report on this month's analysis will be published next week.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

Messrs. G. J. Wood, A. Downing, F. Maitland, and James Cocks, chemists, Plymouth, have mutually agreed to finally close their respective establishments at 9 P.M. (Saturdays excepted), on and after January 20.

Amongst the wounded at Leeuwfontein on December 29, was Private T. A. Clarkson, of the 13th Company Imperial Yeomanry, who served his apprenticeship to pharmacy with Messrs. Whimpray & Tibbits, chemists, Market Street, Lancaster.

At the Clerkenwell County Court last week, Mrs. Annie Perodeau, photographic artist (and wife of Mr. E. G. Perodeau, pharmaceutical chemist, Islington), recovered 9*l.* 13*s.* 8*d.* from a Bow photographer, the balance on an account for work done by her.

At the meeting of the Essex County Council on January 8 it was decided to appoint an additional analyst. The present analyst, Dr. Pooley, is paid a guinea each for the first 100 samples analysed, half-a-guinea each for the second 100, and 6*s.* each for all subsequent analyses, the average being 7*s.* or 8*s.* per sample.

At a largely attended meeting, on January 10, of Americans in London interested in the success of the American Exhibition at the Crystal Palace, it was reported that space had been applied for to such an extent as to ensure the success of the exhibition, which will be comprehensive and illustrative. The exhibition will be open in the middle of May.

The West Riding analyst, in his last quarterly report, states that in all the great area with which he has to deal it was only found necessary to prosecute in three cases against chemists and druggists—for adulteration of sweet spirit of nitre. A caution was administered in one instance, and in the other cases fines of 1*s.* and costs were inflicted.

The arsenic-in-beer scare is having a revival in Halifax. A tramp died in the workhouse hospital, Skircoat, last week "from chronic arsenic-poisoning, resulting probably from excessive beer-drinking," according to the evidence of the house-surgeon at the inquest. The doctor said he had two other patients in the hospital suffering from the same malady, one of whom had a decided history as a consumer of beer.

AT the meeting of the Norfolk County Council on Saturday at Norwich, the question of the salary of Mr. Francis, the county analyst, was considered. It was reported that he had received 100*l.* per annum for 125 analyses, additional payment being made for any beyond that number. It was resolved that on his reappointment after March 31, the terms should be 15*s.* per sample analysed, irrespective of the number of samples.

Masonic Matters.

Bro. John Henry Aplin, chemist and druggist, Trowbridge, was on January 13 installed Worshipful Master of the Lodge of Concord, 632.

We are indebted to Bro. G. C. Dusart, of the Sussex Drug Company (Limited), for a copy of the Masonic cantata, "The Praise of Friendship," by Mozart, which Mr. Dusart has recently published. An excellent engraving of Mozart occupies a front sheet, and the script is nicely printed. We have not yet had our musical expert's opinion of the score, but the fact that it was composed by the talented brother Mason should be sufficient commendation for all lovers of music.

Medalled Metropolitans.

At the recent sessional examinations held at the Metropolitan College of Pharmacy, the following students were successful in gaining medals:—Silver medal, Mr. A. H. A. Harrington; bronze medals: (dispensing), Mr. S. Burden; (chemistry), Mr. S. H. Vibert; (botany), Mr. T. T. Cocking; (pharmacy), Mr. T. J. Rice; (materia medica), Mr. D. W. Lyall.

For Students.

At a meeting of the Spalding Technical Education Committee on January 4, Mr. E. Wightman Bell, chemist and druggist, made application for a grant towards the cost of teaching and apparatus for a class in practical chemistry, for the benefit of chemists' assistants and others, to be held at the Grammar-school during the next two school terms. The question having been discussed, the committee made a grant of 10*l.* towards the object mentioned.

Separatists.

The Court of Victoria University, Manchester, held a meeting at Owens College on January 10, and after long discussion adopted a resolution to the effect that there should be a separate university in Liverpool and a separate university in Manchester, without liability to admit or to remain in association with any other college, and also that a university should be established having its seat in Leeds. At present Owens College, Manchester; University College, Liverpool; and Yorkshire College, Leeds, make up the Victorian University, which, it appears, is now to be split up into three. The Bishop of Ripon is among those who ardently advocate such a scheme.

The Gibbet at Hove.

With regard to the use of preservatives and colouring-matters in foods and drinks the Hove Town Council has adopted a proposal to circulate amongst the tradesmen a summary of the report of the Local Government Board's committee, and one of the councillors suggested that the Sanitary Committee should have tabular statements drawn up of the samples taken and the results of the analyses. If the samples were genuine it would be a good advertisement for the tradesmen, but if adulterated they should be well gibbeted.

Contracts.

Further contracts have been ratified as under:—

Barnsley.—Mr. E. Nash, pharmaceutical chemist, to supply drugs to the Kendray and Smallpox Hospitals.

Hereford.—Mr. John Walker to be chemist to the Corporation.

Scarborough.—Mrs. J. H. Webster to be chemist to the workhouse.

Messrs. Ferris & Co., of Bristol, have secured the contract

Digitized by Google

for the supply of drugs to the Cardiff Sanatorium for the next six months.

Mr. T. Handley, chemist and druggist, Market Place, Loughborough, has been appointed chemist to the Corporation for the ensuing quarter.

Birmingham Notes.

The photographic-apparatus works of Mr. J. E. Wilkins, Blucher Street, suffered severely from a fire on Friday last week.

On Monday Judge Whitehorne decided that a cellar is a warehouse within the meaning of the Workmen's Compensation Act.

Mr. Alfred Bird, pharmacist, of egg-powder fame, has given 100*l.* to the University, and has been elected a life governor. Mr. Chamberlain is asking for 1,000,000*l.* for the funds.

Dr. Griffin Wilkes, son of Mr. Wilkes, chemist, Broad Street, secured a silver cup for Jacobins at the annual Columbarian Society's show, held in Birmingham on Wednesday last.

A member of the pill guild had a parrot which escaped from its cage, and after a couple of days was arrested by a lover of birds and returned to its owner. Since its flight and capture it developed a vicious temper, tore off all its feathers, and died very suddenly.

At a monthly meeting of the Council held on Monday, the Health Committee recommended that the offer of the Birmingham University to undertake the bacteriological examination of sputum for tubercle bacilli for the Borough, at a charge of 2*s.* 6*d* per specimen, be accepted. A local firm offered to do the same at 5*s.*, and another at 7*s.* 6*d.*

Alderman Clayton, at the annual meeting of the University last week, said that with one single exception everyone had paid something towards his promised subscription, and a good many had paid up entirely. He recently met the particular gentleman who had paid nothing, and who is blessed with such a short memory that repeated reminders do not bring forth the needful cheque.

Two circulars which have been issued by a local firm have created a good deal of comment amongst the brethren. One announces analyses at a very low rate, and a discount of 33 per cent. in addition. A series of circulars will be supplied gratis for intending clients, and blank analysis-forms to be filled in and signed by the chemist himself. This appears to be taking a hint from THE CHEMISTS' AND DRUGGISTS' DIARY treatises.

Leeds Items.

An epidemic of whooping-cough is interrupting the educational acquirements of the juvenile population of Radley, near Leeds. The local chemists and doctors are not complaining.

The spread of the smallpox scourge to the Provinces has not, so far, disturbed the equanimity of the Leeds people, inquiries showing that the demand for lymph is normal. The authorities and lodging-house people are very much on the alert, however.

Guardians' Doings.

By contracting for the supply of drugs to the workhouse the Elham Board of Guardians last year effected a saving of 80*l.* 12*s.* 8½*d.* The present cost for a year's supply of drugs is 36*l.* 16*s.* 7½*d.*, and prior to the contracting system being adopted the expenditure totalled 117*l.* 9*s.* 4*d.*

The Local Government Board advised the Atcham Board of Guardians to supply in future all expensive drugs and medicines direct and not through the medical officers. At the meeting of the Board on January 11 the Clerk stated that the question was considered by the Board a few years ago, when such a scheme was found unworkable. The doctors, he said, preferred to find the medicines themselves. The Board decided to communicate these facts to the L.G.B.

At their meeting on January 8, the Halifax Board of Guardians considered the reappointment of Mr. G. M. Cobb, chemist and druggist, to be dispenser at the infirmary and hospital for three months, at a salary of 10*s.* per week One of the members expressed the hope that the dispensing was not being taken from the house-surgeon, who had 140*l.* per annum simply to look after 298 sick persons. The Chairman of the Infirmary and Hospital Committee thought the Board would see by the short period of the appointment that the committee had an object in view. It was stated that if Mr. Cobb could not attend to the dispensing personally he must send an assistant, and on a member objecting to an assistant being allowed to undertake the work, it was explained that this option was one of the terms upon which Mr. Cobb undertook the duties.

Fire.

The chemical-works of Messrs. Nichol & Co., which are situated close to the railway-station at Baxenden, were almost destroyed by fire on January 13. The damage is estimated at several thousand pounds, and about forty workpeople are thrown out of employment. The origin of the fire is unknown.

Royd Oil.

In the further hearing of the charge of fraud against thirteen persons connected with the Patent Novelties and other companies, Mr. James Lees, of St. Albans, Liverpool, who was chairman of the Patent Novelties board last year, stated that the French Royd Oil Company was formed in 1898. The company was given exclusive right to vend "Royd Oil for Paralysis" in France and her European possessions. For this right the company was to pay to the Novelties Company 10,000*l.* in 80,000 shares of 2*s.* 6*d.* each. Other agreements were for the acquisition of Royd oils for rheumatism and paralysis, for which the Novelties Company were to receive 40,000*l.* The oils were described as "possessing extraordinary curative properties." Walter Arnold Bradley was recognised as the proprietor of the Royd oils. The hearing is proceeding.

The Week's Poisonings.

Since our last report a dozen more victims to poisoning are added to the list. Of these nine were killed by scheduled poisons, two by the mineral acids (nitric and sulphuric), which our sapient rulers do not rank as poisons, and one by "acid poisoning," whatever that may be. Laudanum heads the scheduled list with four cases to its credit, while carbolic acid, strychnine, chloral, oxalic acid, and arsenic killed one each. The arsenic was taken by a Stainton man, who obtained it from Mr. Francis Crowden, chemist and druggist, Penrith, to whom the deceased was well known. He said it was for poisoning rats; and the Coroner told the jury that it was a perfectly legitimate business transaction, and had been carried out by Mr. Crowden in the proper way.—The oxalic acid was taken by a Charlton labourer, who mistook it for Epsom salts.—At an inquest on the death of a woman named Müller, at the Westminster Coroner's Court, it transpired that strychnine-poisoning was the cause of death. Dr. F. J. Pearse, who was called to the deceased after death, said a small unlabelled bottle found in the room contained sufficient strychnine to poison forty persons, and the remains in the tumbler would have killed twenty. Some foreign substance seemed to have been mixed with the poison, which had certainly not been obtained at a chemist's. The Coroner said he thought it was such a serious matter that the police ought to follow up the inquiry in order to ascertain, if possible, where such an enormous quantity of this most deadly poison could have been obtained. The jury recommended the police to make full inquiries as to the purchase.—At an inquest held at Birmingham on the death of an elderly man under the A.C.E mixture, it was stated that in every case this was the best anæsthetic for young or for old people.—At the Southampton Police Court on January 10, an insurance-agent was charged with attempting to commit suicide by taking chlorodyne. Dr. Weston, who was the only witness called, said prisoner produced a bottle, which was then without a cork, and said he had taken half the contents—chlorodyne—with the intention of poisoning himself. The bottle did not contain ordinary chlorodyne, said the doctor, "but a tincture, and the half-bottle would contain 2 gr. of morphine." The substance prisoner had taken was not scheduled as a poison, but he (witness) thought it ought to be.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Pharmaceutical Society of Ireland.

Pharmaceutical Licence Examination.—The following candidates passed at the recent examination: F. C. Large, W. F. Cuttiford, F. B. Angley, W. M. Kennedy, G. G. Williamson. Twelve candidates were rejected.

Preliminary Examination.—At the recent examination the following passed: R. H Orr, R E. Campbell, J. Marron, T. H. H. Bennett, C Carmichael, W. E. W. Harper, A. McCombe, R. Courtney, W P. Doohan, T. H. Brabazon, A. M. Gamble. Ten candidates were rejected.

Five-shilling Analyses.

At the meeting of the Guardians of the Limerick Union last week, the Clerk stated that he wrote to Mr. Thorp, a Limerick analyst, asking him whether he would accept the position of analyst to the Union, at an annual remuneration of 10*l.* Mr. Thorp replied to the effect that he would accept the position on the condition that if the number or samples sent in for the year exceeded forty the Guardians would increase the remuneration in subsequent years, so as to approximate to a fee of 5*s.* per sample. A letter was read from Professor C. R. C. Tichborne, analyst, Dublin, applying for the position. He offered to do the work for 10*l.* a year, the number of samples not to exceed fifty annually. All samples in excess of that number to be charged for at the rate of 2*s.* each. After some discussion, Mr. Thorp was appointed for one year at 10*l.* including extras, and subject to the sanction of the Local Government Board.

The Kelp Industry.

The Land Commission Court, on January 10, commenced the hearing of a case in which Colonel Nolan, M.P., claims the right to exact toll on the sea-weed collected by his tenants on Miveenish Island. Mr. T. M. Healy, M.P., counsel for the tenants, in his opening speech, made some interesting remarks about the kelp-industry, which we quote from:—

Red-weed, which is kelp or iodine-weed, grows in the deep sea or on the rocks far out at sea, and is continually lashed by the waves of the Atlantic, with the result that at certain seasons of the year after storm this red-weed becomes detached, and if the tide set towards Miveenish Island or the mainland a certain amount of weed is occasionally thrown upon the rocks. It is only when the weed is in bloom, so to speak, that it is of any value as drift-weed, and that period is ten days at the end of April and ten days at the beginning of May. If the drift-weed be thrown up except at that period it is of no value for iodine-purposes. Some years ago this kelp, when manufactured, was worth 10*l.* a ton, but its value now, thanks to the syndicates in Chili and Peru, is only 4*l.* a ton. To raise this kelp-weed requires two men always in a boat, and two women ashore. Twenty boat-loads are equivalent to 30 tons of the weed, and it takes that quantity to make 3 tons of kelp. Sometimes there is a skilled person called a burner, who gets 5*s.* for his job out of the matter. The season lasts from April to October, and the highest price obtained is 4*l.*, but it runs as low as 1*l.*, 2*l.*, or 3*l.* at times. In other words, the four persons engaged at the work for six months produce 3 tons at 4*l.* a ton.

Evidence was called in support of this statement.

Accounts without Requisitions.

At the last meeting of the Mohill (co. Leitrim) Guardians the Clerk stated that the contractor for medical and surgical appliances submitted an account but did not forward the requisitions. The Chairman said that Mr. White ought to send in the requisitions. The Clerk said that he had communicated with the contractor, who had asked that the amount should be paid, and the requisitions could then be looked up; but the Guardians could not do that, as they would be liable to a surcharge. Perhaps the requisitions had been sent to some other Board, as he had from time to time received invoices and requisitions for other Unions from the same contractor, and he always put them in an envelope and forwarded them to the proper place. The Chairman said that Mr. White's attention should be called to the matter. The Clerk: This letter of his will have to go on the minutes to the Local Government Board.

Sued for Medicine.

At the Waterford Quarter Sessions on January 8, Mr. Thomas Sullivan, chemist, sued John Sheehan, High Street, to recover 1*l.* 13*s.* 6*d.* for medicines supplied, and a decree was given for the amount claimed, with costs.

Contracts.

Messrs. John Clarke & Co. (Limited) have obtained the contract for the supply of medicines, surgical instruments and appliances, and sundries to Mercer's Hospital, Dublin, for the year 1902.

The Governors of the City of Dublin Hospital, Upper Baggot Street, have divided the contract for the supply of drugs and surgical requisites between the following firms: The Apothecaries' Hall of Ireland, Messrs. Thacker & Hoffe, Fannin & Co. (Limited), and the Medical Supply Association.

Personal.

Dr. Meredith R. Whitla, M.C.P.S.I., Monaghan, has been returned unopposed as a member of the local District Council.

Dr. J. B. Coyle, of Inistiogue, co. Kilkenny, who was recently elected a member of the Pharmaceutical Society, is mentioned as a candidate for the Council at the next election in October.

Mr. Frederick J. Macrae, who has been representing Messrs. Oppenheimer, Son & Co. (Limited) in Ireland, and was formerly the Southern representative of Messrs. John Clarke & Co. (Limited), has joined that section of the New Imperial Yeomanry called the "Irish Horse," and is at present in training at the Curragh. It is expected he will go out with the draft about the third week in February.

Cheap Analysts.

Dingle Union Guardians expect an analyst to do the work of analysing drugs for the workhouse and from dispensaries for 5*l.* per annum; and Ennistymon Guardians advertise for an analyst to do the work for workhouse and three dispensaries at 6*l.* per annum. Notwithstanding Professor Tichborne's letter in *C. & D.* of January 4, these salaries do not seem princely.

Compliment to Sir Edward Hodgson.

At the last meeting of the Rathmines Commissioners the occasion of Sir Edward Hodgson's retirement from the Board was signalised by the passing of the following resolution and the delivering of several complimentary speeches:—

The Council desire to place on the record of their proceedings a statement of the regret they feel at the retirement of Sir Edward Hodgson, who has so ably discharged the duties of Chairman since the Council was formed. They also desire to express their sense of the valuable services he rendered to the township of Rathmines for a period of thirty-five years, during which time he acted as a Commissioner, and finally as Chairman, of the Rathmines Board, and the Council wish Sir Edward and Lady Hodgson many years of health and happiness.

Sir Edward, in reply, said it was with the deepest regret that he had to sever his connection with the Council, but advancing age and business calls compelled him to relinquish the position which had been conferred on him unanimously three times by the Council.

BOILS AND CARBUNCLES can be aborted by painting the affected spot with collodion in which salicylic acid (1½ or 2 gr. to the drachm) has been dissolved. Apply three or four coats within twelve hours

TRADE-CONDITIONS IN ECUADOR.—The American Consul-General de Leon, of Guayaquil, reports the failure of the large exporting firm of Martin Reinberg & Co. The run on the bank of which Mr. Reinberg was one of the managers, adds Mr. de Leon, has been followed by the failure of the Paris branch of Seminario Brothers, a family hitherto regarded as the wealthiest in Ecuador. The situation demands extreme caution on the part of merchants in extending credits.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

The Carnegie Trust.

At a meeting of the Carnegie Trust Committee in Edinburgh, on Monday, January 13, it was reported that fees have been paid by the Trust to 2,441 students, amounting to 22,941*l.* 16*s.* 6*d.*

Poisonings.

The wife of a dairyman named McBurnie, living at Ravenstone Mains, Glasserton, Wigtown, committed suicide on January 5 by drinking a quantity of aconite liniment.

A well-known Perthshire farmer, Mr. S. McMillan, of Laighwood, near Dunkeld, was poisoned on January 12 by inadvertently drinking a poisonous lotion in mistake for whisky. He died twenty minutes after he had taken the lotion, and before medical aid could be obtained.

Nitroglycerin Explosion.

On January 9 a tremendous explosion took place at Nobel's explosives-factory at Ardeer in Ayrshire. It is calculated that about 3,000 lbs. of nitroglycerin exploded in one of the nitroglycerin washing-houses, and no trace of the only man known to be in the vicinity of the building at the time can be found. The effect of the explosion was felt for many miles around.

Glasgow Notes.

Mr. W. S. Cuthbert, chemist and druggist, has been appointed dispenser to the Govan Parish Council.

A course of free lectures is at present being delivered at Glasgow University, and on Monday evening Professor Bower delivered the third one on "A Grain of Wheat" in the Botanical class-room before a large audience.

A very interesting series of lectures is also being delivered in the Technical College, by Dr. Julius Lewkowitsch, on "Fats and Fatty-oil Industries." The first was given on Thursday, January 9, when a very crowded gathering attended.

The action by a Glasgow labourer for 500*l.* damages against the Corporation of Glasgow in respect of metallic poisoning caused by using a poisonous paint supplied by the Corporation has been settled by the payment of 225*l.* to the pursuer.

The renewed activity of the Glasgow and West of Scotland Pharmaceutical Association has already taken a practical turn in a systematic movement in support of early-closing. The Council has just completed a plebiscite of the city. Of the 120 papers issued, the 70 returned were all in favour of shorter hours, while it is well known that most of the unresponsive 50 stand for the *status quo*. The night-bell *sans fee* is named as the great obstacle to reform, which, it would almost seem, can only come through Parliamentary interference. That the Association is not neglecting social amenities is shown by the "At Home" held in the Cockburn Hotel this week as the *C. & D.* goes to press.

The Assistants' Association, which has done good work since its formation three years ago, still maintains its membership well, but has lost some of its most active members, who have gone into business. It now holds monthly instead of fortnightly meetings, and at the next of the series Mr. T. Maben is to read a paper on "Pharmaceutical Education." Thanks to the *C. & D.*, the knowledge and fame of the Assistants' Association has travelled far. The President has received a letter from the Malay Archipelago, asking for further information about the process for revivifying animal charcoal referred to in the *C. & D.* report of a paper on "A Visit to a Sugar-refinery," read before the Association by Mr. Rodwell.

It is likely that Mr. J. F. Tocher, F.I.C., Peterhead, will visit Glasgow early in February, under the joint auspices of the local Associations, to expound and defend the draft scheme of a university course for students of pharmacy, which will be submitted to a representative meeting of chemists and druggists in Edinburgh towards the end of this month. The scheme, which is well matured and feasible, is sure to excite keen interest and discussion.

The bellicose Southern Medical Society is still on the war-path. Its resources of defence and offence are inexhaustible, and its latest brilliant stroke is to get its members who are licentiates of the Glasgow Faculty of Physicians and Surgeons to induce that body to resist the disciplinary decree of the General Medical Council with reference to doctors' shops, on the ground that the Faculty's chartered rights exclude the Council's jurisdiction. The Faculty is not likely to adopt such a policy, but we shall see what we shall see.

Those who have a foible for ancient history may remember that this Society sent up a deputation to the General Medical Council to convince it of the error of its ways in *l'affaire* Thomson. The Council refused to hear the deputation at first, on the ground that the case was *sub judice*, and afterwards, when the decision had been given, because the matter was legally closed. The misadventures of the deputation have now been immortalised by the laureate of the Society ("J. W.") in a rhymed production, of which the subjoined quatrains are fair samples:—

Some Doctors in a temper gaed frae Glesga tae the Sooth,
They were burstin' fair wi' anger, they were foamin' at the mooth:
And their comrades stey'd ahint them pittin' bawbees in a hat,
Tae pey their wey in Lunnon, an' tae see them Bell-the-Cat.

. . . . . .

Arrived in Lunnon—strong in desire tae beard richt in their den,
That po'erful Cooncil—tho' effete—o' puir misguided men,
They sent their cairdies up tae Bruce tae show him they'd got there,
Then gaed awa' tae straucht their ties, an' some tae caim their hair.

Ma certes! but their hair was caimed ere mony 'oors gied bye,
For the Cooncil caumly askit "Whit was a' the hue an' cry?
Rin awa' hame, guid frien's," quo' they, "an' min' yer open shops,
Yer men are maybe sellin' Sauts or Chlorodyne Cough Drops."

The Scots, dark-bro'ed, like stirkies stood, an' glower'd at Turner's face,
They hover'd roun' the Cooncil yetts, astoonded at the base
Perfidious Cooncil's scarce veil'd threats tae show them wha were maisters
If they persisted selling Senna-leaves or pushion'd Plaisters.

. . . . . .

Fast to the nearest pub they hied, an' a' got pints o' yull,
An' a' did drink (for they were dry) wi' hearty Scotch guid will,
Confusion to the Cooncil, whilk had treated them sae base,
Sae flabbergasted were they, they forgot tae say a grace.

. . . . . .

The poet, it will be seen, has taken more than his share of poetic liberties.

It is a sign of the times that the Glasgow newspapers almost daily contain advertisements of doctors' shops for sale or for "qualified chemists" to serve in "surgeries." As in two cases the same shops have been offered for sale for months, it is evident that the doctor's shop is not a very vendible asset.

Just now an effort is being made to get a night-bell fee imposed in the city. *A propos* of this, there appears a very readable article in a weekly newspaper on the queer experiences of an assistant. The most of these seem old friends, culled from the pages of the *C. & D.*, but there is information in the statement that the assistant knows a shop (in Glasgow?), where, "after 11 o'clock a 1*d.* stamp costs 7*d.*" It is very doubtful if this is so at present, but we may hope it is a case of coming events casting their shadows before!

ANOTHER STORY.—It is stated that Mr. Rudyard Kipling was once induced to write a tale of Indian life for a ladies' paper in Philadelphia. The third instalment brought a letter from the editress, who said it was the unvarying rule of the journal to strike out the name of any intoxicating liquor, and that in one chapter two of the characters are said to have consumed a bottle of champagne between them. Kipling wrote back: "Strike out 'champagne' and make it Mellin's Food'!"

French News.

(From our Paris Correspondent.)

The Legion of Honour.—Among the promotions in the order of the Legion of Honour announced by the French Foreign Office this week is that of Dr. W. Douglas Hogg, the well-known Anglo-French pharmacist, of 62 Avenue des Champs Elysées, Paris, to the rank of officer. This distinction has been conferred on him as General Secretary of the Union des Femmes de France (the French Red Cross Society), to the cause of which Dr. Hogg has devoted himself for a good many years past.

The Health of Paris.—There were 139 cases of diphtheria notified in Paris for the week ending Saturday last, being an increase of 10 over the previous week. The deaths from the same cause amounted to 51, against 20 the week before, while the average rate is 7. Smallpox was responsible for 3 deaths, scarlatina 3, measles 8, whooping-cough 8, and typhoid fever 4. The total death-rate was 946, being far below the average, and consequently the health of the city reported as very satisfactory.

Illegal Practice of Pharmacy.—The Syndicate of Pharmacists of Clermont-Ferrand has been making a dead-set against people in this district who have been suspected of contravening the Pharmacy Act. Summonses were issued against six religious bodies, as well as against a grocer, a midwife, and a school kept by priests. Out of these nine summonses four of the defendants were acquitted, and the rest sentenced to fines varying from 25f. to 50f., but with the benefit of the First Offenders Act. The syndicate claimed 10 000f. damages, but only received 30f. Unfair competition has, however, been discouraged in the district—for a time, at least.

The Ink of the Ancients.—M. Leidié communicated an interesting paper at the December meeting of the Paris Society of Pharmacy, which makes it tolerably certain that the ink used by the ancients was composed chiefly of lamp-black. M. Leidié examined the contents of two bronze cylinders which were found in the ruins of a Roman villa at Vertault (Côte-d'Or). The cylinders contained a dark substance, which, it was argued, was either an ointment, a paint, or ink. Chemical tests negatived the first two suggestions, and finally the substance was identified as lampblack. Traces of copper, tin, iron, and chalk were found in the ash. The ink was, therefore, of a nature like the present-day Indian ink.

Business Change.—The special depôt in Paris of the "Cherry Blossom" perfumery has changed address this month through the expiration of lease, and is transferred to Beral's, the well-known Anglo-French Pharmacy, 14 rue de la Paix, where suitable window-space is devoted to a display of the goods. During the past ten years or more the "Cherry Blossom" depôt has been the most prominent English shop on the Grand Boulevards. Having always been kept open brilliantly illuminated until 10 P.M., and being one of the finest examples of the shopfitter's art in Paris, it has been looked upon as a Mecca of English and American residents and visitors, and one of the attractions of that remarkable thoroughfare

Milk and Water.—The fact that some policemen patrolling in the early hours of the morning on bicycles recently arrested a milkman as he was in the act of diluting his milk from the fountains in the Place de la Concorde, Paris, has given rise to something approaching a scare here. Interviewed on the subject, M. Girard, the well-known chief chemist of the Paris Municipal Laboratory, says that 6,000 samples of milk are taken on an average annually by his staff from the various dairymen of the city. Of these some 2,000 are usually found to be adulterated. Last year as many as 1,355 summonses were issued against backsliding milkmen, but only a small proportion (some 200) were found guilty of the charge of adulteration. In 1896 a committee was appointed to devise means of preventing the adulteration of milk. The committee is composed of eminent doctors and chemists, who in due course issued a report giving their recommendations; but, adds M. Girard, no notice was taken of them by the authorities and hence the present deplorable state of things, as since 1896 he adulteration of milk has gone on increasing.

Transferring Disease.—A Paris newspaper is responsible for the following little story:—

America has not the entire monopoly of medicine-men Anti-toxin treatment and the various serums are all very well in their way, but the latest medical discovery bids fair to leave them far behind. It is very simple, and it is also infallible—provided the person does not die in the interval. The process consists in transferring the disease from the patient to a tree. Unfortunately the cure can only be successfully attempted on Tuesday and Friday nights when the moon is full. After exactly locating the seat of the disease, the "doctor" pricks it with a pin until several drops of blood can be collected on a piece of blotting-paper, which is then rolled into a ball. The patient then goes to bed, and the "doctor" takes a walk abroad, and when he comes across a likely tree makes an incision in the bark and inserts the paper pellet. The cure is then bound to succeed—provided the patient can stand it three successive weeks.

Duties on Colonial Produce.—On several occasions we have referred to the proposed maximum and minimum duties on colonial produce, and it will be remembered that the application of such tariffs was postponed until February 24 During the postponement further representations have been made by the London Chamber of Commerce and the British Chamber in Paris, with a view to securing the benefits of the minimum tariff for British colonial produce, or a still further postponement pending the completion of special arrangements between the colonies concerned and the French Republic. As a result of the negotiations a Bill has been lodged in the Chamber of Deputies, making the following provisions relating to the British colonies:—

(1) Pending the negotiations, now nearly completed, with India, Ceylon, Mauritius, Seychelles, and Jamaica, to continue the minimum tariff to those colonies for another year from February 24, 1902; and (2) to continue by decree the minimum tariff on the products of the Straits Settlements, Federated Malay States, and Hong-Kong so long as those colonies grant to French merchandise the advantages now accorded. As to the other British colonies, the general tariff will be applied to their colonial products on and after February 24 next, as the British Government is not disposed to enter into a special arrangement with the French Government on their behalf.

The Modern Twelfth-night Cake.

Le Matin publishes the above cartoon by Guillaume, intended to suggest an up-to-date substitute for the "bean" which is concealed in French Twelfth-night cakes. The "beans," being usually made of glass or porcelain (in the shape of babies or little pigs), are often swallowed (sometimes intentionally), and may cause appendicitis; hence the suggestion to introduce a pill, cachet, or pastille, containing a suitable medicament.

South African News.

PROPOSED EXHIBITION AT CAPE TOWN.—An exhibition will be held in Cape Town in 1903. It is to be organised from home, and is intended mainly for the promotion of business.

ORANGE RIVER COLONY.—The Administration of this colony have under consideration the question of the registration of chemists and druggists, and also the formation of a Board of Examiners.

THE CONTRACT for the supply of disinfectants to the Durban Corporation has been secured by Messrs. Quibell Brothers, of Newark, through their South African representative, Mr. Charles W. Holmes.

A VISIBLE INCREASE.—According to the *Board of Trade Journal* the approximate value of the drugs and chemicals entered for removal under rebate and otherwise from the Cape Colony to the Transvaal during the nine months ended September 1901 was 12,268*l.* as against 48*l.* during the corresponding period in 1900.

MR KERR AGAIN.—In the Cape Government *Gazette* inquiry is made respecting the whereabouts of "William Henry Kerr (a chemist), discharged from Somerset Hospital, Cape Town, on 11th April, 1901." This shows that the Government and military officials do not keep a sharp eye on their men. Mr. Kerr was technically in custody when the notice appeared.

TRADE-MARKS.—In Natal application has been made by the undermentioned persons for the registration of the following trade-marks:—

Mr. Alfred Samuel Albert, trading as Scrubb & Co., Guildford Street, London, S.E., "Scrubb's Cloudy Ammonia Fluid."

Mr. William Robinson Pimm, of Berea, Durban, Natal, "Vermol," in Class 2; "Seabreeze" (ferro-arsenical sarsaparilla), "Seabreeze" (headache-wafers), "Seabreeze" (effervescing saline), in Classes 2 and 3.

In the Cape Messrs. F. H. Faulding & Co., 54 King William's Street, Adelaide, S. Aust., have applied to be registered as the proprietors of the trade-mark "Faulding's Australian Eucalyptus Oil (Emu brand)."

WHAT IS A TON?—The Natal merchant says 2,240 lbs., and he got an extra 240 lbs. through to the Transvaal and Orange River Colony for every ton weight allowed as per permit. The Cape Government Railways discovered the irregularity, and were quick to acquaint the military authorities that a ton in South Africa means 2,000 lbs., so now the permits are issued in lbs., and the Colonial ton is to stand. The merchant in Natal may be looked upon as a bit "slick," and the pity of it is that those at the shank end of South Africa did not try on the same thing. Perhaps they have, but in any case Durbanites got an extra 240 lbs. through for every permit in favor of tons, and an extra few pounds is worth trying for in these times.

SHOP ITEMS.—Mr. W. N. Cooper, of the West End, Kimberley, was visited by thieves a short while since. They got away with about 150*l.* worth of goods. A little later in the month his store was flooded, doing considerable damage to the stock. He has the sympathy of the local trade, writes our correspondent.—Mr. Thane, for many years with Mr. A. Davison, Kimberley, has opened a drug-store in the Du Toitspan Road, while Mr. Garwood, formerly with Lennon (Limited) is about to open in the same thoroughfare on his own account.—Mr. N. O. Ruffel, Kimberley, who has been down to the coast on vacation, is building in Du Toitspan Road.—Mr. W. Gasson, Kimberley, finds his business outgrowing his present premises, and an addition thereto is in under way.—Mr. K. James, dispensing chemist, Market Square, Port Elizabeth, has taken into partnership his assistant, Mr. D. E. F. McNaughton, M.P.S.G.B., and will henceforth carry on business under the title of K. James & Co.

SEARCHING FOR PETROLEUM.—Renewed efforts to discover both coal and rock oil are being made in the Western Province of Cape Colony near Cape Town, but with what success has not yet transpired. Those interested are most sanguine; at the same time they declined to make any statement to a representative of the *C. & D.* who visited the borings. Coal would be a very welcome factor in this part of the Colony, and would prove a better source of wealth to the district than a gold reef. The present price ruling for both South African and imported coal is prohibitive, and accounts for the lack of local industries. Opinions differ as to whether petroleum has ever been located in the Colony. Certain persons declare they have undoubted proofs of it, while those who should know and under whose notice the reported "discoveries" from time to time have come officially are equally emphatic in the negative. As a matter of fact, the only sample of any soil, rock, or liquid that has proved by analyses to be impregnated with rock oil came from Mashonaland some years ago, while the many local analyses failed to trace other than floating vegetable oils, which clearly indicates that the stuff had been skimmed from water contained in old wells or stagnant pools. It is understood that certain Americans are the instigators of the present search, and that money is no object.

Condition of Trade.

(From Special Correspondence.)

East London, December 19, 1901.—The wholesale trade here has been fairly good during the past six months, and compares favourably with that of the first part of the year. Martial law, as was only to be expected, has interfered somewhat with our ordinary business relationships, especially that of the immediate interior, and we are greatly handicapped through the great delays in connection with both the landing and delivering of cargo. That we are no worse off in this respect than other Cape ports is, to say the least, but poor consolation.

Business in the retail shows a slight falling off, due, no doubt, to the departure of the refugees and the absence of up-country visitors. Even the most sanguine of our druggists never entertained the idea that this section of business would continue to keep the level of the past two years, consequently the decline was expected. Preparations for the Christmas trade are in evidence on every side.

Kimberley, December 20, 1901.—Business generally continues brisk at this centre. Apart from the presence of the military men, who bring good business, the mines are such a source of wealth to Kimberley as to make the place self-supporting. The permit-system seems to work fairly well, or, perhaps, it is that we are getting more used to it, at the same time we are anxiously looking forward to the time when permits will be considered relics of the past. Great difficulty is being experienced all round in importing photographic goods and similar items not considered necessities by the military authorities. It is to be hoped that the new year will bring us better transport-facilities from the coast.

Cape Town, December 26, 1901.—The trade at this port has fluctuated considerably during the past six months. Just at present permits are coming in more freely from the inland towns, but holiday-calls may have influenced them, and the ordinary hampered conditions will be in evidence again soon. Opinions are diversified as to whether the obstacles put in the way of travel and transport by the military authorities are absolutely necessary. It would be difficult to depict the plight of the trade generally if these authorities had not to reckon with the Cape Government. The stand the Government has taken in the interests of the people is not generally known nor appreciated as it should be. Large stocks are being held by local merchants, and the delay in landing cargo, extending over months in some cases, has forced the small importer to rely more and more on the wholesaler for his supplies; prices have, therefore, maintained themselves all round, and there is a strong tendency to force high prices. The Christmas preparations quite equalled those of previous years, but it is a question whether so great a turnover has been done as was anticipated. The departure of the refugees from the peninsula will make itself felt early in the new year; something like a slump will result unless the transient population increases. Practically no wholesale trade has yet been done with the Transvaal from this city, nor does there appear to be any prospect of it. The value of the drugs and chemicals imported into Cape Colony during the eleven months which ended on November 30, 1901, was 270,429*l.*, against 208,210*l.* for the corresponding period in 1900. The importations of dynamite and blasting compounds amounted to 84,070*l.* in value, against 53,609*l.* in 1900.

"It's my head that's been troubling me so lately, my dear," the old lady remarked to a young friend, "and the doctor he says 'You take these p'ere pills,' says he, 'and you will soon shake it off.'

Colonial and Foreign News.

Invading Russia.—Permission has been granted for importation into Russia of "Benson's Plaster," Seabury & Johnson's "Strengthening Plaster," and Scott's Emulsion.

The Advance of Woman.—Miss Ida Freudenheim, of Königsberg, has passed the State examination in dentistry at the Breslau University, and is consequently a qualified practical dentist. She is the first woman to enter the profession in Germany.—The second lady chemist to qualify in Germany is Miss Johanna Reder, of Stuttgart. She has only recently passed her examination, and is on the outlook for employment.

Only Synthetic Indigo Now.—The Prussian War Office has decreed that in future all military cloth is to be dyed with German artificial indigo, instead of with the raw vegetable dye as formerly, the artificial product having been found to be as lasting as the other, and of a clearer and brighter shade. The cloth-manufacturers are to be allowed to supply next year's requirements with the old kind of cloth, to enable them to use up their stocks of vegetable indigo.

Formosan Opium and Camphor Monopolies.—A Japanese vernacular paper publishes an alarming account of the falling-off in the revenue of the Formosan Government. It is stated that the actual receipts from the opium-monopoly are between 700,000 yen and 1,000,000 yen below the estimate, while the receipts from the camphor-monopoly are 1,200,000 yen below the estimate. The falling-off in the latter is attributable to the competition with the camphor produced in Japan.

The Doctor Now Blamed.—In our issue of January 4 (page 5) particulars are given of an alleged mistake in connection with a chemist's prescription whereby Mlle. Oriese, Maid of Honour to the Queen of Greece, was nearly poisoned. The latest report states that Dr. Catanow, a Russian, who prescribed the medicine, and who had an even narrower escape, is not looked upon with favour by the Greek physicians, who now declare that there was no mistake on the part of the chemist, but that the drug ordered (thiosinamine) was a poisonous one, and ought not to have been prescribed. Dr. Catanow has retorted by offering to swallow ten of the powders in the presence of the members of the medical faculty. So far his offer has not been accepted. Both the doctor and his patient have now completely recovered.

Dutch Pharmacy.—According to an article published recently in the *Pharm. Weekbl.* on the future of Dutch pharmacy, it can only be improved by being taken over by the State.—After an existence of fifty-eight years the *Nederlandsch Tijdschrift voor Pharmacie, Chemie en Toxicologie*, edited by Professor Dr. H. Wefers Bettink, and Apotheker Guldensteeden Egeling, expired with the December number. It is to be replaced by a special organ of the Nederlandsch Maatschappij ter Vervorderung der Pharmacie, the first number of which was published on January 1, 1902.—The Dutch Pharmacopœia Committee have notified their intention of adopting home and Dutch colonial products as far as possible in the compilation of the new Pharmacopœia. They intend, *e.g.*, to insert Curaçao aloes in the place of Cape aloes, and are inviting the opinion of all doctors in the Kingdom on the matter.

Condensed Milk.—The Government analyst of Tasmania, in his annual report for 1900, condemns the use of condensed milk in the feeding of infants. Mr. Ward says:, "The coming generation is shamefully maltreated if fed on condensed milk according to some of the directions on the tins. Most of these are positively dangerous, and infants so fed must be either half-starved or swamped and tortured by an enormous excess of water. To take one case, it is directed to add no less than 18 parts of water to 1 of condensed milk, and the effect of this would be that a child must drink no less than seven times more water, to obtain the same amount of milk solids, than would be the case if he or she were properly fed on human milk of average quality. Even then, this washy mixture would be entirely wrong as regards the proper proportions of the various ingredients, not to mention the possible ill effects of the preservative present. The added cane-sugar improves matters to some slight extent, but it is not a natural constituent of milk."

Japanese Opium-monopoly.—During the financial year ended March, 1900, the Japanese Government made a profit of about 94,000*l.* from the opium-monopoly in Formosa alone. The value of the imports to the island was 360,464*l.*, an increase over 1899 of more than 65,000*l.* In 1899 the import was almost entirely from Persia, but in 1900, 562 cwt., valued at 47,927*l.*, came from Benares, against only 12 cwt., valued at 786*l.*, in 1899. The imported opium is "prepared" at the Government factory at Taipeh, after which it is distributed to the various local Government offices throughout the island. Thence it is sent to agents, who in their turn supply the dealers. At the end of December, 1900, there were 165,752 licensed opium-smokers in the island, 152,950 of whom were male and 12,802 female, giving a percentage of 6·18 of the total population as against a percentage of 5·29 in 1899. Persons licensed to engage in the opium-business numbered 3,028, and there were 648 cases of infringement of the opium law during 1900. The value of the drug supplied to the dealers in the different districts was nearly 450,000*l.*

American Notes.

Linseed-oil Adulteration.—The adulteration of linseed oil is becoming a common practice both in New York and other cities, in spite of many arrests and fines. Recent high price has been the cause of it, and among the adulterants used are corn, cottonseed, petroleum and other mineral oils.

A Plaster-of-Paris Combination.—The United States Gypsum Company is the title of a combination in which the interests of twenty-seven gypsum-factories are said to have been merged. The purpose of the consolidation, it is asserted, is to develop the use of gypsum plaster in the market against that of lime.

Rewarding the Workers.—By the will of the late Mr. Edward Kemp, of the firm of Lanman & Kemp, drug-merchants and perfumers, New York, $50,000 is to be distributed among the employés of the firm who have served more than five years. Mr. George Massey, for faithful services, gets $50,000 on the death of the testator's widow.

Southern Soap Combine.—A movement has been started at Atlanta, Ga., to consolidate all the Southern manufacturers of soap. The Georgia Soap Company has been approached in the matter. E. O. Miles, secretary of this company, says the proposed combine only intends to reform abuses in the business, not to regulate prices. He adds that manufacturers of soap in Savannah, Macon, the Virginia-Carolina Chemical Company, and manufacturers at Nashville and other Southern places will go into the proposed association, which will also affiliate with similar associations in the East and West.

Platinum in Wyoming.—Professor Wilbur C. Knight has written a report on the discovery of platinum in Carbon County, Wyoming. The indications are that the metal occurs in considerable quantity. The Rambler Mine, from which the platinum comes, yields copper pyrites, and it was only through unaccountable variations in the assays that the rarer and more valuable metal was brought to light. The discovery was made by Dr. L. D. Godshall, manager of the Boston and Wyoming Smelter Company. It is not yet known whether the platinum is in the copper or in the iron pyrites which accompanies it, or both.

Incorporated.—The firm of Gilpin, Langdon & Co., for fifty-six years engaged in the wholesale drug-business and as drug-millers at Baltimore, has been incorporated as a stock company at Trenton, N.J., with a capital stock of $250,000. Mr. H. B. Gilpin and Mr. Charles F. Husted, of Baltimore, and Mr. Kenneth McLaren, of New Jersey, are the directors, and the capital is divided into shares of a par value of $100, but none of them are to be offered for sale, the entire amount being subscribed, and the shares being quoted at $150. The company will continue business at 300 and 302 West Lombard Street, Baltimore, the building occupied some months ago, and which was formerly owned by the Charles A. Vogeler Company.

Winter Session.

Federation of Pharmaceutical Associations.

MR. GEORGE F. MERSON, Hon. Secretary and Treasurer of the Federation, informs us that he can supply reprints of Mr. James Paterson's paper on "State-aided Pharmaceutical Education" for the use of any association which is to discuss the subject. Secretaries should apply direct to Mr. Merson at 24 Newgate Street, Newcastle-on-Tyne.

Society of Chemical Industry.

MANCHESTER SECTION.

A MEETING was held at the Victoria Hotel on January 10, Dr. Grossmann in the chair, and was devoted to general communications. Dr. GERLAND (Accrington) gave a *resumé* of his investigations in the estimation of

SMALL QUANTITIES OF ARSENIC.

He said that, supposing arsenic to be dissolved with some organic or other foreign substance, the safest way to separate the arsenic was by means of sulphuretted hydrogen. If the quantity of arsenic was very small it frequently, happened that the sulphide of arsenic remained in solution in a colloidal state. To get over this difficulty it was only necessary to add a small quantity of any metal precipitated by that gas—bismuth by preference. A very small amount of bismuth would bring down the arsenic completely, and that precipitate could be readily filtered and washed. By treatment with ammonium carbonate the arsenic was dissolved out in a pure condition. The solution evaporated left the arsenic as a sulphide, and that, being fluxed with a small quantity of sodium carbonate and nitrate of potassium, gave an arseniate. By treatment with sulphuric acid all the nitric and nitrous acids was expelled, and the arsenic was left as arsenic pentoxide in the presence of sulphuric acid, and sulphates of potassium and sodium, and could be readily estimated by various methods, especially by the use of iodine.

VANADIUM.

Dr. GERLAND said he had received a communication from Mr. R. Frenzal, who had a quarry of sandstone impregnated with vanadium in the United States, and was preparing vanadium pentoxide at 1*s.* 6*d.* per lb. Mr. Frenzal will send samples of ground ore to anyone interested, but his address was not given.

Eastbourne Chemists' Association.

THE inaugural dinner of this Association took place at Range's Royal Restaurant, Eastbourne, on January 8, under the chairmanship of the President of the Association (Mr. J. Senior). There was a good attendance of members, comprising most of the principal chemists of the town, and including Messrs. Senior, Price, Browne, Harmer, Marchant, Packer, Earnshaw, Routly, Charters, Temple, and Fletcher. A *recherché* repast was provided, after which the usual loyal and patriotic toasts were drunk, and there were also included those of "The President," "Our Association," "Executive Officers," and "Visitors." An excellent musical programme was sustained by Messrs. G. S. Jinman, J. T. Parsons, H. D. Smith, and F. E. Packer, with Mr Page as accompanist. In the course of the evening it was mentioned that the Society had established an early-closing movement—viz., at 5 o'clock on Wednesday evenings during the year, with the exception of the months of July, August, and September.

Young Chemists' Association.

A GENERAL MEETING of this Newcastle-on-Tyne Association was held in Lockhart's Café, Grainger Street, on January 8. The PRESIDENT (Mr. Barry Noble) gave a short address emphasising the fact that upon the rising young generation rested the responsibility of the future status of the calling. He thought young chemists should know the B.P. thoroughly, and in order to encourage them to acquire this knowledge he offered a copy of Remington's "Pharmacy" to be competed for at the end of the session.

Mr. WEDEN SIMS then gave a paper on "Is our calling

A TRADE OR A PROFESSION?"

which called forth much discussion, in which Messrs. MURDOCH, HOLLINGSWORTH, NIMMO SCOTT, WILSON, KATZNER, and USHER took part. Mr. Weden Sims took the professional aspect, holding that a chemist is very different from a grocer in that the properties of the drugs he sells are known to him, whilst the grocer knows little beyond what profit he is getting on his goods. The meeting decided that so long as the callings of the chemist and the druggist continued to be combined, so long would it be a mixture, the chemist being a professional man, and the druggist a mere trader in drugs.

Dewsbury Chemists' Association.

A MEETING of this Association was held on January 13, at the Church House, Dewsbury, the President (Mr. W. Stead) in the chair. Several subjects were discussed. The first was the

SUGGESTED FEDERATION

of chemists' associations in the West Riding of Yorkshire. The SECRETARY (Mr. G. Walker) had approached associations in the Riding, and now reported that the Sheffield and Leeds organisations decided against joining such a federation. The Huddersfield Association was in favour of the proposal, but other organisations had not replied. The Sheffield Pharmaceutical and Chemical Society stated that in their opinion it is undesirable that a federation should be formed, as the multiplicity of organisations one within another tends to hinder rather than promote the progress of pharmacy.

In view of the approaching Dewsbury

PARLIAMENTARY ELECTION,

the Secretary was instructed to write to the Secretary of the Pharmaceutical Society asking for his opinion as to the advisability of approaching the three candidates in the interests of pharmacy, and to suggest points to bring before the candidates.

PHARMACEUTICAL EDUCATION.

On the question of local classes suggested by the Federation of Local Associations the feeling of the meeting was that ample facilities were provided in the West Riding by the Leeds, Huddersfield, and Bradford Technical Colleges and other technical schools. It was felt that these institutions should be considered in any scheme that was propounded, and, subject to this recognition being given, the Association was in favour of provincial schools of pharmacy. The members were also in favour of a compulsory curriculum if it operated through the local schools, but would oppose it if it meant the students going to London. They also supported the division of the Minor examination. In regard to apprenticeships the Secretary was instructed to reply that the difficulty had been experienced in the Dewsbury district, which existed almost throughout the country, in obtaining suitable youths as apprentices. The members were of opinion that this was not attributable to the high standard of education that was necessary, but to the wretched remuneration which pharmacy commanded. Other trades offered better remuneration for far less expense. Mr. BROADHEAD regarded the question as a serious one. Thirty years ago, when chemists were doing well in Dewsbury, there was no difficulty in getting apprentices. Now the trade was quite uninviting to youths, and he knew several who had left the trade to enter the Civil Service or obtain clerkships in the Navy, or become chartered accountants, because the outlook was better in those spheres. Lads knew as well as they did that even men who had been in the business for years were being pushed out.

Bradford Chemists' Association.

A MEETING of this Association was held on January 14, the President (Mr. Hanson) in the chair.

THE PROPOSED FEDERATION.

In reference to the proposal of the Dewsbury Association to federate the various associations of the West Riding, Mr.

Digitized by Google

Silson said they were pushing chaps at Dewsbury, and he would not be one to restrain them, but he should like to know whether the motive of this movement was genuine in its aspect, or was restricted to purely local purposes. Alderman Dunn also asked for information as to the object of the proposed Federation. The President said he looked upon it that the object of the Federation would enable them to show a bold front in case of any legislation that might be proposed affecting the Associations or the members. He thought it would be rather a good thing to have a Federation. Alderman Dunn said it had struck him that this proposed Federation of West Riding Associations would somewhat hamper the existing Federation of Pharmaceutical Associations. He could see that oftentimes a meeting of the various associations of the West Riding might be convened and could be of very great service, but in such cases why should they not approach the present Federation with a view to holding meetings? He suggested that they should adjourn the consideration of the matter in order to see what steps were being taken by other associations, especially as they had little or no information as to what was the object of the proposed Federation. Mr. Marshall said he did not see why there should not be any special meeting of the West Riding associations without the formation of a West Riding Federation. Ultimately it was decided that the Hon. Secretary should write asking for further information.

Provincial Schools of Pharmacy.

The Hon. Secretary said he had received a letter from the Federation of Pharmaceutical Associations asking the Association to consider and report as to what educational facilities existed for apprentices and assistants in their districts. Intimately associated with the foregoing, it was stated, were the questions of a compulsory curriculum, the division of the Minor, the relationship between master and pupil, and the difficulty of obtaining apprentices. These points in the circular letter were dealt with *seriatim*. Mr. Silson, junior, said that Bradford was well supplied with educational institutions, and Mr. Silson said if they were going to have a curriculum they must have schools. Alderman Dunn asked if the schools had to be brought to the attention of the Pharmaceutical Society, to which Mr. Silson replied that he supposed they would read the *Pharmaceutical Journal* and The Chemist and Druggist, but the Hon. Secretary added the Pharmaceutical Society do not recognise any school except their own. Alderman Dunn thought the first point would be met if they forwarded to the Federation a syllabus of the Bradford Technical College, Mr. Silson adding that it might also be stated that the Association had taken steps to provide for special education; Mr. Marshall remarking that the classes are not well attended.

Mr. Silson: That is the cry anywhere; no one attends classes unless he is forced. Mr. Silson went on to say that if they were to have a compulsory curriculum it seemed to him to be making a profession—it was really going to be above a trade—and that would do away, he thought, with apprentices. The step would seem to be following the course of the medical profession. He thought they should either go in for a good honest trade, or a good straight up-and-down honest profession. Alderman Dunn said if they had a curriculum they should have something to look forward to at the end of the curriculum. If they had a curriculum they must have protection. It must be illegal for otherwise than qualified men to keep a shop and sell medicine. Until they had protection of that kind a curriculum would be disastrous.

The discussion ended in the passing of a resolution that so long as unqualified persons are permitted to keep open shop the enforcement of a curriculum would inflict serious injustice upon registered chemists and druggists.

The Association decided in favour of a division of the Minor or qualifying examination. The other questions were deferred.

The vast number of camphor-trees in the province of Foochow are rarely cut for purposes of camphor-production, says the British Consul there, the timber being at present put to many other uses, boats even being built of it.

Deaths.

Hirst.—At Crossgates, Leeds, on January 1, Mr. John Hirst, for over forty years outdoor dispenser to the Leeds Union. Aged 66. Mr. Hirst came of an old family of chemists and dispensers. Prior to his appointment to the Leeds Union, he was for some time assistant dispenser at the Leeds General Infirmary. He retired on a pension about a year ago, and since then his health failed rapidly. He leaves a son and a daughter. The former (Mr. Walter Hirst, L.R.C.P. & S.E., L.F.P.S.G., Howden-le-Wear) is one of the district medical officers of the Auckland Union, Durham.

Lewis.—At London, on January 10, Mr. John Lloyd Lewis, chemist and druggist, late of Aberayron. Mr. Lewis, who had been for five years a student at the London Hospital, died from smallpox. He had spent Christmas week with his wife and children at Aberayron, returning to London on New Year's Day. Two days afterwards he was stricken by the disease which proved fatal. Mr. Lewis, who was 36 years of age, served his apprenticeship with Mr. Parlby, chemist and druggist, Swansea. He afterwards acquired the old-established business of Mr. J. P. Jones, Aberayron, but five years ago he decided to enter the medical profession. He had qualified in midwifery, and would in a few months have entered for his final examination.

Mallinson. — On January 3, at Bournemouth, Mr Frederick William Mallinson, chemist and druggist, formerly of Barnsley. Aged 37.

Pickup.—On December 20, Mr. John Arthur Pickup, chemist and druggist, Bacup. Aged 74.

Richards.—At Farnham, Surrey, Mr. Fredk. Richards, chemist and druggist. Aged 27. Mr Richards, who leaves a widow, succumbed to rapid consumption.

Russell.—At Croydon, on December 29, Mr. Charles J. L. Russell, pharmaceutical chemist.

Southall —At Edgbaston, Birmingham, on January 11, Mrs. Sarah Southall Aged 100. Mrs. Southall was the wife of Mr. Thomas Southall, one of the founders of the Pharmaceutical Society and of the business of Messrs. Southall Brothers & Barclay. Her death throws several pharmaceutical families into mourning. Mr. Alfred Southall, member of the Pharmaceutical Council is her nephew; Mr. William Ransom, of Hitchin, was apprenticed to her husband and married her daughter, and the late Mr. George Dymond, who was a partner in the Birmingham firm, married another daughter. We published some particulars of Mrs. Southall when she attained her centenary (see *C. & D.*, September 14, 1901, page 455, and September 21, 1901, page 495). In the years subsequent to her husband's death (January 12, 1881) Mrs Southall took a keen and active interest in charitable and philanthropic efforts of all kinds, and she was one of the pioneers of the women's temperance movement.

Willsher.—At Barnsley, on January 2, Dr. Stephen Henry Willsher, pharmaceutical chemist. Aged 61. Mr. Willsher was for many years in business at Tenterden, near Ashford (Kent), but left that town about five years ago. When at Tenterden he was a member of the Town Council, and for eight years warden at the Parish Church.

Recent Wills.

Dickinson.—Probate of the will (with a codicil) of Mr. Frederick Dickinson, chemist and druggist, of Stamford, has been granted to his son, Mr. Frederick Dickinson, chemist, and Mr. Frederick King Parker, Stamford, grocer, nephew, and Mrs. Mary Mead Dickinson, of Stamford, widow of the deceased. The gross value of the estate is 5,134*l.* 8*s.* 5*d.*, and the net personalty 4,516*l.* 11*s.* 5*d.*

Lenfesty.—Mr. William Giffard Lenfesty, chemist and druggist, 49 Shepherd's Bush Road, West Kensington, formerly of Faversham and Herne Bay, who died on August 1, 1901, has left a gross estate of 686*l.* 10*s.* The sole executrix is his widow, Mrs. Julia Eliza Kingston Lenfesty.

Trade Notes.

THE NIPPER COMPETITION.—Messrs. W. Butcher & Sons, Blackheath notify us that in the list published last week (page 56) the winner of the first prize in Classes A and B was Mr W H Wells, and not Wills.

MESSRS VAN OPPEN, ROSS & Co., wholesale and export perfumers, 38 Basinghall Street, E C., inform us that they are not a limited company, as the index to advertisements in THE CHEMISTS' AND DRUGGISTS' DIARY states.

MESSRS CHAS ZIMMERMAN & Co, 9 and 10 St. Mary-at-Hill, E C., have been appointed sole agents by Messrs. Boehringer & Reuss, Cannstatt in Wurtemberg, for the sale of their papaïn in Great Britain and the Colonies.

BRUSHES.—Messrs. W. B. Fordham & Sons (Limited), 38-40 York Road, King's Cross, N, have issued a new illustrated list of brushes which they will send to any chemist who applies for it. The list runs through the whole gamut of brushes from a camel-hair pencil to a broom.

"TABLOID" ASPIRIN.—Aspirin, an acetyl salicylic acid, is used in the treatment of rheumatism, being preferred by some prescribers to salicylic acid. To meet the demand Messrs. Burroughs, Wellcome & Co., Snow Hill Buildings, E.C, have added "tabloid" aspirin to their price-list. "Tabloid" aspirin is put up in bottles of 25 and 100, the dose being 5 to 15 gr. of the drug.

CENTURY THERMAL CABINETS.—The manufacturers of these cabinets, writing in regard to our note of last week, say they do not offer in their circular entire control to any one chemist. The wording implies that the control of the territory will be placed after the cabinet has been tested. Their object is to get a chemist to use the cabinet, and they then look to arranging territorial rights with him, on the lines set forth in another circular, wherein the retailer is called upon to place an order for one dozen cabinets at a special discount of some 42½ per cent. Immediately that certificate is placed all other applicants in the same territory are quoted at 25 per cent. discount, and the orders are executed through the party who holds the certificate. It follows, therefore, that of all recipients of the circular to which we referred last week "the man who is the best hustler, and who gets out right away and tests the merit of our article, is the man who will get control, to the exclusion of all others" That is the company's statement made through Mr Pointing, but another correspondent in this issue (page 93) throws further light on the matter, and we have more correspondence expressing dissatisfaction.

OLIVE OIL.—Mr. Fredk. Boehm's pamphlet on olive oil to which brief reference has already been made in the *C. & D.* contains much useful commercial information regarding the present condition of the industry. Firstly, the botanical origin, habitat, and character of the olive-tree are described, then follow the methods of preparation and classification of the oil, each country being dealt with in turn. Spain easily takes the first place as regards production, which is estimated at not less than 300,000 tons annually, the bulk of which is suitable for lubricating-purposes only. As regards Italy the recent plague has left its mark on the production, and year after year seasons that began with promise have ended in disaster. Italy has, therefore, lost much of its position as a constant supplier of large quantities of olive oil to foreign countries Indeed, it has had to purchase considerable amounts from Spain, Tunis, and Algiers, as witnessed by the importation of 15 400 tuns during 1900. The term "Lucca" oil, which represented the finest edible oil in the world, has now fallen into disrepute owing to the prevalence of adulteration and "blending," and so shameless has this substitution become, says the compiler, that a large amount of the oil sold in Florence flasks is cottonseed oil, pure and simple. Other countries producing olive oil are Algiers (which has increased its exports during the last three or four years), Austria, France, Greece, the Levant, Sicily, Morocco, Tunis, and United States. Space is devoted to a brief summary of the physical and chemical characteristics of olive oil, and the last two sections of the monograph describe plant-pests and the uses of olive oil, together with two useful tables, one showing the value of oil imported into the U.K, the other being a parity table. A coloured map of the Mediterranean Coast, showing the olive-oil producing districts is inserted in the pamphlet.

Business Changes.

MR. G. BURNETT, chemist and druggist, has acquired the business of Mr. J. H. Suttle at Ludlow.

MR. J. HOOKS KENNARD has succeeded to the chemist's business lately carried on by Mr. T. Benson Evans at 32 High Street, Denbigh.

MR. H. B DUNN, chemist and druggist, has acquired the business at Regent Street, Leamington, hitherto carried on by Mr. Wilson.

MESSRS. WALKER & HARRIS, chemists, Canterbury, have purchased the business lately carried on by Mr. R. Walmsley, chemist and druggist, at Hastings.

AT Croydon the branch establishment of Henry's Cash Drug-stores has been transferred from No. 32 to the main business at Nos. 103 and 105 North End.

MR. SIDNEY DAVIES, chemist and druggist, has taken over the business at 187 Arundel Street, Landport, Portsmouth, for the last eighteen months carried on by Mr. A. Storrs-Walker.

MR L. MORETON PARRY has purchased the business of the late Mr. J. Geldart, chemist and druggist, at 163 Oakfield Road, Liverpool, which, after alterations, will be carried on on modern store lines by Moreton Parry & Co.

TAYLOR'S DRUG-STORES (LIMITED) have purchased the business of the Albion Drug-stores, two doors distant from the new branch of Boots (Limited), at Bradford, and will open there as speedily as possible. Taylor's central establishment is only on the other side of the road, but the possession of this additional shop will give them the opportunity of catching a very large part of the traffic which passes on Boots' side of the road.

Chemists' Calendars.

Mr. T. R. Perkins, the Modern Pharmacy, Henley-in-Arden, has adapted the Universal Almanack to local requirements by giving information as to the places of worship, postal and railway facilities, and medical service. A lighting-up time-table for cyclists is a useful feature.

Mr. Samuel Lawrence, chemist and druggist, 101 George Street, Oban, sends us a copy of the West Highland Almanac which he has brought out for fifteen years. The almanac, which is printed on salmon paper, is full of local information and contains illustrations of Mr. Lawrence's pharmacy and warehouse in Oban.

The illustrated almanack published by Messrs. W. Budden & Co., chemists, 399 Stanley Road, Kirkdale, Liverpool, runs to over 80 pages. It contains a condensed price-list of druggists' sundries and proprietary medicines, and plenty of space is given to advertising special medicines. The almanack, which is enclosed in a deep-red cover, insures the holder for 200*l.*

The proprietors of Holloway's pills are issuing an almanac and "Family Friend," which insures the holder for 100*l.* in the Ocean Accident and Guarantee Corporation in case of death whilst travelling by train, omnibus, or tramcar. The literary contents of the almanac deal with the fruits yielded by the various countries of the earth.

The Midland Medical Almanack Dictionary and price-list is published by Messrs. Morris, Banks & Co. (Limited), 2 and 3 High Street, Bull Ring, Birmingham, for the eighteenth year. The price-list is divided into sections:—(1) Proprietary articles and drugs. (2) surgical appliances, (3) photographic materials, and (4) wines, and the medical-guide portion contains a lot of useful information.

The penny almanack sent out by Mr. H. Payne, chemist and druggist, 16 Broad Street, Welshpool, is distinguished by the fact that some dozen pages are devoted to a history of the fifteen "privileged" families of Powys. This portion forms a key to the family histories of Montgomeryshire, and will doubtless ensure the almanack being kept for reference. Mr. Payne makes use of the advertisement-pages of the almanack in a manner which is sure to bring him good business.

Elementary Dispensing-practice.

By Joseph Ince.

Emulsions—(*continued*).

Egg-emulsions are an important branch of dispensing. Sometimes they are the means of presenting demulcent remedies under the most favourable conditions; at others, of disguising the taste of nauseous compounds. They should be freshly made, but are more stable than is generally supposed.

Half the yolk of an egg will be amply sufficient for the small quantity of emulsion (reduced from 3. 4. and 6 oz.) in the following illustrations. Break the shell of the egg on the side of a glass measure, and dexterously pour out the yolk on a slab; free it from albumen (on a large scale not necessary), and by the sharp action of a palette-knife divide it into equal portions, to serve for two emulsions.

This requires skill and quickness—very desirable attainments.

(1)

℞ Ol. olivæ ... ... ℥ij.
Ovi vitelli ... ... ½
Aq. destillat. ad ... ... ℥j.

Gently stir round the yolk in the mortar until it becomes perfectly smooth, adding, if necessary, a little water; gradually add the oil, and lastly the water by degrees.

In making larger quantities—say, 8 oz. and over—it is desirable, when once emulsification is perfect, to pour in the remainder in a thin, gentle stream, continually stirring the while.

(2)

℞ Ol. terebinth.... ... ... ℥j.
Ovi vitelli ... ... ½
Aq. destillat. ad ... ... ℥j.

Stir round the yolk in the mortar till perfectly smooth; add the turpentine by degrees, alternately with small portions of water; when completely emulsified, add the remainder of the water.

All turpentine emulsions are worked alternately with water; an emulsion of this class which may have gone wrong can be recovered by means of water added till reunion is effected.

It will not be out of place here to remind dispensers that yolk-of-egg emulsion is the best method of administering oil of turpentine, while mucilage is contra-indicated, according to the statement in the "Pharmacologia," "by rubbing up oil of turpentine with mucilage we do but render it more pungent and difficult to swallow."

The next illustration is a well-known formula containing both an acid and an alkali:—

(3)

℞ Ol. terebinth.... ... ... ℥ij.
Ovi vitelli ... ... ½
Liq. ammoniæ ... ... ℥j.
Acid. acetic. ... ... ℥ij.
Aq. destillat. ad ... ... ℥ij.

Made in this order—yolk of egg, turpentine cum aquâ, liq. ammoniæ, aquæ ad ℥xiv., acid. acetic. (undiluted) ℥ij added last.

Should the yolk of egg turn ropy, it may be recovered by a few drops of ammonia; the acid whitens the emulsion and becomes a test that perfect emulsification has been effected. The emulsion known as Stokes's liniment, linimentum album, or rheumatic liniment, may be considered as the original.

(4)

℞ Ol. terebinth. ... ... ℥iij.
Acid. acetic. ... ... ℥iij.
Ovi vitelli ... ... ½
Ess. limonis ... ... ♏v.
Aq. rosæ ad ... ... ℥ij.

To the finished emulsion add the undiluted acid. Essence of lemon is ol. limonis, not a dilution of oil in spirit; it masks the smell of turpentine. Several methods have been proposed with regard to that vexatious substance, ext. filicis maris, fresh milk being among the best. It may be presented with success as an egg-emulsion:—

(5)

℞ Ext. filicis liquidi ... ... ♏45
Ovi vitelli ... ... ½
Aq. destillat. ad ... ... ℥j.

(6)

Dr. Paris's Castor-oil Draught.

[In colic from lead.]

℞ Ol. ricini ... ... ℥ss.
Ovi vitelli ... ... q.s.

Tere simul et adde—

Syrup. papaveris ... ... ℥ij.
Tinct. opii ... ... ♏v.
Aq. destillatæ ... ... ℥j.

Fiat haustus, tertiis vel quartis horis sumendus.

(7)

℞ Cetacei pulv. ... ... gr. 60
Ovi vitelli ... ... ½
Syrup. aurant. floris ... ... ℥ij.
Aq. destillat. ad ... ... ℥iss.

The spermaceti must be reduced to the finest state of division with rectified spirit, and made perfectly smooth by continued trituration with the yolk of egg and syrup. Appearances in this case are deceitful; simple as the formula looks, its execution requires more than ordinary care.

(8)

℞ Cetacei ... ... gr. 60
Vitelli ovi dimidium,
Syrupi ... ... ℥ij.
Aquæ cinnamomi ... ... ℥j.
Aquæ destillatæ ... ... ℥ij.

Fiat mistura, de quâ capiat æger cochleare amplum frequenter.
—*Pharmacologia.*

Spermaceti to be made absolutely smooth, to which add yolk of egg, water, syrup, and cinnamon.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

Abegg, R., Herz, W. *Practical Chemistry: Experimental Introduction to Laboratory-practice and Qualitative Analysis from a Physico-chemical Standpoint.* Trans. by H. T. Calvert. 7¾ × 4¾. Pp. 132. 6*s.* (Macmillan.)

Medical Gleanings.

THIOCOL IN DIARRHŒA.

DR. M. T. SCHNIERER, Vienna, records in the *Noureaux Remèdes* some excellent results obtained in treating diarrhœa by the use of thiocol. The dose of the drug is 6 gr. three times a day.

PHENOLPHTHALEIN AS A PURGATIVE.

UNDER the name of "Purgo," phenolphthalein, in tablets of 0·1 and 0·15 gramme each, has been introduced as a purgative. The dose given above acts in from two to five hours, but in the case of bed-ridden patients the dose needs to be increased.—*Apoth. Zeitung.*

GLUCONIC ACID

is suggested in the treatment of diabetic coma in place of glucose. Gluconic acid is formed from dextrose by oxidation with bromine-water, and is used in doses of from 50 gr. to 70 gr. in alkalinised water. Sodium bicarbonate is freely administered when the patient is taking gluconic acid.

SARSAPARILLA OF SOME GOOD.

DR. T. SUTTON writes to the *Medical Press* in praise of sarsaparilla for chronic syphilis. Very bad cases are often improved at once under sarsaparilla, but mercury-vapour baths and dietetic treatment were used at the same time in some cases. Chronic syphilis with skin lesions is a form of the disease quickly benefited by sarsaparilla. The patient is directed to purchase the most expensive kind, make a fresh decoction daily, and take a pint each day.

LUMBAGO-LINIMENT.

Lime-water	6 oz.
Olive oil	6 oz.
Chloral	3 oz.

To be well rubbed into the back.

Sig.: One three times a day.

—*Medical Press.*

DYSENTERY-TREATMENT.

AT the Deelfontein Hospital Dr. G. E. Richmond obtained good results from the use of sulphur and Dover's powder in dysentery. The precise action of the sulphur in the intestines is not known, but it is supposed that sulphuretted hydrogen and other sulphur derivatives are formed, and inhibit the growth of the micro-organism of dysentery. Twenty grains of sublimed sulphur, with 5 gr. of Dover's powder, is given every four hours.

THE NEW HÆMOSTATIC.

SUPRARENAL extract is coming into use as a hæmostatic. It has been of use in operations on the nose and eye, but has not hitherto been used as a general hæmostatic. Mr. W. T. Thomas, in the *Lancet*, tells of two cases where bleeding persisted after the use of perchloride-of-iron packings, but on placing powdered suprarenal tablets in the wounds hæmorrhage ceased at once. Dr. W. S Fenwick for the last eighteen months has found suprarenal extract of the greatest value in the treatment of severe bleeding from the stomach. The plan he adopts is to administer 10 oz. of a freshly prepared decoction, containing 2 gr. of the desiccated gland to the ounce, as soon as possible after the attack, and repeat after two hours. The treatment is applicable in cases of the slight hæmorrhage of gastric cancer as well as the more severe bleeding from ulcers. The most striking and immediate results follow where the ulcer is near the cardiac end of the stomach and recent. It is probable that chronic ulcers of the pyloric region will not be so amenable to suprarenal extract.

Practical Notes and Formulæ.

COPYING PRESCRIPTIONS.

MR. A. B. STEVENS, at the last meeting of the American Pharmaceutical Association, gave the following method for copying unusual prescriptions, which might be useful to those chemists who send us tracings of different prescriptions to decipher:—

Facsimiles of prescriptions may be easily made upon glass by covering the glass with a very thin film of old turpentine, or a little resin dissolved in turpentine. This is best accomplished by placing a drop of the turpentine on the glass and rubbing it over the surface with a piece of flannel. The film must be very thin else the ink will not flow freely from the pen. Place the glass thus prepared over the prescription to be copied and trace with India ink. Recently I have preferred to use celluloid in place of glass. It is more convenient, and, being thinner than glass, a more perfect tracing can be made. The celluloid may be obtained in strips several feet in length, and the prescriptions copied in the same manner as upon glass. Spirit of camphor may be used in place of the oil of turpentine.

FLATULENT-INDIGESTION POWDER.

Magnesium carbonate	1 oz.
Calcium phosphate	1 oz.
Powdered charcoal	1 oz.
Sulphur	1 oz.

Mix.

A teaspoonful to be taken in water as required.

GLYCERIN-TONIC COMPOUND.

THE following formula was suggested by Mr. W. L. Scoville in a paper presented to the Massachusetts Pharmaceutical Association:—

Gentian-root, ground	20 grammes
Taraxacum-root, ground	30 grammes
Sugar	150 grammes
Spirit of orange (U.S.P.)	10 c.c.
Tinct. cardamom comp.	60 c.c.
Solution of saccharin (N.F.) ...	20 c.c.
Phosphoric acid (85 per cent.) ...	5 c.c.
Acetic ether	2·5 c.c.
Glycerin	400 c.c.
Sherry-wine	q. s. to make 1,000 c.c.

Moisten the drugs with the spirit of orange and about 10 c.c. of wine, and pack in a small percolator. Pour on wine to cover the drugs, and when the liquid begins to drop close the lower orifice of the percolator and allow to macerate twenty-four hours; then allow to drop slowly, regulating the flow to about one drop in five or six seconds, and pass enough sherry-wine through to obtain 400 c.c. of percolate. In this dissolve the sugar and filter, if necessary. Then add the other ingredients in order, and finally enough sherry-wine to make a total volume of 1,000 c.c.

MUSEUM SPECIMENS.

The following is a fuller account of Dr. Galt's method of preserving pathological specimens than we have already given. The preliminary treatment consists in trimming the specimens, if necessary, and washing in running water for several hours. The specimens are then put into a large excess of methylated spirit for from six hours to as many days, according to the size and nature of the specimens, changing the spirit once or twice should there be much oozing of tissue fluids. In the case of large or soft specimens the addition of ½ per cent. of formalin accelerates the setting of the tissues. From this the specimens are transferred to the following preservative liquid:—

Sodium chloride	5 oz.
Potassium nitrate	1 oz.
Chloral hydrate	1 oz.
Water...	100 oz.

The liquid in some cases may need renewing after a few weeks. The advantages of the method are its cheapness, the shrinking is less than in the older methods, and the colour is retained in a high degree.

Scientific Progress.

Behaviour of Calcium Hypophosphite (when administered internally).—Massol and Gamel [*J. Pharm. Chim.*, 1901 (vi.), 14, 337–342; and *J. C. S.*, January, 1902] show from the results of experiments carried out on dogs that, when calcium hypophosphite is administered internally, the hypophosphite is not oxidised to phosphate, but is entirely eliminated by the urine as sodium hypophosphite, and that the calcium is eliminated by the fæces. The volume of urine, the total nitrogen, and the amount of urea are not changed, but the acidity of the urine, the amount of uric acid, and the ratio of uric acid to urea are diminished.

Formation of the Perfume of Vanilla.—Henri Lecomte (*Compt. Rend.*, 1901, 133, 745–748; and *J. C. S.*, January, 1902), referring to the fact that the fruit of *Vanilla planifolia* does not possess the characteristic odour of vanilla at the period of cropping, but is developed during the curing-process, adduces evidence in support of the view that vanillin is formed by the action of a ferment on coniferin, the coniferyl alcohol thus produced being transformed by an oxydase into vanillin. Oxydase was found in vanilla from Mexico, Reunion, Mayotte, and Seychelles, but was absent, or nearly so, in inferior vanilla from Tahiti, and in "vanillin" from Guadeloupe. All the materials examined contained manganese.

Albumin in Urine.—Professor Pollacci, Italy, suggests a new method for the detection of albumin in urine. He prepares a solution of tartaric acid 1 gramme, corrosive sublimate 5 grammes, and sodium chloride 10 grammes, in 100 c.c. of distilled water, and adds 5 c.c. of formaldehyde (40 per cent.). To test the sample first put about 2 c.c. of the solution in a test-tube, then carefully add 3 to 4 c.c. of the urine, taking care that the two fluids do not mix. Should a ring immediately appear at the division of the two fluids, the urine contains pathological albumin. If the ring appears slowly after about ten to fifteen minutes, the urine is physiologically right, and the small quantities of albumin shown are normal. Professor Pollacci claims for the test a sensibility of 1 in 370,000.

Chemistry of Male Fern.—A series of papers on this subject by R. Boehm appears in the current issue of *Liebig's Annalen* (318–230 *et seq.*), in which several new points of interest are noted. If filicic acid or flavaspidic acid be heated with zinc, tin, and caustic soda for a few minutes, two compounds are obtained—filicinic acid and its corresponding butanone. The latter is a colourless crystalline compound, melting at 95°–97° C., of the formula $C_{12}H_{16}O_4$, and can be obtained with one molecule of water of crystallisation by using acetone as the solvent. It then melts at 65°–67°. It is quantitatively hydrolised by heating with water to filicinic and butyric acids. The constitution of filicinic acid is thus nearly established. The therapeutic activity of the filicic-acid group appears to be due to this combination, as when the butyric acid is split off the resulting filicinic acid is practically inactive. The body aspidinol, which has been identified in the ethereal extract from *Aspidium Filix-mas*, *A. spinulosum*, and *Athyrium Filix-femina*, was also investigated, and found to melt at 156°–161°. It appears to be the normal butanone of methyl-phloroglucinol-methyl-ether. The constitution of filicic acid is then discussed, and one of two formulæ is clearly established.

Atroscine.—Hesse has (*Chem. Central.*, 1901, 1,313) published a full account of his more recent researches on the chief of the Solanaceous alkaloids, of which the work on atroscine is of the greatest interest. It is not necessary to here revert to the prolonged disputes about this group of bases, but merely to detail the figures and statements of chief interest in the present paper. Hesse first prepared atroscine, although in an impure condition, from the so-called commercial scopolamine hydrobromide. He states that it is identical with the inactive scopolamine of Schmidt, the hyoscine (inactive) of Bender, and the scopolamine of Luboldt. Atroscine or inactive hyoscine has the formula $C_{17}H_{21}NO_4$, and crystallises with two molecules of water. When anhydrous it melts at 82°–83° C. By heating with alkali it decomposes into oscine (scopoline), of the formula $C_8H_{13}NO_2$, and tropic acid. It forms well-defined crystalline salts, of which the aurichloride melts at 201°–202° C. It forms a syrupy acetyl derivative, which, in its turn, forms crystalline salts. Hyoscine is transformed to a very large extent into its inactive isomer by heating the dry hydrobromide to about 195° C., some charring taking place at the same time. The base oscine melts at 106°–107° C., and forms long colourless prisms.

"MANY thanks for benefits received, and for the good messages you have put in the paper," is one of many pleasant words that we have lately been receiving along with annual half-sovereigns. (190/39.)

"C. & D." Nursery Rhymes.

Col. Wasser Oleon.

O, Colonel,
Supernal,
When bullets infernal
Have angrily whistled and spluttered and cracked,
I trow you have wondered
(While ordnance thundered)
If you would emerge with your body intact.

But, Colonel,
Eternal,
And more than diurnal,
E'en permanent fame is your fortunate lot;
And thus the Wise Fairy
Made you Secret-airy
Of the U.S. Legation—she never forgot.

So, Colonel,
This vernal
But evergreen journal
Salutes a brave man now in pathways of peace,
And hopes you ne'er fretted,
Or ever regretted
Forsaking U.S. for the service of Greece.

Soon after he resigned the secretaryship of the American Legation, to take over the management of the vaseline business here, Colonel and Mrs. Chesebrough were at some grand function when a former acquaintance in the diplomatic world remarked to the latter: "You have left the Legation, I hear." "Yes," said the lady; "we have gone into the service of Greece." The Colonel, we may add, did not wear the above costume at the battle of Bull Run, in which he fought as a lieutenant of the 11th Infantry Regiment.

COPPER SULPHATE FOR ALGIERS.—In a report to the Foreign Office by H.M. Consul General at Algiers, it is stated that there is a prospect of good trade in sulphate of copper used for sprinkling vines. The British product is preferred in the local market. During 1900 the import of sulphate of copper from the United Kingdom amounted to 118 tons, or an increase of 20 tons on the preceding year.

Observations and Reflections.

By XRAYSER.

The Chain for the Badge,

each link of which represents a President, was a happy idea. It gives a meaning to the decoration and redeems it from the vulgarity of mere barbaric display. Now it becomes in some degree a record of the Society's history. In our jewellery we generally make believe, at all events, that some useful purpose is to be served. The chain, the signet-ring, the scarf-pin, the eye-glass, fulfil some apparent purpose. Savages, on the other hand, decorate themselves from a simple desire to shine, to glitter. And the savage says to himself, even if he does not say it to his associates, as he hangs a new ring on his nose, or fixes a large piece of glass where his waistcoat should be, "This will make those beggars in the next forest respect me. They will never dare to call me a nonentity again." Curiously, too, that is the effect actually produced.

These Links, however,

are to appeal to a higher sentiment. They are to remind us all of the services which good men have rendered to us, and thus keep our gratitude alive, and especially to remind the President for the time being how far he falls short of the standard which has been set up for him by his distinguished ancestry, and thus keep him duly humble. But as he, too, passes into the domain of history, his glory will, like theirs, be magnified. "The evil that men do lives after them. The good is oft interred with their bones," wrote Bacon in one of those frivolous moments when, according to Mrs. Gallup, he was furtively writing plays for momentary amusement. But when he wrote seriously for posterity, as in his essays, he declared of the past nobility that "the memory of their virtues remains to their posterity, and their faults die with themselves." I think the prose reflection is the truer one. We know most of our predecessors by obituary notices only, and those who fill official positions are likely to sweep into their own net all that was done under their reigns by their subordinate colleagues.

The Later Links

scarcely get a fair field, I am afraid, in comparison with their earliest ancestors. It is almost a sacrilege in the eyes of some people to assume that our more recent Presidents, Messrs. Newsholme, Martindale, Hills, and Carteighe, can rank with Jacob Bell, William Allen, Peter Squire, and Henry Deane, for example. I do not just now argue that they can; but it is simple justice to remember that there was no critical *advocatus Diaboli* in the form of a trade Press in the old days to point out the faults and failings, if they had any, of the great men of pharmacy of the time. And while we are dispensing justice all round, let us remember that the links are far from naming all our heroes. There have been excellent men among us who have never risen beyond the Vice-President's chair, and others who have never even been near that. These must be contented with the fame of their virtues only. Someone asked Cato why among all the statues in Rome there was none of him. "I would rather people should ask why my statue is not there, than why it is there," Cato answered.

The Introduction of Pepsin

into regular medical practice by a Birmingham professor of medicine, suggested last week by the Birmingham correspondent, is hardly a claim which will bear investigation. The statement quoted from one of the earliest numbers of the *C. & D.* to the effect that pepsin was mentioned by Pliny and described by Galen must also have been based on a misapprehension. The first experiments with the gastric juice, which led to the discovery of pepsin, were made by the physiological chemist Schwann, in the year 1836, and it was he who applied the name to the digestive principle. To him, too, is mainly due the modern theories of zymotic diseases. *Pepsis* in Greek, meant, originally, cooking, boiling, and the *pharmaka peptica* of Pliny were simply medicines, usually administered in the form of decoctions.

The Origin of Opodeldoc

is another interesting pharmaceutical problem opened by a correspondent last week. The dictionaries say opodeldoc was introduced by Mindererus, and some of them make guesses at the origin of the name. But Mindererus must be content with the glory due to his recommendation of the acetate of ammonia. He did devise an opodeldoc which he refers to as somewhat different from that of Paracelsus. In a book of his entitled "Medicina Militaris" he thus advises the army surgeon: "Be also provided with a good plaister for wounds made by thrusting, such as are the opodeldock of Theophrastus." That was the familiar way in which he alluded to Paracelsus. Another writer of about the same date (1600), Schrœder, refers to the "Oppodeldock Plaister of Paracelsus." Paracelsus lived a century earlier than these two, and several allusions to opodeldoc have been found in his works. Very likely he invented the word; whoever did was a genius. It would have made a splendid word for a trade-mark. It looks as if it must have a meaning and yet probably never had any. It may have been suggested by opobalsamum, the tears of the balm of Gilead, a remedy of much repute at that date.

The Irish Preliminary

includes theoretical chemistry as a compulsory subject and botany as an optional one. Out of 94 candidates last year only 15 were plucked in chemistry, while 38 broke down over arithmetic. This appeared in Sir George Duffey's report on the examinations. Some members of the Irish Pharmaceutical Council in discussing the report suggested the withdrawal of chemistry from this examination. It will be seen that the figures quoted do not call for such a step, and though the inclusion of a technical subject in an examination purporting to be a test of general education has often been condemned, I think its abandonment here would be regrettable. Only a general idea of the science, I presume, is expected, and I can see no reason why a youth intending to be a chemist should not get that idea early. But have the arithmetic questions been quite fair? Boys are generally fairly sound on straightforward figure-work, but they have no imagination, and examiners are fond of puzzling them with questions setting forth a lot of hypothetic conditions which the candidates cannot realise.

The Somerset House Authorities,

as I understand, recently repudiated to the Editor of this journal any intention to depart from the principles of interpretation of the Medicine-stamp Acts laid down in Alpe's "Handy-book." It is difficult to reconcile some of the claims we are now hearing of with that intimation. In Mr. Eastman's letter, for example, there are distinct deviations from Alpe's dicta. Mr. Eastman is told that a label "Children's Cough-mixture [so much] to be taken *when the cough is troublesome*" is liable on account of the italicised words. Alpe (page 92) says "Cough Lozenges. Two to be taken when the cough is troublesome," is not a dutiable recommendation. Mr. Eastman has also been told that "Neuralgic Mixture; sells morning, noon, and night" is a liable legend. Alpe has no quotation exactly corresponding to this, but he says (page 84) that "The efficacy of these pills has been universally tested," which is at least as strong a statement, would not involve liability to duty.

Editorial Comments.

British Trade in 1901.

THE trade of the United Kingdom last year reached the grand total value of 870 millions sterling. Of this amount 522 millions were imports, 280 millions were exports, and 68 millions re-exports. Taking the figures collectively they show a decrease of 11 millions compared with 1900. That year, however, was an exceedingly prosperous one throughout Europe, and a period of abnormally high prices. The year's imports were slightly below those of 1900—522 238,986*l.*, against 523 075,163*l.*—and the changes that contributed to bring about this inappreciable decrease were considerable. Our principal articles of import have always been duty-free food and drink, and last year they were valued at 163 millions, or an increase of nearly seven millions. We bought almost three million pounds' worth more of corn, due, probably, to an improvement in prices. Purchases of dead meat were also on a considerably larger scale, and account for an advance of over three and a half millions sterling. Raw materials for textile manufactures increased by two million odd, chemicals increased by over half a million, and under the heading of "miscellaneous articles" there was an increase of a like amount. The only other increase was one of 385,000*l.* under manufactured articles. Set against these increases there were a number of decreases, which, in the aggregate, exceeded them to the extent of over three-quarters of a million. The heaviest was a falling-off of seven millions odd in raw materials for sundry industries, and the other decreases of importance were those of two and a half millions shown under metals,

Digitized by Google

and one and a half million under dutiable articles of food and drink. As already mentioned we bought 568,000*l.* worth more of chemicals, &c., for which indigo is responsible to the amount of 246,000*l.* The remainder of the increase is made up of larger purchases of alkali, carbide of calcium, tanning-bark, cutch and gambier, coal-tar dyes and valonia. We imported less borax, brimstone, and saltpetre. Our imports of spices declined by 267,527*l.*, due to lessened receipts of ginger, pepper, and unenumerated spices. In raw cocoa there was a decrease of 107,000*l.*, and in the prepared article an increase of 136 000*l.* The coffee import is at the same time higher by just half a million. Condensed milk shows a decline of under 50,000*l.* In refined sugar, thanks largely to anticipatory imports, there is a gain on balance of 773,000*l.*, while unrefined sugar exhibits a decrease of over half a million. The total of sugar and molasses is increased by about 270,000*l.* on balance. Glucose (owing to the duty, probably) shows a falling-off of about 100,000*l.*, and tea imports declined 1,200,000*l.* In regard to the importation of foreign spirits for methylation-purposes there was a prodigious increase, the figures being, 1901, 380,556 gals.; 1900, 61,708 gals.; and 1899, 8,573 gals. The bulk of this is, of course, German potato-spirit, which is finding new outlets for industrial purposes.

The exports for the year show a total reduction of 10 693,000*l.*, and it may at once be stated that 8 501,000*l.* of this was due to a falling-off in raw materials, which, in turn, is due to the reduced price of coal. The next largest decrease is that of nearly six millions in metals and metal manufactures. Chemicals show a slight decline of 320 400*l.* on a total of 8,942 100*l.* One of the chief features to be noted here is the continued expansion of our exports of drugs and medicinal preparations, the figures being as under:—

	1901	1900	1899
£	1,339,150	1,262,685	1,155,637

Our shipments of "soda compounds" increased by 62,392 cwt (5,474*l.*). The trade in bleaching-materials fell off by 240,000 cwt. (29,000*l.*), and of this amount the United States took 157,000 cwt. less. American competition has played havoc with the sulphate-of-copper business, a decline of 6,884 cwt (167,000*l.*) being noticeable. Chemical manures show an increase of 27,000 cwt. Soap has more than recovered its position, exports having gone up 71,630 cwt. and values 60 000*l.* The exports of seed-oils are stationary, our best customers being Germany, Holland, Belgium, and Australasia. Re-exports of foreign and colonial merchandise show an increase of four and a half millions, which is satisfactory. The figures relating to cinchona-bark show a diminution of 18,559 cwt., or 46,000*l.* Gum arabic has advanced by nearly 19,000 cwt., or 15,000*l.*, and there is a slight increase in lac of all kinds. Cocoanut, olive, and palm oils and petroleum have advanced by leaps and bounds, especially petroleum, which shows an increase of over one and a half million gallons. Quicksilver improved by 74,500 lbs., but the enhanced value was only 1,000*l.* Bearing in mind the adverse conditions under which British trade was carried on last year, and the industrial crisis which has prevailed in Europe, there is little foothold for the pessimist in the record. At all times the December report is one of the most interesting documents to the observant and studious Britonnian—if we may use a word which we find in Mr. J. Arthur Gibson's book on Consumption to designate the English, Scotch, or Irish man. Take, for example, the cotton account. In round figures we imported 42 million pounds' worth of raw cotton last year, and 4½ of cotton manufactures, and sent out of the country cotton piece-goods valued at 66 million pounds, besides 10 millions of other cotton manufactures and 5 millions of the raw stuff; in other words, we supplied our own needs in cotton and returned to the world the original value and as much again, that being payment for the skill and labour put into it. A similar tale might be told about wool; but we seem to use up all the raw jute we get for ourselves, as our exports of manufactured jute goods are just about equal to our imports of the same, while raw jute amounts to over four million pounds' worth. The linen trade is better, for while the imports of flax were valued at 2,606,565*l.*, the exports of linen yarns, piece-goods, threads, &c., were valued at over five millions. The country rarely gets credit for its business in manufactured articles. Yet three-fourths of the exports (or 230,000,000*l.*) are manufactured articles, and between a fourth and a fifth (118,000,000*l.*) only of the imports are manufactures, the rest (404 000,000*l.*) being food, drinks, raw materials, and other natural produce. In short, every man, woman, and child in the United Kingdom spends 5*s.* a week on imported produce, but only 1*s.* of that is on manufactured goods. The bullion and specie account is the smallest for many years. Our imports in 1901 were 32 millions, against 45 millions in 1899, and the exports for the same years 26 and 35 millions. We have to thank the Boer war for this, as in 1899 British South Africa sent us 15 millions' worth of gold, but the value dwindled to 378,626*l.* in 1900, and increased to 1,962 283*l.* last year. It is a pity the Board of Trade does not work out the value of diamonds as well.

The Wrong Button.

RIGID economists who consider that the essence of commercial enterprise and the aim of users of things are to transfer any article from its origin to the consumer, by the quickest process and at the smallest profit, will doubtless agree that the new scheme of trading which Kodak (Limited and Reduced) have introduced is altogether good. It consists, to put it bluntly, in squeezing out the wholesaler and entering into direct relations with the retail purchasers, offering them practically the whole of the discount that they were wont to give wholesalers, or half of it, if they decline not to deal in competitive goods. The scheme is not altogether new, for it has already been tried with some success in the United States by the other and larger portion of the Eastman concern. American dealers are better accustomed to schemes which savour of the trust, and many have taken more kindly to the arrangement than dealers in this country will when they, as the photographic season approaches, appreciate to the full what the Kodak scheme will really mean to them. We do not profess to say that the Kodak Company should not do exactly as they like with Kodak goods. The founders of the business came here with articles whose originality and utility would have sufficed to make them popular, but with magnificent enterprise and exceptional skill in publicity they hastened the popularity, so that at the present time the retail photographic business to the extent of not more than 50 per cent. is in Kodak goods. This is a circumstance which commands respect in considering the company's new scheme, and we agree with many retailers that gratitude for assistance in building up the photographic business cannot be altogether eliminated. Nevertheless, the Kodak Company will be the first to say that the business is one into which sentiment does not enter, and they have followed this policy in stopping relations with wholesalers. We are insular enough to sympathise with the aggrieved parties in saying that it is contrary to well-established British principles of trading to annul existing arrangements, for the carrying out of which

Digitized by Google

the subordinate parties have provided business machinery. We mentioned last week that one firm of wholesale dealers alone have been handling 1,000*l.* worth of Kodak goods per month—a figure which means a lot of office and warehouse labour. It requires no calculation to appreciate the position of such a house when their supplies are peremptorily cut off in order that the goods may go direct to some at least, probably the majority, of their customers. This latter consideration is apt to be overlooked, just as the Kodak Company have overlooked or ignored the fact that chemists and druggists in this country, who form the bulk of photographic retail dealers, have by long experience found that wholesale distributors are a great convenience. In effect, the Kodak Company wish to disestablish this custom and to get every retailer to buy direct. Another object appears to be to find out where their goods are sold, and probably where they are not in sufficient quantities. They do not want to open more retail stores, they assure us, but they have no objections to supply retailers with all the photographic goods they want, "competitive goods" probably not included. The plan will undoubtedly suit a great many retailers, but there will be as many to whom it will be an immense inconvenience, and that the Kodak Company appear not to have considered. We think they have touched the wrong button, but there is still time to make amends.

Samples.

LITTLE of what is going on in the Poisons Committee at Whitehall has been allowed to leak out, but those who ought to know say that matters are going badly for the principle of the Pharmacy Act. Since the pharmaceutical witnesses gave their evidence a preponderating mass of testimony from the other side has been called, and we noticed a sample of it in the *Ironmonger* last week. This was a *résumé* of lengthy evidence given by Mr. R. H. Smith, General Secretary to the Ironmongers' Federated Association, before the Committee. It was to the following effect:—

The members of the Ironmongers' Federated Association would be prepared, when selling poisonous compounds, such as weed-killer and sheep dip, to fall in with any regulations which the Privy Council may impose with the object of safeguarding the public. They suggest that they should only be allowed to receive substances which contain such poisons in sealed drums or packets from the manufacturer, and not to disturb bulk, but to distribute the packages exactly as received. It is furthermore suggested that ironmongers dealing in such compounds shall have to keep a book for the signatures of buyers of poisonous compounds, and shall set aside a cupboard, room, or other suitable receptacle for the storage of the compounds, properly labelled. Mr. R. H. Smith said that with such regulations it would be safer, from a public point of view, that sheep-dip and arsenic should be sold by ironmongers than by chemists, because in country places the ironmonger is in closer touch with the farmer, and knows the latter's workmen more intimately than does the chemist, as farmers are constantly buying agricultural requirements from the ironmonger. Mr. Smith also asserted that ironmongers were the original distributors of sheep-dips prior to the Pharmacy Act of 1868, and that it was unjust to give one class of traders a monopoly. Further, the chemist, by reason of his average small turnover, could not serve the farmer as advantageously as the ironmonger, who, on account of the large extent of his business, was content with a smaller profit.

Mr. R. H. Smith is described as a particularly useful witness, because he not only represents the I.F.A., but at one stage of his career qualified as an analytical chemist by going through the Royal School of Mines. Indeed, some members of the Committee were old fellow-students of his own. He is, we dare say, one of the least hostile witnesses who have been advocating free-trade in poisons by the creation of a third part of the schedule to consist of poisons which anybody may sell. That is the proposal which has yet to be appreciated by the drug-trade. Most people imagine that it will only apply to ironmongers, oilmen, and the like, but there is no reason why unqualified drug-store keepers should not take the fullest advantage of conditions which would satisfy such as Mr. Smith. Why should they be debarred from selling original packets as received from packers if their neighbour the grocer may? The principle of the Pharmacy Act in its widest sense may, therefore, be involved.

The *Worcester Daily Times* succeeds in printing about half a column in regard to the sale of poisons without mentioning the name of Mr. Dobbs, the Worcester solicitor, to whom credit is due for bringing the question of sale in sealed packets to the surface. We do not say that Mr. Dobbs inspired the article, the essential parts of which, apart from a narrative of what the Poisons Committee is doing, are as follows:—

With the opening of Parliament speculation will be rife as to the possibilities and probabilities of legislative reform on a variety of subjects more or less familiar to the "man in the street." Proposals of considerable importance affecting traders, likely to be embodied in a Government Bill, relate to the sale of poisons.

. . . . . .

The traders, having as great concern for the public safety as the pharmacists, are willing, and indeed anxious, that their sales of articles containing poison shall be subject to proper and well-defined restrictions, and be limited to original sealed vessels or packages, as received from the manufacturers and wholesale dealers. Without attempting to anticipate the report of the Poisons Committee, it seems only reasonable, for the public convenience, that when commodities are required for agricultural, horticultural, or other trade or technical purposes, persons other than chemists, if they are duly licensed, should be at liberty to supply the requirements of their customers; and it is clear that, under the conditions above mentioned, no harm would result.

These are sentiments which may find their way into other country papers, and it may, therefore, be well to keep in mind that they originate in Worcester, where Mr. Dobbs lives, moves, and has his being.

THE OUTDOOR MOVEMENT.

It is a sign of the times that the leading London pharmaceutical firms with the largest staffs of assistants are giving up the indoor system. Those who have adopted this plan within the past year are Messrs. John Bell & Co. and Messrs. Squire & Sons, of Oxford Street. Provision is, of course, made for night-bell attendance, and the change appears to have given satisfaction to all parties.

"WHEN THE COUGH IS TROUBLESOME."

In a letter from Mr. Eastman in last week's issue (page 58) a label for cough-mixture was said to be liable to stamp-duty on account of the words "when the cough is troublesome" after the dose. Alpe's "Handy-book" states that such addition does not involve liability to stamp-duty. We have put the matter before the authorities at Somerset House under the belief that the direction is neither a recommendation nor a holding-out of the article for the relief, &c., but is a simple and straightforward statement as to the time when the medicine should be taken. The department, however, holds that Mr. Alpe was wrong in saying "when the cough is troublesome" does not involve liability, as it is a distinct recommendation. We do not share that view. There are other instances in which it is only possible to give proper directions in regard to the administration of medicines by stating something involving mention of the malady —*e.g.*, in the case of diarrhœa-mixture, "after each loose motion." Such directions are not in any sense intended as a recommendation of the medicine, but as a safe guide for administration.

MILITARY DENTISTRY.

Many rejections have recently been made by the War Office authorities amongst the volunteer candidates for service in South Africa solely because the rejected ones had

Digitized by Google

bad or insufficient teeth. The possession of good teeth has come to be regarded as a necessity for successful soldiering, and the United States Government, with characteristic promptness, have in their new Army Reorganisation Bill created a corps of dental surgeons. The members of the Army Dental Corps belong to the regular establishment, and their duties are to serve the officers and enlisted men of the regular and volunteer armies. At present, the system only being in the experimental stage, they are employed as contract dental surgeons, with the rank of first lieutenant. The pay is $150 per month and quarters when serving with troops, all the instruments, apparatus, and materials necessary being furnished by the Medical Department. The Army Dental Corps, as at present constituted, is composed of thirty men. Three form the examining board, and the other twenty-seven are in Cuba, Puerto Rico, and the Philippines, with several at the Presidio in San Francisco examining the molars of the men returning on the transports.

THE TELEPHONE SERVICE.

["Is it too much to hope that, if the Postmaster-General retains the remnant of a conscience, the influence of the *Times* may ultimately succeed in awakening it?"—Messrs. Fletcher, Fletcher & Co. (Limited) (Holloway) in the *Times*, January 14.]

Bearding burly Markiss, baiting Mother *Times*,
Bold, audacious Fletcher, reckless in thy crimes,
Curb thy zeal unholy, common men may rob,
But Markisses—and gentlemen—are much above "a job."

"Remnant of a conscience," the phrase it likes me well;
But read his Lordship's speeches, and thy doubtings they'll dispel,
For thy keen commercial instinct must surely see that meet
And perfect "competition" comes from those that don't compete.

Business-man and Markiss, chief of the P.O.
Sapientia concentrata wheresoe'er he go.
"Is that you, St. Martins? Markiss seems in pain
Put him on Vibrona; good for muddied brain."

CONSUMPTION SANATORIA.

In view of the rumours prevalent as to the method by which the donation of Sir Ernest Cassel to the King is to be expended the *Medical Press* points out rather convincingly that the erection of palatial edifices to hold a comparatively small number of patients is a mistake. That has hitherto been the tendency: witness the Brompton Hospital for Consumption; but the *Press* advocates instead the erection of cheap buildings on a scale commensurate with the demand. Unless the funds are judiciously expended only a fraction of the tuberculous sick can be treated on approved principles; and until it has become possible to admit to treatment all who apply, the idea of stamping out, or even checking the disease, may be abandoned. It has been found that results equally as good as those obtained in brick-and-mortar hospitals can be secured at a fraction of the cost of the latter. The treatment is essentially one of long duration, and the good accomplished in large institutions where but a few can be accommodated is necessarily very limited. At the Mount Vernon sanatorium at Hampstead, continues the *Press* man the treatment is limited to three months, with the result that no cures are to be recorded, although in most instances a certain degree of improvement has followed. What is wanted, he urges, is a large number of light wooden houses distributed all over the kingdom on suitable sites. These may be destroyed or re-erected elsewhere from time to time without the costly administration which absorbs such a large proportion of money contributed by the charitable in our large general hospitals. This is a point which the King, who has a reputation for considerable common sense, would do well to look into.

SOME NOTIONS.

There are a few items in this week's *Truth* which are rather interesting to chemists and druggists. One of the first is that every boy in Harrow School had to be vaccinated, and the two doctors got 304*l.* 10*s.* for the job, 10*s.* 6*d.* for doing each of 580 boys, and 1*s.* for the lymph. It is the extra charge for the lymph which Mr. Labouchere objects to—rightly, we think. The next item that we strike is this:—

A firm of "soft-soap manufacturers," calling themselves the Chiswick Soap Company, have lately been annoying householders in the West End, offering to take 1*s.* 3*d.* for a parcel of goods priced at 4*s.* 6*d.*, and telling any one who will believe it that "our relations with the trade will prevent our supplying you direct in future."

This paragraph is followed by another about the rheumatic specialist, Charles Montagu, and the third leading article is an instructive one regarding the Drouet Institute for the Deaf, which is described as "a gang of quacks with their headquarters in Paris." This article concludes with a suggestion for the reform of medical law in order "to make it illegal for unqualified persons to practise, no matter by what colorable pretexts they may disguise their doings."

CONTAGIOUS DISEASES OF ANIMALS.

According to the official returns under the Diseases of Animals Acts, anthrax is steadily becoming more prevalent. In 1901 there were 647 outbreaks, as against 571 of the previous year. There appears to be immortal fame (if not fortune) for the veterinarian who can discover a cure, or even an effective remedy, for this fatal blood-disease. Glanders also appears to be on the increase, the highest total (1,350) since 1893 having been reached last year. Consolation for these alarming statistics may be found in the fact that rabies in dogs is now evidently extinct in Great Britain. Last year only one case was reported, and the muzzling order is not in operation in any part of the island. Pleuro-pneumonia has not been heard of in this country for four years, but outbreaks of swine-fever seem to be on the increase, while the number of swine slaughtered is diminishing—a fact which apparently indicates a greater number of cures than formerly. In 1900 there were twenty-one outbreaks of foot-and-mouth disease, which last year was reduced to twelve.

THE MILK STANDARD.

It has frequently been urged by Dr. Attfield as an argument against the legalisation of the British Pharmacopœia as the standard under the Sale of Food and Drugs Acts, that such a step would tend to lower the present high standard of galenical preparations. Unscrupulous traders would be tempted, he has said, to reduce galenicals of high quality to the minimum limits of legal requirements, as is the practice in the selling of milk. That the Board of Agriculture is alive to this practice is shown by a circular recently issued to local authorities urging them to keep steadily in view the possibility of the artificial reduction of the quality of natural milk to the official limits by the abstraction of cream or the addition of separated milk or water. Samples are to be taken for analysis whenever the existence of malpractices of the kind is suspected. The evidence given before the Milk Regulations Committee showed that the practice of mixing separated milk with new milk has become increasingly prevalent, and therefore increased stringency is impressed upon the authorities to counteract these fraudulent tendencies. The Committee reported further that, from the evidence submitted, they find that it is a common practice to add gelatin to cream for the purpose of giving it a fictitious appearance of richness or thickness. Local authorities are desired to ascertain whether this form of adulteration prevails in their districts, and if the presence of gelatin or other similar substance is reported by the analyst proceedings might be instituted under Section 6 of the Sale of Food and Drugs Act, 1875.

Legal Reports.

High Court Cases.

A Valentine Echo.

In the Court of Appeal on January 14, the Master of the Rolls, Lord Justice Romer, and Lord Justice Mathew heard an appeal by the plaintiffs in the action of H. G. Campion & Co. *v.* the Valentine Extract Company (Limited) and others brought by a firm of solicitors to recover 889*l.* 5*s.* 6*d.*, the balance of costs alleged to be due from the defendants, and incurred in defending an action in the Chancery Division brought by Valentine's Meat-juice Company against the defendants. Mr. Justice Darling had in a lower court refused to regard a Mr. Herbert Hughes as one of the defendants, and the Court now reversed that decision.

Electrolytic Alkali.

The case of the Commercial Development Corporation (Limited) *v.* Atkins & Applegarth came before the Appeal Court (Lords Justices Vaughan Williams, Stirling, and Cozens-Hardy) on January 14. It was an echo of the action by Messrs. Atkins & Applegarth against the Castner Kellner Alkali Company to restrain the infringement of a patent. This failed. The Castner Kellner Company have bought their opponents' patent, subject to the option of the Development Corporation, who had entered into an arrangement with the present defendants whereby the latter were to prosecute their action "to final judgment or settlement." A nice legal tangle has since resulted, for the Development Corporation's rights were threatened by the arrangement. Mr. Justice Buckley granted the company an injunction to restrain the defendants from withdrawing or hindering the appeal against his own decision in the case of Atkins & Applegarth *v.* the Castner Kellner Company, and their Lordships now sustained that injunction.

Stockbroker and Chemist.

Mr. Justice Jelf sitting without a jury, in the King's Bench Division, on Tuesday, January 14, heard a case in which Wm. Richard Eaton, member of the London Stock Exchange, sued Geo Croker, a chemist, trading as Geo. Bennett, at 107 Brixton Road, to recover 120*l.*, balance of account due for commission earned as broker on the purchase and sale of stocks and shares and for differences on Stock Exchange transactions. The plaintiff's case was that the defendant asked him to open a very speculative account in American shares, and plaintiff only agreed to do so on condition that he was kept supplied with cover, and stipulated that if at any time he found he had not sufficient cover in hand to meet any loss he should be at liberty to close the account. Nothing was said as to giving notice of closing the account, but it was pointed out that in speculative stock of this description in time of panic the defendant might lose a couple of thousand pounds before he could even communicate with the plaintiff. There were dealings up to July, 1901, when plaintiff closed the account, the cover having run off, and claimed the amount due. The defence was that the transactions were entered into on the terms that the plaintiff should hold the stock until instructed to sell, the defendant supplying reasonable security, and that the losses were incurred by the plaintiff wrongfully and without authority and without giving the defendant an opportunity of supplying cover closing the account. He contended that but for this there would have been a profit, and counterclaimed for 380*l.* His Lordship was satisfied that a special bargain was made as stated by the plaintiff, and gave judgment for the plaintiff on the claim and counterclaim, with costs.

Sale of Food and Drugs Act.

Milk of Sulphur.

At Marlborough Street Police Court on January 9, John R. Shardlow, oilman, 15 Broad Street, Golden Square, W., was summoned for having sold sublimed sulphur as "milk of sulphur." Rosa Webb, who purchased the sample, said she went to the defendant's shop and asked for "a quarter o a pound of milk of sulphur," for which she paid a penny. The article supplied proved to be sublimed sulphur, which the inspector said if taken in mistake for milk of sulphur might cause considerable irritation, as it is not prepared specially to be taken inwardly.

The Defendant: If I had known there was any difference I should not have done it. It would not pay me to run such a risk. Two-shillings' worth will last me twelve months.

Mr. Kennedy (the Magistrate): You might poison somebody if you do not know the difference between the articles you sell.

The Defendant: I should have been poisoned years ago if it were poisonous. My mother used to give me brimstone and treacle regularly in the spring of the year. There is not much poison about it.

Mr. Kennedy: Are you acquainted with the nature of all the articles you sell?

The Defendant: Some I do not know.

Mr. Kennedy: If someone asked you for flour would you give them arsenic?

The Defendant: I do not sell it.

Mr. Kennedy: This is a very dangerous state of things, these oilmen selling drugs. You will have to pay a fine of 40*s.*, with 14*s.* 6*d.* costs.

At Bradford West Riding Court on January 9, John William Hird, grocer, Shipley, was charged with selling adulterated milk of sulphur, which on analysis was found to contain 62 per cent. of hydrated calcium sulphate. The defendant contended that he was not responsible as he sold the milk of sulphur in sealed boxes, just as it was supplied to him. A fine of 20*s.* and costs was imposed, the Chairman remarking that the defendant ought to be indemnified by the firm that supplied him.

Camphorated Oil.

At Kensington on January 13, Mr. Thomas Strode, chemist and druggist, 88 Askew Road, Shepherd's Bush, W., was summoned for selling camphorated oil which according to the certificate of Mr. W. Chattaway (the public analyst) was deficient in camphor to the extent of 23·3 per cent. On behalf of the defendant it was urged that the boy who made the camphorated oil had not properly mixed the ingredients, and the camphor settled at the bottom of the vessel. Defendant, who said he had been in business at his present address for nineteen years, in reply to Dr Forman (one of the Magistrates), stated that he did not notice that the camphor had settled at the bottom of the vessel until the oil was being turned from one vessel into another. Dr. Forman said a very little shaking would dissolve the camphor in the oil. If it had been a preparation of opium those who were given the last portion of it might have been in a bad plight. The Magistrates at first imposed a fine of 5*l.*, but on reconsideration decided on a fine of 40*s.*

Mr. Jesse Tomlinson, trading as a druggist at Accrington, was fined 10*s.* and costs at Burnley, on January 8, for selling camphorated oil not up to the B.P. standard.

Spirit of Nitrous Ether.

A medical herbalist named Tickle, of Old Hall Street, Burnley, was on January 8 fined 10*s.*, including costs, for selling spirit of nitrous ether deficient in ethyl nitrite. His defence was that the drug had lost its strength by evaporation.

At Keighley on January 13, Sophie Ogden, grocer, Braithwaite, was fined 1*s.* and costs, 8*s.* 6*d.* in all, for selling sweet spirit of nitre certified to contain only four-sevenths of the minimum proportion of ethyl nitrite.

Errors in the Summons.

Before Mr. Justice Darling and Mr. Justice Phillimore, sitting as a Divisional Court of King's Bench on Tuesday, January 14, Mr. Griffith Jones moved for a rule *nisi* calling upon Alderman Vaughan Morgan, sitting as a Court of Summary Jurisdiction at the Guildhall, to show cause why he should not state a case. He heard a summons against a milk-seller named Richards, and convicted him of selling milk diluted with water. The grounds of the appeal were that there was a very material omission in the copy of the analyst's report attached to the summons, which stated that

Digitized by Google

he had received from the inspector "a sample of ——." In the original the word "milk" was inserted, but in the copy served on the defendant the blank was not filled in. Counsel also took the point that though the Act provided that the samples were to be divided and sealed "there and then," the inspector took them from the shop to an adjoining room and there sealed them. Their Lordships refused the rule.

GREGORY'S POWDER.

AT Pontefract on January 11, William Henry Beetham, grocer, Ackworth, was charged with having sold Gregory's powder which upon analysis was found to contain 55 per cent. of magnesia and 45 per cent. of ginger and rhubarb, instead of 66 per cent. and 33 per cent. respectively. Defendant, who said he had made the powder for a recipe which had been used by his predecessor for forty years, was fined 30*s.* 6*d.*, inclusive of costs.

Night-lights for the Chest.

IN the City of London Court on Monday, January 13, before Judge Lumley Smith, K.C., an action was brought by Mr. William Steward, of Wanstead, against Mr. John Glenister, of Bow Road, and Mr. Arthur E. Reeve, Fairland Road, Romford, to recover the sum of 65*l.* 10*s.* on a commission-note dated February 28, 1898. Mr. Joseph, plaintiff's counsel, said the defendants were patentees of medicated night-lights, and in February, 1898, they agreed to give the plaintiff 10 per cent. if he could raise 2,500*l* with which to develop business in the lights. They became acquainted with the plaintiff in business, and they now thought he had influence in procuring a purchaser of their patents. They agreed to give him 10 per cent. on the purchase-price which would be paid, and subsequently a proposition was made for a company to be formed by them with a capital of 2 500*l.* The plaintiff was to become a director of the company and to use his best endeavours to obtain the necessary capital. Everybody anticipated that the whole of the money would be forthcoming. The plaintiff, however, was able to get 655 shares at 1*l* each subscribed for. The company went to allotment, and after it had been in existence for some time the plaintiff found that he had been compelled to bring this action to recover the commission to which he was entitled. The defendants' case was that no arrangement had ever been entered into by which the plaintiff was to be paid cash for commission for introducing capital. They had been willing all along to give him shares in the company to the value of the amount of his claim. If the plaintiff had found 2,500*l.* the company would no doubt have been a success, but he was only able to find 200*l.*, and that had "messed the whole thing up." The Judge, after hearing evidence in support of these statements, said judgment must be entered for the plaintiff for the amount claimed, with costs. In the course of his remarks he asked whether the night-lights were differently medicated for each disease, or whether the same night-light would cure influenza, laryngitis, whooping-cough, lung-disease, and everything else. Mr. Reeve, the second defendant, said one night-light was made, and it was for benefiting the chest. It acted on the tissues of the lungs and enabled the patient to breathe more freely. The Judge suggested that the night-lights had the same effect as a bronchitis-kettle. The witness said it was similar, only one had air giving off chemicals instead of steam. The Judge: I only wanted to know, you know. I am not going to buy any of your shares. (Laughter.)

THE principal export from the Bahamas is sponge, and 1,165,406 lbs. (104,219*l.*) of it were exported in 1900, against 1,124,585 lbs. (84,003*l.*) in 1899. Of this amount the United States received last year 850,141 lbs. (74 287*l.*), and the United Kingdom 115,936 lbs (7,461*l.*).

THE CREDITORS OF SAMUEL H. HENRY, chemist, Monaghan, met in the offices of Messrs H. C. Neilson & Son, solicitors, 10 Fleet Street, Dublin, on January 8, when an amended statement of affairs was presented showing liabilities 771*l* 10*s.* 9*d.*, and assets 324*l.* 3*s.* 6*d.* Debtor's solicitor made an offer of 7*s.* 6*d.* in the pound, but after some discussion this was increased to 10*s.* in the pound, payable at four, eight, and twelve months. This was favourably received by the creditors.

Bankruptcies and Failures.

Re JAMES MENZIES, 81 Jamaica Street, Glasgow, trading as a Chemist.—At a meeting of creditors, held in Glasgow on January 8, Mr. H. M. Mackie, C.A., was appointed trustee in the sequestration. No statement of affairs was lodged.

Re JOHN HUTCHINSON WOOD, 72 Handcroft Road, Croydon, trading as a Chemist.

THE Official Receiver, who is the trustee, having realised the estate, gives notice that it is his intention of applying to the Board of Trade for his release. The accounts show a net realisation of 33*l.* 17*s.* 11*d.*, as against 100*l.* 2*s.* 6*d.*, the debtor's estimate of the value of his estate. The total costs and charges amount to 19*l.* 6*s.* 1*d.*; preference creditors, 14*s.* 4*d.*; first and final dividend of 1*s.* 6*d.* in the pound on 179*l.* 13*s.* 10*d.*, the amount for which proofs were admitted, 13*l.* 9*s.* 7*d.*; balance, 7*s.* 11*d.* The debtor's estimate of the amount expected to rank for dividend was 201*l.* 9*s.* 4*d.* The Official Receiver, in his remarks, says that after deducting costs and rent debtor paid him the balance, amounting to 2*l.* 15*s.* 2*d.* The life policy had not been in force sufficiently long to have acquired a surrender-value. The good-will was unrealisable. He was successful in obtaining 40*l* for his interest in the lease of 70 and 72 Handcroft Road, after payment of a sum of 12*l.* in redemption of the fully-secured creditors' claim thereon. Creditors can obtain any further information by inquiry at the office of the Official Receiver and Trustee, 24 Railway Approach, London Bridge, S.E.

Re WILLIAM WOOSTER, High Street, Southall, trading as a Chemist.

THE examination of this debtor took place at the Westminster Bankruptcy Court on January 11. The statement of affairs showed liabilities of 806*l.* 7*s.* 8*d.* (including forty-six unsecured creditors, 611*l.* 5*s.* 2*d.*), and net assets 369*l.* 1*s.* 6*d.* Debtor stated that he commenced business in High Street, Southall, in December, 1898, with a capital of 50*l.* or 60*l.*, having previously been managing assistant to a chemist in Holloway Road, N. He was subjected to a searching cross-examination by the Official Receiver (Mr. Cecil Mercer) as to his reasons for taking over such a business with so little capital. The inquiry elicited the fact that while at Holloway Road debtor made the acquaintance of a Mr. Moore, who offered to advance him money to start business for himself if he could see a suitable one going. Debtor opened negotiations as to the Southall business, then owned by Mr. Williams. Eventually Mr. Moore took the business from Mr. Williams and transferred it to debtor. Mr. Moore advanced 400*l.*, and debtor had to find the remaining 287*l.*; 200*l.* of this amount was left to be repaid to Mr. Williams in instalments. Despite a clause in the leases that lessee should not, without the consent of the lessor, assign or underlet the premises or any part thereof, the premises were made over to a Mr. F. C. Quinian, to whom debtor had paid the rent until last June. He valued the stock at the date of the receiving-order at 350*l.* Up to May 31, 1901, debtor said he owed his wholesale houses 611*l.* By an ante-nuptial settlement he made over the household furniture and effects to his wife, who had advanced him 50*l.* Judgments had been obtained against him in the County Court at the time of the receiving-order. No fewer than five people were in possession—viz., the two landlords, the High Bailiff from Uxbridge, the Sheriff, and afterwards the Official Receiver. He attributed his insolvency to want of capital and competition. He incurred very little liability after May, paying chiefly in cash. On a capital of 50*l.* he made himself responsible for 687*l.*, including the rent when he took over the business. He found afterwards that he had been misled, and had paid too much for the business. He was never in a position to pay all his accounts in full. Debtor did not think that any of the creditors, with the exception of Messrs. Baiss Brothers & Stevenson (Limited), knew of the arrangement between himself and Mr. Moore. The takings of the business averaged 817*l.* per year. The profits of a chemist varied considerably according to the class of business, and might be anything between 25 and 200 or 300 per cent. His was only a drug store, and the profits worked out at 26 per cent., say from 200*l.* to 250*l* a year, out of which he had to pay rent, living, wages, and allow for bad debts. County Court expenses had cost him about 40*l.*, and solicitors' costs about 20*l.* His net profits for the three years had been about 200*l.*, and he had repaid Mr. Moore just over 100*l.*, and 100*l.* had been paid to Mr. Williams. He had never prepared a profit-and loss account or taken stock; it was not usual. Some of the largest creditors were Messrs. Baiss Brothers & Stevenson, 80*l.*; Messrs. Meggeson (Limited), 19*l.*; and Messrs. Loomes, 67*l.* 10*s.* He had never been able to pay these amounts, and had been carrying on business with the indulgence of his creditors. After further questioning the examination was adjourned.

Martyn, George, late Orchard Street, Portman Square, W., physician and surgeon.

Adjudications.

Emmett, Simeon, Bradford, formerly mineral-water manufacturer, now mineral-water manufacturer's assistant.

Trythall, William John, Cusgarne, Gwennap, and Perranwell Station, Cornwall, chemical-manufacturer, Truro.

New Companies & Company News.

Borran (Limited).—Capital 500*l.*, in 1*l.* shares. Objects: To carry on at Sheffield or elsewhere the business of general dealers in various commodities pertaining to artificial teeth.

Bradford Detergent Fluid Company (Limited).—Capital 10,000*l.*, in 1*l.* shares. Objects: To manufacture and sell all kinds of soaps, substances, materials, preparations, fluids and articles for cleansing, purifying, disinfecting, dyeing or treating raw materials, manufactured products, &c.

R. S. Clare & Co. (Limited).—Capital 20,000*l.*, in 1*l.* shares. Objects: To acquire the business of distillers of tar, rosin, oil and turpentine, manufacturing chemists, oil, grease, and varnish manufacturers, drysalters, drug-merchants, &c., now carried on at Liverpool, as "R. S. Clare & Co." The first directors are the vendor, W. A. Meadows, and one other to be appointed by the vendor. Remuneration of W. A. Meadows, 300*l.* per annum.

Selby Flax Co. (Limited).—Capital 10,000*l.*, in 1*l.* shares. Objects: To acquire the business of a flax, tow, and hemp grower importer and merchant, thresher, retter, scutcher, seed and cake merchant, farmer, &c., heretofore carried on by John Foster at the Holmes and Water Lane, Selby, Yorks, and elsewhere, and to carry on the same and the business of general textile manufacturers and merchants, seed-merchants, oil-refiners and merchants, oil-cake manufacturers, makers of vitriol and dyeing and bleaching materials, &c. No initial public issue. The first directors are R. J. Foster and R. Blackburn. Qualification, 100*l.* Remuneration as fixed by the company. Registered office, Water Lane, Selby, Yorks.

Scotch Soda Manufacturing Company (Limited).—Capital 5,000*l.*, in 1*l.* shares. Objects: To acquire the business of a soda-manufacturer, &c, carried on by A. Cohen as "The South London Scotch Soda Manufacturing Company" at Bombay Street Arch, Southwark Park Road, London, and to carry on the same and the business of chemical-manufacturers, chemists, drysalters, drug and dyeware merchants, &c. The first subscribers are:—M. Heilpern, 16A Faulkner Street, Manchester, wholesale draper; B. Cohen, 10 Tredegar Square, Bow, E., chemical-works manager; S. Miller, 73 Sidney Street, E., soda-maker; M. Plesser, 2 Mulberry Street, E., chemical-works foreman; P. Weber, 10 Tredegar Square, Bow, E., accountant; Mrs. B. Cohen, 10 Tredegar Square, Bow, E.; and A. Cohen, 37A Commercial Road, E., hardware-merchant. No initial public issue. A. Cohen is the first managing director. Registered office, Bombay Street, Southwark Park Road, London.

Lawrence Heap & Co. (Limited).—Capital 5,000*l.*, in 1*l.* shares Objects: To acquire the business of a chemical-manufacturer carried on by Lawrence Heap at the Rossendale Chemical-works, Stacksteads, Lancs, as "Lawrence Heap & Co.," and the business of a pipe clay manufacturer carried on by Lawrence Greenwood at Lee Mill, Bacup, Lancs, as "W. R. Preston & Co.," and to carry on the business of manufacturing chemists, pipe-clay manufacturers, druggists, drysalters, oil and colour men, importers and manufacturers of chemical and other preparations, manufacturers of photographic, surgical and scientific apparatus and materials, &c. The first subscribers are:—L. Heap, Brandwood, Stacksteads, chemical-manufacturer; L. Greenwood, Manchester Road, Haslingden, pipe clay manufacturer; Mrs. E. H Heap, Brandwood, Stacksteads; Mrs. M. A. Greenwood, Manchester Road, Haslingden; J. Greenwood, Lane Side, Haslingden, engineer; J. A. Heap, 279 Newchurch Road, Stacksteads, foreman; and J. Lord, 184 Newchurch Road, Stacksteads, clay-grinder. No initial public issue. The number of directors is not to be less than two nor more than five; the first are Lawrence Heap (chairman) and Lawrence Greenwood. Qualification, 50*l.*

Boots' Shares.—Forty-one preferential shares in Boots Cash Chemists (Lancashire) (Limited) were sold at Sheffield on January 7 for 22*s.* 6*d.* each.

Carlton's Drug-stores (Limited).—It was resolved on December 13, 1901, and confirmed on December 30, at 433 Green Lanes, Harringay, that this company be wound up.

Orion Chemical Company (Limited).—It was resolved on December 18, 1901, that the company be wound up. Mr. J. S. Cotman, Moorgate Station Chambers, E.C., chartered accountant, is the liquidator.

Personalities.

The head of the Cohen Syndicate, which is working a bank-breaking "system" at Monte Carlo is Mr. Edgar Cohen, senior partner in the firm of Messrs. I. & M. Cohen, sponge-merchants, Houndsditch, E. Mr. Cohen is also a director of Harrod's Stores, of D H. Evans & Co. (Limited), and chairman of Louise & Co. (Limited).

Amongst our callers last week was Mr. James Crosbier Goold, the representative in Melbourne of Nestlé's food. Mr. Goold served his apprenticeship to the drug-trade in Dublin, and was for a time in business as a pharmacist in Melbourne, but now has larger interests in the representation of M. Henri Nestlé. While in London his address will be 48 Cannon Street, E.C., his firm's headquarters.

On a Postcard with a Bristol postmark and familiar handwriting:—*Q.* Why did the Calf Lymph?—*A.* Because Louis Pasteur.

Pharmaceutical Society of Great Britain.

JANUARY EXAMINATIONS.

THE Registrar of the Pharmaceutical Society of Great Britain has furnished us with the following list of persons who, at the meeting of the Board of Examiners for England and Wales, held in London this month, satisfied the examiners:—

MAJOR EXAMINATION.

Ten candidates were examined, eight failed, and the following passed:

Cole, William Parmiter, London.
Thompson, Frederick William, London.

MINOR EXAMINATION.

The number of candidates examined was 238; of these 204 failed, and 64 passed, viz.:

Ashforth, Frank P., Corbridge
Baker, Oliver, Leeds
Banks, Sydney J., St. Neots
Bound, Wm. S., Llandrindod Wells
Brazier, W. N., Stourbridge
Brearley, Samuel E., Bromley
Bridger, Fredk. W., Eastbourne
Britland, A. J. D., Penzance
Cannon, Herbert H., Hammett
Clarke, Wm. Fox, King's Lynn
Cocking, T. Tusting, Sheffield
Crompton, H. Grundy, Preston
Day, William George, Windsor
Derry, Alfred, Wadebridge
Dobson, Ernest John, Deal
Downing, E P., Hunstanton
Earlam, Ernest, Frodsham
Evans, David Albert, Narberth
Exell, Arthur, Sheffield
Farr, Francis William, Yaxley
Finlayson, Daniel, Dunfermline
Goss, John Osborne, Plymouth
Gresswell, C. S, Portsmouth
Griffiths, John, Lampeter
Halstead, H. C., Manchester
Hannay, Thomas, London
Harrington, Arthur H. A., Walsham-le-Willows
Higgins, Frederick S., London
Hodgson, John W., Lancaster
Hopkins, C. A., Merthyr Tydvil
Hunt, George P. A., Ipswich
Jones, Robert Ward, Louth
Lacey, Edgar Hiram, Clapham
Layland, John, Wrightington
Lewis, Harry, Poole
Lowe, John Hadfield, Blackpool
Lunt, Godfrey F., Manchester
McCabe, Aubrey J., Croydon
Machin, Harold, London
Mannox, M. M., Birmingham
Mansbridge, W. A., Bristol
Matthews, W., Cirencester
Neill, E. A., Cheadle Hulme
Passmore, S. H., South Molton
Pearce, Robert E., New Quay
Pitchford, William T., Bristol
Purdy, Ernest Gibson, Leeds
Rice, Thomas J., Birmingham
Robinson, Emil, Whitchurch
Robinson, James Stacey, Blyth
Sampson, Howard A. C., Barnet
Sharp, James Alex., Bristol
Shearer, John A., Aberdeen
Shuttleworth, J. H, Gainsborough
Smith, Harold S., Horsham
Stiles, Percy C. G., St. Ives
Taylor, Herbert W., Kensington
Vibert, Samuel Howard, Totnes
Walker, Geo. T., Birmingham
Wardle, A. H., Maidenhead
Westlake, Ethel M., Windsor
Williams, William N. P., Holywell
Willox, L. S., New Pitsligo
Woodward, Henry K., Halifax

The January Minor.

As I am one of the lucky ones in the January examination at Bloomsbury I send THE CHEMIST AND DRUGGIST my questions for the benefit of any who are to tread the steep ascent in the future. My first day was Friday, January 3. Practical chemistry was the morning subject, and the paper was as follows:—

1. Find the s.g of the solution provided.

2. By means of the pure $KHC_2O_4 2H_2O$ provided, estimate the number of grammes of $K_2Mn_2O_8$ per litre of the solution provided.

3. Find the salt mixed with the pure calcium oxalate in the pill-box.

I had to do my quantitative work first, and as nearly all the students had s.g.s everyone wanted the balances together. I had to wait two or three times for my neighbour to finish weighing, and when he wanted to weigh he took someone else's balance, and so kept another fellow waiting. In the end I only had twenty minutes for my salt. The balance was a poor affair into the bargain. I had to call the attendant once, but all the same it creaked like coal-scales whenever the pans were swinging. The salt I found to be sodium chloride.

The dispensing-paper was as follows:—

Dec. aloes co. ... ... ℥xx.

Pil. ferri ... ... gr. v.

Mitte xxx. Varnish.

Lotio. hydrarg. nig. ... ... ℥x.

Pot. brom. ... ... ℥ij.
Pot. iod. ... ... ℥ij.
Tr. sumbul. ... ... ℥ss.
Aq. ad ... ... ℥vj.

℥ss. t.d.s.

Opii ... ... ℥j.
Adipis benz. ... ... ℥j.

I finished the whole of this paper, with the exception of the pills, which, at the end of the time, were still too soft to be rolled out. The examiner, who was an exceedingly nice man, told me I need not trouble about the pills, as I had finished everything else. He was most obliging, helping the candidates to find things, and running here, there, and everywhere to get measures, or whatever was required. The whole lot of us were quite at our ease with him in five minutes. Long life to him, whoever he may be. He was in the little room on Friday afternoon, January 3.

My second day was Saturday, January 11, in the afternoon. As this was the first time I had been up for the second day I was not very hopeful of success. My first subject was prescription Latin. I had to translate into full Latin these:—

Liniment of aconite ... ... ℥ij.
Liniment of belladonna ... ... ℥ss.
Liniment of chloroform ... ... ℥ss.

Mix, and make a liniment.

Directions.—The liniment to be rubbed over the breast-bone and betwixt the shoulder-blades four times a day.

Take of

Strychnine ... ... $\frac{1}{8}$ gr.
Reduced iron ... ... 40 gr.
Powdered rhubarb ... ... } of each a sufficient quantity
Syrup of glucose ... ... }

Divide into six pills.

Directions.—One to be taken early every morning.

I was asked doses—*e.g.*, lead acetate, morphine, liq. morphinæ, hyd. subchlor., and hyd. perchlor.

Next materia medica. I was shown two samples of benzoin to distinguish Siam from Sumatra; two varieties of chamomile, single and double; two specimens of cloves, one badly dried; one sample each manna, aniseed, dill, poppy-seed, sandarac, mastic, strophanthus, and hemlock seed. The examiner asked me the B.P. test for strophanthus, and the way to distinguish between true and false chamomile. All the specimens were so good as to be easily detected. The conium was, in fact, so well dried as to be quite different in appearance from most conium samples. It had kept its green colour quite completely. I was asked the habitat of mastic, the use of maw seed oil, and the botanical names of all the specimens shown me, but no natural orders. I was also questioned about the solubility and methods of extraction of fixed and volatile oils.

In botany I had first to give an explanation of a fern-frond (*Aspidium*). Elementary questions on alternation of generations followed, and on the annular rings in a piece of tree-trunk and in table top. Other items were micro. section of water-plant stem (transverse); reasons for calling it a water-plant; transverse sections (three on one slide) of two-year old gymnosperm stem showing resin-ducts (slides stained). I was shown a flower of the *Ranunculaceæ*, with either petals or sepals suppressed, and asked to point out the corolla. I termed the petaloid leaves "perianch," which satisfied the examiner. He pointed out aborted stamens, asking what they were, and asked the natural order. Two plants for recognition, lavender and one which I did not recognise, but gave its order *Umbelliferæ*.

The pharmacy examiner began by asking me how long I had served, and what B P. preparations I had seen made. Had I ever made spt. ammon. arom., spt. æth. nit., liq. plumbi subacet. fort., ext. ergotæ liq., and several other things, which not one chemists' apprentice out of a hundred gets a chance of seeing made. At last he came down to syrup of tolu, and asked why the liquor is cooled before dissolving the sugar. What is the proportion of sugar in B.P. syrups? Why more or less would be unadvisable? What are the uses to which alcohol is put in the B.P., and proportion necessary as a preservative? Manufacture, distillation, and concentration of alcohol? Giving me a B.P. he asked me to turn up ext. ergot. liq., and explain the process of manufacture. This I was unable to do, as I had forgotten (or never heard) why the hydrochloric acid is used. I asked him, when he had finished questioning me, if he would mind explaining the use of the acid in ergot. He was quite indignant. "Another time and another place," he said; "I am not here for educational purposes"

The examiner in chemistry (Professor Thomson) was the best man of all, if, after the pharmacy man, there could be any distinction. He was constantly saying, "Don't worry yourself, don't worry; you know perfectly well what to say if you will think

Digitized by Google

a minute," and, thanks to his patience, I generally did. He took me all through the syllabus as far as its different branches go. These were the points on which he based his questions: Estimation of molecular weight by combination with silver, by vapour-density, and by depression of the freezing-point; analogies between mercury, copper, and silver, as evidenced by their oxides and chlorides; ditto between iron and chronium; on the oxides of chronium; bichromates and permanganates; silver salts in photography (elementary); benzene and preparation of aniline therefrom by intermediate formation of nitro-benzene; saturated and unsaturated hydrocarbons and difference in graphic formulæ (carbon bonds) between them; methane, ethane, ethylene, formation of ethylic alcohol by intermediate formation of ethyl chloride and heating with alcoholic potash; cuprous and cupric chloride and their preparation from oxides and from each other; direct and indirect oxidising agents. As will be seen the questions covered a good deal of ground, but were none of them unfair in the least. I had no equations, but was allowed to make any note or drawing I wished.

H. A. C. S.

Hints and Verses.

Contributed on C. & D. Diary Coupon Postcard A by Subscribers or their Employés.

Cook's soap, tooth soap,
Soap for the bath and skin,
Plenty of profit guaranteed
Helps to pay the way.
Take my tip and have some in—
Sure you won't regret it;
Ask them for their "special" list
And write to-day.

—F. B. Hirst, Ph.C. (Bury).

The best Paragraph is the following:—"The chemist of to-day must, in order to succeed in business, 'move with the times,' or be 'left behind in the race'; and this he knows either by experience or observation" (page 106).—Dr. Salvatore Gulli (Reggio, Calabria, Italy).

Remember, pray, "Palatinoids,"
My favourite medication;
You won't go wrong if you avoid
What savours imitation.
And, doctor! here's the very thing,
It will but make your patient sing
Your praises; and, what's more beside,
Wish Oppenheimer may abide.

—G. T. Ferrie (Leven, Fife).

Shop Hint.—Have the price of every article in the shop carefully marked upon it. Patents should have labels attached, viz:—

PRICE,	FOR CASH,
2/9	2/-

This prevents assistants having to hunt up price-lists before customers, and to those chemists who have a booking trade it enables them to book at full prices, without questions being subsequently asked by the customer. All "own" specialities should be marked. This gives new assistants confidence in serving, and prevents them running to ask the principal the price whilst the customer waits at the counter. All bottles or parcels containing drugs should, as they are "ticked" off from invoice, have the price per lb., price of bottle (if one), and date marked upon the label. This is always useful, and will enable one to note the fluctuations of the markets when buying again, &c.—W. E. Plant (Doncaster).

For a great many ills the old-fashioned way,
And a popular cure, was to leech 'em.
Time changes most things, so the cure of to-day
Is a world-renowned pill made by Beecham.

—S. F. Alder (Liverpool).

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1s., obtainable through any money-order office.

(*From the "Trade-marks Journal," January* 15, 1902.)

"Semicolon"; for chemicals for saving or minimising the consumption of coal. By Hill Brothers, Foss Island Leather-works, James Street, York. 242,159.

"Boilerine" (no claim for "Boiler"); for an anti-incrustator. By J. Ross, Old Kent Road Railway Station, S.E. 241,980.

"Frewil"; for a wood-stain. By F. Willis, 44 Sunnyhill Road, Streatham, S.W. 242,197.

"Antsaptic"; for a chemical composition for hardening and preserving wood; also an anti-corrosive. By T. A. Mackenzie & Co., 16 Billiter Buildings, Billiter Street, E.C. 242,654.

"Prositas"; for disinfectants. By Adolf Gates, 9 Andrews Road, Hackney, N.E. 242,459.

"Shamrock"; for an embrocation. By Mary Scott King, The Lawn, Weedon, Northampton. 241,874.

"Borobenphene" (no claim for "Boro"); for medicines. By the Henry Heil Chemical Company, 212 South Fourth Street, St. Louis, Miss., U.S.A. 242,068.

"Pilette" (no claim for "Pile"); for a medicine. By J. Mumford, 5 Catherine Court, Seething Lane, E.C. 242,460.

"Cablsvich"; for chemicals. By L. T. Ashwell, Hazlewood, Warlingham, Surrey. 242,631.

"Lithol" (no claim for "Litho"); for goods in Class 4. By the Badische Anilin and Soda Fabrik, Friesenheimer Landstrasse, Ludwigshafen-au-Rhine. 241,900.

"Autoplak"; for eye-glasses. By the Columbia Optical and Camera Company, 42 Goswell Road, E.C. 240,710.

"Jasmine"; for a catamenial appliance. By Daisey Paul Sonnehill, 83 Wooster Street, New York City, U.S.A. 241,200.

"Silvinium"; for surgical instruments. By C. G. G. Ablitt, 34 Womersley Road, Crouch End, N. 242,372.

Device (the essential particular) of a kitten and the word "Pussy," also a design of crocuses and the word "Crocus"; for condensed milk. By the Dutch Condensed-milk Company, Jansen & Storms, 30 Achtergracht, Weesp, Holland. 236,010, 236,011.

"Koffex" (no claim for "Coffee"); for a food substance. By Stevenson & Howell (Limited), 95A Southwark Street, S.E. 242,353.

"Tapiocine"; for foodstuffs. By J. Travers & Sons (Limited), 119 Cannon Street, E.C. 242,605.

Device for a label with the firm's facsimile signature across it for goods in Class 44. By Reid & Donald, 29 George Street, Perth. 234,661.

"Cleksildidum"; for a toilet-preparation. By Agnes Medhurst, Cottesmore, Oakham. 241,717.

Facsimile signature; for perfumery and toilet articles. By J. Stehr, 235 Oxford Street, W. 242,004.

Device showing orb and sceptre resting on cushion; for perfumery and toilet-articles. By Marion, James & Ker, (Limited), Morning Lane, Hackney, N.E. 242,025.

"Streamlet"; for perfumery and toilet-articles. By Vinolia Company (Limited), Malden Crescent, N.W. 242,336.

Facsimile signature; for goods in Class 48. By E. C. Conrad, Walton Villa, Wrotham Road, Gravesend. 242,425.

"Parozone"; for toilet-soap. By the Parozone Company (Limited), 11 Bothwell Street, Glasgow.

Picture of servant-maid polishing a table; for furniture cream and polish. By Stephenson Brothers (Limited), 8 Smith Street, Bradford. 239,888.

"Astonoid" (no claim for "Aston"); for insulating-material in Class 50. By Veritys (Limited), 31 King Street, Covent Garden, W.C. 242,592.

Picture of the House of Commons; for varnishes in Class 50. By Reade Brothers & Co. (Limited), Cleveland Road Wolverhampton. 241,950.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

"Opodeldoc."

SIR,—I think you are mistaken in supposing that the original opodeldoc contained ammonia. The origin both of the word and the thing is somewhat obscure, but it is usually thought that both originated with Paracelsus. He certainly mentions "opodeldoc" several times and gives various formulæ for it, but in none of these, so far as I know, does "ammonia" occur, and it may surprise some of your readers to hear that these early opodeldocs were not liniments, but plasters. I give two receipts from Paracelsus, which are taken from an old English version of his "Dispensatory":—

1. The Opodeltoch (*sic*) Plaister.—Take of the four incarnative seeds—viz., of birth-wort, comfrey, adder's-tongue, and sea-marsh bugloss, of each, ½ oz.; wax and colophony, of each, 2 oz.; of pitch, 3 oz. Mix them, and make a plaister.

2. The Opodeltoch Plaister.—Take of colophony, 2 oz.; the powder of celendine and the powder of orange-skins, of each, ½ oz.; of the best turpentine, so much as to make them into a plaister.

Neither of these is at all like the formula for *Emplastrum Opodeldoc* given in our later English Dispensatories, though Alleyne says this is modelled on Paracelsus's preparation, copied by Schröder and Mindererus, to the latter of whom it has sometimes been attributed. The complete formula is as follows (omitting the directions for the process):—

Bdellium, ammoniacum, galbanum, sagapenum, opoponax, ana ...	℥ij.
Strasburgh turpentine	℥viij.
Oil of bays	℥iv.
Oil of amber	℥ij.
Litharge	1 lb.
Calamine	1½ lb.
Oil of olives	2 lbs.
Linseed oil	1 lb.
Yellow wax and colophony, ana ...	1 lb.
Saffron of Mars, loadstone, red colcothar, olibanum, myrrh, amber, mastich, sarcocolla, dragon's-blood, and camphire, ana	℥j.
Round birthwort-root	℥ij.

These are to be boiled together to a suitable consistence.

The first liquid opodeldoc that I know of (I do not remember the date of Steer's preparation, which, of course, did contain ammonia) is that quoted from the Edinburgh Pharmacopœia in Brookes's "Dispensatory" (1773):—

Balsamum Saponaceum, Vulgo Oppodeldoch—The *Saponaceous Balsam.*—Take of rectified spirit-of-wine, 2 quarts; white Spanish soap, 1 lb.; digest it in a gentle heat till the soap is dissolved; then add of camphire, 2 oz.; the distilled oils of rosemary and wild marjoram, of each, ½ dr. Shake them together till they are well mixed.

This was not *Linimentum saponaceum*, the formula for which Brookes gives immediately after it, but it differs chiefly in containing oil of marjoram, which is absent from the other.

Yours, &c.,

Epworth, January 11. C. C. BELL.

[When we said "true opodeldoc" we were not thinking of the origin of the preparation, but of the liquid liniment at present used by man. This, it seems to us, is more of the nature of Steer's than anything else. See Squire's "Companion," pages 557–8. Probably the filling of ships' medicine-chests in Scotch Coast towns may have started the sale of lin. opii, as that is the "opodeldoc" of the Board of Trade Schedule. See THE CHEMISTS' AND DRUGGISTS' DIARY, 1902, page 530.—EDITOR.]

SIR,—"M.," writing in your last issue, states that opodeldoc is lin. saponis, and that assistants reared in the North of Scotland very commonly and erroneously supply lin. opii. Permit me to point out to "M.," who I infer is an Englishman, that assistants trained, or, as he puts it, "reared," in Scotland, are as a rule noted for their ability, perseverence, and general knowledge of the trade, which assertion is well demonstrated by the fact that for every one English assistant who finds a berth North of the Tweed, upwards of fifty Scotch assistants are engaged for situations in England. But, to return to "opodeldoc," I agree with you, Mr. Editor, that on the Continent ammoniated-soap liniment is supplied; however, as the name "opodeldoc" is not given as a synonym of any B.P. preparation, I hold that all British chemists ought to supply lin. opii, and I quote as my authority the Merchant-shipping Acts, 1867, and Passengers Act, 1899 (Acts passed by Government). On reference to these we find in the list of medicines and medical stores to be carried by merchant-ships, opodeldoc is one of the articles and is described as lin. opii I consider this conclusive evidence that lin. opii ought always to be supplied when opodeldoc is asked for.

I, am, &c.,

Oban, N.B., January 13. SAMUEL LAWRENCE.

["M." is a Scotchman in business in Scotland.—ED.]

Professor Sherrington's Lecture.

SIR,—The correspondence on the above brings to one's mind the thought of "a storm in a tea-cup." There can be no question that the opinion of your correspondents would be vastly different had they been present at the lecture. One could not fail to notice the very kind manner in which the animals were handled, not one appeared to suffer, and I fail to see where the harm came in. I absolutely know that the lecture with its practical demonstrations cannot have failed to be of great value to those who were present. It was exceedingly kind of the Professor and his colleagues to give such an able lecture to the pharmacists of Liverpool and district, and those who were not present suffered a decided loss, and are certainly unable to fairly criticise the proceedings. Yours truly,

St. Helens. J. G. WALLBRIDGE.

Bath-cabinets.

SIR,—I note in your columns a remark upon the introduction of these through the intermediary of the chemist, and the tempting offer to make them sole and "protected" agents for their towns. Probably it would surprise them to find out after a purchase that their chances of sales were anticipated, considering that the medical profession entirely, as well as all clergymen, have been fully canvassed and largely supplied on the half-price principle. There is a capital opportunity for the chemist to invest in this sort of stock, "to look at," and finally add to his museum of curiosities along with specially prescribed proprietaries and defunct patent medicines. Faithfully yours,

E. MARSHALL.

7 Endsleigh Street, Tavistock Square, W.C., January 14.

Metropolitan Chemists' Association.

SIR,—I have followed with interest the correspondence in your columns concerning the "Metropolitan Association," but up to the present there has been much cry and little wool, and I am not one whit the wiser as to its objects. Mr. Pentney asks "Xrayser" to point out in what way these Associations are baneful. Will Mr. Pentney enlighten us as to what benefits we may expect when we have parted with the necessary half-guinea? When the noble two thousand have combined, in what manner will they proceed to make the powers that be at Bloomsbury Square tremble for their existence? How are they going to protect us from the slings and arrows of outrageous coroners, from the traps of the Inland Revenue spy, and the atrocities of the Food and Drugs inspector? In what way will they help us to obtain some return for the hundreds of pounds spent in acquiring the doubtful benefit of registration as chemists and druggists? Will they crush under their heel the companies of the unqualified, who rake in thousands from the pockets of the British public which should legitimately find its way into the tills of the possessors of the Minor certificate? We

Digitized by Google

chemists are poor downtrodden members of society, and our yoke is heavy. Some workable plan to better our miserable condition would be gladly welcomed, but before we are asked to take shares we should very much like to read the prospectus.

Yours truly.
ONE OF THE TWO THOUSAND. (121/59.)

An Analyst as Expert on Therapy.

SIR,—In your issue of January 4 I see there is a letter from Dr. McWalter with the above heading. As I am alone responsible for the statement which he takes exception to I feel I ought, in justice to our analyst, to say so, and thus relieve him of the burden which rightly belongs to me. As prosecutor in conducting the case I made the following statement: "Oil of almonds mixed with syrup of violets is given to infants as a laxative; it is questionable whether peach-nut oil possesses any medicinal virtue." Neither before nor since the case have I been able to find in my works on materia medica any statement as to the virtue of peach-nut oil; therefore I see no reason as yet to alter my opinion. However, Dr. McWalter may have some special knowledge of this article, and no doubt he will tell us the active principle and percentage of the same which is contained in peach-nut oil in order to make it an equal laxative to almond oil.

Yours faithfully,
SAM SMITH
(Inspector of Weights and Measures and Food and Drugs for Northern Division of the County of Wilts.)

Appreciation.

SIR,—As a constant reader of THE CHEMIST AND DRUGGIST for the last eleven years, I would like to express my grateful appreciation of the *C. & D.* and think it is "the paper for the chemist," both at home and abroad, and can only wonder how it is supplied at the price. "Pharmaceutical Formulas" fills the aching void (in the till). Wishing you every success.

Yours sincerely,
Nempsey, N.S.W. CHAS. A. LANE.

Another N.S.W. correspondent writes:—

Your valuable journal seems to me to try to excel itself very much lately in every way, and particularly in the various books published in connection with it which I need not say I possess. May I suggest that the next one be devoted to the manufacturing side of pharmacy, as there is already an immense amount of material scattered throughout your journals and diaries on the subject, particularly on the preparation of galenicals.

An English Chemist in Spain (232/34), in sending his subscription, writes:—

I take this opportunity of thanking you for the regular way in which I receive the paper every Wednesday morning; also for the DIARY, which duly came to hand and has proved intensely interesting. The book "Pharmaceutical Formulas" is very good money's worth, and everyone who may happen to be situated as I am—that is, dispenser to a colony of English people, situated in a spot out of easy reach of all advanced pharmacy—I think should buy a copy. The last thing I was asked for was billiard-cue cement, and your formula did well.

I notice from time to time short notes on pharmaceutical affairs in Spain. It should be understood, however, that all reports of intended progress should be swallowed with large grains of salt. These people try to run before they can walk; the consequence is that the best intentions come to naught, or if any organisation such as the "Colegios" you mentioned a short while ago is founded, the rampant jobbery universal here soon nullifies any efforts to reform abuses. Spain is rather a neglected country, to my mind. There is not one factory of citric acid, in spite of the abundance of all the raw material—lemons, chalk, and sulphuric acid. Their ways of sending out packages are exceedingly wasteful, and very carelessly weighed are the substances. The Germans import a great deal. Carbolic acid, antipyrin, pot. iodid., &c., all come from Germany, so do all fine and photographic chemicals, at any rate those I have had occasion to buy in original packages here in Spain have been German, as is the lint, cotton-wool, &c., sold here. Surely something could be done to get that trade from them, as we have no end of steamers coming from Cardiff, Liverpool, and Glasgow, to Huelva and Seville ports, where steamers of 3,000 tons can get up to the quays to load and unload. Of course the whole trade may not be worth much, but apparently the Germans find it worth their while. But an agent at the port of entry I consider absolutely necessary, on account of the Customs duties, which often change, and sometimes vary in their application.

SIR,—I write to wish you a "Happy and Most Prosperous New Year. I am quite delighted with your DIARY. It is a book every business chemist should have. It is the most useful book for business that I have ever possessed. The *C. & D.* journal has been most useful to me during the time I have been a subscriber, and I thank you most heartily for the very courteous way in which my questions have been answered.

Yours faithfully,
W. (258/22.)

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

117/27. *C. M.*—You must obtain authority from the Board of Inland Revenue to trade in British postage-stamps. Apply for it through the local I.R. supervisor.

119/3. *Nemo.*—Ext. cascara sagrada liq. is not, and cannot be, regarded as an "entire drug," which term in the Medicine-stamp Act refers solely to "medicinal drugs without any mixture with any other drug or ingredient whatsoever," but it does not prevent dilution by the addition of water, nor the addition of mere colouring-matter. B.P. compounded drugs are not exempt from stamp-duty if they are recommended for the relief or cure of maladies.

116/69. *Lux.*—The fact that you have supplied a member of the Royal Family with the article does not entitle you to say that you have been appointed to supply that person. Anyone may use the Royal Arms for purposes of trade, but not the words "by appointment" in association therewith, unless the appointment has actually been received.

120/12. *E. H. R.*—The "Red Cross" embrocation-label is liable because "Red Cross" and the figure are in the nature of a trade-mark, and the directions for use state that it is for rheumatism and lumbago, for sore-throats and colds at the chest, and for strains and sprains. The cream label and handbill do not involve stamp-duty.

121/24. *Sparomat.*—The charges for medical attendance upon a chemist's apprentice are payable by his parents or guardians, not by his employer. Loss of time through illness cannot be added to the apprenticeship period.

121/18. *J. W. S.*—A stamped and addressed envelope should be sent for labels to be returned. We shall examine yours pending hearing from you. The reply will appear in this column.

120/62. *S. T.*—Your proper course was to return the goods to the packers after they had in writing agreed to exchange them for more satisfactory articles. You are technically liable for the goods, and should not have destroyed them without the sanction of the packers. Your best course now, therefore, is to make the best arrangement you can with them.

115/14. *Sefton.*—The headache-powder is free from stamp-duty, being an entire drug. The indigestion-mixture label makes it liable, as it says, "This will be found an excellent preparation for indigestion, and the many unpleasant symptoms arising from it, as wind, heartburn, pain in the pit of the stomach." Submit the cough and chill mixture to the Board of Inland Revenue. The description of treatment is apparently a recommendation for relief or cure, in which the mixture forms a part. When you get the Board's opinion please communicate it to us.

Digitized by Google

111/55. *Crown.*—There is no legal objection to your use of the word "Crown" or a figure of a crown on labels, &c., so long as you do not hold yourself out to be a Royal tradesman.

112/38 *Victim.*—If an employer gives a malicious and false character in reference to a late employé, the latter has good ground for action. You must have more information than you appear to possess before you take legal proceedings. Better consult a solicitor.

113/45. *Storax.*—There is no standard for essences of ginger and peppermint for culinary purposes.

114/33. *M. G. D. Co.*—As your preparation contains a poison (it is so labelled), it may only be sold by registered chemists and druggists.

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

230/35. *G. W. E.*—False hair can be bleached with chloride-of-lime solution, followed by an acid bath, or by potassium permanganate and sulphurous acid.

95/23. *D. P.*—**Solution for Copying Printed Matter.**—We do not know who makes this. A solution we examined some time ago had the following composition:—

Saponis duri	ʒj.
Glycerini	ʒss.
Spt. rectif.	ʒss.
Aq ad...	ʒj.

M. Ft. sol. Damp the printed matter with the solution by sponging, and press a piece of unglazed paper in contact by means of a hard rubber, such as the handle of a toothbrush.

1/19 *J.*—You appear to have missed the recent correspondence in the *C. & D.* regarding "Tatcho."

112/70. *Farrie.*—Large quantities of saffron are used by bacon-curers. Perhaps this is the missing flavour that you are in search of.

24/90. *H.*—You will find all about glycerin-tinctures in "Pharmaceutical Formulas," page 624. Of course in cases like tr. camph. co. there is a deficiency of the aromatic principles.

107/53. *J. P. P.*—**Hair-lotion.**—The following preparation suits your label, and is, moreover, an excellent lotion for the hair:—

Ol. amygd. dulc.	ʒij.
Liq. ammoniæ	ʒiss.
Ess. bouquet...	ʒj.
Tr. canthar.	ʒiij.
Eau de Cologne	ʒj.
Aq. destill. ad	ʒxxiv.

Mix the oil with a little water, and emulsify by adding the ammonia, then add more water, the perfumes, and tincture, and make up to quantity with water.

108/28. *T. C. H.*—Wynter Blyth's "Foods, their Composition and Analysis," 16*s.* (Griffin), is a standard work on the subject.

106/19. *J. W.*—**Liq. Ammon. Acet. 1 to 7:**—

Glacial acetic acid	ʒx.
Carbonate of ammonia (freshly powdered)	a sufficiency.
Water to	ʒxxiiss.

Dilute the acid with an equal quantity of water, neutralise with carbonate of ammonia, filter, and make up to measure.

117/2. *Excelsior.*—In order to take up with any thoroughness analytical work in connection with the production of iron and steel, it is necessary to study metallurgy at such places as Sheffield University College, Leeds University College, or one of the London technical colleges. You should get the programme of the City and Guilds of London Institute (obtainable from the office, Gresham Street, London, E.C., price 6*d.*, or by post 9*d.*), and read the sections dealing with the branch that you desire to take up. The best positions are now obtained by men who have had a three-years' course of training.

266/40 *Preservative* (India).—(1) Chloroform is about the best preservative for the vegetable infusion you prepare; use it in the proportion of 15 drops to 1 pint. Other preservatives besides alcohol, which you object to, would be salicylic acid (10 to 15 gr. to 1 pint), or glycerin (3 to 4 oz. to 1 pint). (2) Turtle-soup is preserved by bottling the aseptic article whilst hot in hermetically sealed vessels.

117/73. *Ungt.*—**Nit-ointment.**—A formula containing ol. staphisagriæ was given in the *C. & D.*, August 10, 1901, page 294, or a pomade can be medicated by using veratrine 1 gr. to the ounce.

111/44. *L. J. M.*—**Liquid Starch-gloss:**—

Spermaceti	1 oz.
Gum arabic	1 oz.
Borax	1 oz.
Glycerin	2½ oz.
Water	14½ oz.

Boil half the water, and add the borax and spermaceti to it separately. Dissolve the gum in the remainder of the water and the glycerin. Strain, and mix thoroughly with the warm mixture.

118/33. *Barnado.*—(1) The pyrogallol and silver-nitrate hair-dye is immediate in its action. (2) Methylated spirit is a stimulant when given to horses for colic. (3) Resin is a well-recognised diuretic for horses.

116/66. *Nunquam.*—**Carborundum** is a product of electric furnaces, and was discovered by Mr. E. G. Acheson, Monongahela City, Pennsylvania. It is carbide of silicon, and is prepared by passing an enormous current through a core of coarse coke, round which is placed a mixture of powdered coke, sand, and a small quantity of sawdust and salt. There are ten furnaces at present employed in making carborundum at Niagara Falls. The substance is extremely hard, and on that account is used as a substitute for emery. Your wholesale house can doubtless supply it.

107/56. *Taroo.*—(1) **Tomato-ketchup** is largely an American production, for the reason that tomatoes are more grown in the United States than in this country. The tomatoes are collected and allowed to ferment slightly before rubbing them through a fine-copper sieve to separate the seeds. The pulp thus produced is cooked in steam pans and any scum removed. When the pulp has been brought to boiling, cloves and allspice enclosed in bags are added, and the whole boiled down to one-half. After this salt and powdered spices (pepper, allspice, mustard, and cinnamon) are added, and sufficient vinegar to make the ketchup of the desired thinness. The formula in "Pharmaceutical Formulas" is a good one, but only use 1½ oz. of salt. Only scanty information on the subject is available in any books we are acquainted with. (2) Apple-pulp is the most usual thickener for the thick varieties of sauce. (3) We are inquiring.

104/15. *A. C.*—(1) Whitlock's soluble orange-dye is obtainable from Mr. James Whitlock, Stonebridge Chemical-works, Oswaldsthwistle, Lancashire. (2) **Butter-yellow** (benzene-azo-dimethylaniline) varies considerably in tint with different makers, so that it is necessary for you to fix on a particular make for your butter-colouring and stick to it.

111/46. *Minim.*—**Soluble Coal-tar** made with quillaia figures in the Pharmacopœia as liquor. picis carbonis. A cheaper preparation is made by heating together—

Tar	2 parts
Caustic potash	1 part
Water	5 parts

120/21. *Melrose.*—There is no definite strength for Retinol-ointment, as it depends on what part it is to be applied to. For the eyes a 5-per-cent. strength is used, for

Digitized by Google

skin-affections 10 to 20 per cent. ointment is employed, whilst in some cases the hydrocarbon itself is applied, as it is unirritating and bland in its action.

120/50. *A. L.*—A list of the principal secondhand booksellers in London is beyond the scope of this column. Mr. H. Kimpton, 13 Furnival Street, London, E.C., is one of the leading dealers in medical and pharmaceutical books.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

107/56. Indian chutney in bulk, where obtainable?

117/25. Makers of "Bloc Hyalin," an article used by hairdressers.

116/37. Who are the proprietors of Clement's tonic and Barry's tricopherus?

117/70. Name of photographic house that sends cameras on sale or return, with window-display stipulation.

120/49. *Camerist* writes:—Can you tell me what single word I can use on my facia-board to signify that I am a "photographic dealer"? This latter style is too long, and I dislike it. "Photographic chemist" appears to put the photography before the ordinary business of a chemist. Is "chemist and photographist" permissible, or can you suggest any alternatives?

Festivities.

Social Assistants.

The weekly meetings of the Chemists' Assistants' Association were resumed on January 9, when the members indulged in the frivolity of a "musical and social evening." The President, Mr. J. W. Peck, occupied the chair, and there was a good attendance of members. An admirable musical programme was rendered by Messrs. Victor Blin, H. Hayling, A. Latreille, and D. C. Jones, and Mr. H. S. Coupland made an efficient accompanist. One of the features of the evening was a gramophone, exhibited by Mr. H. Hymans, the repertoire of the instrument including selections from Ben Davies, Dan Leno, and the Gotham Quartet.

The Chemists' Ball.

The thirty-sixth annual chemists' ball was given in the Whitehall Rooms, Hotel Métropole, on Wednesday evening last. A full complement of pharmacists, senior and junior as to status, old and young as to date of birth, met on a footing of waxed and polished equality to accentuate the continued vitality of the institution, which is now getting well on into adult life. Mr. Carteighe's stately presence gave countenance to the senior members, but we missed Mr. Martindale. Mr. G. T. W. Newsholme, the President, was conspicuous in virtue of his golden chain, of fabulous value, the weight of which did not, however, prevent his joining in the round dances, in which he showed to advantage. The chemist's daily life does not lend itself to much in the way of frivolity, hence the fervour with which he enters into the spirit of the thing when he is about it. Prompt to put in an appearance, indefatigable in securing a quorum of dancers for his dependent ladies, he came up smiling when the supper-tables loomed ahead, soon to be set in frames of variegated hue. The supper disproved the proverb that it is impossible to do two things at the same time, for they talked and ate throughout, *chacun aux sa chacune*. A brief period of quiescence fell on the giddy multitude when Mr. Newsholme rose to propose "Success to the Chemists' Ball." With this toast he associated the name of Mr. Ernest W. Hill, the hon. secretary, to whose efforts the success of the *fête* was undoubtedly due. Mr. Hill's health was drunk with appropriate honours and he briefly replied, after which, due homage having been paid to the ladies, the couples betook themselves back to the ball-room, where they disported themselves with a zest begotten of good cheer. It was not until well on into the small hours of the morning that the gay throng began to thin, and the departing cab-horses shook the frozen mud off their feet as they languidly set out for distant suburbs.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, January 20.

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. Dr. S. Rideal's second lecture on "The Sterilisation of Water."

Wednesday, January 22.

Newcastle Chemists' Association, Jubilee Board Schools, Albion Road, North Shields, at 8.15 P.M. Mr. Barry Noble will introduce a discussion on the apprenticeship question.

Chemists' Assistants' and Managers' Society, Horseshoe Hotel, Tottenham Court Road, W., at 9 P.M. Mr. C. E. Pickering on "What should Chemists' Managers' and Assistants' Salaries be?"

Western Chemists' Association, Westbourne Restaurant, Paddington, W., at 9 P.M. Smoking-concert.

Society of Arts, John Street, Adelphi, W.C., at 8 P.M. "Scientific Observations at High Altitudes." By J. M. Bacon.

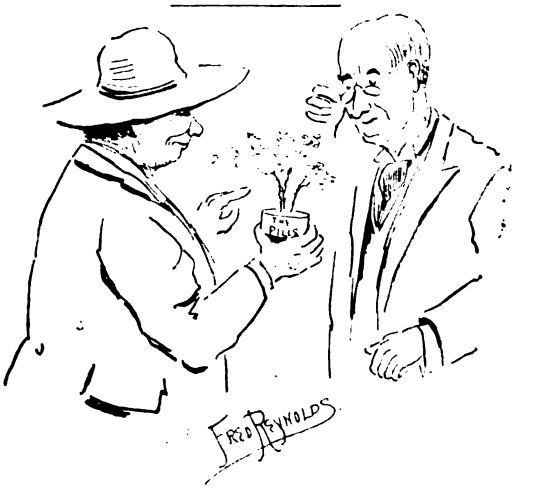
Thursday, January 23.

Optical Society, 7 Crane Court, Fleet Street, E.C., at 8 P.M. Dr. E. Berger Paris on "The Necessity for Reforms in Spectacles for Near Work."

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. Short papers.

Sheffield Pharmaceutical and Chemical Society, at 8.30 P.M. Exhibition of useful advertisements by Dr. Waddy.

Friday, January 24.



Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Mr. H. G. Wells on "The Discovery of the Future."

The Junior Pharmacy Ball will be held on February 26. Tickets can be obtained from Mr. P. Trick, Salisbury House, London Wall, E.C., Hon. Sec.

The annual dinner of the London College of Chemistry will be held in the Venetian Chamber, Holborn Restaurant, on January 29. Mr. Percy M. Thornton, M.P., will take the chair and present the prizes.

The Chemists' and Druggists' Society's annual musical evening will be held on January 28, in the Whitehall Buildings, Belfast. A good programme is being provided, and a large attendance is expected. Mr. James Tate, M.C.P.S.I., will preside.

The annual dinner of the School of Pharmacy of the Pharmaceutical Society of Great Britain is to be held in the Royal Venetian Chamber of the Holborn Restaurant on February 3, Professor J. Reynolds Green will be in the chair. Tickets, 5*s.* each, can be obtained from the Hon. Secs. of the Dinner Committee 17 Bloosbury Square, W.C.

He put the Pil. Rhei in a warm place.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: January 16.

THERE is a better tone about the markets this week, and several important alterations have taken place, including a reduction in salicylates and salol, induced by keen competition. Sulphonal has been reduced by one maker, and prices are now almost on the same level. Crude glycerin has advanced, and refined will probably follow, B.P. oil of almonds is dearer. Cinchona at auction sold at unchanged rates, and quinine still continues very quiet. There is a large sale of cinchona at Amsterdam next week, and no movement is expected until the result is announced. The following are the principal changes of the week :—

Higher	Firmer	Easier	Lower
Bayberry-bark	Cumin-seed	Copper sulphate	Salicylates
Oil, almonds	Glycerin	Pimento	Salol
Pepper, white	Potashes		Shellac
Sarsaparilla			Sulphonal

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from January 9 to 15, inclusive:—Acetanilide (@ Amsterdam), 5; aloes (@ Mossel Bay), 72 cs.; arsenic (@ Melbourne), 60 cks.; arrowroot (@ Natal), 135 cs.; asafetida, 37; balsam copaiba, 3; benzoin, 76 cs.; camphor (@ Hamburg) 61 tubs, (@ Kobe) 275 cs.; cardamoms, 185; caraway-seed oil, 5 cs.; cascara sagrada, 875 and 204 *in tr.*; chillies (@ Kobe), 565 sks; chloride of lime (@ Hamburg), 140 cks.; cinchona (@ Ceylon), 169; citrate of lime (@ Messina), 80; citronella oil, 48 drums; ergot, 5; essential oils (@ N. York) 20 cs., (@ Messina) 145, (@ Ostend) 25, (@ Hong-Kong) 265 cs.; eucalyptus oil (@ Melbourne), 69; honey (Chil.), 12 cs.; jaborandi (@ Tutoia), 6 bgs.; kino (@ Cochin), 24 cs.; lime-juice (W.I.), 30 pns.; liquorice-root (Persian), 495 bls.; myrrh (@ Aden), 33 bgs.; opium (@ Bushire), 20; potash chlorate (@ Rouen), 30 kgs.; rhubarb (@ Shanghai), 58; rose-water (@ Persian Gulf), 20 cs.; saccharin (@ Boulogne), 24 cs.; senna (@ Port Said), 25 bls.; shellac, 968; button lac, 138; sulphur (@ Catania), 2,980 bgs.; tonka-beans (@ Para), 5; vanilla, 131 cs.; wax, bees' (Ital.), 10; wax, Carnauba), 51 bgs.

ACID, ACETIC.—A continental report states that competition continues very keen, and prices have further declined to a point which leaves makers little or no profit. There is an abundance of raw material on offer.

ACID, CITRIC, is dull but steady at 1*s.* 1*d.* per lb.

ACONITE.—German *Napellus* is obtainable at 37*s.* 6*d.* per cwt.; and Japanese root at 35*s.*

ALCOHOL (METHYLATED) may be had at 2*s.* to 2*s.* 1*d.* per gal., naked.

ALOES.—The ss. *Gaul* has arrived from Mossel Bay, &c., with 72 cases aloes in three consignments.

ARROWROOT.—The parcels of St. Vincents offered on Wednesday were all bought in, good at 1½*d.* to 2*d.*, and fine at 3½*d.* per lb.

ASAFETIDA.—A consignment of about 200 packages from the Persian Gulf is close at hand.

BAYBERRY-BARK has advanced to the equivalent of 23*s.* per cwt., c.i.f.

BELLADONNA-ROOT is very firmly held, and there has been a good business this week. Holders quote from 39*s.* up to 42*s.* per cwt., according to quality.

CASCARA SAGRADA.—There has been a more general demand this week, and for a few tons on the spot 25*s.* has been accepted by one holder. The ss. *Yang-tsze* has brought 1,079 packages this week, 204 of which are *in transit*.

CHAMOMILES are firmly held, 70*s.* being wanted for good flowers; with common ditto at 50*s.* per cwt.

CINCHONA.—The first auctions of the year brought out the small supply of 975 packages only, of which more than half consisted of Bolivian cultivated Calisaya There was a good demand, and practically everything was sold at unchanged rates, compared with the last London sale, the average unit being 1⅝*d.* per lb. This auction was the smallest on record, the total quantity of quinine offered in the bark being about 80,000 oz. only. As showing how the quantities of bark offered at the London auctions have dwindled, it may be mentioned that at an auction some fifteen years ago 11,000 packages were offered.

The following table shows the quantity of bark offered and sold:—

	Packages offered.	Packages sold.
South American cinchona ...	626	483
East Indian cinchona	169	169
Java cinchona	101	101
Ceylon cinchona	79	79
	975	832

The following were the approximate quantities of bark purchased by the principal buyers:—

	Lbs.
Agents for the American factories	36,104
Agents for the Frankfort and Stuttgart factories	26,594
Agents for the Brunswick factory	26,470
The Imperial factory	15,789
Messrs. Howards & Sons	11,625
Agents for the Mannheim and Amsterdam factories	8,583
Agents for the Paris factory	3,000
Druggists, &c.	5,760
Total quantity sold	133,925
Bought in or withdrawn	7,504
Total quantity offered	141,429

The prices paid for sound bark were as follows :—

CEYLON.—Succirubra stem chips, 4*d.* to 4¼*d.* per lb.; hybrid, original stem, 6½*d.* to 6¾*d.*

JAVA.—Ledgeriana, original stem-chips, 9⅞*d.* to 1*s.* 0¾*d.* per lb.; Ledgeriana branch, 6⅜*d.* to 8⅝*d.*; red stem chips, 11¼*d.*; and root, 6⅜*d.* per lb.

SOUTH AMERICAN.—Bolivian cultivated Calisaya, quill, fair, 6*d.* to 8¼*d.*; broken ditto, 5½*d.* to 7*d.*; chips and small, 4*d.* to 4¾*d.* Cochabamba, 20 bales sold at 5¾*d.* for small flat. Cartagena, 8 bales country-damaged sold at 3⅛*d.* to 4½*d.* per lb.

EAST INDIAN.—Original Crown stem chips and shavings, 4¾*d.* to 8*d.*; branch ditto, 3½*d.* to 5*d.*; renewed branch, 6½*d.*; and root, 7⅛*d.* per lb.

A supplementary catalogue has been added to the auctions to be held at Amsterdam on January 23, which brings the total to 9,053 bales and 418 cases, weighing 865,921 kilos.

Messrs. C. F. Boehringer & Söhne, of Waldhof, have issued a leaflet of interesting statistics regarding quinine and cinchona. It gives the imports of cinchona into the U.K. for the past four years, exports from Java, stocks of bark at London and Amsterdam, range of unit and average percentage of quinine in manufacturers' bark offered at Amsterdam. Fluctuations in "official" quinine in 1901 are shown, also the estimated contents of quinine in the bark sold at London and Amsterdam, and stocks of quinine in London.

The shipments from Java during the last fourteen days have been 570,000 Amsterdam lbs., against 609,000 last year and 216,000 in 1900.

COCAINE.—It is reported on good authority that there will probably be a substantial reduction ere long, so that buyers would do well to purchase for immediate requirements only. Present price is very high.

COPPER SULPHATE is easier at 18*l.* 15*s.* per ton. Anchor brand is quoted 19*l.* to 19*l.* 10*s.*

DIGITALIS-LEAVES are quoted 34*s.* to 35*s.* per cwt., c.i.f.

ERGOT.—For prompt shipment from Hamburg 1*s.* 6*d.* per lb., c.i.f., is now wanted.

Digitized by Google

Galls.—Some business has been done in Chinese galls at 53*s*., c.i.f., for near at hand.

Gambier.—Cubes continue quiet, with retail sales at 40*s*. to 42*s*. 6*d*. per cwt.

Glycerin.—The market for crude is firmer, and an all-round advance is looked for now that the mines are gradually resuming work in South Africa. The combination price is so far unchanged at 63*s*. per cwt. for double-distilled sp. gr. 1·260 in contract quantities.

Golden-seal.—Sales have been made at 2*s*. 1½*d*. per lb. spot.

Lime-juice.—Good pale West Indian is quoted 1*s*. 3*d*. per gal., and a fair business has been done.

Lobelia has advanced to 12*s*. per lb. in New York owing to extreme scarcity.

Menthol.—A rumour has been current recently that a combination is on foot in Japan, but it is generally discredited. Advices point to the fact, however, that prices are hardening there. For February-March shipment 13*s*. 9*d*. per lb., c.i.f., is quoted for Kobayashi crystals, and 14*s*. 6*d*. on the spot. Practically no business this week.

Musk.—A few hundred ounces Cabardine musk have recently changed hands at 13*s*. per oz.

Oil, Almond.—English pressers of oil from almonds announce an advance of 1*d*. per lb., and now quote 1*s*. 4*d*., and pallid 1*s*. 6*d*.

Oil, Anise Star, remains inactive at 4*s*. 10*d*. to 4*s*. 11*d*. per lb., spot.

Oil, Castor.—Very dull of sale. Medicinal French is quoted on the spot at 33*s*. in cases and 29*s*. for first pressings in barrels. Medicinal Italian is offered at 33*s*. 6*d*. Hull make for February delivery is 29*l*. 10*s*. per ton in barrels and 3 9/16*d*. per lb. in cases for medicinal oil.

Oil, Citronella, is unchanged at 9½*d*. per lb. for drums, and 10*d*. for cases.

Oil, Cod-liver.—The Bergen cod-liver-oil market is unaltered but firm at 69*s*. per barrel, f.o.b. Some few hundred barrels of new oil are reported to have been produced outside the Lofoten district. Up to the present no reports have been received from that source as to the prospects of the new fishing. The exports from Bergen to date amount to 234 barrels, against 221½ barrels at the corresponding period of last year. One of the London agents has received a telegram to the effect that the fishing at Vestrallen has been practically a failure owing to great scarcity of fish.

Oil, Lemon.—Importers are now receiving the new season's crop, and for fine quality 3*s*. to 3*s*. 3*d*., spot, is quoted.

Oil, Peppermint.—All brands of American oil are unchanged at the quotations given last week. Japanese dementholised is quoted 4*s*. 3*d*. nominally, but less would probably buy. A parcel offered in auction last week changed hands at considerably less than the above figure.

Opium.—*Constantinople*, January 4:—Owing to splendid weather crop conditions continue very good. The winter risks, however, still lie ahead, and the chances of frost-damage are still considerable. The week's sales amount to 29 cases druggists at 7*s* 9*d*. Market continues quiet.

Constantinople, January 10:—This market has responded to the better tone in Smyrna, where about 80 cases have been sold this week at 7*s*. 11*d*. to 8*s*., and holders are now asking these parities. Smyrna advices report a very firm market, but we see no chance of further advance unless severe weather imperils the sowings. The week's sales amount to 20 cases at 7*s*. 10*d*. to 8*s*.

Potashes.—Montreal potashes continue scarce at 26*s*. 9*d*. per cwt., and pearl are unchanged at 40*s*.

Quinine.—At the close of last week spot changed hands at 1*s* 1*d*., but the market has since become steadier, with buyers at this quotation but no sellers, 1*s*. 1¼*d*. to 1*s*. 1½*d*. being asked. Several transactions in June delivery, are reported at 1*s*. 1¾*d*. There will be no business of importance until after the bark sale next week.

Rose-petals are becoming scarce at from 3*s*. 3*d*. to 3*s*. 6*d*. per lb., according to quantity.

Saffron continues very firm at from 23*s*. 6*d*. to 24*s*. 6*d*. per lb., net, for B.P. quality.

Salicylates.—Values have been twice reduced this week, which brings the quotation down to a basis of 11½*d*. for powdered salicylic acid in contracts of 10-cwt. lots. This price applies to one of the leading makes, but as yet no circulars have been issued, and some confusion exists as to what present prices are, but other makers will probably follow this reduction. As no convention exists now, two of the prominent makers are cutting prices.

Salol.—A reduction from 2*s*. 10*d*. to 2*s*. 3*d*. per lb., net, for small wholesale quantities has taken place; 28 lbs. to 1-cwt. quantities are subject to a scale of discounts. This follows the reduction in salicylates.

Sarsaparilla is firmly held, and no arrivals have taken place this week per the usual mail steamer. In Lima-Jamaica description business is reported at 1*s*. 4*d*. per lb., and for good grey Jamaica 1*s*. 7*d* has been paid. Honduras has also sold at 1*s*. 2½*d*., net, landed, for ordinary quality.

Seeds.—Russian *Anise* remains dull of sale at 21*s*. 6*d*. per cwt. Dutch *Caraways* are steady at 21*s* to 22*s* per cwt. *Coriander* is selling at 9*s* 6*d*. to 10*s* per cwt. for Morocco. *Cumin* is tending dearer for Morocco quality, the supply being small; 24*s*. per cwt. was the last price paid. *Canary* is very firm owing to a steady demand and reducing stocks; the quotation for Turkish is 38*s*. per quarter.

Serpentary.—New York advices report a strong position, at 1*s*. 9½*d*. per lb., c.i.f.

Shellac.—A dull tone has prevailed. The market opened this week at a decline of 2*s*. to 3*s*. per cwt. for future delivery, but prices subsequently became firmer. On the spot there has been a fair inquiry, fair second-orange selling at 120*s*. to 121*s*. A. C. Garnet is quoted 120*s*. to 123*s*. In auction 570 cases were offered, of which 20 cases of odd lots sold, there being little demand.

Soda Salts.—*Caustic*: 70 per cent., on the spot, is quoted 10*l*. 15*s*. per ton; Liverpool, 10*l*. 5*s*., and 60 per cent. 20*s*. less. *Crystals* in London are quoted 62*s*. 6*d* to 65*s*., ex ship or wharf, according to packing. In Liverpool the price is 67*s*. 6*d*., f.o.b., and on the Tyne, 62*s*. 6*d*. *Alkali*: 58 per cent. is held at 5*l*. 7*s*. 6*d*. ex ship and 5*l*. 10*s*. ex rails, London; and 4*l*. 12*s*. 6*d*. on rails or 4*l*. 15*s*., f.o.b., Liverpool.

Soy.—A small business has been done at 1*s*. 6*d*. per gal., duty paid.

Spermaceti.—American refined is quoted at 1*s*. 0½*d*. per lb., c.i.f.

Spices.—The auctions on Wednesday were small, and contained little of interest except a large quantity of Zanzibar *Cloves*, damaged by water, which sold at 2 7/8*d*. to 3*d*. per lb. Good quality was bought in at 4½*d*. per lb. The quotation for future delivery is unchanged, with buyers of March-May at 4 1/32*d*. per lb. A small lot of brown rough Cochin *Ginger*, slightly mouldy and wormy, was bought in at 50*s*. per cwt. A few barrels of Jamaica sold at 44*s*. 6*d*. per cwt. for dull medium; the rest being bought in. Fair red Nyassaland *Chillies* sold at 52*s*. per cwt., and part of a parcel of Japan at 44*s*. per cwt. Fine Egyptian *Capsicums* were bought in at 50*s*. per cwt. *Pimento* was rather easier; a few lots of common and ordinary sold at 3*d*.; fair being held for 3¼*d*. per lb. Common *Cinnamon-quillings* sold at 6½*d*. per lb. Middling red *Mace* was bought in at 1*s*. 5*d*. per lb. Black *Pepper* sold at 6½*d*. per lb. for fair Singapore, and at 6*d*. for greyish. Malabar, rather shrivelled and grey, sold at 5½*d*. per lb. Singapore white is slightly dearer, at 10*d*. per lb. on the spot, and at 10 3/16*d*. for January-March shipment. Penang is also dearer at 9 9/16*d*. on the spot, and 9⅝*d*. for early shipment.

Stavesacre-seed.—Business has been done at 30*s*. per cwt

Sticklac.—At the drysaltery-auctions 39 cases sifted Siam sold at 67*s*. per cwt.

Sulphonal is again lower. The Bayer Company have reduced their quotation from 7*s*. 6*d*. per lb. to 5*s*., in 5-lb. and 10-lb. parcels, but it is understood that the other makers have not yet lowered their price. There is not much business to be done now as buyers have filled their requirements.

Digitized by Google

TURMERIC.—Fair to good bright Madras finger has sold in quantity at 20*s.* to 23*s.* 6*d.* per cwt., and small sales of Bengal are reported at 16*s.* 6*d.*

VALERIAN.—Good quality is still very cheap, one importer quoting 17*s.* per cwt., c.i.f.

WAX, BEES'.—Twenty cases of unbleached Calcutta sold at the auction last week, at 6*l.* 2*s.* 6*d.* per cwt. for original cakes. Italian, of guaranteed purity, is quoted 7*l.* 10*s.* per cwt., spot.

WAX, JAPANESE, is unchanged at 35*s.* per cwt. spot, which figure has been paid.

Cablegrams.

SMYRNA, January 16, 10 19 A.M.:—The opium-sales for the week ending Wednesday have amounted to 100 cases for American consumption. The prices remain the same, and the market is firm.

* * * *

HAMBURG, January 16:—Refined camphor is firm, menthol is scarce on the spot, and ergot of rye is quiet. Cevadilla-seed is dull of sale at 71m. per 100 kilos.

* * * *

NEW YORK, January 16:—Business here is quiet. Both Rio and Cartagena ipecacuanha are lower at $2·60 and $1·40 per lb. respectively. Lithia salts have been reduced. Wild-cherry bark is scarce at 15c. Senega is firmly held at 51c., and balsam of copaiba is hardening at 34c. per lb. American beeswax is firm at 29c. per lb.

Heavy Chemicals.

Business in the heavy-chemical market continues to be of a rather quiet nature. All-round demand on home-trade account is, all things being considered, a fairly good one; but exports are only quiet, and scarcely up to expectations. Values show little fluctuation, and, generally speaking, keep fairly steady.

ALKALI PRODUCE.—Demand in this branch is only a moderate one, bleaching powder, caustic soda, and saltcake especially being in quieter request. Other main products stand practically unchanged in all respects.

SULPHATE OF AMMONIA has taken a harder tone, and has advanced in price. Beckton, January-June delivery, 11*l.* 10*s.*; Beckton terms, 11*l.* 5*s.*; London, 11*l.* 6*s* 3*d.* to 11*l.* 7*s.* 6*d.*; Leith, 11*l.* 5*s.* to 11*l.* 6*s.* 3*d.*; and Hull, 11*l.* 2*s.* 6*d.*

RECOVERED SULPHUR.—In strong demand and firm, at advanced figures of 5*l.* to 5*l.* 5*s.* per ton, free on rails, in bags.

MAGNESIUM SALTS keep in steady request. The chloride is steadier, at 62*s.* 6*d.* to 67*s.* 6*d.* per ton. Magnesium sulphate (Epsom's), 62*s.* 6*d.* to 67*s.* 6*d.* per ton, in bags, free on rails. Carbonate of magnesia, 37*s.* 6*d.* to 40*s.* per cwt.

BENZOLS.—Quiet: 90 per cent. at 10½*d.*, and 50 per cent. at 9*d.* to 9½*d.* Aniline oil and salt, 4½*d.* and 4*d.* per lb. respectively. Anthracene: A grade, 2*d.* to 2¼*d.*, and B grade, 1¼*d.*

BARIUM PRODUCTS.—There is little or no change to report, all compounds maintaining a very firm tone. The principal and most preferred raw material is now in somewhat better supply, but not sufficiently so for prices to be affected in any downward direction, and, as mines are all well sold ahead, steady figures are likely to continue to rule. Prices for the witherite are, therefore, only nominal, and they vary according to the strength, quality, and quantity required. Chloride of barium, best ordinary refined crystals, 7*l.* 5*s.* to 7*l.* 15*s.* per ton, in usual casks, and 5*s.* per ton less in bags. Blanc fixe (pure precipitated sulphate of barium in paste form), 7*l.* 5*s.* to 7*l.* 15*s.* per ton in ordinary casks. Hydrate of baryta, purest crystals, in steady request at late rates: 14*l.* to 14*l.* 10*s.* per ton, in 6-7-cwt. casks. Mineral sulphate of barytes, ground, firm, at from 40*s.* to 100*s.* per ton, according to quality, quantity, and package. Sulphide of barium, crude calcined 70-75 per cent., 5*l.* 10*s.* to 6*l.* per ton, in casks. Nitrate of baryta very firm, at 16*l.* 10*s.* to 17*l.* 10*s.* per ton for crystals, in casks, on rails.

Liverpool Drug Market.

Liverpool, January 15.

CASTOR OIL.—The continued downward movement in Calcutta good seconds is still evident, 3*d.* per lb. having been accepted in one quarter. The same price is asked for first-pressure French, but slightly less would be taken. Second-pressure French is still held at 2⅞*d.* For good seconds Calcutta, for shipment, lower prices are again being quoted.

GRAINS OF PARADISE.—A further arrival has taken place, and 15 bags were offered at auction; 55*s.* per cwt. was bid, but 60*s.* is asked.

GUM ACACIA.—Business continues to move slowly, and no important transactions have taken place. At the same time there is a distinctly hardening tendency in the market, and soft Soudan sorts are worth 42*s.* 6*d.* to 47*s.* 6*d.* per cwt., according to quality.

CANARY-SEED is firmly held at 39*s.* per qr.

TURPENTINE.—Very firmly held at 29*s.* per cwt. For forward delivery much higher prices are being asked.

LINSEED OIL.—Easier, at 29*s.* to 30*s.* per cwt., according to quality.

BEESWAX.—A parcel of 7 bags of grey to yellow Chilian has changed hands at 7*l.* 2*s.* 6*d.* per cwt. Two bags of fair yellow sold at 7*l.* 7*s.* 6*d.*, and 2 bags of choice, at 7*l.* 12*s.* 6*d.*

ARSENIC maintains its firm position at 15*l.* 10*s.* per ton.

SULPHATE OF COPPER.—In good demand, at 19*l.* 5*s.* to 19*l.* 10*s.* per ton.

GALLS.—A parcel of blue Smyrna description is offered at 65*s.* per cwt.

TONKA-BEANS.—Ten cases of good frosted Para sold readily at 1*s.* 6*d.* to 1*s.* 6½*d.* per lb.

CARNAUBA WAX.—Firmer rates have been paid for grey, small parcels of Ceara and Pernambuco having changed hands at 52*s.* to 55*s.*, and 110 bags Maranham, at 53*s.* 6*d.* to 55*s.* per cwt. Fair ordinary Ceara has also sold at 57*s.* 6*d.*

COPAIBA.—Firm and unchanged. An arrival of 7 barrels per *Bourbon* has taken place.

German Drug-market.

Hamburg, January 14.

Business is now improving, and our drug-market shows more animation.

AGAR-AGAR for spot delivery is scarce, and firmly held at 395m. to 400m. per 100 kilos.; forward delivery is 385m. per 100 kilos.

ANTIMONY is firmer on the spot at 29m., and for forward delivery 28m. per 100 kilos. is asked.

CONDURANGO is tending firmer, and now held at 76m. to 77m. per 100 kilos.

CAMPHOR (REFINED) is firmly held at 435m. per 100 kilos. A little is offered in second hands.

ERGOT.—Russian is steady at 335m. to 340m., and Spanish at 345m. spot; forward, 330m. per 100 kilos.

FENUGREEK-SEED is tending dearer at 16m. per 100 kilos.

MYRRH is very scarce at 150m. per 100 kilos.

QUININE is unchanged at 39m. per kilo.

SANTONIN.—There seems to be very little left in second hands, and an advance is not improbable.

SENEGA is quoted 490m. per 100 kilos.

OILS.—Cod-liver oil quotes 67m. to 68m. per barrel. Castor oil neglected; first-pressing in barrels, 55½m. per 100 kilos. Linseed oil easier. Cotton oil very firm.

ESSENTIAL OILS.—Star-anise oil unchanged at 10½m. per kilo. Peppermint oil HGH at 8.65 to 8.70m. per lb.; Japanese oil 8½m. per kilo.

ALOES.—Cape is firm at 76m. per 100 kilos.

ANISE SEED of new crop is steady at 40m. per 100 kilos.

BALSAM PERU continues firm at 13m. per kilo.

CORIANDER-SEED is firm; Mogador at 21m. per 100 kilos. for forward delivery.

LYCOPODIUM continues very firm and scarce at 445m. per 100 kilos. on the spot.

MENTHOL is firm at 31½m. per kilo.

STAR-ANISE is quiet at 130m. per 100 kilos.

WAX.—Japanese is firmly held at 68m. per 100 kilos. on the spot.

New Steamship Services.

The establishment of a new steamship service between New York, Halifax, N.S., and ports in Jamaica was inaugurated on December 2. It will be known as the Kerr Line. The vessels will sail from Halifax for Jamaica monthly, carrying passengers and cargo. Another new steamship line is the United States Steamship Company, which will ply between Boston, the West Indies, Mexico, Central, and South America. The company's fleet will consist of fourteen vessels, and Boston will be the headquarters of the line. The steamers will sail direct from Boston to Havana, San Juan, and Porto Rico, connecting at both points with other steamers of the same line for other points in the West Indies and the Continent. This is Boston's first direct steam-freight route to the West Indies and Latin America. The capital stock of the company is $5,000,000 (1,000,000*l.*).

Batavian Spice-market.

Several dealers at Batavia have decided to start a spice market there. The nutmeg trade is now very much depressed, and prices in Europe are unremunerative. The idea is that it would be more profitable to sell nutmegs at Batavia than ship them to Europe.

Digitized by Google

Cinchona-seed Auction.

At the auction in Batavia on November 30 the following prices were paid for cinchona seed originating from the Government plantations: Twenty-one small packets succirubra seed sold for 344·75fl.=28*l.* 14*s* 7*d.*; 19 packets hybrid seed sold for 2,271fl.=186*l.* 15*s.*, and 40 packets Ledgeriana seed sold for 5,902fl. =491*l.* 16*s.* 8*d.*

Platinum in British Columbia.

The Superintendent of the Assay Office at Vancouver has reported to the Press that among the specimens of gold brought to him to be refined he has found considerable quantities of platinum, and he is under the impression that the miners do not know what platinum is when they see it. In all the placer-mining districts of British Columbia and the Yukon territory large amounts of platinum and kindred metals have been thrown away by miners who did not know the value of the product. At the present price of platinum, the superintendent says it will pay prospectors to be on the look out for this metal, which doubtless exists in considerable quantities in the province.

United States Quicksilver.

The quicksilver receipts at San Francisco in November 1901 were 1,374 flasks. For the eleven months ending November 30, 1901, the receipts were 18,172 flasks, against 18,046 for the corresponding period in 1900, and 21,739 in 1899. These receipts do not include shipments made direct from the mines to consumers. The exports from San Francisco by water for the eleven months were as follows:—Siberia, 2 flasks; Korea, 12; Japan, 24; South America, 20; Central America, 1,008; Mexico, 3,436; British Columbia, 32; New York, 70; total, 4,604 flasks, against 6,588 in 1900. In 1900 1,000 flasks were sent to China, but that country procured no quicksilver from California in 1901. The supplies of quicksilver in the United States are now becoming very small, and the producing properties have been unable to materially increase their output. The stocks there two years ago were 2,500 flasks, which were reduced to 1,200 flasks during the following year. The returns of the Boston owned properties for 1901 were disappointing. The normal output of both the Napa and the New Idria is about 400 flasks a month. The total production in the United States for last year was about 27,000 flasks. The Aetna Company has expended $25,000 in 1901 for prospecting purposes, but failed to discover any new ore bodies of value, whereas the Boston Company has been more successful, its output being 200 flasks a month, which it is hoped will be materially increased in future.

Produce Notes.

"Indian Senna."

A large consignment of leaves was recently placed on the London drug-market under the name of "Indian senna." Very few of the leaves are perfect, as they are extremely brittle and readily broken. In shape and general appearance they are very similar to those of some of the species of *Cassia*, the leaflets being sessile, close, membranous, obtuse, and varying from ½ inch to 1 inch or more in length. It is difficult to determine with certainty their botanical origin, but they agree very nearly with the leaves of *Cæsalpinia pulcherrima*, a shrub or small tree universally cultivated throughout India and elsewhere in the tropics. The native country of this plant is not clearly known, but according to some authorities it was introduced into the Botanic Gardens, Calcutta, in 1792. All parts of the plant are said to be emmenagogue and purgative, but there appears to be no trustworthy data bearing upon this point. In India the leaves, flowers, and trees are employed in native medicine, and an ink is made from the charred wood.

Cardamoms in French Indo-China.

The *Revue des Cultures Coloniales* of November 5, in the course of a long article on the cardamoms of French Indo-China, states that the exports to Singapore and Hong-Kong may be considered as representing the total production of the country, the quantity consumed locally being insignificant. Nearly the whole of the crop is sent to China *viâ* Hong-Kong. It is the Chinese, moreover, in Cambodia, Laos, Annam, and Tonkin who buy or exchange the cardamoms with the producers, and then send them to the different ports whence they are exported. This trade is said to be entirely in their hands. The port of shipment for Cambodia and a part of Laos is Saigon, with Cholon as *entrepot* and market. The exports from Annam and the region round Laos go *viâ* Vinh, and from Tonkin *viâ* Haipheng. This latter port also receives many cardamoms from Annam. The following table shows the quantity and value of the exports of cardamoms from French Indo-China during the last two years:—

	1899		1900	
	Quantity	Value	Quantity	Value
	Kilos.	Francs.	Kilos.	Francs.
Annam	14,503	67,968	9,857	74,913
Cochin China and Cambodia	289,074	1,195,002	196,908	632,679
Tonkin	43,127	97,036	54,019	405,142
Total...	346,704	1,360,006	260,784	1,112,734
	763,000 (lbs.)	54,000*l.*	574,000 (lbs.)	45,000*l.*

Honey-water.

THE honey-water of modern times is well known to be a different article altogether from what was originally used. The present-day perfume preparation was originated, we understand, by Mr. George Wilson, chemist to James II, so that it probably goes back to 1685. Honey-water was recommended by Theophrastus for preventing the hair falling off. He died in 286 B.C We quote the following from "The Newe Iewell of Health," by George Baker, chirurgian. Printed at London by Henrie Denham, 1576. It is a translation of Gesner's work:—

The water of the honie combe, procureth heare to growe: and helpeth the hard fetching and drawing of breath, or such short wynded through the straytenesse of the breath, if thys bee often druncke: it helpeth a man's beard to growe the more, being sundrie times annoynted or wette therewith: but farre better and sooner doth the oyle and honie performe the same, whiche hath a moste great force in the lyke.

The dystilled honie annoynted on a bald place, causeth the heare to growe, and come very soone againe, after the shedding of heare: this Theophrastus.

Ioannes Montanus writeth, that of hony may a strong water be made: and that in the thirde dystillation of it, to become a poysonable lycour: but of Mercurie which is resolued by the strong water, is to be brought into a water the which will make a helthfull lycour and strengthening.

The water of honie to make the face whyte and faire: take of reddishe honie twoo poundes, of gumme Arabecke twoo ounces, these twoo myxe togither, and dystill by a Lymbecke with a soft fire: The first water that Commeth, serveth unto the cleansing of the face, and unto the cleering and whytening of it: the seconde with the thirde lycour, doth cause the heares to grow and become whytishe or flaxen of colour.

Gesnerus distilled a water out of hony, whose first water favoured somewhat of waxe, where besides it was sufficient delectable and cleare, and whytish, which perhaps may seeme avayleable in the Cholicke passions. The seconde water which dystilled forth, had a certaine sowrenesse. The thirde water which came forth, tasted as it were vinegar. The fourth water which came forth, tasted in a maner as sowre as vinegar: He began distillation in the morning at the seaventh houre, and out of half a measure of honie, he purchased two small vials full in a daye, in the evening he began to dystill, and continued unto noone in a maner, he also prepared and made his fire to last until the ninth houre of the night: and from that hourem he renued the fire unto the sixt houre of the next morrowe: and following the fire from the sixt houre of the morning unto twoo in the after noone: then began a great fume or smoke to arise and issue forth into the receyver, and that somewhat stincking, and a substance also to ascend (as when nothing remayned of the watrie substance, then did the honie ascend) then drewe I forth the Cucurbite (sayeth the author) which I shoulde not have done (but rather have set or lyfted him hygher in the ashes) and then came the droppes forth redde, and burnt in the Limbeck, yea sowre, and in savour or smell lyke to the oyle of the Juniper woode in a maner: and of it fast cleaving to the sides and bottome of the Cucurbite: The remnant in the Cucurbite, was the honie of a blackish redde colour, burnt, somewhat sowre, and colouring yelowe.

Interesting as this may be, the fact remains that honey-water so made was not the kind that Sir Erasmus Wilson prescribed. What he wanted was the perfumed water such as is given in "Pharmaceutical Formulas," page 178.

THIS JOURNAL is regularly supplied by subscription to the whole of the Members of FIFTEEN PHARMACEUTICAL SOCIETIES in the British Empire. The associate Journal, *The Chemist and Druggist of Australasia*, published at Melbourne and Sydney, is also supplied to all Australasian subscribers.

Summary.

APPRENTICESHIP is a leading feature in this Number.

ARTICLES describing their own experiences are contributed by Messrs. Mumbray, Newsholme, Martin, Druce, Stephenson, Boa, Taylor, and Lescher. The series begins on p. 132.

THE question has also been discussed in the provinces by Mr. Hutcheon at Edinburgh, and Mr. Noble, of Newcastle-on-Tyne (p. 174).

OUR comments on the subject are on p. 126.

MR. INCE this week shows how tragacanth emulsions should be made (p. 142).

MESSRS. LIONEL AND LE BLANC NEWBERY provide this week's cartoon (p. 124).

MESSRS. C. DELACRE ET CIE.'S new pharmacy in Brussels is figured on p. 159.

FURTHER correspondence in regard to opodeldoc shows that the question is not yet settled (p 176).

MR. ALCOCK finds the use of caustic potash an improvement on lime in the assay of cinchona (p. 110).

A FAIR NUMBER of novelties and improvements in pharmaceutical products are described on p. 122.

MR. JOHN TAYLOR and Mr. Lord Gifford were the stars at the Blackpool chemists' dinner last week (p. 130).

AN ANCIENT CHARM, which was thought to be a prescription, is the subject of Mr. C. C. Bell's paper on p. 153.

THE PHARMACEUTICAL RELICS in the Nuremberg Museum are illustrated and described in an article on p. 149.

IN the case of Bernhard *v.* the Erasmic Company, the plaintiff has been awarded 2,250*l.* for wrongful dismissal (p. 167).

OUR TOWN TRAVELLER has varied his journey in London with visits to several of the houses in Edinburgh and Glasgow (p. 116).

SOME interesting practical notes are given by Mr. Frost on bee-keeping, which he thinks is a suitable hobby for pharmacists (p. 109).

The case of Treatt *v.* Samuelson was commenced at the High Court on Tuesday. Some peculiar revelations have come out (p. 166).

MR. EDGAR COHEN, the Houndsditch sponge-merchant, is in no way connected with the bank-breaking syndicate at Monte Carlo (p. 177).

PARLIAMENT promises very little directly connected with pharmacy this Session, and indeed, little of anything, except increased taxation (p. 173).

UNDER British Pharmacy in India we describe the pharmacies of Messrs. Stanistreet & Co., E. Plomer & Co., W. C. Kidd, C. J. Milne, and J. B. Foster & Co. (p. 144).

OUR PARIS CORRESPONDENT has made a tour of the Grands Boulevards, and contributes a chatty and well-illustrated article on the pharmacies which are there (p. 156).

OUR special South African correspondent has journeyed to Johannesburg and back, and describes what he saw. The chemists in the Transvaal are reticent as to business (p. 160).

MESSRS. OGSTON AND MOORE, in a paper on the chemical and physical constants of bergamot, lemon, and orange oils, communicate a number of useful figures, this year's crop being included (p. 154).

EMERALD GREEN has been held by the Leeds Magistrate to be a preparation of arsenic, and Taylor's Drug Company have been fined for selling it contrary to the provisions of Section 17 of the Pharmacy Act (p. 167). See also note on p. 127.

THE only change of any importance this week has been a reduction in cocaine. Hypophosphites are weak owing to price-cutting on the part of German makers. Senega is tending firmer (p. 178). A full report of the drug-sales will be found in our coloured supplement.

THE NEWS OF THE WEEK up to Wednesday (when this section of THE CHEMIST AND DRUGGIST went to press) included the following items:—Institute of Chemistry examination-questions, and the report of an inquest on a child at Sheffield in which an "infants' preservative" was implicated. Mr. H. Vincent Johnston has been co opted a member of the Irish Council. Our Glasgow correspondents contribute various local items to the Scotch collection. The Court of Session has upheld the judgment of Sheriff Guthrie, of Glasgow, in the claim of Mrs. Weatherston against her husband's estate. For Thursday's news see Coloured Supplement.

Corner for Students.

Conducted by Leonard Dobbin, Ph.D.

Reports.

THE powder distributed to students on December 24 contained 3 parts of ferrous oxalate, 2 parts of barium oxalate, and 1 part of ammonium oxalate.

The calculated composition of such a mixture is—

Fe	15·6
Ba	18·8
NH_4	4·2
C_2O_4	46·8
H_2O	14·6
	100·0

The powder also contained, as impurities, somewhat considerable traces of strontium and calcium and of the sulphuric-acid radical, also an exceedingly minute trace of chloride.

Samples of the powder were distributed to 54 students, and 27 reports were submitted for examination.

All our correspondents succeeded in detecting iron and ammonium, 11 failed to detect barium, 3 failed to detect the oxalic-acid radical, while 5 did not make any mention of water. No single correspondent reported all the impurities mentioned above.

Containing, as it did, a small quantity of the sulphuric-acid radical along with a barium salt, the powder did not dissolve completely when boiled with dilute hydrochloric acid. The insoluble residue, although small in quantity, was not specially inconspicuous, yet it entirely escaped the observation of all except five of our correspondents, and of these only two succeeded in penetrating the secret of its composition—the one by direct examination, the other indirectly. It is true that some delicacy of treatment was necessary in order to detect barium and the sulphuric-acid radical with certainty in the small quantity of insoluble residue available for examination; but the delicate handling of traces, with a view to determining their chemical composition, is one of those arts which the student must aim at attaining if he wishes to excel as an analyst. As to the procedure in the present case, it was best to collect the residue on a small ashless filter-paper, thoroughly wash and dry it there, incinerate the filter on platinum foil, fuse the residue with several times its weight of pure potassium and sodium carbonates (fusion mixture), and extract the fused mass with water. The aqueous extract, after acidulation with dilute hydrochloric acid, gave a distinct white precipitate of barium sulphate on the addition of barium chloride. The portion of the fused mass which did not dissolve in water was dissolved at once on the addition of a drop of dilute hydrochloric acid, and the acid solution so obtained gave the flame coloration and other reactions characteristic of barium.

The numerous failures to detect barium in the powder were chiefly due to failure to destroy the oxalates present by evaporating the acid solution to dryness after the addition of hydrogen sulphide, and igniting the residue. The neglect of this precaution led to the precipitation of barium oxalate along with ferric hydroxide (or ferrous sulphide) on the addition of excess of ammonia (or of ammonia and ammonium hydrosulphide). A number of students report that no precipitate was formed when ammonium carbonate was added to the filtrate from the iron group—a result which clearly indicates that the precipitation of the barium as oxalate, along with the iron, had been practically if not quite complete.

The only other serious analytical pitfall presented by this month's exercise was the rather sparing solubility of the precipitate of silver oxalate in dilute nitric acid. Failure to add the latter reagent in sufficient quantity to dissolve the whole of the silver oxalate, led several correspondents to suppose that chloride was present in quantity, whereas only a trace was really present. The chlorine which one or two report as evolved on heating the powder with black manganese oxide and concentrated sulphuric acid is almost certainly to be attributed to impurity in the black oxide.

We would impress upon all our correspondents the importance of including in their reports the summary of the results of each analysis, which is asked for in the announcement of each fresh analytical exercise. Reports not infrequently contain statements which are to some extent contradictory with respect to the probable presence of certain metallic or acid radicals; and if the writers do not add a summary of conclusions, in which they state their final views regarding the presence or absence of these radicals, there is room for doubt as to what their views may be, and marks are lost which perhaps need not have been lost but for this neglect.

Prizes.

The First Prize for the best analysis has been awarded to

H. Longstaff, 223 Saltwell Road, Bensham, Gateshead-on-Tyne.

The Second Prize has been awarded to

John G. Murdoch, c/o Wilkinson & Simpson (Limited), Newcastle-on-Tyne.

First Prize.—Any scientific book that is published at a price not greatly exceeding half-a-guinea may be taken as a first prize.

Second Prize.—Any scientific book which is sold for about five shillings may be taken as a second prize.

The students to whom prizes are awarded are requested to write at once to the Publisher naming the book or books they select.

Marks Awarded for Analyses.

H. Longstaff (1st prize) ...	97	Mitosis	80
John G. Murdoch (2nd prize)	96	Aloes	74
Westminster	95	Nemo	74
Algol	94	Cruciferae	71
S.V.R. (Newcastle-on-Tyne)	91	S.V.R. (Davenport) ...	71
Talc	91	Spirogyra	69
Flora McDonald	90	Studentior	68
Glacialine	89	Tanglewood	68

Filix Mas	83	Photo	56
J.I.A.	82	Tabloid	55
Manna flake	81	B. K. N.	43
		J. H. Williams	28

To Correspondents.

Algol.—We are rather at a loss to understand why the hydrochloric acid solution of part of the residue left on igniting the powder failed in your hands to yield a red coloration with ammonium thiocyanate, while the nitric acid solution of another part gave the reaction. We found both solutions to behave alike in this respect.

S.V.R. (Newcastle-on-Tyne), Talc, Flora McDonald, and many others.—The method of testing for strontium in the precipitate of barium-group carbonates, by dissolving in acetic acid, removing the barium as chromate, and then adding ammonium sulphate to the filtrate, is not sufficiently delicate to reveal the presence of such traces of strontium as were contained in the present powder, unless special precautions are taken. Even at best the method is a very poor one, as strontium sulphate is quite appreciably soluble in water.

Glacialine.—It is a pity that you did not make an attempt to determine the composition of the insoluble residue. See general remarks for a description of the way in which it might have been examined.

W. H., A.-in-M.—We do not understand how you and several other correspondents obtained evidence which led you to conclude that only traces of barium were present in the powder. You will

Digitized by Google

observe that nearly one-fifth of the whole was barium. Perhaps you applied your test for barium to a solution which had been very much diluted, or which only represented a very small quantity of the original powder. We fancy the sulphuric and hydrochloric acid radicals which you report present in quantity are due to impurities in your sodium carbonate.

EDINBURGUM.—We have not been able to confirm your experience with respect to the absence of ammonium from the aqueous solution. Solutions prepared both with hot and with cold water alike yielded ammonia in abundance when boiled with sodium hydroxide.

FILIX MAS.—Aim at making your examination exhaustive. You do not describe any tests for magnesium, potassium, sodium, or lithium. After dissolving the iron-group precipitate in hydrochloric acid, and adding potassium hydroxide in excess, any chromium would be in the solution, not in the precipitate. The formula for barium chloride is not Ba_2Cl_6.

MANNA FLAKE.—The white fumes you observed on heating the powder with sulphuric acid were due to the acid itself. Read the first two sentences of the reply to "Filix Mas."

S. V. R. (DAVENPORT).—If the darkening observed on heating the powder had been due to the presence of citrate it would have been accompanied by the characteristic "burnt-sugar" smell; but this was altogether absent. All the reactions which you attributed to the presence of citrate were really due to oxalate.

ALOES.—You should have applied some confirmatory test to the precipitate you supposed to consist of zinc sulphide. Had you done so you would have been led to a more accurate conclusion respecting it. Chloroplatinic acid should only be employed to test for potassium in solutions from which all metallic radicals except sodium, lithium, and potassium have been removed.

NEMO and TANGLEWOOD.—You added potassium chromate to a hydrochloric-acid solution of the powder, and, not obtaining any precipitate, concluded that barium was absent. Note, however, that barium chromate dissolves in hydrochloric acid, and therefore could not have been precipitated.

SPIROGYRA.—Elaborate descriptions of how film and match tests are carried out are not required. Short statements of the results of the tests are all that is necessary The disagreeable odour you observed in the cacodyl (not Cacodyl's) test for acetate was probably due to cyanogen from the decomposition of the ammonium oxalate.

STUDENTIOR.—You do not report any attempt to ascertain whether the precipitate of iron-group hydroxides contained either aluminium or chromium. It was rather a thoughtless proceeding to test for carbonate in the solution prepared for the examination for acid radicals by boiling the powder with sodium carbonate; but it was quite unpardonable to find that this solution did not contain any carbonate.

ANGUS SCOTT.—The pungent vapours you observed on treating the powder with dilute hydrochloric acid (and presumably heating) were, doubtless, simply due to the volatilisation of part of the acid you had added. It is not possible to determine by mere inspection of a precipitate, which obviously consists largely of ferric hydroxide, that it may not also contain aluminium or chromic hydroxide: a separation must be made. Chloroform dissolves chlorine and yields a yellowish solution; possibly it was such a solution that you mistook for a solution of bromine in chloroform.

TABLOID.—We have endeavoured to obtain the reactions for chromium which you describe, but have not succeeded. Read the general remarks respecting the treatment of mixtures containing the oxalic-acid radical.

B. K. N.—The neatness of your report raised expectations which were dispelled by its want of accuracy. Heated by itself or with concentrated sulphuric acid, the powder did not yield the smell of "burnt sugar." The precipitate produced in the aqueous solution by the addition of calcium chloride did not dissolve in acetic acid. The aluminium which you found was probably an impurity contained in the solution of potassium hydroxide used. Silicate and borate were not present. Persevere, however, and try to get confirmation of the presence of every metallic and acid radical which you think you have detected.

PUNJAB INDIGO DECLINES.—Owing to the fall in prices, followed by the closure of several factories, indigo planting is greatly on the wane in the Punjab, the sown area having fallen since 1900 from 115,700 to 71,600 acres. Moreover, the season has not been favourable, as the rains ceased prematurely after sowing time and the canals ran short. The yield of dye is only 808,400 seers compared with 1,235,500 seers, and still worse the yield of seed is only 1,868,400 seers compared with 5,807,400 seers.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

A Burford lad has been remanded on a charge of stealing a tobacco-pouch from the shop of Mr. Edwin Ballard, chemist, High Street, Burford.

A storekeeper and a tinner were remanded at Leeds on January 18 on charges of stealing and receiving two ingots of copper from Messrs. Nicholson & Sons, chemical manufacturers, Hunslet.

A donation of 100 guineas has been made by the Vinolia Company to the fund for the new building and endowment of the Parkes Museum, in connection with the Sanitary Institute, at Margaret Street, W.

The War Office has accepted from Mr. Christy Strong, of Reading, a further donation of 50,000 of his fly-papers for the use of the hospitals in South Africa. The consignment was sent off in December last.

At Huddersfield County Court on January 16, William Ernest Wimpenny, stock and sharebroker, obtained judgment for 9*l.* 9*s.* 2*d.* and costs from Charles Roebuck, wholesale chemist, Shelley, in an action concerning the sale of some shares.

Only five poisonings are recorded since our last report. A doctor's wife at Abercorn swallowed a tabloid of perchloride of mercury with fatal results, a Glossop chemist took prussic acid, and a Birmingham man attached a piece of india-rubber tubing to the gas-jet, put the other end of the tube in his mouth, and turned on the gas. The others were caused by laudanum and spirit of salt respectively.

One evening last week, Mr. Thomas Topham, chemist and druggist, Halifax, who had been troubled with insomnia, went into his shop before going to bed to take a dose of morphine. It is presumed that he took in mistake an overdose, for he was found unconscious in the early morning. Medical aid was summoned, and, although in a critical condition for some days, Mr. Topham has now nearly recovered.

At the prize-competition held on December 10, 1901, at the Westminster College of Chemistry and Pharmacy, the following gentlemen were awarded the medals of the College:—Chemistry, Mr. L. S. Willox; botany, Mr. B. Bickley; materia medica, Mr. A. J. McCabe; pharmacy, Mr. G. T. Walker; dispensing, Mr. H. H. Cannon. Four out of the five have since entered and passed the Minor examination this month.

Mr. Richard Johnson, J.P., President of the National Union of Mineral-water Manufacturers, has written to the Chancellor of the Exchequer asking him to receive a deputation who desire to lay before him certain facts and figures in the hope of staying any further charge upon sugar in the next Budget. The Chancellor of the Exchequer has replied that he will be glad to receive representations from the trade against any proposed additional tax upon sugar.

In the City of London Court on Tuesday, January 21, Mr. G. C. Hounsell, Twickenham, sued Mr. Edward W. Goodenough, 37 Walbrook, E.C., for 6*l.* in respect of four casks which had contained boiler-fluid. Judge Rentoul, after hearing the evidence (which, on defendant's behalf, was that he wanted to return them, but plaintiff had no warehouse; while plaintiff said he agreed to let defendant have them for half-price), gave judgment for the plaintiff for 3*l.*, without costs.

Registered-letter Envelopes.

The Post-office authorities have decided to substitute for the present blue medallion (value 2*d.*) on registered-letter envelopes a brown medallion (value 3*d.*) denoting a registration fee of 2*d.* and postage 1*d.* The prices of the new envelopes of all sizes will consequently be 1*d.* per envelope more than the prices of the old ones. In cases where a registration or insurance fee of more than 2*d.* is paid, or the

Digitized by Google

postage is more than 1*d.*, adhesive stamps to the value required should be placed on the envelope immediately to the left of the medallion. The new envelopes will be on sale at all post-offices in the course of the next few weeks.

Institute of Chemistry.

Last week the Institute examination in pharmacology, microscopy, and therapeutics, conducted in accordance with the requirements of the Local Government Board, was held by Dr. A. P. Luff. There were sixteen candidates, and the questions were:—

(1) Examine the specimens of coffee marked "A" and report upon its probable purity or otherwise, basing your opinion on the microscopical appearances only. Leave a prepared slide on your bench

(2) Examine, describe, and state respectively the nature of the prepared slides marked B and C.

(3) What articles of food and drink are liable to contain lead? Describe the sources from which the lead is derived and the method by which it is introduced into the respective articles. What are the effects on the human body produced by the daily ingestion of small quantities of lead?

(4) What are the distinctions as regards their action on the human body of corrosive sublimate and irritant poisons? Mention four purely corrosive and four purely irritant poisons.

(5) Give the maximum safe doses for an adult of arsenious oxide, morphine acetate, atropine sulphate, and B.P. hydrocyanic acid.

In reply to Question 1 the most of the candidates said the specimen was pure. Question 2 was found to be a fungus with conidia and linen scraped off a pocket-handkerchief. The drugs shown were the common aperients (aloes, colocynth) and poisonous drugs (strychnine sulphate) and their preparations.

Commemorating a Clever Young Doctor.

The Myers Scholarship (150*l* per annum) has been founded at Birmingham University by the father of Dr. Myers, who died last year while studying malarial fever in South America. Each candidate must be a B.Sc. of one of the premier universities or of Birmingham.

Retrenchment.

At a meeting of the Nottingham Board of Guardians on January 14, it was reported that the cost of drugs for indoor and outdoor poor during 1901, with the dispensers' salaries (332*l.*), amounted to 1,809*l.* That sum was thought excessive, and the Clerk was instructed to direct the dispensers to use the utmost care to prevent waste in their department. Instructions were likewise given for a general order to be issued to the medical staff to state precisely on each prescription the quantities to be given. The committee believed that the absence of such an instruction had caused considerable waste, not only in the medicine given, but in other directions. The dispensers were to be instructed to inform the Clerk of any failure on the part of the medical officers to comply with this regulation.

Nasal Analysis.

At Sheffield, on January 17, an inquest was held on the body of George Bellamy, aged four weeks, son of a timekeeper. The evidence showed that the child was healthy and well-developed. The mother, in consequence of the child being cross, bought a quantity of "infant's preservative" from a chemist in St. Philip's Road, and administered several half-teaspoonful doses in water. The child got worse, however, and was taken to the Royal Hospital, where it died. Dr. A. Graham, house surgeon at the hospital, said when the child was admitted he seemed to be in a state of stupor, and was as much dead as alive. There were no signs of a convulsive fit. Witness thought the child was under the influence of a narcotic. The Coroner: Is that your opinion still? Witness: Well, I am under the impression it must have been some strong sedative. It appears that the mother has given the child a dose of soothing-mixture from some chemist, and that (producing the bottle) smells strongly of opium. The Coroner said the mixture smelt much too strongly to give a one-month old child, especially when the bottle was labelled "Free from laudanum." Some years ago a concoction was brought out and called "quietening-mixture"; that was the best name it ever had. (Laughter.) (To the doctor): I think the opinion you give without making a *post-mortem* examination is that the child had a strong sedative of some kind, and in in all probability similar to the remaining contents of the bottle produced? Witness: It may be so; the child had all the symptoms of narcotic-poisoning. The Coroner said a *post-mortem* examination must be made. It was tantamount to manslaughter if the mixture contained opium and was labelled "free from laudanum." The inquiry was adjourned till January 20, when death was found to be due to pneumonia. No trace of opium was found on analysing the preservative.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Mr. R. Lyons, chemist and druggist, Omagh, has been elected a member of the Omagh Urban Council.

Mr. W. R. Wilson, pharmaceutical chemist, Enniskillen, has been elected a member of the local municipal board.

Sir Henry Cochrane, managing director of Thacker & Hoffe (Limited), chemists and druggists, Dublin, has been elected a member of the Bray Urban Council.

Mr. G. H. Grindley, M.P.S.I., one of the senior members of the Council of the Pharmaceutical Society of Ireland, was taken suddenly ill while at business on January 9, and has been confined to bed ever since. His condition is considered very serious by his physicians, the latest reports being far from favourable.

Poisoning-case.

An inquest was held at Tralee, co. Kerry, on January 17, as a result of which it was decided that Mrs. Ellen Murphy died from drinking spirit of salt "which she had taken in a moment of excitement without being aware of its poisonous nature."

Compulsory Chemistry.

The regulation framed by the Pharmaceutical Council making a course of elementary chemistry compulsory on candidates for the Licence-examination is at present before the Privy Council, and is almost certain to be passed, as the Government Inspector's (Sir Geo. Duffy, M.D.) annual reports advocate the necessity for such. If sanctioned the regulation will not come into force before January 1, 1903.

Council Candidates.

Mr. H. V. Johnston, M.P.S.I., Ranelagh, was co-opted a member of the Pharmaceutical Council at the last meeting to fill the place of the late Mr. W. D. Porter, and will, according to the rotation-list retire and offer himself for re-election next October, when, it is currently reported, quite a number of aspirants will enter "the field," so that competition will be brisk.

Potato-spraying.

Some time ago it was stated that potatoes which had been sprayed with copper sulphate had caused poisoning in persons who had eaten them. Three samples of the potatoes were sent to the Agricultural Department, Dublin, for analysis, and the analysts have come to the conclusion that there was no trace of copper salts in the potatoes.

Guardians' Drugs.

At the last meeting of the Ennistymon (co. Clare) Board of Guardians a letter was read from the L.G.B. requesting the Guardians to obtain a report from the medicine-contractor as to liniment of camphor which had been supplied to the Miltown-Malbay Dispensary of the Union, and which the analyst had reported on as not being up to standard. The Clerk was directed to write to the contractor for his explanation.

Record Rejections.

The recent examination for the licence to act as pharmaceutical chemist created almost a record in the number of rejections, many of which were due to failure in "practical pharmacy." Of those that passed Mr. Large scored marks

Digitized by Google

within a few of the total which would place him in the running for the gold medal annually offered to the holder of the highest marks, but he up to the present holds first claim to the silver medal. Mr. Cuttiford, who obtained second place, was barely 21 years of age on the day of the examination, and consequently it was his first attempt, and a most meritorious one.

Medical Inconsistency.

The recent fatality which occurred in a Dublin hospital is likely to bring pressure on the various boards of these institutions, and compel them, for their own safety and reputation, to appoint duly qualified dispensers. It is almost incredible that members of the medical profession, who so jealously guard their own rights, should countenance the appointment of any but qualified dispensers; still, several of the largest hospitals in Dublin are defaulters in this respect. Were the attention of the Government, or of the Dublin Corporation, called to the matter it would, doubtless, soon be rectified.

Medicine-contract.

At the last meeting of the Enniscorthy (co. Wexford) Lunatic Asylum Committee the tenders for the supply of medicine to the asylum were received. They were as follows:—Messrs. John Clarke & Co., Dublin, at 26 per cent. under the prescribed list of the Local Government Board; the Apothecaries' Hall of Ireland, at 17½ per cent. less; Messrs. Hunt & Co., Dublin, at 9 per cent. less; Messrs. Fletcher & Hoff, at 15 per cent. less; Mr. William Cooke, Gorey, at 10 per cent. less; Messrs. Leslie & Co., Dublin, at 25 per cent. less; Mr. J. H. A. Hadden, Enniscorthy, at 10 per cent. less. The Board accepted the tender of Messrs. John Clarke & Co.

Dispensary Medicines.

At the last meeting of the Granard (co. Longford) Board of Guardians the question of the disposing of the dispensary medicines (which had previously been on the *tapis*) was again referred to. The Chairman said: Now, as Mr. Mackin is here, I think it would be well if he would answer the communication from the Local Government Board with reference to his statement as to the selling of dispensary medicine. That was a very serious charge. Mr. Mackin: I will have an answer to the communication for this day week. The Chairman: It would be well to have it cleared up, at all events.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Changes.

Mr. J. W. Miller, Byres Road, Glasgow, has purchased the shop in Jamaica Street known as "Dow's Drug-store," and intends to develop the business on new lines.

Messrs. Wm. Paterson & Sons, Aberdeen, whose premises were destroyed by fire the other day, have secured a large warehouse on the opposite side of the street.

Mr. James McNiven, chemist, Graham's Road, Falkirk, and Mr. Andrew Forrester, chemist, Camelon, have joined their businesses, forming a co-partnership, and will trade in future as McNiven & Forrester.

Mr. R. Tocher, pharmaceutical chemist, Maybole, has taken over the old-established and well-known business in Victoria Road, Crosshill, Glasgow, so long and so successfully conducted by the late Mr. J. Dickie.

The Carnegie Trust.

The evening meeting of the Pharmaceutical Society of Great Britain in Edinburgh, which was to have been held in January, is postponed. The meeting was intended for the consideration of a proposal to provide a suitable course of study for pharmaceutical students in connection with the four Scottish Universities, and it has now been arranged to hold the meeting on Friday, February 21, when Mr. J. F. Tocher, F.I.C., Peterhead, will explain the scheme, and a discussion will follow.

Imitation Tobacco.

In the Court of Session, Edinburgh, on Wednesday January 15, Lord Stormonth Darling had before him the Crown case against David Wilson, merchant, and Robert Simpson Baxter, both of Dundee, for having in their possession 5 lbs. weight or thereby of ground or powdered wood or other matter to imitate or resemble tobacco or snuff, contrary to the statute. A second charge in similar terms referred to 17 lbs. or thereby in other premises in Dundee. Mr. A. S. D. Thomson appeared for the respondents, and tendered a plea of not guilty. The case was adjourned.

Glasgow Notes.

There are fifty applicants for the post of Medical Superintendent of the Glasgow Royal Infirmary, rendered vacant by the retirement of Dr. M. Thomas. The salary is 500*l.*

Hitherto Parish Councils have contracted with the parish doctors, or with chemists, to supply and dispense medicines for outdoor patients. The Govan Parish Council has made a new departure, by setting up its own district dispensaries with a qualified dispenser in each. Three dispensaries have just been opened—in Govan, Kinning Park, and Partick. This charge is due largely to the initiative of Mr. David Watson, chemist, recently elected a member of the Govan Board.

The Pharmaceutical Association's "At Home" did not give the opportunity for chatting that a *conversazione* does, but here and there groups occasionally formed to discuss the interminable problems of pharmaceutical politics, or to recall old times. One missed nearly all the "old, familiar faces" of the palmy days of the Price-list. Mr. R. Brodie, in ever-green youth, and Mr. J. Robb, upon whose genial face the crowsfeet leave but little trace, were the only representatives present of the generation of Alexander Currie, Daniel Frazer, Alexander Kinninmont, and the rest, who waged Homeric warfare in the good old days.

A South Side medico, of a disputatious turn, has been in correspondence with the celebrated "P. Morison, jun.," with reference to that gentleman's claim that the Pharmaceutical Society impartially administers the Pharmacy Act as between doctor and chemist. The Glasgow controversalist demurs to this statement, on the ground that whereas the Pharmaceutical Council complains to the Medical Council, of medical men who continue to employ unqualified dispensers after these have been convicted of breaches of the Pharmacy Act. It does not report similar cases in which chemists are concerned to the Privy Council, in terms of section 26 of the Pharmacy Act, 1868. Mr. Morison's answer is, that the Pharmaceutical Council does not take this course because it has no disciplinary power over registered chemists, but that it is open to the doctor or any other person to approach the Privy Council on the matter. The correspondence is to be published shortly.

Ayr Chemist's Separation Sequel.

The Judges of the Second Division of the Court of Session, Edinburgh, disposed, on January 16, of an appeal from the Glasgow Sheriff Court taken by William Cluny Beattie, Dumbiedykes Road, Edinburgh, to a decision by Sheriff Guthrie. The action was raised by W. J. & R. Buchanan, auctioneers, Glasgow, who had sold a quantity of furniture belonging to Frank Beattie Weatherston, lately a chemist in Ayr, under instructions from Beattie. Mrs. Weatherstone laid an arrestment on the proceeds of the sale of the furniture, which, after deducting expenses, amounted to 141*l.* 15*s.* 5*d.* under a decree of separation and aliment which she obtained against her husband in 1900, her claim on her husband's estate amounting to 139*l.* of aliment and 325*l.* of expenses on the action. Beattie claimed the sum referred to (which was lodged with the Clerk of Court) in respect of an advance which he made to Mr. Weatherstone (his nephew) of 300*l.* on security for which Weatherstone handed over the furniture to him. Mrs. Weatherston stated that the arrangement between her husband and his uncle was a simulate effected collusively between them to defeat her claim. Sheriff Guthrie, after hearing proof, found Mrs. Weatherston entitled to the whole fund, and found Beattie liable in expenses, and the Second Division Judges adhered to that decision and found Beattie liable in additional expenses.

French News.

(From our Paris Correspondent.)

The Anti-tuberculosis Movement.—The Committee of the Paris Anti-tuberculosis Dispensaries, of which Professor Brouardel is the President, has arranged a grand charity performance to be held at the Sarah Bernhardt Theatre on Wednesday afternoon, January 29, for the purpose of raising funds. Mme. Bernhardt has given the gratuitous use of her theatre, and will in addition take part in the performance. The anti-tuberculosis movement has also been a prominent feature in other parts of France during the past week.

M. Berthelot on Outdoor Exercises.—M. Berthelot, the famous chemist, who celebrated his fiftieth scientific jubilee last November, has given an interviewer some interesting facts regarding his impressions in matters of motor-car riding, cycling, and outdoor sports in general, including ballooning. He refers to cycling as "improved walking," and credited the initial motor-car trials to Papin, of whom he speaks in his book "Science and Morals." The second apostle of the modern locomotion, says M. Berthelot, was Cugnot, to whom reference was made in the Paris press a few days ago as giving the opportunity for Napoleon I. to be recorded in history as the original imperial patron of the motor car. Upon being asked whether, on the subject of ballooning he was a partisan of the "heavier than air," or the "lighter than air" theorists, M. Berthelot replied, "The essential thing is to maintain oneself the longest time in the air without falling. Any means of accomplishing this must be considered excellent."

The Secret of the Boer Resistance.—The following communication, which bears the Dijon postmark, may interest London war critics:—"I travelled down here with an amiable and voluble Frenchman, and our conversation turned—as it is wont to turn nowadays—on the prolongation of the Boer War. 'But will you know the true reason why Lord Kitchener succeeds not?' he concluded when we alighted. 'I will show you.' And he led me to a neighbouring hoarding where the posters were varied and numerous. He indicated one with his umbrella. It represented a fatigued soldier of cadaverous aspect—whose scarlet coat (the French artist still fondly imagines our troops combat in this uniform) denoted him as an Englishman—wearily seating himself by the roadside. A jovial and hearty Boer of rustic aspect and aldermanic rotundity presented him with a glass of some beverage from a bottle he held in his hand. Above was inscribed 'Kola Fontbonne,' and below an announcement of the many hygienic and force-giving properties of this aperatif fabricated by a Dijon firm, I noticed. I am very much afraid my travelling companion was interested in its sale by the anxiety he subsequently evinced to have my personal opinion on its palatable and stimulating nature. But the originality of the poster and its evident appeal to French sympathy much amused me, for the inference is that the Boer resistance is due to the energy derived from their having a good supply of the medicated wine in question."

New Museums.—Amongst the proposals for reorganising the various services of the Paris hospitals is one for transferring to Ivry the central pharmacy of the hospitals, which for many years has occupied the seigneurial mansion known as the Hôtel des Miramiones, on the quai des Tournelles, Paris. The Public-relief Department having decided to sell this historic house, the Committee of Old Paris has passed a resolution to the effect that an attempt shall be made to secure it as a museum of charities. From 1691 to 1790 the mansion was used as a convent, which was suppressed in the latter year. The gardens still contain trees that date from the time of Louis XIV. The difficulty in connection with organising the proposed museum is the cost, which would be about 900,000f. (36,000*l*.). A similar scheme is on foot at Lyons to form an historical medico-pharmaceutical museum at the Mixed Faculty of Medicine and Pharmacy, which is situated on the quai Claude-Bernard, between the rue de la Viriolerie and the rue Chevreul. The principal promoters are M. Lacassagne, the Professor of Forensic Medicine, and M. Florence, the Professor of Materia Medica and Botany. The former represents the medical element, and the latter the pharmaceutical, as he is pharmacist at the Hôpital des Vieillards at Lyons. These two gentlemen request anyone having portraits, old surgical instruments, pharmacy pots and mortars connected with the Lyonnais region of France to help them in forming a collection worthy of the second city of the Republic.

A Drop of Milk.

This is a reduction of another of Guillaume's clever sketches in *Le Matin*. It is accompanied by five verses parodying Sully-Prudhomme, of which the following is a free translation:—

The vase of snow-white porcelain,
From which the doubtful milk we pour,
Had erstwhile near a fountain lain,
Where drivers, milkmen kicked it o'er.

But who may heed its contused edge,
Its fair sides cracked and splintered round,
When Science gives a certain pledge
That She its contents sure can sound?

So 'neath the microscope dropped out
A sample from the vase is tried;
No longer there remains a doubt.
Drink not the milk! 'Tis liquefied!

'Tis often so; the milk we love
Our stomach glazes and destroys.
We drink again; nor glance above
At those who've perished by its joys.

Pure to the world though it may seem
This milk, it ofttimes is, alas!
Well mixed with Seine-polluted stream,
'Tis watered! Shun the tempting glass.

South African News.

The Meetings of the Pharmaceutical Society of Cape Colony have been discontinued until February.

Wanted a Tonic.—At Cape Town a native was found guilty of stealing a case of Fellows' syrup from a trawler near the Docks, and was sentenced to thirty days' hard labour.

Returned Medicos.—Dr. Bloomfield, a well-known Rand practitioner, has arrived in Cape Town, *en route* for Johannesburg, after a prolonged stay in England.—Dr. Paul Pettavel has also returned from a six-months' holiday in Europe, and will immediately get into harness again.

New Doctors.—Licences have been issued authorising the undermentioned persons to practise as medical practi-

Digitized by Google

tioners in Cape Colony:—Alfred Bentley Sigismond Powell, L.R.C.P., L.R.C.S.Ed. (late of Inverness), Walwyn Thomas, M.B., B.S. (late of St. George's Hospital, S.W.), Patrick Jobson Henderson, M.B., M.S. (late of Blairgowrie), Frank Mayo Morris, M.R.C.S., L.R.C.P. (late of St. Mark's Hospital, E.C.), Hermann Peyer (late of Switzerland).

PLAGUE.—At the Plague Board meeting on December 17, 1901, the chief medical officer reported that no cases of plague had occurred in Port Elizabeth during the week previous. This was the first week since May last in which a clean sheet has been furnished.—The Government plague expert at King Williamstown has inoculated 11,000 natives, the personality of Dr. Montgomery, the medical officer in charge at King Williamstown being doubtless responsible for the faith of the natives.

ALLEGED PHARMACY ACT INFRINGEMENT.—At the Cape Town Police Court, before Mr. G. Blackstone Williams, R.M., Emma Kate Sherlock was brought up on remand on charges of having practised as a medical practitioner without a licence, and also with having sold poison. Mr. Williams again took the evidence which had been heard at the previous hearing (see *C. & D.*, November 9, 1901, page 755, and November 23, 1901, page 832), and which was to the effect that the accused sold boxes of pills, which were shown to contain opium and other ingredients. The defendant, in her evidence, said she did not know the contents of the pills, and made nothing out of them, but admitted that she did not hold a licence. Judgment was reserved.

UNIFORM PRICES.—In response to a circular letter sent to all the chemists in the Peninsula, and signed by Mr. D. K. Petersen (of P. J. Petersen & Co.), Mr. A. J. Rivett (managing director of Lennon, Limited, Cape Town), and Mr. F. C. Mathew (of Heynes, Mathew & Co.), and Mr. Geo. Darrvel (of Cleghorn's pharmacy), a meeting was held on December 18, 1901, in the Pharmacy Board Rooms, Cape Town, to discuss the question of uniform retail prices. The meeting was fairly representative, including, in addition to the conveners, Messrs. Cameron and Hamilton, Mr. E. L. Lalling, Mr. W. Fick, Mr. Hopkins, Mr. J. Hall (Claremont), Mr. H. L. Stonham, Mr. Prophet, representing Mr. F. W. C. Thomas (Claremont), and several others. Mr. C. J. Rivett was voted to the chair, and gave a brief outline of the proposed measures. Finally a ballot was taken to appoint a committee of nine, to be again divided into sub-committees of three, to consider respectively the drug, patent, and sundries sections of the scheme. After investigation the various decisions will be submitted to another general meeting, to be held shortly. The question of society and club dispensing was broached at the meeting, but was ruled out of order. This subject, however, as well as the modification of the Sunday hours of chemists in Cape Town, will come up for discussion at the next meeting.

Natal Trade in 1901.

(*From our Durban Correspondent.*)

Wholesale.—During the past six months wholesale business has been brisk. "Sparklets" have been very much in evidence in recent shipments, the hot weather being close at hand. The decision of the military authorities to strictly guard and to utilise the main line of railway from Durban to Johannesburg for conveying supplies for the troops and civilian population of the Rand has resulted in an enormous increase of all kinds of chemists' goods being sent *viâ* Durban. So much is this the case that with the exception of a little *viâ* East London, the Cape ports are not in the running with Natal. The grievances of business men in general, and the chemist in particular, in connection with the importation of home goods are too numerous to be more than indicated. There is the usual weekly apology from home *re* divided shipments, such as 125 cases on bill of lading, with only 25 shipped, whilst the frequent interviews with shipping and forwarding agents anent the transhipment of goods *en route* fully justify the claims of Natal merchants for a direct service of steamers by the Union Castle Company.

Messrs. Lennon (Limited) are erecting new wholesale and retail premises on their old site in West Street. As the building will not be completed for some time I shall have an opportunity of referring to it later.

The wholesale supply of methylated spirit is still a source of considerable irritation to the trade. The duty of 15*s.* per gal. imposed by the Government on the imported article from any place outside the Customs Convention, absolutely precludes any competition with the local product. Unfortunately the local manufacturers are unable to cope with the demand, with the result that every now and again the supply of S.V.M. runs out.

Retail.—For some time there has been a slight falling-off in the returns of the retail trade, due perhaps especially to the gradual return of many of the Rand refugees, the better class of whom have been staying at the hotels for the past two years, and of course have contributed in no small measure to the increased business; also to the less frequent visits of officers from the front, most of whom are too far away from the principal towns to admit of spending an occasional day in town for shopping purposes. Moreover, they are constantly on the move since guerilla warfare set in.

The future outlook is bright and reassuring, for with the opening up of the Rand in the New Year a great increase of visitors from home is anticipated, and, judging from the number of berths booked by the various passenger-steamers, together with the thousands of tourists on the roll at "Cook's," expectations likely to be realised.

Those chemists who combine photography with pharmacy have had a very busy year, both in selling photo goods and in developing films, printing, &c. Thousands of films have been sent down from the front, so it may be imagined what an impetus the photo business received. With the rapid growth of the outlying districts of the borough of Durban there have naturally been several opportunities for the enterprising assistant to go into business or for an ambitious proprietor to establish a branch. These opportunities local chemists have not been slow to take advantage of, with the result that several new drug-stores have been opened during the past year.

From a patriotic standpoint, it is to be greatly regretted that the retail sale of perfumery is mostly of French manufacture. Roger & Gallot, Pinaud, Piver, Rigaud, and Legrand are in great demand, whilst the Germans score with Mühlens. Such English firms as Atkinson, and the Crown Perfumery Company's products are occasionally asked for, but very seldom in comparison with those of the French firms named. With the perfume-loving public an exquisite odour is not all that is necessary. It must be enclosed in an attractive bottle with a handsome label and a faultless *tout ensemble*, so as to provoke love at first sight. This combination the French aim at, while the English—well, don't.

American Notes.

BUSINESS-CHANGE.—The Arkwright Pharmaceutical Company have taken over the business at 3818 Laclede Avenue, St. Louis, Mo., formerly belonging to Messrs. Griffiths & Co. The businesses will in future be carried on under the name of the Arkwright Pharmaceutical Company, with headquarters at 212, South Seventh Street, St. Louis.

SAME ALL THE WORLD OVER.—One of the most travelled "travellers" is, perhaps, Mr. P. J. Smythe, who represents an Eastern drug-house dealing in petroleum products. He is an Irishman, and his professional wanderings take him to every part of the five great continents, excepting only South America. In his most recent trip he has been through India, from Calcutta to Bombay, through Afghanistan, and the Holy Land. He has covered Japan and almost half of the great area of China. From the Orient he went to Africa, and after a tour of the northern part of that continent he returned to America. In speaking of the various peoples he has met Mr. Smythe said the more he travelled the more he realised that druggists at least are the same the world over. In India or in America the men with whom he has to deal have about the same methods and instincts. Mr. Smythe speaks several languages besides English, but says that English will carry the ordinary man around the world. "Whether one is in Paris or Berlin or Rome or in the heart of the Sahara," said Mr. Smythe, "he will find that the knowledge of English is the 'open sesame'—the only requisite for the interchange of thought."

ITALIAN QUICKSILVER.—According to the *Bollettino della Finanze* there is a considerable output of quicksilver in Italy, especially in Tuscany, where the quality of the ore is said to be as good as that of the Spanish mines of Almaden. The chief deposits are those of San Salvatore and of Comacchio, and Siele in the province of Grosseto. About 95 per cent. of the Tuscan quicksilver is sent to the United Kingdom.

Winter Session.

Royal Institution.

A LARGE audience was present at the Royal Institution on January 17, to hear the first Friday evening discourse of the session, by Lord Rayleigh, on the

INTERFERENCE OF SOUND.

The Duke of Northumberland was in the chair, and we noticed amongst the scientists present Sir Frederick Abel, Sir William Crookes, Sir Henry Trueman Wood, Sir W. C. Roberts-Austen, Sir Andrew Noble, Dr. Ludwig Mond, Dr. J. H. Gladstone, Professor Dewar, Professor S. P. Thompson, Dr. Messel, and Mr. Wimshurst.

Lord RAYLEIGH began by giving Tyndall's experiment with a shrill sound (in this case produced by a bird-call) and a sensitive flame, and showed how, by measuring the space between the nodes and loops, the length of a sound-wave can be measured. These two points are at a distance apart equal to half the length of the sound-wave. It should be explained that behind the flame a reflector is placed, which sends the waves back as stationary waves, in which loops and nodes alternate. Reflectors of glass, muslin, and paper have the same effect To produce more complete interference, a glass screen with a circular hole in the centre, was placed between the flame and bird-call, the flame being made to flare by placing a disc of cardboard before the centre hole. Lord Rayleigh showed how the flame-method forms an easy method of determining the pitch of tuning-forks. This led up to an account of some experiments he had been making in fog-signalling at St. Catherine's Point, Isle of Wight, as scientific adviser to Trinity House, and which resulted in the discovery that fog-horns with elliptical cones are superior to the round ones hitherto employed. It was noted that the best results as regards spreading the sound along the horizon are obtained by placing the cone with its long way vertical, and not, as would be thought, with the long way horizontal. This was shown by means of model foghorns attached to the bird-call, when it was seen the best effects were obtained by placing the cone exactly vertical, the sounds co-operating instead of neutralising each other, as they do when the horizontal position is assumed. The curious phenomenon of a "silent area," in which the sound may be silent at, say, a mile from the foghorn, yet be heard again at a further distance was referred to. This circumstance is obviously a very serious one for ships that get in the "silent area," and Tyndall's explanation was that it was a phenomenon of interference, the sea acting as a reflector of the sound-waves, which thus neutralised each other. Lord Rayleigh could offer no better explanation, but was not quite sure that Tyndall was right, as assuming that there was a "silent area" at the level of the deck, the sounds should be recovered either at the sea-level or up the mast. In experiments on board the *Irene*, however, the sounds could not be recovered. A concluding experiment was one showing that sound is affected by the medium through which it travels. Two hoops of metal, with collodion ends, were filled with carbonic-acid gas, with a retarding effect on the sound as compared with air. The collodion discs which covered the ends of the metal hoops were made by pouring a solution of celluloid in amyl acetate on water, allowing the solvent to evaporate and lifting the skin which remains on to the end of the hoop.

AN INTERESTING CEREMONY

took place at the conclusion of the discourse, when a bust of Sir Frederick Bramwell was unveiled. The Duke of NORTHUMBERLAND, advancing to the lecture-table, explained that when Sir Frederick Bramwell retired from the secretaryship last year his friends conceived the idea of presenting his (Sir Frederick's) bust to the Institution to commemorate his holding the secretaryship for fifteen years. The Duke explained that as when Parliament is opened by Commission the commission speaks in the King's own words, so he (the speaker) spoke in the words of the Board of Management, and proceeded to read a resolution which was passed in June, 1900, expressing the esteem with hich Sir Frederick was held by his colleagues. The Duke, with the assistance of one of the Institution officials, removed the red-velvet cloth which covered the bust, the audience applauding the while.

Sir JAMES CRICHTON BROWNE, as Treasurer of the Institution, accepted the bust on behalf of the members, speaking of it as "an animated bust with a photosphere of life around it." Sir James was in good form, and related how when Sir Frederick heard that it was resolved to commemorate his secretaryship he asked to be allowed to provide it himself, in the shape of an electric lift from the laboratories in the basement to the professors' department upstairs. But Sir James said "I told him he had already given the Institution a good lift, and it was not a hoist but a bust that was wanted."

Sir FREDERICK BRAMWELL said he found great difficulty in making any adequate reply. At his age—he was well into his 84th year—many things were denied him, among others the faculty of blushing; otherwise he would not have been able to sit and listen to the laudatory remarks of the Duke of Northumberland and Sir James Crichton Browne. The fifteen years he had served as secretary had been years of hard work, but of great enjoyment, for he had been brought into intimate contact with many men whom it was a pleasure and an honour to know. In 1885, before he accepted the secretaryship, as he did not feel fit for the duty, he consulted an old friend, who said to him, "You know a certain institution, and that so-and-so was secretary. Well, he was the biggest fool they ever had in the position and the institution was never so flourishing." "That certainly did encourage me," said Sir Frederick amidst roars of laughter. He was glad the bust had been given, for he believed the work of the world was done by average mediocrity pegging on, and it was well to encourage men in that sort of thing. As regards the form the commemoration had taken, it had the advantage that it could be easily removed, when some fifty years hence some one would ask "Who is that old fellow?" Perhaps the Professor Dewar of the day, after having liquefied the ether and preparing to solidify it, would want more space, and would say "we must get rid of some of these busts." (Loud laughter.) Sir Frederick concluded by making a touching reference to the recent death of the sculptor of the bust, Mr. Onslow Ford, saying it was a matter on which he could scarcely trust himself to speak. He had anticipated the process of making this bust with horror, but it became an actual enjoyment to sit to the genius and genial man who had made it and watch the clay growing into a most improperly exact likeness of himself, and the death of Mr. Onslow Ford was to him a source of infinite sorrow. He (the speaker) thanked the numerous friends most heartily for the evidence the bust afforded of the interest taken in him. (Loud applause.)

Chemical Society.

A MEETING was held at Burlington House, Piccadilly, W., on January 16, at 8 o'clock, with the President (Professor Emerson Reynolds) in the chair. After the reading of the minutes, the senior SECRETARY announced that the Council had made

ANOTHER CHANGE IN THE DATES OF MEETINGS

for the remainder of the session, and in consequence the next meeting would be held on Thursday, January 30, at 8 o'clock. After that date the first of the long-deferred and much-debated afternoon meetings will be held—unless the Council again changes its mind—on Wednesday, February 12, at 5.30 P.M.

The first

TWO PAPERS

down for reading dealt with the colouring-matter of green ebony and the constitution of the yellow dye myricetin, obtained from the Indian dyewood *Myrica Nagi*, and were contributed by Mr. A. G. Perkin. Owing to the absence of the author they were taken as read. The third paper was by Professor RUTHERFORD and Mr. SODDY, of Canada, and gave an account of their experiments on the

"RADIATION" AND "EMANATION" PHENOMENA

exhibited by thoria. As much interest is at present being shown in these mysterious subjects the paper was read in

Digitized by Google

abstract by Dr. SCOTT, and subsequently Professor VERNON HARCOURT gave a concise *résumé* of the author's previous work on this subject which made the matter clear to the Fellows present. During recent years the existence of a class of substances capable of sending out a straight-line radiation similar in character to ordinary light has been recognised through the researches of Curie, Crookes, and others, and this phenomenon has been named, after the physicist who first observed it, Becquerel radiation. Such a substance is the element radium, which occurs associated with barium, whilst uranium is supposed to owe its radio-activity to the presence of minute traces of actinium, and likewise polonium is associated with bismuth. Thoria contains such a radio-active substance which can be concentrated to a certain extent by fractional precipitation of crude thoria, but has so far successfully avoided all attempts at isolation. In addition to its Becquerel radiations, thoria exhibits another remarkable property, since it confers electrical conductivity upon gases when the latter are passed over it in a heated state. This is what the authors call the "emanation" of thoria, and since the mineral loses this power after long heating and regains it by solution and reprecipitation, they believe that some inert gas of the argon type is taken up by thoria and given up by it on heating, thus producing the conducting "emanation."

Dr. CHATTAWAY next read for himself and Mr. Walmore a paper on the constitution of

HYDROCYANIC, CYANIC, AND CYANURIC ACIDS.

In this the view was advocated that the hydrogen atom is attached to the nitrogen—*i.e.*, that prussic acid should be written H.N:C instead of H.C:N. The new evidence brought forward was obtained by a study of the action of reagents upon the haloid derivatives of these cyanogen compounds, which invariably react like substances containing the haloid joined to nitrogen. The paper gave rise to an animated discussion on the possibility of drawing conclusions from the reactions of tantomeric bodies such as those under discussion, most of the speakers being apparently in favour of the old-fashioned formulæ. A paper on an

IMPROVED FORM OF ZEISEL'S APPARATUS

for the estimation of methoxyl was then communicated by Dr. HEWITT and Mr. MOORE. The improvement consists in the use of a fractionating column of special construction to keep back the hydriodic acid instead of the sloping condenser, filled with warm water kept at 40° C., and the washing-apparatus containing amorphous phosphorus. As the new apparatus is simple in construction, can be rapidly put together, and gives apparently excellent results, it will be welcomed in laboratories where alkaloids, essential oils, and other natural products are investigated.

A NEW COLOUR REACTION OF HYDROXYLAMINE

was then shown, and discussed by Mr. BALL, who had observed that when aqueous solutions of ammonium sulphite, hydroxylamine hydrochloride, and ammonia (880) were mixed a fine purple colour was developed. The substance has often been observed by investigators working with compounds of nitrogen and sulphur, but has never been thoroughly examined, and the author was advised by Professor DUNSTAN in the course of the discussion not to follow the evil example of his predecessors, but to clear the matter up finally.

The last paper was by Mr. Menzies, and discussed the range of accuracy possible in a temperature-regulating apparatus of the Ostwald type.

Chemists' Assistants' Association.

AT a meeting of the above Association, held at 73 Newman Street, W., on January 16, the President (Mr. J. W. Peck) being in the chair, there was read an interesting paper by Mr. S. T. FROST on

BEE-KEEPING.

My purpose, said the author, is not to give a treatise on the products of the bee, but to direct attention to bee-keeping as an interesting hobby for chemists. Some may ask, Of what interest is bee-keeping to chemists' assistants in London? A country residence is not a *sine quâ non* to success in this hobby. The rapidity and power of flight of the bee, and its strongly-developed homing instinct, render a distance of a few miles of little account; consequently bees may be, and are being, kept in London, with its extensive parks and commons and numerous lime-trees. Close proximity to pasture-land or to large tracts of heather is an advantage, but it is not indispensable.

Modern bee-keeping differs considerably from the old style in the bell shaped straw skeps. The "scientific" bee-keeper uses "bar-framed" hives, the essential difference between the two systems being that whereas bees kept in straw skeps swarm several times during the honey season, by the new system swarming is prevented with a consequently larger yield of honey.

After minutely describing the "bar-framed" hive, and the "comb-foundation," Mr. Frost remarked that when a colony of bees is placed on a bar-frame hive, fitted with "foundation" combs, the "worker" bees immediately begin to "pull out" the foundation into a honey-comb formation, and if the honey-season is in full swing commence to deposit honey in the cell, while the queen-bee begins to lay the eggs which subsequently materialise into "workers," undeveloped females, drones, male-bees, and queens. The time required for the development of a worker-bee is twenty-one days, drones twenty-four days, queens sixteen days. The more rapid development of the larvæ destined to be queens is due to a special food which is given exclusively to them and which is said to be more rich in proteid matter. Only one queen is allowed in a hive, but she is extremely prolific, so that in the course of a few weeks the body-box of the brood-chamber becomes overcrowded, and if honey is being brought in briskly, the bees, having a few queen-cells with queens nearly hatched, decide to divide or "swarm." All being in readiness the old queen leaves the hive, followed by about three-fourths of the bees. A few weeks later a second "swarm" may be thrown off, and sometimes even a third "swarm" will leave the hive.

Mr. Frost next explained how the modern honey-gatherer circumvents the swarming instinct of the bee by giving them more room. An additional box is placed over the brood-chamber, and between the upper and lower box is placed a piece of zinc perforated in such a manner that while the worker bees can pass through, the queen and drones, being larger, cannot. Breeding is confined, therefore, to the lower chamber, and as the entrance is through the lower box the workers only enter the upper chamber to deposit the honey. As these additions to the hive can be made as required, a colony can be kept working at full pressure during the season.

Dealing with the quantity of honey which a colony gathers in a season, the essayist said he had assisted in taking from one hive 126 lbs. of honeycomb. Swarming, and how to prevent it, was next touched upon. The bee-keeper, having captured the swarm, puts the bees back where they came from. While they are settling in a temporary hive he stretches a sheet horizontally across the front of the hive, allowing it to bag somewhat, but not sufficient to touch the ground. Just before dusk, when the bees have settled comfortably for the night, he takes the hive and, by a sharp jerk, throws the whole of the bees upon the sheet. For a few moments all is confusion, the bees running about in all directions, very few, however, attempting to fly. By means of the "smoker"—the bee-keeper's chief weapon of offence and defence—the bees are soon all turned towards the mouth of the hive, and it is then a most interesting sight to watch the great mass of bees marching inside. To prevent a recurrence of the swarm the beekeeper sometimes opens the hive before putting the bees back and cuts out all the queen cells. If it is desired to have a young queen, he and his assistants take up a position on either side of the sheet, close to the entrance, and keep a keen look-out for the queen, and on sighting her she is at once destroyed. Should she elude the watchers a fight will probably occur between the old and young queens, and when the question of supremacy is decided the bees soon resume the even tenor of their way.

The collection of the honey was the next aspect of bee-keeping considered. The method recommended by Mr. Frost is as follows: In the early morning of a suitable day the different sections of the hive are slightly opened, and a little smoke puffed into the hive. This alarms the bees,

Digitized by Google

and causes them to gorge themselves with honey, when they may be manipulated without risk of stings. The upper part of the hive is then raised clear of the body-box, and a bee "escape" inserted between the upper and lower portion. This stops the bees in the latter part from coming upwards, but those in the upper part can go downwards. As a result, the "supers," or upper boxes, are soon clear of bees, and the combs may be removed to extract the honey. Before doing so it is necessary to "uncap" the honey-cells—perhaps the most tedious and delicate task the bee-keeper has to perform. Modern methods, however, have made the task comparatively easy, and if a knife constructed for this purpose be employed, taking care to immerse it frequently in boiling water, the combs are soon ready for the "extractor"—a centrifugal machine which rapidly empties the combs of honey. After passing through the "extractor," the combs are replaced in their former position in the "supers," and can be utilised for the next season, for, if the bees have a comb ready prepared, the task of storing the honey is commenced immediately. It will be readily understood that by this system little beeswax is produced; but modern bee-keeping has this advantage—that much more honey is obtained, and it is not necessary to destroy a single bee. The whole of the young brood is kept alive, and forms the strength of the colony the following spring. The lower box, or brood-chamber, is generally left alone, so that the honey it contains may serve as winter food for the bees. Sometimes this is not sufficient, and a bee-food, consisting of a thick syrup of sugar and water with a dash of vinegar, is prepared. This is placed in a special "feeder," whence the bees can carry it down to the hive at leisure.

Mr. Frost gave some instances of the extreme adaptability of *Apis mellifica*. During a bad honey season the bees from one apiary raided a local confectionery-works where glucose was extensively used, and the work-people were compelled to cease work in the daytime. Large quantities of syrups intended for the manufacture of sweets were carried away by the bees, with the result that when the honey-cells were exposed some appeared to contain pink honey and others a red-coloured fluid. The proprietor of the works has since threatened the owner of the bees with an action for damages on account of the loss and annoyance caused.

When honey is scarce the otherwise industrious and moral bee gives way to some predatory instinct, and each begins to rob his neighbour. Mr. Frost said he rather sympathised with the "drone," who was after all not such a lazy good-for-nothing fellow as generally described. After performing the necessary function of fertilising the queen bee and subsequently tending and keeping warm the young bees in the grub-stage, he is, at the end of the season, driven out of the hive and left to starve.

The life of a worker-bee during the honey season is of short duration, and when honey is plentiful one may sometimes notice great numbers of bees crawling around the hives with their wings literally worn into shreds so that they can no longer fly. These are denied entrance to the hives, the sentinels at the doorway expelling them in the same brutal fashion as the drones.

The paper was supplemented by specimens of various bee-appliances lent by Messrs. James Lee & Son, 10 Silver Street, High Holborn, W.C.

The PRESIDENT, Mr. R E. Lonsbrough, and Mr. FFOULKES spoke on the subject, and Mr. FROST, replying to the question, said he did not know the effect of passing glucose through the bee; honey is composed of two glucoses. All pure honey crystallises on keeping. If melted down it does not re-crystallise if adulterated. Localities certainly affect the quality of the honey; clover honey is very nice, and heather honey has a distinctive flavour, but is dark and very dense. As to the bee distinguishing certain flowers, he knew that once the bee found where honey is to be obtained it makes a "bee-line" to the spot. The average life of a worker bee is six weeks, but they live longer in winter. Honey ripens better in the combs, but is also "ripened" artificially.

Midland Pharmaceutical Association.

AT a meeting of the above-named Association held at the University, Birmingham, on January 16, under the presidency of Mr. A. W. Gerrard, F.C.S. (in the absence, on account of the death of Mrs. Sarah Southall, of Mr. John Barclay).

Mr. F. H. ALCOCK, F.I.C, read a paper on

CINCHONA BARK: ITS TINCTURE AND ASSAY.

Mr. Alcock reminded his hearers that attention had been called on several occasions recently to the unsatisfactory nature of the preparations of astringent drugs. He showed several samples of simple tincture of cinchona and the compound tincture. The bottles were coated with a thin film of insoluble matter, and there was a thick sediment of the same substance, whilst a general deterioration of the tincture was evident. The flaky substance was not easily detached from the bottle by shaking in water or spirit, but yielded immediately to caustic potash or soda a clear deep red-brown liquid, becoming darker on exposure to air. Mr. Cripps, he mentioned, showed some years ago that alkaloids were deposited in the sediment of tincture of cinchona, and Mr. Alcock, on testing the sediment in 15 c c. of one of the samples of tincture, obtained a very faint reaction for alkaloids. While dealing with this sediment the thought occurred to him to examine the official assay process with the tincture, which consists presumably of treating 10 c c. of the tincture in the same way that 5 c.c. of the liquid extract would be treated. This process seemed to be a very elaborate one in order to capture 0·1 gramme or 1½ gr. of alkaloid from 10 c.c. of the tincture, and it was not difficult to understand an inexperienced analyst going wrong when assaying this preparation. With the same process

IT WAS NOT SURPRISING

that even highly experienced analysts could differ almost to a serious degree when this assay was adopted. He found the lime-assay process on the evaporated residue was not satisfactory because of the danger of the formation of lumps, entangling the alkaloid, and causing resistance to the action of the alkaloidal solvent. To prove this a standard tincture was taken, and by the lime process only 0·82 gr. of total alkaloid was obtained from 10 c.c. He mentioned that benzolated amylic alcohol does not remove the whole of the alkaloid from the ammoniacal solution of alkaloids (last stage of assay process), even after six washings, and in two instances at least nine and ten washings did not entirely remove what was considered to be traces of alkaloid. After acidification with hydrochloric acid the presence of alkaloids was still indicated by the usual reagents. Mr. Alcock described how the tincture used in his experiments was prepared. A sample of bark from the London Docks, guaranteed to be of B P. strength, yielded 6·23 per cent. of total alkaloid, distributed as follows: 1·2 per cent. of quinine and cinchonidine, 3·9 per cent. of cinchonine and amorphous alkaloid. The residue in the filtrate, which the B.P. ignored, was 1·13. He reminded his hearers that Mortimer several years ago called attention to this omission in the official process, and Professor Attfield, in his "Digest of Criticisms" of the 1898 B.P., thought that he had not extracted the whole of his alkaloid because he did not leave it long enough. Describing how his tincture was made, Mr. Alcock said 4 oz. of the bark was macerated with 4 oz. of 70-per-cent. alcohol, transferred to a percolator, and percolated with the same menstruum until 1 pint of the product had been obtained. This was put on one side, and percolation continued with water until all the alkaloids were removed, as indicated by Mayer's alkaloidal reagent. The aqueous and weaker spirituous portion was evaporated to low bulk, and mixed with previously collected percolate. The resulting tincture, when assayed according to the B P. plan, contained 1·07 gramme of alkaloids per 100 c.c., and yielded 5·35 per cent. of total solids, which in its turn gave 25 per cent. of ash, while the sp. gr. was 0·919. The aqueous portion contained but a very small quantity of alkaloid. The following modification of the official process was used in assaying the tincture. Ten c.c. was mixed with separate portions of potassium hydrate, quantities varying from 0·2 to 1 gr. being used, together with 20 c.c. benzolated amylic alcohol, which was removed, and the residue washed with another 10 c.c. of B.A.A., then proceeding as the B.P. directs. By this process all emulsification is avoided, separation is clear and well defined, and the substratum liquid perfectly clear and soluble. Another experiment was tried in which chloroform alone was used, and the result compared favourably with the previous experiment, the

Digitized by Google

resulting alkaloidal residne being slightly coloured. A third experiment with ether was not satisfactory, the ether removing a considerable quantity of colouring-matter. Standard alcoholic potash may be used with advantage, for then the impurities of commercial caustic potash—such as chloride, sulphate, and carbonate—do not interfere with the subsequent separation. This potash process was applied to the analysis of the marc. Five grammes of the marc and 5 gr. of caustic potash, with 10 c.c. of alcohol, were triturated in a mortar and left for twenty minutes, then transferred to a flask, B.A.A. added, and the extraction proceeded with according to the B.P. directions. This process gave the same result as the official process, and was apparently cleaner and quicker in operation. When adding either lime or caustic potash to the cinchona-bark it was observed that an ammoniacal gas was evolved. He had not seen this recorded before, and he asked if other experimenters had had a similar experience. Dewhurst adversely criticised the B.P. bark-extraction, and Mr. J. Stenhouse had proposed an alternative process, but Mr. Alcock believed that by the use of this alcoholic-potash method the official process would stand good.

Mr. GERRARD said the essence of Mr. Alcock's paper seemed to be a portion of that important branch of pharmacy which was concerned with the known solvents—their uses and how they operated when brought to bear upon drugs. He had had considerable experience of the extraction of alkaloids, and so far as emulsification was concerned, it was a very good thing to shake first of all with absolute ether. It was necessary that it should be absolute, and then emulsification did not take place so readily. There was no objection to the use of methylated ether. It removed fat and waxy matters, and chlorophyll, which was of a waxy nature also. He had not had a close acquaintance with cinchona bark or its tincture, but should imagine it was not easy for solvents to penetrate the hard bark and extract the alkaloids. Moreover, the alkaloids were not very soluble, and in addition the tannin bodies in the bark held them back. It was an easier matter when dealing with belladonna-root to extract the bases, for they could get the root in a fine state of division, and the alkaloids contained therein were much more soluble and were easily extracted. One could quite understand that potassium hydrate would possess power of penetration, but it was known to dissolve many substances such as cellulose, and by setting alkaloids free they were more easily attacked by the solvent. How far caustic potash acted upon this substance if left long in contact he could not say, but workers conducted their processes rapidly, and possibly there might not be much serious destruction. He himself had chiefly used ammonia hydrate, and he did not quite understand why so large a quantity of the solution of potash was required in the assay process for the liquid extract of cinchona. It struck him as being excessive. He met the difficulty of emulsification in the early part of his experience, and found that gentle warming facilitated separation. The oscillatory motion caused by slowly rocking the solvent and the liquid in a dish with the surface contact caused the extraction of the alkaloid, and answered quite as well as vigorous shaking. Mr. Gerrard referred to the mixing of chlorodyne, in which chloroform, ether, and treacle were emulsified together. The addition of a little water would cause the separation if that was desired, and this too he had found a good method of dealing with thick and viscid liquids. With regard to sediments in tinctures, which made their appearance especially after the tincture had been kept some time, he thought it was due to the union of some of the natural acids of the drugs with the alcohol. Chemical changes were set up resulting in the formation of precipitates. If the old tincture was examined it would be found to possess more aroma and be more agreeable than the freshly-made preparation. He was of opinion, too, that light played a very important part in the production of these sediments, for on examination of the shop-rounds the deposition was found to be greater on the side most affected by the light. He concluded by moving a vote of thanks to Mr. Alcock.

Mr. G. E. PERRY, in seconding, said Mr. Alcock had not referred in his paper to aspirating the emulsion through cotton wool by means of a pump. Personally he had found this to be of great advantage.

The vote was cordially passed, and Mr. Alcock acknowledged.

Halifax Chemists' Association.

THE annual general meeting of this Association was held at the Old Cock Hotel, Halifax, on January 15, the President (Mr. W. S. Thompson) in the chair. Mr. Gibson Dixon was elected President for the ensuing year; Mr. W. R. Black was appointed Secretary, and Mr. J. W. Tiffany Treasurer. The date of the annual dinner was fixed for February 6.

Northampton Chemists' Association.

THE monthly meeting of this Association was held at the Black Boy Hotel, Northampton, on January 17. The President (Mr. W. McKinnell) was in the chair.

ENLARGING THE SOCIETY.

The SECRETARY (Mr. F. Cowdery) reported that he had written to the chemists of Northamptonshire inviting them to attend a meeting of the Association to discuss the possibility of joining the Northampton Chemists' Association in their meetings. He had received twelve replies, from chemists at Kettering, Peterborough, Rushden, Desborough, Wellingborough, Earls Barton, Daventry, and Rothwell. Ten of these were completely favourable, one was unfavourable, and the other, while agreeing with the proposal, pointed out difficulties in the way of attending meetings at Northampton, because the train service was so inconvenient. The Secretary is to invite the county chemists to a special meeting on January 30, at 4 o'clock.

SIDE-LINES.

Mr. E. C. ASHFORD opened a discussion upon the adjuncts to his business which the chemist might profitably undertake. After dividing chemists into three classes—the scientific analytical chemist, the dispensing chemist, and the general chemist—he pointed out that the chemist of to-day had to face competition which previous generations of chemists knew not. Doctors did their own dispensing; large dispensaries absorbed a great deal, if not most, of the dispensing which a chemist reasonably might have expected; grocers sold tartaric acid, borax, citric acid, essence of lemon, and mineral waters; the small shops in the secondary streets of the town sold a great many things which the chemist sold; the ironmonger took up the sale of oils and chloride of lime; and the drapers sold perfumery, violet-powder, and puff-boxes. All these things in former years were sold almost exclusively by chemists, and it was difficult to say what the chemist was to do to compensate himself for the loss of the trade in these things. As the Government compelled a chemist to pass hard examinations, it ought to give him some protection in his trade, so that chemists' goods may not be sold by other tradesmen. He suggested that chemists should sell oils, paints, petroleum, and other things, so that the public would go to them for these as well as for drugs, and, personally, he would have no hesitation in selling anything that he thought the public would be likely to ask him for. A brisk discussion followed, varied opinions being expressed.

Edinburgh Chemists', Assistants', and Apprentices' Association.

A MEETING of the Association was held in the Pharmaceutical Society's House, Edinburgh, on January 15, Mr. J. G. Sclater (President) in the chair.

Mr. DAVID HARLEY read a

NOTE ON ICHTHYOL.

The word "ichthyol" is derived from the Greek word *ichthus*, a fish, the substance being obtained from a mineral oil distilled from a bituminous quartz containing fossil deposits—chiefly fish. The mineral oil is treated with sulphuric acid and neutralised with ammonia, the product being ammonium sulpho-ichthyolate, a complex sulphur compound, the formula for which is said to be $(NH_4)_2C_{22}H_{26}S_3O_6$. This is the preparation which is distinctively known as ichthyol, although there are other similar combinations of sulpho-ichthyolates prepared with

Digitized by Google

lithium, sodium, or zinc. It is a semi-liquid, dark-brown, tarry-looking substance, with a strong disagreeable odour. On heating it readily loses bulk, puffing up, liberating gaseous vapours, and carbonising; in fact, in appearance and smell it is very similar to boiling pitch or asphalt. On exposure to the atmosphere it thickens and sets like a varnish; this may be noticed when a drop is left on the side of the stock-bottle. It is one of the few substances which are freely soluble in water and at the same time quite readily miscible with fats and oils. The various forms in which it is compounded at the dispensing-counter were then reviewed.

ICHTHYOL OINTMENT

is the most common form in which the drug is used. An ointment containing as much as 40 per cent. of ichthyol, made up with lanoline, makes a satisfactory preparation.

Aqueous solutions with or without glycerin or alcohol are commonly used as gargles, injections, lotions, and sprays, another form of external application being ichthyol collodion, when it is used as a paint, or the substance itself may be used for the same purpose. Pessaries containing 10 per cent. are often ordered, and are now generally prepared with cacao-butter as a base. They were formerly made with gelatin, but these were found unsatisfactory on account of their insolubility, and, as pointed out by Mr. Hill, the combination of ichthyol and gelatin was not all that could be desired. In making the pessaries with cacao-butter as little heat as possible should be used. Suppositories are not often prescribed, but can be prepared in the same manner as the pessaries. Martindale suggests the addition of a little wax to give firmness, but a suppository containing 2 gr. of ichthyol with cacao-butter alone answers very well. The melting-point of cacao-butter and wax mixtures is usually higher than the temperature of the body, but it is said to be considerably lowered by the addition of ichthyol. Dusting-powders, plasters, and soaps are other forms in which it is exhibited for skin-medication.

FOR INTERNAL ADMINISTRATION

a usual prescription is:—

Ichthyol.	...	...	...	... ℥ss.
Aq. destil.	...	...	...	... ℥iss.

Dose.—20 to 25 drops.

This forms a clear-brown solution with a slightly acid reaction. Mr. Harley laid stress on the solubility of ichthyol in water, because in the "Art of Dispensing" it is given as a substance insoluble in water. A mixture containing

Ichthyol.	...	...	...	... ʒj.
Potass. brom.	...	...	...	... ʒij.
Aq. ad ..	...	...	...	... ℥uj.

requires a little care. On mixing the two solutions a turbid-brown precipitate falls and eventually settles as a sticky mass. The precipitate may be a sulpho-ichthyolate of potash, which is not so soluble as the ammonia compound, and is consequently thrown out. The addition of a little mucilage makes a more presentable preparation. Pills containing 2 or 3 gr. are sometimes ordered. Equal parts of ichthyol and liquorice-powder rubbed together and set aside for an hour or two before being rolled make a fair pill. To make a small pill spread the ichthyol on a slab and heat gently for a little, until a suitable consistency is acquired, when the mass may be rolled off without any addition whatever. The sodium compound might be preferred in this combination, but in the heating necessary the ichthyol does not appear to suffer, water merely being driven off. Capsules and tablets are other convenient forms for administration. Judging from the many forms in which this substance has been used and the variety of cases in which it is prescribed, it would appear to be held in good repute by the medical faculty, and it would be interesting to know wherein its therapeutic value lies. It is said to contain from 10 to 15 per cent. of sulphur in an easily assimilable condition. Antiseptic and alterative properties are attributed to it, and in chronic eczema, lupus, and various skin-affections, gout, rheumatism, gastric catarrh, constipation, and even phthisis, beneficial results have been reported from its use.

Mr. J. Hutcheon then read the paper (see page 175) on

THE APPRENTICE-QUESTION,

which provoked the following discussion:—

Mr. Donald McEwan said the first duty of chemists was to join the Pharmaceutical Society, and then discuss what it should or should not do; and Mr. Currie said the Pharmaceutical Society possessed no disciplinary or penal powers and could not possibly use the force or compulsion to which Mr. Hutcheon had referred. He thought the present standard of the Preliminary examination was necessary and right. He was also of opinion that employers ought to allow their apprentices more time for study. Mr. Cowie said the apprentice-difficulty was just as pressing in other trades. He thought the Society had missed a chance in not doing more to assist unqualified men. The School of Pharmacy did not seem adapted for the rank and file, but catered rather for the sons of gentlemen. He believed every student at Bloomsbury Square cost the Society about 30*l*. He did not see why the Pharmaceutical Society should not be like South Kensington, and recognise the schools of pharmacy throughout the country. They would not object to be inspected by competent men. Mr. McPherson said if it is true that the apprentice-difficulty is common to other trades, one is inclined to ask, "Where do the boys go to?" Mr. Duncan said the Society was just what they made it. They could change the Council if they were not satisfied. The Bloomsbury Square School was open to the rank and file, but the men, being wise in their generation, preferred to go to the other schools. He thought the great difficulty lay in the masters. They made no attempt to train their apprentices, and only tried to get as much work out of them as possible. If the Society could compel masters to train their apprentices it would be a great gain. He thought it was too bad for examiners in their reports to blame teachers for what was really the fault of the masters. He found that students came to him quite ignorant of the simplest processes in practical pharmacy, and he really had to teach them the whole subject of dispensing; and this Mr. Cowie agreed in, adding that out of ten men who were asked to make simple syrup only two knew how to go about it.

Votes of thanks were awarded to Messrs. Harley and Hutcheon, and the meeting closed.

Huddersfield Chemists' Association.

A meeting of the above Association was held on January 14, the President (Mr. R. C. Walshaw) in the chair. The minutes of the last meeting were read, after which a sub-committee, appointed to make arrangements for the proposed dinner, reporting favourably, it was decided to fix the date for February 5.

Tees-side Chemists' Association.

The annual meeting of the above Association was held at Middlesboro' on January 16. The chair was taken by the President (Mr. T. Buck). The retiring President gave a short *résumé* of the work done by the Association, and especially emphasised the better feeling which had been brought about by the meetings of the Association.

The following officers were elected for the coming year:—President, Mr. W. R. Brackenbury; Vice-Presidents, Mr. Close and Mr. Round; Treasurer, Mr. T. Buck; Hon. Secretaries, Mr. W. Thompson and Mr. W. Finlayson; Committee, The officials, together with Messrs. Rothwell and Lee. The newly-elected President took the chair vacated by Mr. Buck, and proceeded to read a paper on "Trade Prospects," which was afterwards discussed.

Chemists' Assistants' and Managers' Society.

A meeting of this Society was held at the Horseshoe Hotel, Tottenham Court Road, W., on January 22, when Mr. C. E. Pickering read a paper on

SALARIES,

which was an endeavour to determine what the salaries of chemists' assistants and managers should be. The following is an abstract of Mr. Pickering's remarks:—

Digitized by Google

During his management of the employment-department of the C.A.U. it was his lot on so many occasions to receive inquiries respecting the pay of assistants, that it was resolved to bring the subject before the members, and, if possible, to arrive at some scale that the Council might adopt as the minimum, particularly in the case of junior assistants. The circumstances surrounding managers vary so much that it is almost impossible to fix any definite scale for their pay.

With regard to junior assistants, taking an average case, in which an assistant has satisfactorily completed a well-arranged apprenticeship spent in an average-sized provincial town, where he has been taught the general routine of a good family and dispensing business, with some agricultural work, and where his master has taken some interest in him, and seen that he has laid the foundation of his knowledge of pharmacy. He has passed the Preliminary, or its equivalent, examination before commencing his apprenticeship, and by the time his three years' pupilage has expired he should know not only how to make most of the ordinary preparations of the B.P., but be versed in the elements of chemistry and botany, and be fairly proficient in the ordinary duties of the counter. Assuming he is 19, he will have two years at least to pass as a junior before he can qualify, but he can be very useful in a general business. Surely he is worth at least 10*s.* a week with board and lodgings? Mr. Pickering thought he should get 30*l.* per annum indoors, or 75*l.* outdoors. By the time he is desirous of qualifying he should have increased his commercial value to at least 40*l.* per annum indoors, or 85*l.* outdoors, but many men at the age of 21 are worth more. Then follows a period when an absence from business—which may range from six months to a year or more—becomes necessary in order to become qualified. Having therefore thoroughly studied the various subjects required and successfully negotiated the Minor, it may become

A VITAL QUESTION TO DECIDE

whether to at once return to business or acquire the Major diploma. Every man who wishes to be able to accept any scientific position which may present itself should have the Major certificate at least, and it is advisable to secure it right away if possible. Assuming that he returns to business after passing the Minor, with his diploma and previous experience he should not expect to receive less than 60*l.* per annum indoors, or 120*l.* outdoors to start with, with an advance in three months. It must be remembered, however, that there are many historic houses which do not pay more than 40*l.* indoors, or 90*l.* out, but the value of such appointments is not to be reckoned in pounds, shillings, and pence. The average man who wishes to improve himself as quickly as possible, to widen his experience, and increase his income, would be well advised for a time to seek short berths, say go as *locum tenens* for two or three years. It is really wonderful how bright a rolling stone becomes, and what polish it acquires. The various methods and ways adopted, and believed to be absolutely the best by so many different chemists in divers parts of the country, are really very refreshing, besides broadening the views of the assistant and enabling him, as a mere disinterested party, to draw a correct view of the matter. The assistant may with great advantage also spend a year or two abroad, particularly in some continental health-resorts, when the knowledge gained is invaluable. Such an assistant at the age of 25 should be unable to undertake the management of a good family and dispensing business, where two or more assistants are kept. And at this stage it is difficult to say what salary he should command. So much depends on what is required of him, the responsibility, and number of people in his charge; but a capable man is worth 80*l.* indoors and from 140*l.* to 160*l.* outdoors, to commence with, and a commission on results. Suppose he receives 156*l.* per annum, that at an average of ten hours' actual attendance in the pharmacy per diem, works out at (during six days a week) 1*s.* an hour, which he (the speaker) did not think was an exorbitant figure. A good plan recommended to employers is to pay the manager 10 per cent. on the turnover, and allow him an extra 2½ per cent. on all increase of business, which, Mr. Pickering said, is fairer to the employer and the manager than a fixed annual salary. It gives the manager more scope for his energies, and he knows that he receives, as well as earns, his reward for his industry.

School of Pharmacy Students' Association.

THE first meeting of the new term in connection with the above Association was held on Friday evening, January 17, Mr. H. S. PHILIPS occupying the chair. It took the form of "impromptu discussions," and was much enjoyed by everyone present. All the members were quite on their mettle, and some capital impromptu speeches were made. The topics chosen proved very attractive, and not only included matters concerning pharmacy, but ranged so far as to include "Trade Unionism," and the latter had its supporters even at the "Square." Time, unfortunately, did not permit of every subject submitted being discussed, and an interesting meeting was brought to a close by a hearty vote of thanks to the popular Chairman.

Pharmaceutical Society of Ireland.

EXAMINATION RESULTS.

Pharmaceutical Assistant Examination.—The following passed: T. Arnold, W. J. Balmer, J. Taylor

Registered Druggist Examination.—J. H. MacLaughlin, C. Y. Oakman, and S. J. Smiley passed. One candidate was rejected.

The following is the pharmacy paper given at the Assistants' examination:—

1. Enumerate liquid preparations containing opium, and give dose of each.
2. Give dose and strength in active ingredients of B.P. representative for Easton's syrup.
3. Enumerate hypodermic injections of B.P., giving strength and dose.
4. Give composition and strength of the following:—

Tinct. sennæ	Ung. conii
Decoc. aloes co.	Pulv. kino co.
Tinct. lavand. co.	Mist. sennæ co.
Pulv. ipecac. co.	Ung. iodi
Mist. ferri co.	Pil. asafet. co.
Lin. pot. iod. c. sapon	Pil. ipecac. c. scillæ

5. Under what conditions are the following retailed?—

Liq. hyd. perchlor.	Tartar emetic
Tinct. aconit.	Liq. arsenical
Syr. chloral	Tinct. cantharid.
Phenol	Ext. ergot. liq.

The following paper was set at the Registered Druggist examination:—

1. If 35 cwt. cost 36*l.* 17*s.* 11*d.*, how many cwt. can be bought for 25*l.* 6*s.*?
2. The sp. gr. of glycerin is 1·25. Find the weight of 2½ quarts.
3. Find the value of ⅞ of ⅔ of a guinea − ⅔ of 7¾ of a half-crown.
4. Cod-liver oil is bought at 5*s.* per gal.: at what price per pint must 40 gal. be sold to gain 5*l.*
5. Under what conditions are the following sold:—Red precipitate, liniment of aconite, opium, tartarated antimony, blistering liquid, liquid extract of ergot, liniment of belladonna?
6. State how you would distinguish Epsom salt from sulphate of zinc, calomel from sub nitrate of bismuth, arsenic from cream of tartar.
7. Write an essay on "Christmas."

NEW ZEALAND TARIFF DECISIONS.—The following decisions bearing on the New Zealand Customs tariff have been recorded:—

Eucalyptus, "Sanders"—	
As eucalyptus oil, in bulk or bottle	20 % *ad val.*
Soap compound, rose, for the manufacture of soaps	Free
Weed-killer, "Acme"—	
As "not otherwise enumerated"	Free
Wine, "beef and malt" and "coca" (*a*)—	
As wine, other than sparkling and Australian	6*s.* per gal.
Wine, "beef and iron," "quinine," and "quinine and orange" (*a*)—	
As drugs and druggists' sundries, not otherwise enumerated	15 % *ad val.*

(*a*) Whether proprietary or otherwise

Galen Glee-club.

The Christmas Gathering.

A dark and dreary fog-bound Christmas-tide,
Whose leaden hues fore-stemmed the surging side
Of gay Ricardo's spirits, down they sank
Deep as a dungeon; till a noisesome clank
Reverberating from the banquet hall
Recalled him thither, and the woesome pall
Lifted like magic, for his glance surveyed
Full in its pride the wonders he had made.

Wreathed round with holly prickly stood the Throne,
"Vox et præterea—" thus the motto shone,
Extracts in plenty (from Knapman's treasured tomes),
Festoons of fibres and leaves and roots (from Holmes),
Rare herbs (quite Greenish), fruit both ripe and Green,
Mottoes and mountings, the like were never seen,
Blended in brightness and dazzling in array,
Shining with a splendour that mocked the light of day.

Then, on gentle tiptoe, moved Ricardo round
The board, 'neath viands groaning, and to each chair he bound
The little gift of Christmas that Santa-Claus-like came
A-bolting from the Blue as aloud he'd called the name
Of those whom most he cherished, but be he friend or foe,
He promptly was provided with a something *à propos*.

The penny trump from Houndsditch or the Jewsharp from afar,
With crowns and swords of tinsel for the valiant men of war.

Then he summoned Schreiber, who bore with tender care
A jewelled golden casket, which he placed upon the chair.
Reverently he fumbled the golden key in lock,
Timid glanced a-round, fearing One there'd be to mock.
All aflash it lay on its velvet counterpane
The symbol of True Pharmacy, with link-completed Chain.
Each link drooping pendant of the chastest West-end cut,
Emblem each of wisdom—and the zeal of Borthwaye Knutte.

Soon in long procession solemn men with quills,
Learnèd youths with inkpots, legal lights with Bills,
Lynx-eyed luminaries, pallid men with proofs
Chanting weird-like music, drowning restive hoofs
Of equine neighbours pawing in that perfume-haunted Place
So well-beloved of candidates who run the Minor race,
And who think while long in patience they wait their Lords' behest
Of the ammoniacal odour and the uric-acid test.

Blandly watched Ricardo, grimly Schreiber glared,
Slowly rolled the music while brazen trumpets blared.
The Staff with lungs of leather ringing forth their weird refrain,
As with brandished proofs and inkpots they thus chanted of the Chain.

The Chant of the Chain.

Wondrous circlet, regal fashioned,
For the massive manly chest,
Of the great Ones whose impassioned
Love for Us hath made them blest.
Wise Defender,
Praise we render,
(At the Borthwaye Knutte request.)

Links to bind a stubborn Craft with,
Golden discs that mark our past,
Rope to hold the breaking Raft with,
Warp the bosun to the mast;
Praise we render,
Homage tender,
(Lest Cartegno look aghast.

Chain to weld our interests closer,
Badge to prove our learning, skill,
Fit to slay the cutting Grocer,
Or the Comp-an-ies to kill.
Useful, tender,
Gold defender,
Aid us with another Bill.

Thus in unison we praise thee,
Paying tribute to thy worth;
May no vulgar man debase thee
With the thought of things of Earth.
Praise we render,
To the tender,
Loving thought that gave thee birth.

The rolling echoes of the dying Chant
Had scarce grown silent, ere the adamant
But urbane Schreiber held up warning hand,
And all expectant stood, like stricken band.
Full soon without a lordly step was heard,
A knightly figure entered, richly furred,

And, casting mantle from him, with a strut
Stood forth disclosed the Lord of Borthwaye Knutte.
The Staff bowed low, then cheered till rafters rang;
He made to speak—but changed his mind and sang.

THE SONG OF THE NUT.

A little Nut grew on a Bloom-Berry tree,
And a hard little Nut to crack was he;
But he grew quite ripe, and no green you'd see
Behind him or before, O.
And he made such sums from the books that he read,
Did this clever little Nut with the wise, wise head,
That his wondering neighbours very soon said
"He's a Heaven-born Audit-ōr, O."

Chorus.

The bright little Nut with the long, long head
Grew so wise that his brethren each one said,
He must be an Audit-ōr, O.

So they plucked him straightway from his perch,
And among their sums they made him search
Till he fain would have left them in the lurch,
Or have sinfully shed their gore, O.
But he soon found the sums were as clear as day,
And he'd nothing to do but to smile and to play,
So he gathered big plums, and he gave them away,
Did this generous Audit-ōr, O.

Chorus.

He collected plums by night and by day,
And to good little boys he gave them away,
This ingenious Audit-ōr, O.

Now his fame grew great in the neighbouring trees,
And crowds came a-gazing from over the seas
Till the whole world shook if he chanced to sneeze
Or unwittingly to snore, O.
And at length his success so flew to his brain
That he mocked all his friends till he gave them pain,
So they cracked the Nut with a badge and a chain,
The poor little Audit-ōr, O.

Chorus.

This simple tale you must take to heart,
And never, never seek from your tree to part,
Or you'll come to your end by some lightning dart,
Like this far-famed Audit-ōr, O.

The pale effulgence of the Ancient Moon
Beamed radiant in the doorway; and a boon
He craved in tone commanding, while the hush
Of awed expectancy brought faintest blush

Of pride to marble cheek, though clear-cut brow,
Bestrewn with silvered locks, perturbed was now.
Their Over Lord, he told them, from his heights
Of Northern fastness hied him many nights
Before to join them, but the snow-wreaths piled
In mountainous altitude bestayed him. Wild
With desire to join his band, he strove
To cut a path with epigrams from Jove
(Surnamed Atcano); but the snow was thick.
E'en Gee-Jaye's fiery speeches froze up quick,
And progress hopeless seemed; so, quite resigned
To Fate's decree he Marconi-ed by wind
A message telling of his woful plight,
And deep regret that not with them that night
Could he disport himself. And this his will:
That bold Cartegno his lone seat should fill.

So, sadly mounting to the vacant Throne,
He squashed th' unheeded casket. With a groan
Of mingled terror and despair they saw
The bauble splintered, and a long-drawn "Ah!"
Was followed by a scramble for the links.
The grieved Cartegno, mute with horror, sinks
Into his seat, while Schreiber gleans the floor
With careful fingers, kneeling, puffing sore.
Remains of splintered badge at length are got,
And broken links are Welda-ed on the spot.
Peace once more reigns, good humour soon restored,
Cartegno clears his throat and thumps the board;
Silence obtained, he views the waiting throng,
And, smiling slightly, bursts forth into song.

THE PRESIDENT'S PLIGHT.

Can you picture the sight
And the terrible plight
In which our good Chieftain has fallen;
With the snow all around
In a marble-like mound
It must really be something appallin';
With a frost-bitten nose,
Tender, tingling toes,
And nothing to comfort or cheer him;
No friend to condole
(Ne'er a pan to his sole),
Or Councillor anywhere near him.

No Registrar watchful of conduct unlawful,
It really must be quite too utterly awful.

He sits grave and grim,
Hums the 49th hymn,
And glares at the views in the carriage;
Then he drops off to sleep,
And a heavenly peep
Of a banquet at Jacob Bell's marriage
Appears in a dream;
But he wakes with a scream,
For he sees now Camlachie pursue him,
And Dobbs and the Devil
Have joined in a revel
With weed-killer-men to undo him.

Through all the long ages he shakes and he shivers,
While cold perspiration runs off him in rivers.

Then at length in despair,
He dishevels his hair,
And stamps up and down the compartment;
But the merciless snow
Seems unlikely to go,
And he prays for a Clearance Department.
He dreams of his bed,
Of the speeches he's made,
Till he feels just like Pilate the Pontius;
So his hunger to stay,
He gets out the *P. J.*,
And he reads it—and falls down unconscious

'Tis a criminal thing for a wicked prescriber
To order his victim a column of Schreiber.

Loud genial laughter in the outer Court,
The shaken hand, the quip, the quick retort
Proclaim the arrival of the Wise Men all
Who rule in Council or in Question Hall.
These be the proud Elect whose monthly gait
Betake them thither to deliberate
The ponderous problems needing careful thought,
And carefuller speech; lest haply there slip aught
To th' Outer World that is not meet to hear,
And might prevent our jealous craft cohere—

(At which stage the Poet awoke.)

Our Town Traveller.

SINCE my last report I have cable-carred in Modern Athens and glided along the electric pathways of the commercial capital of Scotland, Glasgow, to wit. Edinburgh never looks more picturesque than when the Castle crags are covered with snow, and the Broomielaw is at no time more grimly businesslike than in the dank days of the Northern winter. Some reference to my calls in the Winter Issue of THE CHEMIST AND DRUGGIST is, however, quite appropriate. In old Edinburgh one naturally explores the Canongate region, so rich in historic association, and there, within a stone's throw of Holyrood is the factory of

MESSRS. DUNCAN FLOCKHART & CO.

As in many other businesses bearing a world-wide reputation, the premises have not been built for external display. As first conceived and executed the main building was a big substantial structure standing four-square to the winds from the Forth; but on several occasions during the past fifteen years extensions have been made; yet the internal arrangements in office and warehouse are of reflective of well-ordered business. In the course of a short conversation with Mr. J. L. Ewing, who greeted me heartily as the emissary of "The Chemists' Journal of the Empire," I gathered that the manufacturing and wholesale business is making rapid though unobtrusive progress. The firm have added the proverbial thousand things to the one upon which their fame was established—chloroform; but these are chiefly of the galenical type that was wont to be called "Elegant Pharmacy." The counter-speciality trade has not yet got a grip of Scotland, although Mr. Ewing told me that his firm put up many proprietary articles for customers, but these are merely to meet a local demand; and, as far as I could gather from various representatives of wholesale houses with whom I discussed the subject, little has been done in Scotland to create a market for factory-packed counter-specialities which figure so largely on the south of the Tweed. The Scottish pharmacist is perhaps nearer being a pharmacist in the true sense of the word than his English *confrère*. His business is still practically confined to dealing in drugs and chemicals, and dispensing prescriptions. Counter-prescribing, except in parts of the West of Scotland, where competition with the doctor-druggist has to be met, is not generally prevalent, and therefore the need for proprietary articles is perhaps not so strongly forced upon the chemist.

Continuing my journey in the Holyrood district I happened on 93 and 109 Abbeyhill, where

MESSRS. J. F. MACFARLAN & CO.

have for more than a generation scented the neighbourhood with the aroma exhaled from decoctions of opium. I was received by Mr. David Brown and his son, who talked with me a little while on the advances of the firm's business and the condition of pharmacy in general. It is a remarkable fact that from these quiet precincts of Auld Reekie export-business in spirituous B P. galenicals has been quietly, but surely, built up under the advantageous conditions granted by the Excise a decade since, specially (it was thought) for London houses. Messrs. Macfarlan as coadjutors, so to speak, with Lister when he was Professor of Surgery in Edinburgh, have since that time kept pace with all the developments of antiseptic surgery, so that the manufacture of antiseptic dressings is now a large branch of their business, without interfering with the older branches—alkaloids and chloroform manufacture, as well as fine chemicals generally.

Smith's Place, Leith Walk, is one of the quietest retreats, but there one finds the modest sign of

MESSRS. RAIMES, CLARK & CO.

There I was greeted by Mr. Davies, whose forty-six years' connection with the firm embraces intimate work with the late Mr. Richard Raimes, senior, the founder of the firm, and the pupilage of the present principal Mr. Richard Clark. With Dr. George Coull as the "Ferguson" of the party, I was conducted all over the extensive establishment, which consists of three floors in the main building and numerous off-shoots. A walk through the store-rooms is a revelation of the firm's turnover in druggists' goods. An important department of their work is the manufacture of medicinal capsules, as may be judged by the fact that they order a ton of gelatin at a time. Cascara sagrada is also ordered in ton quantities. Mr. Davies, whose long experience of the drug-trade entitles him to speak with authority, remarked on the influence this American drug has had on the sale of senna. Whereas twenty or thirty years ago the firm were accustomed to buy ten or fifteen bales of senna on the London market, now five suffice, as the salts and senna of our forefathers is replaced by the more elegant pharmaceutical laxatives of the present day. I could not help remarking that the Americans balance the account by buying more senna than ever, for to them chiefly is due the increased output of that older but quite as efficient laxative. The Smith's Place establishment, with its "wets," "dries," "heavies," and so forth is an excellent proof of the fact that floor-space may be as precious outside London as in it; every department appeared filled to overflowing, and both Mr. Davies and Dr. Coull have been smitten by the "more" room malady that afflicts the wholesale as much as it did little Oliver. But I understand that another two-storeyed building is in contemplation to relieve the pressure of the present congestion. Passing through the wet and dry rooms, and spending more than a few minutes in the steam laboratories, with their old-fashioned solid brickbat furnaces and modern chemical appliances cheek by jowl, Dr. Coull introduced me to his "sanctum sanctorum," as he called the experimental laboratory. I was glad to hear him say that one of the mainstays of his labours is a set of THE CHEMIST AND DRUGGIST and its DIARIES from 1881. It is from this laboratory that Dr. Coull (who is, of course, a Major man) controls the work in the manufacturing laboratory.

Mr. Peter Boa, at the Jubilee-dinner of the North British Branch, on December 18, 1901, recalling the names of the founders of the branch, mentioned, amid enthusiastic applause, that they had present with them on that occasion Thomas and Henry Smith, two descendants of the third generation of

MESSRS T. & H. SMITH & CO.

These are the sons of Peter Shanklie Smith, and they are now the proprietors of this well-known business. In the course of a short chat with the elder of the two, Mr. Henry Ewing Smith, he told an incident *à propos* of his marriage which illustrates the development of this well-known business. Mr. Smith told me that on the occasion of his father's marriage the employés of the firm, about a dozen in all, were entertained to a cake-and-wine banquet in the private room at 19 Duke Street, Edinburgh, the original home of the firm. In order to carry out a similar entertainment last month it had been found necessary to engage the Royal Arch Mason Hall, one of the largest public halls in Edinburgh, where 250 of the employés, from Edinburgh and Glasgow, were entertained to dinner. These represented merely the employés in Scotland, for the firm have an important branch in London over which Mr. H. Ewing Smith presides, and the London employés had a gathering of their own. A cursory inspection of the Edinburgh business premises provides further evidence of the progress of this firm since the late Thomas Smith made his first batch of morphine in a frying-pan in the cellar of 19 Duke Street. Extensive alterations have recently been made at the works, a new building of three floors having been added, and in ten years, I was informed, the staffs at Duke Street and the factory have been more than quadrupled. It is interesting to recall in this connection that Thomas Smith was also the first manufacturer of aërated-waters in Edinburgh, which business is still an important side-line to the chemicals and pharmaceuticals which are the chief products of the house.

Glasgow is one of the best business-cities in the world and her citizens owe the fact to their own enterprise, which has overcome many natural defects of location. They have almost literally hewed a river-path to the ocean highway, and annexed mineral wealth of far other territories than

Digitized by Google

those which naturally pertain to the district. In chemical-manufacture, the alkalies of C. Tennant, Sons & Co. (Limited) and the bichromates of J. & J. White (Limited), of Rutherglen (to mention only two branches) are world-known, and there are many other firms more directly connected with pharmacy which deserve to be better known outside Scotland than they are. During my visit (brief at the longest) I called on

MESSRS. J. C. STEELE & CO.

at their works in Port Eglinton. It is there that Steele's chloride of lime is put into air-tight packets, which have earned the blessings of innumerable errand-boys and apprentices, besides the appreciation of housewives. I gathered during my visit that chlorinated line is still an important factor in domestic and sanitary economy. The size of Messrs. Steele's premises and the stir and industry within are evidence of the fact.

The fine new building in Renfield Street, Glasgow, which, Phœnix-like, has risen from the ashes of the old warehouse of

MESSRS. W. & R. HATRICK,

is a place well worth seeing. I had an interview with Mr. W. Hatrick, who, with his brother, now carries on this large wholesale drug-business. The internal fittings, both in office and warehouse, would give points to many London houses, and the Messrs. Hatrick, who, while sticking to a historic reputation, have adapted themselves, as far-seeing young men do, to the probabilities of the future. Mr. Hatrick had much to say on the question of some varieties of present-day trading which would commend him to most pharmacists, and he had withal about him an air of quiet capability which augured well for the future of this business.

The busiest crossing in Glasgow, and said to be second in intricacy to the meeting of ways at the Bank of England, is where Jamaica Street crosses Argyle Street. Almost overlooking this corner—at 191 Argyle Street—are the business-premises of

MESSRS. LORIMER & MOYES,

the druggist sundriesmen. This business was established in 1851, and was acquired about three years ago by Mr. William Dykes. The Argyle Street premises have only recently become the headquarters of the firm, which for nearly forty years previously was at 56 Howard Street. It was originally a brush-and-comb house, and to this day, Mr. Dykes assured me, they hold a stock of these commodities much greater in quantity and variety than any other house outside London. It is the aim of Mr. Dykes similarly to establish a druggist-sundries' business of the first class to vie with the London houses. A walk round his establishment proved to me that he is in a fair way towards the accomplishment of this desire. I traversed three floors (each about 100 feet by 40 feet) packed with sundries. Six travellers are continually on the road for the house. Messrs. Lorimer & Moyes are the agents in Scotland for the soaps and perfumery of Messrs. T. F. Bristow & Co. (Limited), and they avoid business with cutters. They deal directly with the retailer. A word or two in reference to what I saw will not be out of place. On the second floor was an excellent selection of sponges of all sizes, shapes, and grades, from the common 1*d.* slate sponge to the fine Turkey cup. These were loose in bunkers, ready to be picked. Mr Dykes also makes a feature of boxing sponges in assorted lots to suit all buyers. Large stocks of willow, cardboard and turned-wood boxes are always held. The top floor is kept exclusively for boxes and feeding-bottles, of which about half a million are sold in twelve months. Toilet-articles and perfumery bulk largely in the stock, and the increase in business during the past few years shows that the impetus which Mr. Dykes has put into things is already productive of results.

One of the most interesting of my interviews was at 48 Dundas Street with

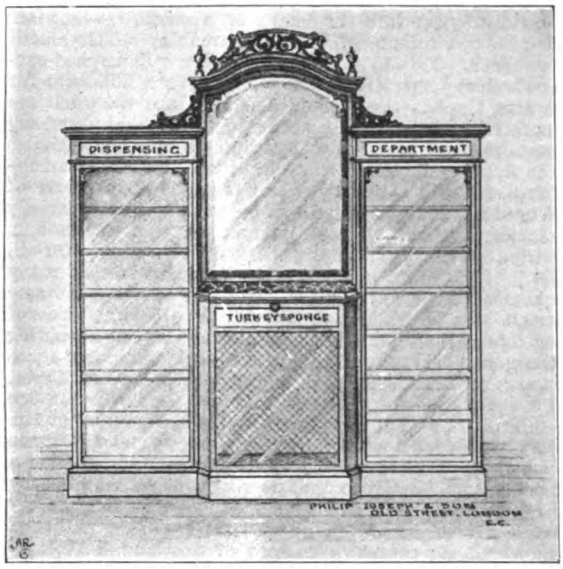
MR. WILLIAM COWAN,

the inventor of the vaccination-shield. Mr. Cowan appears to be one of these inventive geniuses to whom nothing comes amiss; but it was undoubtedly the happy thought of the shield which was the turning-point in his career. The story of its inception has been told in the *C. & D.* more than once, the Editor informs me, but he will at least permit me to say that Mr. Cowan's baby, for whom the first shield was made, is now nearly 6 feet high, and gives a hearty hand-grip. By the way, this first shield, after it had done duty on Baby Cowan's arm, was lent to neighbours right and left, and ultimately it got into the hands of a chemist, who, after seeing his own infant safely over its trouble, sold the shield for sixpence. This is the reverse of the "bang-gaed-saxpence" story; but Mr. Cowan would give a 20*l.* note for that shield now. For it launched him into the wholesale manufacture of the article, with results which all pharmacy knows. There have been many improvements and varieties of the shield made since then, but the shield of chamois-padded silk and satin-covered wires which the Duchess of Fife used for her children is, in construction, substantially the lemonade-wire and tape product of twenty years ago. [It strikes us that O.T.T. has worked off the story after all. —ED.] Mr. Cowan is, besides, the manufacturer of many mechanical surgical appliances. He has acquired a fame amongst the physicians of the city for the excellence of his artificial limbs, and he claims to make "the lightest leg in Glasgow." He has invented many ingenious contrivances for the relief of sufferers with maimed or contracted limbs, and the production of trusses is one of his specialities. Since my talk with him I observe from a Glasgow paper that Mr. Cowan has invented a machine for registering the distance for which the passengers on a tramcar may be carried for a given sum; an appliance that is likely to be adopted by several municipal tramway companies.

Having forsaken the (more or less) primrose paths of dalliance among the snow wreaths of Scotland, I took up my usual round, and one of my first visits was to the works of the

VINOLIA COMPANY (LIMITED)

in Malden Crescent, N.W. There Mr. Welch plucked a morsel from the fleeting hour, and ordered up Vinolia delicacies for my delectation. These included a new label for Vinolia white-rose perfume (1*s.* size), a new sixpenny line of perfumes, and a new series of twopenny soaps—glycerin and cucumber, musk-brown Windsor, and "Peach Bloom." These are all nice cakes, beautifully milled, and, the latter in particular, is exceptionally good value. The "Peach Bloom" series is large in size, with a flowery impress which takes the eye, and it is to be had in nine different perfumes and colours. Mr. Welch predicts a great future for this soap, and I think he is justified. "Fo-Fum" carbolic soap is being pushed as a valuable anti-smallpox remedy, and the penny "Diamond" brand honey-cake is not looked upon as one that will be a difficult seller. In the course of our conversation I gathered from Mr. Welch that the company have now between seventy and eighty travellers in their employ, fifty being at work in the United Kingdom and the balance "even unto the uttermost ends of the earth." It must be evident, therefore, that the sale of the Vinolia preparations is not declining, and as the directors make it a point to produce one or two novelties a month, the Vinolia list is not getting shorter. This reminds me that the Vinolia price-list is as dainty a production as are the rest of the Vinolia products. Mr. Welch, who, by the way, claims that the Vinolia Company can sell pure otto of rose (in 1-oz. bottles) on better terms than most people, showed me besides various partly finished "evolutions" for the future. The most striking is "Idolita" soap, which will be sufficiently sumptuous in get-up to make it *à propos* to the Coronation. The design for the box (to hold three cakes) is a Burne-Jones maiden in art colours on a ground of white satin. It looks exquisite, and the price will probably be in the neighbourhood of half-a-guinea per box.



My descent upon

MESSRS. PHILIP JOSEPHS & SON

in their stronghold at 93 Old Street, London, E.C., the other day resulted in the production of various new designs in shop-furniture for my inspection. It seems strange that I see something new at each visit, but next time there is sure to be something "newer." On my last visit the new dispensing-screen figured overleaf engaged a good deal of my attention. It is constructed in solid mahogany, and the features are the carving, the cases with plate-glass shelves

Digitized by Google

all the way down each side of the mirror, and the "brilliant" lettering. The last is a decided improvement. It has the appearance of gold lettering, and the back-ground may be cream, dark, or light mahogany colour as desired.

The lettering is done by stamping out of sheet copper with solid steel dyes, and is very chaste to look upon. This "incised-gold" lettering has caught on, and the newest designs in furniture or facias I saw were done by the copper process. I had to confess an admiration, also, for a large mahogany and plate-glass centre case for holding cameras or optical goods, which is to accompany the aforementioned screen to its owner in South Africa. It was a handsome case and so daintly fragile in appearance that I positively received a shock when Mr. Philip Josephs, jun., to demonstrate its strength and stability, began to vigorously kick the plate glass. A feature of the wall-cases, and indeed of all the two-doored cases now constructed by Messrs. Josephs, is that each door opens on a separate compartment. There is a neat central division, and it is no longer necessary to open both doors in order to get admission to a large case.

A visit which I paid to

Messrs. Henry P. Thompson & Co.'s Showroom

at 93 Aldersgate Street, E.C., enabled me to make a thorough examination of Messrs. Bauer & Black's plasters, surgical dressings, suspensory bandages, and chest-protectors, about which, I understand, an illustrated inset is to be distributed with this number. It is difficult to convey an adequate impression of the real attractiveness of these goods. Messrs. Bauer & Black seem to have the artistic sense highly developed, and it is associated with a definite system which together are expressed in an extensive variety of styles of packages. I made notes of a few of the articles which, I think, merit the attention of the trade. First, their mustard-plasters in roll and leaf are perfectly flexible, smooth, and do not shed mustard-powder in the least. Then there are kidney-plasters on swansdown which can be sold without stamping, and a recommended one, called "King's plaster," which Messrs. H. P. Thompson & Co. are to make a speciality of. Next I inspected a series of adhesive plaster in spools, from the 1*d.* pocket-box to the 10-yard spool; there are various widths for surgical purposes. Isinglass-plaster is another good B. & B. article. It is spread on silk (skin colour, black, and white), and can be had by the yard or in pocket-cases—in fact, the 1*d.* pocket-cases, containing a piece of each colour, is as good a pennyworth as there is in the market, and makes an attractive display. The Bauer & Black corn and bunion plasters, in boxes and bulk, are also worth attention. I made a careful examination of their belladonna-plasters. As the United States alkaloidal standard for these is lower than the British Pharmacopœia one, Messrs. Bauer & Black specially prepare belladonna-plasters for the British market so that they conform to the B.P. standard. They use extract of belladonna-root with indiarubber basis. The analytical results from six plasters show consistent uniformity in the alkaloidal strength. Another plaster which Messrs. Thompson are to make a leading line of is a strengthening one called the "Rex" porous-plaster. This will be a speciality, and only one chemist in each neighbourhood will be supplied with it.

Turning to the surgical dressings, I noticed that the plain gauze bandages are sterilised and are put up very neatly in parchment paper, a 10-yard bandage being as compact as an ordinary 6-yard one. Iodoform and other gauzes are put up in clear amber glass-bottles containing 1 yard or 5 yards, the containers being aseptic and sealed. The gauzes are also packed in paper packages similarly sterilised. The prices struck me as just right. Messrs. Bauer & Black are the makers of the O.P.C. suspensories, and Messrs. Thompson are carrying a very complete line of these goods. It is impossible to refer in detail to the numerous varieties both in price and style, but one feature should be mentioned—namely, that each suspensor is packed in a box or card envelope with the number and designation on the side, so that the retailer can easily pick from his stock what his customer requires. The card-envelopes referred to can be opened up and displayed. A forcibly-written and well-illustrated booklet regarding the use of suspensories is supplied to retailers for distribution. It is quite American. As an indication of the prices of the suspensories we noted No. 36 with a silk bag nicely boxed, which costs 8*s.* 9*d.* per dozen. The firm also stock athletic supporters. In chest-protectors one of the most attractive and saleable articles is the "Frost King" chamois vest, which is largely used by golfers. It is a tailor-made article with elastic gussets on each side, and costs, wholesale, 5*s.* 10*d.* A similar vest, named the "Frost Queen," is largely used by lady golfers in the United States, who wear it as a vest underneath their jackets.

I may also mention that Messrs. Thompson have secured the sole supply to the British Empire of dispensing and toilet bottles, produced at a leading American glass-factory. These are of white-flint glass, perfectly transparent, without bloom, and of exquisite finish. I would specially commend the "Oriole" (a new oval for toilet-preparations), and a dispensing-bottle flat on one side and oval on the other. Chemists who like to do things quite differently from others, and who are not afraid of novelties, should get samples of these. Mr. Thompson also informed me that he has obtained from Mr. G. B. Evans, the celebrated Philadelphian chemist, the sole agency for his Violet talcum-powder, which is popular in the United States, as it doubtless will be here very soon, for Mr. Thompson has entered into a big advertising contract, which begins in February, and which covers the leading ladies' papers. The firm want at least one agent for the powder in each town. It is put up in attractive boxes, with dredger-tops, a dozen boxes being in a showbox. It sells at 1*s.*

I dropped into the offices and showrooms of

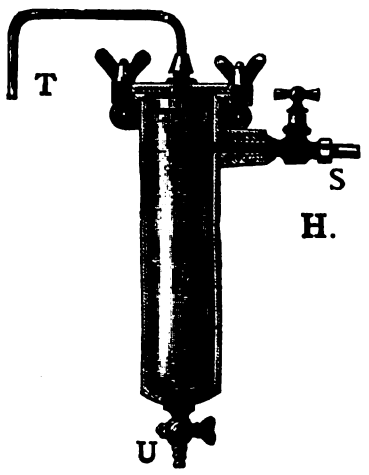
Messrs. Parkinson & Co.,

at 27 Southampton Row, W.C., the other day, and had a talk with Mr. Roe, their shop-fitting expert. Messrs. Parkinson, who have recently taken over the business formerly carried on by Messrs. George Treble & Son, are by no means beginners in the art of shop-fitting. As a matter of fact, they have been shop-fitters in a quiet way, Mr. Roe told me, for about eighty years, but the acquisition of Messrs. Treble's business will now probably bring them more in touch with chemists. They have done much good work, as I could see, for various firms of chemists, and they have the great merit of originality in style of structure—a thing for which all up-to-date chemists sigh. Their endeavour, as expressed by Mr. Roe, is to give the best workmanship available for a fair price, and to avoid all "fly-blown phylacteries" in designs.

The latest addition to the list of cosmopolitan pharmacies to be found in Oxford Street, W., is that of Manrieve & Co. This establishment is a unique example of chemists' shop-fittings executed by

Mr. H. Mills,

of 163 Old Street, City Road, E.C. The woodwork is in dark mahogany throughout, with carved cornices showing



Digitized by Google

careful workmanship. The counter is narrow (leaving room for customers), with brass supports all along, with glass shelving for the display of proprietaries and sundries. A noticeable feature is a series of cupboards, with mirrored doors of bevelled glass, that form part of the wall-fittings behind the counter, and there are many points from which an inquiring brother pharmacist might get a wrinkle in shop-furniture.

The new germ-proof filter, named the "Tubor," which the

BERKEFELD FILTER COMPANY (LIMITED)

have recently introduced is the same in principle as former filters made by this firm. The advantages of the new filter, however, are obvious on examination. In the company's premises at 121 Oxford Street, W., I inspected several of the candles recently, and found that although of the same Kieselguhrian composition the material is closer in the pore and smoother to the touch than formerly. This not only increases the efficacy of the cylinder as a filtering-medium, but makes it much more durable. The "Tubor" cylinders are less fragile than formerly—a fact specially noted by Dr. Andrew Wilson, who regards the "Tubor" as "the ideal of the sanitarian's definition of a true filter." The house-filter which we reproduce illustrates the principle of all. S is the inlet tap, T the filtered-water outlet, and U the flushing-tap. The price of this variety has been reduced from 42*s.* to 30*s.*, and proportionate reductions have been made in the prices of the other kinds.

VANILLA.

Hearing that Messrs. GEORGE CHURCH & Co., vanilla importers and dealers, had removed from 149 Fenchurch Street to 15 Little Trinity Lane, E.C., I called round the other day to have a look over their stock. The firm do a very large business in Seychelles, Mauritius, and other vanillas, and I inspected a number of exceptionally good samples of these. The firm have built up quite an important business with large users of vanilla, including manufacturers of chocolate, wholesale druggists, &c., and they are desirous of still further extending their connection with the drug-trade. Mr. Church, principal of the firm, has had twenty-five years' experience of the Mincing Lane vanilla-trade.

Recent Patents.

THE following are abstracts of complete specifications recently published, of inventions for which letters patent have been granted. Money order offices sell postcards, price 8*d.* each, which, on filling up with the number and year of the patent and posting, secure a copy of any complete specification.

Aluminium Solder.—J. A. McLeod, H. E. Provost, druggist, Haverhill, U.S.A., and H. Smith, Lowell, have patented a solder for aluminium composed of zinc 25 parts, aluminium 6 parts, and tin 69 parts. The solder may be used with other metals. (19,836, 1901.)

Sweet bag.—T. Kerfoot, manufacturing pharmaceutical chemist, Ashton-under-Lyne, has patented an improved bag for sweetmeats and confectionery, in which either the upper or lower portion is composed of a woven fabric fastened by glue to the paper portion. When the top part is of woven fabric it may be closed by using strings to draw the edges together. (17,231, 1901.)

Aluminium Alloy.—A. Manhardt, Vienna, produces from the following combination an alloy of aluminium which is bright, silver-white, does not tarnish, is easily worked, and is not brittle:—

Aluminium	100
Tin	12·05
Antimony	0·20
Phosphorus	0·09
Copper	7·50
Magnesium	0·06
Bicarbonate of soda...	0·06
Sulphur	0·04

(19,403, 1901.)

A Family Pill.—Elizabeth Birch, trained nurse, and Eustace Fordyce Birch, chemist's apprentice, 51 Barrington Road, Crouch End, N., are joint patentees of a pill for human use of the following composition:—

Dried sulphate of iron	15 gr.
Powdered capsicum	20 gr.
Extract of Barbadoes aloes ...	38 gr.

Divide into forty pills, and coat with French chalk and gum.

The pill gives tone to the stomach, and "whilst acting as a tonic and mild aperient, its effects are non-irritating, and it is particularly recommended in cases of indigestion and for the cure of flatuence, constipation, and female pelvic troubles." (17,474, 1901.)

Animal-food.—J. G. A. Koolmans, Amsterdam, makes an improved food for animals by mixing molasses, 70 parts, with ground maize, oobs, or stalks, 30 parts. (16,802, 1901.)

Soldering Aluminium.—C. P. Sörensen, Copenhagen, patents a process of soldering aluminium, which consists principally in the thorough cleansing of the aluminium first. The parts to be soldered are heated up to about 300° C. over a fire, which produces a strong oxidation of the metal. The oxidation is removed by treating with a concentrated alkaline lye, after which the metal is clean-washed with water; soldering can now be carried on without any flux. Good results are obtained by using a brazing-alloy of zinc and brass or zinc and tin. (16,864, 1901.)

Artificial Marble.—Otto Hertwig, and E. Liebang, Dörnfeld, Germany, patent an artificial marble made of

Magnesite	16 parts
Magnesium chloride	17 parts
Flint, or its equivalent	45 parts
Kaolin, or its equivalent	5 parts
Water	17 parts

(166,40, 1901.)

Starching-composition.—M. Cabidos, and J. M. Abram, Toulouse, make a patented starching-composition for laundresses' use, as follows:—

Rice-starch	100 parts
Borax	12½ parts
White-fat soap	7 parts

(16,148, 1901.)

Coating Compound.—A. Wolf, Paris, has obtained protection for a composition for coating statuary and stone made of stearine and resin of each 1 kilo., bitumen 0·20 gramme, benzoin (preferably from Sumatra) 0·50 gramme, creosote (preferably from beech) 0·05 gramme. The articles are dipped in the melted compound or otherwise coated with it. (15,204, 1901.)

Shaving-brushes. — B. Hesseling, Krefeld, Germany, makes inexpensive shaving-brushes so that a brush can be thrown away after once using. Fibre is used, the lower part being prepared by dipping in soap solution, so that lathering can be conducted by the use of water only. The upper ends of the fibre are bound together and used in a holder. (14,409, 1901.)

Artificial Wood.—E. Helbing, Wandsbek, near Hamburg, proposes to make artificial wood by the following process:—Turf or peat is washed and freed from acids, and to 100 parts of the moist are added 4 to 10 parts of hydrate of lime and 30 to 50 parts of a combination of aluminium, such as sulphate of aluminia. The mixture is pressed whilst in a wet condition and hardened in the open air. (13,136, 1901.)

C. & D. "Diary" Competition.

THE B section of our annual DIARY competition has been as laborious as ever to adjudicate upon. We deal in the present article with the home cards only. The questions which our subscribers, their assistants or families, had to answer were:—

1. Which is the most interesting advertisement in the DIARY?
2. Which DIARY advertisement should be most helpful during the year?
3. Indicate the best illustrated design amongst the DIARY advertisements?
4. Name the speciality (of any kind) advertised in the DIARY which you sell most of?
5. What is there not advertised in the DIARY that should be?
6. Which proprietary article would you like to own?

We have so frequently referred to the work of adjudication that we need only say now that the scrutiny of the cards containing the replies, each one being carefully examined and recorded, occupied the better part of three days. After all were examined, and the votes counted, it was found that

THE MOST INTERESTING ADVERTISEMENT

is contained in pages 25 to 35, which tells the story of Pears' soap. The vote for this is 200 ahead of the second of the following:—

Pears' soap (pages 25–35)
Burroughs Wellcome & Co. (pages 229–256)
Daisy (Limited) (pages 151–157)
Allen & Hanburys (Limited) (pages 169–188)
F. Schutze & Co (page 559)
J. Hart & Son (page 44)
Hearon, Squire & Francis (Limited) (page 293)
W. Butcher & Sons (page 97) &c.

Scarcely less decisive is the vote on the

MOST HELPFUL ADVERTISEMENT,

but in this instance opinion is much more divided. By a large majority the series of Messrs. Burroughs Wellcome & Co. is given first place. Then come Messrs. Allen & Hanburys (Limited), Daisy (Limited), Standard Tablet Company (page 305), Pears' (Limited), Camwal (Limited) (page vi), W. Toogood (page 579), W. Butcher & Sons, Philip Joseph & Son (pages 126, 127). Many voters pay us the compliment of saying they find the "Buyer's Guide" the most helpful; and another expressed the opinion that "*C. & D.* books to buy—if bought" are most helpful.

The position held for several years by Messrs. Stevenson & Howell (Limited) (pages 8 and 9) for the

BEST ILLUSTRATED DESIGN

has again been kept by them, but this year they have had to cope with much severer competition. By barely a fifty majority over Pears they have retained premier position. The first eight are thus placed:—

Stevenson & Howell (Limited)
Pears' (Limited)
Burroughs Wellcome & Co. (page 231)
Cadbury Brothers (page 489)
Van Oppen, Ross & Co. (page 518)
Hearon, Squire & Francis (Limited)
J. H. Haywood (page 592)
C. P. Goerz (page 95)

The fourth question was not exactly new, and it has served to elicit an opinion that the

BEST-SELLING SPECIALITY

is Beecham's pills. This was a toughly contested question, but Beecham beat Daisy by exactly 100. The Burroughs-Wellcome specialities take third place; then come Pears' soap, Vinolia preparations, Brand's essence of beef, Plasmon, Vaseline, "Allenburys" foods, Winslow's syrup, Warner's pills, Woodward's gripe-water, Camwal waters, Apenta, Idris waters, and many others.

By far the most interesting question, and, moreover, the one which produced the greatest diversity of opinion, was the fifth question about

ARTICLES WHICH SHOULD BE ADVERTISED

in the DIARY, the competitors considering that Bovril is the most flagrant omission. The list of articles which our subscribers miss, and wish to refer to in THE CHEMISTS AND DRUGGISTS' DIARY, include:—

Bovril
Bile-beans
Seigel's syrup
Elliman's embrocation
Owbridge's lung-tonic
Kodak goods
Erasmic specialities
Scott's emulsion
Pharmaceutical Society's School
Mellin's food
Kutnow's powder
Maypole soap
Rowntree's cocoa
Tatcho
Frog in the throat
Williams's pink pills
Carter's pills
Phosferine
Dodd's kidney-pills
Horlick's malted milk
Koko
Angier's emulsion
Kaputine powders
Mazawattee cocoa
Scott's pills
Hudson's dry soap
Steedman's powders
Frame Food jelly
Armour's preparations
Hinksman's asthma-cure
Paris whiting
Sugar for syrups
Californian syrup of figs
Peck's asthma-cure
Dylissia goods
Timmin's Mira-cura
Atkins's diuretic balls
Guttapercha bottles
Guinness's invalid stout
Label-cabinets
Ogden's cigarettes
Tibble's Vi cocoa
Dent's toothache-gum
Sparklets
Keating's powder
Grossmith's perfumes
Eczema-balm
William's shaving-soap
Fulleylove's embrocation
Phonographs
Tyler & England's photo-apparatus
Skuse's tablets and mixture
Eade's pills
Dinneford's fluid magnesia
S. & M.'s peptonised milk chocolate
Hood's sarsaparilla
Parke's furniture-cream
Holdroyd's gravel-pills
Brush and sponge powders
Clarke's blood-mixture
Glendenning's beef-and malt wine
Writing-inks
Clare & Hunt's specialities
Price's glycerine
Oxo
Fetchner's "Lunkura"
Electric bells
Optical illusions and toys
Morley's Malvaline
Ordish's Mend-all cement
Antexema
Imperial Tobacco Company's products
Insurance (fire, life, burglary, &c.)

Many competitors flatter the Publisher by saying the DIARY is perfect; there is "nothing" to be added, but several would like to see the *C. & D.* publications more prominently displayed. Others ask photographic goods to be advertised better, and there appears to be considerable demand for "*bonâ-fide* makers of photographic accessories." Several would like to see P.A.T.A. matters displayed in the DIARY advertisement pages. One gentleman hankers after "Ping-Pong," while another would like to see "a portrait of the Editor." Two candidates yearn for an advertiser to guarantee them "Distilled water B.P. and spt. eth. nit., always sent out 7 vols." Yet another wishes to see "something with a larger profit and a bigger turnover," and there is a pathetic desire on the part of one competitor to learn "the way to prevent being swindled." There are likewise in the answers food for mathematical reflection and scope for the exercise of ingenuity in the desire put forward by someone for "a concise little work showing the small retailer how to take stock, work out a profit-and-loss account, and strike a balance that will show him his exact financial position."

It was to be expected (although we did not think of it) that, seeing Beecham is given top place as the "best seller," his proprietary would be considered

THE MOST DESIRABLE TO OWN.

In the replies to question 6 "Beecham's Pills" comes therefore well out ahead of the others, but there are many who would like to own Pears' soap, Daisy powders, B. W. & Co.'s business, Kepler's malt, Vinolia, 4,711 Eau-de-Cologne, Cadbury's cocoa, and so on. One competitor, however, professes a desire to own "none" of the proprietaries advertised.

AWARDS.

An unprecedented number of competitors (5) have this year answered the six questions as the majorities in each case have done. To each of the following gentlemen we therefore award one guinea:—

Mr. H. A. WILKINSON, 69 Bridge Street, Worksop.
Mr. CHARLES MCCANN, 4 Chief Street, Belfast.
Mr. J. A. SYMONDS, 16 Upper Brook Street, Ipswich.

Digitized by Google

Mr. A. DAVIDSON, c/o Mr. J. G. Nicholson, 7 Hanover Street, Edinburgh.

Mr. J. W. COWAP, Over-Winsford, Cheshire.

We wished to give five guineas for a six-correct card in Section B, and as five gentlemen have come up to that standard we divide the sum between them. Cheques will be sent to them forthwith. We reserve a larger portion of the ten guineas than usual, because the response in the A section and the large amount of useful hints to be disposed of deserve fuller recognition.

Hints and Verses.

Contributed on C. & D. Diary Coupon Postcard A by Subscribers or their Employés.

SHOP HINT.—Dress your window tastefully and attractively, and do not forget the one essential point to sell from it is to price everything in plain figures.—A. S. HIGGS (Kingston).

P erhaps the most inviting ad.,
E ngenders thoughts of Godliness;
A ltho' most bold the "Little" lad—
R emembers "The Cult of Cleanliness."
S ee then, the baby in the tub;
S ee, next, our old friend "Bubbles";
O r "Grandma," who believes in "rub,"
A nd Furniss's man, of bi-ennial scrub,
P ear's Soap should end all their troubles.

—A. E. WARDEN (15 Hawksdale Road, Waverley Park, S.W.).

SHOP HINT.—I find that when a very stiff ointment has to be mixed in a mortar it is very difficult to work the pestle round unless a firm grip is kept on the mortar, which keeps slipping on the counter. To obviate this, take a small wooden box (strong), about 4 inches square, and 2 or 3 inches high, screw down to the counter at the four corners, place the mortar in this and tightly wedge with pieces of wood. I find this an excellent contrivance, and have thought about getting a smarter one made in iron, &c., and having it patented.—WILLIAM LISTER (Ambleside).

SHOP HINT.—Any chemist—who is built for it—can easily make more money extracting teeth with or without N_2O (gas) and fitting "artificials" than he can out of any other department of his business, and there is no necessity to be a dentist to do all this, or style oneself such.—ARTHUR OGLESBY (Barnsley).

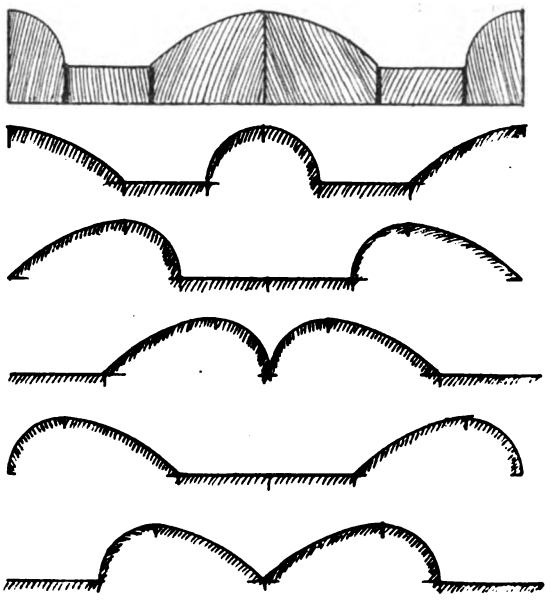
Of all the patents which I stock
(And this is true I'm telling),
For sales as steady as a rock
Pil. Beecham is excelling.

—"MARMION" (Hawick, N.B.).

SHOP HINT.—Hang in a conspicuous position in your pharmacy a copy of the "Sale of Poisons" schedule as presented with this year's *C. & D.* DIARY.—G. E. GUEST (Pontefract).

PILL-MACHINE FOR LOZENGE-MAKING.—Most elegant small lozenges of cushion shape may be prepared by piping the mass as for pills, and cutting by pressure without rolling. The following is the formula used in making one dozen lozenges for a doctor:—

Cocain. hyd.	gr. j.
Sacch. lactis	gr. vj.
Sacchari	gr. xlviij.
Pulv. gum. acac.	gr. vj.
Liq. carmini et aq. rosæ aa. ...	q.s.



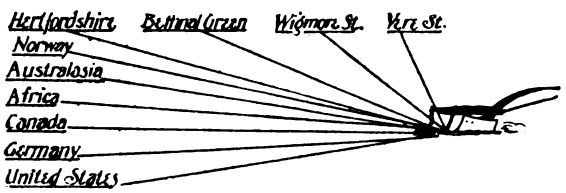
Ft. troch. xij. ut supra.

He was delighted.—J. E. ALLENBY (Helmsley, R.S.O.).

SHOP HINT.—Price the things in the window.—J. N. WALKER (Staple Hill).

DESIGN FOR WINDOW-SHELVING OR COUNTER-STANDS.

It affords the advantage of a perpetual change of outline, enhancing novelty of display, and saving 50 per cent. time in dressing either of above. Made in six pieces. The top



sketch shows the ground plan, and those below it possible combinations.—A. PEREIRA (140 Hornsey Road).

Suggested invitation for a well-known firm.

Come Burro'(w) in the Snow Hill,
Nor shall the same prove void:
You'll find a mighty Wellcome
In a very small tabloid.

—GEORGE MURDOCH (Cricklewood, N.W.).

Page 169.

A precedent to the "Lonely Furrow," and what became of it. Read the *C. & D.* for up-to-date hints applicable to extend business.—W. E. POWELL (19 Laitwood Road, S.W.).

In looking through the DIARY in a casual sort of mood
I notice a good facsimile of "Allenburys" Food.
They put it up in tins, in three quite different stages,
The first, the second, and the third, for kids of different ages.
There's "Allenburys" malt-extract (prepared *in vacuo*),
"It keeps in any climate"—at least, they tell you so.
And "Allenburys" toilet-soaps, of different shape and odour,
There's one "non-alkaline honey soap, containing no free soda."

—T. C. JONES (Medical Hall, Connah's Quay, Flintshire).

SHOP HINT.—In packing specialities it is best to paste the edge of the paper instead of folding, as is usually done. This makes a neater package, looks more workmanlike, and saves paper.—C. A. COLES (c/o Mr. S. J. Coles, 25 High Street, Halstead).

Notes on Novelties and Improvements.

"TATCHO."

Geo. R. Sims' Hair-restorer Company, 81 Great Queen Street, London, W.C., insert in this issue an effective advertisement respecting their special offer, about which a chemist says: "Repeat my last order. I disposed of three gross of the 1s. 10d. size 'Tatcho' last week."

ELEGANT PHARMACY

is a title which is used with a considerable amount of appropriateness on the labels of a series of pills and capsules which are submitted for our inspection by the Wand Manufacturing Company, Leicester. The pills are gelatin or silver coated, and either round or oval, whilst the capsules are of the soft, easily-soluble variety, and completely filled with the medicament. The labels of the packages are examples of lithography which it would be difficult to excel.

GUY'S TONIC SHOWCARD.

The manufacturers of Guy's Tonic have some new showcards ready. They measure 6 inches long by 4 inches wide, and consist of a brilliant metallic plaque 5¼ inches by 3 inches, upon which the words "Guy's Tonic for Indigestion" and a figure of the packet are printed in a striking manner. The plaque is mounted on a round-cornered white card, and is as effective a thing of the kind as we have seen for a long time. Any chemist can get a few by writing to the manufacturers.

CELLULOID VACCINATION-SHIELD.

Messrs. J. L. Hatrick & Co. (Limited), 82 Turnmill Street, E.C., are putting on the market a vaccination-shield made of celluloid in the shape of a soap-plate, but bent to conform to the shape of the arm It is transparent, and is provided with ventilation-holes, as well as a piece of india-rubber adhesive plaster at each side, by which the shield is affixed to the arm. It is made in sizes suitable for adults or children, and, as it may be washed with boiling water, it can be kept in an aseptic condition.

PERFUME MATERIALS.

Messrs. K. F. Kramer & Co., 11 Rangoon Street, London, E.C., submit a copy of their price list of essential oils, compound perfumes, artificial and synthetic perfumes, &c. The firm who are sole agents for Messrs. Vimard & Monschein, Vallauris near Grasse, and the prices of their "Perfection" brand of essential oils are given. Artificial and synthetic perfumes are a speciality of the firm, and the more prominent of them include, heliotrope, jasmin, lilac, neroli, carnation, rose and violet. Messrs. Kramer do a wholesale business only, and samples and special quotations may be had on application. The firm have also published a neat pocket diary for the use of their customers.

CRYSTAL PALACE MARKING-INK.

The proprietors of John Bond's Crystal Palace Marking-ink, 75 Southgate Road, N., do not rest upon their oars so far as the quality and sale of their products are concerned, in spite of the fact that the ink has been so many years before the trade. As we have previously noted, the ink has been so improved that it requires no heating, and it can be used with pen, stamp, type, or stencil. The new price-list which the firm have issued contains illustrations of the several forms in which it is put up, also particulars of the "Nota Bene" marking-ink, and wholesale prices and illustrations of a comprehensive series of indiarubber stamps made by them.

DIGESTIVE TABLETS.

Messrs W. R. Warner & Co., Philadelphia (British depôt, Messrs. F. Newbery & Sons, 27 and 28 Charterhouse Square, London, E.C.), have brought out a new digestive tablet of the following composition:—

Pepsin. sacch.	gr. 4
Pancreatin. pur.	gr. ½
Diastas.	gr. $\frac{1}{10}$
Ac. lactic.	gr. $\frac{1}{10}$
Ac. hydrochlor.	gr. $\frac{1}{10}$
Pulv. aromat....	gr. ¼

The tablets are chocolate coated, and put up in attractive style.

TINCT. AURANTII NOV.

Messrs Wright, Layman & Umney (Limited), Southwark, S.E., now have ready tincture of orange made from this season's fresh peel. It is an exquisite tincture, both aroma and taste being as superior to the tincture made from the dried peel as Moet's champagne is to gooseberry-wine. The tincture accords with the pharmacopœial standard, and as Messrs. Wright, Layman & Umney (Limited) make hundreds of gallons of it at this season, uniformity is ensured. The firm, in addition to supplying the tincture, offer the fresh-cut peel for delivery on the day that it is cut. As this is the time for filling requirements in regard to these articles it would be well for those pharmacists whose stock is low to replenish promptly. Samples and quotations can be obtained on application.

PROTECTION AND FREE CARRIAGE.

Mr John Morgan Richards, of 46 Holborn Viaduct, E.C., who are agents in this country for the perfumes and soaps of Messrs. Colgate & Co., of New York, inform us that they are protecting the prices of these articles for the benefit of the retailer. In future the shilling size of Colgate's shaving-soap, (which costs 6s. 6d. per dozen, 5s. 6d. per dozen in gross quantities, and with each dozen of which six samples are presented gratis) will be fixed at a minimum retail-price of 10d. Other Colgate preparations will have their minimum prices fixed accordingly, and we think the retailer will have little reason to grumble at the margin of profit allowed him. As will be seen from our advertisement columns, Dr. Williams' pink pills and Carter's little liver pills will, after February 1, be sent carriage paid on the old terms as set forth in the price-lists.

COUNTER-SPECIALITIES.

Messrs. Marion, James & Ker (Limited), Durham Grove Works, Morning Lane, Hackney, have a new illustrated price-list which they will send copies of to any of our subscribers. The company (whose business as specialty makers commenced with the Royal Court hair-dyes) have now branched into quite a number of lines that chemists handle, and we had the opportunity the other morning of inspecting a case full of these and may mention a few of them. With each dozen 1s.-size asthma relief-powder the company give a dozen trial packets each of which sells at 2d., and this will make the profit more than half of the selling-price. Lipsaline is a pretty balsamic lip-salve put up in pure tin boxes to retail at 6d. each. Tube preparations are a strong line with the company. Their perfumes are finished off with gold embossed labels, an endeavour being made to emulate the high-class style of French perfumery even in the 1s.-size perfumes. A water softener to retail at 6d. in tins is worth looking into, and Velvetta cream for the skin appears to us to be an attractive line for cold weather, while the long glass boxes for tooth-paste are a distinctly

Digitized by Google

novel feature. Dentifrices, hair-washes, lavender-water, rat-cheese, and many other every-day needs are put up and catalogued by Messrs. Marion, James & Ker (Limited), and as the directors have long personal experience of what goes on at the counter, as well as original ideas, they should be able to give the trade a point or two.

NEW PRICE-LISTS.

MESSRS. SOUTHALL BROTHERS & BARCLAY (LIMITED), Birmingham, send us a copy of the new edition of "Southall's Export Journal," which consists of price-lists of the seven sections of their wholesale pharmaceutical business. Spirituous medicinal preparations are priced in bond for export. We note also that about 120 varieties of Dutch medicines are supplied, prepared according to Dutch formulæ, and put up in the usual Dutch style. Southall's herbaria are well known to students, and many who used the cabinets will be pleased to hear that a collection of drugs illustrating the materia medica of the Indian and Colonial Addendum has been prepared. It is known as "Collection M," and contains fifty specimens. The surgical-dressings factories at Birmingham and Bromsgrove which have been built and acquired are in working order, placing this firm in an unique position as regards the execution of orders for surgical wools and lints. The perfumery price-list is separate; it contains on the outside a brilliant example of trichromatic photography and within prices and illustrations of various styles and kinds of perfumery.

ST. PAUL'S BRAND.

"IF I had my way of it," said a pharmacist to us the other day, "I would dispense all ointments in nice wide-mouth bottles—the mouth as wide as the bottle, if I could get it." The very thing he wants is provided by Messrs. F. Newbery & Sons, Charterhouse Square, E.C., in their 2-oz. star bottom pomade-bottle with nickel lift-off lid. There are a few more St. Paul's and Charterhouse specialities to be noted in this issue, and which are displayed in the firm's showroom at present. The "Limpet" self-adhesive vaccination-pad is a piece of sterilised lint in the centre of a square of adhesive plaster with holes at the back. The child's pad retails at 2*d*. and the adult's at 3*d*. A lip-salve in metal case (2*s*. 6*d*. per doz.), white rose tablets (1*d*.), heliotrope shampoo-powder (2*d*.), and cold-cream (1*d*. illuminated tin boxes) are little lines notable for good compounding. The firm are now putting up a full series of culinary essences, the 6*d*. size being a good bargain to look at and in actuality, so is the Old London toilet-vinegar in "Rimmel" bottle, but distinctive label, the 1*s*. size costing 4*s*. 6*d*. per doz. In sundries (a growing department with the firm) there is a full range of aluminium dressing-combs, the teeth of which are round-finished so that they pass easily through the hair. The prices are low. There are also a useful pocket moustache-brush which folds into an imitation tortoise-shell lid (retails at 6*d*.) and a pair of tweezers with nail-file and ear-scoop—a most useful article in nickel finish (3*s*. per dozen.).

GLYCERIN AND HONEY JELLY.

THE popularity of Messrs. Osborne, Bauer & Cheeseman's glycerin and honey jelly has not been without its disadvantages to the makers. It is one of the most extensively imitated articles, but some of the German imitations are barefaced frauds. We have recently inspected a number of samples which had been forwarded to the firm from the Continent, and which in get-up were strikingly like the original, the label being yellow paper and the printing scarlet ink, while the wording of Messrs. Osborne, Bauer & Cheeseman's label was followed as faithfully as the German printer could make it. In one case the jelly was stated to be prepared and sold by "Price & Co., parfumer to the Royal Family," at an address in Lombard Street, London, which had no connection whatever with any firm of Price that we know of. Another of the frauds was labelled "Prepared according. William Peers & Brothers, 1890. Third Avenue, S.W. Cor. 105th St., New Jork." It is evident from this that the jelly had never seen New York, but such is the nature of the competition which British manufacturers have to meet on the Continent. Messrs. Osborne, Bauer & Cheeseman are now endeavouring to ensure for the users of their jelly a reliable indication of its origin. They have registered the word "Glymiel" as a trade-mark, and in future the tubes of the jelly which are exported will bear on the label, printed in green ink across the original red, the words "Guarantee of genuineness. Glymiel-jelly. Registered trade-mark, Patent office. No. 236,270." It will be some time before the jelly for home sale is similarly marked, but our subscribers both at home and abroad will find full particulars in regard to the matter in the advertisement which the firm insert in this issue.

COLOURLESS CARBOLIC ACID.

THERE is scarcely a volume of THE CHEMIST AND DRUGGIST published which does not contain some theory as to coloration of liquid carbolic acid which takes place on exposure to light. It is generally attributed to a process of oxidation, but how to prevent it has hitherto been a mystery. Just as we go to press, however, we receive a sample of "liquefied phenol, colourless (Martindale)," from Mr. William Martindale, 10 New Cavendish Street, London, W., which we are

assured will not colour even in the presence of daylight and on long keeping. The tendency to coloration has been prevented by a process of refining and elimination of all traces of pyridine and quinoline bases. The "liquefied phenol" is prepared from pure phenol in detached crystals, melting at not lower than 40° C., and is brilliantly clear and colourless. The sample we have received has already been exposed to light for a month, and we shall keep it in the light for a further period, and report if it shows any sign of becoming coloured. The acid is sold at 1*s*. 6*d*. per lb., in Winchester quarts. Another form in which the acid is put up is in sealed tubes (as shown in the illustration) for surgeons' use. Each tube contains sufficient phenol to prepare a pint of 1-in-20 solution. We may conveniently note here that Mr. Martindale is now supplying medicated gelatin-capsules in bulk at the closest prices consistent with the guaranteed purity of the contents. Samples of the capsules which have been submitted to us show that they are well made and neatly boxed.

A CURIOUS CONCRETE ILLUSTRATION of commercial success is afforded by the fact that twenty-seven years ago, when Mr. Owbridge began to manufacture his lung-tonic at Hull, a 2-gal. bottle and a ½-gal. pan sufficed his need. At the present time his manufactory can turn out 26,000 bottles per day. Although the actual recipe is a secret, the manufacturer frankly announces that he used 70 tons of honey during the present season, and facetiously wonders what may be the number of his staff, including the bees.—*Illustrated London News*.

Digitized by Google

Scientific Progress.

A New Synthesis of Vanillin has just been announced (*Pharm. Central*, 1902, 38). It consists in adding to 14·2 kilos. of protocatechuic aldehyde dissolved in concentrated soda solution, 12·6 kilos. of dimethyl sulphate, and warming for a certain time. After acidification it is extracted with ether, and the ether distilled off, the residue being then extracted by chloroform, from which the vanillin is easily obtained and purified by recrystallisation.

Oil of Tomatoes.—Battaglia has examined the fixed oil obtained from ripe tomatoes, and finds it to differ but slightly in composition and properties from numerous other oils of the semi-drying class, with iodine values near 100. The following figures are given:—Sp. gr., 0·922; refractive index, 1·473; iodine value, 106·9; iodine value of the fatty acids, 112; insoluble fatty acids, 95·1 per cent.; Reichert value, 18·9. It contained 2·3 per cent. of lecithine, small quantities of cholesterine, myristicene, oleine, linoleine, and stearine.—(*Ann. Chim. Analyt*, 1901, 434.)

Adulteration of Belladonna Leaves.—A communication from the University of Tomsk (*Pharmazeft*, 1901, 1065) states that the leaves of belladonna put on the market by a very large firm have been found to contain the leaves of *Phytolacca decandra*. It is suggested that this may be accidental and due to careless gathering, but the author of the communication considers that care should be taken in watching for this substitution, as, although the leaves are very similar, their histological characters are sufficiently different to render the detection of the false leaves very easy.

Adulterated Saffron.—Blarez (*Jour. de Pharmacie*, 1902, 14) gives an account of a number of adulterated samples of saffron which he has recently come across. No added filaments of a foreign nature were present in the samples, but their impurity was at once indicated by the high ash yielded. In every case the adulteration appeared to have been effected by the addition of a syrupy, hygroscopic, non crystallisable solution of an organic acid with a mineral base. Boric acid was detected to a slight extent in the ash, but the author has been unable to identify the acid used. Sugar and citric and tartaric acids were all absent.

A New Casein Derivative.—In the process of destroying organic matter usually adopted in toxicological analysis for metals—namely, the action of strong hydrochloric acid and potassium chlorate—a small amount of a voluminous precipitate is always noticed. Panza (*Journal de Pharmacie*, 1902, 33) believed this to be of an albuminous nature. He has now confirmed this supposition by treating pure casein in the same manner, and obtained about 15 per cent. of a similar precipitate which forms a yellow powder, insoluble in water and neutral solvents, also in acids, but soluble in alkalies. It yields none of the characteristic reactions of albuminoids, but on analysis it was found to contain carbon, hydrogen, nitrogen, oxygen, sulphur, chlorine, and phosphorus. It appears to be a direct derivative of casein.

Methyl-heptenone.—The chemistry of this body, which occurs in lemongrass oil and other essential oils, is the subject of Wallach's latest researches. He has prepared from it by splitting off water from its oxime, a base isomeric with and resembling the alkaloid coniine, and a new base of closely allied constitution. He has also succeeded in preparing an isomeric methyl-heptenone. This results from treating ordinary methylheptenylamine with bromine and splitting off hydrobromic acid from the resulting compound. The new base $C_8H_{15}N$ results, and on treating this with nitrous acid the new ketone is formed. This new methyl-heptenone $C_8H_{14}O$ boils at 161°–162, and has a sp. gr. 0·842. Its refractive index is 1·43096. It forms normal semicarbazone and oxime, and behaves in all its reactions as a ketone closely allied to the already well-known compound.

Ibogaine.—Dybowski and Landrin have made an investigation of the plant known as Iboga, which appears to be *Tabernanthe Iboga*, Baillon, and is known as Aboua by the Pahouins, who use it as a stimulant and claim it to have an extraordinary power of averting fatigue and of warding off the desire of sleep. Baillon stated that the active principle of this plant resided in the bark, but it now appears that the whole of the wood and especially that of the root, contains appreciable quantities of an alkaloid which the discoverers have termed ibogaine. This compound forms a light amber coloured crystalline body melting at 132° C., and almost insoluble in water, but freely soluble in hot alcohol. Its specific rotation is −48° 32′, and analyses agree with the formula $C_{52}H_{66}N_6O_2$, although the authors give no reason why they have not selected half these values. It forms an easily crystallisable hydrochloride, but the other salts could not be obtained in a crystalline condition.—(*Acad. de Sciences*, 133, 748.)

"C. & D." Nursery Rhymes.

A Charterhouse Dialogue.

Said Lionel to Le Blanc
With a *soupçon* of *elan*—
"Drugs have helped us since those days of Dr. Johnson's,
When the hospitable door
Of our worthy ancest-or
Was open to all honest men with conscience."

Said Le Blanc to Lion-el—
"All our friends know us so well
That to thank them seems to me un-necess-airy;
For they know we've done our best
To forestall each one's request,
Be 't for perfume, pill, or tooth-brush badger hairy."

Said Lionel to Le Blanc—
"We give value to a franc
With the best, as did the goodly men before us,
For we strenuously have striven,
And an upright life have given,
To the 'sundry' causes, swelling chemists, chorus."

Said Le Blanc to Lion-el—
"True, there's naught we do not sell,
And our 'brands' they are perpetually in vogue, sir,
And no man from Roche to Ross,
Should be ever at a loss,
For he'll find his 'want' in Newbery's catalogue, sir."

Chemists' Calendars.

Dr. L. Zambeletti, The Farmacia Zambeletti, Milan, sends us one of his card calendars for 1902. It is beautifully got up in the style of early Italian illuminations, and has a half-monthly tear-off date pad. A small picture of the Pharmacia Zambeletti with the cathedral in the distance occupies a central position on the card.

Mr. M. C. Sumners, pharmaceutical chemist, Heckington, combines his almanack with a cash price list of drugs and chemicals. An announcement is made on the inside of the cover that prescriptions are filled just as the doctor orders, the following points being particularised:—

1. All powerful drugs carefully checked.
2. No substituting one drug for another.
3. No altering of weights and measures.
4. Dispensed by men qualified by examination and members of the Pharmaceutical Society of Great Britain.

The Almanack sent out by Mr. F. W. Cannon, chemist and druggist, High Street, Baldock, is a small one adapted for carrying in the purse or vest-pocket. It is called the Bouquet Almanack, and is delicately perfumed.

Observations and Reflections.

By XRAYSER.

Parliament Meets

for the second time this century, and no one looks forward to its deliberations with any pleasure or hope. According to the programme, education is to be the principal burden of its discussions, but heavier taxation is likely to be the net result of its Session. It is hardly likely that any pharmacy legislation will be reached this year, but we are pretty sure to get to the preliminary contest which the report of the Departmental Committee on the sale of poisons must raise. From the "samples" quoted last week, and from what can be pieced together from floating bits of information, there is little doubt that the report will be to some extent opposed to the Pharmacy Act view of the sale of poisons. But this need not alarm us. The case that can be made out for the Pharmacy Act is at least as sound as that which Mr. Cross and Mr. Dobbs can manufacture against it, and an Act which has done good service for a generation will certainly not be lightly dismissed by representatives of the public who do not happen to be traders with an axe to grind. Even supposing Messrs. Cross and Dobbs secure the powerful backing of the Privy Council, and that department backs their Bill, this will give us a fine opening for introducing ours, and we shall at least be powerful enough to get both referred to a committee; then let the best Bill win.

Paracelsus's Opodeldoc.

Before Mr. Bell's letter appeared last week I had been looking up Paracelsus's original formula. I went to the British Museum Library and secured a desk in the neighbourhood of the P section of the catalogue. Under "Paracelsus" in the catalogue I found a note "see Bombastes von Hohenheim." From P to B in that catalogue means a considerable slice out of a quarter of a mile, but I trudged it, and in the B section I was rewarded with a list of quite a hundred books in English, Latin, German, Dutch, and French, which were either Bombastes' own or translations or selections from his writings. I chose two English and one Latin one, and in those three books alone discovered seven distinct formulas for "oppodeltoch." Indeed, the term seems to have been used by Paracelsus almost generically. In the Latin book ("Chirurgia Minor"), under "De cura Undimiæ," there is an allusion to "nostro oppodeltoch"; this expression seems to indicate the real proprietary article. The formula prescribes realgar, lime, wax, colophony, yolk of egg, turpentine, amber, and aristolochia. Mr. Bell's No. 2 "Oppodeltoch Plaister" (the one with the orange skin powder) is prescribed for corns. Before using it you are to make the corn partly moulder away by applying oil of juniper, agaric, and oxgall. Then the plaster is to be used "for four or five weeks, or until a cure is effected," which, as Mr. Alpe would have held, is not a dutiable recommendation.

Turpentine was a Favourite Remedy

with Paracelsus, though he says it is not suitable in all cases. It will do more harm than good in the case of dry humours (or moist ones, I forget which). But what an advertisement-writer that man would have made! For instance, in describing turpentine he says it "hath a medicinal influence which God hath created in it. Its medicinal virtue is an invisible spirit imparted into its body as the spirit was breathed into man. In Turpentine there are 5 things: an Elementary body, the heavenly impressions of the Starrs, the heavenly Vulcan, the complexion of the Chaos, and a created spirit." Anybody can add to this: "In bottles, 1*s.* 1½*d.* and 2*s* 9*d.* each."

The Oxford English Dictionary

continues its stately progress through our language, and a part just published carries us forward from Lap to Leisurely. In this part 1,472 main words (as well as combinations and derivatives) are treated. It is interesting to note that of the 1,472 words 1,030 are in current use, 897 are described as obsolete, and 45 as alien, or not yet fully naturalised. In their preface the editors refer to a few words of particular interest dealt with, and first among these is

Lavender.

Etymologists have agreed to trace this word to *lavare* (to wash), through the Italian *lavanda* (washing), which gave lavandula and lavendula in medical Latin. The theory of this derivation was that the plant was used for perfuming baths, or else that it was placed among washed linen. Dr. Murray considers that this is not a likely sense-development. He finds that the earliest form of the term was "livendula," and suggests that the origin may have been from *livere* (to be livid or bluish), relating to the colour of the flower. It is not certain, he adds, that the name has not changed in its application. In early glosses livendula and lavendula are synonymous with samsucus and amaracus, which referred to marjoram; but old plant-names, he truly remarks, were often applied very loosely.

Laudanum

furnishes another interesting monograph, but I do not think Dr. Murray tells us anything new about that word. Paracelsus again figures as its originator, though Professor Skeat rather indignantly denies his claim. Ladanum, a stomachic cordial, made and named from gum labdanum, had been in medical use for centuries. Paracelsus's laudanum was quite a different preparation. He himself said it was made from gold leaf and pearls not perforated, but whether he took the name from ladanum, or whether he meant that it was a praiseworthy (laudandum) remedy, or whether he coined the word arbitrarily, does not appear. Certainly it was soon found that his remedy contained opium, and tinctures and wines made from that substance soon came into use as substitutes for his. No doubt they were declared to be just as good, and only half the price.

Other Words of Trade Interest

which occur in this part of the dictionary are Ledger and Leech. Ledger, formerly lidger, and corresponding with the Dutch ligger, is a derivative from the verb lie, and means a book that lies permanently in one place. A quotation from certain local chronicles dated 1538 shows the idea: Curates are enjoined to provide a Bible for a church "to be a lidger in that church for the parishioners to read on." Leech, the old name for a physician, is traced to the Gothic läka, to heal, while leech, the blood-sucker, though "commonly regarded as a transferred use" of the human leech, seems to be connected with old English, lyce, middle English, liche, and this derivation suggests possibly distinct words.

The Liverpool Lecture

illustrated by experiments on live animals evidently gave pleasure to the pharmaceutical audience who attended it, and Mr. Wallbridge seems to suggest that it ought to have been not less pleasing to the rabbits which were performed on so lovingly. But Mr. Wallbridge misses the point. He helps to prove that the experiments were of the nature of a public entertainment, and therefore contrary to the statute. The most vigorous supporters of vivisection in the medical profession will agree with me that the physiological action of drugs is not an essential part of the pharmacist's training.

Editorial Comments.

Apprenticeship.

THE remarkable series of articles which we print to-day from men of long experience in pharmacy are a timely contribution to a subject which has now been occupying pharmaceutical attention for some time. Our object in asking the co-operation of the writers to a consideration of this question was to present, if possible, a faithful reflection of the training of apprentices as it has been conducted during the past sixty years. We are conscious that the ideal conditions of training are not presented in the series. In days gone by Harvey of Leeds, Randall of Southampton and Schacht of Bristol, were types of men who besides being employers were preceptors in the true sense of the word, and taught their pupils upon a system, so that the young men

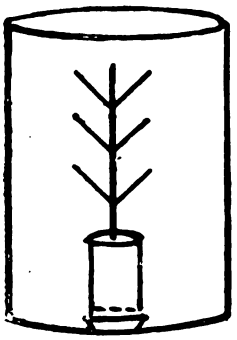
Digitized by Google

who were fortunate in having such employers acquired a thorough knowledge of pharmacy as an art and a business. The fact that we have not in the course of our inquiry got into touch with any man of the younger generation who has gone through such a training is fair evidence that it is almost a thing of the past. Conscientious and painstaking apprentice-masters do exist, but there are now very few indeed in pharmacy who for premiums ranging from 100*l.* to 250*l.* undertake to train apprentices in the style that Harvey, Randall, and Schacht were wont faithfully to carry out, supplementing shop-practice with private instruction in scientific methods and direction of book-studies. The apprenticeship of to-day is limited to shop-practice, and the schools of pharmacy and science have replaced the preceptorship of days gone by. It is as well to recognise that fact at the outset, also that the ideal apprenticeship appears not to have been so common as orators are inclined to preach. For there is not a single one of our contributors (and they are all men who have influenced pharmacy in some manner) who has had anything else than experience in shop-routine.

This does not appear to be peculiar either, for several eminent men, who have contributed much to pharmaceutical knowledge and to the progress of chemical science in this country, have given us, privately, particulars of their apprenticeship which show that they went through exactly the kind of neglect from their masters that is complained of as being rampant at the present time. Their parents had stiff premiums to pay, and they had stiff work to get through day by day. It seems conclusive, in short, that systematic training of apprentices does not account for the positions held by our pharmaceutical leaders, and that there has been no serious degeneration as regards treatment of apprentices. We do not see the slightest reason for saying that apprentices are now more than formerly employed as a means of cheap labour. There are few men in the country who take apprentices for the love of the thing, and the legal conditions now applicable make it certain that no man would employ an apprentice if he could afford a qualified assistant. The training is another question, but, as Edinburgh chemists said a few weeks ago, the best training for apprentices is plenty of hard work. The opportunity for training is not made for the apprentice, but by him, and it is the lad whose powers of observation are above the average, and who is desirous of learning the business well, who finds himself superior to any disadvantageous conditions in which he may find himself. That is really the moral to be deduced from the series of articles which we publish. Undoubtedly retail pharmacy is now different, and the improvement of methods and better commercial conditions have thrown into the hands of wholesalers a large amount of work which was previously done in retail pharmacies, so that apprentices are deprived of the opportunity of making large quantities of plasters and tinctures, rolling big pill-masses, and sweating over horse-balls. But there are compensating advantages, and youths of the old type who are willing to work and willing to learn have as good, if not better, chances now as any of our contributors had.

"Preparations."

IF the Leeds police had intended in the prosecution of Taylor's Drug Company (Limited) for the sale of an arsenical pigment to provide the Poisons Committee with an argument for the revision of the poisons schedule they could not have succeeded better than they have done. The police proceeded under Section 17 of the Pharmacy Act substantially because emerald green was sold (1) without labelling it "Poison," (2) without entering the sale in the poisons-book, and (3) because it was sold to a person unknown to the seller. There appears to be a disposition on the part of the police throughout the country to take proceedings under Section 17 more freely than they have ever done. The Leeds case raises several points of considerable importance. In the first place it may be noted that the Arsenic Act does not clearly apply to such articles as emerald green. That Act says, "The word 'arsenic' shall include arsenious acid and the arsenites, arsenic acid and the arseniates, and *all other colourless preparations* of arsenic." This specification of colourless preparations apparently implies that the arsenites and arseniates referred to are also colourless, and as emerald green (an aceto-arsenite of copper) is a coloured substance, it is doubtful if it is included in the Arsenic Act—at any rate the Leeds police preferred the Pharmacy Act. The second point is, Can aceto-arsenite of copper be considered a "preparation" of arsenic within the meaning of the Pharmacy Act? The schedule appended to the Act contains two kinds of entries—*e.g.*, "Arsenic and its *preparations*" and "Strychnine and all poisonous vegetable alkaloids and their *salts*." By "preparations" the pharmaceutical authorities of the day meant those medicinal or other compounds in which the specific poison is a component in the sense, for example, that arsenic is a component of Fowler's solution. Aceto-arsenite of copper is not in this sense a "preparation" of arsenic, but a "salt," just as morphine hydrochloride is a "salt" of the alkaloid, and morphine suppositories a "preparation" of the alkaloid.



The Leeds Magistrate declined to discuss what is a poison and what is not, a circumstance which is to be regretted, because if he had taken time to consider the matter he would have seen that it is not free from doubt. If "Preparations," according to the Pharmacy Act, include salts, then preparations of morphine, which are in Part 2 of the schedule, include the salts of morphine—an absurd supposition. Salts of poisonous vegetable alkaloids are specifically named in the first part. It has also to be noted as a fact that aceto-arsenite of copper is no more arsenic or a preparation thereof than potassium ferro-cyanide is a metallic cyanide or a preparation of it. The same, of course, applies to arsenites and arsenates generally, as to aceto-arsenite of copper. Through custom and the specification in the Arsenic Act chemists and druggists have always treated the medicinal arsenites as poisons in the first part of the schedule, and we do not wish to say anything which would minimise this needful precaution, but it is doubtful if the legal necessity for it would stand argument in a High Court. All this goes to show, therefore, that the poisons-schedule is much in need of revision, and to this the Privy Council Committee is specially directing its attention.

Kino.

SIX years ago, when kino was a scarce and dear article, that department of the Government of India which has the oversight of economic products undertook to inquire into the reasons for the scarcity. The results have been felt on the market by an abundant supply before the information has appeared, as it now does, in a monograph which brings the article on *Pterocarpus marsupium* in the "Dictionary of Economic Products" up to date. The revised monograph is by Mr. David Hooper, F.I.C., F.C.S., and is an excellent *résumé* of the botany, collection, and chemistry of kino. The commerce of the drug is incidentally treated; but as there is no explanation of the scarcity referred to we may, before dealing with the monograph, recall the fact that the scarcity commenced in 1889, and during the six years following only 121 cases, or about eighteen months' supply,

Digitized by Google

were received in London. The real explanation of this, as we afterwards ascertained, was that exporters in India, who bought at about 3*d.* per lb, had wilfully destroyed the bulk of the supply in order that the market-value should be increased. The price went up to over 1*s.* per oz. in Mincing Lane. This is not at all likely to occur again, as Mr. Hooper recalls the fact that the collection of kino is now either carried out by forest rangers under the supervision of district officers, or the right to tap the trees is put up to auction, together with that of collecting other forest produce, such as beeswax and honey. In any case, the collection is undertaken subject to the condition of its being done properly and without causing undue damage to the trees, as was the case some years ago when the hill tribesmen extracted the juice. In the monograph Mr. Hooper, after giving botanical and other references to the kino tree (which should, by the way, include, in addition to those given for the *C. & D.*, references to our issues of 1896, February 8, page 227, and March 28, page 460) states that the tree is most abundant in the North Malabar district of the Madras Presidency, where the juice is manufactured into the drug. The tree occurs abundantly elsewhere in the Presidency, but kino appears not to have been manufactured there. The manner of collecting and making kino in Anjurkandy, a village at the foot of the ghats of North Malabar and supposed to be the site of the factory where the first supply was prepared for the market early last century, is to make a longitudinal cut with an axe or with a knife through the bark of the tree down to the cambium, about 1½ feet long, and side cuts are made to lead into this. A bamboo tube is then fixed at the bottom of the main incision in order to catch the juice. The figure shows the cuts and tube. When the flow of juice has ceased, the bamboo cups are taken down, removed to headquarters and emptied into a large cauldron, and the juice concentrated to the consistence of a thick extract, when it is exposed to the sun in thin layers in shallow vessels until it is dry enough to crumble to pieces. The kino is then weighed and packed in wooden boxes. The district forest officer of the North Malabar has adopted the plan of drying the juice in shallow trays arranged on tiers of shelves in the shade, a suggestion made by a *C. & D.* contributor (February 26, 1898, page 355), as this product was proved by Messrs. Watson Will and Branch to be of the highest tannin value. The kino so made is dark ruby in colour, and is of exceptional purity. The yield of juice per tree is roughly 1½ lb., which is equivalent to ¾ lb. of the dried gum ready for medicinal purposes. Genuine Malabar kino will now, as already stated, be obtainable in unlimited supply through the Forest Department, and at a price that will preclude all competition of other articles of a similar nature. In North Malabar alone about 2,000 lbs. of the drug can be produced annually at the cost-price of 3a. to 4a. (3*d.* to 4*d.*) per lb. There is scarcely any demand for the article in India, except for the requisition of the Medical-store Departments of Calcutta, Madras, and Bombay. The drug collected in Malabar finds an outlet in the ports of Calicut and Tellicherry. That from North Malabar is shipped at Tellicherry, while that from South Malabar (including the Nilambur forests and the Wynaad), Coimbatore, and the Nilgiris is shipped at Calicut. The native state of Travancore exports its produce through Cochin and Alleppy, while gum collected in South Kanara is despatched from Mangalore. Coasting steamers collect the products at all the Travancore and Malabar ports and convey them to Bombay. The trade is in the hands of European and native firms, and, as Cochin is the principal port of call, much of the drug is called "Cochin grain," although it is not actually shipped there (see the last-quoted article). Touching on the chemistry of kino, Mr. Hooper gives analyses of ten samples from different districts, his figures agreeing fairly well with those of Watson Will and Branch, except in regard to tannin, due to different methods having been used. The commerce of the drug is finally dealt with, and we may bring this quite up to date by stating that last year there was little demand for the article, and only 62 packages were delivered from the warehouses, being 37 less than the amount delivered in 1900. The importations were 141 packages, as against 85 in 1900. There is now a very heavy stock in London—viz., 118 packages, which is a considerable increase on previous years, as the following figures show:—

	1900	1899	1898	1897	1896
Packages	26	45	66	21	25

The moral of the monograph, if there be any, is that the Economic Product Department has done good service to Malabar, and has given speculative exporters a severe lesson. African kino was re-discovered in 1895, owing to the scarcity of the Indian kind. African kino was the original kind, and could be made to suit all purposes of Indian kino. It threatened for a time the existence of the latter, but there is no chance for it as long as the B.P. article can be put on the home market at 1*s.* per lb. Of course, very little is used in medicine, most of it being absorbed by the wine-trade.

Medicine-stamp Questions.

Chemists and druggists have not yet heard the last of medicine-stamp troubles, and if we may judge from the problems which are submitted to us daily, they are anxious to be on the right side of the law. We have this week had another example of the "until relief is obtained" liability. Messrs. F. Newbery & Son have for several years sold "Bronchial throat-pastilles," which specified no malady on the label, but in the "Directions" the phrase "until relief is experienced" occurred. A customer was recently asked to pay a penalty, whereupon Messrs. Newbery wrote to the Board asking if the label made the tablets liable, at the same time remarking that "hoarseness and relaxed throat are not regarded as distempers, maladies, &c." The Board asked for the label in duplicate, and in due course returned one marked "liable to duty." In a further letter the Board stated that the words "until relief is experienced" incurred liability. We particularly note that the label marked "not liable to duty" bears the sentence "Repeat as occasion requires." We should like to emphasize this because it is a good equivalent for such expressions as "when the cough is troublesome" that are declared to be dutiable. There is a curious case mentioned in the *Anti-cutting Record* this month. A member of the Chemists' Defence Association has had the usual claim for 10*l.* made against him for selling unstamped pastilles with the following label:—

J. BLANK, DASHTOWN.
PURE GUM PASTILLES.
INFLUENZA.
DELIGHTFULLY SOOTHING
TO SINGERS AND PUBLIC SPEAKERS.
Must be kept in a cool place.

Digitized by Google

The Chemists' Defence Association solicitor does not advise acquiescence in the usual arrangement whereby the chemist pays the Inland Revenue a mitigated penalty instead of going into court. It is a label upon which, he thinks, a court should be asked to express an opinion, and correspondence is now passing between the Association's solicitor and the authorities, which will end either in a prosecution or a withdrawal of the claim. We hope the case will come into court and be fought to a finish; not that we think the Chemists' Defence Association will win (for the juxtaposition of "influenza" and "delightfully soothing" convey the idea of relief), but in order that the administration of the Act may be well submitted by both sides. While writing on this subject we should like to warn all dispensers that when such preparations as Fellows' syrup or other stamped proprietary articles are dispensed without admixture with water or other material, they must be stamped. The authorities are looking rather keenly after the matter at present.

INDUSTRIAL CANADA.

The November number of *Industrial Canada*, the organ of the Canadian Manufacturers' Association, contains a full report of the recent annual meeting at Toronto. This Association has now a membership of about nine hundred, an increase of 580 during the past year. The primary object of the organisation is to bring home to the British public the extent, resources, and products of Canada. One special department of its work is devoted to the extension of foreign trade, an effort being made to facilitate as much as possible the formation of business connections between outside firms and Canadian manufacturers. Assistance and information are offered free of charge.

DISCIPLINARY POWERS IN PHARMACY.

The complaint referred to under Scotch news, that the Pharmaceutical Society does not take action against chemists and druggists whose assistants have been convicted for infringement of the Pharmacy Act, is based on a misapprehension of the incidence of Section 26 of the Act. That section gives the Privy Council power to "direct the name of any person who is convicted of any offence against this Act, which in their opinion renders him unfit to be on the register under this Act to be erased from such register." Consequently it applies solely to the conviction of chemists and druggists themselves. It does not refer at all to the acts of unqualified employés, unless they come within Section 17—in fact, the offences referred to can only be the habitual disregard of the regulations for the keeping and selling of poisons. The Pharmaceutical Council has power to remove from the Society any member or student-associate who has been guilty of any act or conduct which is contrary to, or subversive of, the interests of the Society, and this power has been enforced on several occasions.

LAGOS POISONS ORDINANCE.

The Bill at present before the Lagos Legislative Council dealing with the sale of drugs and poisons is still vexing the British inhabitants of that malarial region. In our issues of August 17 and August 24, 1901 (pages 301 and 338 respectively), we alluded to the opposition which existed to the measure, and now a leading article in the *Lagos Weekly Record* is devoted to its condemnation. The *Record* argues that the ordinance is unnecessary, and will retard the efforts of the local Government to popularise European medicines. The ordinance would prohibit anyone, no matter what his experience or qualification, from dispensing or selling drugs except on the prescription of a medical man. This is presupposing a system which does not exist locally, says the *Record*, medical practitioners, as a rule, compounding and dispensing their own medicines. In the absence of this system it will be impossible, according to the *Record*, for anyone to comply with the provisions of the proposed ordinance, which require each candidate for licence to swear either that he has kept open shop for the compounding of the prescriptions of a qualified medical practitioner for three years preceding the passing of the ordinance, or to produce a certificate signed by a duly qualified medical practitioner to the effect that he has compounded his prescriptions for that period. We think the difficulties are perhaps slightly exaggerated in this connection, but another objection put forward by the *Record* appears to have a sounder basis. It was thought that the ordinance would be framed so as to exempt altogether practising druggists of long standing from its provisions. This, the *Record* states, is not the intention of the framers, and the exception only relates to persons who have acquired proficiency within three years preceding the passing of the Act. If that be so, and we can hardly think it is, the promoters of the ordinance will have, we fear, considerable difficulty in obtaining its enactment.

THE SALE OF POISONS.

Mr. Algernon Warren has contributed to the *Bristol Western Press* a column article on the suggested reform in the sale of poisons. He narrates the history of the poison law, and the conditions applicable to sellers of poisons; then proceeds to speak of the Poisons Committee and Mr. Dobbs's Bill, refuting some of the allegations against chemists made by the promoter of that measure. Referring to the principle of Mr. Dobbs's Bill he says:—

> The element of safety will be conspicuous by its absence should poisons and poisonous compounds be freely vended over the counter of the general dealer who has had no examination to pass touching their nature and properties. Sealed packages are capable of being perforated, and the contents may be withdrawn for other purposes than those for which they are destined, so this proposed stipulation is inadequate. If, too, a poison be obtained from a qualified pharmacist and misused, he, on being appealed to, has at his fingers' ends a knowledge of the best antidotes. But the seedsman or ironmonger would in nine cases out of ten be helpless to assist, if called upon to counteract the deadly effect of a poison purchased ostensibly for agricultural or horticultural purposes, but misapplied.

Mr. Warren goes on to say that the position of the chemist and druggist is not one of roses. At a cost of close and assiduous brainwork he has to spend years in acquiring the knowledge requisite for the passing of the examination. He must exercise vigilance daily. Unlike most other traders he is forced to stock things for sale which are indispensable to his calling, and which, nevertheless, he may not sell as he likes or thinks proper, but must vend strictly in accordance with stringent legal enactments, and if he do otherwise he may be brought before a magistrate on a charge of manslaughter. His mental strain is great, and a mistake on his part may lead to fatal consequences. The days of uniform large profits on his small turnover are gone from him for ever, and if his chance of a livelihood be diminished by a measure calculated to endanger the safety of the public for the convenience of a minority, there is every reason for anticipating that some of those who now advocate it will live to regret that they ever did so.

A MANGANESE TRUST.—After negotiations extending over six months a trust has been formed to consolidate the output of manganese in the Caucasus. It will include 264 mines, whose total output is about 400,000 tons per annum. The headquarters of the trust are to be in Berlin and the capital is three million marks. The syndicate is formed for a term of ten years, and naturally they will have considerable control over prices.

Festivities.

SMOKING IN BAYSWATER.

The members of the Western Chemists' Association had a smoking-concert at the Westbourne Restaurant, Craven Road, W., on January 22, with their President (Mr. W. F. Gulliver) in the chair. There was a good attendance, and excellent music was discoursed by Messrs. Henry Prenton, Chas. Gardner, H. H. Heap, Ambrose Skinner, and Alf. Wood. The banjo-manipulations of Mr. Wood (who holds the position of banjoist to Princess Louise) were much appreciated; while Mr. Skinner's humorosities were keenly relished. Mr. Prenton developed unexpected traits in "Sandy McGlusky."

WHOLESALERS DINE.

The annual dinner and smoking-concert of Messrs. Baiss Brothers & Stevenson (Limited) was held at the City Arms, St. Mary Axe, E.C., on January 17. Mr. Arnold Baiss presided, and was supported by his co-directors, Mr. Sydney Baiss and Mr. H. E. Stevenson. About sixty were present, including Messrs. W. C. Allen, H. C. Bridge, J. T. Clark, F. Davis, Samuel Lambert, G. Roe, R. C. Treatt, S. C. Welch, and others. After the toast of "The King" had been given from the chair, Mr. John Lloyd, who was in the vice-chair, proposed "The Firm," to which the Chairman responded, and Mr. Allen replied for "The Visitors" in a vigorous speech. An excellent musical programme was provided under the direction of Mr. R. Tonking, and Messrs. H. E. Fifield and E. Wells acted as stewards. Altogether a very pleasant and harmonious evening was spent, the speeches amply testifying to the good relations existing between the firm and its employés.

CARDIFF ASSISTANTS' ASSOCIATION.

The annual reunion of this Association was held on January 15 at the Park Hotel, Mr. Albert Hagon, President of the Cardiff Pharmaceutical Association, occupying the chair. There was a fairly good attendance of members and their friends, and an excellent programme had been arranged, which was contributed to by Messrs. Keast, Hutchens, Dave McNeil, J. Williams, and the Cardiff Mandoline, Banjo, and Guitar Orchestra, conducted by Mr. Walter Norrish. Towards the close of the concert the Chairman proposed the toast of "The Cardiff Chemists' Assistants' Association," coupling with it the name of the President (Mr. A. B. Sparrow). The Chairman urged the assistants to combine to improve the hours of labour, and suggested the formation of cricket and athletic clubs. He also spoke of the educational movement which was on foot with regard to the establishment of pharmacy classes at the University College, and read a letter from Principal Griffiths in which he said that, although there were difficulties in the way, he did not think they were insurmountable, and he would do his utmost to establish a satisfactory pharmacy class at the College. Mr. A. B. Sparrow responded on behalf of the Association.

SCOTCH AT HOME.

The Glasgow Pharmaceutical Association gave an "At Home" in the Cockburn Hotel on the evening of January 16. The company, which consisted of about 40 couples, and a few stray but not disconsolate singles, included Messrs. Peter Boa, J. G. Sclater and Beaumont (Edinburgh), Messrs. W. L. Currie, T. Maben, T. Dunlop, J. Anderson Russell, D. Watson, Sutherland and Robb (Frazer & Green), Walker (Glasgow Apothecaries Company), J. L. Hatrick, T. Taylor, W. Dykes (Lorimer & Moyes), J. Lothian, T. S. Barrie, J. P. Gilmour and R. Brodie. Mr. W. L. Currie opened the proceedings by bidding all welcome, and expressing the hope that joy might be unconfined. Dancing began at 9 o'clock with a polka, and was carried on with zest until 1 A.M., when Mr. Boa proposed a vote of thanks to the organising Committee, and was acclaimed for describing the function as an unqualified success. In the brief intervals between the dances songs were given with artistic finish by Miss Currie, and Messrs. Dykes, Riddell, Maben and Anderson Russell; Mr. Robertson gave gramophone selections, and Mr. J. P. Gilmour recited. The dance music was played admirably by Mr Ferries and his assistant, and refreshments on a generous scale were smartly served at a buffet.

BLACKPOOL AND FYLDE DINE.

The Blackpool and Fylde Chemists' Association held their annual dinner at the Palatine Hotel on January 15, with Mr. H. P. Withers as Chairman. After dinner and the usual loyal toasts, the Vice-Chairman (Mr. T. Carter) in a short speech sent through the telephone, regretted his inability to be present, and wished the dinner every success.

THE PHARMACEUTICAL SOCIETY

was toasted by Mr. W. C. Richardson, to which Mr. Lord Gifford responded. After referring to the past history of the Society, he said that with others he was trying to bring it more in touch with the constituency. Education has always been an important part of the work of the Society, and if the work of the Society is to be successful it must always be so. Had not former Councils grimly stuck to their efforts in this direction they would not have had a leg to stand upon at the present day, although in his opinion they stultify themselves if they do not at the same time always insist on the protection intended.

THE FIRST AIM OF THE COUNCIL

is the benefit of the craft. They have a oneness of aim to that end, and he was therefore extremely hopeful of the future because their position is strong, and they only ask for what is quite reasonable. There is only one difficulty they have to face and fight against, and that is, when reduced to its lowest terms, unqualified practice. He feared they would never have penal powers to remedy this, but if they had they should not have the injustice they are having at the present day. The only remedy is the prevention of the unqualified person from practising. His (the speaker's) experience on the Council has greatly strengthened the conviction that unqualified ownership is incompatible with professional position. Every member of the Council can see this, and they are rapidly getting into a position which will bring this point into prominence. Many chemists do not face the difficulty that the fact of having a qualified man in a shop does not make qualified practice. He believed the Council recognised that, and if they understood the matter, public opinion ultimately would too.

Mr. Lord Gifford then read an extract from a daily paper calling for more stringent poison-regulations, which, he said, illustrated the "altered temper of the press," and finished by inviting those present who were not already members to join the Society.

Mr. Jno. Taylor proposed the toast "The Blackpool and Fylde Chemists' Association," and said he was sure that the Association took the best course in emphasising the social element, for, owing to man's social instincts, it was a most powerful force in the breaking-down of the isolation and sourness which too often resulted from competition. Knowing many Blackpool residents and more visitors, he knew that they, as a body of pharmacists, had won the high esteem of their fellow-citizens, and in that reputation they had a powerful lever for the defence of their interests when assailed, as it was possible they might be when the Poisons Committee had reported. Unfortunately chemists were not directly represented on the Poisons Committee, and it might soon be necessary to take instant action in the defence of the principle of the Act of 1868—viz., that the safety of the public required the sale of poisons to be in the hands of registered and qualified men. They knew that the monetary value of the trade in poisons was little to the individual, so it was not selfishness which dictated their policy. But they knew also the country was not so much better than it was in 1868 that the safeguards which the wisdom of Parliament then imposed could now be cast aside. Verbal mechanical regulations could never take the place or perform the service of a live commonsense pharmacist.

Mr. C. H. Turner (the Divisional Secretary) responded, mentioning that the local M.P. has pledged his support to the Pharmacy Bill and that the Technical Instruction Committee had provided a good laboratory and a competent instructor in chemistry.

Other toasts were gone through, the speeches being interspersed with musical sketches, to which Mr. L. Mayson and others contributed.

Medical Gleanings.

CUPROL IN GRANULAR OPHTHALMIA.

DR. S. SNELL, in the *Lancet*, relates that he has recently substituted cuprol for copper sulphate in the treatment of granular ophthalmia. The application causes less discomfort than copper sulphate, and its use as an alternative to other remedies is distinctly encouraging.

CHLOROFORM-ANTIDOTE.

DR. T. G. BRODIE, at the Turin Congress of Physiologists, in a paper on "A Method of Investigating the Effect of Drugs on the Heart," said he found that suprarenal extract increased the rate of the beat and largely augmented the work performed. Its effect was antidotal to chloroform, which markedly depressed the working-capacity of the organ. If superarenal extract were administered before chloroform, the heart withstood much larger doses of the anæsthetic, while a heart greatly depressed by chloroform recovered completely when suprarenal-extract was introduced.

DIONINE IN DIAGNOSIS.

DIONINE, the hydrochloride of ethyl-morphine, when applied to the conjunctiva causes a burning pain, and soon the eye gets red, swollen and chemotic. This chemosis is much more marked in lymphatic and scrofulous people and still more in those affected with gout, heart and kidney diseases. It may thus be used as a mode of diagnosis for constitutional disorders. Dionine has also an important analgesic action in the deep seated pain of iritis and glaucoma. The pain of these diseases which can hardly be touched by cocaine readily yields to dionine.

THE USE OF CHINOSOL.

CERTAIN chemical peculiarities in using chinosol should be noted. It is precipitated by alkaline water and by soap, so that if it is used to disinfect hands or skin after washing with soap distilled water must first be used for rinsing the hands. Solutions should be kept in glass vessels, as chinosol acts on metal, although nickel-plated instruments are not attacked. The chief disadvantage of its general use is the readiness with which it is precipitated from solutions.—*Lancet.*

MERCUROL IN SYPHILIS.

DR. AYRES, New York, from a fourteen months' trial of mercurol recommends it as the best form for administering mercury in syphilis. The patient is started on 1 gr. three times a day, the dose being increased after four days at the rate of 1 gr. every four days till there is slight salivation, slight looseness of the bowels or improvement in the patient. To control the diarrhœa 10 gr. of bismuth subnitrate is given three times a day. In a few cases potassium iodide 5 gr. daily is needed in addition to mercurol. Mercurol is always to be given in pill form—never in solution, because of its instability.

GLAND INUNCTION.

DR. B. ROHDEN claims that inunction with cod-liver oil emulsion is excellent for reducing tuberculous glands. The rubbing is done two or three times a day for a few weeks. The skin is first rubbed with brandy and then with water, finally using the emulsion in such quantity that 4 oz. is used in ten to twelve days. The preparation preferred contains 50 per cent. of cod-liver oil with balsam of Peru, lanoline, glycerin and an alkali, flavoured with cinnamon, lemon and thyme.

SENILE PRURITIS

DR. JOHN MACDONALD in the *British Medical Journal* mentions that he has found successful, when other remedies fail, ʒj. doses of sodium phosphate in water three times a day after meals. The same remedy is good for urticaria and boils. Dr. G. Parker (Clifton) suggests that as the skin in these patients is often exceedingly dry, and somewhat atrophic, small doses of pilocarpine—say $\frac{1}{20}$ gr. two or three a day—may be found useful. As an external application a liniment containing menthol, salicylic acid, lanolin, and olive oil affords temporary ease.

TURPENTINE IN RINGWORM.

LEVEN recommends oil of turpentine in ringworm and pityriasis versicolor. In the latter disease the oil is rubbed in daily for five minutes. In ringworm pieces of linen soaked in the oil are applied night and morning. After six days the patches become inflamed and the epidermis exfoliates. The skin is afterwards treated with simple ointments.—*British Medical Journal.*

REMEDY FOR PILES.

Ext. echinaceæ angust.	... ...	ʒj.
Ext. hamamelidis virg.	....	ʒij.
Aquæ destillatæ	... ...	ʒj.

Sig.: Inject 2 fl. dr. after each stool.

—*Therapeutic Gazette.*

WAX-MODELLING.

DR. J. F. SCHOMBERG, in the *Medical Bulletin*, gives the following information on the making of wax models for clinical teaching and other purposes. The plaster of Paris used by dentists is recommended for the casts, and is prepared for use by sprinkling it in handfuls or through a sieve into a basin of water until the water will absorb no more plaster. After the plaster is submerged the mass is stirred until it acquires a creamy consistence, when it is poured upon the skin. Previously, however, the surface of the part to be modelled is rubbed with olive oil, or where hair is present with a stiff ointment, such as resin cerate. The eyelashes should be well greased with vaseline. The following is the wax composition employed for taking a cast of the plaster mould:—

White wax	1 part
Yellow wax	2 parts
Paraffin (about 51° C. melting-point)	1 part
Starch	2 parts
Talcum	3 parts

The wax and paraffin are melted together upon a water-bath, and the starch and talcum, previously mixed, are thoroughly stirred into the mass. The wax is now poured into the mould up to the brim, and then poured back again into the receptacle. It is important in this first pouring to bring the wax rapidly into contact with the entire surface of the mould, otherwise indelible furrows will be produced in the resulting models. The pourings are now repeated until the model has acquired a sufficient thickness (ordinarily from $\frac{1}{4}$ to $\frac{3}{8}$ inch). It is then allowed to cool, after which the plaster cast is broken piecemeal from the model.

STERILISING CATGUT.

MR. C. A. BALL, house surgeon at Sir Patrick Dun's Hospital, Dublin, describes in the *Lancet* a method of preparing sterilised catgut, which has been in use for the last eight months. The difficulty in using thick catgut has been to sterilise the inner layers, but the process given answers well on catgut up to No. 4 (Droncke), and moreover does not diminish the strength of the material:—

A glass reel is used, 1 inch in diameter and 3 inches in length, with a flange at each end, each flange being pierced with a hole to which the ends of the gut are tied. A reel of lignum vitæ or any wood that sinks in water answers the purpose equally well. The winding can easily be done with an ordinary bandage-roller by placing a perforated cork in each end of the reel. The knots joining two strands together must be very carefully tied, else they will slip when boiled, and such an accident destroys the whole reel of gut by allowing it to untwist. The reel is now placed in a 5-per-cent. solution of formalin, and left for about twenty-four hours; it is then thoroughly washed in cold water. It is next dropped into boiling water and left boiling for from five to ten minutes, according to the thickness of the gut. Lastly, it is placed in the following solution:—

Mercury perchloride	1 part
Boiled glycerin	250 parts
Methylated spirit	1,000 parts

The gut is now ready, and receives no handling after sterilisation until it is used. The glycerin and spirit dehydrate the gut, the former rendering it pliable. The mercury perchloride impregnates the gut, swollen by boiling, with an antiseptic, and hardens it sufficiently to prevent it twisting when moistened by the tissues during the process of stitching—a difficulty with gut dehydrated by alcohol alone.

Apprenticeship as it Was.

Several Well-known Pharmacists Recall the Experience of their Apprentice Days.

NOT only the apprentice but the art of training him is a fading pharmaceutical factor. It was on a basis somewhat of this nature that we ventured to solicit from several well-known pharmacists an account of their experience as apprentices. The object is to bring into relief the manners of the past through the contrast with the somewhat prosaic present.

We had hoped to obtain more evidence than we have of systematic training, which, we are frequently reminded, was the chief feature of the pharmaceutical apprenticeship of days gone by. Indeed, several very good friends to THE CHEMIST AND DRUGGIST have asked to be excused recording their experience, because they feel that *they* were not amongst the fortunate ones who were well drilled by historic masters in the art of pharmacy. They fetched and carried, "killed" mercury, powdered aloes, laboured late and early, but were never taught pharmacy during their apprenticeship. We feel that we have still to catch the man who has gone through the ideal apprenticeship.

Henry Deane, who was one of the best exponents of the craft that British pharmacy has known, once wrote for our columns an account of his apprenticeship, which we may be pardoned quoting, although it is lengthy, because it takes us back almost eighty years. When Henry Deane left school in 1821, at the age of 14, he had four years of "untraining," as he quaintly put it, but he lived in Stratford, and John Gibson, of Howard, Jewel & Gibson (now Howards & Sons), was a friend of his father's, and he allowed young Deane to have "the run of the laboratories." Thus he obtained "a predilection for manufacturing-chemistry pursuits." John Gibson encouraged him, and so—but Henry Deane's words will tell the rest.

At the age of 18 I was apprenticed, for three years, to a chemist and druggist at Reading, Joseph Fardon, who had served his time to my uncle Shillitoe, of Tottenham, and who afterwards lived three years with John Bell & Co., in Oxford Street. This well-known pharmacist was a kind, indulgent, considerate friend and master, and while with him I learned to powder alum, ginger, and nut-galls; to grind and mix paints; polish the shop scales, counter, and bottles; open and shut shop, and many other things now, unfortunately, considered *infra dignitatem* in this generation. I had to open shop, summer and winter, at 6 o'clock in the morning, a practice which I continued with my own hands for many years after I came to Clapham, without losing the respect and confidence of any one of my customers. To me activity was a necessity, and I rather liked these tasks than otherwise, and I saw no indignity in performing duties required by my master, which were in their nature not only honest, but calculated to improve me in the knowledge of my business. For while grinding Prussian blue, or powdering roots and seeds, I pondered over their physical constitution, and afterwards read up their natural history in my then incomparable book and best friend, Thomson's "Dispensatory." This habit of doing anything that was required of me was not only of immediate benefit to myself, but in after years probably rendered me more apt in teaching those placed under my care, and certainly gave me an idea of the nature and requirements of our trade in country places, such as London itself could not afford.

From that time my motto has been—as I believe it ever was in practice—"There is nothing beneath the dignity of a man that is not dishonourable." Not unfrequently have I had to carry a dozen or two of soda-water to a distance of one or two miles on a hot summer's day, and these occasions afforded opportunities for looking after plants. I shall never forget on one of these excursions finding a fine plant of henbane, a plant I had never seen before, but which I recognised at once from the description read in Thomson's "Dispensatory." I took it home and made some extract much to my own satisfaction, but my master would not have it used, it was so unlike the black stuff usually dispensed; mine was of that pleasant green colour now well appreciated.

In addition to the real love I had for my business, there was one strong inducement to stick unflinchingly to my duties, which was ever borne in mind. I knew I should have to get my living by an occupation deliberately chosen by myself, and paid for by my father, though with the humble fee he could but ill afford. Both parents would probably grow old, and the day might come when it would be my duty and privilege to provide for their declining years. An amount of honest pride was also a strong stimulant to exertion in acquiring knowledge. When I first entered on my duties behind the counter I was a tall fellow 6 feet high, and could look over the heads of my master and his assistant. Consequently, many of the customers presumed I knew more in proportion to my size, and asked me questions about things of which I had never heard, and which made me blush in utterest confusion. This state of ignorance was most distasteful, and I resolved to have an answer ready for the next inquiring customer. Thus I soon gained a reputation for more knowledge than I felt I deserved. My master's small library was soon exhausted, and my shilling a week pocket money and other small pecuniary presents were chiefly devoted to the purchase of such standard works, directly or indirectly relating to pharmacy, that my limited means would reach. At that time there was nothing in the English language published for the benefit of those following our particular business. This was very remarkable, seeing that the Fellows of the College of Physicians were entirely dependent on the chemists and druggists as dispensers of their prescriptions, and for their success in practice. However, in London and some large towns in the country, a few of the most intelligent chemists did the larger portion of the dispensing, to the exclusion of those who would not or did not take sufficient pains to acquire the right kind of knowledge, or who could not resist the temptation to use inferior or sophisticated drugs compounded according to formulæ well known at that date, but now rapidly becoming obsolete.

At the conclusion of his apprenticeship Henry Deane had no difficulty in reaching that Mecca of English pharmacy—a position in the house of John Bell & Co.

Those days were little more than the beginning of the chemist and druggist or pharmaceutist era. There were few who so called themselves that were not by training apothecaries. Most of the druggists of the time were hucksters—honest men, doubtless, but without pretence to scientific knowledge. Men of Joseph Fardon's type were becoming more numerous, and pharmacy was differentiating rapidly towards the final crystallisation of 1841. We may, therefore, put down Henry Deane's experience as typical of his day. The first of those which follow covers almost the same period and makes a good contrast. We deal elsewhere with the subject as a whole.

An Octogenarian's Apprenticeship.

IT was with feelings of great joy that in the year 1834 I signed an important document styled an indenture of apprenticeship binding me for a period of five years to serve "my master's interests, his secrets keep, and obey his lawful commands; to abstain from such unlawful games as cards and dice, nor to haunt ale-houses and taverns, or to contract marriage, or to form any immoral connexion," whilst the master on his part undertook to instruct me in the "art and mystery of his craft, to lodge and board me during the whole term of the agreement"—all particulars of which seemed very easy; but I soon found that the yoke I had undertaken to bear was not so light as anticipated. The sudden transition from the intense pleasures of boyhood and jovial companionships to downright hard work was rather galling to the spirit, and the sense of servitude less bearable than the discipline of the old Dominie with his ferule and powdered pow. The senior apprentice alone gave me a cordial welcome, but it soon became apparent that his gladness was of a selfish nature, for he contrived to relieve himself by shoving upon me the least agreeable occupations, such as opening and shutting shop, window-cleaning, polishing brass, scales, door-plate, trimming four argand bracket-lamps, &c. The shop was opened at 7 A.M. and not closed until 10 P.M. Then there was running errands to deliver goods and medicine, and I have sometimes been so exhausted as to fall asleep after hard work, been carried to bed, and on awaking in the morning wondered how I got

Digitized by Google

there. But this severe training did not break down an irrepressible spirit and buoyant temperament. A year after my senior left and was replaced by a successor who being strong, good-natured and willing, we got on very fairly together, made our little experiments together, went out in the early morning botanising in the marshes, and with much glee using leaping-poles over the marsh dykes. We also had an alliance with other 'prentice boys, hired a boat and were often in the open sea by sunrise, taking a header into the placid ocean. This physical training was beneficial, giving tone both to body and mind.

To return to business. It was the pride of our principal to have every drug and preparation genuine. At that time of day adulteration was shamefully carried on by the wholesalers. There was no such thing as an unsophisticated powder or extract, and in order to secure this desideratum he chose to prepare all tinctures, distillations, extracts, ointments, syrups, &c., himself, and it was no small satisfaction to find that such "honesty was the best policy." An instance may be mentioned to illustrate this. A preparation containing ext. papaveris was dispensed for a highly respectable old lady. The unexpected soporific effect caused her friends to inquire whether there had not been an error in compounding, as the patient had never experienced such a result from the medicine, which had always been dispensed at a first-class West-end establishment. The explanation that followed proving satisfactory led to greater confidence in the country chemist, and brought an accession of business.

The work of the laboratory progressed, and we had a good time in the open, gathering hyoscyamus, digitalis, belladonna, taraxacum, &c., often making a good bag. This, of course, entailed more work, but as the master was not above his trade all worked harmoniously, and with very simple apparatus turned out a lot of produce.

But of all the enjoyments of 'prentice life nothing equalled the harvest of elder-flowers for distillation and making ung. flor. sambuci. We had a good connection with the hospitable farmers, who gave permission to enter any enclosure and take as much as we required, even entertaining us with country fare and sending our sacks home into the bargain.

I remember on one occasion a sack of elder-flowers arrived rather late in the evening, and, being busy, we did not empty it into the 24-gal. still; the whole house was filled with the odour, rank and unpleasant. On opening the sack next morning a heated black mass presented itself; this was a caution. I may here allude to a narrow escape I had when on one of our forays. I had climbed an unusually large eld er-tree, when I espied a fine branch suitable for a pop-gun, and began hacking it off with a sailor's jack-knife. Before I had got half-way through the main stem upon which I was astride broke, and down came boy and knife, which happily fell flat under me.

Shop again. We always had some object of interest designed to amuse customers, such as a glass retort and receiver in operation. How the country folk would wonder to see a dark-coloured fluid boiling in a glass vessel, and then re-appearing in another state "as clear as gin."

We had electrical apparatus—a rapidly-revolving magnet —which was "more than any fellah could understand." This arrangement was made profitable for "shocking" nervous subjects, who believed they were much benefited by the treatment. We had also a large and powerful battery, consisting of 36 jars, 25 oz. capacity, and with this in our spare moments we exploded gunpowder under water, burned gold-leaf, melted iron wire, and decomposed water, much to the delight of friends and acquaintances, and to our own advancement in scientific knowledge.

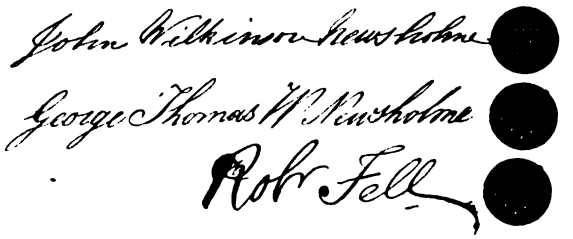
As for systematic training there was none. Phillips's "Translation of the London Pharmacopœia" and Gray's "Supplement" were the only authorities we had reference to; but the conviction that the mere trading in drugs was of inferior value compared with the literature and science of pharmacy was fully recognised and acted upon.

Would that such pursuits were more cultivated nowadays. Principals, assistants, and apprentices would find greater satisfaction in the investigation of facts in science than in scoring a great victory at football, where physical force is in the ascendant and there is no permanent satisfaction in recounting the glories of the field—not that athletic sports should be discouraged, but these feats of strength should be subordinate to the more solid and resourceful engagements of minds.

That there is room for improvement in the training of pupils is an acknowledged fact. Professor Attfield demonstrated this years ago. But, still, young men are left by principals who are really responsible for the future of pharmacy, and who might ennoble the profession by devoting some attention to the interests of those who are destined to carry on the ever-expanding science which, from the remotest ages, has maintained its interest and paramount importance for the benefit of the human race.

Gordon Murray

G. T. Wilkinson Newsholme.



THE President of the Pharmaceutical Society of Great Britain does not owe his position in pharmacy to an ideal apprenticeship or the fostering care of influential pharmacists who early discerned his abilities and pushed him forward. His scoring has all been done off his own bat. Born in Settle, Yorkshire, in the early fifties of last century, and the eldest son of "John Wilkinson Newsholme, Gentleman," as his indentures put it, he had a thoroughly sound education, especially in the classics, at the Giggleswick Grammar School, where Archdeacon Paley was educated. There were ideas of making young Newsholme a doctor, but the lad had formed in his own mind the determination that a pharmaceutical life was just the thing that would suit him. His uncle, Mr. Thomas Bateson, of Kendal, was a frequent visitor at his father's house, and Mr. Bateson happens to be exactly the type of man to convey to a young relative the idea that "all is well." He had leisure, overflowing spirits, and a prosperous business. Against that the sole attraction of a medical career which there was to the observant nephew was the pleasure of getting up in the middle of the night, harnessing a horse, and driving ten miles or so to see a patient. That was a dream of bliss which long hovered over the lad but pharmacy was a sure thing, and his thoughts were always in it. So a friend told his father of a splendid chemist for training apprentices—Mr. Robert Fell, of Huddersfield, and Mr. Newsholme, sen., went to talk with Mr. Fell about the matter. This was just about the time the Pharmacy Bill was crystallising towards an Act of Parliament; but Mr. Fell was not a member of the Pharmaceutical Society, hence when the indentures were drawn up there was nothing out of the ordinary in them, and neither the apprentice nor his father knew anything about the Society's examination. The indentures set forth that Robert Fell would "during the term of five years teach, learn, and instruct George Thomas Wilkinson Newsholme the art, trade, or business of a chemist and druggist, and find and provide for him sufficient and enough of meat, drink, and lodgings during the whole of the said term, and also allow him a fortnight's holiday in each year of the said term at such time as shall be most convenient to the said Robert Fell."

The document, which looked so formidable to young Newsholme, and was, he thought, an assurance that pharmacy was all he conjured it to be, was not signed until May 18, 1868. The signatures are of interest now that the

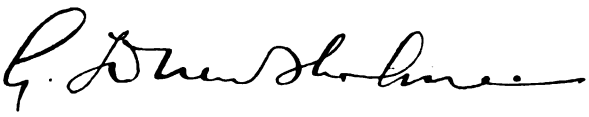
Digitized by Google

youngest party to the contract signs many of those things that pharmaceutical aspirants most desire to possess:—

But this takes us away from the story, which, the reader will have gathered, is not told in Mr. Newsholme's own words. He was good enough to spare us half an hour at "the Square" one afternoon recently for a chat, and if this is not so interesting as his own talk, which it certainly is not, it couples well with the apprenticeship.

On February 7, 1868, George Newsholme became an inhabitant of Huddersfield, and he entered Mr. Fell's double-fronted shop with a keen interest in the mysteries that lie behind the crimson lights. There were doubts about the lad's living in a strange town, but none in his own mind. He had all pharmacy before him. He was the junior of two apprentices, and there was a porter to do the heavy work. The senior apprentice did not give him sulphur and chlorate of potash to rub together in a mortar, nor a pound or two of aloes to powder, immediately he donned the apron, but there were various little light-porter jobs to fill in his time until a parcel was ready for Mrs. Blank, and the senior apprentice was deputed to go out with the junior so as to show him where this customer and that lived, in case such an errand might arise again. Need we say that that happened often? Before the trial month ended the junior apprentice had written home to say that mechanical engineering would be more in his line. His father arranged for a visit to Bury, and the junior came back convinced that on the whole pharmacy was just as good. He resumed this routine, which commenced at 7 in the morning, when he left his master's house hugging the loaf that was destined for the coffee and bread-and-butter breakfast which he and the senior had on the premises at the shop. The shutters were down at 7.30. The apprentices were in the shop all day, having half an hour for dinner and the same for tea, until 7.30 P.M. and 10 on Saturdays. Mr. Newsholme, senior, had stipulated for one night per week for cricket, but this did not last long, as it interfered with business, which accounts, doubtless, for the absence of Mr. G. T. W. Newsholme's name from any of the Yorkshire elevens.

If the young apprentice was not taken in hand by his master and put through a systematic course of training to acquaint him with all the branches of pharmacy, he had the next best thing to that—plenty of hard work at everything that was done in the shop. It was a good country business—oils and paints were a speciality; British wines, too, were much dealt in; there was a good connection with medical men in supplying them with preparations; and most of the quacks in the neighbourhood went thither for their pills. On Saturday nights Huddersfield poured into the shop for supplies of hair-oil—used in enormous quantities—and the junior apprentice became an adept from the very first Saturday in serving this article. Most things were made on the premises—ointments, pills, tinctures, plasters, and so on, and the apprentices made them. They did not start with precise instructions or anything about the dignity of the craft or the importance of being accurate; nor were they bothered much with the Pharmacopœia; but they had the shop recipe-book, and there was scarcely a process in the art of pharmacy with which they did not become familiar in work. We say work purposely, because Mr. Newsholme has not dignified it with the word "practice," which he might have done if any thought of the high position he now occupies tempted him to throw a glamour over his pupilage. The older we grow and the more extensive our experience becomes, the more are we apt to reflect that the earliest years of our experience were the shaping of our destiny. Possibly there is some truth in the conceit, but we could extract nothing from Mr. Newsholme to favour the idea that his apprenticeship was an experience to be proud of. He learned all branches of the business thoroughly, for the simple reason that he found himself there as one of a staff which had to do so much business every day. Pill-masses to make by the pound, tinctures to put on and finish, plasters to compound and spread, soon make a lad expert; and Mr. Fell's apprentices had plenty of exercise at the iron mortar powdering black antimony, aloes, and carbonate of ammonia, amongst other things more or less disagreeable but muscle-developing. Their experience of things was equalled by knowledge of men, for the everyday stream of customers from town and suburbs, with needs as varied as their ills and occupations, engenders an acquaintance with human nature which is eminently serviceable in after-life. One feature of Mr. Fell's business which must have been of the greatest service to the apprentices was his *per contra* relations with wholesalers. Huddersfield was in the centre of a district which produced myriads of red poppies and pansies, and when these were in bloom the apprentices had plenty of work. The flowers were brought in by the cart-load, and had to be converted into syrups by the simple process of packing them and sugar into hogsheads and pouring boiling water on them. The pansy-petals had to be picked from the calices, and tired, tired were the apprentice fingers during the weeks when syrup of violets was made. The finished syrups were sent to London and elsewhere, and, strange to say, York sent pansies to Mr. Fell's place in Huddersfield, and he sent them back as syrup.



To the modern apprentice, whose experience of plasters extends to taking a beautiful spread article out of a box and tenderly handing it over to the customer, it may be of interest to know that the President of the Pharmaceutical Society had to take them from a cruder stage. His experience began with the litharge and oil, thence through all compounding stages up to the forming of rolls on the marble slab, and division thereof into the penn'orths which the pedlars of the district required. One day, while he and his senior were busy rolling and cutting "oxycroceum," an Italian organ-grinder who knew no English came in and eyed them with watering mouth. He thought they were manipulating some toothsome confection, and the language of signs persuaded him to put a penn'orth in his mouth. The apprentices had a terrible afternoon. The organ-grinder came back with fixed jaws, and a friend with a dagger, who stood over the apprentices while they picked the plaster from the grinders of the irate Italian.

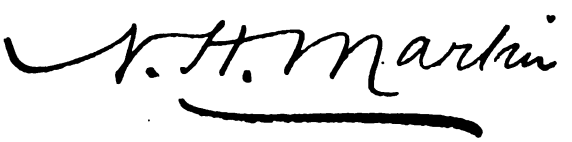
In course of time Mr. Newsholme became senior apprentice, and, short of the supervision by Mr. Fell's brother, who was manager, he had charge of the shop, as Mr. Fell had a lead business in Skipton which took him away two or three days a week. Mr. Newsholme had by this time negotiated the Preliminary examination, and had attended science classes in the Mechanics' Institute of the town, the late Mr. George Jarmain being the teacher. Besides that Mr. Newsholme had little opportunity for acquiring pharmacy theory; indeed, he almost confined his reading to Pereira's "Selecta e Prescriptis," and that was owing to his fondness for Latin. He used to dispense all the prescriptions in it that he could which Mr. Fell assented to, and, although one or two genuine prescriptions were all that came into the shop per week, these latterly he dispensed. He was the dispenser of the establishment. So it happened that when the five years' apprenticeship was finished, and he had served an extra year as assistant, he received from Mr. Fell a testimonial, in which his expertness as a dispenser was specially referred to. With this he obtained a situation as dispensing assistant to the late Mr. Chas. Jones, Birkenhead.

Here properly Mr. Newsholme's apprenticeship ends, but that of a president does not until he steps into the presidential chair. So we may carry the story a little further. After studying at Muter's, he passed the Minor and Major. On the day he got his Major certificate he called at Messrs. Barron, Harveys & Co.'s, where he learnt that Mr. Radley, of Sheffield, wanted to sell his business. He saw Mr. Radley on his way home, and three or four months later came to terms with him. It was a fine prescribing-business—the very thing he did not want; but he took it, telling Mr. Radley he would not carry on that branch. Mr. Radley was horrified, but lived to say that his successor had done the right thing.

Digitized by Google

It is a unique circumstance in the annals of pharmacy that the founder of a business and his successor (Mr. Radley and Mr. Newsholme) and uncle and nephew (Mr. Bateson and Mr. Newsholme) have been on the Pharmaceutical Council together. Also that the lad who commenced his pharmaceutical career with astonishment at being used as an errand-boy has lived to be the first provincial pharmacist to be President of the Pharmaceutical Society.

A Pupil of Henry Deane.



THAT may almost be said of Mr. Nicholas Henry Martin, of Newcastle-on-Tyne, for although his actual apprenticeship was not served in Clapham, Mr. Martin went to Mr. Deane at a stage in his pharmaceutical career when he was hungry to learn more than he had yet acquired. We venture to give Mr. Martin's own words in regard to the matter. "Mine," he writes, "was a very ordinary apprenticeship in a small country town to a man who undertook to teach me the art and mystery of the craft, and who knew little, if anything, of botany or chemistry, but there were many other things he did know. He was an excellent judge of drugs, and kept good ones, and he was quite an authority in prescribing for all manner of human and animal ailments." Mr. Martin started his apprenticeship with an excellent grammar-school education, he was an insatiable reader, and the pharmacy afforded him the opportunity to put his reading into practice. We daresay he shudders now when he thinks how after a few months' experience he treated complaints in young and old, but there was never an inquest. He read Neligan's "Medicines" from cover to cover, more than once, and Barlowe's "Practice of Medicine," *con amore*. He sweated over Bentley's "Botany," and with it as a guide named all the common plants in the neighbourhood. In chemistry he read through and through Galloway's "First Step to Chemistry," and worked every equation of the various double decompositions, but missed guidance in that subject more than any other.

During his apprenticeship his father died, and he had so arranged the patrimony that at the end of his apprenticeship the son found himself with a small sum of money in hand and the whole world before him to make his own way in it, or rather in his chosen occupation until he reached 26. "If my father," writes Mr. Martin, "had had any idea that it would have been desirable for me to have had money to carry on systematic study, I am sure he would have so arranged it. As it was, I went to London in May, 1867, and took a situation in Bruton Street at 30*l.* a year, indoors. In October out of this I paid the fees for the courses of lectures on chemistry (Redwood) and botany (Bentley) at the Square, and passed my Minor in February, 1868. Then I went on reading and working, but in April I had notice to leave my situation, as the business had changed hands, and my new master wanted an older assistant. I went to Mr. Deane's at Clapham in May, 1868, still very anxious to complete the botany course and go to Bentley's lectures at the Gardens. One evening I summoned up courage and, promising to make good the time and work, asked Mr. Deane if I could be spared the two mornings a week to go to these. 'No; your duty is to do my work, and I can't spare you!' he replied. That was discouraging enough, but it compelled me to read still more systematically. My shop-hours every day were from 7 A.M. to 9.30 P.M., but I read early and late and late and early, 2 A.M. to 6 A.M. being the sleeping-hours until December 12, 1868, when I passed the Major in honours. When Mr. Deane, who was an examiner, came home that evening, he greeted me very warmly and said, 'Martin, I am as proud of you to-day as if you were my son.' It appears that I obtained the highest marks of the session. Daniel Hanbury, who lived at Clapham, and who had examined me, came into Deane's shop specially to congratulate me. That day commenced my real acquaintance with the leaders of pharmacy.

"I stayed at Mr. Deane's the next four or five years until I went into business on my own account, and although our shop-hours were still 7 to 9.30 I continued scientific work, and mounted during that time about 1,000 microscope-slides. On my off-evenings, one winter, I demonstrated a course of lectures on the microscope at Brixton by Mr. W. T. Suffolk, where I used to meet Mr. B. Daydon Jackson and others, and examined several batches of dredgings which Mr. Gassiott had from friends in the Navy. So my attention was turned to *Foraminifera*."

It will be remembered that Mr. Martin's late partner, Dr. H. B. Brady, was so eminent an authority on the *Foraminifera* that he was requested to work up the dredgings of the *Challenger* in that department, and his book on the subject is a monumental work of erudition and patience. It is strange that Mr. Martin should have branched out into that subject after the Major was over, and that he should afterwards have become the partner of the one man in pharmacy who best knew his favourite subject.

George Claridge Druce.

I HAVE been asked by the Editor to say a few words about my apprenticeship, and his request gives me something of a shock, for it at once suggests that one has passed the meridian of life, and that time has rushed by on such eagle's wings as to be positively alarming. Then the personal tone which such a notice must assume is disconcerting to one so nervous and, comparatively, bashful as myself, but this personal element will, I hope, not be so pronounced as to be distasteful to my readers.

My early days had been spent in a quiet country village, where, brought up by an indulgent mother, and under private tuition, I had acquired an intense love for natural science, which, thank God, has never waned. I prided myself on knowing the haunts of bird, insect, and flower of that forest district of Whittlebury which lay adjacent to me. Although my people had been connected with the land for many generations, I never cared for agricultural pursuits, but had devoured with eagerness such scientific books as I could lay hands on, practising such chemical experiments

Digitized by Google

as lay within the compass of my attainments. These led the way to the selection of the business of a chemist and druggist as the one for me to adopt.

Many replies came to my advertisement, in which the premiums asked varied from 80*l.* to 300*l.*; eventually one in our county town was chosen, at which a premium of 100*l.* for a four years' apprenticeship was asked, and subsequently paid. Accordingly, my heart in my boots, I left for the first time a gentle home, and entered for a month on approval. The business to which I went was such a one as several of our Midland towns could then show before the segregation which is such a characteristic of these days had become pronounced, for this was a retail and wholesale business—a retail of a mixed character, from dispensing and prescribing down through the various grades of ordinary retail, veterinary-preparations, pickles, and paints, *et hoc genus omne*. The wholesale was even more varied, for it comprised, in addition to the foregoing, sweets, tea, oils, blacklead, blue, and starch. Further, the manufacturing of galenicals, such as the green extracts, expression of juices, distillation of waters, killing quicksilver, grinding linseed cake and saltpetre, powdering drugs, and making anchovy sauce and varnishes, burst upon me in a fearful and wondersome manner.

Our staff consisted of the principal, a man of means and of parts, who, but for the fact of his having a good competency, might have made his business such a one as that of another of the great Midland firms which still flourish. He was a prescriber with a great reputation, and a string of customers from widely separated parishes in the county came in on market-days to benefit themselves by his remedies, and him by their fees—a symbiotic combination now so strongly condemned by the powers that be. I can, however, assuredly say here, so far as my experience goes, I saw none injured but many benefited by his common-sense method of treatment. Next to him was the general manager, who proved to be a kindly and intelligent man, who has subsequently, I believe, become successful elsewhere; then a dull individual took care of the retail, and of himself, in the latter case by leaving undone all that he could possibly make one junior to himself perform, the junior being in this instance the senior apprentice, a real good fellow, who was then nearing his release.

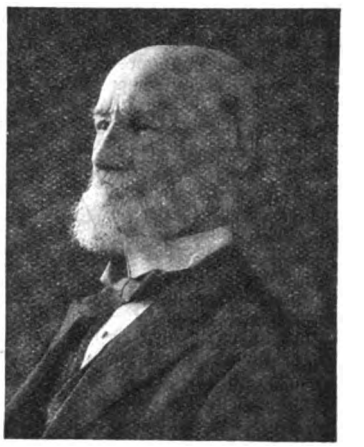
In the wholesale we had a jovial traveller, with only one enemy in the world, who called upon the village doctors and small shops throughout the greater part of the surrounding counties. An apprentice assisted the porters to put up the assorted orders he sent home. Then we had an engine-man to look after the ten horse-power boiler and laboratory. My fate was to go to the wholesale, and assist generally in putting-up orders, and to make such preparations as could be safely entrusted to me. My first initiation was to make 6 gals. of syrup of red poppies, and the task of bruising and expressing the juice from the petals was not a light one on a hot June day for a boy of 15, but my fellow-apprentice lent his hand and we turned out a presentable article. The evaporating-pans were a wonder and delight to me, and I found their use shortly after when a ton of henbane, which we crushed under the linseed-cake stones, had to be made into green extract. Less pleasant was the monotonous folding-up of grosses of 1*d.* saffron or hiera picra, or the bottling of three dozen pints of castor oil out of the horrid square tins into the stupid and irrational long and narrow-necked bottles which were then in vogue. How greasy I got! Like an artist, I dabbled in "oils and paints." And then, released on market-days from the wholesale, I came into the shop and served pennyworths of hair-oil galore. A gallon was a normal quantity to sell in these small quantities on these days, and the amazing numbers of pills, ointments, and plasters, and crude drugs! Grosses of packets of senna, saffron, chamomiles, jalap, hiera picra (I can see the very drawers of them now), went off in astonishingly quick time; and, oh! the vile wretches who doctored themselves with Venice turpentine (made by me on the premises), Locatel balsam, or the balsam which is not balsamic. Then I might be called to fetch up some leeches, or hold a man's head while his tooth was pulled out, or mix a special draught for some "coo" in an interesting condition. Worst of all, later in the year, was the sale of pints or gallons of fish oil, for then the cotton-seed oil had congealed; and to get it into one of the stinking tins, and to get it out of the big cistern by letting down a measure with a rope was a sickly operation. As luck would have it, our assistant left shortly after I was duly "bound," and I got a move up, as the new one, who had been through a six years' apprenticeship at Beverley, during which, as his employer shrewdly, if not kindly, said in his reference "if he possesses any talent, business or otherwise, he most successfully concealed it." As he came for a salary of 15*l.*—well, what could one expect? So he was put to do the dirty work of the establishment, much to our relief, if not to his satisfaction. Meanwhile, I tried to make myself acquainted with everything that went on, and with a zeal that, perhaps, had something deadly in it, began the task of preparing everything in the London Pharmacopœia, as well as all the proprietary preparations of the firm. My Beverley friend was not to be trusted in the laboratory, for his first essay at preparing white spirit-varnish was a failure, since he put the gums and resins into the steam evaporating-pan, put on 2 gals. of methylated spirit, turned on the steam, and went out surreptitiously to get some of the liquid extract of malt, which his system seemed periodically to require. His irate questioning of one and all later on as to who had taken away the spirit spoke volumes as to his mental capacity.

Speaking of methylated spirit brings to mind the fact that at that time (1866) a large business was done with the village shops in methylated tinctures, sweet nitre, and sal-volatile, and as there was no fear of a Sale of Food and Drugs Act before one's eyes, judicious (from a purely economical point of view) substitution was employed in many preparations. Beeswax (the paraffins were not then articles of commerce) innocent of *Apis mellifica* was prepared, which if it had not a blush on its face, frequently had a bloom, from the vegetable wax of Japan which entered into its composition. But these and similar things were sold as sophisticated.

Towards the end of my first year's apprenticeship our manager left, and I was appointed to take charge of the retail counter, so my laboratory work became somewhat intermittent; but I had by this time passed my Preliminary examination, and I now and then had a day among the steam-pans in order to prepare a 10-gal. batch of Brunswick black. I wonder how many students of the present day know how very light vegetable black is, and how long they would be over the job? Almost more trying, although less dirty, was the task of rubbing 20 lbs. of anchovies through a hair sieve to make a batch of the essence which I now never see on the tables of the Métropole without thinking, not of the eternal sole, but of the darnation backbone.

My career of manufacture had once a sudden check, for an order required at once for 8 oz. of iodide of mercury (in ointment) for the late Empress of Austria, who had a hunting-establishment in the neighbourhood, nearly blinded me, for we were out of the iodide, and could not get enough in the town, so I essayed to make it by rubbing the mercury and iodine together, checking the exuberance of their chemical action with alcohol. A little of the boiling solution of iodide, free and combined, spurted into my eye and caused me exquisite suffering, but fortunately with no after-effects, and I got off my order before I took to bed. I may say that, as far as supervision went, we had little or none; certain hours had to be kept, an attendance at a place of worship once on a Sunday insisted on, and beyond these we were left very much to our own sweet will. To the idle or the vicious this liberty was bad; but my companions, with one or two exceptions, were neither, and I do not think we wasted our master's property even in the somewhat reckless way we made preparations, which would not be attempted now in many pharmacies. Cooley's "Cyclopædia of Receipts" was a fascinating book to me, and Faraday's "Chemical Manipulation" a mint of wealth. Thanks to Faraday, I have iodoform by me made in the sixties, long before its uses were understood. Before two years of my apprenticeship were over my friend the old senior apprentice left, and I succeeded to his post as senior in the establishment, and, although a general manager was talked about, he never came. Therefore I had now to do the dispensing, as well as keep all the books of the establishment and generally superintend its affairs. As I had then to do all the various jobs, and make or assist in making all the various galenicals from 20 gals. of elder-flower water and 10 gals. of syr. ferri iodidi to Venice turpentine and Brunswick black, the gamut was a

Digitized by Google



large one. My employer was good enough to send me out with his son, about my own age, for a fortnight's holiday, giving us 15*l.* to do it on, and we spent it in a walking tour through North Wales. The hotel bills, which I have still, are curiosities of cheapness, for everyone was kind to the two schoolboys which we were taken for, and I did not explain that I was occupying such a responsible position. At the end of my second year he gave us 20*l.*, and we visited Scotland for a fortnight, climbing Cairngorm, Ben-y-Vroe, and Ben Nevis; starting from home by the night train after a heavy day's market work, and aching in every limb, for the third-class carriages in those days were not upholstered, reached Edinburgh on a Sabbath morning. My employer lived much at his country house four miles away, and during the summer I rarely missed walking out there to breakfast, and I learned my botany on the walk, reading Lindley's "Introduction" on the way. We had breakfast at 7.30, and then either walked, drove, or rode back with one of the boys, who came to the town to school. Our engineman was a strict Calvinist, and at times, especially after St. Monday, impressed upon us with a free flow of words his views about predestination and the fact of his being one of the elect with great force, if not lucidity. He kept the secrets of his work very close, but I got him by special favour and some liquid argument to show me how to stoke the boiler, to get up steam, and even to work the machinery. Well, this knowledge once stood me in stead, for one autumn, when we were very busy, the sheep-ointment season being on, he was laid up with lumbago, which he attributed to mercury, but I to beer, and consoled him by saying it was evidently predestined, or it would not have happened.

As my employer, who knew nothing about my participation in the engine-man's secret, was away, I thought it a favourable opportunity to show off my knowledge. I went into the laboratory, where I soon got up steam, and had melted the tallow, lard, and ung. hydrarg. fort., and was mixing them with my bare hands and arms in the huge wooden tray, while downstairs the great stones were keeping down the steam by grinding linseed-cake under the care of a young porter, while the errand-boy was at the boiler watching the height of the water. Messages were flying up the speaking-tube in grand style, when I caught a well-known step on the stairs, and up came the boss, stamping and raving, his hair almost on end, at my daring to get up steam. On learning the facts, he, like the fat, cooled down, and he was soon meekly holding the two-pound snuff-tins into which I ran the ointment, which I had been manipulating in the manner described. I was sure to be salivated, he said, but I was not, and my twenty pounds was despatched the same evening. On his return our Calvinistic friend was obliged to confess that nothing was wrong except that I had used up all his "killed mercury." In passing, one may say that at this time we bought glycerin by the pound; that the 20-lb. mass of antibilious pills was rolled out by women on the ordinary 24-pill machines; that emetics were still kept ready for sale; oil of swallows, and of worms, and of wheat were often asked for, and the people who asked did not go empty away. Carbolic acid was practically unused, and patents were sold at full price. Our hours were from 8 to 8, and 10 on Saturday. I was on duty two nights a week and every other Sunday. About the end of my second year's apprenticeship my friend Branson was initiated into our mysteries, and many and fearsome experiments we made together. He was strong on mechanical appliances, and our united efforts made the traversing of the adjoining passage to our premises, which led from one street to another, a thing not to be lightly undertaken after "closing-time" on Saturday night (12 o'clock it was then), and we did much to convert the erring ones, although language was occasionally evolved which was not as good as it should have been. My sides even now shake at some of the remembrances of that long-ago time. But one must not enter upon one's anec-dotage too soon. Let me say that my fourth year soon came to an end, and a 20*l.* Beck's binocular still shines upon me as a memento of my employer's recognition of the end of my apprenticeship.

J. C. Stuck

An Edinburgh Apprenticeship.

I WAS apprenticed (writes Mr. J. B Stephenson, Edinburgh) to a firm of chemists and druggists in this city for five years, my indenture dating from January 1, 1842. By its terms I bound and obliged myself to serve honestly, faithfully, and diligently, by night and by day, including Sabbaths when necessary, and, further, not to reveal the secrets of my master's business or his employers, nor to dispense drugs or medicines on my own account. On the other hand my master bound and obliged himself to teach and instruct me during the time of my apprenticeship in the art and business of a chemist and druggist, and in every part thereof, in so far as he himself knew and practised the same, and to use his best endeavours to make me skilled and expert therein. My master was to provide me with bed, board and lodging in his own house or in the back shop if required (this in lieu of salary), I being at the expense of my own clothes and washing. There was also an agreement (though not specified in the indenture) that I was to be allowed time to attend two classes at the University, in the fourth and fifth years of my service. There was no premium.

When I first entered there was only one other apprentice' who was in the last year of his time, and my first year was mainly occupied in running errands, indoor work about the shop, such as cleaning bottles, scales, &c., and pounding in the big iron mortar—in those days we powdered all our own drugs such as aloes, cubebs, and nitre. As business increased, and I progressed in knowledge of the work, these acts of drudgery were transferred to the message-boy, and although my services in these capacities were still from time to time brought into requisition, I had more time and opportunity for learning my proper duties. The other apprentice left during the second year of my term, and shortly afterwards a junior apprentice was installed, and I became practically senior assistant, there being no employé between me and my master, who, however, was always a close attender on business, being rarely out of the shop.

I cannot recall ever having received any formal instruction or tuition in chemistry, or even pharmacy, from my employer, but as we had a good going business, of which the bulk was dispensing, I had every opportunity of picking up the working details. I can remember being encouraged to read Christison's "Dispensatory" (which, with the exception of the Edinburgh Pharmacopœia, was the only textbook we had), and although the only time I had for reading was after 9 P.M. and in the back-shop (we closed at 10, but after 9 we were allowed to read, should customers not occupy us), I managed to get through the book oftener than once. From a very early date, too, I was allowed to dispense—especially ointments and pills—but was always strictly catechised, and made to recite all the ingredients and their quantities. In addition to this we prepared all our own stock pills, tinctures, ointments, &c., of which work I had my full share. I can recall the interest I took in it. Percolation had been recently introduced, and we had adopted it for all the tinctures it could be applied to. There was no "division of labour," and I had the inestimable advantage of witnessing and assisting in every stage of the process, from the bruising of the crude drug to the turning out of the finished product. In those days there was an enormous demand for pills, particularly pil. colcc. co. and pil. aloes et asaf., the latter being turned out in quantities of not less than 1½ lb. at a time, and all for retail sale.

In the last year of my apprenticeship I attended the University lectures of Christison and Gregory on materia

Digitized by Google

medica and chemistry respectively, and it was from them—and especially the former—that I believe I really learned my business. It was Christison who put life into the dry bones of shop-work, and my business seemed to me to take a new form from that time—since then only have I considered myself as actually master of it. Although intimately acquainted with its details before I attended the classes, it was the scientific facts and explanations, many of which came as an absolute revelation to me, which cemented my knowledge and made a pharmacist of me.

My experience goes to show that practical training, supplemented by theoretical knowledge, is superior to a theoretical training into which a portion only of practical work has been thrown.

J. B. Stephenson

Peter Boa.

It is just over thirty years since I began my apprenticeship in a country town—Stranraer. My apprenticeship master was Mr. James Dorman, who, I am glad to say, is still alive and well, and taking an active part in business. During my last term at school, when the subject of an occupation for me began to be discussed, I had not developed an inclination for any one business. There was just a trace of a suggestion in my mind that I would not object to go into the local bank. That I was not to be a draper or a grocer I had quite decided. About the end of my school time Mr. Dorman had been visiting in our neighbourhood and saw me. He told my parents that he wanted an apprentice, and suggested that I should become a chemist. My feelings having been consulted, I made no objections. There appeared to be more mystery about this business than drapery and groceries. Besides, I was very "soft" on Latin, and this seemed a good chance to air the little I knew of it. I went on a month's trial, and at the end of that time my employer said he could put up with me, while I, although not greatly enamoured of the "magic and smells," took the Shakespearian view of the matter, and decided that as I had begun I might as well continue rather than risk falling into something worse. I was accordingly indentured in proper legal form for four years.

The hours of business were from 8 A.M. to 8 P.M., with intervals for breakfast, dinner, and tea. On Saturdays we kept open till 10.30. On Sunday the shop was open for an hour morning, midday, and evening. Weekly half-holidays had not then been introduced, and summer holidays were not in fashion, so I had not an opportunity of enjoying either. During my four years of apprenticeship my holiday time was some three or four week-ends and a Queen's Birthday. I did not grumble. My governor was not more stingy than others. It was just the way of the town. There were few Sundays on which I was not on duty part or whole of the open time. I rather liked the Sunday duty. It gave me a feeling of importance, and I derived a lot of entertainment from observation of the humours of Sunday shopping. At times I believe I must have been unsuspectedly wicked. I was very sparing of giving small change on Sundays if the client were "near" and on the way to church. On one occasion, however, I was "had." A feminine church-goer of this sort asked me for two halfpennies for a penny. With appearance of great regret I said I was sorry I had only one in the place. She said she would take two or three peppermints and that halfpenny for her penny.

The work I had to do was of a good class and very varied. There were two apprentices besides myself. We had packets of medicines such as Epsom salts and "Gregory" to put up; horse-balls to make; parcels of arsenic and soda to weigh for sheep-dipping, and of blue-stone for wheat-dressing. These things were all sent out in good style. There was money in them for the governor and education for us. Of dispensing we got a fair quantity, made up of local prescriptions and those brought by visitors. On market days we were usually very busy. The farmers brought goodly orders, and the articles had to be sent to their conveyances from 3 to 5 o'clock, according to their time for leaving. When a lot of heavy goods were ready and the porter not at hand, we just hoisted them on to a barrow and raced them round to the hotel yard. And we took off our coats to it, and enjoyed it. The youngest apprentice had to take out parcels when necessary.

We did a considerable trade in Belfast aërated-waters. These came in large square hampers holding 10 or 12 dozen packed in straw, with not room for one bottle more—a regular tight fit. It was a tradition in our establishment that we must pack the same number of empties safely into the hampers. It required practice, but one after another acquired the art of doing it, and rarely was there a report of any bottles broken. I personally even now enjoy lending a hand to pack a hamper.

Mr. Dorman was a man of good education and business habits. He was a good example to us in business affairs, and he encouraged us to read the standard books relating to pharmacy. He had a good library, containing many works on medicine and pharmaceutics. A Latin Pharmacopœia and a book on physiology written in Latin (the author's name I have forgotten) afforded me practice and entertainment. I was jogged up from time to time by the governor in regard to my Preliminary. About the end of my apprenticeship I passed this examination quite off my own bat. I had to go to Dumfries to "sit" for it. It was then I first became acquainted with Mr. Allan, of that town. He was then the local superintendent.

So far as I can form an opinion from observation and personal experience, I would say that apprenticeship in a good country business is bad to beat as a start for a pharmacist. He sees more variety than a town apprentice. I have had a qualified assistant, town-trained, ask me how much aloes had to be put into a 6-dr. physic ball, and whether the dose of areca-nut was the same as santonin. My apprenticeship experience has served me well. Knowledge gained then has since enabled me many times to score. Then I had to make pills, tinctures, ointments, and many other things, and derived satisfaction from the work. My apprentices now get these things to make, and they mostly appear to take an interest in the processes. This work is a training in manipulation and attention to detail which is essentially valuable to a young pharmacist. Making one's own galenicals is said by some to be out of date and not modern business. It may still, however, be permitted to me to call it pharmacy.

Peter Boa

From Pen to Pestle.

I served my apprenticeship with Mr. William Blain, pharmaceutical chemist, in my native town. Being over 19 years old when I went to him I served only the statutory three years. Seven years had passed from my leaving school, and during this time my employment had no special bearing on the business I was to take up. I had no science training. I was a member of a literary society, and wrote for it several papers, and got considerable practice in speaking. This was a help afterwards in that it destroyed nervousness and self-consciousness, and when I faced the examiners I was able to do my best.

Digitized by Google

At 18 I passed the Solicitor's Preliminary, and shortly afterwards circumstances turned me to pharmacy. I went to Mr. Blain in March, 1875, and in the previous January I began to attend science and art classes in inorganic chemistry at the Church Institute, Bolton. This subject being quite strange I found it very difficult, especially the calculations, for the weakest point of my elementary training was arithmetic. I was much helped by my friend, Mr. W. Mason, pharmaceutical chemist, who was a fellow-student. The next winter (1875–76) I again took the science-and-art class in organic chemistry, and this time got along better, but not to my satisfaction. I came to the conclusion that if I was to pass I must attack the subject in a different way, and when the winter of 1876–77 came round I put the chemistry-class aside and took human physiology and botany. This was the first Science-and-Art botany-class held in Bolton. It was taught by Dr. Norris Wolfenden, the throat specialist. He used Sach's "Botany," and was an excellent teacher. I got a first in both subjects at the examination, and a special prize from Dr. Wolfenden himself for botany. During my last winter as an apprentice I attended Mr. Siebold's classes bi-weekly in Manchester, and, using "Attfield" I got on much better with chemistry. The classes were held in the evening and taught by Mr. Siebold in connection with the Manchester Pharmaceutical Association. I took also materia medica and pharmacy, this being my first systematic teaching in these two subjects. During my whole apprenticeship I was reading and studying the Minor subjects, and in the summer months did some botanising. I made friends also with a gardener who had care of the largest range of glass-houses near Bolton, and obtained many specimens from him, especially in winter, when wild flowers were not to be had. Mr. Blain's son was a fellow-student, and we regularly talked over our studies, affording help to each other. As to dispensing, my master had the leading business in the town in that respect. From the point of numbers we should fall a long way behind businesses in towns where doctors prescribe more than in Bolton, and in those years there were neither specialists nor consultants here. But still, prescriptions were not few, and coming as they did largely from Liverpool, Manchester, and London, they afforded an excellent training in dispensing, and I had no fear on that score when I entered the Society's house in Bloomsbury. We made enough of tinctures to give us a good knowledge of the processes. We also made all our pills, suppositories, &c., so that we had a very fair training in practical pharmacy.

During these three winters I kept up my connection with the Literary Society, attended as often as I could, and wrote a paper each winter.

My apprenticeship expired March 8, 1878, and I entered a class which Mr. Siebold was holding for the June Minor. This was a full-time class, and surely there was never its like. Some day I may write some of its story.

Having got a good grip of botany, I needed little more than to keep it fresh in mind, and this enabled me to devote more time to chemistry—the subject of which I was most afraid. I worked hard and systematically, but kept Sundays quite free from study. Twice whilst the class existed we had a botanical ramble.

I passed the Minor in June, 1878—three years and three months after entering the trade—and have ever since regretted not taking the Major.

Looking back, I feel it was a great advantage not coming into the trade as early as was and is customary. I escaped much of the drudgery which usually falls to the junior apprentice, though there was little of that when I served my time for anyone. My previous employment had accustomed me to conversing with people my seniors in age and superiors in position. Hence, when I came to the counter and examination-room, I was not nervous. I was old enough, also, to appreciate from the beginning of apprenticeship the difficulties to be faced, my ideas were naturally more settled than a lad's of 14; consequently, I lost no time, but studied hard and steadily until my end was gained. But, if I could go back now, whilst I would not choose to begin shop-life much earlier, I would spend the years between that and school in getting a good secondary education. I think we shall have to cease looking for lads of 14 or 15, and make up our minds to take older ones for shorter terms than were or are common. I think, for a young man of 18, the statutory time is quite enough. We shall lose the cheap labour of young apprentices, but they and the trade will gain in proportion.

John T. Taylor.

A Wholesaler's Experience.

WHETHER long apprenticeships are preferable to short ones and whether pharmacists are better taught by their masters now than formerly, are subjects well worthy of consideration. I have been asked to contribute my experience, but, with George Canning's knife-grinder, I could exclaim,

"Story! God bless you! I have none to tell, sir."

But I will jot down a few facts that may possibly prove of some interest as bearing on the above propositions.

In the year 1856, on November 1, when 14 years of age, I was formally bound apprentice to Mr. Thomas Bickerton Evans, one of the senior partners in Evans, Sons, & Co., of Liverpool, and a liveryman of the Grocers' Company. This took place at Grocers' Hall, Baron Heath, Italian Consul-General in London, being then master of that ancient company, once the Pepp'rers, with the right of searching for and destroying unsound drugs in the City of London, with charters dating from Edward III.

In the early part of the nineteenth century, here would have doubtless begun my actual work, but I returned to school for several years, and when about 17 set to work seriously at Bartholomew Close. First of all there was plenty to do at the dry-counter, weighing up drugs of all sorts, and becoming familiar with their appearance; afterwards in the wet-room and oil-room, filling bottles with cod-liver oil, essential oils, &c. Then there were months spent at the manufacture of pharmaceutical preparations in the laboratory. In these departments I learnt a great deal about materia medica, a subject that took hold of my mind, and botany was associated with it, which I had liked ever since I had attended Robert Bentley's lectures at the London Institution, and had hunted, when about 10 years of age, for the Bee orchis on Beachy Head. The heads of the different rooms acted well and taught me a lot of things; they take the place of the master in the retail, for there is no doubt that the master has more responsibility toward the apprentice than *vice versa*; it is easier to learn than to teach. In many wholesale houses, especially in old days, apprentices were left to themselves—worked as they liked and learnt no more than they cared about. Such was the case when my

Digitized by Google

father, J. Sidney Lescher, was apprenticed about 1819 to Jenks, Wheeler & Baildon, wholesale druggists in the City of London.

One of the disadvantages of the wholesale trade for apprentices is that the principals are generally too busy all day long to take much trouble about them, or what they do, or what they learn; nowadays there are but few apprentices in the wholesale drug-trade. But the study of Materia Medica is pursued with much greater facility and with much greater benefit to oneself than in the retail: jalap, ipecacuanha, opium, rhubarb, &c., are seen in the original packages as imported. Then there is the garbling and division into different grades of most crude drugs; and one sees them in large quantities, and here and there, offered at the Drug Sales, their principal adulterants. I remember being told at the Square that many in the retail trade at that time had never seen jalap in the tuber or sarsaparilla in the original hank of long fibrous root. The supervision and daily instruction that is given in the retail by the chemist, or owner of the pharmacy, is found in the wholesale with the head of each department; much depends, therefore, on his power of teaching. In the wholesale one misses the dispensing, and laboratory experience scarcely makes up for this want; certainly it is not sufficient for the curriculum, now wisely required, of three years' experience in practical dispensing for the Minor examination, but in my time this was not necessary. In the counting-house I spent several useful years, and this is an essential part of work in the wholesale, and a really good training it is in forming the mind for the many-sided phases of successful commerce. My classical education for several years after I was 14 was by no means wasted time. The more I see of results of education, the more I approve of Latin, Greek, and mathematics as opposed to what is called a commercial education—viz., modern languages taught in England and book-keeping taught theoretically in schools. I see how the former enlarges the mind, exercises the intellect, and forms those habits of judgment and decision on which depends so much of success in after-life

This brings us to the point of the question of long apprenticeships. In the Middle Ages, to exercise a trade one had to be free of a company or fraternity, and the only way to acquire this "freedom" was by serving as an apprentice to a member of that body.

By a law of the 5th of Elizabeth, chap. 4 (since repealed), everyone in England exercising a trade was required to have previously served as an apprentice to it for seven years. Now, did the master in those days of long apprenship teach the whole art and mystery better than at the present time, when the system seems dying out, and threatens to become nearly as obsolete with us as it is in the United States? A long apprenticeship, no doubt, familiarises with work, so that one becomes mechanically perfect in it. Old Montaigne says, in one of his essays: "Arts and sciences are not cast in a mould, but are formed and perfected by degrees, by often handling and polishing." But even in the days of Adam Smith these long years were considered by many as real loss of time. In his "Wealth of Nations," Book I, x., he says—and here he is followed by most political economists—

> Seven years seem anciently to have been, all over Europe, the usual term established for the duration of apprenticeships in the greater part of incorporated trades. Long apprenticeships are altogether unnecessary; they have no tendency to form young people to industry; a young man naturally conceives an aversion to labour when for a long time he receives no benefit from it.

Long apprenticeships were quite in the spirit of the old trade guilds; they formed those merchant warriors who established the independence of the Dutch Republic, who fought as burghers of the Hanse towns, and who ruled over Hindostan, but they are not adapted to the spirit of the twentieth century.

Is the Pharmaceutical Society so adapted, and has it kept abreast of the times? I think that it has, and that it has helped much in the scientific teaching of apprentices in pharmacy. Compare their position in the days of long apprenticeship and their present position, owing so much to the necessity of working up for the examinations. I am proud that my father was one of those who met at the Crown and Anchor in 1841 to create the Pharmaceutical Society, and I have always had great affection for "the Square"—my Alma Mater in pharmacy. The lectures and laboratory instructions there during my apprenticeship enabled me to pass the Minor in 1861—they were more lenient in dispensing then than at the present day. The Preliminary was simply a few lines in Cæsar with dear old Peter Squire, and I remember, as examiners in the Minor, Deane, Cracknell, Gale, and Davenport. Old Braithwaite was then manager of the laboratory, and used to come round and see to our work. I learnt a great deal at the Square; this theoretical work, with the experience gained in a wholesale warehouse, certainly gives a first-rate insight into our business. But private study was as essential then as it is now, and even more in the wholesale if one intends to pass the examinations; it was not until 1868 that I passed the Major, and it was this private study, night after night, that enabled me to win the Pereira medal of that year.

In 1863, when 21 years of age, I had taken up my freedom of the City of London at the Chamberlain's office, had been admitted a freeman of the Grocers' Company (where my master, Mr. Thomas B. Evans, certified that I had received no pay during my apprenticeship), and I believe that I had as good an all-round training during my four-and-a-half years as it is possible to get.

Certainly my experience leads me to entertain a firm conviction that apprentices are better taught by their masters now than formerly; I know this is so in the wholesale, and I believe it to be the case in the retail. In the first place, there is far more to teach and far more that must be learned, and then science and a love for science have advanced with such rapid strides of late years. In fact, in this development of things to be taught we sometimes lose sight of the great virtue of thoroughness, and forget with Pope that

> A little learning is a dangerous thing;

or with Tennyson, that

> Knowledge comes but wisdom lingers.

To sum up, I think there is little doubt that apprentices now are always taught more, and generally taught better than in the old days, and I believe that the ideal state, well mirrored as follows in a voice from Cape Town (Lady Hely-Hutchinson) in the current number of the *Nineteenth Century*, is generally met with at the present day:—

> The word apprentice carries with it a vision of thorough teaching by some one who is master of his craft. The apprentice looks to be vigorously instructed in the details of each separate department of the calling selected—from the lowest to the highest branch.

Concentrated Compound Infusion of Gentian, B.P.C.

Gentian-root, in No. 20 powder ...	2 oz.
Dried bitter-orange peel	2 oz.
Dried lemon-peel	1 oz.
Tincture of fresh lemon-peel ...	1 fl. oz.
Alcohol (90-per-cent.)	4 fl. oz.
Distilled water	a sufficient quantity

Mix the gentian, bitter-orange and dried lemon peel, and pour over them 20 fl oz. of distilled water; macerate twenty-four hours and press off the liquor. Reserve 10 fl. oz., and add to it the tincture of lemon-peel and the alcohol. Treat the marc with two further macerations of 20 fl. oz. of distilled water for six hours each, press off, and mix the liquors, adding any left from the first maceration. Evaporate to 5 fl. oz., and add it to the first portion to make 1 pint.

Dose: ½ to 1 fl. dr.

Elixir of Aletris, B.P.C.

Liquid extract of aletris	5 fl. oz.
Liquid extract of liquorice ...	1¼ fl. oz.
Tincture of orange	1¼ fl. oz.
Syrup	7½ fl. oz.
Distilled water sufficient to produce	1 pint

Mix.

Dose: ½ to 1 fl. dr.

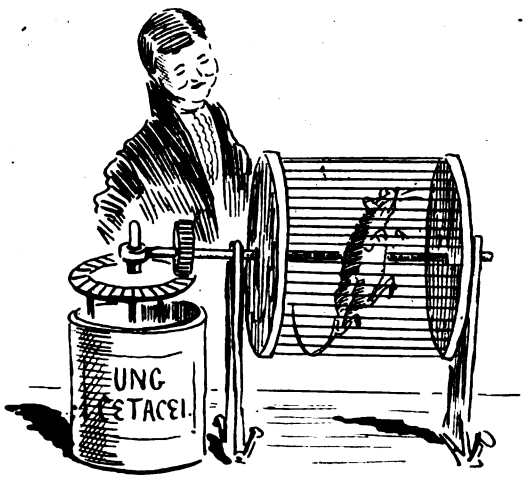
My Apprenticeship.

By FRED REYNOLDS.



PHASE 1.—A revered relative apprentices me to a good old Pharmacist.

PHASE 2.—When considered competent I begin to dispense (magnesia levis).

PHASE 3.—By a little arrangement I fitted up in my bedroom I studied Pharmacy and enjoyed the sacred weed without detection.

PHASE 4.—I fixed up an ointment-stirrer, pressing a blind rat into my service. By this means I was enabled to read scientific (*sic*) books.

PHASE 5.—I found the large Botanical Vasculum my master gave me more than useful—fish at the bottom, plants at the top!

PHASE 6.—I soon got my Diploma, and might have been made President, but there was no gold Chain in those days.

Elementary Dispensing-practice.

By Joseph Ince.

Emulsions—(*continued*).

TWO things should be remembered in compounding emulsions with tragacanth as an emulsifier—first, that this gum is sparingly soluble in water and swells up into a gelatinous mass, extremely difficult to convert into a clear homogeneous liquid; second, that the moment tragacanth is in contact with spirit it becomes miscible, and forms a clear mucilage with water.

The mucilago tragacanthæ, B.P. 1898 (page 220), is the key to the formation of tragacanth-emulsions. [The first four examples given are to be made in a phial.]

(1)

℞	Pulv. tragac.	gr. vj.
	Spirit. v. rect.	♏xij.
	Aq. destillat. ad	℥j.

Spirit on gum, shake till mixed; add the whole of the water, and shake till mucilage is formed.

(2)

℞	Quininæ sulph.	gr. iij.
	Tinct. aurant.,	
	Tinct. cardam. comp. aa	℥ss.
	Pulv. tragac.	gr. iij.
	Aq. destillat. ad	℥iss.

Dissolve quinine in mixed tinctures; shake with gum; water to be added in thirds with agitation.

(3)

℞	Tinct. cannabis ind.	℥ss.
	Syrupi	℥j.
	Pulv. tragac.	gr. iv.
	Aq. destillat. ad	℥iss.

Tincture on tragacanth, syrup, water.

Pars tertia pro dosi sumenda.

(4)

℞	Tinct. guaiaci ammoniat.	℥ss.
	Syrupi...	℥j.
	Pulv. tragac.	gr. iij.
	Aq. destillat. ad	℥j.

Tincture on tragacanth, syrup, water; when guaiacum is suspended by means of acacia, the mucilage must be diluted, aq. 2, mucil. 1, to avoid flocculent cosgulation.

(5)

℞	Aq. destillat. ad	℥j.
	Potass. iodid....	gr. v.
	Spt. ammon. arom.	℥ss.
	Quininæ sulph.	gr. ij.
	Pulv. tragac.	gr. iij.
	Syrupi...	℥j.

Note the curious method of writing water first. Made thus, in mortar: Tragacanth + spirit + syrup. Mix, add quinine; water to ℥ss. In glass measure dissolve KI in aquæ ℥ss. Mix all together.

(6)

℞	Ext. filicis liquidi	℥j.
	Pulv. tragac. comp....	ʒiv.
	Aq. destillat. ad	℥iss.

In mortar, alternative method to yolk of egg. Tincture of quillaia, containing saponin, has been found useful in making extemporaneous emulsions: its action is rapid, little skill being required:—

℞	Ol. olivæ	℥j.
	Tinct. quillaiæ	℥ss.
	Syrupi...	♏x.
	Aq. destillat. ad	℥ss.

In phial. Quillaia, oil, shake till emulsified; syrup; water. Tincture of senega, also containing saponin, is credited with powerful emulsifying-effects which the writer has not been able to realise.

Flitting a Pharmacy.

By "Samos."

BUSINESS had become bad. The leading grocer had opened near me (it was a large town), and began selling senna at 2 oz. for 1½*d.* and other things in proportion. So I decided to look out for a suitable opening where competition was not so keen. Accordingly, I took excursions every Sunday—my only off day—into the adjoining suburbs near me. I found plenty of openings of all classes, and many first-class suburbs either without a chemist, or with only one, who appeared to be thriving. Ultimately I discovered a suburban second-class village about five miles off, with no chemist, and here I decided to open. I took a corner shop, at 18*l.* rent per annum (I had been paying 55*l.* and big rates). The idea of "flitting" had not originally occurred to me. I meant to sell, but it was suggested to me that my fixtures were in good condition, and could easily be removed; so I resolved to do so. I put a notice in my shop, stating that I would shortly remove to Greenfields, and an announcement in the shop at Greenfields that "Blank, chemist, John Street, Largetown, would shortly open this shop as a chemist and druggist." I offered to such of my customers as seemed likely various lots of fancy goods at clearing-out prices for cash, which, indeed, was absolutely necessary to enable me to pay for the flit. I put up my shutters for the last time on a Tuesday night. I had, of course, been packing for a few days previously. I packed all stock-bottles standing upright in 1-cwt. soap-boxes, which I bought at 4*d.* each, putting handbills only between the bottles. Some bottles—such as ether, chloroform, &c.—required the stoppers tying. Sundries were then either placed on top of these or put into three or four drug-hampers. On the Tuesday the local joiner, whom I had engaged for the whole job, removed all the fastenings of the counters and shelves. Early on the Wednesday morning we commenced the "flit." There were my brother, the joiner, the carter, and myself, with a one-horse covered van. We carried in first the nests of drawers, removing only the lower big ones, then the heavy boxes, followed by the lighter articles, the whole contents of the shop being stowed in this one van, but the rough cellar goods—casks and oils—were left for another day. When we arrived at Greenfields we emptied the van while the joiner at once set about the fixing up—first the drawers, then the shelves above, then the counters and show-cases, and lastly the odds and ends. It took the joiner three days altogether taking down and fixing up, during which time I helped him or unpacked my stock. I was able to open on the Saturday morning, roughly fixed, no doubt, but sufficiently in order to take 11*s.* 6*d.* in cash. For the moment I did nothing at the windows, which were simply grocer's window-bottoms, but I afterwards made them decent by getting from the blacksmith four long iron rods to run the show-globes on. These cost about 7*s.* (40 lbs. at 2*d.*). The total cost of the flit was only about 5*l*, details of which I give:—

	£	*s.*	*d.*
Van and carter, six hours at 3*s.* 6*d.* ...	1	1	0
Brother, one day	0	5	0
Joiner, twenty-nine hours	1	4	6
Painting name	0	10	0
Gas, plumber	1	4	0
Papering shop...	0	9	0
Carting cellar goods, five hours at 1*s.* 6*d.*...	0	7	6
Total	5	1	0

Perhaps my experience may be of some use to a man struggling to make a bare living in a large town, when the suburb near by opens its arms and invites him to enter.

"Chemicals, medicines, resins, and perfumery" valued at 8,000*l.* were imported into Sardinia last year, and of this amount Great Britain alone supplied 4,347*l.*, Sweden, Norway, and Denmark coming next with 2,369*l.* Similar products exported amounted to 941*l.*, which were absorbed by Austria-Hungary.

The Minor Examination.

Home-made Curriculum.

By ANNIE M. BARR.

THE grind for the Minor is always "uphill" work, and has been compared to the ascent of a mountain. "Hoc opus hic labor est" may be said of both, but ambition as well as love lightens labour. I am a hereditary chemist—the interior of a drug-shop has always been familiar to me, and I early decided to adopt my father's calling. The last year of my school-life was devoted to preparation for the "Prelim." No special difficulty presented itself at that examination, and the Minor viewed from the distance of five odd years seemed merely visionary. As in climbing, one may make a choice of several routes. There is no Royal road! As there were no science classes in our village, and as I imagined chemistry would prove to be the most difficult subject, my first step was to buy a pencil, a large notebook, and "Roscoe." Resolutely and alone I faced his formidable pages, and throughout that winter laboured over Chapters I. and II., making an endeavour to perform the experiments therein, and to answer the appended questions. I fell into the error common to the novice of trying to hurry over the ground too quickly and, besides, "Roscoe" does not accommodate himself to self-taught beginners. Although someone has said that advice is the worst of all vices, I would advise those essaying chemistry to work with the most elementary book they can find until interest in the subject is thoroughly aroused, and they have an intelligent grasp of the leading principles.

When spring came I gladly turned to botany, thinking it would prove less abstract and more easily assimilated than chemistry. I understood that Bentley was one of the great authorities, and, therefore, bought his bulky volume on "Structural, Morphological, and Physiological Botany" (including materia medica). It is about as tough for a beginner as Roscoe. Oliver or Scott would have been much better at this stage. Living as I did in the country field botany naturally occupied my attention. I quickly learned the names and characteristics of the commoner plants and natural orders with the aid of Hennedy's "Clydesdale Flora"—a capital book which I found in the home bookcase. Although almost every plant in that work was familiar to my father, he never, by any chance, revealed the name of one until I had found it out for myself by reference to the book. This Spartan method seemed to me heartless at the time, but it has much to recommend it. I seldom or never forgot what I learned. Writing results in a second huge notebook helped the fixing process. My rambles in search of specimens nearly always took place before breakfast, and I often returned with a vasculum full of flowers. Most of them had to be thrown away.

At the end of that summer I had gained a fair knowledge of the natural orders and botanical terms. No doubt, I was greatly, though unconsciously, influenced in much of my effort at this time by my father, alongside of whom I daily worked at the counter.

With the approach of the second winter of study my thoughts reverted to chemistry, and, profiting by experience, I determined to attend classes in a neighbouring town, three evenings per week. Gradually my interest was aroused, so much so that I continued my "ante jentaculum" labours, not wholly from choice, but because another Spartan household law forbade the burning of midnight oil. "There is no armour against fate," and for me there was no option.

The second spring I returned to Bentley with a fixed resolve to conquer his "Manual of Botany." Notwithstanding the tortoise-like rate of progress, I at length saw the end of Part I. I copied the diagrams to more firmly impress the forms and structures of root, stem, leaf and cell upon my memory. I also made copious notes in the big notebook and tried to remember what I had read by cross-examining myself. Conjointly with this theoretical I kept up the practical work of dissecting and classifying plants.

The third winter I attended advanced chemistry classes. The subject had now become fascinating and progress was accordingly greater than before. At this period I engaged for the first time in THE CHEMIST AND DRUGGIST analytical competitions. These were done in the back shop during the quieter hours of the day, and have proved of immense value. They would require a special article to do them justice.

The following summer saw chemistry continued and botany extended into materia medica and microscope work. Southall's "Materia Medica," Ince's "Latin Grammar," and the "B.P." were added to my book-shelf, and a microscope and new razor to my laboratory equipment. The making of slides is a delicate process, needing much skill and more time than I could well spare, but although my sections were clumsy I learned not a little in their preparation.

Throughout the fourth and fifth winter I studied all these subjects on consecutive days of the week in my spare time, and once again applied myself to "Roscoe" to learn the chapters on organic chemistry with rather better success than before. Where so much depends on memory as in getting up the Pharmacopœia there must be arduous work. Its various doses appeared to me endless in their complexity, and stern necessity alone urged me on. Another pastime was writing out in full Latin all the prescriptions which came to our dispensing-counter. In connection with materia medica an atlas is of the utmost importance and specimens of the drugs indispensable. Unless their meaning was perfectly clear I found great difficulty in remembering the long, unfamiliar names and so a much worn "Ainsworth" was my constant companion.

Being now acquainted generally with all the requisite subjects I had a long season of "recapitulation and reiteration" not only in the reading, but in the practice of pharmacy. Here "the Art of Dispensing" became my guide, philosopher and friend. To attain proficiency I made pitch plasters on brown paper in wholesale quantities, pills of all varieties by the gross, ointments *ad libitum*, mixtures *ad infinitum*, and emulsions *ad nauseam*. I also read eagerly every description of the examinations given in THE CHEMIST AND DRUGGIST and worked out the specimen papers and ticklish official preparations. Then I took a three months' course at the Glasgow School of Pharmacy, and there made the final spurt and gained enough confidence to enter as a candidate for the examination. I was summoned to appear on December 27, "at 10 A.M. precisely," at 36 York Place, Edinburgh. In order not to disappoint the examiners I took time by the forelock and left St. Mungo by the 6.45 A.M. train. Well do I recollect that winter morning—the early start for a two-mile walk to the station—the black silence broken only by an occasional gas lamp or a solitary policeman—the bustle at the station, and the anxious faces of my classmates who were also called up. As we sped towards the Capital we comforted each other by exchanging "wrinkles" such as "Keep cool," "Look wise, if possible," "Begin with the question which requires most time," and others which we all know, but generally fail to act upon at the critical moment.

Edinburgh always thrills a Scot and, as we walked along Princes Street in search of a breakfast, and looked towards the Castle, and to where the Auld Toon's ridgy back heaves to the sky, we remembered and felt that heroes had fought and martyrs bled even before the era of pharmaceutical examinations. The thought nerved our too timid steps towards the examination hall.

The questions given in my dispensing and chemistry papers were so dealt with that next morning I received notice to present myself, the following week, for the oral examination. The chief thing in connection with this is (presuming you know the subjects) to keep your presence of mind, and to think before you speak, not after. One lady student had good reason to remember this advice as she had to identify over thirty materia medica specimens, the usual number being under twelve. The examiners were, without exception genial, courteous, kindly Scots—not in the least like the ogres I had pictured. Sitting on the funking form after being interviewed by them successively, I had the temerity to ask Mr. —— whether I had passed. His answer "Y— e — es"! was short, but sufficient. It braced me for the official intimation and handshaking which came later.

Having climbed Ben Minor I have found as mountaineers too often do, that what I thought was a summit is in reality only a shoulder of the mountain of pharmaceutical knowledge. The "Major" is now clearly visible, and even the greater heights of B.Sc. and D.Sc. can be espied in the far distance. They call "Excelsior!" but here I must call a halt

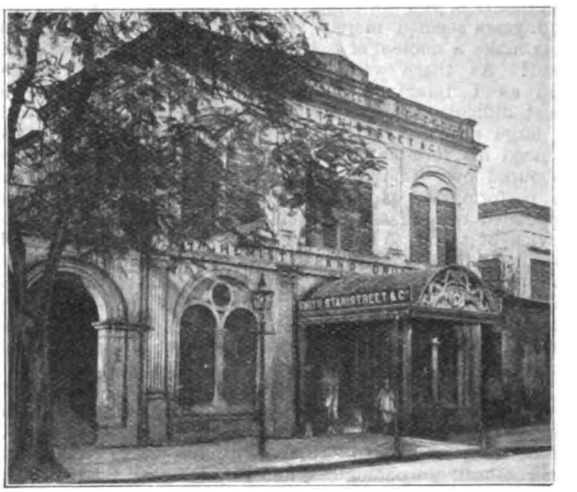
British Pharmacy in India.

The First of a Series of Articles on the Anglo-Indian Drug-trade.

OF all parts of the British Empire outside the tight little island which some call England, none is of greater importance in trade than British India. With its population of over three hundred millions, the fact is not surprising; indeed, we know that, were it not for the almost elemental habits of the people, the volume of business actually done would be infinitely greater. This is particularly true of the drug-trade. India's medical needs are chiefly satisfied by the produce of the country. Only the well-to-do can afford the luxury of European physic. But the demand is growing with the education of the people, and thousands of native druggists in the bazaars and elsewhere thrive upon business in modern remedies.

Since the days of John Company there has also been in India a strong leaven of British-trained pharmacists. First settled there to supply the requirements of British residents, they have long since ceased to rely solely upon them, as well-to-do and rich natives are amongst their most important customers. In beginning a series of articles on what, for lack of a better term, we may call the Anglo-Indian drug-trade, it is but right we should say that pharmacy in India is not the fortune-making business it was, say, forty years ago. Indeed, "patents" can be bought and prescriptions are dispensed in some parts—*e.g.*, Bombay—at less than in some English provincial towns. India is no longer an Eldorado for pharmacists, and all have to work hard and make a huge turnover before they can ensure a retiring-allowance in time to enjoy it.



We do not adopt any definite order in the series, for the simple reason that we have to deal with a large constituency which cannot be marshalled into journalistic lines just as an editor desires. Facts come slowly, even although the mail takes but fifteen days between London and Bombay. We have, however, to acknowledge assistance from several gentlemen on the spot, and the selection which we now give will be followed by others, so that a fair account of British pharmacy in India may be put on record. To save reference

to an atlas we print here a sketch-map of the country, whose geography is not always easy to figure in the mind's eye.

Smith, Stanistreet & Co.

Dalhousie Square, Calcutta, is famous in the history of British India. There stood the Black Hole, in which, through the perfidy of a native ruler, 123 out of 146 British officers and men perished in a single night—killed by the exhalations of their own bodies. This happened in 1756. Scotchmen, who form an exceptionally large proportion of Calcutta's white population, are proud of the Square; its name perpetuates the memory of a compatriot, Fox Maule, first Earl of Dalhousie, one of the most gifted of India's

The Pharmacy in Dalhousie Square, Calcutta.

Viceroys. The gardens on one side give the square an aspect which reminds Scotchmen of Princes Street, Edinburgh; and St. Andrew's Church, which stands at one side, is the head of Presbyterianism in India. At one time the Viceroy's residence was in the square, but for many years now the Residency has been given over to the disciples of Galen. Messrs. Smith, Stanistreet & Co. have their principal pharmacy in it. Here the firm occupy the whole building, and an extensive array of factories and godowns in the rear. It is not, and does not pretend to be, the most imposing pharmaceutical establishment in India, but our readers may judge from the photograph of the exterior that it is no mean concern.

Messrs. Smith and Stanistreet, the founders of the firm, were ship's surgeons who were in the habit of visiting Calcutta during the first and second decades of last century. They saw an opportunity of combining the practice of medicine and pharmacy under one roof, for at that time there were few doctors in private practice in Calcutta except Army surgeons, and their practice was at specialists' rates. Messrs Smith and Stanistreet conceived the idea of keeping an open shop and giving free medical advice to all comers, who simply paid for the remedies supplied, and we daresay the prices that ruled then left sufficient margin. The actual year in which they started business is not known, but by 1817 they were doing a good trade, and Messrs. Weiss & Co., surgical-instrument makers, London, still preserve a respectable order which they executed for Messrs. Smith & Stanistreet in 1817. While the founders were active men, whose energy had not been blunted by the ravages of time, the business on the pharmaceutical side steadily progressed, but by 1869 it had degenerated considerably. It was then that the late Dr. Charles Noyce Kernot came on the scene. Like Messrs. Smith and Stanistreet he was a ship's surgeon, and then on the sunny side of thirty. He had travelled the world well after taking his medical diploma in Ireland, and had spent some time in Australia as well as at the Cape, and had paid several visits to India. While in Calcutta he saw his opportunity in Messrs. Smith & Stanistreet's business; and in

Digitized by Google

1869, after proving it and his own capacity to handle it, he bought the business and made important changes in it and on the premises. He was a man of good professional ability, born to control a business concern rather than to vegetate as a general medical practitioner. Under his guidance Messrs. Smith, Stanistreet & Co. (Limited), as the concern was now called, made steady development, and so it continued until his death in 1889, when Dr. Frank Charles Butt (a cousin of Dr. Kernot's and a Guy's man) took over the business in conjunction with Mr. Symington, a Scotch pharmacist, who for some years had managed it under Dr. Kernot. This partnership continued until 1900, when Dr. Butt and Mr. Symington retired in favour of Mr. Charles Frederick Baker, who had been with the firm from 1882 and who took into partnership Mr. Walter T. Grice, F.C.S., who had been an assistant with the firm from 1890. The business is now carried on as Messrs. Smith, Stanistreet & Co.

The firm have four pharmacies—two in Calcutta, and the others in Darjeeling and Howrah. They employ altogether over 230 assistants and servants. The Dalhousie Square establishment is, of course, the headquarters, and it is there that the aërated-water factory, manufacturing laboratories, and extensive stores are located. The photograph of the interior which we reproduce is the front hall of the Dalhousie Square place. The central arch, surmounted by the arms of the Honourable East India Company, gives entrance to the wholesale and manufacturing departments; through the left one is the dispensary, and through the right is a counting-house, where about thirty clerks are employed. To the right of that, again, is the consulting-room, where a medical practitioner is always present to give advice free to all comers. The principals have their desks in the hall, which is splendidly got up. There also is the receipt of custom—a writing-table at which an assistant attends to receive prescriptions or any other orders that have to be executed, and these he passes in to the working staffs of the dispensary and wholesale department. This table is in the centre of the hall in front of the showcases, and beside it is the cash-desk, where a Babu cashier is installed. A very effective display of surgical instruments is made in the table and wall showcases, this being a branch of the firm's business which has been consistently developed since the founders' time, and to which have been added physical and photographic apparatus as well as a spectacle department, now becoming one of the most important pharmaceutical side-lines. The wall-case immediately to the right of the central arch is filled with lavender-water on one half and Eau-de-Cologne and other perfumes on the other. The rest of the cases were wont to be filled with proprietary articles, but are now devoted to the firm's own manufactures, especially galenicals. The whole is a magnificent appartment, as may be judged by the fact that it extends to the width of the building, and is entered by two doors in the front, which are flanked by two windows on each side.

Since Mr. Baker took over the business two years ago he has made considerable alterations in the premises, bringing them thoroughly up to date. The photograph which we produce does not, as a matter of fact, show the improvements which he has made. He has also thoroughly overhauled the manufacturing laboratories and aërated-water factory, as the firm are encouraging more than ever the manufacture on the spot of everything possible that can be produced in India. They hold Government contracts for galenicals, and their resources are such that they frequently execute contracts for the fitting-up of surgeries, including woodwork, glassware, and medicines, quicker than the work could be done from this side. As may be judged, this involves thorough organisation as well as a comprehensive stock. The three branch establishments draw supplies from these headquarters, and the firm have also an important wholesale connection far and near. During his recent visit to England we had the opportunity of a conversation with Mr. Baker in regard to Indian pharmacy, and he was by no means despondent as to its future, although he admits that competition is keener at the present time than it was when he went out to Messrs. Smith, Stanistreet & Co. as a junior in 1882. Mr. Baker's own experience is an example of what is within the reach of any pharmacist of ability and business tact who goes out to India and sticks to his work. As a boy he was apprenticed to Mr. N. H. Martin, then in business at Hitchin. From Mr. Martin, he told us, he received thorough instruction in the principles of pharmacy, as well as in business management, and that experience he calls the foundation of his business knowledge. Afterwards he had experience as an assistant in Nottingham, Scarborough, Isle of Wight, and at Messrs. Hooper & Co.'s, Grosvenor Street, and passed the Minor in 1880. When he went out to Calcutta he joined a "chummery" of chemists' assistants—this being the local name given to the *ménage* formed by four or five young men who keep house together with the staff of native servants necessary in India. In the business he worked himself up from the comparatively subordinate position of junior to principal assistant under Mr. Symington, and it is expected that his push and enterprise will still further develop the business. Mr. Grice, his

THE HALL OF SMITH, STANISTREET & CO.'S PHARMACY.

partner, was with Messrs. Philip Harris & Co., of Birmingham, before he went out to Calcutta, and he had charge of the manufacturing and analytical department, which, indeed, he still supervises with expert assistance.

MR. W. T. GRICE, F.C.S.

E. PLOMER & CO.

To pharmacists the Punjab is one of the most interesting parts of India, as botanical explorations by men connected with the scientific side of the calling have located several of the most important medicines there. Apart from that, the Punjab is interesting to all Britishers from the fact that it was one of the great centres of the Indian Mutiny in 1857–58. The frontiers of the province touch Afghanistan and Cashmere, and from the military point of view it is therefore of importance. The town of Simla is well known as the summer hill quarters of the British Government in India. It is beautifully situated on the southern slopes and heights of the Himalayas, 7,000 to 7,500 feet above the sea-level. But in spite of the fact that tracts of the country are barren, much of the Punjab is under cultivation and irrigation, yielding excellent crops, which include indigo, grain, cotton, opium, tea, and tobacco. One of the most important agricultural districts in the province is that of Lahore, which is well irrigated by the Bari Doab Canal, and Lahore city on the Ravi is the capital of the Punjab and the centre of the railway ramifications of the province. Here Messrs. E. Plomer & Co., wholesale and retail druggists, have their headquarters. The business was originally a branch of Peake, Allen & Co., and was acquired by the present chief proprietor, Mr. Tom Bliss, in 1877, and has since been carried on under the present firm-name. It is a typical Indian drug-business, and is housed in splendid premises which give ample room for the principal departments of which it consists—viz., (1) retail and dispensing, (2) the wholesale, and (3) aërated-water manufacturing. In the first of these departments European assistants control, as is customary in India, the work of native compounders, and carry on the retail transactions. The firm have not been slow to establish those profitable side-lines which a well-to-do community are willing to patronise, and the sale of photographic apparatus and chemicals has become a very large item with the firm. We had a chat with Mr. Bliss during his recent visit home, and then confirmed some details of his career which we had gathered from a correspondent in India. Mr. Bliss was born in Darnaway, Morayshire, and after the thorough parish-school education which they gave in Scotland about the middle of last century he was apprenticed to the drug-trade with a chemist in Nairn. He then, in 1863, started on a voyage to Calcutta to seek his fortune. Like many another North Country lad, he worked his way out as one of the crew. After a four months' voyage he arrived at Calcutta, and soon obtained a post as an assistant with Messrs. R. Scott Thomson & Co., with whom he remained until 1869. In the following year he went to Simla as an assistant to Messrs. E. Plomer & Co., who were then one of two pharmaceutical firms in the hill station, Messrs. Symes & Co. being the other. The Plomer business had been founded on the ruins of the Punjab Trading Company (formerly Peake, Allen & Co.) by Mr. Ebenezer Plomer and Mr. Samuel Fitz, and was carried on by them under the above firm-name. After four years' experience of the business, Mr. Bliss took it over and continued it under the same name. The Simla season appeared not to provide sufficient scope for his energies, and accordingly, in 1877, he bought the Lahore business, which at the time was owned by Mr. R. Richardson, who had bought it when the Punjab Trading Company was wound up in 1869. The premises at Simla as well as at Lahore are amongst the best of the kind in India, and occupy excellent positions in the trading-parts of the town. At the Simla establishment aërated-water manufacture is also a big thing, and Mr. Bliss keeps pace with the times in regard to machinery, filters, and other requisites for good waters. As is usual in India, the

MR. TOM BLISS.

MILNE'S STORE IN QUETTA.

Digitized by Google

waters are put up in 14-oz. bottles, soda-water selling at from 8a. to 12a. per dozen. The Simla establishment is the headquarters in the district for the goods of Messrs. Cutler, Palmer & Co., wine-merchants, for whom E. Plomer & Co. are agents. The firm employ half-a-dozen English assistants besides native compounders, and from twenty to thirty other native employés. In 1899 Mr. Bliss admitted into partnership his assistant, Mr. William Cotton, and is thus enabled to come home frequently—indeed, he has not spent a summer on the plains of India since 1870. He is by no means the grand old man of Indian pharmacy, yet the fact that this year he completes thirty-nine years' residence out there is notable, for it is difficult to realise when talking with him that he has been so long away from his native air. He is as energetic physically as he has been enterprising in business. Naturally, during such a long residence, he has become well known to Government servants and military men in the Punjab, and he has done many a good turn in his quiet modest way that has earned him the thanks of the Anglo-Indian community.

WM. C. KIDD.

Four years after he had passed the Major examination Mr. William Champley Kidd went out to Lucknow as an assistant, and, after thirteen years' experience of the trade of the city, he in 1893 started in business for himself in these premises:—

THE ENGLISH PHARMACY, LUCKNOW.

Here he has established a good-class retail and dispensing business, and more recently has added photographic sundries, in which he has done very well. He has also a fair share of the wholesale trade of the district.

CHARLES J. MILNE.

Milne's drug and general store in Quetta takes us beyond the scope of our map fully 250 miles as the crow flies in a straight line north of Karachi. Quetta is in Baluchistan, and is a fortified British garrison-town commanding the Bolan Pass. There Mr. Charles J. Milne, chemist and druggist, pitched his tent in 1889. It is a commodious tent, and some idea of the range of goods carried is denoted by the fact that, besides dispensing prescriptions as well as he did when he was with Messrs. Duncan, Flockhart & Co., and giving you a bottle of soda fresh sparkling from his own factory, it is Mr. Milne's peculiar boast that he imports direct from England drugs and chemicals, photographic chemicals and apparatus, dispensing-requisites, druggists' sundries, surgical instruments and appliances, tabloids of compressed drugs, homœopathic medicines, patent medicines veterinary medicines, disinfectant, toilet and nursery requisites, toilet and medicated soaps, perfumery, stationery, saddlery, smokers' requisites, pipes, cigars, tobacco, and cigarettes, electro-plated ware, enamel and tin ware, cutlery and glassware, presentation articles and household requisites, fancy and miscellaneous goods, also oilman's stores and provisions.

Mr. Milne is "frae Aberdeen awa'." He served his apprenticeship in the Granite City with Mr. D. W. Mackay, chemist and druggist, after which he was an assistant for nearly two years in Messrs. Duncan, Flockhart & Co.'s Prince's Street pharmacy. From there he went to Messrs. Bathgate & Co., of Calcutta, and remained with them five years, having charge of their Park Street branch. He then went to Mr. J. L. Lyell (afterwards Lyell & Co., Limited), Allahabad, as manager of the drug department, for six years, after which he went to Quetta and started business on his own account. Even in that far-away place Mr. Milne finds competition keen, in this instance the bazaars being the aggressive parties, and they, it has been said, will sell a caseful of stuff at no profit except the wooden case which holds the goods.

J. B. FORSTER & CO.

We now take a trip right away south to the cardamom-territory—Mysore—where, in Bangalore, Mr. J. B. Forster has been in business for eight years. Before that he had nearly five years' experience of Anglo-Indian pharmacy, having in 1888 joined Messrs. W. E. Smith & Co.'s staff in Madras. He managed their Bangalore branch for three

FORSTER'S PHARMACY IN BANGALORE.

years of the time. He started for himself in a small place in April, 1893, and removed to the present premises in 1895, the business having rapidly grown. Mr. W. G. Paddock, chemist and druggist, then joined him in partnership. The business-premises are fitted up with electric light, and the mineral-water factory is quite up to date as regards machinery and fittings which are of the most improved kind. The hall of the retail premises (shown in the next

THE HALL OF FORSTER'S PHARMACY IN BANGALORE.

picture) is splendidly fitted, the display of goods in the glass cases being a feature of the establishment. There are good arrangements for dispensing, and ample trained assistance. The main hall measures 80 feet by 40 feet. The dental surgery is a later addition to the business, and is in charge of a qualified dentist. The firm specialise in several directions, particularly in the manufacture of soluble phenol and pineoline disinfectants.

Saffron.

By JOHN MULLETT.

FEW drugs can boast so extraordinary a career as saffron has had; it has not only changed its nationality, but it has also altered in character as well as in its uses. Although known to the ancients, it was at one period of the Christian era essentially English, but it has lost all its birthright, and has for many years been an article of import only. At one time looked upon in England as a specific in certain maladies, and as an important component in many medicines, it is now almost excluded from English pharmaceutical preparations. It has also experienced in a remarkable degree the attention of the adulterator.

Crocus sativus, from which saffron is gathered, was formerly grown to advantage in this country. Saffron Walden, in Essex, and Saffron Hill, in Holborn, are said to have taken their names from it having been grown in large quantities in both places. It found favour as a culinary adjunct in the food of the wealthy classes, and it is still very generally used in cakes throughout the West of England. Saffron was also known to the Greeks and Romans; it is doubtless the "karoom" of the Hebrews referred to in the Song of Solomon, iv. 14, and is still generally used at the present time in soups by the Jews.

As now grown in Spain and France, the bulbs are planted in rows about 6 inches apart, and 3 inches between the bulbs, in the month of July, and the crop is collected in September, dried and ready for market in October. Only the three yellow-red stamens and part of the style are collected. The yield of an acre is but 2 lbs. the first year; this may, however, increase to ten times that quantity during the second and third years, after which the bulbs are taken up and planted *de novo*.

The price of saffron on the London market has during the last fifty years ranged in first hands from 18*s*. to about 68*s*. per lb., and is at the present time 26*s*. per lb., although in 1889 it stood at about the highest figure.

The various forms of adulteration to which saffron has been subjected are most remarkable. The very first shipments which came to hand from Spain were "caked" by means of an admixture of honey, but this was probably a measure of precaution in transporting so valuable an article, and was afterwards abolished. Perhaps the earliest actual adulteration was that emanating from France, and introduced about the middle of the last century, when the stamens were covered with a preparation of barytes. To such an extent was this effected that sometimes 1 lb. of such "Alicante" saffron could be packed into a tin of about 4 inches cube, whereas a like quantity of pure saffron requires a tin of at least double that capacity. At that period such adulterated qualities were shipped in large quantities to native merchants in Calcutta and Bombay, and by them sold, it was supposed, for purposes of worship in native temples, where, being burnt, the adulteration mattered little. Besides such treatment, saffron has been often mixed with other vegetable or floral matter, such as dyed esparto-grass, the hairy root of the leek, marigold flowers, &c., all forms of adulteration being invariably classed as "Alicante," which term is still always used to indicate a cheap or impure quality, although as a matter of fact the finest qualities of pure saffron are grown round about the Alicante district of Spain. The latest form of adulteration, and perhaps the most elegant yet introduced, is accomplished by means, it is said, of a preparation of potash, with which the saffron is dressed or saturated, and then slowly dried, it being increased in weight thereby according to the amount of treatment rendered. Such qualities, when moderately dressed, give good clear solutions, but are unable to pass the present low ash-test. As to the adulteration of saffron, much may be said condemnatory of the practice, though to a certain extent there are arguments which may be brought forward in favour of it. Thus, when prices rule very high, the free use of such a valuable colouring-matter amongst employés incurs considerable risk of pilfering, for unfortunately even with drugs, no less than with jewellery, the "receiver" is ever extant to forward or promote the cause of dishonesty, and a manufacturer may therefore feel more secure in working from a mixed article of lower value, provided, of course, adequate results are obtained, especially as for dyeing-purposes large quantities are used. In 1870 a "receiver" of stolen saffron came to a sad end. A large quantity had been stolen from a public warehouse in the City of London, whence it was taken away in big brown-paper bags. For days the detectives were engaged in endeavouring to trace the stolen goods, and at length one of them, in passing along the Hackney Road, discovered some "red-looking stuff" on the steps leading down to the basement of one of the houses there, where, sure enough, the police found the saffron, at the home of the receiver, who was at once arrested and conveyed to the police-station. On arriving there he pleaded hunger, and was allowed to have a chop, and he availed himself of the knife supplied therewith to commit suicide.

The tests for saffron are the tinctorial power of solutions and the burning or "ash test"; but the best of all tests is that of experience on the part of the buyer. Some time ago a witness in a trial concerning some essential oil said, with regard to the article in question, that the best test was a "thirty-five-year-old nose," meaning, of course, a nasal organ which had had thirty-five years' experience. Equally so is it with saffron, but with this difference, that it requires also the experience of eyes and hands as well.

The ash-test in itself is a hollow farce. Take, for instance, a poor thin semi-wild quality of saffron with much yellow in the stamen, and it will probably give an excellent ash result, perhaps not over 4 per cent.; while a fine bold quality, which may have been dressed to a very moderate extent, will be outclassed by yielding over than the B.P. maximum 7 per cent.; and yet in dyeing power the latter will be considerably richer than the former. As a rule, it is the very finest qualities which receive the attention of the dresser, while, on the other hand, the very commonest saffrons may give the lowest ash yield. Again, a saffron mixed with other vegetable or floral matter may pass the ash-test most creditably, though adulterated to a considerable extent. Thus the ash-test is of little use to the buyer of saffron unless he has experience as well to help him. In the judging of saffron technical knowledge is excellent, but practical experience is excellent also. It is quite possible for the young and perhaps over-educated chemist to take days to discover the full character of a sample submitted, which the old grey-headed experienced counterman would most accurately define in a few minutes.

Newly collected or new-crop saffron is always of a bright colour, which gradually decreases with age, and absolutely pure qualities become exceedingly dry with long keeping. It is claimed for the slightly dressed qualities that they maintain their pristine freshness longer, and are also not so liable to become abnormally dry in keeping. Having regard to its varied uses, it more than ever behoves the saffron-buyer to discover the quality best suited to his particular purpose, and to use his own means of making sure that he obtains it.

Shop-hints.

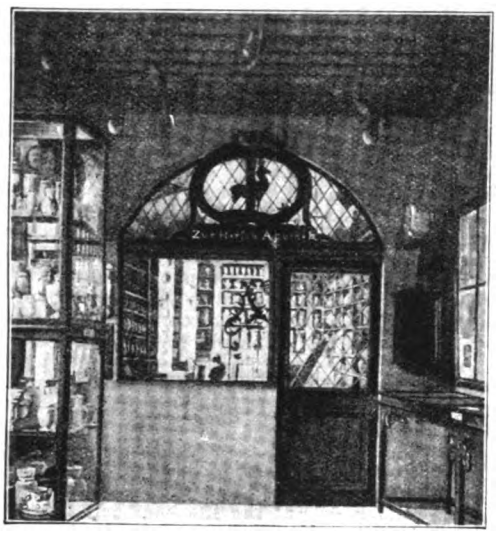
THERE are several methods of cleansing very dirty bottles—viz., put a handful of coal slack into the bottle, half fill with water and shake. Shot may be used instead of slack, or small parings of raw potatoes.

Coarse brown paper torn up small is a very good thing for cleaning dirty shop-rounds. Place in the bottle, add water and ½ oz. of liquor potassæ, and shake well.

To clean a measure which smells persistently of an essential oil, place it under the tap and allow a stream of water to flow into it for ten or fifteen minutes.

To make gummed labels adhere to the lids of bronzed-tin ointment-boxes, rub a little Friar's balsam on the surface and let it dry before attaching the labels.

To get a cork out of the interior of a bottle, take a piece of stiff cord, double it in a loop, push the loop well into the bottle, turn the latter so that the cork shall fall against the opening of the neck, then catch it in the loop and pull.



To remove a label from a skin-capped bottle without soiling the cap, cut a slip of blotting-paper rather larger than the label, wet it with water, place it on the label, and after a few minutes the latter can be readily removed.

The Pharmaceutical Museum at Nuremberg.

By A. C. WOOTTON.

THIS remarkable collection, representing the history of pharmacy, has been referred to several times in past volumes of THE CHEMIST AND DRUGGIST, but it is so unique and full of interest that nothing short of a much more detailed description than is at present available can satisfy students. The collection forms a section of the

THE ANCIENT PHARMACY (as seen from the Corridor).

National Germanic Museum in Nuremberg, and carefully compiled catalogues of some of the departments of that institution are already in print. We have recently been informed that an official catalogue of the Pharmaceutical

THE ANCIENT PHARMACY (interior view).

Section is in course of preparation, and if it is as complete as those already published it will be of great value; but the Director of the Museum declines to commit himself to the promise of any date, even with a year's margin, for the publication of the anticipated treatise.

The library of old alchemical and galenical books and manuscripts comprised in this section is of priceless value, but the ordinary visitor can only see so much of these as can be exhibited in glass cases. The documents, however, it may be hoped, will be freely quoted from in the coming catalogue. The earliest on view is an illuminated manuscript from some monastery, dated 1473. Subjoined is a sample of the manuscripts. It is a copy of a certificate of Theriacum, dated MDCLXXVI. Die XXV. mensis Maii:—

CORNER OF THE STOCK-ROOM (Material Kammer).

The figure is in painted wood, and represents Mithridates.

Viri Magnates, et quibus Respublica Medica et eius splendor cara sunt, in primis debent curare Theriaci compositionem et prisci illius seculi ornamenta fonere et producere, in huius et futuri seculi usum. Inter cetera autem, quae Theriacae compositionem ingrediuntur viperini Pastilli primas sibi vendicant. Hos vero, quos una parte ornat icon Sancti Caroli et nomé Hieronymi Patanini Pharmacopolae Inclytae ac Illustrio Polonorum Nationis. Perfectos, et ex Montibus Eujaneis, NosMedici Patinini qui eorum confectioni adstitimus, approbamus et commendamus. Qua propter ut videant cuncti et excipiant, libentur testamur et subscribamus.

Four signatures of doctors are appended, and below these appears the portrait of H. Z. Patanini, the maker of the Theriacum, while the margin of the certificate is beautifully decorated with portraits of Hippocrates, Galen, Andromachus, and Avicenna.

The old pharmacy, which is fitted up with a selection of vessels of various colours, shapes, and wares, occupies the end of a corridor and faces the visitor, as shown in our first picture. The second gives a better idea of the interior. Hanging from the ceiling between the two anchors is a sign bearing the appended advice to the apprentice, in Old German:—

CORNER OF THE LABORATORY.

Most of the apparatus is what was used by the alchemists.

Stell jedes an den Ort
Wohin sieh fuglich schukt
Und siehe fleissig zu
Das is nicht werd verruckt.

The labels on the jars, bottles, and drawers are of particular interest. The following are copied from the drawers:—

Spod. Fossil.	Sem. Buniad.	Sem. Cicer. Rub.
Cerat. Hernio	Aes. Ustum	Bezoar Occid.
Bolus Alb.	Cannul Clyst.	Sem. Mummul.
Sem. Violar.	Sem. Asparag.	Lign. Lentisc.
Rad. Palm. Chr.	Rad. Dentar.	Succ. Virid.
Rad. Hemodact.	Emp. Tagemah.	Herb. Antyrrh.

In the corridor is a field-pharmacy which is said to have accompanied the Nuremberg contingent in the campaign of 1683, when the Germans and Poles drove the Turkish invaders from Vienna. This is a fine piece of unpolished cabinet-work, and it is a little difficult to accept the assurance on

Digitized by Google

the museum ticket that it actually went through a war. It might have come straight from Maw's. The contents must have represented the most luxurious pharmacy of the

CORNER OF THE HERB-ROOM.

The drawers are from the seventeenth century. A half-faded landscape is painted on each.

time. There was the Theriaca Andromachi and the Theriaca Diatessaron; the confection of Mithridates, elaterium, an elixir de succo rosar., and an elixir vitæ Arnoldi de Villa Nova; a pulvis epilepticus, a preparation of Oriental pearls, and one of crabs' eyes; bezoar, oil of mastic, essence of sugar, and many more remedies, the names of which are now mysterious. The Burdett-Couttses of the time could hardly have found fault with the pharmaceutical provision for that army, if such physic as this cabinet contained was indeed meant for the ordinary "Tommies."

The laboratory, the stock-room, and the herb-room, corners of which are shown in the photographs, are all replete with interest, but we await the publication of the official description before commenting on them in detail.

Collodion of Belladonna, B.P.C.

(*Emplastrum Belladonnæ Fluidum.*)

Alcoholic extract of belladonna-leaf	a quantity containing 44 gr. of the alkaloids
Alcohol (90-per-cent.)	a sufficiency

Dissolve the extract in 9 fl. oz. of the alcohol, then add—

Purified ether (sp. gr. 0·72) ...	9 fl. oz.

Mix, set aside for twelve hours, decant, and dissolve in the mixture—

Camphor	130 gr.
Pyroxylin	½ oz.

Then add—

Alcohol (90-per cent.) } in equal volumes, sufficient to Purified ether... }	produce 1 pint

Copaiba Jelly.

Spermaceti	℥ij.
Copaiba	℥x.

Melt the spermaceti in a 1-lb. jar placed in hot water. Add the copaiba gradually, stirring all the time until the mixture is clear, and allow to cool as the water-bath grows cold.

Chilblain-powder.

Flowers of camphor...	℥j.
Morphine hydrochloride	gr. v.
Sifted starch	℥iij.

Mix well, and sift through a very fine sieve.

This powder is to be sprinkled in woollen gloves to prevent frost-bite in excessively cold weather.

Concentrated Toning-bath.

Gold chloride	gr. xv.
Ammonium sulphocyanide... ...	gr. ccxxv.
Water to	℥iij ℥vj.

Dissolve the gold chloride in 15 dr. of water, neutralise with a little chalk, and filter. Dissolve the ammonium sulphocyanide in 1½ oz. of water and add to the gold solution, making up the bulk to ℥iij. ℥vj. Shake the bottle. To make a toning-bath add 4 dr. to 15½ oz. of water.

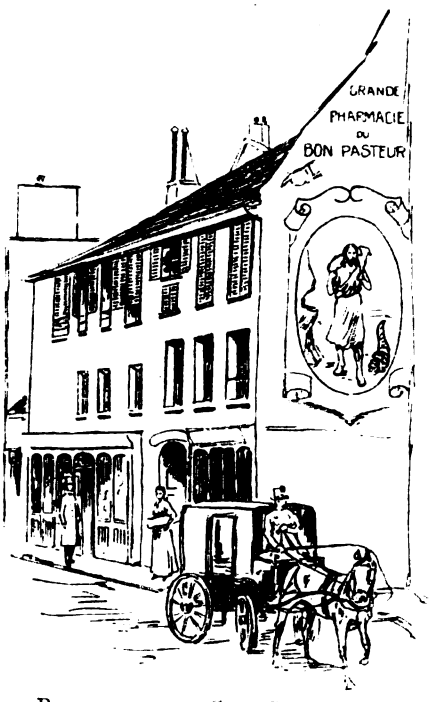
Pharmacy-signs.

THE sign, to the mind of the modern Englishman, is inevitably associated with the public-house—the swinging board over the door of the country inn, with the weather-beaten portrait of the Iron Duke or the faded heraldic blazonry of the Red Lion or Blue Boar. Do not the very names of the "Cock," the "Black Bull," or the "Cheshire Cheese" suggest liquid or solid refreshment to the average Londoner? We are apt to forget that this is merely a special survival of a general custom; that in "the spacious days of good Queen Bess"—nay, as late as the golden epoch of good Queen Anne—the sign hung over the door of nearly every shop, useful (like the armorial bearings of sovereigns, knights, and bishops) in times when the mass of the populace were unable to read the name of the proprietor or the announcement of wares offered for sale.

Evidently with the spread of education these pictorial or sculptured distinctions were doomed to disappear. It would probably be a difficult task to find half-a-dozen pharmacy-signs in the streets of modern London. In the Guildhall Museum a "Pill," carved in stone, that once adorned the frontage of a well-known drug-firm, is still preserved; and Corbyn & Co. still possess a bas-relief of the "Bell and Dragon" in their Holborn establishment. The "Rhinoceros" or "Unicorn"—doubtless an allusion to the medicinal virtues supposed to have been possessed by the unicorn-horn—still figures over the entrance to Apothecaries' Hall, Blackfriars, with Apollo (god of healing) in the shield below.

But these are the exceptions that prove the rule. The signs of the London apothecary of the Middle Ages or of Stuart days are gone. But the diligent student of ancient newspapers may occasionally find in their advertisement-columns some quaint name of an apothecary's shop, such as the Dragon and the Golden Mortar, and readers of "Pepys's Diary" may recollect the name of Mr. Wm. Potts, the apothecary who lived "at the Elephant and Castle, near St. Antholin's Church, in Queen Street, London," not a great way from the *C. & D.* premises.

In foreign countries the practice dies harder, and many signs may yet be noticed over chemists' and druggists' shops by the careful and ubiquitous observer. Amongst French towns

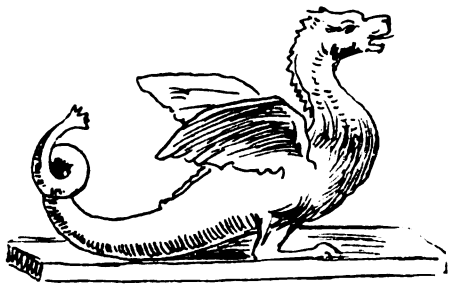


PARIS

(the last place where the uninitiated would look for anything ancient, and yet a very world of interest to the student of bygone days) affords a small but most interesting selection. In the rue des Lombards, always the great centre of the wholesale drug-trade, there is a series which is specially remarkable. Here, cheek by jowl, are the "Image of St. Peter," brilliant in oils; "Our Lady of Victories," gilt and resplendent in her niche; the "Golden Pestle," the "Golden Mortar" over the entrances of two pushing pharmacies; the "Grande Monarque," with its gilt sun emblematical of the glory of Louis XIV.; and last, not least, the "Golden Beard," where Pierre Pomet, the seventeenth-century apothecary, wrote the famous work on drugs so frequently quoted by Hanbury and other authors. The construction of the Boulevard Sebastopol some forty or fifty years ago entailed the demolition of a large portion of the rue des Lombards. Previous to this epoch the signs were much more numerous and interesting. Close by, in the rue St.-Denis, are two more pharmacies, respectively bearing the signs of the "Sphinx" and the "Silver Mortar." I may here note that the "Golden Mortar" was among the most popular designations of pharmacies in days gone by, and may be found in several old towns in France and Belgium, and possibly elsewhere. In fact, the pharmacist put out a golden mortar as naturally as a cutler would display a large pair of gilt scissors, the barber his basin or his pole, or the French wayside tavern its bush.

The "Pharmacy of the Good Shepherd" is in the rue des Francs-Bourgeois, quite close to the Paris Municipal Bacteriological Laboratory, recently described in these columns. The quaint painting on the wall is, we believe, unique in its way, and is doomed to disappear with the widening of the street. Not far away the "Good Samaritan" was, until a year or two ago, depicted on the first-floor front of the corner

Digitized by Google



of the rue de la Poterie—a most appropriate sign in Paris, where the victim of a street-accident or crime is always conveyed to the nearest pharmacy. The opportunities of

PHARMACY OF THE GOOD SHEPHERD.

sketching these pharmacy-signs daily become fewer, so quickly are they disappearing.

Where, for instance, are the "Polygone" pharmacy in the rue du Four-St.-Germain, the "Belle Athénienne" perfume-store on the rue St.-Honoré, the "Dame-Jeanne" of the chemical-warehouse in the rue Boucherat?—all three noted by the great novelist Balzac in his curious and little-known work on the "Signs of Paris." (A modern and most interesting work on the same subject pays but scanty attention to pharmacy-signs.) Where is the "Lamprey on the Grill," where a register was kept of vacant situations for pharmacy-assistants a couple of centuries ago, in the rue de la Huchette; the "Page du Roy," where M. Allary sold his "febrifuge" tablets and purgative-syrup for the bile, on the quai des Augustins; the "Devise Royale" on the quai de Nesle, where spirit of wine was sold wholesale; the sign of the "Provident" in the rue St.-Denis, where a pomade could be obtained "which repaired all the defaults of the skin and gave a great freshness of complexion"—four signs mentioned in Nicolas de Blegny's curious "Livre Commode" of 1692? "Eheu fugaces!" "Delinda est Carthago," "Hinc illæ lachrymæ"—all my Minor Latin would not suffice to find a suitable quotation.

THE DRAGON

Modern pharmacy-signs are not unknown in central modern Paris; we may cite M. Jollivet's heraldic dragon at 114 Faubourg St.-Honoré, and the apothecary of the middle ages which figures over the corner of M. Delouche's pharmacy in the rue St.-Honoré at the angle of the rue Castiglione.

A herbalist's in the rue Bourg-Thibourg, near the Hôtel de Ville, still bears the sign "St. John's Palm-tree" ("au Palmier St.-Jean"), while the "Olive-tree" of an olive-shop in the rue de Rivoli, and the "Grand Siphon" of a wineshop at the Gare St.-Lazare will not fail to strike the eye of the passing pharmacist in Paris. The "Civet" is a common sign for Parisian and provincial tobacco-shops, and the "Cork Oak" is the trade-mark of a merchant who makes a speciality of chemists' corks. The proprietor of the "Bourdon St.-Jacques" in the rue St.-Honoré found it convenient to change the name of his pharmacy to the "Bourdon d'Or" at the time of the Revolution, when saints, like kings, were proscribed alike by law and public sentiment. But the old house still exists, and a business in proprietary medicines is still carried on behind the quaint old frontage with its ornaments of pilgrims' staves ("bourdons"). By the way, the "Bourdon St.-Jacques" is an old popular name for the rose-mallow, and as mallow was one of the mainstays of old French pharmacy, the name might have had a double signification. A gilt "Panier Fleuri" figures over the door of Pinaud's new perfumery premises in the place Vendôme, and Gosnell's "Cherry-blossom" branch on the Grand Boulevard may be cited as an English specimen of the French habit of making the name or sign more conspicuous than the actual name of the proprietor.

FRENCH PROVINCIAL TOWNS

vary curiously in the matter of pharmacy-signs. In many quite ancient towns not one is left; on the contrary, one sometimes has a remarkable find in the little back streets of some bustling city. The faded painting of the "Two Palm-trees" above the door of a corner pharmacy in the rue Jeanne-d'Arc, one of the main streets of Rouen, may be familiar to some of our readers. The palm-tree, encircled by a serpent, it may be noted, forms the arms of the Paris School of Pharmacy. The "Solar Spectrum" may be noticed as the sign of a chemical, drug, and varnish warehouse in the rue de la République at Rouen. At Trouville, the fashionable Norman seaside resort, the tourist or "baigneur" afflicted with toothache can hardly fail to be attracted by the "Golden Molar" on the quay, which is the outward and visible sign of a Belgian dentist's anxiety to relieve his suffering fellow-creatures. The "Stag" is a popular sign for cutlers' shops in the centre of France, but the connection of the "antlered monarch of the herd" with pharmacy did not strike me just at first when I saw its gilded form over a pharmacy-front at Villefranche (Rhône). It should not be forgotten, however, that wonderful virtues were ascribed to different parts of the animal's body in bygone days; French and German authorities, two hundred years ago, said it was "all antidote." I may, however, add that the Bourbon family who formerly ruled Villefranche bore stags on their arms. There is also a "Falcon" pharmacy at Villefranche, but there is no sign.

The "Geneva Cross" is a popular sign for French pharmacies, as well as for shops where bandages or surgical instruments are sold. At Nantes, M. Martin keeps a pharmacy in the rue Basse-Grande, at the sign of the "Holy Cross," a name which should appeal to Bretons, ever a pious folk. The holy cross in question is simply a red Geneva cross on a white ground, depicted on a metal sheet hanging out from the first-floor balcony. M. Raymond Four, whom our readers will remember as the pharmacist who figured so painfully in a recent assassination case at Nancy, kept the Droguerie Pharmacie Lorraine in a bustling street of that pretty frontier city, and had the "Cross of Lorraine" conspicuously painted in the centre of his shop-front. (It was *white*, by the way; while Macaulay, in his ballad, speaks of "the cornet white with crosses *black*, the flag of false Lorraine." Perhaps some of our heraldic readers can tell us whether M. Four or Macaulay was right.)

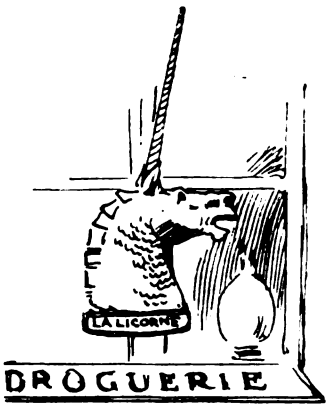
Digitized by Google

At Nancy, too, M. Poulet has just hung out a new and artistic sign, which appears to represent a chameleon surmounting a lantern-bracket of original design.

M. Lemaître's pharmacy-sign at Dieppe also deserves notice; it is considered by some to be the handsomest in France. It was described in the *C. & D.*, March 9, 1901.

The "Cast-iron Mortar" is the name of an old pharmacy in the rue d'Orléans, Nantes, but the sign itself has disappeared.

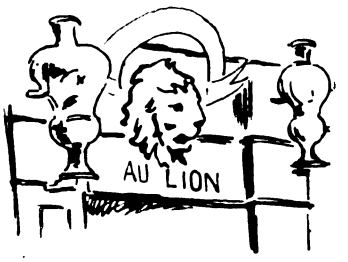
But outside the rue des Lombards, the most interesting street of pharmaceutical signs in France is the curious collection in the rue Lanterne at Lyons, mentioned in the *C. & D.* some years ago under the title of



"A PHARMACEUTICAL MENAGERIE."

Here the "Serpent" writhes outside the corner pharmacy, and seems to hiss defiance at the "Elephant"—a rival

THE POLAR BEAR.



establishment—just opposite, where three or four beasts with castellated howdahs (suggestive of the well-known sign the "Elephant and Castle") adorn the window. The "Unicorn's Head," further on, is a clever piece of sculpture, though probably only dating from the nineteenth century. The "Dragon" and the "Antelope" are wholesale drug-houses; the "Lion" and the "Polar Bear" modern retail pharmacies; the last-named is in the rue Longue, a side street. The "Siren" is only a few doors off. The "Black Bear," the "Centaur," and the "Fox" have disappeared, but many Lyons pharmacists can remember their existence in this curious street.

This quarter of Lyons, like the rue des Lombards in Paris, has been for centuries a centre for the drug and allied trades. In Barbe's "Parfumeur François" (1701 edition) he mentions the Sieur Orlandy, who sold toilet-soap in the rue Longue, at Lyons.

OVER THE FRENCH FRONTIER,

in Metz and Luxemburg signs seem to be far more common than in France; in fact, they are quite an institution in some towns of Germany. In Luxemburg, for instance, every pharmacy has its sign, from the Hof-Apotheke with its "Golden Eagle" with outstretched wings, to Herr Kuborn's "Golden Swan" and the mysterious phœnix-like bird over Herr Guzenberger's pharmacy. Just opposite is Herr Kliess Kneipp's "Mohren-Apotheke." One of the life-sized painted negroes that flank the entrance is an unmistakable Zulu, with his cowhide shield, assegai, and feathered crest and limbs: his companion, with club and bow, evidently belongs to the same or a neighbouring tribe. At Metz the "Adler-Apotheke," with the usual carved and gilt spread eagle on a bracket on the façade stands in the rue du Palais. Herr Otto's "Elephantin Apotheke," with the patient pachyderm over the door, is near the Market Place, and the "Lion" pharmacy in the Romerstrasse (the main shopping street of the town). At the "Deer" pharmacy ("Pharmacie du Cerf") no actual sign exists.

The "Stern-Apotheke," in the St. Ludwigs-platz, has the "Star" sculptured on each of the stone columns between the windows. The "Eagle" and "Star" pharmacies may be found, I believe, in many German towns. The "Stern-Apotheke," at Nuremberg, claims to have existed as far back as 1551, though it was only removed to its present site in 1728.

IN BELGIUM

a good many signs may be noticed. At Brussels, for instance, the "Three Elephants," the "Chamois," the "Eagle," the "Golden Mortar," &c., can be seen: while the "Tapir" in the rue de Namur is a most artistic bit of wrought-iron work—the beast being supported by a handsome bracket representing various plants used in old-fashioned pharmacy combined with the serpent and cup which are often used to typify the healing art. I doubt not that many others might be noted by any tourist who had the time to stroll round the interesting old towns of this busy little country.

IN ANCIENT ITALY.

In Venice in the sixteenth century two famous pharmacies bore the signs of the "Bear" and the "Phœnix"—this latter sign, as will have been seen by the preceding notes, was ever popular with druggists, and not unworthily figures on the *C. & D.* cover.

IN NORWAY

many ancient pharmacies had signs. Amongst those which, we believe, still exist are the "Swan" at Bergen (founded 1595), one of the same name at Christiania (1628), the "Elephant" at Christiania (1662) and the "Hygiæa" at Stavanger (1650).

IN AUSTRIA.

C. & D. readers may remember how the famous Von Waldheim succeeded his father as proprietor of the "Golden Crown" pharmacy. Another well-known face at International Pharmaceutical Congresses, Mr. Anton Altan, keeps the "Aurora" pharmacy at Bucharest (Roumania). Whether these far-off pharmacies actually employ signs, or whether merely the name now exists, I have no means of knowing: the tendency in modern continental shops, now the schoolmaster is abroad, is to replace the painted or carved image by a simple inscription.

But if these few stray notes—pebbles picked up by the seashore while the great unexplored ocean of Central and Northern Europe lies beyond — should induce any subscribers of the *C. & D.* to collect and communicate notes or sketches of any pharmacy-signs they may meet on their summer holiday outing, they will not have been written in in vain.

"IS ANYTHING MORE ABSURD than that it should be insisted upon by the Legislature that prescriptions must be made up by duly-qualified pharmaceutical chemists, while any errand-boy can be employed to stock the bottles?" This is *Modern Society's* wisdom. How happy we should be if the absurdity in the first part were the law as regards all registered chemists and druggists.

An Old Charm.

Is it Magic or Medicine?

By C. C. BELL.

THE relations between magic and medicine, formerly so close, have been considerably relaxed by the progress of modern science, and though we occasionally hear of So-and-so's pills having "acted like magic," this may usually be taken for a mere figure of speech. The time has gone by when the word "Abracadabra," written in a triangular arrangement—the word is said to signify the Trinity—and worn round the neck, was supposed to be good against agues. In country places, indeed, the belief in witchcraft still lingers, and the writer of these lines has himself acted more than once as a witch-doctor; has been consulted as to the virtues of wicken-tree and mandrake when worn as charms, and on one occasion has practised exorcism by means of a liberal dose of *haustus niger*; but it is rather startling to an up-to-date pharmacist in a thriving town to have "prescriptions" brought to him, which, upon examination, prove to be magical charms. This, however, has recently happened to Mr. Bernard A. Rogerson, of Bradford, who sends to the office of THE CHEMIST AND DRUGGIST seven small strips of parchment inscribed with cabalistic words, with a request for the interpretation thereof. These strips

were discovered a short time since in an ancient hall near Bradford, and are said to be three hundred years old. They certainly look it, and the inscription they carry (for they are all alike) is doubtless a good deal older. None of the strips can be read through, all being very much defaced by time and weather, but by comparing them it is possible to decipher the whole charm with some degree of certainty—if the qualification is allowable. It reads thus:—

Aon + hora + Cammall + + +
Naadgrass + Dyradgrass + + +
Arassund + yo + Sigrged + + +
dayniss + Tetragrammaton E
Inurmed E Soleysicke + + +
domend + Ame + dias + hora + + M
Fiat.

The key to this gibberish is most probably to be found in the word "Tetragrammaton," a word of great import in magic. It signifies the four letters which, in Hebrew, express the name of God (JHVH), or so, at least, says Dr. Brewer. Among other virtues it was credited with that of preventing bleeding from wounds, &c., and there is a tradition that when the Earl of Gowrie (of the famous conspiracy) was slain at Perth in 1600, this word, written on a piece of parchment, was found on his body, which had, in consequence, lost no blood. The meaning of the inscription, as a whole, it is impossible even to guess at, which is quite in keeping with what is known of such charms. "Ancient or foreign epithets (says a writer in *Chambers's Encyclopædia*) and terms not merely misunderstood, but not understood at all, are often found to have been particularly efficacious, and we find mediæval sorcerers in their formulas using transposed letters and artificial words, the traditional Jewish names of demons, as Asmodai and the like, and a gibberish of mixed Hebrew and Greek words more or less consciously confused."

That such amulets and incantations were in great vogue all through the middle ages is sufficiently clear from the number of enactments that were made against them, and they were even prescribed by the medical men of those times and by good churchmen. It is true that in many cases their magical character was more or less disguised under the cloak of science or religion, or both, as, for instance, in the following charm, taken from Professor Henslowe's "Medical Works of the Fourteenth Century":—"For ye Goute-cayne [*sayne* = cure]. Take ye rote of ache (*apium graveolens*) and writte ther-on iii wordes + ihs + xt + dominus + and as longe as he [it] be rith on hym aboute his nekke, if he have gode beleve on god, he salle nevere have it more in alle his lyve." Here the root employed, the words Jesus, Christ, Lord, and the crosses (to say nothing of the belief enjoined), would save the conscience of any patient using the charm, which is, nevertheless, evidently as pure a bit of magic as the Bradford amulet. That such things can ever have had effect may seem impossible to us, and yet it is not unlikely that in many nervous disorders they were really of some efficacy. Magic is a real power to those who believe in it; and we need not hold with Burton of the "Anatomy of Melancholy," that there is no virtue at all in "these charms, spells, characters, and barbarous words; but that the divell himself doth use such means to delude them"—a quotation which proves that Burton, too, had some sort of faith in the very things he was attacking. The mere apprehension of harm, the mere expectation of a cure, would of itself give effect to whatever means were employed; and Paracelsus, in his treatise on long life, recommends the use of charms on this very ground. The old proverb "Conceit may kill, and conceit may cure," embodies the same truth; but it still remains difficult to understand how the mere persuasion of safety could be of any use in such a case as the Earl of Gowrie's; and we must suppose that the saner sort of people, even in those days, used some discrimination in their employment of these magical formulas. In the darkest ages of ignorance it was not everybody who believed in pills against earthquake, and we must remember that some people even now carry about a stolen potato as a preventive of rheumatism. Magic can scarcely go further than that. Since the above was written it has been suggested that these slips may after all be purely medical prescriptions, or at least half medical and half magical. The suggestion is due to a suspicion that *Cammall* is an irregular form of *Camomile*, but this is hardly likely. No such form occurs in any glossary that has been consulted, or in the Oxford English Dictionary. *Naadgrass* might similarly be supposed to stand for *Nard grass*, and indicate lavender or valerian, were such a name for either to be found elsewhere, but it has been searched for in vain. The conclusion at present irresistible is that most of the words written upon these slips are arbitrary ones, and the whole inscription a magical charm.

ACCORDING to the report of Mr. Acting Consul-General Rhinde on the trade of Rio de Janeiro in 1900, the value of the drugs, chemicals, &c., imported into Brazil during that period were as follow:—British Empire, 42,271*l.*; United States, 20,488*l.*; Germany, 45,749*l.*; France, 28,295*l.*; Belgium, 16,441*l.*; and Italy, 3,578*l.*

THE WINDOW'S POWER.—I do not believe there is a man living who has not, at some time or other, bought goods which he would not have purchased unless influenced by displays seen in windows. This has been everybody's experience, and shows in a sufficiently clear light the importance of timely and tasteful arrangement.—*Practical Advertising.*

A "LIVER-SHIFTER."—There is a chemist in the neighbourhood of Piccadilly who does not believe in the decline of British trade. All he has to complain of, he says, is the falling-off in the demand for liver-pills. "And if you want to know the reason, sir," he added, "just you take a 'bus from the corner of Bond Street to the Circus, and see what that'll do for a torpid liver! It's that bit of road, sir, that's ruined my liver-pill connection."—*Globe.*

Lemon, Orange, and Bergamot Oils.

Their Physical Properties.

By G. H. Ogston & Moore.

HAVING had the opportunity during the last few years of examining a large number of commercial samples of these essential oils (a number amounting altogether to many hundreds), we think that the publication of the figures obtained may be of interest. We have therefore summarised the results of these numerous observations, and give them in the following tables, together with a few remarks suggested by them. The year has been taken in each instance as beginning with November, that being the time at which the first of the new season's oils are usually obtained.

Oil of Lemon.

The arrangement adopted in the tables is to give for each year the percentage of the samples examined whose specific gravity or optical rotation lies between the limits given in the first column. To take first the sp. grs., we have the following results:—

Sp. Gr.	1898–1899	1899–1900	1900–1901
	Per cent.	Per cent.	Per cent.
0·855 to 0·856	1·1	8·0	7·4
0·856 „ 0·857	42·9	38·1	52·6
0·857 „ 0·858	47·2	38·8	35·9
0·858 „ 0·859	8·8	14·1	3·5
0·859 „ 0·860	—	0·6	0·3
0·860 „ 0·861	—	0·4	0·3

It is seen that the specific gravities of the vast majority of samples lie between the limits 0·856 and 0·858, though genuine oils are met with showing figures greater or less than these. It is found also that in each year the specific gravities varies regularly according to the time at which the oil is made. This is illustrated in the following table, which gives the percentage of the samples examined during each period, which had a specific gravity less than 0·857:—

—	1898–1899	1899–1900	1900–1901
	Per cent.	Per cent.	Per cent.
November to January...	66·6	70·2	77·7
February to April ...	64·3	47·5	58·7
April to October ...	17·7	12·7	25·3

In each year, therefore, the specific gravity of the oil produced increases as the season goes on.

The next table shows the variation in optical rotation in a similar manner to that given above for specific gravity:—

Year	1898–1899	1899–1900	1900–1901
	Per cent.	Per cent.	Per cent.
Below + 58°	8·0	9·0	0·3
From + 58 to 59° ...	8·5	9·0	0·8
„ + 59 to 60° ...	40·1	19·1	5·6
„ + 60 to 61° ...	31·7	24 6	12·0
„ + 61 to 62° ...	9·1	21·9	20·3
„ + 62 to 63° ...	2·1	11·5	25·3
„ + 63 to 64° ...	0·5	3·7	24·0
„ + 64 to 65° ...	—	1·0	9·3
„ + 65 to 66° ...	—	0·2	2·4

The rotations are taken at 15·5° C., in a 100 mm. tube.

The difference between the oils of different years is very marked, and it is clear that in laying down limits for sp. gr. and optical rotation of pure oils it is necessary to have regard to the general characteristics of the season in which they are produced. A figure which would excite suspicion in one year would be perfectly normal in another. This is a point which will be referred to again in connection with bergamot essence.

A peculiarity to be noted is that *machine-made* essence (produced in Calabria, and not often met with in London) resembles in colour, so closely as to be hardly distinguishable, the machine-made bergamot oil, and has a higher sp. gr. than the ordinary hand made. The few samples of high gravity, 0 859 to 0·861 mentioned in the above tables are samples of this kind. Those having sp. gr. 0·858 to 0·859 come from the Palermo district, the essence from which is, as a rule, heavier than that from the neighbourhood of Messina. In the latter district, taking from Catania on one side to Barcelona on the other the sp. gr. is always included between the limits 0 856 to 0·858.

An abnormal sample was met with, coming from a district of Palermo, which had an optical rotation of only + 52·5°. This would usually indicate adulteration with about 10 per cent. of turpentine, but fractional distillation showed its purity. We afterwards had other samples specially obtained for us which confirmed this result.

The optical rotation of Palermo essence is generally lower than that of Messina, varying from +58–62°, as compared with +59–65° for the latter.

Oil of Bergamot.

In this case we have arranged the results in three tables, one for each year, the figures being as before the percentage of the samples examined which had specific gravities lying between the limits given, and, in addition, the average optical rotation and percentage of linalyl acetate in these samples:—

I.—1898–1899.

Sp. Gr.	Per cent. of Samples	Average Lin. Acet.	Average Rotation
		Per cent.	
0·880–0·881	7·4	33·7	+16·5°
0·881–0·882	9·3	32·7	+13·8°
0·882–0·883	37·0	36·5	+14·3°
0·883–0·884	25·9	38·2	+13·3°
0·884–0·885	16·7	39·6	+13·4°
0·885–0·886	—	—	—
0·886–0·887	3·7	43·7	+ 7·3°

Of the total number of samples, 11 per cent. contained over 40 per cent. linalyl acetate.

II.—Year 1899–1900.

Sp. Gr.	Per Cent. of Samples	Average Lin. Acet.	Average Rotation.
		Per cent.	
0·880–0·881	1·0	33·26	+16·8°
0·881–0·882	3·2	34·24	+14·5°
0·882–0 883	5·5	35·06	+13·5°
0·883–0 884	11·7	36·54	+12·8°
0·884–0·885	16·5	37·96	+11·5°
0·885–0 886	24·7	39·48	+11·6°
0·886–0·887	19·0	41·07	+10·7°
0·887–0·888	10·9	42·23	+10·8°
0·888–0·889	5·5	44·16	+ 8·7°
0·889–0·890	1·6	45·17	+ 7·0°
0·890–	0·4	47·55	+ 6·8°

Of the samples examined during this season 46 per cent. contained over 40 per cent. of linalyl acetate.

Digitized by Google

III.—YEAR 1900-1901.

Sp. Gr.	Per Cent. of Samples	Average Lin. Acet.	Average Rotation
		Per cent.	
0·877–0·878	1·4	30·56	+23 8°
0·878–0·879	3·4	31·34	+21·4°
0 879–0·880	16·0	32·59	+19·6°
0·880–0·881	20·4	33·95	+17·7°
0·881–0·882	17·3	35·47	+17·3°
0·882–0·883	16·0	36·51	+16·8°
0·883–0·884	7·5	36·95	+14·1°
0 884–0·885	5·4	38·80	+13·7°
0·885–0·886	5·1	39·59	+13·6°
0·886–0·887	3·1	39·76	+11·2°
0·887–0·888	2·7	41·48	+12·08°
0·888–0·889	0·8	43·87	+10·0°
0·889	0·8	44·54	+10·1°

The samples exceeding 40 per cent. linalyl acetate numbered 8·9 per cent.

A consideration of these figures is of great value in assisting the detection of any adulterant present in bergamot oil. It will be seen that a consistent relation occurs between sp. gr., percentage of linalyl acetate, and optical rotation of pure oils, and any considerable departure from this relation must be regarded as indicating impurity. There is a variety of the oil known as "essence of black bergamot" which is made from a bastard fruit, that is, one which never arrives at maturity. It is characterised by a very high sp gr. (up to 0·898), and a low percentage of linalyl acetate, and is very dark in colour. These properties cause it to be readily detected when present in ordinary bergamot oil. Distilled essence has a high rotation (exceeding + 20°), and a very low ester-content (2 to 5 per cent.) and sp. gr. (about 0 865).

The very marked difference between the crops of different seasons is clearly seen in these tables. The oil produced during 1899–1900 was of unusually high quality. Nearly half of the large number of samples tested showed a proportion of ester exceeding 40 per cent., and one sample was found as high as 48 per cent. In contrast with this the following season showed less than 9 per cent. of samples exceeding the 40-per-cent. limit. As remarked in the case of lemon oil, it is necessary to take into account the general character of the season when judging of the purity of an oil.

The following figures are of interest, as showing the effect of unusual conditions on the quality of the essence. They refer to samples obtained in the season which has recently commenced, and which have been made from the immature fruit brought down by the recent storms:—

Sp. Gr.	Lin. Acet.	Opt. Rot.
0·8810	30·85	+ 16 3°
0·8820	30·25	+ 13·0°
0·8789	26·70	+ 18·6°
0·8812	30·30	+ 13·3°
0·8825	30·20	+ 14·0°
0·8819	32·25	+ 11·4°
0·8808	30·95	+ 7·0°
0·8815	31·35	+ 13·0°
0·8814	30·7	+ 16·0°
0·8816	32·9	+ 10·4°
0·8833	33·5	+ 8·0°
0·8827	33·9	+ 12·6°
0·8812	28·65	+ 13·6°

These all show considerable variations from the general standards given above.

OIL OF SWEET ORANGE.

The physical properties of this oil show much less variation than do those of the two oils already dealt with. The sp. gr., in the great majority of cases, lies between 0·848 and 0·850, and the rotation between + 96° and 99°. Of seventy samples examined in the season 1899–1900 only three were found outside these limits, and in the following year six samples were met with, having a somewhat higher sp. gr. between 0·850 and 0·851, but the rotation of all the pure samples was between the figures named.

When distilled at the ordinary pressure the first 10 per cent. of a pure oil will have an optical rotation greater than that of the original essence by at least 1°. Our experience in the past season shows the average rise to have been 1·60° (range, 1·1°–2·5°). Any oil with the optical rotation of the 10-per-cent. distillate showing a rise of less than 1° may be suspected to contain either oil of lemon or the terpenes therefrom. The following results are from the new season's crop:—

Sp. Gr.	Opt. Rot.	Rot. of 10 per-cent. Dist.	Rise
0·84860	+98·75°	+99·95°	1·20°
0·84900	+98·15°	+99·33°	1·18°
0·84955	+98·30°	+99·50°	1·20°
0·84905	+98·75°	+99·90°	1·15°
0·84840	+98·50°	+99·70°	1·20°
0·84845	+98·05°	+99·40°	1·35°
0·84910	+97·40°	+98·70°	1·30°
0·84980	+97·00°	+98·80°	1·80°
0·84920	+98·00°	+99·20°	1·20°
0·84880	+98·70°	+99·80°	1·10°
0·84925	+98·00°	+99·35°	1·35°
0·84960	+98·05°	+99·70°	1·65°
0·84915	+98·70°	+99·90°	1·20°

The next figures are from essences that were found to be impure, and it will be noticed that there is still a rise in the rotation of the distillate.

No.	Sp. Gr.	Opt. Rot.	Rot. of 10-per-cent. Dist.	Rise
1	0·84890	+95·50°	+95·58°	0·08°
2	0·85020	+92·30°	+92·80°	0·5°
3	0·84958	+59·60°	+96·20°	0·6°
4	0·84845	+99·25°	+99 90°	0·65°

No. 4 contained orange terpenes; 1, 2, and 3 lemon oil or terpenes. These figures show that the statement that has been made, that the first 10 per cent. distilled may have a lower rotation than the original oil, is not correct. We have seen it stated that a fall of 5° is possible. Such a figure would certainly indicate adulteration to the extent of at least 30 per cent.

We hope shortly to be able to publish some figures relating to oil of bitter orange and oil of mandarin.

Since writing the above we have received samples of bergamot oil made from the normal fruit, and find the ester-content to vary between 33 and 36 per cent., the specific gravity and rotation corresponding with those given in the tables for previous years. The odour of this year's oil seems to be unusually fine. Referring to what was said with regard to machine-made oil of lemon, it is of interest to note that hand-made oil of bergamot, which also is rarely met with, has a colour scarcely darker than that of lemon oil, and contains only 25 to 30 per cent. linalyl acetate. The specific gravity of course is correspondingly low.

"PHARMACEUTICAL TESTING" (Mr. B. S. Proctor) contains easily-applied tests for ensuring the purity of chemicals for use at the counter. Price 2s. 6d., by post 2s. 9d., from the *C. & D.* office, 42 Cannon Street, E.C.

Round the Grands Boulevards.

A Parisian Stroll.

THERE are probably few spots on the face of the habitable globe which have been more persistently "written up" than the "Grands Boulevards" of Paris. That celebrated half-mile of thoroughfare, which is the Mecca of every Frenchman and not a few foreigners, has been described and studied from the historical, social, moral, political, literary, artistic, and every other aspect by writers of every nation under heaven.

"But, from a

PHARMACEUTICAL STANDPOINT,

has the boulevard ever been described?" a Parisian friend of mine asked me, knowing my line of business.

"I don't think so," I replied. "Are there any pharmacies on the Grands Boulevards? Not many, I fancy."

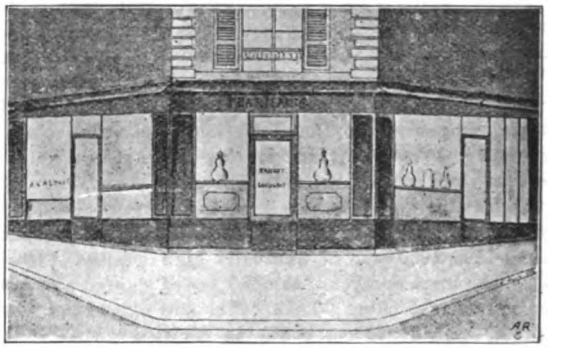
"Oh, dozens," he declared, and then shook his head. "Perhaps you are right after all. Rents are high there, you

THE BOULEVARD DE LA MADELEINE,
the commencement of the Grands Boulevards.

know, and even you pharmacist people can't always make profit enough to pay them."

This was the unkindest cut of all, but my friend is not in the trade and holds the outsiders' views as to chemists' profits. I always think it a pity to destroy the gilded illusions of youth, and he ended by making a modest bet of

A CORNER OF THE PLACE DE LA MADELEINE,
showing Pharmacie Virenque.



two absinthes that he would find me a dozen pharmacies between the Madeleine and the Carrefour des Ecrasés. ("Runover Crossing," as every Parisian knows, is at the corner of the rue Montmartre).

We met at an American bar at the Madeleine during the afternoon, and he informed me he had already unearthed Pharmacy No. 1. This was M. Virenque's, just next door to the bar in question, in the place de la Madeleine. It is a modest establishment of limited floor space, and of no originality calling for description; but, were it not a little removed from the actual stream of traffic, would be in one of the best positions in Paris.

"The name boulevard or bulwark," remarked my guide (these young fellows will always teach their elders), "indicates the former site of the city walls, and the rue Basse du Rempart evidently occupies the place of the fosse or ditch below." But what interested me more than his somewhat threadbare discourse was

TANRET'S PHARMACY,

which stands at the corner of the street in question. This may be considered one of the "classic houses" of Paris, M. Tanret having made a name for himself by original research. The officine (No. 64 rue Basse du Rempart) is now owned by M. Langlois. "He is, you see, an ex-interne of one of our hospitals," said my friend, pointing to the inscription on the

ONE OF THE PARIS "CLASSIC" PHARMACIES.

front of the shop. "Most of the best pharmacists here have spent a few years in one of the hospitals. A medical 'interne' is a house-surgeon, but a pharmaceutical interne is, of course, exclusively employed in preparing medicaments."

"We have carboys all the world over," I remarked (studying the window), "and that microscope is explained by this notice, 'Chemical analyses executed.' Hippocrates' portrait on the door-jambs is somewhat originally placed, but equally explicable. But why that catskin? Does it imply veterinary treatment for poor pussy?"

"Surely you know that is a wild-cat skin," was the reply, "which differs from the fur of the domestic pussy in possessing valuable qualities for the cure of rheumatism. You don't believe it? My grandfather does, and wears them next to his skin. He says he always has an attack of rheumatism if he takes them off."

"And this window-blind, with the palm-tree and serpent and digitalis and other medical plants below. Quite a work of art."

"You can buy them by the dozen in the rue St.-Denis at a very moderate figure. This one is the pharmacy blind, the palm-tree and serpent are the arms of the Paris School of Pharmacy. There is a pork-butcher's blind with wild boars in the forest, a baker's blind with the harvest, and so on until further notice."

After leaving Tanret's we noted the new handsomely fitted and bright British-American pharmacy opened not long ago, just off the boulevard at 3 rue Scribe, by Mr. Louis Nathan (formerly with Roberts & Co., Paris), who was one

Digitized by Google

of the last Englishmen to take his diploma of French pharmacist under the old *régime*, and then "drew blank" for a time, and I fancy my companion saw his bet was practically lost. In addition to the high rent of houses already alluded to, the fact that there are five or six pharmacies in the rue

THE PLACE DE L'OPÉRA,
looking towards the rue Auber; this spot is the heart of Paris, and the centre of Boulevard life.

de la Paix and its vicinity—the principal English pharmacies of Paris are all in that neighbourhood—accounts for their absence from this particular part of the boulevard. There are Robert's and Beral's in the rue de la Paix, Hogg's, Swann's and others in or near the rue Castiglione, and these do much to supply the inmates of the Grand Hotel and the endless other cosmopolitan *caravanserai* round this quarter of Paris.

PERFUMERY

was, however, much to the fore in the neighbourhood of the Opéra. Dr. Pierre's dentifrice has a quiet-looking establishment in the place de l'Opéra, and Jones' perfumery is near by on the boulevard; a little further down the boulevard the inscriptions "Parfumerie Anglaise" in French and "Rimmel's Perfumery" in English, call attention to the Paris branch of a well-known London house. The arms of half the Royal Courts in Europe are blazoned on the plate-glass front and between the *entresol* windows, and the window-display is tasty and conspicuous. Glancing down the rue de la Paix, one may catch a glimpse of Guerlain's perfumery, and of the establishment of the eau de Botot, while Gellé's and Agnel's are not far from the Opéra in the other direction. Pinaud's head place is in the place Vendôme, but here on the boulevard des Italiens (No. 30) he has a neat little retail branch, where "Marie Louise" and other prettily named and elegantly got-up perfumes make a dainty show. Many were in satin boxes.

"For New Year's gifts. Very nice for ladies, but terrible for us men," sighed my companion. "Ah! if I only had the money I spent on *étrennes*."

I calmed his troubled spirit by telling him of the delightful English custom of Boxing-day, and we crossed to Violet's, the appropriate name of a smart corner perfumery at the angle of the boulevard and the rue de la Michodière.

To use a sign or trade-mark instead of a name is a very common practice in Paris. I noticed Pinaud's sign is "The Flower Basket," and Violet's "The Queen Bee." This prolific insect figured neatly gilt on the carving at the back of the window, and a very swarm of the honeyed tribe adorned the door. Curiously enough the next shop I noticed (at the corner of the rue Favart) was the handsome retail depôt of "Cherry Blossom" perfumery fame, where the same principle of subordinating the maker's own name to a badge or trade-mark is carried out to a still fuller extent. This fine establishment, with its delicate light-green woodwork window and exterior and oak-panelled interior, has a thoroughly English get-up, has long been a feature of the boulevard, but I understand the agency has since been removed to the rue de la Paix.

"But where are the pharmacies?" I asked. He pointed to M. Gras's officine a few doors down the rue Lepeletier, and then we turned down the rue Favart, and (though I once more protested that this was not the boulevard) I was pleased to have an opportunity of seeing

MIALHE'S PHARMACY,

one of the "classic houses" of Paris. How old it is I know not. I remember seeing in the French "National Almanac" of 1802 that M. Sureau kept a pharmacy in the rue Favart "near the Comédie Italienne." Mialhe was a famous man in French pharmacy in his day, while M. Petit, the present proprietor of the officine, will be familiar to readers of the *C. & D.* in his various aspects as the President of the 1900

THE FASHIONABLE BOULEVARD DES CAPUCINES,
showing the store "Old England" and part of the Grand Hôtel

International Pharmacy Congress, for fifteen years Chairman of the General Association of French Pharmacists, as an ex-President of the Paris Society of Pharmacy, as an honorary member of the Pharmaceutical Society of Great Britain and of the British Pharmaceutical Conference, as a large manufacturer of pharmaceuticals, and as Mayor of Virofiay, a little place near Versailles.

Quoting my companion: "M. Petit's varied pursuits reminds me of Schiller's lines—

Denn wo das Strenge mit dem zartem
Wo Starke sich ein mildes parten
Da gibt es einem guten Klang;

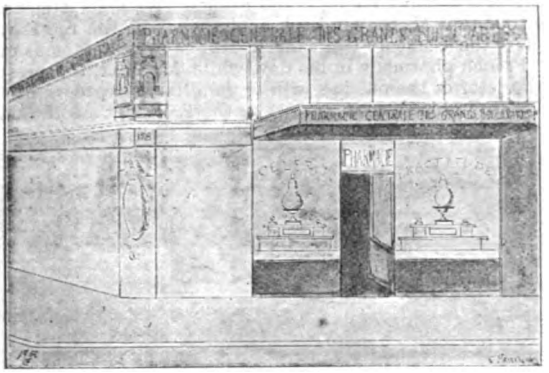
for as a chemical-manufacturer he mixes the natural elements into an harmonious whole, and as Mayor he officially unites in the nuptial knot two hearts that beat as one."

MINERAL WATERS.

To turn abruptly from marriage to mineral waters, I ought to have mentioned an interesting establishment (just opposite Violet's perfumery) where only mineral waters are sold. I have seldom seen more different varieties exposed in a single shop-window. Besides Vichy, St. Galmier, Vals, Contrexéville, Alet, Bussang, Salins les Bains, Plombières, and a host of French waters too numerous to mention, there were Hunyadi János and many other foreign names more or less familiar to the average English chemist. The shop, run by a M. Broise, more especially represents the Contrexéville establishment (where the Shah of Persia made a "cure" in 1900, and seems likely to return), but does a large general business.

"The other mineral-water people come and go a good deal," my friend remarked. "The Evian people had a shop on this boulevard not long ago, but transferred it to the rue Favart, and, you see, the Bourboule in that *entresol*—I suppose they have an office there. No; that 'Quinquina Dubonnet' shop opposite has nothing pharmaceutical about it—it is a depôt for liqueurs and *aperitifs*. Shall we go and take ours?"

For we had arrived at the rue Montmartre—the Fleet Street of Parisian journalism and



THE CUTTING PHARMACIES

of the rue Montmartre quarter, which now came into view.

The "Central Pharmacy of the Grands Boulevards" announces itself in letters a foot long at the corner of the rue

Digitized by Google

Montmartre and the boulevard. "Open all night; reduced prices; bandages and sundries; antiseptic dressings; English spoken; se le habla español; uroscopy and lactoscopy (does the Paris milkman understand this semi-Latin-French? Possibly it is done to spare his feelings—'milk-

A Prominent Cutting Pharmacy.

analysis' might be too brutal); récherche de microbes"; such are the inscriptions blazoned in white letters on the *entresol* (mezzanine floor) window on the boulevard and on the frontage in the street.

Of window-show the pharmacy is all but innocent; a few books and sundry apparatus are all that is visible: a couple of carboys, a pair of scales, a few cards advertising coca-kola preparations—that is all.

Inside, the same severe simplicity—oak fittings, rows of jars and bottles (a few patents are visible on one side), a book-keeper's desk, a cash-register with lady attendants, and a huge pile of catalogues, a bench for customers, five or six assistants, mostly middle-aged men—the usual style of the modern French commercial pharmacy in a good middle-class quarter.

The "New Century" Pharmacy (it used to be called the "Nineteenth Century" pharmacy, if my informant's memory is correct) is nearly opposite—28 boulevard Montmartre—and is run by M. Picard, a first-class pharmacist. He also announces he keeps open all night, and adds, "Same prices night-time as day-time." The interior of the pharmacy much resembled the one last described, except that the bench is replaced by bent-wood chairs. The advertising matter in front of the shop is, however, of a more decided character. Besides the general announcement of "Very reduced prices," several articles are advertised—"Koff," which is an "African tisane," quinine-wine, mineral waters, and Dr. Humphrey's patent medicines are specially mentioned, as well as a "quadruple wine," which costs 5f. a litre (say, 5*s*. a quart), and is "vivifying and regenerating."

Urine-analysis with percentage of sugar for half-a-crown would almost seem tautology when placed near the announce-

The Porte St.-Martin,
an interesting and typical spot on the Boulevards in the centre of a busy district.

ment, "Diabetes cured by Dr. Charlemagne's anti-diabetic wine and electuary." A santal specific was advertised to cure even more disagreeable maladies in two days. In fact, it was quite a "star combination" of remedies.

A painting between the two entrance-doors represents a very robust individual at the seaside declaring to a pallid invalid that "Quadruple wine is his secret for rejuvenating himself," while a card announcing that "Our wines may be tasted for 3*d*. a glass" almost persuaded me to enter and remove a few grey hairs and wrinkles at such a low figure. But my younger companion declared that what he required was not so much rejuvenation as temporary rest and refreshment. Installed at the café of our choice, he skilfully prepared the pick-me-up, while I still admired the front of the pharmacy. A couple of carboys *outside* the window on the mezzanine floor form a feature I do not remember to have seen elsewhere, while two lamps (with "Pharmacie" on one side and the Geneva Cross on the other) make the place conspicuous at night.

"Why do these cutting pharmacies abound round this quarter?" I asked. "Are journalists great consumers of medicaments?"

"It is not so much the journalists, perhaps, as the market-people. You see we are in the centre of the business quarter, and only about half a mile or less from the Halles Centrales, which represent your Billingsgate, Leadenhall, Covent Garden, and Smithfield markets combined. Thousands of peasants come there every morning, and the French peasant will walk a mile any day to get a bottle of medicine for sixteen sous instead of twenty. You noticed that one at least of these pharmacies was very quiet in its style, the pushing-trade is done by distributing priced-catalogues. I think it was one of these officines here that was warned or punished not long ago for not using metric terms in its list—you know our peasants still bargain in pounds, &c."

From this we drifted on to talk of a certain medical institute, which was open until lately at No. 19 on this boulevard, and figured in the police-court for illegal practice of pharmacy some time ago. My informant was under the impression that it was run by Englishmen, but as the average Parisian

An Historical Pharmacy,
the Pharmacie Charlard-Vigier.

is quite unable to distinguish between an Englishman and an American he gave me the benefit of the doubt. "Do you know," said he, "there was a notice that 'an English doctor attended daily except Sunday' close to announcements like 'Research for gonorrhea bacillus, 20f.' It is just as well

Digitized by Google

to keep the Fourth Commandment, even if you can't keep the others, isn't it."

I hardly saw the point of the remark till he followed it up by a tale of a cannibal chief, who after his conversion always cooked his victims on Saturday to avoid Sunday cooking. We chatted for half an hour, but, like a true boulevarder, he stoutly refused to come any further. "The real boulevard ends at the Porte St.-Martin," said he, "and you will find just as few pharmacies that way as this."

I decided, however, to continue my route. There was a long gap, for this is the "city" or business quarter of Paris, and tailors, restaurants, and similar establishments predominate. This succession of non-pharmaceutic establishments is only broken by the

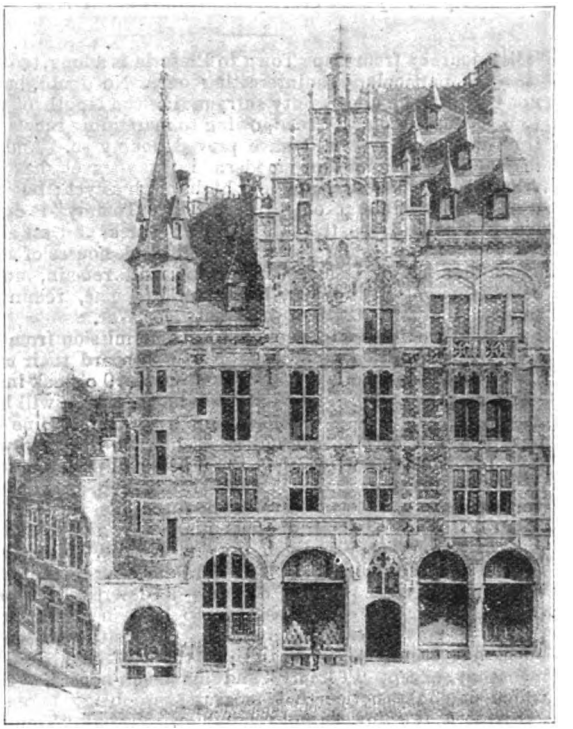
PHARMACIE SAVOYE,

4 boulevard Poissonière, an old-fashioned-looking place painted in black and gold, with two diminutive carboys in each window, and half-a-dozen glass jars containing elixirs, pectoral lozenges, and similar put-up goods. Inside, the old leather-backed chairs keep up the old-fashioned aspect.

The

PHARMACIE CHARLARD-VIGIER,

12 boulevard Bonne Nouvelle, is another of the historical pharmacies of Paris, Charlard having occupied these premises just a century ago. It is now kept by M. Vigier (brother of M. Pierre Vigier, who, curiously enough, keeps another historical pharmacy in the rue du Bac). This place is as old-fashioned-looking as one might expect, with its threshold several steps above the street level, and its brass and mahogany front. M. Vigier evidently believes in putting up his own specialities, and a neat series of dentifrices, infants' food, &c., adorns the window.



THE PLACE DE LA BASTILLE,
the end of the Grands Boulevards.

An English Pharmacy in Brussels.

AMONGST the New Year cards which we have received this month are two photographs of the new pharmacy erected by Messrs. Ch. Delacre et Cie. in the rue Coudenberg, Brussels.

"LA PHARMACIE ANGLAIS,"

as it is termed, was founded in 1853 by M. Charles Delacre, and is of world-wide repute. The new building is excellently adapted for the extensive business of the firm. It is in the old Flemish style, the exterior being of the fifteenth and the interior of the seventeenth century. All the fittings and counters are in carved oak, and it will be seen from the photograph of the interior that the style is unique. Particular attention has been paid in the arrangement of the working departments to provide each assistant with a complete dispensing section for himself, so that all work independently of each other. Throughout the pharmacy British Pharmacopœia preparations are denoted by distinctive labels, the Royal Arms of the United Kingdom being placed on each jar and bottle. The pharmacy is lighted throughout by electricity. Messrs. Delacre et Cie. keep an inter-

LA PHARMACIE ANGLAIS.

national stock, especially of proprietary articles, and their assistants speak English, French, and German, and have

INTERIOR OF LA PHARMACIE ANGLAIS.

personal experience, one or the other, of the pharmacy of the countries which they represent.

ENGAGED.—"First of all," said the druggist to the youthful applicant, "we'll have to test your ability as a whistler. Suppose you try." "I'm sorry, sir," said the boy, "but I can't whistle at all." "Take off your coat," cried the druggist, "you're the boy we're looking for."

DRUGS AND CHEMICALS.—Products to the value of 18,760*l.* and 329,000*l.* respectively were exported from the United Kingdom to Belgium during 1900. From that country we imported last year drugs valued at 94,080*l.*, and chemical products (not specified) 169,880*l.* Palm oil and other vegetable oils (not for food) were imported to the extent of 310,960*l.*

Across War Country.

By our Special Correspondent in South Africa.

THE journey from Cape Town to Pretoria is a long, tedious, and particularly uninteresting one. No doubt, had it not been for the uncertainty surrounding the length of time to be occupied on the road, owing to marauding rebels and train-wreckers, it would have proved doubly so. And, remember, the luxury of modern railway-travel has not reached in South Africa a very high pitch as yet; but it is worth the trouble, if only to see what "Tommy" is doing. He rides behind the train in an open truck, and all along the track he has built some splendid block-houses of stone and other material, many of which will remain, unless demolished after the war, for years to come, reminding those who gaze on them of the great Boer War.

If you are fortunate enough to get permission from the military authorities to proceed North on board their mail-train, you leave the Cape Town terminus at 9 o'clock in the evening. On waking up next morning the train will have negotiated the Hex River Pass, and by breakfast-time will have covered barely 200 miles. Telegraph-linesmen were busy repairing the wires that the rebels had pulled down a day or so previous. War it was—or rebellion, or whatever you please to call it—and to war the discussion turned.

Breakfast over, the train gets under way again, and we now enter on our journey across the Karroo. Mountains, sand, and scrubby bush. More mountains, more sand, more bush; a waterless tract of country—a desert. Here and there a few goats and sheep are to be seen picking up a precarious sort of a living by eating the withered, stubby bush, but otherwise there is little to break the dreadful monotony, except "Tommy" and his block-houses, outside which one may notice that measures are being taken to cultivate a few flowers and vegetables. Withal, "Tommy" is humorous in his way. He will go to no end of pains to make an effigy of himself, which he places on the veldt in the vicinity of his fortifications for the Boers to shoot at, and will crown it with the biggest helmet that he can find, on which some such words as "Let 'em all come," or "Ready, always ready," are painted. The notice, "Please throw out papers," appeals to most travellers, and, if you have no literature to throw out, the idea of subscribing towards the fund for the supply of same commends itself; for, after all, it is on the look-out man in the block-house that the safety of the train and its passengers falls.

In the early hours of the morning the second day out, the train had taken an easterly direction. My companion, a small important little man, with a very big moustache, who snored as if the car belonged to him, got pitched out of his sleeping-berth by the sudden stoppage of the train. He grasped his rifle, and with the words "Damn!—it's the Boers," disappeared along the corridors, only to find that the stoppage was occasioned by the engine taking in water from a tank. A rather sheepish look crossed his face when I pointed out to him that he failed to take his ammunition with him.

At Norval's Pont

the I.M.R. officials take charge of the train, for the frontier is hard by. Passes and permits are collected and endorsed by armed men—quite a new thing in railway travel, say you—and the train is hastened away, for it is not deemed advisable as yet to allow trains to travel at night in the new colonies—mail trains, at any rate—the reason for which is but too well known, although the line is as safe as it will ever be. The bridge over the Orange River—now almost completely restored—is the finest in South Africa, and, as everybody by this time knows, connects by rail the two colonies. A run of about four hours brings you to Bloemfontein. Here you must not, on any account, leave the platform till dinner is ready, and as soon as the repast is finished must return to the cars. It is an offence against martial law to transgress this regulation, and transgressors are severely and promptly dealt with. Martial law is swift to bring retribution—far too swift at times. At the dawn of day an armoured train left northward. It was our escort, and we shortly followed. The country immediately adjacent to the railroad is one undulating plain—fine pastoral territory, I should imagine—something different from the interior of Cape Colony. By midday the train steamed into the frontier station Vereeniging. In the olden days the Customs here were looked upon by English-speaking men as the worst in the world. On foreigners they were not so hard. From my own experience of four years ago I feel sure that the old Transvaal Custom officials located at this station could give the New York and certain continental Customs points, so eager were they exceeding their duty to the discomfort of the Uitlander of those days. A sense of gratification is felt now that

They are No More.

The railway through the Orange River Colony has been fenced in by the military, and woe betide the Boer who is caught near it, or any other person, for that matter, who gets close enough to touch the wires. So far there is not a thing that would strike a South African as being very foreign, but once over the Vaal River, and there you have it. Of course it will soon be all altered; indeed, much has been done already. At the same time, one does not have to look very keenly for the evidence of "made in Germany." Even the semaphores work upwards instead of down. Allowing for the somewhat natural prejudice of an English-speaking man, I saw nothing in the Transvaal to which the foreign idea could be legally attached that looked very durable, except the railway itself; and I am inclined to say—not that I pose as an authority on rail-tracks—that the I.M.R. in their Transvaal road have the best in South Africa but one, the N.G.R.

Then, again, the Natal iron horse has almost impossible curves and seemingly more impossible mountains to negotiate, such as are not to be found in the vicinity of the Golden City, outside which tall iron smoke-stacks eject clouds of black smoke. Local coal is being consumed, you say to yourself; but what matters what coal to the old resident returning? The moment he has looked forward to for so long has arrived, and he is going to make the most of it. Johannesburg is the hope of thousands, and the home of thousands behind them. When will the hopes of the masses be realised? The time is not yet, I fear.

Pretoria at Last.

On my right is a panorama of the city, while immediately on my left snorts No. 3 armoured train, duly named fore and aft "Cock o' the North." What more appropriate emblem? Large and small arms poke their noses outside the port-holes in the armour plating. Men with Scotch accents that you could cut with a knife, man the guns, and they chew and smoke ship's tobacco placidly. Fighting is their business. In all probability they have looked so long at the destruction and death that the weapons under their charge have barked forth that it is part of their every-day life now to kill or get killed. The "Cock o' the North" is no misnomer.

The Customs having duly labelled your baggage as "passed" (they do really label them—none of your chalked signs at Pretoria), you are at liberty to start forth on the conquest of the Transvaal capital. The first thing that drew my attention was "a milk shake" with the Stars and Stripes emblazoned thereon, while nearly opposite was the establishment of the Owl Drug Company. A notice over the electric bell calls on you to ring, but the "push button" is broken, and the Owl Drug Company itself *non est*. The sign, together with a few odds and ends and a few bottles of hair-tonic, is all that is left to denote that it was once a drug-store. There may be other stores connected with the craft in a like state, but this was the only one that came under my notice, and as it was the first one I confess it came as a shock. Further along is the Crow Pharmacy owned by Messrs. J. R. Jones & Co. (Limited), and almost next door the temporary home of the stranger in the land—to wit, the Grand Hotel. At the Grand they make a speciality of "doing" you from 20*s.* to 30*s.* per diem, but eggs are charged extra; while half a guinea would not buy a bottle of German beer when I, by sheer luck, found myself within its portals.

Underneath the hotel proper runs the sign "Directe Invoeders van Artikelen de Luxe," which is not quite truthful, as will be seen from the foregoing. Higher up the street you are greeted with "Transvaalsche Meubelmagarijn" (furniture-store); also acquainted with the fact that

Digitized by Google

in the vicinity "tobak en segaren" are to be had for a consideration. The "segaren" proved to be Transvaalers three for 1*s.* To my mind it was quite unnecessary to tax these 15*s.* per 100, as the Imperial authorities have done, for they are about the vilest imitations of cigars ever thought of.

I walked into one of Pretoria's principal hotels, and requested to be supplied with a glass of whisky.

"Very sorry, sir," said the man in charge, "but we are quite out of such liquids. The bar is only open for half an hour, and we can only supply lemonade, ginger-ale, Mason's essence, or Eno's fruit salt."

Hitherto I had always associated Eno's fruit salt with the drug-store, and Mason's with the housewife, but to find it being bottled, labelled, and retailed in an hotel at so much a bottle! Why, bless my ignorance! It is the whole temperance question in a nutshell—settled, too. Next day I walked boldly in and asked for a Mason's iced, in the same way as the Germans who sell drugs and chemicals on 'Change, and who read their *C. & D.* regularly, go into the lager-beer hall at the London Bridge end of Gracechurch Street.

The Editor instructed me to be sure and find out what immediate prospects there were of a

RESUMPTION OF TRADE RELATIONS,

and when I met a chemist who explained that he was occupied sorting 5 tons of goods out of 8 tons that he had remaining over of a shipment, the interest of my errand came back to me. I was on its track already.

"How many tons do you reckon on getting up this month?" I asked, eagerly.

"Couldn't give you an idea," he replied.

That was all the intelligence I got out of him. The fact is chemists have no wish to divulge just how they are situated in this direction—they evade the subject. I have been permitted to take from the Government statistics the exact figures covering importations connected with the trade for the three months ending September, 1901. They are, I consider, of decided interest. The aggregate value of the duties collected for the period under notice amounted to 133,307*l.* 16*s.* An advance of 25 per cent. for the three months ending December, 1901, may be confidently looked forward to, should military requirements in no way interfere with the present trend of events.

The returns are as follows:—

		Value
Acetic acid and vinegar	2,766 gals. ...	£584
Apothecary ware—Chemicals ...	— ...	19,350
Cyanide of potassium ...	77,841 lbs. ...	4,034
Quicksilver	— ...	224
Sulphuric acid	16,344 lbs. ...	159
Acids, other kinds...	— ...	174
Confectionery	199,238 lbs. ...	7,850
Glass bottles	8,501 doz. ...	991
Honey	7,044 lbs. ...	265
Hops...	35,273 lbs. ...	2,168
Mineral waters	685 doz. ...	149
Castor oil	1,287 gals. ...	451
Cocoanut oil	1,528 gals. ...	253
Lard oil	804 gals. ...	138
Lamp-oil	102,021 gals. ...	4,925
Linseed oil	2,156 gals. ...	337
Machine oil...	35,600 gals. ...	2,722
Sweet oil	2,354 gals. ...	773
Other kinds...	2,439 gals. ...	514
Sheep dip	540 gals. ...	129
Soap (common)	462,456 lbs. ...	5,578
Soap (toilet)...	22,618 lbs. ...	1,904
Spirit (perfumed)	571 gals. ...	1,454
Spirit (Oversea*)	27,167 gals. ...	16,363
Spirit (South African)	739 gals. ...	336
Tallow	30,201 lbs. ...	444
Turpentine	955 gals. ...	97

* "Oversea" doubtless infers for drinking-purposes.

The figures given are exclusive of importations for Field Force canteens, Relief Committees, Government and other stores imported as "Public Stores."

Unfortunately there is no prospect of a general surrender of those now in the field against us, consequently the opening-up of both the Orange River Colony and the Transvaal to civil traffic will be slow for some time to come. I would not like to go so far as to predict a date when manufacturers' representatives will be allowed in.

The Royal Arms.

MR. E. A. EBBLEWHITE, F.S.A., barrister-at-law, contributes to the *Ironmonger* a description of the Royal Arms and their use by tradesmen, which is of peculiar interest in so far as the writer, being a specialist in the subject, gives reliable and up-to-date information. The arms of King Edward VII. are accurately outlined in the following figure, and the heraldic description or "blazon," as settled by George III, is attached:—

Quarterly of four: first and fourth, ENGLAND—namely, gules three lions passant guardant in pale or; second, SCOTLAND—namely, or a lion rampant, within a double tressure flory-counter-flory gules; third, IRELAND, azure a harp, or, stringed argent: the whole encircled with the Garter. Crest: On the Royal Crown proper a lion statant guardant or, regally crowned also proper. Supporters: Dexter, a lion guardant or, crowned as in the crest; and sinister, a unicorn argent armed, crined and unguled or, gorged with a coronet composed of crosses patée and fleurs-de-lis, a chain affixed thereto, passing between the fore legs and reflexed over the back, of the last.

The plain English of this is that the shield is divided into four equal parts or quarterings, the first of which contains the arms of England—viz., on a red background, three gold lions walking (with the right paw raised), with their heads full-faced. These lions were devised for England on the second Great Seal of King Richard I. The second "quartering" gives the arms of Scotland—viz., on a gold back-ground, a red lion standing on its left hind leg, and elevating both its fore legs, the right above the left; this lion is surrounded by a narrow red double border, decorated with *fleurs-de-lis*, or conventional lilies, placed alternately outwards and inwards. The third "quartering" contains the arms of Ireland—viz., a golden harp with silver strings, on a blue blackground.

The *garter* surrounding the shield is the insignia of the Order of the Garter. The ribbon is of dark blue, edged with gold, and the letters and buckle are also of gold. The motto of the Order, "Honi soit qui mal y pense," should be translated, "Dishonoured be he who thinks evil of it."

The *crown*, as here depicted, is the form chosen by his Majesty, to perpetuate the Tudor crown used by his predecessor in name, King Edward VI. In heraldry the crown is painted gold, with jewels in their natural colours, including the emerald "mound," or ball at the top, which supports the cross. The *cap* within the crown is coloured crimson (though the cap now actually in use is purple), and turned up below the rim of the crown with ermine.

The Royal *helmet* stands *affronté* or full-faced, and is entirely of gold.

The *mantling*, or ornamentation on each side of the helmet, is of yellow or gold lined with ermine.

Digitized by Google

The *crest* is a lion of England, similar to those in the first and fourth quarterings of the shield, standing on a Royal crown, and having another on its head, both crowns being precisely similar to the one just described.

To avoid so much repetition of the Royal crown, the large one shown over the "shield" in the illustration may be omitted when the "helmet" and "mantling" are omitted.

The figures on each side of the shield are the *supporters*, and should *support* the shield. In hundreds of instances these supporters are foolishly depicted either as lying down on either side of the shield, as if digesting a heavy meal, or as chasing one another round the escutcheon, which it is their duty to hold up. Had it not been for such inaccuracies in the public representations of these "supporters" during the eighteenth and first half of the nineteenth centuries we might have been spared the doggerel:—

The lion and the unicorn
Fighting for the crown;
The lion beat the unicorn
All round the town.

The "blazon" tells us that on the dexter (or right) side we shall find a *lion*; but, as a matter of fact, he is on the spectator's left. This is owing to a heraldic fiction that the whole design is turned round, and that the "dexter" or right side of the achievement is seen on your left. The lion is entirely of gold, full-faced, and crowned with the Royal crown like the "crest." The "supporter" on the "sinister" side (the reader's right) is a silver unicorn, with horn, mane, tufts, and hoofs of gold. Its neck is encircled by a coronet (similar to the circlet of the Royal crown) composed of *crosses patée* (*i.e.*, crosses with expanding limbs nearly forming a square) and *fleurs-de-lis*, entirely of gold; and a gold chain hangs therefrom on the unicorn's chest, passes between its fore-legs and over its back, and ends close to the hind-legs. This "supporter" typifies Scotland.

In the *Compartment* or gold scroll-work below the shield is the Royal motto "Dieu et mon Droit," which has been used by our Sovereigns for some four hundred years. This motto is usually painted in letters of gold on a white motto-scroll or, as in the reigns of the first three Georges, on a dark-blue scroll edged with gold. The "compartment" also contains the Royal *badge* or emblem of the rose (for England), shamrock (for Ireland), and thistle (for Scotland) grafted on one stem —in allusion to the Union which was adopted by King George III. in 1801. In this "badge" the stalks, leaves, and sepals (or little leaves encircling the rose) are green. The flower of the thistle is purple, and the rose is a double one showing white petals within red ones.

The late Queen Victoria's crown was of the "Imperial" form adopted by her about 1886, and is shown in the adjoining figure: this should replace the "Tudor" form of crown adopted by King Edward in all representations of the late Queen's arms.

Queen Alexandra places the King's Arms in an oval formed by the "garter" on the left and the Royal Arms of Denmark in a floral oval on the right; the two ovals reclining against each other, the left slightly over the right. The crown and supporters (the latter standing on a gold "compartment") are like the King's, but the other accessories are omitted.

The coronet of the Prince of Wales is like the Royal Crown, but with a single instead of a double arch, and the coronets in the crest and supporter are made to correspond. Over the Arms, on the shoulders of the two supporters, and on the shoulder of the lion in the crest, appears a silver label of three points or pendants. Similarly the coronet changes and the label varies in the achievement of the various other members of the Royal Family.

It was not until after the general removal of tradesmen's signs in London in the early part of the reign of George III. that Royal tradesmen began to distinguish their shops by putting up the Royal Arms and the words "By Appointment," thus indicating that they held a warrant of appointment to the Royal Household, which had been obtained from the "Board of Green Cloth."

These warrants are issued by the Lord Steward's Department (*Board of Green Cloth, Buckingham Palace*), the Lord Chamberlain's Office (*St. James's Palace*), the Master of the Horse's Office (*Royal Mews, Buckingham Palace*), the Keeper of the Privy Purse (*Privy Purse Office, Buckingham Palace*), the Lord Chamberlain to Queen Alexandra (*Marlborough House*), and other Government Departments, and may be held "to the King," "to the Queen Alexandra," "to the late Queen Victoria," and to other past and present members of the Royal Family. All such warrants equally confer the right to use the Royal Arms—subject, of course, to the introduction of the proper marks of difference to indicate to which member of the Royal Family the appointment is held. No fees are payable by the tradesman to the Department issuing the warrant, nor do the Commissioners of Inland Revenue require a licence to be taken out by him for the use of the Royal Arms in connection with matters relating merely to his trade, as on bill-heads, trade-labels, &c., or on his shop-front.

The use of the Royal Arms without the authority of the King or any of the Royal Family is not prohibited, if the user does not employ them "in such a manner as to be calculated to lead other persons to believe that he is carrying on his trade, business, calling, or profession by or under such authority."

Orders for goods from tradesmen for the use of the Royal households come through the various departments referred to, and a tradesman who has received one or more such orders, if desirous of obtaining a Royal warrant, should apply to the head of the department for the privilege, though it does not by any means follow that the application will be successful. There is no difference in degree of importance between warrants issued by the several departments, except that the King's warrant-holders may claim precedence of the Queen's, the Prince of Wales's of the Princess's, and so forth.

New Books.

Any book named in this list can be supplied post-free to any part of the world on receipt of the published price by the Publisher of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

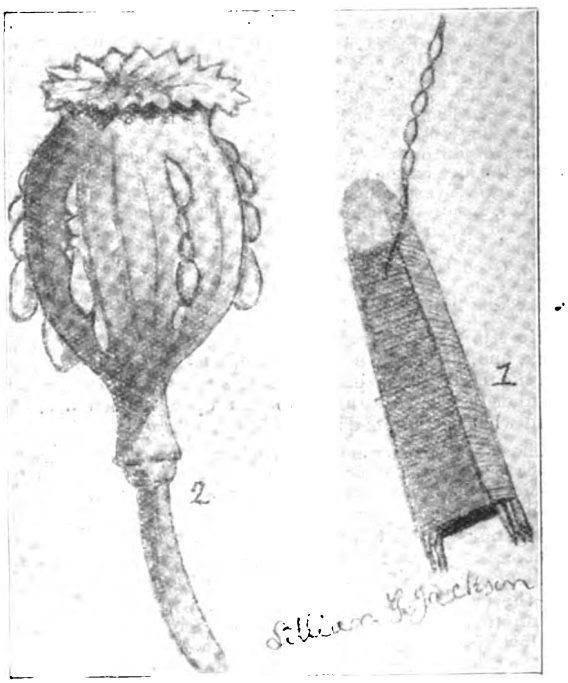
Poppies and Opium.

By JOHN R. JACKSON.

IT seems but a week or two back, and yet several months have passed, since, in flying up from Devonshire on the South-Western line one of the most brilliant sights presented itself on the banks and fields in the neighbourhood of Basingstoke, in the form of a remarkably abundant crop of corn-poppies. The descending yet brilliant sun of a glorious summer evening intensified the brightness of the poppies' own colour, which made one reflect that this pest of the farmer would, if it were less common, be hard to beat as a garden-plant; and in this connection our memory travelled back to another display of poppies that had attracted considerable attention only a week

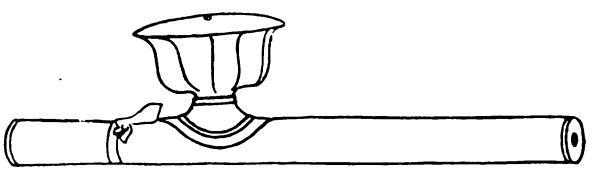
CORN-POPPY (*Papaver Rhœas*). OPIUM-POPPY (*Papaver somniferum*).

or two previously in the Royal Gardens, Kew. In this case, however, instead of the scarlet blaze of the *Papaver Rhœas*, a great variety of form and colour was represented by the numerous double varieties of opium-poppy (*P. somniferum*) that have of late years become so much cultivated in gardens.



DOUBLE POPPY.

Both the species of poppy here alluded to are well known to the pharmacist, though now-a-days the corn-poppy has but very little value. Formerly, however, the petals had the reputation of being sudorific and anodyne, and were used in erysipelas, inflammation of the lungs, &c. Notwithstanding its bright and attractive colour, no one would think of growing *Papaver Rhœas* as a garden-plant, though the variety known as the Shirley poppy has become quite a favourite in our gardens, assuming, as it does, a variety of tints, which, together with its graceful and slender habit, justifies its position. From a pharmaceutical point of view the white or opium poppy (*Papaver somniferum*) is one of the most important plants in the Pharmacopœia, yielding, as it does, opium with all its valuable alkaloids. Like its near relative the red poppy, it is found in cornfields and waste places, and though it is common enough in many parts of the British Isles, it seems to have no claim to the position of a British plant; its distribution having probably arisen from its cultivation in gardens, all the favourite varieties of double poppies being derived from it.



The home of this species is considered to be in all probability South-Eastern Europe and Asia Minor, but at the present time it is widely spread throughout Europe and Asia, N.W. Africa, and N. America. Its cultivation for the production of opium dates from an early period in Asia Minor and Greece, while at the present time the largest quantity of opium is produced in India, China, Asia Minor, and Persia. Though the quality of opium obtained from plants grown in temperate countries differs but little from those grown in hotter climates, the quantity is much less, so that the plants are grown chiefly for the "heads," the harvesting of which usually takes place in the early autumn.

Though the collection of opium differs somewhat in different countries, the principle is practically the same. Thus in India the heads are scratched longitudinally by little

1. LANCET USED FOR SCARIFYING POPPY-HEADS.
2. POPPY-HEAD SCARIFIED. OPIUM EXUDING.

lancets, as shown in the figure, while in Asia Minor they are incised spirally. The object is to cause the milky juice to flow outwardly and to partially solidify on the surface of the poppy-head, as seen in the drawing, when it is scraped off with a small iron scoop or spoon, and moulded in India into large balls, and in Asia Minor into irregular lumps. Though

PIPE FOR SMOKING OPIUM.

nothing new can be said on the subject of opium-smoking, it is not impossible that there are some of our readers who have never tried it, nor, perhaps, ever seen an opium-pipe. We therefore give a figure of one. The stem of the

Digitized by Google

original from which the drawing was made is of bamboo, and the bowl of red porcelain. Clasping the bamboo is a metal plate, into which the bowl fits, and near this plate is shown one of the nodes, or leaf-scars which forms a ring completely encircling the stem. The mouthpiece, with the central aperture, is of ivory, and on the top of the bowl is seen also a small aperture. A very small quantity of opium is placed upon this aperture and the lips applied to the extreme end of the bamboo tube. Meanwhile the bowl is held over a lamp, and the opium by this means kept alight. The pipes, of course, vary in style and elaboration, but the drawing shows one of medium quality.

With such attractions as poppies possess, besides their practical interest, it is not surprising that they have of late years become garden favourites.

Fictional Pharmacy.

A CLEVER psychological study by Mr. H. C. Rowland in the current number of *Munsey's Magazine* introduces the up-to-date bacteriological pharmacist. A young man is nervously pacing up and down in front of a drug-store, and finding himself afraid to enter. At length—

He caught his breath and dived suddenly into the shop. With a pale face, but steady steps, he walked back to the little window over which was the single word "Prescriptions." On the other side of the window there was another sign: "Bacteriological Examinations a Speciality."

He tapped smartly on the ground glass. It slid up, framing in the opening a pallid, peevish face.

"Have you examined the specimen I left here yesterday?" asked the man on the outside.

The peevish expression gave place to one of professional suavity.

"Yes, doctor—one minute, please. Let me see—479,385—yes, here you are, sir; thank you—call again, sir. We make a speciality of this work, and employ one of the best bacteriologists in the city. Good day, sir."

The young man shoved the yellow envelope into his pocket and walked out hurriedly.

He sits down presently on one of the benches in the park, and, although a brave man, who more than once in his life had calmly led his soldiers to seeming destruction, he finds it a hard struggle to tear open the envelope. He read what it contained:—

The paper lying crumpled in his hand bore the superscription of the laboratory, and, underneath, the signature of the analyst. Between were the words, "Specimen swarms with tubercle bacilli."

The bulk of the tale is an analysis of the feelings of the condemned man—for the specimen is his own. He first calls on an old friend—a physician in large practice and, on the pretence that the examination was made on behalf of another man, he obtains the doctor's verdict that the yellow slip is clear proof of the hopelessness of the case, as the pharmacists who made the bacteriological examination "are reliable people." He reads up the symptoms in the doctor's library after the doctor has left on his rounds, and afterwards strolls round to the office of his *fiancée's* father to tell him the news. He finds the old man immersed in business on account of a "panicky" market; so he writes several letters of farewell, and, after bidding the old man good-bye, goes out, resolved on suicide. He thought a narcotic would be the least offensive way out.

He wondered if he would have any difficulty in obtaining the drug. Then he happened to think of the druggist who had made the analysis. Good! They had taken it for granted there that he was a physician. They would naturally let him have it without asking any questions. His car took him to the door of the pharmacy. As he entered the shop, he wondered if it could really be the same day that he had been there before. Quietly he walked to the counter.

"I want an ounce bottle of laudanum," he said to the clerk. "Do you wish a prescription?"

The clerk had not been long employed in the store. "I guess," he began. "Just wait a minute, please." He walked back to the window marked "Prescriptions."

"D'you want an order for a bottle o' laudanum?" he asked, tapping on the ground glass.

"Who is it?" The slide went up smartly, and the pale face peered forth. "That gentleman down there?" A look of recognition came into his face. "No, that's all right—he's a doctor. Oh, by th' way"—he came hurriedly out from behind the partition, and walked down to where Duncan was standing.

"I'm sorry, doctor," he began apologetically, "but after you left this morning I found I'd given you the wrong report on that specimen you left. I tried to find out where you lived, but had no way of going at it. This is yours."

He held out a yellow envelope.

The multicolored bottles on the shelves danced before Duncan's eyes in kaleidoscopic array. He gripped the counter till his nails cut into the flesh.

"What did you find?" he asked in a voice that seemed to him to come from a long way off.

"Nothing at all—didn't really expect to, from the character. What's the matter, sir?"

"Oh, nothing. I was pretty busy to-day, and went without my lunch. You ought to be more careful about the reports of those analyses. It's a very serious matter to report unfavourably. I'm not sure that you're not liable to a suit for damages."

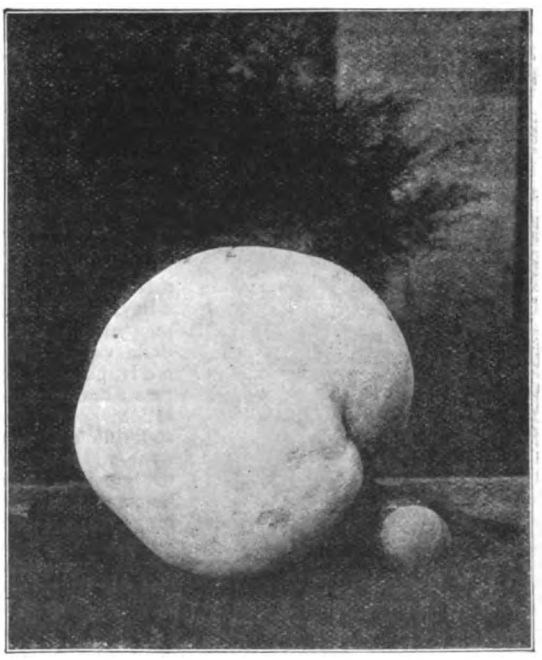
"I know it, sir. I can't tell you how sorry I—— You look very badly, sir; better let me send for a cab."

Duncan sank down on a stool.

"Yes," he said; "please call a cab." He drank at a gulp the whisky which the clerk had offered him at a sign from his employer. "And call a messenger, please—at once!"

He leaned over the counter and rested his head on his arms.

A two-wheeler drew up at the door.



"Here's your cab, doctor. Oh, you wanted some laudanum?"

Duncan shuddered. "Never mind the laudanum," he said.

The objectionable part of the tale—from a pharmacist's point of view—is the imputation that an error was made by the pharmacist. In real life this, of course, would not occur, but in this instance we will allow it to pass for the sake of the stockbroker's charming daughter.

Lycoperdon.

MR. W. H. WAIND, of Hastings, sends us a photograph of an abnormal specimen of lycoperdon which he collected in Yorkshire last summer. It weighed 8 lbs. and measured 40 inches in circumference. The child's playing-ball placed at the side was about 4½ inches in diameter.

The name giant puff-ball, usually applied to *Lycoperdon giganteum*, will be seen to be fully justified by this specimen. This peculiar fungus is by no means uncommon in pastures, and in its young state as it emerges from the grass might be mistaken for a true mushroom. It can readily be determined, however, by breaking in half, when it exposes a solid white flesh. Even if it were mistaken for a mushroom and

Digitized by Google

eaten as such, no harm would ensue, for though puff-balls are frequently shunned as dangerous fungi, to the expert cryptogamist they are included amongst the most delicious of the edible species, but it must be gathered when quite fleshy and white and cooked at once, for it deteriorates very quickly after gathering, and as it gets older becomes a mass of brown dust-like spores. Dr. M. C. Cooke, in his little book on British fungi, gives his experience of the economic side of the giant puff-ball. "A gardener brought us a large puff-ball equal in size to a large quartern-loaf, and which was still in its young and pulpy state, of a beautiful creamy whiteness when cut. It had been found developing itself in a garden at Highgate, and to the finder its virtues were unknown. We had this specimen cut in slices of about ½ inch in thickness, the outer skin peeled off, and each slice dipped in an egg which had been beaten up, then sprinkled with bread-crumbs and fried in butter with salt and pepper. The result was exceedingly satisfactory; and finding this immense fungus more than our family could consume whilst it remained fresh, we invited our friends to partake, and they were as delighted as ourselves with the new breakfast relish, to them and to us, the first, but we hope not the last, experiment upon a fried puff-ball."

Though the chief economic value of this fungus at the present time is an article of food, it was formerly used to stanch blood and also as tinder. The fumes arising from the plant when burnt are said to have a narcotic effect, and it is sometimes used to stupefy bees to enable the honey to be taken.

Reviews.

The Nordrach Treatment for Consumptives in this Country. How to Cure and Prevent Consumption and other Forms of Tuberculosis, together with a General Consideration of the Laws Governing Health. By JAMES ARTHUR GIBSON. 16mo. xvi + pp. 164. 3*s.* 6*d.* net. London, 1901: Sampson Low, Marston & Co.

THE author of this book is an Edinburgh chemist, who was cured of pulmonary tuberculosis a few years ago by the Nordrach treatment, and is now in better condition than ever he was before. His book comprises the articles on the subject which he contributed to the *Nineteenth Century* and the *Westminster Review*, but the articles have been largely re-written. The work is in four parts—viz.: (1) Description of the Nordrach treatment and (2) its practicability in this country; (3) the cry of the consumptives and (4) the open window. The author first describes his own case, and proceeds to give a great deal of information in regard to the open-air cure, including particulars of cases which have come under his own observation; instructions as to diet, clothing, and sleeping; with incidental remarks on the numerous empirical methods of medicinal treatment. From cover to cover the book is of great interest, and we are glad to note throughout it a cheerful, optimistic tone and a large-hearted sympathy, which make the book an eminently desirable one to place in the hands of those who are afflicted with consumption. There is no question in our own minds that the Nordrach treatment has been unnecessarily vilified by medical practitioners, while many who half believe in it persist in complicating the treatment with medicinal remedies, which too frequently retard recovery. There is no bacillus which is exterminated so easily as that of consumption, and the only microbicides necessary for this are sunshine and fresh air. That is the doctrine which Mr. Gibson preaches with a degree of hopefulness which is inspiriting to the afflicted, and we cordially commend the book to his *confrères* as one which they may sell as well as read.

Hager's Handbuch der Pharmaceutischen Praxis. Von B. FISCHER und C. HARTWICH. Band II. 8*s.* Pp. 1,334. Berlin, 1902: Julius Springer.

SOMEWHAT less than two years ago we reviewed the first volume of the new and completely revised edition of Hager's "Handbook of Pharmaceutical Practice" (*C. & D.*, May 12, 1900, page 799). The recent appearance of the second volume, which in the meantime has been issued to subscribers in parts, and which now completes the work, affords an opportunity of again bringing it to the notice of our readers. In our review of the first volume a brief account was given of its evolution from the original conception of Hager, as also of the plan, scope, and merits of the present edition, which has now attained such stately proportions. The two volumes are nearly equally divided with regard to the extent of the subject-matter, which is arranged in alphabetical sequence, the first including the letters A to G, and comprising 1,280 pages, whereas the second volume (H to Z) comprises 1,179 pages, exclusive of the index.

A survey of the contents of the work at once indicates its general thoroughness and completeness, since it includes nearly all the drugs and preparations which are of medicinal importance, and therefore of special pharmaceutical interest. The organic and synthetic chemicals which have been introduced as medicinal agents in such infinite variety in recent years also appear to have been very fully considered, and, in fact, within its pages information may be found concerning practically every subject which may be included in a highly diversified pharmaceutical practice.

In a work covering so large a field, and which has required so much time for its elaboration, it is not altogether surprising that there should be some deficiencies or actual errors, but it is evident that the number of these which may be revealed by a most critical inspection is comparatively few. Thus, on page 101, the so-called *Jaborine* is given as one of the constituents of pilocarpus-leaves, whereas it has been conclusively shown by Jowett that this substance is not an independent alkaloid, but simply an impure mixture. On page 625 the constitution of pilocarpine, as given by Hardy and Calmels, is still retained, although this has likewise been shown to be incorrect and without any foundation. On page 168 the use of the essential oil of *Juniperus virginiana* is referred to, but the true oil of the leaves of this plant appears to have been distilled but once, and what is commonly sold as such is usually the oil of *Thuja*, or, perhaps, a mixture of coniferous oils (see Schimmel's *Bericht*, April, 1898, page 13). Under potassium tartrate (page 219) it is stated that this salt, either in the form of crystals or powder, contains no water of crystallisation. It does, however, contain ½ molecule of water. Lobelia (page 308) is stated to contain two alkaloids, lobeline and inflatine. The latter substance is not an alkaloid, but was shown some time ago to be phytosterin (Siebert, Inaug. Dissertation, Harburg, 1891). *Podophyllum Emodi* (page 689) is stated to contain only half as much podophyllotoxin as *P. peltatum*. The conditions are actually just the reverse of this, since it has been shown by Henry that the Indian drug (*P. emodi*) contains from two to five times as much podophyllotoxin as the American *P. peltatum*. These few inaccuracies are noted from the fact of having fallen under our personal observation, but they should not be considered as materially detracting from the great value and usefulness of this comprehensive work. The two volumes are clearly printed, well illustrated, and substantially bound. The very complete index should also be specially noted, since it comprises no fewer than 154 closely-printed large octavo pages, and reference to innumerable minor subjects is thereby greatly facilitated. We can repeat the hearty recommendation that was expressed in connection with the first volume, in regarding it as a work that is not only indispensable to every progressive pharmacist, but which will also be found extremely useful in many branches of applied chemistry. It worthily perpetuates the name of Hager, and reflects great credit upon the editors and their collaborators, who have so successfully accomplished their painstaking and laborious task.

MESSRS. BRÜCKNER LAMPE & CO., of Berlin, in their annual report state that the drug and chemical trade in Germany last year was not depressed to so great an extent as other branches of commerce. The demand for medicines is to a certain degree assured even in hard times, by reason of the public sick-fund societies, but in spite of this fact the consumption fell off considerably, which is of course attributed to the good public health and the prevailing commercial depression. People have had recourse to cheaper remedies where possible, and treatment by the Kneipp and cold-water cures has become popular. It is to be regretted that the flood of new remedies showed no abatement last year.

Legal Reports.

High Court Cases.

Treatt *v.* Samuelson.

In the Chancery Division on Tuesday, January 21, the trial of this action was commenced before Mr. Justice Joyce. The plaintiff (Mr. Treatt) claimed to be entitled, under Section 35 of the Partnership Act, to have a dissolution of his partnership with the defendant, on the ground that Mr. Samuelson had committed a wilful and persistent breach of the partnership-agreement. The business carried on by the parties was that of essential-oil merchants.

In opening the case for the plaintiff, Mr. Hughes, K.C., said the conduct on the part of the defendant was such that the plaintiff could not reasonably be expected to continue the partnership. The nature of the breach alleged against the defendant was that he had persistently drawn from the partnership a great deal more money that he was entitled to draw.

Mr. Justice Joyce said he recollected some of the facts which had been disclosed to the Court when the matter came on as a motion. He suggested that it was a case for a settlement.

Mr. Hughes agreed, but Mr. Younger, K.C. (who appeared for the defendant), said there could be no settlement on the terms which had been offered.

Mr. Hughes went on to say that, prior to August 27, 1900, Mr. Treatt had carried on the business of an essential-oil merchant. Mr. Samuelson had been in the employment of the plaintiff as manager, and on the date mentioned it was agreed that the parties should become partners for fourteen years as from July 1, 1899. Mr. Treatt's capital was to be taken as an agreed sum, and he was to receive interest at the rate of 5 per cent. on it, and Samuelson was not to bring in any capital. Of the profits up to 3,000*l.* plaintiff was to take four-fifths and Samuelson one-fifth, and Treatt was to receive three-quarters of the profits which exceeded 3,000*l.* and Samuelson one-quarter. For the first three years Samuelson was to have at least 400*l.* a year. If at the end of any year the net profits should not have amounted to such sum as that drawn out by a partner, the balance should be repaid by him. At the date of the partnership articles there was a sum of 924*l.* due from Samuelson to Treatt, and the latter said it was arranged that the former should draw 8*l.* a week, and that it was intended between them that the liability of 924*l.* should be cleared up out of the remainder of Samuelson's profits. Defendant drew very largely in excess of 8*l.* a week from the first, but Mr. Treatt did not discover it until April, 1901, when a balance-sheet as to March 31 was made out. This showed that the defendant had drawn 975*l.* Treatt remonstrated with him, and Samuelson expressed his regret, and a memorandum to the following effect was drawn up and signed by defendant:—

> To give R. C. T. a life-policy endorsed to him as covering 800*l.*, to agree to draw at the rate of 8*l.* a week from now to the end of 1901, and afterwards at 10*l.* a week. I agree to the above, and the interest in the policy of 80*l.* is transferred to R. C. Treatt until I am out of his debt.

Upon that footing Treatt went on with the business. In October, 1901, he again looked into the question of the drawings, and he found that from April to October defendant had drawn 493*l.*, or drawings of about 70*l.* a month. He did not concede that the repayment of the sum was any justification of the drawings. There were further remonstrances by the plaintiff, and ultimately he suggested that the partnership should be dissolved. The defendant complained that since the date of the dispute the plaintiff had sent out letters and had transferred the banking account of the partnership to his own name. He argued that that could not be a defence to the action even if Treatt had mistaken his rights.

Affidavits on both sides were then read.

Mr. R. C. Treatt, the plaintiff, said that on account of the drawings of the defendant in December last he had been obliged to borrow money to meet the requirements of the business. For that purpose he borrowed 1,500*l.* from the London and County Bank on his own responsibility.

Cross-examined: It was possible that he had drawn 870*l.* out of the company's account in the previous seven weeks. He did not know whether ten days after the partnership was formed he drew 1,000*l.* out of the partnership property and paid off a private debt of his own to the bank. The firm became liable to the bank for this 1,000*l.* The acceptance of June 10 was a four months' acceptance, which had been renewed at intervals from time to time, and 500*l.* debt had been added. The amount was entered in the bank-book as a liability of the firm. The firm of R. C. Treatt & Co. owed him 1,500*l.*, and he owed the bank 1,500*l.* The firm owed him 1,500*l.* in addition to his capital of 3,000*l.* He deposited the deeds with the bank when he first borrowed the money, before the partnership. It was true that he had found money for the business which would not have been necessary but for the over-drawings of the defendant. He had brought the action with reluctance, and had been deeply pained to make suggestions against the defendant. He was not influenced by the fact that if he succeeded in getting rid of Mr. Samuelson in this action he would not have to pay him anything. He had known Mr. Samuelson for fourteen years, and during a large part of that time in his absence Mr. Samuelson had the right to draw on his banking-account, and sign his name in connection with the business. Before the partnership Mr. Samuelson had a percentage of profits. The partnership was entered into for the benefit of his wife and family and as a recognition of Mr. Samuelson's services. The agreement as to Mr. Samuelson's drawings was a verbal one, made a few days after the deed of partnership was signed. There was never any agreement as to his own drawings. The agreement was that the defendant should not draw more than 400*l.* per annum. In his affidavit he said it was agreed that the defendant should not draw more than 33*l.* 6*s.* 8*d.* per month. Under the articles of partnership Mr. Samuelson was entitled to 400*l.* a year, whether there were profits or not, and the agreement not to draw more than that sum was in order that he might pay off the debt he owed. He did not remember whether it was before or after the execution of the deed that the conversation with reference to defendant's drawings took place. In his affidavit he stated that at the date of the partnership the defendant owed him 1,524*l.* 2*s.* 6*d.*, but the fact was that at that time he owed defendant 600*l.* off that, and he regretted that he had not made that clear.

The further hearing was adjourned.

SECOND DAY.

On Wednesday plaintiff was again cross-examined. He stated that the agreement with defendant that the latter was not to draw more than 400*l.* a year was made clear to the defendant, but the sum was not entered in the deed of partnership because he did not desire his solicitor to know the amount. He knew at the end of 1899 or the beginning 1900 that the defendant was drawing more than 400*l.* a year. The witness was then cross-examined as to a number of transactions on the Stock Exchange in which he and defendant were jointly interested. He had lost confidence in the defendant.

Mr. Johnson, an accountant, gave evidence as to the accounts of the firm, of which he had prepared a summary for the use of the Court. He was examined at considerable length by Mr. Hughes in regard to the loans which plaintiff received from the bank (1,000*l.*, ultimately increased to 1,500*l.*). There was a good deal of discussion about this, the Judge occasionally going to the witness-box in order to examine the books of the firm; and after one of these journeys to examine Mr. Treatt's account, in order to see whether the interest on the loans was charged to it or the firm, he remarked: "It appears to me to be a voluminous account."

Mr. Younger then took up the cross-examination, and elicited from witness that Mr. Treatt's profits in March, 1900, were sufficient to pay 1,000*l.* of the loan, but not 1,500*l.* Mr. Younger suggested that the money was paid out of the assets of the business, to which witness did not demur.

The Judge: It has been stated that 1,000*l.* was paid by Mr. Treatt, but the books show that the firm paid it.

William James Fancourt, junior clerk in the employment of the plaintiff, said he had seen some of the invoice forms with the names of Treatt and Samuelson on them.

Did you strike out at any time the name of Mr. Treatt or

Digitized by Google

Mr. Samuelson?—I crossed out both names and put "R. C. Treatt & Co."

Did you do that by Mr. Treatt's instructions or not?—No.

Why did you do it?—As an experiment, in case the erasure of the name should eventually be wanted, and in order to see how it looked. Witness added that he had charge of the stationery of the firm. He sent out the invoice with the two names struck out by mistake. About eight invoices were treated in this way. At that time he had not been told there was any dispute between Mr. Treatt and Mr. Samuelson, but he understood there was. Cross-examined by Mr. Younger, witness adhered to his statement that he had altered the invoices on his own initiative as an experiment. He had done it on the morning of November 20 with a typewriting machine. He had not done more than eight, and at no other time. The two names had also been cut out from some of the printed forms, but he did not do that. He took the forms to be printed, and he did not think the names were blacked out then. He did not know by whose instructions the printers were told to print the invoices without the names.

The Judge: It is most extraordinary! [Counsel concurred.]

Mr. Alfred Thomas Field, a member of a firm of printers who printed stationery for the plaintiffs, said it had been the practice to have on their stationery the names of R. C. Treatt and B. Samuelson. He did not know that the names had been omitted, but they were omitted from some 500 invoices. He had no instructions to omit them.

Mr. Alfred G. Morris, in the employment of the firm as bookkeeper, said the books were audited until August, 1898, by the defendant's brother. The partners never signed the balance-sheets that were drawn up from time to time. There was no truth in the suggestion that Mr. Treatt forced the defendant's private drawer; the drawer was unlocked.

This closed the case for the plaintiff.

Mr. Younger, K.C., for the defence, called attention to the fact that the action was brought under Section 35 of the Partnership Act. If the plaintiff could get rid of the defendant under that section on the ground of misconduct, as he asked, the defendant would cease to have any interest in the business, and the plaintiff would get rid of him without any payment whatever. Ever since Mr. Treatt wrote these letters in November, and ever since Mr. Samuelson returned to this country Mr. Samuelson had remained away from the premises of the partnership, and Mr. Treatt had been left in sole and undisputed possession. From that time Mr. Samuelson had never purported or attempted to draw any cheque on the partnership-account. To succeed in the action Mr. Treatt must establish a wilful or persistent breach of the partnership-agreement, or acts which had amounted to a destruction of confidence, so that the business had become imperilled. The charge launched against the defendant was that of taking out of the business not only his own profits but Mr. Treatt's capital, and that to such an extent that the banking-account was not safe in his hands. Mr. Samuelson would be called to say what had been done, and when he had given evidence he should with confidence ask his Lordship to say that Mr. Treatt was not entitled to the relief he claimed, which would have such serious consequences to Mr. Samuelson.

The hearing was then adjourned.

The report of Thursday's proceedings will be found in our Coloured Supplement.

BERNHARD *v.* ERASMIC COMPANY (LIMITED).

IN the King's Bench Division of the High Court of Justice on Monday, January 20, the trial of this action came before the Lord Chief Justice and a special jury. The plaintiff, Mr. Edgar Hugh Bernhard, brought his action against the Erasmic Company (Limited), Warrington, claiming damages in respect of wrongful dismissal and for arrears of commission. The defendants by their pleadings justified the dismissal, but this defence was now withdrawn, so that the only question was the amount of damages. Mr. C. F. Gill, K.C., and Mr. Montagu Lush appeared for the plaintiff; Sir Ed. Clarke, K.C., and Mr. Shearman for the defendants.

In opening the case Mr. Gill said the defendants had taken the only possible course open to them by, at the very last moment, stating the question for the jury was the amount of damage to be paid to the plaintiff. The plaintiff was a young man of 29 years of age who was educated at King's College.

The Lord Chief Justice asked whether, as justification had been withdrawn, the defendants could not go a little further.

Counsel having conferred, a settlement was arrived at.

Sir Ed. Clarke said he was glad to say that the time of the jury would be saved. But before stating the result arrived at he wished to say a word in justice to the plaintiff. He quite understood the desire that the matter should be investigated in court in order that there might be a report generally to show that there was no complaint made with regard to the plaintiff. Having regard to the circumstances of his dismissal from defendant's service and the statements which were then made, the directors were bound in honour, and he as their counsel ought on their behalf to say that they were not in a position to find any justification for the statements, injurious to the plaintiff, which might have been made. He had agreed that a sum should be paid to the plaintiff in satisfaction of all damages and costs in connection with the action.

Mr. Gill said the plaintiff was summarily dismissed by the defendants, for whom he had done valuable work, on information given to them that he had accepted commission. There was absolutely no foundation for this statement. Circulars were sent round to the trade in which it was stated that Mr. Bernhard had been summarily dismissed, and the result was, of course, disastrous to this young man. There was only one way to clear his character, and that was by having the case tried out in open court, or getting a statement which would place his character beyond suspicion, and the payment of such a sum by the defendants as would satisfy everyone that the company had done all in its power to remedy the wrong it had caused.

The Lord Chief Justice said the statement made by defendants' counsel amply justified the plaintiff in bringing the action, and made it impossible for anyone to say that he was not justified in so doing.

The jury having returned a verdict for plaintiff for 2,250*l.*,

Sir Edward Clarke said the defendants had paid into court 44*l.* 4*s.* 10*d.* in respect of arrears of commission, and this sum would be paid to the plaintiff in addition to the 2,250*l.*

THE KOKO COMPANY *v.* LUNGER & CADMAN.

THIS case was mentioned before Mr. Justice Swinfen Eady in the Chancery Division on January 17. Mr. Arthur Sims said there was an interim injunction against the defendant until that day, but they had consented to it being continued until February 1, and that the plaintiffs have till January 29 to file their evidence in reply. The injunction was allowed to continue accordingly.

[In regard to this matter our reporter writes: "The motion was a very short one, and the parties not wishing the case to be published did not state any facts."]

Pharmacy Act, 1868.

SALE OF EMERALD GREEN.

AT the Leeds City Police Court on Friday, January 17, before Mr. C. M. Atkinson, Taylor's Drug Company (Limited) were summoned for having (1) sold a preparation of arsenic without having labelled the wrapper, (2) sold it to a person unknown to the seller, and (3) omitted to make a proper entry in the poison-book. The prosecution was undertaken by Mr. T. Thornton (from the Town Clerk's Department), and Mr. John Harrison, ex-Town Clerk of Leeds, represented the defendant company. Mr. Harrison stated at the outset that he was obliged to admit that a technical mishap had occurred, and he suggested that this admission might save the time of the Court. The Stipendiary Magistrate, however, thought it would be better to have the facts related.

In laying the case before his Worship, Mr. Thornton stated that the charge against the defendants, who were store chemists, with their chief office in Guildford Street, was on three informations under Section 17 of the Pharmacy Act, 1868. An assistant inspector of Foods and Drugs, James Burke, visited the Waterloo Road branch of the defendants, and was served with ½ lb. of "emerald green" in a wrapper which had no label on it.

Digitized by Google

Mr. Harrison interposed with the remark that it gave the name.

Mr. Thornton admitted that it did, but, he continued, there was no reference to poison. The assistant inspector was unknown to the defendants, and no entry was made in any book at all.

Replying to his Worship, Mr. Thornton stated that "emerald green" was a substance, the bulk of which was copper aceto-arsenite. It was commonly used for colouring walls.

Mr. Harrison: It is not a food or a drug.

Mr. Thornton went on to say that in the circumstances he did not propose to enter into the question of how far the health might be affected of any persons living in the house where the preparation was used. It was, however, a reprehensible practice to sell such a preparation to a person who had not the slightest idea that it was anything but a harmless preparation.

Mr. Harrison admitted a sale, but urged that the offence was purely a technical one. Prior to the purchase of the "emerald green" in question nobody in the world had any idea whatever that it came under the provisions of the Pharmacy Act. It was not a poison in the ordinary sense, which might be taken, nor was it in any way used either in regard to medicine or food. It was not that kind of article sold specially by chemists or by those who dealt in poisons, but was in reality the thing sold by painters for the most part, or by colour merchants. It might in some cases be kept in stock by druggists, but it was not the article dealt with by them as chemists. Many grocers, for instance, and others dealt in it, and its general use was to employ an Irishman for "white-washing." (Laughter.)

The Stipendiary: I do not know that you can make a distinction between poisons.

Mr. Harrison: This action is entirely new, as nobody considered it a poison before. Continuing, he said the shop where it was obtained was really a store; no poisons were sold at it, and this article certainly had not been considered generally in the trade as a poison. He believed that it was the first prosecution of the kind in the Kingdom; it was the first in Leeds, at any rate. He agreed that great care was important in dealing with such things, and instructions had been already given to the shops that the stuff was to be treated as a poison. In fact, in cases where the defendants did not keep a chemist they had withdrawn the article altogether. Mr. Harrison proceeded to observe that a company was not a person within the meaning of Section 17, but, he added, he would not take that point. It was not his desire to ride off on a technicality. His Worship would see from the wrappers that they have the name of the sellers (Taylor's Drug Company), so that there was no concealment in the matter.

The Stipendiary Magistrate: There is no question of concealment; it is one of principle. Have there been cases of people poisoned?

Mr. Harrison: Nothing of the sort, sir.

Dr. Cameron, the medical officer of health for the city, stated, in reply to questions, that it was well-known that wall-papers containing arsenic were exceedingly dangerous, the malady taking the form of chronic poisoning.

Mr. Harrison: The next thing we shall hear of will be a prosecution by the doctor against wall-paper sellers.

Dr. Cameron added that wall-paper poisoning produced sickness and an affection of the eyes, the latter being a sort of inflammatory condition.

Mr. Harrison: I should think it rather serious to the nose. (Laughter.) The nose must be made to run. (Renewed laughter.) One has heard from childhood that green was considered to be deleterious.

The Stipendiary Magistrate: My impression is that it was the contrary. I always thought nature made so many things green because that colour was so refreshing and restful to the eye.

Mr. Harrison: Personally I have a decided preference for that colour. (Laughter.)

The Stipendiary Magistrate: Of course proceedings of this kind would not stop the use of the preparation; it would be only necessary to wrap it up in a particular form.

Mr. Thornton: It would give every purchaser notice that it is a poison.

Mr. Harrison: I suppose the only object of these proceedings is to call attention to the fact. We have sold this article for the purpose mentioned exactly as received from the wholesaler, and we acted quite innocently if we committed a technical mistake. It seemed unnecessary to take out three summonses.

Mr. Thornton intimated that he would be content with a decision on one of the summonses.

Mr. Harrison pointed out that the article was not in the British Pharmacopœia or any of the druggists' text-books.

The Stipendiary Magistrate: I take it that the only object is to give publicity to the fact, therefore I think that the case will be met with a fine of 40*s.* on the first summons, and ordering the payment of the costs of the summonses on the other two.

Sale of Methylated Spirit.

ON January 14, in the Dublin Southern Divisional Court, before Mr. Byrne, K.C., Arthur Duignan, 97 Lower Leeson Street, Dublin, was prosecuted for having sold methylated spirit without being licensed. For the defence it was stated that Mr. Duignan had succeeded his father, who had been licensed. The licence had not been renewed because the defendant had forwarded the letters he had received from the Inland Revenue to his father, who had not replied. Mr. Byrne imposed a fine of 12*l.* 10*s.*

Sale of Intoxicating Liquor to Children Act.

WHAT IS A SEALED BOTTLE?

THIS question was decided by the Peterborough Magistrates on January 16, in a test-case brought by the chief constable against a well-known licensed victualler. A sergeant of police saw a boy under 14 with a pint of stout in a bottle. A piece of gummed paper was loosely placed over the cork. He took the boy and the bottle back to the trader from whom the stout was obtained and asked him "if he called that a sealed bottle." The landlord replied that he did, but seeing the label was only partly adhering he tore it off, and replaced it with another. The bottle had previously been corked so tightly that the boy's father had to use a corkscrew to remove it. The Chairman, after consultation with his colleagues, said they had come to the conclusion that the label was not a sufficient seal under the Act. The Act said the bottle must be "corked and sealed." The bottle was admittedly corked, but the label did not seem to be a sufficient seal, for it must have time to dry, and in most cases it would not adhere to a glass bottle. The chief constable said that the Licensed Victuallers' Association had now issued instructions to the trade advising that the bottles be sealed with sealing-wax or labels thoroughly dry before the bottles leave the house.—At Folkestone on January 15, a public-house keeper was fined 5*s.* and 15*s.* costs for selling a pint bottle of beer to a girl aged 8 years. Over the bottle was a paper label which was easily removed without destruction. The Court held that the Act required the bottle to be secured by some substance without the destruction of which the cork, plug, or stopper could not be withdrawn.

Sale of Food and Drugs Act.

NO APPEAL.

AT the North London Police Court on Friday, January 17, Mr. A. Mellor Bramall, solicitor to the Islington Borough Council, mentioned the soap-liniment case, in which Taylor's Drug Company (Limited) were defendants, which was dismissed on a legal technicality (see *C. & D.*, December 28, 1901, page 1004). Mr. Bramall now informed Mr. Fordham that the shorthand notes of his judgment had been laid before the Law and Parliamentary Committee of the Borough Council with a view to an appeal in the High Court; but the committee had decided to proceed no further—a result which he (Mr. Bramall) regretted.

Mr. Fordham: So do I, because I am satisfied that my decision would have been upheld. (Laughter.)

Mr. Bramall: It was, in my opinion, a debatable point as to the time when the proceedings did actually commence; and my submission then was that the secretary of the company had good notice of the action, and might have

Digitized by Google

fully protected himself to fight the case on its merits. However, there is to be no appeal, and there the matter ends.

SWEET SPIRIT OF NITRE.

THE supply of sweet spirit of nitre by wholesale chemists to the small village shopkeeper, and its retail by them often with a deficiency of nitrous ether, has engaged the attention of the justices in the Keighley district during the past few days on informations issued against the shopkeepers by the local inspector under the S. F. and D. Acts. In each case the plea was urged that the spirit had not been adulterated, and that owing to its extreme volatility it was almost impossible to keep the drug up to the B.P. standard. At Skipton the justices agreed that it was hardly to be expected that the village shopman could keep the spirit up to the standard, but said such a storekeeper had better not keep drugs at all if he could not keep them up to the standard. At Keighley the additional plea was set up—if not in express terms by implication—that spirit of nitre was a common household medicine, and it was highly convenient to be able to buy it at the village store. It was better to purchase the drug even a little under the B.P. standard rather than not to be able to procure it at all. It was urged further that on the ruling of the bench would probably depend whether these small dealers would continue to keep the drug. The bench showed some sympathy with the defence, but felt they could not allow sentiment to override the rights of the purchaser and obligations of the seller. They imposed a fine of 1*s.* and costs in each case. The wholesale dealer who supplied the spirit, Mr. W. Fowlds, Keighley, has since issued a public notice advising village shopkeepers to discontinue selling sweet spirit of nitre. It is practically impossible, he says, to keep sweet spirit of nitre up to the standard owing to its volatile nature.

BORATED SHRIMPS.

A LIVERPOOL fish-dealer last week was summoned for selling potted shrimps containing boric acid. The Inspector stated that the samples comprised 80 per cent. of shrimps containing 61 gr. of boric acid per lb., and 20 per cent. of butter containing 12 gr. of boric acid. The whole sample contained on the average 51 gr. of boric acid. For the vendor it was submitted that the adulteration was impregnated in the butter in which the shrimps were boiled and potted. Had it been possible, the vendor would like to have the shrimps and butter analysed separately. A fine of 10*s.* and costs was imposed.

TINCTURE OF OPIUM.

MR. WILLIAM BENTHAM, chemist and druggist, Bishop Auckland, was summoned on January 9 for selling tincture of opium which, according to Mr. F. W. K. Stock, the county analyst, was deficient in proof spirit to the extent of 22·72 per cent. Mr. T. C. Atkinson, chemist to Messrs. Bleasdale & Co., York, said Mr. Stock's analysis was based on the standard of 1885 instead of 1898. The Chairman said it would have been better if Mr. Stock had analysed the sample under the standard of 1898. The Magistrates suggested that the case should be withdrawn, which was done, each party paying his own costs.

CHEWING-GUM.

AT Tamworth on January 14, Josiah Morrall, shopkeeper, Glascote, was charged with selling chewing-gum containing 16 per cent. of paraffin-wax. Mr. J. Matthews, who defended, submitted that chewing-gum was not a food. He cited the case of Bennett *v.* Tyler, which, he said, was precisely similar, and in which the Teddington Justices convicted, but the conviction was quashed by the Court of Appeal. The Bench dismissed the case and remitted the costs upon the defendant undertaking not to sell any more of the gum.

SWEET SPIRIT OF NITRE AND MILK OF SULPHUR.

At Boston on January 17, Wm. Lamplugh, chemist and druggist, Wide Bargate, was summoned for selling sweet spirit of nitre which was deficient in nitrous ether to the extent of 87·5 per cent., and which also contained 28 per cent. of excess water.

The same defendant was summoned for selling milk of sulphur which contained 48 5 per cent. of sulphate of lime.

After hearing the evidence, the Bench said they were quite convinced defendant had no intention whatever to defraud the public, but a technical offence had been committed, and he would be fined 5*s.* and 6*s.* 6*d.* costs in each case.

County Court Cases.

BREAKING THE AGREEMENT.

IN Durham Court of Chancery on January 17, before Mr. Milvain, K.C., an action was brought by E. H. Pollock, surgeon-dentist, of Sunderland, for an injunction to restrain Wallace Inman, an unregistered practitioner, from carrying on the business of a surgeon-dentist at Durham under the name and title of Mr. Pollock. There was a counterclaim of 200*l.* for damages by breach of contract. The defendant had been an assistant to Mr. Pollock, and when the latter left Durham to take up a practice the defendant bought the business. The complainant undertook (on a forfeit of 200*l.*) not to practise within six miles of Durham on his own account. The Judge refused to restrain the defendant from carrying on the business. The plaintiff had set up a rival practice within six miles, he said, and had broken the agreement. Judgment must therefore be for the defendant on both the claim and the counterclaim with costs.

A TRAVELLER'S CLAIM.

AT the Leicester County Court on January 17, before Judge Wightman Wood, Robert Stanley, commercial traveller, Leicester, sued Richard Hoult, trading as the Unique Trading Company, chemical-manufacturers, Doncaster, for the recovery of 50*l.* for breach of agreement. The case for the plaintiff was that in October last he was engaged on a two years' agreement as traveller to the defendant at 10*l.* a week, to include expenses, defendant to have the right to terminate the agreement at a fortnight's notice if plaintiff did not in any way get orders to the amount of 166*l.* On November 13 defendant wrote to Stanley telling him not to take any more orders, in consequence of the trouble he had had with the customers. Plaintiff had during the six weeks obtained orders to the amount of over 200*l.* In any case he was entitled to a fortnight's notice. Defendant, who had paid 1*l.* 18*s.* 5*d.* into Court, alleged that he had forwarded two cheques to plaintiff, which the latter denied receiving. Ultimately judgment was given for the plaintiff for 8*l.* 17*s.* 5*d.*

New Companies.

CHARLES BEST (LIMITED).—Capital 3,000*l.* in 1*l.* shares. Objects: To acquire the business carried on by Edgar H. Lancaster, trading as "Charles Best," and to carry on the business of manufacturers of and dealers in soda-fountains, patent soda-draught-taps, syrups, essences, &c. Registered office, 36–7 Whittal Street, Birmingham.

THIERRY (ADOLF) (LIMITED).—Capital 60,000*l.* in 1*l.* shares (40,000) preference. Objects: To acquire the business of manufacturers of and dealers in patent medicines, ointments, and other medicinal preparations, now carried on by A. Thierry at Pregrada, Austro-Hungary, and at 48 Brixton Road, S.W., and elsewhere, and to carry on the business of manufacturing, wholesale, and retail chemists and druggists, manufacturers of and dealers in pharmaceutical, medicinal, chemical, industrial, and other preparations, makers and vendors of patent medicines and proprietary articles, manufacturers of electrical, chemical, surgical, and scientific apparatus and materials, &c. The first subscribers are:—P. Warnford-Davis, Pomona Buildings, 61½ Fore Street, E.C., director of Parke's Drug-stores (Limited); W. B. Helsby, Thirlmere, Ashlake Road, Streatham, S.W., surveyor; J. Leighton, The Lawn, 137 Tulse Hill, S.W., director of Trades and Markets Exhibition (Limited); H. Steiner, 48 Brixton Road, S.W., manager; G. A. Upjohn, 6 Darenth Road, Stamford Hill, N., clerk; J. D. Duncan, 65 Watling Street, E.C., solicitor; and S. Pennels, 87 Biscay Road, Fulham Palace Road, W., clerk. Minimum cash-subscription, 5,000*l.* The number of directors is not to be less than three nor more than seven: the first are P. Warnford-Davis, W. B. Helsby, J. Leighton, and H. Steiner. Qualification, 200*l.* Remuneration (except for the vendor's nominee, who shall be entitled to no remuneration), 300 guineas per annum, divisible, with an increase according to profits. Registered office, Aldermary House, 60 Watling Street, E.C.

Circulars and Price Lists.

THIS being the year in which Edward VII. will be crowned King of all the Britains, it is appropriate that the first special issue of The Chemist and Druggist should be enclosed in a purely national cover printed in Royal purple and gold.

We are pleased to know that the insets which our friends in the wholesale trade are sending in this issue to our readers at home and abroad are well above the average in artistic excellence. We commend these to the careful attention of buyers. They represent good business and profitable commodities. The nature of the contents in each case is summarised below.

The next occasion on which circulars and price-lists can be received for insertion in The Chemist and Druggist will be Saturday, July 26, 1902. Particulars of the charges are appended to the index to advertisements in this issue. This method of advertising is excellent, and those who are struck by it should communicate with our Publisher. He may be able to crystallise their ideas.

Aërators (Limited),

120 Oxford Street, London, W., devote their inset to the announcement that the new Sparklet syphons can be re-charged at a cheaper rate than formerly. The syphon is a development of the aërator principle which has a great future, and in this belief the company are preparing to make mutual arrangements with chemists for window-displays. (Pp. 32–33)

Allen & Hanburys (Limited),

Plough Court, Lombard Street, London, E.C., in a beautifully printed inset give particulars of the revision which has lately taken place in the minimum selling-prices of their specialities. The list was originally issued in 1895, but this year some twenty additions have been made, and in other cases the minimum retail prices have been raised. These alterations and additions are clearly set forth, and from their favourable bearing on chemists' prices should meet with careful consideration. Messrs. Allen & Hanburys' specialities are now on the protected list of the P.A.T.A. (Pp. 32–33)

Breffit's (Aire and Calder Bottle Company, Limited),

83 Upper Thames Street, London, insert a price-list of chemists' and druggists' bottles and glassware. The list is a 24-page supplement, the pale-green cover printed in gold making it distinguishable. A great variety of bottles are described and priced, three pages of illustrations making clear the textual portion. The list is alphabetically arranged, the sizes and prices being definitely stated; for instance, under "Limes or round-shouldered French vials," the prices of sixteen sizes are given in pale blue, white flint, or actinic-green glass, and also fitted with box-topped corks, ordinary corks, and with square-head or globe-head ground-glass stoppers. Under feeding-bottles "The International," "La Spécialité," and old-fashioned boat-shaped feeders are quoted, as well as the numerous component parts. The list is not, however, simply devoted to bottles, but contains quotations for such things as corks, covered pots, funnels, honey-jars, measures, pomade-pots, syringes, and pill-tubes. It is a comprehensive list which is sure to be kept for reference, and is inserted loose so that it may be hung at the desk.

Brunner, Mond & Co. (Limited),

Northwich, Cheshire, urge mineral-water manufacturers to use bicarbonate of soda in place of the messy whiting which has been employed for years as a source of carbonic-acid gas in the preparation of aërated waters. It does not need any argument from us to convince chemists of the utility of bicarbonate of soda as a source of the gas, the complete conversion of the product being not the least of the many advantages offered. To show the simplicity of the process concise directions are given in the inset as to the manner of using "Crescent" soda, and now that the price of the chemical is so low, expense can no longer be pleaded by those manufacturers who are loth to make the change. (Pp. 64–65.)

P. B. Burgoyne & Co.,

5 Dowgate Hill, E.C., very effectively advertise their well-known Australian wines by the insertion of a representation of a bunch of grapes. Everybody will admire the page as a perfect example of three-colour process work, the modelling and the delicate bloom of the grapes give the impression that the real thing is being looked at. Messrs. Burgoyne have done so much to popularise the wine of our vast Australian empire that it is satisfactory to observe that they have been appointed "Growers to King Edward VII." (Pp. 64–65.)

Cantrell & Cochrane,

Dublin and Belfast, devote their inset to reminding chemists that their aromatic ginger-ale is the original of its kind, and the standard to which many competitors in vain try to attain. Thirty-two gold and prize medals is a numerical particularisation of the popular "scuttleful of medals," and it is an ideal which none but the best firm ever reaches. The facsimile label given is doubtless familiar to the majority of our readers, but another glance at it will serve as a reminder to beware of imitations. (Pp. 32–33.)

J. Defries & Sons (Limited),

147 Houndsditch, E.C., give particulars of the best known kinds of Pasteur (Chamberland) filters. Now that the public is so much alive to the necessity of germ-free drinking-water, greater interest is taken in choosing an efficient filter. The effect of passing polluted water through one of the Pasteur filters is to render the water sterile. The filters are supplied in all sizes up to the large installations required for town water supplies. (Pp. 64–65.)

Duckworth & Co.,

Old Trafford Essence Distillery, Manchester, let out a secret which aërated-water manufacturers will take advantage of. The inset consists of a lithographed design of shamrocks and an Irish harp, whilst five of the pages contain representations of Winchester quarts of the

Digitized by Google

"Shamrock" ginger-ale extract. The test of the ability of an aërated-water maker is, the inset informs our colonial and foreign readers, the quality of his ginger-ale. It follows that a manufacturer should spare no efforts to produce a well-flavoured ginger-ale, which he cannot do without using a high-class essence. The "Shamrock" essence is the outcome of a long series of laboratory experiments. The inset is placed in colonial and foreign copies only. (Pp. 32–33.)

Durafort & Son,

Paris, who are represented in this country by Mr. E. Schmolle, 42 Gutter Lane, London, E.C., remind our readers that their syphons obtained the highest award of the recent Paris exhibition. The inset shows the various styles of syphon-tops obtainable which can be taken advantage of to give a distinctive style to the waters sent out from particular establishments. A section of the new syphon top with a porcelain core is also shown, which gives a capital idea of the perfection which has been reached in syphon manufacturing. The only objection which scientific purists could bring against syphon-contained waters, the contact with metal, is thus done away with at a sweep. (Pp. 32–33.)

Elliman, Sons & Co.

Slough, give as an inset a picture in colours of a horse afflicted with most of the external ailments which that animal is subject to. The "bad unsound" horse is a *facsimile* of a showcard which is supplied to advertise the "First-aid Book" for horses. The Elliman first-aid book is in four parts, dealing with (1) horses, (2) dogs, (3) birds, and (4) cattle, and is supplied by a coupon-system, the necessary docket being attached to the wrapper of each bottle of Elliman's Royal embrocation. Any *C. & D.* subscriber will be supplied with the showcard on application. (Pp. 32–33.)

William Gardner & Sons,

Bristol Road, Gloucester, devote a four-page supplement to an abridged price-list of Gardner's patent "Rapid" sifters and mixers. From long experience this firm has been able to devise patterns of machines specially adapted for the uses to which the machines are put, using, however, the same general principles. Thus, for mixing baking-powder a pattern which both sifts and mixes is used, whilst if a powder requires a liquid flavour a form with an essence-sprayer is best. These and many other varieties of machinery used in grinding, powdering, sifting, and mixing drugs are enumerated on the illustrated inset, which gives, in addition, a few of the features which give Gardner's mixers a distinction over all others. (Pp. 64–65.)

C. J. Hewlett & Son,

wholesale and export druggists and analytical chemists, 40, 41, and 42 Charlotte Street, London, E.C., give particulars of their standardised tinctures in bond for export trade. The tinctures this firm send out have in the course of years obtained an enviable reputation, which has been built up by using pure grain spirit and drugs, and finally standardising the finished tinctures. Special terms are accorded to indents sent direct in the shape of discounts and free freight, packages, packing, and shipping and bond charges. The list enumerates some two hundred tinctures, but it will be noted that the special terms extend to drugs, druggists' sundries, instruments and apparatus, and drysalteries, except that in the latter case the customer pays for freight. (Pp. 160–161, colonial and foreign copies only.)

McKesson & Robbins,

New York, U.S.A. (London agents, S. Maw, Son & Sons, 7–12 Aldersgate Street, E.C.), insert a formulary and price-list of "McK. & R." ovoid capsuled pills. These pills are coated with gelatin only, and are of an oval shape to facilitate the operation of swallowing them. The point that these pills keep in any climate is forcibly brought home by a letter from Panama, in which it is stated that the pills keep perfectly in that notoriously damp climate. The formulary contains a selection of the more frequently wanted combinations of drugs in pilular form. (Pp. 160–161.)

Marshalls (Limited),

27 Red Lion Square, London, W.C., insert their price-list of toilet-preparations and perfumes. The list occupies twenty-four pages, with descriptions, illustrations, and prices of the various goods which are special to this house. The portion devoted to collapsible-tube preparations shows to what proportions the business in this style of package has been developed; not only are tooth-pastes and toilet-preparations put up in tubes, but boot-creams and medical soaps. The packed drugs and perfumery section contains such put-up articles as household ammonia, brilliantine, and cucumber and glycerin, as well as a selection of druggists' sundries, which includes many varieties of combs, and brushes, in most cases sent out with special arrangements for showing the goods on the counter or in the window. Sachets, a well-known feature of Marshalls, are presented in numerous dresses, the illustrations sufficiently explaining the *tout ensemble*. Lastly should be noted the "Sterling" tablet-machine, which is one of the most inexpensive of its kind, and Parker's essence of Jamaica ginger, for which, by arangement with one chemist in each town, special terms are granted. (Inserted loose for hanging at the desk.)

Meggeson & Co. (Limited),

Miles Lane, Upper Thames Street, E.C., insert what is probably the most complete list of medicated lozenges ever put before the drug-trade. The sage-green cover conceals a forty-page price-list, printed on glazed paper and illustrated with many fine half-tone blocks of special lines. Pharmacopœia lozenges of both the 1898 and 1885 editions are priced, the strength of the active ingredient being stated in each case. The list of Throat Hospital lozenges has a useful key to the stamp marks, and includes the additions made in the hospital Pharmacopœia published a few weeks ago. The London Hospital lozenges, which are often asked for in some districts, are also quoted. This section is followed by a complete list of the many lozenges demanded in retail trade. Further on will be found priced lists of confectioners' sundries, compressed pellets, jujubes and pastilles, medicated pastilles, acidulated drops and tablets, medicated capsules, essential oils, aromatic and toilet distilled waters, concentrated perfumes, and special lines in lozenges and perfumery put up ready for retailing. The illustrations, being photographically prepared, are valuable as showing the style of the articles. (Inserted loose for hanging at the desk.)

E. Merck,

manufacturing chemist, Darmstadt, Germany, in an 8-page inset, gives an idea of the range of chemicals he manufactures. Alkaloids, medicinal chemicals, pharmaceutical preparations, photographic preparations, and laboratory chemicals are the sections into which the list is divided In each section are enumerated the various chemicals which are special manufactures. Attention is also called to the publications, most of which may be had for the asking. The London address is 16 Jewry Street, E.C. (Pp. 160–161, in colonial and foreign copies only.)

Digitized by Google

A. & F. Pears (Limited),

71–75 New Oxford Street, London, W C., insert a 4-page inset printed in red, green, and gold on thick paper. The front of the supplement bears the announcement that Pears have been appointed soapmakers by Royal warrants to the King and Queen. Inside the prices of the well-known soap are given, and an important statement as to the system of discounts by which a purchaser of 5*l.*-worth of soap is put on an equality with all other buyers no matter how large the order. A replica of the Paris Exhibition gold medal is given on the back page, the Grand Prix obtained in 1900 making the twenty-first highest award representing the consensus of opinion of more than a hundred of the chief experts in the world. (Pp. 32–33.)

Robinson & Sons (Limited),

Wheat Bridge Mills, Chesterfield, in their attractive inset refer to the numerous surgical dressings they manufacture. One of the illustrations shows the style of packages adopted for lint, cotton-wool, tissues, gauzes, and bandages. The cartons of absorbent cotton-wool are a special convenience for retail trade. "Mene" towels for ladies are advertised in a novel manner by means of a representation of a bathing-machine with a door to open. "Look behind the door," as the inscription invites, and the particular advantages of the towels will be revealed. Cardboard boxes for various purposes are also illustrated, but the selection is by no means intended to suggest a limit to kinds made by Messrs. Robinson, for, whilst a large number of stock sizes and styles are obtainable, cardboard boxes for any purpose can be made to order. (Pp. 192–193)

Shirley Brothers (Limited),

Whitecross Works, London, S.E., in an eight-page inset show that since their conversion into a limited-liability company they have not lost the personal characteristics of push and up-to-dateness. In the list will be found the specialities in successful side-lines, which have been a feature for some years side by side with the most recent introductions in feeders and soothers. Those chemists who prefer to put up their own specialities should note the series of ornamented tins on pages ii and iii. The appearance of a package of any ready put-up article is an important factor. Etienne Frères' perfumery, referred to on the end page, and the special bargains in assorted parcels, should not be missed. (Pp. 64–65.)

Spratt's Patent (Limited),

24 and 25 Fenchurch Street, London, E.C., in their inset wish their customers a successful new year and emphasise several points of interest to chemists and druggists. Packed cage-bird and parrot seeds, poultry-spice, and boxes of dog-biscuits, are some of the later developments of this firm which refer especially to chemists' trade. The offer to supply booklets on the management and treatment of dogs and on rearing chickens or cage-birds should be taken advantage of. The booklets are much appreciated by dog or bird owners, as it is difficult for them to obtain appropriate advice on their domestic pets just when it is wanted. "If herrings make bloaters what do Spratt's make?" is a conundrum which is nightly being asked before crowded audiences at the Drury Lane Theatre, which makes the present an appropriate time to show some of the dainty cardboard boxes of dog-biscuits, of which particulars are given on the back page. (Pp. 192–193)

Henry P. Thompson & Co.,

93 Aldersgate Street, London, E.C, who are sole agents for Messrs. Bauer & Black, Chicago, U.S.A, give in a 24-page inset an idea of the class of goods they are introducing to this country. The pale-green cover bears within a description of one of the most remarkable factories in the world for the production of plasters, cotton-wool, surgical dressings, suspensory bandages, and chest-protectors. Asepsis was the main thought of the builders of the factory, rafters and shafting were excluded, thus doing away with a great number of dust-traps, whilst the ingenuity of the engineers was devoted to the production of sterilising apparatus, so essential a part of surgical-dressings factories. The aseptic-room is supplied with sterilised air, and a good idea of this room and other parts of the factory is given by the photogravure illustrations contained in the inset. Four pages are devoted to coloured pictures of some special lines, and from these a fair idea is obtained of the style of the goods. Portraits of the men who have thought out and developed the business figure on one page, and another is devoted to the staff of twenty salesmen who divide up the United States between them in the interests of Messrs. Bauer & Black. (Inserted loose in home copies only.)

Tyler, Chas., & England Bros. (Limited),

79 Copenhagen Street, King's Cross, London, N., in their supplement enumerate the new mounts for 1902. The designs are very pretty and distinctly novel, and chemists, who hold practically the monopoly of the retail photographic trade, should particularly study this inset. Hand-cameras have had improvements added for the coming season chiefly in the form of more convenient fittings. The specifications of the "Empire" and "Champion" cameras give an idea of what is provided according to price. The "1902" Marvel sells at as low a price as 6*s.*, and from the description given certainly does not seem to belie its name. (Pp. 64–65.)

The Vinolia Company (Limited),

Malden Crescent, London, N.W., provide us with the largest inset in this Winter Number. It is an artistic production extending to fifty-two pages, and containing descriptions and prices (with illustrations) of the company's chief products. The foundation of these was Vinolia cream, which still gets first place, and the list takes buyers through a range of toilet elegancies on to soaps, which occupy twenty pages of the list. Then follow more unique toilet-preparations, a selection of "Liril" specialities, perfumes, and other products—all priced for wholesale and retail. The list is inserted loose so that buyers may place it beside their order-book.

W. R. Warner & Co.,

British Depôt, Francis Newbery & Sons, Charterhouse Square, London, E.C., insert a 16-page abridgement of their price-list of soluble-coated pills and granules, compressed tablets, effervescent salts and pharmaceuticals. The superiority of the "Warner process" of pill-making is summed up as giving pills which are soluble, permanent, pure, active, convenient, and efficacious, the aim being to compound the best pill possible. Glancing through the list we notice several new articles, and a new feature is introduced in indicating the articles not liable to stamp-duty. In this way Warner's lithia tablets, Tono Sumbul, and obesity-salts are shown to be exempt from medicine-stamp duty, and a note is apperded to another article in reference to the recent fiat that "until relief is experienced" renders an article liable to duty. A new preparation in the list is digestive tablets, composed of pepsin, pancreatin diastase and lactic acid, and sent out chocolate-coated, which is an attractive addition to the after-dinner medicines for promoting digestion. Popular non-proprietary pills are put up ready for sale in both bottles and boxes, some kinds of pills, such as "Blaud" pills, in several styles. Quinine pills

Digitized by Google

in flat slide boxes, each pill resting in a hole in a false bottom, are another attractive line, whilst the list of pills sold in bulk is both complete and in some respects unique. (Inserted loose.)

Wright, Layman & Umney (Limited), Southwark Street, London, have an inset printed in violet ink, which contains reproductions of some of the labels and cartons they use on their packed pharmaceuticals. No one can deny that the labels are effective and make the packages attractive. Given the same care on the preparations as has been lavished on the labels and cartons, and ideal counter specialities result. The reputation of the firm is a sufficient guarantee that the goods are the best of their kind. The purpose of the inset appears to be to whet the appetite of chemists, so that those who desire more may write for the special illustrated list containing prices and other particulars of the perfected packed pharmaceuticals. (Pp. 160–161.)

Westminster Wisdom.

(*By our Parliamentary Correspondent.*)

The New Session.

UNTIL the debate on the Address has been concluded it will be difficult to forecast the nature of the new Session of Parliament, and even then much will remain in doubt until the new procedure has been explained and adopted. At present all that can be said is that much legislation must not be looked for. As a prominent Labour representative remarked to me, "You cannot expect legislation so long as the war goes on." The war will certainly monopolise attention, and any time left will be needed—it may not be enough—for the Education and Water Bills. It is usually the case, however, that as the Session proceeds a few departmental measures—not mentioned in the Speech from the Throne—emerge, and towards the prorogation the Government either adopt or give special facilities for passing certain private members' Bills which have reached an advanced stage.

Private Members' Bills.

The ballot for places for private members' Bills has resulted unsatisfactorily in so far as measures affecting chemists and druggists are concerned. As a rule only those Bills which secure the first ten places in the list have any chance of being discussed, and on this occasion all the coveted places have been allocated to Bills affecting other interests. It is possible, of course, that one or more of the ten may drop out, and in that case a chance will be given to Lord Cecil Manners' measure to secure the better training of midwives, and to regulate their practice. Mr. Tatton Egerton, who took some part in former discussions on the subject, had also put down a similar proposal, but he will doubtless join forces with his colleague who has obtained the better position. Another medical Bill, which is, in fact, an old stager, stands in the name of General Laurie. It is entitled "A Bill to extend the provisions of the Medical Acts, 1858 and 1886"—a somewhat vague description. The real object of the gallant general is to enable colonial practitioners to be registered in this country, and the Bill originated through the refusal of the Imperial authorities to accept the services for the Imperial troops of certain medical men who went out to South Africa with the Canadian contingent. These men were fully qualified in Canada; but the War Office requires that all candidates must be registered medical practitioners.

No Smallpox Legislation.

The Government do not intend to take any action, so far as legislation is concerned, in regard to the smallpox-epidemic in the Metropolis. Answering a question put by Mr. Bartley, Mr. Long stated that he did not consider that any legislation was necessary.

Preservatives in Food.

The President of the Local Government Board has been asked what steps he proposes to take in pursuance of the report of the Committee on Preservatives and Colouring-matter in Articles of Food, and his reply is that he has not at present arrived at a decision in the matter. The report is receiving his "careful consideration."

Regulation of Shop-hours.

A statement made by Mr. Balfour on Tuesday bears out what I have said in the opening paragraph as to the hopelessness of expecting much legislation this Session. There will be no legislation in regard to the proposals of the Lords' Committee on the early closing of shops to the effect that towns should be authorised to pass provisional orders regulating the closing of shops on account of the existence of hours of work grievously injurious to health. In the meantime, however, Sir Charles Dilke has introduced a Bill of his own on the subject.

Patent Laws.

In reply to Sir John Leng on Tuesday,

Mr. Gerald Balfour (President of the Board of Trade) said he proposed at an early date to give notice of his intention to introduce a Bill to give effect to the recommendations of the Committee on the Working of the Patent Acts.

In this connection it may be mentioned that the Patents Rules, 1901, under the Patents, Designs, and Trade-marks Acts, 1883 to 1888, have now been presented to Parliament, and copies will be available in a day or two.

The Hospital-ships at Purfleet.

Dr. J. C. Thresh, medical officer of health for Essex, called attention the other day to the outbreak of smallpox on the Essex coast, and attributed it to the presence of the hospital-vessels. The matter has now been brought before Mr. Long, who, beyond sending a medical inspector to communicate with the local authorities, does not intend to do anything in the meantime. He says that every possible step has been taken to find another mooring for the vessels, but without success. It is necessary that there should be easy communication with the shore, so that patients may be taken on board with the least possible difficulty. A suggestion has been made that the ships should be moved down into the sea-reach, where on either side of the river there is practically no population, but so far, as I have indicated, Mr. Long has not found this to be practicable.

Ireland and the Sugar-tax.

An attempt has been made to induce the Chancellor of the Exchequer to give up the sugar-tax in his forthcoming Budget in the case of Ireland, but, as the right honourable gentleman explained on Tuesday, his anticipation that it would be a continuing source of revenue is being realised, and he sees no reason to change his opinion. Up to the end of December about 232,000*l.* was collected in Ireland in respect of the tax.

The Taxation of Imports.

Mr. David MacIver has given notice of a motion on this subject. No date has been fixed for it, and a debate cannot be expected for many weeks. The motion much resembles several for which Sir Howard Vincent has made himself responsible in past Sessions, and it has as little chance of success. It seeks to declare that the increased revenue needed for naval and military purposes could best be obtained by *ad-valorem* duties of not less than 5 per cent. to be levied upon all importations of whatever description entering this country for purposes of sale, *bonâ-fide* passengers' luggage and private effects for owners' use alone excepted.

Government Lymph.

Mr. Bartley is asking the President of the Local Government Board on Thursday if private medical practitioners are able to purchase Government lymph for those who are prepared to pay for vaccination.

ADJUDICATION.

Thomson, Malcolm Edward, Northampton, surgeon.

Bankruptcies and Failures.

Re Alfred McLaren Post, 96 and 98 Leadenhall Street, E.C., managing director of A. M. Post (Limited).—The case of this debtor came before Mr. Registrar Brougham at the London Bankruptcy Court on January 17 in relation to his public examination. The accounts show total liabilities 8,293*l.* 9*s.* 9*d.*, of which 3,964*l.* 13*s.* 3*d.* is expected to rank, against assets 4,039*l.* 18*s.* 6*d.*, thus disclosing a surplus of about 75*l.* The debtor came over from America in 1894 with a cure for gout, rheumatism, &c., known as "Post's C.B.Q." In 1897 the business was taken over by A. M. Post (Limited), which company was registered with a capital of 10,000*l.* The debtor ascribes his failure to the policy of the directors in limiting the advertisements of the specific, the result being a very much reduced sale. He does not admit insolvency, and explains his appearance at the Court by his inability to realise his shares in the company to advantage and pressure on the part of creditors. Mr C. A. Pope, Assistant Receiver, reported that the debtor had been given leave to proceed to America to enter into certain business negotiations. Under those circumstances he asked for the examination to be postponed until April. By consent of all parties an order was made in those terms.

Re Thomas Philip Garrett (trading as Garrett Brothers), 33 Commercial Street, Newport, Mon., Chemist and Druggist.—Under this recent failure accounts have been filed showing gross liabilities 4,331*l.* 16*s*, and net assets 1,319*l.* 7*s.* 7*d.* From the Official Receiver's observations it appears that the debtor commenced business in 1882, when he joined his father in partnership. The partnership continued until his father's death in 1883. He continued the business on his own account until 1894. He did not contribute any capital on joining his father in November, 1882, but the business was solvent. From the year 1883 to the year 1892 he provided out of the business, under the terms of his father's will, 3*l.* per week for his mother and sisters. In 1894 he was joined in partnership by another person. The businesses were amalgamated, and the joint stock was valued at 2,800*l.*, the debtor in addition paying 400*l.* for his share of the lease and fixtures of his partner's business, and in addition paying 250*l.* into the partnership account as capital. The partnership continued until 1897, when it was dissolved, and the debtor agreed to pay 600*l.* to his partner to go out (150*l.* in cash and the balance by bills). No balance-sheet was prepared, but the business was solvent, after allowing for the 600*l.* to be paid to the outgoing partner. He continued the business on his own account until November 30, 1897, when he assigned his estate to a trustee for the benefit of his creditors generally, when his liabilities (including family claims hereinafter referred to) amounted to 4,922*l.* 7*s.* 2*d.*, and his assets to 2,273*l.* 10*s.* The business was carried on by the trustee under the deed of assignment until November 16, 1898, when the debtor arranged to pay a composition of 10*s.* in the pound by deferred payments extending over two years from March 22, 1898, and on November 9, 1899, the estate was re-assigned to the debtor (the composition having been paid), and he then continued the business on his own account until the date of the receiving order. About the year 1893 he received a sum of 1,500*l.* or thereabouts from the estate of a relative as next-of kin, which he invested in his business. This sum was subsequently claimed by another person as being nearer of kin, and acting under the advice of counsel he compromised the matter with him, when so far as he can now remember, he paid about 400*l.*, the remainder being paid by his two sisters, who received a similar share. A portion of this property is sub-let to various tenants for sums amounting together to 92*l.* per annum. The tenancy of his dwelling-house is in his wife's name, who pays the rent. He attributes his insolvency to "bad trade, severe competition, heavy rent and rates," and he states that he first became aware of his position in 1898, and has since then contracted all his present indebtedness, except family claims, hoping to be able to carry on the business at a profit.

Birth.

Gray.—At Simla, Punjab, on December 9, 1901, the wife of James G. M. Gray, chemist and druggist, of a son.

Marriage.

O'Sullivan—Dodd.—On January 11, 1902, at Banteer, co. Cork, by the Rev. E. McCarthy, of Newmarket, assisted by the Rev. Canon Morrissy, Denis H. O'Sullivan, L.P.S.I., Newmarket, to Mary, only daughter of Mr. William Dodd, of the same town.

Deaths.

Bailey.—At Newark on January 11, Mr. William Bailey. Aged 24. Mr. Bailey served his apprenticeship with Mr. L. Priestley, pharmaceutical chemist, Newark, and about four years ago left to take a situation at Manchester. From there he went to the South London School of Pharmacy and subsequently took temporary engagements at Hitchin and Sloane Square, London, returning to his former situation at Manchester until August last when, after a short holiday, he again went to London to a school of pharmacy to study for the Minor examination. He went in for his final in January when not quite well and failed. This was a severe disappointment to him, and he went home to Newark where he took to his bed from which he never rose. His condition gradually grew worse and he died about a week afterwards from overwork of the brain and weak heart.

Bradbury.—At Glossop, on January 17, Mr. Thomas Bradbury, chemist and druggist. Aged 45. Mr. Bradbury suffered greatly from pains in the head, and committed suicide in his back-shop by taking prussic acid.

Brook.—At Rochdale, on January 15, Mr. Robert Brook. Aged 72. Mr. Brook was one of the oldest chemists in the Halifax district. He served his apprenticeship with the late Mr. Thos. Fardon, of Maidstone, and in 1855 he began business at premises in Silver Street, Halifax, in partnership with his brother William. About the year 1865 the partnership was dissolved and Robert took over the establishment. When the Silver Street premises were pulled down he removed to Central Street. He retired in 1896, his business at that time being the oldest established of its kind in the district. Mr. Brook took no active part in public affairs.

Campbell.—On January 14, at his residence, Lower Sackville Street, Dublin, Mr. James Campbell. Aged 67. Mr. Campbell had been for a number of years manager for Messrs. Hoyte & Sons, City of Dublin Drug Hall. The funeral took place on January 17 last at Mount Jerome Cemetery.

Fawcitt.—At Manchester, on January 12, Mr. Thomas Christopher Fawcitt, chemist and druggist. Mr. Fawcitt, who died after a brief illness, was a native of Thirsk, where he served his apprenticeship with Messrs. Foggett & Son, wholesale and retail chemists. He afterwards established himself in business at Manchester.

Richardson.—The last member of the family of Richardsons, who for so long carried on business at Waterloo Mills, Hunslet, and East Street, Leeds, as drysalters and manufacturing chemists, died this week at his residence in Leeds. The deceased gentleman was Mr. Charles Christopher Richardson, who had attained the age of 71. He and his brother, the late Mr. Jas. Richardson, carried on the business as Richardson Brothers. The founder of the firm was Mr. Thos. Richardson. In 1863 Mr. C. C. Richardson retired, and has taken no active part in the business since. Mr. James Richardson died eighteen months ago at the age of 75.

Turnbull.—At Radcliffe, on January 16, Mr. John Turnbull, manufacturing chemist and drysalter. Aged 55.

The Apprenticeship-question.

WE have received this week two papers communicated to provincial associations on this subject—one by Mr. J. Hutcheon, read to Edinburgh assistants last week, and the other read by Mr. J. G. Barry Noble to the Newcastle-on-Tyne Chemists' Association on Wednesday evening, January 22. We subjoin abstracts of both:—

MR. HUTCHEON'S VIEWS.

The position of the pharmaceutical student towards education and towards the Society was especially discussed. There are in the ranks of the profession, said the author, many who have not passed the Preliminary examination, and who in all likelihood never will. There are few students now entering the profession who have passed this examination, and the number of unqualified assistants will only tend to increase. How is this influx of insufficiently educated youths, who may ultimately form a thorn in the flesh of qualified pharmacy, to be prevented? And how is the profession to be made sufficiently attractive so as to draw to it that particular class who would be able to qualify? An adequate answer to the second question will also solve the first.

The Pharmaceutical Society has already made a marked advance towards making the profession more attractive by raising the standard of the Preliminary examination, but the duty of the Society does not end here. In the present condition of pharmacy it is a hard matter for the Pharmaceutical student to obtain during his apprenticeship the required education to enable him to pass the Qualifying examination.

Mr. Hutcheon proceeded to criticise rather scathingly the views of Mr. William Lyon on the subject as expressed in a three-column article in a contemporary, and proceeded to say that reform should come from the inside: external influences must not be allowed. Force alone can work the remedy. Pressure will have to be brought on the pharmacists—if not by the Pharmaceutical Council, then by the assistants themselves. The apprentice-difficulty is not one peculiar to the pharmacy profession. The Council is the body to whom pharmacists, as well as apprentices, have to look for salvation regarding the apprentice-question. If not the Council, some other authoritative body which may have to be put in its place if it be impotent. Government does not allow a pupil-teacher to work more than five hours per day, and gives him a fixed wage that is relatively more than that of the average pharmacist's assistant. A law apprentice has short hours, while the Law Societies and the Educational Institute of Scotland avail themselves of the teaching-facilities of the Universities, whereby the youth gets his business and theoretical training efficiently and simultaneously carried through. What, then, is the peculiarity that gives the pharmaceutical profession such a bad name, and keeps youths from entering it? It lies in the fact that the Council is a hollow mockery. It had better get its house set in order, or some upheaval may overthrow it. If a corporate body cannot control the individual members in the matter of apprentices, when not only teachers and lawyers but even bakers and plumbers can do so most effectively, that body is indeed powerless, and ought to be put out of existence. They must do something to fix the hours of work, supply methods of training, and regulate numbers, or the very life of the profession is endangered. The other result is inevitable. The profession will sink into darkness, and what will survive is a body of shopmen huxtering patent preparations at a grade of professional dignity no higher than the seller of bootlaces or ham and eggs. A powerless Council condemns itself.

It must be admitted by even the most enthusiastic scientific pharmacist that a great amount of his everyday business-work is of such a nature as may be quite well and very profitably carried out by unskilled labour. Let us protest as much as we may about raising the professional standard of the profession, the fact has to be faced that the tendency in the drug-trade is towards commercialism and, except in a few outstanding cases, away from science. At the same time, the advance of the sciences in their relation to pharmacy does undoubtedly necessitate among pharmacists a thorough scientific education. We are thus between two extremes, and to bridge the gulf we would require a man as an ideal pharmacist who would combine in himself the capabilities for ordinary manual labour with the scholarship and training of a laboratory expert. This is not likely to be generally accomplished among the thousands who compose the trade or profession of pharmacy.

It comes, therefore, to this, that the supply of apprentices who will be in a position to present themselves for the Qualifying-examination will fall very far short of the demand. Two results may ensue—the recognition of the unqualified men and the diminution of the number of pharmacists qualified according to Society standards. The unqualified man will become a necessity. When he appreciates the fact he will raise his own value. He is quite capable of doing the drudgery work of the profession—the work which brings in the money. The day may not be far distant when the unqualified man may demand recognition by the Government, and perhaps obtain exemption from the Acts regulating the sale of poisons—our only stronghold. Mr. Hutcheon spoke as an unqualified man.

WHAT MR. NOBLE THINKS.

Three main issues, said Mr. Noble, have to be considered in dealing with this question. The first is, What is the cause of the present famine of apprentices? The scarcity began, he said, ten or twelve years ago. He pointed out that sons of professional men do not enter pharmacy, and by sketching an imaginary interview with the father of a Board-school boy, in which the parent was informed of the legal requirements, shop duties, premium, and the like, he made it fairly clear that the average father could not fail to conclude that something less exacting and more remunerative than pharmacy would be better for his son. Turning to the condition of the trade, he said it was not due to the Pharmaceutical Society, but that chemists as a class have hardly lifted their little finger to try to stop the flowing tide, and how can they expect the ship of pharmacy to sail straight with its captain and officers in the main cabin quarrelling over such things as the Glyn-Jones motion, and making a gold chain with a pretty badge at the end of it to hang round the captain's neck; whilst another portion of the crew is working hard to keep the ship from altogether sinking, and at the same time a third portion of the crew deserts the vessel and joins the pirates who, with unlimited guns, pour in their shot and shell of close-prices? It is this that has caused the apprentice-famine and the ruin of the drug-trade.

The second question was, What will be the final result if we do not replenish the ranks of our calling with new blood? To this he replied at some length, reviewing the conditions of pharmacy in Great Britain and Ireland, and pointing out that the non-recognition of the chemist and druggist class in Ireland after the 1875 Act passed led to the growth of that body, and their special recognition by the 1890 Amendment Act. He considered that the apprentice-famine and increased stringency of the Minor examination may give us a repetition in Great Britain of the Irish case. There is also, to his mind, another rock ahead which the pharmacy ship may have difficulty in clearing, and it is that the doctors will do the dispensing, and the wholesale houses the practical pharmacy, while the chemist will become a mere distributor of manufactured goods. What dispensing is left to be done will be secured by companies who keep dispensers, with qualification probably nothing better than the Apothecaries' certificate. We are already on that rock. Summing up this portion of his paper, Mr. Noble said:—

> We shall have the following result: apprentices being scarce, a very large number of chemists will take boys of the errand-boy type, who will, after learning to be useful, take their place behind the counter, and they will in time grow in number and strength. The remaining chemists, who manage to get real apprentices and thoroughly teach them their profession so that in due course they will qualify, will be in the minority. Then we shall see the errand-boy variety demanding recognition, and the Government, finding that more licensed sellers of poisons are required than are being supplied, will grant the demand and give them such powers, provided they can show they have been for a certain time in the drug-trade, and can pass some simple examination such as the Apothecaries'. These men will form the druggists of the future, who will conduct open shops much the same as we do ours. It is their places to which the people will go for a penny-

Digitized by Google

worth of paregoric, a bottle of glycerin, or an ounce of Epsom salts; and competition will remain as keen amongst them as it is amongst ourselves, and perhaps more so. But above this class will arise a set of men who will be recognised as chemists—true chemists, not mere druggists—who have been through a thorough apprenticeship and passed the Major examination or an equivalent to it. The public will realise the difference between these two classes, and when Mr. Blank has a prescription to be dispensed it will be taken to the chemist. The chemists will take up analytical and other scientific work. In short, we shall have two classes—namely, pharmacists and drug-dealers or druggists.

The third question was, How are we to remedy the evil, or, in other words, how are we to fill the present apprenticeship-vacancies? He considered that chemists as a class have most shamefully neglected the training of their apprentices, and that no one has a right to take an apprentice unless he is prepared to help him in the advancement of his studies—viz., teach him practical pharmacy, help him to master the materia medica of the Pharmacopœia and to have a ground-work of pharmaceutical chemistry. He enlarged on this matter, and, referring to what the Pharmaceutical Council might do, said he had written to every member of it, and from what he could gather from them the Minor cannot be divided without fresh legislation. [This we have shown to be incorrect, and several members of Council, as well as examiners, agree with us.—Editor *C. & D.*] Mr. Noble concluded by saying our duty amounts to this:—(1) We must abolish the premium system and give our apprentices a fair wage for their work. (2) We must teach them the art of pharmacy, and not bring them up as mere salesmen. (3) We must all join the Society, let the Council know what they have to do, and use our voting-papers to that effect. (4) The Minor examination must be divided, and in cases where the candidate has failed in one or two subjects he must have credit for those in which he has done well, so that he may be able to devote his study to the weak points.

Personalities.

Mr. Arthur Bellamy, chemist, Louth, has been installed Worshipful Master of the Lindsey Lodge of Freemasons.

Alderman George Eade, chemist and druggist, Goswell Road, E.C., has been elected chairman of the Bartholomew Club.

Mr. J. Hinton Lake, pharmaceutical chemist, presided at the annual dinner of the Exeter Literary Society on January 17.

Mr. John Morgan Richards has purchased *Literature* from the *Times* and has incorporated it with *The Academy* under the title *The Academy and "Literature."*

Mr. T. Horner, for many years in Messrs. Kemp & Son's laboratory, Horncastle, is leaving at the end of the present month to take up a similar position with Messrs. Woolley (Limited), Blackburn.

Mr. Edward Evans, jun., says the *Times*, has returned to Liverpool from a visit to the Earl of Rosebery at Dalmeny. During his stay there Mr. Evans obtained a promise from Lord Rosebery to address a Liberal meeting in Liverpool next month. On the occasion of Lord Rosebery's visit he will be the guest of Mr. Evans, at his residence, Spital Old Hall, near Birkenhead.

Mr. Edgar Cohen of Messrs. I. & M. Cohen, sponge merchants, Houndsditch, E.C., asks us to give an unqualified denial of the statement (*C. & D.*, January 18, page 90), that he is the head of a Cohen Syndicate which is working to break the bank at Monte Carlo. He has not been in Monte Carlo for three years. If we read the *Star* more frequently we would have seen there a brief interview which a *Star* representative had with Mr. Cohen, and which concluded with this paragraph:—

"The report is wholly untrue, and I cannot tell how it originated," said Mr. Cohen, when confronted with the account of his play at Monte Carlo. "I am not in any way concerned with the Cohen syndicate, and know nothing of it. Why, I have not been to Monte Carlo for years!"

Business Changes.

Mr. Samuel Taylor has acquired the County Drug-stores, Weston-super-Mare, lately carried on by Mr. Smith.

Mr. C. H. Smith, chemist and druggist, late of Barrow-in-Furness, has opened a business at 11 Agar Street, Strand, W.C.

Mr. T. R. Oldbury, of Knighton, Radnorshire, has purchased the business of the late Mr. W. Owen Jones, chemist and druggist, at Much Wenlock, Shropshire.

Mr Frank Elijah Palmer, chemist and druggist, who for some time has been managing one of Poo's branches, has commenced business at 168 Unthank Road, Norwich.

Mr. A. Bush, pharmaceutical chemist, late of Margate, has taken over the business, of Barnett, Newth & Co., at 97 Uxbridge Road, W., which he will carry on under the same title.

Mr Ralph M. Ling, chemist and druggist, who for some years has managed the business of the late Mr. W. P. Hoare, Church Street, Cromer, is about to commence business at Havelock House, Cromer.

Messrs. Gostling & Co., chemists, Diss, have purchased the business of Mr. Betts, at Framlingham, and it is rumoured they are about to acquire others in the district with the view to amalgamating all their businesses under the Limited Liability Act.

The A. M. Todd Company (Limited) is a new limited partnership association, formed under the laws of Michigan, to succeed to the essential oil business of Mr. A. M. Todd, at Kalamazoo, Michigan. Mr. Todd will act as president and his two oldest sons, William A. and Albert J. are to be vice-president and secretary respectively.

The Chemists' Defence Association (Limited) and the Proprietary Articles Trade Association are becoming quite professional, having deserted the street made notable by the *Star* for offices at 184 Temple Chambers, Temple Avenue, E.C., where barristers, scientists, solicitors and the like do congregate. The subscription to the P.A.T.A. remains 5*s.*

Practical Notes.

Oil of Wintergreen.

M. A. Petit, in a communication to the Society of Pharmacy of Lyon, proposed as the best means of masking the smell of oil of wintergreen the addition of 1½ to 2 per cent. of oil of lavender.

Antiseptic Ointment.

Microcidine (naphtholate of soda)...	gr. xlv.
Oil of geranium	℥ss.
Oil of thyme	℥ss.
Oil of verbena	℥ss.
White vaseline	℥xxxv.

The ointment possesses antiseptic qualities, and has been used in burns with good results.

Elixir of Pepsin.

The following formula, by Mr. J. H. Hayden, is given in the *American Druggist*:—

Granular pepsin, U.S.P.	512 gr.
Granular rennet (concent.) ...	512 gr.
Distilled water	8 oz.
Glycerin	4 oz.
Deodorised alcohol	8 oz.
Detannated muscatel wine to make	4 pints

Mix the water and glycerin, add the pepsin and rennet, and allow them to stand for three or four hours, until they are apparently dissolved. Then add the deodorised alcohol and sufficient wine to make 4 pints. Mix with 1 oz. of talcum, and allow to stand a week and filter.

The wine is detannated with hydrated oxide of iron. If sherry is used in place of muscatel, 30 drops of oil of orange should be added to improve the flavour. To test the finished product add 1 dr. to 2 pints of fresh milk, previously warmed to 100° F., and stir; in fifteen minutes a firm curd should be formed.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

Opodeldoc.

SIR,—I have referred to an old dispensatory of the Royal College of Physicians of Edinburgh, and find the following preparation:—

Unguentum opodeldoch.
The ointment opodeldoc.*

Take of the roots of angelica, long birthwort, and masterwort each 2 oz.; of leaves of basil, sage, and wild thyme, as also of the flowers of rosemary and lavender, each 1½ oz; of juniper berries, of bay-berries, and of cumin seed, each 1 oz. Slice and bruise the ingredients, all of them being taken dry, and pour thereon 1 gal of rectified spirit; digest them without heat for three days in a close vessel; then set them in a warm balneum mariæ for some hours; afterwards press out the liquor, and add thereto 1 oz. of camphire and 2 lbs. of Venetian soap, cut into small slices; then with a gentle heat of a balneum mariæ digest all again in a circulating vessel, with the junctures luted till it becomes an ointment.

* The meaning of the name opodeldoch is not well understood, and was originally given by Paracelsus to a plaister which he very much recommends against ulcers, and which he seems to have judiciously applied as a chirurgeon; however whimsical he might have been in giving it this chemical title, according to his usual liberty in coining words, or transposing and changing their letters.

You will see by the footnote that Peter Shaw, M.D., editor of the above dispensatory translation in 1727, did not definitely know what opodeldoch should mean.

Yours faithfully,
R G. EUSTACE.

394 King's Head, Chelsea, S.W., January 17.

SIR,—With an experience in at least four Scotch counties, I have been in the habit of selling as opodeldoc the plain lin. saponis. The lin. opii I have been taught to sell as anodyne liniment. Considering that the laundresses here use lin. saponis along with turpentine to mix with their starch, I am afraid the guidman's collars would not be what he expects to see them. Steer's opodeldoc I have sold as a proprietary, but it was solid.

References: "Anodyne liniment—tinct. saponis cum opio, Edinr.," "Edinburgh Dispensatory"; "Opodeldoc—camphorated soap-liniment," "Medical Dictionary" (Dorland).

I may mention that I have met those who sold as elixir of vitriol the plain acid. sulph. dil., so that there are mixed views on the subject of the popular remedies.

Yours truly,
January 20. WM. R KERMATH.

SIR,—I have perused with much interest the discussion in your really valuable journal upon such an ancient preparation as "opodeldoc"—one of the oldest preparations asked for. The formula which Mr. C. C. Bell quotes is the formula given in Edit. IV. of the Pharmacopœia of the Royal College of Physicians, Edinburgh. I have acted both as assistant and manager for several years in the North and South of this country, and lin. saponis was always dispensed for opodeldoc, which, of course, as it contains all (or nearly all) the ingredients, has long since replaced the older formula. But the argument of that patriotic Scotchman, Mr. S. Lawrence, is really sufficient to make the old apothecary turn in his coffin. To think that a Shipping Act passed in 1867 could change the composition of a pharmacopœial preparation which was widely known and respected in the year 1770! "O Tempora! O Mores!" Mr. W. Lewis, in his copy of the Edinburgh Pharmacopœia, after giving the same formula as Mr. Bell, adds: "By occasionally adding tincture of opium to this balsam it becomes balsamum anodynum Bateanum, or Bates's anodyne." The "anodyne balsam" in use at the Royal Hospital, Edinburgh, was made by mixing ½ lb. of liquid laudanum with 1½ lb. saponaceous balsam.

Yours faithfully,
Graigue, January 20. P. V. COYLE.

SIR,—My label will show you that our opodeldoc does not contain opium. Mr. Lawrence's letter explains why we are occasionally asked for "the dark kind," and supply lin. opii. To save any confusion as to light and dark it might be well if the B.P.C. gave a dictum. My knowledge goes back to the early fifties, and extends from Tweed to Kirkwall.

Yours, &c.,
DELTA. (129/24)

London Chemists' Association.

SIR,—I shall be glad if you will allow me in these columns to call attention to the first meeting of the London Chemists' Association, which will be held at the Holborn Viaduct Hotel on Wednesday, January 29, at 3.30 P.M. A good number of the gentlemen who attended the meeting convened in November by the Western Chemists' Association omitted to sign the attendance sheet, and it will be impossible to send them personally a notice of this meeting. Any registered chemist residing, or engaged in business, in or near London will be eligible for membership of the Association, and on behalf of the Committee arranging the meeting I wish to cordially invite the presence of all who are taking an interest in the formation of this new association.

Yours faithfully,
88 Norwood Road, S.E. ROBERT H. JONES.

The Inspector of Measures as Materia Medica Expert.

SIR,—I am absolutely aghast at the judicial procedure which permits a person to be prosecuted for selling a drug because the functionary whose sole duty it is to collect the sample is allowed to state that it was "questionable whether it had any medicinal virtue," whilst he confesses that his sole ground for the statement was that he was ignorant of its properties, and failed to obtain information. Obviously, if I object, as a member of the medical profession, to an analyst posing as an expert on a question of pharmacology, my objections apply *à fortiori* to an inspector of weights and measures assuming that office. I am glad, however, that Mr. Sam Smith has relieved the analyst of the charge in good time, because I had intended bringing the matter before the Association. I must decline to discuss in detail the properties of almond oil against that of *Amygdalus persica* with Mr. Sam Smith or any other person whose knowledge of the subject is so hazy that he believes its use with syrup of violets is that of a laxative, or that some definite active principle differentiates the two oils, but I have had some considerable experience of both in medicine, and although I should not wish to have the one supplied if I specified the other, still I can detect no difference in therapeutics between good samples of either oil. I cannot but think that such a statement as Mr. Smith made in the summons was not only calculated to prejudice the case, but calculated to deceive the Magistrate into the belief that it was the mature and skilled scientific opinion of the medical officer of health, or at least of the analyst.

Yours truly,
Dublin, January 18. J. C. MCWALTER.

Christmas Day at Ladysmith.

SIR,—Your DIARY for 1902 safely to hand on Christmas Day, in time to relieve the monotony of an otherwise long day's duty, which it did most effectually. Allow me to congratulate you on, if possible, exceeding the value of any of your previous issues. Pages 518–520 are worthy of being framed, and hung in the most prominent part of every drug-store.

Yours faithfully,
Ladysmith, Natal, December 27, 1901. A. ADAMS.

Scotch Assistants.

SIR,—Your correspondent Mr. Lawrence is probably well within the mark when he says that for every English assistant working in Scotland there are fifty Scotch assistants in situations in England. This, I take it, is more an indication of business-shrewdness on the part of both English and Scotch assistants, than of any great difference

Digitized by Google

in their respective abilities. In support of this view, may I ask—

1. Are the salaries obtainable in Scotland likely to tempt any man to leave even a third-rate place in England?
2. Is any Scotchman (apart from purely personal reasons) likely to stay at home when he can do so much better further south? [Even after making allowance for increased cost of living, there is no denying salaries are much higher in England.]
3. Whether the professed preference for Scotch assistants on the part of one or two London firms is not entirely due to the fact that Scotchmen will engage for lower salaries than Englishmen will accept?

I know that the training (?) acquired in some town shops n England is far from satisfactory; but I fancy that, say, a Yorkshireman who has served an apprenticeship with a proper chemist will hold his own against an average Scotchman in any class of trade.

Yours faithfully,

£ s. d. (129/19.)

The Glasgow Faculty of Physicians and Doctors' Shops.

Sir,—I notice that your Glasgow correspondent states that certain licentiates of the Glasgow Faculty are appealing to that body to disregard the decision of the Medical Council regarding the "infamous conduct" of selling poisons, but he suggests that the Faculty will not move in the matter. This is not so certain. At a late meeting the President rather boasted in my hearing of their independence of the General Medical Council, and so far as I can gather that part of the charter which gives the Faculty control over the sale of drugs in Glasgow, &c., has never been repealed, though it was surrendered for the purposes of the Medical Acts as regards surgery, &c. Although I regard the Glasgow doctors' shops as a credit neither to pharmacy or physic, still, personally, on a question of privilege, I should vote that the Faculty should endeavour to reassert its old charter in this matter. Yours faithfully,

January 20. F.F.P.S Glas. (126/16)

[*Replies to Correspondents next week.*]

Trade-Marks Applied For.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1*l.*, obtainable through any money-order office.

"Jingo"; for photographic goods. By Seabrook Brothers & Co., 21 Edmund Place, E.C. 241,800.

"Rutico"; for photographic goods. By Rushbrooke & Co., 30 Moor Street, Birmingham. 242,391.

"Senaeb"; for an infant's and invalid food. By E. Beanes & Co., Falcon Works, Wallis Road, Hackney Wick. 242,437.

"Dragon Fly"; for yeast and malt extract. By the Bakers' Supply Company (Limited), Bridge House, St. Philip's Bridge, Bristol. 242,647.

Device consisting of a picture of the "Happy Valley"; for goods in Class 47. By F. Maltby, Stanley House, Ainsdale, near Southport, soap-manufacturer. 241,260.

"Viskosiline" (disclaims "Visco"); for illuminating, heating, or lubricating oils. By Sands, Wilson & Co. (Limited), Birstall, near Leeds, oil and tallow merchants. 242,082.

Label with combination of devices (wording "Pyrola," Buisson Frères, London); for a perfume. By W. J. Bush & Co (Limited), 28 Ash Grove, Hackney, manufacturing chemists and essential-oil distillers. 241,672.

"Lo Bapo"; for a toilet-preparation for softening water. By Violet Vaughan, 10 Blenheim Street, New Bond Street, W., toilet-specialist. 241,773.

"Gimco"; for incandescent mantles in Class 50. By the Guaranty Incandescent Mantle Company, 27 Balham Hill, S.W. 242,936.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, January 27.

Wolverhampton Chemists' Association. Annual meeting.

Tuesday, January 28.

Bradford Chemists' Association. Musical evening arranged by Mr. Arthur Hanson.

Glasgow Chemists' and Druggists' Assistants' Association, at 9.15. Mr. T. Maben on "The reign of law; being a plain statement of present-day facts commonly ignored."

The Chemists' and Druggists' Society of Ireland, Whitehall Buildings, Belfast. Annual musical evening. Mr. James Tate, M.C P.S.I., will preside.

Wednesday, January 29.

London Chemists' Association, Holborn Viaduct Hotel, at 3.30 P.M.

The London College of Chemistry. Annual dinner in the Venetian Chamber, Holborn Restaurant, London, W.C. Mr. Percy M. Thornton, M.P., will take the chair and present the prizes.

Public and Poor-law Dispensers' Association, St. Bride's Institute, Bride Lane, E.C., at 8 P.M. Annual meeting, when an address will be given by Mr. Duff on "The Aims, Organisation, and Extension of Our Association."

Nottingham Chemists' Association, Conservative Club Lecture-hall, Market Street, at 8.30 P.M. Mr. A. E. Beilby will give a lantern-lecture entitled "Old Belgian Cities."

Thursday, January 30.

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. "Plant Misfortunes," by Mr. R. E. Lownsbrough.

Barnsley Chemists' Association, Royal Hotel, Barnsley, at 6.30 P.M.

Friday, January 31.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Professor A. Crum Brown on "The Ions of Electrolysis."

School of Pharmacy Students' Association, at 5.30 P.M. Mr. Mole will give a paper, "The Life and History of *Apis Mellifica*." To be illustrated by lantern-slides, &c.

The Junior Pharmacy Ball will be held on February 26. Tickets can be obtained from Mr. P. Trick, Salisbury House, London Wall, E.C., Hon. Sec.

The annual dinner of the School of Pharmacy of the Pharmaceutical Society of Great Britain is to be held in the Royal Venetian Chamber of the Holborn Restaurant on February 3, Professor J. Reynolds Green will be in the chair. Tickets, 5*s.* each, can be obtained from the Hon. Secs. of the Dinner Committee, 17 Bloomsbury Square, W.C.

"Veterinary Counter Practice."—The book is a valuable one, in not only the information it contains, but in throwing out numerous hints as to how the pharmacist may increase his trade in this particular field.—*American Journal of Pharmacy.*

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: January 22.

THIS section of THE CHEMIST AND DRUGGIST goes to press a day earlier than usual this week, so that what follows here covers the markets up to Wednesday evening only. An account of the drug-sales will be found in the Coloured Supplement. The markets have generally been extremely quiet this week, and there are few changes in the drug and chemical markets. The principal alteration has been a reduction in cocaine, owing to a better supply of crude material Hypophosphites are weak, owing to competition and the dissolution of the Convention. Lithia has also been further reduced. Ergot is unchanged on the spot, but there are lower offers from Hamburg. Shellac has been a dull and declining market, and quinine has been quiet but firm in view of the Amsterdam bark-sale to-morrow, the result of which will also be found in our Coloured Supplement. In essential oils, so-called "Wayne County" peppermint is firmer; lemon oil also comes a trifle higher from Sicily; and orange is about 6*d*. dearer.

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from January 16 to 21, inclusive:—Aniseed (@ Libau), 104; arrowroot (@ St. V.), 227 brls.; arsenic (@ Oporto), 99 brls.; asafetida (@ Bunder Abbas), 400 cs.; bismuth ore (@ Antofagasta), 234 pkgs.; buchu (@ Cape Town), 23 bls.; camphor (@ Hamburg), 228; castor oil (@ Antwerp) 221, (@ Italy) 115 cs., (Fr.) 35 brls.; cinchona (@ Amst.), 30 bales; cocaine, crude (@ Callao), 3 bxs.; cochineal, 10; cod-liver oil (@ Aalesund), 144; colocynth, 13; chamomiles, 8; chillies, 93; cumin-seed (@ Malta), 87; ergot (@ Hamburg), 7; galls (Persian), 664 bgs.; gum arabic (@ Bombay) 8, (@ Alexandria) 500, (@ Trieste) 71 cs; gum olibanum, 320; gum sandarac, 100; gum tragacanth, 122 cs.; gum, unenumerated (@ Bombay) 184 cs., (@ Persia) 810 cs. 607 bgs.; jaborandi, 3; jalap, 14; lemon-juice (@ Messina), 10; lime-juice, (@ Halifax) 97 hhds., (@ Jamaica) 3 brls., (@ Dominica) 317 brls., (@ Trinidad) 24 cks.; lime oil (W.I.), 11 cs.; liquorice-root (Persian), 332; opium, (@ Amsterdam) 6, (@ Smyrna) 107, (@ Persia) 101; orris (Ital.), 85; potash carb. (@ Rouen), 7; potash chlorate (Swed.), 115 kegs; quicksilver (Ital.), 200; senna, (@ Bombay), 334, (@ Suez), 65 pkgs.; shellac, 1,206; button lac, 105; spermaceti (Amer.), 50; soda crystals (@ Ghent), 200 bgs.; squills (@ Malta), 21; turmeric, 71 bgs.; wax, bees' (@ Natal) 21, (@ Hamburg) 182, (Mor.), 31.

ACETANILIDE is dull of sale at from 8½*d*. per lb. for 1-cwt lots.

ACID, CARBOLIC.—The current quotations are as follows:—Ordinary ice crystals 34° to 35° C., 6½*d*. to 6⅝*d*. per lb, and 39° to 40° C., 6⅝*d*. to 6¾*d*.; detached crystals (B.P. quality), 8½*d*. to 8¾*d*. per lb; crude 60 per cent., 1*s*. 10½*d*. to 1*s*. 11*d*., 75 per cent., 2*s*. 4*d*. per gal.; cresylic 95 per cent., 8*d*. to 11*d*. per gal.

ALCOHOL.—German potato-spirit, druggists' quality (56 and 68 o p.) for home use, is quoted 7⅞*d*. to 8⅛*d*. per proof gal. net delivered in bond in casks or drums. Perfumers' quality is 8½*d*. to 9¼*d*.

ARROWROOT.—At auction on Wednesday St. Vincents was bought in at 1½*d*. to 1⅝*d*. per lb. for fair to good; and Natal at 6½*d*. per lb.

ARSENIC.—Best white English powdered is quoted 16*l*. to 16*l*. 5*s*. per ton in London, and 15*l*. f.o.b. Devon.

ASAFETIDA.—The s.s. *Afrikander* from Bunder Abbas has brought 400 cases.

CALCIUM CARBIDE is quoted at 14*s*. 6*d*. per cwt., f.o.b., Hamburg, which price may be shaded for contracts.

CAMPHOR.—Refined German is tending firmer, and in second-hands, makers' prices are quoted—viz, 2*s*. 2*d*. to 2*s*. 2½*d*. per lb. There are sellers of Japanese crude at 156*s*. to 157*s* 6*d*. per cwt., c.i.f., being easier, but for parcels near at hand higher prices are asked.

The exports from Canton and Hong Kong to the Continent from January 1 to December 20, 1901, have been:—

	1901	1900	1899	1898
Boxes ...	3,202	21,491	15,772	16,174

COCAINE.—As anticipated in our last report, makers have reduced their prices, 3*s*. per oz., and now quote the hydrochloride at 17*s*. 9*d*. for contracts of 200 ozs. Pure is 2*s*. 9*s*. per oz. more. Supplies of crude cocaine have been more plentiful of late. It is also stated that another maker of cocaine has entered the field.

COCOA-BUTTER.—The auctions to be held at Amsterdam on February 4 will consist of 85 tons Van Houten's, 8 tons De Jong, 4 tons Helm, 3 tons Betke, 5 tons Mignon, and 3½ tons foreign brands; while on the same date in London 90 tons Cadbury's will be offered.

ERGOT is unchanged on the spot, business having been done at 1*s*. 9*d*. for Spanish. From Hamburg the prices are a shade easier, and there are offers at 1*s*. 5½*d*., c.i.f., or 1*s*. 5*d*., c.i.f., from Spain.

GAMBOGE.—The scarcity has been relieved by the arrival of 16 cases new crop, which is the first shipment of any importance since 1897, and during the interval prices have risen from 9*l*. to about 13*l*. 10*s*. per cwt.

HYPOPHOSPHITES.—No official change in price has been announced, but the market is weak in anticipation of severe price-cutting between makers. The quotation for lime, soda, and potash in ½-ton lots is 2*s*. 9*d*. per lb. net.

JUNIPER-BERRIES are becoming scarce, and one holder has advanced his price to 12*s*. 6*d*. on the spot, and to arrive 12*s*., c.i.f., is quoted.

LIQUORICE-ROOT.—In ordinary rough Persian further sales have been made at 6*s*. 6*d*. to 7*s*. 6*d*. per cwt. Clean-cut lengths are quoted 12*s*., and decorticated is nominally worth 20*s*. per cwt.

LITHIA.—A further reduction has taken place, the quotation for carbonate in 2-cwt. quantities being 5*s*. 11*d*. per lb. net.

MAGNESIA SULPHATE is quoted 47*s*. 6*d*. per ton in bags, and 52*s*. 6*d*. in casks, f.o.b., Hamburg.

MENTHOL.—A quiet market at from 14*s*. to 14*s*. 6*d*. per lb., spot.

OIL, ANISE, STAR.—Quiet, with sellers at 4*s*. 9*d*. to 4*s*. 10*d*. on the spot.

OIL, CASTOR.—Both French and Italian are tending easier, but there is no quotable alteration in price.

OIL, CINNAMON.—Genuine bark oil is quoted 1*s*. 6*d*. to 1*s*. 10*d*. per oz., according to quality, and leaf oil at 1¾*d*. to 2*d*. per oz.

OIL, CITRONELLA.—Business has been done in drums at 9¼*d*. per oz., c.i.f., for January-March shipment.

OIL, COD-LIVER.—The reports concerning the new fishing are still meagre and of little importance. Quotation for best Lofoten non-congealing oil, which is very scarce, is unchanged at 69*s*. per barrel, f.o.b. Bergen, for old oil and 71*s*. for new. The exports from that port to date amount to 346 barrels, against 260 barrels at the same time last year. In London the quotation ranges from 70*s*., c.i.f., upwards, but only a small business is reported.

OIL, LEMONGRASS, is steady at 7½*d*. per oz., spot, and to arrive 6*d*., c.i.f., is quoted.

OIL, PEPPERMINT.—So-called "Wayne County" oil is firmer, with sales at 7*s*. 3*d*. per lb., spot, and the same figure has been paid for JBH "pure." HGH is unchanged and quiet, at 9*s*. to 9*s*. 3*d*. Todd's "crystal white" is quoted 8*s*. 3*d*., and "Rose Mitcham" 12*s*. 6*d*. per lb.

Digitized by Google

OILS, SICILIAN.—Orange is about 6*d.* dearer, one agent quoting 5*s.* 11*d.*, c.i.f.; bergamot is 7*s.* 3*d.* to 7*s.* 6*d.*, c.i.f.; and lemon has slightly advanced, 2*s* 10*d.*, c.i.f., being quoted for a good brand.

OPIUM.—In Persian opium a good business has been done lately at about 9*s.* 3*d.* per lb., c.i.f., and 9*s.* 6*d.* to 9*s.* 9*d.*, on the spot. Full prices have also been paid for soft-shipping, which is quoted at from 14*s.* to 15*s.* 9*d.* for good to fine manufacturing kinds, and druggists' have been quiet.

SMYRNA, January 10.—The demand this week has been very active, English, American, and other buyers having come forward and purchased about 150 cases at full prices, principally for American account. From 8*s.* 1*d.* to 8*s.* 3*d.* per lb., c.i.f., was paid, according to quality. The market closes firm with buyers. The arrivals to date amount to 2,990 cases, against 3,748 cases at the same time last year. The conditions as regards sowings continue favourable.

CONSTANTINOPLE, January 17.—The only sales to report are 2 cases "soft"-shipping at 11*s.* 4*d.* per lb., and 4 cases "druggist" at 8*s.* 1*d.* This market has responded to the firmer tone ruling in Smyrna, and to-day sellers are not to be found at above prices. The weather has turned very cold, and should severe frost follow the young plants will suffer, and prices will, without doubt, rise still further.

ORRIS is very flat, and prices in Italy continue very low, one importer quoting 28*s.* per cwt., c.i.f.

POTASHES.—Montreal are quoted 26*s.* 6*d.* to 28*s.* 9*d.* per cwt. for firsts, but seconds are unobtainable. *Pearl* is worth 40*s.*

QUININE.—The market in second hands closed rather dearer last week, about 20,000 oz. selling on the spot at 1*s.* 1½*d.* per oz., and this price has since been maintained. Business has been of small extent (owing to the cinchona auctions in Amsterdam to-morrow), and comprises March delivery at 1*s.* 1⅜*d.*, May 1*s.* 1⅝*d.*, and June 1*s* 1¾*d.* per oz. Messrs. C. M. & C. Woodhouse, in their latest circular, say that the tone of the market during the past month has been quiet, but very firm, and we have hardly any fluctuations to record in prices of second-hand quinine. Few holders can afford to sell at present rates except at a loss, and we are now approaching the season when exports of bark from Java usually show a material reduction, with a consequent advance in prices of bark and quinine. The feature of the market for some time past has been the absence of sellers.

SARSAPARILLA.—None is to be offered in auction to morrow. Privately a few bales of Lima-Jamaica are obtainable at 1*s.* 4*d.*, and grey Jamaica at 1*s* 7*d.* per lb.

SENEGA.—It is reported that practically all the available stock on offer in the North-West has been purchased by New York houses. There is a firmer tone about the market here, and 2*s.* 4*d.* per lb., net, is quoted by one holder.

SHELLAC has been a flat and declining market owing to a reduction in the Calcutta price of TN, which now stands at 66r. On the spot the value of fair second orange TN is now 118*s.* to 120*s.*, and a few sales have been made at about these figures. Futures have been quiet, the business done comprising January delivery at 119*s.*; March, 121*s.* to 122*s.*; May, 123*s.* to 124*s.* per cwt. The market closes dull and inactive.

SPICES.—Singapore black *Pepper* is lower for arrival, business having been done at 6¼*d.* per lb. for March-May shipment. At auction on Wednesday fair quality sold at 6*d.* to 6⅛*d.* per lb. A parcel of greyish Alleppy partly sold at 5⅞*d* per lb. Penang was bought in at 5¾*d.* per lb. A small lot of Singapore white, rather brownish, sold at 9¾*d.* per lb.; fair quality is selling at 10*d.* and at 10 3/16*d.* for January-March shipment. Penang is worth 9 11/16*d.* on the spot, and 10*d.* for January-March steamer. All the parcels of Cochin *Ginger* were bought in; dull washed rough, new crop, at 50*s.*, good boldish washed rough at 52*s.*, bold rough at 55*s*, and B cut at 72*s.* 6*d.* per cwt. Rough limed Japan was bought in at 42*s.* per cwt. Zanzibar *Cloves* have been very quiet, the value for March-May delivery being nominally 4 1/16*d.* per lb. Fair Penang were bought in at 7⅛*d.* per lb. *Pimento* dull, ordinary to fair was bought in at 3¼*d.* to 3⅜*d.* per lb. *Cinnamon-chips* were withdrawn at 3¼*d.* per lb.

SULPHUR.—The total exports from Sicily from 1898 to 1901 were as follows:—

	1901	1900	1899	1898
Tons of 13 Sicil. cantars ..	461,466	543,632	470,965	443,711

The exports in 1901 to U.S.A. and Canada show a decline of 15,713 tons. France of 31 376 tons, Italy of 20,902 tons, Germany 6,532 tons. Great Britain increased her imports by 563 tons, the total being 23,189 tons, against 22,626 tons in 1900. The current quotations are as follows:—Foreign flowers, 6*l.* 7*s.* 6*d.* per ton; roll brimstone, 6*l.* to 6*l.* 2*s.* 6*d.*; recovered, 96*s.*, f.o.b., and best third's, 80*s*, c.i.f.

SUGAR OF LEAD.—White is quoted 23*s.* 6*d.* per cwt., and brown 19*s.* 6*d.*, f.o.b. Continent, in 5-ton lots.

Heavy Chemicals.

The volume of business passing in the heavy-chemical market has not yet grown in any great degree, but with home consuming trades fairly well employed demand for miscellaneous products is quite a moderate one, and in addition there are signs of it increasing. In the export line quietness is usual at this period with various ports still closed to shipments, but orders for forward requirements are being steadily booked. Demand against existing contracts keeps well up to the average. As regards values there is not much that is new or of special moment to be reported, prices for the most part being steadily maintained at late rates.

ALKALI PRODUCE. — Bleaching-powder for prompt is rather quiet, but there are fair inquiries in for forward, and in this respect more business is being done. For hardwood casks, f.o.b. Tyne or Liverpool, price is 6*l.* 15*s.* to 7*l.* per ton, and for soft-woods, free on rails, 6*l.* 7*s.* 6*d.* to 6*l.* 12*s.* 6*d.* per ton. Caustic soda is in much the same position as bleach, 76 to 77 per cent., 10*l.* 7*s.* 6*d.* to 10*l.* 15*s.* per ton; 70 per cent., 9*l.* 15*s.* to 10*l.* per ton; 60 per cent., 8*l.* 15*s.* to 9*l.* per ton. In saltcake there is little or nothing being done, and price is weak at 25*s.* to 26*s.* per ton, free on rails, in bulk. Chlorates are fairly steady, at 3*d.* and 3¼*d.* per lb. for potash and soda respectively. Yellow prussiate of potash has maintained its late firmer tone, and is steady at 5¾*d.* to 5½*d.* per lb. for best Lancashire makes. Ammonia alkali in steady request and firm, at 4*l.* 12*s.* 6*d.* to 4*l.* 17*s.* 6*d.* per ton in bags, free on rails. Soda crystals stand unchanged, at 62*s.* 6*d.* per ton, f.o.b. Tyne, and 67*s.* 6*d.* per ton, f.o.b. Liverpool, with fair general request. Prices and position of other products in this branch as lately reported.

SULPHOCYANIDES are without improvement either in value or demand. Potassium, 7½*d.* to 7½*d.* per lb. Ammonium, 95 per cent., 6*d.* per lb. Barium, 95 per cent., 4*d.* per lb.

ZINC SALTS have declined a little and are scarcely moving so well. Zinc sulphate crystals, 6*l.* to 6*l.* 2*s.* 6*d.* per ton. Zinc chloride solution, 100° Tw., 6*l.* to 6*l.* 5*s.* per ton.

BROWN ACETATE OF LIME.—Although in fairly good request, is in better supply, and price is rather lower at 5*l.* 5*s.* to 5*l.* 10*s.* per ton.

Cablegram.

HAMBURG, January 22, 1 48 P.M.:—Cevadilla is lower in price, 70*m.* per kilo. being the most recent quotation. Worm-seed is scarce, and, therefore, firmer prices are the rule. The turpentine-market is excited.

Propyl Alcohol Pays Spirit-duty.

Recently the Customs authorities have been exacting duty on all importations of propyl alcohol. We have asked the Board of Customs upon what ground this duty is chargeable, especially if it is on account of any ethylic alcohol which it may contain. We have now received the following reply:—

Custom House, London,
January 21, 1902.

SIR,—I am directed by the Commissioners of His Majesty's Customs to inform you, in reply to your letter of the 10th instant, that duty has been charged on propyl alcohol at the current spirit-rate, as a form of spirit which Parliament has not exempted from duty. I am, Sir, your obedient servant,

The Editor, JOHN GATTING.
The "Chemist and Druggist,"
42 Cannon Street, E.C.

This seems to us a matter in which the Drug Club or the Chemical Section of the Chamber of Commerce might take action.

To Make Sulphuric Acid.

The extensive pyrites ore areas at Rowsell's Harbour, Labrador, that were owned by Joseph Ripey, of St. John's, Newfoundland, and others, have been secured by the Dominion Iron and Steel Company, who have sent a force of men and mining apparatus to work these deposits. The company intend to manufacture sulphuric acid on a large scale.

"'PHARMACEUTICAL TESTING' is just the thing for the busy pharmacist. Practical, concise, and easy of reference, it gives him the test by which he may ascertain the purity of most of the leading chemical preparations, &c., the quality of which it is his business to know."—Professor W. M. SEARBY, of the College of Pharmacy, San Francisco. (Published by the *C. & D.*, 2s. 6d.; by post, 2s. 9d.)

Summary.

"J. ISLIP" is again ordering goods. See warning note on p. 211.

KODAK'S terms are discussed, *pro* and *con*, by correspondents (p. 212).

SOME more phrases which involve medicine-stamp liability are mentioned on p. 134.

THINGS THAT HAPPEN—SOMETIMES replace our nursery rhymes for a short time (p. 194).

INTERESTING particulars regarding the practice of dentistry in Egypt are given on p. 213.

TWO UNLICENSED RETAILERS have been fined for exposing stamped medicines (p. 204).

THE conclusion of evidence and arguments in Treatt *v.* Samuelson is reported on p. 200.

A CREOSOTE MASS suitable for manufacturers is described by Mr. J. J. Bryant in a note on p. 199.

WE sum up the discussion on opodeldoc in an historical review of the origin of the preparation (p. 196).

WHAT is calcii phosphas, B.P.? This is a question which Messrs. Cowley and Catford answer on p. 190.

THE supply of vaccine-lymph and the cure of cancer have occupied the attention of Parliament (p. 215).

THE President of the Pharmaceutical Society has expressed his views on Mr. Paterson's education proposal (p. 193).

MR. LORD GIFFORD says the best way to settle the apprenticeship question is to go for unqualified practice (p. 211).

DENTISTS (unregistered) have got into trouble at Clitheroe owing to the death of a patient under chloroform (p. 183).

"YOUKNO" is the name of a skin-preparation used in Australia which has given rise to an interesting legal action there (p. 187).

THE DISCOVERY OF THE FUTURE was the topic at the Royal Institution last week, and Mr. H. G. Wells, the novelist, was the lecturer (p. 193).

MR. W. R. D. WHITE, of Portsmouth, has been fined a second time under the Pharmacy Act because his poison labels do not conform with Section 17 (p. 200).

A BOW STREET summons against a retailer in respect to paregoric had to be withdrawn because the analyst made a misstatement in his certificate (p. 203).

THE DICKENS *v.* RANDERSON DECISION upset the contention in the London Mansion House Court that mercurial ointment is not necessarily the B.P. article (p. 203).

THE Pharmaceutical Society of Trinidad (one of the fifteen Societies for which the *C. & D.* is "the official organ") has had a successful annual reunion (p. 211).

THE work of the Poisons Committee and the issues involved are the subject of a communication on p. 215. A note on p. 197 indicates the importance of the statement.

THE DUBLIN HIGH COURT has finally decided that the use of embossed aërated-water bottles by other makers than the owners is an infringement of the Merchandise-marks Act (p. 201).

EARLY-CLOSING OF SHOPS is now occupying the attention of the House of Lords (Lord Avebury's Bill), and the House of Commons has Sir Charles Dilke's Bill before it. The latter we summarise on p. 198.

THE DUDLEY BOROUGH ANALYST'S CERTIFICATE on an orange wine has been contested successfully, Dr. Paul, Mr. Gordon Salamon, Dr. Luff, and Mr. R. Bannister being witnesses for the defence (p. 203).

THE METHYLATED SOAP-LINIMENT CASE, in which Parke's Drug Stores (Limited) were defendants, has been decided against the company by Mr. D'Eyncourt, who imposed a fine of 20*l.* and ten guineas costs (p. 202).

PHARMACEUTICAL EDUCATION is the subject of the week before local pharmaceutical associations, the Federation being partly responsible for much writing and oratory which we condense in our reports beginning on p. 189.

THERE is a marked absence of any feature in the drug and chemical markets this week, business being very dull. At the vanilla-sale on Wednesday the largest quantity on record was offered, the bulk of which sold at firm prices (p. 208).

B—C

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

The dinner of the Huddersfield Chemists' Association has been postponed from February 5 to February 26.

In the North of London just now samples of acetum scillæ are being taken by the food and drugs inspectors with the view of testing the acid strength.

The committee of the Worcester Infirmary has accepted the tender of Messrs. Anderson & Virgo to supply drugs for the current year at 15 per cent. off the list-prices.

At a meeting held in Liverpool, on January 27, in support of a scheme for a local university, it was announced that 8,000*l.* had already been subscribed towards the project.

The public analyst for Camberwell reports that during the quarter ending December 31, 1901, 245 samples of food and drugs had been analysed, and of that number 32 were adulterated.

The business premises occupied by Mr. Bertram G. Skipworth, chemist and druggist, at 15 Wharf Road, Grantham, were sold by auction on January 20, being purchased by Mr. Skipworth for 900*l.*

Joshua McDurban was committed for trial at the Gosport Petty Sessions on January 28, on a charge of embezzling various sums of money belonging to Dr. Kyffin with whom he had been employed as book-keeper and dispenser since September last.

At an inquest held at Lambeth on January 27, on the body of Augustus George Boore, a chemist's assistant, who was found dead in bed, the medical evidence showed that death was due to syncope consequent upon fatty degeneration of the heart.

At Wakefield County Court on January 22, the Pontefract Liquorice-refining Company obtained judgment for 10*l.* 7*s.* against the Lancashire and Yorkshire Railway Company, for loss sustained through damage done to five casks of syrup, which Judge Raikes found had not been properly warehoused.

At Lancaster Assizes on January 27, William Anthony Trythall, a Coventry commercial traveller, was sentenced to six months' hard labour for obtaining money by means of bogus cheques, one of which purported to be drawn upon the banking account of Mr. Arthur Davis, a Leeds drysalter.

In a claim made by Mr. Stanley Smith, chemist and druggist, Tunbridge Wells, on January 23, against the South-Eastern Railway Company for 3*l.* 15*s.*, the value of a terrier, it was stated that the dog had escaped from the company's porter through the snapping of a chain supplied by the plaintiff. The Judge, after a lengthy hearing, found for the defendants.

At the Hull Police-court on January 21, a German steward on the s.s. *Albatross*, lying in the Prince's Dock, named Herman Burns, was charged with smuggling 1 lb. of saccharin. A Customs officer gave evidence of finding the saccharin in prisoner's trousers, and said that the single value and duty on the saccharin amounted to 2*l.* 12*s.* Prisoner was fined 2*l.* 13*s.* 6*d.*, and costs 10*s.* 2*d.*

A fashionably attired lady, giving the name of Mina Stuart Simpson, was remanded at Windsor on January 26 on a charge of obtaining goods to the value of 1*l.* 6*s.* from Mr. Edward Grisbrook, chemist and druggist, High Street, Windsor, by false pretences. Accused represented herself as the daughter of Lady Murray, and ordered certain perfumes and toilet articles to be sent to her house. Her representations being found to be devoid of truth, she was arrested.

Dr Bynoe, formerly residing and carrying on the profession or business of a general practice in medicine, surgery, and dental surgery, at 1 Endsleigh Gardens, London, N.W., is suing the Bank of England for 25,000*l.* damages. In 1892 he was sentenced to a term of penal servitude for forging banknotes, and the jury afterwards described the sentence as a miscarriage of justice. Dr. Bynoe's name was removed from the medical register, and the General Medical Council has refused to reinstate it.

Politician and Pharmacist.

Alderman J. L. Seaton, J.P., pharmaceutical chemist, Hull, is the subject of an interesting sketch in a recent issue of the *Hull News*. Mr. Seaton is the senior alderman of the Corporation, which he entered in 1867. Six years later he filled the mayoral chair, and in the year following he was made an alderman. He interested himself deeply in the income-tax question, and his speeches on the subject, delivered all over the country, brought him into contact with the late Mr. W. E Gladstone, Lord Beaconsfield, and Sir Stafford Northcote. During his mayoralty, in 1874, Alderman Seaton originated the Hospital Sunday movement in Hull. He is a Justice of the Peace, a member of the Humber Conservancy Board and of the Humber Pilot Commissioners, a Governor of Hymer's College, and the oldest Freemason of the Humber Lodge, which he joined in 1851. He was born at Chatham in 1820, and served his apprenticeship with Cooper & Chambers, wholesale druggists, Rochester. After acting successively as assistant and commercial traveller with that firm, he opened a pharmacy in Whitefriargate, Hull, in 1847. Being a homœopathist, the present Homœopathic Dispensary originated from his business. He subsequently founded the firm of J. L. Seaton & Co., oil bottlers and refiners.

Not Arsenic the Cause.

With regard to the "arsenic-in-beer" revival in Halifax mentioned in our issue of January 18 (page 70), the adjourned inquiry was held on January 23. The first witness was Mr. J. F. Woodyatt, who gave an exhaustive account of the results of his *post-mortem* examination, and said death was due to pneumonia and not to arsenical poisoning. Samples of beer had been purchased from three public-houses, at one of which the deceased man drank on the Sunday prior to his death. Mr. A. H. Allen, the Sheffield public analyst, deposed to analysing the samples of beer, as well as the liver, kidneys, and intestines of the dead man. He did not think the traces of arsenic found had any definite significance. A verdict in accordance with this evidence was returned.

Special Soap.

At Southwark Police Court on January 24, John Trunley, scavenger, and Mark Cook, watchman, were charged with stealing and receiving 30 lbs. of soap, value 6*s.*, the property of Messrs. Peters & Bridges, skin-rug manufacturers, of Peckham. The soap when produced was in bars of such a peculiar colour that the Magistrate (Mr. Paul Taylor) observed that they looked more like bricks than soap. The cashier to the prosecutors said it was soap of the kind they used in dressing skins, and was specially made for their business. The prosecuting sergeant said it contained arsenic, and the police-constable who made the arrest said Trunley told him he got it for some of his mates to wash their trousers with, and also the legs of the Vestry horses. Both prisoners were sentenced to three months' hard labour.

Cough-lozenges for Children.

On January 23 the Walsall Coroner (Mr. T. H. Stanley) held an inquest at Bloxwich, respecting the death of Edward Clark, aged one year and ten months. An elder brother of deceased brought home some linseed, liquorice and chlorodyne cough-lozenges, said to be manufactured by a firm in Walsall. Several members of the family partook of the lozenges, and all without ill effect except deceased, who was allowed to eat five of them, and some hours afterwards was seized with sickness, which continued at intervals during the night and next day. On the following day, as its condition became more serious, Dr. F. Wilson was called in, and found the child comatose. From what he was told he administered an emetic, and applied other remedies, but the child died next morning. A *post-mortem* examination showed the existence of intense irritation of the stomach, to which death was due, and this the doctor considered was produced by the lozenges, each of which contained about $\frac{1}{12}$ gr. of morphia. He explained that an adult might have felt no ill effect from taking $\frac{1}{4}$ gr. of morphia or even more in some cases, but with children it was very different, as

Digitized by Google

they were much more susceptible to morphia and opium. In this case deceased was a big, strong, healthy child. It was stated that deceased's brother, aged 13, ate nine of the lozenges, and the Coroner said he should imagine he had had a narrow escape. The Doctor: I should think so; if you eat two or three they will make you quite sleepy. The Coroner said the lozenges were in very common use, and this was borne out by members of the jury, who said tons of them were eaten, and that these were rather a better class—a remark which elicited the reply that they were certainly more effective. The Coroner having tried one of the lozenges said there was a perceptible burning sensation, and Dr. Wilson said he had no doubt they contained something besides morphia. A verdict of death by misadventure was returned, the Coroner remarking that the case would no doubt act as a warning to parents to keep such things out of the reach of young children.

Booming Bovril.

A thousand medical men practising in London and suburbs attended a reception at the premises of Bovril (Limited), Old Street, E.C, on January 23. Viscount Duncannon received the visitors, who were then conducted over the factory and offices in parties of twenty, and midway in their perambulations were entertained to luncheon in the labelling and wrapping-room which for the nonce had been converted into a refreshment-room. A tour of nearly the whole building was made by the visitors, and much appreciation was expressed at the perfected arrangements used in preparing, bottling, and packing bovril and the other specialities of the firm. Later on in the day another reception and tea was given to medical men unable to be present at the earlier function. The visits to the factory will no doubt do much to enhance the popularity of Bovril.

Birmingham Notes.

A curious announcement occurs in one of our city weeklies: "Mourner, you have no claim against the chemist; on your own showing he merely guaranteed the *bottle*."

In the Dudley orange-wine case "Mr. Paul, Editor of the *Lancet*," gave evidence, according to a local paper. When did the evergreen doctor forsake the pleasant groves of Bloomsbury?

A possessor of pigeons, desiring to get rid of some of them, gave them some opium pills, and, to his great surprise, found that it had not the desired effect. He afterwards learnt that these birds are as immune to opium as it is said cockroaches are to strychnine.

The accident at Moseley Reddings last Saturday in football calls for a complete first-aid outfit at each of these assemblies, and it seems an excellent chance for a pharmacist to devise a cheap one, with the wherewithals in a compact and portable form.

The Birmingham authorities are about to appoint a bacteriologist to their sewage-works at a salary of 160*l.* per annum. One dissentient, Dr. Evans, contended that bacteriological treatment of sewage is nothing more than the natural process, and no special officer was required other than the chemist.

A dentist, writing to the *Post*, asks it to gather statistics of the many unqualified practitioners of their profession in this city, and publish their names. The letter is full of righteous indignation and highly technical terms, but it does not cloak the fact that there are more sinners in the midst of them than without.

Sister against sister sounds dreadful, but it was only a Ping-pong tourney at the Bingley Hall on Saturday afternoon last, when the Misses Wolseley were pitted against each other for award of first and second prize. These talented ladies are very well known, and have held excellent dispenserships at the local hospitals and surgeries of the Midlands. They have relinquished pharmacy.

The King has been pleased to accept a book on "The War against Consumption," which has been written by two of Birmingham's worthy sons, Drs. D. and J. Vinrace, now practising in London, sons of Dr. John Vinrace, who has practised medicine in this city for over fifty years. They received their medical education in our city, and saw much practice at the General and Children's Hospitals.

A customer entered an oilshop for some vermilion, and was told they did not sell it, but could supply vermilionette, which for the particular purpose required seemed to answer very well. What was it? It has been suggested that it is one of the many methods adopted to avoid the sale of poisonous preparations by the great unqualified. For example, red-lead is often sold in our city by drysalters for red precipitate, and spermaceti ointment for white-precipitate ointment.

Leeds Notes.

Leeds people are seeking immunity from the smallpox by re-vaccination, and the demand for calf-lymph has suddenly sprang up to unprecedented dimensions.

Mrs. Martha Ellen Shillito, widow of the late Mr. Richard Shillito, chemist, of Meadow Lane, Leeds, died at Beeston Hill, Leeds, on January 15. She was 72 years of age.

An owner of a large stud had a talk with a correspondent on Wednesday, on the alleged drugging of horses on the Yorkshire wolds. He said that the lads drug the animals to make them sleek and bright in their coats. It had been a common practice for years past for the lads on the isolated wold farms to get the carriers to bring them certain drugs from the chemists in the neighbouring towns, and he was glad to hear that some of the carriers had already refused to take any drugs. He wished that every carrier would follow the example, and that the druggists of the various towns would refuse to supply farm-lads with deadly drugs, or even deleterious mixtures of any kind, unless they had some proof that they were needed by their employers, and were procured with their knowledge. Druggists, he believed, would be ready to help to put a stop to the practice when they knew more of the evil results of supplying certain drugs indiscriminately to farm-lads.

Wholesale Druggists' Cricket Championship.

In the past season the League table resulted as follows:—

—	Played	Won	Lost	Points
Wellcome C.C. ...	9	8	1	16
Davy Hill's C.C. ...	9	7	2	14
Kindrug C.C.	7	3	4	6
Burgoyne's C.C. ...	7	1	6	2
City Mills' C.C. ...	8	1	7	2

The Wellcome C.C. and Davy Hill's C.C. tied for first place, and on playing the deciding match, the Wellcome C.C. won by 10 runs. The annual concert, as announced on page 214, takes place on February 14, and is to be good.

A Chloroform Case.

On January 21 Mrs. Margaret Ann Hothersall (30), of Low Moor, Clitheroe, visited the rooms of Thomas Crook and James Lancaster, artificial-teeth makers, of Castle View, Clitheroe, and of Blackburn, for the purpose of having some teeth extracted, and at her own request chloroform was administered. After the teeth had been drawn she did not recover satisfactorily, and Dr. Barker was called in. Artificial respiration and other means were tried without success, life being extinct. At the inquest the following afternoon, it was stated that Crook and Lancaster were unregistered dentists, their sign bearing the words—

Teeth extracted painlessly, and artificial teeth supplied. Also specialists for skin-diseases.

The housekeeper at Castle View, where Lancaster and Crook practised, deposed that deceased expressed a wish to have chloroform. Crook, Lancaster, and witness all tried to dissuade deceased, and the two men got her to consent to have gas, but this was scarcely applied before it gave out, and chloroform was then administered on a pocket-handkerchief. As soon as she had "gone off," Lancaster drew the teeth, and before he had the last one out she seemed to be coming round and opened her eyes. Mr. Lancaster thereupon got her up to wash out her mouth, but she collapsed, and he at once sent for Dr. Barker.

Dr. Barker stated that when he was called to the house he found deceased being supported in a semi-upright posi-

Digitized by Google

tion on the sofa in the front room. He immediately placed her flat on the sofa with her head low. Artificial respiration and hot fomentation over the heart were applied, but without effect. Apparently none of the ordinary means had been taken prior to his arrival to restore deceased. The position in which he found deceased was an unfortunate one. His opinion was that the woman died from asphyxia from chloroform-poisoning. He could not say whether he could have saved her had he been five minutes sooner. The heart may have gone first, even under chloroform, suddenly.

Mr. Knowles (for the dentists): I take it chloroform is safe, even for a child of 2 years of age?

It is never particularly safe, even with the greatest care in administration. Deaths have taken place under chloroform when under medical care.

James Lancaster, who described himself as an artificial-teeth maker, of Whalley New Road, Blackburn, said he did not measure the chloroform he administered to deceased. He got four teeth out in about six seconds, and immediately he had done he lifted deceased up so that the blood would come out of her mouth. When she collapsed he got a bottle of ammonia and put it to her nose, and told Mr. Crook to run for the doctor. The upright position the doctor spoke of was only momentary. Asked by the Coroner whether he had any medical qualification, Lancaster said he had not, but he had as much qualification as other dentists, having gone through the same colleges, though he was not registered. There were 95 out of every 100 who had not passed at all.

Examined by Mr. Knowles, Lancaster said he had been in Clitheroe fifteen months, and during that time had administered chloroform between 300 and 400 times successfully. His partner, Crook, had more medical qualifications than himself. He did not know the amount of chloroform he administered; he simply gave it till the patient lost consciousness.

After half-an-hour's deliberation in private, the jury found—

That Margaret Ann Hothersall had died from an overdose of chloroform unskilfully administered by James Lancaster and Thomas Crook, and, further, that they, by the means and manner aforesaid, did kill and slay the said Margaret Ann Hothersall.

On January 25 the two men appeared at the Clitheroe Police Court, in answer to a charge of manslaughter.

The Chief Constable, who prosecuted, briefly related the statements disclosed at the inquest.

Mr. Knowles, who defended, asked several of the witnesses whether the original verdict of the Coroner's jury at the inquest had not been altered on the suggestion of the Coroner? Dr. Barker admitted that something was added to it, but he did not think it amounted to a verdict. Dr. Smithies, who made a *post-mortem* examination in conjunction with Dr. Barker, said he was prepared to swear that deceased died from the inhalation of the fumes of chloroform. The Chief Constable said Crook went to his office, told him of the occurrence, and requested witness to go with him to Castle View. Both Crook and Lancaster told him they were not dental surgeons, nor were they registered dentists. Dr. Barker, recalled, said prisoners had employed the method usually adopted in administering chloroform, but had not used the special graduated bottle generally employed.

The prisoners were committed for trial at the Liverpool Assizes.

Sundry Claims.

In the Westminster County Court on January 27, Judge Woodfall had before him on a default summons the case of Johnson *v.* Kirby, in which the plaintiff claimed payment of an order in respect of chemicals supplied to the defendant. The debtor did not appear, but plaintiff said he was the proprietor of a preparation for hair, and was well able to pay. An order for payment in fourteen days with costs was made.—On the following day in the case of Foxley *v.* Braham the plaintiff sought to enforce payment of a judgment debt due from the defendant, a chemist's assistant, and an order for payment at the rate of 1*l.* a month was made.—In another case on the same day (Tuesday) his Honour Judge Woodfall had before him a case in which plaintiff, a fancy-goods dealer, named Benham, sought to enforce payment of an order in respect of trade goods supplied to the defendant, a chemist, named Titcombe, until recently carrying on business at Clapham Road, S.W. The plaintiff said that since the goods had been supplied the defendant had sold his business for a considerable sum, but had not made the slightest effort to pay this debt. An order was made for payment in a fortnight subject to committal in default.

The L.G.B. Adamant.

The Local Government Board is not generous to Poor-Law dispensers. No matter what their extra duties in times of extraordinary illness there is the inevitable refusal to give increased pay. The Holborn Board of Guardians asked permission to increase the salary of Mr. N. Colbeck, dispenser at their Highgate Infirmary, because of good services rendered; but on January 22 a letter from the Local Government Board was read at the Guardians' meeting, in which it was stated that the Board are not prepared to make an exception to the rule as to dispensers' salaries.

Methylated Spirit Internally.

At an inquest held at Wyggeston Hospital on January 20, a nurse stated that the deceased, a male inmate 90 years of age, had been in bed for a year and a half. He was getting some medicine internally, and she had been in the habit of rubbing his back with methylated spirit to prevent bedsores. One day by inadvertence she gave him a tablespoonful of the methylated spirit in place of his medicine. Both bottles were the same in colour and shape, but were properly labelled. The deceased died two days afterwards from "over-stimulation acting on an enfeebled circulation followed by collapse, and caused by the dose of methylated spirit." Had deceased been a younger man the spirit, according to the medical evidence, would have had little ill effect. Death from misadventure was the verdict.

Masonic.

At the annual installation of the Sutherland Lodge of Unity No. 460 of Freemasons, held on January 24 at Newcastle-under-Lyne, Brothers D. H. Oxen, chemist and druggist, and C. J. Wain, pharmaceutical chemist, were installed S.W. and J.D. respectively.

The Week's Poisonings.

Nine fatalities from poisoning are reported, which, with the single exception of carbonic oxide, are attributed to scheduled poisons. Prussic acid was taken by a veterinary surgeon at Chelsea and by a chemist at Tranmere. Three laudanum suicides are recorded, and one each from morphine, carbolic acid, and oxalic acid. The fatality from carbonic oxide which took place at Leeds, was said to be due to the naked flame of a paraffin-oil lamp burning in an insufficiently ventilated room. The Medical Officer of Health for Bermondsey reported last week twenty-one cases of poisoning from tyrotoxicon, found in some cheese imported from Holland. Into a house in Leeds adjoining a bakehouse sulphur fumes penetrated from a defective flue, rendering the inmates unconscious. Two of the family recovered, but an elderly woman was removed to the infirmary suffering from sulphur-poisoning.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Mr. R. Keating Clay (solicitor to the Pharmaceutical Society of Ireland) was last week, on the motion of the President of the Society (Mr. G. D. Beggs), elected Chairman of the Dalkey Urban Council.

Good Drugs.

Mr. Henry Boyers, pharmaceutical chemist, Sligo, came in for a word of praise at the meeting of the Tobercurry Guardians on January 20, the occasion being the report of the analyst (Sir Charles Cameron) that the drugs examined,

Digitized by Google

and which had been supplied by Mr. Boyers, were all up to the standard.

Theoretical Chemistry.

The class for theoretical chemistry and physics of the Pharmaceutical Society of Ireland, which is held at the Society's house, 67 Lower Mount Street, Dublin, starts on Tuesday, February 4. Mr. Thomas A. Shegog will conduct the class on Tuesdays and Thursdays, from 8 P.M. to 9 30 P.M. The syllabus can be obtained from the Registrar.

Guardians' Loss.

There was some discussion at the meeting of the Sligo Board of Guardians on January 18, relative to the loss of 200*l.* rebate, incurred by the neglect of the late Clerk to the Board to forward samples of drugs for analysis as required by the L.G.B. regulations. The Clerk was directed to write again and see if anything can be done to avert the loss.

Irish Municipal Elections.

The following candidates connected with the drug-trade have been returned as councillors:—

Mr. Robert Lyons, druggist, High Street, Omagh.
Sir Thomas Robinson, Kingston.
Mr. John Watson, Belfast.
Mr. John A. Woodside, L.P.S.I., Ballymena.

Contractor Explains.

Mr. White, Sligo, attended at the meeting of the Swinford Guardians on January 21, relative to adverse exports of the analyst on drugs supplied. The L.G.B. had called the Guardians' attention to an unsatisfactory explanation regarding tinctures of opium and iodine supplied to Keltimagh Dispensary. Mr. White explained that the tinctures were over strength, and complained of the L.G.B., who seemed to be trying to run him out of every drug-contract he had with the different Unions. It was unanimously decided to continue Mr. White as drug-contractor.

Demurrage Case.

The judgment in the case of Messrs. Morel (Limited), Cardiff, *v.* Messrs. Goulding (Limited), Cork, in which a demurrage claim of 208*l.* 14*s.* 6*d.* was made for a cargo of sulphur ore, was delivered on January 27 in the King's Bench Division of the Dublin High Court. The verdict for the defendants previously given in the lower court was sustained.

Selling Dispensary Medicines.

The complaint of a guardian (Mr. Mackin) of the Granard Union, that a doctor had sold dispensary medicines (*C. & D.*, January 25), again came before the Board of Guardians at its last meeting in the shape of the following letter:—

Gentlemen,—With reference to the letter of the Local Government Board asking for the names of the medical officers who, it was alleged, sold dispensary medicines, I have to state that the parties who did so are not in the Union at present, and as we have nothing further to do with them I must refuse to give their names; but, seeing that there are two vacancies to be filled on the medical staff of the Union, and lest the men should be ignorant of, or overlook, the dispensary regulations, I thought it my duty to direct public attention to the matter, and so prevent these frauds on the sick poor. Believing I have done my duty in the matter, I must respectfully decline to have anything further to say or do with it.—Yours, &c., P. MACKIN.

The letter was marked "Read."

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

The Kinninmont Prize.

The examination (which is a written one, the subjects being botany, magnetism, and electricity) for this annual prize will be held in Glasgow in May or June. Assistants in Glasgow and the counties of Argyle, Ayr, Bute, Dumbarton, Dumfries, Kirkcudbright, Lanark, Renfrew, and Wigtown, who have qualified two years previous to the examination, are eligible to compete. Assistants who have served their apprenticeship in these districts, but have removed outside the radius within twelve months of the examination, will also be eligible. Intending competitors should send in their names to the Secretary, Mr. W. L. Currie, 223 Byres Road, Dowanhill, Glasgow.

Personal.

The Aberdeen Pharmaceutical Association is to entertain Mr. James Clark, Ph.C., at dinner, and present him with an address, prior to his departure for London to take up a position with Messrs. Burroughs Wellcome & Co.

Poisoning.

George Blyth (64), a grocer and sub-postmaster in the mining village of Glencraig, near Dunfermline, died on January 24 from the effects of swallowing an overdose of laudanum.

A hawker named Hallpin was found in an unconscious condition near Galashiels, with a bottle containing oil of vitriol near him. He was restored sufficiently to appear at the police court on January 27, when he told the Bailie that he had had a shock on the left side, and used the vitriol (diluted) to relieve his suffering. The Bailie discharged him with an admonition.

An Example to the Empire.

The chemists of the country may well "keep their eye on Paisley." There the principal members of the craft live in peace and amity, and by joint action are able not only to close their shops at 8 P.M. but to have a Tuesday half-holiday in addition. This goes on all the year round and works beautifully. As for night-bell fees, late calls are hardly ever made, the public being educated to the point of respecting the leisure-hours of the chemist, save only in cases of dire necessity.

Glasgow Notes.

A lady (30), tall and refined, &c., wishes, through the *Citizen*, to meet business gentleman; qualified chemist preferred.

Mr. Andrew Carnegie has just sent his promised cheque for 25,000*l.* to the building-fund of the Glasgow and West of Scotland Technical College.

It will cost 170,000*l.* to carry out the scheme for reconstructing the Royal Infirmary, now definitely adopted. Much of the money is still to be found.

In addition to the three dispensaries which the Govan Parish Council have opened, as reported in our last issue, they intend to establish a laboratory for the manufacture of their own galenicals.

A pauper patient died suddenly on January 21 in the surgery of Dr. J. S. Rankin, Cumberland Street, and when his body was searched over 21*l.* was found in the pockets, and savings-bank books showing total credits of 90*l.*

A medical man from the East End has been called as a witness before the Committee on the Poisons Schedules. He will probably give important evidence as to the scrupulous observance in doctors' shops of the regulations for the storage and sale of poisons.

It is claimed that the *x*-ray treatment of cancer, now being boomed as of American origin, has been employed successfully for the past eighteen months in the Royal Infirmary here by Dr. Faulds. The distinctive merit of the treatment is its efficacy in the recurrent form of the malady.

A chemist, learned in pharmacy law, has been making some of the local medicos who dispense their own prescriptions uncomfortable, by pointing out to them that their habitual practice of sending out bottles and packages containing scheduled poisons without their name and address, and of failing to enter such prescriptions in a book kept for the purpose, is a breach of the Pharmacy Act.

The public are at last discovering that the chemist is a scientific man. At Paisley the other day an old farmer handed a chemist a hunk of stone, with a request that he would test it for silver, and recently a painter brought a Glasgow suburban chemist several parcels of "painters'

Digitized by Google

stuff," which had been offered to him for sale. The chemist, who keeps up his practical work and has a complete set of B.P. reagents, was able to identify all the specimens, and to inform his client that what he imagined to be whiting or stucco, was really sulphate of barium. The painter was effusively grateful, but walked away without mentioning a fee, and the "scientific gent" was too diffident to call him back. Knowledge, like virtue, is often its own reward, but that form of return does not pay rent and taxes.

The chemists' windows now present a thoroughly seasonable appearance. Malt preparations, cod-liver oil, and emulsions seem to be the favourite articles. One small store evidently aims at a display suitable for all seasons, as the bottles of cod-liver oil and cough-mixture alternate with salines. Several still inform the public that Christmas presents may be had within, which seems to suggest that some windows are not dressed frequently. Mr. M. F. Thomson announces his annual "clearing sale of high-class perfumery and toilet-articles; great reductions." He still has the most elegant window-display in the city. Mr. Robinson displays in St. Vincent's Pharmacy a testimonial for his speciality from Dan Leno, who finds that cocalypthols are all that singers and speakers require.

Photographics.

At the monthly meeting of the Blairgowrie Photographic Association the results of a pictorial-postcard competition were announced, in which the second prize was taken by Mr. J. D. Petrie, chemist and druggist, Blairgowrie.

The Dundee and East of Scotland Photographic Association has been in existence over twenty years, the President of the year being Mr. W. F. Hill. Monthly meetings are held in University College during the winter session (October to May), and the Association has club-rooms at 39 High Street, Dundee, which are open daily (summer and winter) for the use of members.

An International Photographic Exhibition will be held, under the auspices of the Dundee and East of Scotland Photographic Association, in the Victoria Art Galleries, Dundee, on January 31, and will remain open for four weeks. The judges in the "picture" section are Messrs. J. Craig Annan and Mr. Crooke, and Mr. A. Horsley Hinton will adjudicate in the class comprising "lantern-slides and lecturette."

Family Jars.

An action has been raised in the Court of Session by John Miller, chemist, 6 Woodlands, Langside, Glasgow, against his brother-in-law, Henry Adam, engineer, South Lambeth, London, for 250*l.* damages for alleged slander. Pursuer states that before he settled in Glasgow he was employed in Mexico, and that while there he gave defender employment and boarded him. Defender and his sister had an interest in heritable property in Govan regarding which differences arose, and in January last year the defender is said to have written to his sister which contained grave reflections on pursuer's character. Mrs. Miller has also raised an action against her brother, in which she claims 250*l.* as damages for statements made against her character in the same letter.

French News.

(From our Paris Correspondent.)

Pro-Boer Pharmacy.—Pate Kruger is the name given by an enterprising Paris pharmacist to a cough-lozenge with a basis of eucalyptus. He sent a sample box to the ex-President, who replied, "Hartelijk Dank!" which was taken as a sign of great appreciation, and the lozenge was at once named in his honour.

Vanilla from the Colonies.—A decree has been issued fixing at 10,000 kilos. the quantity of vanilla produced in French establishments in Oceania (Tahiti and its dependencies), which, from July 1 1901, to June 30, 1902, is to be allowed a deduction of 50 per cent. of the ordinary import-duty on importation into France.

An Anecdote from Germany.—It is related that a French pharmacist recently sent his son to Germany to learn the language and placed him with an apotheker in business near Frankfort. This pharmacist happened to have a contract for supplying the local German garrison, and in due course he received a notice from the military authorities forbidding him employing the French lad.

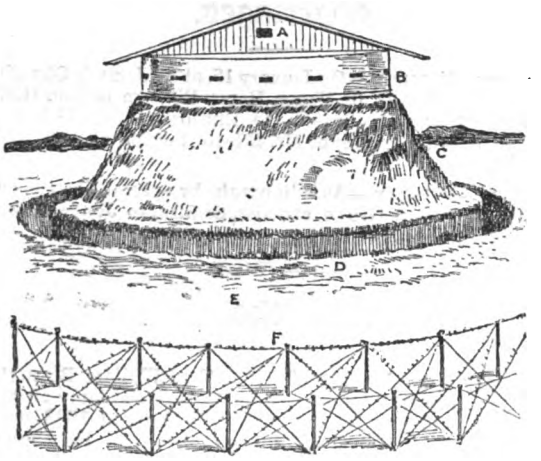
Commercial Pharmacy.—The Syndicate of the Grandes Pharmacies Commerciales de France held its annual meeting a few days ago in Paris, when questions relative to the development of the commercial element in French pharmacy were discussed, and M Mille, a pharmacist of Paris, was re-elected President. Various resolutions were passed with a view to obtaining a reduction in the amount of the Paris City dues on certain products used in pharmacy, and especially on alcohol and cod-liver oil.

Co-operative Pharmacy seems to have at last secured a firm footing in France, although a great effort has been made to nip it in the bud. It was the subject of a long lawsuit some time since between the pharmacists of Marseilles and the local co-operative, or mutual-help, societies, resulting in a favourable judgment for the latter. Other southern towns, including Toulouse, Toulon, and Limoges, have now their co-operative pharmacies, and other centres are adopting the same course. There is no doubt that pharmacists in French country towns will feel this competition rather severely if it develops.

Assurance against Illness.—The Grand Duché of Luxembourg has just introduced a law rendering assurance against illness obligatory for that class of people whose earnings are less than 3,000*f.* (120*l.*) per annum. The cost of the insurance is rated at 3 per cent of the wages, two-thirds being paid by the worker and one-third by the employer, the latter being responsible for the payment of the premium. The persons insured get, in case of illness, medical attendance and drugs and medicines free, as well as a cash payment of a sum equal to half their wages for each working day. In case of death the widow receives an amount equal to twenty times the daily wage. Women receive half their wages for four weeks in cases of accouchement.

Amor Vincit Omnia.—Mlle. X—— was the proprietor of a well-kept officine not a hundred miles from the Paris School of Pharmacy, of which she is a graduate. On starting business, mindful alike of Mrs. Grundy and of the interests of her sex, she decided to employ a female assistant, and engaged a young lady, Mlle. V——, in that capacity. But, alas! the little god that laughs at locksmiths is not to be denied admission to a pharmacy, and the young lady assistant had a brother who was a student at the Paris School of Pharmacy. So it comes about that the name of Mlle. X—— on the pharmacy door is followed by the discreet addition "Mme. Y——," for the lady pharmacist and her assistant's brother are now man and wife. When he takes his pharmaceutical degree, perhaps there will be a pharmacy less in Paris kept by a lady.

South African News.



Uniform Prices.—The Cape Town Prices-adjustment Committee has commenced its labours, and it is expected that a uniform price-list, so far as retail prices are concerned, will be ready and presented to the trade at a meeting for confirmation at no distant date. The task of adjusting the retail prices for patents and proprietary articles probably forms one of the most difficult features of the scheme. As in home centres the grocer has to be reckoned with for patents, the outfitters in Cape Town handle perfumes and the general stores sell both perfumes and soaps at cut prices, admitting they do not want profit on this class of business. In St. George's Street the other day a furnishing ironmonger's window was filled with toilet-soaps, but, to give the ironmonger his due, full prices were put on the goods.

More Room.—Anyone who has seen the handsome structure in Cape Town which comprises the headquarters of Messrs. Heynes, Mathew & Co. in South Africa would imagine that with such a vast amount of floor space there should be plenty of room for the conduct of a wholesale

Digitized by Google

business. So there is, but the distance from European markets forces local firms to carry enormous stocks, and it is to relieve the Adderley Street premises that a further property has had to be acquired, which will be used as a general store for the more bulky merchandise handled in the course of every-day trade in South Africa. It is a significant fact that of the many merchants' stores in Cape Town, those associated with the drug-trade are among the finest.

A BLOCKHOUSE.—We reproduce herewith a sketch which appeared in a recent issue of the *Weekly Scotsman*. It represents a blockhouse, and was drawn by Mr. J. D. Horsburgh, chemist and druggist, who is at present with the R.A.M.C. somewhere in the neighbourhood of Vrede, in the north-east of the Orange River Colony. Mr. Horsburgh sent the sketch and the following description of its construction to his mother at Aberdour House, Fife, to whose courtesy we are indebted for the paper containing it:—

A—In important blockhouses a loophole for a Maxim gun; in any case a ventilator. B—Loopholes for rifle fire. C—Earthworks. D—Trench 4 to 6 feet deep and 6 feet wide. E—An open space for "sentry-go" and playing skittles. F—Barbed-wire fencing.

Mr. Horsburgh states that four of these houses are erected in one day by about a hundred natives and twenty engineers to each. They begin at the trench, throwing the earth into the centre. When sufficient height is got in the middle a circle (about 24 feet diameter and 3 feet high) of galvanised iron is put in, another of the same added, and then banked round until a bullet-proof mound surrounds the whole. The top part, containing the loopholes, is in a double cylinder, packed with small stones to make it impervious to rifle fire.

PRACTISING IN THE TRANSVAAL.—The appointment of Health Boards has been notified for the towns of Heidelberg, Vereeniging, Potchefstroom, Klerksdorp, Boksburg, and Germiston. A proclamation has been issued making provision, until the establishment of a Medical Board, for duly qualified persons to practise as medical practitioners, dentists, and chemists and druggists. One clause provides that no licence should be granted to applicants to practise as physicians, surgeons, or dentists, on any degree, diploma, or certificate of any foreign university or medical school, unless it be proved that such degree or diploma entitles the holder to practise in his own country, and that, by the laws of such country, in which the degree or diploma is conferred. British subjects legally qualified to practise in Great Britain and Ireland are afforded privileges equivalent to those granted by licences under this proclamation.

THERE IS SOMETHING LIKE A STORM raging here in medical circles, writes our Cape Town correspondent, under date January 7, the cause of which is as follows: Towards the middle of last year Dr. Gregory was appointed medical officer of health for the Cape Colony. Outside officialdom a doubt existed as to whether Dr. Gregory held the necessary qualifications for such a high post. Shortly after the appointment had been made a letter appeared in the now-defunct paper *Greater Britain*, commenting thereon, and was signed "An Old Colonist." For some unexplained reason the editress divulged the name of the writer, who turns out to have been Dr. Scholtz. Dr. Gregory then drew the attention of the Medical Council to the matter, in whose hands it was left. Section 13 of the Medical and Pharmacy Act, 1899, provides that if a medical man is found, after due inquiry, to be guilty of "unprofessional conduct" he may be reprimanded and cautioned; if guilty of "infamous or disgraceful conduct" his licence may be withdrawn. Dr. Scholtz is an elected member of the Medical Council. The result of the investigation by the Medical Council will not, of course, become public property, since they simply tender their recommendations to the Government, who alone can act in extreme cases; but according to a section of the local Press Dr. Scholtz is to lose his licence, and more is to be heard of the business in the courts. Perhaps, however, seeing the necessary publicity has attended the proceedings, the affair will blow over.

BECAME ATTACHED TO IT.—Dr. Stanley Hodgson, recently medical officer to the West African Hinterland Consolidated (Limited), in the course of a report on the climatic conditions of West Africa, says: "The daily taking of quinine was proceeded with during the whole of the time we were in the bush, and the health condition of the men was such that on the march back they would rather have gone without their breakfasts any morning than without the quinine.

Australasian News.

MEDICAL PRIVILEGES.—The case of the Pharmacy Board of Victoria *v.* Andrew Honman (*C. & D.*, January 11, page 39) came on at the Williamstown Police-court on December 13, 1901. Mr. Honman is a medical man, and is registered under the Firms Act as one of the proprietors of the business of T. M. Blackett & Sons, Williamstown, and the Pharmacy Board prosecuted him for illegally carrying on the business of a chemist and druggist. The defendant relied on the exemption contained in the Act referring to the rights and privileges of any legally qualified medical man. The Bench found that defendant did not carry on the business of a chemist and druggist on the date mentioned, and dismissed the case with 10*l.* 10*s.* costs for defendant. An application was made on December 17 to the higher court for an order to review the decision.

GERMAN PERFUMERY IN AUSTRALIA.—The German Export Bank of Berlin have received the following letter from Sydney—"Although there is a good market here for perfumery, there is practically no demand for the German made article. A liberal distribution of free samples would perhaps stimulate the business. Only a short time ago we received from a German maker an empty bottle, nicely labelled and got up in good style, but with no perfume inside. We should only be laughed at here if such samples were shown. The English and still more the American manufacturers are incomparably more obliging with respect to samples. An agent we know has lately received fourteen cases containing twelve bottles each as gratis samples for distribution, and the firm in question allowed him 10*l.* per month until further notice towards expenses. Without an arrangement of this sort people here are unwilling to introduce foreign and unknown brands. Therefore we cannot accept any agency before we know what proposals German houses are willing to make."

A SKIN-LOTION.—In the Supreme Court, Melbourne, on December 10, 1901, Mrs. Augusta Griffiths sought to recover from Messrs. Martin & Co., chemists and druggists, Perth, 200*l.* as damages for personal injuries said to have been sustained by using "Youkno," a lotion prepared by the defendants for putting on the hands and face to keep away insects. It was stated that the bottles containing the preparation were labelled "Perfectly harmless, and serves to whiten, soften, and beautify the skin." The effect of the application on the plaintiff had been to cause a skin-

Digitized by Google

disease to break out on her, giving her great pain and preventing her following her occupation as a dressmaker. Evidence was given by Mr. McClure, manager for Messrs. A. M. Bickford & Sons, wholesale druggists, and Mr. Garner, manager for Messrs. F. H. Faulding & Co., wholesale druggists, regarding the sale of "Youkno." Both witnesses deposed that during the past few years they had sold large quantities of the preparation, and had never heard of any harmful effects from its use. Mrs. Griffiths said she used the lotion—a bottle of which her husband had procured from a chemist in Freemantle—to keep away mosquitoes. She applied the stuff to the backs of her hands, at intervals, for ten days, with the result that blisters broke out, and she had to have medical attendance for about a month, until the sores were healed. Two bottles of the lotion were analysed by Mr. Samuel S. Dougall, who said each bottle contained 99 per cent. of kerosene with a little phenol and some citrorella and verbena oils. Two doctors, who attended the plaintiff, expressed the opinion that the inflammation on her hands was caused by the application of kerosene. For the defence Dr. Astles, who saw the plaintiff in Freemantle, said she was suffering from a pustular form of eczema which might have been in her system, and would be brought out by hard water or soap. He (the doctor) had used "Youkno" on many occasions during the past summer on his face and hands, and had recommended it to many people, and no ill-effects resulted. Another medical man was of opinion that "Youkno" would not cause eczema unless there existed in the person using it a predisposition to the complaint. The case was adjourned.

East Indian News.

A Withdrawal.—Dr. Wilkins' sarsaparilla, the American imitation of the original British preparation, has been finally withdrawn from the bazaars of India.

Personal.—Mr. Alexander Wilson, representing Messrs. Evans, Lescher & Webb, 60 Bartholomew Close, London, E.C., was in Bombay when the mail left.—Messrs. Grimault, of Paris, also had a representative doing ground for the first time at Bombay.

A Warning to Shippers.—A fearful ingenuity, remarks the *Civil and Military Gazette*, is exhibited by the Customs authorities at Karachi in interpreting the law. Not long after stopping some goods for Lahore, marked "Made in Berlin," because they were not marked with the country of origin, the Karachi officials stopped some carbon enamel, such as brewers use for enamelling casks, on the ground that it contained alcohol which was not rendered unfit for drinking purposes. The Karachi officials, after submitting the enamel to the Government analyst, found they were wrong. They thereupon let the enamel pass—after charging the shipper with the analyst's fee.

Business Changes.

Briggs' Drug-stores is about to be opened at 197 Hoxton Street, Hoxton, N.

Messrs. Swire & Co. have opened a pharmacy at South Gosforth, near Carnforth.

Butterfield's Drug-stores have been opened at 2 Franklin Road (next door to the Drill Hall), Harrogate.

The Spitalfields Drug-store Company have recently acquired new premises at 9 Fournier Street, Commercial Street, E.

Mr. Reginald Halstead, F.C.S., nephew of Mr. T. Farries, has, as from January 1, been admitted a partner of Messrs. Burgoyne, Burbidges & Co., 16 Coleman Street, E.C.

Mr F. S. Cullen, of St. James' Pharmacy, Norwich, has just opened new corner premises in the Magdalen Road, where he intends running a high-class modern drug-store on strictly store-lines.

Mr. T. W. Harris, fourteen years manager for Messrs. W. Bates & Co., Oxford Street, Southampton, has taken premises in Above Bar Street, and, when alterations are complete, is going to open as an ophthalmic optician, belt and truss maker, &c.

The company carrying on business at Newcastle, Staffs, as Oxen & Co. (Limited), chemists, druggists, and medicine vendors, has been voluntarily wound up. The business will in future be carried on by Mr. David H. Oxen, chemist and druggist, in his own name.

Birth.

Vallance.—At Fieldhead, Mansfield, Notts, on January 26, the wife of Arthur C. Vallance, pharmaceutical chemist, of a son.

Marriages.

Bolton—Fowler.—On January 15, at St. James's Church, Hull, by the Rev. D. K. Moore, Henry William Bolton, H.M. Customs, Newhaven, Sussex, to Elizabeth Mary Deborah (Debby), eldest daughter of Mr. Edwin Fowler, chemist and druggist, Hull.

Grieve—Murray.—At Edinburgh, by special licence, on January 24, Robert Grieve, chemist, Selkirk, to Jessie Welsh or Murray, Delhaig, Gorgie.

Deaths.

Bennett.—On January 23, Mr. Alfred William Bennett, M.A., B.Sc., the well-known botanist, died suddenly on an omnibus in London. He was born at Clapham in 1833, and was educated at University College, London. He edited with Sir W. Thiselton Dyer the English edition of Sachs's "Text-book of Botany," 1875, and had written several important botanical works.

Holland.—At Kettering, on January 22, Mr. John James Holland, dispenser to Messrs. J. W. & L. W. Dryland, surgeons. Aged 45. Mr. Holland was found lying on the floor in the drug-store room quite dead. Death was due to apoplexy.

Jessop.—On January 22, at Septon, near Huddersfield, Mr. Thomas J. Jessop, of H. Jessop & Sons, chemical-manufacturers, Fenay Bridge. Aged 65.

Pott.—At 72 Old Chester Road, Tranmere, Cheshire, on January 23, Mr. Frederick Fore Pott, chemist and druggist. Aged 51. Mr. Pott, who had been worried and depressed by financial affairs, committed suicide with prussic acid.

Webster.—At Bangor, on January 21, Mr. Thomas Webster, son of Mr. Thomas Webster, chemist and druggist, Bangor. Aged 25. Mr. Webster served his apprenticeship with his father, and after a short period of study in Liverpool he came to London, where he was for about two years an assistant with Messrs. Morgan Brothers, chemists, King's Cross, N. From London he went as an assistant to Mr. Lloyd, of Walton-on-the-Naze, returning to Bangor in the end of September.

Williams.—At Bury, on January 27, suddenly, Mr. Robert Williams, assistant to Mr. Crompton, chemist, 41 Stanley Street, Bury. Aged 19.

Recent Will.

Kershaw.—The will of Mr. Sam Kershaw, chemist and druggist, Formby, who died on June 5, has been proved at the District Registry at Liverpool, by his executors, Mr. James Kershaw, of "The Dol," Oxenhope, near Keighley, worsted manufacturer, the father, and Mr. Thomas Birtwistle, of Cheltenham, provision merchant. The gross estate is valued at 590*l.* 0*s.* 10*d.*

Digitized by Google

Winter Session.

Chemists' and Druggists' Society of Ireland.

THE committee of this Society met on January 22 at Garfield Chambers, Belfast, Mr. Robert Cumbridge (Carrickfergus) in the chair. After the minutes had been read, the opportunity was taken to congratulate Mr. John Watson, one of the Vice-Presidents, on his election as a city councillor for Victoria Ward, to which Mr. WATSON replied.

A report in reference to the drug classes recently started in the Municipal Institute was presented and passed.

SHOP-HOURS.

A petition in favour of the Shop-hours (Early Closing) Bill was submitted and passed, the Chairman and Hon. Secretary being empowered to sign and forward it to the Right Hon. Lord Avebury, who has since introduced the Bill again, as as the Government have intimated that they do not intend to deal with the question.

It was decided to hold the annual business and social meeting on February 27, and Messrs. Jamison, Gibson, Carse, Frackleton, Walsh, and the Hon. Secretary were appointed as a committee to carry out all the arrangements.

MINIMUM PRICES.

A report was presented by the Prices Committee, which stated that several firms were trying to fix minimum non-cutting prices, which was looked upon as a step in the right direction; and as it was considered that a large number of proprietary articles, especially foods, were now sold by grocers, it was decided to wait on the Grocers' Association in order to bring the matter of fair prices before the members. Messrs. Carse, Walsh, and the Hon. Secretary were asked to act.

The committee then adjourned.

THE ANNUAL MUSICAL EVENING

of the Society was successfully brought off in the Whitehall Buildings, Belfast, on January 24. Mr. James Tate occupied the chair, and there was an excellent attendance. A splendid programme was gone through, the following taking part: Messrs. C. Abernethy, T. W. Gibson, J. Harper, John Morrison, James McCormick, R. Dimond, S. Holmes, Leggett, Burland, King, Firth, McDade, and McDowell; Misses Ida Corbett, Magill, Orr, McCamley, Tumath, Grills, Nora Corbett, and McDowell; and the evening concluded with the singing of "God Save the King."

Newcastle-on-Tyne Chemists' Association.

A SPECIAL meeting of this Association was held in the Science Schools, North Shields, on January 22, Mr. Robert Wright (President) in the chair. Newcastle and the adjoining towns and district were well represented.

The Association makes a point of meeting at least once during the session in one or other of the adjoining towns within its area, thus keeping up the interest of those members who cannot attend regular meetings in Newcastle, besides proving a valuable recruiting agency by bringing outside members of the trade into direct touch with the Association.

Mr. BARRY NOBLE read the paper on

THE APPRENTICESHIP QUESTION

(printed in THE CHEMIST AND DRUGGIST last week, page 175)—part of the "Federation circular" which was referred to this meeting for discussion.

Mr. GIBSON (North Shields) thought that better facilities for study and recreation should be given to apprentices, also a fair payment. He was inclined to think that the retail drug-trade would ultimately drift into large monopolies on the lines of co-operative establishments. Mr. G. F. MERSON considered that the "First" examination had nothing to do with the dearth of apprentices. It was only adequate in view of the succeeding examinations. The weakness lay in the want of status and recognition after qualification. He was of opinion that the conditions under which business existed in many districts did not admit of proper training of apprentices. Mr. F. GILDERDALE thought doctors doing their own dispensing was a great drawback. Mr. HEDLEY PATTINSON (Whitley Bay) said the chief cause of the dearth of apprentices was the long hours which obtained—as apprentices, as assistants, as principals. This militated against getting the right class of material. Mr. J. D. ROSE (Jarrow) took a very gloomy view of the present state of matters; and Mr. CHAS. RIDLEY and Mr. BUCKLEY (North Shields) said they had never taken apprentices, because, as they stated candidly, they were not prepared to give the proper training which they thought should be given to apprentices. Mr. ELLIS (South Shields) would make the Preliminary or its equivalent a *sine quâ non* before indentures were signed. He was optimistic in his general views. Mr. NAPIER, Mr. KERSE, and the PRESIDENT also took part. Mr. NOBLE replied, and votes of thanks terminated the meeting.

Plymouth Chemists' Association.

AT a meeting of this Association on Wednesday evening, January 22, Mr. C. T. Weary (President) in the chair, Mr. Broom (Devonport) was elected a member of the Association, and Mr. Woolley (also of Devonport) a member of the junior section. Mr. F. MAITLAND (Hon. Secretary of the Pharmacy Ball Committee) reported that there was a small balance to be handed to the Association as the result of the ball. Mr. Maitland was heartily thanked for his services, to which the unqualified success of the ball was greatly due. The Association decided unanimously to support Lord Avebury's Bill providing for shorter hours in shops.

The proposal to establish

PROVINCIAL SCHOOLS OF PHARMACY

was discussed on the basis of a letter from the Federation of Local Pharmaceutical Associations. The PRESIDENT considered Mr. Paterson's paper an excellent one, and remarked that pharmacy was one of the few callings not considered at all in technical education, although it had a prior claim over almost all others. This was probably partly due to a lack of cohesion among chemists. If they had in that town a good centre of technical education, where students could obtain proper facilities, he believed it would to some extent do away with the great difficulty in obtaining apprentices.

Mr. BARGE was of opinion that they would never obtain just what was required if they were dependent on classes conducted by their local Association. To chemists throughout the country the question was of the greatest possible interest, because the time was no doubt coming when apprentices would have to qualify during their period of apprenticeship; and there seemed no other course than to obtain for apprentices a thorough and practical system of education. Chemists should place the matter before the Government and the Pharmaceutical Society with a request that the grants to technical schools should include the provision of a thorough training in pharmacy in all large towns. In view of the fact that this special training was legally necessary in the interests of the public and for the public safety, all such schools of pharmacy should receive Government support in conjunction with the Pharmaceutical Society of Great Britain.

Mr. MAITLAND considered that they could not expect the Government to send any grant to them direct. The Technical Education Committees received and dealt with the funds for the respective centres, and they would be the best authorities to work this matter.

Mr. TURNEY remarked that the whole matter hinged upon whether money was forthcoming from the Government or other sources in order that an efficient pharmaceutical education might be provided. From efforts in the past it was very evident that it was impossible in Plymouth to work a school to teach pharmacy as it should be done without a special grant.

Mr. PARK pointed out that, when approached by the Association some time ago, the headmaster of Plymouth Technical Schools said the matter was one of money, as the whole sum granted to the centre was allotted, and there was none to spare for special classes for teaching pharmacy. It must be recognised that chemists were now helped to a considerable extent by these schools.

Digitized by Google

Mr. HUNT, Mr. ROPER, and Mr. COCKS spoke on the local conditions, and the discussion became conversational. In the course of it, Mr. PARK said he could not for a moment see that the Pharmaceutical Society was called upon to do anything for the education of the student. A man who wished to enter a profession ought not to expect a private Society to assist him in this respect. If that is the case, Mr. ROPER asked, how can the Society justify the subsidising of the Square school? Mr. PARK said it was perfectly open for any of them as students to go there Mr. ROPER did not consider that that justified it. Mr. PARK was of opinion that if the Society had the means they would establish a school in every large centre in England. Mr. DAVEY TURNEY and Mr. FAIRWEATHER continued the discussion; and Mr. ROPER moved that the Hon. Secretary be requested to write to the Secretary of the Federation, giving a general statement as to the possibilities of pharmaceutical education in the district and mentioning the character of the classes provided at the Technical Schools. The motion was seconded by Mr. PARK, and carried.

Mr ROPER, referring to other matters in the letter from the Federation, considered it desirable that the

MINOR EXAMINATION SHOULD BE DIVIDED,

and purely scientific subjects taken at periods during apprenticeship, so that more time and attention might be devoted to the purely technical subjects. In other professions all the examinations were divided in that way.

Mr. PARK said it was impossible for the Society to divide the Minor examination. That would have to come under a new Act of Parliament. The present Minor examination did not press heavily on students who were industrious during their apprenticeship.

A motion in favour of the existing arrangements was carried by 6 votes to 4.

Referring to the request for suggestions as to the

DIFFICULTY IN OBTAINING SUITABLE APPRENTICES,

Mr. MAITLAND urged more generous treatment, as well as shorter hours Mr. DAVEY TURNEY considered the increased difficulty of the Preliminary examination one of the factors in the problem. Mr. ROPER agreed with Mr. Allen that if they were honest they could not give parents thinking of apprenticing their sons too favourable an impression. Mr. HUNT pointed out that in businesses in which there were shorter hours and no examination apprentices could not be obtained. Mr. ROPER moved that, in the opinion of the Association, shorter hours and improved educational facilities would tend to remove the difficulty, which was carried.

After the meeting the President and members adjourned to the Swiss Café, where supper was provided.

Liverpool Chemists' Association.

THE adjourned annual meeting was held at the Royal Institution, Liverpool, on Thursday evening, January 23, Mr. Harold Wyatt, jun. (President) in the chair.

Mr. W. S. Mitchell, King Street, Egremont, was elected a member of the Society.

PRACTICAL TOPICS.

Mr. J. T. HORNBLOWER asked if acid sulphate of sodium is frequently used as a remedial agent at the Royal Infirmary. He believed it had recently been prescribed as sodii sulph, and some considerable doubt had existed as to whether the sulphide or the sulphate should be dispensed. An interesting discussion followed, the members being about equally divided in thinking that the sulphide or the sulphate should be dispensed. It was decided to leave the matter in the hands of Mr. P. H. Marsden to deal with at a subsequent meeting. [As to the use of the acid sulphate see *C. & D.*, February 16, 1901, page 285]

Mr. T. S. WOKES submitted the following prescription, consisting of—

Boracis	ʒss.
Sodii bicarb.	ʒss.
Cocainæ [hydrochlor.]	gr. ij.
Aquæ ad	ʒx.

He had dissolved the borax and sodii bicarb. in water and then added the cocaine also dissolved in water. The result was a precipitate which he had expected. He communicated with the doctor, and suggested that ½ oz. of glycerin should be added, and he consented. The result was that the cocaine was all taken up readily. It seemed worthy of note that such a small quantity of glycerin was effective in a case of this kind.

NEW COUNCILLORS.

The following gentlemen were elected to the Council T. F. Abraham, J. Hocken, H. B. Morgan, R. Stockdale, T. H. Swinton, C. Symes, and Harold Wyatt, jun. The last-named has been re-elected President.

ANNUAL REPORTS.

The TREASURER presented his statement, showing a debit balance of 12*l.* 13*s.* 3*d*, which, although unusually heavy, was considered satisfactory in view of the fact that there had been very exceptional expenses during the year, and that the Council had some assets which had not yet been realised. Messrs. Wokes and Wallbridge were appointed auditors.

Mr. R. C. COWLEY presented the Council's annual report, which gave a *résumé* of the year's work, and which, upon the whole, was of a very satisfactory character. The statement of accounts and report were passed by the meeting unanimously.

Mr. COWLEY then read the following paper on

CALCIUM PHOSPHATE: ITS COMPOSITION AND IMPURITIES.

By R. C. Cowley and J. P. Catford.

During our recent (and still pending) work on phosphates we have had reason to question the purity of an article sold as pure calcium phosphate. In the 1885 Pharmacopœia there were explicit directions given for preparing this salt from bone-ash, and also its chemical formula. The 1898 edition omits the formula, and suggests alternative methods for preparing it. The first process is identical with that of the 1885 edition, and yields a product which conforms to the official characters and tests.

The alternative process is "by the interaction of calcium chloride and sodium phosphate." This has been quoted word by word (as the process almost exclusively adopted in preparing the official article) by the Editor and Reporter on the Pharmacopœia, in his "Digest of Researches and Criticisms," a work that would be more useful if brought up to date. Has there been nothing "digestible" since December, 1898? Commentators on the Pharmacopœia, including Messrs. White and Humphrey in "Pharmacopedia," have assumed that the sodium phosphate mentioned is di-sodium-hydrogen-phosphate, and they have concluded that there are two calcic phosphates official—viz., tri-calcic phosphate, $Ca_3 2PO_4$, and di-calcic phosphate, $CaHPO_4$; but commentators have quite overlooked the fact that this di-calcic phosphate does not conform to the B.P. characters and tests, being a crystalline precipitate which, under the microscope, is seen to be composed of thin rhombic plates or prisms. Moreover, a sample of the di-calcic phosphate ($CaHPO_4 2H_2O$) dissolved in diluted hydrochloric acid and precipitated as tri-calcic phosphate by solution of ammonia as directed, showed a loss of over 29 per cent., as only two-thirds of the phosphoric acid is precipitated, whilst the loss allowed by the Pharmacopœia is not more than 5 per cent.

An alternative reading of the pharmacopœial monograph, however, suggests itself since the materials referred to as sources of official compounds are frequently not official; for instance, "bone-ash," in the paragraph now under consideration. Hence, by "sodium phosphate," in this connection—tri-sodic phosphate—may have been intended, and then the product would correspond to the official characters and tests.

One of these tests is worthy of remark. We are told that the solution of amorphous phosphate in dilute hydrochloric or nitric acid continues clear when dilute sodium acetate is added in excess, proving the "absence of calcium oxalate." Is this a slip for "alumina"?

It does not appear clear to us how calcium oxalate could occur as an impurity in phosphate unless subsequently added. The production of a precipitate by ammonium oxalate is mentioned among the 1885 tests.

The sample labelled "Pure calcium phosphate" referred to above, when examined by the sodium-acetate test (a normal solution of that and acetic acid was used) gave a precipitate which proved to be calcium sulphate, which was determined by Mr. F. Peacock in the laboratory of the Liverpool School of Pharmacy to be present to the extent of 95 per cent. This would lead us to the assumption that the preparation was made from calcium phosphate that had been treated with sulphuric acid, forming superphosphate or mono calcic phosphate, $CaH_4(PO_4)_2$, and calcium sulphate. On adding solution of ammonia to the solution

Digitized by Google

of this mixture a precipitate containing di- and tri-calcic phosphates with sulphate would be produced. A microscopic examition of the substance revealed the presence of all three. Traces of iron were also present. Possibly it would also show small quantities of arsenic if specially looked for.

We should like to draw the attention of chemists and pharmacists to the utility of the microscope in examining precipitates. In the case under consideration the presence of calcium sulphate and of di-sodium phosphate are readily detected by this means.

On the motion of Mr. WARDLEWORTH a hearty vote of thanks was accorded to the authors, whose researches, it was considered, reflected the greatest possible credit upon the Association.

Mr. HAROLD WYATT, jun., then delivered an inaugural address upon.

"SOME PHASES OF MODERN PHARMACY."

In this he dealt with the trade difficulties which have exercised the minds of pharmacists for the last two or three years, and which he said were due to two causes: first, the depression in trade generally, and, second, the large amount of unfair competition with which chemists have to contend—viz., the carrying on of ostensibly chemists' businesses by unqualified individuals, and the dispensing of medical prescriptions by such individuals and by unqualified assistants to doctors. He agreed that legislation is needed badly to remedy this state of affairs, especially to put the dispensing of everything ordered on the prescriptions of qualified medical men into the hands of chemists. He did not approve of asking for the sole monopoly of trade in drugs and the thousand-and-one excrescences to pharmacy, but the claim of specially trained men to have the exercise of their technical knowledge retained for them alone, to the exclusion of those untrained and unqualified men would—he was sure—if properly presented before Parliament meet with support, and effective legislation would follow. He then referred to the Preliminary examination and the dearth of apprentices, saying that the line of legislation should be along the line he had suggested, so as to ensure good, systematic, and continuous education for the youths entering the business. There must be abolition of the apprenticeship-system as hitherto understood, but a youth should, after passing his entrance examination, be made to do three years' service, at least, in a properly conducted pharmacy, after which he might proceed to his qualifying examination through a course of study at a school of pharmacy or in a university. The training in a pharmacy should be insisted on as a preliminary to the final course of study, and any scheme providing one entire scholastic course in a school of pharmacy or a university should be resolutely opposed. Mr. Wyatt elaborated these ideas, and proceeded to speak of the indifference of the medical profession to a knowledge of drugs and prescribing, as a result of which ready-made preparations are too frequently prescribed. Still, he considered that the days when galenicals would be no more used, and when the whole of a doctor's outfit would consist of a few tubes of active principles or animal extracts and serums, are a long way off; in fact, a reaction seems to have already set in, for of late doctors have shown a decided preference for some of the oldest and most reliable of drugs. Consequently it behoves each member composing the family of pharmacy to take interest in his business, to keep his mind open and up to date, and to strive to keep himself abreast with the times. One of the best ways of doing this is to cultivate one or more hobbies as much in character with one's business as possible, not losing sight of the necessity for plenty of outdoor exercise. He then referred to the benefits of local Associations and the Pharmaceutical Society, defending both against aspersions by persons who write letters in the trade papers.

On the motion of Mr. R. C. COWLEY thanks was accorded to the President, and remarks were made by Mr. R. MACALLEY, Mr. MARSDEN, and Mr. WALLBRIDGE, of St. Helens, the last-named saying that his great difficulty as to dispensing is that doctors do their own to such an extent in his town that he is compelled to teach his apprentices dispensing by the means of dummy-prescriptions.

Cardiff Chemists' Assistants' Association.

A SPECIAL meeting of this Association was held on January 23, when Mr. A. B. SPARROW (the President) started a discussion as to the formation of pharmaceutical classes in Cardiff. The idea was suggested by the Pharmaceutical Association, which was fully prepared to render the junior Association every support. Mr. Jones and himself had had an interview with Principal Griffiths, of the University College, who promised to start a class next October if they could guarantee twenty students—or, say, a sum of 25*l*. The College would have to get a special tutor, as the Minor was a very "tricky" examination, and required as teacher someone who had been through it. Arrangements might be made whereby students might either take a full-day course or half-a-day course; the latter would cover nine months, during which time the whole curriculum would be gone through, and the fee would be 15*l*. The scheme, so far as he had been able to learn, was viewed very favourably by chemists in Cardiff, Newport, and Pontypridd. Personally, he thought that Wales ought to be able to support a good pharmacy class. Some discussion followed, in which the opinion was expressed that there ought to be no difficulty in getting considerably more than the number required for a start; and eventually it was decided to call a meeting of the committee to consider the best means of putting the scheme into operation.

Chemists' Assistants' Association.

AT the meeting held at 73 Newman Street, W., on January 23, Mr. J. W. Peck (President) in the chair, Mr. H. FFOULKES read a paper on

SOME SHAKESPEAREAN MATERIA MEDICA.

The author commenced with a delicate reference to the Bacon-Shakespearean controversy, saying that it is more than a passing coincidence that two of the greatest poets who ever lived—Homer and Shakespeare—should have their identity controverted. Even the personality of one of our own writers—Mr. Andrew Lang—has been questioned by a sensational American pressman. He argued that no one man could be so versatile a writer, and suggested that "Andrew Lang" is a syndicate, which publishes the writings of different men under that pseudonym. Turning to the subject proper, Mr. Ffoulkes said that as Shakespeare lived three centuries ago, and as pharmacy at that time was in an empiric state, his works reflect the conditions then existent. He proceeded to give examples, reciting them well. First was the apothecary in "Romeo and Juliet," the description of whom is typical, he remarked, of the average apothecary in Shakespeare's time. English pharmacists are apt to plume themselves upon the Pharmacy Act, with its scheduled poisons, which they regard as quite a modern institution, but at Mantua there was evidently at this early period, according to Shakespeare's imaginative mind, something like a Pharmacy Act, for when Romeo tempts the old apothecary to sell him some deadly poison the apothecary replies:—

> Such mortal drugs I have; but Mantuan law
> Is death to any that utters them.

Next Mr. Ffoulkes quoted with effect several pieces illustrative of the witchcraft and animal medicines then abounding as associates of pharmacy, and the conversation between the Queen and Cornelius the physician in "Cymbeline," wherein the doctor fears to hand over "these most poisonous compounds, which are the movers of a languishing death"; and the Queen conjures him:—

> Have I not been
> Thy pupil long? Hast thou not learn'd me how
> To make perfumes? distil? preserve? yea, so
> That our great king himself doth woo me oft
> For my confections? Having thus far proceeded
> (Unless thou thinkst me devilish) is't not meet,
> That I did amplify my judgment in
> Other conclusions? I will try the forces
> Of these thy compounds on such creatures as
> We count not worth the hanging (but not human),
> To try the vigour of them, and apply
> Allayments to their act.

Fine scope for the anti-vivisectionist there. It is also interesting to note that we have here a clear case of "substitution," supposed to be a modern vice in pharmacy, for the

Digitized by Google

doctor practised a little sophistication, which he explains in a "stage aside":—

> I do not like her. She doth think she has
> Strange lingering poisons; I do know her spirit,
> And will not try one of her malice with
> A drug of such damn'd nature; those, she has,
> Will stupefy and dull the sense awhile;
> Which first, perchance, she'll prove on cats and dogs,
> Then afterward up higher; but there is
> No danger in what show of death it makes,
> More than the locking up the spirits a time,
> To be more fresh, reviving. She is fool'd
> With a most false effect.

Shakespeare's idea of poisons was naturally vague. Many of the chemical substances of the present day were unknown, and the deadly and potent alkaloids, which science has put into the hands of the modern chemists were, perhaps, undreamt of. On the other hand, the man who administered poisons, in what we would now call a crude form, went unpunished, because there were no means of detecting and proving his guilt. Consequently the references in Shakespeare to poisons are generally of the following nebulous character:—

> The potent poison quite o'er-crows my spirit.
> . . . . . the thought whereof
> Doth, like a poisonous mineral, gnaw my inwards.
> . . . . . poisons
> Which, at the first, are scarce found to distaste;
> But, with a little act upon the blood,
> Burn like the mines of sulphur.

Also that direction to Romeo beginning "Take thou this phial," and that other:—

> I bought an unction of a mountebank,
> So mortal, that, but dig a knife in it,
> Where it draws blood, no cataplasm so rare,
> Collected from all simples that have virtue
> Under the moon, can save the thing from death
> That is but scratched withal.

Shakespeare rarely names his poisons, which may have been mere dramatic propriety, but in "Hamlet" occurs the "juice of cursed hebenon." It has been disputed whether "hebenon" means "henbane" or ebony. Gray quotes a passage in Pliny where we are told that oil of henbane-seeds, dropped into the ears, will injure the understanding ("Nat. Hist.," lib. 25, cap. 4). On the other hand, a passage of Marlowe's "Jew of Malta," cited by Steevens, shows that the juice or sap of "hebon" (ebony) was accounted poisonous:—

> the blood of Hydra, Lerna's bane,
> The juice of hebon, and Cocytus' breath.
>
> ("Works," p. 164, ed. Dyce 1858.)

Shakespeare has been claimed as a temperance advocate because he wrote:—"O, thou invisible spirit of wine, if thou hast no name to be known by, let us call thee—devil!" Now, we do not refer to it as "devil," but as ethyl hydroxide, or C_2H_5OH, which is certainly not so picturesque.

We find many references to all kinds of herbs and drugs, and Mr. Ffoulkes's catalogue included fennel, columbine, rue, nettle, lettuce, hyssop, thyme, Arabian medicinal gum, saffron, mace, dates, nutmegs, ginger, prunes, raisins, civet, and wormwood—but this bare catalogue does not reproduce the poetry or phantasy of England's greatest son. It may suffice, however, to send those who have not sought to find how Shakespeare touches every craft under the sun with the spell of his wonderful knowledge.

A short discussion followed, in which Messrs. Peck, Garsed, and Strother joined; and Mr. S. C. G. Tweedy followed with some remarks on

Photographers and Bromide Printing.

He divided amateurs into two broad classes—the inexperienced and the experienced—and very humorously traced the career of the novice from enthusiasm to despair, when he either gives up photography or enters the second category. In regard to bromide printing, he said, it is easier done, and the results are more artistic than with albumen or P.O.P. prints. He described the usual method of printing on gaslight bromide paper and how to develop. He also referred to the lack of taste and originality often shown by the amateur in choosing a mount for his photo. If no mount is found suitable, said he, make one. Mr. Tweedy exhibited some beautiful specimens of photos taken on Wellington & Ward's bromide papers, and one of Dawson's densitometers for ascertaining correct exposure, lent by Messrs. Geo. Houghton & Son. A general discussion followed.

Wolverhampton Chemists' Association.

The above Association held its second annual meeting on January 27 at the Star and Garter Hotel, Wolverhampton. The annual report gave a brief summary of the work of the session, and was adopted. The election of officers then took place. Mr. S. Phillips was re-elected President, and Mr. F. J. Gibson was appointed Vice-President. Messrs. Cullwick and Harold Coleman were unanimously re-elected Treasurer and Secretary respectively. Messrs. H. Forster, M. R. Warner, A. C. Weaver, and F. A. Willcock were elected as the Committee. A vote of thanks was passed to the President for his services during the last twelve months, and Mr. Phillips in replying said he hoped for more papers and a larger attendance in the future. A donation of 21s. was voted to the Benevolent Fund, and the Treasurer (Mr. Cullwick) said he would give the same amount, which statement was received with applause.

London Chemists' Association.

The first meeting of the Association was held at the Holborn Viaduct Hotel, London, E.C., on January 29. There were about three dozen London chemists present. Mr. Glyn-Jones was voted to the chair, and he explained that the meeting was called to approve of the rules drafted by the committee appointed at the meeting convened by the Western Chemists' Association in November last. The rules were read *seriatim* and finally passed in block, a few alterations being made and an additional rule added. The objects of the Association are:—

(*a*) To promote and protect the trade-interests of chemists and druggists.
(*b*) To cultivate friendly intercourse amongst chemists and druggists.
(*c*) To support the Pharmaceutical Society, or any organisation conducted in the interests of chemists and druggists, and to give its pecuniary aid (as explained in Rule 13) as cases may arise and the funds of the Association permit.
(*d*) To discuss matters of common interest to its members.
(*e*) To form local branches in the various Metropolitan districts.

There was some discussion as to the title of the Association. Mr. Nichols suggested that "London Association of Pharmacists" would be more suitable. It was, however, pointed out that such a title would exclude all but pharmaceutical chemists. The third rule was altered so as to emphasise the fact that only registered chemists were eligible for membership, Mr. Glyn-Jones pointing out that to be able to represent that the members of the Association were all registered chemists would be important in the future. Some relaxation of this condition was suggested in the interests of members of wholesale firms who are not registered chemists. To the fourteen rules one was added on the suggestion of Mr. J. C. Umney, regulating the time of notice for special and other meetings of the Association; at least ten days' notice must be given to the members of such meetings. The government of the Association is left largely in the hands of a general purposes committee consisting of twenty-five chemists, who will elect five of their number to fill the offices of president, two vice-presidents, treasurer, and secretary. The following are the names of the committee appointed by the meeting: Messrs. F. Andrews (Bayswater), C. Breese (Streatham), C. J. G. Bunker (Camberwell), A. L. Burton (Mile End), F. E. Bustard (Seven Sisters Road), W. M. Campbell (Goldhawk Road), R F. Clarke (Gravesend), A. Cooper (Kensington), H. Cracknell (Bayswater), E. Dawson (Camberwell), W. S. Glyn-Jones (Poplar), W. A. Goodall (Fulham), J. F. Harrington (Kensington), R. H. Jones (Norwood), W. N. G. Lance (Islington), A. Pellew (Camberwell), J. C. Pentney (Dalston), W. J. I. Philp (Notting Hill), C. E. Pickering (Marylebone Road), G. P. Pond (Fleet Street), F. W. Truman (Camberwell), J. C. Umney (Southwark Street), W. T. White (Borough), and R. Willson (New Kent Road).

Glasgow Chemists' Assistants' and Apprentices' Association.

AT the meeting held at 94 W Regent Street, Glasgow, on January 28, Mr. J. P. Gilmour (President) in the chair; and Mr. T. MABEN read a paper on

THE REIGN OF LAW,

which consisted chiefly of a eulogy of the Pharmaceutical Society as the representatives of pharmacy in this country. The condition of pharmacy was passed under review, and to improve it the author urged shorter hours, the abolition of cutting, discouragement of proprietary preparations, taking a genuine pride in the prescription-department, and cultivating the medical men. He also urged the Society to co-operate with the College of Preceptors, to take up a new examination once in six months. The division of the Minor and kindred topics were touched on.

The PRESIDENT, Mr. MCCUTCHEON, and Mr. MALLISON discussed the paper.

Nottingham Chemists' Association.

UNDER the auspices of this Association a lecture was given in the Lecture Hall of the Constitutional Club, Nottingham, on Wednesday evening, by Mr. A. E. BEILBY (the Vice-President), on "Ancient Cities of Belgium." Mr. A. Eberlin occupied the chair, and at the conclusion of a very interesting lecture a hearty vote of thanks was accorded Mr. Beilby.

Public and Poor Law Dispensers' Association.

THE annual meeting was held at St. Bride's Institute, E.C. on January 29, Mr. F. Noad Clark in the chair. There were about thirty members present, and the Treasurer (Mr. Hewitt) submitted a statement showing that a balance of 5*l.* 15*s.* 9*d.* stands to the good. The officers and council for the ensuing year were then elected as follows:—President, Mr. Duff; Vice-President, Mr. F. Noad Clark; Treasurer, Mr. Hewitt; Secretary, Mr. Samuels; committee, Messrs. Welford, Donnan, Miller, Windmill, Dunstan, and Kingsland. The retiring PRESIDENT (Mr. Clark) delivered a short address, and was followed by his successor in the chair.

Sheffield Pharmaceutical Society.

AT last week's meeting the members had a merry hour listening to Dr. Waddy's witty remarks on a number of drug and patent-medicine circulars and advertisements, in some of which he detected humour. This week (Wednesday evening, January 29) the members met to discuss the

FEDERATION ITEMS.

A letter from Mr. Newsholme was read, in which, while agreeing with Mr. Paterson that systematic training in pharmaceutical subjects within the reach of students during their shop pupilage is worthy of earnest consideration, he was scarcely prepared to say that the triple subsidising of schools by Government, the Pharmaceutical Society, and local associations, is the wisest means of accomplishing the the object. At any rate, it appeared to him to be a little premature to consider details in regard to the establishment and maintenance of additional schools of pharmacy in provincial centres just at present, for as yet no evidence of a definite course of training is demanded of candidates for the qualifying examination, and he had had sufficient administrative experience to teach him that to rely upon students imposing upon themselves a voluntary curriculum was trusting to a broken reed. A voluntary curriculum had been officially recommended by the Society for years, and many local Associations had loyally expended time and money in arranging for a systematic course of instruction on those lines, to be furnished to students at a nominal cost, but how few were the cases in which the efforts proved successful. In most instances the student had not shown himself ready to embrace opportunities offered for his benefit. He held that the establishment of schools of pharmacy in every village would not remedy the evil, of which he saw painful evidence every session on the Board of Examiners. Examination and education should bear a definite relation to each other, and they cannot be advantageously considered apart in a calling like pharmacy. With regard to grants, he preferred self-help to subsidy in pharmaceutical and national affairs. If the pharmacist of the future was to raise himself in the public estimation he must possess a strong individuality.

After discussion by Mr. SQUIRE, Mr. MORRISON, and Mr. ANTCLIFFE, the PRESIDENT (Mr. J. Austin) moved:—

That, while sympathising with the objects of Mr. Paterson's scheme, it is the opinion of this meeting that no general system of pharmaceutical education, whether State-aided or otherwise, will be of any permanent service until such time as a compulsory curriculum be enforced.

Mr. G. ELLINOR also submitted a motion, but the President's one was adopted.

The Society have fixed February 6 for the annual ball at the Royal Victoria Hotel.

Manchester Pharmaceutical Association.

AT a meeting held on Wednesday evening, January 29, Mr. G. S. Woolley in the chair, a paper on "Pharmaceutical Education" was read by Mr. JAMES GRIER, Ph.C., lecturer at Owens College. In it he discussed the Preliminary examination, considering the new standard right, the necessity for continuous study of pharmacy from the beginning of apprenticeship was enjoined, a scheme being outlined; an intermediate examination before the qualifying one was advocated, and the author suggested a written as well as an ora examination. He did not think much of those who pass the Minor, and deplored the apathy of pharmacists to the training given in university colleges. He also claimed for pharmacy a share in the 25,000*l.* annually given to colleges and universities for dental and medical teaching. Finally, he referred to dispensing in doctors' surgeries, saying that if pharmacists were represented on the General Medical Council the Minor instead of the Apothecaries' Assistants' certificate might be recognised as the only legal qualification for the dispensing of physicians' prescriptions.

The PRESIDENT opened the discussion, deprecating the pessimistic tone of the paper, and holding that, as a class, those who pass the Minor are competent for their duties. Mr. HARRY KEMP dubbed the paper as too theoretical. Professor W. J. POPE said in the technical colleges he was connected with in London they always looked upon the pharmacy students as unsatisfactory, as their idea seemed only to be to get through a certain examination. They did not regard their training in chemistry as education, and were crammed in that and other subjects. Professor WEISS, in the course of a lengthy speech, said there was probably some room for improvement in the examinations. He was followed by Mr. REDCLIFFE; and Mr. JOHN TAYLOR (Bolton), in speaking about a compulsory curriculum, referred to the difficulties in the way of getting one—even if it were desirable. Professor R. B. WILD said there is a tendenoy at present for the pharmacist to become merely a middleman for selling American goods in the original wrappers. He agreed with Mr. Grier's suggestions as to examinations. Mr. YOUNG also spoke, and Mr. GRIER replied.

Cardiff Pharmaceutical Association.

A MEETING was held at the Park Hotel, Cardiff, on Wednesday, January 29. Mr. A. Hagon presided, and was supported by Mr. R. Drane, the newly-elected President, and a large number of members, in addition to chemists from various towns in South Wales and Monmouthshire, were present. The CHAIRMAN, having briefly addressed the meeting, introduced the new PRESIDENT, who delivered a characteristic address, in the course of which he recommended the flotation of specialities by chemists in order to conteract popular proprietaries. This topic was the basis of a good discussion in which Messrs. J. MUNDAY, LLOYD (Merthyr), HICKS, EVAN JONES (Llanelly), JESSE WILLIAMS, COLEMAN, and BARRINGTON SPARROW took part. The PRESIDENT replied and was thanked for his address.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1*l.*, obtainable through any money-order office.

(*From the "Trade-marks Journal," January* 29, 1902.)

"AURONAL" (no claim for "Aurone"); for chemicals. By the Chemische Fabriken vorm. Weiler-ter Meer, Uerdengen-on-the-Rhine, Prussia. 240,449.

"GALVANITE" and "DRIOROL"; for chemicals. By Griffiths Brothers & Co., 29 Mack's Road, Bermondsey, S.E. 243,062 and 243,080.

"PURITAN" (in written characters); for goods in Class 2. By F. J. Griffin, 96 Gainsborough Road, Wavertree, Liverpool. 240,739.

"ANTSAPTIC"; for a white ant and insect destroyer, also a disinfectant and antiseptic (in Class 2). By T. A. Mackenzie & Co., 16 Billiter Buildings, Billiter Street, E.C. 242,655.

"FIXATINE"; for goods in Class 2. By G. F. W. Hope, 18 Ironmonger Lane, E.C. 243,014.

"THAPSYNE"; for an internal medicine. By A. J. Barnes, 1 Charlemont Street, Dublin. 241,701.

The word "KIMMOL," device for label with a goat in the top right-hand corner, and facsimile signature of the proprietor (the essential particulars); for a medicine. By David King Morgan, 25 King Street, Carmarthen. 242,049.

"REMOIDS"; for chemicals. By Bishop & Vincent, 460 Holloway Road, N. 242,277.

"PURITAN" (in printed characters); for chemicals in Class 3. By C. Thomas & Brothers (Limited), Broad Plain Soapworks, Bristol. 243,013.

"GLYCOID" (no claim for "Glyco"); for chemicals. By Allen & Hanburys (Limited), Plough Court, E.C. 243,122.

Combination of devices (the essential particular); for ink. By H. C. Stephens, 57 Aldersgate Street, E.C. 241,444.

"MONITOR"; for goods in Class 42. By Stiles (Limited), 72–74 Gray's Inn Road, E.C. 242,803.

"SODOX"; for an aërated water mixed with nutritious matter. By E. H. Josephi, 20 Bucklersbury, E.C. 242,677.

Device (the essential particular) of a black cat which has fallen into a tub of "Laundry Bleach," and has been partly bleached white; for bleaching-liquors for laundry use. By the United Alkali Company (Limited), 30 James Street, Liverpool. 240,568.

"AUTO-LUBRINE" and "MOTO-LUBRINE" (no claim for "Auto" or "Moto"); for lubricating-oils. By the East Lancashire Chemical Company, Fairfield Chemical-works, Edge Lane, Droylsden. 242,107 and 242,108.

"CONRADINE"; for goods in Class 48. By E. C. Conrad, Walton Villa, Wrotham Road, Gravesend. 242,424.

"INO"; for perfumery and toilet articles. By Gerard Brothers (Limited), New Basford, Nottingham. 242,489.

"LASIN"; for an application to prevent spectacles or the like glasses becoming obscured by moisture. By F. Fuchs, 8 Breite Gasse, Vienna. 242,572.

"MIRRORENE" (the essential particular, no claim being made for "Mirror"); for a polish. By J. Wilson, 66 Charlotte Lane, City, Glasgow. 241,676.

"SOZMAR"; for polishes in Class 50. By R. James & Co., Edward Street, West Bromwich. 242,118.

"HOVO"; for metal and other polishes. By Robinson & Moore, 64 Savernake Road, Hampstead, N.W. 242,587.

ACETATES of soda and lime can now be imported into Holland free of import duty when they are for use in the preparation of vinegar or acetone.

NO HOMEOPATHY IN JAPAN.—U.S.A. Minister Buck, of Tokyo, under date of December 12, 1901, states that on July 20, 1899, the Central Sanitary Council resolved not to permit the practice of homeopathy in Japan.

Things that Happen—Sometimes.

BOY: "Please, sir, I've called for my Christmas-box."
CHEMIST: "Why, you have never done anything for me."
BOY: "Yars, I once borrered your 'and-cart."

Personalities.

MR. T. H. W. IDRIS is the subject of an appreciative sketch in *Fortunes Made in Business.*

MR. A. PAIN, pharmaceutical chemist, has been appointed a Vice-President of the Ipswich Early Closing Association.

MR. F. NOAD CLARK, chemist and druggist, has been elected President of the South London Entomological Society.

MR. J. A. WATERING has retired from Messrs. D. M. & C. Watering, cinchona brokers, Amsterdam, and Mr. J. Vorstelman has been admitted a partner. The style of the firm remains unchanged.

THE Progress medal of the Royal Photographic Society has been awarded to Dr. Joseph Wilson Swan. Dr. Swan was early in the field of photographic discovery, and his carbon process, patented in 1864, was the first practicable one for commercial purposes.

MR. W. S. THOMPSON, founder and principal of the Crown Perfumery Company, was staying in the Murray Hill Hotel, New York, which was so seriously affected by the dynamite explosion on Monday. Mr. Thompson has cabled that he is unhurt. He is 79 years old, and vigorous for his age.

ALDERMAN J. J. SHAWYER, chemist and druggist, Wood Street, and Foringdon Street, Swindon, has been appointed Chairman of the Swindon Technical Education Committee. Alderman Shawyer has always taken a great interest in education, and this appointment is a flattering testimony and recognition of his services to the cause.

Young Fissick's got a sign-board out
Proclaiming him M.D.;
But from A.M. to late P.M.
His office is M.T.

DOCTOR'S SPECIALITIES "will find a ready market on the Ivory Coast," writes a correspondent of the *Gold Coast Globe.*

VACCINATION

He thought he saw the host which stayed
The Saracen alarm.
He looked again and saw a crowd
With neatly ribboned arm.
"Some more red tape," he said, "but this
Is quite devoid of harm." —*The Outlook.*

Observations and Reflections.

By XRAYSER.

The Apprenticeship Experiences given in the Winter number were extremely interesting. I was going to add "useful," but I am not sure whether this term could be justified. The condition of things referred to in the narratives is pretty well gone; and I think I am glad it has. Consequently there is very little to learn from its records, unless it be the lesson that young fellows of sound sense and stamina cannot be easily suppressed. Mr. Newsholme's apprenticeship, for example, hardly seemed planned to create a future President; but it was just as good as any other. He would have probably got to the Presidency all the same if he had been apprenticed anywhere else. On the other hand, the youth from Beverley referred to by Mr. Druce, who, "if he possessed any talent, business or otherwise, had most successfully concealed it," is no doubt convinced, if he is still in the business, perhaps as a *locum tenens* somewhere, that his career was ruined at the outset by an incompetent master. The reflection suggested by a human document of that character is that the repressing influence of the master is of very little consequence compared with that of the beverage which that young man's system "seemed periodically to require."

Ideal Apprenticeships, it is hinted, were those with employers who were also preceptors, who taught their pupils on a system; and this style of thing, it is further suggested, is now "out of print." With sincere respect for the good men who felt that they had undertaken a duty and must conscientiously fulfil it, I take the liberty of saying that I do not believe the method thus sketched has been sufficiently justified by results to make us keenly regret its disappearance. Without any formal "system" of instruction, he must be a poor-brained youth who cannot learn all his master knows about the business after daily intercourse with him for three, four, or five years; and I fancy the really sharp lad picks up more useful information by a careful study of his employer's deficiencies than from a contemplation of his virtues. He unconsciously makes mental notes of how much better he could do this and that; and when the proper time arrives he makes practical use of those notes. A youth can be nursed or mollycoddled in the way which leads to his examination; but it is by using his own wits that he trains into a successful business-man.

Apprenticeship to the Wholesale drug-trade is alluded to by Mr. Lescher. This is interesting. An apprenticeship in a modern wholesale drug-house is far more my ideal of even a retail chemist's training than that which has been so much glorified; and if it should lead to a seat, however humble, at the table of the Drug Club, that would mean fame and fortune enough to satisfy most people's ambition. Mr. Lescher disappointingly adds: "Nowadays there are but few apprentices in the wholesale drug-trade." It is news to me that there are any, and I should strongly advise chemists with sons whom they wish to fit for their own trade to find out about these. The acquaintance with drugs and their treatment on a large scale, with laboratory-work, and with the office-work incidental to a wholesale business, would be well worth paying for. Cannot some of the big houses offer terms on which young chemists might have, say, six or twelve months in their warehouses partly as learners and partly as workers? It would be an invaluable experience to them, and they would probably be lifelong customers to the firm by whom they had been so taken. Perhaps there is a danger that they might learn too much.

The Winter Volume presents such a mass and such a variety of instruction and entertainment as to defy anything like fairly balanced comment. Among the many useful supplements, Meggeson's and the Vinolia price-lists would seem to have reached the climax of artistic advertising; but I suppose the laurel must be awarded to an American firm —Messrs. Bauer & Black, of Chicago. I have never seen photographs of interiors so wonderfully produced as they are in this pamphlet. In the literary section I note (page 103) that the Chancellor of the Exchequer is to receive a deputation from mineral-water makers to hear what they have to say against a higher tax on sugar. That looks ominous. Glasgow doctors "of a disputatious turn" (page 105) are, no doubt, unreasonable in alleging that the Pharmaceutical Society looks after them more closely than it does its own subscribing members. It would not justify doctors in employing unqualified persons to sell poisons to prove that M.P.S.'s do the same. But the charge affects the honour of the Society. Is there any truth in it? Mr. Frost (page 109) does not exactly appreciate the objection to bee-keeping by London chemists. The bees will find the flowers, no doubt, but those of us who work in our little gardens do not want to be grasping one of our neighbouring chemist's bees when we are tending our roses The "family pill" patented by Elizabeth Birch, trained nurse, and Eustace Fordyce Birch, chemist's apprentice (page 119), may become famous, but patenting it will not help the sale nor protect it from the competition of other family pills. Why have they wasted their money? I observe with pleasure (page 122) that Mr. John Morgan Richards is beginning to protect profits. He will be a glorious catch for the P.A.T.A. when he comes in with all his agencies. Mr. Reynolds's first sketch (on page 141) is a gem of humour Miss Barr's article on the Minor examination (page 143) is much superior to the general run of such essays, in that it gives the outline of the patient work that led up to qualification, and is not simply a description of the final brilliant victory. I am afraid most of us try to find a shorter cut to registration than Miss Barr indicates. The several articles of pharmaceutical interest from India, the Continent, and the Transvaal almost compel the commentator to linger but space will not permit. The Bradford amulets commented on by Mr. Bell (page 153) are an interesting find, but I can hardly bring myself to believe in them as genuine charms notwithstanding the word "tetragrammaton."* The language used in those old charms was generally composed of ordinary words with a mystical religious look about them, even if much sense could not be made out of the whole. Are they not merely cuttings from a sort of parchment copy-book, by means of which some young scrivener was trying to acquire a clerkly hand? Mr. Ebblewhite's learned analysis of the Royal arms (page 161) is instructive, but it is difficult for those of us not in the "arms" line to treat heraldry quite seriously. Lord Westbury was once trying a case in which a witness from the Heralds' College gave evidence. The witness, perhaps nervously, confounded a "bar" with a "bend." "Why, you silly old man," said the sharp-tongued Judge, "you don't know your own silly old business." I am not sure that the practice of giving to selected tradesmen the right to use the Royal arms, and to describe themselves as specially appointed, without charging them for the privilege, is quite fair to taxpaying competitors.

* Another early English text authority, judging from the engraving, assures us that the scrip is not anterior to 1820.—ED. *C. & D*

Editorial Comments.

Opodeldoc.

For some weeks an interesting discussion has been going on in our columns as to the origin of opodeldoc. The discussion was brought about by a question as to whether opium-liniment may properly be sold as opodeldoc, that being the custom in some parts of the country. This has proved to be far less interesting than the ancient history of the article. There is not much doubt that Paracelsus (1493–1541) invented the word opodeldoc as a general term for various plasters. Mr. C. C. Bell and "Xrayser" have given formulæ from Paracelsus' "Chirurgica Minor" which show that opodeldoc-plaster bears no relation to the saponaceous compound known under the name of opodeldoc at the present time. Some lexicographers attribute the invention of opodeldoc-plaster to Mindererus (1570–1621), but this is an error. Mindererus distinctly states in his "Medicina Militaris" that the opodeldoc of Paracelsus is a good plaster for wounds, but that his own preparation contains additional ingredients which make the plaster red and hard, "like Spanish sealing-wax." As to the meaning of the word opodeldoc there is much difference of opinion. Dunglison says it is "an unmeaning term frequently used by Paracelsus." Webster-Mahn explain it as "so called by Paracelsus, who liked to coin arbitrary and unmeaning words. The first syllable is perhaps the Greek ὀπός, vegetable-juice." Blancard says: "'Tis a fictitious name, having no real signification." The late Mr. John Borland, suggests (*Pharm. Journal*, 1871) as the roots of the word opodeldoc, ὀπός, juice, and θέλγω, I soothe or charm. By syncopating the *s* the word becomes ὀποθέλγω, and employing the adjective form we have ὀποθελκτικός, meaning the soothing juice or balsam. By the mutation of the rough lingual θ into the softer medial δ the word would become (using Roman letters) *opodelgo*, and conventionality or euphemism might lead to *opodeldo* or *opodeldoc*.

How did the name come to be applied to a saponaceous compound? All the formulæ given in Paracelsus and Mindererus are innocent of soap. The following seems to be the evolution

Digitized by Google

of the present-day soap-liniment. Powell (Translation of the 1809 London Pharmacopœia), under Lin. Saponis Compositum, has a note that "the basis of this form was first proposed by Riverius, and is now commonly used under the name of opodeldoc." The only reference we can find in Riverius' (1589–1685) "Praxis Medica" is under the heading of "Hip Gout or Sciatica" (Bk. 16, c. 2)—viz., "Spanish soap or Castile soap dissolved in spirit of wine is most excellent smeared on by the fireside." The next clue is given by Bate (1608–1669) in the "Pharmacopœia Bateans," where, under the title of "Balsamum Anodynum," is given the following:—

Sapon. castil.	℥j.
Opii	℥ss.
Camphor.	℥vj.
Croci	℥j.
Pyrœni	℥xviij.

This formula is given intact in the first Edinburgh Pharmacopœia, 1722, but there is also given a formula under the title of "Unguentum Opodeldoch," a translation of which was quoted by Mr. Eustace last week. In the 1744 P.E. Bate's anodyne balsam is made by adding tr. opii to "Balsamum sapona-ceum vulgo oppodeltoch," prepared from—

Spt. vini rect.	4 lbs.
Sapo. hispan.	1 lb.
Camphor.	2 oz.
Ol. rosmarini	½ oz.
Ol. origani	½ oz.

Balsamum is the new name applied in 1744 to the old unguentum, probably because its consistence was too soft for the generally accepted idea of an ointment. James ("Universal Dispensatory," 1752) says he does "not know why the oil of origanum is here added," but that was no doubt because it was judged that thyme and rosemary were the preponderating flavours of the old ung. opodeldoch of the P.E. 1722. Quincey, it may also be noted, mentions that Bate's anodyne balsam is much like a prescription of Horstius, whom we take to be Gregory Horstius (1578–1636), known as the "German Æsculapius." The Edinburgh balsamum saponaceum first appeared in the London Pharmacopœia of 1745 as "Linimentum Saponaceum," with the following simplified formula:—

Spiritus rorismarini	libram unam
Saponis duri hispanici	uncias tres
Camphoræ	unciam unam

Digere saponem in spiritu rorismarini dum solutus sit; deinde adde camphoram.

It appears from "Pharmacopœia Reformata," a criticism of the Pharmacopœia published in 1744, that a preparation similar to the above was proposed, but with the addition of ammonium carbonate, a note explaining that "medicines of this kind have been pretty much in esteem of late, but are generally more impregnated with the essential oils of vegetables which undoubtedly promote the medicinal efficacy of the composition." This refers no doubt to Steer's opodeldoc, which was then a popular proprietary article. Dorvault ("L'Officine") says the formulæ for baume opodeldoch originated from an English proprietary medicine (he says "patented," but Steer's preparation was never the subject of letters patent). It now becomes fairly clear that the first soap-liniment was an imitation of Steer's opodeldoc, and judging by the quantity of soap it was a semi-solid preparation; it is not, however, quite so clear whether Steer's was an original preparation or an improvement on the Edinburgh formula. The fact that Steer's contains ammonia would seem to point to the latter conclusion. So far we have not been able to find any reason for the adoption of the word opodeldoch other than the fact that Paracelsus' plaster was obsolete, and the name a good one for an external preparation. Lin. saponaceum became lin. saponis in the P.L. 1788, lin. saponis co. in the P.L. 1788 (ed. alt.), and remained with that title until 1836, when the present lin. saponis was adopted. The 1788 P.L. ordered 3 oz. of soap and 1 oz. of camphor in 16 oz. of spirit of rosemary made with proof spirit; in 1809 the spirit of rosemary was made with rectified spirit, but as there was difficulty in dissolving the soap distilled water was added in the proportion of 2 oz. to 18 oz. of spirit of rosemary. The water was increased to 4 oz. in 1885, and the camphor diminished to 2 oz., but previously a mixture of oil of rosemary, and spirit had replaced the spirit of rosemary. In the present Pharmacopœia soft soap takes the place of hard soap. The "dark-coloured" opodeldoc which our original correspondent refers to as asked for in Scotland may be a survival of the days when tr. opii was added to balsam of soap to make it into Bate's anodyne balsam, but it is well to recall what was pointed out by Deane in 1859—viz., that the colour of soap-liniment formerly varied according to the kind of Castile soap used in its preparation. It is also said to have been the custom to heighten the colour of the liniment with saccharum ustum. It is quite probable, however, that the Board of Trade's requirement for shipping medicine-chests may have influenced the local custom of giving lin. opii. In regard to the substitution of soft soap for hard soap in the present Pharmacopœia, it is probably due to the suggestion of Mr. J. T. Hornblower (*C. & D.*, April 28, 1894, page 571), although as long ago as 1818 Gray gave formulæ in which soft soap was employed, and it is still common in the trade to use that soap as a more emollient opodeldoc is produced.

The Poisons Committee.

THE sample of Westminster wisdom on the poisons question which our Parliamentary correspondent contributes this week (page 215) is a striking corroboration of what we have repeatedly said respecting the temper of administrators on this matter, and the need for the chemists and druggists in Great Britain giving it their closest attention. We have ample evidence that the trade is almost lethargic about it so far. We do not fear that when the time for fighting comes plenty of energy will be displayed, but we should like to see more evidence now that chemists and druggists as a body realise that the principle of the Act which made them a statutory body is being insidiously undermined. Perhaps the "statement" communicated by our Parliamentary representative may help them to realise the position. We print it as received, with all the bias and travesty of the truth apparent to those who know the facts regarding the Wheeldon case better than the authority from whom the statement emanates. The judgment by Mr. Justice Hawkins, which decided that the person who hands over the poison must either be qualified or be under the immediate supervision of a qualified person, has been far more keenly felt by pharmaceutical owners of drug-shops than by the medical men of Glasgow and the West of Scotland. We have repeatedly shown since the decision that the demand for qualified assistants by pharmaceutical owners has enormously increased, twice as many now qualifying, in spite of the fact that the examinations have become more stringent. There is no distinction in the Pharmacy Act between the medical man and the pharmacist so far as keeping open shop is concerned; both must give personal supervision or provide qualified assistants. The nature of their occupation prevents medical men from giving the close attention to open shops which their pharmaceutical *confrères* can give, and as medical men who own open shops have them chiefly for the purpose of keeping the pot boiling until their more legitimate practice is sufficiently re-

Digitized by Google

munerative, they have usually put their shops in charge of the cheapest assistants. Consequently, law-breaking has been more common in such shops, and it is that fact which the General Medical Council has recognised and acted upon with deliberation. There is no love lost between that Council and the Pharmaceutical Society. The General Medical Council would not have moved in the matter had it not been convinced that the law-breaking was endangering the status of the medical profession. We are pleased to notice that the Poisons Committee will have an opportunity of getting at the real facts of this matter, which appears to be used to prejudice the members of the Committee against the legitimate retailers of poisons. Amongst the witnesses who are now to be called are Mr. Richard Bremridge, Secretary of the Pharmaceutical Society, and Registrar under the Pharmacy Act, and the Assistant Secretary, Mr. J. Rutherford Hill, of Edinburgh. Both are well qualified by experience and knowledge of the Pharmacy Act to give the Committee a correct idea of the impartiality with which it has been administered, and they will be able especially to tell the Committee how far the public safety has been endangered by the insidious manner in which those who merely regard the sale of poisons as a source of gain have circumvented the objects of the Legislature.

The Dilke Shops Bill.

THE Bill which Sir Charles Dilke has introduced to amend the law relating to shops is not exactly on the same lines as Lord Avebury's Bill which, in the Session of 1900, was rejected in the House of Lords, and has again been introduced this week. That Bill proposes, among other things, that two-thirds of the shopkeepers in any locality should be authorised to memorialise the local authority, and that the local authority should then be empowered to close the shops at an hour not earlier than 7 o'clock in the evening. There is no mention of memorialising in Sir Charles Dilke's proposals. It is simply provided that the local authority "shall fix the closing-hours for each day in the week in accordance with this Act as far as concerns the shops within their area," and that they "shall publish their determination in such manner as they think fit, and a certificate purporting to be signed by the Clerk of the local authority shall be evidence of the closing-hour fixed for any day." This gets rid of the objection urged by Lord Salisbury in 1900, that under Lord Avebury's scheme two-thirds of the shopkeepers in a district could coerce the other third, and, moreover, it is in accordance with the recommendation of the Select Committee of last Session, "that town councils should be authorised to pass provisional orders making such regulations in respect to the closing of shops as may seem to them to be necessary for the areas under their jurisdiction." The whole of the first part deals with this question of closing, but there is an exemption clause which provides that the proposals in this connection shall not apply to shops kept open for the sale solely of certain scheduled articles, including "medicines or medical or surgical appliances." Consequently the first part only has general interest for the majority of our readers. The second part is devoted to miscellaneous clauses, and for their clear interpretation it may be explained that for the purpose of the Bill the expression "shop" includes retail and wholesale shops, markets, and stalls, and "young person" means any person under the age of eighteen. It will not be legal, should the Bill pass, to allow a child under the age of fourteen to be employed in or about a shop. Further, a person must not be employed continuously for more than five hours without an interval of at least half an hour for a meal, and he must be allowed at least an hour between noon and 2 o'clock for dinner, and not less than half an hour between 4 and 7 for tea. Then follows a clause over the principle of which a long discussion took place on the occasion of the last amendment of the Factory Acts. It provides that—

> A young person or woman who is employed on any day in a factory or workshop shall not subsequently on the same day be employed in or about a shop for such a period as will make the total period of his or her employment in the factory or workshop, and in the shop, exceed the number of hours permitted by the Factory and Workshop Act, 1901, for his or her employment in the factory or workshop.

This will, undoubtedly, again prove to be a bone of contention. The remaining provisions may be dismissed in a line. They provide for efficient sanitary arrangements and ventilation, for annual returns of all persons employed, the enforcement of the Act by factory inspectors and police officials, and legal proceedings. One clause near the end is worth separate notice—viz., that "any person found in a shop, other than a customer, shall, until the contrary is proved, be deemed for the purposes of this Act to have been then employed in the shop." Sir Charles Dilke has the support of representatives of the three Kingdoms. His backers number Mr. John Burns, Mr. Flower, Mr. Lloyd-George, Colonel Hughes, Mr. Kemp, Mr. McCrae, Mr. Melville Mr. Nannetti, Sir Barrington Simeon, and Mr. Tennant. In view of the announced disinclination of the Government to take up the subject, the progress of the Bill will be watched with much interest, as will also that of Lord Avebury, although the leader of his House is not at all sympathetic to him.

THE WEEK'S LAW.

Our space this week does not permit extended comment upon the legal cases which we report, but we may at least emphasise their importance, especially the support given to the Dickens *v.* Randerson decision, which sustains the authority of the British Pharmacopœia in regard to medicines mentioned therein, so far as the Sale of Food and Drugs Acts are concerned. The Pharmaceutical Society's renewed procedure under Section 17 of the Pharmacy Act against Mr. Woolmer White, of Portsmouth, for not putting on a poison-label the exact address where the poison was sold, is rather hard upon him, as he appears since he was first fined to have done all that it was possible to conform with the law. The real significance of the case is, however, that the Pharmaceutical Council is ignoring the West London Magistrate's decision in regard to the name, and taking action only in respect to the address. It seems strange that the Council has not taken an earlier opportunity and simpler way of making the fact known.

THE DISCOVERY OF THE FUTURE.

When Mr. H. G. Wells, the novelist, is serious, as he was understood to be at the Royal Institution last Friday evening, it is the greatest difficulty to realise that he is so. From 9 o'clock, when he walked into the lecture-theatre accompanied by Lord Rayleigh and Professor Dewar, to 9.30 he spoke of the past, and up to 9 45 of past and present, with a dash of prophetic speculation, but the future that he spoke of in the other ten minutes was hazy and wild. There was nothing in the lecture which cannot be gleaned from "Anticipations," and the first half-dozen sentences contained all that men of science need care about. Mr. Wells said in effect that the human mind has always been prone to dwell upon what has happened or is happening, and the cultivation of what may happen is still an undeveloped faculty on that account. We think this puts the matter fairly, but the lecture was so devoid of examples of futurity or any suggestion of a formula which might start speculation

Digitized by Google

in prophetic science, that it is possible in saying this we credit Mr. Wells with more than he expressed. Nevertheless, the idea is that if scientific men would try to think where ascertained facts will lead them instead of studying their relations with the past, and collating nice records of progress, they would get a much better insight into the future than we have got hitherto. The prediction of the discovery of new elements was instanced as proof of what can be done along these lines. Sir William Crookes was at the meeting, but it is so many years since we heard a similar doctrine to this from his lips, both privately and publicly, that some disappointment at Mr. Wells's feebler efforts was, perhaps, inevitable. Now that the Royal Institution has paid this young gentleman the supreme compliment of asking him to lecture to the most dilettante audience of modern times, on the subject which he handles entrancingly in fiction, we may turn to astronomers, chemists, and physicists for more light on the subject, and ask Mr. Wells to give us more of his fiction.

A NEW EXPLOSIVE.

The Explosives Committee, British War Office, which consists of Lord Rayleigh, Sir Andrew Noble, Sir William Crookes, Sir W. Roberts-Austen and Mr. R. B. Haldane, besides members representing the War Office and the Admiralty, have now made effective trials with the new smokeless powder to be known as "Cordite M.D." The orginal cordite, patented in 1889 by Sir Frederick Abel and Professor Dewar, consists of 58 per cent. of nitroglycerin, 37 per cent. of tri-nitro-cellulose (with a small proportion of soluble gun-cotton), and 5 per cent. of vaseline. Cordite M.D. is not patented, but nitrocellulose is the base, and it contains a percentage of nitroglycerin not nearly so high as that in cordite. The advantage of the new powder is that it is not so erosive as cordite, and in other respects it is far superior.

POTASSIUM OR POTASH?

In the current issue of the *Polyclinic*, Dr. C. O. Hawthorne discusses the question as to whether the word "potassium" or "potash" should be used in speaking of the compound KI. It appears that in the severe atmosphere of the *Polyclinic* "iodide of potash" has been heard, and a critic comments adversely on the use of the term. Dr. Hawthorne thereupon writes a little homily on the subject, which concludes with this little paragraph:—

> Our critic is therefore perfectly right in finding fault with the phrase iodide of potash, for which no defence can possibly be attempted. Indeed, as now appears, his commendable anxiety for accuracy in chemical phraseology might have justified the adoption of a wider censure, though not perhaps on equally sure grounds. To speak of iodide of potash is, we admit, to sin against both reason and history. Carbonate of potash and its congeners are less grave offences, but they cannot advance a plea of justification according to modern theories. They can claim the sanction of a former custom, but their present employment indicates some failure to appreciate one aspect of the fuller chemical doctrine of our later day.

After all, there is no finality in matters of this kind. The names that we use are simply convenient labels to tack on to chemicals, and are not necessarily descriptive of the condition in which the constituent elements are combined.

GOVERNMENT LYMPH.

The reply of Mr. Long to a question in the House of Commons last week concerning the supply of Government calf-lymph has aroused the "official" medical practitioner. Mr. Long said there was no necessity to supply "Government" lymph to private practitioners, as there was an ample supply outside that issued by the Local Government Board. Dr. T. D. Acland writes to the *Times* in alarm at this reply, saying surely Mr. Long cannot be "aware of the widespread demand which exists for the lymph prepared by the national vaccine establishment." The worthy doctor hears the desire expressed "on all sides" that the Government laboratories should be so extended and equipped as to enable them to supply glycerinated lymph to any qualified practitioner who may wish to use it. It is felt, he says, that as a matter of such national importance, not only should the laboratories be extended but that steps should be taken to test and regulate the sale of all imported lymph and to inspect the manufacture of all that is prepared in this country. The maintenance of an enlarged Government laboratory would, he thinks, be a wise economy for the nation, where an adequate supply of lymph of the highest standard of efficiency and purity could be obtained, "rather than, as at present, to compel all private practitioners to depend for their supply on that which is made abroad, or prepared by private firms in England without any official regulation, inspection, or guarantee." This appears to imply that the "private firms" making vaccine-lymph are not to be trusted; but we should imagine that the commercial reputation of those adventurous "private firms" who dare to produce a lymph in opposition to the Government, would be worth considerably more to the private practitioner and the man in the street than any amount of "official guarantees."

Note on Creosote-pills.

PILL-MANUFACTURERS are not unfrequently asked for creosote-pills each to contain 1, 2, or 3 minims of the substance. To prepare the latter of a suitable size is more than difficult—in fact, it is impossible if the size is limited to that of an ordinary 5-gr. pill. For many years the difficulty has continually presented itself, and it is not always easy to persuade customers (who, by the way, sell "castor-oil pills" weighing about 5 gr. each) that 1 minim is the most that can be got into a presentable pill when working with large quantities. I have known dispensers who could send out a fairly-presentable pill containing 2 minims, but when these have to be prepared in quantity and by machinery another state of affairs exists.

Without going into unnecessary details of experiments with various excipients tried, I can recommend the following formula containing 1 part of creosote in 4 parts of mass. It produces a firm mass for the piping-press and cuts well; in a very short time it sets sufficiently to allow of coating if that process is carefully carried out. The pills so made remain pliable and do not go right hard upon keeping, and they soften readily with warmth from the fingers:—

CREOSOTE-MASS 1 IN 4.

Creosote	4 parts
Powdered animal soap	2 parts

Mix thoroughly in a warm mortar and add—

Yellow beeswax (previously melted)	4 parts

Mix thoroughly and incorporate in the mixing-machine with—

Powdered liquorice...	1 part
Powdered althæa	1 part
Calcium phosphate...	2 parts
Kaolin	2 parts

The mixing should be done lightly and not carried on for longer than necessary to make a uniform mass.

My experiments show that one cannot make pills of all strengths, the only strength suitable being 1 minim; the other two strengths would need to be represented by a large pill, especially when coated, and would not be favoured by those having to take them. Moreover such a pill would be larger and less convenient to take than a capsule or perle containing the same amount of creosote. The exhibition of the latter ensures that the proper dose is given, and their use should be encouraged. JOHN J. BRYANT.

HINE'S DRUG STORES, dispensing chemists, of Holloway and Aldgate, have acquired the business of Messrs. Belton & Co., of 61 High Road, Lee, S.E.

Legal Reports.

Pharmacy Act, 1868.

LABELLING UNDER SECTION 17.

AT the Portsmouth Police Court on January 28, before Colonel Lanyon Owen (Chairman), Mr. J. J. Young, and Mr. C. E. Matthews, Woolmer R. D. White, J.P., chemist and druggist, of the Timothy White Company, was summoned at the instance of the Pharmaceutical Society for selling at one of his shops oxalic acid without a distinguishing label.

Mr. Burley appeared for the Society, and Mr. Brutton for the defendant.

Mr. Burley stated that on November 25 a clerk in the employ of the Pharmaceutical Society purchased at defendant's shop in Stamshaw Avenue, Portsmouth, a pennyworth of oxalic acid, which was given to him in a blue wrapper upon which was placed a label bearing these words, "Oxalic acid," and then above and below that, "Timothy White Company, chemists by examination. Pharmacies throughout the South of England. Prescriptions dispensed by qualified chemists at half the usual charges." There was no address on the label, simply "Pharmacies throughout the South of England." Serious consequences might ensue through lack of an address, and it would be impossible to tell at which of the defendant's numerous branch shops this particular poison was bought. Mr. Woolmer White was himself a member of the Pharmaceutical Society, and therefore clearly knew what was the law in relation to the matter. He mentioned also that though they were not charging this as a second offence, Mr. White had been previously convicted under this section.

George Pidsley proved the purchase, and in reply to Mr. Brutton said that when he paid for his purchase he received a receipt for 1*d*.

Colonel Owen: Did you see the name and address of the firm on that receipt?—No, I did not.

Colonel Owen: Well, here it is.

Mr. Matthews pointed out that the form of receipt bore no fewer than twenty-eight addresses, including the address of this very shop at which the poison had been obtained.

Harry Moon, clerk to the Pharmaceutical Society, said that he was specially instructed to get a purchase made at Timothy White's. There was nothing wrong with the label in question, except that the name of the shop where the purchase was effected was not given.

The Bench drew attention to the fact that Timothy White's was as well known as the Town Hall itself.

For the defence Mr. Brutton observed that the objection of the Society was that the label did not specifically denote the branch-shop at which the purchase was made. He submitted that this was not necessary under the Act, and that the prosecution was somewhat vindictive. The real grievance of the Society was that on the labels were the words "Prescriptions dispensed by qualified chemists at half the usual prices." Mr. White was a very liberal subscriber to the funds of the Society. He had after the last case instructed the managers of his several shops to withdraw that form of label and substitute for it a new label on which was printed the address of the branch at which it was used. They were told on the issue of this new label to destroy all the old ones, but apparently they had not all done so in this instance. He contended that, having done this, his client could not be held criminally responsible for the act of a servant who had acted in direct opposition to his express instructions.

This point was argued at great length, but the Clerk (Mr. Harry Fisk) advised the Bench that under Section 17 the employer's responsibility was maintained.

Evidence was then called for defendant as to new labels having been distributed. The witnesses were Alfred Henry Holt, general manager of the warehouse; Henry William Carrier, manager of the Stamshaw branch (who stated that on the receipt was the stamp of the firm, "Timothy White Co., Stamshaw branch"); George Albert Harvey, superintendent of drugs; and Mr. Chase, manager of the defendant's Albert Road shop.

The Bench retired, and, on returning, said they felt the defendant had done all in his power to meet the requirements of the Act, but in a firm such as his little slips must occasionally occur. They were satisfied that a technical offence had been committed, and fined the defendant 1*s*. and the costs, amounting to 13*s*. 6*d*.

Mr. Burley: You are satisfied that a technical offence has been committed?

The Bench: That is our decision. We would emphasise the word "technical."

High Court Cases.

TREATT *v.* SAMUELSON.

ON Thursday, January 23, Mr. Younger concluded his speech introducing his case, and Mr. Percy Samuelson was examined by Mr. Stokes. When he was taken into partnership 223*l*. was due to him, being commission at the rate of 10 per cent. on profits up to June 30, 1899. There was no agreement whatever as to the amount he should draw—certainly not 8*l*. a week. He took a flat in Park Place at 110*l*. a year and furnished it at a cost of 150*l*., Mr. Treatt approving of the step. He then gave his view of the share transactions, stating he suggested to Mr. Treatt that a speculation in West Africans should be closed, and was examined at some length on the Stock Exchange transactions. Before going to Madeira for a holiday last October Mr. Treatt showed him a statement of his drawings from which it appeared he had taken 14*l*. a week, and, after he had expressed regret, Mr. Treatt suggested that he should write him a friendly letter of regret, which was done on the voyage to please Mr. Treatt. Mr. Hughes sharply cross-examined witness, first endeavouring to get him to admit that when the partnership was entered into there was an understanding as to how much witness would draw, but he admitted only "to the limit of his profits." He was then taken over his drawings item by item with the view to show that he had been living extravagantly. In April of this year he drew 127*l*. 7*s*. 10*d*., in May 34*l*. 0*s*. 9*d*., in June 88*l*. 11*s*. 1*d*., in July 117*l*. 13*s*. 11*d*.; in August 59*l*. 19*s*. 7*d*., in September 37*l*. 0*s*. 10*d*., and in October 263*l*. 12*s*., the last including interest. Mr. Hughes next took up witness's alleged statement that his extravagant living was due to his being at liberty to write cheques, and that if he had to go to Mr. Treatt for cheques there would be some control of his expenditure. He denied that, and could not be shaken. There was some pretty fencing between counsel and defendant in regard to this matter, and it transpired that defendant had, at Mr. Treatt's suggestion, sublet his flat and gone to live with friends, so as to reduce his expenditure. A letter of Mr. Treatt's was also read, in which he suggested to defendant that he should go to Liverpool to escape the temptations of the West-end and start a branch of the business.

In re-examination by Mr. Younger, defendant said the relations between Mr. Treatt and him were, up to the time of this action, most affectionate—like that of father and son, in fact. He wrote the letter from Madeira to please the plaintiff. Although the share-transactions were not partnership matters, they went through the firm's books. He promised to make out for his Lordship accounts showing what his drawings from April to October, 1901, were—whether personal, Stock Exchange, or otherwise; as stated, they include everything. "Nothing is lost in the summations in this case," slily added Mr. Younger; and (a little later) "Mr. Samuelson has never overdrawn his profits."

"Never overdrawn his profits?" queried his Lordship. "One moment. Even with his losses on the Stock Exchange?"

"Yes, my Lord; that is so," said Mr. Younger and his junior, Mr. Stokes, *sotto voce*. Then Mr. Younger quietly but firmly drew from his client the assurance that he went to live in the West-end at Mr. Treatt's suggestion, and that he had never indulged in West-end extravagances. He had never said he could not control his expenditure.

Mr. Baker, chartered accountant, was the next witness. He had gone through the firm's books, and prepared several balance-sheets. First, he stated that the 3,600*l*. credited to Mr. Treatt at the beginning of the partnership included 223*l*. due to Mr. Samuelson as commission. The balance-sheet was submitted, showing that on September 30, 1901,

Digitized by Google

46*l.* was due to Mr. Samuelson. Then came four profit-and-loss accounts, the first of which, covering the nine months ending March, 1900, showed Mr. Treatt's profits for the period to be 3,036*l.* and Mr. Samuelson's 858*l.*; in the six months following Mr. Treatt's profits were 1,258*l.* and Mr. Samuelson's 314*l.*; for the six months ending March, 1901, 1,595*l.* and 436*l.* respectively; and for the six months after that 1,360*l.* to Mr. Treatt and 342*l.* to Mr. Samuelson. Then witness submitted an analysis of Mr. Treatt's drawing-account, the first, from July, 1899, to March, 1900, showing that Mr. Treatt drew 6,099*l.*; in the six months following, 3,456*l.*; for the six months ending March, 1901, 2,439*l.* Mr. Treatt had received interest on his capital all this time, and Mr. Samuelson had been paying interest on the debit against him of 923*l.* The credit balances due to Mr. Samuelson were—April 1, 1900, 319*l.*, and so on up to October 1, 1901, when 46*l.* 19*s.* 7*d.* was due to him. He had never overdrawn his accounts so far as the account balances showed.

Mr. Thompson (junior counsel for the plaintiff) asked the cross-examination to be adjourned until the next morning, as he had not seen these accounts before.

Mr. Moull, the next and last witness, said he was a friend of Mr. Samuelson, and when he rang him up on the telephone on December 10, 1901, Mr. Treatt replied. He said, "Mr. Samuelson is no longer in my office; his address is 3 Park Place."

This evidence created consternation in court, as it was the opposite to what had been stated by the plaintiff in the witness-box, but the witness was not shaken in his cross-examination.

Mr. Younger then proceeded to address the Court on behalf of the defendant, and was still speaking when the Court adjourned until Friday morning at 10.30.

The foregoing appeared in our Coloured Supplement last week.

FOURTH DAY.

At the resumed hearing on Friday, January 24, Mr. Baker, C.A., was further examined by Mr. Younger in regard to Mr. Samuelson's drawing-account, again corroborating his statement of the previous day that it was not overdrawn. Witness was not cross-examined. Defendant was again called in respect to the Stock Exchange transactions and cross-examined by Mr. Hughes. Mr. Younger then resumed his address, stating that he submitted two points—first, that there was no agreement between plaintiff and defendant as to the latter's drawings, and, if there was, that Mr. Treatt ignored it. If there was anything plain in the evidence, it was that Mr. Treatt regarded the 8*l.* a week as what was requisite by Mr. Samuelson for his wants. He submitted that having regard to the way the Stock Exchange transactions were brought into account, the personal expenditure of Mr. Samuelson did not exceed 8*l.* per week. The Stock Exchange losses were part of his drawings, and, allowing for that, the agreement made in April, 1901, had not been broken. Referring to Mr. Treatt's affidavit, he said from beginning to end it was a tissue of exaggeration. It had been stated that Mr. Treatt had been compelled by reason of the defendant overdrawing to pledge his own property for the purpose of obtaining money to carry on the business. When that matter was investigated, however, it was found that Mr. Treatt had obtained a renewal of the old debt that had been incurred months before, and that instead of pledging his property for that purpose, all that he did was to leave his property where it had been for three years. Further, Mr. Treatt in his affidavit did not refer to the striking fact that in the seven weeks before he made that affidavit he had drawn out for himself no less than 800*l.* The actions of Mr. Samuelson in this matter were nothing compared with those of Mr. Treatt, who had drawn out every penny from the bank and put it in his own name. As a proposal plaintiff was now willing to submit to an alteration in the partnership agreement, whereby cheques should be signed by both parties.

Mr. Hughes here intimated that Mr. Treatt was willing to submit to a valuation of the goodwill, and that Mr. Samuelson should be credited with his share of it—viz., one-fifth. Replying on the whole case, Mr. Hughes submitted it was practically impossible for the partnership to go on. Mr. Treatt was still very anxious that nothing unfair to Samuelson should be done. It was almost inconceivable that Treatt would have taken Samuelson into partnership without some limit upon his drawings while he was 923*l.* in debt to Treatt. He submitted that Mr. Samuelson's letter of October 31, 1901, which was not written on the spur of the moment or under the slightest pressure, admitted that his drawings were largely in excess of what he agreed to draw, and that he must give up living in the West-end. Mr. Samuelson was, during the twelve months prior to April, 1901, spending at the rate of nearly 1,000*l.* a year. Having regard to the fact that he was heavily indebted to Mr. Treatt, and that after his solemn promise not to overdraw he broke it again, counsel contended that the partnership became impossible. Mr. Treatt did not wish to take advantage of that, so that he was willing to give him his share of the goodwill, and allow him to carry on business, but not under the name of Treatt, or as successor of the business.

This closed counsel's address, after which Mr. Justice Joyce said that in mercy to the plaintiff and defendant he would refrain from delivering judgment until the week after next, matters to remain *in statu quo*, and Mr. Samuelson to keep away from the office.

Merchandise Marks Act.

EMBOSSED AËRATED-WATER BOTTLES.

IN the Dublin Court for Crown Cases Reserved on January 23, the long-deferred judgment in the matter of the "Limerick Mineral-water Case," as it has come to be called, was delivered. The Judges were the Lord Chief Justice (Lord O'Brien), Lord Chief Baron Palles, Mr. Justice Andrews, Mr. Justice Johnson, Mr. Justice Gibson, Mr. Justice Madden, Mr. Justice Boyd, Mr. Justice Kenny, Mr. Justice Barton, and Mr. Justice Wright. A number of North of Ireland cases—in Newry, Lurgan, &c.—will be governed by this judgment. The facts of the case are as follows: At the Limerick Hilary Sessions of 1901 Messrs. John McEvilly, Cornelius Conway, and John Cross, jun., were indicted before Judge Adams and a jury, at the suit of the Dublin Mineral-water Association, for selling aërated waters in bottles embossed "Cantrell & Cochrane" and "Hovenden & Orr," but to which labels bearing defendants' names were attached. Substantially the case and evidence for the defence were that the universal practice of Cantrell & Cochrane and Hovenden & Orr was to sell their mineral waters in bottles, charging a single price for both. The bottles as well as the waters then became the property of the purchaser, who got an allowance for the bottles returned. According to this contention the bottles, before the sale by the defendants, had ceased to be the property of the prosecutors. It was also submitted that in using the bottles they acted without intent to defraud anyone, and that they guarded against any possibility of mistake by using their own labels on the bottles, notwithstanding the "embossment." County Court Judge Adams ruled that evidence to such effect was inadmissible, and he refused to direct on that point as requested by counsel for the defendants. He told the jury that if they were satisfied that bottles embossed with the names of "Cantrell & Cochrane" or "Hovenden & Orr" found their way into the possession of the defendants, and that the defendants "knowingly" put into these bottles their own mineral waters and sold these bottles so filled to their customers, they (the jury) were bound to convict. On the issues thus put the jury convicted, and Judge Adams fined the defendants 6*d.* each. Having been asked to state a case, he did so on the following points: (1) Whether he ought to have directed an acquittal; and (2) whether he rightly directed the jury and left them the proper question.

The case had been at argument at previous sittings of the Court for Crown Cases Reserved, and was adjourned for further argument, and also that the County Court Judge might state a supplemental case setting forth (1) the evidence given, and (2) the ground on which he had declined to put specifically the question as to innocence.

Counsel for the defendants: Mr. Brereton Barry, K.C., Mr. Charles Doyle, B.L., and Mr. Lynch, B.L. (instructed by Mr. W. E. Connibar, solicitor).

For sustaining the conviction: The Solicitor-General, K.C., Mr. O'Shaughnessy, K.C., Mr. Matheson, K.C., Mr. Day, B.L., and Mr. Evans (instructed by Mr. Gerald Byrne, solicitor).

Digitized by Google

For the Crown: Mr. Murphy, B.L. (instructed by Sir Patrick Coll, Chief Crown Solicitor).

On the re-argument now, Mr. Brereton Barry, K.C., for the defendants, said that the case of "Wood *v.* Burgess," which had been cited in the matter, did not assist the Court much.

The Lord Chief Justice: I think the Act of Parliament itself is plain enough. I assume that the matter was left properly to the jury. You seem, on the facts, to have no defence at all.

Mr. Barry, K.C.: What I contend is that Judge Adams ought to have put to the jury the question, "Did the defendants act innocently and without intent to defraud?" The real question in the case was whether the Act was intentionally violated by selling something which was not the proper thing described. As far as the purchaser was concerned the label prevented the possibility of mistake. In the eyes of the public the label, and not the "embossment,' was the governing trade-description.

Mr. O'Shaughnessy, for the complainants, said, according to the case for the defendants, the only protection the public had was a label that might fall off at any moment. The "innocence" contemplated in the Act of Parliament was innocence of an intention to infringe the statute. In this case the defendants committed the offence after a cautionary notice had been served on them by the prosecutors. The defendants sold something under a description not applicable to it. He submitted that the conviction ought to be affirmed.

Mr. Matheson, K.C., followed on the same side, and Mr. Doyle replied.

The members of the Court, having retired to consider their decision, returned after half an hour, when

The Lord Chief Justice delivered the judgment of the Court as follows: The decision of this Court in a case reserved is limited to the questions of law which the Judge at the trial has reserved, and that decision should be given with regard to the position in which the case stood when the questions were reserved. It was a common case at the trial at both sides that the accused applied a false trade-description to the goods in the bottles as sold by them, and we are therefore of opinion that the first question reserved—namely, whether the Judge ought to have directed an acquittal—should be answered in the negative; and that the second question—namely, whether he rightly directed the jury and left the proper issues to them—having regard to what was the common case, ought to be answered in the affirmative. The conviction is therefore affirmed.

Sale of Food and Drugs Acts.

LINIMENT OF SOAP.

AT Clerkenwell Police Court on Friday, January 24, the resumed hearing of the charge against Parke's Drug-stores (Limited) for selling methylated liniment of soap was continued before Mr. D'Eyncourt. The Magistrate asked Mr. Beck (who appeared for the defendants) what further course he proposed to take. Mr. Beck replied that he had already given evidence as to the prejudice of the purchaser, and he proposed to call a mass of evidence as to the commercial standard recognised for the liniment.

Mr. Bramall (for the prosecution) pointed out that if it could be proved that the article was sold to the prejudice of the purchaser no amount of evidence showing commercial custom would be of any use, and cited Dickens *v.* Randerson as proof that the British Pharmacopœia applied to drugs mentioned therein, as is the case with soap liniment.

Mr. Beck pointed out that the B.P. is only a *prima-facie* standard, and there is no well-known commercial standard for domestic remedies. Further there are many things in the Pharmacopœia for which it is absolutely impossible for the Pharmacopœia to be a standard. He further argued that the judgment by Mr. Justice Phillimore in Dickens *v.* Randerson clearly indicated that he was entitled to produce evidence as to commercial custom; and he also put in the notice sent to chemists and druggists by the Inland Revenue authorities as to the use of methylated spirit in various liniments.

Mr. D'Eyncourt, said he had come to the conclusion not to admit evidence as to commercial standard. He admitted that the law on the point was not in a satisfactory condition. There are many things in the Pharmacopœia not really drugs, and for which it probably could not be reasonably accepted as a standard, but it was all the more necessary that chemists in prescribing domestic remedies should be careful to supply those prepared according to the Pharmacopœia standard provided they were included in that.

Evidence was then called to settle whether 4 oz. or 6 oz. of liniment was supplied, the point being in dispute. Alexander Junor, chemist and druggist, who supplied the liniment, said the quantity was 6 oz., and he charged 2*d.* per oz. and 1*d.* for the bottle In cross-examination by Mr. Bramall witness said he had rectified liniment in the shop for which 4*d.* per oz. was charged. He only sold the rectified preparation when it was ordered by a physician, but he had never sold it in that shop. Mr. Bramall read the "Note" in THE CHEMISTS' AND DRUGGISTS' DIARY for 1902, pages 282 and 283, which refers to the prohibition of methylated preparations for internal use. Witness had seen that passage, but could not tell if it was in the 1901 Diary or not. [It was.—ED.]

Mr. D'Eyncourt, after further discussion, referring to the Boots case and Mr. Beck's request for a case for appeal, said he had come to the conclusion that he was precluded from granting a case. In the present case he was quite satisfied that the Pharmacy Act and the decisions in regard to the B.P. articles prevented the question of any commercial standard except that of the B.P. being raised.

Mr. Beck accepted this decision, and said that he would proceed to get a mandamus, and asked the Magistrate if he could not find as to whether or not there had been prejudice to the purchaser.

Mr. D'Eyncourt was quite decided on that point also. There could be no question, he said, that the sale had been to the prejudice of the purchaser, and he would not go behind the decision in Dickens *v.* Randerson. The only way in which the question of prejudice to the purchaser might rise would be if it were shown that the ingredients used, though not identical, were practically the same. He thought that even the question of smell in this case alone showed there was prejudice. The question of price did not arise, although he was perfectly convinced from the evidence of the last witness that methylated soap-liniment could be sold at a much greater profit than the rectified liniment. That of course was only a side-light, and had nothing to do with the case. His finding in the present case, therefore, was that there was a sale to the prejudice of the purchaser. In this connection he desired to recall statements made by many eminent witnesses for the defence whom he asked whether it would be safe for chemists to make a compound of drugs not according to the Pharmacopœia, and all said it would not. The sale, then, was to the prejudice of the purchaser, as the purchaser did not get that which he was entitled to. He imposed the full penalty of 20*l.*, and 10*l.* 10*s.* costs.

Mr. Bramall drew attention to the fact that Parke's had already been fined in regard to three articles previously, so they had had sufficient warning not to carry on the same offence. He did not wish to press strongly for any higher penalty, but he thought that this offence showed that the trade was honeycombed with commercial standards which were undoubtedly to the detriment of the public.

Mr. D'Eyncourt decided, however, that the penalty should stand.

ORANGE-WINE.

AT Dudley on January 24, John Wilkinson, confectioner, Dudley, was charged with selling orange-wine which Mr. P. Vaughan Hughes, the borough analyst, certified to contain 23–24 per cent. of alcohol and ½ gr. per fl. oz. of salicylic acid. It was suggested by the prosecution that the presence of salicylic acid was an offence. It was not a constituent of orange-wine, and its use as a preservative even was unnecesary, as alcohol was present in excess. Moreover, salicylic acid was held to be injurious to health. In cross-examination, Mr. Vaughan Hughes said for commercial purposes a preservative was necessary in the case of orange-wine to prevent fermentation. He described his method of analysis—bromination, and titrating back with potassium iodide and thiosulphate. In the test he made there was not sufficient tannin to affect the result, although it might have been present in small quantities. Medical evidence was called as to the injury to health by the continued use of wine containing such a quantity of salicylic acid. Mr. Rose

Digitized by Google

Innes, K.C. (for the defendant), called Dr. B. H. Paul, who said the sample he analysed contained 2 gr. of salicylic acid per pint, one-fifth of the quantity specified by the borough analyst. The test he applied was the only recognised test, and he had thirty or forty years' experience. The sample had been tested by five independent analysts, whose figures were identically the same as his. He had never heard of the test applied by Mr. Hughes, and he should say it was utterly untrustworthy. Mr. Gordon Salamon corroborated Dr. Paul's evidence, and condemned the bromine test as applied to fermented beverages and used by Mr. Hughes. Salicylic acid was, he said, the most valuable and practical preservative for fermented beverages that was known, it kept wine bright and improved its keeping qualities. Evidence to the same effect was given by Dr. A. P. Luff and Mr. R. Bannister.

The Magistrates dismissed the case.

CREAM OF TARTAR.

IN Forfar Sheriff Court on January 23, Alex. Bell, manager of the West Town End Co-operative Association, Forfar, who was charged with selling cream of tartar which was certified by Mr. G. D. Macdougald, public analyst, to be adulterated with not less than 30 per cent. of stucco and 20 per cent. of starch. Accused pleaded guilty, and Mr. J. S. Gordon (solicitor) stated on his behalf that the kegs in which the cream of tartar and "cream powder" were kept were very much alike, and the lad in filling up the drawer in which the cream of tartar was kept had by mistake filled it up with "cream powder." Immediately the mistake was discovered the Association stopped using the cream powder.

The Sheriff remarked that he had seen a somewhat similar recipe for killing rats. (Laughter.)

Mr. Freeman, procurator-fiscal, said everyone knew that stucco was an insoluble substance, and sooner or later, he supposed, it would make plaster of Paris in a person's inside. (Laughter.)

The Sheriff observed that the public was entitled to be protected, and imposed a fine of 2*l.*, with the alternative of five days' imprisonment.

SELF-RAISING FLOUR.

AT Dudley, on January 22, Alfred Edward Hughes and Daniel Barchall were charged with selling as self-raising flour a substance not of the nature and quality of the article demanded, and also with falsely labelling it. Mr. J. V. Hughes, borough analyst, said the sample examined by him contained 63 gr. per lb. of tartaric acid and 26½ gr. per lb. of bicarbonate of soda, there being also a considerable admixture of potato-starch. In proportion to the bicarbonate of soda the quantity of tartaric acid was double what was required. Dr. Wilkinson, borough medical officer, said bread made with such an admixture of tartaric acid as specified by the analyst would be likely to cause indigestion, flatulence, and eventually diarrhœa. Thirty grains was the highest medicinal dose. Dr. Messiter corroborated. Mr. Green, for the defendants, said he could show that the acid used was in reality cream of tartar, and that if the analyst had tested the sample for the presence of potash and deducted the quantity found from the acid it would have been found that the quantity of the acid was not excessive. He could also prove that there was no potato-starch in the mixture. Mr. E. W. T. Jones, public analyst for Wolverhampton, stated that in good self-raising flour the chemical constituents were 23 gr. per lb. of tartaric acid, or 46 gr. of cream of tartar, and 46 gr. of carbonate of soda. In the sample furnished him by Mr. Green he found 25·2 gr. per lb. of carbonate of soda and 47 gr. of cream of tartar. There was very little indication of free tartaric acid. The case was adjourned in order that a sample should be sent to Somerset House.

LINIMENT OF SOAP, PAREGORIC, AND CAMPHORATED OIL.

ON January 24, Arthur Spink, trading as a chemist at 134 Theobalds Road, W., appeared at Bow Street, before Mr. Fenwick, to answer charges of selling paregoric elixir said to be 18·10 per cent. deficient in alcohol and liniment of soap containing 40 per cent. of methylated spirit. Mr. H. C. Jones, who prosecuted for the Borough Council of Holborn, agreed to the adjournment of the liniment-of-soap charge in order that a sample should be sent to Somerset House for analysis.

Mr. Jones then said he wished to withdraw the summons as to paregoric.

Mr. Fenwick: Why?

Mr. Jones: A mistake has been made in the analyst's certificate.

Mr. Fenwick: What is the nature of the mistake?

Mr. Jones: The analyst, in his certificate, had said the B.P. article "should contain at least 60 per cent. of alcohol" instead of "should be made with 60 per-cent. alcohol."

Mr. Kirby (for the Chemists' Defence Association) asked for costs, pointing out that a mistake had been made by the other side, of which he had had no notice. As a consequence he had brought several witnesses who could have given a complete answer to the charge on the merits of the case, as he had no desire to win on a technicality.

Mr. Jones said the mistake had just been discovered in court that day.

The Magistrate thought Mr. Kirby ought to be satisfied at getting the case withdrawn, and refused costs.

The case which followed was against Mr. Henry Jenkins, chemist and druggist, 73 Red Lion Street, Holborn, who was charged with selling camphorated oil deficient in camphor to the extent of at least 76 per cent., and containing 90·7 per cent. of a mineral oil in place of olive oil. Mr. Jones, who prosecuted in this case also, said it had been held that even if a customer did not ask for a drug compounded according to the British Pharmacopœia it would be to the prejudice of the purchaser unless it was compounded in accordance with that standard. The inspector who bought the oil said he asked for 4 oz., and was served in two bottles, paying 7*d.* When he told the defendant that he had purchased the oil for the purpose of analysis he said, "It is not camphorated oil at all," and wanted it back.

The defendant (a patriarchial-looking gentleman) said the inspector only paid 5*d.* for the oil and 2*d.* for the bottles. He urged rather eloquently that the inspector must have known he could not buy 4 oz. of pure camphorated oil for 5*d.* He had to stock two qualities, as very few people would pay the price of the genuine article. The inspector must have known he was getting the cheap article, reiterated the the defendant. The bottles were not labelled "Camphorated oil." He kept B.P. camphorated oil in stock, but this quality he always labelled "Embrocation." The defendant, who was fined 3*l.* and 12*s.* 6*d.* costs, asked the Magistrate to kindly tell him of what charge he was convicted; but Mr. Fenwick declined to discuss the matter further.

MERCURY-OINTMENT.

AT the Mansion House on January 27, before Alderman Sir Horatio Davies, M.P., Henry Lamplough (Limited) were charged with selling at their branch in 134 Cheapside, 3 oz. of mercury-ointment which was 70 per cent. deficient in mercury. Mr. Vickery, who prosecuted, said the purchaser was entitled to have a drug prepared according to the British Pharmacopœia, and he put in the B.P. to show that the mercury-ointment supplied did not come up to the standard. He quoted the case of Dickens *v* Randerson as bearing on the point. The inspector (Mr. W. H. May) having given evidence of purchase, Mr. Beck, who defended, obtained from him the admission that two other articles—viz., liniment of chloroform and boric-acid ointment, had been obtained on the same occasion, and had both been found correct. The assistant to the defendants, who handed him the samples, said (after he had informed him that the samples were for analysis) he should have inquired whether it was strong or "mit." mercury-ointment that was required. He agreed that it was a matter of common knowledge that the use of the strong mercury-ointment would be dangerous to the general public. The strong mercury-ointment would possibly be supplied only on a physician's prescription, and what he gave to Messrs. Lamplough's manager was not a prescription, but an order.

The Alderman: But a chemist would not take upon himself the responsibility of supplying the dilute ointment if "ung hydrargyri" was ordered on a prescription.

Mr. Beck: I quite agree, your Worship, he would not, provided it were a physician's prescription. But there is a

Digitized by Google

difference, which every chemist would recognise, between a prescription and this order.

Mr. Beck then went on to contend that, although the B.P. is the standard for physicians' prescriptions, there are many things in its pages for which it cannot possibly be a standard, and for which there may be a commercial standard quite apart from that of the B.P. The strong mercury-ointment of the B.P., if sold on every occasion when "mercury-ointment" was asked for by the general public, would cause serious injury to the user. The chemist, therefore, exercises great care in the sale of the article, and (unless specifically ordered by a physician) supplies a dilute article which will not be injurious, and which is what the customer wants. He then went on to say that he proposed to call several chemists of exceptional experience, who would speak to the existence of a commercial standard. Mr. Vickery objected to this evidence being taken, but the Alderman was disposed to allow it. He asked first, however, about the difference in the cost, and it was pointed out that the cost of the diluted ointment would be 4*d.* an oz. (the price charged by the defendants), while the strong ointment would be 6*d.* an oz. James Francis Quin, who said he possessed the Irish pharmaceutical qualification, and was an assistant at 134 Cheapside, deposed to receiving the order (produced) from the manager, and, in consequence of a discussion with the manager, he put up the dilute mercury-ointment. He had never sold the strong mercury-ointment over the counter in his life. Evidence of a similar purport was given by Messrs. Lamplough's manager, Alfred Ernest Coleman. He explained that he knew the order was not written by a physician, as it contained neither the doctor's initials nor the "R" sign. Besides, there were no directions for use.

Mr. Beck, then referring to the "commercial standard" defence, called the Alderman's attention to the paragraph in Justice Phillimore's decision in Dickens *v.* Randerson, in which he said "the defendant had failed to prove there was a commercial article," which, said Mr. Beck, indicated clearly that evidence of a commercial standard was permissible.

The Alderman said it seemed quite clear to his mind that Messrs. Lamplough had supplied the wrong article, although he was perfectly satisfied that it was not done with any intention of fraud. It was merely a mistake that they would have to stand by. He would therefore allow evidence of commercial standard to be given to guide him as to the penalty.

Mr. W. S. Glyn-Jones deposed that he would supply "ung. hydrarg. mit." if he received such an order as that produced. In the absence of "fort." or "B.P.," and recognising as he would that the order was not from a physician, he thought he would not be justified in supplying anything else.

"But," said the Alderman, "this is written in Latin; wouldn't you think that somebody wrote it who knew something of its properties?"

"Perhaps so," replied the witness, "but I have had orders given me over the counter copied in Latin from various magazines, from people who did not know anything about what they were writing." He had never seen strong mercury-ointment ordered as "ung. hydrargyri," even by a doctor. The doctors generally indicated their desire by adding "fort." or "B.P."

A fine of 2*s.* 6d. and 18*s.* 6*d.* costs was imposed.

JOHN CHARLES MEACHER, chemist and druggist, 1A Wood Street, Cheapside, E.C., was then charged with selling mercury-ointment which was 60 per cent. deficient in mercury. In this case 1*s.* 6*d.* had been paid for the sample, a fact which the prosecution made the most of. The Alderman said the defendant appeared to have followed no standard in particular in the preparation of the ointment, and fined him 40*s.* and 12*s.* 6*d.* costs.

Medicine-stamp Act.

NO LICENCE.

AT the West London Police Court on January 28, before Mr. Lane, K.C., William A. Shephard, pharmaceutical chemist, 155 King Street, Hammersmith, W., was summoned, at the instance of the Inland Revenue, for selling and exposing for sale Dr. King's dandelion and quinine pills without a licence. Mr. G. H. Dennis, barrister, who supported the summons, said the defendant not having renewed his licence for a shop at 4 Greyhound Road, Hammersmith, an officer called, and was supplied with the box of pills. The box had on it a stamp for duty. Defendant said he took out licences every year, and had the licences then. The licences had not been taken out on the day the officer called. He stated that it had been customary for the officer to call on two occasions and remind him as to the licences; but on his second visit, in this instance, he must have made a purchase instead. Defendant was stated to have been previously convicted of a similar offence, and a fine of 5*l.* was imposed, with 2*s.* costs.

GROCERS AND HEADACHE-POWDERS.

AT the Ruabon Court on Friday, January 24, Benjamin Davies, grocer, was summoned for exhibiting for sale certain patent medicines without holding a licence. Mr. F. A. Stirk, London, who prosecuted on behalf of Somerset House authorities, and said the case was of much importance to grocers throughout the country who sold patent medicines. The local Inland Revenue officer, Mr. George Ulyett, entered defendant's shop on October 31 last, and purchased a penny powder, warranted to cure neuralgia. Defendant admitted he had no licence, and refused to obtain one. Defendant pleaded ignorance of his liability, and said he sent the powders back immediately, and, therefore, did not obtain a licence. He was fined 12*s.* 6*d*, inclusive of costs.

County Court Cases.

NUT-OIL *v.* EDIBLE OIL.

IN the City of London Court, before Judge Rentoul, K.C., M.P., on January 24, Charles Windschuegle & Co., oil and chemical merchants, Leadenhall Street, E.C., sued Mr. Max Snaoroff, 25 Lady Lane, Leeds, for the value of a cask of nut-oil supplied. The defence was that the defendant wanted white nut-oil and not yellow nut-oil, which the plaintiffs had sent in the first instance, but after they were told of their mistake a barrel of palest edible oil (*i.e.*, refined cotton oil) was also sent, and they now wanted to charge for nut-oil. After hearing witnesses and counsel, Judge Rentoul said there was an extraordinary conflict of testimony. The defendant in his evidence said he objected to the yellow nut-oil which was sent him, because it was not as genuine as the white. He had not taken delivery of the nut-oil which was now sued for. Judge Rentoul said he must find for the defendant, and judgment was given accordingly.

THE DOCTOR AND THE CHEMIST.

AT Romford County Court on January 20, Dr. A. J. Ryan claimed 50*l.* from Mr. Henry Winstanley Whitelock, chemist and druggist, Romford. Plaintiff deposed that in 1900 he discussed with Mr. Whitelock as to the possibility of opening business at Chadwell Heath, and subsequently a partnership was agreed upon. He advanced defendant 50*l.* At this time the terms of the agreement had been accepted on both sides, but the agreement had not been signed. A few months afterwards there was a disagreement about the cost of fitting the new shop, and plaintiff told defendant he did not wish to enter into partnership with him. Defendant refused to do anything about the 50*l.*, and after a time plaintiff gave him the offer of paying by instalments, and allowed him 10*l.* for any trouble he might have put him to. Subsequently, however, both parties agreed that the money should be used as rent for the surgery, but this arrangement likewise fell through. Afterwards defendant complained that he had a great deal of trouble with assistants, that he had put the business up for sale, and that he would pay plaintiff the whole amount when he had sold it. During all the interviews defendant had never suggested that plaintiff was his partner, nor had he considered him with regard to selling the business. The name over the door was "Whitelock." The defendant's contention was that the partnership had not been determined, and he (Mr. Whitelock) had pointed out to Dr. Ryan that if he wished to withdraw, there was no alternative but to wind up the concern as quickly and as cheaply as possible and if the result warranted it, hand him the 50*l.* He had never agreed at any time to release Dr. Ryan from his obligation as a partner in the business. Further evidence having been given. Judge Tindal Atkinson pointed out that the

Digitized by Google

plaintiff could not recover the 50*l.* as money lent, because it was clear, on his own evidence, that he did not advance it as a loan, but as part payment or a contribution towards the expenses of the then existing partnership. If he was entitled to recover at all, it was by the agreement alleged to have been made after the partnership had come to an end.

The jury gave a verdict for the plaintiff for the amount claimed, and judgment was entered accordingly.

Bankruptcies and Failures.

Re THOMAS PHILIP GARRETT, 33 Commercial Street, Newport, trading as Garrett Brothers, Chemist and Druggist.

THE creditors under this failure met on Wednesday, January 29, at the London Bankruptcy Buildings, before Mr. George H. Llewellyn, the Newport Official Receiver. The debtor, who filed his own petition on December 19, has lodged accounts showing liabilities 4,331*l.* 16*s.*, and assets valued at 1,537*l.* 15*s.* The failure is ascribed to bad trade, severe competition, and heavy rent and rates. The observations of the Official Receiver were reported in the *C. & D.* last week, page 174. The Chairman now reported that acting upon special proxies sent in by creditors, he nominated as trustee Mr. Walter Hunter, accountant, Corn Street, Newport. Mr. Hunter was elected. The public examination of the debtor is appointed for February 6, at the Town Hall, Newport. Appended is a list of the principal creditors, viz :—

Re C. R. VALENTINE, Tooley Street, S.E., Colonial-produce Merchant, Agent, and Dealer.—The public examination of this debtor was resumed on Tuesday before Mr. Registrar Linklater at the London Bankruptcy Court, and after some further questions he was allowed to pass.

Re ARTHUR CLAUDE HOWARD NEWTON-MASON, 113 High Street, West Bromwich, Chemist and Druggist.—The public examination of this debtor was to have been held on January 24, but owing to the illness of the debtor it was adjourned.

Re SOLOMON SERVAS MAW, 128 Crookesmoor Road, and 2 Arthur Street, Addy Street, Sheffield, manufacturing chemist.—Under this failure the Official Receiver of the Sheffield Bankruptcy Court announces that he is prepared to pay to the unsecured creditors a supplemental dividend of 1*s.* 1¾*d.* in the pound.

Re JOSEPH EDWARD LYNDALL, 167 Ashley Gardens, Westminster, now or late managing director of Myname Soap Company (Limited), 59 Eastcheap, E.C.—At the London Bankruptcy Court on January 17 the public examination of this debtor was adjourned *sine die*. Mr. G. W. Chapman, Official Receiver, reported that the proceedings were instituted by a creditor in September last. The debtor had not surrendered, but had written from Paris. He was undischarged from a previous bankruptcy, and under the circumstances it was thought that no good purpose would be served by keeping open the public examination in this instance. Mr. Registrar Brougham endorsed that view, and closed the examination *sine die*.

Re JAMES MENZIES, trading as a chemist at 81 Jamaica Street, Glasgow.—In the Glasgow Sheriff Court on January 27 this debtor was examined before Sheriff Boyd. He stated that he started about five years ago in partnership with Charles Wylie, horse dealer, Ayr, in the drug business, at Jamaica Street, Glasgow, but he bought out Wylie and acquired the business for himself about three years ago. He carried on the business until November 28 last, when, being pressed for money, he took steps to dispose of it, but his estimate of the stock and fittings was at least 150*l.* more than the amount brought out in the stock-sheets. It was his belief that if the business was properly sold everyone would be paid. The state of affairs showed a deficiency of 525*l.* 1*s.* 5*d.*, equal to a dividend of 9*s.* 3*d.* in the pound, subject to the expenses of realisation. The liabilities were put down at 978*l.* 19*s.* 11*d.*, and the assets at 453*l.* 18*s.* 6*d.*

Re HANNAH BROAD (widow), 36 Coleridge Road, Crouch End, late of Hornsey Rise Gardens, N., Chemist.

THIS bankrupt applied on Wednesday, January 29, to Mr. Registrar Giffard, at the London Bankruptcy Court, for an order of discharge, and it was granted subject to the usual suspension for two years on statutory grounds.

Deeds of Arrangement.

Dewdney, Albert Victor, 60 St. George's Road, Pimlico chemist. Trustee, George White, 14 Old Jewry Chambers, E.C., chartered accountant. Dated, January 18; filed, January 22. Secured creditors, 350*l.*; liabilities unsecured, 253*l.* 5*s.* 9*d.*; estimated net assets, 150*l.* 16*s.* 10*d.* The creditors include :—

	£	s.	d.
Camwal (Limited), London	14	0	0
Davy, Hill & Son, Yates & Hicks, London	37	0	0
Idris & Co., London...	19	0	0
Sutton & Co., London	12	0	0

Palmer, Frank Hermann, 47 St. Nicholas Street, Ipswich, chemist. Trustee, Julius P. Harvey, Ipswich, chartered accountant. Dated, January 18; filed, January 23. Liabilities unsecured, 499*l.*; estimated net assets, 200*l.* No trade creditors.

Partnership Dissolved.

Perrett, G. S., and **Routley, E. W.,** under the style of Perrett & Routley, Bexhill on-Sea, chemists.

The Bankruptcy Acts, 1883 and 1890.

RECEIVING ORDER.

Watson, Solomon George, Hove and Brighton, surgeon.

ADJUDICATION.

Martyn, George, late Orchard Street, Portman Square, physician and surgeon.

New Companies & Company News.

UNLIMITED (LIMITED).—Capital 10,000*l.* in 1*l.* shares. To carry on business in twenty-four specified branches, including dentists, chemists, &c.

TUTTLE & SONS (LIMITED).—Capital 30,000*l.*, in 5*l.* shares Will carry on business as drapers, chemists, &c., and take over the business of H. Tuttle & Son at Lowestoft.

BROTHERTON & Co. (LIMITED).—Capital 250,000*l.*, in 10*l.* shares. Objects: To acquire and carry on the business of an ammonia and tar distiller, &c., carried on by E. A. Brotherton at Leeds and elsewhere, as "Brotherton & Co." The first directors are E. A. Brotherton, G. Brumfit, and J. Wyld. Registered office, Commercial Buildings, Park Row, Leeds.

Digitized by Google

TABOR, TREGO & Co. (1902) (LIMITED).—Capital 87,500*l.*, in 80,000 preference shares of 1*l.* each and 150,000 ordinary shares of 1*s.* each. Objects: To acquire and take over the japan and varnish manufacturing business of "Tabor, Trego & Co. (Limited)," and to carry on the business. The first directors are T. Jackson and three others to be appointed by the subscribers. Qualification, 1,000*l.* Remuneration as fixed by the company. Registered office, 42 New Broad Street, E.C.

HYDROSOL (LIMITED).—Capital 15,000*l.*, in 1*l.* shares (10,000 preference). Objects: To acquire the business of processors of petroleum merchants, and warehousemen, now carried on at Dunster House, Mincing Lane, E.C., and at Hydrosol Wharf, Leven Road, Poplar, E., as "Hoffman & Shoemaker," to adopt an agreement with M. A. Hoffman and W. M. Shoemaker, jun., and to carry on the business of processors of petroleum, oil refiners, storers, and dealers, chemists, druggists, &c. The first directors are M. A. Hoffman and W. M. Shoemaker, jun. Qualification, 200*l.* Remuneration, 1 guinea each per board-meeting attended. Registered office, Dunster House, Mincing Lane, E.C.

STANDARD AMMONIA COMPANY OF SYDNEY (LIMITED).—Capital 10,000*l.*, in 1*l.* shares. Objects: To adopt an agreement with certain vendor companies (which are not named), and to carry on the business of chemical-manufacturers, chemical-refiners, manufacturing chemists, artificial-manure manufacturers and dealers, &c. The first subscribers are:—C. Page, 85 Gracechurch Street, E.C., merchant; F. J. Lovegrove, 85 Gracechurch Street, E.C., secretary; W. J. Lawrence, 85 Gracechurch Street, E.C., clerk; A. Harris, 70 Gracechurch Street, E.C., clerk; F. Christian, 47 Brookbank Road, Lewisham, clerk; G. H. Dolman, 11 Fordyce Hill, Lewisham, clerk; and W. G. Luxford, 13 Canonbury Grove, N., clerk.

UNIVERSAL CHEMICAL MANUFACTURING AND EXPORTATION COMPANY (LIMITED).—Capital 4,000*l.*, in 1*l.* shares. Objects: To adopt an agreement between H. E. Stubbs and O. J. Broederlow and to carry on the business of chemical-manufacturers, manufacturing chemists, druggists, oil and colourmen, &c. The first subscribers are:—H. E. Stubbs, Dyserth, Flintshire, chemical broker; Mrs. E. W. Stubbs, Dyserth, Flintshire; Miss S. G. M. Stubbs, Dyserth, Flintshire; Miss L. M. T. Stubbs, Dyserth, Flintshire; R. A. Hampson, Liverpool, solicitor; Mrs. M. Broederlow, Tantallon House, Liscard; and O. J. Broederlow, 20 Hockins Hey, Liverpool, chemical broker. No initial public issue. The first directors are Harold E Stubbs and Oscar J. Broederlow. Registered office, 12-13 Cleveland Square, Liverpool.

HULL CHEMICAL WORKS (LIMITED).—Capital 5,000*l.*, in 1*l.* shares. Objects: To acquire the business of a manufacturing-chemist carried on by George C. Robinson at Kingston-upon-Hull, as the Hull Chemical Works, and to carry on the business of manufacturing chemists and druggists, and manufacturers of the vendor's specialities: "Stannum," "Phaston," "Sheep-dip powder," "Sheep-dip paste," "Bitter-oil" insecticide, and "Humber brand" insecticide. The first subscribers are:—W. Wheatley, 410 Anlaby Road, Hull, wine and spirit merchant; G. C. Robinson, 295 Spring Bank West, Hull, analytical chemist; J. Fawcett, 4 Park Avenue, Hull, hide-merchant; W. R. Wheatley, Gledholt, Hessle, wine and spirit merchant; W. Fell, 1 Newland Avenue, Hull, clerk; E. L. Ferraby, 2 Lambton Street, Hull; and A. H. Cowley, 430 Anlaby Road, Hull, wine and spirit merchant. No initial public issue The first directors are W. Wheatley, G. C. Robinson (manager), and J. Fawcett. Qualification 100*l.* Remuneration as fixed by the company. Registered office, 94A Cumberland Street, Kingston-upon-Hull.

H. W. CARTER & Co (LIMITED).—The directors announce a dividend on the ordinary shares of 10 per cent.

CARLTON'S DRUG-STORES (LIMITED).—Mr. Samuel Roberts, 9 and 11 Clerkenwell Road, London, E.C, would be glad if any or all creditors of this concern would communicate with him.

GLOBE SOAP AND CHEMICAL COMPANY (LIMITED), Middleton.—It was resolved on January 6, and confirmed on January 20, that this company be wound up. Mr. A. W. Pitt, Manchester Old Road, Middleton, is the liquidator.

LENNON (LIMITED) (S. AFRICA).—A new issue of 2,500 cumulative preference shares of 10*l.* each is announced. The preference shares are entitled to a cumulative preference dividend, at the rate of 5 per cent. per annum, payable half-yearly on June 30 and December 31. The interest due on June 30, 1902, on the above issue will be calculated from the dates of the respective payments.

PRICE'S PATENT CANDLE COMPANY (LIMITED).—The directors announce that the accounts to December 31 show a profit for 1901 of about 88,400*l.*, to which has to be added 6,637*l.* undivided profit from 1900, making together about 95,000*l.* Deducting the divided of 15*s.* per share amounting to 28,125*l.* paid in September, 1901, a sum of about 66,900*l.* is available for disposition. The directors recommend that the usual sum of 12,500*l.* be written off for depreciation, that 37,500*l.* be applied in paying a divided of 1*l.* per share, that 10,000*l.* be added to the reserve fund, and that the remainder, about 6,900*l.*, be carried forward.

BORAX CONSOLIDATED (LIMITED).—The report of the directors for the year ended September 30, 1901, stated that the profits for the period, after providing for all management and administration expenses, are 258,021*l.* The sum of 15,000*l.* has been placed to depreciation reserve account, and 5,825*l.* to the credit of the debenture stock redemption sinking fund. Of the balance of 151,638*l.* to the credit of profit and loss account, after providing for the items above mentioned, the final dividend on the preference shares and the third interim dividend on the ordinary shares paid on November 1 absorb 37,000*l.* And from the balance the directors purpose to pay a final dividend of 1*l.* per share on the ordinary shares, making 17½ per cent. for the year, 60,000*l.*; to place to general reserve, 30,000*l.*; to write off expenditure on inspection and development of properties, 8,843*l.*; and to carry forward 15,794*l.*

Trade Notes.

MESSRS. SMITH, STANISTREET & Co.'s branch at 47 Dhurrumtollah Street, Calcutta, is the shop figured on page 144 of our last issue, not the headquarters establishment.

OXO PROFITS are becoming a feature. The Liebig's Extract of Meat Company now announce that a minimum retail profit of 16½ per cent. is assured, with 2 to 5 per cent. extra in the form of rebate.

ROYAL PLATES.—Messrs. Cadett & Neall (Limited), Ashtead, Surrey, are making in our advertisement-columns an announcement of special discounts on the Royal dry-plates for the Coronation year.

SCHIEFFELIN'S MANUFACTURES.—Messrs. Thomas Christy & Co., 4, 10 and 12 Old Swan Lane, E.C., have been appointed sole agents for the United Kingdom for the preparations of Messrs. Schieffelin & Co., New York, of which they carry a full stock.

ASPIRIN TABLETS.—Aspirin, the new combination of acetic and salicylic acid, first described by Witthaüer, and used for rheumatism in the same manner as salicylic acid or salicylate of soda, is now sent out by Messrs. Parke, Davis & Co., 111 Queen Victoria Street, E.C., in tablet form. The tablets are packed in bottles of 100.

THE CROWN PERFUMERY COMPANY have recently engaged two well-known travellers. Mr. Cowel is taking the northern counties in their interests, and Mr. Mawdsley will, from February 1, call upon business men in the South of London. The company now have three motor cars for the use of their travellers going daily within the metropolitan area.

OUR WINTER ISSUE.—The publisher desires us to notify one or two points about the advertisements in last week's number which subscribers should note. First, Messrs. H. P. Thompson & Co.'s advertisement on pages 26 and 27 should have the address of the firm on each page—namely, 96 Aldersgate Street, London, E.C.; second, two advertisements on page 222—viz., those of the Neena Company (Limited), and Messrs. Creig & Co., Pall Mall, have been indexed as page 206. See also note page 211 this issue.

CORONATION SOAP.—The first sample of toilet soap prepared especially for this Coronation year comes to us from Messrs. Jarvie & Co. (Limited), Scotia Soapworks, Coatbridge. It is a soap in handsome oval cakes, beautifully moulded so as to show portraits, in relief, of King Edward and Queen Alexandra. The soap is nicely perfumed and put up in attractive boxes of three tablets. It is a popular line and

Digitized by Google

should sell well up to Coronation time at least. The same company make another quite elegant toilet soap which they call "Heather Bloom." It has a triple-milled basis, is uncoloured, and is delicately scented. The cake is in the best oval style, and each one is wrapped in wax paper and outer wrapper with cream-coloured surface. This soap also is boxed in threes as a first-class article to sell at a popular price.

THE "TABLOID" OPHTHALMIC products of Messrs. Burroughs Wellcome & Co., Snow Hill Buildings, E.C. have received an addition in the shape of (X) atropine sulphate, gr. $\frac{1}{400}$. The tablets are designed to avoid objections attendant on the use of stock solutions, which are apt to decompose. The products under examination are very small tablets, and dissolve at once on being placed in the eye.

THE LIMPET VACCINATION-PAD, to which some reference was made in THE CHEMIST AND DRUGGIST last week, is manufactured by Messrs. Solport Brothers, 188 Goswell Road, London, E.C. The woodcut given herewith shows the form of the pad. It is one of the best things of the kind that we have seen, as we find that it considerably reduces the irritation when the inflammatory stage of the "pock" is reached. It is sufficiently cheap to enable the victim to use several until the trouble is over. It consists, as previously stated, of a piece of absorbent cotton and lint inserted upon perforated india-rubber adhesive plaster. We think the manufacturers might also make a pad with boric or other antiseptic lint.

SELF-ADHESIVE.
VACCINATION PAD.

WELLCOME RESEARCH LABORATORIES.—The following communications to the Chemical Society from the Wellcome Chemical Research Laboratories have been published in pamphlet form:—"The Constituents of Pilocarpine," Part III., by Dr. H. A. D. Jowett; "A New Synthesis of α-ethyltricarballylic Acid," by Dr. H. A. D. Jowett; "The Constituents of the Essential Oil of *Asarum canadense*," by Dr. F. B. Power and Mr. F. H. Lees; and "The Derivatives of Gallic Acid," by Dr. F. B. Power and Mr. Frank Shedden

Festivities.

LONDON COLLEGE OF PHARMACY.

"Holborn Restaurant, Venetian Chamber; Number, 200; Time, 7; Waiter, G. Smith." So the notice-board proclaimed. It was on Wednesday night of this week, and upstairs (in the room where are specimens of perch, pike, salmon, and fabulous fish which piscatorial men have put in cases) we found the two hundred or thereabouts, Mr. Henry Wootton, B.Sc., Principal of the College, greeting them, with Mr. Percy M. Thornton, M.P., by his side. Ere long, G. Smith (the double of Mr. Arthur Balfour) cried out "Gentlemen, dinner is served"; and about an hour after that, "Gentlemen, pray silence," &c. Before we knew it, Mr. Thornton, in his best parliamentary manner, had toasted "The King" for us, and introduced a clever trio of banjo and piano players, with a singer or two, who amused us exceedingly all the evening. There were four toasts only. After "The King" came "The London College," proposed in the best Fraserian style by Mr. W. J. of that ilk, who told us that the College is built on nice gravel soil, that the keeper of the King's conscience used to live there, he had seen deer in the park close by forty-five years ago, and, best of all, the London College is fuller than ever, going strong; and Mr. Wootton—well, he blushed at the compliments and the cheers which greeted his rising. Two of the things he said stuck in our memory—first, that on one occasion all the ladies at the College had passed, and half the pass at the Square on another occasion came from London College. "The Staff" was given by Mr. H. Grayshon, and Mr. C. E. F. Vallet replied. Mr. Grayshon's was a good Lancashire speech, which commenced with the remark that his selection for the job reminded him of a remark by a friend of his when he passed the Minor—"This is, indeed, a flattery." Mr. W. B. Nelson, a demonstrator, gave "The Students," for whom Mr. E. W. James replied. Before he presented the prizes, Mr. Thornton, in the course of a happy speech, referred to the necessity for chemists being thoroughly well educated, so that they may dispense with accuracy the prescriptions of physicians; and although, he said, there is a school growing up which advise us that we should never take any medicine, he thought common sense is all that is necessary to correct such absurd ideas. The purpose of pharmacy is to do good to humanity, and he was proud to think that such an institution as the London College exists in his constituency. The following are the medallists of the College during the past session:—

Sidney J. Banks—silver medals (materia medica and pharmacy) and bronze medal (botany).
John A. Jenkins—silver medals (chemistry and materia medica).
Edward Corner—silver medal (pharmacy) and bronze medal (chemistry).
G. P. A. Hunt—silver medal (chemistry) and bronze medal (materia medica).
Bertha A. Kenway—silver medal (botany).
Frank E. Rogers—silver medal (botany).
Lincoln Ridehalgh—bronze medals (materia medica and pharmacy).
William F. Clarke—bronze medal (pharmacy).
Donald Colebrook—bronze medal (chemistry).
Samuel H. Passmore—bronze medal (botany).
Albert W. Ashkanazy—bronze medal (materia medica).

Much cheering greeted all the honours-men as they came up to receive their rewards, and it was a pleasure to hear the Chairman's "pat" remarks. The evening provided a a most enjoyable reunion, take it for all in all.

SWANSEA AND DISTRICT CHEMISTS' ASSOCIATION.

The tenth annual dinner of this Association was held at the Hotel Cameron, Swansea, on January 23. The President (Mr. D. J. Davies) was supported by Mr. C. B. Allen (Vice-President of the Pharmaceutical Society), Messrs. N. M. Grose, Lloyd, J. T. Davies, Hughes, Arnold (Owmavon), Havard, Davies (Clydach), Rees (Skewen), Keall, Davies, jun., Moses Jones, Rees (St. Thomas), Richards, Isaac and Ivor Jones (Neath), Bowen (Pontardulais), and John Davies (Secretary). The loyal toasts having been duly honoured, the President gave the "Pharmaceutical Society," and Mr. Allen replied. He said the Society was not a trades union, but it watched very particularly over the educational advancement of the trade. He hoped the time was not far distant when the public would recognise the education required, and the skill and care necessary to properly prepare medicines, and pay the dispensing pharmacist a fair remuneration. At present he was worse paid than a skilled mechanic. Mr. Isaac (Neath), Mr. Davies (Walter Road), and others spoke their high appreciation of Mr. Allen, who subsequently proposed a vote of thanks to the President and the Hon. Secretary.

BRADFORD CHEMISTS' ASSOCIATION.

The members of this Association, who have been kept wandering from place to place during the greater part of this season because of their inability to make satisfactory arrangements, went to the Café Royal, Darley Street, on Tuesday night for a musical evening, and were pleasantly accommodated there. As the President was figuring pretty largely as a contributor to the programme, Mr. J M. Newbould took the chair in his stead. A pleasant programme of items was gone through, the President (Mr. A. Hanson) contributing as vocalist and pianist, and the other musicians being Miss Bartour (singer), Mr. James Hanson (violin), and Mr. Stott (piano).

GAY CUTTERS.

The managers and assistants of Boots (Limited) at Lincoln had a musical and terpsichorean evening at the Lindum Restaurant on January 25. The company numbered about eighty, and an enjoyable time was spent.—The first annual ball of the Boots' Football Club was held in the Cambridge Hall, Sheffield, on January 16. There was a large number present, and dancing was kept up till the early hours of the morning. The M.C.'s were Messrs. S. Paddon, T. H. Paddon, and R. T. Simpson, and Mr. J. W. Ross was Secretary.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: January 30.

THE business tone in Mincing Lane is very dull this week, and changes in value are few. Perhaps the principal event has been the holding of the largest vanilla sale on record, which took place on Wednesday and Thursday. There was a larger attendance of buyers than usual, and the bulk sold at irregular but steady prices. All essential oils are quiet, and star-anise seems to have further fallen away. English lavender oil will probably be dearer, as low-priced offerings have now almost been cleared off the market. Quinine had a slight spurt towards the end of last week, but since then practically no business has been done. The following table shows the principal changes of the week:—

Higher	Firmer	Easier	Lower
Lobelia	Oil lavender (Eng.)	Aconite (Germ.)	Ginger
Wild cherry bark	Pepper (black)	Elemi	Oil anise, star
		Morphine	Paraldehyde
		Quinine	Pimento
			Shellac

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from January 22 to 29, inclusive:—Acetic acid, 46 cks.; areca, 28; arsenic (@ Melbourne) 40 cks., (@ Hamburg) 40; benzoin (@ Penang) 174 cs., (@ Singapore) 134 cs. calcium carbide (@ Havre), 1,494 drums; camphor, 500 cs.; cardamoms, 280; castor oil (E.I.) 350 cs., (Ital.) 12, (Belg.) 141 brls.; cinchona (@ Ceylon) 270, (@ Calicut) 272; cod-liver oil (Norweg.), 301 brls.; croton-seed, 17; drugs (@ Trieste), 79; essential oils (@ Messina) 229 pkgs., (@ Ostend) 10 cs., (@ Palermo) 100 pkgs.; eucalyptus oil (@ Melbourne), 23 cs.; drugs (@ Monte Video), 19; galls (@ Shanghai), 100; ginger (Jam.), 27; gum sandarac, 121; honey (@ Jamaica), 14; insect-powder, 5; kola, 2; lemon-juice, 20 pps.; lime citrate, 291 cks.; lime-juice, 141 pns. 68 hds. 5 cks. 13 brls.; lime oil (W.I.), 2 cks. 29 cs.; menthol (@ Japan), 10; musk (@ Colombo), 1 box; opium (@ Calcutta) 25, (@ Genoa) 28; peppermint oil (Jap.), 50; pot. chlor. (Swed.), 10; pot. permang., 62; quicksilver, 14; quinine (@ Amsterdam), 28 cs; saccharin, 27; senna (@ Colombo), 38; saffron, 5; squills (@ Messina), 25 bgs.; sulphur (@ Sicily), 380 tons 1,130 pkgs.; tamarinds (E.I.), 100; wax, Carnauba, 30 bgs.

Heavy Chemicals.

The general tone of the heavy-chemical market keeps as lately reported, business being for the most part quiet, and specially so on export account, whilst values remain well maintained, and are largely without change.

SULPHATE OF AMMONIA is moving off well, and prices are firm. Beckton January-June, 11*l.* 10*s.*; Beckton terms, 11*l.* 5*s.* to 11*l.* 6*s.* 3*d.*; London and Leith, 11*l.* 7*s.* 6*d.*; and Hull, 11*l.* 5*s.* to 11*l.* 6*s.* 3*d.* Exports from Leith last week amounted to 445 tons.

LINSEED AND COTTONSEED CAKES continue in good all-round demand, and prices are firmly maintained with tendency towards advancement. Linseed-cakes, 95-per-cent. pure, 8*l.* 7*s.* 6*d.* to 8*l.* 12*s.* 6*d.* per ton. Oil-cakes, 7*l.* 5*s.* to 7*l.* 10*s.* per ton. Cotton-seed cakes, firsts, 4*l.* 15*s.* to 4*l.* 17*s.* 6*d.* per ton; and seconds, 4*l.* 10*s* to 4*l.* 12*s.* 6*d.* per ton.

PEARL HARDENING.—In fairly good demand both for home and export at from 60*s.* to 67*s.* 6*d.* per ton, free on rails or free on board in usual casks.

PHOSPHORUS quiet. Yellow, 1*s.* 3*d.* to 1*s.* 4*d.* per lb.; and *red*, 2*s.* per lb.

ALUMINA-PRODUCTS.—Consumptive demand keeps steady, and prices are firm and mostly unchanged. Crystal alum, loose lump, 5*l.* to 5*l.* 5*s.* per ton; lump in tierces, 5*l.* 5*s.* to 5*l.* 10*s.* per ton; ground in bags, 5*l.* 12*s.* 6*d.* to 5*l.* 17*s.* 6*d.* per ton. Sulphate of alumina, best qualities and pure white practically free of iron, 87*s.* 6*d.* to 95*s.* per ton in ordinary casks, with usual allowances for bags and loose slabs. Aluminous cake, 55*s.* to 62*s.* 6*d.* per ton. Alumino ferric, 57*s.* 6*d.* to 65*s.* per ton, according to quality and condition. Hydrate of alumina, purest and highest strength Al_2O_3, 11*l.* 15*s.* to 12*l.* 5*s.* per ton in casks. Hydrate of alumina, special pulp, 12*s.* 6*d.* to 15*s.* per cwt. Hydrate of alumina, purest pulp dried, 37*s.* 6*d.* to 38*s.* 6*d.* per cwt. in usual casks; ground 38*s.* to 39*s.* per cwt. Aluminate of soda, highest strength Al_2O_3, 35*s.* to 37*s.* 6*d.* per cwt. Carbonate of alumina, 35*s.* to 37*s.* 6*d.* per cwt.

Liverpool Drug Market.

Liverpool, January 29.

CASTOR OIL.—The market continues quietly steady, and good seconds Calcutta is still held at 3⅛*d.* to 3⅜*d.* per lb. The improvement in the forward position has been fairly maintained, shippers showing very little anxiety to meet the views of buyers. First-pressure French is still obtainable at 2⅞*d.* to 3*d.*, and second-pressure is held for 2¾*d.* per lb.

OIL, TURPENTINE.—After the strong advices of last week, and after having touched 31*s.* 6*d.*, the position for the moment has become quieter, and 31*s.* per cwt. would again be taken.

HONEY.—Seventy-seven barrels of pile 3 Peruvian have changed hands at 16*s.* per cwt., and 32 cases pile 3 Chilian at 18*s.*

LINSEED OIL.—Continues to maintain a very firm position, and an advance of quite 6*d.* has been established during the week, sellers now asking 30*s.* 6*d.* to 31*s.* per cwt., according to quality.

BEESWAX.—There is continued scarcity of Chilian beeswax, and for the remaining stocks available 7*l.* 5*s.* to 7*l.* 15*s.* per cwt. is asked. About 130 sacks have been sold at from 6*l.* 17*s.* 6*d.* to to 7*l.* 15*s.*

SULPHATE OF COPPER is steady at 19*l.* to 19*l.* 5*s.* per ton, and expected to advance in sympathy with the movement in copper.

TONKA-BEANS. — Thirteen cases of frosted Para at auction realised 1*s.* 8½*d.*, and 1 case foxy to black realised 1*s.* 6½*d.* per lb.

GUM ACACIA.—The position of holders continues firm. There is no quotable change in the values, but the holders show little or no diposition to meet the views of buyers.

WAX, CARNAUBA.—About 40 bags grey Pernambuco have been sold at 52*s.* 6*d.* to 53*s.* per cwt., and Maranham is firmly held at 51*s.* to 55*s.* Yellow is quiet with a small sale at 62*s.* 6*d.* to 67*s.* 6*d.* per cwt.

COPAIBA.—Values are unchanged, a small sale ex *Bombay* having been made at 2*s.* 1*d.* for cloudy Maranham.

American Drug-market.

New York, January 21.

The market continues quiet. Demand is fairly good, but only of a jobbing nature. The chief feature is the keen competition between makers of certain chemicals.

BALSAM COPAIBA is in good demand, and prime Central American goods have sold up to 37c. per lb. Competition is keen however, and supplies are obtainable as low as 34c.

COCAINE is again lower, owing to the cut-throat policy of makers. Bulk is quoted nominally at $4.60, but $4.25 will buy.

ERGOT.—Russian has further declined to 39c. and Spanish to 40c. Lack of demand is said to be the cause.

IPECAC.—Rio is very dull and $2.50 will now buy.

JABORANDI.—Only the finer grades are offering, and values are very firm at 18c. to 20c. per lb.

LITHIUM CARBONATE is now openly quoted at $1.50 and lower figures yet are expected.

OPIUM is selling in case-lots at $3.00.

Japanese Drug Market.

Yokohama, December 27, 1901.

Owing to the end of the year business in general is quieter, and demand for import articles is of a hand-to-mouth character.

In exports, dry ginger of new crop will appear in the market about the middle of next month, and the price quoted is 14.00 yen per picul; but as this year's crop is estimated at not less than 25,000 piculs, the price may be lower in the near future. Menthol again dearer, and sellers now quote 8.20 yen per catty without any transactions; since my last report about 10,000 catties have been booked on contract, and some 150 cases have also been shipped. The stock is estimated at about 20,000 catties altogether, so that if demand abroad continues the prices may advance still higher. Oil of peppermint is also very firmly held at 2.20 yen, with some holders asking 2.30 yen per catty. During this month transactions of some 600 cases (each 60 lbs. net) have been made at from 1.90 yen to 2.15 yen per catty; stock is estimated at 25,000 catties. Aniseed is lower at 11.00 yen per picul, and for

Digitized by Google

new crop of agar-agar 85 yen for best and 75.00 yen for medium is asked. Refined camphor remains firm at 1.03 yen for 1-oz. tablets, and 1·04 yen for ½-oz. tablets per lb. Iodine remains unchanged at 3.30 yen per lb. for crude. Potassium iodide is 3·40 yen to 3.50 yen, according to quantity. Resublimed iodine is 5.00 yen per lb., while for iodoform 5.50 yen is wanted. Sulphate of copper is quoted 14.25 per case of 60 kilos., and bleaching-powder (33 per cent.) is held at 5.50 yen per case of 100 lbs.

In import articles, carbolic acid is lifeless; the present quotation is 41 sen per lb. in 112-lb. drums; owing to arrivals of bismuth subnitrate bought at low prices, values have again declined about 20 per cent., and there are sellers at 2.70 yen per lb. Cocaine hydrochloride is unchanged at 11.25 yen per oz. without active demand. Ergot of rye is quoted at 1.25 yen per lb. for Spanish. Condurango has been reduced, and present price is 24 sen per lb.; this is due to arrivals of low cost goods. Santonin is a little lower, holders now quoting 8.70 yen per lb. in face of absence of demand. Saffron is quoted at 18·50 yen per catty. Glycerin has been reduced on account of large arrivals, and holders now ask 31 sen per lb. in 56-lb. tin for 12.60 sp. gr. Quinine is lifeless at 57 sen per oz. to 55 sen per oz. Sulphonal is considerably lower; present quotation is 5.00 yen per lb., with a still lower tendency. Senega is unchanged with sellers at 1.30 to 1.40 yen per lb. Cape aloes is scarce, and holders ask 30 yen per picul. Thymol is quoted 5.60 yen with few sellers.

Cablegrams.

HAMBURG, January 30:—Condurango is firmer at 87½m. per 100 kilos. Agar-agar is easier, and both refined camphor and menthol are lower.

* * * *

NEW YORK, January 30:—Business is tame here. Balsam of copaiba is a strong market at 35c. per lb. Damiana-leaves are higher at 11c. Mandrake-root is scarce at 4½c. Guaiacum has advanced 5c. per lb., cocaine has declined 10c., and wild-cherry bark is scarce at 10c. per lb.

London Markets.

ACETANILIDE is quoted 8¼*d.* per lb. for lowest quantities.

ACID, ACETIC.—B.P. quality (100 per cent.) is quoted 33*l.* 10*s.*, and 99 per cent. 32*l.* 10*s.* per ton.

ACONITE.—*Napellus*, in lots of 10 to 20 cwt., is quoted 32*s.* 6*d.* per cwt. delivered London or c.i.f.

ANTIPYRIN in bulk is quoted 5*s.* 6*d.* per oz. by one agent.

ARROWROOT.—At auction on Wednesday good St. Vincents in cases sold at 2*d.* per lb.; ordinary in barrels was held for 1⅜*d.*, but good sold at 2*d.*, and fine at 2⅜*d.* to 2¾*d.* per lb. Ordinary Bermuda sold at 1*s.* 2½*d.* to 1*s.* 3½*d.* per lb., good being bought in at 1*s.* 7*d.*

ASAFETIDA.—Since the auctions a fair quantity has been sold, principally for export, at about the valuations. The consignment per s.s. *Afrikander* from Bunder Abbas has been amended to 621 cases.

BALSAM, CANADA.—A little could probably be had at 2*s.* 4*d.* per lb. net on the spot.

BALSAM COPAIBA.—For B.P. quality 1*s.* 9*d.* net is quoted for a small lot.

BELLADONNA-ROOT.—A brisk demand is reported from the Continent, one dealer quoting 38*s.* per cwt., c.i.f. U.K. or delivered London, for a few tons thin root of good fracture. Good green leaves are scarce at from 41*s.* to 45*s.* 9*d.* per cwt.

CANTHARIDES—Russian are firm at 2*s.* 8*d.* per lb., c.i.f., and Chinese are quoted 1*s.* 10*d.*, c.i.f.

CASCARA SAGRADA.—Old bark (1899 crop) to arrive is quoted 26*s.* per cwt., c.i.f., and on the spot 24*s.* to 25*s.* is wanted, according to quantity.

COPPER SULPHATE is slow of sale at 18*l.* 15*s.* per ton, Anchor 19*l.* to 19*l.* 10*s.*, Macclesfield 19*l.* 10*s.*, and Liverpool 18*l.* 10*s.*, f.o.b.

COUMARIN is offered at 15*s.* per lb. in quantity.

CREAM OF TARTAR is quiet at 71*s.* for best white crystals, 73*s* for powder; 98-per-cent. powder is 75*s.* 6*d.*, and 95-per-cent. 73*s.* per cwt.

CUBEBS.—Several holders ask 45*s.* per cwt., although business has been done at slightly under this figure for rather stalky quality.

DANDELION-ROOT.—For whole root 24*s.* per cwt., c.i.f., is quoted, and for small cut ditto 33*s.*, c.i.f.

ELEMI.—A little of the parcel offered last week has been sold at 100*s.* per cwt. for fine white.

EPSOM SALTS of foreign make is quoted 82*s.* 6*d.* for re-crystallised, and 18*l.* per ton for dry.

ERGOT.—A report from Leipzig, dated January 25, states that the result of the picking in Russia appears to be behind last year's, but as long as large lots of Spanish and Portuguese ergot are on the market, there is little chance of the condition of Russian improving. Both Russian or Spanish for early delivery are quoted 1*s.* 6*d.* per lb., c.i.f.

GALLS.—Chinese are quoted 52*s.* to 52*s.* 6*d.* per cwt., c.i.f., for near shipment, with buyers at 1*s.* less; spot is quoted 62*s.* 6*d.* nominally.

GAMBIER.—Cubes are slow of sale at from 32*s.* to 34*s.* per cwt, c.i.f., according to position.

GLAUBER SALTS is quoted 14*l.* per ton for refined (B.P. quality), and pure powder 16*l.* 10*s.*

GOLDEN SEAL is quoted 2*s.* 2*d.* per lb. spot.

GUAIACUM.—Further sales of good glassy block have been made at 1*s.* 1*d.* per lb.

GUM ARABIC.—Fair clean yellow Ghatti has sold in quantity at from 15*s.* 6*d.* to 19*s.* 6*d.* per cwt., and good clean sifted Cawnpore at 25*s.*

GUM THUS.—For quantities of two tons 9*s.* per cwt., c.i.f., is quoted.

HYPOPHOSPHITES.—Makers' prices are unchanged, but it is quite understood they are prepared to meet competition on the part of German makers.

IPECACUANHA.—Cartagena is quiet and unchanged at 5*s.* to 5*s.* 3*d.* per lb.

JALAP is quoted 5¾*d.* per lb. net by one holder.

JABORANDI.—From Liverpool a continued active inquiry is reported, the business done including a recent arrival of 6 bales small leaves at 10½*d.* per lb.

LITHIA CITRATE.—The present price is 5*s.* 6½*d.* per lb. for crystals in 2-cwt. lots up to 5*s.* 9*d.* for small wholesale quantities.

LOBELIA is scarce and dear. Loose is offered at 6*d.* per lb., c.i.f., and there is a small quantity to be had in cases on the spot at this figure.

MORPHINE remains weak at 4*s.* 5*d.* per oz. net, but business in second-hands has been done at slightly under for quantity.

NUX VOMICA.—A Calcutta report, dated January 5, states that supplies have been very small, and consequently sales are retarded. There are few sales for ready or forward delivery at 2 10r. to 2·12r. At the former rate shippers are willing to operate, but sellers refuse to accept. Offerings of Coconada kinds are also very small.

OIL, ANISE, STAR.—The effect of the recent failure of a well-known firm of brokers in Mincing Lane has made itself felt in this article, and some quantity is now in course of liquidation. For a parcel of 50 cases 4*s.* 2*d.* per lb. has been paid, and a further 20 cases from another source has changed hands at 4*s.* 2½*d.* spot.

OIL, CASTOR.—Calcutta is slow of sale at 3¼*d.* per lb. for seconds.

OIL, COD LIVER.—Our Bergen correspondent writes on January 25 that the official inspection of the Lofoten cod-fisheries of now in force, but there is as yet no news as to catch and quality. The weather has for some time been very stormy, and no fish appear to have been caught in the Lofoten districts. From the less important fishing places there are private reports of small fish and lean livers, but official confirmation is wanting. There has been no increase in the quantity of oil produced, and the tone is unaltered, but very firm at 71*s.* per barrel f.o.b. for new oil. The exports from Bergen to date amounted to 417 barrels, against 448 barrels at the same time last year. In London, similar reports regarding stormy weather have been received, but as yet little interest is displayed in the new oil. One holder

Digitized by Google

quotes 68*s*. 6*d*. for a 50-barrel parcel of old oil, and 70*s*. for smaller quantities.

OIL, LAVENDER.—There is a prospect of dearer prices for English oil, as the bulk of last year's crop has been practically cleared, and there is very little now obtainable at the low prices which have ruled throughout the season. For genuine quality 25*s*. per lb. is about the value.

OPIUM.—Quiet and unchanged.

SMYRNA, January 17.—Owing to the Greek and Armenian New Year the market was quiet for the first part of the week, but on Wednesday one of the principal American buyers came forward and purchased about 100 cases manufacturing qualities (Karahissar type) at 7*s*. 11*d*. per lb, f.o.b. The tendency is therefore weaker, and there will probably be a further decline next week. The arrivals to date amount to 3,004 cases, against 3,795 cases at the same time last year.

CONSTANTINOPLE, January 21.—Absence of buyers in Smyrna this week has had a quietening effect on holders here, and they would now accept rather lower prices than they were asking last week. At the same time prices are low and winter risks still ahead, so there is naturally no great pressure to sell at present prices. The week's sales amount to 8 cases "druggists'" at 7*s*. 11*d*. per lb. Market is steady.

ORANGE-PEEL.—Further sales of thin bright Maltese strip have been made at 10*d*. per lb.

PARALDEHYDE is about 9*d*. per lb. lower, one maker now quoting 2*s*. 6*d*. per lb. for bottom quantities. Other makers are expected to follow the reduction.

PHENACETIN.—One agent quotes 4*s* 2*d*. per lb. in bulk.

QUICKSILVER is very firm at the recent reduction—viz., 8*l*. 15*s*. per bottle. Mercurials are in good demand.

QUININE has again been quiet and practically unchanged. Small sales for March delivery have been made at 1*s*. 1¼*d*., and May at 1*s*. 1½*d*. per oz., and to-day June has sold at 1*s* 1½*d*.

SACCHARIN.—In cwt. quantities 50*s*. per lb. is quoted for 500 or 550 strength.

SAFFRON.—There has been a good demand, buyers taking advantage of present low prices. Best Valencia is quoted 23*s*. per lb. net.

SARSAPARILLA.—Good Honduras is quoted 1*s*. 4*d*. to 1*s*. 5*d*. per lb, spot; and Mexican 4*d*., c.i.f.

SHELLAC has been a dull market with a decline of about 3*s*. per cwt. in futures, the sales comprising March delivery at 121*s*. to 122*s*., May 123*s*., and June at 124*s*. to 125*s*. On the spot fair second TN is quoted 120*s*. to 121*s*. net, and genuine firsts 132*s*. 6*d*. About 150 cases AA in circle have been sold at 125*s*.

SPERMACETI.—A small parcel of American is offered at 1*s*. 0½*d*. net, ex-wharf London.

SPICES.—At auction on Wednesday some parcels of cut Cochin *Ginger* were offered "without reserve," and sold at considerably lower prices: B cut at 60*s*. 6*d*. to 62*s*., a fine lot at 64*s*.; C cut at 50*s* 6*d*. to 52*s*. 6*d*. for plump, at 48*s*. to 49*s*. 6*d*. for fair, at 44*s*. 6*d*. to 46*s*. 6*d*. for good limed, and at 42*s* 6*d*. to 43*s*. for common small and ends; D rough sold at 38*s*. to 39*s*., washed rough being bought in at 50*s*. to 52*s*. per cwt.; Jamaica sold at 40*s*. to 42*s*. per cwt. for dull lean. Zanzibar *Cloves* have been extremely quiet during the past week, but prices are unchanged at 3$\frac{31}{32}$*d*. per lb. for January–March delivery, and 4$\frac{1}{32}$*d*. for March–May. At auction a consignment of fair quality was bought in at 4¼*d*. per lb. Good Japan *Chillies* were bought in at 45*s*. per cwt. *Pimento* lower; a few lots sold, common at 2$\frac{7}{8}$*d*. and fair at 3*d*. per lb. *Cinnamon-chips* sold at 2½*d*. to 2$\frac{5}{8}$*d*. per lb. for common quality. Black *Pepper* was bought in at 5$\frac{5}{8}$*d*. per lb. for light Sarawak, and at the same price for Penang. There has been a large business done in Singapore to arrive down to 6*d* per lb., but the market has since been firmer with buyers at 6$\frac{1}{16}$*d*. Singapore white was bought in at 10*d*. per lb. for dull ordinary, and at 11*d*. to 11½*d*. per lb. for good coriander kind. For arrival fair Singapore is quoted 10$\frac{1}{8}$*d*. to 10$\frac{3}{16}$*d*. per lb. Penang is unchanged at 9$\frac{11}{16}$*d*. on the spot, and 10*d*. to arrive.

TURMERIC.—Small sales of mixed bright bulb and finger have been made at 17*s*. 6*d*. to 18*s*. per cwt. Bengal is quoted 16*s*. 6*d*.

VANILLA.—The supply brought forward on Wednesday was the heaviest on record, and attracted a much larger attendance of buyers than usual. There was a good demand, however, and practically the whole quantity offered, about 2,800 tins, was sold. Long lengths being scarce brought rather dearer prices; medium sold well at late rates, but the lower grades were easier. The auction was adjourned on Wednesday at 5 P.M., and was concluded to-day. The following were some of the prices paid:—Fair to good chocolate, 8 to 8½ inches, 22*s*. 6*d*.; 7½ to 8 inches, 19*s* 6*d*. to 21*s*. 6*d* ; 7 to 7½*d*. inches, 14*s*. 6*d*. to 16*s*. 6*d* ; 6½ to 7 inches, 10*s*. 6*d*. to 14*s*. 6*d*.; common dry brown, 4*s*. to 11*s*. 6*d* ; ordinary foxy to fair short, 5*s* 6*d*. to 6*s*. 6*d*.; medium, 6*s*. 9*d*. to 7*s*. 6*d*., and long, 7*s*. 6*d*. to 10*s*. 6*d*. per lb.

Messrs. Brookes & Green have issued a report on vanilla, in the course of which they state that the Seychelles crop for 1901, shipped from August to December, totalled "fully double." the heaviest quantity exported from the island in any previous season, it being estimated at about 80 tons. The feature of this season's supply of vanilla from Seychelles is the unprecedented large proportion of "short" beans; medium to good size quality measure from 6 inches to 8 inches, but the consignments landed in London during the past three months have contained about 75 per cent. of very short beans ranging from 3 inches to 5 inches. The result has been that, whilst long-length quality has fairly maintained previous values, the short measurements show a reduction of about 50 per cent. To obtain good plump pods, it is incumbent for planters to see that early in the season the young shoots are thinned by pricking out a quantity of surplus sprouts. In the present case it would seem as though nearly all had been allowed to germinate. This view is somewhat confirmed by recent reports from Seychelles, which advise that the flowering for the next crop is small, possibly due to the weakening of the vines last year—indeed, some of the older plants are reported as seriously exhausted, a very natural result if the above surmise is true. During the past year or two there has been an increasing "doubtful trade" carried on by crystallising Tahiti vanilla, and making it in bundles to represent Bourbon and other better-class qualities, buyers paying twice as much as their actual value, or even more.

VANILLIN.—The quotations for a Swiss make are as follows: 1 oz. tins 23*s* 3*d*, 1-lb. tins 22*s*. 3*d*., and 7-lb. tins 21*s*. 9*d*. per lb.

WAX, JAPANESE, is steady at 33*s*. to 34*s*. per cwt., spot.

WILD CHERRY BARK is extremely scarce at 4½*d*. per lb. c.i.f.

The Travancore Cardamoms Estates Company (Limited).

A trading corporation under the above name has been formed, with Mr. S. Iyer, ex-Dewan, as President, Mr. E. R. Iyer as Vice-President, Mr. A. V. Iyer as Secretary. The capital at present is 22,000r., consisting of 200 shares, and the area taken up for cultivation is 290 acres.

Sulphate of Copper for Greece.

American Consul Jackson, of Patras, has written to his Government confirming his telegram of December 9 (see *C. & D.*, January 11, page 64) announcing the decision of the Currant Bank of Greece to import 500 tons of copper sulphate for the use of the currant industry. Sealed bids will be received for this amount, and, other things being equal, the order will be placed with the lowest bidder. The sulphate will be entered free of duty, and the contract will be let probably about the last of February, 1902. The Consul says the order is not a large one, compared with the amount used by the bank in the previous season, but a fair supply is still on hand, and at least 150 tons additional will be supplied by the Greek Powder Manufacturing Company. Of the 6,000 tons copper sulphate imported into Greece last year only 200 tons entered Patras by direct shipment from America, which means scarcely 4 per cent. of the quantity consumed. This experimental shipment, however, was successful in price as well as in quality, and it seems reasonable to suppose that a greater business should follow.

Senega.

A Minnesota correspondent of the *O. P. & D. Reporter* states that there has been nothing doing in senega in that section of late. All the small lots have gone forward, and the result has been, as already predicted in previous correspondence, that there was no root being held back. There were only a few small lots that came into the market, which were sold on bid, a total of about 2,400 lbs. There is no senega in the hands of the country dealers or diggers. There is one lot held in the Twin Cities. This lot is in strong hands, and the party who holds it stated that

Digitized by Google

he had tried to sell it at 50c., but not being able to do so had withdrawn it from the market, and is now holding it at 60c.; he has about 4,000 lbs. The senega-market would certainly have gone to 60c., or better, had it not been for one weak dealer in Winnipeg. He imagined he saw a fortune in sight, and bought a lot of 7,000 lbs. at a high figure. Understand the price was 48c. there. He tried to sell it at an advance, but the New York dealers had no orders, and refused to buy. He then offered it to all the New York houses. We understand he sold all of it, excepting 3,000 lbs. This lot he has since offered to six or seven dealers. If they had the nerve to buy it they would have had all the root there is with the exception of the lot held in the Twin Cities. There will be be no root dug until June, and it will be along July or August before any fresh root is on the market. If there is any demand whatever there will be a scramble to get what few pounds there is left.

Ceylon Exports.

The Ceylon Chamber of Commerce have issued their annual statement relating to the shipments of produce from Colombo and Galle, compiled as from January 1 to December 31. We give below the cinchona, cardamoms, citronella and cinnamon oil exports:—

—	Cinchona	Cardamoms	Citronella oil	Cinnamon bark and leaf oil
	lbs.	lbs.	lbs.	lbs
1901	601,039	559,704	1,430,168	73,493
1900	510,462	537,455	1,409,058	72,904
1899	618,921	499,959	1,478,756	118,778
1898	975,784	531,473	1,365,917	183,312
1897	653,346	532,830	1,182,867	181,536
1896	1,309,560	452,595	1,132,141	132,057
1895	921,085	374,635	1,182,255	78,587
1894	2,497,616	306,317	938,471	88,150
1893	3,571,325	428,210	668,530	140,334
1892	6,793,320	372,510	844,502	106,303

Of the cinchona-exports, Great Britain received 564,614 lbs., and America 25,389 lbs.; of cardamoms we imported 321,331 lbs., India 143,697 lbs., Germany 70,894 lbs., and America 4,481 lbs. We imported 928,908 lbs. of citronella oil last year, America coming second with 292,946 lbs., and France third with 172,981 lbs.

Cottonseed Oil Dispute.

At the Hull County Court on January 24, Judge Raikes, K.C., heard an action in which the question at issue was whether an award made in an arbitration (conducted under the terms of the Oil Trade Association's contract) relative to the settling price of undelivered cotton oil should be upheld. The plaintiffs were Messrs. Plimpton & Smith, the defendants being Messrs. H. F. and Lee Smith & Co. Mr. Stuart explained on behalf of the plaintiffs that the arbitrators, Mr. Tall and Mr. B. Barton, being unable to agree, called in Mr. T. Hall Sissons as umpire, who fixed the settling price, and on his award this claim was made. Dr. Aske, for the defendants, questioned whether they were bound by this arbitration. He argued that the arbitrators had not the power to appoint an umpire. His Honour remarked that the award was only signed by the umpire. Under the rules of the contract a third arbitrator should have been appointed, and not an umpire, and then the award would have been signed by two out of the three arbitrators. Dr. Aske said that was his objection. Mr. Stuart quoted the case of Whitmore *v.* Smith (an appeal from the Court of Exchequer), 1861, and after reading it his Honour held that the award was good, and he was prepared to give judgment on this point. Mr. Stuart said this was a case of great importance as thousands of pounds were dealt with under such contracts. His Honour held that the rules of the contract and its form were at variance, and instead of fighting this case they should be altered and amended. The points raised were interesting and academic, and might be settled by the House of Lords at the cost of 2,000*l.* or 3,000*l.* The rules would have to be redrafted by a lawyer. He would rather not give a decision. After further conversation it was decided that the case should proceed, and after hearing evidence his Honour, in giving judgment for the plaintiffs, said that in his opinion the price fixed by the arbitrator was a fair one, and the plaintiffs were entitled to recover. He did not think that in the circumstances arbitration was a proper way of settling the matter.

The American Chemical Market in 1901.

The increased domestic production coupled with the high tariff has resulted in a marked fall in imports of heavy chemicals, especially of the soda compounds, bleaching-powder, and chlorate of potash. Prices in most lines, however, were more satisfactory than in 1900. The market for domestic alkali was particularly strong in the last half of the year, owing to comparatively small stocks and the destruction by fire of a large plant in the Middle West. Caustic soda, besides finding a steady sale among glass-makers, has shown an improved demand from mercerised goods manufacturers. Chlorate of potash found a large sale with gunpowder makers. There was a large decrease in imports on account of increased domestic production. Prices were very weak, however, owing to aggressive competition. Glass makers have been large buyers of arsenic at lower prices than the previous year. The consumption of cyanide of potash has been large, owing partly to the erection of new gold recovery plants. Prices, however, were lower, owing to the heavy production in England and Germany, and the large accumulation of stocks as a result of the continued small consumption in the Transvaal. Prices of sulphuric acid were kept at a satisfactory level, being chiefly controlled in the east by the General Chemical Company. The exports of copper sulphate have largely increased, Italy receiving 280,000,000 lbs. out of a total of 37,300,000 lbs. for the eleven months ending November, 1901. Of brimstone 160,000 tons, chiefly best unmixed seconds, were imported, or 7,000 tons less than in 1900. The high prices and increased consumption of pyrites by acid makers were responsible for the decrease.

Pharmaceutical Society of Trinidad.

THE members of this Society dined together at the Ice House Trinidad, on the evening of January 9, amongst those present being Messrs. A. J. Taitt (President), L. O. Inniss (Secretary and Treasurer), W. Mills, Melville Murray, P. A. Ramsay, A. Soublette, E. C. Aerstein, F. L. Ronalds, Alfred Richards, J. C. Poyer, E. T. Mitchell, G. D. Dieffenthaller, Andrew Gransaull, A. S. Larodé, and V. W. Laurence. After an excellent dinner the King was toasted, and Mr. Walter Mills, in giving the toast of the Society, called attention to the trend of public opinion in the Mother Country in regard to the dispensing of prescriptions. He was followed by Mr. Inniss, who reviewed the history of the Society since its foundation in 1884, with Mr. W. C. Ross as President. During its existence it has done good work for the drug-trade of the island, especially in regard to the Customs regulations of 1885, respecting spirituous medicines, and the Medical Ordinance of 1887, which would have been bad for the druggists had not the Society intervened. Since that year Mr. Inniss has been Secretary. In 1896 regular monthly meetings were instituted. By the repeated representations of the Society to the Medical Board many violations of the rights of druggists by unqualified persons have been put a stop to, the tone of the examinations has been raised, and when the Collector of Customs made another attempt to levy spirit-duty upon tinctures and other spirituous medicinal compounds the Society resisted, and succeeded in obtaining a very important concession from the Council—viz., that medicinal tinctures and other medicinal compounds containing alcohol be passed at 5*s.* per gal. duty, instead of 15*s.* as proposed by the Collector. In the following year the Society was incorporated, and another Medical Ordinance gave trouble, but through the efforts of the officers the clauses relating to druggists were submitted to the Society for consideration, and most of their suggestions were adopted. Latterly a much more cordial feeling has arisen between the Pharmaceutical Society and the Medical Board. During the past year a fair commencement to the collection of native medicinal plants had been made. The officers elected for the year 1902 are Messrs. A. J. Taitt (President), A. E. Boland (Vice-President), L. O. Inniss (Secretary and Treasurer).

Look Out for Mr. Islip.

AS we go to press Messrs. Cooper & Co., South Kensington, telephone to us that "J. Islip," 28 Redgrave Road, Putney, has sent them an order by post for various things which they have not supplied, for he is the man who some time ago was imprisoned for obtaining goods under false pretences. London subscribers should not supply the man with goods unless they are paid for in hard cash.

THE HEADING to the advertisement on page 136 of our Winter Issue should have been "Modern Pharmaceutical Preparations of Farbwerke vorm. Meister, Lucius & Brüning," Hoechst-o.-M. The word "limited," accidentally placed after the firm's name, was quite inapplicable in the case of the Hoechst firm.

A NEW ANTISEPTIC.—At the last meeting of the Academy of Medicine at Rome, Professor Durante read a paper on experiments made by him in his clinic with "tacciolo," a new antiseptic discovered by Professor Paterno. The experiments, he said, demonstrated the great efficacy of tacciolo as an antiseptic, and proved it to be far superior to sublimate of mercury.

CHEMIST'S STRANGE PLIGHT.—The chemist's shop of Mr. M. E. Price (28), of Senghenydd (Glamorganshire), having been closed for a week without anyone knowing what had become of the proprietor, it was resolved on Wednesday to effect an entry into the premises, and on this being done Mr. Price was found sitting before the fire in a very exhausted state. Medical aid was summoned, but his condition was so precarious that the hopes entertained of his recovery are not very strong.

Correspondence.

Our Winter Issue.

SIR,—We have been complimented on our two-page advertisement which appeared in your special issue of January 25, and, though the writer is actually responsible for the design and matter generally, you always give such care to our wishes and so thoroughly grasp the intention, that we feel part of the credit is due to yourself, and we gladly, therefore, take this opportunity of tendering you our thanks. We are, as you know, pretty large advertisers, but from no journal do we trace better results at all times than from THE CHEMIST AND DRUGGIST.

Yours faithfully,
HENRY E. STEVENSON, Director
(For Baiss Brothers & Stevenson, Limited).

4 Jewry Street, E.C., January 29.

Apprenticeship.

"This gossip."
"I have heard nothing of it. Tell me the gist of it, pray."
"Tell you, ma'am? Not I. What the gossip is, no matter; what really is, you know. Set facts right, and the scandal will right itself." —*Hardy.*

SIR,—I am pressed on many sides to study the apprenticeship-question and become a useful member of society. Really, the humour one finds in pharmaceutical politics is prodigious.

There is no apprenticeship-question. There will soon be no apprentices. One question dominates and permeates us—unqualified practice. Set that right, and the consequent scandals will remedy themselves. As a subsidiary or dependent matter, that of apprenticeship is important, and affects chemists directly. But it will pass the wit of man to point out a remedy which does not involve settling the all-important question. Therefore, why do we tinker and mess? Why not grasp the nettle—close with unqualified practice? We may talk and talk, but the fact of unqualified persons being able to practise or otherwise will determine the future of the drug-trade.

Chemists have the remedy in themselves. Become members of the Pharmaceutical Society. Insist that this Society shall exist for its members. Demand efficiency in all its affairs. Grandmotherly management of the affairs of chemists is altogether discredited; but a sane assertiveness will produce results. Yours faithfully,

Blackburn, January 29. R. LORD GIFFORD.

What is Lapis Infernalis?

SIR,—"Xrayser" has some interesting notes in your issue of to-day on the latest instalment of the Oxford English Dictionary, but he omits to notice the definition therein given of "lapis infernalis" as lunar caustic. I venture to think the definition wrong, though it is true that under "Infernal" in a previous section quotations are given from Phillips (1706) and Reid (1758) which seem to justify it; and that, according to Squire, lunar caustic has this name assigned to it in several continental Pharmacopœias. In England at the present day, however, so far as my experience goes, "lapis infernalis" signifies caustic potash, and it has this meaning in every Dispensatory and recipe-book I possess (in which the name occurs), from Culpeper (1654) to Phillips's "Translation of the Pharmacopœia Londinensis" (1851). It would be interesting to know what is the opinion of the trade generally on this point.

Yours, &c,

Epworth, January 25. C. C. BELL.

"The Wrong Button."

SIR,—As a chemist who for many years has dealt in photographic goods in connection with the drug-business, I have read your article, entitled "The Wrong Button," with a considerable amount of interest. I have had business-relations with the Eastman's Material Company since their address was 115 Oxford Street, London, and my experience goes to prove that if the patent-medicine manufacturers and others had, in the past, controlled wholesale houses and retailers, in the supply and up-keeping of prices, in the same manner in which the Kodak Company have, the average chemist would not have been in the unfortunate position that he is to-day in respect to patent medicines and other proprietary articles. In buying goods from them I have always had the comfortable feeling that, in selling them, I was sure of a fair margin of profit, and that I was not being undersold by some firm of self-called cash chemists. A pleasing result of their protection of prices was a short time ago instanced in Liverpool. An American gentleman went into a shop, and asked the price of a No. 4 cartridge kodak. The proprietor said 5*l.* 5*s.* The American then said, "And how much less?" and the answer was, "Nothing." The gentleman replied, "I guess I'll have to try elsewhere." The proprietor of the shop asked him if his shop was the first one at which he had called, and on ascertaining that it was, said, "If you find you cannot get it for less than the price stated, do you mind coming back and purchasing it from me?" The American, apparently struck by the fairness of the request, replied heartily, "I will." Considerably later in the day he tramped wearily into the shop, saying, "I've come to acknowledge my defeat. I've tried numbers of places, but cannot get it for less than you asked. I'll buy it from you."

I have other reasons for welcoming the attitude of Kodak (Limited). When a certain firm was cutting prices of Kodak goods, and several wholesale houses were approached in order to trace from where the firm obtained its supplies, instead of all the help possible being rendered obstacles were actually thrown in the way. I, and others who dealt in Kodak goods and had been affected by this cutting, have reason to thank the company for the time and money expended in securing to us that fair profit which the mere wholesaler never would, nor did, attempt to secure for us. There are other advantages to the dealer in trading direct with the manufacturer. He is dealing with one who is willing to help him in every way possible to create a trade in his particular manufactures. There is a closer personal business relationship. He is better supplied with advertising-matter. If he makes a mistake in ordering it is rectified if he mentions it within a reasonable time. There are also many other valuable favours he can obtain when dealing direct. Lastly, and most important, he can obtain supplies which are fresh. In regard to inconvenience, that is simply a nonentity, as everything (except plates alone under 5*l.* worth) is sent out carriage paid, and there is no waiting until the wholesale drug-house, if out of stock, has obtained from the very same source from which we can draw our supplies. I take it that the nearer approach of certain manufacturers to the retailer is one of the revenges of time on those manufacturers and wholesalers who took no interest whatever in the retailer except as a means of bringing in mere monetary profit. It behoves the retailer of to-day to support only those who are willing to work for and with him in keeping up to advertised prices. If a manufacturer values his productions at certain prices and advertises them as being for sale at such prices, what moral right have cutting firms to step in and take away from the ordinary dealer that profit which is fixed as being only a fair remuneration?

Yours, &c.,
A CHEMIST AND PHOTOFACTOR. (133/12)

SIR,—I think if all chemists dealing in "Kodak" goods were to do as we are doing in this town—viz., send a vigorous protest against the new conditions which Kodak propose to bring in—it would at any rate show our united disapproval of such an unfair, unbusinesslike, and un-English mode of procedure, and also obtain some concessions on their part. I am writing from a town where there are some twelve or so dealers (mostly chemists), who are all thoroughly in unison in this matter, and I believe it is the general opinion of the trade at large. It seems to me that this protest might be successfully arranged through the local Associations (where any), as we are doing here, and should be done at once. Yours truly,

BROMIDE. (130/23)

SIR,—One point seems to have escaped notice in relation to Kodak's regulations. It is at the Kodak Company's wish to alter the patent laws of this country to suit their own pockets. As I understand it, the patent laws grant a

Digitized by Google

monopoly for a certain term of years as a reward for new inventions, but to prevent stagnation and induce healthy competition very properly limit the period of protection. I believe these laws are more or less universal. The Kodak Company are trying by all means in their power—and they seem somewhat varied—to extend this protection beyond its legal limit and to crush competition.

Yours faithfully,

January 21. P. (128/66.)

Legal Queries.

Before sending in a query for reply in this section see if the subject is not dealt with in "The Chemists' and Druggists Diary"—Trade Law or Pharmacy Law Sections.

123/49. *Caution.*—The use of spirit of chloroform as a flavouring-agent in infinitesimal quantity has not been regarded as a requirement for a poison-label. On this point see the paragraph "Preparations of Poisons," page 272 of THE CHEMISTS' AND DRUGGISTS' DIARY, 1902.

126/37. *Suez.*—The Post Office does not interfere with the *bona-fide* distribution by traders of circulars from house to house, even though they bear the names and addresses of the occupants. The conveyance of such circulars from town to town and delivery thereat is a different matter.

121/18. *J. W. S.* sends us about fifty labels which he uses, and we find the following instances of liability amongst them: neuralgia-pills to be taken "until relieved"; cough-linctus to be taken "when the cough [is troublesome"; neuralgic mixture stated on handbill to be "prepared from a celebrated recipe, the efficacy of which has been thoroughly tested"; compound menthol snuff stated on label to be "for headache, neuralgia, and colds"; and a label for Erasmus Wilson's hair-wash stated to "remove one of the most frequent causes of heaviness and headache." The following we consider doubtful: universal embrocation "invaluable to athletes," and liquid dentifrice having "antiseptic properties which prevent decay." These two should be submitted to Somerset House for opinion.

121/52. *Nemo.*—The cash-book of a business belongs to the person who has disposed of the business. If you take action against your predecessor for misrepresentation he may be compelled by the Court to produce the cash-book, but you cannot otherwise demand it.

132/18. *C. G. W.*—A toilet-preparation is not liable to duty because it allays shaving-irritation and is an "antiseptic emollient."

133/52. *Agreement.*—See the paragraph on this matter in THE CHEMISTS' AND DRUGGISTS' DIARY, page 261. You do not give us sufficient information regarding the terms of your agreement to enable us to advise you as to legal proceedings, but in a matter of right of way belonging to you you have right of action without the agreement.

121/20. *J. E. W.*—If you refer to the pharmacy-law section in our DIARY you will find all aspects of the wholesale druggist question dealt with more fully than we can possibly spare space for here.

126/31. *Antipyrin.*—Your distilled extract of witch-hazel label makes the preparation liable to duty because it says the extract "is one of the most valuable domestic medicines ever discovered," and in the directions for use it is stated to be used "for burns, scalds, cuts, bruises, sprains, chafings, bites or stings of insects, chilblains, ulcerations, varicose veins, piles, eczema, &c.," "for sore or weak eyes," "for sore throat," and "for hæmorrhages from the lungs and stomach." The reason why hazeline is unstamped is that it is not recommended to the public in involving terms.

237/27. *South American Subscriber.*—We have received from an Egyptian correspondent the following particulars regarding the practice of dentistry in Egypt:—

Every medical man, veterinary surgeon, pharmacist, and dentist practising or intending to practise in Egypt must present his diploma at the office of the sanitary administration, and receive from them a permit, at the same time his name is published in the official journal. The fee for registration is purely nominal, and only really means the cost of the stamped paper on which the demand is made. The diploma of any State school is recognised. There is a school for medicine, veterinary medicine and pharmacy in Cairo, but no school for dentistry. In Cairo there are now in practice two English dentists, three American dentists, and several Germans with American diplomas. The English firm has been established for many years, and has a lot of capital behind it, and is, in fact, though not by appointment, the dental practitioner for the army of occupation. In Alexandria there is Dr. Love, American dentist, long established and in excellent repute, and an English dentist, formerly assistant to Dr. Love, who is also in good practice, a number of Syrians, Jews, and Germans, who all style themselves doctors. One L.D.S. Eng. left Alexandria some three years ago after a two years' trial. Cairo prices are those of first-class dentists in England. There is a good opening for season work (December, January, February, March and April), in Luxor and Assouan for a young enterprising dentist. There is a resident doctor in each of these places for season work. I may add that rentals in Cairo and other European quarters run very high.

126/24. *R. C.* puts the following case:—"A asks B for quotation of goods. A sends to B for parcel of goods. A then fourteen days after sends to B for more goods "as quoted." Since then the price has risen. B sends A the goods at an advanced price with invoice at bigger price. A makes no remark, but two months afterwards in settling the account deducts difference in price. Can he do this?" [Yes. The forwarding of the goods was acceptance of the order, and, although it would have been but fair for A to have on receipt of invoice advised B that he would not pay the higher rate, he was not compelled to do so.]

Miscellaneous Inquiries.

We endeavour to reply promptly and practically to trade questions of general interest, but cannot guarantee insertion of replies on a particular date, nor can we repeat information given during the past twelve months.

123/46. *Sefton.*—We have no personal knowledge of the Cure for Rupture to which you refer, and think you would be better advised to reserve your money for consulting a surgeon of repute who has special knowledge of the treatment of hernia. As a pharmacist you should be able to appreciate the fact that a liniment for hernia is a ridiculous application for healing the ruptured internal tissues, and this is an index to the rest of the treatment advertised.

134/16. *R. C.*—When solution of ammonium carbonate is added to solution of strychnine, crystals of strychnine are precipitated.

127/28. *P. V. C.*—The treatment of obesity with thyroid gland varies in results, and should not be undertaken without medical advice.

132/59. *Molar* (Australia)—There is nothing that can safely be injected along with cocaine hydrochloride which will prevent the action upon the heart. It is advisable in dental cases before administering the injection, to give the patient a 1-dr. dose of aromatic spirit of ammonia, and to keep another dose ready in the event of faintness coming over the patient during the operation. Not more than 1 gr. should be injected at a time.

131/12. *Micrometer.*—Classes on brewing are held in the University of Birmingham, which grants a degree in that department. You should get the syllabus, and gather what hints you can from it. Also see the syllabus of the Technological Examinations of the City and Guilds of London Institute, Gresham Street, London, E.C., which any bookseller can get for you, or you can get it from the Institute by post for 9*d*. You will be able to judge from that the scope of the work required for a brewer's chemist and bacteriologist.

133/53. *P. D.*—There is a postal system of preparing for the Minor, carried on in connection with the Westminster College of Chemistry and Pharmacy, Trinity Square, Borough, S.E.

Digitized by Google

134/18. *A. S.*—Consult the 1902 DIARY for names of goitre specialists.

30/4. *Mikado.*—We do not know what is mixed with grain or meal to attract pheasants to the preserves: we always thought the food itself was a sufficient attraction.

119/51. *Digi.*—Your inquiry is too vague for us to be able to give a definite answer. Another time send us the prescription or a photograph of it.

134/10. *Omega.*—Muscarine is a very poisonous alkaloid occurring together with neurine in the fly agaric (*Agaricus muscarius*), and in putrefying flesh. The formula ascribed to it is $C_5H_{15}NO_2$. It acts as a narcotic poison, antagonistic to atropine. We know of no use for it apart from its employment for physiological experiments.

115/45. *W. R. T.*—Cleaning Sponges.—First wash the sponges well, then dip in a solution consisting of 1 oz. potassium permanganate and 2 oz. of hydrochloric acid, and 8 gals. of water. Press out as much of the liquid as possible and put the sponges into a bath of 1 lb. of hyposulphite of soda in 8 gals. of water, and well wash, the final bath to be one containing 1 oz. potassium carbonate and 1 oz. glycerin in 1 gal. of water. Sulphurous acid may be used in place of the "hypo" bath.

157/57. *E. S. & Co.*—*La Semaine Pharmaceutique* is published at 66 rue de Rivoli, Paris.

126/41. *J. P.*—There is nothing the matter with the Irish moss mucilage you forward. Your customer is probably trying to avoid payment, and inventing excuses.

126/39. *W. J. B.*—Lethal Chamber for cats.—There is nothing of this nature on sale as far as we are aware. An article in the *C. & D.*, September 28, 1901, page 534, contains an illustration of a box for use in poisoning cats, which may give you an idea of a suitable apparatus.

127/25. *Qualified.*—Our rule is not to publish formulæ in imitation of proprietary articles.

128/44. *W. H. B.*—Intensifying Negatives.—There are nine formulæ for intensifiers in the 1902 DIARY, and whilst none of them come under Part I. of the poison schedule, several require labelling poison, and none can be truthfully designated non-poisonous.

121/43. *Nomen.*—The DIARY for 1900 contains thirty-seven formulæ for developers, and there are many in the current Diary. Will you please refer to these?

124/61. *A. & Co.*—Sodii sulphas acidus, acid sodium sulphate, or sodium bisulphate, is no doubt intended in prescription you send. In the *C. & D.*, February 16, 1901, page 285, you will see an account of the use of sodium bisulphate for destroying typhoid germs in drinking-water.

129/45. *H. H.*—As glycer. pepsinæ is the nearest B.P. thing to liq. pepsin., you may dispense it when no maker is specified. Mark the prescription to that effect.

129/71. *Subscriber.*—These columns are not intended to teach people arithmetic, but we may take pity upon you and inform you that with an article which costs 8*d.*, and sells at 1*s.*, there is 50 per cent. profit on the outlay, and 33⅓ per cent. of the returns is profit. The rules of simple proportion apply in this case.

131/25. *S. C. N.*—The quantity of castor oil in the inseparable brilliantine ("Pharmaceutical Formulas," page 76) should be 2 oz. If a more oleaceous article is wanted, stronger alcohol should be used.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

134/65. Name of a dealer in second-hand wine-bottles.

134/26. Makers of or agents for Kuna pine solid.

124/39. Makers of imitation-parchment bags.

134/46. Address of makers of Little's oriental balm.

134/52. Present address of makers of "Spanish herbal cigarettes."

133/57. "Renardine" for driving rabbits out of holes: where obtainable?

126/19. What is "lemoluerein" (a substitute for annatto) and is it harmless?

28/29. Where can "corpolia" (or similar title), for restoring silk hats, be obtained?

128/57. "Orcherdine" said to be a substitute for musk: who makes or where obtainable?

125/5. Makers of fancy cards for fixing small bottles of perfumes to, and fancy boxes for packing perfumery.

Coming Events.

Notices of forthcoming meetings are inserted in this section free of charge. Secretaries should send such notices to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C., so that they may be received not later than Wednesday of the week of publication; if later, by telegram to "Chemicus London."

Monday, February 3.

Society of Chemical Industry (London Section), Burlington House, Piccadilly, W., at 8 P.M. Dr. A. Dupré, on "The Explosion of Potassium Chlorate by Heat," and Dr. F. Clowes, on "The New Photometer and Standard Pentane Burner for Gas-testing."

School of Pharmacy of the Pharmaceutical Society of Great Britain. Annual dinner in the Royal Venetian Chamber of the Holborn Restaurant, at 7 P.M., Professor J. Reynolds Green in the chair.

Wednesday, February 5.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, at 11 A.M. Council meeting.

Pharmaceutical Society of Ireland, 67 Lower Mount Street, Dublin, at 3 P.M. Council meeting.

Thursday, February 6.

Chemical Society, Burlington House, Piccadilly, W., at 8 P.M. The following papers will be communicated:—"An Investigation into the Composition of Brittle Platinum," by Mr. W. H. Hartley; "Conversion of α-hydroxycamphene into β-halogen Derivatives of Camphor," by Dr. M. O. Forster; "Tetrazoline," Part 2, by Messrs. S. Ruhemann and H. E. Stapleton; "The Solubilities of the Calcium Salts of the Acids of the Acetic-acid series," and "The Equilibrium between a Solid and its Saturated Solution at Various Temperatures," by Mr. J. S. Lumsden; "The Influence of "Temperature on Association in Benzene Solution, and the Value of the Molecular Rise of Boiling-point for Benzene' at Different Temperatures," by Mr. W. R. Innes; "The Magnetic Rotation of Ring Compounds: Camphor, Limonene, Carvene, Pinene, and Some of Their Derivatives," by Dr. W. H. Perkin, sen., F.R.S.; "Polymerisation Products from Diazoacetic Ester," by Mr. O. Silberrad.

Röntgen Society, 20 Hanover Square, W., at 8.30 P.M. Mr. E. W. H. Shenton on "A System of Radiography."

Midland Pharmaceutical Association, Birmingham. Lecture by Dr. Hall-Edwards on "Radiography."

Chemists' Assistants' Association, 73 Newman Street, Oxford Street, W., at 9 P.M. Impromptu discussion.

Friday, February 7.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Professor E. Ray Lankester on "The New Mammal from Central Africa and other Giraffe-like Animals."

THE Junior Pharmacy Ball will take place on February 26. Tickets can be obtained from Mr. P. Trick, Salisbury House, London Wall, E.C., Hon. Secretary.

THE Wholesale Chemists' and Druggists' Cricket Championship second annual concert will take place at the Holborn Town Hall on February 14. During the interval the silver challenge cup will be presented to the winners for 1901—the Wellcome C.C. Tickets, 1*s.* each, may be had from the Hon. Secretary, Mr. E. Sibley, 64 Park Street, Southwark, S.E.

Westminster Wisdom.

(By our Parliamentary Correspondent.)

THE POISONS COMMITTEE.

I am informed that the Departmental Committee appointed to inquire into what alterations may be expedient in Schedule A of the Pharmacy Act, 1868, have arranged to hold their next meetings on February 6, 7, and 8, and that the witnesses who are expected to give evidence will include Mr. Le Neve Foster, Dr. Selby Church, Dr. W. L. Muir, Mr. Richard Bremridge (Secretary of the Pharmaceutical Society), Mr. Rutherford Hill, Mr. Dobbs, Dr. Voelcker, Mr. J. Bowen Jones, and Mr. A. F. Giles (Secretary of the Grocers' Federation). *A propos* of this I have been furnished with an interesting statement of one side of the question by a gentleman who is well entitled to express an opinion and has special means of knowing what is going on before the Committee. It is as follows:—

"The inquiry of the Committee has brought out a great many interesting points. For instance, in the law of master and servant a master is responsible for the doings of his employé. But for reasons best known to themselves the Pharmaceutical Society chose to prosecute the employé who sold the goods for a breach of the Act when such an event occurred. After much litigation they succeeded in this point in England, and the High Courts in Scotland, following the English precedent, permitted the same procedure. It therefore appears that the pharmacists have made a law unto themselves, and that in this trade alone a master is not responsible for a breach of the Act by his employé. In some cases, however, the employer cannot escape—as, for instance, in what are called in Scotland 'doctors' shops.' In the case of Glasgow east of High Street, in an area inhabited by at least one-third of the whole population, it is believed there are not more than seven or eight shops occupied by qualified pharmacists. All the drug-trade otherwise is done in the shops of medical practitioners, and these number about 250. In these shops, of course, it is impossible to employ a highly-paid and qualified pharmacist. If a slight breach of the Act occurs in the doctor's absence—as when, for instance, a customer comes in *in extremis* and asks for a little laudanum, and the medicine is sold by the assistant—then the assistant is liable to punishment, but, as it happened recently, the doctor does not escape. The Pharmaceutical Society prosecuted some half-dozen such cases in Glasgow, and, having succeeded in the prosecution, they gave information to the General Medical Council. Forthwith the doctors were summoned before the Council as having been guilty of what is termed 'infamous conduct.' Particulars appeared in the newspapers, with the names of the doctors in question, but without a full explanation. The simple fact was announced that they had been before the General Medical Council, and had been found guilty of 'infamous conduct.' This is a state of things which obviously is not to be submitted to in silence, and so Dr. W. L. Muir, of Glasgow, has been deputed on behalf of the Eastern Medical Society of Glasgow, which numbers about 150 members, and the Poor-law Medical Association of Scotland, to give evidence on these points. The terms of the remit to the Committee are to consider the poison schedules of the Act of 1868, and ascertain whether circumstances that have occurred since then make the schedules as they now stand suitable for the present time. The Committee are asked to report what addition or other changes should be made, and chiefly they are asked to say whether, in their opinion, another schedule should be added to the Act, and what should be placed in that schedule. This is in view of the suggestion that the third schedule should contain articles that are used in the arts and in commerce, as well as in agriculture and horticulture, such as sheep-dips, colours and paints whether for the decoration of houses or for the use of artists, photographic materials, and acids of sorts which are used very largely for manufacturing-purposes; and it will be for the Committee to decide whether the sale of these shall be conducted upon ordinary commercial principles. In relation to other poisons it will be considered whether it is simply enough for the public protection that these should be sold under regulations drawn up by the Pharmaceutical Society, or whether there should be broad regulations affecting everybody and adjusted without dependence upon the individual who happens to make the particular sale. Some persons have formed the opinion that, after all, the danger of poisoning which may result from the sale of many of the above-mentioned articles is just as great whether the article is sold by a lad in an ironmonger's shop or seedsman's warehouse, or by a highly qualified and highly paid man in the drug-store near by."

SUGAR-TESTING STATIONS.

From information supplied by the Chancellor of the Exchequer, it appears that there are four sugar-testing stations in England and three in Scotland. The initial cost for plant, &c., has been about 500*l*., and there is a small annual charge, representing part of the pay of the officers employed in testing. It has not been found necessary as yet to establish a testing-station for sugar in Ireland. No unrefined sugar has been imported into that country from abroad, and stations are only necessary in respect to that kind.

THE SUPPLY OF LYMPH.

Since my last letter some interesting statements have been made in the House of Commons in regard to the supply of lymph for vaccination-purposes. Mr. Bartley put a question to the President of the Local Government Board as to whether medical practitioners are now able to purchase Government lymph for those who are prepared to pay for vaccination, or whether they have to obtain it as they can, chiefly from abroad. In view of the interest felt in the subject at present, I give Mr. Long's answer, and what arose out of it, fully:—

Mr. Long replied: The statutory duty of the Local Government Board as regards the supply of glycerinated calf-lymph is limited to supplying it to public vaccinators for purposes of primary vaccination only, and their lymph establishment was formed with this object. Arrangements were, however, made to extend the supply so as to enable lymph to be provided for use by these officers in revaccinations, and a very large amount has been supplied for this purpose. The organisation of the establishment is not such as would enable me to furnish lymph to private medical practitioners.

Mr. Bartley: May I ask whether the right honourable gentleman will take into consideration, in view of the present state of affairs, whether this lymph cannot be supplied to private practitioners all over the country, so that there might be a guarantee that it is really efficient?

Mr. Long: It would be a very serious thing to suggest that the lymph should be supplied gratis to——

Mr. Bartley: I did not mean gratis.

Mr. Long: Well, or for sale to private practitioners; but there is no necessity for it. I have ascertained that there is ample glycerinated lymph outside that which is supplied by the Government departments.

Mr. Bartley: Is it a fact that nearly all the lymph obtained outside comes from abroad?

Mr. Long: Some of it comes from Paris, but there are other sources of supply, and I have no doubt that there is at the present time an abundant supply of lymph on the market.

Dr. Ambrose: May I ask whether the greater quantity of the lymph to be got outside is inefficient?

Mr. Long: I have reason to believe that most of it is efficient. Perhaps the lymph supplied by the Local Government Board is stronger, but I do not think—judging from my own experience—that the outside lymph is less efficient.

Mr. Bartley subsequently put a general question about the progress of revaccination to which Mr. Long replied as follows:—I am not at present in a position to give any estimate of the extra number of vaccinations and revaccinations performed during the present epidemic of smallpox. The returns as to the vaccination of infants born in 1901 and as to revaccinations by public vaccinators will be received in due course, but there is no record of revaccinations performed by private medical practitioners. I have, however, reason to believe that there has been a very large number of vaccinations in the last few months in London and the neighbourhood. Since the beginning of September I have caused lymph to be issued to public vaccinators for 480,000 vaccinations, that is about 300,000 in excess of the normal supply for this period. A very considerable portion of the excess has been issued to the metropolis.

Subsequently Mr. Bartley suggested that, considering the

Digitized by Google

difficulty private practitioners have in obtaining calf-lymph as reliable as that issued to the public vaccinators, the Local Government Board should extend its lymph department.

Mr. Long replied: The establishment has been very nearly doubled within the last few weeks, and it is impossible at present to supply all that is required for primary vaccination. To supply private practitioners other than public vaccinators would, I think, tax the resources of the establishment beyond its powers, but we are doing everything we possibly can, and if we can possibly add to the supply we shall do it.

Another question on the subject was put by Mr. Corrie Grant. It was in the following terms: Whether the President of the Local Government Board can state the original sources of the vaccine-lymph supplied by the Government; is any derived from the inoculation of smallpox on animals; whether a pure culture of the organism of vaccinia could be supplied in place of lymph; whether the strength of the virus can be standardised so as to measure the dose administered; whether the Government guarantee the purity and innocuity of the lymph they supply; and whether the Government will take steps to secure the control and supervision of all lymph used in this country?

Mr. Long replied: The lymph supplied by the Government is derived from calves which have been vaccinated with lymph from other calves, and is not obtained by inoculating animals with smallpox. The reply to the third and fourth questions is in the negative. The Government give no guarantee, but they use every effort to secure that their lymph shall be free from undesirable organisms. As at present advised, I do not propose to ask for power to control the lymph supplied from other sources.

In this connection I may add that quite a number of members have been revaccinated since Parliament met. The other day Mr. Hozier, one of the Scotch members, was wearing a red ribbon and keeping aloof from his fellows, and now Mr. Robert Spencer, the heir of Earl Spencer, has his left arm in a sling.

The Cure of Cancer.

A proposal that a Royal Commission should be appointed to consider this question came before the House of Commons on January 24, in the form of an inquiry, at the instance of Mr. Arthur Lee.

Dr. Farquharson, before the question was answered, asked the First Lord of the Treasury: Whether his attention had been directed to a scheme, backed up by the leaders of the medical profession, for "organised research on cancer," and whether he will wait till this is formulated before committing himself to the costly and dilatory process of a Royal Commission?

Mr. Balfour replied as follows: In answer to the last question, I have to say that my attention has been called to the passage in a newspaper to which the honourable member refers. I have no other information as to the progress which this experiment in organisation is making. I am sure I wish it all success. As regards the question put on the paper, I entirely agree with my honourable friend as to the great importance of this subject of the medical investigation, but I confess my instinct is not in favour of attempting to deal with it by means of a Royal Commission. I do not think the cases of cancer and tuberculosis are at all parallel. I will not develop my reasons for holding that opinion, but I think there is no parallel, and I also think the number of great scientific discoveries which have been made by Royal Commissions has been very limited, and that it would be probably better to leave this subject in the hands of the medical profession in all countries whose attention is, and has been for some years past, directed towards it. Of course, if those competent to speak for the medical profession take a different view they are much more qualified to judge than I am, and if their views are brought before the Government they will receive full consideration.

Mr. Arthur Lee: Will the right honourable gentleman consider the advisability of advising a substantial grant, in view of the fact that there is no fund available for the purpose?

Mr. Balfour: The question of the honourable member raises a very large issue, and I should not like to touch upon it at the present time. The amount of the Government money given to experiment in this country is not very large, but whether it should be increased is a question that I cannot answer on the spur of the moment. It requires careful consideration. I may add that there has been no application up to the present time for a grant in order to carry out this particular object.

Prospects of Midwives Bill.

The promoters of the Bill for the registration of midwives and the regulation of their practice have been exceptionally fortunate in securing the first place on Wednesday, February 26. At present one cannot say how the promised new procedure will operate, or whether the Wednesdays of the Session hitherto appropriated by private members will still continue to be so occupied; but should the new procedure leave the privileges of private members on Wednesdays untouched, a good opportunity for debating the subject will arise. And there is some ground for the hope of the promoters that the second reading will be carried by a considerable majority. In 1900 the figures were 124 for, and 34 against, and the measure was lost only after it had been considered by a Standing Committee. Its progress would not have been so suddenly interrupted had more time been available. On this occasion there will be plenty of time, and all concerned may look forward to a lively controversy.

Shops (Early-closing) Bill Revived.

In the House of Lords on Monday evening, Lord Avebury presented his Bill to provide for the earlier closing of shops. He said that during the last few days he had received communications from shopkeepers' associations all over the country expressing great disappointment that the Government did not propose to deal with the subject as they had hoped after the recommendation of the Committee which sat last Session. He hoped the Bill would receive the support of the Government. It was read a first time.

Anti-vaccination Bill.

Mr. Broadhurst has had the temerity to introduce a Bil which can only be described by my heading. He is acting, I believe, at the instance of Leicester anti-vaccinators, and the chief object of the measure appears to be to make it impossible for a vaccination-officer to take any action without the consent of the Board of Guardians.

A Welsh University Bill.

Mr. Brynmor-Jones has introduced a Bill to give to the graduates of the University of Wales the same legal status in all respects as those of Oxford, Cambridge, and London. It is couched in the same language as the Victoria University Act. I learn that the Bill is not of great immediate importance. They have yet to establish a medical faculty in the University, though at Cardiff a school has been started in connection with the University College.

Practical Notes.

Orange-flower Water.

According to M. Manseau (*Bulletin de la Société de Pharm. de Bordeaux*), by shaking orange-flower water which has become yellow, cloudy, and full of growths with sand it can be recovered and made suitable for purposes other than medicinal. The sand is prepared by boiling with double its volume of water acidulated with hydrochloric acid, decanting, washing with water to get rid of the acid, and calcining. About 2 oz. of prepared sand is shaken with 1 pint of orange-flower water, at intervals, for ten or fifteen minutes, and filtered.

Dried Yeast.

M. Jouisse gives the following characters and method of preparing dried yeast for medicinal purposes. The yeast, which must be fresh, is first washed with iced water till the washings are colourless, then collected and submitted to pressure in a tincture-press. The residue is then completely dried in a current of air at a temperature not exceeding 35° to 38° C. The characters given are: colour, a pale brown; odour, faint; taste, pleasantly bitter taste of hops. A good yeast causes fermentation in from twelve to fifteen minutes in three times its weight of 10-per-cent. sugar solution, at a temperature of 30° C. Iodine solution should not give a blue colour with yeast.—(*Bulletin des Sc. Pharm.*)

EXPORT TRADE.

THE Publisher of the *C. & D.* has compiled some striking figures about the exports of British-manufactured goods by the drug and allied trades during 1901. He shows that the values were as follows:—

	£
Aërated waters	145,397
Brushware	155,281
Candles	432,707
Chemicals and chemical and medicinal preparations	8,942,109
Confectionery, jams, vinegar, and sauces	1,539,674
Glass bottles	440,710
Indiarubber-manufactures	1,086,841
Paints and materials	2,009,572
Salt	509,769
Seed oil	1,157,574
Soap	999,420

These do not include perfumery, varnishes, and other druggists' goods not separately enumerated, nor 3,885,242*l.* worth of colonial and foreign produce of kindred character also exported in 1901. This is in connection with the Merchant Shippers' Issue of THE CHEMIST AND DRUGGIST on March 8. We strongly advise all dealers and manufacturers of these classes of goods to insert announcements of them in the Issue. Instructions as to announcements should be sent as early as possible to The Publisher of THE CHEMIST AND DRUGGIST, 42 Cannon Street, London, E.C.

Summary.

THE LATEST STORE-PRICES are given on p. 220.

A NEW OPIUM BILL is in the U.S.A. Senate (p. 224).

SCOTCH LITIGATION reported on p. 240 is more interesting than usual.

INFANTS'-FOOD MAKERS will find a case that especially interests them reported on p. 218.

TWO VACCINATION BILLS are now before Parliament—one *anti*, the other anti-*anti* (p. 231).

A NEW YORK MAN thinks he has a way of making oil of lemon that will beat everything (p. 224).

IN KENTUCKY doctors may only dispense their own prescriptions, not those of others (p. 224).

PARTICULARS of the American Exhibition to be held in the Crystal Palace are given on p. 218.

A LONDON DOCTOR has been accused of failing to notify a case of smallpox which infected twelve others (p. 218).

SOME FACTS about Sir Howard Vincent's Bill to restrain the false marking of foreign goods are given on p. 231.

A CORRESPONDENT submits labels for two kinds of licoricine one for chemists' sale, the other by grocers (p. 243).

THE numerical position of the chemical and drug trades as revealed by last year's census is the subject of a note on p. 235.

SOME USEFUL HINTS as to meeting emergencies in vitriol-works, by Mr. F. J. R. Carulla and others, are given on p. 229.

THE PAPER and discussion on pharmaceutical education at the Manchester Pharmaceutical Association are fully dealt with on p. 225.

MR. ROBERT DRANE'S views on the "patent" medicine trade and a sarcastic handbill *re* Bunkum & Co.'s latest are printed on p. 227.

WILLSON'S PATENT for the electrolytic production of calcium carbide has been found by the High Court of Justice not to be valid (p. 239).

FURTHER particulars in regard to Mincing Lane firms who have failed consequent on Rogers Brothers' suspension are given on p. 240.

A HULL RETAILER, trading as a chemist, has been fined for sending a child under age for brandy required for medicinal purposes (p. 240).

THE EXACT ADDRESS on the poison-label is a matter of more importance than the Portsmouth Magistrates realise, says "Xrayser" (p. 233).

THE NEW POISONS SCHEDULE recommended for New South Wales is printed on p. 223. It forms an interesting contrast with the home schedules.

THE Cambridge Pharmaceutical Association have difficulty in carrying out their early-closing scheme on account of a few chemists holding out (p. 227).

"A LEGEND OF BLOOMSBURY SQUARE" is this week's contribution from Mr. Reynolds's pencil, and it illustrates a thing that not infrequently happens (p. 232).

POTASSIUM CHLORATE explodes by heat alone. Such is the opinion of Dr. Dupré and M. Berthelot, but other experts do not altogether agree. See the discussion on the subject (p. 228).

MR. WILLIAM MARTINDALE was found dead in his study on Sunday morning. References to his career (p. 234) and to his pharmaceutical accomplishments (p. 237) are made in this issue.

MR. BOUTALL, the owner of numerous pharmacies in London, has been fined for selling unstamped proprietaries—an omission which the Inland Revenue authorities are sharply looking after at present (p. 239).

MR. DOBBS, of Worcester, is quite active again in regard to packed poisons. We quote from a letter which he is sending to various journals, and also print other public references to the Poisons Committee (p. 236).

FLUCTUATIONS in the markets include a further drop in lithia citrate. Cod-liver oil is firmer; oil of star anise is dearer, and so is senega and Para tonka-beans. Both sulphate of copper and nitrate of soda have advanced (p. 245).

A QUESTION put to the Home Secretary in regard to the Glasgow doctors who came into contact with the General Medical Council on the shop question did not receive a very sympathetic reply. Question and answer are on p. 231.

B—C

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

On January 27, Mr. Wilfred Crow, chemical-manufacturer, Barking, was injured by the explosion of an oil-tar tank.

An inquest was held at Portsmouth on February 3 on the body of Charles Broxholm, described as a retired chemist, aged 76, who fell downstairs and was killed.

At Chelmsford on February 4, William Thomas Mynors (42), described as a dispenser, was sentenced to twelve months' imprisonment with hard labour for bigamy.

Maidstone Town Council has accepted the tender of Messrs. Stonham & Son, chemists and druggists, Maidstone, for the supply of disinfectants to the value of 159*l.* 19*s.* 9*d.*

Mina Stuart Simpson, the young lady charged with obtaining goods by false pretences from Mr. E. Grisbrook, chemist, Windsor, has been bound over under the First Offenders Act.

The monthly Council-meeting of the Pharmaceutical Society of Great Britain, which was to have been held on February 5, was postponed till February 12, owing to the funeral of the late Mr. William Martindale.

Mr. Walter Walwin, chemist and druggist, Southgate Street, Gloucester, has secured the contract to supply the city with disinfectants; and Messrs. Sadleir & Slinn, Northgate Street, will supply the drugs for the Stroud Road Hospital in that city.

At an inquest held at Senghennydd on January 31, touching the death of Mr. M. E. Price, who traded as a chemist in that place, and who was discovered on his premises in an exhausted condition (see *C. & D.*, February 1, page 211), the jury found that deceased died from alcoholic-poisoning.

The Holborn Board of Guardians has resolved to employ a dentist for the schools, and to purchase a dental chair and operating-engine of Messrs. Claudius Ash & Sons (Limited), 56 Broad Street, Golden Square, W.; also to purchase a case of *post-mortem* instruments of Messrs. S. Maw, Son & Sons.

The annual dinner of the Commercial Travellers' Benevolent Institution will take place at the Hôtel Métropole, Whitehall Rooms, on April 18, with Mr. W. B. Skinner (of Lilley & Skinner, Limited) in the chair. The Secretary (Mr. Leonard Courtney), 11 Ironmonger Lane, Cheapside, E.C., will supply all particulars.

Three cattle died suddenly on a Salop farm last week. Anthrax was suspected, but an examination showed that the blood was free from anthrax bacilli. A veterinary surgeon thereupon made a *post-mortem* examination and found an irritant poison, which is said to have been caused by the animals eating horseradish growing in the pasture.

In the Nottingham County Court last week, Gordon Clarke, dentist, of Nottingham, sued Captain Arthur Sowes for 9*l.* 9*s.* for fitting and making a set of false teeth. Defendant contested the case, saying that the teeth pressed unduly on each side of the mouth and caused pain. The Judge gave him the verdict, and the plaintiff leave to apply for a new trial.

The case of Valentine *v.* Valentine Meat-juice Company came before the House of Lords last week in the form of a petition by the respondents that the cost of the appeal (including the costs of this and two other incidental petitions) might be taxed and paid out of 200*l.* paid by the appellant into the Security Fund of the House, the balance to be paid to the Official Receiver in Bankruptcy. The petition was referred to the Appeal Committee.

American Exhibition.

We have already mentioned the fact that this year an American Exhibition is to be held at the Crystal Palace from May to September, 1902. The Exhibition is designed to demonstrate the commercial development which has taken place in the United States during recent years, and from a conversation that we had the other day with Mr. W. H. Fassett we learn that considerable interest has been awakened in the United States in regard to the exhibition. The exhibits will be placed in the Central Transept of the Palace, in the South Transept, and in several special Exhibition Courts, provision also being made for heavy machinery in spaces to the south of the Great Orchestra. There will be eleven classes of exhibits, and those which are allied to pharmacy will include Class III. (prepared food-products), Class IV. (pharmaceutical and kindred preparations, surgical appliances, drugs, perfumery, &c.); Class VI. (hygiene, sanitary appliances, &c.); Class VIII. includes photographic and optical apparatus and material, and Class IX. is devoted to education and science. Upon the Advisory Committee are Messrs. J. Morgan Richards, F. C. Van Duzer, W. H Fassett, and F. M. Fisk. Mr. Morgan Richards is the Chairman of the Advisory Committee in Class IV., and there is every likelihood that the exhibits in that Class will be specially attractive. Inquiries in respect to the exhibition may be addressed to the Assistant Commissioner of the Commercial Section, Mr. W. B. Bancroft, 20 Victoria Street, S.W., or the Commissioner for the United States, Mr. Alfred H. Post, Produce Exchange, New York.

Smallpox in London.

At Bow Street Police Court, London, on January 31, Dr. John Colin Matheson, 11 Soho Square, was summoned for failing to notify to the Medical Officer of Health that one of his patients was suffering from smallpox. The Holborn Borough Council instituted the proceedings, and on their behalf Mr. H. C. Jones stated that Dr. Matheson was called on December 20, 1901, to attend a man who had a rash. The man gradually grew worse, and three days later Dr. Matheson consulted some medical friends who suggested it was smallpox. The man died without the sanitary authorities being informed of the matter. In consequence, it was alleged, twelve persons who came in contact with the case took smallpox, and three of them died. The accused, on December 22, told the housekeeper of the Westminster Dispensary (of which he was medical officer) that he thought he had a case of smallpox, and on the following evening he sat down beside the housekeeper's daughter, put his arm round her neck and said, "I have just been attending a case of smallpox: now you will catch it." The girl, only 18 years of age, was seized with smallpox, and died. Evidence was called in support of this statement, and for the defence Mr. Bodkin submitted that accused's conduct was consistent with his view that it was not smallpox that the man had. The case was adjourned. The hearing was resumed on Tuesday, February 4, when the evidence of the accused, of Dr. Washbourne (physician to Guy's Hospital and also to the London Fever Hospital), and others showed that the case was one of hæmorrhagic smallpox, and sometimes it was almost impossible to distinguish it from *purpura hæmorrhagica*. Mr. Fenwick (the Magistrate) said there could be no doubt that the man died from smallpox, but the question for him to decide was, Did the defendant know the nature of the disease from which the man was suffering? He thought there was a doubt about this, and the defendant ought to have the benefit of that doubt. The summons would, therefore, be dismissed.

The Doctor, the Chemist, and the Infant's Food.

At an inquest held at Hammersmith on February 4 on the body of Nellie Eva Lonsdale, aged 2½ months, the mother said she was obliged to feed the baby artificially, and for a fortnight gave it barley-water and milk. That made it sick, and she then gave it infant's food, obtained from Mr. Strode, chemist, which was recommended as being good. The child had been wasting away, but began to pull up again, and the chemist's food was the only thing that seemed to do it any good. The child was afterwards found dead in bed. Dr. Solomon Peake said death was due to pneumonia and wasting, the latter being the result of the former, together with improper feeding. Mr. Thomas Strode, chemist and druggist, 88 Askew Road, Shepherd's Bush, W., was shown a tin of "cooked and malted food for infants."

The Coroner (Mr. Luxmoore Drew): Do you prepare this food?—No, sir; it is made up for me.

Digitized by Google

The Coroner: It is printed on the label, "Prepared by T. Strode, M.P.S., dispensing chemist and surgeon-dentist, 88 Askew Road, Shepherd's Bush."—It should be "made for." It is supplied to a lot of chemists, the manufacturers labelling and wrapping it up for them.

The Coroner: It is a malted and cooked food?—Yes; I have the analyst's report on it.

The Coroner: This does not state the ingredients. It contains 15 per cent. of albuminoids. It is a farinaceous food—principally flour, I suppose?—Yes, I think so.

Dr. Peake, recalled, said farinaceous food, as described by Mr. Strode, was unfit for a child 2½ months old. It ought not to be given under 6 months of age.

The Coroner: It says here on the label (reading from the tin), "This delicate food is prepared especially for infants, and possesses every requirement for children brought up wholly or partially by hand"—that is not correct?—The Doctor: No, sir.

The Coroner: What should be the sole food for a child of that age?—Milk. Farinaceous food would cause wasting.

The Coroner (to Mr. Strode): I should think it would be as well, Mr. Strode, to alter this label.

Mr. Strode: Thousands of children have been brought up from birth on this food, and I have never seen any ill effects.

The Coroner: Does it do any good—does it nourish them?—Yes, sir. I think the most delicate child could digest that food.

The Coroner: It is the doctor's opinion I must accept before that of a chemist, who knows nothing about the treatment of diseases.

The jury returned a verdict that the death from pneumonia was accelerated by improper feeding.

L.A.P.T.

The annual report of the London Association for the Protection of Trade states that 729 new members were elected during the year. This does not represent a net increase, as several secessions have occurred, but a steadily increasing growth is prevalent. In the debt-recovery department 139,449*l.* was recovered out of a total of 247,387*l.* applied for. Members get free legal advice on matters connected with their trading operations, and during the past year 37,925*l.* has been recovered by actions in the Courts. There are now eighty-four societies in association throughout the United Kingdom, with an aggregate membership of about 50,000. Pharmacy is represented on the committee of management by Mr C. J. Park, pharmaceutical chemist, Plymouth, and by Mr. Henry Gadd, of Evans, Gadd & Co., Exeter and Bristol.

Institute of Chemistry.

The following have passed the final A.I.C. examination:—Branch "A" (mineral chemistry).—A. G. Armstrong, W. W. Lumsden, A. B. Shepherd, B.Sc. (Vict.), and W. F. Sutherst, Ph.D. (Geneva). Branch "D" (organic chemistry).—G. Clarke, jun., E. D. M. Neumann, B.A. (Oxon), Ph.D (Göttingen), H. A. D. Neville, B.Sc. (Lond.), G. M. Norman, A.R.C.Sc., B.Sc. (Lond.), W. H. Nuttall, W. H. Peters, and V. W. Theobalds. Branch "E" (analysis of food and drugs, including an examination in therapeutics, pharmacology, and microscopy).—F. W. F. Arnaud, J. Evans, J. E. Jenkins, W. Partridge, S. O. Richmond, and E. C. Spurge.

Birmingham Notes.

Several Birmingham pharmacists who knew Mr. Grice very well were struck and particularly pleased with the good photo. of him which was exhibited in the Winter number. He served his articles with the well-known Edmund Street firm, and was later a pupil with Mr. F. H. Alcock.

The Birmingham Photographic Society is to hold an exhibition at the Royal Society of Artists, New Street, from February 22 to March 1. Silver and bronze medals and certificates are amongst the awards. The Secretary is Mr. H. Vooght-Cornish, Norwich Union Chambers, Congreve Street, Birmingham.

Between 9 and 10 P.M. on February 4, Messrs. Boots' shop, Broad Street, was entered by burglars. Mr. Chambers, the assistant, returned and found two men there, who bolted with 3*d.*, leaving their overcoats behind with their addresses in. They were found at their home, arrested, charged, brought before the Magistrates, and remanded for a week.

The infamous-conduct incident of the Medical Council has caused some alarm among the many charitable dispensaries which are in this city. Mr. Josiah Austin, chemist, Hon. Secretary of one of these, in a speech at the annual gathering, feared that unless they altered the terms of their prospectus their medical officers would have to resign, and were, indeed, contemplating the step.

There appears to be at present a great desire on the part of young and unqualified pharmacists to obtain situations in the wholesale, their chief objects being to obtain shorter hours and a knowledge of wholesale methods. The wholesaler, however, is very chary about them, as it has been found when they have acquired dexterity and knowledge in certain departments they offer their services to other wholesalers at an advanced wage. Quite a score of such changes have taken place in Birmingham within the last few months.

Some time ago experiments were carried out at the Central Fire-station, Birmingham, with a fire-engine, by which a mixture of bicarbonate of soda, sulphuric acid, and water is thrown on a conflagration. On January 27 further demonstrations were made, but the carbonic-acid gas, the result of the combination, was contained in a separate cylinder, and this was connected to a fire-engine boiler capable of holding about 40 gals. A pressure of 120 lbs. was maintained for some time, and a good stream of water delivered for ten minutes. The jet is a small one, and is intended to stop a fire at the outset. It is expected that the method will be adopted by the Birmingham brigade.

An Indigestion-cure.

The preliminary inquiry into a charge of company-fraud, which has been going on for some weeks, closed on January 31 at Bow Street with the committal for trial of Charles F. Way, once a drysalter in High Holborn. With him worked one Barrow, as partner. It was stated that certain persons were induced to invest money with Barrow and Way as a condition precedent to employment in the business. The concern was registered as a limited company, with a capital of 15,000*l.* In seven weeks' trading stock was bought to the value of 70*l.*, and the wages bill for that period came to 218*l.* The vendors valued some recipes, one of which was a simple indigestion-cure, at 2,000*l.* as a fair selling-price to the company. Along with Way in the dock stood Joseph Hall, one of the employés alleged to have helped in the conspiracy. But Sir Albert de Rutzen was quite certain Hall had been a dupe, and he was liberated. Barrow has not "faced the music."

Leeds Notes.

The sum of 284*l.* 19*s.* was paid for drugs for the Leeds Women and Children's Hospital last year. The new hospital, which is expected to cost 24,000*l.*, will be ready for patients at the end of the present year. About 20,000*l.* has already been collected towards the cost.

Last week, at the Otley Police Court, Robert Molesworth, described as a chemist, of Menston, was summoned for having travelled on the Midland Railway without a ticket. The defendant was not present, and Mrs. Molesworth attended the court and explained that her husband had been called away to Manchester on special business, and she asked that the case be adjourned. This was accordingly done.

At the Grocers', Bakers' and Confectioners' Exhibition opened in Leeds on Wednesday, very effective displays are made by Messrs. Goodall, Backhouse & Co., wholesale chemists, &c., and Messrs. J. Barraclough & Co., manufacturing chemists. The country visitors to the exhibition were much diverted by the legend "Shake the bottle" on Messrs. Goodall, Backhouse & Co.'s pair of show Yorkshire Relish bottles, measuring 15 feet in height, and about 6 feet in circumference. The firm offered a substantial special prize in the competitions.

The death under singular circumstances of Mr. E. Austin Padgett (23), trading as a chemist at Guiseley, was investigated by the district Coroner on February 3. According to the evidence of his wife, Padgett was found lying on the

Digitized by Google

floor of the cellar, as though he had fainted. Dr. Cheetham, who was sent for, stated that when he was called in Mr. Padgett admitted that he had taken strong hydrochloric acid, but whether accidentally or intentionally witness did not know. He gave a certificate to the effect that Mr. Padgett died from alcoholism, accelerated by shock caused by drinking some acid. The jury found a verdict in accordance with the medical evidence.

Poisoned by Insecticide.

At Stoke, on January 30, an inquest was held on the body of Thomas Bullock (80), who died fifteen minutes after swallowing 2 oz. of an insecticide used for vines. The poison had been obtained from a gardener, who had purchased the stuff (called "XL all") at a florist's at Newcastle-under-Lyme. It was supplied in a brandy-bottle with the "brandy" label kept on. Deceased did not know it was poisonous, but the infirmary doctor said the deceased died from nicotine-poisoning. The seller did not know it was a poison; and the jury requested the Coroner to communicate with the authorities pointing out the danger of selling the insecticide without labelling it poisonous.

Store-prices.

The following additions are noted in the price-list of the Army and Navy Stores for February:—

Aseptic vaccination lancets, 2*s.* 9*d.* each; Bennett's patent massage and toilet-stones, 1*s.* 3*d.* each; Velva, 3*s.* per bottle; "Mabelian" fairy toilet-powder, 3*s.* per box; fly-papers (for South Africa) in packets of 150, 6*s.*; binaural stethoscopes (folding), 7*s.* 6*d.* each; clinical thermometers plain (2 min.), 1*s.* 6*d.* each; (60 secs.), 1*s.* 9*d.* each; flat (2 min.), 2*s.* each; magnifying (2 min.), 2*s.* each; (60 secs. with certificate), 4*s.* 3*d.* each; (30 secs. with certificate), 5*s.* 3*d.* each; veterinary, 1*s.* 6*d.* each.

Chlorinated lime in 1-lb. tins has been discontinued.

A Way out of a Difficulty.

The Holborn Board of Guardians, desirous of compensating their dispenser for good services, asked the Local Government Board to allow them to increase his salary. This was refused because the maximum salary had been reached; but the Guardians decided at their meeting on Wednesday, February 5, to award Mr. Norman Colbeck, their dispenser at the Highgate Infirmary, a gratuity of 10*l.*, "because of his work having increased greatly during the winter months." Mr. Miller, Chairman of the Infirmary Committee, said they did not want to lose a good dispenser for the sake of 10*l.*, and if the Local Government Board would not sanction it the Guardians must give it.

Huddersfield Chemists' Association.

A meeting was held on February 4, the President (Mr. R. C. Walshaw) in the chair. The business was principally in connection with the dinner to be held on February 26. It was decided to welcome any members of the craft residing in Huddersfield and the neighbouring towns who desire to be present. The President of the Pharmaceutical Society and Mr. Glyn-Jones will be there. Tickets, price 3*s.* 6*d.*, may be obtained from the President, Mr. R. C. Walshaw, or the Secretary, Mr. J. W. B. Johnson, 4 Birkby Hall Road, Huddersfield.

Camwal and the Bicycle.

At the Clerkenwell County Court on February 3, before his Honour Judge Edge, Joseph Jacob Humphreys, insurance-agent, 44 Devonshire Place, Brighton, sued Messrs. Camwal (Limited), mineral-water manufacturers, to recover the sum of 21*l.* damages in respect of personal injuries and damage done to his bicycle through being run down, it was alleged, by one of defendants' vans on October 29 last. After hearing both sides the jury found for the defendants, and judgment was entered accordingly. Mr. Cababe, for the plaintiff, applied for a new trial, on the ground that the weight of the evidence was manifestly in favour of a verdict being given for plaintiff. The Judge: I might have given a different verdict if I had been the jury; but I cannot go behind their finding. They have exercised their right, and I do not feel inclined to alter it.

Poisoning Cases.

We have received reports of ten deaths from poison since our last issue. In two instances oxalic acid was taken simultaneously by two brothers (cabmen) in London.—Robert Williams (19), a chemist's apprentice at Bury, died there from prussic-acid poisoning.—On February 5, Dr. Danford Thomas, the Marylebone Coroner, held an inquiry regarding the circumstances of the death of Mr. W. Martindale, who was found dying in his study on Sunday morning. The evidence, including that of Dr. Sydney Ringer, showed that deceased had been suffering from overwork and mental depression; death was due to prussic-acid poisoning.—At an inquest on the body of Alfred Pearson (58), a Birmingham hairdresser, who had died of chlorodyne-poisoning on February 3, a witness named Lowe, who stated that he managed one of Boots' drug-stores, said he supplied the deceased with the chlorodyne, on his explaining that he required it for neuralgia. In this case the Coroner agreed with the foreman of the jury that, although the chlorodyne was sold in a blue poison-bottle, the label was not sufficiently distinct.—A dock-labourer in Liverpool, who had been drinking for some time, ended his life on Sunday with carbolic acid; and a man in Salford died from the same poison.—An old woman in Cockermouth Workhouse drank Jeyes' fluid last Saturday night and died.—Edwin Shand, a medical assistant, was last week found dead on Hampstead Heath. He had taken morphine.—At Downham a Coroner's jury has returned a verdict of death by misadventure in the case of Mrs. Crawford, who had been in the habit of taking a mixture containing laudanum, and one night took an overdose of it.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Mr. Frank J. Gill, representative for the Apollinaris Company (Limited) in Ireland, has removed to more central offices at 49 Middle Abbey Street, Dublin.

Messrs. Tom White (Harker, Stagg & Morgan), H. C. Grimes (Evans, Liverpool), and Frank J. Gill (Apollinaris Company, Dublin), have qualified as life-governors of the Commercial Travellers' Benevolent Institution. At the recent annual reunion of the association they each subscribed the sum of 10 guineas.

Lost Recoupment.

The Sligo Guardians at their meeting on January 25 again referred to the recoupment question (*C. & D.*, February 1, page 185) when a guardian said the loss was a very serious one, and that they often talked more over giving 1*s.* 6*d.* in relief than they did over the loss of this money. The matter was to be discussed fully at the next meeting.

The Water was Pure.

A libel-action was heard on January 27, 23, and 29 in the Dublin Nisi Prius Court in which allegations were said to have been contained in a communication to a local paper by an Enniscorthy mineral-water maker that the water used by a rival was impure. The plaintiff brought evidence that the water he used in his mineral-water factory had been analysed and found pure by Sir Chas. Cameron and Professor Tichborne. The jury found the water was good and pure, and returned the damages as one farthing.

Insurance Dispute.

In the King's Bench Division, Dublin, on January 31, an application for the appointment of an arbitrator was made in the case of the Ocean Accident and Guarantee Corporation and Mrs. Murray, widow of the late W. B. Murray, pharmaceutical chemist, St. Stephen's Green, Dublin, who claims 1,000*l.* under a policy of insurance. One side wants a lawyer appointed as arbitrator and the other a doctor. The case was adjourned till February 3, when the Master of the Rolls consented to hear the action, both parties offering to submit to his Lordship's jurisdiction.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Dundee Medical School.

The authorities of the University College, Dundee, with the sanction of the Court of St. Andrews University, have approved of plans and signed contracts for a new building to be erected in the College grounds at Dundee. It will cost 20,000*l.*

For Pastures New.

On January 29 the members of the Aberdeen Pharmaceutical Association and other friends of Mr. James Clark, pharmaceutical chemist, Aberdeen, entertained him to supper in Kennaway's Rooms, Aberdeen, on the occasion of his departure for London to take up a position with Messrs. Burroughs Wellcome & Co. The Association presented Mr. Clark with an illuminated address, while a travelling-bag and a hand-bag for Mrs. Clark were presented by his personal friends. Mr. Clark has been in business in Aberdeen for about eight years.

Glasgow Notes.

A nurses' subscription dance—the first function of the kind in Glasgow—was held last week. All the leading hospitals were represented, and the affair was a great success.

The chairman of the recent annual meeting of the Eye Infirmary called special attention to the enormous number of cases treated during the year—21,549—and to the wide and liberal support given to the institution by working men.

Two years ago the Volcanic Aëration Company, of 203 Great College Street, London, N.W., secured from the Glasgow Corporation a contract for the supply of aërating-machinery to the Belvidere Hospital. The plant then laid down has proved so satisfactory that the company have just received another order from the Corporation for a similar erection at Ruchill Hospital.

On February 1 fire broke out in the warehouse of Mr. R. Suttie, druggists' sundriesman, 44 and 46 London Steet. It started in the basement, and, spreading through a hatchway to a store containing chemicals before it was extinguished, damage amounting to 800*l.* was done. The damage is covered by insurance. Two of the firemen in attendance were burned about the face, and had to receive medical treatment.

This is the season for taking or retaking premises for the ensuing year. Several doctors have given up their shops, and are going to keep "offices" henceforward. A committee, appointed by shop-keeping doctors, are engaged in drawing up a list of scheduled poisons and their preparations. It is said that they have profited greatly by the list in THE CHEMISTS' AND DRUGGISTS' DIARY for 1902. But they are nonplussed by the term "poisonous alkaloid" and the problem as to what is, or is not, a "preparation."

At a recent meeting of the Govan Parish Council, Mr. A. Stewart complained of the present state of the Partick Dispensary. He said "the bare appearance of the place and the cold chill (*sic*) of the asphalt floor led him to the conclusion that some landed proprietors were better to their dogs than the Council were to their poor." It was explained that the Council had just acquired the premises, and that the venture was still in the experimental stage. Steps would be taken to make the place more comfortable.

At a meeting of the Scottish Section of the Society of Chemical Industry on January 28, Mr. C. A. Fawsitt read a paper on "Peroxide of Hydrogen," and "Notes on Japanese Coal" were submitted by Dr. W. C. Anderson and J. R. Henderson. A flippant local journalist recommends students of chemistry desiring to study the oxidising action of H_2O_2 on the human hair to take front seats in the stalls at the pantomime, and pay special attention to the *coiffure* of the ladies of the ballet.

Another sign of the times. English Lady Customer: "Is this a chemist's shop or a doctor's, please?" Doctor-pecked Chemist (briskly): "A chemist's, ma'am." Customer: "I'm so glad. I'll take a penn'orth of paregoric. It's so queer here in Glasgow; you can't tell which is which, and I'm told the doctors are not allowed to sell poisons. I know I've been in several doctors' shops, and the young men were quite rude. They actually asked me 'Wnat's your little game?' and one must have been mad or drunk, for he said, 'I'm not having my photograph snapshotted just now, thank you.'" It dawns on the chemist that his customer had fallen under suspicion of being the notorious "female spy" armed with a detective-camera, who has figured in so many local prosecutions.

From Chemist to Dock-labourer.

Proof was led before Lord Low in the Court of Session on January 31 in an action of divorce by Robert Mathieson, butcher, Aberdeen, against Helen Wood or Mathieson, Leith, and also against John Ellis, formerly chemist, now labourer, also residing at Leith. Ellis, in evidence, admitted that since last November he had been living with Mrs. Mathieson in Leith. Decree of divorce was granted, with expenses against the co-defender.

Photographic Exhibition.

The exhibition of photographs organised by the Dundee and East of Scotland Photographic Association was opened on January 31 at Dundee. The collection contains over 550 exhibits, divided into thirteen classes. The gold medal in Class 1, restricted to pictures which have taken a first award in an open exhibition, has been awarded to Mr. Archibald Cochrane, Glasgow. Sir William Ogilvy Dalgleish, of Errol, opened the exhibition. It is interesting to recall the fact that at Rossie Priory Sir David Brewster repeated Fox Talbot's experiments in 1850, Lord Kinnaird and Dr. Graham, of Errol, being present. Dr. Graham was an enthusiast in photography, and had a good deal to do with the first photographic exhibition held in Dundee, in 1854. The late George Lord Kinnaird once held that James Watt, the inventor of the steam-engine, discovered the principle of sun-pictures, but that, on the earnest request of the miniature-painters of the day, Watt refrained from making his discovery public.

The Tippling Act.

This Act was quoted in defence of an action in the Arbroath Sheriff Court on January 29, brought by James Jack, pharmaceutical chemist, Arbroath, against Mrs. Margaret Rennie or Francis and her husband, James Francis, for a debt amounting to 7*l.* 4*s.* 11*d.* For the defence, it was objected, on behalf of Mrs. Francis, that the bulk of the account was for whisky, brandy, and wines supplied in small quantities and not delivered at her residence, and so came under the Tippling Act. Mrs. Francis stated in evidence that for some years her husband got a good deal of drink from Mr. Jack, and she went twice to Mr. Jack and told him not to give her husband any drink. Mr. Jack stated, on the contrary, that after Mrs. Francis stopped her husband from getting goods a new account was opened in 1898, and the account had been kept in Mrs. Francis's name ever since. He understood that the goods were supplied for medicinal purposes, and that Mrs. Francis had a separate estate. Sheriff Lee held that Mrs. Francis had not pledged herself that the goods would be paid out of her estate, and assoilzied her, giving decree against the husband.

Imitation Tobacco.

In the Court of Session, Edinburgh, on February 1, Lord Stormont Darling, closed the record in the action by the Crown authorities against David Wilson, Dundee, and Robert S. Baxter, Broughty Ferry, for having in their possession imitation tobacco made from wood. Mr. Baxter is the inventor of the stuff, which is called cellinite. It was used for making substitutes for corks, linoleum, roofings, waterproofing, special composition soap, and in an evil hour a paragraph in a paper suggested to the defendants that it could be made into cheap cigarettes. They wrote to a few tobacco-manufacturers, and among others Messrs. Wills, of Bristol. Messrs. Wills replied stating that they would have pleasure in handing over the letter to the Inland Revenue, and the replies received from other tobacco-manufacturers

Digitized by Google

were also not encouraging. Later they heard from a gentleman in Bristol who said he would be in Dundee on November 2, when he wished to see Mr. Wilson with reference to the letter sent to Messrs. Wills. Meanwhile Mr. Baxter called upon an Excise officer in Dundee, who read to him the first few sections of the Tobacco Act, showing that it is illegal for tobacco-manufacturers to use ground wood, but did not, the defenders state, read the eighth section, nor inform Mr. Baxter that it is illegal for anyone to have in his possession ground wood stained to resemble tobacco. In ignorance of that they exhibited the imitation tobacco, and it was seized. The further hearing of the case is down for February 20.

French News.

(From our Paris Correspondent.)

POISON IN THE SAUCE.—A new cook engaged at a country mansion in a French provincial town accidentally put some arsenic, intended for rat-poison, in a fish-sauce last Friday. There were a dozen guests, and all escaped serious consequences by drinking milk as an antidote, except one; he tried warm water instead of milk, and died.

DR. GALIPPE, the director of one of the Laboratories at the Paris Faculty of Medicine, was elected a member of the Academy of Medicine last Monday. The new academician is a pharmacist, but has also taken his degree as Doctor of Medicine, and studied dentistry. He has specialised himself for treating affections of the mouth, but in the course of his long career he has studied a large number of questions connected with therapeutics. He was the first scientist to prove that salts of copper are almost innocuous. Before his works on the subject were published, copper and its derivatives were considered to be violent poisons. In 1874, a herbalist named Moreau, of St.-Denis, near Paris, was executed for a crime he could not have committed, and tradesmen were prosecuted and ruined for frauds they knew nothing of. It was Dr. Galippe who was able to establish in an indisputable manner the extent of the misunderstanding prevailing regarding salts of copper. Amongst Dr. Galippe's works are two books on bread considered from a hygienic point of view, a monograph on micrography, and numerous papers on bacteriology and parasitology.

A TROUBLESOME HALLUCINATION.—Jean Boulegue is employed as porter and laboratory-assistant at a pharmacy in the rue de Sèvres, Paris. In a misguided moment he was prompted to act the part of the good Samaritan a few nights ago, but now he has an impression that the *rôle* is played out, and does not pay. Jean slept on the premises, and it was his duty to open the pharmacy; so that when M. Tissot, one of the assistants, arrived at his usual hour, and found the place closed, he was surprised, but was soon informed by the neighbours that the *garçon* had been arrested on the previous night for attempted murder. He had no difficulty in learning the particulars, which were graphically given as follows:—It was 1 A.M., and two *sergents de ville* passing down the street heard cries for help coming from the passage of the house where the pharmacy is. The next thing was that the door was thrust open and a man, apparently stark mad, rushed out, wielding an axe. The policemen followed promptly, and disarmed the man. "I have just escaped assassination in the pharmacy," he shrieked, "and there are six of them." Making his way into the laboratory, one of the policemen found Boulegue sitting quietly, but apparently rather dazed. He submitted peacefully to the formality of arrest, and was taken to the police-station. Questioned there as to what it all meant, Boulegue was incapable of giving an intelligible reply; but the complainant hastened to supply full information with volubility and much gesticulation. "I was in a cab just before midnight, and caught one of my hands in the door when closing it. Shortly after I went into a *café*, where the prisoner, who was a stranger to me, was sitting. He offered to bandage my hand, and I accepted gladly, accompanying him to the pharmacy in the rue de Sèvres. The bandaging over, he offered me a drink, and we had absinthe and Madeira wine. When I wanted to leave, the prisoner muttered something about having lost his keys, and asked me to go out by an underground passage leading from the cellar; but, on looking down the narrow staircase, I heard the whispering of voices and noticed the shadows of several men. Then it dawned on me that I had fallen into an ambuscade, and was likely to be assassinated; but I kept cool, and quickly rushed out of the pharmacy into a passage. There I found an axe, and, bursting the door open, I fled. The policemen know the rest." A summary investigation into the statement put quite another complexion on the dramatic story. It all resulted from an overdose of either the absinthe or Madeira wine (perhaps both) the men had been drinking. On the pharmacist's *garçon* the effect had been distinctly soothing, but with the complainant great excitability resulted, and he had become the victim (imagination aiding) of a hallucination that he had fallen into a den of assassins. Jean Boulegue was set at liberty; but his friends are convinced by his attitude that there is to-day a good Samaritan the less in the world.

Australasian News.

Chiefly from "The Chemist and Druggist of Australasia," January 1, 1902. 6d. per copy, post free.

QUEENSLAND PHARMACY BOARD ELECTION resulted in the return of the old members, with the addition of Mr. Allen, who takes the place of Mr. Denham. Mr. A. B. Chater was returned at the head of the poll.

CORRECTING THE REGISTER.—Among the names of chemists erased from the Pharmaceutical Register of Victoria are those of B. A. Nicol, 397 Hornsey Road, London, N., and M. J. Todd, Roslyn Terrace, Sunderland. The names have been removed because no answers have been received to registered letters sent to these addresses.

THE YOUKNO CASE mentioned in the *C. & D.* last week (page 187) resulted in judgment for the defendant. Mr. Justice Parker said he was not satisfied that the plaintiff's eczema was caused by "Youkno," and even if that had been proved he would have been bound to come to the conclusion from the evidence that the eczema must have been constitutional with the plaintiff, and had simply been brought out by the use of the application.

A GOVERNMENT GRANT in the shape of land has been given to the Pharmaceutical Society of Western Australia. The Under-Secretary for Lands, in making the grant of land in Wellington Street, Perth, stipulates that the Society is to relinquish the land purchased from the Temperance League and Band of Hope. The Pharmaceutical Society is ready to do this if the League will refund all monies paid for the land, which it is understood they are willing to do.

A PRESCRIBING CHEMIST.—Mr. Herbert Bingeman, chemist, of Perth, W.A., has been prosecuted under the Medical Act, 1894, for having practised medicine by medically treating the eyes of John William Thompson and prescribing a lotion for the cure of an ailment of the eyes, he not being a registered medical practitioner. The chemists called as witnesses for the defence claimed the right to treat minor ailments, and it was admitted that a chemist always has the right to render "first aid" in all cases of urgency. The Magistrate, in giving judgment, said that where a chemist diagnoses a case in any shape or form he oversteps the line of the lawful business or occupation of a chemist, and in this case he found that the defendant practised medicine. A fine of 5*l.* and costs was inflicted. Notice of appeal was given. The Pharmaceutical Society of Western Australia is to support the appeal.

THE ANNUAL DINNER of the Pharmaceutical Society of Australasia was held at Melbourne on December 4. The function was a great success. During the proposal of the toast of the "College of Pharmacy" Mr. E. N. Grimwade, as a past student at Bloomsbury Square, said the Melbourne College did not suffer by comparison with the British school. The toast of the "Pharmaceutical Society of Great Britain and Kindred Societies" was proposed by Mr. W. H. Potts, who said the British Society had recently shown great kindnesses to members of the Victorian Society. In reply, Mr. Sidney Plowman said that "good wine needs no bush," and the Pharmaceutical Society of Great Britain needs no praise.

Digitized by Google

The general and research laboratory, the unrivalled drug-museum, the library, all created by pharmacists without help from Government, were an honour to pharmacy, not only in Britain, but elsewhere. He hoped the time would come when the British Society would receive in reciprocal arrangements certificates from the whole of the Societies in the British Empire.

CUSTOMS DECISIONS.—The Comptroller of Customs has announced the following decisions:—Carbolic acid, 15 per per cent. as disinfectants; cases, spectacles, dutiable according to material, whether spectacles enclosed or not; dental goods, appliances being gold, granulated and sheet amalgam, free; cement, 20 per cent., as cements n.e.i. pellets (amadou), for drying cavities in teeth, free; rubber alloys, if not under No. 112, free; enemas, rubber, 15 per cent.; goods destroyed in bond, casks, bottles, &c., containing same, dutiable; india-rubber-solution, 20 per cent., as cement; muskinol, 20 per cent., as perfumery.; manufactures of paper, n.e.i., such as fly-papers, not being advertising matter, 25 per cent.; opium, liquid extract of, &c., dutiable either as opium, according to strength, spirit, or medicines, whichever yields highest duty; opium, solid, extract of, being double strength, 60*s.* per lb.; oil, tattoo, 1*s.* per cwt., and 15 per cent., as paints in liquid; potash, permanganate of (in bulk), 15 per cent., as disinfectants, n.e.i.; spectacle-frames, free, if not gold or silver.

POISONS SCHEDULE.—The following is the revised poison-schedule accepted by the Pharmacy Board of New South Wales, and submitted for approval to the Treasury:—

SCHEDULE A (*First Part*).

Arsenic	Ergot of rye and its preparations
Prussic acid	Laudanum
Strychnine	All poisonous vegetable alkaloids and their salts
Savin and its oil	

Second Part.

Preparations of prussic acid	Arsenical preparations, except green and other coloured paints
Preparations of strychnine	Essential oil of almonds, unless deprived of its prussic acid
Preparations of all poisonous vegetable alkaloids and their salts	Chloral-hydrate and its preparations
Cyanide of potassium, and all metallic cyanides and its preparations	Preparations of morphine
Aconite and its preparations	Red oxide of mercury (commonly known as red precipitate of mercury)
Tartar emetic and its preparations	Ammoniated mercury (commonly known as white precipitate of mercury)
Corrosive sublimate and its preparations	Nux vomica and its preparations
Cantharides, tincture and all vesicating liquid preparations of cantharides.	Carbolic acid
Oxalic acid and its preparations	Phosphorus, except red amorphous
Chloroform and its preparations	Strong spirit of salt
Belladonna and its preparations	Strong sulphuric acid
Opium and all preparations of opium or poppies other than laudanum	Strong nitric acid

This new schedule is particularly interesting to British chemists at the present time, when the original schedule of the Pharmacy Act (1868) is in danger of being whittled down.

South African News.

AN INDUSTRIAL EXHIBITION is projected in Cape Town in 1903. The general manager is Mr. Albert P. Baker, P. O. Box, 950, Cape Town, and the title of the show will be the British and Colonial Industrial Exhibition.

BUSINESS CHANGE.—Messrs. Smart & Copley, of Bulawayo, have taken over the local business lately carried on under the name of "F. J. Byrne, chemist." The branch will be under the personal supervision of Mr. Harold W. Smart.

GLASS MANUFACTURE.—There is a movement on foot to re-establish a glass factory in the Cape peninsula. Simon's Town is said to be the chosen site, and the promoters of the scheme are Messrs. Ohlson (Limited), the well known Cape brewers. Hitherto attempts to manufacture glass at the Cape have proved a failure, consequently the departure will be watched with interest.

NATAL NOTES.—The regular quarterly meaning of the Natal Pharmacy Board was held on January 9, all the members being present.—Owing to representations made to Government during last year the methylated spirit licence has been reduced from 3*l.* to 2*l.* per annum.—Mr. T. C. C. Glaeser left Durban on January 7 for the Transvaal, where he intends stirring things up in the drug trade. His address will be "Pretoria" in future.

NEW DOCTORS.—Licences have been issued authorising the following to practise as medical practitioners in Cape Colony:—George Rawdon Barton, L.R.C.P.I., L.R.C.S.I. (formerly of Dundalki Ireland); Donald Munro Maciver, M.B., B.S. (late of Melrose, Scotland); Andries Christoffel Neethling, M.B., B.S. (formerly of Edinburgh, Scotland); Arthur John Tonkin, M.B., B.S. (formerly of Manchester, England); Robert Culbertson Vernon (not on the Medical Register, 1901); Frederick Chas. Willmott, L.R.C.P., L.R.C.S. (Ed.) (not on the 1901 Register).

A CHARGE DISMISSED.—Dr. R. S. Anthony, formerly of the Claremont Sanatorium, but now practising at Cradock, was charged before a Military Court on January 7, with assisting the enemy. It was alleged that Dr. Anthony furnished clothing to Wessels, a medical student fighting with the Boers. A man named Kissen, swore that he took a letter to Dr. Anthony from Wessels, who is the doctor's brother-in-law, and that on receipt of the letter Dr. Anthony sent him to purchase 10*l.* worth of clothing and accompanied him (Kissen) to the Boers. Dr. Anthony, who is an American subject, denied Kissen's statement *in toto*, although he admitted having met Wessels, and tried to induce him to surrender. The case was dismissed.

TRAVELLERS' LICENCES.—With the beginning of 1902 comes the demand of 25*l.* from the Cape Government for a licence to represent a foreign firm in the colony and its dependencies. The representatives have hitherto always paid up not too willingly, but during the past two years the licence to trade in the interior has been more or less a farce. Now that the permit-system is at its zenith there is much heartburning over the payment. The licence has, of course, to be paid. The Cape Government sees to that. But permission to travel rests with the military, who have very little sympathy with business men, and it is quite the usual thing for a travelling representative to have his right of way challenged owing to "military exigencies." It is astonishing how much ground this phrase covers. Moreover, he may be forced to remain at a centre for an indefinite time at the whim of a commandant for daring to complain, or for some other trivial offence. The life of some of the representatives of British drug-houses must be anything but pleasant just now.

East Indian News.

BOMBAY TRADE IN 1901.—In dry aniline dyes the trade last year showed a very large expansion, the imports having been over 3,000,000 lbs., or about 50 per cent. in excess of those in 1900.

CHEMISTRY IN ANCIENT INDIA.—Dr. P. C. Ray, D.Sc., Professor of Chemistry at the Calcutta Presidency College, has an original work in the press dealing with the chemistry of ancient India. The book is illustrated, and promises to attract the attention of scientists and orientalists.

SAIGON PASTEUR INSTITUTE.—It is stated that the Pasteur Institute at Saigon has been placed directly under the authority of the Governor-General of Indo-China. Its functions include—first, the treatment of hydrophobia after dog-bite; second, the preparation of Jennerian lymph; third, the preparation and the supply, either gratuitous or on payment, of therapeutic serums and lymph of various kinds, to hospitals, to druggists, to medical practitioners, and to veterinary surgeons, in Indo China, and throughout the Far East.

Digitized by Google

American Notes.

PHARMACY AND THE DRAMA.—Mr. C. C. Matthewson, of Boonville, Ind., one of the pioneer druggists of Indiana, and one of the wealthiest druggists in the State, has donated part of his fortune for the building of a playhouse, which has been named the Matthewson Opera House.

TO RESTRICT OPIUM IMPORTS.—A Bill has been introduced into the Senate to regulate the importation of opium and fix penalties for violation thereof. The Bill prohibits the importation of opium except for medicinal purposes on penalty of a fine of $500 or imprisonment not to exceed one year.

ESSENTIAL OILS OF LEMON AND ORANGE.—Mr. E. J. Sheehan, of Utica, N.Y., is the inventor of machinery that is stated to furnish a better means of extracting oil from orange and lemon than any hitherto used. Mr. Sheehan is thinking of starting at Riverside, Cal., where he can find a plentiful supply of water and power, convenient shipping facilities, and plenty of fruit.

S. C. I. MEETING.—At a meeting of the New York Section of the Society of Chemical Industry on January 24 papers were read by Mr. Louis J. Matos on "Sulphur Blacks and their Action upon Cellulose,"; and by Mr. Wilhelm Dreyfus on "Sanitary Chemistry in Relation to the Live-stock Industry of the United States," with lantern-slide demonstrations. Mr. E. H. Gane read a note on the "Presence of Copper in Powdered Chemicals and Drugs," and Mr. J. Merritt Matthews spoke "On the Influence of Indigo red in Indigo-dyeing."

CALIFORNIAN OLIVE OIL.—The season just ended has been most satisfactory to olive-growers. The Los Angeles Olive-growers' Association expects a yield of between 50,000 and 60,000 gals. of oil, worth $2 50 per gal. The Association has 1,100 acres in bearing in the San Fernando valley. The yield at Andrew McNally's ranch near Pasadena is estimated at about 10,000 gals. of oil. The value of the crop of picked olives in Southern California is estimated at about $75,000, and the value of oil when marketed will approximate $500,000.

IMPENDING LEGISLATION.—An amendment of the pharmacy law of New York State is projected in a Bill which has been introduced into the Legislature proposing to grant pharmacists' licences to physicians without examination. This measure is very unpopular amongst druggists. Another Bill which the New York Legislature have in hand this Session deals with the adulteration of drugs, chemicals, and other substances recognised or authorised in the U.S. Pharmacopœia. Noticeable features in the proposed Bill are that it deals entirely and directly with "drugs, medicines, pharmaceutical preparations, chemicals, &c.," and that any "person, firm, or corporation" sinning against its provisions will be liable to penalty.

DOCTOR-DRUGGISTS BARRED.—The Kentucky Court of Appeals decided on January 14 that physicians have no right to fill prescriptions, and that that section of the statutes which allows only registered druggists to fill prescriptions applies to physicians as well as hod-carriers. Dr. Havious was recently indicted under the statute prohibiting anyone save a registered pharmacist from filling prescriptions. The Court found that the defendant carried on the business of retail druggist, but that as he was a regularly licensed physician he had the right to carry on the drug-business without obtaining the certificate required by law of pharmacists. The case was taken to appeal, and came up for trial before the Court of Appeals, where the judgment of the lower Court was reversed. Judge Guffy said the true meaning of the statutes is to allow a physician to compound or sell drugs to his own patients, but not to fill prescriptions sent to him by others. The decision promises to work a revolution in the rural districts of Kentucky. In most of the small towns there are only one or two drug-stores and it has been the custom of some of the physicians to carry on a small drug business.

Colonial and Foreign News.

VENEZUELAN DUTIES ON DRUGS.—A decree, dated December 6, 1901, has been issued to the effect that all drugs, medicines, and patent medicines imported through the Custom-houses of Venezuela shall pay the duties of the sixth class of the tariff (3 bolivars, or 2*s.* 6*d.* per kilo.). The decree affects articles leaving the port of shipment from December 10, 1901.

SPONGE-POACHERS.—*Laffan's* correspondent telegraphed from Key West on January 28 that eight American vessels have been taken by the British, having been caught poaching on the sponge-grounds of the Bahamas. The Customs authorities at Nassau have on many occasions complained of gross violations of the law by vessels which leave Key West, nominally for the Cuba or Florida sponge-grounds, and then go direct to the Bahama banks and gather a cargo of sponge for the West Key market.

BOGUS CHEMISTS AND DOCTORS IN TURKEY.—The Imperial School of Medicine of Turkey has reiterated its instructions to the municipal authorities for recovering all diplomas or certificates which had been held by deceased chemists, physicians, and midwives. It appears that there have been cases in which unscrupulous persons have appropriated the diplomas of deceased medical practitioners and chemists, and have practised without the least knowledge of medicine or chemistry; and it is in order to prevent a recurrence of this abuse that the School has given this order to the municipal authorities.

A NEW CURE FOR DYSENTERY.—Numerous applications from various parts of the world have been received by Mr. H. N. Ridley, Director of the Botanical Gardens of the Straits Settlements, for seeds of a plant known as *Brucea sumatrana*, the seeds of which are said to be a specific for the cure of dysentery. It is a shrub with large leaves, with numerous leaflets, and is distributed over Borneo, Sumatra, Java, Philippines, S. China and Australia. Specimens have been recorded from Perak and Pahang only. The plant is being propagated from seeds and it is hoped that in a few months seedlings will be ready for distribution.

SUPPLIES FOR SCIENCE.—The Budget of the Prussian Minister of Instruction for 1902 includes a sum of 60,000m. for fitting out the nearly completed Pharmaceutico Chemical Institute at Dahlem with apparatus, instruments, &c.; 120,000m. for the erection of the proposed building for housing the collective exhibits of German chemical industry shown at the Paris Exhibition, 1900; 10,000m. contribution to the Cancer-investigation Committee; 53 000m. to the chemical department of the Charité Hospital, Berlin, for the investigation of cancer, the superintendent of which has devoted his special attention to the subject for many years; and for the erection of three barracks, one to be utilised for the examinations, and the other two for the admission of twelve patients in each. The examination will probably occupy five years, and will include endeavours to prove whether it be possible to treat and cure cancer by non-surgical means.

PIGEONS AND PRESCRIPTIONS.—A German paper (*Die Umschau*) after having drawn attention to the fact that American doctors have used carrier pigeons for forwarding their prescriptions to chemists, and that a French doctor had adopted them for some years for obtaining messages from his patients quickly, claims the priority of the idea for Germany, describing how Mr. Wilhelm Neubronner, Official Apotheker of Cronberg (father of the present Dr. J. Neubronner, court-apotheker, Cronberg), used carrier pigeons for fetching his prescriptions from outlying districts more than fifty years ago. The prescriptions were written by the doctor in pencil on tissue paper, put into the finger of a kid glove, and attached to the pigeon in knapsack fashion, which then flew back to its cot at Mr. Neubronner's apotheke. On entering, it touched a connexion with the adjoining room, and thereby attracted attention to its return. The prescriptions were then made up immediately, and the medicines placed, together with the pigeon, in a case, and dispatched to the patient. It was only in very foggy weather that irregularities occurred.

Winter Session.

Pharmaceutical Education.

As briefly reported last week, the Manchester Pharmaceutical Association held a special meeting in the Chemical Club Room, Victoria Hotel, Manchester, on January 29, for the purpose of considering pharmaceutical education, the subject being introduced by Mr. James Grier, of Owens College. Mr. Geo. S. Woolley (the President) occupied the chair, and several educationists of the district attended to take part in the discussion.

Mr. GRIER commenced by deploring the apathy of ordinary pharmacists to his subject, although "education is the cope-stone of British pharmacy, and the personal qualification or education of the pharmacist is the safeguard of the public." He attributed this apathy to the unremunerative character of the calling. Present interest in the subject is due to the scarcity of apprentices, which at first was attributed to the raising of the standard of the Preliminary examination, but it has been shown that this is not the real cause of the trouble. The increased stringency is almost solely in the mathematical part, and every teacher of pharmacy knows that the young men who pass through his hands are very deficient in ordinary arithmetic, to say nothing of the higher portion of matriculation mathematics. The present standard, is, he considered, the minimum which a student needs in order to tackle the scientific and technical subjects of the qualifying examination. A lower standard of general education would necessitate a corresponding lowering of the qualifying examination and the abolition of the Major examination. He saw no reason why the higher-grade Board schools should not prepare boys for those examinations accepted by the Council of the Pharmaceutical Society. The Central Board school of Manchester prepares boys for the entrance examination of the Victoria University, and other higher-grade Board schools are already capable of preparing boys in all the subjects of the Preliminary except Latin, which would require to be taken as a special subject. Latin is not taught in the higher-grade Board schools because it brings no grant, which fact he strongly condemned. Proceeding, he said many young ladies who take the Apothecaries' Assistants' certificate have had a high-school education, although in their case no examination in general knowledge is required. It therefore behoves pharmacists to see that those who take the pharmaceutical qualification are not inferior to them in general education.

Turning to apprenticeship, he said it should last four years, and study should be undertaken during it. No greater mistake can be made than putting off all study until 20 or 21, and then expecting to acquire the knowledge in six months at a school of pharmacy. The following is the course of study which he outlined, presuming the apprentice has passed the Preliminary examination:—

First Year.—Elementary stage of mechanics at a technical school.

Second Year.—Elementary inorganic chemistry (theoretical and practical), and the alternative physics course of the Science and Art Department.

Third Year.—Elementary botany and organic chemistry.

Fourth Year.—Advanced inorganic and organic chemistry.

Mr. Grier was in favour of dividing the qualifying examination into two parts—viz., (1) scientific, and (2) technical subjects. An intermediate examination in the purely scientific subjects should be instituted. It should include chemistry, physics, and botany—theoretical and practical—but a candidate who has studied those matters at a recognised technical school could be exempted from that part of the examination. The same could also apply in the case of those who had passed the inter-science examination or the class examinations in these subjects at a university college. This is simply an extension of the principle which the Pharmaceutical Society has adopted in accepting certificates for the Preliminary examination; and Mr. Grier argued that it would be a great advantage to the student and to pharmacy in general. It would enable those holding the requisite certificates to go straight forward to the second part or qualifying examination in (*a*) pharmacy, including practical pharmacy and dispensing, prescription-reading, posology, and pharmacy law; (*b*) materia medica and pharmacognosy; (*c*) pharmaceutical chemistry—*i.e.*, the identification, estimation, and examination for impurities of all B.P. drugs, including assaying. To this might be added a knowledge of poisonous and fatal doses and of antidotes. He thought it would also be an improvement to have a written examination, followed by a short oral examination where necessary, and the practical work. This would ensure the subjects had been properly studied, leaving the student to decide as to when and where he would pursue his studies. There would be no cramming, because Science and Art certificates could not be awarded without attendance on classes for a full session. The student would also learn simple elementary matters before touching those of a more difficult description. Under the present system it is not unusual for students to keep going up periodically, first from one school and then another, and students often alternately fail and pass in the same subject. Sometimes a candidate of indifferent knowledge succeeds in passing at Bloomsbury Square owing to his pluck and nerve when under an oral examination, whereas a more competent student fails.

Mr. Grier admitted that his experience of pharmaceutical students at Owens College has not been so great as it might have been, as during the five years he has been there the number of students in the pharmaceutical department has never exceeded a dozen. It was difficult, he said, to account for this apathy on the part of pharmacists towards the university colleges, as it would obviously be to their advantage to be associated with them. Students have the advantage of professors who are specialists in their respective subjects, and the constant intercourse with other students who are studying the same subjects, but from different standpoints, is an education in itself. The responsible nature of the pharmacist's calling would thus be better appreciated by medical men, teachers, and the public generally. Finally, pharmacy would share with medicine and dentistry in the annual grant of 25,000*l.* which is made to the university colleges, so that by utilising technical schools during apprenticeship, and the universities later on in preparing for the qualifying examination, pharmacists would share to the fullest extent in the grants which the Government give in aid of secondary and university education, and also in any corporation or city grants. The colleges would welcome any advances and any suggestions on the part of pharmacists. There is no getting over the fact that many medical men look with suspicion on, and have very little faith in, the quality of the training which the ordinary pharmacist of the present day receives. In his (the speaker's) opinion pharmacy should be represented on the General Medical Council along with medicine and dentistry. There would then be some chance of a comprehensive Bill being drafted. It might then be even possible to come to some understanding with the Society of Apothecaries, so as to get the pharmacist's qualifying examination recognised as the only legal qualification for the dispensing of physicians' prescriptions. There is no wish to prevent any doctor dispensing his own medicines if he choose. Concluding, Mr. Grier said (referring to higher pharmaceutical education) for all practical purposes the Major examination has served its day, though it is of educational value. It is only reasonable that a man who has passed the legal qualifying examination should be free to use the terms "pharmacist" and "pharmaceutical chemist," and call his shop a "pharmacy."

DISCUSSION.

The PRESIDENT agreed with the suggestion as to the training of apprentices, and of apprentices having time for study. Also he was in accord with the suggestion to divide the qualifying examination. He thought, however, that Mr. Grier was a little too pessimistic as to the qualifications of those who pass the Minor examination. He deprecated the removal of the power of examination from the Pharmaceutical Society to other bodies. In any examination of a number of students, such as go up to Bloomsbury Square, it must of necessity occur that one or two would get through who were not quite competent; but he was inclined to think that if those examinations were delegated to another body, such as Mr. Grier had indicated, the opportunities of escape would be more numerous. He could not agree with Mr. Grier that the Major examination had served. He

Digitized by Google

knew from personal experience that a great number of the public recognised the difference between a Major man and others.

Mr. KEMP having spoken briefly,

Professor POPE stated that during the last five or six years he had been in charge of a chemistry department at one of the large London technical colleges where they had had large numbers of students who wished ultimately to go up for examination at Bloomsbury Square. They always looked upon the pharmacy students as being unsatisfactory. Their idea appeared to be to get through a certain examination and then finish with chemistry. Therefore it almost seemed as if the system in vogue in training pharmacists involved cramming. He thought the frequency with which candidates went up to the examination was an indication they had been crammed. A scheme of compulsory education would do away with such possibilities. It seemed to him that pharmacy students, as far as chemistry is concerned, do not regard their training in any way as an education. They are simply learning a business in pretty much the same way as a linendraper would learn his. If that notion could be eradicated it would be a splendid thing. If there was any real desire on the part of the pharmacy students to attend evening classes at technical schools, he was sure the technical schools would be very quick to respond; but, as a teacher at a technical school himself, he could only echo what had been said by Mr. Grier.

Professor WEISS stated that he had been associated with the pharmacy department at Owens College for ten years. He agreed with a great deal of what Mr. Grier had said, and considered his views as to examinations for pharmacists were very sound. He emphasised the fact that although only a few students attended the classes at Owens College the results were very satisfactory. He had not had the experience which Professor Pope had had with respect to technical schools.

Professor POPE: Mine were simply evening students.

Professor WEISS said their students did not come to be crammed, but went through a lengthy course of instruction. In that respect they had no doubt been more fortunate than others. But there does exist the danger of students endeavouring to become prepared for examination in too short a time. It was necessary to prescribe a due course of education with a definite time over which that education should extend. It would be a wise thing to induce apprentices to take up some subjects which would relieve them and help them in their examination. Unless it were made compulsory, apprentices would not be able to take classes of the kind suggested, as they would be generally so occupied with their work in the pharmacy. The suggested division would, from an educational point of view, be very desirable. In the Joint Board's examination for medical men a student was allowed to separate his subjects in two grooves. He took the chemistry and physics at one time, and he took the botany at another. The subjects for the Minor examination could be divided in the same way. It is doubtful whether it would be possible to make attendance compulsory at lectures with any good effect. There is probably some room for improvement with regard to examinations. Speaking for his own subject—botany—it would be better if students were examined both orally and in writing. He had had some experience in examining, and if a man had been examining students all day orally he would feel very different at the end of the day from what he did at the beginning. Those students who came at the end of the day might have a very different chance of passing from those who were taken earlier. If Mr. Grier's suggestion was adopted some part of the Major examination might be included in the second part of the Minor examination. Pharmacy is taking up part of the profession of medical-men. Therefore adequate training is required, and anything that would tend to raise the standard of examination would tend to raise the standard of the profession. If the Major examination was to be dropped, he thought some provision should be made in the university colleges to give a degree in the pharmacy line. He thought the universities would very readily take up that subject.

Mr. RADCLIFFE said that at the technical school during the last two or three years, they endeavoured to provide a rather higher course of pharmaceutical chemistry for pharmaceutical chemists, but not a pharmaceutical chemist attended. They had had chiefly chemists from colour-works who desired to know what was going on in pharmaceutical chemistry.

Mr. JOHN TAYLOR said he had never felt that the scarcity of apprentices was in any degree caused by the Preliminary examination standard being too high. He had lived among working men all his life, and their children, provided they studied Latin, were quite as well able to pass the Preliminary examination as any of those who came from a grammar-school. There was a good deal of difficulty connected with a compulsory curriculum. If it was to begin during apprenticeship, it would have to be laid down as an absolute law that the apprenticeship should not begin until the Preliminary was passed. However willing the Council of the Society might be to pass a resolution in favour of a compulsory curriculum, and however much probability there might be of getting an Act of Parliament, they would have an immense amount of opposition to overcome from the members of the trade themselves. There must be hundreds of men in the country upon whom the regulation for a compulsory curriculum for apprentices would impose a very great hardship. Then, again, the State would say it could not depute qualification functions to the Pharmaceutical Society if they were going to hand over a part of those functions to another body. The State might as well deal with the other body direct and get rid of the middleman. They must keep the matter in their own hands.

Professor R. B. WILD said the first question that had been raised was, What is the object of the curriculum and of the examination? It is to ensure that the pharmacist, when he entered upon his profession, should be in the best possible position as regards skill and knowledge. The duties of pharmacists in foreign countries are carried to very much greater lengths than they are in this country. A pharmacist abroad undertakes scientific duties which are not undertaken here. The pharmacist exercises scientific and trade functions. Whether the profession of the pharmacist would become divided on trade and professional lines no one could say, but there seems to be a tendency at the present time for him to be reduced to the position of a middleman selling American goods in their original wrappers. They could not but deprecate the tendency to utilise those preparations made up for export. What is it a pharmacist really wants? He wants a knowledge of chemistry, botany, and materia medica. He also wants a fair average amount of general education before he can enter upon those subjects. There are two ways in which efficiency could be tested. One is by prescribing a curriculum and by ensuring that a man shall attend a sufficient number of classes in a certain school and under a recognised teacher. The other is the examination-test, taking no thought as to where a man has received his training. He thought the profession of pharmacy is now in a state of evolution similar to the medical profession before the Act of 1888. He thought pharmacists should endeavour to obtain degrees, and he was entirely in agreement with Mr. Grier as to his suggestions for examinations.

Mr. YOUNG was of opinion that the raising of the standard of examination had nothing to do with the scarcity of apprentices.

Mr. GRIER then replied, saying in the course of his remarks that if a compulsory curriculum is to come about it must necessarily be after apprenticeship. In his opinion, nine months at college would be all that would be required after an apprentice had passed the scientific subjects. He would not do away with the Major examination in a sense. He suggested substituting something in its place which would be of real value—namely, a degree. By taking an extra year the apprentice would obtain that degree.

Cambridge Pharmaceutical Association.

A SPECIALLY convened meeting of this Association was held at the Bull Hotel, Cambridge, on January 29. The President (Mr. A. S. Campkin, J.P.) presided, and there were also present Messrs. A. Deck, H. F. Cook, E. S. Peck, W. L. White, Percy Pain, Bourne, Evans, Coulson, Collins, Mosse, Beale, Addison, McAvoy, Parsons, Bernard S. Campkin (Hon. Secretary), and others The meeting was primarily called to consider the breaking of an agreement among chemists of the town to close during the winter months at 5 P.M. on Thursdays.

Digitized by Google

EARLY CLOSING.

The PRESIDENT said when they entered into this arrangement they posted in all the windows notices to the effect that early closing would be observed. The consequence was the public knew of their intention, and he believed they had been partially, if not fully, educated up to it; at all events, from some experience he had had, he found that the public were getting alive to it, and he believed that it was only by persisting in that course that they could eventually educate public opinion. As a matter of fact, when one spoke of closing, they knew perfectly well they closed on Sundays, and did not expect to be called upon to supply anything, except in urgent cases. The same thing undoubtedly applied to closing at 5 o'clock on Thursdays, and the public would be educated up to that in the same way as they were to the fact that they closed early in the summer vacation. In the long vacation they closed at 2 P.M. on Thursday, and he believed the whole of them loyally adhered to that arrangement. Although there were several hundreds of undergraduates in Cambridge in the summer months, they got to know of the arrangement, and they did not trouble them unless in exceptional cases. He hoped the meeting would see fit to reaffirm the arrangement made a few months ago, which had been so much appreciated by employers and employed.

The HON. SECRETARY read a letter from a member of the Association intimating that he found it impossible to close during term time at 5 P.M. Other correspondence was also read, one gentleman stating that he would close only on condition that all did so, while another declared that they ought not to lose their independence because one did not see his way to fall in with their plans. This latter view met with the warm approval of all present, and on a show of hands a unanimous vote reaffirming the resolution to close the shops at 5 P.M. on Thursdays during the winter months was given. A deputation was appointed to wait upon the gentleman referred to, to explain fully the resolution adopted by the meeting, and to express the hope that there might be complete co-operation among the members.

PROVINCIAL SCHOOLS OF PHARMACY.

Mr. E. S. PECK introduced for discussion the paper upon "Provincial Schools of Pharmacy" by Mr. James Paterson, read at the Federation meeting at Dublin. He went over the various points, and drew special attention to the view that for the establishment and maintenance of such schools support might be looked for from Government moneys devoted to technical education. He considered that there was much to be said in favour of this view. He thought that if such schools could be established, or if not a complete school, definite courses in, say, chemistry and botany should be provided, and after due consideration definitely recognised by the Pharmaceutical Society, then the question of the "curriculum during or after apprenticeship need not present any insuperable difficulty." Apprentices could attend these courses of instruction, get "signed up" for them, and then, if necessary, go to a school of pharmacy for a final training, and enter for the Minor with a fair chance of being successful. He contended that the adoption of the curriculum would be advantageous to the candidate for the Minor. At the present time it was essential that the registration examination should be passed before being apprenticed—say, at the age of 16—and as the Minor could not be entered before the age of 21, there was great danger of losing whatever habits one might have been acquired of correct thinking or systematic study. On the other hand, the courses of lectures he had mentioned would tend to keep a candidate in touch with his work and avoid a mere superficial cram for his examination, which was invariably detected and caused failure. Again, at the end of the course of lectures there would probably be an examination (the passing of which need not necessarily be made essential), which would help to obviate the terrible nervousness candidates showed when up for examination, despite the continued efforts of the examiners to remove it.

In the course of the discussion, Mr. Addison said he considered that Mr. Paterson's suggestion would do more harm than good: it meant that apprentices would have to go to big places like Birmingham and Manchester to obtain advantages which a town like Cambridge did not possess.

The HON. SECRETARY said he was an apprentice in a suburb of London, and he attended the lectures in botany and in chemistry at the People's Palace. He found the lectures of very great value; in fact, he was possessed of knowledge which was not taught in the school of pharmacy, for the simple reason that he had to get his work done in three months.

Mr. COOK moved the adjournment of the discussion till a later date, but, after a little further talk, a resolution was carried, with one or two dissentients, expressing general approval of Mr. Paterson's paper, but drawing attention to the fact that in so small a centre as Cambridge the plan suggested does not apply so forcibly as to such places as Manchester and Birmingham.

Cardiff Chemists' Association.

IN the abridged report of the January 30 meeting of the Cardiff and District Chemists' Association, which appeared in last week's CHEMIST AND DRUGGIST, we stated that Mr. Robert Drane, the newly elected President, delivered an address. His audience was exceptionally representative of the pharmacy of the district. The essential features of the address were the exposure of

THE PRESENT CONDITION OF PHARMACY,

in which pharmacists lead laborious lives of unalleviated toil for a paltry and inadequate income, compared with what is earned by men with less responsibility in other branches of life. He considered that chemists as a body compare most favourably with other traders for commercial integrity, general conscientiousness, and assiduity in business. The reason of their comparative failure to obtain adequate remuneration from the public for their services he believed to be due to the fact that years ago they were so unwise as to embark upon a branch of business previously held almost exclusively by booksellers and stationers—namely, the sale of "patent" medicines. Mr. Drane made it perfectly clear from his own experience that that sort of business was in his early days avoided by all respectable chemists, because they considered it derogatory to the interests of their craft to encourage the sale of nostrums, while booksellers and stationers only took up the business because they paid for the medicines in kind—advertising space and the like. In the chemist's hands the business has developed so extensively that it has now encroached upon the pharmacist's most treasured possession—namely, the dispensing of medicines from medical practitioners' prescriptions. In this connection Mr. Drane told how, after recently calling with one of his colleagues on Principal Griffiths, University College, in regard to the education of young pharmacists, he found, on returning to his shop, a prescription to be dispensed. It was by a London man of acknowledged position, and consisted simply and entirely of three proprietary medicines, of whose real composition, remarked Mr. Drane, the prescriber was ignorant. Where, under such circumstances, he asked, is the necessity for the higher education when the dispenser is the mere irresponsible distributor of quack medicines? Developing his theme further by many quaint observations, Mr. Drane submitted for the consideration of his fellow-members a handbill (of which the subjoined is a reprint), and concluded by suggesting the organisation of a scheme for the supply by all chemists alike of a whole series of Rational Remedies—under copyright labels and of known and published constitution—and secure their preference by absolutely truthful advertising out of a common fund allocated to that purpose by the Association. He believed that if the members were only wise enough to be honourable and united, they could easily sweep the field to its horizon until the whole body of the trade would take up the cry with a ringing cheer.

BUNKUM & CO.'S LATEST.

AMONGST the most recent of our numerous MARVELLOUS DISCOVERIES is our unique METEORIC CURE for Consumption, Bunions, Cancer, and WATER ON THE BRAIN. The action of this truly MIRACULOUS MEDICINE is almost instantaneous. This is the more wonderful because it has no flavour, the dose is very small, the price is very small, though the benefit is very great—indeed, incalculable. SO WONDERFUL IS IT that we fear we may be suspected of exaggerating its value, and have therefore deter-

Digitized by Google

mined to prove our assertion by supplying a quantity, sufficient to cure any two of the very worst cases of the above diseases that can be found, WITHOUT CHARGE to every id . . . (intelligent person) who will apply to us for it within the space of three weeks from this date (when there will be a NEW MOON).

We are obliged to limit the privilege to three weeks, because by that time the repute of our MIRACULOUS MEDICINE will be so completely established as to need no advertisement, for it is well known that GOOD WINE NEEDS NO BUSH. Who ever saw Rhubarb, Jalap, or Epsom Salts advertised? They are so good, so simple, so serviceable, that they are familiar to us all and need no help from dishonest puffing. In three weeks from to-day that will be the position of OUR MARVELLOUS METEORIC CURE throughout the civilised world, so that "Mee Toric Cure Mammer" will be heard amongst the first lispings of infancy, for "Out of the mouth of babes and sucklings is perfected praise."

Like that of everything great, its discovery was accidental and most simple. It was entirely due to the catching of a Meteor in South Africa by our Special Representative, who, being sent out on purpose to study FALLING STARS, was suffering at the time from G.P.I.* and was instantly cured.

We shall be pleased to send FREE BY POST a book with fully authenticated PARTICULARS OF ALL THE EXTRAORDINARY circumstances of the discovery. With this book there will be sent a Coupon for which, if detached and returned to us, we hereby pledge our word to forward a 5*l.* BANK OF ENGLAND NOTE by return of Post in proof of our good faith. By this method, obviously very expensive, we shall feel the pure delight of conferring INCALCULABLE BENEFIT on the WHOLE HUMAN RACE.

We shall also completely suppress such old-fashioned and fraudulent institutions as the College of Physicians and the General Hospital, and CONQUERING ALL DISEASES by this ONE INCOMPARABLE MEDICINE deliver mankind from the impositions of MOCK DOCTORS who ride in their carriages by playing upon the fears of their too confiding and credulous victims.

Those who desire to make trial of our MARVELLOUS METEORIC MEDICINE should ask for it at their Grocer's, where they will be served with what they demand without any doubt being cast upon their sanity, nor any attempt made to substitute some COMMON-sensed remedy (for the sake of larger profits) as is sometimes done by unprincipled Druggists, who are as dishonest and ignorant as the Doctors themselves.

At the same time and place they may obtain a FREE SAMPLE of our world-famed BUTTERED THUNDER, which will cure in a flash all obliquity of vision and every disease of the eyes and kidneys, restore to bald heads the locks of youth, and to grey hair its pristine beauty of colour. We have in our possession a most flattering letter from His Gracious Majesty Edward VII., under the King's Sign Manual, testifying to the value of this our preparation in his case, enclosing his photographic portrait *before* and *after* treatment.

Ask for BUTTERED THUNDER, and see that you get it.

In some cases, for complete success, it may be necessary to take a few doses of "Castor Oil Pills." Those we offer, though no larger than peas, are warranted to contain a full ounce each of the finest Italian Castor Oil by our secret Patent process, by which we suspend the Laws of Gravity.

Signed on behalf of the Company,
R. DRANE, *Hon. Sec.*
(1 Corinthians vii. 15.)

Old Toll Gate,
Fools' Paradise, New York,
April 1*st*, 1902.

DISCUSSION.

Mr. J. MUNDAY, referring to Mr. Drane's scheme, said if good specialities were brought out for particular complaints and were acknowledged by the whole body of chemists, he thought they would give great confidence to the public. He hoped the day would come when they would unitedly acknowledge rational remedies such as referred to and push them against all outsiders. (Hear, hear.) The persons who manufactured and sold proprietary articles had no knowledge of drugs, but it happened that they had capital at their back, and were able to advertise them.

Mr. LLOYD, of Merthyr, thought the suggestion excellent. He had had a fairly wide experience of the counter, and he could assure those present that the quantity of patent medicines sold by chemists was very much smaller than was thought to be the case. He did not believe that a chemist was at the mercy of patent-medicine vendors, but that if he so willed it he could really keep the trade of the people within his own hands.

Mr. HICKS said it was deplorable that men who had passed such an examination as that demanded by the Pharmaceutical Society should occupy the inferior position they did. The President had drawn attention to what was perhaps the greatest blot on their business. He cordially endorsed his scheme. An ideal state of things would be that the chemists should discontinue the sale of patent medicines and hand them over entirely to the grocers. He thought the Pharmaceutical Society should have the power of striking off the register every man who sold a remedy the composition of which he did not know himself. (Hear, hear.)

Mr. EVAN JONES, of Llanelly, suggested that they, as pharmacists, should bar any assistant from managing the drug-stores.

Mr. JESSE WILLIAMS thought that Government appointments of dispensers should be given to persons qualified by the Pharmaceutical Society. (Hear, hear.)

Mr. COLEMAN hoped that the President would press his scheme home. It seemed to him that it was ripe for operation, and if Mr. Drane would only formulate it roughly it would be well supported by the chemists of the district.

Mr. BARRINGTON SPARROW said the members of the Assistants' Association had pledged themselves practically not to sell themselves to the drug-stores. They were thoroughly imbued with the idea of raising the status of pharmacy, and were anxious to extend their Association to Newport, Pontypridd, and Merthyr, and other parts of South Wales.

The PRESIDENT, replying to the criticisms passed upon his address, said they had taken him by surprise. He thought he was the apostle of a thoroughly unpopular solution of this proprietary-article difficulty, and he found there was a tendency amongst chemists to gravitate towards the views which had dominated his own actions for years past. He was delighted to hear them, being sure that if this feeling existed now it must go on increasing in an enormous ratio. He was certain that if the chemists only took the matter up unitedly they could sweep away the whole of the wretched superstructure which was so greatly hampering them.

The annual dinner of the Association was held at the Park Hotel on the same evening, under the presidency of Mr. Robert Drane, who was supported by, amongst others, Principal Griffiths, the President of the Cardiff Medical Society (Dr. Patterson), the Secretary of that society (Dr. W. Sheen), and Dr. C. T. Vachell.

Chemists' Assistants' Association.

AT the meeting held at 73 Newman Street, W., on January 30, Mr. F. W. Peck (President) in the chair. Mr. R. E. LOWNSBROUGH read a paper upon "Plant Misfortunes." The paper was supplemented by specimens of plants and insects, many of which were carefully mounted, and also by photographs taken by Mr. Lownsbrough. After speaking about the fungi which produce "rusts" and "smuts," he dealt with insect troubles.

A short discussion followed, in which Messrs. PECK, LATREILLE, RICHARDS, and FFOULKES joined.

Society of Chemical Industry.

LONDON SECTION.

A MEETING was held in the rooms of the Chemical Society, Burlington House, on Monday evening, February 3, at 8 o'clock. Mr. Otto Hehner presided over a full gathering, and after the minutes had been read, he stated that now is the time for nominating members for the Local Committee, and he hoped that the members would exercise their franchise in the matter. He regretted that Dr. Dupré was unable, through illness, to be present to read his paper on the

EXPLOSION OF POTASSIUM CHLORATE BY HEAT,

and called upon Mr. A. R. LING, the Local Secretary, to read it. It will be remembered that during a fire at one of the United Alkali Company's works, St. Helens, a fearful explosion took place in a potassium-chlorate shed. Dr. Dupré was called upon as one of the Home Office experts in the Explosives Department to assist Colonel Ford in investigating the matter. It had not hitherto been considered that potassium chlorate *per se* is explosive, but Dr. Dupre found on heating the chlorate on a clean platinum wire in the Bunsen flame until a bead is formed, that a point is reached

* General Paralysis of the Insane.

Digitized by Google

at which the chlorate explodes. Writing to Colonel Ford about it he mentioned that he could make the experiment in the blue part of an ordinary gas-flame. M. Berthelot had subsequently written about the matter, and attributed the explosion partly to the gases of the flame, and suggested that the St. Helens explosion was not an explosion of the chlorate *per se*, but was due to the combustion of the wood of the casks in combination with the chlorate. Dr. Dupré said that Berthelot might not have said this if he had known that his own experiments were made with a Bunsen burner, and not in an ordinary gas-flame. He had stopped his experiments when the trial against the Alkali Company was instituted, but since that was settled he had resumed the work, and had corroborated to the full what he had previously ascertained, so that there is no doubt that pure potassium chlorate can be exploded when it is in a molten condition, although he did not go so far as to say that it is explosive like gunpowder.

The CHAIRMAN having invited remarks upon the subject, Mr. OSCAR GUTTMANN responded, and as he was one of the expert witnesses in the lawsuit referred to his remarks were of exceptional interest. At the outset he stated that Dr. Dupré had mistaken altogether the purport of Berthelot's article. Berthelot did not dispute Dr. Dupré's statement in the least; in fact, the French chemist said that explosion of chlorate can take place in the open with heat alone. Mr. Guttmann then gave an extemporaneous translation from the original article of Berthelot corroborative of this statement, showing that a molten bead of the chlorate exploded in a tube in which there was more chlorate, but the explosion did not extend to the rest of the chlorate. Berthelot therefore inferred that the St. Helens explosion was due to the carbon from the charred barrels; in fact, Berthelot and Dupré agree, and Mr. Guttman also agrees that chlorate *per se* may under certain conditions explode, but Mr. Guttmann did not agree that the St. Helens explosion was due to heat alone. His own idea was that the fire burned some of the casks on one side and the molten chlorate ran down over the heated bricks and met with charred wood and exploded.

The next speaker could not agree that chlorate heated under any circumstances whatever is explosive. He considered that it would be very serious to put down this article as an explosive substance, and gave particulars of experiments in which 5-ton quantities of chlorate had been heated to 3,000° C. without exploding. His explanation of the explosion was practically similar to that of Mr. Guttmann.

It now appeared to the meeting that the significance of the communication really resided in the question as to whether potassium chlorate will be treated as an explosive by the Home Office. The matter is sufficiently grave from the commercial aspect to cause alarm; and the next speaker submitted the results of five or six experiments to show that chlorate is not explosive; while another member stated that, in all his experience of oxygen-making for lantern-purposes, he had never had an explosion when he used the chlorate alone. The CHAIRMAN, however, summed up the matter by saying that no amount of negative evidence can outweigh a positive effect, and in the most amusing manner he convinced the meeting that, although chlorate has been heated thousands of times without any untoward result, a single fatality resulting from its explosion should suffice to put us on our guard, and if possible avoid a repetition of the conditions which produced the St. Helens explosion.

This closed the matter, and Dr. FRANK CLOWES, principal chemist of the London County Council, then read his paper on "The New Photometer and Standard Pentane Burner for Gas-testing." In this there was nothing of pharmaceutical interest.

NOTTINGHAM SECTION.

AT the meeting held on Wednesday evening, January 29, at the Station Hotel, Burton-on-Trent, Mr. L. Archbutt, F.I.C. (the Chairman of the Section), presiding, there was a good attendance from Manchester, Birmingham, Nottingham, Derby, and Burton. Mr. F. J. R. CARULLA read a paper on

EMERGENCIES IN VITRIOL-WORKS.

In the course of this he made some recommendations applicable to all industrial establishments. He pointed out, for instance, the facility with which repairs can be quickly executed in cases of emergency where all machinery and appliances are constructed to standard pattern, so that the parts of one machine are interchangeable with the corresponding parts of another. Mr. W. G. TIMMANS opened the discussion, and remarked that the remedies used in works are not always those approved by the doctors. A case in point was when once he had occasion to send two men to the infirmary who, through the bursting of a retort, had been splashed with oil of vitriol, sp. gr. 1·800. He used lime-water and oil, but at the infirmary they applied a weak solution of carbonate of soda to the wounds. Mr. F. E. LOTT suggested that the Society might with great advantage form a committee, and draw up a short series of immediate remedies for use in the various works in which the Society is interested. Mr. ARTHUR SHEARER agreed, saying men so rely upon the managers for instructions that it should be upon their consciences to be able to give help in case of need. He also referred to the value of compressed oxygen for cases of suffocation. He had seen a man overcome by CO_2 in a carburettor brought round in a marvellous way, a cylinder of oxygen being at hand. He had found carron oil a good thing in cases of acid-burns, and soapsuds for treating scalds. The CHAIRMAN said the best way of dealing with an accident from sulphuric acid is, in the first place, to use water or lime-water in large quantities, so as to wash away the acid as quickly as possible; then a soothing-application. It seemed rather lamentable that there is not in every works a code of rules hung up, as suggested by Mr. Lott. He thought that such codes were already obtainable. Mr. CARULLA, in his reply, said that it would be very gratifying to him if the discussion led to the preparation of special rules for the different works, as suggested by Mr. Lott.

Mr. J. T. WOOD gave a short account of "Erodin," to be used with a culture of *Bacillus erodiens*, and exhibited specimens of these substances, which are taking the place of dog and pigeon dung in the process of tanning, and thus doing away with an objectionable feature in the leather-industry.

Mr. J. O'SULLIVAN followed with a communication on "The Nature of the Fermenting-power of Yeast," in which he described certain experiments of his on the action of yeast on sugar-solutions, fully confirming Buchner's classical discoveries of the enzyme separable from yeast-cells. The character of the action is chemical, and not vital, as was at one time supposed.

Bristol Pharmaceutical Association.

THE annual meeting of this Association was held on January 29, at University College. Mr. G. T. Turner (President) occupied the chair, and the following members were also present: Messrs. B. Allen, F. H. Blissett, H E. Boorne, J. Cooper (Weston-super-Mare), E. W. Hill, B. Keen (Hon. Secretary), H. Matthews, A. L. Taylor, E. F. Young.

Mr. A E. Matthews was elected to fill the office of Hon. Treasurer, in place of Mr. J. Stroud. Mr. H E. Boorne was elected Hon. Secretary, in place of Mr. B. Keen, who retired owing to ill-health. Mr. E. F. Young was elected President for the ensuing year. Mr. G. T. Turner was elected Vice-President. It was decided that the committee as at present constituted should remain in office for another year.

Votes of thanks were passed to the retiring President, Hon. Secretary, and Hon. Treasurer.

Royal Institution.

THE bitterly cold east wind prevailing on the last day of January thinned the attendance at the Friday night discourse by Professor A. Crum Brown on the "Ions of Electrolysis." Lord Kelvin occupied the chair, and the Professor, in a musical Scotch accent, reviewed the theory of the ions and anions of electricity from its origin by Faraday to the important position it has assumed by recent researches. A quaintly told allegory of men and horses moving at various rates in a field was used to illustrate the movements of the ions in electrolysis. One of the experiments during the discourse was by Dr. H. Marshall showing the direct method of preparing persulphates, which he discovered in 1890, by the electrolysis of the acid sulphate of the metal.

Festivities.

Still Dining.

On January 29 a party of Boots' branch and departmental managers, over fifty in all, dined at the Mikado Café, Nottingham, Mr. E. S. Waring (a director of the Eastern Company) presiding. Representatives were present from Lincoln, Derby, Newark, Mansfield, Loughborough, Ilkeston, Melton Mowbray, Swadlincote, &c. After a sumptuous repast, a well-arranged programme was carried out. The usual loyal toasts were proposed, after which "The Firm" was pledged, to which Mr. A. L. Milne (Secretary) replied. Various musical items were contributed by Messrs. Waring, Bentley, Kerridge, Potter, Palmer, I. Aspden, and G. R. Elliott.

Wolverhampton Diners.

On January 30 the staff of Martyn's Stores (Limited) were entertained to dinner at the Swan and Peacock Hotel. About fifty were present, including the managing director (Mr. S. M. Hibberd) and the solicitor (Mr. J. F. Brewer). The chair was occupied by Mr. E. A. A. Fry, and the vice-chair by Mr. Westherick. Mr. J. Mould submitted the toast of "The Firm," to which Mr. Hibberd, in replying, stated that during the past year they had served two-thirds of a million customers. A number of other toasts followed, and an excellent programme of music was contributed by Messrs. Knight, Chuter, Fudge, Atherton, Jackson, Dunn, and Dean. The duties of accompanist were well discharged by Mr. C. E. Love.

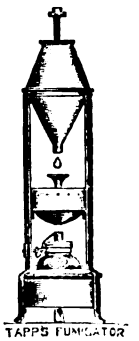
Dietetic Demonstration.

The Students of the School of Pharmacy of the Pharmaceutical Society of Great Britain arranged a class for the study of dietetics at the Holborn Restaurant on February 3. Professor Reynolds Green conducted the demonstration, and this being an annual affair friends of the school were present, amongst whom we noticed, Mr. C. B. Allen (Vice-President), Dr. Attfield, Dr. A. P. Luff, Mr. Walter Hills, Mr. R. Bremridge, Professor Collie, Professor Greenish, Mr. Michael Carteighe, Mr. R. A Robinson, Mr. E. N. Butt, Mr. F. C.J. Bird, Mr. F. J. Hanbury, Mr. W. Warren, Mr. W. F. Gulliver, Mr. W. P. Robinson, Mr. E. W. Lucas, Mr. J. S. Ward, and Mr. J. R. Wretts. Specimens of various foods from the animal and vegetable kingdoms, prepared in the restaurant laboratory for the use of man, were placed before the company, and these were comminuted and digested in various unofficial infusions and fermented juices. On the suggestion of Professor Green the fumes of the leaves of *Nicotiana Tabacum* were inhaled and, the practical part of the demonstration being over, a discussion took place interspersed with illustrations of the power of the larynx in producing pleasing sounds, Professor Elwin and the Bloomsbury Square quartette being the chief exponents of this art.

The toast of "The King" having been honoured, Mr. A. Norman Hirst proposed "The Pharmaceutical Society," giving it as his opinion that the best place to study for the Minor was the "Square" school. The Vice-President in reply referred to the educational aims of the founders of the Society, and said that their successors have ever since endeavoured to progress on the lines originally laid down. Mr. Carteighe proposed "The School of Pharmacy," recalling the time when science was unrecognised and unknown amongst fashionable and blue-blooded people. The pharmacist was the first chemist, and lest the present generation should forget, he (the speaker) reiterated that nearly every discovery of importance in chemistry was formerly made by pharmacists, and that the first laboratory for the teaching of practical chemistry in London was in the kitchen of 17 Bloomsbury Square. The Dean of the School (Professor Green) replied. Mr. E. T. Neathercoat, in a well-delivered speech, proposed the toast of "The Past Students," saying that the successes of the past students as presidents, councillors, and municipal governors encouraged present students. Mr. Walter Hills, replying, said he estimated that he was speaking for some two thousand past students, and put forward the life of G. F. Schacht as that of an ideal pharmacist. Students could not do better than study the works of Schacht as shown in his various contributions to pharmacy. After this "The Demonstrators" was proposed by Professor Greenish, and replied to by Mr. T. E. Wallis, (and other toasts such as that of "The Dinner Secretaries" Messrs. J. S. Hills and E. T. Neathercoat) were taken.

Trade Notes.

A New Film, the Planchon, is about to be put on the English market by Messrs. Gaumont & Co., Cecil Court, Charing Cross Road, W.C. The Planchon film is to be made in rolls for daylight loading, and also in cut films.



The firm of Thomas Wilkinson, 42 Hatton Wall, E.C., inform us that it was their sarsaparilla which was imitated by an American firm for the drug-bazaars in India, to which reference was made by a correspondent last week (p. 188).

Packed Chloride.—A penny packet of "XL chloride of lime" reposes on the desk in front of us, and there are no odoriferous indications that it contains that sweet-smelling domestic article. It is neat, compact, odourless, and of good size. The manufacturers, Messrs. John Paterson & Co., of 6 Main Street, Anderston, Glasgow, say it will keep intact in any climate, being both airtight and waterproof. It is put up also in twopenny packets.

For the Vaccinated and Unvaccinated.—Referring to our note in last week's issue concerning vaccination-pads (page 207), Messrs. S. Maw, Son & Sons, of Aldersgate Street, E.C., have shown us a series of pads they manufacture which are made of boric lint and wool. These are in two sizes (for adults and infants), and are fitted with strapping on the top and tapes below, for the convenience of examination by the surgeon. In this connection also Messrs. Maw have recently made arrangements for an increased supply of their "Pure Culture" brand of vaccine-lymph, to cope with the abnormal demand at present existing.

P.A.T.A. Additions.—We mentioned in our Winter Issue, January 25, that Messrs. Allen & Hanburys (Limited) had placed their goods upon the Proprietary Articles Trade Association list. The firm have for years been protecting the prices of their specialities, and at the beginning of this year they advanced the minimum prices of most of them to ensure a better profit to retailers and wholesalers alike. The inclusion in the P.A.T.A. list makes no further change as to terms, but has been done at the request of wholesale houses who find it advantageous to work protective schemes through the P.A.T.A.

Tapp's Patent Fumigator, for which Messrs. S. Maw, Son & Sons, Aldersgate Street, E.C., are wholesale agents, is a clever and sensible piece of apparatus. It is intended for continuous fumigations of rooms or wards with disinfectants or deodorants. The apparatus is 14 inches high, and consists of a double-cone vessel to hold the disinfectant. On the top is a regulating rod which terminates at the bottom and permits the contents to drop out at any desired rate into an evaporating-basin, which is heated by a spirit-lamp. A little silver sand is put into the basin so that the rate of the evaporation is always moderate, and may of course be controlled by regulating the amount of liquid dropping into it, which the regulator does effectually. It can be used for such varied substances as carbolic acid, formalin, eucalyptus oil, and eau-de-Cologne.

TAPP'S FUMIGATOR

A Scotch Sundries List.—The catalogue and price-list of patent medicines and proprietary articles just issued by Messrs. Raimes, Clark & Co., of Edinburgh, is a well-arranged and nicely-printed production. Beside a full list of the patent medicines in ordinary use (with retail, discount and net cash-prices plainly set forth), several pages are given to the specialities in perfumery, soaps, &c., manufactured by Messrs. Raimes, Clark & Co. Lozenges, jujubes, capsules, and new and special pharmaceutical preparations of the firm's own manufacture should prove interesting reading to the trade, and the sixteen pages devoted to the synonyms, formulæ, uses and doses of some of the most recent synthetic remedies will be an instruction to many.

Westminster Wisdom.

(By our Parliamentary Representative.)

THE POISONS COMMITTEE.

In the House of Commons on Monday, Mr. Caldwell, the member for Mid Lanark, put the following question to the Home Secretary:—

Whether he is aware that, under the law relating to the sale of scheduled poisons, an unqualified assistant of a medical man or of a registered chemist is prohibited from selling poisons, under penalty of a fine, but that no penalty is attached to the employer for any offence committed by such unqualified assistant; whether he is aware that, in the case of registered medical practitioners, the General Council of Medical Education and Registration of the United Kingdom have given notice that they will treat as infamous conduct in a professional respect, and have the name erased from the Medical Register, under the 29th section of the Medical Act (1868), any medical practitioner who may leave an unqualified assistant in charge of their medical halls or open shops, whilst no penalty is attached to the registered chemist who employs an unqualified assistant should that assistant sell scheduled poisons; whether it is within the power of the General Council to declare the employment of an unqualified assistant to be infamous conduct in a professional respect under the Medical Acts; and, if so, whether he will introduce legislation which will equally punish a registered chemist who may similarly employ an unqualified assistant, seeing that the danger to the public is equally the same whether the unqualified assistant be that of a medical practitioner or of a registered chemist.

Mr. Jesse Collings replied as follows on behalf of the Home Secretary:—"My right honourable friend understands that under the Pharmacy Acts (1868 and 1869) any person who, not being a chemist or a qualified medical practitioner, sells poisons, is liable to prosecution, but that there is no provision in those Acts for making the employer responsible for the acts of his apprentice or assistant except in the case of a breach of the regulations to be observed in the sale of poisons. As my right honourable friend has said in answer to another question, the powers of the General Medical Council as to deciding what is or what is not 'infamous conduct in a professional respect' under the Medical Act are governed by the terms of the Act and the decisions thereunder, and the Secretary of State for the Home Department has no authority to interpret them. As regards the last part of the question, the subject of the sale of poisons is now being considered by a committee, whose recommendations must be awaited before any decision as to the legislation suggested can be arrived at."

The other answer alluded to by Mr. Collings was to a question put by Dr. Macnamara as to the case of Dr. Rendell, of Great Yarmouth, who last November was before the General Medical Council in regard to a charge of infamous conduct because he held an appointment as medical officer for the Liverpool Victoria Legal Friendly Society, which canvassed for members. That case being *sub judice*, the Home Secretary "fenced."

VAGRANTS AND SMALLPOX.

Mr. Grant Lawson, Parliamentary Secretary to the Local Government Board, has announced that the President of the Board recently issued a circular to Boards of Guardians, in which he called attention to the risk of smallpox being spread by means of casual paupers.

VACCINATION.

Mr. Ritchie appears to be taking steps to secure uniformity in the charge for vaccination-exemption certificates. He has explained, in answer to a question, that the charge varies in different districts, and he is doing his best to secure uniformity.

In my last letter I called attention to a Bill which Mr. Broadhurst had introduced to amend the Vaccination Acts, and stated that it appeared at the instance of certain Leicester anti-vaccinators. The text, which is now circulated, bears me out. It provides that—

No parent or person having the custody of a child shall be compelled or ordered to vaccinate such child by any justice, court, or other, having authority hitherto, to compel or order, and so much of Sections 29 and 31 of the Vaccination Act of 1867 as enacts that any parent or person having the custody of a child shall be compelled as aforesaid is hereby repealed.

At a recent sitting of the House of Lords Lord Newton presented a Bill, which was read a first time, "to amend the Vaccination Act, 1898." Afterwards his Lordship favoured me with a few minutes' conversation in the Lobby as to the scope of the Bill. He said it is very simple. All he desires is to do away with the "conscientious objector" which the Act of 1898 called, so to speak, into existence. Put in other words, the part of the Act which the noble lord proposes to repeal is that—

No parent or other person shall be liable to any penalty under Section 29 or Section 31 of the Vaccination Act of 1897 if within four months from the birth of the child he satisfies two justices or a stipendiary or metropolitan police magistrate in petty sessions, that he conscientiously believes that vaccination would be prejudicial to the health of the child, and within seven days thereafter delivers to the vaccination officer for the district a certificate by such justices or magistrate of such conscientious objection.

Mr. Long announces that he cannot hold out any expectation that the Government will introduce a Revaccination Bill during the present session.

BOVINE AND HUMAN TUBERCULOSIS.

It appears that very extensive experiments will have to be carried out by the Commission appointed to report on Professor Koch's theory that bovine and human tuberculosis are distinct diseases and incommunicable, and that for this purpose laboratories and other buildings have been erected on the farms where this part of the work is to be done. Mr. Grant Lawson stated in the House on Monday, in reply to a question, that it is impossible to say how long these experiments will take, but arrangements have been made for the Commission occupying the farms for three years.

REGISTRATION OF FIRMS.

Mr. Emmott, who has charge of the new Bill for the registration of firms and persons carrying on business under trade-names, writes to me to say that the measure is the same as that of last year. That Bill was very different from the measure which was sent to a committee two years ago, and one of its features—if an omission can be called a feature, was that the district register, which was originally proposed, was done away with.

FALSE MARKING OF FOREIGN GOODS.

Sir Howard Vincent's Bill to "restrain the false marking of foreign goods" has now been printed. It simply provides for the repeal of Section 16 of the Merchandise Marks Act, 1887, which the promoters of the Bill allege has become inoperative, and for the substitution of the following preamble and provision:—

Whereas it is expedient to make provision for prohibiting the importation of goods which might be fraudulently sold as being of British manufacture, be it therefore enacted as follows:—All goods of foreign manufacture are hereby prohibited to be imported into the United Kingdom unless the word "imported" shall be conspicuously and indelibly stamped upon each article, and any goods of foreign manufacture not so marked shall be included among goods prohibited to be imported, as if they were specified in Section 42 of the Customs Consolidation Act, 1876.

There is a proviso to the effect that it shall apply to all goods imported from any foreign country except such goods as may be specially exempted from time to time from the provisions of the published regulations of the Commissioners of Customs on the ground that they are incapable of being marked. In this connection it is interesting to recall that the committee which considered the whole subject in 1897 found that the Marks Act of 1887 had to a great extent stopped fraudulent practices, but, while saying that the balance of evidence was in favour of retaining the greater portion of the Act, they also expressed the opinion—and it is this which is at the foundation of the present—that "the competition of improperly marked goods is sometimes injurious." Sir Howard Vincent and his colleagues use much more forcible language on the subject; they go as far as to assert that in some particular articles the home product is being driven out of the market.

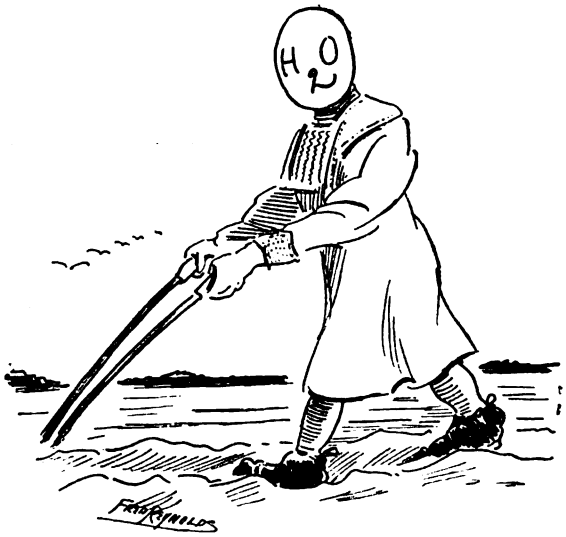
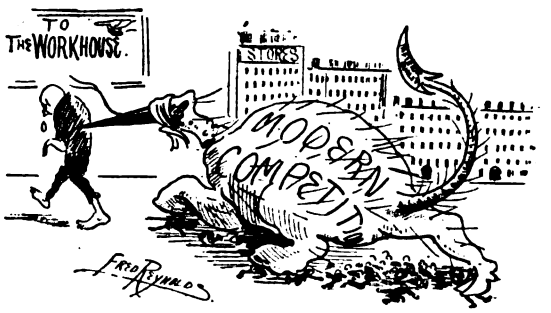
Things that Happen—Sometimes.



Then and Now.

(A Legend of Bloomsbury Square.)

H. Tuwoe was a qualified man
(As Mr. Brem. attested),
He opened a shop on an elegant plan,
No wayside waggon or travelling van,
But the finest seen since drugs began
And the recipes of the medical clan
Poured in quite unrequested.



So he sang all day in an artless way:
"A hundred per cent. come pay, pay, pay;
Come, my itching palm assist!
'Tis well I wot
To touch the spot,
And be a pharmacist!"

But, ah, in time he mourned intense,
And profits could not scrape any;
The doctors did themselves d spense,
And stores uprose in size immense,
With patent plans to soothe the sense
For something less than sevenpence,
Or, maybe, twopence-ha'penny.

So, cynic-like, he went on strike;
"For now," said he, "all men alike
Can kill a pain or harm a cyst;
Far better go
And plough and sow,
And on a farm assist."

Alas for H. Tuwoe! the curse
Of modern competition
Quite broke his heart and drained his purse
(No charity could re-imburse),
And so he had a workhouse hearse
When he this epitaph in verse
Had penned in deep contrition:

"No patent pill could cure his ill,
And he gave up hope of any Bill
Designed to save the pharmacist;
A Union slave
Prepared his grave,
And Peace did with her balm assist."

W. H. SCOTT.

Observations and Reflections.

By XRAYSER.

Methylated Soap-liniment

must surely hold the record among drugs under the Sale of Food and Drugs Act for slipperiness. The fates have ordained that the right to sell this article as soap-liniment shall be defended by our friends the companies. I do not doubt that they are fighting the battle for many a struggling "legitimate" chemist and druggist as well as for themselves, for no doubt there has existed a widespread notion that the order of the Board of Inland Revenue permitting the use of methylated spirit in certain liniments was to be regarded as a sort of command, or at any rate as of an authority equal to that of the Pharmacopœia. But nobody can say that the companies are not doing the work thoroughly. They are fighting for the right as if their very dividends depended on it. Now they are going to the High Court with, I think, six distinct points. Their defence recalls the classic case of the cracked kettle. "I contend," said the counsel for the defence, "first, that we never borrowed the kettle; secondly, that it was cracked when we borrowed it; and thirdly, that we returned it sound." "We never sold this stuff," says one of the defendants; "if we did, we sold the proper article; and there is no such thing as a standard to show what the proper article should be." Whatever the result may be the lawyers are enjoying themselves.

The London Chemists' Association

has got itself formed, but its objects are as shadowy as ever. In December Mr. Pond peremptorily enjoined those amiable outsiders who were trying to help the committee with some suggestions to suspend their comments until he and his colleagues had been pleased to set forth the defined purpose of the Association. We should probably have to wait till, as the French say, "three days after never" if we were duly obedient. The one defined purpose vouchsafed to us by the self-created committee of twenty-five is that we are to pay 5*s.* a year. For this we are to be rewarded with friendly intercourse between Camberwell and Bayswater twice a year—in May and November. During the rest of the twelve months the Twenty-five will think for us, speak for us, "make such rules as they may deem advisable" for us, appoint special committees to carry out special objects, and spend as much of our money "as they shall think fit" on the protection of our trade rights and interests. But as the Association will have to keep itself going before it can help other causes, I am sorry for the objects which are going to be dependent on those subsidies.

The First Hundred Crowns

or more are already due to somebody for "preliminaries"; it will cost a hundred more each time the Pharmaceutical Council is made to shudder; twice that figure will hardly send a tremor through the County Council; and what it costs to stagger Parliament, I know not. But these are among the exploits we look for from Mr. Pentney and his associates before our surplus funds are voted to other combatants; and if there are five hundred dumb driven cattle among metropolitan pharmacists who will plank down 5*s.* each on so vague a programme as the one put before them, business must have been very brisk this winter.

Compare

the opinion of the Portsmouth Magistrates on the multi-shopkeeper with that of a Metropolitan stipendiary. Mr. Woolmer White has twenty-eight addresses, and the Portsmouth Bench were compelled to find that at one of these he was disregarding the Pharmacy Act. But they said, "In a firm such as his" (with pharmacies all over the South of England) "little slips must occasionally occur," and they imposed a fine of 1*s.* It is so good of this gentleman, they seemed to argue—a J.P. himself, by the way—to provide for us all those nice shops, that we ought not to expect too strict a compliance with the law in his case. Mr. D'Eyncourt, the Clerkenwell Stipendiary, does not see any good reason to temper the wind of the law when a wealthy company breaks it. Having found charges proven under the Sale of Food and Drugs Act against two big druggists' companies, he remarked in each case, "This is a large concern and I shall impose the full penalty, 20*l.*, with 10*l.* 10*s.* costs." *Noblesse oblige*, and, in Mr. D'Eyncourt's view, so does size.

The Exact Address

on the poison-label is a matter of more importance than the Portsmouth Magistrates realise. From a police point of view it is the essential information. How is a purchase to be traced if "all over the South of England" is the definition of the selling-place? It might be suggested to the Privy Council Committee that in this respect the statutory requirement might be made rather more stringent. If Mr. White had put all his addresses on his poison-labels he would have complied with the law, but the information would have been as vague as it was in the form he actually used. Chemists with two or three shops generally, I suppose, use labels with those two or three addresses on them. Even in such cases it is impossible to fix the place of sale if it should be to the interest of the vendor not to admit it. The exact address where the sale was effected, and no other, ought to be insisted on in the case of every poison-label.

A Fine Distinction

was that which was made by Alderman Sir Horatio Davies at the Mansion House Police Court. "Ung. hydrargyri" was bought at two City pharmacies. It was so ordered in writing, and both vendors supplied a preparation weaker than the B P. ointment. The first, supplied by a company, was 70 per cent. deficient; the second 60 per cent. The first was supplied by a company; the second by an individual. The company pleaded not guilty, and had a solicitor to defend them; the individual pleaded guilty, and said nothing. The Alderman fined the company 2*s.* 6*d.*, and the individual 40*s.* He justified the difference by remarking that the company's dilution was based on an old formula, while the other "appeared to have followed no standard." Flies bite the lean horse is how I should characterise that sort of justice.

The Manchester Chemists' Association

ought to know all there is to be known about pharmaceutical education after a discourse on the subject by Mr. Grier, lecturer at Owens College, and a discussion sustained by Professor Pope, Professor Weiss, and Professor Wild. The learned gentlemen were not quite as tender towards our feelings as they ought to have been. They hinted that pharmacy-students thought rather of passing their examination than of education; which is, of course, what no other students do. One of the professors, however, hit the target, but not the bull's-eye, when he said the pharmacist was becoming a mere middleman for selling American goods in the original wrappers. That is crude, Professor. What we really want in a highly trained modern pharmacist is that he shall sell something else just as good when the customer wants the American remedy, and at the same time send the customer away satisfied. Do they teach him how to do that at Owens College?

Editorial Comments.

William Martindale.

"*Facile princeps* amongst pharmacists."

"A man who for many years had been steeped in pharmacy, who had led the race of many of the new discoveries and in making known the new remedies introduced into medicine."

IT is years since these high encomiums were publicly uttered on two similar but different occasions—one by Mr. S. R. Atkins, and the other by Mr. N. H. Martin—and now that the man of whom they spoke has gone to his rest it is difficult to put more happily the characteristics which made him the best-known pharmacist in the British Empire. William Martindale was first and foremost a pharmacist; he carried with him that love of the Art which attracts all practitioners of it, be they men of manipulative skill, or learned in the sciences which bear upon it, or neither of these but mere toilers for the pittance which falls to the drug-dealer. All were equally attracted by his obvious practical intimacy with every branch of the art of pharmacy, and although he did not lack the average Englishman's share of obstinacy in sticking to his opinions, one forgot the fact as acquaintance ripened and intimacy showed that he did not lack appreciation for all shades of opinion, even of those who were opposed to his own. Perhaps the best tribute of respect paid to his abilities as a pharmacist was his frequent election to

Digitized by Google

the Council of the Pharmaceutical Society in a position on the poll far ahead of those who by administrative experience were his superiors. He was essentially a practical man, and in that regard was he esteemed by the members of the Society. Yet, strange to say, it is not by his contributions to pharmaceutical literature that this estimate of William Martindale is sustained. There are many now with us who have written more voluminously on kindred subjects, but few have hit the need of the moment so happily as he, and that was where his strength lay—it built up his reputation amongst his fellows, and made him in the business sense a successful pharmacist. The characteristic was first shown when shortly after his appointment as dispenser and teacher of pharmacy in University College he contributed to the evening meeting of the Pharmaceutical Society in December, 1868, an interesting statement regarding the antiseptic treatment of wounds then but recently adopted by "Professor Lister, of Glasgow." It was simply a paper on "Carbolic-acid Plaster," but it was an excellent *début* for a man of six-and-twenty, and at different times in after years he showed that he kept pace with the progress of Listerism. Again, in 1870, when the British Pharmacopœia was under discussion, he put forward, in a series of notes to an evening meeting of the Society, several suggestions, which have since become of universal acceptance, such as the moistening of tragacanth-powder with spirit before adding the water in making mucilage. There are many new ideas of his in regard to the everyday work of the pharmacy scattered through the publications which he gave to the pharmaceutical world during the better thirty years of his life; we may mention his strong advocacy of the use of fresh bitter-orange peel in preference to the dried for the tincture; the advantages of oil of theobroma as a solvent and pill excipient for phosphorus and, later, as a vehicle for the administration of nitro-glycerin; his suggestion that quinine hydrochloride should replace the sulphate in making the tincture (not original to him, yet its final adoption was due to his advocacy); his work on the pharmacy of Chian turpentine was of immense service to dispensers of twenty years ago, as were also his hints regarding potassium-permanganate pills when they were introduced about 1883. Ideas such as these scattered throughout papers do not alone make a reputation: it was a peculiarity with William Martindale that he rarely conversed or spoke publicly on any topic related to practical pharmacy without conveying something fresh based on experience. His pharmacy was within the confines of the medical Mecca, and thus he was brought into contact with the leading medical and surgical practitioners of the day, which, combined with his close attention to current medical literature, placed him amongst the first of pharmacists to solve problems which sooner or later presented themselves far and wide. He was not the only pharmacist so favourably situated, but he was known to his *confrères* as one who gave them the benefit of his experience. That was exactly the feeling with which the "Extra Pharmacopœia" was received when it was first published in 1883, and the utility of the work to pharmacists and physicians has been consistently maintained through numerous editions. Elsewhere in this issue we deal more precisely with events in his career, and there is a pathetic interest in the fact that his services to pharmacy as a leader, in the widest sense of the term, have been chequered by the cardiac-malady which hastened his end. In fact, he entered the arena of pharmaceutical politics at a time when, for his health's sake, it would have been better, had he consulted more his own well-being, if he had taken the leisure which his business afforded him. His presidency of the British Pharmaceutical Conference was interrupted by his medical adviser, and when he came to accept the presidential chair of the Pharmaceutical Society he was again compelled by his physician to seek rest in a voyage to the Cape. His services to pharmacy as an investigator, as Chairman of the B.P.C. Formulary Committee, as a member of the Pharmaceutical Committee for the Revision of the British Pharmacopœia, and as an authority on galenical pharmacy and dispensing, were an ample contribution to his day and generation, and for these his memory will be revered.

Wonderful London.

THE Registrar-General has just issued the complete statistical tables for the county of London as shown by the census of 1900, and a study of the tables shows what a wonderfully complex whole it is that is included in the county of London. The area comprised is 74,839 acres, and on this space 4,536,541 persons are located. The pauper inmates of workhouses number 46,646 persons, 10,724 were in hospitals, 3,412 in lunatic asylums, and 4,167 under lock and key in local and convict prisons. The females exceed the males by 252,371, the proportion between the sexes being a little greater than it was in 1891. There are 571,768 inhabited houses and 40,069 uninhabited houses in the county of London, but of the latter class 24,098 are used for business-purposes, and had no inhabitants on census night. There are 109,716 babies under one year, which suggests plenty of scope for inventors of feeding-bottles; 495,608 children are under five years, the next favourite age being 25 to 30, 438,329 persons claiming that five-year period. Twenty-four entered themselves as of 100 years of age or upwards. Turning now to the nationalities of the inhabitants, we note that over three millions are London born, 56,605 were born in Scotland, 60,211 in Ireland, 35,421 in Wales, whilst 161,222 persons were born in foreign countries. The occupations of special interest to chemists contain the following number of persons:—

Physicians, surgeons, and general practitioners ...	4,801
Dentists (including assistants)	1,307
Veterinary surgeons	327
Nurses and invalid attendants	16,473
Persons engaged in scientific pursuits	711
Scientific-instrument makers and opticians ...	2,629
Surgical-instrument makers...	1,741
Manufacturing chemists	3,152
Alkali-manufacturers	22
Chemists, druggists	5,921
Retired chemists and druggists (in the workhouse, 24)	152
Oil and colour men	3,761
Mineral-water makers	1,756

The definition given for chemists and druggists is evidently not the legal one, as the number includes 835 women. The distribution of chemists and druggists in the various boroughs is not of much value, as the sizes of the boroughs bear no proportion to each other, but with the population given in the second column will enable some unemployed pharmaceutical statisticians to work out the proportion:—

	Chemists and Druggists	Population
City of London	46	26,923
Battersea ...	154	168,907
Bermondsey ...	171	130,760
Bethnal Green	134	129,680
Camberwell ...	410	259,339
Chelsea ...	77	73,842
Deptford ...	121	110,398
Finsbury ...	145	101,463
Fulham ...	126	137,289
Greenwich ...	67	95,770
Hackney ...	346	219,272
Hammersmith	133	112,239
Hampstead ...	132	81,942
Holborn ...	126	59,405
Islington ...	522	334,991
Kensington ...	230	176,628
Lambeth ...	505	301,895
Lewisham ...	159	127,495
Paddington ...	215	143,976
Poplar... ...	105	168,822
St. Marylebone	225	133,301
St. Pancras ...	310	235,317
Shoreditch ...	128	118,637
Southwark ...	353	206,180
Stepney ...	259	298,600
Stoke Newington	83	51,247
Wandsworth ...	284	232,034
Westminster (City) ...	291	183,011
Woolwich ...	56	117,178

Digitized by Google

It should be explained that the statistics refer only to the county of London; the area known as Greater London, which includes the above, has 6,581,372 inhabitants.

MR. DOBBS AGAIN.

Mr. Thomas G. Dobbs, Secretary to the "Traders in Poisons or Poisonous Substances for Technical or Trade Purposes Protection Society," is indefatigable in the interests of his clients. Several papers—photographic, grocery, and agricultural—contained last week a letter by him about the amendment of the Pharmacy Act, 1868, and the Poisons Committee. He sticks closely to his text—viz, that the sale of poisons in sealed packets as put up by the manufacturer does not require the chemist's skill and knowledge, which may be reserved, according to his view, "in making up a bottle of medicine for a human being." He goes on to say:—

It is to the benefit of traders in all parts of the country that the Society to which I have referred is exerting itself, and I am glad to inform you that the reasonableness of its demand has been admitted by the Privy Council, who last year appointed a Poisons Committee to investigate the matter and report on the evidence submitted to them. Already that committee has held three sittings, at which witnesses were heard on behalf of the Pharmaceutical Society, on the one hand, and our Protection Society on the other, besides some independent skilled and departmental witnesses, and there is good reason for believing that the committee may recommend the adoption of a third schedule to the Pharmacy Act, which will provide where poisonous compounds are sold in sealed packages for agricultural, horticultural, disinfecting, and other trade or technical purposes, by persons other than chemists, who shall be duly licensed, and being respectable and responsible individuals, they shall be lawfully entitled to sell such articles. It must be understood, however, that this desired result can only be obtained by the traders concerned bestirring themselves and bringing pressure to bear upon the members of Parliament in their respective districts, pointing out to them the desirability of the Government being urged to bring in an Amendment Bill for the purposes above indicated.

This is what Mr. Dobbs is fighting for with all his might, and we should be more content in regard to the outcome of the Poisons Committee if we had an equally strong pharmaceutical representative to go out in the open like Mr. Dobbs.

NEWSPAPERS AND THE POISON COMMITTEE.

The information which our Parliamentary correspondent sent us last week constitutes the first real insight into what the Committee sitting in Whitehall is doing. It is authentic information, and is none the worse because it happens to express views which are not exactly in line with our own. We have since noticed the following paragraph in the *Birmingham Post*:—

I hear that the committee of experts which has been sitting for some time, under the presidency of Sir Herbert Maxwell, M.P., to consider the qualifications necessary for chemists and the sale of poisons, is likely to make several important recommendations in the report which will be presented before long to the Lord President of the Council. Sir Herbert has had associated with him on the committee such well-known authorities as Professors Thorpe and Tilden, and Dr. Thomas Stevenson, and it is believed that one of the principal recommendations that will find a place in the report will be the compulsory registration of all chemists' shops, and the appointment only of duly-qualified chemists to take charge of them. Attention will also, in all probability, be drawn to certain glaring anomalies connected with the sale of poisons, and while the removal of certain arbitrary restrictions will no doubt be recommended, there is a likelihood that the committee will propose that in future all prosecutions should be initiated by a public prosecutor, instead of, as at present, by the Pharmaceutical Society.

The same paragraph, more or less mutilated, has appeared in other metropolitan and provincial papers. Need we say that all this in regard to the Committee's report is mere conjecture? The stage for drafting the replies to the propositions put to the Committee has not yet been reached.

THE SALE OF DISINFECTANTS.

The *Public Health Engineer* is much troubled in regard to the distribution of carbolic acid, partly on account of the smallpox, and partly because the acid has been scheduled as a poison. "This 'poison,'" says our contemporary, "may cause the death of one or two suicidal maniacs, or be even the means of murdering innocent people. On the other hand, it may save the lives of thousands, especially during the approaching spring. The criminals and the suicides can find other ways of compassing their fell designs; they can buy cyanide of potassium, for instance, for purposes of amateur photography, and they can use lethal weapons. Because there is a remote danger that somebody may at some time be poisoned by carbolic acid, therefore the public are now unable to obtain this disinfectant in retail quantities except from chemists and druggist. The whole business would be laughable were it not fraught with so much tragedy." This is bad engineering. Carbolic acid caused the deaths of thousands of people, and became a popular poison before it was scheduled. It will take years before its legitimate sale is properly restricted, for it is infinitely more difficult to uproot a tree than to pull out a sapling.

ELIXIR VITÆ.

The author of "Behind the Scenes in the Transvaal" refers to the remarkable fact that the native women of Swaziland retain their juvenility long after their first youth is passed. The late King Umbandine's adviser told him that this result was obtained by the use of a secret elixir, and investigations, he says, satisfied him that the Kaffirs really do possess the secret of some mysterious medicine which retards the natural process of physical decay. "This medicine, like all Kaffir specifics, is the product of a herb," adds the author, "and is administered in powder form once only, when the girl has reached a certain age. The result is apparently precisely what we are told follows the use of the traditional elixir of life. Her eyes are bright, her flesh firm, her limbs shapely and supple. Not a line shows on her face, and in this condition she will remain for thirty or forty years."

Recent Wills.

Deighton.—The will, dated November 5, 1901, of Alderman Thomas Milner Deighton, J.P., pharmaceutical chemist, of "The Hollies," Bridgnorth, who died on November 26 last, has been proved. The testator, whose estate has been valued at 8,870*l.* 0*s.* 4*d.*, left all his property in trust for his wife, Mrs. Sarah Deighton.

Doble.—Mr. Thomas Iago Doble, chemist and druggist, 45 Cadogan Street, Chelsea, S.W., who died in Westminster Hospital on August 12, has left a gross estate of 448*l.* 10*s.* His son, Mr. William Henry Doble, chemist's assistant, is the sole executor.

Furmston.—Probate of the will of Mr. Samuel Chambers Furmston, chemist and druggist, Chantry House, Avenue Road, Shanklin (formerly in business at High Wycombe), has been granted to his widow, Mrs. Anne Furmston, and the Rev. Samuel Chambers Furmston, of Blockwell Vicarage, Alfreton, son of the deceased. The gross estate is valued at 3,476*l.* 4*s.* 7*d.*, and the net personalty 2,436*l.* 18*s.* 10*d.*

Lowe.—The will of Mr. Robert Henry Lowe, chemist and druggist, of 330 Bilston Road, Wolverhampton, who died on August 31, has been proved at the Lichfield Probate Registry by his executors, Mr. Francis Hawkyard Hinde, of Wolverhampton, stationer, Mr. George Edward Johnson, of Sedgley, Conservative agent, and Mr. Osmond Henry Lowe, chemist, son of the deceased. The gross value of the estate is 662*l.* 14*s.* 4*d.*, and the net personalty 453*l.* 14*s.* 4*d.*

MacCormac.—The will, dated May 31, 1886, of Sir William MacCormac, of 13 Harley Street, London, consulting surgeon to St. Thomas's Hospital, son of Dr. Henry MacCormac, of Belfast, who died at Bath on December 4 last, aged 65 years, is proved on personal estate of the net value of 22,541*l.* The sole executrix is his widow, Dame Katherine MacCormac, daughter of Mr. Charters, of Belfast, and to her the testator left all his property.

Nutt.—The will of Mr. Archbell James Nutt, chemist and druggist, 133 Fenchurch Street, London, E.C., who died at 49 Bonham Road, Brixton, on July 20, has been proved by his widow, Mrs. Edith Jane Nutt. The gross amount of the estate is 254*l.* 14*s.* 6*d.*, and the net personalty 136*l.* 4*s.* 7*d.*

Digitized by Google

Marriage.

MCMAHON—RYAN.—On January 23, at St. Munchin's Church, Limerick, John MacMahon, L.P.S.I., Barrington Street, Limerick, to May, daughter of the late John Ryan, T.C, Patrick Street, Limerick.

Deaths.

ANDREW.—At 84 Union Grove, Aberdeen, on January 29, Mr. Thomas Thain Andrew, chemist.

CHAPMAN.—On January 20, Mr. Edward John Chapman, chemist and druggist, Hull. Aged 68.

CHAPMAN.—On January 18, at Heanor, Mr. Frederick Chapman, chemist and druggist. Aged 74.

DUNCAN.—At Brighton, on January 17, Mr. Robert Duncan, chemist and druggist. Aged 27.

FRYER.—On January 15, Mr. Charles John Fryer, chemist and druggist, Wandsworth Road, S.W. Aged 34.

GROVES.—The death occurred recently of Mr. Arthur Groves, chemist, 90 Field Road, Forest Gate, in his 50th year.

HARSTON.—On January 16, Mr. John Frederick Harston, chemist and druggist, Bristol. Aged 48.

HARTLEY.—On December 10, 1901, at Linton, Australia, Mr. Edward Hartley, chemist, formerly of Wakefield, England, and at one time bonded-store proprietor, Mel-Melbourne. Aged 84.

HEWITT.—At 211 Graham Road, Hackney, Mr. John H. Hewitt, who for nearly forty years was in the office of Messrs. D. & W. Gibbs (Limited), of the City Soapworks, London, and by his energy and trustworthiness has worked his way up from the position of junior clerk to that of head cashier. Mr. Hewitt had been in failing health for some time past, but died suddenly from heart-failure. The funeral service will be held at St. Luke's Church, Chatham Place, Hackney, at noon on Friday, February 7, and the interment will take place at Abney Park Cemetery about an hour later.

MARTINDALE.—On February 2, at 19 Devonshire Street, Portland Place, W., William Martindale, F.C.S., F.L.S., past President of the Pharmaceutical Society. Aged 61. Mr. Martindale was born near Carlisle in 1840, and was apprenticed with the late Mr. Andrew Thompson, Carlisle. The apprenticeship was of a practical nature, and Mr. Martindale has often related how with his apprentice-master early-morning rambles were made in search of henbane and dandelion for the manufacture of galenicals. This early acquaintance with botany doubtless gave him the strong leaning to the botanical side of pharmacy, which came out strongly in after life. Mr. Martindale came to London in 1862 as an assistant at Merrell's in Camden Road, and was afterwards with Messrs. Morson & Son, Southampton Row, W.C., where he remained for some years, attending in the early part of his career a course of lectures at the Bloomsbury Square School. He passed the Minor examination in July 1864, and the Major on October 17, 1866, taking honours in the latter. In 1868 he was appointed dispenser and teacher of pharmacy at University College Hospital, where he remained till he took over the retail branch of Messrs. Hopkins & Williams, 10 Cavendish Street, W., on May 23, 1873, retaining, however, for a short time a position as demonstrator of materia medica to the College. He joined the Board of Examiners of the Pharmaceutical Society in 1872, taking the place of Mr. Augustus Bird, and was an examiner until the end of 1882 In May, 1889, he was elected a member of the Council of the Pharmaceutical Society, being placed at the top of the poll, and it is an index of his popularity with pharmacists that in subsequent elections he was usually returned in that position. He was appointed Treasurer in the early part of 1899, when Mr. Hampson resigned, and in June, 1899, succeeded Mr. Walter Hills as President. At this time Mr. Martindale's health was far from robust, some cardiac trouble giving him considerable annoyance, not to say anxiety, and it was not, therefore, surprising to his friends that before the end of the year of office he was ordered a complete rest. The Vice-President (Mr. Newsholme) had to take his place at the annual meeting in 1900. Mr. Martindale's prescription when not feeling in good health was a sea-voyage, and in these journeys he never failed to investigate the materia medica of the countries he visited. A visit to Egypt in 1889 resulted in a paper on Egyptian opium, and in 1899, when he visited the West Indies, he communicated to the Royal Botanical Society a note on Barbados aloes and Tous les mois. In 1900 he visited South Africa, and on leaving for England was entertained at dinner by the Cape Pharmaceutical Society. Mr. Martindale was early connected with the British Pharmaceutical Conference. He was elected a member at the Exeter meeting in 1869, and was at once put on the Executive Committee. On the formation of the

Formulary Committee in 1886 he was appointed Chairman. From 1888 to 1890 he was Treasurer of the Conference, and in 1891 and 1896 filled the office of President, the state of his health not permitting him to take the presidency in 1892. It is curious to note that the two years he was President were the only occasions on which the Conference has been welcomed to the town by a peer; in 1891 the late Marquis of Bute was Mayor of Cardiff and welcomed the Conference, and in 1896 the Earl of Derby, as Lord Mayor of Liverpool, similarly acted in that city. When the Conference met in London in 1900 Mr. Martindale was Chairman of the Local Committee, and with his wife and daughter received the visitors at the garden-party at the Royal Botanical Gardens. Mr. Martindale was one of the members of the committee appointed in 1895 by the Pharmaceutical Society at the request of the General Medical Council to assist in the revision of the Pharmacopœia. He took an active part on the committee, and made a large number of experimental preparations in his own laboratory in connection with this work. Of his services to pharmacy generally we write elsewhere. It will be remembered that last July the Privy Council appointed Mr. Martindale to represent the Pharmaceutical Society on the committee which is inquiring into the necessity for alterations in the poisons schedule, and we can testify from personal knowledge to the laborious and painstaking work which he has done in this connection. He was suited better for the pleasant ways of the art of pharmacy rather than the worry of politics. He had the student's mind more fully developed than that of the statesman, so we find his record a large one in pharmaceutical literature. Besides in 1872 he

Digitized by Google

edited the University College Hospital Pharmacopœia, and in 1883 published the now well-known "Extra Pharmacopœia," being assisted in the medical notes by Dr. Wynn Westcott. The tenth edition brought out last May has considerably over double the number of pages that were contained in the first edition. The book undoubtedly did much to make his reputation outside the British Isles. When cocaine was all the rage fifteen years ago he wrote a little work on "Coca and Cocaine," which has gone through four editions. He was one of the original contributors to "The Art of Dispensing," and kept up his interest in it, frequently sending us little notes and suggestions for its improvement. In spite of his numerous engagements Mr. Martindale found time to interest himself in municipal life, and was Mayor of Winchelsea in 1893, where he had a family residence and considerable property. He also had archæological tastes and possessed a small collection of ancient pharmacy vases and Egyptian antiquities. He was most methodical in his arrangements, a fact which largely accounts for the varied interests which he attended to, and kept all his correspondence from his youth. Mr. Martindale was a man of handsome presence, and the picture of health and energy when he was well. He was kindness itself, and a perfect mine of information on pharmaceutical topics. He had travelled much, and has been honoured by pharmacists of several countries. He was happily married, and the sympathy of the whole craft will be extended to Mrs. Martindale and her two daughters, and two sons, in their pitiful bereavement. For some years Mr. Martindale had been assisted in his business by his elder son, Dr. W. Harrison Martindale, pharmaceutical chemist, who indeed had recently relieved his father of most of the details in connection with it. The younger son is an apprentice at 10 New Cavendish Street. The funeral took place at St. Marylebone Cemetery, East Finchley, on Wednesday, February 5, and was attended by many of Mr. Martindale's old colleagues and friends. His two sons and the staff from New Cavendish Street followed the body to the grave, and amongst those connected with pharmacy present were Messrs. C. B. Allen, R. Bremridge, E. N. Butt, M. Carteighe, A. Cooper, W. G. Cross, A. C. Flack, W. S. Glyn-Jones, W. F. Gulliver, Walter Hills, G. T. W. Newsholme, A. J. Phillips, W. J. I. Philp, J. C. Preston, R A. Robinson, Frank A. Rogers, A. L. Savory, F. Taubman. G. S. Taylor, J. C. Umney, W. P. Want, W. Warren, Harold Wilson, J. A. Wink, S. W. Woolley, and A. C. Wootton. The members of the Pharmaceutical Council and the other officers of the Society who were present attended as representatives of that body, the Council-meeting of this week having been postponed on account of the death. Many beautiful wreaths of flowers were placed on the coffin, and amongst them one sent officially from the Pharmaceutical Society.

Matterson.—On January 19, at Dewsbury, Mr. Edward Hardwick Matterson, pharmaceutical chemist. Aged 83.

Nobbs.—On January 20, Mr. James William Nobbs, chemist and druggist, East India Dock Road, E. Aged 62.

Reynolds.—On January 16, at Bungay, Mr. James John Reynolds, formerly in partnership with Mr. J. Lloyd Bullock, 3 Hanover Street, London, W. Aged 76.

Rickerby.—At Liverpool, on January 20, Mr. Thomas Rickerby, chemist and druggist. Aged 70.

Scheffer.—Mr. Emil Scheffer, one of the best-known chemists in the United States, died in Louisville, Ky., last month. He was born in Stuttgart, Germany, in 1832, and went when young to the United States, where he did good work, especially in regard to the production of pepsin and digestive preparations generally, the pepsin made by his process in 1870 being the first kind of the gastric ferments without the tissue.

Sibthorp.—On January 13, Mr. Stephen James Kenneth Sibthorp, chemist and druggist, West Hampstead. Aged 52.

Stewart.—At South Street, Milnathort, on January 30, Mrs. Elizabeth Stewart, widow of the late Mr. Alexander Stewart, chemist and druggist. Aged 88.

Thompson.—At 102 Highbury Hill, London, N., on January 19, Mr. Henry Thompson, pharmaceutical chemist. Aged 75. Mr. Thompson was for many years a manager with Messrs. A. S. Hill & Son, wholesale druggists, Southwark Street, S.E., and had latterly been living in retirement.

Turner.—At Prittlewell, on January 9, Mr. Jabez Turner, chemist and druggist, formerly of Hackney. Aged 75.

Wildsmith.—At 2 Brudenell Avenue, Leeds, on January 30, Mr. Edward Wildsmith, chemist and druggist. Aged 58.

Personalities.

Mr. T. Davies, representative of Messrs. Evans, Sons & Co., is succeeding Mr. John Blyton in the Yorkshire and Lancashire journey.

Mr. J. Ferrier has been appointed Vice-President of the Cardiff Chemists' Assistants' Association, in place of Mr. A. S. Swadling, who has left the country.

Mr. J. Robinson, pharmaceutical chemist, of Northgate, Darlington, has been re-elected Chairman and a director of the Darlington Mutual Plate-glass Insurance Company (Limited).

Mr. P. E. F. Perrédès, Ph.C., B.Sc., F.L.S., of the Wellcome Research Laboratories, is in California. He is visiting different parts of the coast, studying the *Rhamnaceæ* and other medicinal plants.

At an amateur dramatic entertainment promoted by the Rhyl Advertising and Town Improvement Association, and which took place at Rhyl on January 29 and 30, leading parts were taken by Mr. P. J. Ashfield, chemist and druggist, who is Vice-President of the Association.

On Monday, February 3, at the Great Eastern Hotel, Liverpool Street, E.C., Brother H. Potter (Messrs. Potter & Clarke) was installed as the first Worshipful Master of the Borough of Stepney Lodge, No. 2,884. The Consecrating Officers were: V.W. Brother E. Letchworth Grand Secretary; V.W. Brother Colonel Probyn, Mayor of Westminster; W. Brother W. J. Crump, Mayor of Islington; V.W. Brother Right Rev. the Bishop of Barking; and V.W. Brother Frank Richardson.

Business Changes.

Mr. S. A. Warner, chemist and druggist, has recently opened a business at 29 Regent Circus, Swindon.

Mr. R. E. Rice, chemist and druggist, has taken over the business of the late Mr. W. Briggs at 89 Union Road, Newington Causeway, S.E.

Messrs. Walker & Harris, chemists, London, Canterbury, and Ashford (Kent), have purchased the business formerly carried on at 20 George Street, Hastings, by Mr. Walmsley.

Messrs. Carter White & Co., "cash chemists," have opened new premises at 73 Freeman Street, Grimsby. In their public announcements Messrs. Carter White & Co. state that the "firm is owned controlled, and managed by fully-qualified chemists only."

College Notes.

Exeter Pharmacy School.—The Society of Apothecaries has consented to recognise the course of training given in the pharmaceutical department of the Royal Albert Memorial College, Exeter, as qualifying for admission to the assistants' examination under the new regulations.

London College of Pharmacy.—In reporting Mr. H. Wootton's speech last week, we said all the ladies had passed on one occasion. What he actually said was "On three occasions all the Majors we sent up from the College were successful, and twice they formed one-half the total pass."

Imperial College of Chemistry.—At the recent examination conducted by the Institute of Chemistry in Branch E, pharmacology, therapeutics, and microscopy, the whole of the candidates presenting themselves from this College were successful—namely, F. Arnaud, J. R. Brookes, E. Jenkins, Herbert King, M.Sc., W. Lowson, W. Partridge.

Digitized by Google

INTER-COLLEGIATE FOOTBALL.—The return League game between the Metropolitan College and London College was played at Wormholt Farm on Saturday, February 1, but what promised to be a fast and interesting game was considerably spoiled by the very high wind. London scored through Evans in the first half, and managed to keep their opponents out, thus reversing the result of the previous game by 1 to nil.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.—A meeting was held in the lecture theatre, 17 Bloomsbury Square, W.C., on Friday evening, January 31, Mr. Richard A. Robinson, jun., in the chair. After the minutes were disposed of, Mr. C. E. Male read a paper on "Apis Mellifica." He stated at the outset that he proposed to confine himself to the anatomy and life history of the honey-bee, the subject of bee-keeping having lately been treated in an able and practical manner by Mr. S. T. Frost (see *C. & D.*, January 25, page 109). The paper, which was illustrated by a number of lantern-slides, was followed with interest by all present. At its conclusion Mr. F. C. Hanbury explained the construction of a modern bee-hive, which, together with other apparatus, combs, &c., had been lent for the occasion by Messrs. Lee & Son, Silver Street, W.C. Mr. T. E. Wallis, B.Sc., also described some experiments, which showed that the antennæ of the bee are organs of smell, and that, although each compound eye of the bee consists of about 3,000 lenses, there is every probability that only one image of any object is conveyed to the insect's brain. Questions were asked by some of the students, and replied to by Mr. Hanbury and Mr. Male. [For dinner report, see page 230.]

NEWCASTLE STUDENTS SUP AND SMOKE.—The students of the North of England School of Chemistry and Pharmacy held their annual supper and smoker on Wednesday, January 29, in the Grand Hotel, Newcastle-on-Tyne. There was a large attendance of old students, and the visitors included Mr. G. F. Merson, F.C.S., and Mr. Barry Noble. Mr. F. R. Dudderidge, F.C.S., presided, and after supper the toast of the "Pharmaceutical Society" was given by Mr. J. F. Wootton, and replied to by Mr. Merson; that of the "North of England School of Chemistry and Pharmacy" being given by Mr. G. Rae Patterson and acknowledged by Mr. Dudderidge. Mr. Barry Noble spoke a few words urging the claims of the Young Chemists' Association. The rest of the evening was devoted to a smoking concert, the following gentlemen contributing to the programme:—Messrs. J. Hay, G. R. Patterson, J. C. Patterson, Stewardson, Marshall, and McPhail with songs; Messrs. Blackburn and J. A. Hay with piano solos; Mr. Moffatt a violin solo; Messrs. Robertson, Gowland, W. C. Longstaff, and Parsons with recitations; Messrs Blackburn and J. A. Hay very ably performing the accompaniments. The programme of this happy reunion was designed by Mr. H. Parsons in colours and "gold," the latter being one of those insoluble salts which are familiar to visitors to York Place, Edinburgh, but whose nature they less frequently know. One side of the programme showed sketches of laboratory and dispensing-counter apparatus depicting "to the coming generation of counter-jumpers the road to ruin—three years' hard." The right side showed two return tickets to Edinburgh, four bags of money representing examiners' fees and expenses, below which we find the label of "A. Stonybroke, M P.S., chemist and druggist. Hours, 7.30 to 9.30; Sundays, 1 to 3 and 6 to 9." It was for

The Conglomeration.
One look that will
be a warning to
the future generation

"N.B.—I sell no drugs—only patents at cost price."

NURSERY RHYMES AND PILLS.—Messrs. Page Woodcock, the pill-manufacturers, of Lincoln, recently inserted an advertisement in the *Schoolmistress*, offering a parcel of pictorial nursery rhymes to infant-schools and received one thousand applications. That number of parcels has been despatched, each parcel containing from twenty to six hundred pictorial cards for distribution to school children.

THE ACADEMY AND "LITERATURE" for February 1 is a composite production which will appeal to readers with diversified tastes. Although mainly interesting to "littery persons," there are several articles—the review of Mr. Holland Rose's "The Life of Napoleon I," for instance—that place this weekly far above the snippety productions of ephemeral journalism. Under the title "Things Seen" are two delightful sketches, which throw into strong relief the innate politeness of the Italian and the callousness of the ordinary British peasant. "A Kipling Exam. Paper" is distinctly humorous, while the drama, art, and science are consecutively treated by men who know how to write and what they are writing about.

Legal Reports.

High Court Cases.

CARBIDE PATENT.

THE validity of Willson's patent for the production of calcium carbide was raised in an action before Mr. Justice Buckley by the Acetylene Illuminating Company (Limited) against the United Alkali Company (Limited) to restrain them from manufacturing, selling, or supplying in this country calcium carbide manufactured according to Willson's specification No. 16,705, of 1894. After a hearing which lasted several days his Lordship dismissed the action, holding that the defendants had proved their case—viz, that the patent was not valid, and that they had not in fact infringed it.

"KOKO FOR THE HAIR."

ON January 31 Mr. Justice Swinfen Eady granted to the Koko Mariscopos Company an interim injunction to restrain Cadman & Lunger until trial of the action from selling in this country a toilet-preparation called "Koko for the Hair," and from passing off as the plaintiffs' any preparation not manufactured by them. It was stated that the plaintiffs were incorporated in 1895, and in 1898 became the proprietors of registered trade-marks. They had recently discovered that an attempt had been made by the defendants to sell to Harrod's Stores and another store a similar preparation, and that was a breach of an agreement made in 1888 between the defendants and the plaintiffs' predecessors. The defendants claimed a right to manufacture and sell in this country, for export, which point his Lordship will decide at the trial.

Merchandise-marks Act.

MINERAL-WATER BOTTLES.

ON January 31, at the Limerick Quarter Sessions, before Judge Adams, Patrick Toomey, mineral-water manufacturer, sought to recover the sum of 10*l.* from Mr. Mathew McNamara, Sexton Street, mineral-water manufacturer (trading as P. Ryan), damages sustained by reason of the defendant converting to his own use a quantity of mineral-water bottles marked with plaintiff's name. Plaintiff also claimed an injunction against the defendant from further using the bottles.

The defendant said that counsel was engaged in the case who could not attend.

The case was adjourned to next Sessions.

AT the Newry Petty Sessions on January 29, John D. McVicker, Inspector of the Belfast Bottle Exchange, prosecuted John O'Hare & Sons, mineral-water manufacturers, Queen Street, Newry, on a similar charge, and obtained a fine of 10*s.* and 30*s.* costs.

Medicine-stamp Acts.

UNSTAMPED PROPRIETARIES.

AT Bow Street Police Court on January 30, George Squire Boutall, chemist and druggist, was summoned for selling medicines liable to a stamp duty, without stamps, at 237 High Holborn, The Pharmacy, Holborn, 98 Strand, 5 Green Street, and 3 Newcastle Street, seven summonses in all. Mr. Timbrell, for the defence, admitted that there had been a technical offence, but pleaded that in consequence of an accident the defendant met with in September last he had been unable to exercise proper control over the thirteen businesses he owned. Mr. Uniacke, who prosecuted for the Inland Revenue authorities, said seven distinct purchases had been made. In each case unstamped medicine was supplied, and in each case the article was marked 1*s.* 1½*d*, but was sold for 1*s.* Mr. Boutall had been cautioned by the Board of Inland Revenue, and wrote to say that he was surprised, as his assistants had been repeatedly told to put stamps on all articles liable to stamp duty. The fact that the defendant had met with an accident, Mr. Uniacke said, would make little difference, inasmuch as he had thirteen shops to look after, and he could not supervise them

Digitized by Google

thoroughly. He had been convicted of the same offence on more than one occasion. Mr. Timbrell said defendant had made arrangements that in future all goods manufactured and sent out from the Marchmont depôt should be stamped before they left the store. This, of course, would relieve the assistants at the various branches of any responsibility. James Towse, manager of the head depôt at Marchmont Street, said several assistants who had received special instructions to see that all dutiable goods should be stamped had recently been discharged for not doing their duty. Richard Clarke, an assistant at the defendant's Holborn establishment, deposed that defendant's employés had received instructions verbally, and in writing, to affix stamps to all goods which ought to be stamped, and they were supplied with stamps for that purpose.

Mr. Uniacke: Can you understand why an article marked 1*s.* 1½*d.* was sold for 1*s.*?

The Witness: It is a usual thing.

Mr. Uniacke: Why are these goods marked at 1*s.*?

The Witness: You can buy patent medicine at 10*d.*, although it is marked 1*s.* 1½*d.* The thing is done all over London.

Sir Albert de Rutzen said it was a pity the defendant did not make arrangements for having all his goods stamped before they left the depôt after he was fined on the last occasion. He would now have to pay fines and costs amounting to 18*l.* 4*s.*

County Court Cases.

On Sale or Return.

At Northampton County Court on January 29, Algernon Lewes (Limited), Albion Works, Hornsey Rise, London, manufacturers, claimed from Jabez Mayes, Northampton, 6*l.* 11*s.* 3*d* for horse-medicines, &c. The plaintiff company abandoned 2*l.* 2*s.* of the claim, a payment of that sum having been overlooked. The goods were left on sale or return, and the defence was that all that were sold were paid for—two-guineas' worth. The rest of the goods was unsaleable, and the defendant had several times written to the company requesting them to remove them. The defendant said when he paid the 2*l.* 2*s.* to the traveller, he asked the traveller to take the remainder of the goods away, and he said he would send for them in a few days. Notwithstanding this and the defendant's letters to the company, they had never sent for the goods. Judge Snagge gave a verdict for the plaintiff, but said he would not enter judgment until the next Court, so that the defendant could return the unsold goods on hand.

The Necessity for Caution.

In the City of London Court on January 31, before Judge Lumley Smith, K.C., an action was brought by J. Vincent & Sons (Limited), 18 Little Britain, E.C., to recover the sum of 1*l.* 19*s.* against Mr. Oldcorn, chemist, Trevelyan Buildings, Coventry Street, for sanitary-paper supplied. The defendant said he had had the goods, but they did not come from the plaintiff, but from one Lockwood, and he owed the money to him. He did not have any invoice from the plaintiffs until seven months after the goods had been delivered. They were delivered by Pickford & Co., and he had not the remotest idea that they came from the plaintiffs. Judge Lumley Smith held that plaintiffs were entitled to payment, as it was they who supplied the goods and not Lockwood, and gave judgment for plaintiffs, with costs.

Sale of Food and Drugs Act.

Sweet Spirit of Nitre.

The careless way in which drugs are handled by the general trader was shown in the prosecution of Walter Scott, a Misterton grocer, last week before the Retford County Bench, for selling deficient sweet spirit of nitre. The inspector who made the purchase for analysis said he was served from a bottle that had no cork, and he pointed out that evaporation must deteriorate the spirit. The certificate from the analyst showed that the sample contained but a very small proportion of ethyl nitrite. The Magistrates ordered defendant to pay a fine and costs amounting to 20*s.*

At Settle on January 28, Isabella Ralph, grocer, Settle, was fined 1*s.* and 1*l.* 3*s.* 6*d.* costs for selling sweet spirit of nitre containing only about $\frac{1}{7}$ of the minimum proportion of nitrous ether required by the British Pharmacopœia.

Child Messenger Act.

On February 4, at the Hull Police-court, William Wesson, described as a chemist (but whose name does not appear on the register), 117 Hessle Road, was summoned for sending a boy, 11 years of age, for brandy to the Lily Hotel. The landlord refused to supply the boy, and defendant pleaded that he forgot about the Act. A nominal penalty of 2*s* 6*d.* and costs was imposed.

Bankruptcies and Failures.

Re William Thomas, trading at Market Place, Willenhall, near Wolverhampton, Chemist and Druggist.—The Official Receiver of the Wolverhampton Bankruptcy Court announces that he has completed the realisation of the debtor's estate, and, after meeting the costs of the bankruptcy proceedings and the claims of the preferential creditors, he is enabled to pay a first and final dividend of 2*s.* 10*d.* in the pound.

Re W. J. Trythall, Cusgarne, Gwennap, Proprietor of Carnon Chemical-works.—At the meeting of the creditors of this debtor last week it was stated that the gross liabilities amounted to 6,468*l.*, and assets to 2,193*l.* Debtor attributed his failure to pressure by a creditor and the serious and unprecedented fall of arsenic. He carried on the business of arsenic-refining, tin-streaming, and ochre works.

Re J. J. R. Short, 7 Crosby Square, E.C., trading as Thomas & Short, Merchant.

A sitting of the London Bankruptcy Court was held on February 5, before Mr. Registrar Giffard, for the public examination of this debtor. The failure is one of the group of provision and produce firms now in the Court, and is the result of accommodation-bill transactions entered into with Messrs. Wallis Brothers & Co., Messrs. S. & E. Ransome, and Messrs. Rogers Brothers. Accounts have been filed by the debtor showing total liabilities 43,795*l.* (unsecured, 26,623*l.*), assets valued at 1,117*l.*, and a deficiency of 25,511*l.* Debtor stated that he was assisted financially by Messrs. Rogers Brothers, with whom he exchanged acceptances. In recognition of that assistance he drew or accepted bills for that firm or their nominees, principally Messrs. Wallis Brothers & Co. and Messrs. S. and E. Ransome, in respect of which he had no part of the proceeds. There were some dozen firms in all, and the amount of the transactions must have exceeded 103,000*l.* He denied that he was any part of the combination of those firms, or that he was a party to the drawing of trade bills with a view to deceiving the banks. He had always regarded Messrs. Rogers Brothers, who introduced him to the other firms, as being good for 30,000*l.* or 40,000*l.* The hearing was adjourned until the examination of the other firms has been held.

Deeds of Arrangement.

Longman, Samuel Hurman, 3 and 4 Market Place, Highbridge, and The Poplars, Berrow Road, Burnham, chemist and druggist. Trustee, Edward W. Helps, Bank Chambers, Bridgwater, I.A. Dated, January 23; filed, January 28. Secured creditors, 300*l.*; liabilities unsecured, 297*l.* 5*s.* 10*d.*; estimated net assets, 651*l.* 18*s.* 7*d.* The following are scheduled as creditors:—

Betts, Reginald, late Framlingham, chemist.

New Companies & Company News.

CHESHIRE AND LANCASHIRE SOAP-MANUFACTURING COMPANY (LIMITED).—Capital 5,000*l.*, in 1*l.* shares. Objects: To acquire the business of soap-manufacturers carried on at Winsford, Cheshire, by the Salt Union (Limited), and to carry on the business of soap and candle makers, seed-crushers, varnish-manufacturers, &c. Registered office, New Road, Winsford, Cheshire.

NORDRACH-ON-DEE SANATORIUM (LIMITED).—Registered in Edinburgh. Capital 55,000*l.*, in 1*l.* shares. Objects: To acquire from D. Lawson, M.D., the 25 acres of ground belonging to him in Banchory-Ternan, the buildings of the sanatorium, the laboratory, &c., engine-house and shelters, and the whole furniture, fittings, and plenishings, and to maintain a sanatorium for the treatment of pulmonary tuberculosis. Registered office, 179 Union Street, Aberdeen.

C. WALLIS (LIMITED).—Capital, 5,100*l.*, in 1*l.* shares (5,000 preference). Objects: To carry on the business of importers, manufacturers and brokers of and dealers in foreign and colonial produce, provision merchants, Italian warehousemen, oil and colourmen, chemists, druggists, drapers, &c. No initial public issue. The first directors are W. T. Bilson, R. McAllister, and J. W. Andrew. Qualification, 50 preference shares.

BICHLORIDE OF GOLD HYDRO ESTABLISHMENT (SOUTHPORT) (LIMITED).—Capital 4,000*l.*, in 1*l.* shares. Objects: To acquire and carry on the treatment and cure of alcoholism, narcotism, neuresthenia and kindred diseases now carried on by R. Henshall, Emily Henshall, P. V. Wolfenden, and Florence E. Wolfenden at the Ranche, 24 Oxford Road, Birkdale, Lancs, as "The Bichloride of Gold Hydro, Southport," and to carry on the general business of a hydropathic establishment. Registered office, Chapel Street, Southport.

SANITAS ELECTRICAL COMPANY (LIMITED).—Capital 4,000*l.*, in 1*l.* shares. Objects: To acquire from R. Otto and K. Otto, of Berlin, the benefit of certain inventions relating to apparatus for curing diseases by means of light, and to manufacture and deal in medical and other appliances (whether electrical or otherwise), light baths, &c. The first subscribers are:—R. Otto, 22A Luisenstrasse, Berlin, merchant; K. Otto, 22A Luisenstrasse, Berlin, merchant (first director); J. K. A. Hoffmann, 19 Kirchstrasse, Berlin, merchant; H. O. H. Wiskemann, 6 Abchurch Yard, E.C., merchant; E. W. L. U. Peters, 55 and 56 Chancery Lane, W.C., solicitor; and Miss E. Robinson, 143 Mare Street, Hackney. Remuneration, 150*l.* per annum.

LENNON (LIMITED).—The result of last year's trading was as follows: Dividend of 10 per cent. per annum, 21,949*l.*; to reserve fund, 10,000*l.*; balance carried forward, 10,022*l.*; total 41,971*l.*

BOVRIL (LIMITED).—The *Financial Times* reports that the directors of Bovril (Limited) have resolved to recommend, subject to final audit, the following dividends: On preference and ordinary shares at the rate of 5½ per cent. and 7 per cent. per annum respectively for the second half-year and 4 per cent. in deferred for the year 1901, to add 25,000*l.* to reserve, and carry forward 14,354*l.* The deferred-share dividend for 1900 was 3½ per cent.

G. B. KENT & SONS (LIMITED).—The report of the directors and the balance-sheet and profit and loss account show, after charging working expenses, allowing for bad and doubtful debts, depreciation, &c., a profit of 9,920*l.* for the year ended September 30, 1901. To this is added balance from last account (848*l.*) and transfer fees (16*l.*). The deductions comprise interest on mortgages and loans (392*l.*), directors' fees and income-tax (£84*l.*), and interim dividends paid (3,892*l.*), leaving a balance of 5,915*l.* The profit is less than last year, owing to the stock having been valued at a less amount, and to increased expenses. Under these circumstances the life directors prefer to forego their fees for this year, and the board have therefore placed 500*l.* to reserve, and paid a further half-yearly dividend of 5½ per cent. on the preference shares (absorbing 2,589*l.*). They recommend a dividend of 9 per cent. per annum on the ordinary shares for the second half-year (making 7 per cent. for the year) thus absorbing 2,542*l.*, and leaving a balance of 283*l.* to be carried forward. The new factory at Hemel Hempstead is now almost completed, and work will be commenced this month.

Trade-Marks Applied for.

Objections to the registration of any of the undermentioned applications should be lodged with C. N. Dalton, Esq., C.B., Comptroller-General of Patents, Designs, and Trade-marks, at the Patent Office, 25 Southampton Buildings, Chancery Lane, London, W.C., within one month of the dates mentioned. The objection must be stated on Trade-marks Form J, cost 1*l.*, obtainable through any money-order office.

A Stereoscopic Adapter.

By J. A. FORRET.

A HALF or whole plate camera with removable front can be readily adapted for stereoscopic work at a very small outlay. The necessary materials are here figured, and, though simple and crude, for ordinary purposes they are sufficient. The lenses, which are round, are such as are used in vulcanite folders which can be bought for about 1*s.* a pair. They should be carefully examined before selected

for this purpose, as, like all cheap spectacles and eyeglasses, many of the frames are glazed with lenses that are not pairs. For our purpose we must have two lenses that are optically a pair. A focal length between 6½ and 5 inches, corresponding to +6·0 and +8·0 diopters, will be found suitable for most purposes. The lenses are mounted in stout cardboard tubes (A) of convenient length. Stops of any required value are easily made from pill-boxes (B), which fit into the lens-tubes, and two pill-box lids fixed to a flat piece of wood or cardboard (C) form the caps for the lenses. The lens-tubes are glued to a piece of stout cardboard (D), having two circular holes a little smaller than the diameter of the tubes, the distance between the lens-centres being about 3 inches. This cardboard "front" replaces the panel carrying the lens of the camera, and is made rigid by two pieces of wood (E). It is now only necessary to divide the camera to prevent overlapping of the images. This is easily effected by fixing to the back of the camera a narrow strip of wood carrying a piece of cardboard of suitable size (F). It is convenient to indicate on the focussing-screen the position of the centre of each picture. Of course such lenses as I have referred to are simply double convex spectacle-lenses with all their inherent spherical and chromatic aberration; but the size of a stereoscopic picture is small, and these lenses when stopped down to, say F/20, give very fair results, the area of sharp definition being sufficiently large for stereoscopic purposes.

London Drug Statistics.

THE following statistics are compiled from information supplied by public warehouses. They relate to the receipts and deliveries of some of the leading drugs from and into the London public warehouses for the month of January, 1902, and to the stocks on January 31.

CORRESPONDENCE

TO CORRESPONDENTS.—Please write clearly and concisely on one side of the paper only. All communications should be accompanied by the names and addresses of the writers. If queries are submitted, each should be written on a separate piece of paper. We do not reply to queries by post, and can only answer on subjects of general interest.

An Old Charm.

SIR,—May I say that after my article under this head was in type, but before it appeared in your columns, an authority in such matters informed me that the writing on the slips is in the "legal hand of George the Third's time." The statement in your note that it cannot be earlier than 1820 is certainly much too strong. I have myself compared it carefully with handwritings of various dates from the middle of the eighteenth century to 1822, and it is quite as much like the earlier as the later of these. There is no reason why it should not be 150 years old. It is not necessary to suppose that it was then written for use as a charm; these slips, which are almost certainly copies of older ones, may then have been regarded merely as curiosities, and as such preserved. But the contrary is also possible. Fergus MacIvor, who had received the best education of his time, had some lingering belief in magical incantations in 1845; and Scott tells us that even when "Waverley" was written they were in common use in remote parts of Scotland. Probably they are so still.

Yours truly,
C. C. BELL.

Poisonous Patents.

SIR,—I was told yesterday by one of our customers that he had bought a bottle of "licoricine" from a grocer in this district. Now, "licoricine" contains chlorodyne, so I sent for a bottle to the same grocer, and found it was an entirely different preparation. It is put up by the same firm in exactly the same style as the one we sell, with the exception that it does not mention that it contains chlorodyne. I have enclosed the two labels, so that you can compare them:—

CHEMISTS' "LICORICINE."

This preparation combines in a most agreeable form the well-known soothing and healing properties of Licorice Root and Glycerine, with Ipecacuanha, Marsh Mallow, Chlorodyne, &c., and to ensure its careful use according to the printed directions, the Pharmacy Act, 1868, requires it to be labelled POISON.

GROCERS' "LICORICINE."

This preparation combines in a most agreeable form the well-known soothing and healing properties of Licorice Root and Glycerine, with Ipecacuanha, Marsh Mallow, &c., &c.

Which of these preparations is "licoricine"? When the public ask for a patent they expect to get the same article, whether from a chemist or a grocer. If a child has been given the one from the grocer and the next bottle is purchased from a chemist, it is possible that the child might be poisoned, and the mother could not be blamed for giving it, as she would be under the impression it was perfectly harmless. I am not sure if there are other "patents" made in the same way. Perhaps someone amongst your many readers know of other cases. If so, I think it would be something for the P.A.T.A. to look into.

Didsbury. C. BROWN.

On Sale or Return.

SIR,—On July 16, 1901, I received an invoice and letter from a firm in Lowestoft stating they had sent a parcel of wine "on sale or return." As I had not ordered any, and further had no licence, I sent back their invoice by return of post, declining to accept it. However, the wine was offered at my shop, and I declined receiving it, telling the railway company to refer to senders for instructions. A second letter came. Since then I have not heard from the firm until this week, when they sent me a statement asking me to remit the amount. As I was not the only person in Belper to whom the same party sent a similar consignment, it seems to be the way they push their goods, and I think the trade generally should be made aware of the practice.

Sincerely yours,
Belper, January 28. W. T. BURKINSHAW.

[Mr. Burkinshaw sends us copies of his correspondence with the British and Foreign Wine Company, who sent the wine, and J. Chapman & Co. (Limited), of Norwich. Two dozen of Coleman's quinine wine (with case invoiced at 1*l.* 17*s.*) was sent. This was entirely at consignors' risk, and delivery having been declined the liability of the consignee did not commence. We presume the B. and F. Wine Company will not attempt to sue, but if they do in this or any similar case we shall be glad to have particulars.—EDITOR *C. & D.*]

Dispensing Dutiable Medicines.

SIR,—I do not know if I quite grasp all the meaning conveyed in the remarks on page 129 of the issue of the *C. & D.* of January 25: "Fellows's syrup or other stamped proprietaries dispensed without admixture must be stamped." I am in the habit of receiving such prescriptions as this:—

Syr. hypophos. co. (Fellows) ... ℥iij.
℥j. t.d. p.c. ex aq.

I open a stamped bottle of Fellows's syrup, fill a 3-oz. bottle, and label it as directed by the prescriber. Do the authorities require me to stamp that 3-oz. bottle?

I am, faithfully,
J. B. (134/4.)

[Yes. A paragraph in THE CHEMISTS' AND DRUGGISTS' DIARY, page 281, gives the information. It is as follows:—

"For dispensing, medicines otherwise liable to stamp-duty may be supplied unstamped [*i.e.*, by the maker] if labelled, 'This medicine is to be used for dispensing only.' Such medicine may be dispensed, on doctor's prescription or otherwise, duty free if it is mixed with something else, but if not so mixed it must be stamped according to the charge made for it."

The stamping must be done whether the medicine is taken out of a stamped package or not. The thrifty plan is to use medicine from an unstamped package. If dispensing chemists had strictly carried out their duties in this matter, physicians would long ago have appreciated the risk they run by prescribing *per se* dutiable medicines.—EDITOR *C. & D.*]

"The Wrong Button."

SIR,—The story unfolded of the American by "A Chemist and Photofactor" in the *C. & D.* of February 1, resembles very much that told me by the representative of Kodak (Limited) when discussing with him their lately-dropped scheme. Possibly "A Chemist and Photofactor" got his information from the same source. I sincerely hope that the latest scheme of Kodak (Limited) will have as short a life as the former one.

Yours, &c.,
P. O. P. (140/46.)

Distribution of Circulars.

SIR,—If circulars are addressed they can only be delivered by someone in a trader's regular employ. An ordinary bill-distributor engaged for the purpose would quickly receive a notice from the P.O., if officials in the district are as much on the alert as they are here.

Yours very truly,
ERICA. (141/17.)

Invalid Bovril.

SIR,—Some time ago invalid bovril was offered to chemists as a desirable article for them to introduce and push, a good profit being shown. Now, when a demand has been created, the price is considerably advanced, but the retail remains the same as before. Thus the article now bears only the grocer's profit on the ordinary kind. This seems very like a case of kicking away the ladder as soon as the object has been attained.

Yours, &c.,
February 4. M.P.S.I. (142/42.)

Quality of Benzoin.

SIR,—Messrs. Southall Brothers & Barclay, in their tenth annual laboratory report, in respect of benzoin as examined by them, state "that the percentage of matter soluble in 90-per-cent. alcohol varied from 61·04 to 66·10 per cent.,

Digitized by Google

showing an average of 64·33 per cent., and demonstrating the practical impossibility of obtaining commercial samples answering the B.P. requirements." This statement, without any qualifying words to indicate the class of benzoin assayed, is, in our opinion, liable to be misunderstood. Dieterich, in the *C. & D.*, 1898, stated that from Sumatra benzoin he obtained 68 to 83 per cent. of matter soluble in alcohol 90-per-cent. White and Humphrey's "Pharmacopedia" gives 70 to 80 per cent., and our own assays vary from 82 to 87 per cent. of matter soluble in 90-per-cent. alcohol. We have had no difficulty in obtaining Siam benzoin which answered B.P. requirements.

Yours truly,

Horncastle, January 28. W. KEMP & SON.

Separating the Yolk.

SIR,—Having in my young days been an occasional visitor to the confectioner's workshop, I have seen the practical method of dealing with a basket of eggs, which may not be so familiar to your readers as it ought to be. The point is to chip the egg on some sharp edge so as to divide the shell into two equal parts, either of which is sufficient to hold the yolk, and permit of the overflow of the albumen into a separate vessel. The yolk-sac has a natural tendency to settle in the lower end when the newly split egg is turned vertically, but a little care is necessary to prevent it passing over with the first rush of the white. Then by gently tossing the yolk from one half-shell to the other it becomes almost entirely separated from the albumen. In dispensing-practice it is advisable to use a knife-edge, with which to make a short, sharp, and rather shallow fissure in the egg-shell, and this, by gentle pressure of the blade, may be extended some way round, so as to insure a regular fracture of the remainder. This is suggested by Mr. Ince's paper on emulsion-making. C. (134/88)

"Opodeldoc"

SIR,—The mistakes of "M." and Samuel Lawrence, both with respect to opodeldoc and assistants, are easily explainable. The *Edinburgh Medical and Physical Journal*, 1807, gives:—

Opodeldoc, a term of no precise meaning invented by Paracelsus. It formerly signified a plaster for all external injuries, but now is confined to camphorated soap-liniment, the composition of which is very well known to surgeons and apothecaries.

English assistants have no inducement to go for improvement or further experience to the North, where it is seldom to be found, and where the English language is so frightfully murdered with Scotch brogue. The Scotch, for experience and monetary considerations, find it expedient to come *Sooth*.

Yours,

January 28. CHEMIST. (134/81)

Scotch Assistants and Situations.

SIR,—After passing my Minor at Edinburgh in 1885, I was offered by an Edinburgh firm 120*l.* per annum outdoors. I went to London instead at 60*l.* indoors. I do not think I bettered myself, my age at the time being 24.

Yours truly,

PING-PONG. (134/21)

Miscellaneous Inquiries.

136/40 *Yorkshire*.—A bust-developer which we examined recently was a glycerin and tragacanth paste. See also *C. & D.*, September 14, 1901, page 479, for a useful formula.

138/62. *Ulysses and Others*.—South African Situations.—We note your remarks. We do not forget that there are two sides to most questions.

134/60. *J. H. C.*—The South Dakota Pharmacy Board's examination should not be difficult to pass once you get acquainted with American pharmacy and the U.S. Pharmacopœia. The salaries paid to druggists' assistants out there range from £10 a week upwards. You should tell us more about your experience and intentions, as well as the part of the State you intend to go to.

129/31. *Ne no*.—One of the simplest check-tills is that made by O'Brien, of Liverpool. If you require an elaborate till to automatically register the amount of each sale, refer to the advertisement of the British Machine Company (Limited), THE CHEMISTS' AND DRUGGISTS' DIARY, page 468. We presume that the reason why a few large retail shops have reverted to a human cashier, is that they have had evidence of general pilfering, and desire to limit the possibilities.

136/54. *L. S. S.*—Surely your interest in the names on the Nuremberg bottles is equal to the little trouble that it will take you to refer to a few seventeenth and eighteenth century works on materia medica, or even Gray's "Supplement." Half the names are obviously not mysterious at all.

134/22. *Mancunian*.—Mercuric chloride does not cure skins rapidly, but acts merely as an antiseptic preventing putrefaction. The best way to work is to stretch the skin when fresh over a board, scrape any adherent muscle off the skin, and brush with a hot solution of ammonium chloride 1 oz., and mercuric chloride ½ oz. in 12 oz. of water. Repeat the application daily for four days, exposing to the light all the time. This does not tan the skin.

Other replies will appear next week.

Information Wanted.

Postcard replies to any of the subjoined inquiries will be esteemed.

142/1. Where can glass-wove socks for wearing in shoes be obtained?

138/47. Address of makers of Harris's tamarind emulsion, Baynard's massage-cream, and Newton's rouge-powder.

Coming Events.

Monday, February 10.

Dewsbury Chemists' Association, Church House, Dewsbury, at 8.30 P.M. Lantern-lecture, by Mr. F. P. Sargeant (Leeds), on "Bacteria and their Allies."

Tuesday, February 11.

Bradford Chemists' Association. Lantern-lecture, "By ways in Cumbria," by Mr. Percy Lund.

Wednesday, February 12.

Chemists' Managers' and Assistants' Society. Grand Bohemian concert in aid of the Benevolent Fund of the Pharmaceutical Society in the council chamber of the Holborn Restaurant, at 8 P.M. Tickets, 1s. each, can be had from Mr. G. Cullwick, 13 Mysore Road, Lavendar Hill, S.W.

Manchester Pharmaceutical Association, Victoria Hotel, at 7.30. Lantern-lecture on Jamaica by Mr. T. H. Wardleworth, Liverpool.

Pharmaceutical Society of Great Britain, 17 Bloomsbury Square, W.C., at 11 A.M., Council-meeting postponed from this week.

Newcastle-on-Tyne Chemists' Association. Smoking-concert at the Hôtel Métropole, Clayton Street, at 8 P.M.

Sheffield Pharmaceutical and Chemical Society. Address on "Pharmaceutical Topics," by Mr. G. T. W. Newsholme.

Thursday, February 13

North-East Lancashire Chemists' Association, White Bull Hotel, Blackburn, at 8.30 P.M. Mr. Joseph Hindle will deliver a lantern-lecture on "Switzerland."

Cardiff Chemists' Assistants' Association. "The Effect of Quinine on the Malarial Parasite," by Dr. Paterson.

Optical Society, 7 Crane Court, Fleet Street, E.C., at 8 P.M. Mr. J. T. Sandell will read a paper on "Photographic Films."

Friday, February 14.

Glasgow and West of Scotland Pharmaceutical Association. "The Preparation of Antitoxic Serum," illustrated by lime-light views by Mr. T. Maben, and a discussion on early-closing.

Royal Institution of Great Britain, Albemarle Street, Piccadilly, W., at 9 P.M. Major P. A. MacMahon on Magic Squares and other problems on a chess-board.

Wholesale Chemists' and Druggists' Cricket Championship, second annual concert at the Holborn Town Hall, Grays' Inn Road, W.C., at 8 P.M. Tickets, 1s. each, can be obtained from Mr. E. Sibley, 64 Park Street, Southwark, S.E.

Trade Report.

NOTICE TO BUYERS.—The prices given in this section are those obtained by importers or manufacturers for bulk quantities or original packages. To these prices various charges have to be added, whereby values are in many instances greatly augmented before wholesale dealers stock the goods. Qualities of drugs and oils vary greatly, and higher prices are commanded by selected qualities even in bulk quantities. It would be unreasonable for retail buyers to expect to get small quantities at anything like the prices here quoted.

42 Cannon Street, London, E.C.: February 6.

BUSINESS in drugs and chemicals shows a slight improvement on that of last week, probably owing to the drug-sales. There is still, however, a depressed feeling hanging over the markets, and complaints of dull business are frequent. Quinine remains very quiet, but steady, in the absence of sellers. Senega is a rising market, and Para tonka-beans are dearer. Lithia citrate has again been reduced, owing to keen competition. Cod-liver oil is tending upwards, but as yet there is no definite news regarding the fishing. In essential oils the chief movement has been in star-anise, which has advanced about 3*d.* to 4*d.* per lb. Cassia continues neglected, lemongrass is steady, and in peppermint there is little business doing. Citric and tartaric acids and cream of tartar are all very quiet, as is also borax and boric acid. Copper sulphate has been in better demand at improved prices. The following table shows the principal changes of the week:—

Higher	Firmer	Easier	Lower
Copper sulphate	Acid, carbolic	Ipecac. (Rio)	Benzols
Dragon's-blood	Belladonna-root	Orange-peel	Buchu
Nutmegs	Myrrh	Pepper, black	Calumba
Soda nitrate	Oil, anise, star		Cardamoms
Tonka-beans (Para)	Oil, castor (Belg.)		Chillies
Wax, bees' (Jam.)	Oil, cod-liver		Cocoa-butter
Wax, bees' (Madagascar)	Senega		Cubebs
			Ipecac. (Cart.)
			Lithia citrate
			Pepper
			Sarsaparilla (Jam.)
			Tin-crystals

Arrivals.

The following drugs, &c., have arrived at the principal ports of the United Kingdom from January 30 to February 5, inclusive:—Acid, boric (@ Hamburg) 115 cks., (@ Leghorn) 13 cs.; acid, carbolic (@ Cologne), 10; acid, oxalic (@ Rotterdam), 17; acid, tartaric (@ Rotterdam), 97; antimony (@ Hamburg) 5, (@ Leghorn) 31; argol (@ Bordeaux), 53; arsenic (@ Antwerp), 30; bay-rum (@ St. Thomas), 1 brl.; benzoin (@ Penang), 49; bismuth ore, 47; bleaching-powder (@ Antwerp), 81; borate of lime, 6,908; borax (@ Leghorn) 33 cs., (@ Tocopilla), 1,562 bgs.; (@ Valparaiso), 1,066; bromine, 187; camphor (@ Hamburg), 600 cs.; cardamoms, 106; caraway-seed, 25; chamomiles, 5; chillies (Jap.), 200; chloral hydrate, 10; cinchona (@ Valparaiso) 14 srns., (@ Ceylon) 29; cinnamon, 131 bls.; coca-leaves (@ Ceylon), 12; cocaine, crude (@ Callao), 4 cs.; cochineal (@ Las Palmas), 12; cod-liver oil (@ Christiana) 75, (@ Aalesund) 238; cream of tartar (@ Rotterdam) 29, (@ Bordeaux) 222 cks., (@ Tarragona) 10; cubebs (@ Hamburg), 47; cumin-seed (Mor.), 50; drugs (@ Marseilles 119, (@ Leghorn) 9; essential oils (@ Hamburg) 6, (@ Messina) 155 pkgs., (@ Palermo), 6 pkgs., @ Hong-Kong), 60 cs. 20 bxs., (@ New York) 31 cs.; farina (@ Hamburg), 56; gentian (@ Marseilles) 40 brls., (@ Bordeaux) 10; ginger (@ Bombay 66 bgs., (Jam.) 50; glycerin (@ Boulogne) 40, (@ N.Z.) 166) (@ Amst.) 35; guinea grains, 14; gum arabic (@ Alexandria) 53; gum sandarac, 77; gum thus, 204 brls.; honey (Jam.) 5, (Chil.) 325 brls; ipecacuanha (@ Cartagena), 41; juniper-berries, 100; kola (W.C.A.), 9; lemon-juice, conc. (@ Catania), 30 pps.; lime citrate (@ Messina), 117 cks.; lime-juice (@ Jamaica), 5 brls.; lysol (@ Hamburg), 79 cs.; manna (@ Palermo), 3; oil, castor (E.I.) 125, (Ital.) 100; olibanum, 199 cs.; orange-peel (Malta), 10; ozokerite (@ Hamburg), 172 bgs.; peppermint oil (@ Hamburg) 10, (@ Yokohama) 90 pkgs.; poppy-heads (@ Antwerp), 12; potash chlorate (Swed.), 180; potash oxal., 40; quicksilver (Ital.), 100; quillaia, 97; quinine, 18; "roots" (@ Marseilles) 181 bls., (@ N.Y.) 13; rose oil (E.I.), 4 pots; saccharin, 8 cs; sal ammoniac (@ Hamburg), 12; saltpetre (@ Hamburg) 214, (@ Antwerp) 135; sarsaparilla (@ Panama) 25; (@ Limon) 14 bales, (*vid* Hamburg) 144; senna (@ Bombay), 28; shellac, 100 cwt.; button lac, 279 cwt.; sulphur (@ Catania), 427 bgs. 308 cks. 64 brls.; tragacanth (@ Bombay), 124; turmeric (@ Bombay) 50, (@ Calcutta) 260; turpentine oil (@ Riga) 52, (@ Libau) 52; vanilla, 9 cs, (@ Bordeaux), 9 cs.; wax, bees' (@ Hamburg) 16 bgs. 75 pkgs., (Chil.) 12, (@ W C.A.) 14, (Span., 22, (E.I.) 43; wax, Japanese, 23; wine lees (@ Palermo) 403 bgs. (@ Bordeaux) 22 bgs.

Java Quinine Auctions.

The auctions of quinine to be held in Batavia this year will take place on

March 5,	September 3,
April 9,	October 8,
May 21,	November 12,
June 25,	December 17.
July 30,	

It is intended to offer 4,000 kilos. (140,000 oz.) at each auction.

A Minimum Freight.

A combination has been formed among the principal Atlantic steamship companies which has abolished the old rates of freight in favour of a minimum which will leave a fair margin of profit. The following are the parties to the agreement: Allan line, American line (Liverpool and Southampton service), Atlantic Transport line, Beaver line, Cunard line, Chesapeake line, Dominion line, Elder-Dempster line, Gulf Transport line, Johnston line, Lamport and Holt line, Leyland line, Manchester Liners (Limited), Philadelphia-Manchester line, National line, Thompson line, Warren line, White Star line, Wilson line, and Wilson-Furness-Leyland line.

Liverpool Drug Market.

Liverpool, February 5.

CASTOR OIL.—The market is practically featureless, the quotations of last week being still maintained—namely, 3$\frac{7}{16}$*d.* to 3$\frac{1}{2}$*d.* per lb. for good seconds Calcutta. The forward position has, if anything, fallen away, and lower quotations are now quoted for arrival parcels. First-pressure French is obtainable at 2$\frac{15}{16}$*d.* to 3*d.* per lb.; second-pressure is held for 2$\frac{7}{8}$*d.* per lb., with a hardening market forward.

GUM ACACIA.—For Soudan sorts the prices are fully maintained, and for hard amber sorts 35*s.* per cwt. is lowest for a parcel of mixed, lower prices being refused.

QUILLAIA-BARK.—Sales have been reported during the week at 12*l.* 10*s.* to 12*l.* 17*s.* 6*d.* per ton.

SULPHATE OF COPPER has improved materially during the week, and sales are recorded in quantity at 19*l.* 15*s.* per ton. Makers are asking 20*l.* There is every prospect of still higher prices.

HONEY.—Sixty-eight barrels of Pile X. Chilian, fair quality, have changed hands at 28*s.* per cwt., and sales of smaller parcels of other grades have been made at the equivalent figures during the week.

BEESWAX.—The small stocks now available are held for full prices—namely, 7*l.* 5*s.* to 7*l.* 15*s.* per cwt.

GRAINS OF PARADISE.—Holders on the spot have now put up their price to 70*s.* per cwt., owing to scarcity.

German Drug-market.

Hamburg, February 4.

Business in general is improving, and our drug-market shows a better tone and more business.

ANTIMONY is practically unchanged at 29m. for spot, and forward 28m. per 100 kilos.

BALSAM PERU is very firm at 13$\frac{1}{2}$m. to 14m. per kilo.

CAMPHOR (REFINED) is firm, at 435m. per 100 kilos. A good consumptive demand is expected.

CEVADILLA-SEED is dull and lower at 71m. per 100 kilos.

COCA-LEAVES are lower, as cocaine has gone down lately. Bolivian leaves are quoted 250m., and Cusco leaves 240m. per 100 kilos.

CONDURANGO-BARK shows a very firm tendency; 85m. per 100 kilos. paid, 87$\frac{1}{2}$m. asked.

CUMIN-SEED is quieter at 51m. to 52m. per 100 kilos.

ERGOT OF RYE is still quiet. Russian is coming in slowly, and values are about 330m per 100 kilos.

FENUGREEK-SEED is firm, and little is offered. Spot is quoted 15$\frac{1}{2}$m. and forward delivery 15m. per 100 kilos.

IPECACUANHA is quiet and lower, Rio at 23m. per kilo.

Digitized by Google

JABORANDI-LEAVES show a fair inquiry, but very little is offered.

LYCOPODIUM shows a rather strong market. Higher prices are quoted from Russia, and stocks are small there. The present quotation in Hamburg is 440m. per 100 kilos.

MENTHOL is unchanged, at 30m. spot.

QUININE is almost without business, at 39m. per kilo.

OILS, ESSENTIAL.—Peppermint oil is very firm at 8.70m. per lb. for HGH, Japanese is 8½m. per kilo., and there are sellers of star-anise at 11m. to 10¾m. per kilo.

OILS, FIXED.—Cotton is tending upwards. Linseed rapidly advancing. Castor neglected, and very slow of sale. Cod-liver, 70m. per 100 kilos.

SANTONIN is firm, and nothing is obtainable below makers' price.

SPERMACETI firm at 230m. per 100 kilos.

WAX, JAPANESE, for forward delivery, is quoted 67m. to 68m. per 100 kilos.

WORMSEED is very firm and advancing; brown 63m. to 65m, green 77½m. to 80m. per 100 kilos.

Cablegrams.

HAMBURG:—Both refined camphor and menthol are quiet. Wormseed is dearer, and cod-liver oil is advancing.

* * * *

NEW YORK, February 6:—Business here is good. Opium is dull at $3·00 per lb. Cartagena ipecac. is easy at $1·40 per lb. Balsam copaiba advancing—now 35c.; buchu easy at 19c. Cannabis indica strong at 70c. Senega dull at 50c. per lb. Sarsaparilla firmer at 7c. per lb.

ACID, CARBOLIC, has a firmer tendency, and prices would appear to have reached their lowest point. Ordinary crystals, 39° to 40° C. are quoted 6¼*d.* to 6½*d.*, and 34° to 35° C. 6¼*d.* per lb. Crude, 60 per cent., is 1*s.* 10*d.*, 75 per cent., 2*s.* 3*d.* per gal. Cresylic, 95 per cent., 8*d.* to 11*d.*

ACID, CITRIC is a dull market at 1*s.* 0¾*d.* per lb.

ACID, TARTARIC, is also dull of sale at 10½*d.* per lb. for foreign, and 11¼*d.* for English.

ALUM is quoted 5*l.* 10*s.* to 5*l.* 12*s.* 6*d.* for lump, and 6*l.* for ground. Liverpool is 4*l.* 17*s.* 6*d.* to 5*l.* per ton, f.o.b., for lump, according to size of package.

ANTIMONY.—Japanese regulus is quoted 27*l.* 10*s.* per ton, c.i.f.

ARROWROOT.—At auction on Wednesday good Natal was bought in at 6½*d.* per lb. A pile of good St. Vincents sold at 1½*d.* per lb., but the remainder was bought in.

ARSENIC is slow of sale, though stocks are gradually being reduced. For best white English powder 16*l.* to 16*l.* 5*s.* per ton spot is quoted.

BELLADONNA-ROOT is rather firmer, good quality being still scarce; from 37*s.* to 40*s.*, c.i.f., is quoted for fair.

CINCHONA.—The shipments from Java to Europe during January amounted to

	Amst. lbs.		Amst. lbs.
1902	940,000	1896	970,000
1901	1,000,000	1895	657,000
1899	509,800	1894	893,000
1898	956,000	1893	900,000
1897	390,000		

COCOA-BUTTER.—At the auction held at Amsterdam on February 4, 85 tons *Van Houten's* brand sold at 69½c. to 68c. per ½ kilo. (average price 68·70c.) against 70½c. at the previous auction; 8 tons *de Jong* sold at 67½c. to 67c., 4 tons *Helm* at 66¾, and 5 tons *Betke* at 66¾c.

COPPER SULPHATE.—There has been considerably more doing in this article during the past few days, and values have advanced in sympathy with the boom in the metal market. Business has been done up to 19*l.* 10*s.* while some sellers ask 5*s.* to 10*s.* advance on this figure. Anchor brand is quoted 20*l.* to 20*l.* 10*s.* per ton, and Liverpool 19*l* 10*s.* to 19*l.* 15*s.* Should the usual spring demand be up to the average, it is probable prices will advance further, especially as the production has been restricted owing to the dangerous position of copper. Supplies from several works are already less than anticipated, and the bulk of the requirements have yet to be filled.

A telegram from U.S. Consul Jackson at Patras to his Government announces that a United States firm has been awarded the contract to supply 500 tons copper sulphate to the Currant Bank of Greece.

LEMON-JUICE (CONC.).—A Messina report, dated January 31, states prices declined only slightly during the past month, notwithstanding the large crop. It is known that large contracts have been placed by French buyers. The manufacture of lemon-juice and citrate of lime at Palermo is now beginning, and as the crop there is a large one also (while exportation of fresh fruit is almost at a standstill), a further decline in values is looked for; 12*l.* 3*s.* per pipe of 130 gals., f.o.b., is quoted for February-April shipment.

LITHIA CARBONATE has again declined, makers quoting 2-cwt. quantities at 4*s.* 6*d.* per lb.

MENTHOL.—Privately the lowest price for Kobayashi crystals appears to be 14*s.* 3*d.* per lb., spot. From the Continent there are offers at from 13*s.* 3*d.* to 13*s.* 6*d.* per lb., c.i.f.

OIL, ANISE, STAR.—There has been considerably more business this week, and values have advanced about 3*d.* per lb. After further business was done at 4*s.* 2*d.* per lb., spot, holders advanced their quotation to 4*s.* 4*d.*, and this figure has been paid for 50 cases for consumption; 4*s.* 6*d.* was the lowest spot price on Wednesday. In auction 20 cases "Ship" brand were firmly held at 4*s.* 9*d.* per lb.

OIL, CANANGA.—Guaranteed pure is quoted 12*s.* per lb.

OIL, COD-LIVER.—Our Bergen correspondent writes on February 1 that the first official reports from Lofoten have come to hand. They state that a fair amount of cod has been perceived at the fishing stations, but nothing is mentioned regarding the quality of the liver. If the weather, which is still stormy, should moderate, there would be every prospect of a good fishing. So far the production of new oil is only slight—not exceeding 1,000 barrels. The quotation for new Lofoten oil is unaltered, at 71*s.* per barrel, f.o.b. Bergen. The exports from that port to date amount to 706 barrels, as against 510 barrels at the same date of last year. In London, business of fair extent has been done at 71*s.* per barrel for last season's oil, which shows a firmer tendency.

OIL, LEMON, is quoted 2*s.* 9*d.* per lb., c.i.f., for a good brand, and a fair demand is reported.

OIL, LEMONGRASS, is steady at 7½*d.* per oz., spot.

OIL, OLIVE.—A report from Messina, dated January 31, states that the gathering of the olives is finished except in a few mountain districts. The result, however, is not so abundant as expected. Notwithstanding, prices have declined under the impression of the large Spanish crop.

OIL, PETITGRAIN.—For Paraguayan distilled 7*s.* per lb., c.i.f., is quoted.

OPIUM.—Our Constantinople correspondent writes on January 31 that, owing to continued fine weather, a weaker tone is apparent, and there is more disposition on the part of holders to sell. The week's sales amount to 6 cases "druggists'" at 7*s.* 9*d.*, and 2 cases at 7*s.* 11*d.* per lb. The sales in Smyrna for the week ending January 24 amount to 44 cases, principally for the United States, at rather easier prices. The weather continues favourable, and the young opium-plants in the interior promise well.

POTASH, CHLORATE.—The spot price for crystals is 3¼*d.* to 3½*d.* per lb., net, and powder 3¼*d.* to 3½*d.* In Liverpool 5-ton lots are quoted 3*d.* to 3¼*d.* per lb., f.o.b.

QUICKSILVER is very firm at 8*l.* 15*s.* per bottle, and a large export business has been done this week.

QUININE.—Practically no transactions are reported this week, but the market is steady, with buyers for March delivery at 1*s.* 1*d.*, and sellers at 1*s.* 1½*d.* per oz. To-day a sale of 30,000 oz. is reported at 1*s.* 1⅝*d.* for March, and 1*s.* 1½*d.* for June.

According to a telegram from Batavia on Wednesday 2,000 kilos. quinine (Ed. II.) sold at an average of 20½fl. per kilo. (about equal to 8c. Amsterdam unit), while the last price paid was 20¼fl. per kilo.

SEEDS.—Russian *Anise* slow, at 20*s.* 6*d.* per cwt. Dutch *Caraways* quiet, at 21*s.* 6*d.* per cwt. *Coriander* steady, at 9*s.* 6*d.* to 10*s.* per cwt. for Morocco. *Cumin* sells readily at

Digitized by Google

24*s.* to 25*s.* per cwt. for Morocco, but Malta meets with no demand. *Fenugreek* steady, but quiet, at 7*s.* to 7*s.* 6*d.* per cwt. *Linseed* firm, at 59*s.* per quarter for good quality. *Canary* steady on the spot, but lower prices have been accepted for Turkish to arrive.

SENEGA.—Privately a firmer tone has developed, and offers of 2*s* per lb, c.i.f., have been refused. On the spot 2*s.* 3*d.* per lb, net, is quoted. In auction 10 bales of good quality were firmly held at 2*s.* 3*d*, a bid of 2*s.* 2*d.* being refused.

SHELLAC has been a dull and easier market. On the spot business has been done in fair second orange TN on a basis of 119*s.* to 120*s.* for fair TN. Futures, after being lower, closed rather firmer on Wednesday. May delivery has sold at 123*s.* and June at 123*s.* 6*d.* per cwt.

SODA, BICARBONATE, is quoted 7*l.* 5*s.* per ton, ex warehouse, and 6*l.* 15*s.* per ton in kegs, f.o.b. Liverpool.

SODA NITRATE is dearer at 10*s.* 4½*d.* per cwt., and ordinary 10*s.* 3*d.*, spot; in Liverpool 10*s.* 3*d.* to 10*s.* 6*d*, ex store, is quoted.

SOY is steady at 1*s.* 6*d.* to 1*s.* 8*d.* per gal., duty paid.

SPICES.—There has been little business done during the week, and at the auctions on Wednesday the demand was slow. Cochin *Ginger* was bought in at 50*s.* per cwt. for washed rough. Japan was held for 42*s.* per cwt. Jamaica partly sold at 41*s.* 6*d.* to 42*s.* 6*d.* per cwt. for small washed, and at 41*s.* 6*d.* to 42*s.* for hard dull bold. St. Lucia sold at 40*s.* 6*d.* per cwt. for dull, rather small. Zanzibar *Cloves* are steady at 4 1/16*d.* per lb. for June-August delivery. Good Amboyna were bought in at 6*d* per lb. *Pimento* quiet; ordinary quality was bought in at 3*d.* per lb. Japan *Chillies* sold "without reserve" at 39*s.* 6*d.* to 40*s.* per cwt. for good red, being lower. *Capsicums* sold at 13*s.* per cwt. for common red East India on stalk; good cherries were bought in at 30*s.*, dark sold at 18*s.* per cwt., and shrivelled on stalk at 12*s.* Fine picked Egyptian were bought in at 50*s.* per cwt. *Cinnamon-chips* were bought in at 3*d.* per lb. Wild *Cinnamon* sold at ¾*d.* per lb. for quill, and ⅝*d.* per lb. for bark. *Cassia-chips* were bought in at 50*s.* per cwt. Black *Pepper* slow and easier; fair Singapore was bought in at 6*d.* per lb. Business to arrive has been done at 5 15/16*d.* for March-May shipment, but the market is now firmer. White is steady; dull Singapore was bought in at 10*d.* per lb., and Penang at 9⅞*d.* per lb. Singapore has been sold to arrive at 10⅛*d.*, and Penang at 10*d.* to 10 1/16*d.* per lb.

London Drug-auctions.

THE tone was dull throughout, and the tendency of prices generally was towards easier rates. Sumatra benzoin sold well at steady prices; buchu-leaves dropped quite 2*d.*; cardamoms were again depressed; cubebs sold cheaply; dragon's-blood was dearer. Gamboge was firmly held; honey neglected, at about previous values. Both kinds of ipecacuanha were a trifle easier, especially Cartagena. Myrrh irregular; rhubarb steady; Jamaica sarsaparilla lower; senna unchanged; Jamaica and Madagascar beeswax dearer. The following table shows the quantities offered nd sold:—

	Offered	Sold
Aconite	35	0
Alkanet-root	8	0

* Sold privately.

ALOES.—Of Curaçao aloes 61 boxes were shown; for good liver 30*s.* was wanted, and for black capey 22*s*, subject, was paid, and dull liver and coarse 18*s.* 6*d.*, subject. Cape remains scarce; for an odd case of seconds 23*s.* 6*d.* per cwt. was paid.

ARECA.—For good seed 30*s.* was wanted.

ASAFETIDA.—There was little public demand for the new consignment of 480 packages from the Persian Gulf, though a fair quantity was sold after the sale, including 15 cases at 50*s.*, about half the bulk of which consisted of good almondy pinky block, the remainder being very heavy greyish dark block, the loose consisting partially of gum and stones. Two cases of mostly loose almondy, rather husky, sold at 57*s.* 6*d.* A parcel of 179 cases from Bombay, imported twelve months ago, was offered without reserve, and sold at from 6*s.* 6*d.* up to 15*s.* per cwt. for low descriptions.

BALSAM COPAIBA.—A case of opaque Cartagena sold at 1*s.* per lb. Four cases guaranteed B.P. quality were held at 1*s.* 9*d.*

BALSAM PERU.—Four cases had been sold privately; 6*s.* 3*d.* to 6*s.* 6*d* is about the value.

BALSAM TOLU.—Two cases slightly drossy quality, in large tins, brought 11*d.* per lb.

BENZOIN.—In active demand at steady prices. Good Sumatra seconds, well packed with small almonds, sold at 7*l.* 15*s.* per cwt.; and ditto, not so well packed, 7*l.* 2*s.* 6*d.* to 7*l.* 5*s.* Good fair Sumatra seconds sold at 7*l.* per cwt, subject, to 7*l.* 2*s.* 6*d.*; and for medium seconds of old fracture, 6*l.* to 6*l.* 10*s.* was paid, the bulk selling at the lower figure. Palembang gum sold at 30*s.* for very barky seconds in small tins, and for a mixed lot of good almondy to woody 35*s.* was wanted. Siam, which is scarce, sold at high rates, 22*l.* 15*s.* being paid for a case of small to bold pale loose almonds of good flavour; blocky pea and bean size almonds were bought in at 12*l.*; and 3 cases of darkish brown seedy block sold at 65*s.*

BUCHU.—Large arrivals brought about a decline of about 2*d.* per lb. In auction fair greenish round leaf sold at 8*d.* to 8¼*d*, and yellowish leaf at 7*d.* Good long green leaf sold at 1*s.* 4*d.*, and not quite so green at 1*s.* 1*d.* to 1*s.* 2*d.*

CALABAR-BEANS were held for 1*s.* 4*d.* per lb.

CALUMBA.—Several parcels were withdrawn, and the only sale made was of 120 bags small to medium dull brown sorts sold at 8*s.* 6*d.* to 8*s.* 9*d.* per cwt.

Digitized by Google

CAMPHOR.—For Japanese refined Sumitomo brand, in 1-oz. tablets, 2*s.* 2*d.* per lb. was wanted in auction. Privately, several hundred piculs Japanese crude camphor have been sold at 150*s.* per cwt., c.i.f., for February-March shipment.

CARDAMOMS.—The selection on offer was poor, and prices were again lower and irregular, little interest being taken in the spice. Part of the offerings were withdrawn. The following prices were paid:—Ceylon-Mysore, medium and bold pale 2*s.* 1*d.* to 2*s.* 4*d.*, bold medium palish 1*s.* 9*d.* to 1*s.* 11*d.*, small and medium dull 1*s.* 4*d.* to 1*s.* 6*d.*, brown and split 1*s.* to 1*s.* 4*d.*, pickings 1*s.* 1*d.* to 1*s.* 2*d.*, split 1*s.* Ceylon-Malabar, small and medium brown 1*s.* 1*d.* to 1*s.* 4*d.*, very brown small 1*s.* 2*d*, small lean 11*d.* to 1*s.* Eight cases *Seed* sold at 1*s.* 7*d.* to 1*s.* 9*d.* Of Native wild 3 cases small medium sold at 2*s.* 2*d.*, subject, and pickings at 1*s.* 1*d.*, subject.

The annual report of the Kandy District Planters' Association states that the past season for the cardamom crop was not favourable, and most estates were short. Experiments are now being tried with artificial manures, which hitherto have been of no avail. The prices realised during the past season point to a downward tendency. Prospects of crop for 1902 appear fair.

CASCARA-SAGRADA.—Two parcels of 1899 crop were offered, and 26*s.* to 27*s.* were wanted for them.

CASCARILLA.—Two bales of lean and twiggy quill sold at 45*s.* per cwt.

COLOCYNTH.—A cask of brownish pulped Spanish sold at 1*s.* 1*d.*

COWHAGE.—Four tins of ordinary stony and very sandy quality sold "without reserve" at 1*d.* per oz.

CUBEBS.—Three bags of fair bold berries free from stalk sold at 30*s.* per cwt. The exports from Singapore from January 1 to December 31 (in piculs) have been:—

—	Great Britain	U.S.A.
1901	104	2,783
1900	263	1,197
1899	—	539
1898	1,142	1,272
1897	417	639
1896	295	224

CUTTLE-FISH BONE.—Very broken brown bone sold at ¾*d.* per lb. without reserve.

DRAGON'S-BLOOD.—Two cases of fair bright seedy lump were limited at 14*l.*, a bid of 12*l.* 5*s.* being refused. Two cases of part reboiled lump of fair colour sold at 11*l.* per cwt., being dearer.

The exports from Singapore to Great Britain from January 1 to December 31 (in piculs) have been:—1901, 101; 1900, 224; 1899, 227; 1898, 118; 1897, 99; and 1896, 71 piculs.

GAMBOGE.—Good dry pipe of orange fracture, partly blocky, was held for 14*l.* per cwt.

GUM ARABIC.—Four bales "picked" Trieste grain sold without reserve at 80*s.* to 83*s.* per cwt., and for 2 cases good ditto 5*l.* was paid. Small to bold pale picked Trieste brought 9*l.* Palish Soudan sorts were held at 40*s.*

HONEY.—Very cheap and neglected, only a small proportion being disposed of, at the following prices: Palish to brown, set, in cases, 15*s.* to 18*s* per cwt.; and pale thick at 30*s.* Brown candied, in barrels, 18*s.*

IPECACUANHA.—It will be seen from the drug statistics that the stocks continue to accumulate, the total of both descriptions in the warehouses being nearly a thousand packages. In auction there was very little demand for Rio, a few sales being made at late rates. For two lots of good, partly native picked, 10*s.* 2*d.* to 10*s.* 4*d.* was paid. Ordinary lean Rio pickings sold at 8*s.* 2*d.* Four bales cultivated native picked sold at 10*s* (subject) to 10*s.* 1*d.* per lb. Cartagena was about 3*d.* easier, two bales selling at 4*s* 6*d.* for fair average quality, and for five bales a bid of 4*s.* 3*d.* is to be submitted.

MYRRH.—Pale siftings were dearer, 2 cases selling at 70*s.* per cwt. Five cases dusty and darkish sorts sold at from 58*s.* to 61*s.*

OIL, CASSIA.—Thirty cases 75 per cent. to 80 per cent. C.A. were limited at 2*s.* 9*d.*, and 80 to 85 per cent. at 3*s.*

OIL, EUCALYPTUS.—Twelve cases Magnet brand had been sold privately. There was plenty of B.P. quality on offer at 1*s.* 2*d.* per lb.

ORANGE-PEEL.—For thin bright Maltese strip 8*d.* per lb. subject was accepted, with darker ditto at 7*d.* subject.

RHUBARB sold at unchanged rates as follows: Two cases small to bold flat High-dried, with good coat and pinky fracture, 9*d* per lb., and the same price was paid for 3 cases small to medium ditto. From another catalogue 6 cases sold at 8*d.* to 8½*d.* per lb. for small to medium flat; 16 cases of bold round high-dried of wormy quality and dark fracture sold at 2¾*d.* to 3*d*, and medium ditto, 3*d.* to 3½*d.* per lb., without reserve; and a similar parcel, not so wormy, at 4¾*d.* to 5*d.* Ten cases round rough High-dried of new crop sold at 6*d.* per lb. for three-quarters good fracture and coat.

SARSAPARILLA.—Lower. About 100 bales grey Jamaica have arrived this week, part of which were offered in auction. For 12 bales sound 1*s.* 4*d.* was paid, and 1*s.* 3*d.* for slightly country damaged, being about 2*d.* per lb. cheaper. Two bales of native red Jamaica brought 9*d.* per lb., subject, and for 3 bales good ditto 10*d.* was paid, with grey at 8*d.*

SENNA.—The quality of the Tinnevelly senna offered was again very low, and it is not expected to improve now until the new crop comes in about August. Prices were steady, a few bales of medium to bold greenish leaf selling at 6*d.* to 6½*d.*; small to medium greenish, 2*d.* to 3¾*d.*; ordinary yellowish to medium, 1¾*d.* to 1¾*d.*; and low yellow and sea-damaged (of which the bulk consisted), ½*d.* to 1*d.* per lb. Pods sold at 1½*d.* to 2*d.* per lb. Nice pale Alexandrian pods were bought in at 7½*d.* per lb., and a few bales of fair broken leaf sold at 2¾*d.* Good siftings were held for 2½*d*, and for fair partly whole leaf 6*d.* was wanted.

TAMARINDS.—Black and stony Calcutta sold at 10*s.* per cwt.

TONKA BEANS.—Privately it is said 2*s.* has been paid for Para, and this was the price asked in auction. For Angostura 2*s.* 10*d.* was refused.

TURMERIC-POWDER.—A parcel from Bombay sold without reserve at 13*s.* per cwt.

WAX, BEES'.—Jamaica was 2*s.* 6*d.* dearer, 8*l.* to 8*l.* 2*s.* 6*d* per cwt. being paid for fair to good red and brown, and 7*l.* 10*s.* for very dark brown. Madagascar was also 2*s* 6*d.* dearer, good sound wax selling at 6*l.* 15*s.*, dark brown at 6*l.* 12*s.* 6*d.*, with wormy and partly foul at 6*l.* 5*s.* to 6*l.* 7*s* 6*d.* Of Zanzibar 50 blocks of fair brown quality sold at 6*l.* 12*s* 6*d* per cwt., and a further 24 balés and cases at 6*l.* 12*s.* 6*d* to 6*l.* 15*s.* A case of unbleached East Indian brought 6*l.* 2*s.* 6*d.*, and a case of grey and yellow New Zealand 6*l.* 12*s.* 6*d.*, subject.

"HOW TO MAKE TABLETS."—We have received a supply of the second edition of this useful little work, published by the Spatula Publishing Company, of Boston, U.S.A. Copies can be supplied from 42 Cannon Street, London, E.C., at 1*s.* 2*d.* each, post free.

DINING CHEMISTS, PLEASE NOTE!—King Edward VII. has informed the Lord Mayor of London that, in his opinion, there can be no doubt as to what should be done at public gatherings when the toast is proposed of "Her Majesty Queen Alexandra, their Royal Highnesses the Prince and Princess of Wales, and the other members of the Royal Family." The toast should be received standing, and the company should not resume their seats until the first few bars of the "National Anthem" (to be immediately followed by a few bars of "God bless the Prince of Wales") have been played.

NEXT WEEK'S CONCERTS.—We would remind London chemists of two trade smoking concerts which are to be held next week. The first, on Wednesday evening, February 12, in the Council-chamber of the Holborn Restaurant, at 8 o'clock, is promoted by the Chemists' Managers' and Assistants' Society on behalf of the Pharmaceutical Benevolent Fund. The second is to be held on Friday evening in the Holborn Town Hall, Gray's Inn Road, and is the annual one of the Wholesale Druggists' Cricket-championship League. First-class talent is to be there, and in the course of the evening the Chairman (Mr. Peter MacEwan) will present the Challenge Cup to the winning team. Tickets for this concert may be obtained from Mr. E. Sibley, 61 Park Street, Southwark, S.E., price 1*s.* or 2*s.* 6*d.*

EXPORT TRADE.

THE Publisher of the *C. & D.* has compiled some striking figures about the exports of British-manufactured goods by the drug and allied trades during 1901. He shows that the values were as follows :—

	£
Aërated waters	145,397
Brushware	155,281
Candles	432,707
Chemicals and chemical and medicinal preparations	8,942,109
Confectionery, jams, vinegar, and sauces	1,539,674
Glass bottles	440,710
Indiarubber-manufactures	1,086,841
Paints and materials	2,009,572
Salt	509,769
Seed oil	1,157,574
Soap	999,420

These do not include perfumery, varnishes, and other druggists' goods not separately enumerated, nor 3,885,242*l.* worth of colonial and foreign produce of kindred character also exported in 1901. This is in connection with the Merchant Shippers' Issue of THE CHEMIST AND DRUGGIST on March 8. We strongly advise all dealers and manufacturers of these classes of goods to insert announcements of them in the Issue. Instructions as to announcements should be sent as early as possible to The Publisher of THE CHEMIST AND DRUGGIST, 42 Cannon Street, London, E.C.

Summary.

FURTHER particulars of the Cape Town exhibition will be found on p. 281.

MR. WALTER HILLS succeeds Mr. Martindale on the Poisons Committee (p. 267).

MR. JESSE BOOT'S aims as regards his managers and staff are formulated in a speech on p. 260.

A THIRD PART of the poisons schedule seems to be in the potential state. See the note on p. 267.

MR. HENRY O'CONNOR has been appointed a pharmaceutical assistants' examiner in Ireland (p. 259).

THE names of those who passed the Apothecaries' Assistants' examination last month are given on p. 251.

GOOD HINTS on the preparation of glycerin of starch and collodion by Mr. W. B. Cowie are printed on p. 269.

PLYMOUTH JUNIORS are waking up and have resolved to take more interest in what the Seniors are doing for them (p. 269).

THIS week's South African News shows that confidence and trade are reviving in the Colonies in a remarkable manner (p. 281).

THERE are fewer chemists in Great Britain now in proportion to the population than have been recorded since 1871 (p. 263).

LORD AVEBURY'S Early-closing Bill is briefly summarised on p. 262, and it is suggested that chemists' associations should petition in favour of it.

THE new regulations as to the practice of medicine, dentistry, and pharmacy in the Transvaal are given in full on p. 281, and some comments on p. 265.

PLATINUM POINTS on dental instruments are apt to become brittle. Professor Hartley explained why to the Chemical Society last week (p. 268).

J. ISLIP AND HENRY HEATH are men who have ordered goods from chemists without paying for them. Facsimiles of their letters are given on p. 284.

SOME DRUGGISTS in the North of Ireland seem to be working hand in hand with doctors in back shop consultation business, and pharmacists do not like it (p. 259).

THE President of the Local Government Board declines to supply Government vaccine-lymph for sale, as he considers private ventures equal to the occasion (p. 262).

BRITISH trade during January was fairly good, but the official returns are chiefly interesting because they show for the first time the figures for quinine imported and exported (p. 266).

SOME doctors think it does not accord with professional etiquette to put their names and addresses on their poison-labels. The police might convince them to the contrary (p. 263).

MR. HALL EDWARDS has lectured to the Midland Pharmaceutical Association on his *x*-ray experience in South Africa. Our report is illustrated with interesting photographs (p. 283).

THE condition of the pharmaceutical registers at the end of 1901 is summarised on p. 257. We note the names of students of the Society who have reached their majority as such (p. 267).

THE POISONS COMMITTEE has adjourned until March. The packet-poison people are getting doleful about the fate of their venture when it comes before the House of Commons (p. 267).

THE THREE MEN, Bedding, Hodges, and Lea, who obtained druggists' goods from wholesalers and manufacturers without paying for them, have been sentenced to terms of imprisonment (p. 252).

APPRECIATIONS of the late Mr. Martindale bulked largely in the Pharmaceutical Council proceedings this week (p. 256). "Xrayser" adds his word of praise (p. 263), and the Bradford Association has passed a vote of condolence (p. 270).

THE Prince of Wales was admitted a Fellow of the Royal Society last week and afterwards complimented Sir Wm. Crookes on his lecture, in which he brought his old radiant matter and radiant energy observations up to date and into line with the ionic hypothesis (p. 268).

FLUCTUATIONS in the markets are fairly numerous this week, but mostly slight. Among the articles tending upwards are castor oil, insect-flowers, quinine, shellac, crude camphor, and glycerin. Menthol, thymol, lemon oil, Cochin ginger, and cream of tartar are all easier inclined. Cinchona was steady in auction (p. 277).

TWO North London chemists, who were summoned for selling methylated-soap liniment, have won the day because it was not methylated (p. 271). In an article on p. 264 we show how the Riché and Bardy test may have misled the public analyst, and Mr. J. Slinger Ward has favoured us with interesting analytical data.

Corner for Students.

CONDUCTED BY LEONARD DOBBIN, PH.D.

Students, please note. All communications should be addressed to the Editor of "The Chemist and Druggist," 42 Cannon Street, London, E.C.

QUALITATIVE ANALYSIS.

A MIXTURE of not more than three salts will form the subject of the next exercise in qualitative analysis. The mixture is to be submitted to a thorough systematic examination, all its constituents are to be detected, and proof is to be given that the substances detected are the only constituents of the mixture.

Students' applications for portions of the mixture of salts (accompanied by a *stamped and addressed envelope*, not a stamp merely) will be received up to Tuesday, February 18, and the samples will be posted on the following day.

Reports from students will be received up to Saturday, March 1. Each report should contain a concise account of the work done, and should include a list of the constituents detected. In this list any substance regarded as an accidental impurity should be distinguished from the essential constituents of the salts composing the mixture.

The report on this month's analysis will be published next week.

English News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Brevities.

A woman named Eliza Johnson died from syncope in the shop of Mr. Pollard, chemist and druggist, Westgate, Wakefield, on February 10.

At Thames Police Court on February 7 two men were charged with stealing and receiving amongst other things 31 tablets of Pears' soap.

In an explosion which occurred on February 6 at the Central Higher Grade School, Hull, the chemistry teacher, Mr. F. R. Upton, was injured.

East Sussex County Council on February 11 appointed Mr. Samuel Allinson Woodhead, B.Sc., as district analyst under the Fertilisers and Feeding-stuffs Act.

At West London Police Court on February 8, Archibald James Scott Stewart, chemist's assistant, secured discharge of an order of maintenance on account of his wife's adultery.

Two plate-glass windows at the pharmacy of Mr. H. A. Elliott, chemist and druggist, High Street, Evesham, were smashed on February 3 by a horse backing into the shop-front.

An *employé* at Hardshaw Brook Chemical-works, St. Helens, was terribly burnt on February 7 by a spark from his pipe igniting his clothing, which was impregnated with chlorate of potash.

At Dudley County Court on February 6, James Hough, of Wall Heath, was awarded 2*l.* and costs against Messrs. Chance & Hunt (Limited), chemical manufacturers, in respect of damages to a horse and harness.

Messrs. Brunner, Mond & Co. have decided to grant twelve days' pay to all employés who qualify for a seven days' holiday, the conditions being that not more than three days during the year must be lost by a workman's own neglect.

Rudolph Chiffman (35), described as an "American drug-merchant," was fined 5*s.* at Marylebone Police Court on February 10 for being disorderly in Edgware Road. His wife, who was summoned for a like offence, was discharged.

Robert Banning, mineral-water manufacturer, was fined 5*l.* and costs by the Birmingham Magistrates on February 6 for selling a bottle of mineral water to which the trade-mark of R. White & Sons (Limited), of Camberwell, S.E., was applied.

Boots (Limited) and Cater, Stoffell & Fortt (Limited), Bath, intimate that they intend to continue early-closing on Thursdays as hitherto. This is in consequence of some firms having altered their early-closing day from Thursday to Saturday.

On February 6 a refuse-mound at the Oldbury Alkali Works of Messrs. Chance & Hunt (Limited), suddenly gave way, doing serious damage to property in the neighbourhood. The mound was some twenty or thirty yards high, and it is computed that hundreds of tons of refuse fell against the houses. No lives were lost.

James Cottrill, brewer's engineer, was remanded at Manchester on February 11 on a charge of maliciously destroying a vat of beer. The prisoner was dismissed from the Swan Brewery, and it is alleged that he put a quantity of red lead in a vat containing 40 barrels. The contamination was discovered while the beer was being run off.

On Tuesday, February 11, the students of the Leeds College of Pharmacy had a day off. Starting at 10 A.M. for East Keswick, they studied practical botany on the way, under the direction of the principal, Mr. F. Pilkington Sargeant, F.C.S. After their arrival at the Wellington they had a football match, the team captained by Mr. Taylor beating that of Mr. Reynolds by ten goals to five. After tea an impromptu smoking-concert and whist-drive were followed by an exciting "cake-walk."

A novel rating-point has been raised at Sleaford by the assessment of traders for permanent advertisements exhibited on other than their own business-premises. At a meeting of the Sleaford Traders' Association on February 10 it was reported that, in the opinion of counsel, the practice is illegal. There was a consensus of opinion amongst those present that the person upon whose property the advertisement was exhibited should be rated, and it was resolved to send a representation to the rating authorities in these terms.

At the Manchester Assizes on February 7, Edward Fawthorp obtained 30*l.* damages for false imprisonment and malicious prosecution from Arthur Thorley, who with his brother carries on business as wholesale druggists at Pendleton under the style of Cauley & Co. Plaintiff had formerly been a traveller in the service of the defendant's firm, but left and commenced business on his own account. Defendant then caused plaintiff to be arrested on charges of embezzlement. He was tried at the Salford Quarter Sessions, and acquitted.

The Chemist-Optician.

Mr. J. R. Cornish, chemist and druggist, and Fellow of the Spectacle-makers' Company, St. Anne's Road, South Tottenham, lectured on February 5 to the Tottenham School Board teachers on "Children's Eyesight." After explaining the structure of the eye, Mr. Cornish called attention to the common forms of defective eyesight. Hyperopia is a natural defect in nearly all young children, but it is generally outgrown as the child develops. Myopia, on the other hand, is rare in children, but comes on in the early teens with disastrous consequences to health if not corrected by proper glasses. Defect of sight may easily be mistaken by school teachers for dulness of intellect. Mr. Cornish pointed out that the staff at ophthalmic hospitals is overburdened by the large number of eye-testing cases presented, which bears out our contention that there is plenty of scope for chemists as opticians. There are many people who would not go to hospitals to have their eyes tested if the local chemists were competent to undertake the work.

Football.

The match played at Wormholt Farm on February 8 between London College of Pharmacy F.C. and the United Amateurs F.C. resulted in a win for the London College by 4 goals to nil.

Metropolitan College F.C. *v.* Muter's College F.C.—The second meeting between these teams took place on February 8 at Shepherd's Bush, and ended in a win for the Metros. by

Digitized by Google

8 goals to 1. A special feature of the game was the good work and fine centring by the wing forwards for the winners.

Apothecaries Assistants' Examination.

The following candidates were granted the certificate of qualification to act as an assistant to an apothecary in compounding and dispensing medicines at the examination held last month:—N. Barnby, C. W. Bayley. A. H. Best, E. S. Best, H. E. Bywater, K. Cavanagh, C. M. Cleveland, M. G. Copestake, K. S. Costello, S. Dale, D. Drury, A. H. Esden, S. W. Fitzgerald, E. M. Griffiths, C. McG. Hall, W. Hill, E. M. Horwood, E. K. Hughes, C. L. Jones, I. Kelly, I. Martin, A. M. Maynard, E. McMullen, E. M. Phillips, E. McL. Scott, M. J. Scott, B. Sibley, M. E. Sills, M. H. Smyth, G. E. G. Stevens, K. Sturrock, W. J. Sunman, J. A Topping, E Tyson, M S. Woodfin. The Society in this list pays no attention to whether the individuals named are male or female.

Censuring the "Surgery Assistant."

At an inquest held at Hackney on February 10 on the body of Mrs. Mahalah Scott, the husband said deceased had not been well for eighteen months, and had been attended by a "Dr." Edwards Witness paid Edwards cash for the medicine he received. John Edwards, of 103 Listria Park, Stoke Newington, stated that he had no qualification of any kind. He was a "surgery assistant." He admitted treating a family named Chown, with whom he used to live "for little ailments." He had always regarded the Scotts as friends. Deceased said she had relief from what he gave her, and now and again he gave her a bottle of medicine. Dr. Frederick Cockell said death was due to syncope, but he could not say that her life might have been prolonged if she had had proper medical advice. The jury returned a verdict of natural death, and censured Edwards.

Ticket Laxity.

The case against Robert Molesworth, described as a chemist, of Menston, for having travelled on the Midland Railway without a ticket was heard at the Otley Police Court on February 7. The prosecution alleged that Molesworth had travelled from Bradford to Menston and not paid the fare (8½*d*.) Defendant maintained that he had given up his ticket, and after hearing witnesses on both sides the Bench said it appeared that a good deal of laxity had been shown in collecting tickets, but they found the charge proved and fined defendant 10*s*. 6*d*. and costs.

Birmingham Notes.

The rush on vaccine-lymph, and the sale of such portable disinfectants as camphor-naphthalin, are prodigious here at present.

"Dispenser and Lady Housekeeper (30) desires engagement in doctor's house." The "Hall" qualification is not mentioned.

Mr. W. F Southall exhibited appropriate limelight-views to illustrate a lecture by Miss Finey last week on the "Housing Question."

There has been a small raid upon the chemists for jury-service, and many have availed themselves of the exemption-clause, although not legally entitled to it.

Mr. Walter Johnson has removed his business by the railway-bridge, Cotteridge, King's Norton, nearer to the heart of the local market. The new premises are more commodious, and the position is better.

The young men called Taylor, who were arrested for breaking into Boots' shop in Broad Street, were at the police court on Wednesday committed for trial at the Sessions, bail being allowed.

The question of misuse of mineral-water bottles came before the local Magistrates last week, and a fine of 5*l*. and costs was the result. The offender was Robert Banning, of Lenge Street, who pleaded oversight due to pressure of business.

Chemists are reminded that a gang of thieves are making a provincial tour. They have a horse and trap, and their method is to locate the till, bring out the counterman to view in the window some article they desire to purchase, while a confederate goes in and steals the cash.

Mr. Thomas Barclay's name appears in an article on Birmingham's use of soap in the *Windsor Magazine*. He estimates that the excess of lime in the Birmingham water obtained locally, over that which is to be brought from Wales, causes in a daily boiler use of 200,000,000 gals., a difference of no less than 320 tons of incrustation a year.

The ladies have had a field-day this week, for the Priestley scholarship in chemistry, of the value of 96*l*., at the Birmingham University has been divided between Miss C. E. Morgan, B.Sc. London and Miss M. B Thomas, Nat. Sc. Tripos Cambridge, both old pupils of the King Edward's High School for Girls. It has not previously been awarded to a woman-student.

A complaint which has become very noticeable to an outsider is now often heard. Formerly when the principal was wanted and was not far away the customer was so informed; now the assistant assumes the rôle for the nonce, and businesses are becoming less and less personal. Changes in staffs are so frequent that the confiding public is sometimes nonplussed as to whom the establishment really belongs to, and why the principal is such a changeable person.

Our kin could take a leaf out of the tobacconists' book, for in a new shop in Easy Row can be seen an excellent display of many varieties of tobacco-leaf arranged upon large glass trays supported by brass uprights on ebony pedestals. If these were specimens of choice drugs and chemicals a good "ad." would be secured, and quite a crowd would no doubt stop to gaze. There are only two places where any drug-exhibit of the kind may be seen—viz, in Bull Street and at Five Ways.

The Registered Herbalist.

At an inquest held at Poplar on February 11, on the body of a milkman named Bloxham, the widow stated that deceased had been attended prior to his death by Mr. Purdue, of Galt Street, Limehouse, who supplied a bottle of medicine and a lotion. Mr. John Charles Purdue, "registered herbalist," wished the Coroner (Mr. Wynne Baxter) "good morning" as he stepped into the witness-box. The Coroner: Oh, good morning; we see one another pretty frequently. Witness said he saw deceased about mid-day on Thursday, February 6, and was paid 1*s*. The witness remained in the witness-box, when the Coroner looked up from his papers and remarked: I haven't any questions to ask you. I hope you are not disappointed. Witness: Oh, no, sir. The medical evidence showed that death was due to heart failure supervening on chronic bronchitis, but not in any way accelerated by the treatment of Mr. Purdue. The Coroner said there was nothing much to say about Mr. Purdue this time. It was very undesirable that people should be taken for doctors when they were not. He (the Coroner) did not think that Mr. Purdue held himself out as one, although he was "sailing very close to the wind." How a herbalist knew what medicine was required was a very open question, and also very doubtful.

Fires.

On February 3 a fire broke out at the chemical works of Messrs. Sadler & Co., Carlton, near Stockton, but was extinguished before much damage was done.

An outbreak of fire occurred on February 8 at the premises of Messrs. Bainbridge & Finlayson, chemists, Stockton-on-Tees, which, however, was subdued before any damage was done.

A fire broke out on February 9 at Crownhill Villa, at the corner of Tamerton Road, Crownhill, the residence of Mr. R F Roper, chemist, Tavistock Road, Plymouth. In winter the house is left in charge of a caretaker. At about 3 in the morning a bedroom was found to be on fire, and it is supposed that a lamp which was burning in the room exploded. The fire was soon extinguished, but not without considerable damage to the furniture.

Sheffield Drugs.

In his quarterly report Mr. A. H. Allen, the Sheffield analyst, states that six samples of carbonate of bismuth examined by him were found to be prepared substantially in accordance with the directions of the British Pharmacopœia;

Digitized by Google

four samples of paregoric were genuine and one of inferior quality, and two samples of sweet spirit of nitre were of fair quality. Two samples of ground ginger, one of glycerin, and two of compound liquorice-powder were all genuine.

The Long Firm.

At the Central Criminal Court on February 12, James Hodges (62), agent, pleaded guilty to an indictment charging him with obtaining goods by false pretences; and Charles Bedding and Christian R. Lea, described as chemists but not on the register, with conspiracy to defraud. They had represented that they were carrying on a *bonâ-fide* business as chemists and druggists in various parts of the metropolis, and over 1,000*l.* worth of goods were obtained by them by false pretences. Particulars of their trial at Worship Street Police Court appeared in our issue of November 23, page 833, and subsequent issues. Lea and Bedding were each sentenced to nine months' hard labour, and Hodges to eighteen months'.

Poisoned by Weed-killer.

At Greenham, Somerset, on February 4, a gardener committed suicide by drinking a quantity of weed-killer. At the inquest the widow stated that her husband, coming in very sick, told her he had taken "some arsenic from the garden." A doctor was at once sent for, but deceased was dead before he arrived. Dr. Arthur Thompson said the symptoms were consistent with arsenical-poisoning, and a verdict to that effect was given by the jury.

What was in the Drawer?

Mrs. O'Keeffe, the wife of Dr. O'Keeffe, of St. Helens, and her three children, had some soda cakes, for tea on February 8, and shortly after partaking of them they were all seized with vomiting, and were very ill. Dr. O'Keeffe came in from his rounds, and immediately called in Dr. Bellew, whose treatment soon had a good effect, and Mrs. O'Keeffe and her children recovered. The bicarbonate of soda used for making the cakes had been procured from the surgery by Mrs. O'Keeffe herself, and events point to the conclusion that she had taken something from the wrong drawer.

No Poison-bottle.

At Halifax on February 8, Mrs. Heap inadvertently drank a quantity of liniment of aconite and belladonna in mistake for her medicine, and died shortly afterwards. At the inquest the daughter of the deceased lady said her mother had been suffering from rheumatism, and Dr. Morton, who attended her, had supplied a bottle of medicine to be taken internally, and a lotion. The bottles were alike and both were on the mantelshelf near the patient, who had been in the habit of taking the medicine herself from the bottle. Dr. Morton deposed to supplying the mixture and lotion, and to finding Mrs. Heap in a state of stupor from an overdose of aconite and belladonna, from the effects of which she subsequently died. The Coroner (Mr. E. H. Hill): You have heard of such a thing as specially shaped bottle for poisons?—Yes.

Don't you think it is advisable to put that practice into force?—We generally do for people who are using it themselves (*sic!*). In this case it was to be sprinkled on by the daughters. The Coroner: But the daughter could have taken hold of the wrong bottle. I should say it would be advisable to adhere strictly to that rule so that you are entirely on the right side.

Writing on this case in the local Press, Mr. Gibson Dixon, President of the Halifax Chemists' Association, contends that if doctors' surgeries were placed on the same footing with regard to the Poisons Act as chemists' shops, the risk of such accidents would be much lessened. He points out that it is illegal for a chemist to dispense a lotion in any but a poison-bottle, and why, he asks, should it be legal for a doctor to do so? In the interests of public safety Mr. Dixon urges that the medical profession all over the country should observe the Privy Council "order" with regard to poisonous preparations, although it is not legally binding upon them.

Not Poisoned.

A young man named Foster had been for some time an inmate of Orsett (Essex) Infectious Hospital suffering from smallpox. On February 7 one of the nurses gave him by mistake 1½ oz. of a solution of carbolic acid. He died a few hours later, but the medical evidence at the inquest showed that "death was due to shock caused by the man knowing he had taken something other than his medicine, and partially due to his condition from smallpox." The solution given was not a fatal dose. The jury returned a verdict of accidental death, and expressed sympathy with the nurse.

The Week's Poisonings.

Since our last report thirteen fatalities from poisoning have been recorded. Ten of these were due to the scheduled poisons, carbolic acid (3), chloral hydrate, oxalic acid, strychnine, hydrocyanic acid, chlorodyne, arsenic (in weed-killer), and opium. Hydrochloric acid was taken in two cases—one being an inadvertance—and the female inmate of a medical home in Beaumont Street, Marylebone, died from drinking a quantity of lysol, used for disinfecting purposes. The chloral was taken in overdose by a Tottenham doctor, and the prussic acid by a Liverpool girl of 19, who was a doctor's attendant, and had obtained the poison from the surgery.

Irish News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Personal.

Dr. William Whitla, L.P.S.I., have been appointed Professor of materia medica to the Royal University, Dublin.

We are pleased to hear that Mr. Grindley, member of the Pharmaceutical Council, is making satisfactory progress under Dr. Harley's care, and his early recovery is anticipated.

Mr. T. W. McMurray, L.P.S.I., late manager of the Clontarf branch of Messrs. Hamilton & Long's state pharmacy, Dublin, has accepted the management of the compounding department of Messrs. Henry Williams & Co. (Limited), who carry on grocery and Italian warehouses at Henry Street and Rathmines.

Swallowed the Lotion.

On February 3 Peter Ward, a farmer, who had gone to live in Dundalk town, and was in the habit of taking medicine and also using a lotion, swallowed some of the latter by mistake, and death resulted.

Cost of Medicines.

At a meeting of the Guardians of the North Dublin Union last week, a letter was read from the Local Government Board directing attention to the large sum expended during the half-year which ended in September last, on medicines and medical and surgical appliances. The L.G.B. found that the cost per patient in the workhouse for medicines and medical and surgical appliances had risen from 2*s.* 1¾*d.* in 1900 to 4*s.* 11*d.* in 1901, while there had also been a rise in the average cost of drugs, &c., for the dispensary patients from 2¼*d.* to 4*d.* The Guardians have decided to refer the matter to a committee before replying to the L.G.B.

Contractor Difficulty.

The L.G.B., referring to Mr. White's explanation to the Swinford Guardians in reference to defective drugs (*C. & D.*, February 1, page 185), threaten to withhold recoupment if Mr. White's services as contractor are retained. The Chairman of the Guardians thought it was more the standard of the contractor's nationality than the standard of his drugs that was objected to, and advised that the L.G.B. be asked to reconsider their decision.

Life-saver.

A few days ago at a public meeting of the inhabitants of Wicklow, Mr. Robert M. Lees, L.P.S.I., proprietor of the Medical Hall, Wicklow, was publicly complimented for his promptitude and gallantry in saving life during the recent storm on the coast. Mr. Lees headed a band of rescuers and helped to man the lifeboat in a heavy sea, and when helpers were required to rescue those in danger of drowning was amongst the first to volunteer, his example stimulating many others. Mr. Lees hails from Scotland, and prior to settling down in Wicklow he acted as assistant to Mr. W. F. Wells, Dublin.

Scotch News.

Local newspapers containing marked items of news interesting to the trade are always welcomed by the Editor.

Business Changes.

Mr. G. Mackie, of the Renfield Street pharmacy, Glasgow, has bought the business in Strathbungo so long carried on by Mr. John Fenwick, chemist and druggist, who now goes into well-earned retirement.

The business at 389 Union Street, Aberdeen, formerly carried on by Mr. James Clark, pharmaceutical chemist, has been acquired by Mr. Henry Marshall, chemist and druggist, who for the past four years has been an assistant with Messrs. Davidson & Kay.

The wholesale grocery and drug business of Messrs. W. Sinclair & Co., Aberdeen, has been disposed of to Messrs. Alexander Stephen (with Messrs. William Paterson & Sons, Aberdeen) and Alfred Duffus (agent in Scotland for Messrs. Beaufoy & Co., London), who are to carry on the business under the same name as formerly.

Photographic.

At a meeting of the Motherwell Camera Club on January 27 a lecture on "The Carbon Process" was delivered by Mr. W. B. Halley, ex-President of the Glasgow and West of Scotland Photographic Association. Mr. Halley has been representative for nearly a quarter of a century of Messrs. Raimes, Clark & Co., wholesale druggists, Edinburgh.

Glasgow Notes.

A chemist who had occasion to make up liq. sodii ethylatis, being out of absolute alcohol, got several samples in his neighbourhood. In no case did the sp. gr. exceed 0·804, corresponding to 96 per cent. of alcohol by weight.

The recent effort to advance the retail prices of patents and proprietaries is a *fiasco*. It was foredoomed to failure by the refusal of some retailers in each district to adhere to it, and by the fantastic character of the list of "advances."

The other day, as a dispensing physician was passing along the street, he came upon a man whose face was covered with smallpox pustles. The physician did not lose sight of the walking pestilence until he was in the hands of the sanitary officials.

On dit that some of the big English drug-store companies are casting longing eyes on Glasgow. If they ever get the length of casting their "lives" here, they may not find them in such pleasant dividend-yielding places as in the fat Midland districts.

A veteran traveller, who has been on the trail for many moons, thus epigrammatically sums up the contrast in business methods between the past and the present. "Once on a time a customer's first question to me was, 'What's your best quality?' Now it is 'What's your best price?'"

The Licentiates' Association, which has been formed to induce the Glasgow Faculty of Physicians and Surgeons to resist the Medical Council's edict *re* doctors' shops, has won the first move in the game, by carrying an instruction that the Council of the Faculty are to inquire into the matter and consider what can be done.

The Doctor's Fees.

In Rothesay Sheriff Court, Dr. J. B. Lawson sued the executors of the late Mrs. Elizabeth Burrell for 66*l*. 14*s*., being fees for attendance on the deceased lady from October, 1896, to July, 1900. The claim was resisted as excessive, and in the course of the evidence it came out that while the pursuer's rate of charges to the deceased during her lifetime ranged from 7*d*. to 1*s* 6*d*. a visit, the present account was made up at the rate of 4*s*. per visit. It also transpired that during the last three or four years of her life Mrs. Burrell had made several wills, in each of which Dr. Lawson was made a beneficiary to the extent of 60*l*. In May, 1900, however, she made a codicil in which the bequest to the doctor was cancelled, and the residue of her estate left to the parish church. A strong point was made by the defenders' agent of the fact that pursuer in June, 1901, had destroyed his visiting books in which the earlier parts of the account were detailed, and this with the knowledge that his account was to be contested. Pursuer's agent argued that the doctor, having minimised his charges to the deceased lady during life under the belief that she was in poor circumstances, was justified in increasing his rate after death when he knew that she had left funds. On February 7, Sheriff Martin issued his interlocutor disallowing the portion of the account which had not been vouched, and granting decree for 24*l*, being at the rate of 2*s*. 6*d*. per visit from February to July, 1900, the portion which was vouched by the production of the visiting-book. He also finds the defenders entitled to expenses.

The Inventor of Waterproof.

An article in the *Edinburgh Evening Dispatch* on india-rubber, has brought the suggestion that the real inventor of waterproof was not Mackintosh, of Glasgow, but Professor J Syme, of Edinburgh. It is pointed out on the authority of a book sent by Professor Chiene, of Edinburgh University, that Professor Syme published in 1818 an article in *The Annals of Philosophy*, announcing his discovery of benzene and its solvent power on caoutchouc. Having dissolved the rubber, Professor Syme relates that he rendered various textures (such as a silk cloak) waterproof by brushing with a thin solution. The article did not appear in the *Annals* until some months after he had sent it, and not long afterwards Macintosh took out a patent for applying the solution to make waterproof cloth. A correspondent says even if it were true that Syme discovered that benzene would dissolve indiarubber, that in no way proves that he invented waterproof. Indiarubber can be dissolved by many things, such as turpentine, naphtha, and ether, and before 1820 india-rubber was dissolved and used for commercial purposes by Mackintosh, of Glasgow, who used coal-tar naphtha, and by Hancock, of London, who used turpentine.

A. D. & F. Social.

The annual social reunion of the employés of Messrs. Duncan, Flockhart & Co., of Edinburgh, took place in the Free Gardeners Institute, Picardy Place, Edinburgh, on February 7. About 250 employés and friends took part in the proceedings. Amongst those present were Mr. J. L. Ewing and Mrs. Ewing, Mr. R. G. Guyer and Mrs. Guyer, and Mr. G. Murray. An excellent programme of songs and recitations commenced the programme, at the conclusion of which refreshments were served in the large saloon. A dance followed in which over eighty couples took part, and which was continued until the small hours of the morning. The whole arrangements were ably carried through by Mr. P. Barrett, assisted by a committee.

From the Lay Standpoint.

An entertaining article appears in a recent issue of an Edinburgh newspaper, describing a meeting of the Royal Society of Edinburgh as it appeared to a layman. The writer relates how with mathematical exactness Lord Kelvin took the chair at 8 o'clock, and the meeting having been constituted, he vacated in favour of Lord McLaren, while he (Lord Kelvin) discussed "The Specification of Stress and Strain in the Mathematical Theory of Elasticity." Thus the writer:

> The method of notation, which Lord Kelvin suggested, was to take, instead of a cube, a tetrahedron, a figure with four corners, four planes, and six edges, with six ideal lines drawn in the direction of the six edges; any change in the shape or bulk being represented by the elongation of the six edges of the tetrahedron. There now! The thing seemed so plain that it might be left to speak for itself. But no. The aged Seer, with voice and gesture, blackboard and model, shook the proposition inside out, turned it upside down, tried it by every test known to mathematicians, and finally he dragged the subject out of the maelstrom of weird words and expressions, arguments and proofs, laid it out flat, folded it neatly, and presented it to the audience as a thing which, although not greatly superior to that formerly in use, was at least worthy of their acceptance.

A question from the Chairman produced a reply of five minutes' duration from Lord Kelvin, who afterwards resumed the presidential chair. Lord McLaren then took a seat which had been placed in front of the clock. When he

Digitized by Google

leant back his head crashed through the glass case of the clock, and a momentary panic ensued for fear the learned Judge had injured himself. His black scull-cap had saved him; but he changed his seat. The next item was a communication on "The Condition of Iron in the Spleen," by Dr. Brodie

The paper had one effect which was noticeable to everybody. Amid Lord Kelvin's crash of facts and figures, an elderly gentleman in a front seat slumbered peacefully, and thus lost a great deal of information. But he was interested in the spleen above all other parts of man's internal machinery. When the word spleen was mentioned he became very wide awake, and listened with the utmost intentness to the young doctor's story. At the end he rose and proceeded to cross-examine Dr. Brodie. In a fine old-fashioned courtly manner, he explained that he was not a medical man, and he begged pardon for presuming to speak on the subject at all. He had evidently spent a portion of his life in India, because he spoke of the indigestion which troubled Hindus in consequence of the voracious manner in which they ate their rice. Dr. Brodie answered the questions, and the gentleman from India having courteously expressed his thanks, straightway fell asleep again.

Then Lord Kelvin had another innings. His subject was the molecular dynamics of a crystal, and had relation to stable and unstable homogeneous assemblages, the deviation from homogeneousness in surface layers and their tensile strength and cleavage.

If his former subject required explanation it seemed simplicity itself to the dynamics of a crystal. Lord Kelvin literally warmed to his work. It was a great sight to see him, with a piece of chalk in each hand, hobbling about the room, from the table to the blackboard, from the blackboard to the table, now dotting down a few mysterious figures in singular combinations, now appealing to his audience with the eagerness of a youngster, now stopping a frightfully ununderstandable problem to explain that he was putting it simply in order that they might all take it in. If the aged philosopher had chosen to be what he would regard as abstruse, it is impossible to say what might have happened.

The gentleman from India slept through it all, clinging to the back of his seat with his left arm and leaning forward at an acute angle with the floor. Lord Kelvin, with his monocle in his left eye, and bits of chalk in both hands, cast anxious glances in the direction of impending disaster. The gentleman awoke, however, before he lurched too far, and Lord Kelvin revelled in his subject till 10 o'clock came, and he had with obvious reluctance to desist.

Suing the Dentist.

Mrs. Margaret Craik sued an Edinburgh dentist in the Edinburgh Sheriff Court on February 13, for 50*l.* damages for imperfect tooth-extraction. She alleged that defender splintered her jawbone and left splintered pieces in her gums, causing much pain and suffering. Defender denied that any pieces were left in the gums, and said the pain was the natural result of the operation. The Sheriff said he would consider the questions raised.

French News.

(From our Paris Correspondent.)

M. DUCLAUX, Director of the Pasteur Institute, Paris, who was taken ill suddenly a short time ago while giving a lecture, is now much better, and hopes soon to assume his usual occupations.

THEY'VE GOT IT ON.—An order just issued decrees that pharmacists attached to the recently formed French Colonial Army Corps shall wear uniform similar to that used by the Colonial Infantry, but with special buttons and green-velvet bands to the collar of the tunic and the képi.

SUNDAY CLOSING.—At Nîmes last Sunday 1,200 shop-assistants of both sexes took part in a manifestation against the retail shops there that do not close on Sundays during the dull season. "Rest for shop-assistants" was their war-cry, and they carried banners bearing that emblem. There was a fair sprinkling of pharmacists' assistants amongst the 1,200, but no special demonstration was directed against any of the pharmacies, of which there are twenty-two in the town.

OPERATING ON THE SIAMESE TWINS.—Dr. Doyen, the famous French surgeon, successfully carried out last Sunday afternoon the delicate operation of dividing the Siamese twin-sisters Radica and Doodica, who have been exhibited at Barnum and Bailey's circus here. After the Röntgen rays had been used the girls were put under anæsthetics, and the operation lasted just twenty minutes, including the time necessary to make three sutures. Both the poor girls are suffering from tuberculosis, one more seriously than the other, but the condition of both is still very precarious. An element of interest connected with this unusual operation was that it was cinematographed, and the apparatus caught practically all the surgeon's movements.

A FRENCH DEPUTY ON CARBOYS.—There was an amusing little incident in the French Chamber of Deputies last Friday resulting from a question put by M. Charles Bernard regarding certain alleged frauds said to have occurred in the wine section at the Paris Exhibition of 1900. The trouble from his point of view was that sealed bottles containing water coloured with chemicals had been shown in one section instead of wine, as the wine-growers of the Bazas district had declined to exhibit. In the course of the debate M. de Larsan remarked that pharmacists are in the habit of showing in their shop-windows large glass bottles containing coloured water, and as far as he knew their reputation for integrity had not suffered thereby, although he was credibly informed that the practice was carried out in almost every town of the world. M. Bernard had something more to say, but no one took very much notice of him, and the Chamber passed on to other business.

PROTECTIVE POLICY.—The British Chamber of Commerce of Paris, at the monthly dinner on February 10, continued the discussion, "Has France improved her commercial position by her system of protection?" which was introduced at the October dinner by MM. Yves Guyot and Edmond Théry. On this occasion Mr. O. E. Bodington, who opened the discussion, said that it was exceedingly difficult to judge the effect of a fiscal policy in any country until a considerable time had elapsed from its introduction, and the real influence of the protectionist reform of 1892 would only be realised at its true value later. He would like to see the question examined by considering the effect of the application of the various duties imposed upon the artisan class, for, following the economic doctrines of Professor Marshall, nothing is so systematic as the manner in which a man earns his living. It would be interesting and enlightening if a comparison could be made of the artisan class—say, before the application of protectionist duties, and after—for, after all, the social condition plays an important part in the commercial position of a country. An animated discussion by other members followed, but the question was not definitely answered.

"TURNING THE TABLES."—There are two men at least in Paris to-day who entertain unkindly feelings towards each other. One is M. Maillot, a dentist, and the other Mr. Sutton, his former secretary. They appeared as plaintiff and defendant at the Assize Court here last Saturday, the dentist charging his ex-secretary with embezzlement. The latter, however, turned the tables on his employer in such a manner that he promptly secured a verdict of not guilty from a sympathising jury. The defence was that the dentist had insisted on a subtle and secret system of book-keeping in order to deceive certain members of his family regarding the nature of some of his private expenses. For instance, advertising figured for quite a large amount, but it was suggested, and apparently sufficiently proved, that the money entered under that heading was spent in quite another direction. The same was said of "Arnica," which occupied a leading place in the ledger, though not usually comprised in a dental stock-in-trade. There were about eighty alterations in all in the account-books, but Sutton said they were made by the order of his chief. The ex-secretary also caused some hilarity in court by explaining that the dentist sought to pose amongst his patients as holder of the much-coveted Legion of Honour by wearing a tricolour ribbon—with only the red visible. When judgment was given there was considerable applause, quickly suppressed, however, by the Judge.

American Notes.

PERSONAL.—Mr. George J. Seabury (of Seabury & Johnson, New York), has been elected Chairman of the Literature Committee of the American Protective Tariff League.

UNREGISTERED ASSISTANTS.—A crusade instituted some time ago by the agents of the State Pharmaceutical Examining Board has resulted in the issue of sixty warrants against druggists and doctors in Philadelphia, who are charged with selling medicines or preparing prescriptions illegally. It is alleged that many of the accused have hired certificates from registered persons or have (as in the case of the doctors) employed unregistered managers to run their drug-stores.

PLATINUM COMBINATION RUMOURS.—Rumours have been persistently circulated recently that a combination in the platinum-trade is under way, and that the plant of Baker & Co, refiners at Newark, N J. has been acquired. That firm, however, emphatically deny the rumour. The demand for platinum is chiefly supplied by South America and Russia, as the United States production is still small, though there have been promising discoveries in some of the Western States.

DENTAL CEMENT DUTIABLE.—At New York on January 28, the Board of United States General Appraisers handed down a decision in the protest case of O. G. Hempstead & Son, sustaining the claims made by the firm. Two separate compounds were imported, one a powder, and the other a mixture of formaldehyde, oil of cloves, and creosote. The compounds are sold under the trade name of "Formagen" and are designed to be used together and known commercially as dentists' cement. The Board held the "Formagen" to be dutiable as "other cement," at 20 per cent. *ad valorem*, It was further held by the Board that a compound of formaldehyde, oil of cloves, and creosote separately imported, designed to be used with a powder to form a cement and also serving as an antiseptic, is dutiable as a non-alcoholic medicinal preparation.

WORK FOR PHARMACISTS!—Winter novelties for the soda-fountain are hard to find. Hot chocolate, beef-tea, clam-broth, and coffee are the staple attractions, but the American demand for novelty and change demands additional items with which to vary the monotony of old favourites. This has led a contemporary to put forth the strikingly original idea of serving oyster cocktails at the soda-counter. The cocktail consists of about half-a-dozen small-sized oysters placed raw in a wineglass of ample size and covered with hot tomato-ketchup, to which has been added some seasoning, including a dash of good pepper. This is very easily and speedily prepared. Oysters are plentiful and cheap in the United States, and are supplied by the pint, quart, or gallon out of their shells all ready for use. An oyster cocktail is just the sort of appetite teaser one would appreciate on a cold day, and there is little doubt that the druggist who is bold enough to start the innovation in New York will meet with considerable success.

DRUG-TRADE FIRE-INSURANCE.—At the annual meeting of the New York Drug-trade Section of the Board of Trade and Transportation, held on January 16, a lengthy report of the special committee appointed to protest against the new drug-classification adopted by the New York Board of Fire Underwriters was brought forward. The report calls attention to many inconsistencies in the schedule, and states that the classification was made without consultation with anyone familiar with the characteristics of the numerous drugs and chemicals which it covers. The committee believes that by consultation with the representatives of different trades the underwriters could arrive at a more logical classification, which would render unnecessary many of the existing regulations. A single instance will suffice to show the inconsistency of the classification. Calisaya bark and Peruvian bark for purposes of insurance are practically identical, but the underwriters make storage of the latter more hazardous than the former. The wholesale druggists assume that the basis of this discrimination was probably fire insurance showing a larger percentage of loss during a given period of time in insurance carried on Peruvian bark than on Calisaya. Hence the underwriters' conviction that it is more hazardous inherently!

Colonial and Foreign News.

CONGRESS OF NATURAL PHILOSOPHERS AT CARLSBAD.—From September 21 to 28 the 74th Congress of German philosophers and physicians will be held at Carlsbad, and the members will, we understand, have the opportunity of visiting the famous Sprudel.

QUICKSILVER MINES REOPEN.—The Guadaloupe quicksilver mines in Santa Clara county, which have not been worked for some years, have been leased by the owners to Mr. H. C Davey for a term of five years. He undertakes to employ two shifts of not less than ten men each daily, also to make certain repairs.

RUSSIAN CUSTOMS DECISIONS.—The Russian Government have decreed that medical and pharmaceutical preparations not mentioned in the list of preparations authorised to be imported into Russia, must be accompanied by *two* samples for examination. If imported in special packages, with labels and descriptions, the samples must also be accompanied by these labels and descriptions.

AN INTERNATIONAL AND COLONIAL EXHIBITION will be held at Aix-en-Provence from April 27 to July 28 next, under the auspices of the municipality of that town. The exhibition will comprise commercial, industrial and agricultural products. An area of about 25,000 square metres will be utilised. Applications for permission to exhibit will be received up to the March 17 next at the offices of the Administration, Rue de l'Opéra 9, Aix-en-Provence.

CHEMISTS' ASSISTANTS IN GERMANY.—According to the *Apotheker Zeitung*, the Federal Council has now granted permission for foreigners to serve as assistants in German pharmacies, provided they have passed an examination in their own country equivalent to the German one. Hitherto the council has refused to allow those of other nationalities to act as assistants unless they have qualified by the German examination. The change of front is considered by the *Pharmaceutische Zeitung* to have probably been caused by the scarcity of assistants last year in Germany. The *Pharmaceutische Zeitung* states that there is now no difficulty in obtaining German assistants.

AN ANCIENT PHARMACY.—On October 4, the *Apotheke Zum Weissen Adler* or "White Eagle Pharmacy," at Berlin, celebrated its 200th anniversary, it having been founded October 4, 1701, by Philip Reinhart Spener, under a concession from Frederich I. The privilege was confirmed to "Spener and his heirs for ever" some twenty years later by King Frederich Wilhelm I., and the documents pertaining to this confirmation are held by the present owner of the pharmacy. According to the archives of the state, Spener was already a *Koncessionirter* of three years' standing. The shop was removed in 1829, by royal permission, to the present locality, 206 Friederichstrasse. The present owner is Mr. Alexander Edward Alfred von Gusnar.

CALCIUM CARBIDE IN AUSTRIA.—There are five carbide-works in Austria—viz., at Meran, Lend Gastem, Jajce, Matrei and Paternion. As the general overproduction of carbide has made itself felt in Austria-Hungary as elsewhere on the Continent, three of these works, which are controlled by different companies—viz, those of Meran and Matrei (both in Tyrol) and Jajce (in Bosnia)—formed a syndicate, known in Austria under the term "Cartell." The carbide produced in the united works is sold in Vienna by a concern which is under the immediate control of the Bosnian company. Their carbide enjoys a good reputation, and an acetylene-generation of 280 litres per kilo. of carbide is guaranteed. The syndicate charges from 33 to 40 crowns per 100 kilos.; the price had previously gone down to 24 crowns (a little over 20*s*). The Gastem works have not joined this combine, but they have bound themselves not to sell any carbide within the Dual Monarchy; their market is in Bavaria, and their chief customer the Bavarian State Railway Nor has Paternion joined. These works are near the Italian frontier, the seat of the company is in Venice, and all the business done is practically with Italy. Foreign competition need not much be feared in Austria, as an import-duty of 20 crowns per 100 kilos. is levied on carbide. The annual consumption of carbide in Hungary is now estimated at about 500 tons.
